The good impression created by the Government's first acts, the energetic cleansing of Government Departments of all unqualified workers and party protégés, the unification of the penal code, the dissolution of all political parties irrespective of creed or colour, etc., has been still further strengthened by the amnesty of all political prisoners whose offences, mainly libel and other offences against the Press laws, were committed before January 6 and were called forth by the acute party and tribal strife of the last few years. Not one political arrest under these laws has been made since the change, in striking contrast to the mass arrests which usually mark a *coup d'état*, and among those pardoned were several accused of having insulted the King or the Royal House. Later General Maximovitch, whose appointment as Veliki Jupan of Zagreb caused such a stir, was re-called to his regiment, and decorated for his services, his place being taken by a civilian. To-day further changes are announced in the definite formation of nominated councils, which are to replace the old municipal councils of Belgrade, Zagreb and Liubliana. The King's Commissars are to be M. Mil. Savchitch, known for his peace efforts after the Skupshchina murders, in Belgrade, M. Putz in Liubliana and M. Srkuly in Zagreb. The councils are composed of experts of all branches of learning, University professors, doctors, lawyers, engineers, and representatives of industrial and

commercial organisations, Chambers of Commerce and Industry, craft unions, workers' unions, etc. In Zagreb it is to be noticed that these experts are of all shades of political opinion and include many who were notable members of the more extreme Croatian parties, the Raditchists and Frankovtzi.

Concentration of Power.

The policy of the concentration of power in as few hands as possible has been continued by the revision of the powers of the Ministerial Council. The new regulations greatly strengthen the position of the Prime Minister and take away from the Ministerial Council almost all its executive powers. Where before the Council's consent was needed it is now necessary for the Minister concerned to get the consent only of the Prime Minister, and where once the unanimous consent of the Finance Committee of the Skupshtina was necessary the Prime Minister can now take a decision on the recommendation of the Minister of Finance and in consultation with two of the senior Ministers.

There are remarkably few manifestations of dissatisfaction, when the undisciplined, passionate nature of the people and their intense interest in politics are taken into consideration. Apart from M. Matchek and M. Krnyevitch in Zagreb, the only sign has been from the old Democrat leader, Dr. Davidovitch, who recently sent letters to his old friends informing them that the change in régime was prepared without his consent and that the Democrat members, M. Marinkovitch, Dr. Kumanudi, M. Radiyoyevitch and M. Alaupovitch, entered the Government without his consent. But beyond clearing himself of any participation in its formation, he seems to have expressed no opinion on the new Government or its work.

Foreign Policy.

In its foreign policy the Government has proved itself faithful to the principle laid down in the King's proclamation of peace with neighbouring States. The signing of the Kellogg Pact on the day after the expiration of the very inadequate Pact of Friendship with Italy was a sign that its lapsing implied no new danger to peace and that the Yugoslav Government intends to pursue a policy of non-aggression and good will. The re-opening of the Bulgarian frontier which had been closed ever since the murder of General Kovatchevitch by Bulgarian komitajis in 1927 was a gesture of great value, for it removed what the Bulgarians have stated to be the greatest obstacle to the re-establishment of good relations between them and the Yugoslavs, and proved conclusively the King's desire for friendship.

The Exhibition of British Art.

The month of British culture, begun in Belgrade by the opening of an exhibition of British Art by Mr. W. H. Kennard, British Minister, and M. B. Maximovitch, Minister of Education, in the presence of Queen Marie, and marked by a whole series of receptions, banquets, lectures, plays and concerts, has proved itself an enormous success. The lectures were all overcrowded, the concert of old English madrigals given by the First Belgrade Choral Society, which should some day be given a chance to visit England, was most enthusiastically received and on all sides an interest in, and affection for, England have been manifested.

The Cold Weather.

But the first and last topic of conversation in Belgrade at present is the cold wave, which has frozen the Sava and Danube completely over, so that horse-drawn sleighs now pass across in perfect safety, caused several deaths by freezing, completely disorganised all forms of transport and so tamed wild animals and birds that they are falling an easy prey to men or to the large packs of savage wolves which have come down from the mountains and forests and invaded even the bigger towns, doing great damage to stock and taking a toll also in human life.

CYPRUS.

Nicosia, February 13.

The Greek Archbishop and Mr. T. P. O'Connor.

His Eminence the Greek Archbishop having written to Mr. O'Connor to congratulate him on his eightieth birthday, has received from the "Father of the House of Commons" a letter warmly thanking him and expressing his sympathy for Cyprus, and adding that he fully adheres to his sentiments regarding oppressed peoples, including those of Cyprus.

The Weather.

Severe cold has been felt throughout the island. The "river" Pedias, which flows by Nicosia, has brought down large volumes of water and threatened some damage to properties. All other torrents have been heavily swollen. There have been heavy seas on the South Coast, and at Limassol damage to boats and the drowning of one fisherman.

Sericulture.

A Sericultural Conference is to be held on February 18 at the office of the Director of Agriculture. The development of the silk industry is one of great importance for the island, and one which can give employment to whole families in places where mulberry trees are available, since women and children can look after the feeding of the silkworms, while men are out in the fields. Unfortunately the factory in the Papho District has not been able to show satisfactory results for 1928. But it is to be hoped, as Mr. Breton has said, that when existing agreements with merchants and money-lenders expire, and indebted villagers, with the help of co-operative credit societies (which are increasing considerably in numbers), are free to sell their cocoons where they will, there should be a change for the better. But most things move very slowly in Cyprus.

The Orange Industry.

The orange industry is capable of very great extension. Besides the cultivation of the Jaffa and other good species of the fruit, there should now be a very large increase in the growing of bitter oranges. Excellent Cyprus marmalade is now sold in London, and the Cyprus Trade Commissioner in London, Major Flynn, has advised the shipment of as many bitter oranges as possible. The trees grow admirably in almost all parts of the island, and it is to be hoped that the opportunity will be taken rapidly to develop this branch, especially in view of the advertised increase of facilities to be given by the Prince Line of steamers for shipment to and from the United Kingdom.

General News.

Mr. Lee, who has been for some two years in Cyprus, and who, it was understood, would succeed Canon Newham as Chief Inspector of Schools, has left the island, and, it is believed, will not return. The Greek Press strongly advocates the appointment of a Greek to the post.

The draft law imposing a tax on dogs (those of shepherds and goat-herds to be exempt) is unpopular. Every month, it is complained, some new impost is invented; and the current joke is that it will no doubt be followed by a tax on cats.

Mgr. Kyrillos III. Basileion, Archbishop of Cyprus, is sending a Petition, signed by his Beatitude in the vermilion ink which he is privileged to use in virtue of a rescript issued by the Emperor Zeno, to both Houses of the Imperial Parliament asking that Cyprus may be united with Greece in spite of Mr. Amery's unfavourable reply of August 1, 1928, to a previous Petition in the same sense.

The transport *Neuraila* left Southampton for Egypt and India on February 19 with 94 officers, 29 warrant officers, and 1,131 other ranks, in addition to 102 wives and children. The troops were in charge of Lieutenant-Colonel Sir T. G. Cope, of The Seaforth Highlanders. Apart from a few men for Egypt, including 40 of The Durham Light Infantry and 25 of the Royal Tank Corps, the troops were bound for Karachi.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 7.

Afghanistan.

The position of India with regard to the situation in Afghanistan was the subject of a speech last mail day by Sir Denys Bray in the Assembly. "I am grateful," he said, "to Mr. Gyaprasad Singh for giving me this opportunity for making a statement on the position on the North-West Frontier with special reference to the upheaval in Afghanistan. The military situation has been normal throughout. Not a soldier nor a gun has been moved to the Frontier. The daily life of the Frontier garrisons has remained undisturbed." That may be believed, no matter how many statements to the contrary have been given circulation. It is the tradition of the Government of India rather to leave undone on the Frontier what should be done for the defence of the Indian empire than to do it too soon.

Viceroy and Pandit.

We were not kept waiting long for Pandit Motilal Nehru's reply to the Viceroy's appeal for more "sweetness and light," to use Arnold's phrase, in the Indian political struggle. In an interview with a representative of the *Pioneer* he said: "I must express my full agreement with His Excellency when he says that what all people must desire is a solution reached by mutual agreement between Great Britain and India, and that, in the present circumstances, the friendly collaboration of Great Britain and India is a requisite and indispensable condition to obtain it." The hope that such words were calculated to raise was soon dispelled; for, after speaking of what he himself had done to secure "the free exchange of opinion on terms honourable to all," the Pandit went on to say, "What has been the response so far? Nothing but ridicule, culminating in the crowning folly of appointing the Simon Commission in the teeth of united opposition by political India." There was not one word of ridicule uttered by any responsible statesman; neither by Prime Minister in the House of Commons, nor by Mr. MacDonald, nor by Viceroy in India, nor by Sir John Simon. As for "united opposition by political India," once again I may cite the late Lord Sinha's message, sent as the members of the Commission were approaching Bombay, "Economic evils, incapable of rapid remedy, combine with a natural sensitiveness and avoidable misunderstandings to provoke hostile demonstrations from certain classes which, I feel certain, you will appraise at their proper value." Lord Sinha was a more clear-sighted man and more deeply sincere than any other Indian politician that could have been named.

British India a British Creation.

The Pandit was equally disappointing in what he had to say on the Viceroy's sound point that, as British India is by general consent a British creation, it must be seen that the British influence cannot without great danger be suddenly withdrawn. "No one will dispute with His Excellency," he said, "the obvious fact that British India . . . is a British creation, and that it is the British power which has held together its constituents parts. In the events which have happened, however, I venture to differ from His Excellency in describing this influence as centripetal. I would characterise it as paralysing." There is no meaning in a man in whose mouth are such palpable contradictions, and worse than contradictions. He has committed himself to shouting for the moon, and he knows that, if he does not shout loud enough, he will be turned out to make room for Mr. Srinivasa Iyengar or another. Whether he would talk sense, if he was closeted with the Viceroy and Sir John Simon, is doubtful. I myself think it is too late; that the Pandit must be disregarded henceforth.

The "Pioneer."

The *Pioneer's* view is that Viceroy and Pandit should meet, and that speedily. That journal's reading of the situation is hardly mine; its opinion of the Pandit's political value I certainly do not share, but its view may be given. In a leader it had: "If, as we conjecture, both the minds of Lord Irwin and the Pandit are working along similar lines, then they should see the necessity for getting together and grappling with the real problem. Lord Irwin will, doubtless, be urged to remember that the Simon Commission is in being. . . . but the plain facts of the situation must be recognised. Most educated Indians will have nothing to do with the Simon Commission, and the parties grouped under the Pandit's leadership consider it anathema." As for educated Indians refusing to have anything to do with the Commission, the most brilliant sons of Oxford among the Indians who are my own friends are for the Commission as much as Lord Sinha was.

The Communists.

The Home Member, on re-introducing the Public Safety Bill (it was thrown out last session by one vote), assured the Assembly that the Bill was aimed only at the emissaries of Moscow, and that with full justification; for that some of the recent strikes in Bombay and Bengal had originated under "Red" influence, and had been prolonged by "Red" money, admitted of no doubt. Point has since been given to the Home Member's plea for more power for the Government by the latest news from Bombay, if rioting between Hindus and Pathans did not immediately arise out of a strike incident. The present anarchy in Bombay is a strike-engendered thing. No community has gained anything from the troubles of the last twelve months, and no community ever stood to gain anything. If Moscow was not insanely stupid, it would see that.

Railway Publicity Exhibition.

Delhi is preparing a Railway Publicity Exhibition intended to show to those fortunate enough to be near at hand that modern railway equipment is designed to make a wider appeal in India, on the one hand to the rural population, the railway's best customers, and on the other to rich travellers, and especially the American tourist. Of the millions of dollars spent annually by American tourists, it is estimated that India gets only about forty lakhs of rupees, or less than is spent in Egypt. If the number of visitors from America increases steadily, there is still room for expansion of that branch of India's "invisible" export trade. Railway Publicity Exhibitions in the States themselves are what are wanted. They may come.

"INDIA IN 1927-28."

Although interest in India, both in Parliament and outside, has been sensibly quickened by the events of the past few months, the task of those called upon to present an intelligent conspectus of Indian affairs is becoming more and more difficult and complex.

In the form introduced by Professor Rushbrook Williams, to which his successor has wisely adhered and in several directions actually improved upon, the annual Moral and Material Progress is probably the nearest approach to the ideal Blue Book that has yet been devised.

In the latest volume of the series—"India in 1927-28"—Mr. John Coatman, Director of Public Information with the Government of India, its present author, opens, as before, with a general survey of his vast subject, viewed primarily from the political aspect, before proceeding, in the ensuing nine chapters, to carry out a more detailed analysis of the main currents of India's social and economic life.

The report examines the political tendencies of the year; it emphasises the complexity of the subject and shows that

the feature of the new constitution, now under examination, has been the growth of provincial consciousness leading to "the increasing importance of provincial politics as compared with all-India politics." The political groupings in the provinces have been on communal rather than on ordinary party lines. The communal issue is explained at length and with lucidity, and its connexion with the attitude of the Swarajists and certain Liberals towards the Simon Commission is indicated.

An illuminating chapter deals with the economic condition of the people and shows how preponderantly rural is the population. Less than 8½ millions of India's 318,942,480 persons live in towns with a population each of 100,000 and upwards. There are only 35 of such towns. "Roughly 3½ millions lived in 54 towns whose population numbered between 50,000 and 100,000. Apart from these less than 21 million people lived in places which can be called towns even if we include in the latter category what really are villages with populations of less than 5,000." The conclusion is that the writer, who deals with the general economic condition of the Indian people, is "primarily concerned with the condition of the agricultural population consisting largely of an immense number of smallholders." The exposition of the work of the Agricultural Department in research, vocational training and crop development is especially valuable. An increase in the yield of rice, improvement in the type of wheat, the breeding of new varieties of sugar cane, improvement of the quality of the lint and increase in the acreage yield in the cotton crops—these are some of the aims of the Department, which has, within the limits of its financial resources, achieved remarkable success.

The value to the Indian revenues of a progressive forest policy is exemplified in the passages dealing with the operations of the Forest Department, which has at Dehra Dun a remarkable research institute, to the work of which special attention is paid. The new building designed to meet the growing needs of the institute is nearing completion and it is expected to be "the finest Forest Research Institute in the world." Another side of agricultural life—irrigation—also comes in for treatment. The huge canal works in the Punjab, of which the Sutlej Valley project is the latest, and the Sukkur Barrage in Sind naturally are accorded pride of place, but due note is made of the very important Sarda Canal and the Cauvery Reservoir works in the United Provinces and Madras respectively. The efforts made to tackle the housing problem in industrial centres and their connexion with the League of Nations' discussions at Geneva are noted. The unemployment problem is very different from the corresponding problem in England; "normally all the labour available can be absorbed and very often the trouble is not to find work for the workless, but to find workers for the work." But unemployment among the educated classes "constitutes a problem which is becoming more and more serious every year." New avenues of employment are needed, Mr. Coatman urges, and he hopes that the growth of industry and rise of new forms of industry will assist.

The Posts and Telegraphs Department, with its 22,000 post offices and 110,000 officials ranging from high secretariat officers, skilled experts and engineers to "primitive jungle and hill folk," who "constantly run the risk of death from wild beasts and accidents by flood and field," carried on an increasing business described in figures of "almost astronomical dimensions." During the year the Department carried 548,000,000 letters, 83,000,000 registered newspapers, 93,000,000 packets and 16,000,000 parcels—an increase of 20,000,000 on the total number over the figures for the previous year. Thirty-seven million money orders to the total value of about £69,000,000 were issued, the commission realised being about £890,000. The percentage of non-delivered articles of whatever class was only .04—"a fine standard of achievement" as the Report justifiably observes.

Coincident with the retirement after 21 years' service of Mr. J. H. Field, the father of "upper air research in India," mention is made of the virtual completion of his

scheme for the transfer of the Meteorological Department's headquarters from Simla to the more commodious site at Poona. The fiscal policy of India of to-day is reviewed in the light of the canons laid down for the guidance of the Indian Tariff Board in carrying out the policy of discriminating protection. There will be general agreement with Mr. Coatman's conclusion that "the producer class of India sees clearly enough where its interests lie and how these are to be safeguarded, whilst the consuming class, which, as far as foreign trade is concerned, is the vast majority of the people of this country, apparently takes no interest in the tariff question."

The quietude on the frontier already noted has inspired a concise elucidation of the problem of defence of India's 6,000 miles of land frontier, and the Report, after making passing reference to liveliness among the Afridis and Oraksais—mainly domestic—settles on Waziristan as specially requiring study, for it is "the ancient storm centre." We are shown how "the modern version of the forward policy—a policy of roadmaking and civilisation—has brought comparative peace to Waziristan" . . . there has been a continuation of the progressive improvement in conditions which augurs well for the maintenance of peace. Many tours which would have been impossible four or five years ago have been made by Political Officers, including one to the summit of Pre Ghal, the highest mountain in Waziristan. "And the Mahsud and Wazir tribesmen have participated in the work of peaceful road construction"—to their own financial advantage. It is even hoped to put in effect without delay a five-year programme for the opening of schools in tribal territory. The Government of India's campaign against slavery in the Triangle area of Burma found reflection in Chitral by the efforts of the Mehtar, as the ruler of Chitral is called, to put an end to the feudal "khanasad" system and by the promulgation of a decree by the Khan of Kelat for the abolition of slavery throughout that State. The liberation of slaves of all kinds was achieved during the year in implementing that decree. The Government of India's solicitude for the welfare of Indian settlers in Kenya and British Guiana impels a close examination of conditions in those Colonies, and further improvement in the relations between the South African and Indian Governments over the Asiatic problem in the Union is reported, together with a special tribute to the work of the Right Hon. V. S. Sastri, India's first Agent in South Africa.

Of particular interest, in the light of recent events in Bombay, Calcutta, and other centres, is the chapter devoted to the question of law and order. Here, as in the chapter on finance, the author, himself a former member of the Indian Police, goes somewhat outside the limits of a mere chronicle of the year's events to present, as a background to current happenings, the division of powers and functions between the Central Government and the Provinces, and to explain the structure of the Provincial Government and the meaning of the terms "reserved" and "transferred" as applied to its departments.

The report concludes with a cursory examination of the administration of the transferred departments of education, engineering, agriculture and local self-government. Taking the last subject first, it states that where the local bodies have been manned by keen and public spirited members, the work has been good. "Where men of inferior fibre have been elected, their work has been indifferent or bad." So it is considered, "not easy to form an opinion." In the domain of public health, further efforts to cope with malaria, kala azar and leprosy are recorded, while in the educational field the attempts to break down the prejudices barring the women's way to advance are noted. The greatest need is for the systematic encouragement of the dispensary system in the former, and for the more rapid increase in the number of female scholars in the latter sphere. The co-operative movement is described as in a good state of health, but in certain provinces setbacks were recorded. The final verdict on all these provincial activities is that something has been done "to improve the conditions of living, the civic capacity and"

the economic conditions of the masses of the country, and if progress seems often to observers to be disappointingly slight and slow, the level from which the progress started must be remembered."

THE AHMADIYYA COMMUNITY.

The Ahmadiyya community has submitted to the Simon Commission a carefully framed memorandum in which the principal questions before the Commission are discussed at length. This community is a sect, or division, of Islam, which was founded nearly forty years ago by Mirza Ghulam Ahmed, who claimed to be, in his own person, both the Mahdi or guide, foretold by Muhammad, and the Messiah foretold by the Hebrew prophets. A considerable number of adherents gathered around Ahmad, attracted to him by his eloquence and piety. Nor did they forsake his teaching when he died—in 1908. On the contrary, at the present time his disciples number more than a million. They are mostly in India and other parts of the British Empire, but some are in Persia, Egypt, and elsewhere. On his death Ahmad's place was taken by Maulvi Nur-ud-Din, who in turn was succeeded by the present head of the movement Hadrat Mirza Bashir-ud-Din Mahmud Ahmad.

The sect has its headquarters at Qadian in the Punjab, where the memorandum was published. Broadly stated the position taken up by the framers of the memorandum is that India should become a federation of States or provinces consisting of a central government and of a number of provincial governments. This Federation would be within the British Empire. But complaint is made that in some of the Dominions Indians are treated as being worse than aliens; and equality of treatment is demanded. Without this equality Indians will not, it is affirmed, take any pride in the Empire, and will want to cut adrift. It is pointed out that provincial autonomy is a necessary precedent to the establishment of a federal system, and the powers and duties of the provincial governments and of the central government are discussed in considerable detail. It is of interest to note that dyarchy is not condemned by the writers of the memorandum. On the contrary, the opinion is expressed that there is no other practical plan whereby responsible government can be gradually introduced in India. But it is asserted that dyarchy has not been given a fair trial. The method of selecting Ministers, and the *bloc* of official votes in the Provincial Councils, have had the effect of "practically keeping even the transferred departments in the groove."

It is recommended in the memorandum that immediate steps should be taken in the way of increasing the number of the transferred subjects, and of limiting the authority of the Governor in the reserved departments. It is insisted that the transference of powers must be complete: "Unless there is a complete transference of powers we could neither call this experiment a fair trial, nor the system of dyarchy in its true sense." The memorandum favours provincial legislatures of the uni-cameral type. Second Chambers in the provinces will not, it is suggested, serve any useful purpose, but will on the contrary tend to delay and to obstruct legislation. In the Central Government also the writers of the memorandum would have only one legislative chamber. They regard the establishment of the Council of State as one of "the glaring mistakes" of the Reforms scheme. They accordingly recommended "its total abrogation from the Constitution. This recommendation is unsupported by any reason except that the establishment of the Council of State took away from the Assembly whatever rights and powers were bestowed upon that body. This disputable proposition does not seem to us to be sufficient to show that in any great Federation of States such as it is hoped that India may be, a Senate is unnecessary or mischievous."

As is natural in a representation from a minority community the need for the protection of minority interests is strongly emphasised. It is admitted that theoretically the system of joint electorates is the ideal at which to aim; and that if India is to advance politically it will have to

adopt the joint system. But it is urged that at the present time it would be impossible to make a greater mistake than to discard the system of separate or communal electorates. "India is at present in the grip of communal and sectarian bias. No community reposes faith in the other. The majority is not prepared to concede even its bare rights to the minority. Government offices, universities, commercial and industrial markets, Chambers of Commerce and even judicial awards afford instances of the communal bias that reigns rampant throughout the length and breadth of India. If under these circumstances the system of joint electorates were thrust on the people, there would be no room for the uplift and advancement of the Muslims, the depressed classes and other minority communities in India with the exception perhaps of one or two favoured ones." This is plain speaking, and it is convincing evidence of how acutely the minority communities dread the rule of the majority. The same view is reiterated just as strongly at the close of the memorandum where it is insisted that "it is absolutely necessary that the rights of minorities should be properly safeguarded" just as has been done in several European countries. "The future constitution of India should definitely contain proper safeguards for the rights of Muslims particularly with respect to separate representation, proportionate share in the services, non-interference in religious matters, language and education. Without such safeguards the reforms would be no reforms for the Muslims and the representative form of government will merely exist in name."

We have not been able to do more than merely to outline a few of the main features of an interesting memorandum. It does not, of course, claim to speak for the whole of the great Muslim community in India, of which the disciples of Ahmad constitute only a small fraction. But in these days when Hindu opinion is expressed so constantly and so loudly a reasoned presentation of the Muhammadan view is welcome.

The Fourth PALESTINE and NEAR EAST EXHIBITION and FAIR

will be held at
TEL-AVIV during APRIL 1929

Business houses wishing to trade with Near Eastern countries should avail themselves of this opportunity of reaching territories that spend annually £80,000,000 on imports. As it attracts tens of thousands of visitors from Palestine and neighbouring countries, this Exhibition presents unique possibilities to all traders wishing to reach the important markets of the Near East.

CLASSES OF EXHIBITS:

Building Materials, Agricultural and Industrial Machinery, Raw Materials & Semi-Manufactured Articles, Electrical Appliances, Motor Cars and Bodies, Radio sets and parts, Various Manufactured Goods, etc., etc. :: :: :: ::

For all particulars apply to:—

The Mischar w'Taasia Co., Ltd.
P.O.B. 21, TEL-AVIV, PALESTINE.

or to

London Representative: G. Bradlaw,
3, Bedford Square, London, W.C.1.

THE RULE OF THE ROAD IN IRAQ.

(From a Correspondent.)

The news that the rule of the road in Iraq has been changed will be no surprise to those who have been in the habit of travelling by car between the Mediterranean and Persia. In pre-War days the rule of the road in Iraq, as in the rest of Turkey, was the Napoleonic rule—*viz.*, carriages keep to the right: this was and is also the rule in Persia and Russia. On the arrival in Basrah shortly after the outbreak of war of wheeled transport from India, the Military Governor, under instructions from the Military Authorities, gave orders that the British rule of the road should be observed.* This was, at the time, reasonable, as the whole Force was drawn from India, where the older—that is to say, the English—rule of “carriages keep to the left” applies, and the only wheeled vehicles in the Basrah vilayat were some twenty or thirty cabs plying for hire between Basrah and Ashar. With the development of communications and the growth of road traffic—cars and lorries—between Iraq and other countries, the change of rule at the frontiers had long been a source of inconvenience and even of risk, and the Iraq Government are to be congratulated on having faced the situation and made the change.

At the same time, it may be of interest to readers of THE NEAR EAST AND INDIA to know something of the history of the rule of the road, in England and elsewhere. In England, ancient custom, embodied in the Highways Act of 1835, requires the driver of a carriage to keep to the left or near side of the road when meeting any other carriage or horse, whereas on the American continent (with the honourable exception of Panama) and over most of Europe, the opposite rule holds good. Before the advent of wheeled traffic, transport was by pack animals, and pack-trains kept to the off side of the road, so that a mounted man leading a pack horse by a rope in his right hand could better control both his animals. When wheeled traffic began to make its appearance both in England and abroad, it was at once realised to be convenient that it should keep to the left, so that a mounted man with a led horse could interpose himself between the carriage and the led horse, lest the latter should take fright and block the road.

The pack horse was gradually displaced by wheeled traffic, but the old rule was maintained in England, and to this day (though town-bred motorists occasionally show their ignorance of the fact) the customary rule of the road is that led horses should be on the *right* of the road and should be passed by oncoming traffic on the *left*.

In the interests of safety and common sense it is much to be desired that this salutary custom should be extended, if need be by law, to all mounted men, and to perambulators and pedestrians where no footpath exists, *viz.*, that all should keep to the right of the road, in which position they will be in no danger of being run into by cars approaching from behind, while they are in a position to see, and to avoid, the traffic nearest to them.

The rule of the road in France was the same as in England until it was altered at the Revolution, along with the calendar and other respectable institutions, apparently for the sake of being different from the rest of the world. The example thus set was followed in the U.S.A. and by most European countries, although, if the recollections

of the writer of this note serve him right, Hungary and Denmark and a few other countries stick to older ways.

Before the pundits of the League of Nations change the calendar, they would do well to try to obtain universal agreement on the rule of the road. Iraq has shown them the way!

NEWS IN BRIEF.

It is announced that the suggested Zeppelin flight over Egypt and Palestine will not take place.

Mr. Van Lear Black, the American who is on a flight round the world, arrived in Cairo on February 21 from Athens.

An expert committee has been appointed to study plans for the construction of a bridge across the Save between Belgrade and Semoun (Zimony or Semlin).

A relief fund, under the presidency of Mgr. Chrisóstomos, Archbishop of Athens, has been opened for the benefit of victims of the floods in Greece.

Mgr. Visar Juvani, Archbishop of Tirana and Dürres (Durazzo) has been elected President of the Holy Synod, which is the governing body of the Orthodox Church of Albania.

Two undergraduates of the North-Western University, Chicago, who reached London on February 19, after completing 16,000 miles of a world tour with a motor-cycle and sidecar, left the following day for the Balkans.

MM. Le Brix and Paillard, who are making an experimental mail-carrying flight from France to Indo-China, arrived in Cairo on February 20, whence they flew to Basrah in 9½ hours. They left immediately for Karachi.

The R.A.F. Squadron which left Cairo for Cape Town on February 12 arrived there last week. The squadron is co-operating in manoeuvres with the King's African Rifles to test the ability of the concealment of troops from aircraft.

According to the Yugoslav journal *Vreme*, a Government Press Bureau, with a State Secretary at its head, will open on April 1 as the sole source of news concerning the Government's policy and actions.

Marshal Bergmann, who was in command of the Russian armies in the Caucasus at the beginning of the Great War, and was known as the conqueror of Erzeroum, which he captured from the Turks in 1914, died in Marseilles on February 19.

A Muslim of Nablus (Palestine) has been sentenced to a week's imprisonment for having desecrated the Muslim Fast of Ramadhan by eating during the daytime, when, according to the Shari Law, the taking of food is only permissible after sunset.

The elections for the return of 16 members to the Trans-Jordanic Legislative Assembly ended on February 18. Only three Opposition candidates were returned. The whole election was quite peaceful. The first Session of the new Assembly will begin in the middle of next month.

During the coming spring Professor I. Borca, of Jassy University, accompanied in all probability by M. Calinescu, Inspector of Roumanian State Fisheries in the Dobruja, is to follow up his discovery last year of the bones of a mammoth by further investigations near Ekrene.

Captain Maxwell Barsham Sayer, R.N.R., of the Cadet Training Ship H.M.S. Worcester, off Greenhithe, who as Marine Superintendent of the War Office in the Inland Water Section was responsible for the dispatch of all War Office vessels to Mesopotamia (net personality £3,986), left £4,481.

Lord Lloyd, High Commissioner for Egypt, arrived at Khartoum on February 23 on an official visit to the Governor-General of the Sudan. He travelled by launch from the Upper Nile, and was escorted to the river steps of the Palace by a squadron of the Royal Air Force. He was received with a salute of seventeen guns.

Fresh swarms of locusts have invaded Trans-Jordan north and west of Madaba and also at Shuneh in the Jordan valley. Defensive measures are at present delayed, as heavy rain is making the movement of wheeled transport impossible off the roads. Other swarms were last week reported from Beersheba, in Palestine, to be moving north-eastwards.

Owing to the prevalence of floods in Macedonia and Western Thrace, and the interruption of communications by snow in other districts, the Greek Government has decided to postpone the election for the Senate, which had been fixed for March 3, until April 21. The meeting of the Chamber has also been postponed until after that election, when a special session will be arranged.

* Re-enacted in Basrah by the Municipality on February 15, 1918 (Regulation No. 11).

PERSONAL AND GENERAL

TO-DAY

February 28, 1929 (New Style).
February 15, 1929 (Old Style).
Ramadhan 18, 1347 A.H., of the Muslim Calendar.
Adar I. 18, 5689, of the Muslim Calendar.

Sir Claude and Lady Hollis have left London for Zanzibar.

Sir Henry Dobbs, who has just retired from the High Commissionership of Iraq, arrived in London last week.

The Hon. Oliver and Mrs. Brett will return to London from Egypt on March 10.

Lady (John) Davies and Mrs. G. A. Sawyer have left London for Egypt.

Viscount Inchcape, of Glenapp Castle, Ballantrae, has been appointed a Deputy Lieutenant for the County of Ayr.

Sir John and Lady Henry, who left Nutwood on February 26 for Egypt and Palestine, will be away for two months.

Brigadier-General Sir Ernest Gascoigne arrived from India at Marseilles on February 22 in the P. and O. s.s. Ranpura.

Field-Marshal Viscount Allenby and Viscountess Allenby will return to 24, Wetherby Gardens on March 3 from Scotland.

Lady Beecham, Mr. Adrian and Mr. Thomas Beecham have left the United States to spend the winter in Egypt and Palestine.

Lord Waring has returned to 13, Portland Place from Cannes, where he made a short stay on his way home from the United States.

Sir Cyril Kendall-Butler has returned to 129, Mount Street from India, arriving at Marseilles on February 22 in the P. and O. Ranpura.

Lord Castlemaine will return to Langham House, Ham Common, on March 10 from Egypt. Lady Castlemaine will join him later in the month.

The Hon. Thomas Frankland and the Hon. Mrs. Prior-Palmer have arrived in England on their return from India, and are at Loxwood House, Horsham.

Sir Gilbert Clayton, the new British High Commissioner in Iraq, left Constantinople on February 22 for Baghdad, by way of Syria and Palestine.

Sir George Boughey, Secretary of the Royal Empire Society since 1921, has had to resign his position owing to the demands of other interests on his time.

Brigadier-General Sir Henry Page Croft, M.P., and the Hon. Lady Croft are expected to return to 15, Southwell Gardens towards the end of this week from Egypt.

M. Paul Lessinoff, Counsellor to the Bulgarian Legation, and Mme. Lessinoff have returned to Sidmouth Lodge, The Boltons, from the Continent, where they have been on leave.

Sir Granville Ryrie, High Commissioner for Australia, who has had a severe attack of phlebitis during his stay in Egypt, has now left, on his return to England. He will arrive in London about March 10.

Mr. and the Hon. Mrs. Melville Portal with their son left Marseilles on February 9 in the s.s. Leicester-shire to join Viscount and Viscountess Goschen in Madras.

Sir Howell J. Williams left Marseilles in the s.s. Rajputana on February 22 on his way to Bombay.

The Maharaja of Burdwan, who left for India at the end of November for the marriage of his son, Maharaj Kumar Abhay Chand Mahtab, has returned to 20, Kensington Gore, S.W.7.

OBITUARY.

GENERAL SIR JOHN MAXWELL.

The death occurred last week at Cape Town of General Sir John Maxwell, whose name was closely connected with the history of Egypt. He served in Egypt and the Sudan with great distinction, almost continuously from Tel-el-Kebir in 1882 until the outbreak of the South African War. Between 1908 and 1912 he was G.O.C. Egypt. When the Great War broke out he was sent to Egypt, of which he had very special knowledge. After the evacuation of Gallipoli, and the consequent swelling of the Egyptian Expeditionary Force, Sir John was sent to Ireland to deal with the Sinn Féin insurrection. After the War, however, he resumed his keen interest in Egyptian affairs, particularly in Egyptian archaeology. Archaeology, indeed, was one of his strongest interests, and he strongly supported British endeavours in that field.

SIR HENRY WOODS PASHA.

Sir Henry Felix Woods, who served under the Turkish Government for forty years, died last week at the age of 87. He entered Ottoman service in 1869 as a naval instructor. A year later he married one of the Whittalls, of Smyrna. He effected a thorough organisation of the Turkish fleet, and was completely trusted by the Sultans and their Ministers. After his retirement in 1909 he remained on in Turkey, and only left Constantinople for England when the War made his position impossible. His son, Colonel H. F. Woods, is Commercial Secretary to the British Embassy in Constantinople.

Monsignor Koróshetz, the former Yugoslav Prime Minister and leader of the Slovene Catholic party in the Belgrade Parliament, has been appointed Yugoslav Minister to the Vatican.

M. Dukitch, chief of the Chamber of Accountants of the Yugoslav Ministry of Finance, shot himself in Belgrade on February 24 as he was about to be arrested on a charge of fraudulent conversion of large sums of money.

Colonel George Dodd Martin, M.C., died on February 20, at the age of 45, at Ahmedabad, where he was serving with his regiment, the 4th Battalion (Bhopal), 16th Punjabis. He was commissioned to the Manchester Regiment in 1902. Going out to India in the following year, he was gazetted to the 11th Punjabis. He served in France and Belgium from the first arrival of Indian troops to the middle of 1915, when he was transferred to Egypt. But it was, according to *The Times*, Iraq which claimed him on war service from the end of 1915 to the close of the War. He was General Staff Officer in Iraq from May, 1918, to July, 1919, and again from October, 1920, until August, 1921. There followed 18 months' service as D.A.A.G.

THE WEEK AT HOME

London, Tuesday Morning.

"Thawsday."

Last Thursday the Great Thaw followed the Great Frost; and the two will be equally remembered. The *Evening News*, in one of those all too seldom inspired posters, came out with the placard "Thawsday"; but before that we were all aware of the disappearance of the frost and of the consequent reappearance of water.

For burst pipes and tanks were the rule, rather than the exception. Water poured everywhere in the houses; ceilings fell down; furniture was ruined; housewives grew desperate. Plumbers were many, but they were all too few. Frantic telephone calls always revealed the fact that nine or ten people whose tragedies antedated one's own had prior claims on the precious plumber's services.

But slowly the damage is being repaired. Everywhere one can see new pipes and new tanks being carried. In a few days we shall all be ready for the next Frost; and the plumber will have sunk again into his undeserved obscurity.

One pitiful feature of the frost was the killing off of birds. These poor creatures simply could not find enough to eat to keep warm, and to judge from the few corpses one has seen oneself, they must have died in thousands. Those that have survived the ordeal are rather sorry-looking, ragged-feathered and generally bedraggled. Yet on Saturday I found them in the countryside singing like mad for joy at the change in the weather. All, from the finches to the robins, were joining in the chorus of gratitude.

The Dullness of Politics.

As the election grows nearer and nearer, so it is being forced upon us that the real issues are lamentably small. There is, in fact, about politics at the present moment an air of unreality; politicians seem to be playing a game, their antics only bore. The number of men in the average railway carriage who take seriously the assertions of politicians is negligible; that of women even more negligible. In some places there is doctrinaire belief in the efficacy of the untried; in others there is sentimental hope that the "old uns" will be returned. But of real enthusiasm there is little trace indeed.

This is partly the reason that when a student of politics does say something out of the ordinary he gets listened to. Thus Mr. G. D. H. Cole the other day said that if by constitutional methods the Socialist Party is returned to power, it will proceed to achieve its ends, not by demo-

cratic but by bureaucratic methods. Not a profound nor original saying, truly; but one so far removed from the dusty commonplaces of politicians that it is receiving wide comment.

The truth is—but the truth is hardly ever faced by the vote-catching politicians—that very few men believe wholeheartedly in democracy. The democratic method is a convenient method to obtain a position; but that position obtained, it is by other than democratic steps that measures of resounding importance can be achieved.

As for a forecast of the General Election, it is increasingly difficult. One who lives in the South of England must be influenced by his environment, and I do not think that there is much doubt that the South will on the whole favour the Conservatives. But of the industrial North I know nothing. It is said to be gaining Socialist adherents every minute. From the papers of the North one can gather little, for they are either Conservative or Liberal.

Somebody ought to know the feelings of the country; somebody ought to be able to rouse intense enthusiasm, or to provoke intense irritation. But there is neither great hope nor great fear, but only an all-pervading indifference. The politicians, particularly the Conservative and Liberal politicians, are indeed creatures "moving about in worlds not realised."

Ireland For Ever.

As an instance of the degree of importance which people attach nowadays to the doings of Parliament, the recent fuss made over the reconsidered decision of the Cabinet to pay in full the claims of the Irish Loyalists may be put forward. It almost seemed for a day or two, when those papers which always advocated Home Rule strongly deprecated the yielding of Mr. Baldwin, against the strong advice of Mr. Winston Churchill and of Mr. Amery, to the insistent demands of that group which does not mind being called "Die-Hards," and those papers which opposed the Irish settlement by the Coalition Government blessed his ultimate wisdom, as if Ireland were becoming a factor again in English politics!

But public interest, despite the frenzied efforts of partisan journals to keep it alive, soon evaporated; and there was, I dare say, more comment upon the unexpected Rugger defeat of Ireland by Scotland at Dublin last Saturday, than upon the unexpected surrender of the Government in payment of a debt of honour. In any case, the whole affair seems to have done little good to the reputation of the Government, although here again, as usual, Mr. Baldwin himself is omitted from the general condemnation, it being held that he managed the submission with most becoming adroitness.

Noise and Ugliness.

The struggle that is now going on in England between what may very roughly be called culture and civilisation is a most interesting one. Civilisation, by which one means Americanisation, free and uncontrolled play to scientific discoveries, mechanical means of transport, utilitarian buildings, public advertising, and so on, appears to be winning; but the appearance may be deceptive.

There is a tremendous war against ugliness and for the preservation of beauty in our towns and countryside. The work of such societies as those at Oxford and Cambridge I have frequently mentioned, and also that of the Society for the Preservation of Rural England, and of the Society for the Protection of Ancient Buildings. This work cannot be too well known.

In London the utilitarian is increasingly with us. A few days ago, for instance, the City Corporation decided to abolish the picturesque little shops which stand by St. Ethelburga's in Bishopsgate. Everyone who has passed them must have felt the jollier for it, for they are the queerest, most delightful little pre-Fire edifices imaginable. But what is sentiment; what is history to a Corporation?

Nor is the battle less to be fought in which mechanical things themselves are concerned. Last week, for example,

Dr. Dan Mackenzie in his Chadwick Lecture spoke on the injurious effect on the national health of ugly noises. This is, admittedly, a more debatable matter. There are some who exult in mechanical noise, musicians who dote on the pneumatic drill, journalists who are inspired by the click of typewriters and machines. One gets used to horrid things. Most of us remember how difficult it was at times in the War to sleep when the guns were not firing.

On the whole, however, there is little doubt that Noise is an invention of the Devil. The back-firing of motor-bicycles has spoiled more symphonies than it has created. Silence is always excellent for the soul.

ALTER EGO.

Book Review

THE WORLD OF ISLAM.

"ACROSS THE WORLD OF ISLAM." By Samuel M. Zwemer. (New York: Fleming H. Revell Company. 4 vols.).

The Reverend S. M. Zwemer certainly needs no introduction to Western readers interested in the Near and Middle East, for he has been for some thirty-eight years travelling over this territory, seeking to organise means for converting Muslims to Christianity, and publishing his impressions. Of the sincerity of his aims there is no question: that is agreed by his adherents and his enemies alike. But what to some will seem idealism of the highest kind to others appears as impertinent fanaticism. So persistent and informed a critic of Islam kindles both enthusiasm and irritation. This is no place to take up theological quarrels, and it may well be that the wisest view to take of Christian missionaries in the Islamic world is to measure their results, not in the number of "converts," but in the general influence exerted by them on their surroundings. It is further to be remembered that the "fanaticism" of an earlier, more ignorant generation of missionaries has largely been replaced by less "superior" ways of approach.

It is, then, less from the "missionary" angle that one would wish to judge this book, which is made up of random, but not wholly disconnected, essays upon the present condition of the various Islamic countries, from the Sudan to India, and upon the prospects of a departure from Islam to Christianity. The book suffers, admittedly, from the nature of its composition: it bears traces of over-hasty piecing together, particularly in the allocation of photographs, and some of the articles have not been brought up to date. But it is undeniably an extremely useful summary of an extremely complicated problem, and although the angle of perspective may be the same for each country, there can be very few students of Islam who will not be under some debt of gratitude to the untiring Editor of the *Moslem World* for having collated his impressions of and his information upon the most recent conditions in the world of Islam.

Dr. Zwemer begins his book by assuming that a grand and final struggle for world dominion between Christianity and Islam is now in process, that the minds of Muslims have already been disturbed by the preaching of Christian doctrines, and that they are ready, therefore, for some most significant decision. There is no need here to expatiate on this large assumption, except to remember that it is made by almost every Christian missionary in the Islamic world.

The author rightly begins by examining the relations of the British Empire with Islam. This American observer does not stint his admiration of the British Empire. For instance:—

The Moslems of India, of the Federated Malay States, of Egypt, Palestine, the Sudan, and Nigeria owe a debt of gratitude to Great Britain which it would be difficult to exaggerate, and which the impartial historian will record indelibly in spite of prejudice or denials on the part of those who are unacquainted with the facts. . . . Arabia is an outstanding example of the benefits to the world at large of a Pax Britannica.

He thinks, however, that Islam is too rigorously re-

spected in certain countries, notably the Sudan. Yet he states that it is in the Sudan that "we see British rule at its best." He draws a vivid picture of Christianity and Islam struggling in the Sudan for mastery, and although he seems to favour more "interference" with the Muslim religion, he does quote approvingly some words by Bishop Gwynne which show that the English example of clean and just living in itself has a revolutionising influence upon the world of Islam.

We have no space to deal with Dr. Zwemer's examination of the condition of Islam in Russia, India, Java and the Dutch East Indies, North Africa, and South-Eastern Europe, but it is well worth study. His summary of the position in Persia is particularly interesting. This Shiah country is, he thinks, facing two futures: the future of Moscow—no religion—and the future of Christianity. He thrills to the fact that there were once bishoprics in Ray and Herat, Gilan, Yezd, Herman, Isfahan, and Shiraz; and is profoundly hopeful that it may be so again.

Quite certainly there will be violent disagreement in some quarters with Dr. Zwemer's diagnosis of what is wrong with the world of Islam and with his preferred cure. His book is propaganda, full of prejudice. But it is not the poisonous kind of propaganda, nor the ignorant, baseless kind of prejudice. His essays might conceivably mislead the uninformed, but to the informed we imagine that his collection will provide considerable stimulus.

BOOKS RECEIVED.

The negotiations between Turkey and Bulgaria have resulted in the conclusion of a Pact of Neutrality and Arbitration.

The Roumanian Chamber on February 22 voted the ratification of the Litvinoff Protocol, giving immediate effect to the Kellogg Pact as between Russia, Poland, Roumania, Esthonia, and Latvia.

The decree dealing with Yugoslav State central administration will, it is reported, raise Zagreb (Agram, the Croatian capital) to be the second royal residential city of Yugoslavia, the intention being that the court shall each year make a long stay there.

General Sir Arthur Henry Fitzroy Paget, of Warren House, Kingston Hall, Surrey, Major-General of the Scots Guards in 1900, who saw active service in the Ashanti War and in the Sudan, and commanded the Forces in Ireland, 1911-17, died leaving unsettled estate of the value of £22,708, with net personalty £18,098.

The Egyptian Post Office on February 11, in honour of the ninth birthday of Prince Farouk, son of King Fuad, issued a special stamp. Bearing a three-quarter length portrait of the heir apparent, these royal birthday stamps were sold for one week only, and not more than 50 sets could be purchased by any one applicant. Offset in large upright rectangular format, and inscribed at the foot "Prince Farouk 1920-1929," the series comprises 5 millimes chocolate, 10 mils. carmine, 15 mils. ultramarine, and 20 mils. eau de Nil. The 20 millimes Egyptian special delivery stamp has just appeared in a new bi-coloured printing—namely, red and black, instead of green as hitherto.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Tel-Aviv Fair.

Special interest attaches to the fourth Palestine and Near East Exhibition and Fair which is to be held in April at Tel-Aviv, as the period of the exhibition will coincide with the twentieth anniversary of the establishment of that Jewish centre, and no doubt very many people interested in the Jewish movement in Palestine will take the opportunity of visiting Tel-Aviv and seeing the Fair at the same time. The scope of the exhibition, the importance of which is increasing from year to year, is considerable. There will be sections for industrial and agricultural machinery, builders' plant, electrical goods, wireless apparatus, motors and motor cycles, and raw materials for local industries. The situation of Palestine gives the country distinct advantages and possibilities as a distributing centre for neighbouring regions, and the Tel-Aviv Fair promises to become an important medium for this trade. It is significant that a number of foreign countries are taking a very keen interest in the Fair, among them being Germany and Italy, who are two of the chief rivals that British traders have to contend with in the Near East. The fact that they consider the Fair at Tel-Aviv a valuable medium for trade development will act, it may be hoped, as a spur to British manufacturers, whose attitude in recent years towards so many Near Eastern markets has been rather lukewarm. Coming so soon after the British Industries Fair the Tel-Aviv event offers a unique opportunity of pressing home the advantages that they will have gained by representation at the White City and Birmingham, and of introducing their goods to the very centre of the important Near Eastern markets where they must be to the front if Great Britain is to regain her pre-War position.

Greece's Trade in 1928.

Statistics are now available for the foreign trade of Greece in 1928. The imports totalled 2,359,156 tons of the value of 12,488,122,000 drachmæ, while the exports amounted to 645,493 tons of the value of 6,282,075,000 drachmæ. In sterling the imports were £33,501,000 as against exports valued at £16,652,000. It is an interesting fact that while with the exception of 1926 the tonnage of the imports has been steadily growing, the value, again excepting 1926, has fluctuated comparatively little and for 1928 was less than for 1927 when the tonnage was 2,275,218. On the other hand, both the tonnage and the value of the exports have steadily risen, pointing to the fact that while prices for commodities abroad which Greece purchases have on the whole tended to fall the prices for the commodities which Greece exports have remained steady. America headed the list of countries from which Greece drew her supplies in 1928 with 2,036,434,000 drachmæ, Great Britain being second with 1,795,426,000 drachmæ, Germany third with 1,071,171,000 drachmæ, Roumania fourth with 769,990,000 drachmæ, and France fifth with 867,296,000 drachmæ. In the list of countries importing from Greece Germany is first with 1,627,444,000 drachmæ, America second with 1,256,210,000 drachmæ, Italy third with 1,068,638,000 drachmæ, Great Britain fourth with 827,570,000 drachmæ, and France fifth with 313,168,000 drachmæ. An analysis of the items of the trade make interesting reading. The principal commodity imported

by Greece was wheat to an amount of 475,991 tons and a value of 2,364,768,779 drachmæ or nearly four times the value of the second item in the import list, cotton goods, which figured for 662,891,798 drachmæ. The other leading imports were coal, 475,704,852 drachmæ, sugar, 451,065,218 drachmæ, and wood for construction, 402,660,364 drachmæ. The place taken by wheat in the import list makes it easy to understand the great importance attached to the various reclamation schemes, which it is hoped, will render Greece independent of foreign wheat. Tobacco dominated the export list almost to the same extent as wheat did on the other side of the account with 48,906 tons of the value of 3,211,897,148 drachmæ, currants being second with 79,471 tons of the value of 959,725,057 drachmæ.

Cyprus Trade.

Details will be found elsewhere in this issue of the foreign trade of Cyprus in 1928. The feature of the trade was the increase in the imports, the value of which amounted to £1,840,442, as compared with £1,585,940 for the previous year, and £1,570,278 for 1926. The value of the exports, on the other hand, showed a decrease of £107,103, the total being £1,435,767, as against £1,542,870 for 1927 and £1,103,571 for 1926. The slight fall in the exports was mainly due to the shortage of crops, and the fact that imports have risen as they have done indicates plainly the improving prosperity of the Island. As pointed out in the report, there are important items which rank as invisible exports which have to be taken into account when estimating the adverse trade balance, such as the tourist traffic, which is becoming each year a more important factor. It has also to be borne in mind that the imports include machinery and similar commodities. One of the most interesting features of the import trade of the year was the importation of 474 motor cars, and the fact that the Island is now such an important market for motor vehicles will, it may be hoped, be appreciated by British motor manufacturers, for it is only one of many indications of the growth of the use of the motor in the Near East. In the Balkans, for instance, the work of developing the roads is now a matter of constant attention, and it follows that the markets for motors in that region will be developed considerably in the near future.

Yugoslavia's Adverse Trade Balance.

Yugoslavia's commerce in 1928 was affected by two unfavourable factors, the bad harvest of the previous year and the unsettled political conditions, and the consequence was a substantial increase in the adverse balance of trade. The value of the imports was 7,835,300,000 dinars as against 6,444,600,000 dinars for exports, there being an unfavourable balance of 1,390,000,000 dinars as compared with one of 886,000,000 dinars for 1927. It is a hopeful sign that the increase in the adverse balance was mainly brought about in the early part of the year, the figures for the later months showing a distinct improvement. It is further to be noted that the value of the exports remained practically at the level of the previous year, due to an increase in the exports of wood and that the increase in the imports in the main represented larger purchases of machinery and similar commodities required for the expansion of production. The outlook for the present year is clouded by the fact that the maize harvest failed again in 1928, and the trade balance in the early months is bound to be unfavourable on that account. On the other hand there is the positive asset that political conditions are now much more settled, which means that the way is clear for commercial development. There is no doubt that the new régime has been received with marked favour in business circles in Yugoslavia, and an optimistic view is now taken of the prospects for economic progress. In the circumstances, provided there is a good harvest this summer, and it is an improbable happening that the country's crops should suffer for three years in succession, it is very possible that the trade statistics will take on a much happier aspect before the year ends.

COMMENTATOR.

NEW COMPANIES.**ALBANIAN NATIONAL BREWERY.**

The Albanian National Brewery, Ltd., has been registered as a public company, with a nominal capital of £400,000 in 5s. shares. The objects are to adopt an agreement (a) with M. Kakarriqi, T. Kakarriqi, Luigi Kakarriqi, and Lin Kakarriqi, and (b) and (c) with Commercial Issues, Ltd., and to carry on in Albania or elsewhere the business of brewers, distillers, manufacturers, importers, and exporters of and dealers in beer, ale, porter, stout, wines, spirits, aerated waters, etc. The directors are: Sir Harry C. A. Ayres, K.C.M.G., Cut Heath, Farnham Royal, Bucks, late British Minister Plenipotentiary and Envoy Extraordinary to Albania; W. P. Groves, J.P., 4, Cambridge Terrace, N.W.1 (deputy-chairman Groves and Whitnall, Ltd.); Major C. A. G. Perkins, 155, Sloane Street, S.W.1 (director Barclay, Perkins and Co., Ltd.); T. M. Winch, 2, Clive Court, W.9 (chairman Soulby, Sons and Winch, Ltd.); M. Kakarriqi, Scutari, Albania, brewer.

CONSTANTINESCO POWER TRANSMISSION.

Constantinesco Power Transmission has been registered as a private company, with a nominal capital of £31,500 (30,000 "A" of £1 and 30,000 "B" of 1s.), to adopt and take over the benefit and obligations of an agreement between G. Constantinesco of the first part, the Earl of Verulam, J. C. Robertson, and A. Kitson of the second part, and C. S. Hunter of the third part, and to carry on the business of engineers, etc. The directors are: The Earl of Verulam, Lieut.-Colonel C. S. Hunter, D.S.O., and Lieut.-Colonel J. T. C. Moore Brabazon, M.P.

NEWS FROM ALL SOURCES.

The traffic receipts of the Suez Canal Company from February 9, to 15, totalled 22,770,000 francs.

The net profits of the Banca Romaneasca for 1928 amounted to 118,000,000 lei, as against 116,000,000 lei for 1927.

The French Minister of Commerce left France this week for Egypt in order to open a French exhibition at Cairo on March 6.

The Banque Franco-Bulgare pour le Commerce International is to increase its capital from 22,000,000 leva to 50,000,000 leva.

At the present time there are 7,169 motor cars in Yugoslavia, 1,747 lorries and commercial cars, 238 motor omnibuses, and 1,935 motor bicycles.

Greece's exports of carpets in 1928 totalled 56,000 kg., of the value of 90,200,000 drachmæ. America was the chief importing country with 49,869 kg.

The traffic receipts of the South Indian Railway Company for the week ended January 26 amounted to Rs.14,15,507, making the total from April 1 Rs.5,07,65,988.

The net profits of the National Bank of Roumania for 1928 amounted to 201,000,000 lei. The dividend has been fixed at 447½ lei.

At the request of the Greek Cabinet the Greek Finance Minister has expressed to the International Financial Commission the wish for the abolition of the petroleum monopoly in Old Greece.

The gross profits of the Bank of Athens for 1928 amounted to 193,249,000 drachmæ, against 126,938,000 drachmæ for 1927. The net profits increased from 44,999,000 drachmæ to 69,516,000 drachmæ.

It is reported that the Isch-Bankassi, a leading Turkish bank, which has absorbed the Banque Nationale de Credit, will absorb the Bank for Tobacco Trade of Ak-Hissar and various other provincial banks.

The Société Redeventza, of Bucharest, refined in December 12,440 tons of crude oil, as against 8,684 tons in December, 1927. For 1928, 130,976 tons of crude were produced, as against 72,000 tons for 1927. During 1928 177,350 tons of various petroleum products were exported, as compared with 138,580 tons in 1927.

The Mysore Gold Mining Company recommends a balance dividend for 1928 of 1s. 6d. per share, payable March 23, to holders on the books at the close of business on February 20, less tax at 2s. 1.5d. in the £ (after allowing for relief in respect of Dominion tax). An interim dividend of 9d. has been paid, making 22½ per cent.

A Cairo message states that the Egyptian Ministry of Public Works intends erecting three electricity generating stations in the Northern Delta for the purpose of working pumps to irrigate 800,000 acres at present only partly irrigated. The scheme entails an expenditure of £1,500,000.

Another large power works is to be erected by the Wotscha Electric Central Power Station in Kritshim and the establishment of a number of machinery factories is also planned. Tenders are now being invited for two hydraulic turbines, two generators with a capacity of 5,000 kilowatts each, two transformers, and a variety of other material.

The exports of petroleum products from Roumania in November totalled 208,453 tons, as compared with 249,670 tons in the preceding month, and 171,243 tons for the corresponding month of 1927. The principal countries to which the oil was exported were:—Italy, 66,450 tons; Hungary, 25,637 tons; Germany, 15,004 tons; Yugoslavia, 15,004 tons; Austria, 14,669 tons; France, 12,161 tons; and England, 9,750 tons.

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000**RESERVE FUNDS - Leva 1149,755,960**

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Pleven, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Dupnitsa, Gorna-Orehovitsa, Haskovo, Yambol, Kirdjali, Kustendil, Tater-Pazardjik and Vratza. It has also 86 agencies.

Banking in Egypt

For a country of her population, Egypt is well provided—too well provided, some would say—with banks. This is due to the commercial importance of her cotton crop and the trade currents that its movement engenders. Since the currents of cotton terminate and the counter-currents of commodities originate in the most diverse countries; it is not to be wondered at that nearly every nation has its representative in the Egyptian banking world.

Agriculturists all over the world stand in constant need of credit, and the Egyptian fellah is no exception to the rule. It is the class of small holders that feels the need of capital most. The capital can always be found, but at a price, and prior to 1875 the fellah was dependent on the village usurer for the loans that he needed in order to buy seed, to pay his taxes and sometimes his rent, and to keep himself and his family going until the next harvest replenished the family stocking and the store of maize. Even to-day, although matters are vastly improved, and are improving still, thanks to Government initiative, the usurer is all too common in the villages. An inquiry, started in 1912 by the late Lord Kitchener, who was greatly impressed by the existence of this evil, threw much light on the amount of usury existing and the ways of the rural money-lending fraternity; sorority would, perhaps, be a better name, as one of the most interesting results established by the Kitchener inquiry was the prevalence of money-lending in the villages by women.

The establishment of the Mixed Tribunals in 1876 gave to foreign capital a confidence that was necessary at that time to bring it into an unknown and hitherto untried territory. From about that date money began to pour steadily into the country. The Bank of Egypt (now absorbed by the National Bank of Egypt) had been founded in 1856 with British capital; the Anglo-Egyptian Bank (now amalgamated with Barclays Bank) followed in 1864; the Imperial Ottoman Bank in 1867; and the Crédit Lyonnais in 1875; but their operations were relatively restricted, and they barely touched the question of agricultural credit.

French capital has the credit of discovering and fostering this field of activity, and the Crédit Foncier Egyptien, founded in 1880, has the honour of being the pioneer, as to-day it is the greatest provider of agricultural credit in the country. Its example has since been followed by others, largely with French capital, but also with British, as will presently appear, Italian, Belgian (this, however, frequently French and latterly American, in disguise), Greek, and German.

In 1898 Sir Ernest Cassel, in collaboration with local finance, founded the National Bank of Egypt, and on June 25 of that year the new bank obtained from the Government the sole privilege of issuing banknotes. This privilege, together with the fact that the National Bank of Egypt at once became the bank of the Government, has given it a preponderating influence in local financial circles.

The Pre-War Boom.

The fall in the rate of interest that set in about 1896, and was accelerated in the early years of this century, swept a flood of foreign money into Egypt. Banks, credit houses, and land companies were founded broadcast, and money was to be obtained with the greatest of ease by speculators of all kinds. The boom rose to its height in the early part of 1907, and then the reaction came. Many of the institutions founded during the monetary flow were swept away with the ebb. Some, however, survive and are filling a wanted place and doing useful work to this day. Amongst these none is more prominent than the Agricultural Bank of Egypt, founded in 1902 by the Cassel group. The Crédit Foncier had confined its operations almost entirely to the larger landowners, and its loans were for long periods and mainly for development purposes. The Agricultural Bank, on the contrary, while not neglecting the larger owners, extended its credit to the small

holder, who was thus, for the first time, able to get credit on reasonable terms. Many foreign lenders lost heavily through ill-advised activities in the boom period, and for some years after 1907 no foreign capital would look at Egypt. The country, however, was fundamentally sound, and the period of slow recovery of confidence between 1910 and 1914 saw the establishment of new financial houses in the country.

Egyptian finance, thanks to the resources of the National Bank, stood the first shock of the War well, and, following six months of stagnation due to the collapse of the cotton market, matters began to mend, and the country advanced on the crest of a wave of prosperity that carried forward with it the banks that then existed. It was estimated that the country as a whole earned profits exceeding £100 millions in the four years 1915-18. The cultivators in particular did well out of the years of prosperity, and were enabled to pay back much of their indebtedness. The mortgage debt, due to the seven principal credit establishments, fell from £E45.8 millions in 1914 to £E29.1 millions in 1924. The money so liberated has been used very largely to finance the important building operations of which every large town is the scene to-day.

A summary of present-day banking facilities in Egypt may be given in the following tabular form.

GENERAL BANKING BUSINESS.

Name.	Nationality.	Started in Egypt.	Capital paid up. £E	Reserves. £E
Anglo-Egyptian Bank (Barclays D. C. and O.)	British	1864	4,851,000	1,184,000

The Bank Misr.

The reader cannot fail to note that many of these credit establishments are of foreign origin, though registered as Egyptian. This signifies that the capital in such cases is foreign, with some local participation, but that the headquarters have been placed in Egypt, for two main reasons. First, a financial house can be controlled from Europe only with difficulty, and, secondly, national feeling quite naturally supports an institution that calls itself Egyptian, even if its capital is foreign, in preference to an entirely foreign one. The second reason is particularly interesting, as it is the cause of the existence and prosperity of the Bank Misr. This is a purely national institution; the capital is Egyptian, and none but Egyptians may be shareholders or serve on the board; and its chief field of operations lies amongst the native population. Its avowed object is not only banking proper, but also the education of its compatriots in financial and commercial methods, and the fostering of purely Egyptian efforts to establish commercial and industrial concerns in the country. One may safely say that thirty years ago no such company

would have been possible, and its initiation, and still more, its brilliant success, are a proof that Egypt has successfully entered the region of modern commerce, and an earnest of greater things to come. The following details show the development of this bank :—

Year.	Ordinary Capital.	Dividend.
1920	£E175,108	—
1921	200,528	P20 5 per cent.
1922	269,184	25 6½ per cent.
1923	313,228	30 7½ per cent.
1924	474,924	32 8 per cent.
1925	750,600	33 8½ per cent.
1926	720,000	34 8½ per cent.
1927	1,000,000	35 8½ per cent.

Banking and credit are inseparably connected with currency. Egyptian money is based on gold, with the Egyptian pound (£E) as unit, subdivided into 100 piastres and 1,000 milliemes. The subsidiary currency consists of silver, nickel and copper token coins, which derive their value from the fact that the owner of 1,000 milliemes of good subsidiary money may exchange it for £E1 at the Treasury. The British sovereign had legal currency at the rate of 975 milliemes, but gold is only rarely seen nowadays. Before the War some eight to ten million sovereigns annually used to be brought to Egypt between September and December, to move the cotton crop, and then, having achieved their purpose and trickled back to the banks, they were re-exported. There was a note issue, the privilege of which had been conceded to the National Bank shortly after its foundation in 1898, but it had never become popular, and the circulation never exceeded £E25,000,000.

The War changed all this. Shortly after its outbreak the notes of the National Bank were made legal tender, and the Bank was absolved from the obligation to pay gold for any note presented at its counter. The population took kindly to the notes as soon as they found that the new and unaccustomed currency would do all that the old would, and people have now become so used to them, that a proposal to revert to gold would probably be viewed with disfavour. People are learning (all but a few die-hards) that, excellent though it may be for dental use, for making jewelry, and for gilding picture frames, gold is an expensive commodity to use for currency purposes, which can quite well be performed by a good note system.

Egypt's Admirable Currency System.

There can be no doubt that Egypt possesses to-day one of the best currency systems in the world. Its working is simple in the extreme. A Londoner who wishes to remit £100 to Cairo, has only to present his £100 plus about half a crown to cover expenses, at the counter of the National Bank of Egypt in London, when he will get a bill authorising the holder to draw notes to the value of £E97.5 from the National Bank in Cairo. In theory the Bank invests the £100 in British securities which are realisable without loss at a moment's notice, and simultaneously issues notes in Cairo sufficient to pay the bill on presentation, and so long as the notes remain in circulation they are guaranteed by the securities held as cover. In practice, there would probably be some Cairene who wished to remit money to London, say to the amount of £E78 (£80). He would pay his £E78 over the counter of the Bank of Cairo (plus about P12 commission) and would receive a bill on London, for which, on presentation, the London Agency would hand over £80, utilising for the purpose, let us say, this number of pound notes just paid in by the Londoner. London would then have only £20 to invest in securities. Cairo, on the other hand, could utilise the £E78 of notes just paid in, as part of the payment for the bill sent by the Londoner, and would have to issue new notes for £E19.5 only, which is precisely the sum covered by the £20 of securities bought in London. If more money is being sent from London to Cairo than contrariwise, the balance will be invested and banknotes issued in Cairo for exactly the amount so covered. If on the other hand, more money is being sent from Egypt to Great Britain than in the reverse

direction, banknotes will be withdrawn in Egypt and the sale of exactly the equivalent amount of securities in London will provide just the amount required to pay the balance demanded in London.

And if anyone should want gold for use in the arts, or for what is nearly its sole monetary use, the adjustment of international indebtedness as between countries that do not enjoy so simple an exchange system, he can get it to the full value by presenting his British currency at the Bank of England. Nothing could be simpler or more convenient for international trade. Today, instead of the expensive army of sovereigns marching to Egypt to finance the cotton crop and then marching back again, a few million pounds worth of notes are issued in Egypt against the equivalent sum paid in London, and when the crop has been garnered and paid for, and Egypt begins to use her profits to buy foreign goods, the notes are withdrawn in Cairo, the equivalent value of securities is sold in London to pay for the goods, and the double transaction is carried out with a minimum of inconvenience to all concerned. Meanwhile, the securities in London have been earning interest, to so good purpose that there is at the end of the year over a million accrued. This sum is divided between the National Bank, who carry out the necessary arrangements, and the Government and in the end the Budget benefits to the tune of about £E1,000,000 annually.

The objection is sometimes raised that this ties Egyptian currency too closely to the London money market, and thereby sacrifices in some degree the independence of the former. Nothing could be further from the truth to-day. The Egyptian market is no more tied to the London market than the latter is to the former. In truth the relation is a mutual one, based on the relation £1,000 equals £E975, which is equally true when read in the reverse direction, viz., £E975 equals £1,000. This, indeed, contains the secret of the whole beautiful procedure.

Credit Requirements.

Enough has been said to give a general idea of the credit requirements of the country. So long as she is predominately agricultural, Egypt will stand in need of credit. The land owner wants money to develop his estates; the potential proprietor wants money to buy land, the small holder wants money to tide him over the period that elapses between his first outlay on, let us say, cotton in October of one year and his final entry into the cotton market, which cannot well be earlier than the following September (eleven months) and may easily extend to the next August but one (twenty-two months). The needs of the former classes are catered for sufficiently by the mortgage banks already mentioned, but the wants of the small cotton grower have been hitherto inadequately met. For a period that cannot be less than eleven months he is paying out, and as he is rarely a capitalist, even on a scale proportionate to his holding in which he has sunk all his wealth, he must borrow. Sometimes he borrows from the local usurer; sometimes, if his land is unencumbered, from one of the public or private mortgage banks; but more generally he obtains an advance from an upcountry cotton dealer and in return mortgages his coming crop. The account has to be settled on the arrival of the crop, which comes in all over the country in a flood that much resembles its parent the Nile flood. The cultivator is forced to realise in a market already unable to dispose of all that has come to hand, and consequently unwilling to pay stiff prices for further supplies. This tends to depress the market against the small grower.

If this were all, the prospect would be an unwelcome one for the poor man unable to carry over his cotton till a brighter state of things dawned. But it is not all. There exist, in Alexandria, Liverpool, and the other great cotton markets of the world, dealers in cotton who make it their business to study the probable movements over longer periods than the present day. Looking ahead, these dealers see that the crop in hand will gradually pass into consumption and in the end is likely to be, on average,

completely used by the time the next crop comes along. With their own money, eked out by borrowing from banks on the security of cotton already bought, they are able to buy up all the cotton as rapidly as it comes to hand. They look for their profit in the high rate of interest that they charge their ultimate buyers for the loan between harvest and consumption (for this is what the transaction amounts to). There are enough dealers of this description to make competition very effective, and to negative all fears of joint action to depress the price. This is the saving clause for the small grower.

Nevertheless, it does sometimes happen that cotton comes along too fast for absorption by the market. Then, naturally, the price sags, and every grower who is forced to sell only makes matters worse. Some remedy for this state of affairs is desirable. Agricultural co-operative societies with local pools of cotton (which, however, would be an extraordinary difficult matter, since "cotton" means not one thing, but some 90 different things, according as it is sold unginned or ginned and depending on the kind and grade within the kind) may afford a solution when worked out in the future. Meantime, something has to be done and the Government has stepped into the breach with its scheme of advances to small holders against deposit of their cotton. This system was first instituted in October, 1926, when about £E2,000,000 in all was advanced in this way at a rate of only 4 per cent to cover interest, storage charges, and safeguarding. So satisfactory was the first attempt that the system was brought into operation again this year, and up to the time of writing £E295,000 has been advanced in this way.

Of a somewhat similar nature but of much longer duration was the entry of the Government as a buyer to support a market that seemed to be receiving insufficient help from the professional cotton dealer. This system was first started during the War, in 1914, when cotton became something like a drug on the market. It has been repeated on a small scale at intervals since then, and on a much more important scale in 1926, and to-day the Government is the holder of 371,780 kantars of cotton on which it has sunk some £E2.7 millions of the Reserve Fund. Whether the essay will prove ultimately successful from the cultivators' point of view cannot be said. Had the Government not stepped in as a buyer when it did, undoubtedly matters would have been worse than they were. To this extent other holders benefited. It remains now to be seen whether the depressing effect that the sale of the cotton will cause will not counterbalance the good effect at the start. As circumstances are, probably it will not, and other holders will benefit on the whole from this experiment.

According to a Zagreb message negotiations have commenced towards the fusion of the Yugoslavian Union Bank with the Bosnian Agrarian Industrial Bank, with an aggregate share capital of two hundred million dinars.

NEW BIBBY MOTOR LINER.

On February 19 Messrs. Bibby Bros. and Co., entertained a representative gathering of Merseyside shippers and others at a luncheon on board their new motor liner, Staffordshire, which was berthed at the Mutar Mill quay at Birkenhead. The Staffordshire is the fifth motor driven vessel in the Bibby fleet.

The vessel is 302 ft. long and 62 ft. in breadth, and has a registered gross tonnage of 10,654, with a displacement of 18,000 tons. Its engines are of the Fairfield Sulzer type, consisting of two sets of eight cylinders with 10,000 horse-power. The auxiliary machinery is driven by electricity, generated by three Allan four-stroke Diesel engines of the Burmeister and Wain type. Accommodation is provided for 279 first-class passengers only. There are single- and two-berth rooms. All the accommodation on the main deck, including the dining-room, is ventilated on the Punkah-Louvre system, ensuring a regular supply of fresh air even if the ports have to be closed owing to rough weather.

At the luncheon Mr. H. Harold Roberts, in proposing the toast of the Staffordshire, described the new vessel as a noble vessel and a worthy example of the finest effort of the shipbuilders' art, the newest of a long and remarkably successful line of boats which kept their dates with clock-like precision—a great achievement, invaluable to passengers and helpful beyond measure to merchants who had to fulfil punctually the needs of buyers abroad.

Major A. Harold Bibby, in responding for the owners, said neither they nor the builders had spared time, trouble or money in the endeavour to produce a ship that would meet every requirement of the Eastern trade to-day, a ship that would, it was confidently believed, be a success from an economic point of view and that would give complete satisfaction to shippers and to passengers.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia (Birkenhead, March 9). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maidan for Calcutta (Birkenhead, March 7); s.s. Mangalore for Calcutta (Birkenhead, March 19).

Bibby Line.—S.s. Gloucestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, March 8); s.s. Oxfordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, March 20).

British India Line.—S.s. Manela for Colombo, Madras, and Calcutta (London, March 9); s.s. Mundra for Bombay and Karachi (London, March 16); s.s. Merkara for Colombo, Madras, and Calcutta (London, March 23); s.s. Masula for Bombay and Karachi (London, April 6).

Cunard Line.—S.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume; also at Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, March 16, Swansea March 19); s.s. Bactria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (this steamer will call at Volo if sufficient inducement) (Liverpool, Glsow, and Swansea March 23).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 23).

P. and O. Line.—S.s. Ranchi for Bombay (London, March 1); s.s. Whitegate for Calcutta (London, March 2); s.s. Ranpura for Bombay (London, March 15); s.s. Nellore for Calcutta (London, March 16).

Prince Line.—S.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, March 2); s.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, March 2).

Ellerman and Papayanni Lines.—S.s. Oporto for Algiers*, Calamata, Patras, Piræus, Syra, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 2, Swansea March 2); s.s. Flaminian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona, Venice, Trieste, and Fiume (Liverpool March 2, Swansea March 7); s.s. Andalusian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 7); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, March 19); s.s. Lesbian for Algiers, Piræus, Syra*, Volo*, Salonika, Bourgas, Varna, Constantza, Smyrna, and Constantinople (Liverpool March 16, Swansea* March 16). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

**CASTALIA	Mar. 1	†ASSYRIA	Mar. 27
*BRITANNIA	Mar. 15	**MASSILIA	Apr. 16

*First class passengers only. Specially low fares. †Calls Port Sudan.

‡First and third class passengers.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 26.

The Stock Exchange week has been one of light business and a somewhat hesitating tone, but towards the close evidence increased that investment markets were regaining the confidence that was shaken by the rise in Bank Rate. Nevertheless the position in Wall Street is still being watched very carefully, and there are those who are inclined to ask whether London will have to pay a further price for the speculative fever in New York. It is, however, the almost general opinion of those in closest touch with the course of affairs that the monetary outlook need not cause alarm. It is considered probable that we are very near the time when the flow of gold will turn again in our direction, and a reduction of the Bank Rate in the spring would be anything but a surprise. Meanwhile it may prove to be very salutary that check has been placed by monetary events on certain phases of speculation. It would not be unreasonable to expect a prolonged period of fairly quiet conditions in the Stock markets. For while the improved trade outlook should produce its effect, the approach of Easter, the Budget, and a General Election constitute a triple threat against any big movement.

"Selective" Investment Trusts.

The investing public have recently been invited to subscribe for shares in two newly-formed investment trusts which propose to give their attention particularly, though not exclusively, to certain classes of securities. The first proposes to specialise in investments in plantation companies, the second in foreign railway securities. In each case, of course, the directors have special qualifications for selecting such investments. With the merits of these particular companies we are not here concerned, but as a general rule it is doubtful whether such concerns would be as suitable an outlet for the savings of genuine investors as the more usual form of investment trust. From the investor's point of view, the one supreme merit of the investment trust company is that it affords the maximum assurance of stability and security, because it spreads risks over a wide field. In proportion as a trust

company narrows its field by confining itself to one or more industries or countries, so, in theory at any rate, it loses its real attraction for the investor. What may be called "selective" trust companies, like the ones referred to above, can, and do sometimes, do very well. There are, indeed, several notable examples. But the essential points are: (1) that many investors essentially require the security and safety afforded by the effective spreading of risks, and (2) that this spreading of risks can most effectively be done when the investment experts who direct a trust company have the world to roam over at their discretion. In any case to subscribe to the shares of a new company is too big a speculation for any but those possessed of comfortable means. Those who cannot afford risks, should confine their attention to the shares of proved and established concerns.

"Chartered" Report.

The report of the British South Africa Company for the year ended September 30 last which has been published this week, is of even greater interest than usual in view of the recent activity in Rhodesian mining shares. Substantial progress is disclosed by the report, gross revenue amounting to £650,584, against £617,717 in 1926-27. Only one item among receipts shows a decline—profit on sales of shares and underwriting commissions which fell from £122,591 to £86,858. Dividends and interest brought in £417,618 against £391,238; mining licences and fees £93,250 against £85,380; and sundry revenue, including receipts from livestock, crops and fruits £34,450 against £9,472. At the same time some savings have been effected in expenses so that net profits were £569,920, compared with £526,915 in the preceding year. The directors' report also contains interesting information about the development of the area. As is well known, the rate of discovery of copper in Northern Rhodesia has been surprising, but coal, asbestos and chrome, and gold-mining all have encouraging prospects. The distribution is not altered and is again 1s. 6d. per share, the allocation to "carry-forward" being increased. On the basis of this dividend and bonus the shares yield only about £3 15s. per cent. The price clearly discounts future prospects, but if the mining developments proceed as anticipated, this optimism may yet prove well founded.

Salt Union.

There has been a fair volume of inquiry recently for the shares of Salt Union, Ltd., partly in view of the forthcoming report, and partly in the belief that the recurring rumour of absorption by Imperial Chemicals will one day be confirmed. The voracious appetite of the latter company for all concerns at all similar to any of its ramifications makes this not impossible; but obviously the possibility should not be built on. On their own merits, however, Salt Union shares deserve consideration from investors. The company was formed in 1888 to acquire British firms in the salt industry, and controls numerous companies. In its early years it was none too prosperous, but in recent years profits have been very satisfactory, and a steady dividend of 12½ per cent. has been paid on the ordinary shares since 1923. Salt Union Ltd., also controls the Mersey Power Company. In 1927 this company's sales of current rose by 29 per cent. to 65,585,000 units, but its dividend was only 5 per cent. As its sales approach the full capacity of 126,000,000 units, this subsidiary should prove increasingly beneficial to Salt Union shareholders. The latter's ordinary shares can be bought to yield £5 5s. per cent. on the basis of a 12½ per cent. dividend, and should show gradual appreciation. The 7 per cent. cumulative preference shares, which as a result of arrangements made in 1917 have actually received 11 2-3 per cent. for some years, return £5 11s. per cent. and are a well secured investment.

An offer is reported to have been made by an Italian group for the supply of locomotives to the Roumanian State Railways.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

British Industries Fair.

THE WHITE CITY EXHIBITS.

(Continued from page 247.)

(From Our Own Correspondent.)

Cutlery, Fancy Goods, Etc.

The section devoted to silver, cutlery, jewellery, fancy goods, etc., is as usual very comprehensive, and will well repay a visit. Like almost every section in the Fair a visit to all the stands in it would require the best part of a day. As the nature of the exhibits indicates, it includes some of the most famous British industries, but it also covers a number of the recent developments in our manufactures. An interesting stand is that of W. J. Myatt and Co., Ltd., who show electro-plate and enamelled silverware, pewter ware, etc., and also their well-known Daymark safety razor blades. R. Blacklock and Co. show a fascinating variety of watch straps made in various materials, also over-cases, etc. Another stand of interest is that of Nat Heard, A.R.C.A., where is to be seen an attractive display of Indian artware, such as examples of the enamelled brassware of Northern India and decorative wood carving. Reference must also be made to the stand of the Allan Manufacturing Co., whose exhibits include their "Kling-tite" patent signs. The material used has the advantage that it is unaffected by climatic conditions.

Chemicals.

Canada has a section to herself, and a very fine display of the potentialities of the great Dominion it is. This is a new development at the White City, and one which will no doubt be followed by others parts of the Empire when the next Fair comes round. Following this section comes one of the largest in the Fair, devoted to foodstuffs, beverages, tobacco, chemicals, and drugs. In every case the exhibits give a characteristic display of the products of British manufacturers. Undoubtedly the most interesting part of the section is that devoted to chemicals and drugs. This industry owes its prominent position to-day to developments arising out of the War, and the serried rows of stands bear tribute to the great progress that has been made. Naturally the principal exhibit is that of Imperial Chemical Industries, which occupies the space of a small section by itself. A stand of particular interest in the other part of this section is that of British Evercold (1928), Ltd., who show refrigerators which have the advantage

that they can be operated by paraffin as well as by gas or electricity. This factor makes them particularly suitable for use in the Near East or India.

The rapid growth of the wireless industry is reflected by the rows of stands devoted to receiving sets and other wireless apparatus. In the periods when the Fair is open to the public this section no doubt constitutes one of the chief attractions. Musical instruments, which are also shown in the same locality, are again a wonderful display, and here are to be noted all the latest developments in gramophones, etc. Both these industries are very important from the point of view of the export trade, but as regards the Near East the trade in wireless apparatus is as yet in its infancy owing to the restrictions imposed by the various Governments. Gramophones are subject to no such disabilities, and throughout the Near East, particularly in countries like Egypt, the demand for them is very considerable, and it is probably not going too far to say that, developed as the market is for this commodity, there is still enormous scope for expansion. If British manufacturers are to lead the way in catering for it, they must be prepared to use to the full the resources of publicity which are at their disposal, for it is futile to expect the buyers of the Near East to come to us and ask whether we can supply their requirements.

Leather Goods.

The leather and leather goods section is also very interesting. A particularly attractive stand is that of S. Clarke and Co., Ltd., who show a pleasing variety of trunks, dress cases, suit cases, hat boxes, and leather bags. Another stand of interest is that of W. Wood and Son, Ltd., who also show travelling goods, such as suit cases, etc.

As usual the section for stationery, printing, office appliances and other exhibits is very extensive. Special mention may be made of the stand of Mabie, Todd and Co., Ltd., who show a wide assortment of their famous Swan pens in a bewildering range of sizes and at prices to meet all requirements. The Wyvern Fountain Pen Co. also have a pleasing display of fountain and stylographic pens and propelling pencils, etc. Travel development and services also occupy a part of this section, and mention must be made in this connexion of the stand of the Cunard Steamship Co., Ltd., who show a model of one of their famous liners.

COMPANY NOTES AND REPORTS.

SOUTHERN PUNJAB RAILWAY.

The report of the Southern Punjab Railway for the year ended September 30 last states that the net revenue for the year, after deducting £203,513 2s. 1d. payable to the Secretary of State for India as the share of surplus net receipts due to the Government, and allowing for administration expenses, Indian taxes and interest on debenture stock, is £287,598 10s. 0d., to which must be added £69,743 6s. 5d., brought forward from September 30, 1927, making a total of £357,341 17s. 2d. The dividend on the preference stock paid in respect of the six months to March 31, 1928, together with the interim dividend on the ordinary stock, reduce the balance available to £251,341 17s. 2d. The dividend of £46,000 on the preference stock for the six months to September 30, 1928, was paid on December 1 last, leaving £205,341 17s. 2d. The directors recommend the payment of a final dividend on the ordinary stock of £6 per cent. together with a bonus of £4 per cent. (making, with the interim dividend of £6 per cent. paid in September last, a total distribution of £16 per cent. for the year ended September 30, 1928), from which income tax will be deducted at the rate of 2s. in the £—i.e., 4s. less Dominion relief at 2s. The final dividend and bonus will absorb £100,000, and leave £105,341 17s. 2d. to be carried forward.

A recent Order-in-Council published in the *Cyprus Gazette* provides for the duty-free importation into Cyprus of iron piping, citric acid, and metabisulphate.

Lord Irwin, the Viceroy of India, has granted a warrant to the Dunlop Rubber Co. (India), Ltd., who are also appointed contractors to His Majesty's Army and Royal Air Force in India.

ADVERTISING IN "THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of all classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

London, W.C.2

CYPRUS TRADE IN 1928.

Great Increase in Imports.

The following report has been issued on the trade of Cyprus in 1928:—

The total value of the imports of merchandise into Cyprus during 1928 was £1,840,442, as against £1,585,940 for the year 1927, an increase of £254,502. The following table shows the imports for each of the last three years under the main heads of classification.

	1926. £	1927. £	1928. £
Food, drink and tobacco ...	450,603	464,428	537,062
Raw materials and articles mainly unmanufactured ...	185,050	198,000	232,257
Articles wholly or mainly manufactured ...	933,358	922,826	1,068,902
Miscellaneous and unclassified ...	1,267	686	2,221
Total ...	1,570,278	1,585,940	1,840,442

The imports were received from the following countries:—United Kingdom and other parts of the British Empire, £810,806 (44.06 per cent.); Austria, £18,980 (1.03); Belgium, £42,067 (2.26); Czechoslovakia, £62,018 (3.37); Egypt, £76,950 (4.18); France, £128,329 (6.97); Germany, £113,119 (6.15); Greece, £119,263 (6.48); Holland, £24,346 (1.33); Italy, £106,625 (5.79); Roumania, £58,063 (3.16); Turkey, £25,523 (1.39); United States of America, £66,155 (3.60); other countries, £188,198 (10.23); total, £1,840,442.

The principal increases were in the following articles:—Beans and peas, £3,958; coffee, raw, £4,139; flour, wheaten, £47,511; oils, edible, £7,776; provisions, £4,166; hides and skins, £3,638; iron bars, joists, rods, etc., £3,977; timber, £10,746; petrol and benzine, £7,453; petroleum, £3,474; blasting powder, dynamite, etc., £3,043; chemicals, £2,862; hardware and cutlery, £3,156; iron piping, £5,680; machinery, £61,447; silk manufactures, £5,099; motor cars, £40,449; motor car parts, £3,293; tyres and tubes for motor cars and motorcycles, £5,393; wood manufactures, £13,772; woollen manufactures, £3,416.

There were decreases in the following items:—Olives, £3,666; sugar, £7,981; coal, £5,210; cotton yarn and thread, £25,351; chemical manure, £6,338; leather, sole, £6,071; sacks, £7,618.

The following figures show the excess of imports over exports during the past three years:—

	1926. £	1927. £	1928. £
Imports ...	1,570,278	1,585,950	1,840,442
Exports ...	1,103,571	1,542,870	1,435,767
Excess of imports over exports ...	466,707	43,070	404,675

These figures tend to show that the prosperity of the Island is on the increase, for, although there was a slight decrease in exports, accounted for by shortage of crops and withholding of stocks of carobs and barley, the comparatively large increase in imports indicates that the purchasing power of the people is trending upwards. It must also be remembered that the value of exports during 1927 constituted a record and that that of 1928 was not far behind. Although the balance of trade, as shown by these statistics, is adverse, it is probable that if invisible exports were taken into consideration a much more favourable position would be revealed.

Among invisible exports may be noted the money spent by the increasing number of visitors and tourists (6,787 passengers, mainly visitors for the summer season, landed during 1928, in addition to 5,605 tourists); boat hire paid by passengers and tourists; the supply of Cyprus produce to shipping; increased mineral output involving increased expenditure for labour paid for by companies whose capital is outside the Island; the pay of troops; visits of the British Fleet. Consideration should also be given to the fact that in the total of imports is included amounts for

machinery and other articles paid for by companies in foreign countries.

The continued increase in imports, from which the principal revenues of the Island are derived, goes a long way to show that taxation in the Colony is anything but excessive. Imports from the United Kingdom and other parts of the British Empire increased from £798,083 in 1927 to £810,806 but the percentage to total imports decreased slightly from 44.65 to 44.06.

The largest proportionate increase in imports was that from Germany which increased in value from £78,038 in 1927 to £113,119 in 1928 and in percentage of total imports from 4.92 to 6.15. Imports from Greece fell from £122,430 to £119,263 and in percentage from 7.72 to 6.48. Imports from other countries show little variation.

Owing to the shortage of the wheat crop large quantities of flour continued to come in, there being an increase in value of £47,511 over 1927 which year also showed an increase of some £15,000 over the previous year. For similar reasons the importation of olive oil showed an increase in value of £7,776 over 1927, that year being £3,932 in excess of 1926.

The increase of £61,447 in machinery is partly accounted for by imports by mining and other companies formed during the year, but is also due to the ever-increasing demand for oil engines used for raising water and other purposes. In this connection it may be noted that the importation of windmills used for irrigating orange and other gardens continues, 165 having been imported during 1928 as against 156 in 1927. New gardens especially in the Famagusta District, are increasing almost daily.

One of the most noticeable indications of the prosperity of the Island was the importation, during 1928, of 474 motor cars to the value of £64,095, being 283 in number and £40,499 in value in excess of the previous year. Most of these were passenger vehicles, showing the increased standard of comfort now required by the Cypriot travelling public; but a fair proportion were trucks for the transport of the Island produce. In the Limassol district especially this mode of conveyance for wine and grapes has replaced the slower donkey transport.

Consequent on the increase of motor cars is the increase of £7,453 in petrol, £3,293 in spare parts and £5,393 in tyres and tubes. Building operations continued during the year with a resultant increase of £10,746 in the importation of timber, and £3,977 in iron bars and joists. There was an increase of £13,772 in the importation of wood manufactures. These were principally wooden casks for wine.

Decreases in imports were few. The most important were sugar £7,981, chemical manures £6,338, and cotton yarn and thread £25,351. In the case of sugar the quantity imported was about the same as in the previous year but the value was less owing to cheaper markets. Chemical manure, cotton yarn and thread showed a decrease owing to overstocking in the previous year. Sole leather showed a decrease of £6,071 owing to increased local manufacture, and sacks a decrease of £7,618 due to decreased exports of carobs, barley and other produce of the Colony.

Exports.

The total value of exports of merchandise was £1,435,767 as against £1,542,870 in 1927, a decrease of £107,103. The following table shows the exports during the last three years under the main heads of classification:

	1926. £	1927. £	1928. £
Food, drink, and tobacco ...	523,211	791,682	632,756
Raw materials and articles mainly unmanufactured ...	452,931	626,021	693,168
Articles wholly or mainly manufactured ...	95,511	97,126	84,578
Miscellaneous and unclassified ...	31,912	28,041	25,265
Total ...	1,103,571	1,542,870	1,435,767

Exports to the following countries were: United King-

dom, £283,315 (19.73 per cent.); Other parts of the British Empire, £34,850 (2.43); Egypt, £226,351 (15.77); France, £159,413 (11.10); Germany, £93,626 (6.52); Greece, £137,408 (9.57); Italy, £207,002 (14.42); Spain, £34,009 (2.37); Turkey, £11,846 (0.83); United States of America, £28,930 (2.01); Other countries, £219,017 (15.25); Total, £1,435,767.

The principal decreases were in the following articles: Oxen £7,535, beans and peas £5,782, carobs £67,873, cheese £6,953, barley £52,721, oats £4,179, oranges £5,184, pomegranates £3,071, raisins £7,157, onions £5,281, potatoes £3,536 cotton, raw £12,787, cumin seed £7,503, sponges £8,524, and gypsum £3,630.

There were increases principally in the following articles:—wheat £3,207, grapes £5,182, tobacco, unmanufactured £5,139, asbestos £24,130, pyrites £51,711, silk cocoons £9,293, silk, raw or wound silk, £15,078.

The decrease of £107,103 in exports is accounted for partly by failure of some of the crops, but is also due to a great extent to the withholding of carobs and barley which will become an asset for 1929. Of this decrease £18,000 is due to the exportation, in 1927, of the gold reserve of the Island, practically no exportation of gold having taken place in 1928. A new company was established during the year at Limassol for the crushing of carobs. Owing to high prices operations were on a comparatively small scale.

Destination of Exports.

It is gratifying to record that, in spite of decreased exports generally, those to the United Kingdom increased from £278,367 in 1927 to £283,315 in 1928. The percentage to total exports increased from 18.04 to 19.73. Exports to France, chiefly wine, increased from £116,499 to £159,413 and in percentage from 7.55 to 11.10. Exports to Greece decreased from £157,021 to £137,408 and in percentage from 10.18 to 9.57. Those to Egypt also showed a decrease from £267,501 to £226,351, partly owing to the diversion of wine to France. Exports to Spain were affected by the situation in the carob trade, and showed a decrease from £110,605 in 1927 to £34,009, while increasing exports of minerals, notably asbestos, accounted for a rise from £157,021 to £207,002 in the value of exports to Italy.

The principal decreases, apart from carobs and barley, were: oxen, beans and peas, and raisins. The export of oranges showed a decrease in value of £5,184 owing to a poor crop. It is interesting to note here that a British firm has established a factory for the manufacture of orange and lemon juice of which £1,010 in value was exported in 1928. This is a slight set off to the decrease in export of oranges.

There was a considerable decrease in cotton production and consequent export owing to lack of rain which prevented dry planting in many areas. The export of potatoes decreased in value owing to shortage of crop. The large quantities of seed imported during the latter part of the year promises well for next year's prospects. Small increases are noted in the export of the following: almonds £1,211; hazelnuts £5,182; lemons £2,862; vinegar £414; hemp £458; organum oil £347; straw £665; and camels £836. There was also increased exportation of wheat. This is rather difficult to understand in view of the shortage of the local crop but may be explained by the fact that the people are becoming accustomed to the use of imported flour which is said to be better and cheaper.

The increase of £5,182 in the value of grapes exported explains to some extent the decrease in raisins. The exportation of wine showed a slight decrease from £55,976 to £53,045. This is not an indication of reduced production, but rather of the retention of stocks for maturing in order, later, to export a better class of wine.

Tobacco planting was given another impetus during the year. The area under cultivation and the produce was greater than in any other year but the weighing of the large crop is not yet completed and statistics are therefore

not available. In 1927 3,532 cwt. were produced as against 1,418 cwt. in 1926, and it is estimated that 4,000 cwt were produced in 1928. During 1928 2,244 cwt. were exported as against 1,742 cwt. in 1927.

THE IDEAL HOME EXHIBITION.

The 1929 *Daily Mail* Ideal Home Exhibition was formally opened on February 26 by the Lord Mayor and Lady Mayoress, Sir Kynaston and Lady Studd. This is the twenty-first year since this exhibition was inaugurated, and it is no exaggeration to say that each time it has been held it has enhanced its popularity with the home-loving public who have thronged to it to see the latest devices for making home life more comfortable.

This time, as was to be expected on the occasion of the exhibition's anniversary, the event is larger and more attractive than ever, and between now and March 23 all the world and his wife will wend their way to Olympia. Foremost among the features most people will rank the gardens. To enter Olympia from a snow-clad world with a bitter east wind curling round one, and then to find a series of really delightful gardens, some with charming scenic effects, such as that with two minor cascades falling attractively from an unseen origin to an equally obscure destination, others showing what can be done in the way of adornment with the aid of paving, while everywhere there is a glorious profusion of flowers, hyacinths, daffodils, violets, etc., makes one think that spring has really come—until one leaves the hospitable doors of Olympia and re-enters the bleak world outside.

Another feature which will arouse much interest is the series of bedrooms through the ages, showing eight bedrooms ranging from the time of the cave woman, through Egyptian, Greek, Italian, French, Old Japanese, and Victorian periods, to the extremely modern bedroom of the ultra-fashionable young lady of to-day. An "Ideal Home" exhibition naturally suggests an exhibit of an ideal room, and six ideal rooms are on view. Designed by well-known people, the rooms have been erected, decorated, and furnished by Waring and Gillow, Ltd., whose charming work in the decorating of houses has made them famous all over the world and especially in the Near East. The rooms include a library designed by Lady Oxford and Asquith, a woman's study by Lady Londonderry, and a studio by Sir William Orpen.

The Empire Marketing Board has a display which will arouse considerable interest. This section is divided into two parts, the first pictorial and symbolical and the second practical and utilitarian. In the first there is a foreground showing an industrial scene in the home country, in the middle distance is the sea, on which ships of commerce ply, and, in the background, is a scene of the Empire overseas. The Indian section shows the Lloyd Barrage on the River Indus; next door is a reproduction of the new Sydney Bridge, the contract for which was given by Australia to Great Britain in competition with the whole world. Other parts of the Empire represented include Canada, New Zealand, South Africa, and Cyprus. Reference must also be made to the Cunard Company's exhibit showing the accommodation provided on their Atlantic liners.

Another interesting new feature in the exhibition is the Model Dairy Farm, showing prize cows, sheep, pigs, and poultry in their natural surroundings with the ducks swimming about on a miniature lake crossed by a delightful stone bridge. Each day practical demonstrations are given of making butter, cheese, jams, and other country produce.

There are a few of the features of an exhibition that is full of delights of those whose minds are centred on the home. Furniture, kitchen equipment, electric fittings, these and everything else that goes to make the perfectly equipped home are to be found in abundance. It is an exhibition that should be seen, and doubtless will be, not once but several times.

Engineering Topics

By G. B. B.

Crystallisation of Metals.

The paper which was read last Friday by Mr. G. W. Todd on the Relations between the Properties of Engineering Materials and their Structures was one of singular interest, and at times the author touched heights that few engineers attain. It was interesting to note the tribute he paid to the almost forgotten engineer, Sorby, who carried out so much research work in the eighteenth century. He was, as Mr. Todd pointed out, almost if not quite, the first engineer to recognise the importance of crystal-line structure on the behaviour of metals under stress. It is a common thing nowadays to hear a workman, when a piece of metal has fractured, say that it has "crystallised," but few understand either exactly what this crystallisation is or how it is that it affects, as it undoubtedly does, the strength of the metal. Later investigation has shown the general accuracy of the conclusions arrived at by Sorby, and we know now that the size of the crystal grains of which a metal is composed depends on the previous history of metal. Long exposure to heat encourages crystal growth, whilst sudden cooling tends to reduce the size of the granular particles. The effects of straining beyond the so-called elastic limit, and the consequent slipping in the cleavage planes, can easily be seen under the microscope. The properties of the metal depend almost wholly upon the degree of crystallisation in its structure and the variations of its properties depend on the magnitude and orientations of crystals, as well as on the admixture of foreign crystals and impurities. It is true that examination by X-rays can tell us exactly how these enter and modify the main structure of the metal and when sufficient evidence has accumulated from the many researches which are now being undertaken it should become possible to predict the properties of a metal or an alloy from a knowledge of its constitution and its previous treatment. It is impossible as every engineer knows, in our present stage of knowledge to calculate the elastic properties of a complicated material like an ordinary metal, but a good deal of progress has been made in the way of research into the properties of single crystals.

Steam Generated Efficiency.

Interesting in most industries, and equally applicable to the largest and smallest boiler plant installations, is the greater attention now being given to the blending of the coal, both as regards preventing black smoke and reducing the annual fuel bill. The subject is of considerable

importance also to India and the East, because, for example, not only coal dust and smalls, but also woody and vegetable refuse material can be utilised on these lines to great advantage. The value of the general principle is well illustrated by an interesting series of trials carried out just recently at the works of a well-known Lancashire tar distillers using mixtures of coal at 17s. a ton and gas works coke breeze at 8s. a ton, a material easily obtainable under the particular circumstances. Essentially the plant consists of three 30 feet by 8 feet "Lancashire" cylindrical boilers, feed water economisers, and superheaters, with "Turbine" forced draught furnaces, and the coal was 13,177 B.Th.U. per lb. with 5 per cent. ash and 21.9 per cent. moisture, being an exceptionally good quality, while the corresponding figures for the coke breeze were 10,890 B.Th.U. per lb., 15 per cent. ash and 9 per cent. moisture.

The net result was a substantial economy in net cost of production of steam when using a blend of 1.2 coal and breeze, or 1.3, as against 2.1 coal and coke breeze, or coal only. Thus for example, the cost of evaporation of 10,000 lb. of steam per hour with two parts of coal and one part breeze are 6s., and 1.3 coal and breeze 5s. 9d. In all cases the performance represented average industrial practice, 685-756 lb. of fuel per hour with an evaporation of 4,500-5,050 lb. of water per hour in continuous daily running, the economisers, however, being of small size, with 85-90 lb. of steam pressure and 470 degrees F. superheated steam temperature. The net thermal efficiency also is about 68 per cent., and under these circumstances the figure of one-part coal and two parts breeze is now used regularly, since increasing the breeze beyond this point makes little difference, but of course, with great saving as against the previous practice of coal only.

It is well known that a scientifically designed forced draught furnace of this description, with uniform distribution of the air blast, longitudinally and transversely, varied in amount as desired, will burn any fuel, including for example, as stated, sawdust, general wood refuse, peat, lignite, and very high ash content coal, having the advantage also that no alteration to the boiler plant is required other than replacing the firebars. Further, a greatly increased rate of combustion can be given at any time merely by adjusting the steam valve supplying the nozzles, valuable for conditions where violent fluctuations occur in the demand for steam, while no more skilled labour is required than with ordinary hand-fired grates.

Wireless Direction Finding.

The value of the wireless direction finder as an aid to navigation on all the seven seas is fully recognised to-day, but the fact is not usually appreciated that in some parts of the world the wireless direction finding provides the only reliable means of taking relative bearings. Observations previously made at the Poles had shown that as the magnetic North and South were approached the ordinary compass became highly erratic, which, on many occasions, has proved a considerable obstacle to exploring parties. Until the science of wireless direction finding attained its present pitch of practical perfection there was no means of obviating the difficulty of obtaining bearings when visibility was bad or doubtful. With this instrument, however, modern explorers are secured against the great dangers of getting lost as their ships approach the Poles.

Captain Byrd, whose scientific expeditions in the Antarctic, with an aeroplane and the two base ships *City of New York* and the *Eleanor Bolling*, has penetrated far into the Antarctic, has in a recent report made special mention of the value of his wireless direction finder. His report is as follows:—"Through the aid of radio direction finding equipment, with which both of the expedition's ships are equipped, Captain Brown picked up the whaling steamer *C. A. Larsen* at a time when the regular compasses on both the *City of New York* and the *Eleanor Bolling* were rendered completely useless because of the proximity of the magnetic pole."

Captain Byrd has also found his wireless telephone equipment of great value during his present expedition, and in recent years wireless telephony has played an important part in commercial as well as scientific enterprises in the far south. A number of Antarctic whalers have been equipped with Marconi $\frac{1}{2}$ k.w. telephone sets, with which they have on occasions been heard over distances of more than 2,000 miles. Normally communication is maintained between whalers and the factory ships and the whaling station at St. Georgia up to distances of 700 and 750 miles. A number of Marconi direction finders have been fitted to these craft and have been found invaluable in assisting the navigators to return quickly to the base with their catch, and in emergencies to steer direct to other members of the fleet.

Before the advent of wireless in southern waters the movement of whalers from the mother ship frequently had to be considerably restricted owing to the unreliability of compass bearings and even so it would sometimes be found that one whaler would discover more whales than it could deal with while others were searching in vain.

Miscellaneous.

I understand that Messrs Stothert and Pitt, Ltd., have appointed Messrs. G. H. Draper and Co., a well known Birmingham firm, as their Midland agents for their mixer department, which specialises in the production of concrete mixing machinery, road-making and quarry plant. Stothert and Pitt's productions are known all over Europe for their general excellence and high efficiency. Another note I must make in connexion with this side of engineering is that the Improved Wood Pavement Co., Ltd., of Blackfriars House, London, have just sent out a well-illustrated booklet dealing with their Firmosec system of road surfacing, which is a pavement that should stand up to all traffic conditions, be durable and economical. It is profusely illustrated, well written, and the sort of thing that will be kept for reference.

NEW P. AND O. LINER.

The new P. and O. liner, *Viceroy of India*, ran her acceptance trials in the Firth of Clyde on February 18. Of 19,700 tons gross, she was built by Messrs. Alexander Stephen and Co., of Linthouse on the Clyde, and is due to sail on her maiden voyage to Bombay on March 28. The vessel is particularly interesting as it incorporates two novelties in British ship construction. All the first-class passengers have single berth cabins, and she is the first line constructed in this country to rely on turbo-electric propulsion. The propelling plant, supplied by the British Thomson-Houston Company, consists of two three-phase turbo-alternators fed with steam at a pressure of 350 lb. per square inch and a temperature of 700 deg. F. by six oil-fired water tube boilers designed and constructed by Messrs. Yarrow and Co. The alternators, each rated at 9,000 k.w., supply current to two 8,500 shaft horse power three-phase synchronous motors, one on each of the two shafts. In normal service only one alternator is used, and can deliver power to the two propeller shafts up to a total of 11,600 s.h.p.; but if the full designed speed of 19 knots is required, both alternators are brought into use and the power delivered ranges up to 17,000 s.h.p.

Variation of the speed of the propellers in either direction is effected by varying the speed of the turbines, and is directly under the control of the engineers at the control panel. There are three control levers for each propeller, and it is claimed that with the aid of the indicating instruments provided an intelligent operator can quickly carry out orders with a minimum of manual effort, the possibility of damage to the equipment through unskilful handling being prevented by a system of interlocks.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Non-ferrous Metals.—The Ministry of Communications, Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of non-ferrous metals, iron and steel products, etc., required during the year 1929-30. April 3. (D.O.T.)

Paints, Etc.—The Egyptian Ports and Lighthouses Administration invites tenders for the supply of paints, varnishes, soap, pitch, wood and coal tar, etc., during the year 1929-30. March 18. (D.O.T.)

Piping System and Tank.—The Ministry of Public Works invites tenders for the supply and erection of a complete piping system and elevated wrought iron water tank. March 16. (D.O.T.)

Miscellaneous Stores.—The Egyptian Ports and Lighthouses Administration invite tenders for the supply of miscellaneous stores. The requirements, which consist mainly of small quantities of goods, include among other items bunting, ropes, canvas, hose, cotton waste, tarred oakum, thread, etc. March 25. (D.O.T.)

The Greek Government has decided that no further loan will be necessary for the establishment of refugees, which should be completed by 1930.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended January 31 amounted to £E11,865, making the total from April 1 £E280,071.

M. Ficshinescu, Mining Professor at the Ecole Polytechnique of Bucharest, and a director of the Société Colombia, has been appointed an Officer of the Legion of Honour.

Mr. W. H. Grigsby, Northern manager of the Anglo-Persian Oil Company, lubricating oil section, is retiring after a service of 42 years with the company and its associated interests.

Sir W. G. Armstrong, Whitworth and Co., Ltd., of Newcastle-upon-Tyne, have been awarded in the face of severe Continental competition, the contract for 46 boilers and a large number of parts for superheated locomotives for the Great Indian Peninsula and the East Indian Railways.

A recent Roumanian Customs Circular provides that special apparatus for measuring and dispensing motor spirit may not be imported into Roumania, except under permit issued on the basis of advice from the Roumanian Department of Weights and Measures, which examines and certifies all such apparatus.

The new tax imposed upon foreign commercial travellers and travelling agents in Yugoslavia will amount, for a complete year, to 1,000 dinars in indirect taxation on reaching one of the frontier stations, when entering the country. The regulation applies only to commercial travellers and travelling agents who enter the kingdom for firms which have no permanent representatives and who are engaged in collecting orders or in the sale of some article. Commercial travellers and travelling agents who enter the kingdom with a view to purchasing Yugoslavian produce, or with some other object, will not be subject to the tax. It will be necessary for all persons, on applying for their visas, to explain exactly the object of their journey, so that these facts may be inscribed on their passports.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 20:—

Egyptian Futures.

Sakel Contract.—After the close of our market last Wednesday it became known that the ballot for voluntary short time in the fine section had secured the necessary majority. This brought in further liquidation and trade hedging on the following days; in addition, short interests, who have enjoyed a good innings recently, tried to influence the market to still lower levels. Their efforts in this direction were only partially successful, as increasing resistance began to develop, and since some recovery has taken place, due in part to Alexandria holding round 36 dollars, and to the development of slightly increased trade support. Whilst admitting that Sakel differences, even taking into account their recent narrowing with other markets, are still on the dear side, our contract is now so far below overseas values that a quick turn round is possible should any change in the outlook eventuate. Recent selling has been mainly of a speculative character, added to which the market has also had to face quite an appreciable amount of outside hedging of mixed character; in fact, the "bear" side has been rather too popular for some little time, and the result is rather a weak accumulated short interest. Selling of new crop by one or two local spot houses has again been in evidence; this cotton has generally been taken by straddlers selling Novembers in Egypt. We continue to run at a discount of 40 to 50 points with the overseas market. Fears of re-tenders of the January dockets in March have had a depressing effect on near positions; holders have now such handsome carrying premiums that they will probably put on their hedges; certainly present differences appear attractive to those who have sales out, or who have calls open on the current position. For the time being we are rather inclined to modify the "bearish" views expressed in our recent reports; as mentioned previously, more resistance has been shown during the last two or three sessions, slightly more trade interest is in evidence, and the market presents an oversold appearance.

Upper Contract.—We have had a series of quiet markets during the past week, both speculative and trade interests showing little disposition to operate. Very little business is transacting in either c.i.f. or forward cotton, and until some improvement begins to be manifest in these departments only minor fluctuations are to be anticipated.

Straddle liquidation of near positions is just beginning to come in; this has already widened the March/July difference slightly, and more pressure will probably be experienced at a little later date as some very large lines have still to be transferred.

Egyptian Spot.

Conditions have been very quiet again in this department, but a steadier undertone has been apparent in the Sakel market. Conversely, Uppers have exhibited a somewhat easier tendency. Although the volume of business has still remained lamentably small, there has undoubtedly been a better demand for Sakel cotton during the past few days and, with futures showing a firmer front, prices have remained remarkably steady. The improvement noted has occurred principally in the qualities at from 75 to 125 on. Nahda, Maarad, and White cotton have all figured in the inquiry this week to a moderate extent.

The customary steady business has continued in Upper, chiefly in the 10 off to 10 on quality, but business has been more restricted than of late, and the quieter tone of the futures market has exerted a restraining influence on values. Pilon has not met with a great deal of interest this week, a fact which rather surprises us, particularly as the basis in Egypt appears to be hardening. The feature of the week has been the arrival of the first shipment of Gezira Sakel, which has stimulated trade interest to a marked degree. Only the higher grades, of course, have so far arrived, but, judging by these it is evident that a most desirable quality of cotton has been produced this year. Prices range from 450 to 350 on March Sakel, and keen competition for these early shipments is anticipated.

C.i.f. business has been stagnant and forwardings to the trade last week showed a distinct falling off at 6,210 bales Egyptian and 670 bales Sudan. Estimated sales for the week, 1,300 bales Egyptian and 100 bales Sudan. Quotations of Sakel show a slight decline of 5 points. Upper and Pilon are 10 points lower on the week. F.G.F. Sakel to-day, 17.90d. F.G.F. Upper to-day, 12.15d. F.G.F. Pilon to-day, 12.78d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended February 14, state:—

Since our last report the futures market has been active, and while Sakel has been weak, Uppers have been rather firm. The week's summary of price movements is as follows:—Sakellaridis: March, 35.80 dollars, 0.85 dollars down; May, 36.20 dollars, 0.74 dollars down; July, 36.50 dollars, 0.71 dollars down; November, 37.02 dollars, 0.51 dollars down. Ashmouni: February, 22.37 dollars, 0.29 dollars up; April, 22.70 dollars, 0.14 dollars up; June, 23.10

dollars, 0.12 dollars up; August, 23.45 dollars, 0.13 dollars up; October, 23.75 dollars, unchanged.

Sakel.—Liquidation of long positions has continued and prices have declined appreciably. The liquidation this week has been brought out by the declaration of short time in the Bolton district of Lancashire and the weakness of Sakel futures in Liverpool. Up to now, the decline has been orderly, first, because there has been little or no forced covering of cotton financed by the banks, and, secondly, due to the fact that the trade has been following the decline and has put through some purchases. The undoing, on a large scale, of old straddles, by sales of Sakel against purchases of Uppers, has again been a prominent feature, and, on the whole, we should say that the liquidations alluded to above, taken together with the elimination of these old straddle positions, have probably slightly improved the technical position of the market.

The latest news from the Sudan about the Gezira Sakel crop is somewhat less favourable; at the same time, the conviction remains that the final production will be appreciably larger than that of last year. The demand from spinners has again been rather poor, although it was stated that the Continent and America placed some medium-sized orders when the market was at the lowest. The statistical position of Sakel at the end of the first week of February was approximately as follows:—Stock in Alexandria, 1,375,000 kantars (including the 350,000 kantars held by the Government); stock up-country, (about) 460,000 kantars—1,835,000 kantars. At the corresponding time last year the stock of Sakel in Egypt was about 2,085,000 kantars. As a matter of information, we would add that the exports of Sakel last year from the end of the first week of February to end of August were about 1,500,000 kantars, a figure which we do not think will be attained this year, having in view the falling off in the use of Sakel by spinners both by reason of its high price as well as the ever-increasing competition of artificial silk.

The Sakel/Uppers straddle (March/April) this week stands at 1,310 points, against 1,400 points last week and 874 points at this time last year.

Uppers.—The demand from spinners this week has been slightly better, and this, coupled with the reversal of the straddles mentioned above, has given some life to this market, and prices show a slight gain on the week. Against the second February tender, dockets for

only 1,250 kantars were issued; this was much less than anticipated, and the market reacted favourably to the announcement.

The total dockets issued for the first two tenders of the month amount to 11,500 kantars.

The statistical position of Ashmouni and Zagora at the end of the first week of February was approximately as follows:—Stock in Alexandria, 1,510,000 kantars; stock up-country, (about) 650,000 kantars—2,160,000 kantars. At the corresponding time last year the stock of Ashmouni and Zagora in Egypt was about 1,960,000 kantars. Exports of Ashmouni and Zagora from the same time to the end of August last year were about 1,660,000 kantars, which, in contrast to our remarks on Sakel, will probably be appreciably surpassed this year on account of the relative cheapness of the price of Uppers compared with American, which has stimulated the use of the former.

The Ashmouni/American straddle (February/March) this week stands at 234 points, against 236 points last week and 636 points at this time last year.

The week's receipts amount to 102,784 kantars, against exports 174,830 kantars; the stock in Alexandria stands at 3,319,116 kantars. Spot.—We have had another quiet week at Minet el Bassal, and spinners continue to show but a moderate interest in our cottons. Sales for the week amount to about 14,550 bales, of which we estimate 5,100 bales Sakellaridis, 8,350 bales Ashmouni and Zagora, 800 bales Pilon, and 300 bales other varieties.

Sakellaridis: A fair demand continues and the week's turnover is moderately good as compared with other weeks of recent date. All styles have been dealt in, with the medium qualities, which are scarce, in most demand. Some recrudescence of interest in the better grades is also to be noted. Spot differences are generally unchanged.

Ashmouni and Zagora: Have met with a fairly good demand, and a turnover slightly superior to last week's has resulted, in which all grades except Fully Good and better have shared. Spot differences are generally rather dearer, many sellers waiting for the April premium, as a basis, before selling.

Pilon: Has not been in such good favour as last week, but a fair business has been done, chiefly in the better grades. Spot differences are unchanged.

Other Varieties: In Nahda, White, Brown, and Fouadi a retail business has been done at spot differences generally unchanged from last week. A fair amount of interest, however, has this week been shown in Maarad and a very fair business has been done.

Crop, 1929.—There has been a return to normal weather in the interior, and conditions being again favourable, preparation for sowing is in full swing. In some fields of the South and Central Delta actual sowing has commenced. Prospects for the supply of water during the summer are fairly satisfactory for the time being, and we give below yesterday's reading of the most important Nile gauges (in metres):—Malakal, 10.36, against 9.90 last year; Roseires, 11.83, against 11.39 last year; Wadi Halfa, 1.63, against 1.00 last year. The discharge from the Assouan Reservoir registered yesterday was 951 cubic metres per second, against 650 cubic metres last year and 1,177 cubic metres in 1927. The river levels for the same three dates were respectively 113.63 metres, 112.38 metres, and 113.63 metres.

M. Bourouff, Bulgarian Foreign Minister, informed the Foreign Affairs Committee of the Söbranye on February 22 that negotiations for a commercial treaty with Yugoslavia would open in March. A treaty with Turkey was about to be signed.

Notes of the Week.

The Geneva Meeting.

The stage is set this week at the meeting of the Council of the League of Nations for a full-dress debate on the subject of Minorities, and all the different States personally interested in the question have arrived at Geneva with bristles suitably displayed. It would be strange, indeed, if the Council did not feel impelled to inquire into the working of the so-called "Minorities treaties." Not many months pass without its being reminded of this thorny subject, and for its own peace of mind it must want to discover, if it possibly can, a more effective solution of a problem which threatens to grow more and more insistent. Whether the concrete proposals for reforming the Council's procedure in regard to the receiving of complaints from Minorities, which are to be submitted by the Canadian representative, will meet the difficulty may be doubted, and the better course would seem, to lie in the German proposal to hand over the problem to a special commission for exhaustive inquiry. Until an outside body has inquired into each separate Minority problem and passed impartial judgment upon it, there is little likelihood of any general improvement in the treatment of minorities. Each country is apt to regard general regulations as applying to every other country than itself. What is required is a definite recommendation in respect of each particular minority, which will indicate the line of action that the Government concerned should take and—not less important—the obligations imposed on the minority itself to carry out the duties of loyal citizenship. To those countries that complain that outside interest in their minorities is an encroachment upon national sovereignty it can only be pointed out that, if they give their minorities no cause for grievances, no further interest will be taken in their fate.

Roumania and Hungary.

The statement that a settlement of the Transylvanian Optant question is within sight is good news, for compromises in South-Eastern Europe are not as a rule the order of the day. The controversy has been in progress for

many years, and has experienced a long spell of the "No, no, never" stage; but good sense, not unaided by a belated marshalling of a sense of humour on both sides, has won the day. The quarrel was half over when the Hungarian representative was invited to steal the compensation money instead of pressing to have it handed over. The compromise reached saves the face of both parties. Compensation for the expropriated land will be paid, but, instead of on all of it, as claimed, only on that part of it which would have been left to the owner if he had remained in Transylvania; payment will also be deducted from the Reparations account. A further meeting of the delegates of the two countries is to take place in Vienna on March 15; but it is confidently expected that the adjustment of the remaining details of the agreement will present no difficulty.

Yugoslavia and Greece.

The text of three protocols that are to regulate the lease to Yugoslavia by Greece of a free zone in Salonika has now been agreed upon by the two Governments, and a treaty embodying it is expected to be signed at an early date. With its signature will be settled a matter that has been at issue between the two countries ever since the War. As Salonika was the natural outlet for Serbian trade and Serbia the natural economic hinterland of the Greek port, an agreement that would serve the interests of both States was indicated as soon as the Greco-Serbian boundary was fixed at a distance of less than fifty miles from the coast. An agreement establishing a Serbian free zone at Salonika was signed in the spring of 1914, but its ratification was prevented by the outbreak of the Great War. The question was re-opened by the Belgrade Government in 1922 and Greece hurriedly ratified the 1914 agreement. Yugoslavia, however, refused to be content with the original convention, and the Greek Government was constrained to grant her more favourable terms in an agreement signed on May 10, 1923. The zone was handed over under this second convention in March 1925; but Yugoslavia soon found that the arrangement did not fulfil

all her expectations and an agitation for a revision of the agreement was started. General Pangalos's Government considered it politic to yield to Belgrade's insistence and accorded still more favourable terms in regard not only to the zone itself, but also to the railway connecting Salonika and the frontier of Ghevgeli. The reaction against the Pangalos Dictatorship caused this agreement to be denounced in Greece as an infringement of Greek sovereignty and ratification was refused. With the return to power of M. Venizelos the position of Greece in Europe was considerably improved and became still further strengthened by the treaty of friendship with Italy. Yugoslavia, in the meantime, had lost ground through internal dissensions and her strained relations with Italy. When M. Venizelos visited Belgrade last October to discuss the Salonika question Greece no longer regarded herself at a disadvantage in her negotiations with a State twice her size. The Belgrade Government had to agree to further negotiations being undertaken on the basis of the 1923 Convention and not of the Pangalos agreement. The new protocols, it is understood, have been drafted on these lines. Neither country has any reason to complain that it has suffered in its *amour propre*, and the ground is cleared for a treaty of friendship, if not of alliance, between them.

The Orthodox Church in Albania.

According to reports emanating from Constantinople trouble has broken out between the Œcumenical Patriarchate and the Orthodox Church in Albania. The latter has been in existence *de facto*, if not *de jure*, since 1922; but the Œcumenical Patriarchate could not bring itself to acquiesce formally in this last secession from its seriously truncated jurisdiction. Autocephalous rights have been claimed by Bulgaria, Yugoslavia and Roumania and duly recognised by the Phanar; but difficulties were placed in the way of Albania, when the Orthodox Church there wished to have the same privileges. Two years ago the Patriarchate sent a special envoy to Tirana to endeavour to meet Albanian aspirations without the grant of full autonomy; but the overtures were rejected and the Albanians have since held on their own way. The present trouble is said to have arisen over the appointment of a Synod, which the Patriarchate regards as irregular, and in regard to which the Albanians have had the moral support of the Serbian Church. The Phanar has "deposed" the Albanian bishops and has protested against the action of the Serbian ecclesiastical authorities in countenancing the Albanian "irregularity." In the Orthodox world the different Churches are so closely identified with the nationalities concerned that any ecclesiastical quarrel almost inevitably acquires a political aspect. Whatever may be the rights or wrongs of the present difficulty between the Albanian Church and the Œcumenical Patriarchate, there can be no doubt that any incident which tends to bring Albania and Yugoslavia closer together cannot be wholly unfortunate.

Suspense in Syria.

No signs are yet visible of a settlement of the Syrian political problem. The Assembly is indefinitely prorogued, and what activities are recorded belong rather to the economic than to the political sphere. Syria, it is true, may be little the worse for that; but all the same one would like some symptoms of an attempt to re-envisage the situation. It would appear certain that no further concessions can be made on the part of the French, who have to conform with the obligations imposed by the League of Nations, and it is very significant in this connexion that even the Socialist Press of Paris, whose sympathy with the Syrian Nationalists is very considerable, fully realises that M. Henri Ponsot, High Commissioner for Syria, has shown the utmost generosity compatible with his duties. What, then, is to be done in Syria? The people in that unhappy country must be ineffably weary of the whole series of unsuccessful negotiations. Whether they are ready to turn against the Nationalists, and to support some other party which would co-operate with

the French Mandatory Power, it is too early to say. But it has been suggested that if new elections were to be held in Syria, the Nationalists, who have shown themselves incapable of reaching a solution with authorities whose obligations were previously and clearly defined, might be in a minority in the next Assembly. What grounds there are for that suggestion we do not know, although *prima facie* it would not appear that Syria would easily turn anti-Nationalist. But in the interests of both Syrians and French it is to be hoped that a solution, whether of the democratic or autocratic kind, is not far off. The form of the solution matters nothing, so long as it is workable.

Palestine as a "Seventh Dominion."

Although it is easy to understand the attractions that the "Seventh (Palestine) Dominion League," which held its inaugural meeting in London last week, may have for some British Zionists, it is important to remember two things. First, the Arabs of Palestine, who are in a majority, and, in our opinion, will always be in a majority in the Holy Land, have never consented and will probably never consent to their country being made into a British colony or dominion. And secondly, the vast number of Jewish immigrants into the Holy Land derive from lands outside the British ægis, and, if they were to support this "Seventh Dominion" conception at all, would only do so on condition that the conception of a Jewish majority in Palestine were simultaneously adopted. About the first fact the promoters of this Seventh Dominion League do not appear unduly concerned. They profess to believe that there will be no domination by Jew of Arab; at the same time they are careful to express their trust in the eventual peopling of Trans-Jordan and of Iraq with Jews. The second fact, however, they fully realise, and it is to be assumed that some of their propaganda will be directed to countries containing potential immigrants to Palestine the Governments of which have not previously displayed marked enthusiasm for the spread of British possessions. From an impartial standpoint, therefore, the League is doomed at the outset, for it is based on two untenable hypotheses: that the Arabs of Palestine will ever consent eternally to be denied the opportunity of linking up in a confederation with other Arabic-speaking countries, and that Zionist immigrants from countries outside the British Empire (and immigrants to Palestine from within the British Empire are negligible numerically) will of their own free will become citizens of that Empire unless it assures to them (what will never be) a majority in Palestine.

The Bahrain Affair.

The publication last week of the British Note upon the recent protest by the Persian Government in the matter of the suzerainty of the Bahrain Islands contains the fullest possible statement concerning the relevant history of this disputed possession, and one would imagine, therefore, that so far as the League of Nations is concerned, the affair is at an end. As we have pointed out before, and as this Note emphasises, the Persian Government has neither on historical grounds nor on grounds of international law any sort of claim which would impress an educated audience. As friends of the Persian people, and particularly in the interests of good Anglo-Persian relations, we repeat our conviction that Persia is doing herself no good by raising this question. If a claim to re-possess what once was included within the Persian Empire is in itself reasonable, what is to prevent the Persians from claiming possession of Muscat, of Iraq, or even of the Yaman for that matter? Obviously only common sense can prevent so absurd a proceeding. We can, therefore, but reiterate the hope, expressed in the British Note, that the Persian Government will recognise that their present attitude is "an insurmountable obstacle to the establishment of good relations with the Government and people of Bahrain." It is particularly to be hoped that the Persian papers, which, we note, have almost unanimously upheld the Teheran Government's *démarche* in the

affair of Bahrain, will, when the facts of the case are set out before them—as they are set out in the British Note—adopt an attitude more in keeping with the culture and sense of realities of the Persian people.

INDIAN NOTES.

The Indian Budget.

A year ago Sir Basil Blackett, when presenting his sixth and last Budget, remarked that it was not “a spectacular Budget.” The same remark may also be applied to the Budget which his successor presented for the first time to the Legislative Assembly last week. In fact, as Sir George Schuster early made evident, there is a close and direct connexion between the two statements, for if the outstanding feature of the 1928-29 Budget was the complete and final extinction of the Provincial contributions, without recourse to additional taxation, the new Finance Member had the unenviable task of warning the Legislature that the gap left by the remission had not yet been really filled. While therefore Sir George Schuster has decided, rightly, we think, not to propose new taxation at the present stage he made no secret of his intention, if circumstances next year render such a course necessary, of boldly and resolutely facing the contingency. We mention the point now because it is clearly one upon which critics of the Finance Department, and of the late Finance Member in particular, are certain to concentrate during the forthcoming Budget debates. Briefly stated—a comprehensive summary of the statement will be found on another page of this issue—the position is that the revised estimates for 1928-29 show a small balance on the right side, while those for the coming year are being made also to balance by a transfer from the revenue reserve fund, reinforced by the current year's surplus. To have to Budget for a deficit, no matter however created, is an unenviable distinction for a new Finance Member, and Sir George Schuster is to be congratulated upon the wholly creditable manner in which he emerged from the ordeal. For the rest, main interest in a speech, remarkable alike for its frankness, lucidity and breadth and freshness of vision, will centre upon the new arrangement by which it is hoped to maintain army expenditure during the ensuing four years at last year's figure of Rs.55 crores. The sum of Rs.10 crores required by the programme of modernisation is to be provided out of savings in other directions within the present limit of expenditure. If the plan, in which the hand of Sir Bhupendra Nath Mitra is discernible, can be successfully carried out it will certainly be a notable achievement. Other points of interest are the critical review of the Ways and Means position, and the indication of the policy which the new Finance Member intends to pursue in the matter of capital expenditure and borrowings therefor. India, he said, is passing through a period which needs a steady hand on expenditure, and careful conservation of its credit, combined with a broadening of the basis on which capital required for its development is to be provided. “These objects,” he said, “will be my chief concern and I shall pursue them with all the more confidence and enthusiasm because of my firm conviction that the financial position of this country is intrinsically sound and that there is no country in the world which has better security to offer for its loans.”

The Honours List

The New Year's Honours List, which was delayed by the King's illness, was published on March 1. It announces comparatively few Indian honours, promotions and creations in the two Indian Orders being severely restricted. In the Order of the Star of India, Sir Leslie Wilson's successful term of office as Governor of Bombay is recognised by the award of the Grand Cross. The Nawab of Bahawalpur becomes a K.C.S.I.; and there are five new Companions, who have all won distinction in the

Services, namely, Mr. J. D. Sifton, I.C.S., Bihar, and Orissa; Mr. Michael Keane, I.C.S., Punjab; Lieut.-Col. C. E. Bruce, the Resident in Waziristan; Mr. R. T. Harrison, Indian Service of Engineers, Bombay; and Mr. C. T. Mullings, Indian Service of Engineers, Madras. In the other Indian Order the Maharaja of Kashmir becomes a G.C.I.E., and Sir Fazl-i-Husain, Sir Thomas Middleton, and Sir Clement Hindley receive the K.C.I.E. Sir Fazl-i-Husain is a distinguished Muslim barrister who has been practising in the Punjab for nearly thirty years, and who has lately served with distinction as a member of the Punjab Executive Council. Sir Thomas Middleton, the well-known authority on agriculture, was a prominent member of the recent Royal Commission, and Sir Clement Hindley rendered brilliant service to India as Chief Commissioner of Railways. Among the twenty-four new Companions it is certainly satisfactory to see the name of Mr. Robert S. Finlow, who is the recognised scientific authority on jute and its cultivation, and who is, in addition, the vigorous and capable Director of Agriculture for Bengal. Going to the other side of India, we are glad that the valuable work which Mr. R. H. A. Delves has done for the Bombay Improvement Trust has not been overlooked. Mr. Delves is the Chief Officer of the Trust, a position which he has occupied with success for a number of years.

The New Knights.

Mr. Basil Eddis, a member of the great firm of Gillanders, Arbuthnot and Co., receives a Knighthood. This is an honour which was certainly overdue, seeing that Mr. Eddis has served the commercial interests of India faithfully and well for a long time in Burma and in Bengal. As President he conducted the affairs of the Bengal Chamber of Commerce in 1927-28 with ability and tact, his sound judgment and great knowledge of commercial, and particularly financial, questions being invaluable. He has also achieved distinction as a Director of the Imperial Bank of India, and last year he was Sheriff of Calcutta. Among the honours that go to Bombay few will give greater pleasure than the Knighthood conferred on the European representative, who is now Sir Hugh Cocke. A member of a firm of chartered accountants, Messrs. A. F. Ferguson and Co., which has taken an increasingly important position in Bombay commercial life, he has surrendered a large amount of his time to public work, first in the Bombay Municipality and Legislative Council and afterwards in the Indian Legislative Assembly. Neither an orator nor an advertiser, he has always exhibited a strong quality of saving common sense, and by avoiding

TURKEY'S PROBLEM.

It is altogether a healthy sign that Turks themselves are now indulging in the habit of national stocktaking in an endeavour to gauge the progress that is being made under the Republic. Less than five years have passed since the final liquidation of the old order by the promulgation on April 30, 1924, of the Republican Constitution, and Ismet Pasha, Prime Minister, has not unjustifiably suggested that twenty-five years ought to be allowed the Turks as the period within which to become "a civilised people." If the process is watched with close interest by foreigners, it will be in no spirit of captious criticism, but from a natural desire to see the country play at the earliest possible date the part in the world scheme of things to which its resources and potentialities entitle it. One of the most disappointing features of the earlier years of the new régime was the unanimity with which all articulate expression in Turkey declared that everything that happened or was done was of the best and for the best, for no attempt was made to examine any development critically, with a view to bringing more intellects than one to bear on any given subject. This stage of mental sluggishness or self-deception is gradually passing. Things in Turkey, in common with other parts of the world, are obviously not all of the best nor entirely for the best, and it is useless for the most loyal adherent of the Republic to try to convince others, or even himself, that they are. It may be some time before a correct diagnosis of the situation is made in the country itself; too much knowledge or frankness in a matter of this kind has dangers attached to it, and criticism finds it advisable to go warily. Some advance has been made when it begins to raise its head, as the chorus of indiscriminating approval dies away. As an instance of the new spirit, a Turkish newspaper propounds a big "Why?" to its readers. In less than four years, it points out, the Turks ejected the Greek Army from Turkish soil; but five years have not sufficed to settle the question of the exchange of populations. A day was sufficient to suppress the fez, to banish the Caliph, to close religious schools, or to settle the alphabet question; but women still wear veils, lattice-work frames still cover windows, and open drains still exist. In a word, things which might have been expected to take centuries to achieve have been accomplished in a moment, and matters which could be settled in no time remain undealt with as the years pass. In regard to his antitheses the critic's style is clearly cramped by considerations of discretion, but it is not difficult to understand the point that he wishes to make. In giving the reason for the anomalies that he cites it is the correct Turk who speaks: "The reason is that we have a great man capable of solving great problems, while the machinery for small matters is entirely out of order."

The truth of that explanation strikes deeper than, perhaps, the writer in *Ikdam* realised. Mustapha Kemal Pasha achieved the independence of Turkey—the greatest of all achievements in the eyes of the loyal Turk; he is

also responsible for the suppression of the fez, the abolition of the Caliphate, the secularisation of public instruction, the adoption of Latin characters in the writing of Turkish, and for many other reforms that the critic does not enumerate. Yet many things, the average Turk is beginning to find out, are lacking, and he gropes vaguely in the dark for the reason. In time he will understand that the happiness of a people depends less on the greatness of a few achievements, however spectacular these may be, than on the standard of every-day accomplishment. If "the machinery for small matters" is out of order, it means, as the writer in *Ikdam* implies, that the Ghazi, for all his greatness, cannot support on his own shoulders alone the whole of the Turkish administration in all its details. The mistake that he has made is to suppose that he could. By eliminating all opposition, by surrounding himself with men whose merit is gauged more from their subordination to his will than from their ability to supply gaps in his own knowledge and experience, by allowing none but his own nominees to be members of the Grand National Assembly, Mustapha Kemal Pasha has contrived to make new Turkey dependent on a single mind, and the results are proving unsatisfactory. The government of a modern State is too complex to allow one man to keep all the details of administration waiting on his prompting or word of command. When he insists upon doing so, there is no cause for surprise that the machinery for small affairs is out of order or has not even started to revolve.

The Republic of Turkey was established on the theory that the country had previously been exploited for the benefit of foreigners and that in future it should be developed by Turks alone for their own benefit. The people were encouraged to believe that not only were all the knowledge and experience required for the successful development of the country to be found among the Turks themselves, but also the necessary funds. Turkey's front door was banged, bolted and barred against foreigners and foreign capital. The attempt to carry through extensive reforms with only the country's own resources has led to serious over-taxation; the omission to seek expert advice, because it would have to be foreign, has meant failure for many enterprises, both public and private. A series of bad years for Turkish agriculture has completed the discomfiture of the people, added to the embarrassment of the Government, and, as an inevitable result, imposed an undue strain on the President. The periodical hunt for and discovery of plots can be accounted for only by a national, which means Presidential, attack of nerves. For five years the Turkish Government has gone out of its way not only to antagonise foreign capital, but also to make its profitable investment in the country impossible. To-day the pathetic truth is realized, in the words of one organ in close touch with the Government, that "our Turkey, without doubt, is one of the countries which have most need of foreign capital and which will need it indefinitely." Yet a country dependent on one mind and subject to attacks of nerves, which cause it to see an enemy lurking round every corner, has few inducements to offer the foreign investor. Nor does the experience of those whose help has been accepted by the Turkish Government inspire confidence. The reasons for the failure of a Belgian group and of a Swedish group that came to Turkey's help may be different, but in each case Turkish ignorance or inexperience has been proved. In many other directions—the tobacco monopoly, sugar factories, port administration, and so forth—the Republic is paying dearly for experience which could have been acquired more cheaply, more rapidly and to better purpose, if the authorities had set the example of calling upon experts for their advice. The Ghazi has sent the whole of Turkey to school to learn Latin characters for the writing of the Turkish alphabet; a reform that would have brought about more immediate results in the material development of the country would have been for officials and others to have taken courses in up-to-date administration and business.

The Near and Middle East

From Our Own Correspondents.

Belgrade, February 28.

The Weather and Flood Precautions.

After two days of mild weather, when the streets of Belgrade ran with torrents of melting snow and the danger of floods replaced the news of deaths from the cold as the great topic of conversation in the cafés, it appears that the cold is to return again. This morning it is snowing heavily. The danger from floods is by no means negligible, and the Government is taking elaborate precautions to minimise the danger. The ice near all bridges and other objects subject to damage is being broken up and cleared away, and experiments have been made with artillery of various calibre and mines of different weights to find the best way of breaking the ice and clearing the channel before the floods begin. It is reported that experiments will also be made with a chemical mixture known as "thermite," said to be an American speciality, which generates enormous heat very rapidly and is not affected by water. It is said to have been used effectively in clearing the ice from the St. Lawrence in 1924-25.

The Geneva Meeting.

The Government's foreign policy is one of considerable activity in the direction of agreement and friendship. Yesterday Dr. Kumanudi, acting Minister of Foreign Affairs, left for Switzerland, where he will visit and consult M. Marinkovitch, Minister of Foreign Affairs, who is reported to be progressing rapidly towards complete recovery at Davos. He will then proceed to Geneva to attend the meeting of the Council of the League of Nations. Matters on the agenda likely to interest Yugoslavia are the question of Minorities, which will, I am informed, be treated purely from the point of view of general principles, and that of the Yugoslav representative on the Hague Court of International Justice. It will be remembered that the Yugoslav member resigned in protest against the Hungarian attempt to bring the matter of the ex-Habsburg estates of Belye and Topolovatz before that Court, although the Yugoslav Government maintains that the matter was settled long ago by the terms of the St. Germain Treaty. If the League Council decides that the matter is settled once and for all, the Yugoslav representative on the Hague Court will be reappointed.

The Pirot Conference.

The meeting at Pirot of the mixed Bulgarian-Yugoslav Commission to settle various frontier questions and to try

to prevent future incidents has begun, and several sittings have been held in a most cordial atmosphere. The greetings of the two delegations were of the most friendly, and repeated references were made to the brotherhood of the two peoples. This is the first official meeting of delegates representing the Yugoslav and Bulgarian Governments since the famous meeting at Nish in 1923 just before Stamboliski's tragic end. Hopes are expressed on both sides that this conference may lead to the settlement of outstanding questions and pave the way for more friendly relations.

French Interest in Yugoslavia.

Great attention has been paid in financial and economic circles to the visit of a large party of most influential French industrialists and financiers, including MM. Fouquet and de Beaumarchais, representing the French heavy metal industries, and Baron Bastar, representing financial interests and closely in touch with the French Foreign Office. The visit is said to be made with the object of studying economic and financial conditions here with a special view to credit conditions. It is believed that considerable loans may be offered for the supply of material for railway construction and other large-scale public works, and that in this way the French heavy metal industries hope to establish for themselves another rapidly growing market. This visit is considered to be one of the first-fruits of the Franco-Yugoslav Commercial Treaty recently signed in Paris by the Yugoslav Minister of Commerce, Dr. Mazhuranitch.

Yugoslavia and the Albanian Church.

In recognition of the great help given in the founding of the new, independent Albanian Orthodox Church, which will have its seat at Koritza, King Zogu has decorated the Serbian Patriarch, Mgr. Dimitrija Skanderbeg, and Bishop Viktor, and the Albanian Synod has sent a letter of thanks to the Serbian Synod. The Orthodox Church in Albania has hitherto looked to Belgrade as its centre, and the help given by the new Yugoslav Government in the formation of an independent Albanian Church may be taken as an indication that it realises that a really independent Albania is a greater guarantee of safety on her western frontier than a vassal State held by threats or force.

The Budget.

The budgets of the various Ministries prepared before the change of régime have all been carefully examined by Dr. Shvriyuga and the Ministers concerned, and in every case considerable savings have been made. Especially is this so in the case of Ministries like that of Communications or Posts and Telegraphs, which should be at least self-supporting, if not giving a surplus for general State expenses. Owing to the lack of capital it has been found necessary to defray capital expenditure, such as the building of new railways lines, roads, bridges, public buildings, laying down telegraph and telephone lines, etc., usually paid for from loans, out of budgetary income, and

this has been a very heavy burden on the Budget. All such expenditure, save where necessary for the continuation of work already begun, is to be thrown out of the Budget this year, and in this way it is made certain that the Budget will at least balance, if not have a surplus for the relief of taxation or the feeding of the necessitous. Special provisions will be made in the new Finance Laws to attract foreign capital into the country by removing restrictions, lowering taxation and offering guarantees.

Among other reforms which will shortly be completed is the reform of the Laws regulating religion. It is believed that in future the priests of the various recognised religions will no longer be civil servants, paid directly by the State, but that each Church will be given a fixed sum and left to pay its own priests. This will give further autonomy to the various Churches and secure full religious liberty. Changes will also be made in the Marriage Laws. In addition to marriage according to the customs of the Orthodox and Catholic-Christian Churches, the Protestant Church, the Jewish and the Muhammadan religions, already recognised, a sixth form of marriage will be introduced for people of different religions and civil marriage will be made legal throughout the whole country, although Church marriage will remain the basis of the Marriage Law.

The British Expedition.

The month of British Culture ended to-day and the Exhibition of British Art will be closed to-morrow and removed to make way for the elaborate decorations ready for the great Art Ball taking place on Saturday next. Mr. Kennard, British Minister in Belgrade (now Sir Howard Kennard—Ed.), declares himself more than satisfied with the success of the Exhibition and hopes that an exhibition of Yugoslav art in London can be arranged in return. The enthusiasm shown for the lectures, plays and concerts arranged in connexion with this month of British Culture has been well maintained and the organisers are to be congratulated on a completely successful effort.

Sofia, February 19.

The Municipal Elections.

Elections took place on February 10 for the new municipal councils in almost all the towns of Bulgaria. In the capital itself the election has been postponed until May because there is to be a change in the organisation of the municipality of Sofia. These municipal elections in themselves have no political importance; but they became invested with it by reason of the great tension existing between the Government and the Opposition, who have tried to make of them a national affair. This attempt has met with only partial success, for all parties have become linked up with the most varied and unexpected coalitions, which make a forecast of the general election an impossibility. In any case, the Government has received 70,314 votes as compared with 80,598 given to the Opposition. These figures (which do not include the province of Petritch) are Government figures, and the Opposition parties have protested against them, asserting that they (the figures) indicate the votes given in all the lists of the Democratic Entente, including those in which the Democratic Entente appear in coalition with other parties, so that the percentage of 46.5 which the Government claims to have obtained should in reality be reduced. However, in spite of this incontestable advantage, the Opposition has, by its very division, permitted the Demo-

Split in the Agrarian Party.

There have long existed in the Agrarian Party two sets of opinion, which led on inevitably to an effective split. This split was consummated by the gathering, at Pleven, of two Agrarian Congresses, representing, on the one hand, the extremist party, headed in appearance by a peasant from Pazarjik, George Yordanoff, but actually by the ex-Communist, Dimitri Guitcheff, and on the other, the more moderate section headed by the deputies, George Marcoff and Alexander Radouloff. The extremists, who were joined at the last moment by young Moravieff, nephew of Stamboliski, favour co-operation with the Communists (although officially they deny it) against the bourgeois, without saying much on the maintenance of the existing political and social order, and above all they support a close union with Yugoslavia. The Moderates, appealing to the innate conservatism of the peasants, reject all idea of the upsetting of the present organisation of the State, and hope to collaborate with the other parties to reinforce the democratic evolution of Bulgaria and to help the country over its present difficulties.

Naturally, each of these parties claims to have the support of the mass of the peasants: which is right it is impossible to say. It seems, however, that the Moderates are more powerful than the Extremists. The friends of Marcoff and Radouloff are parleying with the dissident Agrarians of the ex-Minister, Constantin Tomoff, to urge common war against the extreme Left, the Agrarian-Communists.

Cairo, February 23.

The High Commissioner.

The High Commissioner, who has returned to Khartoum on the conclusion of his trip to the Upper Nile, is due in Cairo on March 3. He will leave the Sudan by the Red Sea route, but Lady Lloyd will come back *via* Wadi Halfa, and is expected in Cairo on the 28th. On Lord Lloyd's return the discussions in regard to the MacGregor-Abdel Hamid Soliman report on the Nile waters will be resumed, and will, it is to be hoped, be brought to a satisfactory conclusion, for until agreement is come to in this connexion with Egypt, the Gebel Aulia Dam cannot be embarked upon.

The Season.

The Tourist Development Association of Egypt has just formed a Fêtes Committee to organise entertainments for visitors. There has been much comment by visitors at the absence of any of the organised fêtes outside the hotels which marked the pre-War seasons. But a programme must now be left for next season. The Committee has, however, decided to inaugurate its formation by at least one fête, which will take the form of a parade of decorated cars and battle of flowers to take place on March 17 in the small Gezira, the promenade lying between the Nile steamer landing stages and the public gardens on Gezira Island.

An effort is also being made to attract visitors to Egypt in the early part of the season when the hotels have plenty of accommodation, *viz.*, November and December, and at the same time counteract the Riviera and other Continental winter resorts in the matter of cost. It has been arranged by agreement between some of the steamship companies, the Egyptian State Railways, the Sleeping Car Company, and the hotels of Egypt to issue a combined ticket to cover first-class fare by steamer and rail from Marseilles to Aswan and back, including sleeping berths and Pullman seats, and accommodation in first-class hotels. The exact figure has not been settled yet, but for a twenty-one days' trip including eleven days' hotel accommodation in Cairo or Upper Egypt the cost will not exceed £63, and, if it is desired to extend the stay in Egypt by a further thirty days, the inclusive cost will not exceed £100. These tickets will be available from November 15, and holders must re-embark from an Egyptian port on or before February 2. When one bears in mind the normal charges made by the steamship companies for passages to Egypt and by the hotels, one must admit that the inclusive charge which it is proposed to make is a very reasonable offer, that should serve as an attraction to many who have hitherto been prevented (by reason of cost), from visiting this country.

The Pan-African Games.

The Pan-African Games organised under the auspices of the International Olympic Committee, which were to take place at the beginning of April, have had to be indefinitely postponed. A *communiqué* from the Egyptian Olympic Committee says that the postponement is due to the non-participation of the countries in Africa belonging to France, Great Britain, Italy, and Belgium, and that in consequence of the lack of co-operation on the part of the International Olympic Committees of the countries in question the Egyptian Committee has resigned.

The projected meeting of African Games has been ill-fated from the beginning, for once before, in 1927, it had to be postponed because the Stadium, about which, by the way, there was at one time much controversy, was not finished. The present disappointment could easily have been avoided if the organisers had taken the trouble early on in the arrangements to sound the countries which have refused to co-operate. There is every reason to believe that those countries had good grounds for not allowing their subjects to participate. This could have been discovered long ago, certainly in time to organise a substitute

EGYPT invites you to break your journey, see Cairo, travel along the Nile and visit Luxor and Aswan for the antiquities. Or—from Cairo to Jerusalem and through Palestine. Everything arranged by the American Express—before you leave England.

Services for Travellers to India

SERVICES that smooth the path and take the trouble out of travel. Your steamship passages booked at no extra cost.

A uniformed man to meet you at Bombay or Calcutta. An office nearby to take care of your baggage, issue tickets and arrange tours to any point inland. It pays to summon American Express service to your assistance before you leave Europe.

meeting of Pan-Egyptian Games, which is being mooted now, and so avoid the present eleventh-hour unfortunate postponement. The Egyptian Olympic Committee is such a representative body, each member of which has done such good work in this connexion, that it is to be hoped that it will be prevailed upon to withdraw its resignation and to co-operate in the effort that is now being made to save the situation and justify the building of the Stadium.

Philae.

The second heightening of the Aswan Dam will further submerge Philae and other islands in the reservoir area, and in time will certainly cause the picturesque and interesting monuments on this site to disappear altogether. This danger to the "Pearl of Egypt" does not seem either to have struck the man in the street or, when once pointed out, to have caused him much perturbation, and it has been left to the *Egyptian Gazette* to call public attention to the imminence of what is certainly a catastrophe in so far as archaeology is concerned, and to adumbrate a remedy. It suggests that these monuments should be dismantled under careful expert supervision and reconstructed near by on dry land. This was the suggestion made by Lord Cromer when public indignation was aroused at the partial submergence of Philae by the construction of the first dam.

His suggestion was not entertained, and the monuments were left where they were. But all things happen for the best in this world; they say, and the turning down of the British Agent's idea is a case in point. At that time there was no idea of a dam higher than the one then about to be erected, so it is not improbable that if the Lord's proposal had been carried into effect it would have been necessary again to-day to take these monuments to pieces and rebuild them further inland. As the present is definitely the final heightening of the dam, the transfer of the monuments to above the highest point to which the level of the reservoir will attain could be made without any fear of any further danger of contact with the river. The Egyptian Government is examining the question very closely, and will in due course make known the decision it comes to for the protection of these precious relics.

Mixed Courts Reforms.

The Egyptian Government has appointed a Commission consisting of the Judicial Adviser, the Procureur-General to the Mixed Tribunals, the Under Secretary of State for Foreign Affairs and two Counsellors to recommend what modifications are necessary in the Mixed Code of Criminal procedure and what re-organisation will be required in the Parquet, the judicial police and the prisons to meet the demand for guarantees made by some of the Powers in return for the limited transfer of criminal jurisdiction from the Consular to the Mixed Tribunals. This Commission meets twice a week, and has made such progress with its work that it is confidently expected that the Egyptian Government will be able to send its reply to the Powers by the end of March or the beginning of April. I understand that the rumour that the Powers had demanded the creation of an international corps of police to be at the disposal of the Mixed Tribunals is entirely unfounded, and that in all probability it will be arranged that whenever the Mixed Courts require what one would call "judicial police" they will call on a special section of the national police force.

The King of Yugoslavia has signed a decree appointing the Minister of Trade, M. Mazhuranitch, who is a Croat, to act as Foreign Minister during the absence at Geneva of the present acting Foreign Minister, M. Kumanudi.

In reply to the invitation of the Soviet Government, the Turkish Government has notified Turkey's adherence to the Moscow Protocol. According to details of the correspondence published by the Soviet Press Tewfik Rushdy Bey, Turkish Foreign Minister, in his Note, said that the Turkish Government "regards this new step forward with great favour, and takes great pleasure in participating in the Protocol."

EGYPTIAN STUDENTS AT CAMBRIDGE.

The annual dinner of the Pharaoh's Club—a society of Egyptian students at Cambridge University—was held on March 2 at the University Arms Hotel. Sesostri Sidarouss Bey, Egyptian Chargé d'Affaires in London, was the principal guest. In the course of his speech he pointed out that Pharaoh's Club had been since its foundation eight years ago a piece of Egypt in England, and had constantly striven to create closer intellectual and friendly relations between the Egyptian students and their British colleagues in Cambridge. He hoped that young Egyptians would not only carry away with them a deeper and completer knowledge of British culture, traditions and history, but they would also have been the means of creating among their British fellow-students a greater interest in, and sympathy for, Egypt and the Egyptian people.

It was on the shoulders of the younger generation that would fall the duty of interpreting between the Egyptian and British nations. Egyptian students do not come to Cambridge only to work under the guidance of eminent professors, but also to be initiated among their British comrades into the best social traditions of Great Britain and to exert themselves in those sports which have formed so many generations of athletics, and the taste for which is now spreading so rapidly in Egypt. This art of moulding minds and bodies, he continued, the rules of which are said to have been inaugurated by the ancient Egyptians, where could youth find its traditions more vivid than at Cambridge, which even if its foundation does not go back, as the legend has it, to the year 4321 after the Creation, is one of the most ancient of the Western Universities, Peterhouse having been founded in 1281, as the University of Al Azhar, founded in 988 by the Fatimites, is the oldest among the Eastern? They had that evening with them Shaikh Afifi, a living link between these two great Universities.

After reference to the part that Egypt was beginning to play in sporting contests, and to her co-operation in various international conferences, Sidarouss Bey stated that in thus helping the Orient and the Occident to know and appreciate one another, these scholars are promoting one of the most noble tasks that can be conceived. The day when the West will admire not only the picturesque side of the East, but its true spiritual traditions and its moral teachings and its most profound thoughts, a great step will have been taken for the happiness of humanity.

NEWS IN BRIEF.

The Greek delegation under M. Karapanos, Minister for Foreign Affairs, left Athens on March 1 for Geneva to attend the meeting of the Council of the League.

The Spanish General De Lara, who for several years was one of the neutral Presidents of the Greco-Turkish Mixed Commission for the Exchange of Populations, has died in Germany.

The death has occurred of Mrs. Charles Hancock, who did much during the Great War for the Serbian Red Cross. Later, she was a frequent hostess of the Near and Middle East Association.

The Egyptian Government has subscribed £E5,000 to the fund for repairing the Dome of the Rock in the Haram ash Sharif of Jerusalem, to which the King of Egypt recently gave a similar sum.

The Squadron of three Royal Air Force Southampton flying boats, under the command of Wing Commander T. E. B. Howe, which are to be based at Basrah for two years, left Plymouth on February 28.

Ilias Beg Vrioni, who has four times been Prime Minister of Albania and five times Minister for Foreign Affairs, left Tirana on March 2 for Paris to become Albanian Minister to France.

Some 200 Turkish students of Stamboul University attacked the offices of the Greek newspaper *Ta Chronika*, at Constantinople on March 2. They wrecked the plant and knocked about the Editor on night duty. Their action was due to objection to an article.

According to a message from Athens, unknown thieves on March 2 stole historic relics, including the sacred banner which Germanos, Metropolitan of Patras, raised on March 25, 1821, to inaugurate the War of Independence, from the famous monastery Hagia Laura, near Kalavryta.

Captain Alexander Gordon Ingram, Commandant of Police, Alexandria, died there on February 28 of typhoid fever. He joined the Egyptian Police in 1903. During the European War he served in Egypt and Palestine. He was appointed Military Governor of Beersheba in 1917, and became Assistant Commandant of Alexandria in 1921. He played an important part in the detection of the murderers of the late Sirdar, Sir Lee Stack.

Acting on information that a quantity of sugar had been dispatched from Kuwait with the intention of smuggling it into Iraq, Customs officials at Basrah on February 26 are reported to have sent out patrols. One patrol discovered a *boom* (a small river and coasting craft) anchored in the creek near Fao, and on attempting to board it they were fired on. After a fight, in which the skipper of the *boom* was wounded, the Customs men overpowered the crew and seized a number of rifles and a quantity of ammunition.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 14.

The Political Tangle.

One knows with what a passion of idealism an intellectual American, man or woman, may think of India. I have been comparing notes with such a one, a lady; one who has devoted many years to the study of "the soul of India" (they are her own words), and has done more than all but a very few to bring Indian culture home to America. She visited Calcutta in Christmas week on purpose to attend the sessions of the National Congress, and heard all the speeches. She agreed with me the other day that, ever since it was announced that the Statutory Commission was to be composed solely of members of the British Parliament, the Indian Nationalists had played a losing game, going from one mistake to another. First they decided to boycott the Commission, a policy by which they had nothing to gain, and much to lose. Then, having produced the Nehru Report, they proceeded to make it all of none effect by advocating an extremer policy. To give the British Parliament only a year was a mistake; to resolve upon a further boycott, should the British Parliament, at the end of the year, be still only considering and discussing matters, and to spend this year in preparation for that boycott—more mistakes.

The Remedy.

I have also been comparing notes with a Hindu, a judge of one of the Courts up-country. He wishes as sincerely as any Nationalist that India should be free; but he recognises, as he says all thoughtful Indians do recognise, as the late Lord Sinha did, that India must be helped by some other country; must have another country to lean on. The Judge and I agreed that it is useless for the Viceroy and Pandit Motilal Nehru to talk against each other on platforms or in the Assembly; for nothing whatever comes of that. The remedy for the political tangle is for Pandit Motilal Nehru, Pandit Madan Mohan Malaviya, and two or three others chosen from such as the Maharaja of Mahmudabad, the Parsee leaders, the European leaders, to wait on the Viceroy, with the suggestion that he and they should proceed to London to confer at length with the Prime Minister and the Secretary of State for India. It would have to be after the Statutory Commission has completed its inquiry; for, so much time and money having been spent in gathering information as to the facts of the existing constitution, reasonable men would insist upon waiting until the inquiry was finished. Nothing would be lost by the delay. One may see something of that kind done. An answer recently given in the House by Earl Winterton gave an indication that something of that sort is in contemplation.

Bombay Anarchy.

The news from Bombay has been worse and worse, as the cables have informed you. The deaths number over a hundred, and the other casualties, over six hundred; indeed, I have seen the figure put at over a thousand. The Government, a little tardily it is thought in some quarters, have closed the liquor shops; are rounding up bad characters; have forbidden the assembling of more than five persons; have proscribed lathis, and are enforcing the curfew. Nobody wanted there to be a long casualty list from somewhere in India to give point to the contention that the Government needs such strengthening as can be conferred by legislation, or to point the moral against any weakness in deciding who is to control the police; but point has been given and the moral has been pointed.

Public Safety Bill.

By 61 votes against 50 the Public Safety Bill has been referred to a Select Committee. There was a great deal of loose arguing in the course of the debate. Though the powers asked for by Government are only powers to deport aliens who have come to foment discord, people have

been found ready to argue that the Bill is another blow at Indian freedom. Though there is no connexion that any one can see between Communist stirring up of strife and the Indian rate of exchange with the outside world, Pandit Madan Mohan Malaviya had a passage in his speech in which he ascribed India's "bitter depression" to the "Blackett ratio."

Trades Disputes Bill.

The Trades Disputes Bill has also been referred to a Select Committee. This Bill receives much more general support than the Public Safety Bill; at the same time there are clauses penalising lightning strikes in public utility services and general strikes that many people think the Government had no business to put in the Bill, but should have put in a separate one. That is a reasonable view; the clauses may be dropped, and another Bill be introduced.

Chamber of Princes.

For the first time in its history the Chamber of Princes was open to the public on Tuesday, the following resolution, moved by the Chancellor, the Maharaja of Patiala, having been adopted: "That the practice be amended to open forthwith the meetings of the Chamber to the Press and the public, subject to the provision that the sessions can be held *in camera* if necessary." It is an interesting and probably wise decision. It may be doubted if any sessions will henceforth be held *in camera*.

"India in 1927-28."

The attention of all close students of Indian affairs may be called to "India in 1927-28," the work of Mr. J. Coatsman, Director of Public Information. It is a comprehensive summary of events in India during the year covered by the volume; in other words, it is the story that has been told week by week in this column told by another, writing after the close of the year.

"Forward" Appeal.

It was with deep satisfaction that one read the long judgment of the Chief Justice delivered in the High Court on Monday in the appeal of the editor and printer of *Forward* against their conviction by the Chief Presidency Magistrate on the charge of inciting hatred between Indians and Europeans. The case arose out of the Belur railway disaster; the appeal was dismissed. A rule was also issued, made returnable next Monday, for the enhancement of the sentences. The Chief Justice's judgment is worth reading in full, for all its length.

INDIA TO-DAY.

By SIR BASIL BLACKETT.

[At the request of several readers we reprint below the text of the interesting address broadcast by the former Finance Member on January 15.—ED.]

I wonder what sort of a picture of India you have in your minds as you listen to me this evening. Those of you who have been there have your own memories. Those who have never seen India tend to go astray by unconsciously taking for granted for Indian analogies for this or that Occidental fact a method of approach or frame of mind which is non-existent in India. I have had recently to speak to non-Indian audiences about India in Australia and China and the U.S.A., and I have found it essential to begin by combating two fundamental misconceptions.

The first of these relates to the idea of India as a unit. There is more than one sense in which India can and ought to be regarded as a unit, provided always that Burma is excluded. In all I say this evening I exclude Burma. Burma is part of the Indian Empire, but in language, race, religion, history, culture and in her social, political and economic problems also Burma is entirely distinct. Towards the unity of India the British have contributed the Pax Britannica, communications covering the whole sub-

continent and the English language as a lingua franca, but even more important from the standpoint of Indian unity Hinduism permeates the whole life of three hundred million people. I do not mean Hinduism as a religion, but Hinduism as a social system. As a social system Hinduism is all pervading. It colours every social and political and economic question. It affects not only the Caste Hindus, and the so-called depressed classes who are not strictly speaking Hindus from the standpoint of orthodox Hinduism, but also Muslims and Sikhs and Indian Christians, and even many of the Europeans who spend a large part of their working life in India.

It would therefore be wrong to insist without reservations that India is a geographical name for a sub-continent which, apart from its name, has no unity and no homogeneity; but it is the opposite misconception which is prevalent in the West. We are apt to think of India as a country analogous to France or Spain or England, inhabited by people known as Indians who constitute an Indian nation comparable to the French nation or the German nation or the Italian nation. This notion has to be eradicated before it is possible to begin to get an understanding of India and its problems. India is a sub-continent as large as Europe apart from Russia, and far less homogeneous. It would be truer to speak of a European nation than it is as yet to speak of an Indian nation. The Briton is no more an alien on the Frontier than the Madrasi is. The Scot and the Sicilian and the Portuguese and the Pole have more in common than the Punjabi Muslim, the Madrasi Brahmin, the Moplah and the Bengali. Till the British created the Indian Empire there has never been a single power in India governing the whole, or nearly the whole, of India. Hindus and Muslims have lived side by side or in adjacent villages for nearly one thousand years, but the constant preoccupation of the authorities is to prevent the age-old communal feeling from breaking out into violence and murder. There are scores of Indian languages and hundreds of dialects. English is the only tongue in which the people from one part of India can communicate with people from another. This is true even of people speaking related languages derived from the Sanskrit, such as Gujarati and Bengali. The proceedings of Indian Legislatures, and even of political gatherings, such as the meetings of the All-India Congress, are habitually conducted in English. Lastly, as has been brought into prominence by the proceedings of the Butler Committee, which is considering the relation of the Indian States to British India, India is divided into two quite distinct portions for purposes even of government. The Government of India governs only British India. Seventy million people in India are not British subjects at all but the subjects of Indian Princes.

In this matter, as in much else, India is the land of paradox. The desire to make India a nation is honestly held alike by the Government of India and by the Indian politicians, whether moderate or extremist. Yet it may be truly said that before the Government of India can be really nationalised, or even Indianised, it is necessary first to Indianise India.

So much for my first point. There is a second Western

misconception about India which is even more troublesome. In an address on Craftsmanship and Science delivered last September, Sir William Bragg asked what it is that has produced modern civilisation, and his answer was, "One simple cause has been continuously operative. It is nothing more than the urgent wish of the individual to better his own condition, and, in his disinterested moods, the condition of his neighbours." Even in England it is not everyone who is ready to scorn delights and live laborious days in the hope of bettering his condition. Still, most of us will agree with Sir William Bragg, and our economic and social life is in general based on the assumption, that if a man or a woman is given a reasonable opportunity to secure a higher standard of life and comfort, he or she will be ready to take pains to win such a reward and, as Sir William Bragg says, in our disinterested moods, we are motivated also by the desire to help to better the conditions of our neighbours.

In India, broadly speaking, neither of these motives is operative at all. There is much genuine sympathy for the afflicted, much that is admirable in family life, much disinterested subordination of self by the individual for the sake of family or clan: but it is nearly impossible in India to build securely on the foundation of what the West calls enlightened self-interest, and outside the family or the clan the idea of disinterested service for others is confined to the few who have been wrenched out of their Indian atmosphere by Western education and the influence of western, perhaps I should say Christian, thought. The average worker in the fields or the factories of India regards a higher reward for his labours as an adequate reason for taking an extra day off, sitting restfully at home or in congenial company. Whether he is a Hindu or a Muhammadan, his religion discourages him from the idea of bettering himself, and the teachings of religion are strongly reinforced by social custom and by climatic conditions. It is really none too easy to work extra hard in the heat of the Indian sun. Moreover, the whole of our Occidental conception of progress is challenged by the higher thought of Hinduism. Hindu metaphysicians have for thousands of years concentrated on the doctrine of Maya, Illusion. To the Hindu mystic all effort is illusion save the effort to destroy desire and lose himself in the godhead. I have often felt that the West has much to learn from the spiritual values of the best Hindu thought. It was from India, through the medium of the Arabic numerals, that Europe learnt the device of the cypher, zero, which revolutionised Western mathematics and made our scientific progress possible. In the same way India can, I think, still teach the West a truer sense of values than we sometimes seem to have adopted in our concentration on material things. If in turn India could assimilate the intellectual sincerity of our scientific research workers, who aim at wresting her secrets from nature and applying them to the service of man, East and West alike would have taken a big step in advance.

The Statutory Commission under Sir John Simon is actively at work in India. Its appointment has already served the useful purpose of stimulating interest here in Indian affairs. The attempted boycott by Indian politicians seems for practical purposes to have broken down and

become nothing more than a political manoeuvring for position. In his opposition to the Reforms and to the Simon Commission the Indian politician is in part moved by a sincere belief that he and others are ready for much greater political responsibility. We ourselves have deliberately created the Indian politician by giving him western education in the hope that in due course there will arise a body of Indians, educated enough to transcend racial and religious prejudices, who will be able to carry on responsible government, taking over the traditions of service of the British Officials of the past and of the present. Did not Mr. Montagu himself say that his aim was to break down the pathetic contentment of India? We have succeeded in building up a fine body of Indian Officials, increasing numbers of whom hold most responsible posts: but the difficulty is that out of some three hundred million people in India, excluding Burma, only a very small proportion, hardly 10 per cent., is politically self-conscious, and even of those a large number, perhaps the majority, are both unvoiced and not in sympathy with the extremists. And yet the extremists are almost the only Indians who have fully accepted the doctrine we have tried to inculcate, that it is the duty of Indians to take an active and responsible part in governing India.

There is a further reason for the attempted boycott of the Simon Commission. From one point of view the agitation may be regarded as a last despairing effort by the Caste Hindus to save the age-old structure of Hinduism from the corrosive impact of the West, and this explains in part the refusal of the Muslims, the Sikhs, the non-Brahmins, the depressed classes, and so on, to join in the boycott. While Parliamentary forms and elections and debates in the Legislatures are very gradually, and very superficially affecting or educating the minds of a small portion of the Indian intelligentsia, the movie and the motor-car and other potent agents of the West are rapidly bringing on a silent revolution. For good or for ill the life of the Indian villages—and all but a very few Indian villagers—is being profoundly modified. India may have turned to sleep again after Alexander's legions thundered past, but the movie and the motor-car are waking India up. A few years ago in a tribal battle on the North-West Frontier between Mahsuds and the Wazirs reinforcements brought up in motor-cars along the newly-made military road turned the fortunes of the day.

Our forefathers in the days of the Mutiny, "with the sword in one hand and the Bible in the other," had no doubt of their divine mission in India. Till the end of the century it was a commonplace on Indian as well as on British platforms that "Providence had united Britain and India for the good of both peoples." To-day the phrase "the White Man's burden" smacks of racial arrogance and is offensive to Indian and perhaps to British ears. We seem to have lost some of our confidence in our mission. Yet we cannot leave India even if we would. Our departure would plunge India into chaos and the results would be disastrous to our own economic life. India cannot do without us and we cannot do without India. Honest recognition of the fact that we are in India for self-interest as well as for the sake of India helps, not hinders, the establishment of better relations between Britain and India. Can we not recover some of our earlier confidence? There are still very great services for the British peoples to perform in India. The words Empire and Imperialism have fallen into some disfavour. We prefer to talk of the British Empire as "the Commonwealth of Nations," and there are good reasons for our preference. But there is a British Empire outside Britain and the Dominions. After all, about five-sixths of the population of the Empire live outside Britain and the Dominions. In India and Burma 320 million people are proud to own allegiance to George V. Throughout India and Burma hundreds of millions of people have been praying for the King-Emperor in his illness with a loyal devotion not outdone in any part of his Dominions. Britain has a great mission still to perform in India: a mission to be carried out in no spirit of arrogance, not even in a

missionary spirit. If you go to a distant country feeling you are a missionary, you are apt to think only about reforming everything and everybody about you. In India more perhaps than anywhere else there is need of patient and sympathetic understanding.

The problem of the relations between the brown and the white races of the world has been left to the British Empire to solve in India. More than ever British men and women are needed in India to work with Indians for India in the true spirit of service.

THE INDIAN BUDGET FOR 1929-30.

Sir George Schuster, the Finance Member, presented his first Budget to a crowded Assembly on February 28. After opening his speech on a personal note, he briefly reviewed the accounts for 1927-28, the net result of which year was worse than the revised estimate by 53 lakhs of rupees, thus reducing the balance in the revenue reserve fund to 74 lakhs.

The year 1928-29 he described as having been bad in patches, though the general position did not give ground for serious pessimism. The patches were mainly drought in parts of Northern India, the recent cold wave, and frost and prolonged strikes in various parts of the country. The visible balance of trade in the first nine months of the year was, nevertheless, in India's favour by 670 lakhs of rupees more than last year.

The exports of cotton, jute, jute manufactures and seeds had considerably risen, while those of rice and tea had fallen. Imports of machinery and motor-cars and commercial motors and vehicles showed considerable improvement. Prices in general continued fairly stable, but money conditions were at times difficult and had latterly been affected by world conditions to which the recent rise in the Bank Rate to 8 per cent. must be attributed. Though expansion against commercial bills had taken place to the extent of 9 crores only, there had been a further expansion of about $4\frac{1}{2}$ crores against sterling, created securities and imported gold.

Turning to the revised estimates for 1928-29, the Finance Member, after mentioning the main variations from the original Budget estimate, said that the estimates showed a surplus of 30 lakhs instead of the five entered in the Budget. This would be credited to the Revenue Reserve Fund, which would then stand at 104 lakhs.

The year 1928-29 had fortuitously benefited at the expense of 1927-28 on account of a throw forward of 40 lakhs of land and Customs revenue, and also at the expense of 1929-30, on account of the earlier receipt of 65 lakhs of salt revenue. But for this the year would have closed with a deficit of 75 lakhs, indicating that the gap left by the remission of provincial contributions had not yet been really filled. The Government could make both ends meet in 1929-30 without recourse to increased taxation and without denying money to urgent beneficial expenditure, provided they used the Revenue Reserve Fund to the limited extent required, first, for correcting the artificial disturbance in the normal course of receipts from the salt revenue, and, secondly, to meet certain special items of expenditure of a non-recurring nature, such as the provision of an endowment fund for agricultural research. He had decided not to propose new taxation at the present stage for reasons which he enumerated.

Turning to the detailed estimates of 1929-30, he mentioned the following variations from the revised estimate of the current year: Customs was expected to be better by 40 lakhs and taxes on income only by 10 lakhs in view of the effect of industrial strikes, while salt would show a deterioration of 130 lakhs owing to 65 lakhs of the 1929-30 revenue having been recovered in 1928-29. There was a loss of 42 lakhs under opium as the result of the policy to extinguish exports, but currency receipts showed an improvement of 36 lakhs. Debt services on the whole showed no marked variation, although they included 110 lakhs for the payment of a bonus on cash certificates, against 60 lakhs in the current year. Expenditure under civil administration showed an increase of 118 lakhs, but included a great number of special items of a non-recurring nature—for example, 29 lakhs for India House.

The railway contribution was 79 lakhs better than the revised estimate, while the loss on working the Posts and Telegraphs Department was 22 lakhs less, but the position was not such as to justify a reduction in the postal or telegraph rates.

The question of military expenditure, which again showed no variation, provided Sir George Schuster with the most interesting part of his speech. Excluding 10 lakhs to cover the Shea Committee measures in connexion with the Territorial Force, net outgoings were estimated at 55 crores. Referring to the modernisation of the Army equipment, he said the estimated cost of 10 crores had created a difficult financial problem, but the Government had decided that the military budget could not be allowed to exceed 55 crores, and that the special expenditure required must be found from economies made within the limits of that sum. A plan was devised which provided that if the military budget was maintained at 55 crores for four years from 1928-29, then apart from abnormal or unforeseen circumstances the special expenditure should be met from it, savings in any year being transferred to the suspense account, which could be drawn upon in subsequent years.

Sir George, after explaining that normal recurrent military charges were put at about 53½ crores for 1928-29, and at 52.94 crores for 1929-30, said that the normal cost of standing military charges was thus being steadily cut down, and it was, therefore, possible to hold out the very definite hope that when the four years' programme of re-

equipment was completed, the total military budget would be substantially reduced. Though no immediate relief for the Budget could be obtained from economies which were really being effected in the standing military charges of the Army, it would be an achievement if the programme for modernising the equipment of the Army, costing about 10 crores, could be carried through in four years without increasing the budgetary provision. When the programme was completed the country would be provided with a more efficient force at a smaller cost.

The Finance Member explained that there would be no change in the existing system of financial control, and that the arrangement did not imply any binding obligation on the Government, but represented the policy they intended to follow if circumstances continued normal.

Summarising revenue results for 1929-30, the Finance Member stated that the net result was 120 lakhs worse than for 1928-29, though if the distribution of the salt revenue had been normal 1929-30 would have been 10 lakhs better than 1928-29. As it was, as against a surplus of 30 lakhs in 1928-29, the balance of 90 lakhs would have to be provided in 1929-30 from the Revenue Reserve Fund, leaving 14 lakhs in it at the close of the year.

The Finance Bill would contain provision for an increase from 4 annas to 6 annas per gallon of the import and excise duties on motor spirit, which was expected to yield an additional 6 lakhs in the current year and 83 lakhs in the next. There would be a corresponding charge on revenue estimates by a per contra credit to the Road Development Fund, from which disbursements would be made from time to time for road development.

The dominating feature of the situation in recent years was the great amount of capital development which had been achieved with a comparatively small increase in the Public Debt of the Government. In the five years ended March 31, 1928, the Government had undertaken capital expenditure amounting to 120 crores of rupees and £49,200,000, but had raised by way of loans from the public a net amount (meaning net proceeds of new loans less old loans and Treasury bills discharged) of 12 crores of rupees and £13,000,000 only. The large difference of 108 crores of rupees and £36,200,000 had been met from postal cash certificates, savings bank deposits, revenue surpluses, debt redemption and provision for a reduction in the cash balance and depreciation, and reserve funds, etc.

Coming to 1929-30, the Finance Members said he had provided, as had been indicated in figures given, for the capital expenditure of 26½ crores on railways, a substantial sum, but the real feature in the programme was this—that the bulk of the money was to go on the execution of current work and that new commitments had been cut down to a minimum. There could thus, if necessary, be a substantial reduction in 1930-31, while measures had been adopted to ensure that the allotment for 1929-30 would not be overspent. Other important items of expenditure were £5,250,000 for the purchase of the Southern Punjab Railway according to the decision taken last summer, 2 crores of rupees for other capital expenditure, 7½ crores for the provincial Government's drawings and loans and 4 crores for the net discharge of public debt.

The Budget assumed that a sterling loan of £5,250,000 would be raised to meet the payment for the Southern Punjab Railway, which, if necessary, could be postponed to the following year. For the rest a loan of 18 crores would be necessary on the assumption that the Treasury bills outstanding with the public would be reduced to about 6 crores. Home remittances were estimated at £29,400,000 in the current year and £35,400,000 in 1929-30 on the basis of the Ways and Means programme outlined.

Sir George turned to the subject of the exchange, which, in view of recent discussions, in the Assembly and in the Press, he felt bound to tackle. He did not wish to revive the well-worn controversial argument nor to seek to persuade those who were originally opposed to the Government policy that they had been wrong, though this involved no admission on his part. He would ask them the much simpler question: Could it be seriously proposed as a practical course that after working on the basis of 18d. for several years the Government could deliberately decide to devalue the currency by 11 per cent.? He could conceive no more disastrous course. It would do injustice to thousands of individuals who had entered into previous contracts, including the workers, and it would strike a blow at the credit of India from which it could hardly recover.

After appealing to members to make an end of such talk which "produced a feeling of uncertainty, induced investment abroad and diverted men's minds from efforts to pursue the hard path to real improvement," Sir George Schuster, in conclusion, said that they should look at the state of the country with a broad vision. If one looked back over the past six years, one could not fail to be struck by the great inherent strength exhibited in the position on the side of capital expenditure. The productive assets of the country had been increased in proportion to loan liabilities incurred. Taking a broad view of the revenue position, he thought they were justified in feeling confidence as to the future. They were passing through a period which needed a steady hand on expenditure and careful conservation of their credit and, combined with this, there was also needed some broadening of the basis on which the capital which was required for the development of this vast continent was to be provided. "These objects," he said, "will be my chief concern and I shall pursue them with all the more confidence and enthusiasm because of my firm conviction that the financial position of this country is fundamentally sound and that there can be no country in the world which has better security to offer for its loans."

India till now had had one priceless possession in her credit with the outside world. He believed for such reasons as he had tried to make clear to-day that the economic advancement of the country depended on the maintenance and use of this credit, both within and without.

INDIAN NOTES.

(Continued from page 291.)

extremes has served effectively the interests of the community which he represents. Another Knighthood of especial interest, because of its somewhat unusual nature, is that bestowed on Khan Bahadur N. H. Choksi. His work in medical research began in the early days of the plague epidemic in Bombay, and has earned him much distinction in scientific circles in foreign countries. While the late Dr. J. A. Turner was Health Officer in Bombay, Dr. Choksi materially assisted him in the scientific side of the Health Administration, and for many years used to run practically single-handed and with very limited material resources the Infectious Diseases Hospital of the municipality. Among the recipients of the O.B.E. we notice the name of Captain Bernard Westbrook, the Chief Officer of the Calcutta Fire Brigade. Captain Westbrook practically created the Brigade, and he has brought it to a very high state of efficiency. Official recognition has not come too quickly in his case, nor, now that it has come, can it be said to be excessive.

The Law's Delays.

If an appeal which was before the Judicial Committee of the Privy Council quite recently may be accepted as typical of Indian practice it would seem that serious delays in the hearing and determination of suits by the Indian Courts are still occurring. The appeal was from the decision of the Madras High Court in eleven suits of ejectment. Seven of these cases were instituted in 1913, and so far the only question brought before the Judicial Committee is whether the Civil Courts in Madras, or the Revenue Courts, have jurisdiction. The determination of this question necessitated recourse on seven different occasions to the courts in India, and it occupied nine years. The suits then took six years more to reach the Judicial Committee. In giving the opinion of the Committee the other day Lord Atkin said that they deplored such delay, which was obviously much greater than was necessary, and which reached the borders of a scandal. For years past complaints of delays in the disposal of suits by the Indian Courts have been common, and it will be remembered that Lord Reading endeavoured, when Viceroy of India, to quicken up the procedure. Speaking in Calcutta in 1924 he said that, "Justice long delayed is often justice denied, and I have been impressed by the long delays not only in arriving at the decision of the Court, but also and sometimes more seriously in the enforcement of its decrees." Shortly afterwards Lord Reading's Government appointed a strong Committee, of which the present Chief Justice of Bengal was Chairman, to investigate the question, and to report. This Committee made an exhaustive inquiry and in due course submitted a large number of important recommendations and suggestions. We are without information as to the extent to which these have been so far adopted, but it is understood that of late an improvement has been visible in, at any rate, some of the provinces. If this be so the Madras cases may be of course exceptional, but even so they are greatly to be deplored.

OBITUARY.

MAJOR-GENERAL W. H. KAY.

A Reuter message from New Delhi announces the death, from injuries received by falling from his horse, of Major-General William Heape Kay, C.B., D.S.O., commanding Royal Artillery at Mhow, Central India. Born on July 2, 1871, he was educated at Rossall and the Royal Military Academy, Woolwich. Commissioned to the Royal Artillery in 1891, he was from 1901 to 1904 an adjutant of the R.H.A., while from 1906 to 1909 he was a staff captain of R.A. For services in the War, commanding the Royal Artillery, First Division, he gained the D.S.O. early in 1916, and was made a C.B. in 1919. He was mentioned in dispatches eight times. He arrived in India in 1925, and was attached to the General Staff as major-general of Royal Artillery. He married in 1896 and leaves a daughter.

ADEN AND THE YAMAN.

At a meeting of the Near and Middle East Association, held at 133, Queen's Gate, S.W., the residence of Miss Spalding and Madame Griboval, on February 28, Lord Lamington spoke on the subject of Aden and the Yaman. Sir Thomas Arnold was to have presided, but in his absence owing to illness the Chair was taken by Dr. E. H. Griffin.

Lord Lamington opened his address with a short historical sketch of the south-west corner of Arabia, now comprising Aden, the Aden Protectorate, the Yaman and Asir, but formerly constituting Yaman territory, and ruled over by a number of small dynasties until 1517, when the country was conquered by the Turkish Sultan, Selim I. The Turks relinquished their hold on the Yaman in the seventeenth century, but it fell under the power of Mehemet Ali, Viceroy of Egypt, who held it until 1845. The Turks recognised the Yaman in 1872, and maintained their suzerainty over it until the end of the Great War. In 1735 the Sultan of Lahej threw off his allegiance to the Yaman. In 1837, as a consequence of the maltreatment of the crew and passengers of a British ship which had been wrecked upon the coast, the Lahej ruler agreed to surrender on payment the town and port of Aden to Great Britain. His son and successor repudiated the undertaking the following year, and an expedition from India was sent to enforce it. By a subsequent arrangement Great Britain agreed to pay the subsidies which the tribes had to provide for the Yaman, and the latter undertook to keep the trade routes into the interior open. In 1902 Turkey and Great Britain drew up the frontier line of the Aden Protectorate, which marked the southern limits of the Yaman. The latter, however, maintained on uneasy relationship with the Turks; it was always ready to revolt, and during the Turko-Italian War the Turks had had to keep a large force in Arabia to enforce the submission of the Yamanis. On the recommendation of General Izzet Pasha a treaty on liberal terms was concluded between Turkey and the Yaman in 1913, and on the strength of this the Imam Yahya of the Yaman remained loyal to the Turks during the Great War. When the latter invaded the Aden Protectorate the Yamanis followed in their wake and occupied Dhala. With the elimination of the Turks after the Armistice, they withdrew, but on the ground that he did not recognise the Treaty between Turkey and Great Britain the Imam Yahya re-occupied Dhala in 1919 and remained in possession of it and of other parts of the Aden Protectorate until he was driven out of it, in August, 1928, mainly by the agency of the Royal Air Force. To the Imam's claims, which include Aden as well as the Protectorate, although he would be prepared to leave the port under British administration, provided that his ancestral rights to it were recognised, the British reply is that it was Great Britain that had driven out the Turks and so rendered the independence of the Yaman possible, that the Imam's claims are, to say the least, very shaky, that there has been no vestige of a claim since 1735, and that his occupation had had no political effect.

Lord Lamington attributed the intransigent attitude of the Imam largely to the fact that (so he had learned from a well-informed source) in an official letter sent to the Imam he had been insulted by being styled a mere robber chief of a robber people.

After referring to the resources of the Yaman Lord Lamington expressed the opinion that it was important that a treaty of friendship between that country and Great Britain should be concluded. The fact remained that Sir Gilbert Clayton's attempt in 1925-26 had failed. The Italians, on the other hand, had succeeded in negotiating a Treaty of Trade and Commerce, recognising the full and absolute independence of the Yaman. As a result Italy had supplied the country with aeroplanes, arms and ammunition; and a special visit had been paid to Italy by a son of the Imam Yahya.

The discussion on Lord Lamington's address was opened by the Earl of Glasgow, who pointed out that at least in one particular Italian services to the Yaman had not been attended with happy results, as the aeroplanes supplied had quickly proved unsatisfactory. Mrs. Craufurd spoke from personal knowledge of the Yaman and pointed out that Hodaïdah was the natural port of the country and served Sanaa, the capital, and the northern portion.

Mr. H. A. R. Gibb, of the School of Oriental Studies, challenged the claim of the Imam Yahya to ancestral rights in Aden. In so far as he could trace his descent back a thousand years, his early ancestors had exercised sway over a comparatively small tract of hill country round Sanaa, the only part of his present kingdom which was exclusively of the Zaidi sect. The religious question entered into the problem, because the tribes of the Aden Protectorate were Sunni and had no love for Zaidis. The Imam ruled a mediaeval realm in a mediaeval way; but he was shrewd enough to appreciate the advantages of modern inventions, and he was anxious to have a modern army. It was not out of the bounds of possibility that he would not carry all his people with him in his modern reforms. Mr. Gibb saw no immediate solution of the Aden-Yaman problem, and was inclined to question the advantage of a treaty with a possibly unstable factor. It was true that Ibn Saoud's people were of the plains and the Yamanis of the hills, and that therefore actual fighting between them might seem remote. But Ibn Saoud was achieving his ends by peaceful penetration; Wahhabism was a proselytising force and might yet win adherents in the hills.

Mr. A. H. F. Hamdani, as an Arab from the Yaman, could not accept the view that religious differences entered into the question at all. He declared that there was no Wahhabi propaganda, and that the Yamanis were in perfect agreement with the Wahhabis. They wanted friendship with all surrounding States. If the British would give sympathetic consideration to the Yaman's claims, the Yaman would respond.

Mr. Montague Bell thought that the difficulties between Aden and the Yaman could be allowed to right themselves in time. Owing to the exigencies of the War Great Britain had had to leave the Protectorate in Turkish hands, and the Imam had taken advantage of British preoccupations in other directions to possess himself of territory under British protection. The tribes concerned, being of a different Islamic sect, were not favourably disposed towards the Zaidis, and in any case Great Britain could not allow the Yamani occupation to continue indefinitely. Negotiations for the peaceful withdrawal of the Imam and for a treaty of friendship with the Yaman had failed; and accordingly last year the Yamanis were driven out of the Aden Protectorate by force. Time might now be allowed to the Imam to decide whether he accepted the new position, and no doubt, when he was prepared to negotiate, common ground for a treaty of friendship would be found.

Among those who were present at the meeting or had accepted invitations were:—

The Persian Minister, the Earl of Glasgow, Lady Lamington, Lord and Lady Strathspey, Lady Norah Bentinck, Baron Lukacs, Sir James Heath, Lady Tempest, Lady Heniker-Heaton, Lady Hewitt, the Hon. Mrs. Spencer Graves, Lieut.-Colonel Infante, Herr von Halem, Herr von Zeileissen, Dr. and Frau Feine, Major and Madame Vitez Beldy, Mrs. St. John Philby, Commander and Mrs. R. M. Philby, Miss Edith Durham, Captain Dixon-Johnson, Mrs. Sherwood Kelly, Madame Walkoff, Mr. Selby Bigge, Mrs. de Bunsen, Mrs. Wesley Watson, Captain Gordon Canning, Mrs. Rowan Hamilton, Mr. Yusuf Ali, Mrs. Richard Seligman, Mr. H. G. Hart, Mr. John Mavrogordato, and Professor Thomas Norton.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

Further particulars may be obtained of

E. H. Keeling,
Hon. Sec.

74, Grosvenor Street W.1.

THE HOLY CITIES OF ARABIA.

Mr. Eldon Rutter, author of "The Holy Cities of Arabia," lectured to the Central Asian Society on February 27, with Admiral Sir Herbert Richmond in the Chair. Before introducing the lecturer, Sir Herbert referred to the portrait sketch which had been painted of the President of the Society, Lord Allenby, by Mr. Paul Mak, Court Artist of the Shah, and which had been presented to the Society by the kindness of Prince Mickeladze. The portrait, which will adorn the walls of the headquarters of the Society, was on view before the lecture, and was the subject of general admiration.

Mr. Rutter began with a description of the country in which Mecca lay. Jidda lay about half-way between the northern and southern extremities of the Tihama. To the eastwards of Jidda the mountain range lay between 60 and 70 miles from the sea, but detached mountains extended to within 20 miles of the coast. Hidden in these detached mountains, about 40 miles from the sea, lay Mecca.

Mecca was in the centre of a triangle formed by three oases. Why should such a sterile spot have been chosen as a centre of pilgrimage? According to Arab historians, angels were commanded to build in the valley of Mecca a shrine similar to that which God had created beneath His Throne so that angels might go round about it as an act of praise. When Adam was expelled from Paradise, he was commanded to build a shrine in the same place—for the original shrine had fallen into ruins. This shrine was rebuilt by many people, from Abraham to Muhammad, since whose death it had been rebuilt three times. It was known as the Kaaba, and in pre-Islamic times the Arabs, abandoning the worship of God, had set up idols in it. They made a pilgrimage to it each year, and performed seven circuits round it.

But there was a possible economic reason for, a rationalistic explanation of, the establishment of Mecca. In the Zayma oasis a great annual fair was held before the rise of Islam. Throughout its duration fighting and raiding were prohibited. But the Arab bellicose spirit was not easily quieted, and the lecturer suggested that the Valley of Mecca was chosen as a sanctuary for those fleeing from quarrels started at the fair. The place of refuge thus established would in turn become a religious centre and a permanent settlement.

Mr. Rutter then devoted some attention to the rise of Muhammad, whose object was to bring the Arabs back from idolatry to the original religion. Until the ninth year of the Hijra, he pointed out, Mecca might be visited by any law-abiding man of whatever race or creed. Then, however, came the revelation that the "polytheists"

should be forbidden entrance; and Mecca has remained closed to the unbeliever until the present day.

The lecturer, with the aid of lantern slides (some of which had been lent by General Ibrahim Rifaat Pasha), next explained the features of the great Mosque at Mecca, such as the Kaaba, with its *kiswa* and "black stone." Then were described the pilgrim rites, the assumption of the *ikram*, the *towaf* (seven circuits round the Kaaba), the "running" between Safa and Marwat, the journey to Arafat, the staying at Muzdalfa, the "stoning of the devil" at Mina, and the return to Mecca on the twelfth of Dhulhijja.

Having pointed out that, according to Arab history, the Valley of Mecca was first inhabited by Hagar, the slave-woman of Abraham, and her son Ishmael, and that, although for a long time the Valley was inhabited exclusively by Arabs, nevertheless now it was more cosmopolitan, Mr. Rutter turned his attention to Madina (El Medina).

Madina lay nearly 300 miles north of Mecca, and, unlike Mecca, lay to the east of the great mountain range. Four miles east of the City ran a great water-course which had its source near Taif and flowed through the desert, over some 700 miles, to reach the sea at Wajh. The plain about Madina had abundant water, and there had been a large oasis there from time immemorial. The Amalakites were said to have established a settlement there, calling it Yathrib. When Muhammad entered the town in 622 A.D. it was renamed Madina. The Quran did not forbid the entry of unbelievers into Madina, but the town soon became closed to them.

Explanation was given of the Tomb of the Prophet, the special ritual enjoined on pilgrims to Madina, the benefits which Sultan Abdul Hamid (who built the Hijaz Railway) had brought to the place, its subsequent decline in the hands of the Arabs, and so on.

In conclusion, the lecturer remarked how the Hijazis, who had been parasites of the Turks for several centuries, now found it irksome to be ruled by force (Wahhabi force) instead of by bribery. Ibn Saud, for all that his exploits were lauded by Muslims of every nation, did not command the hearts of all Islam. The modern Muslims, wishing to be Europeanised, though not to be dominated by Europeans, despised the Wahhabi King as a *badu*; and the old-fashioned Muslims were outraged by his lack of veneration for the descendants of the Prophet, and for his desecration of the tombs and historical buildings. He was, therefore, by no means an ideal Muslim champion. He was, personally, strong and ambitious, perhaps too great even to be satisfied with his achievements. Nevertheless, Ibn Saud was certainly one of whom Nature might stand up and say to the world: "This is a man." And Mr. Rutter ended his lecture by likening Ibn Saud to the Emperor Charles V, of whom the Papal Envoy said: "In all his good fortune, he has remained completely modest."

No discussion followed the lecture, but the Chairman took the occasion to point out the extreme modesty of Mr. Rutter, who had said no word of the risks he ran in the accomplishment of his great exploit. Sir Herbert Richmond strongly urged his audience to read the lecturer's "Holy Cities of Arabia."

IRAQ AS A TOURIST CENTRE.

A most attractively produced pamphlet has recently been issued by the Iraq Railways and printed by Messrs. McCorquodale, of London. It gives, in the space available, the fullest information needed by the traveller from the East to Europe, or *vice versa*, who takes the opportunity now afforded of visiting Iraq. And for the visitor to Iraq this guide is extremely useful. Details of choice of routes, of accommodation, and of fares; suggested tours to historical sites, the Holy Cities, and so forth; hints on the sources of further information—all these are conveyed briefly but lucidly. Particularly are to be noted the reproductions of aerial photographs, the two excellent maps, and the general "get-up" of this pamphlet, which reflects, indeed, very creditably on the Iraq Railways. This enterprising spirit deserved commendation. The Iraq Railways, after a hard struggle to make ends meet, certainly deserve rich patronage in the period of prosperity upon which Iraq seems likely soon to enter.

CUNARD
TO

PERSONAL AND GENERAL

TO-DAY

March 7, 1929 (New Style).
February 22, 1929 (Old Style).
Ramadhan 25, 1347 A.H., of the Muslim Calendar.
Adar I. 25, 5689, of the Muslim Calendar.

The Roumanian Minister left London on February 28 for Geneva.

Sir Charles and Lady Wright have returned to 46, Cadogan Place from India.

Sir Thomas and Lady Royden arrived at 7, Hay Hill on February 28 on their return from Egypt.

Lord and Lady Airedale, who have been touring India, will return to 3, Cadogan Square on March 15.

Sir William and Lady Wells have left London for Egypt. They will be away for about four weeks.

Sir William Himbury leaves Egypt on March 10 on his return to England in the P. and O. s.s. Mooltan.

Brigadier-General Sir Henry and Lady Page Croft have returned to 15, Southwell Gardens from their trip to Egypt.

We much regret to learn that Sir Valentine Chirol, who is staying at the Residency in Cairo on his way home from India, is suffering from pneumonia.

Sir Friedrich Eckstein and his son, Mr. Bernard Eckstein, who are at present in the West Indies, are expected to return to London about the middle of April.

Major-General Sir Granville Ryrie, High Commissioner for Australia, who has been to Egypt for the benefit of his health, returned on February 28 to 18, Ennismore Gardens.

His Royal Highness the Prince of Wales received at St. James's Palace on March 1, on behalf of the King, Sir Henry Dobbs, upon relinquishing his appointment as High Commissioner for Iraq.

Lord Melchett, Lord Reading, some of their friends, as well as several Zionist leaders in this country, will proceed to Palestine for the Passover holidays, having made arrangements for their visit to the Holy Land through the Palestine-Lloyd representative in London.

The Hon. Mrs. E. A. FitzRoy, wife of the Speaker of the House of Commons, held her first reception at Speaker's House, Palace of Westminster, on March 1. In the Diplomatic Corps those who accepted invitations included the Turkish Ambassador, the Ministers for Bulgaria, Greece, Yugoslavia, Persia, and Iraq, and the Egyptian Chargé d'Affaires.

NEW YEAR HONOURS.

The following is a selected list of the New Year Honours which will interest readers of THE NEAR EAST AND INDIA:—

BARONET.

ECKSTEIN, Friedrich Gustav Jonathan, Esq., Chairman of the Sudan Plantations Syndicate. For services to the Sudan.

G.C.M.G.

CLERK, The Right Hon. Sir George Russell, K.C.M.G., C.B., His Majesty's Ambassador Extraordinary and Plenipotentiary at Constantinople.

G.B.E.

DOBBS, Sir Henry Robert Conway, K.C.S.I., K.C.M.G., K.C.I.E., High Commissioner and Commander-in-Chief, Iraq.

K.C.M.G.

GREG, Robert Hyde, Esq., His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Bucharest.

KENNARD, Howard William, Esq., C.M.G., C.V.O., His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Belgrade.
STORRS, Colonel Sir Ronald, Kt., C.M.G., C.B.E., Governor and Commander-in-Chief, Colony of Cyprus.

K.B.E. (Civil Division).

ARMITAGE-SMITH, Sydney Armitage, Esq., C.B., Secretary General, Reparation Commission.
MANCE, Brigadier-General Harry Osborne, C.B., C.M.G., D.S.O. For public services.

C.B.

OLIPHANT, Lancelot, Esq., C.M.G., Assistant Under-Secretary of State (Acting), Foreign Office.

C.M.G.

KNOX, Geoffrey George, Esq., First Secretary in His Majesty's Diplomatic Service, lately Acting Counsellor at His Majesty's Embassy at Constantinople.

MACGREGOR, Robert Menzies, Esq., Irrigation Adviser to the Sudan Government.

MADDEN, Frank Cole, Esq., M.B., O.B.E., Dean of the Faculty of Medicine, Egyptian University, Cairo.

C.B.E.

FOWLE, Major Trenchard Craven William, First Assistant Resident, Aden.

C.B.E. (Civil Division).

HEWISON, Robert, Esq., O.B.E., late Director of Agriculture and Forests, Sudan Government.

O.B.E.

ROWLANDS, John Frederick, Esq., Deputy Director of Public Works, Palestine.

STONE, Arnold Alfred Price Dunbar, Esq., F.S.I., A.M.I.C.E., Director of Public Works, Cyprus.

STURGES, Robert Simon Mansfield, Esq., Political Secretary to the High Commissioner for Iraq.

O.B.E. (Civil Division).

HALL, David Patrick, Esq., Director of the Administrative Department of the Egyptian Ministry for Foreign Affairs.

HUNT, George Edward, Esq., Municipal Engineer, Khartoum; and Lecturer in Engineering, Gordon College.

SELOUS, Gerald Holgate, Esq., M.B.E., His Majesty's Consul at Basrah.

WALLACE, Major David Johnston, Deputy Director-General of the Frontiers Administration, Egypt.

HONORARY M.B.E.

ABDUL RAHMAN EMIN GORAYIB, Esq., Director of Public Works, Trans-Jordan.

ROYAL RED CROSS, FIRST CLASS.

The King has approved of the award of the Royal Red Cross, First Class, to the following in recognition of the exceptional devotion and competency displayed by her in the nursing and care of the sick in Air Force Hospitals at home and in Iraq:—

WELCH, Miss Marion, Matron, Princess Mary's Royal Air Force Nursing Service.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.

Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan. Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

Where to stay in the East

OLYMPUS HOTEL : On Mt. Olympus (Troodos)

(Summer resort; altitude 6,400 ft)

Offer excellent accommodation at reasonable tariffs

These four prominent hotels are owned and operated by:

NAJEM HOURY & SONS, LIMASSOL, CYPRUS.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

THE WEEK AT HOME

London, Tuesday Morning.

Mr. Lloyd George's Promise.

Spring is coming; the bulbs begin to shoot, and the politicians to promise. We are about to forget the Winter of discontent, to expect those sunny days when we shall, instead of shivering with cold, be like little bees for industry.

In short, Mr. Lloyd George has spoken. He has promised, if the Liberal Party is returned at the next Election, to reduce Unemployment to normal dimensions; and this without an extra penny on the taxes. Well, well, there is nothing like asking for it, and Mr. Lloyd George was never afraid of hypotheses. What's a promise, anyway? Not very much, even if you are elected. And when you know that you won't be, why . . . These poor Liberals, Mr. Lloyd George must have felt, must be heartened somehow. Let's talk of the disappearance of Unemployment, of the abolition of slums, of anything, in fact, that strikes the imagination.

Unfortunately, it has struck nobody's common-sense. Liberals themselves cannot believe that the nightmares of our national life would vanish with the return to power of one particular set of politicians: so monstrous an assumption would be altogether out of keeping with their "moderate" or "middle" attitude which is so vaunted at the present time. And if they themselves cannot swallow it, how shall the less informed electorate take to it? The truth is that such talk as this speech by Mr. Lloyd George, however delightful in its colour and in comparison with the somewhat drab utterances of politicians of other parties, is idle: there is no one in this tight little island who expects the Liberals to obtain even as many as a hundred seats. But as they are to fight, it is just as well, one supposes, to keep on talking and whistling to keep up one's courage.

The Prestige of Parliament.

It is not often that members of the Houses of Parliament can look in the face the fact, which is recognised by almost everybody outside Parliament, that the prestige of Parliament in this country has tremendously declined. In a sense, therefore, it was gratifying to find, last week, the Marquess of Salisbury realising the truth. "I do not think," he said, "we can view with satisfaction the attitude of our countrymen towards the Parliamentary institutions by which they are governed. There is a loss of confidence in the country in Parliamentary institutions.

People look at the Lords and they look at the Commons, and I think it must be admitted that they have not the same respect for either one or the other that they had fifty years ago."

That was the truth, but not the whole truth. For it is not our countrymen, but the Parliamentary institutions which are to blame. This decline in prestige dates directly from the establishment of the Caucus and the secret party-funds. Money does "talk," as they say, in Parliament in a way which would not have been tolerated in mid-Victorian times. Independence of judgment is at a discount. Few Members of Parliament are really "free." How, then, could indifference to the activities of politicians fail to have spread over our people?

Nor is it fair to pretend that the Commons are more revered than the Lords. To the doctrinaires who supported the Parliament Act that may appear so, but thinking men by no means worship the Commons as being the guardian of the people's liberties. Dean Inge, for example, is, to judge from a recent article, in favour of unicameral government, but his (non-existent) "Second Chamber" would be the Commons!

The Position of "Jix."

One of the few personalities in the present Conservative Administration is the Home Secretary, Mr. Joynson-Hicks, or "Jix" as he is affectionately or opprobriously called. He is always in the limelight. At the present, indeed, an intense campaign is being waged against his "interfering" ways, and to the cartoonists the shade of his "Dora" brings unfailing inspiration.

Recently, however, he has found support in a quarter, which, though not wholly unexpected, is evidence that his attitude towards life is not treated as being wholly partisan. One refers to the "censorship" of books which is proceeding under his ægis. For his services in this direction he is earning the warm thanks of the Nonconformist conscience, which, though sadly disturbed by the misfortunes of its natural keeper, the Liberal Party, is still by no means defunct. The question of a literary censorship is one that is much too big to be discussed here: suffice it to say, therefore, that on the whole the reputation of "Jix" is not suffering markedly from his ceaseless activities in this sphere.

The Honours List.

There are two remarkable features of the New Year Honours. One is the inclusion of men and women who have rendered service rather to the State than to the Party; and the other is the number of women included. Neither of these things, it is to be presumed, is altogether divorced from the fact that the Government is shortly to go to the country, among whose voters some millions of women are being asked to vote for the first time.

There are excellent awards in the List, of course; but perhaps the most gratifying fact about it is the indirect evidence which it provides of the King's recovery.

On Ancient Cottages.

The number of societies that has sprung into being during the last few years as a result of the realisation of the effect which the industrial system is having upon our national landscape is legion: several of these I have already mentioned in these columns. Some are local, some national, in endeavour. Men and women of taste have everywhere begun to band together with the determination to preserve, if possible and desirable, that of England's past which is worth preserving.

One of these Societies in particular has my warm sympathy. Some of them include a few cranks; some of them are a little vague, if not muddle-headed. But the Society for the Preservation of Ancient Cottages, which met in London last week in full and impressive conclave, knows precisely what it wants. It wants to save ancient cottages, for the agricultural labourer preferably, which can be fitted into modern hygienic conceptions. (It wants also—if Sir Fabian Ware's very sensible advice be accepted—to save some of the magnificent barns in England.)

At the meeting of this Society last week the most prominent speakers were Mr. Ramsay MacDonald (who presided), Mr. G. K. Chesterton, and Sir Arnold Wilson. Under such an ægis who would deny that the work attempted is both worthy and practicable? It was a triumvirate comprehensive enough to compel anybody to come in.

But the ancient cottage is, its sponsors apart, pre-eminently worth saving, for nowhere else is there seen so easily, so delightfully, and so invitingly the identity of form and spirit in building. The meaninglessness of much of modern life is mirrored only too often in our modern dwelling-places.

Book Review

THE PALESTINE MANDATE.

"THE MANDATE FOR PALESTINE." By J. Stoyanovsky. (London: Longmans, Green & Co. 25s.)

This is an invaluable book. Dr. Stoyanovsky has approached his subject in the model jurist's spirit. He is detached and generally impartial in his sorting out of the evidence of the workings of the complicated Mandate for Palestine, and his work is one that can confidently be recommended to anyone who wishes to pursue a topic that is not only occasionally baffling even to the unprejudiced mind but has also been overlaid with a wealth, or, rather, a mass of propaganda.

We do not pretend that Dr. Stoyanovsky's is the last word on a much disputed matter; arguments about Palestine, about a "Jewish National Home," about the nature of the promises made or the encouragement given to the Arabs, will persist long after the book has gone into its third or fourth edition. But the author can fairly claim that the conclusions which he arrives at are sincere conclusions, made in the light of all the documentary evidence at present available.

His Introductory Chapter reveals his cautious line of approach, which, however, always ends in conclusions supporting the policy and actions of the British Government. Thus he absolves Great Britain from incurring with the French and with the Arabs obligations that were mutually inconsistent. Again, in discussing the question whether the Palestine Mandate is inconsistent with Article XXII of the Covenant of the League of Nations, he pleads that it is not so inconsistent, because the object of the mandatory system—"to guide towards independence and self-government those races, peoples or communities who for various reasons are not yet able to stand alone" is also "the very object of the national home policy, which aims at giving the Jewish people the necessary assistance to form in Palestine an independent and self-governing community." Yet he sees the other side of this question: that Zionism in Palestine represents a retrograde movement, in that it is a buttressing up of a minority. Indeed he quotes (disapprovingly, of course,) Professor Berriedale Keith's well-known opinion that "the adoption of the principle of a Jewish national home runs directly counter to the doctrine of the right of each people to self-determination."

The book proper is divided into two parts; an examination of the "Jewish National Home," and an examination of "The Mandate Proper." He begins the first by usefully emphasising the distinction between the word "subject" and the word "nationality." For Jews there is but one nationality, namely Jewish nationality; but they are subjects of various States. Another useful distinction is drawn between the Jews' "historical connexion" with, and the Jews' "historic right" to Palestine. The doctrine of "historic rights" is an untenable one, for as the author well says: "Either the historic right is in accordance with the wishes of the population concerned, and then there is no need to invoke it, or it is not, and then it does

not exist." And his definition of the vexed question of what the words "Jewish National Home" really imply is also worth quoting: "The national home policy consists of the *ensemble* of measures to be taken by the Mandatory, with a view to the creation within the framework of the future Palestinian State, of an independent Jewish community out of such elements as will return to Palestine in virtue of the historical connexion recognised as appertaining to the Jewish people as a whole."

In his examination of the obligations of the Mandatory Power arising from the National Home policy Dr. Stoyanovsky generally acquits the Palestine Government, of shortcomings, although it is just possible to observe sympathies with those who urge a speedier realisation of the National Home.

In the second half of the book, "The Mandate Proper," the author starts off by enumerating the "practically unanimous" opinion that, "wherever sovereignty over mandated territories may be located, it does not reside in the Mandatory." This statement is, of course, perfectly correct from the purely juristic point of view, and since this book is written from the purely legal standpoint, no doubt the observation had to be made. But how many practical men interested in Palestine are acting to-day as if it were false! Dr. Stoyanovsky proceeds to trace the way in which the Mandatory Power has fulfilled, or attempted to fulfil, its obligations, first towards the inhabitants of Palestine, and secondly towards the League of Nations. The unique character of the Palestine Mandate is here well demonstrated. For instance, the termination of this Mandate cannot be even approximately foreseen, because, before leaving Palestine, the Mandatory Power has to be satisfied, "not only that the local population as a whole is 'able to stand alone' but also that the establishment of the Jewish National Home has been secured." But that the Mandate is one day to be terminated admits of no juristic doubt.

We have already indicated that much labour has gone to the making of this book, which is, so far as the printed word and human judgment on its may be relied on, a model of fairness. It is indispensable to any serious student of Palestine. The only fault that can be found with it is one that should not fairly be brought against it, in consideration of its scope and intention, namely, that those aspects of the practical side of the Palestinian problem, aspects which frequently have not found their way into printed documents, but which yet exercise considerable influence on the actual situation in the Holy Land, are apt to be ignored by Dr. Stoyanovsky. In the purely juristic aspect, however, no better or more detailed book could have been written.

In recognition of the support he has given to the new autonomous Albanian Church, King Zogu has decorated the Serb Patriarch Dimitri with the highest Albanian decoration, the Star of Skanderbeg.

Jalali Khan, Afghan Minister to Turkey, has been recalled to Afghanistan. He left Angora last week and was instructed first to proceed to Moscow *via* Berlin.

M. Venizelos, Greek Prime Minister, at a special session of the Athenian Academy on March 1 congratulated Professor Hajidakis, of the University of Athens, on attaining his 80th birthday.

M. Polychroniades, Greek Minister to Yugoslavia, left Athens on March 1 for Belgrade carrying the text of the three protocols as modified in Athens in collaboration with M. Soubititch, the Yugoslav technical expert.

The new German cruiser Emden was scheduled to leave Aden on March 1 for Mombasa, where she should be from March 9 to 20. The cruiser Raleigh, flagship of the Vice-Admiral Commanding the United States Forces in Europe, should be at Haifa from March 19 to 25.

Mustapha Kemal Pasha, President of Turkey, has received a letter from the Glasgow section of the British Spelling Association, congratulating him and his Government on their wise and courageous reform of the national alphabet. In his reply, thanking the Association, the Ghazi says: "Experience has shown that the reform of the alphabet is the surest way of sparing the children of the country many difficulties, and giving elderly people many advantages."

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The New Year Honours.

There were a few awards of outstanding interest in the New Year Honours. Notable among them was the baronetcy conferred on Mr. F. G. Eckstein, whose name will always be associated with the development of cotton growing in the Sudan. Under his astute guidance the Sudan Plantations Syndicate has so developed in a comparatively short space of time that to-day it is the most important factor in the country's economic progress. It is surprising that this well-merited recognition of great services to the Empire did not take place earlier. Another interesting name among the baronets was that of Mr. W. R. Morris, whose work in the production of motor cars has done so much in placing Great Britain in the forefront in this vital industry especially with regard to the overseas markets. Then among the new knights two names call for mention—Mr. A. V. Roe, whose services to aviation scarcely need reference, and Mr. B. E. G. Eddis, partner in Gillanders, Arbuthnot and Co., of Calcutta. Among other awards of special interest to the Near East Mr. R. M. MacGregor, Irrigation Adviser to the Sudan Government, receives the C.M.G., and Mr. R. Hewison, late Director of Agriculture and Forests, Sudan Government receives the C.B.E.

A Criticism.

I have only one criticism to pass with regard to the Honours List, and that is that as has usually been the case recognition of commercial services in the Near East is relatively so insignificant. The work of the trading community—and by that I mean the banks and the large commercial houses which have been established in the Near East for generations—is as important to the Empire as the work of the official classes, and an occasional award would do much to encourage a class of the community to whose industry, enterprise, and willingness to accept risks the country owes a very great deal. In the early days, when trade was obviously an adventure from start to finish, the activities of the merchant adventurers compelled recognition, but to-day in different conditions they have to carry on the same work, with, as we have seen through the War, much the same type of risks as their fore-runners, but without the encouragement which comes from official approval. Is it too much to hope that on a subsequent occasion this shortcoming of the Honours List will be remedied?

Egypt's Trade in 1928.

Both in regard to imports and exports there was a great improvement in Egypt's trade figures in 1928. The value of the imports was £E52,043,956 as compared with £E48,685,784, an increase of £E3,358,171, while that of the exports was £E56,165,286 as compared with £E48,340,503, an increase of £E7,824,753. A feature of the import trade was the increase of £E246,555 in tobacco, while cotton, as might be expected, was responsible for most of the increase in the value of the exports. The value of the exports of cotton was £E45,137,823 as against £E38,999,192, reflecting the improved prices which ruled for the commodity during the period. The increase in the imports should serve as a reminder to British traders of the value of the Egyptian market in which for some time unfortunately our trade has not been holding its own. There is every reason for believing that

if the market were cultivated with great energy British traders would find it a wonderful outlet for commerce.

The Turkish Debt.

If the Turkish Government's delay in giving instructions for the payment of the first coupon of the Turkish Debt should have given rise to doubts as to the good faith of the Angora authorities in regard to the settlement they will only have themselves to thank. It was anticipated that the coupon in arrears would have been paid by February 15, but that date passed without any development. The cause of the present delay—if there is a definite cause, and the Turks are not merely pursuing a Fabian policy—is no doubt to be found in the question of the two reserve clauses. The Joint Council of the Turkish Debt at a general meeting held in Paris have now decided to accept the law ratifying the contract with the bondholders together with the two reserve clauses which were inserted in the ratification law by the Grand National Assembly at Angora. This decision has been communicated to the Turkish authorities who have again been requested to give instructions for the payment of the coupon, and it is now hoped that the date of payment will be not later than March 25. It is in Turkey's interest as much as it is in that of the bondholders that the matter should be settled at the earliest possible moment. Sooner or later Turkey must approach the foreign money markets for financial assistance, and her success will inevitably depend on the position of her credit.

The Coal Trade Revival.

It is a hard frost that brings no one any good, and one result of the Arctic spell which has affected the Near East as well as Europe, has been a renewed demand for British coal. The Near East, of course, was one of the outlets in which we have been losing ground, and it is satisfactory to know that the cold spell is not the only reason for the increased demand. When I referred to the position recently I suggested that buyers deserved what they received, and that if they preferred foreign coal to the British product they no doubt knew what was required to meet their needs. It appears that the trial given to foreign coal has convinced buyers that after all the products of Durham and Wales, if dearer, are cheaper in the long run, and

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathens."

96 Branches in GREECE; also in LONDON, UNITED STATES, EGYPT and CYPRUS.

Correspondents all over the World.

The BANK OF ATHENS specialises in the development of Trade between GREECE and the UNITED STATES and GREAT BRITAIN, and in General Banking Business.

London Branch:

BOSTON The Athens Bankers' Corporation, 15 Kneeland St.

so a tendency is now in evidence in the Near East and elsewhere to return to the British market for coals. This tendency, coinciding with the demand due to the cold spell, has given a welcome fillip to the British mining industry, and has provided a unique opportunity of permanently regaining markets which should never have been lost.

The Budget.

In a very few weeks now we shall know the contents of the Government's last Budget. In the prevailing circumstances the temptation to make it an election Budget must be considerable, but Mr. Churchill is obviously not in a position to make any substantial decreases in taxes, and if a penny or so is taken off the income tax and one or two other minor reductions are made it is the most that can be expected. Of course, if it were certain that there would be a real trade revival in the next twelve months it would be possible to take that into account, but the disappointments of recent years have been such that it would be simply tempting providence to entertain any such expectation. The most that can legitimately be anticipated is that trade will continue the course of gradual improvement which has been in evidence for some months. If it were only possible to make a substantial reduction in the taxes which are such a handicap to British industry it would no doubt make an enormous difference to the recovery of trade in this country, but at present, owing to the cost of social services and the payment of interest on War Loans, etc., the expenditure side of the Budget leaves no room for economy, without which there can be no real alleviation of taxation.

Motors in the Balkans.

While as is well known the poor road systems in the Balkans have so far prevented any great development of motor traffic, quite a fair number of motors are in use in the various countries. At the beginning of this year there were 18,777 motor cars in Roumania, 16,212 in Greece, 10,840 in Yugoslavia, and 2,265 in Bulgaria. If one takes the motors per head of the population this order is altered, Greece coming first with one for 377 people, Roumania second with one for 852, Yugoslavia third with one for 1,150, and Bulgaria last with one for 2,210. These proportions make a very poor showing compared with the figures for countries with good road systems, and it is advisable that our motor car manufacturers should bear in mind the fact that great efforts are now being made throughout the Balkans to improve the means of communications for when the roads are brought into a reasonable condition and it is possible to have a long run in the Balkans without passing along roads strewn with boulders and otherwise difficult for transit there will be a great increase in the demand for motors.

The British Industries Fair.

While complete details of the business done at the British Industries Fair at the White City and Birmingham are not yet available, sufficient is known to make it abundantly clear that the Fair has again been a supremely successful event. Foreign buyers were present in large

numbers, and there would have been many more if it had not been for the adverse weather conditions and the influenza epidemic. Orders both for the home market and the overseas trade were freely forthcoming, and all sections at the White City had the same tale to tell of the business being fully up to their expectations, while at Birmingham the same happy state of things prevailed. The plainest indication that the Fair is filling an undoubted need, and is proving itself a real spearhead of British trade endeavour, is provided by the fact that orders for space for the 1930 Fair are already on a very substantial scale, and no doubt it will be found necessary to find a large additional space both at the White City and at Birmingham.

Following up the Fair.

Now that the Fair is over it is to be hoped that our traders will see to it that the advantage that has accrued to them through it in the introduction to new markets, particularly in the Near East, is properly utilised. There is, I fear, a tendency to imagine that representation at the Fair is an end in itself, instead of being, as it is really, a means to an end. It is essential that new business outlets should be developed by representation on the spot, and by a judicious system of publicity in papers which really reach the class with which it is desired to develop contact. It must be emphasised that as regards the Near East the outlook for trade is more promising than it has been at any time since the War. The Balkan currencies are now practically all stabilised, for in the case of Yugoslavia the *fait accompli* will be a merely formal question. Conditions in Roumania and in Yugoslavia are now rapidly improving, in both cases because of the establishment of a régime which enjoys public confidence, and in the former country the obstacles to trade in the shape of high duties, etc., are rapidly being removed. The improvement in the economic conditions will mean a greater market for commodities, and it may be trusted that in this development British trade will be well to the fore.

COMMENTATOR.

The production of the Anglo-Egyptian Oilfields for the week ended March 1 was 5,043 tons.

The Yugoslavian State Industrial Bank made a net profit for 1928 of 1,235,555 dinars, as against 136,564 dinars for 1927.

The Governments of Bulgaria and Roumania are considering a scheme for a floating railway bridge between Rustchuk and Giurgiu.

The death took place recently in London of Mr. George Seton, a leading figure in the Indian tea trade. Mr. Seton was a descendant of the Setons of Cariston, and was the son of a well-known writer on Scottish family history. Educated at Merchiston and Edinburgh University, he served in the Calcutta office of James Finlay and Co., Indian merchants, from 1873 to 1879, afterwards becoming London representative of Octavius Steel and Co., Calcutta. He began to deal in tea shares in 1893, and a year later he founded the Indian Tea Exchange. He played a prominent part in bringing the interests and activities of the tea trade to the knowledge of the investing public. In 1891, after visiting Germany and Russia to investigate the question of developing the Continental market for tea, he advocated the appointment of a special tea commissioner, and he continued to stress the importance of this question up to his retirement in 1922.

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928.

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Pleven, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Doupnitza, Gorna-Orehovitza, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratza. It has also 86 agencies.

THE EGYPTIAN FINANCIAL SETTLEMENT.

A further stage in the regularisation of the relations between Great Britain and Egypt has been reached by the successful issue of the negotiations between Mr. Leith Ross, representing the British Treasury, and Aly Pasha Maher, the Egyptian Minister of Finance, in respect of outstanding financial questions. The settlement, which affords a further proof of Egypt's friendliness to this country, has to be approved by the Council of Ministers, but in the circumstances it may be assumed that this is a formal stage and that the agreement to all intents and purposes is a definite one. The matters which came up for settlement were four. There was first the question of the Turkish Guaranteed Loan of 1855. Under the Treaty of Lausanne the service of this loan and two other Turkish loans, secured on the Egyptian Tribute to Turkey, became part of the service of the Egyptian Public Debt. The Egyptian Government denied its liability, and suspended payments on account of the three loans. Great Britain as a joint guarantor with France of the 1855 Loan has continued the interest on this security. The service of the other two loans was resumed by the Egyptian Government three years ago, following the dismissal of an appeal against a judgment given in favour of the bondholders. Then there was the claim of the Admiralty for the value of ships torpedoed while carrying coal to Egypt. This claim amounted to £856,000, of which £212,000 represented interest. The third question was the claim by the War Office to a refund of customs dues on benzine, paraffin, and tin plates, to the amount of £522,000 including £190,000 interest. The fourth matter at issue was Egypt's claim to a share of War reparations.

Broadly speaking the settlement provides for the acknowledgment by Egypt of liability in respect of a part of the 1855 Loan, for a compromise over the Admiralty and War Office claims, and for the participation by Egypt in War reparations. To take these matters in their due order of sequence. The total amount of the 1855 loan is £3,815,200, and Egypt admits liability for £1,386,000, and will pay to Great Britain £328,600 representing the service of this part of the loan met by Great Britain during the period since payment was suspended. This liability of Egypt will be set against the country's share in reparations (to which reference will be made later) and the arrangement under this head means that the amount is already reduced by £346,000, representing the allotment in respect of reparations to November 30, 1928. As regards the Admiralty claim Egypt admits liability for £600,000, while liability is similarly admitted in respect of the War Office claim for £249,000. Thus the Treasury will this year receive a useful windfall, to use the metaphor from fruit growing which the Chancellor is so fond of using on the occasions of his Budget speeches. Finally we come to the question of Egypt's share of reparations. This has been settled at 0.464 of 1 per cent. of the balance of the British share, and this has been provisionally estimated at £100,000 per annum. For fifteen years £90,000 of this amount is to be utilised to extinguish Egypt's liability in respect of the loan, and in the sixteenth year £75,000, and after that year Egypt will receive her full share of reparations. These are the main points of the agreement which cannot fail to be hailed with satisfaction as an earnest of the growing co-operation between Cairo and London.

The traffic receipts of the South Indian Railway Company for the week ended February 2 amounted to Rs.12,26,531, making the total from April 1 Rs.5,19,92,519.

Roumania's oil output in the last quarter of 1928 was approximately 1,200,000 tons, bringing the total for the year up to about 4,300,000 tons, as compared with 3,661,000 tons in 1927. The output of the main concerns was as follows (in tons):—Astra Romana, 705,853; Steaua Romana, 652,289; Creditul Minier, 521,425; Sirius and Co. (Petrofino), 583,822; Romana Americana, 397,849; Phoenix Oil Co., 391,103; Colombia, 189,481.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, February 26.

The Weather and Crops.

According to the reports of the Agricultural Counsellors in the rural districts the winter sowings have suffered less than might have been expected in most parts of the country from the extraordinarily low temperature which has prevailed during the past few weeks. The thermometer fell in some places to 38 degrees below zero Centigrade, that is 36.4 degrees below zero Fahrenheit. Only the rape-seed has suffered seriously, and the spring sowings may make good the damage, if the spring is not too long in coming. The famous vineyards of the Prahova valley are also said to be threatened, if the cold continues.

The Oilfields.

The long-continued and exceptionally severe cold has also temporarily impeded work on the oilfields and caused great difficulty for transport, and the figures of production are lower this year than for the same period last year. However, in the Moreni region new wells are proving much more productive than had been foreseen; new wells at Mislea (Prahova) are said to be yielding amazing quantities of oil.

The Credit Agricol.

Among the projects of the Government one of those to which the greatest importance is attached is the founding of the Credit Agricol. The Minister of Agriculture, Mr. Mihalache, is working hard in order to set his enterprise on foot before the beginning of the agricultural year, so as to be able to provide the peasant farmer with the requisite implements and seed. This institution will work on a mortgage system, giving long term loans. Its capital will be both Roumanian and foreign, amounting to one milliard lei.

Economic Relations of Little Entente.

The reports of the first economic conference of the Little Entente held at Bucharest are in the main of an informative character. Following a friendly exchange of views the delegates recorded their complete agreement as to the needs of Czechoslovakia, Yugoslavia, and Roumania. They have drawn up a programme for presentation to their respective Governments on the economic relations between the three States. The principal matters deal with are transport, shipping, postal and aerial communications, simplification of customs formalities, etc., participation in international organisations, and the equalisation of legal and administrative measures.

An International Agricultural Conference is to be held in Bucharest from June 7 to 11.

WHY **FORT** DUNLOP ?

THE modern conditions of motoring stress tyres to an unprecedented degree.

The majority of cars have greatly increased powers of rapid acceleration.

Four-wheel brakes permit cars to be brought to a standstill in a few yards.

A generally adopted lower centre of gravity is accompanied by the use of smaller wheels.

Better roads make for higher average speeds.

Fierce acceleration and sudden braking grind the rubber from the tread of the tyre. Smaller wheels necessitate more tyre revolutions to the mile, with an obvious effect upon wear. The greater the average speed the greater the tyre strain.

It is to meet the conditions produced by increased car efficiency that the FORT DUNLOP tyre has been evolved. The FORT DUNLOP tyre is recommended to those motorists who make the fullest use of modern car capabilities and performances.

DUNLOP RUBBER COMPANY LTD.

Branches throughout the World.

ECONOMIC CONDITIONS IN BULGARIA.

[The following notes are taken from the bulletin of the British-Bulgarian Chamber of Commerce of Sofia, dated February 15.]

Communications both with the country and abroad continue to be heavily disturbed by snow and frost. Shipping in the Black Sea ports is reported to be suffering considerable delays. As a consequence trade remains generally very slack, and a considerable part of the commercial maturities falling due in the first half of February had to be prolonged.

The rise in the interest rate in London is likely to have a moderating effect on commercial credits from abroad. Certain British manufacturers are reported to have notified their agents here that for sales on credit higher rates of interest will be charged in future. Local export trade has practically ceased—with a very unfavourable effect on the foreign exchange stock of the National Bank.

Winter sowings in Southern Bulgaria are reported to be suffering through the prolonged frosts. It is, however, premature to give any definite forecast in this respect.

Negotiations for the settlement of different economic and financial points are in progress between the Governments of Greece and Bulgaria. It is believed here that the conclusion of a treaty of commerce between the two countries is likely to be one of the results of these negotiations.

The Budget.

The Council of Ministers has accepted in its final form the State Budget for the coming fiscal year, 1929/1930, and has already introduced it in Parliament for discussion and approval. The main items of the Budget are given below as compared with the Budget for 1928/1929.

EXPENDITURE.

	1929/1930 leva.	1928/1929 leva.
Civil List	55,000,000	53,000,000
Public Debts	2,106,000,000	1,801,000,000
Comptroller General and District Accountants	22,000,000	20,000,000
Foreign Office :		
(a) The Ministry	92,000,000	94,000,000
(b) The Church	44,000,000	45,000,000
Ministry of Interior :		
(a) Administration and Police	276,000,000	285,000,000
(b) Public Health Service	156,000,000	160,000,000
Ministry of Education	892,000,000	890,000,000
Ministry of Finance	193,000,000	200,000,000
Ministry of Justice	184,000,000	186,000,000
War Office	1,121,000,000	1,110,000,000
Ministry of Commerce, Industry, and Labour	129,000,000	132,000,000
Ministry of Agriculture	200,000,000	207,000,000
Ministry of Public Works :		
(a) Public Works	209,000,000	208,000,000
(b) Compulsory Labour Service	159,000,000	164,000,000
Ministry of Railways :		
(a) Direction of Railways and Ports	679,000,000	804,000,000
(b) Direction of Posts, Telegraphs, and Telephones	216,000,000	222,000,000
(c) Aircraft	30,000,000	30,000,000
Fulfilment of Treaty Stipulations	37,000,000	39,900,000
Repayment of Floating Debt to Bulgarian National Bank	100,000,000	100,000,000
Total	6,900,000,000	6,750,000,000

Adding to the amount of 6,900,000,000 leva a further amount of 100,000,000 leva towards the redemption of the debt to the National Bank, a round sum of 7,000,000,000 leva will represent the total expenditure of the country.

The receipts for the coming fiscal year are stated at

6,509,500,000 leva, as against 6,788,000,000 leva for the present fiscal year, and are distributed as follows :—

RECEIPTS.

	1929/1930 leva.	1928/1929 leva.
Direct Taxation	920,000,000	918,000,000
Indirect Taxation	2,778,000,000	2,647,000,000
Various Taxes and Imposts	672,000,000	636,000,000
Fines and Confiscations	80,000,000	72,000,000
Railways and Ports*	140,000,000	1,141,000,000
Posts, Telegraphs, and Telephones	291,000,000	264,000,000
State Property	491,000,000	395,000,000
Contribution of Municipalities for Teachers' Salaries	477,000,000	455,000,000
Sundry Revenues	510,000,000	110,000,000
Budgets Arrears	150,000,000	150,000,000
Total	6,509,500,000	6,788,000,000

Bank Notes in Circulation.

The notes in circulation during January continued to decrease as compared with December, 1928. Thus on January 7 the notes in circulation amounted to 4,132,292,486 leva, on January 15 to 3,949,462,052, on January 23 to 3,877,993,261 leva, and on January 31 to 3,897,683,391 leva.

There is to be observed a gradual increase in the foreign exchange reserves of the National Bank, due mostly to the incoming of the proceeds of the Stabilisation Loan. Thus, on December 7 foreign exchange amounted to 2,669,000,000 leva, on December 31 to 2,736,000,000 leva, on January 7 to 2,717,000,000 leva, and on January 31 to 2,680,000,000 leva.

The assets of the National Bank on November 30 were 1,189,000,000 leva, as against 822,000,000 leva for the corresponding date in 1927, and were distributed as follows :—Commerce, 335,000,000 leva; industry,

* Here are reported only sums which actually will go as a net revenue to the State Treasury, the balance being used for maintenance, etc., of the railways.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent
on application to
the Secretary

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

379,000,000 leva; private banks, 412,000,000 leva; sundry, 63,000,000 leva; total, 1,189,000,000 leva, as against 1,109,000,000 leva for October, 1928.

Miscellaneous.

The wholesale commodity index number (on the basis of 1914=100) for January was 3,211; as compared with 3,210 for December and 3,008 for January, 1928. The general level of wholesale prices has thus risen by 0.03 per cent. as against December, and by 6.7 per cent. as compared with January, 1928.

The production of sugar in 1928 amounted to 26,550,975 kilograms, while in 1927 it was 32,201,890 kilograms. Alcohol distilled in 1928 amounted to 1,727,399 litres, as against 2,036,477 litres for 1927, while the quantity of beer produced in 1928 amounted to 7,687,022 litres, as against 7,720,765 litres in 1927.

Trial exports of walnuts and prunes to England failed formerly on account of the goods not being prepared according to the requirements of the British market. Now, however, since these commodities are handled more properly for foreign export, the walnuts being bleached and well packed and the prunes dried in a more modern manner, it is believed that a market may be developed.

Owing to recent movement of prices of copper on the world market, an opportunity may arise of buying scrap copper in Bulgaria, certain quantities of which are reported to be available in the country. The present price of such scrap copper is reported to be about 1s. to 1s. 6d. per kilogram.

Linificio and Canapificio Nazionale, Milan, Italy, have purchased the majority of shares in the "Ivan Vajaroff, S. A." at Pavlovo, near Sofia. This factory intends manufacturing all kinds of rope and twine, especially from hemp.

In 1928 there were 663 co-operatives for cattle insurance under the auspices of the Central Co-operative Bank, as against 580 in 1927. The number of the insured cattle was 69,009, of which 41,159 were oxen and cows, 12,655 buffaloes, 123 goats, 10,784 horses, 93 mules, and 197 donkeys. The amount insured was 337,028,900 leva, and the premiums amounted to 6,228,480 leva. During the year under review 1,790 head of the insured cattle died and 356 were destroyed. As compared with 1927, the mortality decreased by 0.01 per cent. The indemnity paid amounted to 5,736,636 leva to 1,506 owners.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended February 10 amounted to £Eg,987, making the total from April 1 £E290,058.

The statistics of Roumania's petroleum export trade show that the exports during 1928 amounted to 2,341,025 tons, as compared with 1,912,900 tons in the previous year, an increase of 428,037 tons, or 22.3 per cent. The exports consisted of motor spirit, 662,335 tons; illuminating oil, 688,694 tons; lubricating oil, 62,231 tons; gas oil, 206,945 tons; and fuel oil, 720,820 tons.

THE PALESTINE TOURIST SEASON.

A successful tourist season is confidently anticipated in Palestine this spring. It is the period of the year when the country can be seen at its best, and the associations of the Holy Land, the charm of its scenery, and its equable climate are attractions that assure to Palestine a considerable share of the tourist traffic. Easter and the Passover, between which there is an interval this year of twenty-five days, are always responsible for a large stream of tourists, and the indications are that this year the number of visitors to Palestine will be greater than before, especially in view of the Palestine and Near East Exhibition and Fair which is being held at Tel-Aviv in April. As usual the Palestine and Orient Lloyd, the Jewish Universal Travel and Touring Agency, is organising several tours at its offices in London, Paris, and Berlin, notably one at its London office for the Passover season leaving London on April 15.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, March 9). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Birkenhead, March 19).

Bibby Line.—S.s. Oxfordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, March 20).

British India Line.—S.s. Manela for Colombo, Madras, and Calcutta (London, March 9); s.s. Mundra for Bombay and Karachi (London, March 16); s.s. Merkara for Colombo, Madras, and Calcutta (London, March 23); s.s. Masula for Bombay and Karachi (London, April 6); s.s. Margha for Colombo, Madras, and Calcutta (London, April 6); s.s. Morvada for Colombo, Madras, and Calcutta (London, April 20).

Cunard Line.—S.s. Bantia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume; also at Corfu, Gruz, and Ancona if sufficient inducement (Liverpool March 16, Swansea March 19); s.s. Bactria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (this steamer will call at Volo if sufficient inducement) (Liverpool, Glasgow, and Swansea, March 23).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 23).

P. and O. Line.—S.s. Ranpura for Bombay (London, March 15); s.s. Nellore for Calcutta (London, March 16); s.s. Behar for Calcutta (London, March 30).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, March 17); s.s. Portuguese Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, March 23).

Ellerman and Papayanni Lines.—S.s. Lesbian for Algiers, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 16, Swansea* March 16); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, March 19); s.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 21); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool March 30, Swansea April 4); s.s. Roumelian for Algiers*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 6, Swansea* April 6). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan port via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

A permanent exhibition of samples of Czechoslovak goods has been arranged at Tirana, Albania.

It is reported that the Croat Credit Bank is to take over the General Credit Bank of Subotica.

It is announced that negotiations are shortly to be opened for a commercial treaty between Czechoslovakia and Egypt.

Mr. D. A. Sutherland, M.Inst.M.M., etc., has left for Egypt to visit the oil property of the Affiliated Oilfields, Ltd., at Towila Island.

The board of directors of the Banco Commerciale Italiana have decided to propose to the general meeting of shareholders, to be held in Milan on March 23, a dividend of 13 per cent., after allocating 10 million lire to reserves, leaving about 28 million to be carried forward.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 5.

The Stock Exchange is in a very hesitant mood, and the factor which is completely governing the situation is apprehension regarding the immediate outlook for money rates. The monetary position is definitely puzzling, the more so because it depends upon developments in America, which in turn are obscure. The future depends mainly on the policy of the Federal Reserve Banks. So far as it has gone, Federal Reserve policy has not been conspicuously successful in checking speculation in Wall Street. There is at the moment some difference of opinion among American bankers themselves as to the means by which a check can be successfully imposed. They may possibly decide on measures other than a raising of official discount rates. If, on the other hand, the New York Federal Reserve re-discount rate is raised, it must be supposed that the Bank of England would, however great its reluctance, regard itself as bound to follow suit. Caution is therefore on the lips of all high authorities in the City at the moment, although there is at least a reasonable chance that the present difficult situation may clear up without further undesirable monetary developments.

Brazilian Borrowers.

The savings of the British people have been widely distributed, but, after the British Empire, Britons have probably played a larger part in the development of the South American republics than of any other area. Many British investors are, therefore, interested in the securities of these States. The status which these republics enjoy in the London Stock Markets, however, differs considerably. Political and economic troubles have not reacted favourably on Brazil's credit in recent years, and its stocks may be bought at prices which give relatively generous yields. Thus on the 4 per cent. loan of 1889 the yield is about £7 per cent., while the 6½ per cent. sterling loan of 1927 yields £6 10s. per cent. Brazil is in some ways the most backward of the three most important South American republic—Argentina, Brazil, Chile—as measured by exports, and length of railway or of roads, but this merely

means that the field for development is greater. Less satisfactory, however, is the extent to which her economic structure is based on one commodity—coffee. In 1913 exports of this commodity amounted to 62 per cent. of the whole, and over the last five years the proportion has been 73 per cent. Attempts have been made to broaden the economic interests of the country, but at present their effects are small. In some cases, too, these attempts have misguidedly endeavoured to foster non-indigenous industries. Much has been done in recent years to improve the economic position of the country by stabilising the currency, balancing the Budget, and reducing the floating debt. The question of the main lines on which the country is to be developed, however, needs immediate consideration.

Building Society Progress.

The accounts of the Abbey Road Building Society for the year ended December 31, 1928, again show very substantial progress to have been made. Membership increased by 40 per cent. and now totals 96,304, while an increase of £1,691,412 is reported in share capital and deposits. Reserves also show the very considerable increase of 37 per cent., and now amount to £405,003. While the Abbey Road is one of the foremost building societies, these figures are probably more or less typical of the results of many others of the well-established societies. The assets of the Woolwich Equitable, for example, rose from £5,772,220 to £8,235,877, in the last completed year, and the reserves from £365,000 to

MR. HARTLEY WITHERS

ON BOOMS AND NATIONAL WEALTH.

It is easy to exaggerate the extent of the loss inflicted by booms on the community as a whole. The rocketing ups and downs of prices in the stocks chiefly take money out of one pocket and put it into another. Which is no consolation for the empty pocket, but make a difference when we sum up the result as a whole.

(Copyright: London General Press.)

£450,000. For many small investors a good building society represents a satisfactory outlet for savings, and there are many societies widely advertised which are in a very sound position. Investment in these societies is convenient and entails no payment of commission, and, in general, the money invested can be withdrawn upon notice, whereas in the case of a stock exchange investment there may be a loss on realisation. At the same time, the investment earns a very satisfactory rate of interest when the high class of the security is considered. It would, however, be prudent to be sure that you are selecting one of the most firmly established societies.

The Prudential Report.

The Prudential Assurance Company is the largest undertaking of its kind in the British Empire. If only for this reason its annual report is of exceptional interest; but in fact it is also exceptionally interesting in itself. The company has an unequalled record of continuous progress and has been responsible for introducing a number of noteworthy reforms in the assurance world. The latest annual report maintains this tradition, the total income for last year amounting to £41,791,521—an increase of £1,990,163 as compared with 1927. One of the outstanding factors in the company's success is the efficient management of its funds. The present valuation report states that the interest actually earned on the funds, exclusive of reversions, represented last year £5 2s. 11d., after deduction of tax. Another excellent feature of the report is the further decline in expense ratio of the industrial department, last year's figure being 24.89 per cent., against 25.47 for 1927; as recently as 1920 the figure was over 40 per cent. The benefits of the company's im-

proved position are being passed on to industrial policy holders, and in particular the period of waiting for the reversionary bonus has been eliminated. As regards the ordinary life business, which is by far the largest transacted by any British office, further progress is recorded. Last year the total premiums were £11,778,847, an increase of £618,448. An increase in the various classes of bonuses in this department is announced. Comparatively small contributions to profit and loss are made by the fire, accident, employers' liability, miscellaneous, and sinking fund accounts, but there is again none from the marine account.

PALESTINE CROP PROSPECTS.

The following particulars are taken from the report of the Director of Agriculture and Forests in Palestine on the crop prospects at the beginning of February:—

The excellent weather conditions which characterised the opening stages of the winter season have been well maintained, the principal features being mild temperature and abundant and well-distributed rains. By the end of December twelve out of sixteen meteorological stations had returned records of rainfall considerably in excess of the average, while of four others only Gaza registered a serious deficiency. During January somewhat colder conditions set in with a slight snowfall, but there were intervals of bright sunny weather and several rainy days.

A satisfactory item is the amount of rain which has fallen at Beersheba. Cultivators are everywhere optimistic, and though allowance must be made for the possibility of inadequate late rains and of a locust invasion or other serious calamity, prospects are better than they have been for several years at this season. It is consequently fortunate that timely steps were taken to obviate a serious shortage of seed grain in the northern areas by the issue in the form of a loan of wheat seed imported by the Government from Tunisia to the extent of 1,900 tons and of 200 tons of barley purchased from Gaza. The seed which was distributed in time to be sown during the most favourable weather, was very well received by cultivators.

The British Overseas Bank announces that funds for the payment of the coupon due April 1, 1929, on the bonds of the Roumanian 4 per Cent. Consolidation Loan, 1922, have now been received.

An Athens message states that agreement appears to have been reached on the new Greco-French Commercial Treaty. In exchange for the renunciation by Greece of favourable conditions previously obtained for the entry into France of Greek wines, France reduces the tax on Greek dried grapes from 50 f. to 37½ f., while the quantity of Greek wines allowed to be imported into France is increased from 200 thousand to 250 thousand hectolitres. Certain concessions accorded to four classes of French goods by Greece are to be relinquished.

The Dunlop Company has reduced the price of the famous Dunlop "Maxfli" golf ball from 2s. 6d. to 2s. The "Maxfli" has been such a universal favourite that it is easy to imagine the tremendous production figures which have now been reached. Even a nodding acquaintance with commercial economics teaches that big production, particularly after initial expense has been overcome, brings down the cost per unit, and this, of course, is the explanation of the lower price. The price revision, it might almost be said, demolishes a fetish, for somehow or another half-a-crown has come to be regarded as the proper price for a first-grade golf ball—although in pre-War days 2s. was the established figure for many years.

NEWS FROM ALL SOURCES.

New Tariffs on goods in transit through Yugoslavia will be the subject of a conference.

The First Croatian Savings Bank of Zagreb made a net profit for 1928 of 16,300,000 dinars.

It is reported that the Roumanian Government intends to nationalise all Roumanian private railways.

For the financial year 1927-28 the Madras Budget shows a surplus of 89 lakhs of rupees (£657,000).

A Bill is to be introduced into the Greek Parliament providing for the taxation of foreign companies.

Some very considerable reductions have just been made in the Roumanian export duties on timber.

The net profits of the Commercial Bank of Greece for the second half of 1928 amounted to 21,539,000 drachmæ.

Yugoslavia's foreign trade for 1928 was as follows (in million dinars):—Imports, 7,835.3; exports, 6,444.6.

The Goods Transport Bank of Brasov made a net profit for 1928 of 7,800,000 lei, as against 5,200,000 lei for 1927.

The National Bank of the Kingdom of the Serbs, Croats, and Slovenes has declared a dividend of 400 dinars for 1928.

The net profits of the Banca Romaneasca for 1928 amounted to 118,000,000 lei, as compared with 116,000,000 lei for 1927.

Arrangements are being made for the establishment of a citrus experimental station in Cyprus under the charge of a horticulturist.

The Roumanian Parliament has passed a Law stabilising the leu at 3.10 gold centimes, equivalent to 813.58 lei to the pound sterling.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Co., Bucharest, for February was 50,390 tons.

A Bucharest report says that the Dresdner Bank is negotiating with the Roumanian Government respecting a further credit of £500,000 for the distressed districts.

The Egyptian State Railways will shortly invite tenders for the supply of ten side-tank engines for miscellaneous service. The adjudication will be made on June 1.

Sir John Simon, chairman of the Indian Statutory Commission, celebrated his 56th birthday on February 28. He and his colleagues will return to England at the end of April.

It is reported that the Greek Government is to submit the differences with the Ulen Company on the question of the Athens water supply to the arbitration of the President of the Swiss Confederation.

The gross production of crude oil in February of the Phoenix Oil and Transport group of companies was 32,516 tons. By an error in telegraphic transmission, the production for January was reported as 34,484 tons, in place of the correct figure of 33,484 tons.

It is reported that the Direction der Disconto Gesellschaft has paid over to the Roumanian Government the balance of M.45 millions which completes the payment of M.75½ millions stipulated by the agreement concluded on November 10, 1928, between Germany and Roumania.

The Attock Oil Company, Ltd., announces that the deep well reported drilled in on November 19, 1928, has been beamed down to steady production at a satisfactory level. A further well half a mile west of the well referred to has been drilled into the 3,000 foot sand, with good initial production.

Motors and Motoring.

By G. B. B.

The Eight-wheeled Chassis.

Just as the original four-wheeled railway truck eventually gave place to other and improved designs culminating in the modern eight-wheeled double bogie coach, so it seems that four-wheeled cars will give place to other and more advanced types. The six-wheeled vehicle has been with us for a long time and has certainly proved its great value. I do not remember, however, having seen an eight-wheeled vehicle on the road, although I feel that it is quite within the realms of possibility that some day, on turning a corner, I may find myself unpleasantly mixed up with one of these octopods, as I shall call them.

The eight-wheeled chassis has, however, already appeared, and numbers of them have been sold and placed on the roads, although not, so far as I know, in this country. They are built with four front steering wheels and four rear driving wheels, designed so as to give flexibility in both front and rear sets. The load is thus distributed over the eight wheels, each wheel only carrying one-half of the load that would have to be borne with the ordinary type of chassis. But the difference, in effect, is much greater owing to the fact that the chassis is so designed that the centre of gravity of the load is much further forward than it is in the case of the average four-wheeler. In the ordinary omnibus, for instance, I believe the rear or driving wheels carry about 85 per cent. of the load. In the new type I gather that the front and rear sets of wheels carry 45 and 55 per cent. respectively. Further, the chassis design is such that the centre of gravity is much lower than usual.

Suitable for Rough Country.

The makers point out that even the failure of one of the wheels would not affect the stability of the set, and that consequently a vehicle built on one of these chassis could be used with perfect safety in the roughest country. The transatlantic journal dealing with the new chassis says that, with the four rear driving wheels on the ground, the tractive effort is double that of the usual two-wheel drive, while by the inter-construction of the driving axles each wheel holds the road better than any two driving wheels of the usual four-wheel construction. The reduction of slippage from this cause is stated to be responsible for a saving of as much of 25 per cent. of the petrol consumption. In this new type of 'bus there is a separate brake on each wheel, operated by compressed air, much in the same way as the Westinghouse railway brake, giving a sure, steady, reliable and easily applied control.

It is undoubtedly an interesting development, and would appear to be one which, if taken in hand by British manufacturers, should help to solve the problem of the heavy, fast motor vehicle.

New Fuels.

The petrol position is one that has attracted considerable attention recently, and I hear of sleepless nights spent by would-be inventors who are dreaming of a fortune to be realised by the invention of a new fuel. There is a gentleman in the motor-cycling world who claims to be able to produce a mixture suitable for use in internal combustions by merely adding water to certain ingredients. I know people who say they have driven on this "petrol-from-water" fuel, but that is as far as my knowledge goes. I have not seen the stuff; I do not know what it is. But I do gather that the ingredients can be bought cheaply at any druggist's shop, that they are of the simplest kind, and that there is no possible way by which the new fuel could be protected. The inventor, did he make his process public, would gain nothing by so doing. As he already travels about 70 miles to the gallon of fuel, obviously he would have to ride all day and all night in order to save any appreciable sum on his petrol bill. Here we have one

man with a wonderful secret, unable to make more than 2½d. a week out of it. As far as fuel goes, seriously speaking, the only practical rival I can see to petrol is producer gas, and I do venture to prophesy that the day is not far distant when the private motorist will be able to drive from London to York or Manchester on a handful of coke and half-a-pint or so of water.

A Dunlop Health Experiment.

The sun's effect on the health of workers is to be tested in novel fashion at the large new commercial offices which have been built alongside the main entrance of Fort Dunlop. All the windows on the first floor have been glazed with vitra glass to admit the sun's ultra-violet rays. Careful records will be kept of the health of the workers on this floor and compared with that of the workers on the other three floors. Should the sun workers show any gains, every window in the great building will be glazed to admit the ultra-violet rays.

The chief materials used in the building, which is wholly the work of the Fort Dunlop building staff, are:—Steel-work, 800 tons; cement, 830 tons; concrete, 5,000 tons; nails, 11,000 lb.; reconstructed stone, 15,000 cub. ft.; glass, 30,000 sq. ft.; maple, 85,000 sq. feet.; bricks, 700,000. In a tower at one end of the building, which is flat-roofed, is a tank with a water supply of 4,500 gallons.

The traffic receipts of the Suez Canal from February 16 to February 22 amounted to 21,660,000 francs.

Sir James Donald has joined the board of the Calcutta Electric Supply Corporation in the vacancy caused by the death of Mr. P. V. Luke.

An expert committee has been appointed to study plans for the construction of a bridge across the Save between Belgrade and Semoun.

The retirement is announced of Mr. James Ambrose, general passenger superintendent of the Cunard Line. Mr. Ambrose joined the company in 1888, and has completed 41 years' service.

The net profit of the Constantinople Land and Building Company for 1928 was £3,472, plus £1,770 brought forward. The directors recommend a dividend of 4½ per cent., less tax, placing £1,000 to reserve, making £9,000, and carrying forward £1,242.

The shareholders' meeting of the Credit Foncier d'Algerie et de Tunisie authorised the board to issue shares with plural votes to an equivalent of one-fifteenth of the ordinary shares. The limit of mortgage loans has been raised from eight times to twenty-five times the bank's capital.

ROAD CONSTRUCTION IN EGYPT.

With the increase in traffic on the highways of Egypt, the more important of the district roads have from time to time been surfaced with a layer of limestone macadam 6 inches thick. For a still stronger road a layer of basalt macadam 4 inches thick is sometimes added, and a coating of tar or bitumen applied (says the United States Trade Commissioner at Cairo, Mr. Ralph F. Chesbrough, in a recent report).

Tar macadam has also been tried. As the result of experience, however, tar is now being abandoned in favour of Suez bitumen. The early specification for tar coating and tar macadam followed British practice more or less. The prevailing heat and dryness of the climate, however, showed the necessity for specifications drawn to fit local conditions. In 1914 the composition for coating was 40 kilos tar to 5 kilos pitch, covering 40 square metres, but the mixture was too liquid and took three days to dry.

Attention was then turned to bitumen as less susceptible to changes of temperature than tar. In 1922 the practice was to add 20 per cent. Suez bitumen to the tar to increase its stability. Eventually, the tar was eliminated, and the present practice is to use only Suez bitumen to which a volatile flux, solar oil, has been added for coating purposes. Three grades of this mixture are in use, known as F-60, F-70, and C grades, containing, respectively, 60, 70, and 100 per cent. of bitumen soluble in C-82. The first two are used for first and second coats.

The grade C has to be treated to a higher temperature than the F grades, as it is unfluxed and more viscous. It has to be pressure sprayed on the road, whereas F grades

can be applied with a brush. C grade is used for surfacing roads already treated with a previous layer of bitumen, or where an existing coat is wearing thin.

Cairo.

In the town and suburbs of Cairo, the typical composition of the roads generally is macadam in two layers, the lower layer 6 inches thick of limestone, the upper layer 4 inches of basalt. The surface is usually bitumen coated.

A steady programme of conversion of the principal streets to asphalt is now in progress. The upper layer of basalt is removed, and the lower layer of limestone dressed and compacted to form a foundation. On this foundation is laid a binder course $1\frac{1}{2}$ inches thick, and a surface sheet of similar thickness. In a recent conversion the limestone foundation was dressed with asphalt concrete $1\frac{1}{2}$ inches thick, corresponding to what is known in America as black base, before the binder course was applied. The asphalt used is Trinidad Lake, fluxed with about 10 per cent. of Suez bitumen to produce a penetration of 12 to 18.

The proportions of the ingredients used in the sheet, binder, and concrete mixture vary slightly from time to time, as may be found necessary, but are approximately as follows, in percentages:—Sheet—Asphalt cement 18, filler (limestone dust) 10, graded sand 72; binder—Asphalt cement 8, graded sand 11, small stone (basalt $\frac{3}{4}$ inch) 81; A concrete—Asphalt cement 13, filler (limestone dust) 3, graded sand 44, small stone (basalt) 40.

The graded sand receives special attention. Two of three sort of sands are mixed with a view to obtaining the following groups of sizes and proportions (the latter being such as to be easily committed to memory). The per cent. proportions by sizes are as follows:—Light traffic, passing 10 mesh, retained in 40 mesh, 33; passing 40 mesh, retained in 80 mesh, 44; passing 80 mesh, retained in 200 mesh, 22; residue, 1. Heavy traffic, passing 10 mesh, retained in 40 mesh, 22; passing 40 mesh, retained in 80 mesh, 44; passing 80 mesh, retained in 200 mesh, 33; residue, 1.

The asphalt mixtures are manufactured in two Iroquois plants having mixers of 700 pounds capacity and worked by a semi-Diesel 50-horse-power engine. After mixing the material is delivered in special trucks and brought directly to the site of work. The supervision throughout is efficient and the results are generally excellent.

Roads in Alexandria.

Alexandria, as an important seaport with a large export and import trade, has its own problems. The prevailing form of paving in areas of heavy merchandise traffic—as between the cotton warehouses and the wharves or railway depôts—is large, roughly squared flagstones, or dalles, as they are called, imported from Europe; but under the ever-increasing stress of present-day traffic—a large amount of which is conveyed on local types of heavy, iron-tired, horse-drawn lorries—these stones wear very badly, and rapidly present an uneven and unsightly surface.

On expert advice, the municipality has now decided to give up the use of imported dalles, and to substitute setts of indigenous hard stone—namely basalt or aenite, the former quarried at Abu Zebal, and the latter at Assuan—to be bedded in the orthodox manner on a foundation of concrete 6 inches thick, as the standard type of commercial highway. In other busy areas where there is less horse-drawn and more motor traffic, asphalt surfacing will be substituted for setts on the same type of foundation.

As regards the general condition of roads in Alexandria, 57 per cent. are water bound and uncoated. In some of the coated roads tar has been used in the past, but, as in the case of Cairo, it has now been decided to supersede tar by bitumen as a road material, not only for climatic reasons, but also because bitumen is locally cheaper and otherwise more suitable than tar for the purposes required.

In the article on "Banking in Egypt" in our last issue the figures for the capital and the reserve fund of the Ionian Bank were given as £575,000 and £244,000 respectively. The figures should, of course, have been £600,000 and £250,000.

Near East Markets

JAFFA ORANGE EXPORTS.

The Empire Marketing Board reports that the total direct shipments of Jaffa oranges to the United Kingdom up to February 23 (including fruit transhipped at Port Said before the direct shipping season started) amounted to 852,000 boxes as compared with 1,072,000 boxes at the corresponding date last year. Total shipments to the Continent amounted to about 266,000 boxes up to February 18, as compared with 98,000 boxes last year. Transshipments (via rail to Kantara) have totalled approximately 84,000 boxes to date. A communication received from the Board's representative at Jaffa states that the general opinion now is that the total exports of oranges this season may not exceed 1,600,000 boxes, instead of the earlier estimate of 1,800,000. Shipments during January were well under average and this is expected to prolong the season to a later date than was anticipated. Shipments last year continued until April 9.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows for the week ended February 28:—

Currants.

We must needs carry our memories a long way back to recall a month of such quietude and restricted trade as that which now draws to a close. The narrowness of fluctuations is in itself an indication of the paucity of business done and the lack of interest shown. The sharp rise in the Bank Rate helped to increase this unsatisfactory state of affairs, creating a feeling of uncertainty and uneasiness, and inducing buyers still further to restrict their activities. There is nothing tangible to report of a hopeful character as yet, but those who are in close touch with the market are inclined to discern a brighter outlook, and a period of greater animation may not be far distant. It would certainly not come as a surprise to those best able to weigh up the factors which govern the situation. Consumption has certainly been on a smaller scale than a year ago, but it is hardly conceivable that the extent of the decline is as great as the reduction in importations:—14,172 tons to date, against 18,578 tons a year ago. The difference of 4,400 tons is very considerable, and it seems fairly safe to assume that wholesalers and semi-wholesalers are carrying lighter stocks than usual. If so, the effect will be felt as soon as any revival takes place, and it is not to be supposed that the present state of stagnation can continue indefinitely. Present values in this country are below those ruling on the Greek market, and reports are to hand that shipments have been suspended. The opinion is gaining ground that when the country finds it necessary to replenish depleted stocks an advance in values should be experienced, and some degree of hopefulness may therefore be indulged in. The recrudescence of inclement weather is a set-back, but every day brings us nearer to the spring and to Easter, and there is no excuse for taking a gloomy view of the near future. All indications point to improvement, though it is, of course, impossible to forecast how soon this may take place.

The small arrivals per s.s. Mardinian and Bosnia had no bearing on the market. Holders were anxious to make progress, and as a result values have again receded slightly. Prices of the lower grades show little alteration, but pressure for sales has caused the decline of good grades to be more pronounced. Sales were:—Prygos, 45s. 6d. to 46s.; Amalias and Patras, 46s. 6d. to 48s.; Zante, 47s. to 47s. 6d.; Gulf, 47s. 6d. to 52s. 6d.; Vostizza, 48s. to 50s.; Small Vostizza, 51s. to 51s. 6d. Quotations:—Prygos, 45s. 6d.; Amalias and Patras, 46s. to 48s.; Zante, 47s. to 47s. 6d.; Gulf, 47s. 6d. to 50s.; Vostizza, 48s. to 54s.

Sultanas.

Smyrna.—The market remained in a more or less stagnant condition and business was almost negligible. Holders are displaying signs of dissatisfaction at this prolonged and persistent state of inactivity, while buyers are content for merchants to carry the fruit until there is an improved demand. The few sales were:—Medium, 35s. to 40s.; Good, 46s. to 50s.

Greeks.—S.s. Mardinian and Bosnia brought further supplies, and sales were effected of Ordinary quality at 35s.; Good, 49s. to 52s.; and Best lots, 55s. to 60s.

Figs.

Naturals.—Genuine sell slowly at 31s. to 31s. 6d.

Tenders were opened on February 25 for the electrification of the Helwan railway line to Cairo. The lowest tender was that of the English Electric Company. The work is to be completed in 18 months.

FINER FURS IN DEMAND.

The report of the London Fur Trade Association (Inc.) on the January raw fur skin sales states that they were well attended—representatives of all markets, including America, being present. The fur collections which included early shipments of the new season's catch were, with few exceptions, not in heavy supply, and good competition was, therefore, anticipated. Actually the demand for all the finer furs was such that prices advanced in many instances well beyond previous rates. This was particularly noticeable in regard to foxes of all kinds. So far as the staple lines were concerned prices showed little alteration from previous rates, although there was a weaker tendency where the offerings were substantial. Unless more abundant supplies are available at the forthcoming spring auctions, present rates may be expected to prevail for some time to come. The prevalence of extremely cold weather both at home and abroad should also have a favourable influence on the fur trade.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Portland Cement.—The Egyptian Ports and Lighthouses Administration invites tenders for the supply of 650 tons of Portland cement. March 28. (D.O.T.)

Electric Articles.—The Financial Secretary, Egyptian Army, War Office Cairo, invites tenders for the supply of electric articles to the Military Works Department, Egyptian Army, Abbassia, Cairo. April 4.

Various Stores.—The Director of Stores, Frontiers Administration, Arsenal, Alexandria, invites tenders for the supply of consumable stores, such as paints, ropes, brushes, leathers, ironware, canvas, duck, felt, nails. April 9.

Oils, Paints, Etc.—The Director-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of oils and paints for the year 1929-1930, March 18; bunting, ropes, etc., for the year 1929-1930, March 25; metals for the year 1929-1930. April 3.

Diesel Engine.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nadli, Cairo, invites tenders for the supply, erection, and guarantee of a 400 B.H.P. Diesel engine driving an air compressor together with auxiliary machinery. May 1.

Non-ferrous Metals.—The Ministry of Communications, Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of non-ferrous metals, iron and steel products, etc., required during the year 1929-30. April 3. (D.O.T.)

Paints, Etc.—The Egyptian Ports and Lighthouses Administration invites tenders for the supply of paints, varnishes, soap, pitch, wood and coal tar, etc., during the year 1929-30. March 18. (D.O.T.)

Piping System and Tank.—The Ministry of Public Works invites tenders for the supply and erection of a complete piping system and elevated wrought iron water tank. March 16. (D.O.T.)

Miscellaneous Stores.—The Egyptian Ports and Lighthouses Administration invites tenders for the supply of miscellaneous stores. The requirements, which consist mainly of small quantities of goods, include among other items bunting, ropes, canvas, hose, cotton waste, tarred oakum, thread, etc. March 25. (D.O.T.)

Electric Lighting System.—The Ministry of the Interior, Section des Municipalités et Commissions Locales, Cairo, invites tenders for the supply and installation of an electric lighting system for the town of Fashn. March 27. (D.O.T.)

Clothing.—The Director of Stores, Frontiers Administration, Arsenal, Alexandria, invites tenders for the supply of clothing such as blankets, boots, tarbushes, jerseys, frocks, greatcoats, woollen cotton and linen cloth. March 21.

Dressings, Cotton and Mackintosh Cloth.—The date for the receipt of tenders for the supply of dressings, cotton and mackintosh cloth to the Egyptian Department of Public Health has been postponed from February 10 to March 28. Copies of the new specifications which have been issued by the Egyptian authorities are available for inspection at the offices of the Department of Overseas Trade.

YUGOSLAVIA.

Gauze, Etc.—H.M. Consul at Sarajevo reports that a local firm is desirous of receiving quotations for the supply of hydrophile gauze, unbleached calico, pure cotton wool, and cellulose wadding. (D.O.T.)

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 27:—

Egyptian Futures.

Sakel Contract.—Quite an appreciable amount of interest and activity has been shown in this market during the past week, and values have reacted considerably from the recent low level. Unfortunately the hardening tendency witnessed cannot be attributed to any improvement in the local trade situation, as Sakel yarns continue to be depressed and in poor request. The reason for the upward movement is to be found in the influence surrounding the distinct hardening in the American departments and also in the necessity of a technical readjustment of the position in our own contract. In our last report we drew attention to the unusual state of the market, and indicated the danger of the accumulated "short" interest worked up recently; on the first signs of increasing resistance just prior to the week-end, contracts became scarce, and, whilst the covering that has since taken place leaves the position more evenly balanced, we cannot advise selling on a market that stands so far below "actual" replacement values. On the other hand, the weakness of near positions, both here and in Alexandria, is not a feature that encourages a belief that values will advance further; once the early March tenders are out of the way the situation will be clearer, and we may have reason to change this view; in the meantime trade support, either from English or Continental consumers, appears insufficient to stabilise any further appreciation. As we are practically at the half-way stage of the season it is rather interesting to study the overseas statistical position; from reliable figures stocks in Alexandria and up-country of all grades total 1,835,000 kantars (included in which figures 350,000 kantars of Government stock, which we think has deteriorated to the extent of being untenderable). Exports from the middle of February to the end of August last season approximated to 1,600,000 kantars, so that even allowing for quite a drastic falling off in consumption during the next few months the carry-over of tenderable cotton will be alarmingly small. Trading in the new Sakel contract commenced last Thursday, January 1930 being initially dealt in at a premium of 40 over November, to harden in more recent dealing to 55 over. At this basis it is only valued at about parity with the same position in Alexandria, whereas owing to the tightening up that has taken place we consider the month in question to be intrinsically worth at least 50 points premium. We therefore recommend the straddle as a sound proposition. With regard to the immediate course of the market, we see little to cause any radical change in the level; we still consider, however, that considerable caution should be exercised on the "short" side, as, given encouragement of a further rise in American cotton, further manipulation in Egypt may readily cause prices to harden.

Upper Contract.—Values in this market have shown a firm undertone since we last wrote, a hardening basis in Alexandria and the advancing tendency of American cottons influencing sentiment to the "Bull" side. Liquidation of the March position has been in progress throughout the week, and, rather contrary to our expectations, this has been well taken without affecting the market. The Liverpool spot basis is attractive compared with c.i.f. offers, and cotton imported earlier in the season at tenderable differences has moved off well; thus the local stock stands at a much lower figure than at one time appeared probable. Reports from American staple houses indicate a hardening basis and probable scarcity during the later spring months and onwards. Taking a long view of the market, we consider present prices reasonable and also have a favourable opinion of the American-Upper straddle July and July options at round 225 to 230 points difference.

Egyptian Spot.

This section has been distinctly more active this week, and although the bulk of the business has taken place in new crop Sudan Sakel, the ordinary Egyptian growths have also benefited to some extent by the improved inquiry. Futures have been active, and on occasions strong, and this no doubt has acted as an incentive to buyers. Reports from up-country have been very mixed. Generally speaking, those received from private sources have been anything but encouraging, but the so-called "official" reports have made much brighter reading. Sakel has been in better request at from 75 to 150 on, but little change has occurred in the demand for other qualities of this growth.

An improved offtake has been in evidence for Uppers at from 20 off to 20 on. Egypt has been very "bullish" on Uppers this week, and merchants in that country have been difficult to deal with. The market here has been rather more irregular, and it looks as if the bulk of the cheap cotton, imported earlier in the season, had now been picked up by the trade. Anything over Fully Good Fair has been neglected.

Pilion has been in request at from 25 to 75 on contracts, a price at which but little cotton has been found. White, Maraad, and Nahda have all been in moderate request from time to time. The demand for the very low cottons has been quicker. The first shipments of this season's Sudan Sakel have been offered, and have met with a keen response from spinners at fairly full prices. The grading this year appears to be more regular than has hitherto been the case, and the strength of the fibre will probably give cause for

satisfaction amongst purchasers. So far, of course, only the top qualities have arrived.

C.i.f. business has shown no signs of improvement, and the forwardings to the trade last week showed a further shrinkage of 4,678 bales Egyptian and 362 bales Sudan. Estimated spot sales for the week, 1,500 bales Egyptian and 2,000 bales Sudan Sakel. Quotations of Sakel have been advanced 30 to 35 points, those of Upper and Pilion 40 to 45 points. F.G.F. Sakel to-day, 18.25d. F.G.F. Upper to-day, 12.55d. F.G.F. Pilion to-day, 13.18d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended February 21, state:—

Since our last report the futures market has been much less active and fluctuations have been very limited. The week's summary of price movements is as follows:—Sakellaridis: March, 36.04 dollars, 0.24 dollars up; May, 36.60 dollars, 0.31 dollars up; July, 37.03 dollars, 0.44 dollars up; November, 37.40 dollars, 0.38 dollars up. Ashmouni: February, 22.39 dollars, 0.02 dollars up; April, 22.75 dollars, 0.05 dollars up; June, 23.17 dollars, 0.07 dollars up; August, 23.47 dollars, 0.02 dollars up; October, 23.81 dollars, 0.06 dollars up.

Sakel.—We have had a series of very dull markets, with March fluctuating within a range of a few points round 36 dollars. Exporting houses have done little except for some small purchases, against fixing by spinners, which were absorbed by liquidating sales of old long accounts. The weakness of Liverpool has created a very unfavourable impression on our market, and to this factor more than anything else must be attributed the continued closing of their positions by the bull element. November new crop has, perhaps, been the month most actively dealt in, the operations in this delivery consisting mainly of straddling by purchases of November Sakel Liverpool against November Sakel Alexandria; there were also some purchases of the latter option against sales of October Ashmouni Alexandria. There has also been quite a fair amount of switching from March into November by export houses; owing to the increase in the November premium over March, which is now over 135 points.

The latest news we have received from the Sudan seems to be still quite favourable. The first picking of the crop in the Gezira, now in progress, is giving results distinctly better than those of last year, both in quantity and in quality. Climatic conditions are now again quite normal, and unless the unexpected happens at the last moment, the final result in the Gezira will be very satisfactory. As regards Tokar, Kassala, and other districts of less importance where Sakel is grown, reports continue to be optimistic and give good ground for the conviction that the official crop estimates of the Sudan Government will be easily surpassed.

While the recent fall in Sakel values of about 3 dollars has naturally made present prices look a little more reasonable, we are not yet satisfied that the position is sound. Quite a number of long positions must still exist, and, with the apathetic attitude of spinners towards Sakel apparently more or less quite as pronounced now as before the decline, a renewal of the reaction is more than possible under present conditions.

ADVERTISING IN

"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of *all* classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

Write for advertisement rates to:

The Manager, "The Near East and India," 170 Strand, London, W.C.2.

The Sakel/Upper straddle (March/April) this week stands at 1,329 points, against 1,310 points last week and 917 points at this time last year.

Uppers.—In this market also the movement has been only moderate, but the tone holds firm by reason of the good demand for this variety on the spot market, which is attributed to some new purchases for American account. The Ashmouni/American straddle (April/March) this week stands at 277 points, against 267 points last week and 745 points at this time last year.

The week's receipts amount to 112,628 kantars, against exports 138,414 kantars; the stock in Alexandria stands at 3,293,330 kantars.

Spot.—Minet el Bassal continues quiet, with a continued moderate demand from abroad, and the week's turnover is not very good. Nevertheless, in spite of the big stock and very mediocre offtake, it is not easy to buy decent cotton, especially Sakel, at a reasonable price. Sales amount to about 14,650 bales, of which we estimate 4,250 bales Sakellaridis, 9,500 bales Ashmouni and Zagora, 550 bales Pilon, and 350 bales other varieties.

Sakellaridis: Has been in only moderate request and the turnover is not impressive. The medium qualities have attracted most attention, though other styles have also been dealt in on a small scale. Spot differences are without change for the grades above Fully Good Fair, but for Fully Good Fair and below, which are very scarce and in request, they are distinctly stiffer.

Ashmouni and Zagora: Interest in these varieties is well sustained and the turnover is fairly good. All styles have been dealt in, but the medium qualities have absorbed the great majority of the business done. Spot differences are generally unchanged. Fully Good Fair and the grades below are getting very scarce and are difficult to buy.

Pilon: Demand has fallen away somewhat and the week's total is appreciably less than last week. Although a considerable quantity

of this growth is on offer, the quality is generally poor and the really good staple lots are readily taken up. Spot differences are well maintained and without much quotable change.

Other Varieties: A fair business has been done in Nahda and a retail business in White. Spot differences for both varieties are unchanged. A small trade has been done in Fouadi, but last week's demand for Maarad has continued and a very fair business has once again been done.

Crop, 1926.—Climatic conditions have been changeable and, up to the present, few fields have been sown. The demand for sowing seed is more active, but it is still too early to express any well-founded opinion as to what proportions of the different varieties will be planted. The acreage is expected to show a slight increase over last year, especially in Upper Egypt, while from the additional acreage in Lower Egypt the varieties which will benefit most will be Nahda and Fouadi. We give below the figures registered by the principal Nile gauges on the 19th inst.:—Malakal, 10.33 metres, against 9.85 metres last year; Roseires, 11.70 metres, against 11.30 metres last year; Wadi Halfa, 1.49 metres, against 0.90 metres last year. The discharge from the Assouan Reservoir registered on the same date was 859 cubic metres per second, against 647 cubic metres last year and 1,079 cubic metres in 1927. The river level for the same three dates were respectively 113.62 metres, 112.24 metres, and 113.62 metres.

The annual Sample Fair at Liubiana will be held this year from May 30 to June 9 in combination with a Motor Show. There were 706 exhibitors at last year's Fair, of whom 172 were foreign. The number of annual visitors to the Fair varies from 120,000 to 150,000. An Autumn Fair, to include forestry, shooting, and fishing exhibits, will be held from August 31 to September 9.

Notes of the Week.

The League Council and Minorities.

The discussion on the thorny subject of Minorities at the meeting of the Council of the League of Nations at Geneva last week took place in an unexpectedly peaceful atmosphere, thanks in no small measure to the tactful contribution made to the debate by Sir Austen Chamberlain. At present the petitions of Minorities come before a Committee of Three, which has sole responsibility for dealing with them; it may ignore them to take action upon them, as it thinks fit, and in the latter case only the Government involved may learn of its decision. In many cases the Minorities concerned might know nothing about the fate of their petitions, and there was a general impression that the process of dealing with their complaints was unnecessarily prolonged. The main object of the Canadian resolution was, by clearing away the atmosphere of mystery and silence in which the petitions were heard, to eliminate all suspicion that the League was not doing its duty in regard to Minorities. The German case went further, and, quite possibly, if it had not been modified before it was expounded by Herr Stresemann, might have justified some of the fears of the States that had signed the treaties for the safeguarding of Minorities. As things were, he proposed the appointment of a Commission to examine the whole question, while urging upon the Council a careful investigation of the possibility of improving the machinery for dealing with petitions, of bringing the nations concerned with Minorities more into the picture than hitherto, and of the League's fulfilling its pledges in regard to Minorities outside the sphere of petitions. It is to be desired that Sir Austen Chamberlain's speech should be read and committed to memory both by the Governments and the Minorities concerned. He pointed out that the lack of publicity connected with petitions was a defect, but had its advantage in allowing a Government to make concessions without loss of dignity or authority in its own State. Again the acceleration of decisions in respect of petitions would be useful, but owing to the time required for the collecting of information, it was not easy to see how the procedure could be made more rapid. Sir Austen Chamberlain then proceeded

to deal with the wider issue. The vital thing was to make conditions such that Minorities could be, and were, loyal subjects of the nations to which they now belonged. Oppressions of Minorities had been a cause of war in the past; their protection was a sacred duty which the Council would never neglect. There were, however, correlative duties. If the Government of a State owed definite obligations to the Minorities, so, too, did the Minorities owe loyal allegiance to the State to which they belonged. The Council expected Minorities to come to them with clean hands, able to say that they had given loyalty and true allegiance.

The Council's Resolution.

The Resolution adopted by the Council appointed the representatives of Japan, Great Britain and Spain as a Committee to draw up by the June session a report on the Canadian and German proposals, taking into account the different points raised by speakers during the discussion. Observations may be submitted to the Committee by the Governments that have signed Minorities treaties or by any other member of the League. One effect of the speeches made by the British and French representatives was to convince some of the Governments concerned that for the present the Council was not re-opening the question of the treatment of Minorities, but was restricting its activities to the satisfying of Minorities that it had not lost sight of their interests. The States signatory to the Minorities treaties, however, are inclined to regard the Council's Resolution as the thin end of the wedge, and are contemplating the presentation of their point of view in a joint memorandum. They are understood to be opposed in principle to any alteration in the procedure with regard to the submission of petitions by Minorities; but in view of the Council's attitude that Minorities must not expect sympathy, unless they are able to establish the correctness of their own attitude in regard to loyalty to the State in which they are placed, the Governments concerned cannot hope to be on really strong ground until they are in a position to welcome the fullest inquiry into their treatment of Minorities.

The Albanian Orthodox Church.

History and the Œcumenical Patriarchate are repeating themselves. The Greek Revolution broke off the relations of the Greek clergy with the Patriarch and Synod of Constantinople, for the Patriarch was in some degree a Minister of the Sultan, and a people at war with the latter could not recognise the Patriarch's authority. When Capodistrias became President of Greece, an attempt was made by the Patriarchate to bring the clergy in Greece again under its immediate jurisdiction, but Capodistrias, we are told by the historian Finlay, was too sensible of the danger which would result to the civil power from allowing the clergy to become dependent on foreign patronage to permit any ecclesiastical relations to exist with the Patriarch. In due course a decree of August 4, 1833, proclaimed the National Church of Greece independent of the Patriarch and Synod of Constantinople, and established an ecclesiastical Synod for the Kingdom. The Orthodox Church in Greece thus became subject to a Roman Catholic King instead of to a Muslim Sultan. The independence was little to the liking of the Œcumenical Patriarchate, which proceeded to intrigue in Greece and to endeavour to undermine the stability of the new Church. The Greek authorities, however, remained firm, and in 1850 the Patriarch and Synod of Constantinople published a Synodal Tomos recognising the independence of the Greek Church under certain restrictions and obligations. In 1852 a law was passed by the Greek Parliament embodying the provisions of the Tomos. Nationalism and Orthodoxy in Albania have asserted themselves in the same way; Orthodox Albanians and their rulers had no desire to see the clergy dependent on foreign patronage, still less to have a door left open for foreign propaganda by such means. Accordingly, the Albanian Orthodox Church declared itself independent of the Œcumenical Patriarchate, and the latter has launched its ecclesiastical thunderbolts against the secessionists. The quarrel is to be regretted, as it tends inevitably to assume a national character, the more so as the Albanians, tired of the Patriarchate's obduracy, have found a friend in the Autocephalous Orthodox Church of Serbia. The case for the Constantinople Patriarch is not known to us in its entirety, but it is to be hoped that it will not embody the attempt made in the Greek Press to besmirch the character of the new Archbishop of Albania. It would seem to be time that the Œcumenical Patriarchate recognised that it cannot retain direct control of the national Churches of countries that have established their political independence. Incidentally it may be mentioned that trouble has been brewing for the Œcumenical Patriarchate in the Dodecanese. Italy is claiming that the Orthodox Church of the Islands should become autocephalous, but the Patriarchate stoutly refuses to agree. Three bishoprics have long been vacant, and only the Metropolitan of Rhodes remains.

"Dört" in Turkey.

The Turkish Government has decided to dispense with the local equivalent of the Defence of the Realm Act. The law for the re-establishment of public security was passed at the time of the Kurdish rebellion, and with the Tribunals of Independence, previously called into existence, provided the Government with all the advantages of martial law, while it was able to maintain a façade of civil institutions. ~~Owing to the elimination of all serious criticism of the conduct of public affairs in the Republic, it is not easy to determine to what extent the Government has relied on exceptional powers for the maintenance of law and order; but, as the discovery of plots continue to be the order of the day, it must be supposed that, in dispensing with the law for the re-establishment of public security, the Angora authorities consider themselves sufficiently protected by the ordinary penal code.~~ On the other hand, the solicitude of the Government to present Turkey as a country in normal working order will not be overlooked; the Tribunals of Independence were abolished two years ago, and now on the expiry of the period for which the

Public Security Law was in force, the Government announces its intention not to ask for a renewal. In his speech on the subject to the Grand National Assembly on March 4 the Prime Minister, Ismet Pasha, took occasion to review the achievements of the Republic during the last four years. Once again the Deputies, if they have not lost the power of noticing things on which they may not comment, will have been struck by the complete absence of any reference to economic progress—by far the most important aspect of public affairs in any State to-day. Ismet Pasha, however, broke some new ground, after the stereotyped references to the emancipation of women, the secularisation of the State, and the Turkish alphabet, by touching upon the many false rumours and "tendencious" reports in circulation. As instances he cited statements regarding the health of Mustapha Kemal Pasha, taxation contemplated by the Government and other unspecified matters, calculated to please the enemies of the Republic. When the day arrives for the Grand National Assembly, by being representative of the people instead of being merely nominees of the Government, to be a national safety valve, the uninformed gossip of the hour will not have to wait for a red-letter day in the history of the Assembly to receive its *coup de grâce*.

The Afghan Kaleidoscope.

Without waiting either for the termination of Ramadan or for the snows to melt, King Amanullah, it is reported, has set out from Kandahar on his march against Kabul. As the distance between the two towns cannot easily be covered by an army under three weeks, the issue between the King and the Amir Habibullah should, in the absence of any delaying fights with the tribes *en route*, be engaged towards the end of the month. News from Eastern Afghanistan indicates that King Amanullah's star is again in the ascendant. An unexpected development, however, has occurred in the reported arrest of General Nadir Khan, who had gone to Khost in the hope of bringing about a peaceful settlement of the trouble, in favour of King Amanullah. The incident suggests that the country has definitely split up into separate units, and that King Amanullah, after regaining possession of Kabul, will still have to re-establish his authority over Afghanistan region by region.

Slaves in Islam.

Although the excellent intentions of those Westerners who bridle at the mention of "slavery" wherever they hear of it are not to be gainsaid, there is a danger, which seems hardly to diminish, of over-estimating the real nature of slavery in Islamic countries. At a League of Nations Union meeting held last week in London, for example, the subject of slaves at Mecca appeared to be linked up with that of Bombay factory workers or of women workers in Japan. In truth, however, there is little resemblance. Admittedly, it is the aim of the British Government to stamp out the slave-trade in all territories that come under its influence—in the last Treaty with King Ibn Saoud of the Hijaz and Najd, indeed, a proviso is made to that effect; but it should not be overlooked that slavery in Islam imposes, what it does not imply in other countries, strict obligations upon the master. It is imperative, in these circumstances, for Western observers to make quite certain of their facts, and to define precisely what it is they are denouncing and what they propose to put in the place of slavery, before they talk of interfering with a problem upon which certain Muslims are sensitive. The suggestion was made last week that international action should be taken to limit the age at which pilgrims could be "allowed" to go to Mecca. Now it is true that slavery exists boldly at Mecca: the majority of slaves there, however, are those born to slaves who have long existed in the Holy City. So to interfere with a religion strikes one as particularly delicate. For it is, of course, the children of the poorest class of *hajjis* who occasionally become slaves in the Hijaz. If they were prohibited from accompanying their parents in the performance of one of the most sacred

duties of the Muslim, what would become of them? The problem really bristles with difficulties, and although it is one that must surely be tackled, little progress will be made by linking it up, to the indignation of the Muslim communities concerned, with such totally different problems as the sweated or forced labour which goes on in the East in institutions derived from the West. If slaves in Muslim countries are to be "freed," the essential thing is that their hitherto secured position shall be guaranteed, and that is exactly what it is so difficult, in lands not directly under British ægis, to guarantee. To "free" a slave, and then leave him or her in the lurch is in reality a most un-Christian proceeding.

Iraqi-Wahhabi Relations.

However the recent reports of raids from the south into Iraq and Kuwait be interpreted, it is undeniable that the loss caused in expenditure by the Royal Air Force and by the Iraq Army and in the stolen property of poor shepherd tribes of Iraq is intolerable. Whether these last raids are indulged with protest against the notorious "frontier-posts" as alleged justification has not been made clear; opinion at the moment tends to ascribe them to Wahhabi subjects who have not been impressed with King Ibn Saoud's clear call to his subjects for prudence. It is profoundly to be hoped, therefore, that the new High Commissioner for Iraq, Sir Gilbert Clayton, will shortly be able to confer with the King of the Wahhabi again on this vexed problem. An understanding is urgent, alike from the point of view of the interests of Iraq, of the Najd, and of Great Britain, for continued skirmishes provoke bad blood not only between Iraq and the Wahhabis, but also, in uninformed circles in Iraq, between Iraqis and British. It is pretended by certain journalists in Baghdad that every Wahhabi raid upon Iraq is instigated by the British—for their own ends, of course—and that these raids are designed solely to demonstrate the weakness of Iraq in defence, if left to her own resources. So childish a notion needs an early dispelling. We should be glad to hear, therefore, that Sir Gilbert had decided to visit the disputed region by the wells and to arrange a meeting with King Ibn Saoud. On the whole the winter, or raiding season, has been passed fairly successfully: there is room, however, for considerable improvement.

INDIAN NOTES.

The Judicial Committee.

The appointment of Sir George Lowndes and Sir Binode Mitter will materially strengthen the Judicial Committee as regards Indian appeals. It was explained recently in THE NEAR EAST AND INDIA that Parliament had passed an Act providing for the addition to the Committee of two members with Indian experience. It is in accordance with the provisions of this Act that the new appointments have been made. Both Sir George Lowndes and Sir Binode Mitter are men of sound legal knowledge and sound ripe experience; and it would have been difficult to have found two more highly qualified members. Moreover, there is the additional advantage that while Sir George Lowndes has practised in Western India, Sir Binode Mitter has gained all his experience on the eastern side. He belongs to a well-known Calcutta legal family, and has for years past enjoyed a first-class practice in the Calcutta High Court, where he is held in the highest esteem by Bench and Bar alike. His father, the late Sir Romesh Chunder Mitter, was a distinguished pleader who became a Judge, and officiated for some time as Chief Justice of the Calcutta High Court many years ago. Sir George Lowndes had been a leading advocate of the Bombay High Court for some time when, in 1915, he was appointed Law Member of Lord Hardinge's Government. In this capacity he was of course intimately concerned with the Defence of India Act and other War-time legislation.

During his five years of office he well maintained the traditions of the post, his previous training at the Bombay Bar being, of course, of great advantage to him. Since his retirement from India he has practised before the Judicial Committee, of which tribunal he now become a member.

Bombay and Prohibition.

The Government of Bombay, which seems at present to have many critics and few friends, deserves credit at least for its courageous facing of the facts on the question of Prohibition. A few years ago, Sir Leslie Wilson's Government announced Prohibition as its goal, in spite of the polite sarcasm of the Government of India, and the prognostication of those best acquainted with the drinking conditions of the Presidency. The prophets have proved to be correct—the rationing of liquor supplies by an annual percentage decrease and the closing of shops has led to an enormous amount of illicit distillation and to a great increase in smuggling. Such a result was inevitable when the abundance of facilities for making liquor, and the interlacing of British territory with numerous Indian States are borne in mind. Moreover, the Legislative Council which had demanded Prohibition refused to vote the staff necessary for even a mild degree of its enforcement. The Bombay Government, therefore, faced with a decreasing revenue, an increased amount of liquor lawlessness, and no prospect of being able to employ an adequate establishment for its repression, has wisely given up the struggle at an early stage. But we have no doubt that Mr. Vahabhai Patel will consider this backsliding as another reason for his anti-Government picketing campaign in the Surat district.

THE NEW ROAD TO THE EAST.

The new "road" is, of course, the air. Imperial Airways, Ltd., are to be congratulated on a very effective way of drawing attention to the service which has been in operation since December, 1926, and which on March 30 will become a section of the London-India Air Service. The pamphlet bearing the title of "The New Road to the East" contains a succinct account, written by a passenger, of the journey by aeroplane from Heliopolis to Basrah, via Baghdad. It is admirably told, briefly enough for practical study while in the air, because the traveller will not want his attention distracted for long from the panoramic view spread out around him, and yet covering the route in some detail. The pamphlet is admirably illustrated with air photographs and a map. Anyone who has flown from Cairo to Baghdad will have an experience that will never cease to be among the most thrilling and pleasurable experiences of his life.

IRAQ: THE END OF AN EPOCH.

It is the fashion nowadays to use the political criterion in estimating the progress of a State. In the advanced stage to which Nationalism has unfortunately come, this, perhaps, has become inevitable. Particularly in the East do politics take on an importance which they do not really possess, as if abstract conceptions such as "independence" or "sovereignty" were the paramount interest in the State. The West, however, which in this matter at least is older than the East, knows the fallacy of making the political criterion the supreme and final criterion, realises that no entire nation, especially no nation whose principal interest is in agriculture, can ever consider politics to be a primary consideration, recognises, in short, that economic power precedes political power. The horse must come before the cart: if there be no horse-power in the State, the cart will not move, howsoever its drivers urge it. These reflexions are prompted by an examination of Iraq, which, seeing that the long tenure of office of Sir Henry Dobbs as High Commissioner has just come to an end, is in a certain sense at the end of an epoch. At this moment we are not concerned with the political problems which still afflict the young Arab Kingdom; rather we wish to make, at the present juncture, an attempt to appraise the stage at which Iraq has arrived as a factor in the world's considerations. From the political angle there are in Iraq, unhappily, several problems which still call for wise statesmanship and long views; but viewed from any other angle, Iraq must present to the unbiased observer a marvellous example of what a gifted people can accomplish under the guidance, or with the advice, of so able an administrator as Sir Henry Dobbs. That the retiring High Commissioner would have liked to round off his monumental work with the kind of political achievement which is visible documentarily—we mean, of course, the ratification of the Military and Financial Agreements—is only natural; but we can well imagine that Sir Henry will have been broadly satisfied in that in so far as good order and security could have been achieved in Iraq, and in so far as the people of Iraq could have their steps firmly planted in prosperity for the future, these things have been accomplished. It is not extravagant to say that—politics always apart—Iraq is now "a going concern"; and for this fact capital credit should be accorded to Sir Henry Dobbs.

Long before he assumed the High Commissionership, Sir Henry laid the foundation of good order in Iraq—Mesopotamia, as it then was called; for it is by his Tribal, Civil and Criminal Disputes Regulations, conceived during the War, that Iraq has become a settled and peaceful country. The world has, perhaps, become accustomed now to the idea of a tranquil Iraq, but it is a fact which should never be forgotten that Iraq at this moment enjoys

a peace the like of which she has never enjoyed before in all her long history. Partly this is due to the excellent Police of Iraq, and partly, of course, to the prestige of the Royal Air Force; but primarily it is due to the admirable operation of the Tribal, Civil and Criminal Regulations which the retiring High Commissioner in his wisdom produced as the only means of securing the co-operation of the powerful tribes of Iraq with the Central Government. Nor can one omit from the record of benefits which Sir Henry Dobbs bestowed on Iraq the immense work performed by him in revenue and land reform. It is generally admitted that Sir Henry comprehended every aspect of the administration of Iraq, but in none did his genius shine more convincingly and lucidly than in the sphere of revenue and land problems. To this particular question he brought to bear a long experience gained in countries farther east than Iraq. Perhaps better than any single Iraqi, in fact, he understood revenue and tribal problems, and in this respect at any rate he is irreplaceable.

The story of the successful attempt, subsequent to the departure of Sir Percy Cox from the High Commissionership, on the part of Iraq to assert her claims to the frontier in the Kurdish hills is well known, but it is not always adequately recognised that the time which unfortunately had to be devoted to this particular problem inevitably affected Iraq's economic progress. Once Turko-Iraqi relations had been settled, however, attention could be given more freely to administrative and economic details. To mention but one example of the way in which Sir Henry Dobbs constantly fostered what he rightly considered to be the backbone of Iraq, namely, agriculture: he instigated and assisted special legislation for the encouragement of the use of pumps for irrigation. No acute observer of present-day Iraq can fail to realise, when he sees the thousands of formerly barren acres now under cultivation, what a debt the country owes to the far-seeing and patient administrator who represented Great Britain in the land from 1923-1929. Such an impression, we are glad to note, must have sunk deeply into the imagination of so ardent and proved a friend of the Arabs as Mr. Charles Crane, who on his recent visit to Iraq advised the Nationalists who were fêting him to concentrate their energies on irrigation and agriculture. Sir Henry Dobbs pursued the unostentatious way in Iraq—economics are always less exciting than politics—and because his achievements were not of the resounding (yet sometimes hollow) kind, there may be a disposition in uninformed quarters to belittle the undeniable work which he did in settling surely the foundations of Iraq's future prosperity. We are convinced, however, and we are confident that History will record, that work has been accomplished during the last six years of permanent value; that real, as opposed to illusory progress, has been made; that, in brief, the future generations of Iraqis will rise up and bless the name of the great British administrator who so ably led them into correct and profitable channels. To predict of anything in the Middle East that it is lasting is not a mistake into which observers of Arabia in particular would easily fall; but in so far as permanence can be predicted of any achievement in the Middle East the description may unhesitatingly be applied to the laborious, exacting, but triumphantly performed task of Sir Henry Dobbs. If the impetus which he gave to the administration of Iraq is allowed free play, is permitted, that is, to run on uninterruptedly, Sir Gilbert Clayton, his successor, should have so much the easier duty in concentrating on the political problems still outstanding. That these will soon be solved and the Arab Kingdom allowed quietly to pursue its own course to prosperity, is the hope of every right-minded observer of the Middle East.

*The Near and Middle East

From Our Own Correspondents.

Cairo, March 2.

The London Legation.

There has been much comment in official circles in regard to the delay in filling the post of Minister in London left vacant by the retirement of Aziz Tzetz Pasha. Particularly has the desire to see the post occupied by a permanent incumbent grown keener as the date of the general elections has approached, for it has been widely felt that the period before as well as the period after the British public goes to the polls may well be fraught with momentum import for Egypt, and that it is imperative to have at this juncture someone in London, who, in maintaining touch with British political circles can speak with the authority of a permanent Minister Plenipotentiary. This has been realised by the Egyptian Government, but the peculiar position in Egypt, as well as the imminence of the King's second trip to Europe, has combined to make it impossible at present to make a definite appointment. In this connexion it must be remembered that there is no question of overlooking the signal services rendered by the present Chargé d'Affaires, Sidarouss Bey, who is being kept indefinitely from his Minister's post at Athens.

Dr. Hafez Bey Affi, Minister of Foreign Affairs, has for some time been the man marked out for the post, but he is also the right-hand man of the Prime Minister, who has been torn between the desire to have in London a thoroughly reliable representative and the need to leave behind him in Egypt, when he goes to Europe for his much needed rest and cure, a man in whose ability he can have full confidence. A compromise has, therefore, been made. Dr. Hafez Bey Affi will leave almost immediately on a tour of inspection of Egypt's European Legations, in the course of which he will visit London. He will remain there at least until after the elections, and he will accompany King Fuad, when he tours Europe this summer, in the course of which he will visit Czechoslovakia, Germany, Sweden. Mohamed Mahmoud Pasha will, it is understood, go to the Continent and London early in April, and will be back in Egypt before the King leaves.

Settlement of Financial Questions.

The sensation of the week has undoubtedly been the publication, by *Al Ahram*, of all the documents in connexion with the settlement of the financial questions outstanding since the War between Egypt and Great Britain, which was recently negotiated by Mr. Leith Ross on behalf of the British Government. It had been agreed that, until the Council of Ministers had had an opportunity of considering the terms of the settlement and, as was hoped, had formally approved of the deal, no information was to be given out, and particularly the documents embodying the settlement were to be kept secret and confidential until their ratification. All journalists, who asked the Ministry of Finance for confirmation of the various

details of the settlement, which they had managed to obtain, were begged in the public interest to hold their hands until an official announcement could be made.

How, in the circumstances, *Al Ahram* managed to secure the document is at present a mystery. The leakage of secret documents is such a grave matter that the Prime Minister has ordered an official inquiry to be opened. The settlement would appear to be a very fair deal on either side. The negotiations were entered upon with good will and a desire to reach a settlement by all possible means by both the British and the Egyptian delegates, and to have been able to reach a settlement, no matter what the details, must be a source of satisfaction to both the British and Egyptian Governments, since it removes at one stroke of the pen other questions outstanding between the two countries which, although relatively small compared with the main questions, certainly added by their peculiar character to the possible sources of pinpricks.

The Bar.

The extraordinary judgment delivered by the Bar Council of Discipline in the case of the charges of breach of etiquette and actions incompatible with the dignity of the Bar brought against Nahas Pasha, Wissa Wassef Effendi and Gaafar Fakhry Bey, has been followed quickly by legislation laying down what agreements in regard to fees lawyers may not enter into with their clients, transferring disciplinary jurisdiction in the matter of members of the Bar from the Bar Council of Discipline to the Native Court of Appeal sitting as Court of Cassation, and extending the provisions of the Penal Code governing the corruption of officials to members of all the representative bodies.

This new legislation has met with the approval of all responsible Egyptians. The judgment of the Bar Council of Discipline is regarded as more a defence than a judgment, and there is good reason to believe that it was actuated by a desire to revenge themselves on the Government for having put the age-limit of Judges back to where it was ten years ago. In any case, the Government was fully justified in legislating so as to make clear that there would henceforward be no doubt in regard to the category of covenants *re fees*, which Bar traditions in other countries condemn, and in placing the Native Bar in the matter of disciplinary control on the same footing as the Mixed Bar, which in such matters is amenable to the Mixed Court of Appeal.

As regards the legislation *re corruption*, it was high time that something was done to make impossible, or rather to make punishable by law of the land, the scandalous trafficking in influence in which deputies and senators, provincial counsellors and even members of the Government indulged under the Parliamentary régime.

The Late Gordon Ingram Bey.

The community, both Egyptian and non-Egyptian, has suffered a severe loss in the death of Miralai Gordon Ingram Bey, Commandant of Alexandria City Police, which occurred this week as the result of broncho-

"You say that we cannot accomplish the impossible; but all history is the impossible, the absurd, the unforeseen, forged into reality by the brain and the muscles of man."

BENITO MUSSOLINI.

THE English Artificial Cotton Production and Marketing Corporation, Limited, have pleasure in announcing that the demand both at home and abroad for their new product—"Artificial Cotton"—has exceeded the output for 1929 many times over. In order to cope with this the Corporation is immediately putting large additional tracts of land, in this country and abroad, under cultivation.

Despite a continuous increase in the staff of the Corporation, it is even now unable to keep pace with the immense mass of correspondence from all parts of the world which has accumulated during the past two months. The Corporation have, therefore, to request the indulgence of correspondents whose requirements have not yet been fulfilled and offer its assurance that it will spare no pains to give satisfaction.

All inquiries will be dealt with strictly in rotation, and in order to enable the Corporation to cater adequately for the future requirements of the English trade (Merchants and Brokers ignored) it is requested that applications should be made for quota forms, which can be obtained from the Executive Offices of the Corporation at Windsor House, Victoria Street, London, S.W.1.

pneumonia supervening on typhoid. His funeral, which took place yesterday, was in every way befitting the peculiar position to which he had attained and the high distinctions which he possessed. The coffin, laid on a gun-carriage covered by the Egyptian flag, was drawn by members of the Police force from his house, near the main station, through the streets of Alexandria to St. Catherine's Church whence, after a short service, it was conveyed to the military cemetery at Hadra. King Fuad was represented by the Governor of Alexandria. Mr. Hore, Counsellor at the Residency, represented Lord Lloyd, and the Under-Secretary of State for the Interior the Prime Minister. There were delegations from the British Army, the Egyptian Army, and the Coast Guards, and the Commandants of Cairo and Port Said also attended. The number of those who followed in the procession and of the crowd which thronged the pavement all along the route was an eloquent testimony to the high esteem in which Ingram Bey was held by all communities and all classes.

Ingram Bey had, indeed, had a most gallant and distinguished career. He served through the South African War in which he engaged as a private and gained five clasps to his medals. In 1903 he joined the Egyptian Police force as a constable and, during the subsequent twenty-five years, he worked his way up like his Egyptian colleagues through every rank, until in 1921 he became Assistant-Commandant in Alexandria and in 1925 he attained the position which he held at his death. The rank and file of the Police Force in Alexandria had a tremendous affection for him, and his tenure of office in Egypt's second capital was marked by many improvements in the Police Administration.

But it is not so much as a Police Officer that his loss will be felt. It is in the realm of criminal investigation that his death creates a void which it would appear to be impossible to fill. Ingram Bey as a result of his career in the Egyptian Police Force had gained a remarkable insight into the Oriental mind. He knew the country and the people as few Egyptians knew them. With this he combined extraordinary intuition, a gift for the languages of this part of the world, a resourcefulness and a courage which made him an ideal secret service man. At following up clues, at even finding clues and at getting at the bottom of things criminal he was without equal, and on many occasions his persuasive personality has broken through the barriers of sullen silence of a recalcitrant criminal or witness and, without the use of any brute force, has wrung from him his innermost secrets, which up to then had been a closed book to all other investigators.

When the inner history of the running to earth of the gang which had been responsible for the political murders culminating in the assassination of the Sirdar comes to be written, it will be found that to Ingram Bey alone was due the revelation of the organisation which had been responsible for it and the piecing together of the evidence which brought the assassins to the gallows. In Ingram Bey the Government loses a loyal and trusted servant, the Public Security organisation an assistant whose knowledge and experience constituted its great strength, the community in general a man in whom it had the utmost confidence, and last but not least, journalists a sympathetic and ever-ready helper.

CYPRUS.

Nicosia, February 27.

Sir Ronald Storrs.

The receipt of information that Sir Ronald Storrs will remain in South Africa for at least two months has given rise to various rumours. His Private Secretary, Mr. Gunnis, who has remained in the island awaiting his return, is leaving for England. It is understood that the Colonial Secretary, Mr. Nicholson, who is now Acting Governor, will retire in April, unless requested to remain awhile.

The Question of a Loan.

It is believed that although Sir Ronald Storrs was unable to obtain sanction for a loan by the Cyprus Government of £500,000 for island development, one of £200,000 may be approved. Rumour has it that, in that case, the money will be mainly devoted to the application of asphalt to roads. Adverse comments are made on this assumption. It is held that such expenditure would benefit only a section of the people, and would involve heavy future cost of maintenance, whereas the real needs of Cyprus manifestly relate to a settlement of the question of increased water supplies, to the founding of an Agricultural Bank with wide powers, and to help in various branches of agriculture.

Cyprus and Mr. Lloyd George.

At a meeting convened by the Greek Archbishop, it was decided that two members of the Legislative Council should proceed to Egypt to invite Mr. Lloyd George to visit Cyprus, and to inquire into island conditions and Greek claims. The members chosen were the Bishop of Kition and Mr. M. H. Michailides, who left for Egypt on February 15. As it was understood that Mr. Lloyd George would remain only four days in Egypt, it was arranged that, should a meeting with the statesman not be possible, a memorial should be submitted to him presenting the Greek aspirations. As Mr. Lloyd did not visit Egypt, the project has fallen through.

The Swedish Archaeological Mission.

The Crown Prince of Sweden, himself a keen archaeologist, has by telegram placed a sum of £3,500 towards the continuation of excavations, which will enable the mission to resume its hitherto very successful operations.

ROUMANIA.

Bucharest, February 26.

Legislation in Parliament.

Parliament has been extremely active during the past fortnight, and many laws have been voted, while others have been drawn up and laid before the Chamber. The Bill for the ratification of the Litvinoff Protocol to the Kellogg Pact, signed at Moscow in concert with Poland and the Baltic States, which was submitted to the Chamber by M. Mironescu, Minister for Foreign Affairs, was passed unanimously. So was also (but for a few unimportant amendments) the law governing workmen's contracts, which safeguards both the interests of employers and the liberty and welfare of employees. This law, in the opinion of M. Raducanu, Minister of Labour, marks an important step forward in the domain of political economy. Another law of even greater significance, that of "Commercialisation," also received the approval of the Chambers. It marks the beginning of a policy of development of the wealth and productive forces of this rich country, by removing the artificial barriers hitherto raised against foreign capital and by opening the door to private enterprise. The Minister of Industry and Commerce, M. Madgearu, supported this Bill in a masterly speech, to which M. Duca made a brilliant reply—it was a fine oratorical duel. The Bill was passed, however, by a large majority.

The Control of Foreigners.

The question of the control of foreigners in this country was made the subject of a careful and detailed examination by a committee appointed for the purpose. The Committee has submitted to the Council of Minister a report, which suggests the suppression of passports and proposes a scheme for the treatment of foreign subjects and workmen, whether long established in Roumania or temporary residents in search of work. To those of the first category (it is suggested) "permits to reside" will be issued by the regional commissions for an indefinite period, while to new-comers of the second category the permits issued will be valid only for the period of their engagement—with option of prolonging this period—and they will have to be *visé* every three months.

"Unrest" in Bessarabia.

Foreign newspapers have echoed certain mischievous reports of so-called "unrest" in Bessarabia. These reports are entirely without foundation, for a very general calm reigns in the province. It may be true, undoubtedly, that some malcontents exist, but their influence is only local, though agitators try to lend a wider importance to the conflicts which occasionally arise. If indeed any real feeling of discontent exists, its cause must be sought in the peculiar circumstances of this province. Many years of foreign domination, then ten years of war followed by ten years of martial law and strict censorship have prevented Bessarabia from breathing freely, and it is only now that she is beginning to be able to express her grievances and troubles. This she does, perhaps, with too much insistence and with useless violence, when a little patience might serve her interest better; but there can be no question of revolt. It should not be forgotten either that a succession of years of drought have added terribly to her sufferings and brought famine to some of her departments. The peasants, who have sold their cattle and their agricultural implements to buy maize for food, now see themselves faced with the impossibility of working their land next spring. The Government is taking all possible measures to provide the suffering districts with what they need, and for several weeks the Minister for Bessarabia, M. Pan Halippa, has been on tour in the province, supervising the distribution of food and money to relieve the victims of the famine. The same is being done in the other provinces which have suffered from the drought. What Bessarabia needs are the means to till her rich lands and an economic outlet for her products, and the Government is now earnestly trying by a series of laws and by the adoption of a new policy to improve the economic situation.

This is the only "Bessarabian question," and there is no doubt that with good will on both sides a solution will soon be found. It must be hoped that after the period of the seven thin kine, that of the seven fat kine will ensue for Bessarabia, and it is of good augury that the district where the harvest has been least damaged by the intense cold of the past weeks has been that of the northern provinces of Roumania, including northern Bessarabia.

LIGHT ON THE BOOK OF JOB.

A most ingenious suggestion is contained in an article on "The Musandam Peninsula and its People the Shihuh," contributed by Mr. Bertram Thomas to the last issue of the *Journal* of the Central Asian Society. Mr. Thomas suggests, and brings considerable evidence in support of his thesis, that the strange people inhabiting Musandam (the northernmost part of the Oman Sultanate), called the Shihuh are the Shuhites of the Book of Job. Other folk mentioned in that Book are equated with folk now inhabiting northern Oman. But quite apart from the theory thus put forward, Mr. Thomas's paper is an important contribution to the rather scanty existing knowledge of a comparatively unknown corner of Arabia. It contains, in particular, much anthropological material of a fresh nature.

This issue of the *Journal*, which contains a Foreword by Sir Maurice de Bunsen on the late Lord Carnock, is an exceptionally full and interesting one. It is especially strong in its section devoted to reviews of books.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 21.

Chamber of Princes.

The Princes have spoken with no uncertain voice on the present political situation, and it would be interesting to know what such as Pandit Motilal and Mr. Gandhi, his guest in Delhi at the moment, said when they laid down their newspapers. The Maharaja of Patiala moved:—

"While adhering to their policy of non-intervention in the affairs of British India and repeating their assurances of sympathy with its continued political progress, the Princes and Chiefs composing this Chamber, in view of the recent pronouncements of a section of British Indian politicians indicative of a drift towards complete independence, desire to place on record that, in the light of mutual obligations arising from their treaties and engagements with the British Crown, they cannot assent to any proposals having for their object the adjustment of equitable relations between the Indian States and British India unless such proposals proceed upon the initial basis of the British connexion."

The Maharaja of Bikaner.

The Maharaja's words about it all have been such as these:—"It will be clear that, apart from our feelings of personal loyalty and attachment to the King-Emperor, we are intimately bound to the British Crown through our treaties and engagements, which in themselves render it impossible for the Princes even to countenance, much less to lend their support to, any such fantastic and impossible proposals which aim at complete independence and the severance of the British connexion."

Again the Maharaja said:—"Except those who are not open to reason, every fair-minded person in British India will now be in a position to understand that we stand for evolution and not for revolution, and that we stand and stand unflinchingly, steadfastly, irrevocably, and regardless of all sacrifices for the maintenance of the British connexion. . . ."

The Princes who so speak, and the Chamber of Princes was unanimously with the two Maharajas from whose speeches I have quoted, cannot but be of opinion that, before any radical change was made in the Constitution of British India, an exhaustive inquiry into the working of the present Constitution was what all reasonable men should desire; further that if the Prime Minister of Great Britain and his Cabinet thought it desirable that the inquiry should be made by members of the British Parliament as the chief reporters, that was a point to concede. In other words, one must assume that the Princes and Chiefs of India have no great grudge on the score of the Statutory Commission, that Commission that the *Pioneer* is so positive that the educated among the Indians will not tolerate. Whether the *Pioneer* ranks the Princes and Chiefs among the educated may be for it to say. I certainly rank them myself. They were educated as the pandits were—in school and college—and they have had the further education of administering their States.

Butler Committee's Report.

Among the other matters discussed by the Chamber of Princes was the States' right to discuss the Butler Committee's Report before any action was taken. The Maharaja of Patiala said:—"We must in all fairness inform your Excellency that the round table conference for which we had so earnestly hoped did not materialise. In that case we could have laid all our cards on the table and have exchanged views without reservation, and would have laboured together in harmony and with candour to find a solution of the problems which confront us; but whatever form the report of the Committee may ultimately assume, we are clear in our minds and happy to hear from your Excellency that we in this Chamber should not merely have an opportunity of expressing our opinions upon the document itself, but should have adequate occasion of examining any proposals for action that Government may decide to take."

Logic in the Assembly.

I have written "logic," but "childishness" would be the better word. In the debate on a motion for a further inquiry into the incidents at Lahore, on the day of the arrival of the Statutory Commission, when the late Lala Lajpat Rai was struck in a scuffle, charges of murder were freely made ("The country believes that Lala Lajpat Rai has been murdered," said one speaker). "Dwarka Prasad Misra," according to the *Pioneer's* report, "moved a resolution . . . opining that the Boyd Inquiry was unreal and instituted to whitewash the crimes committed by the police," and so on. Nevertheless when the Home Member says that "This mis-statement of fact only showed how even honest impressions of tumultuous and disorderly action were likely to be quite erroneous," and, "It is clear to me that it is the duty of the Government, when they are satisfied that the police have discharged their difficult and dangerous duties and have not exceeded the limits imposed on them, to prevent any victimisation on political grounds," it provoked the leader of the Opposition into describing the speech as "amazing," and as "introducing a measure of bitterness into the debate." It will provoke another to say, "What about the Viceroy's appeal for mutual trust and forbearance?" Just so; if a Government spokesman tells the politicians that he thinks they have made a mistake, they say he forgets the call for trust; but they may talk of murder, and the trust may be unbroken. Children, all of them.

Mr. Patel's Tea Party.

The President of the Assembly, Mr. Patel, with Mr. Gandhi as his guest in the house, has given a tea party, with the Viceroy as the chief guest from outside. The distinguished statesmen would presumably talk a little politics, and something may come of it. The meeting is variously reported as viewed by the official world as only an "amiable courtesy," and therefore "meaningless," and the Nationalists, they say, cannot believe that the Viceroy "will be able to release himself, even temporarily, from the leading strings of Delhi and Whitehall." My own view is that the Viceroy is in no such leading-strings, but that he happens to share the views of Whitehall and

The Railway Budget.

The railway budget for next year, which opens, of course, with the estimated figures for this year, makes very satisfactory reading. Those should read it who have fallen into the way of thinking that nothing good can come out of Indian officialdom. There are to be reductions in rates, particularly on coal carried long distances, which should benefit Indian industry. It is expected that next year the eighty odd miles of the Raipur-Parvatipur line, connecting the Central Provinces with the new port of Vizagapatam, will be opened, and that the very important new project of the Dacca-Aricha line will be begun. The Railway Board and the staffs of the railways up and down India are heartily to be congratulated on the results of their labours.

THE INDIAN PEASANT IN HISTORY.*

By W. H. MORELAND, C.S.I., C.I.E.

What I have to say this afternoon arises directly out of the report of the Royal Commission on Indian agriculture; but I do not intend to summarise that rather formidable document, still less to criticise it in detail.

As for a summary, the report presents more than 600 important conclusions; and any attempt to compress them into half an hour or so would necessarily be unfruitful. As for detailed criticism, my view is that at the present juncture it is likely to do more harm than good. The outstanding feature of the report is its insistence on the need for a co-ordinated policy of rural reconstruction, a mass attack on the causes of poverty, waste, and inefficiency. All the specific conclusions, important as they are, are by comparison matters of detail; and those who accept, as I unreservedly accept, this fundamental recommendation, will do more good by uniting to press for early and effective action, than by insisting on their individual views on this topic or on that.

The criticisms that have been appearing in India during the last few months show what I mean. You find, as a rule, a sentence, or even an entire paragraph, testifying to the excellence of the Report as a whole; and the rest of the article consists of vigorous destructive criticism of some particular set of recommendations. An excellent report, says one critic, but it's all wrong about the cattle. An admirable report, says another, but it's all wrong about the colleges. Others attack the proposed scheme of finance, or the organisation for research, or any one of a dozen different topics, each of them important, but all of them subordinate to the main issue; and in point of fact we have a revival of the time-honoured Asiatic practice of stoning an offender to death. Two or three stones may not hurt very much, but in the end the victim succumbs to the multitude of missiles. I confess that, like other critics, I have a few stones read to my hand, but I have not come here to display my marksmanship in public. It is much better, I suggest, to leave the necessary detailed criticism to the keen brains of the administrators who have to translate the new policy into fact; the best service we others can do is to concentrate attention on the need for prompt and effective action, instead of providing excuses for the people who want to do nothing, or the more dangerous enemies who want to do nothing but talk.

The question to which I wish to invite your attention to-day is one with which the Commission was not required to deal. Why was this Commission wanted at all? How has this urgent need for rural reconstruction arisen? Why

is it necessary to mobilise all the forces of India in order to get the peasants to do what you and I would only be too glad to do if we had the chance—make a little more money; and live rather better than we do at present? That is not a normal state of affairs. You will not find it, for instance, in other parts of the Empire; and I well remember how the difference struck me when I paid a visit to Australia about thirty years ago. In India I had left the departments trying, not very successfully, to hustle the agriculturists; in Australia I found the agriculturists hustling the departments, and with a substantial measure of success. What are the causes of this difference in attitude?

An inquiry of this kind is worth making. At the beginning of a long and arduous campaign, such as the Commission urges, it is well to learn all you can about the enemy—not merely the positions he occupies at the moment, but how he has reached those positions, how they are connected with his base, and what hidden reserves, or hidden weaknesses, lie behind. It may fairly be said that most of the mistakes we made in India a hundred years or so ago are due to our ignorance of what had gone before; and now at the outset of this new enterprise, it is well to try to eliminate that particular cause of inefficiency.

If you look through the literature of the last century you will find that various theories, or guesses, have been put forward to account for the distinctive mental attitude of Indian peasants in the mass. The oldest, and simplest, of these theories is that the peasant was made that way; but the world has passed the stage where such theories of special creation had to be taken seriously, and it is enough to point out that this view is contradicted by the facts. Indian peasants, as I have known them, are neither placid nor contented. They grumble at least as much as we do, and, like the rest of us, they have their ideals of a better life; but they have also what it is the fashion just now to call an inhibition, which prevents those ideals from being translated effectively into action, and the question is how this inhibition has come into existence.

A common theory is that it is all the fault of the climate. The answer to that theory is that the climates of India are of all sorts. Every authority, from the *Imperial Gazetteer* down to the latest sixpenny handbook, insists on the diversity; and for my part I find it hard to understand how all these different climates can have produced a uniform effect. Let us remember, too, that our predecessors were accustomed to explain differences inside India by these same differences of climate. When, for instance, Akbar's historiographer royal wanted to explain why there was so much more sedition in Bengal than in Agra, he found a simple and convincing explanation in the peculiarities of the Bengal climate, which notoriously bred sedition. I do not say he was right, as to either the fact or its explanation; but I think his reasoning was rather less unscientific than the theory that a uniform result can be attributed to such a heterogeneous entity as the Indian climate. We may agree that over large portions of India the natural conditions are unfavourable to continuous effort. That fact undoubtedly increases the difficulty of rural reconstruction, but it cannot by itself explain why reconstruction is required.

Another theory is that the peculiarities of the peasant's mentality are entirely the result of his diet. Of course, Buckle is out of fashion nowadays; but some recent scientific work in India suggests that there may possibly be something in this view. In some parts of the country, particularly the rice-eating tracts, it is quite possible for a man to eat too much and yet starve; he may get more calories of energy than he needs, and yet get too little protein to maintain his body in reasonable vigour. That kind of deficiency would go some way towards explaining the phenomena we are considering; but it would not help us in the North, where the ordinary diet of cereals and pulses is well-balanced, and will keep a man in vigorous health, if only he gets enough of it. If peasants in the North are underfed, as some of them are, it is part of the

* Paper read before the Indian Section of the Royal Society of Arts on March 8. Sir Edward D. Maclagan, K.C.S.I., K.C.I.E., presided.

problem of poverty, not its primary cause; they eat as much as they can get, and what is wanted is to convince them that they can get more, if they set to work in the right way.

It seems to me, then, that these physical and physiological theories do not carry us far. As against them, I suggest that the main cause of the distinctive mentality of Indian peasants is to be found in the human environment, in the régime to which they have been subjected during the historical period. A survey of that régime shows that it was precisely of the kind which an expert psychologist might prescribe in order to produce the mentality which now exists. It enforced and stereotyped a very low standard of living; it penalised all enterprise; it denied all reward to the peasants; and it offered rewards of almost unbounded magnitude to the men who could exploit the peasants with success. Let us see how this régime operated through the centuries.

We first meet the Indian peasant in the Dharma, the sacred Law of Hinduism. His position there was simple. We read little or nothing about rights; but we find that the peasant's duty was twofold—to cultivate the land, and to pay a share of the produce to the King. That fact is important. Right into the nineteenth century the idea persisted that cultivation was a duty to God and to the State, not a right to which the peasant was entitled; and probably the old idea still lingers in some of the backward parts of the country.

We have no records to tell us how this Sacred Law worked in practice; but obviously the essential question was the amount of the share claimed by the King as his revenue. If it amounted to a rackrent, leaving the peasant nothing to hope for, we have substantially the régime I have described; if it left the peasant a reasonable reward for effort, the conditions necessary for progress may have existed in the Hindu period. I do not know which alternative is true for this period as a whole, but there are signs that the King's share tended to increase as time went on, and that it came, at any rate, very near the danger point.

In the earliest text the share which might be claimed by the King varies from a sixth to a tenth or a twelfth. This is quite a reasonable proportion, though higher than is now considered proper. Presently, however, we find the smaller figures disappear, and the former maximum becomes the standard. Then we read of "what is called a sixth"; and a commentator explains, in language which almost recalls the methods of Somerset House, that the phrase "a sixth" includes a third. We may take it then that Hindu kings eventually claimed about a third of the peasant's produce; and we know that until quite recently the claim in Hindu Rajputana ranged from a third to a half.

It is impossible to speak with precision as to what constituted a rackrent in those early days, but it is safe to say that a third was dangerously near, and that a half left the peasant practically nothing but a bare subsistence. It is quite possible, then, that rackrenting prevailed in Hindu times, extensively if not universally, but there is too little evidence to justify a conclusion; all that can be said is that it is dangerous to take the figures given by text-writers such as Manu as an accurate presentation of the practice of the later period.

We are on firmer ground when we come to the twelfth and thirteenth centuries when the period of Muslim rule began. The religious law of the Muslim conquerors recognised, if it did not formally prescribe, a régime of rackrenting. Under that law the conqueror had a perfectly free hand, and it was open to him to dispossess unbelievers, and distribute their land among his Muslim followers; but if he left the unbelievers in possession, as was done in India, the idea was that the profits of agriculture should ensure to Muslims and not to Hindus. The conqueror claimed a share of the produce, just as Hindu kings claimed a share, but there was no arithmetical limitation, such as is found in Hindu law, and may have been effective in Hindu practice. The only limit recognised by

Muslim jurists was the task of driving the people of the land; and in practice that means rackrenting. So long as the peasants did not rebel or abscond, it was lawful to take all they could be made to pay.

This legal theory is by no means unimportant. It is true that in India many Muslim rulers ignored Islamic law in their administration; but any Muslim who wanted to rackrent could do so with a clear conscience, a thing which counts in practice. Further, there was no possibility of religious opposition to rackrenting, such as occurred in some parts of Europe. In India the religion of the rulers was on the rackrenter's side. Practice, however, is more important than theory, and the practical question is, how Indian peasants in fact fared under Muslim rule.

(To be continued.)

PRIMARY EDUCATION IN BENGAL.

(From a Correspondent.)

The Bengal Rural Primary Education Bill, to which reference was made in THE NEAR EAST AND INDIA about a year ago, is again before the Bengal Legislative Council. It must be more than two and a half years now since the scheme which is embodied in the Bill was originally framed. But delay is inevitable in all legislative matters in Bengal by reason of the great difficulties in connexion with the working of the reformed system of Government. Education is a "transferred" subject, that is to say, it is in the charge of a Minister. But in Bengal it has been so difficult to get a stable Ministry, or to get any Ministry at all for long periods, that all "transferred" subjects have inevitably suffered. At the moment, however, there would seem to be, at any rate, a possibility of the Bill becoming law within a reasonable time. Its object is the extension of primary education in the rural districts of the Province. The municipalities are excluded from its scope as they come within the provisions of the Bengal Primary Education Act of 1919. It is proposed to attain the object in view, first, by the establishment in each district of a central authority to control primary education; secondly, by making provision for raising the money required; and, thirdly, by providing for compulsory attendance at the schools.

According to the 1921 Census there are in the rural areas of the province about 3,255,000 boys aged between six and eleven, and there are also 3,218,000 girls. Assuming the same rate of increase as prevailed between 1911 and 1921 the total number of boys and girls in 1931 will be about 3,375,000 and 3,300,000 respectively. There are at present 38,187 primary schools for boys, and 14,605 for girls, with 15,671 trained teachers for boys and 481 trained women teachers. The total yearly expenditure on primary education in the province is about Rs.60 lakhs, derived from Government funds, District Board funds, fees, and other sources. It is estimated that when the Bill becomes law the total income available will be about Rs.143 lakhs yearly. This amount will be made up of (1) Rs.110 lakhs to be derived from the cess to be levied under the Bill; (2) Rs.24 lakhs now spent from provincial revenues on primary education; and (3) Rs.9 lakhs now spent by the District Boards. If accommodation were to be provided for all the boys and girls between six and eleven 40,250 schools, and 90,000 teachers would be necessary. On this basis the total recurring annual cost would be about Rs.240 lakhs yearly; and the capital expenditure required would be about Rs.144½ lakhs. It does not appear to be possible for the Government to provide for capital expenditure on this scale. Nor can they make up the excess—Rs.97 lakhs—recurring expenditure.

Such being the position it is clear that compulsory education for all boys and girls between six and eleven in the rural areas is unattainable at present. It has been accordingly suggested that compulsion should be made applicable to all boys within seven years from the date of the passing of the Bill. For girls a scheme of voluntary

education would be established; and it is proposed to provide for about one million girls. The number of boys to be provided for is estimated at about one-fifth less than the figure quoted in the last paragraph. This reduction is made to allow for those boys who are reading in secondary schools, and for exempted boys, and so on; and it reduces the total to 2,700,000.

If the scheme is eventually established on the foregoing basis it will mean that primary education will be provided for about 3,700,000 children. It is not proposed to increase the number of schools. On the contrary the number will be reduced to about 35,000. There will be about 5,500 union school boards in the province; and it is estimated that there will be one school for every two square miles. This will enable every boy or girl of the 3,700,000 to find a school within a mile of his or her home. The total recurring cost is estimated at Rs.122½ lakhs. Of the 61,500 teachers who are to be employed under the scheme it is proposed to train 30,750. At present the trained teachers number 16,000. To train the remaining 14,750 within the period, and to provide for the annual wastage it will be necessary to train 3,000 teachers yearly. It is hoped that the training of the required number of teachers and the conversion or replacement of schools will be completed within seven years when all the boys between six and eleven will be brought under compulsion. Girls will continue under the voluntary system, but their education will be free.

Education is a controversial subject in India as it is in other countries; and it would be indeed astonishing if such a scheme as that which is outlined above should be adopted without an enormous volume of criticism. In point of fact this has already begun, as the Bill has been referred by the provincial Legislative Council to one of the largest Select Committees on record. This fact alone suggests pretty clearly that there is likely to be a good deal of trouble. It may be assumed that criticism will centre around the financial proposals. Nobody likes to be taxed, and in Bengal any suggestion of additional taxation is always extremely unpopular. But the Government of Bengal are certainly not in a position to find a large sum such as Rs.143 lakhs yearly without having to resort to new taxation. And if Bengal wants primary education—and the need has been greatly stressed of recent years—it ought not to object to being asked to find the money. The province is admittedly backward in the matter as compared with some of the other Indian provinces and it is to be hoped that the present chance of making up the deficiency will not be allowed to slip.

THE FUTURE OF INDIA.*

It is stated in the opening sentence of Mr. R. J. Minney's book, "Shiva, or the Future of India," that "within the next hundred years India can be the greatest and most prosperous country in the world." In a subsequent paragraph we are told that "India is exceedingly poor. She is in fact one of the poorest countries in the world." A century is not a very long time within which to convert one of the poorest of the world's countries into the greatest and the most prosperous. Who is going to undertake this transformation?

According to Mr. Minney it will certainly not be undertaken by the Indians on their own initiative. "One thing," he says "is certain. Left to himself the Indian can accomplish nothing. The three hundred million peoples have neither the wish nor the will to attain predominance or prosperity." Caste, religion, and sex are the formidable barriers "in the obstacle race of Indian prosperity." Our author has no patience with those who argue that India can work out her own destiny. "She can't. That's sheer bunkum." And again, "The Indian

is not only not able to, but with notable exceptions, has no wish to, reform himself."

It follows that precious little will be done by the Indians to make their country, within record time, the greatest and the most prosperous in the world. It is Britain we are told "who can secure this future for India." But Mr. Minney's opinion of British rule is about as low as his opinion of the Indians. Great Britain has made apparently but little progress up to date. For India, "despite a long and close contact with Britain who has been responsible in an increasing degree for three hundred years for the government of the Indian peoples, shows no noticeable sign of westernisation." And we are assured that "the present form of government in India is the greatest humbug known to history." Now if during the past three hundred years Great Britain has made no impression upon India, and if to-day her Indian administration is the greatest humbug known to history, what possible chance can she have of making the India of a hundred years hence the greatest and most prosperous country in the world? And even assuming that she succeeds in this enterprise what is to be the result? "The India of a hundred years hence that I foresee will be a self-governing India *not* within the British Empire." The italics are the author's.

We agree with Mr. Minney that without the guidance of Great Britain, or some other progressive power, India is unlikely to make any sensible advance towards national prosperity and greatness. But we do not agree that either the Indians or the British are so full of faults as he represents them to be. If they are then it may be confidently anticipated that a hundred years hence India, instead of being the greatest and the most prosperous of countries, will be infinitely weaker and poorer than she is to-day.

[In reply to Lieut.-Commander J. M. Kenworthy in the House of Commons on March 11, Earl Winterton stated that the Government of India had proscribed the book called "Shiva, or the Future of India" because it dealt with certain of its subjects in a manner certain to give great and justifiable offence to Indian public opinion without giving evidence of any attempt to study the subject seriously. In this latter respect, the Under-Secretary of State for India added, it differs entirely from "Mother India."]

THE NEW AUDITOR-GENERAL.

His Majesty having been pleased to approve the retirement of Sir M. F. Gauntlett, K.B.E., C.I.E., the Secretary of State in Council has appointed Mr. E. Burdon, C.S.I., C.I.E., Secretary to the Government of India in the Finance Department, as Auditor-General in India, with effect from November 17, 1929.

Sir M. F. Gauntlett has been granted six months' leave pending retirement, also with effect from November 17, 1929, and will vacate the office of Auditor-General on that day.

Mr. Ernest Burdon, after a long and successful term of office as Army Secretary, was appointed Secretary to the Government of India in the Finance Department in August, 1927. The greater part of his twenty-five years' service has been spent in the Finance Department. Promoted to Under-Secretary in 1914, after a short period in the Military Finance Branch, he was seconded to the Mesopotamian Expeditionary Force as Financial Adviser. At the conclusion of the War he returned to assume charge of the office of Financial Adviser to the Army Department and at the same time was appointed a member of the Indian Munitions Board. Created C.I.E. in 1921 he was invested with the C.S.I. upon vacating the Army Secretaryship and for services in connexion with the Indian Sandhurst Committee, of which he was, apart from the Chairman, the only official member.

Members of the Burma provincial committee associated with the Simon Commission are going to Delhi to discuss various matters, the most important of which is the proposed separation of Burma from India, a subject to which the Simon Commission devoted special attention while in Rangoon.

LORD LLOYD'S TOUR IN THE SUDAN.

BY MRS. MACLAGAN.

On January 29, the High Commissioner and his party arrived at Kosti, to continue his tour of the Southern Sudan. Kosti was full of welcome, the little station being festooned with red and blue in the gayest manner all the way to the reception tent, where the Shaikhs of the Province waited to salute Lord Lloyd. Quiet, grave men they were, some in blue robes embroidered with gold, some in snowy white, the Nazir and the Omdah in the old-fashioned scarlet. The short ceremony was soon over, words of good will were spoken on either side, swords put forward for allegiance, and then the High Commissioner and his party drove down to the River, past a serried crowd of white-clad horsemen, mounted on little weedy ponies or on camels, armed with the heavy broad-bladed spear and short throwing spears of the Dervishes, and chanting a strange song that seems to be only on three notes.

In the late afternoon, Mr. Porson, Governor of the White Nile Province, had organised a duck shoot on an island in the Nile, and Mrs. Porson brought the ladies over to join them at a picnic tea spread in a green glade. After two nights in the train the space and coolness were inexpressibly refreshing, and, as the sportsmen came in after a good shoot, the tea and the long chairs were very welcome. The sun sank slowly in a glory of red and saffron and purple, and as the feluccas drifted softly back across the water the ripples broke behind them like aquamarines drowned in wine.

S.s. Nasir was the boat furnished by the Sudan Government to convey the party, and Lord Lloyd gave a dinner party on board that evening to Mr. and Mrs. Porson and other guests, after which His Excellency with the Sudan Agent, Mr. R. E. More, and Mr. Winter left in the special train for his tour in the Nuba Mountains. At half past five o'clock the next morning s.s. Nasir conveyed Lady Lloyd and the rest of the party up the White Nile to Tonga.

It is of that part of the journey that I now write. The White Nile is a naturalist's Paradise, crocodiles bask in the mud flats, schools of hippopotami wallow and flounder in the river, while the bird life on the banks is marvellously rich and varied. River eagles, ibis, herons, darters, lively flashing red bee-birds, pied kingfishers, plovers, cranes, to name only a few varieties, swoop and dart and fulfil their avocations, while the weaver birds hang the trees with nests as industriously as if they had the housing problem of the world on their shoulders. The boat was halted morning and evening for Lady Lloyd and her party to take a short walk, generally through a belt of trees along the river, gradually merging into mimosa scrub, the deep red trunks and grey thorns forming a pleasant colour scheme, and so into open grass country all dry and blackened by the sun.

On the morning of January 31 we touched at Renk, a small place, but full of activity. Fishing boats were coming into the tiny lagoon, and on the farther bank busy parties were slitting the fish, washing them in the muddy

water and laying them out to dry; a little farther on was the dry dock where boats were repaired, and near the bank was reserved for the washing of clothes. Donkeys laden with tins were fetching water for the village (so advanced is the sanitation of Renk) from a quite different bit of bank from where all the afore-mentioned took place.

The afternoon of February 1 brought us to Kava, where they sell coloured mats, and the entire contents of the store appeared to be spread on the bank for our inspection. They did not offer any great variety from any other gaily coloured straw mat, but Lady Lloyd bought a few and walked through the village, which was commendably clear and tidy, though the people seem to have suffered the almost inevitable deterioration that follows in the wake of the tourist. A group of young Shilluk braves in full panoply of saffron garment slung over one shoulder, many strings of beads, wide ivory amulets and the strangely matted-out hair that is a feature of the tribe, were willing enough to pose for their photographs, but equally ready to hold out a beseeching—even a demanding—hand for piastres to follow, and their manners were completely different from the simple natural courtesy and friendliness of the villagers at Obang, a little village near Kodok where we were taken next day by Mr. Stewart, of the Agricultural Department. Here, far from expecting anything, the natives brought eggs and laid them in our hands with broad smiles, and many drawn out "Ahs"—a word that seems to play as important a part in the Shilluk vocabulary as in that of a West countryman at home.

Kodok is the Fashoda of history, and we were shown the site of General Marchand's encampment. Captain Cann, District Commissioner, was away, but his wife and Mrs. Wilde (who had come on a visit from Bor—a mere matter of 8 days' trek) called on Lady Lloyd, who went later to see Mrs. Cann's house and garden, the latter full of oleanders and English vegetables. There an attractive bird called a hammerhead was busily engaged on a large square nest with a flat roof. He took no notice of us, but continued to lay twigs on his roof and tread them in with an absorption worthy of a better fate. For, we were told, as soon as the nest was ready, a pair of fierce owls would probably swoop down and dispossess the owner, who would be obliged to start life over again.

Sunday, February 3, found us at Malakal, where Lady Lloyd went over the hospital, which efficiently cares for all the sick of the district, under its enthusiastic white doctor, with his Syrian assistant, and lunched with Mr. Willis, Governor of Upper Nile Province.

Monday, February 4, brought the party into touch with medicine again, for a dash up into Lake No, in the hope of seeing game, met only with disappointment, but we encountered Dr. Crouch in his hospital ship, Lady Baker, and were taken all over the cleverly converted barge, which has been marvellously arranged with airy wards, theatre and laboratory. Up and down the river Dr. Crouch ranges, collecting patients whenever need arises, fighting single-handed against disease and fever, known and trusted wherever his boat appears.

And so, steaming and halting, through sunny days and cold nights, we came to Tonga and tied up there on the afternoon of February 4. Here the High Commissioner

EGYPT invites you to break your journey, see Cairo, travel along the Nile and visit Luxor and Aswan for the antiquities. Or—from Cairo to Jerusalem and through Palestine. Everything arranged by the American Express—before you leave England.

rejoined the boat, and here were gathered hundreds of the Shilluk tribe to perform a great war dance in his honour. The village was humming and buzzing, groups gathered in front of each round, thatched hut, small brown boys darting hither and thither, the men, girt with a leopard skin, with feather in hair, many necklaces, and the inevitable spear, striding proudly by, and in one corner all the women, clothed in dark blue and uttering the shrill Sudan twitter as the High Commissioner's car dashed up. Under the awning erected for the guests, sat the King of the Silluk, who had come from his home at Fashoda for the occasion. He wears with his white robes, a blue and white fez, a blue belt and round his neck the medal sent him by King George. He is a good and wise sovereign and beloved of his people, but he was suffering that day from a very bad cold and would only respond rather wanly when Mr. Willis presented him. Then the dancers gather in one huge band, and march round and round the big open space, with the village on one side and the river in the distance, to a steady intoned chant. Round and round they pass, chanting incessantly, blowing like the Levites of old on long trumpets of Koodoo horn, some leaping from the ranks to perform strange antics, all armed with spears and long pointed shields. Round and round, till the rhythmic tread and the many flashing eyes and teeth produced an almost mesmeric effect. At a signal from Captain Cann, who was acting as ballet master, the procession breaks into groups, each of which takes the arena in turn, the others crouching, watchful and silent. The dance itself is an indescribable series of leaps and posturing, then the rush on the foe, the quick side-step to avoid the spear thrust, the drop on one knee behind the shield, the rattle of the spears, the chanting rising shriller and shriller. It is age-old, primeval, and cannot be rendered in the cold black and white of print. The last long rays of the sun were turning the dust tawny as it ended, and the assembly broke up, the High Commissioner returning through the twilight to his steamer and his progress, and the dancers slipping back into the villages, to sit by the fires and talk far into the night of the day's happenings and the feast on beef and "Merissa," or native beer.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

INTER-STATE RELATIONS IN THE BALKANS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your leading article of February 14, on "Inter-State Relations in the Balkans," certain strictures on M. Venizelos' attitude towards the proposed further postponement of the Bulgarian reparations must have greatly surprised not only your Greek readers, but also all others who have followed the financial situation in Greece and in Bulgaria respectively, since the War. Especially startling for such readers must have been your statement that "Greece will not abate by one tittle her claim on the Bulgarian pound of flesh, which she shares with the other victors in the Great War."

In every war it is unavoidable that some countries should suffer invasion by the armies of other countries. In the case in hand, it happens that it was Greece that was invaded, some of her richest provinces having been

made the theatre of warlike operations, and Bulgaria was the invader, while Bulgarian territory suffered no invasion whatsoever and consequently no damage, although Bulgaria was the vanquished. I mention these facts, not in order to claim for Greece a victor's rights, but merely to point out that there is no reason for according to Bulgaria a privileged treatment as compared with Greece.

Furthermore, whereas for Bulgaria the War ended in 1918, for Greece it was prolonged until 1923, and, though Greece belonged to the victorious camp, the War ended for her in disaster and in an influx of refugees nine or ten times greater than was the case with Bulgaria.

Nevertheless, in spite of the crushing burdens laid upon her by the Asia Minor disaster and the colossal refugee problem, Greece proceeded to settle her War indebtedness to her late allies, England, France and America. To confine myself only to the settlement with England (which was not the most onerous for Greece), I wish to recall to your mind the fact that Greece has agreed to pay £23,500,000 in 62 yearly instalments, for an original debt of £13,400,000—in other words, a total of 174 per cent. on the original indebtedness. Allow me to mention, in this connexion, that Italy has compounded her War debt to Great Britain of £570,000,000 for a sum of £276,000,000, payable also in 62 yearly instalments; in other words, Italy has engaged to pay only 48½ per cent of her original indebtedness to Great Britain. Comparing these two settlements, we see that Greece is paying a proportion of her War debt three and a half times greater than that payable by Italy. And this comparison should form an eloquent appeal to the traditional British sense of equity.

As regards the Bulgarian Reparations, the Greek share therein amounts to £2,794,000, payable in annual instalments spread out until the year 1983—provided, of course, that Bulgaria continues to pay regularly. If one bears in mind that only the damage inflicted by the Bulgarians upon private property in Greek Macedonia, as substantiated by court decisions (which damage has been recognised by international agreement as payable out of the Bulgarian Reparations), represents a capital of £15,168,000, or nearly six times the total Greek share of the Bulgarian reparations, one can see how inadequate was the share allotted to Greece.

And while Greece was paying all her obligations in full, her former Allies, by repudiating their financial agreements of 1918 and 1919 with Greece, forced her to find the money to meet her necessities under conditions infinitely more onerous. This repudiation alone of the said Allied agreements has resulted in an additional permanent annual charge of £500,000 in the Greek Budget.

Let us turn now to Bulgaria. By Article 139 of the Treaty of Neuilly she was practically made a present of her War Debt to Germany. Then in 1923 her Reparations obligations were reduced by the Allies from £90,000,000 to £22,000,000. And now, on the ground of last year's earthquake (similar to the earthquake in Greece about the same time), it is proposed that she should be granted a further postponement of her Reparation payments which looks very much like a dexterous preliminary to a practical cessation of such payments altogether.

Greece, being a small country like Bulgaria, cannot but be pleased at any financial assistance rendered to Bulgaria, and has every reason to wish for Bulgaria's complete economic recovery. Nevertheless, since the Greek Government must continue to meet the payments due to the national War debt and the amounts due by way of reparations to Greek citizens for their losses owing to the Bulgarian invasion, and in view of the fact that according to the most recent data, Greece's annual burden for War indebtedness is between five and six times larger than Bulgaria's, Greece cannot avoid a comparison of the attitude of her late Allies towards herself and towards Bulgaria. And Greece would seem perfectly justified in asking at least for equal treatment with Bulgaria. Thus far, however, Greece has merely asked to be excused from participating in the proposed new concessions towards Bulgaria. She will greet with pleasure any liberality to-

THE PERSIA SOCIETY.

wards the latter country, provided that she herself is not called upon for fresh financial sacrifices, which her people are in no position to bear. This attitude on the part of Greece you are, of course, free to represent as you like, even to the extent of saying that "Greece will not abate by one tittle her claim on the Bulgarian pound of flesh." But I cannot understand why you find it so easy to confuse Antonio with Shylock!

But the question of Bulgarian Reparations presents itself under another aspect, as well, which cannot fail to interest THE NEAR EAST AND INDIA, in its very laudable zeal for more cordial relations between the Balkan peoples. You are doubtless aware that, since M. Venizelos's return to power, a marked improvement is noticeable in Greco-Bulgarian relations. On both sides there is to-day a decided disposition to place these relations upon a thoroughly friendly footing. If a new Reparations moratorium were to be granted to Bulgaria, without safeguarding Greece's right to her share in the Reparations in question, this would necessarily force Greece to take measures of self-defence on behalf of her Budget and might seriously influence for the worse the relations between the two countries. This would create a deplorable set-back for the realisation of amity and cordiality between Greece and Bulgaria, for which M. Venizelos is striving so keenly and benefits of which would certainly not be confined to Greek interests alone.—I am, etc.,

Athens, February 23. DEMETRIUS KALOPOTHAKES.
Director of the Press Service, Greek Ministry of Foreign Affairs.

[There are many points in our correspondent's letter which admit of reply or explanation, as, for instance, the apparent discrepancy between Italy's War Debt and Greece's; but it is not profitable at this stage to enter into the old controversies. In the interest of the Balkan States themselves it was hoped that the division into vanquished and victors, enemy and Allies, had been relegated once and for all into the limbo of the past. If State A asks for a moratorium in the payment of its foreign debt, it can be granted or refused on the merits of the case; and it is open to State B. to ask equally for a moratorium on the whole or on part (even on as small a sum as £45,000, if need be) of its foreign debt, which again will be conceded or withheld on the merits of the case. What we deprecated—consistently with what our correspondent generously recognises as our zeal for more cordial relations between the Balkan peoples—was that, when State A has made its request *ad misericordiam*, State B should denounce it as a perfidious ex-enemy, accuse it of resorting to "a dexterous preliminary to a practical cessation of such payments altogether," and let slip the dogs of a Press-war that must inevitably act as a setback to the establishment of good relations. After all, diplomatists exist in the different Balkan capitals. A diplomatic communication to the effect that State B, having precariously balanced its Budget on the strength of a certain payment from State A, would not be able to forgo it, would have met the case. There was no need for an *ex cathedra* denunciation, which could not fail to be resented and to cause bad blood; nor was it to be regretted least, because it created a bad impression abroad and revived the misgivings that had been aroused when M. Venizelos proposed to reduce the interest on the Greek internal loan last autumn.—ED.]

Ninety cases containing treasures found in the tomb of Tutankhamen were dispatched from Luxor on March 9 to Cairo under a strong guard. They represent two years of restoration work by Mr. Howard Carter.

Among the troops which left Southampton on March 9 for Egypt in the City of Marseilles was the advance party of the Welsh Guards, consisting of Lieutenant R. M. V. Ponsonby and 12 other ranks. This will be the last voyage of the City of Marseilles this trooping season. She sailed with drafts and details from about 30 units bound for Egypt and India. Twenty-five other ranks of the Hampshire Regiment from Winchester sailed to join the 1st Battalion at Mooltan. The largest draft, one officer and 100 other ranks, also for India, came from the Essex Regiment at Colchester. The ship carried a total of 12 officers and 848 other ranks.

NEWS IN BRIEF.

Locusts have again become dangerous in Trans-Jordan, near Madeba and Jerash. Help has been sent from Palestine.

A landslide in Armenia has destroyed the small mountain village of Zangezur with a loss of thirteen lives.

Athens will shortly be connected with Belgrade by telephone, and thence with London, Paris, Berlin, Geneva, Bucharest, and Vienna.

King Fuad opened in Cairo on March 6 an exhibition of French industries in the presence of M. Bonnefous, French Minister of Industry and Commerce.

The first Rotary Club in the Balkans was opened on March 3 in Belgrade by the president of the Central European Rotary, M. Schultz, from Prague. There are at present 25 members.

Lord Lloyd, British High Commissioner, arrived in Cairo on March 5 from his tour in the Sudan, having returned from Port Sudan in H.M. Sloop Dahlia to Suez and thence by car to Cairo.

The Queen Dowager of Roumania and her daughter Princess Ileana have arranged to leave Bucharest to-day (Thursday) in order to visit her Majesty's sister the Infanta Alfonso of Orleans in Spain.

During the leave of Sir George Clerk, British Ambassador to Turkey, who has left Constantinople for England, Mr. Edmonds will act as Chargé d'Affaires.

Trotsky, his wife and son, have left the Soviet Consulate at Constantinople, where they had been detained since their arrival from Russia, and are now living in an hotel in Pera.

The Council of the League of Nations has approved in principle the proposal of the British Government to abolish the Anglo-Iraqi Judicial Agreement of 1924 and to institute a uniform system of justice.

The *Osservatore Romano* announces that the Pope has extended the jurisdiction of Mgr. Valero, Apostolic Delegate in Egypt, so as include Palestine, Trans-Jordan, and Cyprus. His jurisdiction had been extended lately over Abyssinia.

It is reported from Constantinople that a terrible accident occurred on the railway near Adabazar, in Anatolia, on March 9. A huge boulder became detached from its parent mountain side and hurtled down on a passing train, completely destroying the engine and capsizing several coaches. Four persons were killed and eleven seriously injured.

The death has taken place at Hyeres, where he was staying, of Admiral Edward Herbert Moubay (retired), at the age of 64 years. He served in Neptune during the Greek blockade of 1886, in Reindeer while engaged in the suppression of the slave trade of East Africa, and was commander of Pigeon, which was engaged in the suppression of gun-running in the Persian Gulf.

The Albanian Government has expelled the Greek Metropolitan (Archbishop) of Koritza owing to the Ecumenical Patriarch's protest against the creation of an independent Albanian Church. Considerable indignation has been expressed in Athens.

Sir Murdoch Macdonald, the consulting engineer, left Cairo on March 7 for Aswan, in connexion with the work of heightening the Dam there, and it is hoped that he will be able to call for tenders towards the end of May, so that it may be possible to start work at the beginning of the winter season in November. The heightening will take about three years to complete, and Egypt should have her increased supply of water for the summer of 1933.

A private meeting of the committee of the Empire Parliamentary Association, which is studying the affairs of the Colonies and the Mandated Territories, was held in the rooms of the Association, Westminster Hall, on March 6, when Sir Henry Dobbs (late High Commissioner and Commander-in-Chief, Iraq) delivered an address upon "Iraq and its Relations with the United Kingdom." Mr. H. Snell, M.P., presided, and after the address questions were put to Sir Henry Dobbs by the members present.

FRENCH SELF-TAUGHT, GRAMMAR WITH KEY

By J. LAFFITTE, B.A., Principal French Master, City of London School.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25.

London: E. MARLBOROUGH & CO., Ltd., 51 & 52, OLD BAILEY, E.C.4.

THE WEEK AT HOME

London, Tuesday Morning.

A Regency?

The fact that a Regency Bill is now being considered by the Government confirms the doubts widely entertained of a quick recovery by the King, and the tendency is now to read more into the doctors' announcement on March 3 than was read at the time. The King's recovery must be a slow process, and if he is not fit to undertake such a responsibility of State as the dissolution of Parliament, it appears certain that the Prince of Wales will become Regent.

The Budget.

It had been announced previously that the Conservatives were keeping the Budget up their sleeve as their trump card for the Election. Now, however, people are preparing for disappointment at the hands of Mr. Winston Churchill. There is, it is being said, to be no reduction in income-tax, and no reduction in the taxation of motor-cars and petrol—in fact, no change.

Whether there is to be additional taxation, only the Chancellor and his assistants know. But if these forecasts are even approximately correct (let us hope that they are not), the Conservatives' chances of obtaining a substantial majority have considerably decreased.

Already one can feel in the air a depression round Conservative quarters. They seem to feel that they have had bad luck, particularly in the matter of this last rise in the price of petrol. This point, however, has in my opinion been exaggerated by the popular Press, which seems to have come to the conclusion that anything outside "Dora" and petrol is beyond the intelligence of their readers. It is in consequence plugging hard these two themes.

The United Liberals.

For a famous phrase there will soon be substituted: "What did Mr. Lloyd George say in 1918?" The question has been raised by the publication, in Mr. Winston Churchill's book, "Aftermath," of the story of the absence of Mr. Asquith from the British Peace Delegation. Mr. Churchill says that Mr. Lloyd George left him out for fear of the anger of Lord Northcliffe. Mr. Lloyd George thereupon says that he did ask Mr. Asquith to join the Delegation, as Lord Chancellor. And Lady Oxford (Mrs. Asquith) asserts that although her husband offered his services, they were refused.

At once the bees which (it was said) were so busy altogether making honey in the Liberal hive, have started to buzz and to use their stings. Sides are taken in accordance with one's admiration for Mr. Asquith or Mr. Lloyd George. The only real sign of vitality in the Liberal Party is, in fact, in the proof that the Asquith-Lloyd George feud is still a living issue. In other words, Mr. Winston Churchill has probably done his present party some good by publishing his book before the General Election.

The Governance of London.

It is probably an arguable point whether the ordinary citizen is more interfered with by the national or the local authorities, but certainly he takes much less interest in his choice of local authorities. Statistics have just been published to show, for instance, how London is governed, and the general apathy therein demonstrated is instructive.

In 1928 at the County Council election only 35.6 per cent of the electorate voted; at the Borough elections, 32.3 per cent voted; and at the Guardians' election, only 18.4 per cent. voted. Yet those bodies were responsible for an annual expenditure of £27,000,000, £12,000,000, and £9,000,000 respectively. London is not unique in this: everywhere there is an appalling lack of interest in Poor Law administrations. Of course our Guardians are unpaid—that may have something to do with it; but then so is everybody in Local Government, except officials (and a few chairmen and mayors).

One was surprised to learn the number of authorities in London. There are in the administrative country 141 authorities with a membership of 5,000, and there are in the outer-London districts (which with the County make up Greater London) another 300 authorities. The total number of voluntary people helping to administer the local government of London is something like 10,000.

Oxford and Cambridge.

The Boat Race is now not far off, and the public interest in it this year is, if anything, keener than ever. Naturally the severe winter has to some extent upset the training of the crews, but no very noticeable deficiency has been remarked.

Oxford men, for all the sporting enthusiasm in which they are looking on this event, do not, I think, really imagine that they can win it, for the whole Cambridge crew (all Trinity men, by the way, except Elles of the Hall, and the cox) are polished oarsmen. I anticipate a steady-lengthening of the odds against Oxford's winning.

The Calcutta Cup.

Everyone agreed that Ireland deserved to beat England recently at Twickenham, but the fact that since then Ireland have been beaten by Scotland and have only drawn with Wales has led some people to suppose that England has not yet produced the best fifteen available. In any case, no fewer than six changes have been made for the team that is to meet Scotland next Saturday at Murrayfield.

Scottish hopes naturally run high. If the Scots win, theirs is the Calcutta Cup. It is difficult to gauge their chances, as the play of the new men chosen for England is not very well known in ordinary Rugger circles in London. From a national point of view, however, it is good to see the West Country and the North so well represented in the English team, and if they pull it off there there will be rejoicings far outside the Metropolis.

That Devon, who were very unlucky indeed to lose in the county championship to Middlesex, should have three men in the England side is a particularly gratifying sign, for the tendency in recent years has been rather for the big London clubs to supply the nucleus of the English fifteen.

Saving a Village.

In pleasing illustration of a paragraph which I wrote here last week comes the announcement that the Royal Society of Arts is endeavouring to acquire the picturesque little village of West Wycombe, in Buckinghamshire. It was to have been sold this week, but this excellent Society has stepped in, states that it already has one third of the amount of money necessary, and is appealing for the rest.

To preserve this historic village, possessing about sixty houses and two very old inns, in perpetuity, is surely an admirable object that will not be allowed to fail of accomplishment.

Spring's Coming.

But a few days ago we were shivering with the cold, praying for the thaw, and dismally wondering how much longer Winter would hold us in his icy grip. Yet in a twinkling all is changed. This past week-end has given us, in fact, the weather of Paradise.

It has been warm enough to lie out of doors. Bathing has been general round the coast. Picnic parties have been seen everywhere. Nothing much is budding yet, and ice is still in the ditches; but the harbinger larks cannot get their joyful songs out fast enough.

A wonderful climate, England's! How long this fine spell is to last no one knows, nor worries much. It is enough that it is here, making the whole clear atmosphere dreamy, idle, extraordinarily pleasant. He who can grumble at this time is indeed an inveterate misanthrope.

ALTER EGO.

REFORMS IN PERSIA.—II.

BY MIRZA FIROOZ KHAN.

Tabriz.

As I have said, the old-fashioned lamb-skin caps are a thing of the past now, and soon will merely decorate museums. The new form of hat is not altogether a new one. It has been in use from fifteen to twenty years. It is a round skull cap made of thin cardboard, lined, usually, with black *mahood* or *shaviet*, and sometimes looks very neat and nice. The present form is the same old cap, with a crescent-shaped piece attached to its front. This hat is called *pahlavi*, but really it is not the whole hat but this frontal piece that is referred to as *pahlavi*. It is not unusual in the street to hear one man telling any other (whose hat has no front piece): "Why don't you attach a *pahlavi* to your hat?"

It looks very smart on young people, who are dressed in *frangi* style; but on the older people it is rather awkward. Here is a typical picture:—

This old man is of sixty or seventy years of age, having used all his life the old-fashioned tall caps. He is dressed in long flowing robes, with wide and spacious trousers of common muslim, coloured blue, and a yellow *aba*, more spacious and baggy than his clothes. His whiskers are twelve inches wide and twice that in length, covering the entire front of his half-open thorax. His face is rather too wide, cheek-bones too prominent, his ears large and separated from the side of his head by a distance of at least one inch. His head is shaven clean and the newly made *pahlavi* (compulsory) one or two sizes too small, stands at the top of his head like a big piece of charcoal upon a large snow pile.

The large white turbans of mullahs (filthy and badly in need of being sent to some laundry) and the blue and green turbans of *sayyids* (the colour hiding the dirt) are being collected and stored in a showroom, which soon will become the National Museum.

Nor is all well with the smart-looking *pahlavi*. There are God-fearing people who will not miss the hour of their *namaz* or prayers. But, as the man, in prostrating himself upon his face, has to press his forehead to the earthen seal (which comes from Mecca) yet cannot do so on account of the front piece of his *pahlavi* he is compelled—during the hour of prayers—to turn the front part of his hat backwards. Recently one of these devout men, after his prayers were over, forgot to correct his hat and went out to his business with his *pahlavi* turned backwards. The police took hold of him and gave him a good "licking" for daring to insult His Majesty, the Shah Pahlavi, before the man was able to prove that he had forgotten to correct its position after saying his prayers. It is said that the man has sworn never to pray hereafter!

Mulemen, camelmen, donkeymen, wagon drivers, all have to change their *papakh* to *pahlavi*, and they are changing. Those who hesitate, get a severe handling. There are officers whose duty it is to see that everybody gets his *sijil* and everybody gets his *pahlavi*. Too old hats are being torn to pieces in order to compel the owner to get a *pahlavi*. In a certain small town the mullah insisted upon wearing his once-upon-a-time white turbans. As the older people had been in the habit of respecting him and would not consent to handle him roughly, some children were instructed to do what the bigger ones would not do. The children quite unexpectedly took the turban off the head of the venerated old fellow, knocked it down and began to kick it like a football. One of them pressed his own *pahlavi* upon the old-man's clean-shaven head, saying: "Agha, by Hazrat-Abbass, this suits you better than that dirty *ammaméh*, and you look prettier, too."

The mullah complained, and he was politely informed: "Agha, pay no attention to the children, but we would advise you to change your *ammaméh* to save you future insults from them." The mullah wept, and wept bitterly, but he had to change his turban.

In the evolution of the *pahlavi* hat, at first the front,

crescent-shaped piece was attached to the *papakhs*, and was worn only by the military men as a "uniform." Later on it was made of cardboard with khaki-colour cloth around it, and a piece of lamb-skin attached to it, in order to preserve the "Persian" nativity of it. Still later on the lamb-skin strip was dispensed with, leaving the entire cap in pure khaki colour. Still later on all the Government employees were ordered to wear the *pahlavi* cap (in black) during their work hours, which was done, keeping it on in the street also. A year later all the drivers and cabbies were ordered to wear the *pahlavi* to distinguish them from the higher-class laymen; and now everybody must wear it, nobody to be distinguished from anybody! Everybody looks like everybody else. Christian and Mussulman, formerly distinguished by their hats and clothes, are alike now, and it is not uncommon for a Mussulman to salute a Christian by a *salam-alaykoom*.

The fact is that every class of men were distinguishable formerly by their clothes. Hajjis, mulemen, donkeymen, camelmen, grocers, pharmacists, mashadis, *kalbalays*, cooks, servants, scribes, mullahs, and sayyids, noblemen and laymen, teachers and schoolboys—everybody was known by a glance at his cap and dress. But now, there are no more classes, no more distinctions, they are all alike externally!

Mussulman women also are changing their old-fashioned dress. In fact, they have done so already for years past! They wear just as short skirts now as the so-called Christian women; this was their national skirt from time immemorial. Speaking literally, this is not a real change for them. They had a middle period some ten to fifteen years ago, using longer skirts like the modest Christian women, but the present style is their home style and has been so from the days of, at least, Nadir Shah! Only the present fashion is made smarter and of a finer material than the usual Manchester calico! In the street from time to time you will see a Muslim woman "straightening" her *chadirshab*, which is intentional permission to let the uninitiated fellow see her indescribable beauty! She has put on silk stockings of almost the colour of the natural skin, silk skirts, say, of crimson colours, and a silk blouse of some snow-white material, without sleeves, of course, and with a low neck. She is neither extra thin, nor extra fat, but healthy with red cheeks, cream-like skin, black eyes and black eyebrows curved like a bow, small lips, shapely nose, that no artist can draw, and a profusion of silk-like, jet-black hair shampooed, trimmed and dressed in the most fashionable manner you can think of! Her hands are soft as wool and white as snow and her fingernails dyed light-red by henna. She uses kid gloves and carries a kid-skin money-bag by a silk string attached to it, which she hangs from her neck. Her high-heeled shoes have no front to them; they are kept on only by a narrow strip of leather band, and are altogether uncomfortable to wear. But she does not mind, because it is *la mode*, the style!

She dispensed with her net-like white veil years ago and now she uses only a small "sunshade" for a veil, which is black, worked of fine, thread-like wire, in the form of a sieve and the size of her hand. It is something like the card-board shades which students use during study-hours to protect their eyes from the glaring light of the gas lamps. This wire veil is kept on at the front of her head by a wire spring, which can be lowered or raised at will, and—in truth—it is always kept raised, as if by chance or forgetfulness, so that you can see her beauty at every step. And the most noticeable thing about it is that she does not care a pin for your seeing her beauty. She has thrown into the waste basket long ago the old-fashioned idea that you are *na-mahram*, and that you ought not to see her face!

The only thing now by which the Mussulman woman is distinguished from her Christian sister is her *chadirshab*. Once she throws that off, too, and dons a hat there will be left nothing by which one might distinguish her from any European woman, unless it be her unmistakable beauty!

PERSONAL AND GENERAL

TO-DAY

March 14, 1929 (New Style).

March 1, 1929 (Old Style).

Shawall 2, 1347 A.H., of the Muslim Calendar.

Adar II, 2, 5689, of the Jewish Calendar.

Sir Arthur du Cros has returned to London from the Sudan.

Field-Marshal Sir Claud and Lady Jacob have returned to London from Torquay.

Lord and Lady Vaux of Harrowden have returned to Harrowden Hall from Egypt.

Captain the Hon. Oliver and Mrs. Brett have returned to 21, Hill Street from Egypt.

Sir Henry and Lady Bax-Ironside have returned to 23, Grosvenor Place from the Continent.

Sir Ian Malcolm has returned to 57, Onslow Square from his visit to Egypt and the Sudan.

Sir John and Lady Bland-Sutton arrived last week at 47, Brook Street on their return from India.

Miss Elizabeth Gathorne-Hardy returned on March 11 to 49, Cumberland Mansions from India.

Mgr. Francis Fellingner has been appointed Bishop Auxiliary to the Latin Patriarchate in Jerusalem.

Lady Evelyn Gifford left London on March 7 to join the P. and O. s.s. Ranchi at Marseilles for Port Said.

Field-Marshal Lord Plumer and Lady Plumer will return to 22, Ennismore Gardens to-morrow (Friday) from abroad.

Lady Chetwode, who is at present in Egypt, is expected to return to 44, Grove End Road, N.W., towards the middle of April.

Sir William Cross left London on March 7, by special train, to join the P. and O. Ranchi at Marseilles on his way to Port Said.

Mr. Alfred Priest returned last week from his travels in India, Australia, and elsewhere to 15, Trafalgar Studios, Chelsea.

Sir Denison Ross, Director of the London School of Oriental Studies, lectured on Persian history and literature at a reception given at Teheran in his honour by the British Minister.

Lord Castlemaine arrived on March 8 at Langham House, Ham Common, on his return from Egypt, where he has been spending the past six weeks with Lady Castlemaine, who will join him at Langham House, later in the month.

Sir Sidney Barton, British Consul-General at Shanghai, has been appointed British Envoy Extraordinary and Minister Plenipotentiary in Addis Ababa, in succession to Mr. S. P. P. Waterlow, whose health was unsuited to the highlands of Abyssinia.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.
Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts., may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan. Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

Lady Strathcona and Mount Royal, who left for India at the end of December, will return to England at the end of April.

We are glad to be able to record that Sir Valentine Chirol, who is lying ill at the Residency, Cairo, is making satisfactory progress.

Viscountess Burnham will join Viscount Burnham at Port Said on his return from India. She will leave Marseilles in the Rawalpindi on March 28.

Professor L. F. Rushbrook-Williams, Foreign Minister of Patiala, who has been attending the session of the Chamber of Princes in Delhi, arrived in London on March 9 from India.

The marriage has been arranged, and will take place in Lincoln's Inn Chapel, on April 6, at 2.50, between Martha Ann, daughter of Mrs. William James Taylor Munro, and Mr. Edward Herbert Keeling, M.C.

Mme. Dora Gabé-Peneva will lecture on March 18, at 8.45 p.m., to the Near and Middle East Association on "La Littérature contemporaine de la Bulgarie." The meeting will take place, by kind permission of Mrs. Henrietta Leslie, at Glebe House, Glebe Place, Chelsea. Dr. Tchitchovsky will preside.

Lady Guillemard and the Council of the Overseas Section of the Forum Club held a "Middle and Far East" At Home on March 12. Among those who accepted invitations were: Major-General Sir Theodore Fraser, Mrs. Patrick Ness, Lady Addis, Lady Clementi, Sir Francis and Lady Aglen, Sir Newton and Lady Stabb, Colonel and Mrs. Hume and Lady Jordan.

Tewfik Rushdi Bey, Turkish Minister for Foreign Affairs, and M. Pavloff, Bulgarian Minister in Angora, last week signed the Turco-Bulgarian Treaty of neutrality, conciliation, and arbitration.

The Greek torpedo-boat Pergamos on March 6 seized near the Island of Zea a steamer flying the Egyptian flag carrying a cargo of narcotic drugs of the estimated value of £60,000, which she was attempting to smuggle into Greece.

The Egyptian Government has decided to accede to the German Government's request that Germans be admitted among the foreign assessors in the Mixed Tribunals although Germans no longer enjoy a capitulatory status.

The death was announced from Paris last week of Princess Alexandre de Caraman-Chimay, a granddaughter of Musurus Pasha, a former Turkish Ambassador in London, and a sister of the poetess Countess Mathieu de Noailles.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Artificial Cotton.

It appears that erroneous reports have gained circulation in India as to the staple of the new product, "artificial cotton," and I am authorised to point out that the staple of this product is from 1½ to 1¾ inches and that the all-over average is 1⅝ inches. From the statement which appears elsewhere in these columns it will be seen that the company marketing the product—the English Artificial Cotton Production and Marketing Corporation, Ltd.—has had an extremely successful initial season. The demand, indeed, has been far more than the Corporation could possibly supply at the time. Great efforts are being made to develop the cultivation of the product here and in other countries, and a great increase in production is anticipated for next season. Already it is abundantly evident that "artificial cotton" is going to be an important factor in the cotton market, and the Corporation and its chairman, Dr. J. C. Hedley-Thornton, are entitled to congratulations on the successful launching of such an important venture.

Greek Finances.

It is only a few months ago that the Greek Government conceived the idea of reducing the rate of interest on an internal loan, and very wisely abandoned the project when the effect such an action would have on the country's credit abroad was brought home to it. Now another equally ill-advised financial project is on the tapis. To a considerable extent the finances of Greece were placed under the control of the International Financial Commission in 1898, and the revenues derived from salt, matches, petroleum, playing cards, and cigarette paper were entrusted to the management of this body for the service of the external loans. Of these monopolies that of petroleum is by far the most important, and it is understood that the Greek Government desires that this commodity should be removed from the list of monopolies. It is quite understandable that the Government should seek to secure complete freedom in financial matters, but it would seem equally clear that the present is not the time to introduce changes in a system which has served the country by maintaining its credit abroad at a high standard. When the vast works of development now in progress, or planned, are completed and the refugees are adding their quota to the country's wealth and are enabling it to dispense with the present large imports of wheat the country's position will be entirely altered, and it would be wise if the question of any changes such as that now proposed were postponed to that time.

The Southern Punjab Railway.

As was to be expected, the speech of the chairman, Mr. J. M. Rendel, at the meeting of the Southern Punjab Railway Company, a report of which will be found elsewhere in these columns, was mainly devoted to the position of the railway in the light of its pending acquisition by the Government of India. The company has four lines, and the contract provides for the payment in respect of each of them of an amount which cannot be less than the capital cost in sterling and cannot be more than 20 per cent. in excess of it. Mr. Rendel pointed out that in the case of the main line the full premium has been absolutely secure for some time, and that the position was the same with regard to the Ludhiana Extension. The Jullundur Doab Railway Extension is, however, differently situated, for the local traffic has been disappointing, and there is no

prospect of a premium in respect of the line. The fourth line—the Sutlej Valley Railway—was completed in 1910, but during the War the rails were taken up to meet military requirements elsewhere, with the result that for some eight years the line was out of action. The company naturally advanced a claim for compensation in the event of this line not having earned its premium at the time of the purchase of the railway, and the Secretary of State, while not conceding the full claim of the company, has proposed that the premium should be based on the average of the three years preceding the date of purchase, and this the company have accepted. It is estimated that the payment of capital expenditure and premium combined, if the full premium is earned on the Sutlej Valley Railway, will be about £5,255,000, and that with the contingencies account, the carry forward at the end of the current year, and other reserves, after meeting all liabilities, it will be possible to make a distribution to the ordinary stockholders of not less than £200 for every £100 stock.

The Eastern Bank.

A satisfactory report is again forthcoming from the Eastern Bank, the net profits amounting to £124,118 as against £121,911 for 1927 and 120,538 for 1926. The dividend is unchanged at 9 per cent., at which figure it has remained for eight years, £25,000 is again placed to the reserve, the premises account receives £5,000 as before, while the carry-forward is £44,470 as compared with £40,351. The balance sheet shows some changes in respect to various items, in which there is no doubt a reflexion of the somewhat abnormal conditions that have prevailed in some of the regions in which the bank operates.

Sudan Cotton Production.

The revised estimate of the Director of Agriculture and Forests in the Sudan for the cotton output for 1928-29 is now available. It shows a production of Sakel amounting to 584,550 kantars and of American of 99,300 kantars. That means a yield of 138,830 bales of Sakel and 22,590 bales of American, or a total production of 161,420 bales. Compared with the world production it is not a large total, but it is sufficient for the Sudan already to be a factor of importance in the market.

ECONOMIC CONDITIONS IN BULGARIA.

[The following notes are taken from the bulletin of the British Bulgarian Chamber of Commerce of Sofia, dated February 28.]

General Situation.

Negotiations on frontier questions between Yugoslavia and Bulgaria are reported to proceed in a friendly manner. There is a probability that economic and railway traffic points will be included in the discussions. According to official statements negotiations with respect to a treaty of commerce between the two countries are to be opened in the near future. There can be no doubt that an improvement in the relations of Bulgaria and Yugoslavia, especially on the basis of economic and commercial matters, may have important effects on business, transport, and foreign trade in Bulgaria.

The question of payment of the State debt to the contractors who built certain railways before the War has been definitely settled by vote of Parliament. The necessary credits have also been voted.

The different tenders announced in our bulletin appear to be followed with keen interest by French, German, Austrian, and Czechoslovakian industries. British firms interested will receive from this Chamber full particulars and any information desired.

The Polish Tobacco Regie has contracted a purchase of 1,200,000 kilograms of Bulgarian tobacco, a substantial part of which will be paid for by means of delivery of agricultural machinery manufactured by the Polish industry. This practice of selling tobacco abroad in exchange for foreign industrial products has been applied to important transactions with Czechoslovakia.

Trade remains generally slow owing to the usual seasonal influences and to the state of roads. Imports are still heavily in excess of exports and the trade balance for the first two months of 1929 remains adverse.

There is a marked tendency on the part of German, Austrian, and Italian travelling agents to call on retail traders in the provinces and to take orders direct from them. This policy appears to correspond to a change in trading methods all over the country. Provincial firms are more and more endeavouring to make direct purchases from abroad in order to avoid paying a difference of price to the local large importers. This point appears to deserve the attention of British exporters sending travelling agents to Bulgaria.

Belgian and French wool exporters appear to be doing active business with the local textile industry. There is a marked decrease in the share of British exports in this direction.

No drastic change in the general state of solvency has occurred. Payment of February maturities has been better, on the whole, than it was anticipated: there has been a large percentage of prolongations, but protested bills appear to be under last year's average.

Imports and Exports.

The trade balance during the month of January is again adverse by 122,000,000 leva, as against 57,318,146 leva

for December, 1928. Exports during January amounted to 19,478 tons for 418,384,000 leva, and there were imported 30,976 tons for 534,924,000 leva, while during December there were imported 28,461 tons for 592,242,000 leva.

The trade balance during January, 1928, closed with a surplus of 182,000,000 leva. The exports in January, 1929, are less than those of January, 1928, by a quantity of 7,320 tons for 185,000,000 leva, while imports have increased by 4,102 tons for 120,026,000 leva. Of the goods exported during January, 1929, the largest decrease as compared with January, 1928, is to be noticed in wheat, 1,079 tons for 8,847,000 leva; maize, 7,871 tons for 42,098,000 leva; flour, 1,150 tons for 16,917,000 leva; tobacco, 1,352 tons for 131,345,000 leva; while the increase is in the exports of rye, 851 tons for 5,016,000 tons; and barley, 1,061 tons for 5,019,000 leva.

Forthcoming Tenders.

The Administration of State Railway, Maintenance Section, is inviting tenders for the supply of 40 locomotive water feeders, and for 20 weighbridges. Adjudications are to be held on April 26 and April 27 respectively. Tenders are also invited by the Traction Section of Railways for the supply of 3 first and second class passenger carriages, four axle with brakes, 14 third class passenger carriages, four axle with brakes, 4 luggage wagons, four axle with brakes, 42 third class passenger wagons, two axle with brakes, 42 luggage wagons, two axle with brakes, 34 box freight wagons, two axle with brakes, for large pieces of merchandise, 30 freight wagons, two axle with brakes, for transportation of fowls, and 10 freight wagons, two axle with brakes, for small domestic animals.

Miscellaneous.

Receipts of the State Treasury for January, 1929, show a decrease as compared with December, 1928. In January, 1929, the regular receipts amounted to 513,100,000 leva, while during December, 1928, they were 621,969,000 leva, the deficiency being 108,869,000 leva. This decrease is due to reduced receipts from direct and indirect taxation, communications, etc.

Receipts of the State Treasury from April, 1928, to the end of January, 1929, aggregated 5,910,160,000 leva, as against 5,491,862,000 leva last year. There is consequently an increase in the present budgetary year of 418,298,000 leva. This increase is due to larger receipts from direct and indirect taxation, communications, etc.

The Anglo-International Bank reports a net profit of £103,085 for 1928. It is proposed to place £10,000 to amortisation of premises, and £125,000 to contingency reserve, carrying forward the balance of £20,532.

The Banca Commerciale Romana of Bucharest is to increase its paid-up share capital from 100,000,000 lei to 300,000,000 lei. Part of the new shares will be used for the acquisition of the Bucharest branch of the Banque Belge pour l'Etranger, which bank will become a shareholder of the Banca Commerciale Romana. The Banque d'Anvers is also participating in the new issue, while the Banque de l'Union Parisienne, which was responsible for the establishment of the bank, is to increase its share holding.

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrvo, Pleven, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Sheumen, Doupnitza, Gorna-Oréhovitza, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratsa. It has also 86 agencies

A NEW INDUSTRY FOR ALBANIA.

The Albanian National Brewery.

It is, unfortunately, not a British characteristic to know much about the Balkans, and so it is not to be expected that many of the inhabitants of the British Isles should be familiar with the attractions or the potentialities of Albania; even if they are quite sure in which part of the Balkans—a region that they view traditionally with some suspicion—this country lies. The fortunate traveller knows that this country, south of rocky Montenegro, is one of the most fascinating regions of the charming Adriatic coast, that besides its ranges of mountains pitted with picturesque villages, it has glorious, sunlit plains which offer ample range for the motorist who wishes to get away from the beaten track. The people themselves are friendly, and are always ready to show great kindness to strangers, and the fact that English is spoken by many Albanians makes the lot of the tourist much more pleasant than it would otherwise be.

Like so many similar regions, the country is still in the main undeveloped, but it is not likely to remain so for long, for Italy has for years recognised the potentialities of the country and Italian capital is seeking outlets there for enterprise. There seems little doubt that the country possesses considerable resources. It is believed, for instance, that the country's minerals include supplies of coal, copper, mercury, iron, platinum, and silver; and no doubt before long efforts will be made to exploit some of these minerals. Such industries as the country possesses have so far been handicapped by lack of capital and by the uneconomic methods employed. There are extensive forests, containing oaks, chestnuts, elms, walnuts, planes, beeches, pines, and firs. Most of the forests are so far untouched, and as many of them adjoin the coast their exploitation would be by no means a difficult matter.

Albanian Products.

Apart from timber, which has been exported on a small scale, the country's exports include tobacco, olive oil, cheese, meat, wool, hides, dried fish, live stock, sumac, gall nuts, bitumen, and cereals. Albanian tobacco is known in the trade as the finest quality of Turkish tobacco available. Albanian olive oil also enjoys a high reputation, and there is a great demand for it in Italy.

It is eminently satisfactory to know that efforts are being made to associate British enterprise with the development of Albania, and this week saw the issue of the prospectus of the Albanian National Brewery, which has been formed to acquire a sole concession for 99 years for the manufacture of beer in the Kingdom of Albania. It is exempt from import duties on building material, plant and machinery required for the brewery, and on all raw materials, such as hops, malt, yeast, etc., required for the industry. Exemption is also secured from all other taxes and duties to the Albanian Government except a nominal tax of 2s. 2½d. per 175 pints of beer, which compares with an existing tax of £1 16s. 9½d. per 175 pints on all imported beer. The concession enables the company to export to other countries beer produced in excess of the quantity necessary for consumption in Albania entirely free of all export tax.

The company is a subsidiary of the Albanian Trading and Development Company, Ltd., which was incorporated in 1927 to establish a general export and import trade in merchandise with Albania and to obtain and exploit concessions in respect of minerals, utility services, timber, fisheries, etc.

At the present time the whole of the beer consumed in Albania is imported, and the consumption is estimated, on the basis of Government tax returns, at between 52,000 and 60,000 hectolitres, which is equal to 9,146,800 and 10,554,000 pints per annum. This beer is retailed at a price of over 7d. per pint, of which the existing Government tax on imported beer represents over 4d. As against this the company, manufacturing its beer in the country, has only to pay the nominal duty provided in the

concession of under 1d. per pint, and will be able to sell its beer at 5d. per pint, at which price it is considered that the consumption should be very considerably increased. Beer is preferred by the inhabitants of Albania to any other drink which they can obtain, and the consumption has only been limited to its present figure by the high price at which imported beer is sold.

As the price at which the company will be able to sell its beer in Albania is one-third less than is possible for any other company, and in view of the protective taxation clauses of the concession, the company will have a virtual monopoly throughout the whole of Albania. Taking into account the present consumption, the company's sales of beer in Albania have been estimated by the directors, on the basis of 50,000 hectolitres (8,785,000 pints) per annum, which is less than the lowest Albanian Government figure of consumption by more than 300,000 pints. The geographical situation of the brewery will place the company in a most favourable position for meeting the considerable demand which there is for lager beer in Egypt, Greece, Palestine, and the Northern African Coast.

Situation of Brewery.

The company will acquire a freehold site of 12,000 square metres (approximately 3 acres), situated at Scutari. This site has been chosen, and the brewery already partly constructed, adjacent to a spring of pure water. The chemical properties of the water used are of the utmost importance in the manufacture of beer, and the water from this spring is chemically very similar to that used in Munich for the manufacture of light and dark lagers, for which the place is famous. The following report has been received from Dr. Geoffrey Martin, D.Sc., Ph.D., F.I.C., F.C.S., M.I.Chem.Eng., the well-known public analyst:—"I have considered the analysis of the water on the brewery site which you are acquiring, and I beg to report to you that in my opinion this water is chemically very similar to that used for brewing of the Munich lager beer and is of excellent purity and quality."

Messrs. S. Briggs and Co., Ltd., of Burton, who have erected and remodelled no fewer than 250 breweries in England and elsewhere, have prepared plans for the completion of the brewery. This firm, in accordance with the plans and estimates prepared by them, will undertake the completion of the brewery buildings and the installation of the necessary plant to produce not less than 100,000 hectolitres (17,500,000 pints) of beer per annum by the end of August, 1929, for a sum not exceeding £48,000. The capacity of the brewery can be trebled by the additional

expenditure of £10,000. The brewery is well situated for the importation of every type of material required for its working.

Distribution.

It is intended to establish depôts at Scutari, at the ports of Durazzo, and Medua, and the following inland towns:—Tirana (the capital of Albania), Shiak, Kruya, Kavaya, Dibrah, Elbassan, Permete, Berat, Gjnokastno, Lushnae, Valona, Fieri, St. Quaranta, Koritzza, Florina, and Pogradetz. To all these towns transport by motor lorries can be effected direct from the brewery, and shipping facilities are available from the ports. Where it is desirable in the larger towns small bottling works will be established to cope with local consumption.

The Board of Directors is a strong and practical one. The company will have the advantage of having as its chairman Sir Harry Eyres, who for forty years served His Majesty's Government in the Near East, for the latter part of the period in Albania itself. The other directors include Mr. William Peer Groves, deputy chairman of Groves and Whitnall, Ltd., brewers; Major Charles Alan Carlos Perkins, a director of Barclay Perkins and Co., Ltd.; and Mr. T. Montagu Winch, chairman of Soulby, Sons and Winch, Ltd., while Mr. Mark Kakarriqi (one of the vendors) will act as managing director of the company. Mr. Tush Kakarriqi, who will act as a brewery manager of the company, has a wide commercial experience, and has a thorough knowledge of all branches of the brewing business in Munich, where he has been engaged in the brewing industry.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Candles.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of $\frac{1}{2}$ metric tons of candles to the Ministry of War. May 1.

Clothing, Etc. The Director-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of clothing required during 1929-1930 (April 11); and general stores required during 1929-1930. April 20.

Metal Cabinets and Safes.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of metal cabinets and metal safes for 1929-1930. June 19.

PERSIA.

Weights.—The Persian Government is calling for tenders, to be presented in Teheran as soon as possible, for the supply of brass and gunmetal weights. (D.O.T.)

The Roumanian Ministry of Transport is reported to have received an offer from a foreign bank for the construction of a canal from Oltenitza to Bucharest, the effect of which would be to make the Roumanian capital a port.

Shipping Intelligence.

GREECE'S MERCHANT MARINE.

At the end of 1928 Greece's merchant marine totalled 1,257 vessels of a total tonnage of 1,315,473. The steamers numbered 528 of 1,256,965 tons, while the sailing vessels totalled 729 of 58,508 tons. In the last quarter of the year the fleet was increased by seven vessels of 43,869 tons. Compared with the position at the end of 1927 the fleet shows a net increase of 24 vessels and 145,915 tons, while as compared with 1915 there is an increase of 53 vessels and 363,315 tons.

Of the 528 steamers 337 or 75.15 per cent. are cargo boats, their tonnage being 1,153,917 or 91.80 per cent. of the total tonnage, 177 or 22.16 per cent. are passenger steamers, their tonnage being 77,706, three liners of a tonnage of 24,725, while the vessels grouped as various total 11 of a tonnage of 1,617.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, March 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Birkenhead, March 19); s.s. Mathura for Calcutta (Birkenhead, March 26).

Bibby Line.—S.s. Oxfordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, March 20).

British India Line.—S.s. Mundra for Bombay and Karachi (London, March 16); s.s. Merkara for Colombo, Madras, and Calcutta (London, March 23); s.s. Masula for Bombay and Karachi (London, April 6); s.s. Margha for Colombo, Madras, and Calcutta (London, April 6); s.s. Morvada for Colombo, Madras, and Calcutta (London, April 20).

Cunard Line.—S.s. Bantia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume; also at Corfu, Gruz, and Ancona if sufficient inducement (Liverpool March 16, Swansea March 19); s.s. Bactria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (this steamer will call at Volo if sufficient inducement) (Liverpool, Glasgow, and Swansea, March 23).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 23).

P. and O. Line.—S.s. Ranpura for Bombay (London, March 15); s.s. Nellore for Calcutta (London, March 16); s.s. Behar for Calcutta (London, March 30).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, March 17); s.s. Portuguese Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, March 23).

Ellerman and Papayanni Lines.—S.s. Gerano for Algiers, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 16, Swansea* March 16); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, March 19); s.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 21); s.s. Lesbian for Genoa, Leghorn, Naples, Palermo, Messina, Bari, Gruz*, Ancona, Venice, Trieste, and Fiume (Liverpool March 30, Swansea April 4); s.s. City of Oxford for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 28); s.s. Roumelian for Algiers*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 6, Swansea* April 6). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

It is reported that valuable deposits of chromium have been discovered in the Rhodope mountains near Plovdiv.

The output for the first eight months of 1928 of the Pernik mines, which produce roughly 85 per cent. of Bulgaria's coal, was 699,642 tons, as against 564,818 tons for the same period of 1927.

Further discoveries of asbestos deposits are being made in Cyprus, and it is announced that a company is now in course of formation for the exploitation of the new discoveries.

The value of Egypt's imports in January was £E4,784,406, an increase of £E499,220 on the figures for the corresponding month of 1927, while that of the exports was £E5,482,749, an increase of £E663,174 on the total for January of last year.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 16.

The Stock Markets remain under the influence of monetary uncertainty and there is a reluctance to do business in all sections. There have even been fears of a $6\frac{1}{2}$ per cent. Bank Rate, but in the best informed circles these are regarded as unjustified. The Bank of England continues to add to its stock of gold, although at a fairly high price, and the new York banks seem disinclined to take more European money for employment in New York. Gilt-edged prices have shown a general tendency to fall, but War Loan has, exceptionally, been firmer. Home Rails, however, in spite of poor traffic returns have been rather firmer, the Southern meeting creating a good impression. The non-realisation of the expected "Hoover" boom in New York has contributed to the dullness which has been almost unrelieved in the Industrial markets. A general opinion that, although prices of many well-known securities look cheap in comparison with January quotations, they are likely to fall still lower naturally prevents any speculative buying.

The Railway Accounts.

The dividend announcements of the British railway companies revealed that considerable savings must have been made to mitigate the very large declines in gross receipts recorded by the weekly traffic returns, and the distributions were in accordance with the highest expectations. The full accounts, which are now available for all the companies, disclose more accurately the economies that have been effected. The gross receipts of the London and North Eastern show a decline on the 1927 figures of £2,877,483, but economies have transformed this into an increase of £9,735 in net receipts; the net receipts of the Southern are also higher—by £174,861—in spite of a decrease of £556,038 in gross revenue. The G.W.R. and the L.M.S.R. recovered £784,664 and £3,034,669 out of gross fallings-off of £1,551,463 and £4,074,539, respectively. These very satisfactory savings are in part due to a reduction of wages agreed upon in last August,

but largely represent the results of the five complete years which have now elapsed since the amalgamations came into being. In spite of these savings, however, net earnings compared with the figures of five years ago, show a decline of 10 per cent. As has been emphasised before, the two chief causes of this position are bad trade and road competition. Both of these may reasonably be hoped to be of less weight in the future, while the reductions in expenditure should continue. It is therefore reasonable to hope that railway investors have seen the worst, and at their present low prices railway securities may be regarded as under-valued. Thus, for example, Southern deferred can be bought to yield £6 5s. per cent., or L.M.S.R. ordinary to return £6 10s. per cent. Among prior charges L.N.E.R. 4 per cent. preference yield £6 11s. per cent, and Southern preferred £6 19s. per cent.

Oil and Petrol.

The excitement aroused by the rise in the price of petrol continues, and the Government has acknowledged that an advance in prices in cases where the supply is controlled by a group of companies acting in co-operation calls for a public statement as to its causes. It may be doubted whether, allowing for the tax imposed last year, the price of petrol in this country is unduly high. American oil markets dominate the situation, but over-production of crude oil in America does not necessarily lead to lower petrol prices, for petrol is only one product of crude oil and the other products—kerosene, lubricating oil, fuel oils—have to be sold. Fuel oil prices fell last year by about 35 per cent., and the internal prices of gasoline in America, accentuated by a temporary shortage, rose by 70 per cent. The export prices also rose by 45 per cent. This rise was not reflected in British prices, and, although over-production has since brought down American prices, the recent rise in prices here merely brings British prices into line in the world prices. Actually, there is still a slight margin in favour of the British consumer.

A High Yielding Preference Share.

Investors who have a good holding of gilt-edged securities are naturally eager to turn their attention to industrial shares or other securities which will give them a rather higher yield than they can secure on "safety-first" stock. Those who set themselves up to give advice on investment topics therefore find themselves continually appealed to to give examples of securities of this class. The ordinary shares of almost all prosperous companies stand at prices which somewhat discount the future. These prices may be justified by the chances of appreciation the shares contain, but for many investors present income is more important than capital appreciation. These investors can, however, consider industrial prior charge stocks which often give very satisfactory yields. They should nevertheless take care to select stocks which are well-secured, for it is never wise to sacrifice safety for a few shillings extra income. The $7\frac{1}{2}$ per cent. cumulative preference shares of Wolsey Ltd., the well-known textile firm, are a first charge on the company's profits since there are no debentures. The report which has just been issued shows profits of £167,000 compared with £154,000 a year ago. These profits permitted the dividend on the 1,292,700 "A" Ordinary shares, which of course rank after the cumulative preference shares, to be raised from 5 per cent. to $7\frac{1}{2}$ per cent. The company's profits have recovered rapidly since 1925, and the demand for its products should now be well-secured. The shares can be bought to yield about £6 19s. per cent.

It is reported that negotiations have been opened for the establishment of a branch of the Deutsche Bank at Athens.

The First Croatian Oil Factory Company, of Zagreb, made net profits of 644,000 dinars.

The number of telephone subscribers in Yugoslavia in 1927 was 29,900, as against 26,917 in 1926.

CURRENCY CHANGES IN THE BALKANS.

In an article on "Currency Reorganisation in the Balkans" in the current issue of the Midland Bank "Monthly Review" the stabilisation of the currencies of Greece, Bulgaria, and Roumania is discussed, and attention is drawn to some essential differences in the methods adopted in the case of these countries. As regards Greece it is pointed out there are two distinctive features.

First, the currency reform was carried out, not immediately upon the issue of the loan, but in May, 1928, well within the six months' period allowed by the League. Secondly, instead of utilising an existing bank as part of the reconstituted machinery, an entirely new, central institution, the Bank of Greece, was established, with a monopoly of note issue. It followed that the old issue bank, the National Bank of Greece, was required to surrender its functions as the source of paper currency, the holder of the country's gold reserves, and the Government's bank. It has now become a commercial bank, with none of the necessary attributes of a central institution. Meanwhile contact between the League and the Bank of Greece is maintained by the presence of a foreign adviser.

The new parity for the drachma was fixed, in May, 1928, concurrently with the opening of the Bank of Greece, at 375 to £1, the rate which had actually been in force for some time past. Thus the new drachma has about one-fifteenth of the gold value possessed by the pre-War unit of the same name. The monetary system, as indicated in the statutes of the new Bank of Greece, is strongly founded upon a gold exchange standard. The maintenance of exchange stability is safeguarded by the provision that the Bank must buy or sell gold exchange on demand at the gold points, while against its notes and other demand liabilities a minimum reserve of 40 per cent. must be maintained. This reserve may consist of gold at home or abroad and/or gold exchange, which is very carefully defined and includes balances with the central banks of foreign countries. There is no requirement as to how much gold, as distinct from exchange, the Bank must hold. The composition of the reserve, within the qualitative limits laid down, is a matter for its own discretion, and this fact, coupled with the exchange buying and selling obligations, places Greece distinctively on a gold basis, though it would be possible should the Bank so decide, to put into operation, on the basis of the present statutes, something closely approaching a full metallic standard. The Bank began operations with an ample reserve, consisting mainly of exchange, supplemented by some £2½ millions of gold.

The statutes provide the usual restrictions on Government influence in the affairs of the Bank. The powers of the State to hold shares of its capital are restricted, and actually none of the capital is at present owned by the State. Further, governmental borrowings are rigidly limited in respect of both amount and duration. It will be seen, then, that the scheme of Greek monetary reform has in several important respects followed the regular lines pursued in other League plans. The Greek arrangements, however, are particularly interesting by reason of the precise nature of the standard set up and the establishment of a completely new central institution with privately-held capital. In this fact it would appear that the League machinery has shown an admirable degree of adaptability, a quality which was perhaps still more clearly displayed in the ultimate outcome of the discussions regarding Bulgarian stabilisation.

As regards the Bulgarian scheme it is pointed out that it was decided to vest the functions of a central institution in the existing bank.

One of the generally accepted principles laid down by the League's Financial Committee, however, has been the necessity of ensuring for the central bank complete independence of the Government, and accordingly it was at first required that the capital of the Bank should be disposed of by the Government to private investors. To this the Bulgarian Government could not agree, basing its objection on the scarcity of capital in the country, which, it was argued, would result under the League plan in foreign interests obtaining control over the National Bank. Eventually a compromise was arrived at, the capital of the Bank being left in the hands of the Government for the time being, the Government undertaking to protect the Bank from political interference and to effect the transfer of the capital to private ownership at a date to be fixed subsequently by agreement between itself and the Council of the League. So far no such date has been decided upon.

The lev was given a parity of 673.66 to £1, about one-twenty-seventh of its pre-War gold value, the choice of this figure representing legal recognition of the approximate level of exchange for several years prior to the date of devaluation. The monetary standard is similar to the Greek, the National Bank being required to buy or sell gold exchange on demand at the gold points. Against its notes and other demand liabilities it must maintain a reserve of not less than one-third in gold and/or gold exchange, the second item again comprising, besides bills, balances with central institutions in foreign countries whose currencies are based on gold. Here, too, the powers of the Government to borrow from the Bank are limited in point of both amount and period. In this case, then, as in that of Greece, there is no compulsion on the Bank to accumulate any particular amount of gold as distinct from exchange. The yellow metal is placed in a position which implies no superiority over exchange on gold standard countries.

Roumania's Financial Reorganisation.

Roumania differed from the other two countries in that no direct assistance was obtained from the League of Nations. The plans for financial reorganisation were evolved largely under French advice and were carried out with active support from the same source. Progress towards ultimate stabilisation with the aid of an external loan was retarded by protracted negotiations regarding outstanding liabilities, but one by one the obstacles, which from time to time seemed extremely difficult if not impossible to overcome, were surmounted.

The gold content decided upon gives a parity of 813.6 lei to £1, so that the present lei has a gold value about one-thirty-second of that possessed by its ancestor of 1914, and about two-thirteenth of its second cousin, the new French franc. There is, however, no simple arithmetic relationship between the two cousins, nor between the lei and its Balkan neighbours. The monetary standard decided upon is a hybrid. Like most of the new European currencies, it is on neither a pure and simple gold standard, nor a pure and simple gold exchange standard, and time alone can tell which of the two elements will predominate. The National Bank, which continues to enjoy a monopoly of note issue, is required to redeem its notes in gold or gold exchange drafts, while it must maintain against its total demand liabilities a minimum reserve of 35 per cent. in gold and/or gold exchange. Of this reserve at least five-sevenths, that is 25 per cent. of the demand liabilities, must be in gold.

In order further to safeguard monetary stability, the statutes of the Bank provide that the participation of the State in its capital shall not exceed 10 per cent., the figure adopted in the Greek scheme. The powers of the Government to borrow from the Bank are rigidly limited in point of amount and time, while the State debt to the Bank was substantially reduced under the stabilisation scheme. In addition, the Bank has appointed a foreign adviser, holding office for three years, to assist in carrying out the plan. Generally speaking, then, it will be seen that the Roumanian reform has followed orthodox lines, very similar to those laid down in various League of Nations schemes adopted in other countries.

The details here set out with regard to the new monetary systems in three of the Balkan countries are not without general interest, over and above their particular local significance. It is, first of all, good cause for satisfaction that Greece and Bulgaria, containing between them roughly twelve million people, returned after many vicissitudes, spread over a decade and a half, to a common international currency basis. Some of the differences, however, between the three schemes are well worthy of notice. Two of them were carried out with active assistance from the League of Nations; one without. Two of them—and not the same two—utilised existing State banks and adapted them as central, though not exclusively central, institutions; the third established an entirely new central bank. The two League schemes instituted a distinctly gold exchange standard; the Roumanian a hybrid with a strong bias towards the metal. Each, moreover, has a different set of reserve requirements. One lays down a minimum of 35 per cent., of which five-sevenths must be metal; one of 35 per cent., of which none need necessarily be metal; and one of 40 per cent., which again may be entirely in exchange. This comparison illustrates in striking form the fact that the numerous ratios set up in the course of European reconstruction are almost entirely arbitrary. True, the general level of the total reserve figure is about the same throughout the entire field, but the fact that substantial differences exist in the required sizes and constitutions of cash reserves indicates that in the statutory provisions lies scope for future economy, through international co-operation, in the use of gold as a basis for credit and currency.

Finally, it is interesting, and not altogether satisfactory, to find still more new arithmetic units being instituted with each new reconstruction. In pre-War times the four countries referred to in this article used a common parity, the same as that of the franc. By this time not only have three of the four adopted new and diverse parities, with the fourth showing a distinct probability of selecting yet another, but their larger associates have done likewise, and only the Swiss franc remains faithful to the parity of the Latin Monetary Union and its affiliated countries. It is not mere sentiment that prompts the words "All, all are gone, the old familiar faces." A process of complete abandonment of old units and adoption of some new common arithmetic basis would have had much to commend it when set side by side with the preservation, in nothing more than name, of pre-War currencies. A decent burial might have been preferred to continued existence in a ghostly form. In spite of this minor disappointment, it is possible none the less warmly to welcome the new, gold-based currencies which bring Europe a stage nearer to complete economic reconstruction.

An exhibition of minerals and of the various mineral waters obtained in Bulgaria is to be opened in Sofia in April.

The Hungarian Export Institute is to open branches in Bucharest, Belgrade, Sofia, Constantinople, and other centres.

The Ceskomoravska-Kolben Engineering Company, of Prague, has obtained a contract for the supply of plant for the power station of the Yugoslav tobacco factory at Nish.

The discussions at the recent conference of delegates of the Austrian, Czechoslovak, Hungarian, and Yugoslav State railways, held at Ljubliana, centred round the reductions to be made by the individual railways in favour of a direct tariff, and on the question of a special commission will now draft tariffs to be introduced for one year on probation.

Motors and Motoring.

By G. B. B.

Starting up from Cold.

At this season of the year many motorists are experiencing a little difficulty in starting up from cold; a difficulty that owners of cars of an older type will appreciate. The inexperienced may be disposed to blame the petrol used; to consider it of a lower grade than hitherto. Some of the rather wild remarks that have appeared lately in the lay Press may tend to support them in that impression and some may believe that the garage keeper has been mixing a proportion of paraffin with the petrol in order that he may the sooner retire on a competency. Those who have had a few years driving experience will know that the trouble is due to the cold, bitter, even Arctic weather we have been having of late.

It is sometimes a most difficult matter to get an engine to start on a cold morning, especially if the car has been standing in an unwarmed garage and there has been a little frost in the night. Experience, always a hard master, will have taught the practised hand exactly how much flooding of the carburettor is required, and the right amount of throttle opening and spark advance. There is very little use in giving any hints as to these points, as practically every engine is a law unto itself in these matters. Wringing out a rag in very hot water and wrapping it round the carburettor will often get over the difficulty, as also will draining the radiator and filling it up with reasonably hot water. Most of the easy-starting accessories on the market are efficient, and in cases of chronic difficulty one or other of these may be fixed with advantage.

Generally speaking, however, the chief trouble is found after the engine has started and the driving of the car commences. A cold engine develops comparatively little power, and it is not until the temperature of the cylinders and the radiating water has risen to something near that of boiling water that the engine begins to work as it should. The only way to get over the difficulty is to get this degree of heat as soon as possible. With a car fitted with radiator shutters and automatically operating thermostats the trouble only exists to a minor degree, but with an older car a good deal of coaxing has to be done. Since the temperature of the engine apart from the question of the richness of the mixture and other driving points, depends on the degree of heat of the cooling water, it is obvious that the thing to be done is to raise this to the required temperature as quickly as possible.

Of course, the quickest way, as has been said, is to drain the radiator and fill it up with boiling water, but in many garages there are no facilities for obtaining boiling water and there may be some domestic friction in connexion with heating a few kettlefulls on the kitchen gas stove.

In view of all this the best plan is blanket the radiator, as it is obvious that with the radiator open and the fan working energetically at its task of driving icily cold air through it it is not easy to get the water warm. The blanketing can be done by putting a piece of newspaper over the radiator to prevent air being drawn through its tubes. The paper will be held firmly in place by the suction of the fan and the movement of the car, and there is no need to get out to remove the paper. As soon as the engine is running well all that has to be done is to stop the car, throttle down the engine to its slowest speed and the paper will drop off.

Another good tip is to have a throttle fixed in the radiating system itself, so that the circulation of the water can be stopped or slowed down when required. This, combined with adjustable radiator shutters, will get over all the difficulty, but when used a certain amount of care has to be taken, as the engine may over-heat if, through a moment of forgetfulness, the engine is run for some time with its cooling system out of action.

That Deputation.

It is with a certain diffidence that I pass into the Opposition lobby, so to speak, over this little matter of Mr. Churchill's speech to the deputation from the motor traders who visited him the other day. All my fellow motorists and a number of other gentlemen who may not and probably do not know a back axle from a back-fire, are joining in a chorus of vituperation against the Chancellor, who made, in my opinion, a very sensible speech. The motor industry is a sheltered trade; no one with a grain of common sense can deny it. Motorists are a favoured section of the community; again, no one with any regard for truth could contradict the statement. Well then what's all the trouble about? It seems, nowadays, that motorists must look at everything from the narrowest possible point of view. For some reason, the class has, as a body, become extremely selfish; it wants all the roads and all the privileges and all the rights.

Roads and Employment.

Mr. Lloyd George's solution for the unemployment problem of a gigantic scheme of road construction may be the kind of thing which will carry weight with what I might call the mass electorate of to-day, but it is not likely to carry conviction with those who know much about the latest methods of road construction. That the country needs large numbers of new roads to cope with the ever-increasing traffic is not a matter that admits of dispute. It is only too apparent, and one can only hope that in the process of the construction of the many new roads required the countryside will not suffer more than

Contractors to the Greek Government for the construction of a Complete System of Roads throughout the Country.

is absolutely necessary. The roads already made are no doubt very serviceable but they are helping to destroy the England that made a day in the country a sheer delight. This is not, however, the matter which I wish to discuss now. In common with every other branch of industry the science of road construction has developed apace, and all manner of machinery is now being utilised to do work which was previously done by manual labour. There is one elaborate American machine—a power shovel—of which it is said that it replaces “armies of labourers” with pick and shovel. If Mr. Lloyd George’s scheme is to be effective it is obvious that his proposed series of roads will have to be constructed without the machinery which is economising labour on the roads as it is in every branch of industry. Even if it were effective one cannot go on building roads *ad infinitum*, and except as a temporary and distinctly limited contribution to the solution of the problem there is nothing in the plan.

Motor Cycles in the London Museum.

Most motor cyclists are altogether unaware that there is a most interesting exhibition of ancient and modern motor cycles at the Science Museum, South Kensington, London. The machines staged show the history of the motor cycle over a period of thirty years. In all, there are eleven mounts on view. The earliest is a 2 h.p. Werner of 1897. Advance of design, in those far off days, is shown by the 1901 Singer and the 1902 Humber of 1.75 and 2.75 h.p. respectively. There is a gap in dates, from 1909 to 1925, when the Humber is again represented, in the same horse-power. The only sidecar machine on view is a 1927 Rudge-Whitworth outfit, whilst the most modern motor cycle—and the only one of 1929 manufacture—is a 5 h.p. Ariel.

PALESTINE ORANGE EXPORTS.

The Empire Marketing Board reports that the total direct shipments of Jaffa oranges to the United Kingdom up to March 1 (including fruit transhipped at Port Said before the direct shipping season started) amounted to 945,000 boxes, as compared with 1,220,000 boxes at the corresponding date last year. Total shipments to the Continent amounted to about 280,000 boxes, and 86,000 boxes had been despatched by rail via Kantara. The total quantity consigned by sea and rail in the present season therefore amounts to over 1,300,000 boxes out of an estimated production for export of about 1,600,000 boxes.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows under date February 20:—

Arrivals in Kordofan Stations (including Tendelti) amounted during the last five days of January to 318 tons, as against 528 tons last year, a shortage of 210 tons, or 40 per cent. This brings the shortage in January to 900 tons. In February to date, arrivals amounted to only 1,192 tons, as compared with 2,212 tons for the same period of 1928, i.e., a shortage of 1,020 tons, or 46 per cent. The shortage of Kordofan arrivals this season to this day totals, therefore, about 1,900 tons.

The smaller arrivals of this season as against last are attributed to the cold weather we have had this year as compared with the exceptional heat experienced during the winter of last year. On the other hand, a crop might be late but still large in total, as for instance in 1926, which with its 26,000 tons was the largest crop recorded. If this year’s Kordofan arrivals are compared with those of 1926 we find they are larger by about 750 tons, or 31 per cent.

Taking El Obeid as the standard, prices opened at 3d. per cwt. less than the closing price on January 26, but fluctuated within that limit up to the 31st, when they were again back to the closing price of the 26th. The following market day, i.e., on February 2, they rose by 5d., on the 3rd and 4th by another 2d. each day; on the 5th the rise was as much as 2s. 6d. per cwt. in a single day. However, a fall of 1s. occurred the following day, but that was only temporary and prices re-started gradually to increase, the rise reaching on the 13th 5s. 3d. per cwt. Since then there has been a falling movement, and on the 18th the fall attained 3s.

The total increase between January 12 and February 18 amounted to 4s. 6d. per cwt. The cause of the increase is undoubtedly due to

exporters having sold heavily for early shipment against expectations of the crop being not only large but early, as last year.

The demand for gum arabic has been checked by the increase in prices on this side, and it seems buyers abroad are not in a hurry to buy at the present high prices, at least until the position as to the total crop is more clear.

CYPRUS CROP PROSPECTS.

The report on Cyprus crops for February states:—

An improvement in weather conditions has favoured the growth of wheat, temporarily checked by frost and snow, and the general prospects are good.

There is an abundant crop of green barley, which is being fed to stock. The condition of the barley being grown for grain is satisfactory, and a good crop may safely be expected. Prices for old barley are 2s. 6d. to 2s. 8d. per bushel.

The continued rains are favourable for a good crop of oats.

There has been a slight upward movement in the prices of potatoes. New potatoes are now sold at £6 15s. per ton, and a rise is anticipated. The ground is ready for the summer crop.

Small shipments of baled cotton lint continue to be made to Greece. The price for seed cotton is 4s. per stone.

The exports of carobs is steady. The price is about £6 per ton.

Oranges of the Jaffa type are 55s. per 1,000, of the Valencia type 35s. per 1,000.

Lemons are 20s. per 1,000. The stock is rapidly diminishing.

The preparation of tobacco seed beds continues. There is a great demand for good tobacco seed, and planting will be more extensive than in previous years.

NEWS FROM ALL SOURCES.

The dividend of the National Bank of Greece has been fixed at 2,600 drachmæ for 1928.

During November 47 motor cars and 14 motor trucks and omnibuses were registered in Iraq.

The net earnings of the Yugoslavenska Bank, Zagreb, for 1928 amounted to 10,542,000 dinars, and the dividend is 8 per cent.

The traffic receipts of the South Indian Railway Company for the week ended February 9 amounted to Rs.12,10,406, making the total from April 1 Rs.5,32,02,925.

The dividend for 1928 of the National Bank of the Kingdom of the Serbs, Croats, and Slovenes has been fixed at 400 dinars per share.

According to a Belgrade message the State Mortgage Bank of Yugoslavia has succeeded in obtaining a loan of 6,000,000 Swiss francs from a syndicate of Swiss banks.

Hussain Said Bey, of the Egyptian State Railways, who has been in London for a short time in connexion with the electrification of the Helwan Railway, left for Egypt on March 10.

The directors of the National Bank of Egypt propose to pay a final dividend of 14 per cent. (£1 8s. per share), making a total of 18 per cent. in respect of the year 1928, as against 17 per cent. for each of the two preceding years, on the ordinary capital of £3,000,000.

An Athens message states that France is renouncing special treatment on imports into Greece of silk and silken mixture goods, calf hides, and pharmaceutical products in exchange for Greece’s similar action with regard to Greek wines imported into France. Such goods will now come under the ordinary tariff.

At the annual general meeting of the Eastern Bank on March 27 a final dividend of 5s. per share, less tax at 3s. 8.627d. in the pound, after allowing for relief in respect of Indian taxation, will be recommended, making 9 per cent. for the year. The directors propose to place £25,000 to the reserve fund and to write £5,000 off premises account, carrying forward £44,470.

The Greek Legation in London states that the Piræus Harbour Authorities report that all steamers entering that port carrying grain may go alongside the quay and unload their cargoes direct on the quay. By this improvement it is estimated that the daily unloading of grain is now increased to 600 tons, instead of only 400 tons. Up-to-date silos in the harbour are expected to be completed and ready for use at the beginning of next year.

A statement issued by the Calcutta Electric Supply Corporation, Ltd., shows that the number of houses connected has risen from 708 in 1901 to 24,985 in 1927. The gross revenue has increased from £23,248 to £930,291, the ordinary dividend from 6 per cent. to 12 per cent., plus a cash bonus of 4d. per share, and the units sold from 962,958 to 129,090,228. The units sold in 1928 had risen further to 147,875,086, an increase on the year of 18,784,859.

FLAX PRODUCTION IN CYPRUS.

Brief reference has already been made in these columns to the visit to Cyprus of Mr. W. J. Megaw, of the Northern Ireland Ministry of Agriculture, for the purpose of investigating the possibilities of flax growing in the Island and to the conclusions at which he arrived. His report to the Empire Marketing Board, is given in a supplement to the *Cyprus Gazette*. We give the following extracts :—

In the plains of Cyprus there are large areas of deep arable land amounting to probably at least 400,000 acres on which cereal crops (mainly wheat and barley) are grown in the winter season. A large proportion of this land can be irrigated during winter, but even without irrigation cereal crops can be successfully grown when there is a normal rainfall. I consider that this land is very suitable for the production of flax as a winter crop both for seed and for fibre purposes.

The summers are extremely dry and hot and in consequence the production of either cereals or flax at that time of year is an impossibility. The temperature during winter is cool, and this condition, combined with that of a moderate rainfall, and the provision of irrigation over large areas, provides the conditions suitable for a flax crop. There is usually sufficient water in a number of the rivers to provide for the retting of the flax which is normally ready for harvesting in April. The harvest period is dry and sunny, and the crop can be dried and the seed saved in excellent condition at a minimum of expense. I may here mention that the nature of the water which is hard, and the dry warm climatic conditions at harvest time, would, I consider, render it impossible to produce economically the better qualities of fibre.

The cultivation of flax in Cyprus is limited at present to three districts. The approximate areas in these districts being as follows :—

Zodia 300 acres grown for fibre for domestic use.
Paphos 200 acres grown for fibre for export. Messaoria 3,000 acres grown for crushing seed only. Total 3,500 acres.

For fibre production a substantial quantity of Belgian and a small quantity "J.W.S." seed were introduced several years ago, but the native varieties are still the principal kinds of seed used both for seed and for fibre purposes. These native varieties produce shorter straw and much larger yields of seed than the fibre varieties, and from the information I obtained they appear to be much more vigorous during the early period of growth. It is still a subject of doubt as to whether the native or the imported fibre varieties of seed are the most suitable for the production of fibre under the conditions which prevail in Cyprus.

Existing Conditions of Industry.

In the Zodia district it appears that about 1,500 families cultivate flax, and employ themselves in their homes during their spare time in the conversion of the flax into home-made linens from which they make embroidered goods. The methods followed are most primitive and are similar to those used in early Biblical times. The work is done almost entirely by women who are very skilful in the various operations. The women are quite satisfied if they can earn a few piastres per day at this work. It seems, however, despite the small earnings that this form of home industry has brought comparative prosperity to the villages in which it is practised. In this district an effort was made to produce fibre for export and for this purpose a Belgian scutching mill was erected several years ago by a local Co-operative Society. Unfortunately, this mill, which is still maintained in good working con-

dition, is now idle. The peasants who had their flax scutched in this mill appear to have been very well satisfied with the monetary returns which they received for their flax crops.

In this district there is an abundance of cheap labour for dealing with a large area of flax. The women workers are very skilful in the handling of flax, and in a scutching demonstration at the mill that was arranged for my benefit, I found that they could scutch flax in a manner that would compare favourably with Belgian workers. I may mention that these women received their training in scutching from the Agricultural Department's Flax Instructor.

For the past four years the Cyprus Agricultural Department have made an effort to promote as a new industry the production of fibre flax for export. Of the three flax mills that were erected as an outcome of this effort only one is now in operation. This must be regarded as a disappointing result. I do not believe that this check in development is due to the unsuitability of the conditions in Cyprus for the production of fibre, but rather to the inexperience of the flax growers in new methods of handling the crop, which of necessity is a cause of serious waste, and to the want of confidence on the part of those who are in a position to finance the industry.

Owing to the illiteracy of the peasants it is impossible for the Agricultural Department to get accurate information with regard to the yields and the monetary returns obtained from flax. From the information that is available, I formed the opinion that flax when grown for fibre was more profitable than any of the cereals crops, and this was the view taken by the various flax growers whom I interviewed. The cost of cultivating and handling the crop by the peasant on his own holding is very small, and, in view of the fact that there is in winter on most holdings a considerable proportion of the arable land under fallow which could be devoted to flax, I believe that flax fibre of a relatively poor to medium grade could be produced as cheaply in Cyprus as in any of the flax growing countries of the world. I, therefore, consider that if well directed efforts were made, it should be possible, despite the disappointing results hitherto obtained, to establish flax growing in Cyprus for the production of fibre for export on a stable and permanent basis without disturbing the production of other crops. Such efforts for a beginning, should, I consider, be confined to one district, such as for example that of Zodia in which the peasants have considerable skill in the handling of flax, and in which there is an available flax mill. If at such a centre the flax growing was successful, confidence in the stability of the industry would be secured and it would then be a comparatively easy matter to get it developed in new districts on the most approved methods.

To facilitate such development, I have recommended that the mill at Zodia be utilized as a centre for the training of workers in the various operations of converting the flax crop into fibre. I consider Zodia is specially suitable for this purpose on account of the degree of efficiency which the workers at that centre have already attained. This scheme would involve an expenditure which would require to be met by a grant out of public funds.

Through far from being an ideal method it may be necessary in the beginning of development for the deseeding and the retting of the flax straw to be done by the flax growers. These operations could, however, be much more

efficiently carried out in connexion with a flax factory properly equipped for the purpose and in which workers skilled in the retting of flax were available. The ultimate aim should, therefore, be to get flax Co-operative Societies or private firms to establish factories and to purchase the dried unretted flax straw from the peasants and carry out at their own risk all the further operations requisite for the production of fibre.

Provision of Trained Supervisors.

The cultivation, retting and scutching of flax to meet modern requirements are technical matters which in new flax growing districts demand the services of well trained and experienced supervisors who could devote individual attention to the growers and who would also be capable of training scutchers and of managing flax mills.

I have, therefore, recommended the Director of Agriculture in Cyprus that should his Department decide on developing the flax growing industry on the Island they should send a few Cypriots who have received a college training in agriculture to Belgium and the North of Ireland for a course of training in the cultivation and handling of flax. Such a course should be severely practical and might extend over a two years' period. These young men on their return to Cyprus should be capable of carrying out all the various operations connected with the production of fibre in a skilful manner and thus be qualified to train farmers and workers in efficient methods of handling the crop.

An alternative to this course would be to employ a number of Belgian experts. I do not, however, consider that this plan would be satisfactory for the following reasons: (1) The language difficulty; (2) the Belgian experts would not understand the conditions peculiar to Cyprus and would, I fear, be unable to adapt their methods to suit these conditions.

Company Meeting.

SOUTHERN PUNJAB RAILWAY.

Government's Purchase Proposals.

The ordinary general meeting of the Southern Punjab Railway Company, Ltd., was held on March 6 at the company's offices, 36, New Broad Street, London, E.C.

Mr. James M. Rendel (the chairman), who presided, in moving the adoption of the report and accounts, said:—The earnings for the year to September 30 last were very satisfactory indeed, and constituted a record, and in other circumstances you would perhaps expect me to examine the figures in detail and comment on them. But as you are aware, the Secretary of State has recently given notice of his intention to exercise at the end of this year, that is, at his first opportunity, the power of purchase reserved to him under his contracts with us. You will probably, therefore, prefer to hear from us what we have to say about the position which has thus been created.

On January 1, 1930, our four lines of railway will pass into the possession of the Secretary of State, and he will have to pay in sterling for each of them a sum which cannot be less than its capital cost in sterling and cannot be more than 20 per cent. in excess of that capital cost, and which within these minimum and maximum limits, depends on the net earnings of the line—the stipulation in the case of each of the four lines being that, subject to the limits I have mentioned, the price is to be equal to 25 years' purchase of the yearly average of the company's net earnings during the five years preceding the date of purchase. How is this going to work out? In the case of the main line the full premium of 20 per cent. has for some time been absolutely secure. Any falling off in the receipts during the remaining months before us, not even their total disappearance, could depress the five years' average to such an extent as to affect the price to be paid for the line. The case is the same with the Ludhiana Extension.

I wish I could say the same of the Jullundur Doab Railway Extension. Although as a feeder to the other two lines it has fully justified its construction, its local traffic has been a disappointment, and it is now in a position which is actually the converse of that of the main line and the Ludhiana Extension, in that it would require within the next few months a very extraordinary—not to say miraculous—development of traffic to raise the five years' average to a point which would produce any premium at all. What therefore we shall receive for this line is the amount of its capital cost in sterling and all idea of premium must be abandoned.

There remains the Sutlej Valley Railway line. This line was com-

pleted in 1910 and great things were expected of it. But in India railways develop slowly, and before our hopes began to be realised the War came, and by order of the Government of India the rails were pulled up to provide for military requirements elsewhere, and so the line remained out of action for some eight years, until it was once more opened for traffic with some change of alignment in November, 1925. At first the traffic, though far from disappointing, was not sufficiently large to encourage the hope that much, if any, premium would be earned, should the Secretary of State buy the line at the end of 1929. Since the beginning of 1927, however, the situation has improved to a very marked degree, and traffic has grown to such an extent as to make it highly probable that but for the compulsory stoppage of eight years the full premium would have actually become payable by that time.

When, therefore, we received notice of purchase the other day, we reminded the Secretary of State of our claim, and submitted to him that the facts were such as to justify us in asking him to guarantee the full premium on the Sutlej Valley Railway. His reply, received not long ago, was to make a counter proposition, which, while not conceding what we asked for, is of so fair and equitable a character that we felt that we had no alternative but to accept it. It is to base the premium not on a five years' average as prescribed by the contract, but on the average of the three years preceding the date of purchase, i.e., the three years 1927, 1928, and 1929, so as to eliminate from the calculation the antecedent period.

The capital expenditure on the main line and the Ludhiana Extension, which amounted at the end of September last to £2,542,800, may be expected by the end of next year to reach the sum in round figures of £2,596,000. The premium on that amount would be £519,000. Capital expenditure on the Jullundur Doab Railway on the same footing may be taken at £910,000, but, as I have said, it carries no premium. In the case of the Sutlej Valley Railway line the capital expenditure in like manner we put at £1,025,000, on which the full premium, if it is earned, would amount to £205,000. The total capital expenditure on the four lines will thus be £4,531,000, and the premium £724,000, making a total payment of capital expenditure and premium combined, if the full premium on the Sutlej Valley Railway is earned, of about £5,255,000. It may be, of course, that this figure will not be reached.

Assuming these figures to be correct, we hope that with the aid of £150,000 standing to the contingencies account, together with the carry forward at the end of the current year, and other reserves, to be able, after meeting all liabilities including cost of liquidation, to make a distribution to the ordinary stockholders on liquidation of not less than £200 for every £100 stock held, and in the meantime to pay them, in addition to the dividend now proposed, a similar dividend for the current year ending September next. The earnings for the last three months, which cannot be known till after December 31, will be dealt with on the final distribution.

Sir Henry P. Burt, K.C.I.E., C.B.E., the deputy chairman, seconded the resolution, which was unanimously adopted, and the dividends recommended were approved.

NEW COMPANY.

SUEZ CANAL LIGHTERAGE.

The Suez Canal Lighterage Company, Ltd., has been registered as a private company, with a nominal capital of £10,000 in £1 shares (5,298 "A" and 4,702 "B"). The objects are to adopt agreements (1) with the English Coaling Company, Ltd., and (2) with British Coaling Depôts, Ltd., and to carry on the business of ship-owners, charterers, salvors, salvage ship owners, freight contractors, colliery proprietors, coal merchants and exporters, etc. The "A" shares are to be issued in the first instance to the English Coaling Company, Ltd., or their nominees, and the "B" shares to the British Coaling Depôts, Ltd., or their nominees, and are in all respects to rank *pari passu*. The registered office is at 117-121, Leadenhall Street, E.C.3.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 6:—

Egyptian Futures.

Sakel Contract.—We have experienced rather a quiet week in this market, with only moderate fluctuations taking place from day to day. In the earlier stages the undertone was rather heavy and unsettled owing to March liquidation and at a slightly later date by the re-selling of unwanted dockets by speculative interests. Near positions have again shown weakness and, even at the handsome carrying premiums now in operation, spot houses generally are not disposed to carry docket cotton; we consider their caution in this matter has been carried to an excessive degree, as spot premiums here have a hardening tendency and spinners are beginning to show more interest in the local stock. As soon as the tenders passed into stronger hands the market started to pick up, and with a sharp rise in American values reacting favourably on sentiment, we finish the week with near positions showing gains of 31 to 38 points for near and 27 to 29 points for distant positions. Dealing in new crop positions have not been on the scale of recent weeks, and straddle differences with Alexandria in these remain pretty much the same as last week. We still have a favourable opinion of local purchases of January against sales of November or January in the overseas market. Trade reports, although still unsatisfactory, show a slight improvement, and this has been backed up by a moderate increase in the offtake; the demand, however, still leaves a good deal to be desired, and will have to expand materially if further advances are to be consolidated. Although in the general situation we do not consider further appreciation likely in the immediate future, the position is dangerous on the "short" side, as, apart from our contract being at a heavy discount, it has recently been utilised too freely as a hedge for stocks of various qualities which are not tenderable.

Upper Contract.—Quiet markets with rather subdued tendency have ruled since last we wrote, thus the advance of 22 to 26 points for near and 11 to 21 points for distant positions does not reflect the appreciation witnessed in the American departments. Trade support has again been moderate, but there are indications of increasing interest on the part of both local and Continental users. We notice that flood warnings have been issued for the Mississippi river; having in mind the effects of these, two seasons ago, further news from this quarter will be eagerly scanned. We still have a favourable opinion of this contract and advice purchases round the present level.

Egyptian Spot.

An improved tone has been noticeable in this department. Trade reports, both at home and overseas, have been better, and the keen interest which has been aroused amongst spinners by the arrival of the early shipment of Sudan Sakel, has spread to some extent to the ordinary Egyptian growths. In Sudans, a very large business has taken place, not only in the new crop, but also in the old. The old crop cotton disposed of consisted almost entirely of the lower qualities and buyers appeared well satisfied with their purchases. Competition for the choice lots of new crop has been very keen and some good lines have been placed at prices ranging from 20d. to 23d.

There has been an improved inquiry for Sakel cotton, the most popular range being 100 to 200 points on March contracts. Liverpool is still much cheaper than Alexandria, but not perhaps quite so cheap as recent quotations have indicated. Latterly, the difference between spot Sakel and futures has been widened, thus bringing quotations more into line with actual business. Inferior qualities at from 4d. to 9d. have not been so prominent of late in the daily inquiry. In Uppers, some improvement has also been witnessed. There is still apparently a plentiful supply of cotton available here at round about the contract price, but the quality represented by 20 to 30 points off March is rapidly becoming harder to find. White, Maarad, and Nahda have been comparatively neglected this week, and Pilon has been in very moderate demand.

C.I.F. business has again been on the quiet side. Forwardings to spinners for the week ending the 1st inst. were returned as 8,657 bales Egyptian and 682 bales Sudan. Estimated spot sales for the week, 1,900 bales Egyptian and 7,700 bales Sudan Sakel. Quotations of Sakel have been advanced 40 to 45 points, those of Upper and Pilon 10 points. F.G.F. Sakel to-day, 18.55d. F.G.F. Pilon to-day, 13.74d. F.G.F. Upper to-day, 12.74d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended February 28, state:—
Since our last report the futures market has been fairly active with a firm note. The week's summary of price movements is as follows:—Sakellaridis: March, 36.90 dollars, 0.86 dollars up; May, 37.36 dollars, 0.66 dollars up; July, 37.95 dollars, 0.92 dollars up; November, 38.25 dollars, 0.85 dollars up; January, 38.25 dollars. Ashmouni: April, 23.39 dollars, 0.64 dollars up; June, 23.86 dollars, 0.69 dollars up; August, 24.10 dollars, 0.63 dollars up; October, 24.40 dollars, 16.59 dollars up.

Sakel.—The rise of half a cent in New York during the last few days restored the confidence which local operators on the market were fast losing, and not only did their liquidations of long positions cease, but quite a fair amount of buying made its appearance. The new bull movement did not, however, receive any support from the trade and a few profit taking sales sufficed to cause a setback in which most of the improvement was lost. The Liverpool Sakel market has only feebly responded to the movement in Alexandria, but for the time being operators here seem to take little notice of prices quoted in Liverpool. The first shipments of Sudan Sakel have just arrived in Liverpool, and, judging from the daily sales figures, Lancashire spinners seem rather eager to acquire the cotton. We are of the opinion that the course of prices on our market, at any rate for the immediate future, will be governed chiefly by the fluctuations of New York, with the probability that any movement either way there will be reflected to a more pronounced extent by our market.

The Sakel/Uppers straddle (March/April) this week stands at 1,351 points, against 1,329 points last week and 952 points at this time last year.

Uppers.—This market has been fairly active and prices have risen in sympathy with American. Although the trade demand has continued to be better than for Sakel, its proportions have not been of the extent required to relieve the rather heavy feeling which has characterised the Uppers market for some weeks.

Against the third February tender, dockets for 2,250 kantars were issued, bringing the total February tenders from the beginning of the month up to 13,750 kantars.

The Ashmouni-American straddle (April/March) this week stands at 284 points, against 277 points last week and 703 points at this time last year.

The week's receipts amount to 178,148 kantars; against exports 145,817 kantars; the stock in Alexandria stands at 3,325,661 kantars.

Spot.—The past week has seen a slight increase in activity at Minet el Bassal, but spinners continue to take but a moderate interest in our cottons. Sales for the week amount to about 16,600 bales, of which we estimate 4,900 bales Sakellaridis, 10,300 bales Ashmouni and Zagora, 1,000 bales Pilon, and 400 bales other growths.

Sakellaridis. Continues in distinctly moderate demand, and a very modest turnover has resulted. All grades have been dealt in up to Strict Good, but the medium qualities, of which the selection on offer is very poor, have attracted by far the most attention. Spot differences are generally unchanged.

Ashmouni and Zagora. Continue in good favour and a good business has been done, chiefly in the medium qualities, though the

GROWERS AND SHIPPERS SHOULD
SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary

better and lower styles have been dealt in on a small scale. Spot differences are generally a little dearer.

Pilon: A much improved demand has appeared and quite a good business has been done, in which all grades have shared. Spot differences are generally rather dearer, especially the better grades. Decent staple cotton is scarce and it is probable that the poor quality of the cotton available in restricting business.

Other Varieties: A fairly good business has been done in White and Nahda at last week's differences. No business is reported in any other variety.

Up-country: The ginning factories are becoming fairly bare of cotton and in many districts are only working intermittently; this should have for effect a marked decline in the daily arrivals in Alexandria.

Crop, 1929.—At the beginning of the week the weather was unfavourable, but conditions became normal later. Some sowing has been started in the South and Central Delta, and also in some districts of Upper Egypt. Both the preparation of land and sowing are at about their normal stage for the time of the year. Prospects for the supply of water continue to be satisfactory. We give below the figures registered by the principal Nile gauges on the 27th inst.:—Malakal, 10.26 metres, against 9.84 metres last year; Roseires, 11.59 metres, against 11.33 metres last year; Wadi Halfa, 1.31 metres, against 0.77 metres last year. The discharge from the Assuan Reservoir registered on the same date was 750 cubic metres per second, against 578 cubic metres last year and 976 cubic metres per second in 1927. The level of the water in the Reservoir for the same three dates were 113.58 metres, 112.12 metres, and 113.60 metres respectively.

The Belgrade Co-operative Society made a net profit of 2,000,000 dinars in 1928.

THE LATE SIR JOHN DENISON-PENDER.

We regret to announce the death of Sir John Denison Denison-Pender, chairman of the Eastern and Associated Cable Companies, which took place last week at his residence in Grosvenor Crescent, S.W., at the age of 73. The third son of Sir John Pender, Sir John was educated at Eton, and in 1878 began his long connexion with the Eastern Telegraph Company and its associates. He was made a director in 1881 and managing director in 1893. In 1896 he became deputy-chairman, and on the death of Sir John Wolfe Barry in 1917 he became chairman. He played an important part in the recent negotiations for the merging of cables and wireless. Sir John received the G.B.E. in 1920, and also was awarded several foreign orders. He was a director of the P. and O. Company and of the Atlas Assurance Company.

The return of the National Bank of Roumania, dated February 7, indicates the alterations resulting from the Stabilisation Law. It shows an increase of the amount of the gold reserve from 255,869,747 lei to 8,258,564,225 lei, while Government advances were reduced from 10,678,975,705 lei to 4,000,000,000 lei.

In virtue of an exchange of notes between Egypt and Yugoslavia, Egyptian goods on importation into Yugoslavia and Yugoslav goods on importation into Egypt are to enjoy most-favoured-nation treatment on terms of reciprocity. The agreement is not to apply as regards the treatment accorded by Egypt to Sudanese goods and to goods of certain surrounding countries in virtue of regional conventions, or to that accorded by Yugoslavia to products of surrounding countries in order to facilitate frontier traffic. The agreement is a temporary arrangement and may be denounced by either party at three months' notice.

Notes of the Week.

Conciliation in the Balkans.

The Balkan Peninsula would seem to have entered—at long last—on an era of conciliation. The past week has seen the signature of protocols preliminary to the conclusion of a Pact of Friendship between Yugoslavia and Greece, the conclusion of the Pirot Conference between Yugoslavia and Bulgaria, the reaching of a further stage, of a not unsatisfactory nature, in the negotiations between Roumania and Hungary over the Optants question, and an offer, apparently sincere, on the part of Turkey to settle the question of the Constantinople Municipal Loan. Our Belgrade Correspondent is, no doubt, right in attributing these healthy developments in part to the changed outlook in Yugoslavia, which is to a large extent the pivot of Balkan peace. The refusal of previous Yugoslav Governments to abandon a rather aggressive attitude in their foreign policy threatened to consolidate opinion in other Balkan States against Yugoslavia; but the change has come just in time to prevent such a regrettable development. The new Yugoslav outlook has reacted immediately on the general situation in the Peninsula, and those who still hope that the States of South-Eastern Europe can one day be brought to appreciate the advantages of close political and economic co-operation have no need to despair of the faith that has been in them throughout a very black period.

Yugoslavia and Greece.

The protocols signed by the representatives of Yugoslavia and Greece at Geneva on March 17 serve to clear out of the way a number of questions at issue between the two countries, which prevented a renewal of the former Treaty of Friendship and Alliance. Six in number, the protocols dealt with different aspects of the Salonika dispute. In the settlement now reached Greece is confirmed in her sovereignty over the Yugoslav Free Zone, inasmuch as the Greek authorities will exercise police and judicial functions in that zone and ships will be required to conform with the sanitary requirements of the Greek port; but the commerce of the zone, both outward and inward, remains otherwise unrestricted, as far as Greece is concerned, and is wholly under Yugoslav control. The rail-

way question is also settled, and the Yugoslav authorities are assured of the free and regular circulation of traffic on the line between the frontier and the Free Zone. Yugoslav misgivings had, in the first instance, been based on the recognition that, apart from the notorious lack of efficient administration of Greek railways, the officials of any one country in the Balkans could be relied upon to put a spoke in the wheels of any business belonging to rivals of another country, and for this reason a resolute attempt was made to eliminate, even at the cost of Greek sovereignty, all possibility of Greek handling of Yugoslav traffic. With the passage of time not only has Greek railway administration become far more efficient, but a new spirit is also abroad in the Balkans which is realising the futility of a policy of pinpricks directed against the peoples of neighbouring countries under the impression that national interests were thereby promoted. The Yugoslav-Greek protocols, according to their summarised version appear to constitute a sensible business arrangement on which both countries are to be congratulated.

The Albanian Church.

Now that the quarrel between the Œcumenical Patriarch and the Albanian Church has acquired the widest possible publicity, it would seem to be more consonant with the dignity of the former to enlist the services of an arbitrator with a view to preventing the controversy from degenerating into an unseemly wrangle by the issue of contradictory statements by the two parties. The Patriarchate, it will be noted, bases its attitude in part on an agreement said to have been signed by Mgr. Chrysanthos in 1926, known as the "Accord of Tirana." It would be interesting to know whether this "agreement" is recognised by the Albanian authorities. Mgr. Chrysanthos visited Albania in that year; but our Tirana Correspondent reported at the time that the agreement that he offered to the Albanians was not acceptable to them, and the envoy of the Patriarchate had to return without arriving at any understanding. There may have been a subsequent agreement which has not achieved much publicity; and, if there is, the Phanar should publish its terms, in order to show how the Albanian Church has violated it. The Bishop of Korytza (Korcha), who was

appointed by the Patriarchate and was expelled by the Albanians, was a Greek, and it is possible that one explanation of the trouble is to be found in that fact. From the Albanian point of view it would be intolerable that a Greek Bishop should exercise sway in Korcha, of all centres in Albania; on the other hand, if the Ecumenical Patriarchate were resolved to keep the Albanian Church "in its place," it would justify the appointment on the ground that there were many Greek-speaking Albanians in that particular district. As a political move, the installation of a Greek prelate in Korcha would be, no doubt, a shrewd one; but the Ecumenical Patriarchate might find it difficult to defend it on the ground of any Christian doctrine. It is the tragic subordination of religion to politics that is largely responsible for the truncated jurisdiction which is now the lot of the Ecumenical Patriarchate, and, incidentally, for the vagaries of a Papa Eftim in its own midst. If his health allows advantage might be taken of the Archbishop of Canterbury's visit to Palestine and the Near East to submit the controversy between the Phanar and the Albanian Church to his arbitration.

The Afghan Trouble.

Much of the news from Afghanistan is of the type which calls for contradiction a few days later. Thus it is now denied that General Nadir Khan has been made prisoner at Khost; he has not, however, met with the same success as Hashim Khan, who went to Jalalabad. The latter has been able to organise a council of the tribes of that part of the country for the purpose of discussing the situation. The meeting was to have been held on March 18. It is noticeable that acceptance of the mullahs' authority, which it had been the object of King Amanullah to destroy, has been the basis of Hashim Khan's negotiations. The position in Afghanistan is such that, even with the re-establishment of a central authority in Kabul, the country must be expected to revert, as far as any progressive movement is concerned, to the position in which it was prior to King Amanullah's unfortunate tour abroad. If the consent of the tribes to the King's recovery of his throne is to be secured by negotiation, they are likely to stipulate for short shrift with reforms that have any semblance of a foreign stamp; at the same time they will also try to regain as much local independence as they can claim to be in their own interests, if not in the interests of the country as a whole. Indeed, King Amanullah may yet find it a harder task to restore his authority over those parts of Afghanistan which have once more experienced the delights and advantages of the independence that puts a premium on lawlessness than to reinstate himself in Kabul, where the Amir Habibullah is experiencing the difficulty of governing with an empty exchequer, which he has no adequate means of filling again from the limited resources of the capital and its immediate neighbourhood.

The Dead Sea Concession.

Another stage in the game of hide-and-seek that has been played round the Dead Sea Concession was completed in the House of Commons this week, when questions elicited from the Under-Secretary of State for the Colonies the statement that the Secretary of State "hopes to be in a position to make a definite offer to the prospective concessionaires at an early date." If that offer is accepted, Mr. Ormsby-Gore added, and if other connected matters are satisfactorily arranged, the concession will be duly signed. From this reply it may be inferred that the British Government anticipates no difficulty from the French threat to take the matter of the Dead Sea Concession to The Hague Court. The story behind this threat is not without its piquancy. A concession in regard to the Dead Sea salts was given to some Turks before the War. Apart from any question of the validity of a concession to enemy subjects, in regard to which no effective work had been done, this Turkish concession was sold to a British subject some seven years ago, who in turn sold it in 1927 to an Indian, who, being unable as a British

national to have recourse against his own Government before an international tribunal, took steps to sell his interest in the matter to a French Syndicate, which, with the help that it claims to have from M. Briand and others, threatens to bring the subject before The Hague Court of International Justice. On the other hand, the French Syndicate is alleged to be willing to come to terms with the British Syndicate on whose behalf so many questions have been asked in Parliament. In the meantime, the British Government would seem to adhere to its decision to give the concession to those who have put in a large amount of preliminary investigation work over a long period of years at the Dead Sea itself and are known to be able to work the concession, in preference to those whose original tenders were not accepted or who might be inclined to use it for a series of financial operations.

"Now Ruz."

The Persian year 1308, which begins to-day, March 21, will be entered upon by the Persian people with confident hope. For the reforms which are reinvigorating their ancient land, under the impulse of the Shah Pahlavi, have now gained momentum. They must go on. Even here, *l'appétit vient en mangeant*. Some of these reforms consist, it is true, merely in throwing off some of the shackles of the past, and may or may not be essentials of regeneration. But quite apart from social reforms, there has been during the régime of the present Shah very solid material achievement. A beginning has been made, for instance, with the great Trans-Persian Railway, which, whether it ever justifies the hopes of its instigators or not, is certainly stimulating Persian thought generally in the direction of economic and industrial development. In road-making, again, there has been most praiseworthy activity. As is pointed out elsewhere in this issue, three thousand miles of roads suitable for motor traffic have been opened up during the last eighteen months. This achievement, at any rate, is unquestionably a step forward, and must be of permanent and increasing value to the Persians. Nor should the willingness of the Persians to obtain the services of foreigners, both in directing their administration, and in the operating of concessions, be overlooked. It is not too much to say, in fact, that the reforms and the development of Persia are proceeding at a most sensible rate; the *tempo* of so-called "Westernisation" is, in short, a model to other Oriental countries. If the Shah maintains his present admirable sense of proportion, and if the Persians, worthily supporting him, sustain their present efforts, Persia may within a generation be taking a much more important rôle in the Middle East than she now enjoys. She herself holds her own solution. Not from outside Persia, but from inside, will come regeneration or reaction. That the Shah can "modernise" his country without the creation in Persia of a single enemy, or class of enemies, is naturally impossible; but his present methods appear to be adequate to the necessities of the situation. It may take centuries to eradicate from the Persian nature certain characteristics which the Shah has publicly stigmatised, such as corruptibility, but on the whole the Persian people may, at the celebration of another "Now Ruz," justly look back on the achievements of the last few years with considerable satisfaction.

Southern Kurdistan.

It has been assumed, from the lack of "incidents" in Southern Kurdistan, that the Kurds who were definitively incorporated in the Iraq State by the Treaty of Angora, 1926, were in process of becoming reconciled with the Baghdad Government. And, indeed, it is the claim of protagonists of the Iraq Government that everything that can reasonably be done for these Iraqi Kurds is being done. Are not the Kurds, the Arabs ask, the Scotsmen of Iraq? Do they not obtain the highest positions everywhere, whether in the political, military, or commercial spheres? Yet there is, unfortunately, another side to this Kurdish problem, a side which was strikingly discovered or made plain on the departure of Sir Henry Dobbs from

Iraq. The High Commissioner's going was the signal for the manifestation of various marks of esteem from many Kurdish and Turcoman chiefs, particularly from Kirkuk, Sulaimani, and Arbil. Their presentation of gifts to the retiring High Commissioner was, however, denounced by certain of the Arabic journals, which, remembering only the fact that the refusal of Arab claims to immediate and complete independence was personified in Sir Henry Dobbs, regarded the Kurdish conduct as little short of treason. The fat then appears to have been in the fire. The Kurds resented the Arabs' imputations, and it needed wise words from the highest quarters to smooth the matter over. Nor does the fact appear to be deniable that this affair has given a handle to those who cry for Kurdish independence and Kurdish Nationalism. It would seem, in the circumstances, seeing that the professed aim of the Iraq Government is not domination but incorporation of Southern Kurdistan, as if a new attempt might officially and beneficially be made to make of Southern Kurdistan in fact rather the Scotland which the Arabs assert it to be than the Ireland which it seems in danger of becoming. The example is vividly before the world at the moment of the ill-results which the comparative neglect by King Alexander of the province of Croatia has had, not only upon Croatia itself, but upon Yugoslavia as a whole. Does not the occasion call, and is not the opportunity at hand, for a Royal tour through Southern Kurdistan? It is idle to pretend that the Kurd is yet a good Iraqi, but if that aim, which, we take it, is shared by both Arab and British Administrators now in Iraq, is to be attained, some high lead must be given to these Kurds, who, after all, form an invaluable element in the Iraq State. Much has been done, admittedly, in the way of preserving and teaching their own language, of calling the Government the Iraq rather than the Arab Government, and so on; but a personal lead might yet accomplish much. Nothing would be more gratifying than to learn that King Faisal had decided to visit the northern liwas of his young State.

A Raid on Trans-Jordan.

The raid which occurred on March 8 in Trans-Jordan was dealt with promptly by the Trans-Jordan frontier force and British armoured cars, and any notion which the raiders may have entertained that the State of the Amir Abdullah was one of the few places in this hopelessly progressive world where the *ghazzu* could be indulged with impunity must have been rudely upset. It is reported that between Qasr al Azraq and Amman the raiders, belonging to the Arab-al-Jabal tribe (?Jabaliyah), did considerable damage, "killing and wounding several people and carrying off plunder." The newspaper statements are more cautiously worded than usual, and instead of finding the whole affair imputed to the machinations of the Wahhabis, we read the rather laconic and impersonal announcement of "Arab raid into Trans-Jordan." Who else than Arabs would be likely to raid the Amirate we do not know, unless it were the Druses, who are hardly likely to disturb their good relations with their friends of long-standing, the British. It may perhaps be assumed, in the absence of further details, that the raid was conducted, probably from economic motives, by a section of an undisciplined tribe from north-east of Trans-Jordan—an indulgence which it may take centuries to good administration to abolish, if, indeed, the immemorial pastime and driving force of the needy desert Arab can ever be wholly eradicated.

INDIAN NOTES.

Europeans and the Reforms.

Sir Walter Willson is doing a public service in drawing attention to the position of the non-official Europeans in India in relation to the reforms scheme and the possibility of further constitutional changes in the near future. The paper that he read last week before the East India Association, which is summarised in another page of this

issue, raised points of more than passing interest; and his warning that the Europeans must be up and doing ought not to pass unheeded. At the same time we are inclined to think that he tends to be a little too pessimistic as regards the attitude of the average European towards political questions. For many years past the Europeans—the great majority of whom are engaged in commercial and industrial pursuits—have influenced legislation through their Chambers of Commerce. These bodies have always presented to Government the views of the European community on all legislative projects affecting commercial interests, using that term in its widest sense. They cover a very wide field, including subjects such as currency, banking, railways, posts and telegraphs, taxation direct and indirect, workmen's compensation, the regulation of factories, trade unions, shipping, and so on. But times are changing. The Executive is no longer supreme. All important legislation concerning commercial interests is nowadays fashioned in the Assembly. It no longer suffices for the Chambers to express their views in writing as they have always done and still do. Opinions, to be effective with the Assembly, must be adequately voiced in its debates. But the Assembly meets at Delhi in the cold weather and at Simla in the hot weather. The Europeans are centred chiefly at Calcutta, Bombay, and the other presidency towns. All these towns are at a great distance from Delhi and Simla. There is no leisured class of Europeans; and fully-occupied business men obviously cannot find it easy to spend weeks at a time at a great distance from their offices. This is the difficulty to which Sir Walter Willson has very rightly drawn attention. But we are not sure that it is due, as he suggests, to the apathy of the Europeans so much as to the circumstances in which they are placed. The remedy is for the great mercantile and agency houses so to staff their Indian offices as to make it possible for their representatives, or some of them, to take an active part in the political life of India. There would then be no difficulty in finding qualified men willing and able to give effective and adequate expression in the Assembly to European opinion. It may be that the many great firms in question are a little slow to appreciate the need for change. The non-official Europeans have built up a great position for themselves in India, and this they cannot afford to sacrifice by failing to move with the times.

The Abuse of the Law.

It is to be hoped that the defamation suits in which the well-known Calcutta newspaper, the *Statesman*, was

THURSDAY, MARCH 21, 1929.

THE EVOLUTION OF EGYPT.

There is a tendency to regard the present state of Egyptian affairs as a mere swing of the pendulum in the rivalry of two Egyptian leaders, or as a definite reaction against the political development of the country. It is, however, possible that History will decide that Mahmoud Pasha's great experiment marks an important stage in the evolution of the Egyptian people. Within a short space of time we are witnessing in Egypt an epitome, as it were, of that great developmental process through which Western nations passed in the course of many centuries. Known to the evolutionist as the Law of Projected Efficiency, the principle of that process is that in human society the present is destined to be in the end controlled, not by its own interests, but by interests in the future beyond the limits of its political consciousness. In other words, it is the subordination of the present to the future. Throughout the first epoch of social evolution all the forms of society and of the State, and of every institution upon which the State and society rested, had borne upon them—the evolutionist reminds us—the impress of a single fact, the ascendancy of the present. "In such conditions," as one writer has stated, "every human institution may be said to have constituted a kind of closed imperium, in which the ascendant interests and the ruling passions were those through which the present was able to express itself in its highest potentiality." It is not claimed for Western civilisation in its present form that it is more than the prelude to the wider and more conscious phase of the struggle towards which, in this view, the world is converging; but in this civilisation may be noted developments, alike in religious thought and in political history, which could only have yielded their real meaning in the stern analysis to which they have been subjected in the actual stress of the evolutionary process in history. In recent years an attempt has been made by nations which have not passed through the successive ordeals of this evolutionary process to adopt the outward and visible signs of Western civilisation; and failure, it would appear, has been most marked just where the essential developments that have characterised the progress of Western nations have been deliberately dispensed with or ignored. Especially is this failure to be noted in the case of party government, the successful working of which implies "the tacit assumption, even when the individual may appear to repudiate it, that the claim of right upon those who profess to be its adherents goes deeper than the claim of loyalty to any system of government, or of party, or of authority, representing itself for the time being as its expression. It is, in short, the subconscious admission of the fact that, however intense our convictions, we are not the ultimate repositories of truth, and that, therefore, our opponents may, after all, be right."

In the recent history of Egypt it is evident that the Wafd has stood whole-heartedly for the ascendancy of the present. As in the Greek and Roman worlds no human interest was recognised as transcending the interest of the

existing social order, so under the Wafd régime no consideration of future interest was allowed to moderate the insistency with which a single obsession was made the ruling principle of government and social conduct. The significance of Mahmoud Pasha's experiment would seem to lie in the fact that it seeks, albeit unconsciously, to permit Egypt to experience those developments which are essential to the success of the evolution in regard to which she had promised herself too short a cut. As in the world at large the evolutionary process towards the subordination of the present to the future had among its earlier indications a changed attitude towards human life which found expression in the humanitarian feeling that put an end, first, to infanticide and, subsequently, to slavery, so it is noticeable that Mahmoud Pasha's Government has found ready to hand wide scope for its activities in the sphere of social service—the betterment of the conditions under which the great majority of Egyptians live, to whose welfare so little thought could be given under the Wafd's surrender to its own particular obsession. For the first time since Egypt obtained her political independence social reforms have been made the primary aim of the Government in power. The programme as elaborated may not be completed within the lifetime of the present régime—there has been no time as yet for more than the most tentative start to be made—but Egypt is now committed to a process that definitely marks her acceptance of principles which have been an essential basis of the evolution of more advanced countries. The temporary suppression of the Legislature and the steps taken to keep political rancour within bounds may also be the means of directing Egyptian attention to the principles of intellectual and political tolerance, without which party government can never be made a success.

Judged, therefore, in the light of an attempt to secure the ordered development of the country in a world-process, it is evident that the present phase in Egyptian affairs does not need to be regarded from the narrow angle of a party programme or to be timed by a political stopwatch. Still less is it necessary for the onlooker to be influenced by the political label attached to the particular form of government now existing in Egypt. In the process of evolution to the stage that the more advanced peoples have reached to-day every form of government has played its part, and the only standard on which no retrogression can be allowed is that government must exist for the benefit of the governed. It is unnecessary to point out how even this elementary principle had been overlooked in the unenlightened adherence to a single obsession that characterised the period previous to the advent to power of the present Government. The impression of that period conveyed to the outside observer was that political power and the very system of parliamentary government were being used for the personal advantage of the politicians rather than for the benefit of the people. It may well be that the temporary suspension of parliamentary institutions will prove the quickest way of inculcating a national appreciation of a purer parliamentary régime. As far as can be discovered, the criticism of the Government's political opponents has been confined to the actual seizure of arbitrary power, and has offered no effective challenge to those measures which have clearly been designed for the material development of Egypt and the betterment of the Egyptian people. That part of Mahmoud Pasha's task which consisted in laying down for the first time in an independent Egypt the principle that government must be for the benefit of the governed may be regarded as already achieved in so far as no subsequent Administration is likely to depart from the principle and to be allowed to remain in office; but for the eradication of abuses, as for the actual carrying into effect of the practical measures which stand at the head of its programme of reforms, it may be hoped in the interests of the country that the Egyptian people will not be called upon to undergo any political change, from whatsoever quarter it may be engineered, until they have learned something of that intellectual and political tolerance which lies at the root of the successful working of constitutionalism.

*The Near and Middle East

From Our Own Correspondents.

EGYPT

Cairo, March 9.

The High Commissioner.

The High Commissioner and Lady Lloyd returned to Cairo this week. Lady Lloyd arrived by the Nile route on March 7 and the High Commissioner *via* Port Sudan and Suez on March 5. The High Commissioner has this time made a very extensive tour, proceeding up the White Nile as far as Rejaf and visiting Kassala and the area recently opened up by the new link-line and Port Sudan on the way back. It is understood that the conversations with regard to the acceptance by the Egyptian Government of the MacGregor-Abdel Hamid Suliman report on the share of the Sudan and Egypt in the waters of the Upper Nile will be resumed forthwith, and it is to be hoped that they will be brought to a successful conclusion, so that the work on Gebel Aulia can be resumed without further delay.

King Fuad's Gift.

King Fuad continues the series of his munificent donations. Recently he gave £E5,000 to the fund for the reconstruction of the Mosque of Omar, and now he has given £E3,000 to the Royal Geographical Society of Egypt, to be used partly for the collection and the completion of political and historical documents connected with Egypt during the reign of Mohamed Aly, and partly on the compilation of a dictionary containing the geographical names mentioned in the books on Egypt written by the Romans and Greeks.

Sir Valentine Chirol.

Sir Valentine Chirol, who arrived here about three weeks ago on his way home from India, is, I regret to say, laid up with an attack of broncho-pneumonia. He had been staying at Mena House awaiting the return of Lord and Lady Lloyd, whose guest he was to be, and the day after he moved into the Residency he became ill. He is, however holding his own very well.

The Military Governor of Paris.

General Gouraud, that famous French soldier, passed through Cairo on March 3 on his return from his visit to India. He was entertained to a luncheon at the French Legation, at which the guests included Lieut.-General Sir Peter Strickland, G.O.C. British troops, and Lady Strickland and Sir Charlton Spinks Pasha, Inspector-General of the Egyptian Army. Afterwards he had an audience of the King, on the conclusion of which he was conducted with an appropriate military escort by Sir Peter Strickland to the station, whence he proceeded *via* Port Said to resume his duties as Military Governor of Paris.

Sir John Maxwell.

The laconic telegram announcing the death of General Sir John Grenfell Maxwell in South Africa caused con-

siderable regret over here. "Conky," as he was affectionately called by his intimates, had spent practically all his career since Tel-El-Kebir in Egypt, with the exception of the period of the South African War and a short but eventful three years in Ireland, and his breezy, attractive personality was widely known in this country. He had a great way with Egyptians, who regarded him with respect and affection, and to this day keep him in loyal remembrance. The place he held in the Egyptian Army was eloquently demonstrated when he took over command of the Army of Occupation in 1908, and again in 1914, when he came out to relieve General Byng of the Command of the British Forces in Egypt on the outbreak of War; and a further tribute to his personality and the confidence reposed in him were the relief and satisfaction expressed everywhere at the news that he had been selected to command in Egypt in the early anxious days of the War.

It was, indeed, no easy task which he assumed owing to the peculiar conditions in which Egypt then found herself, but his tact, and extensive knowledge of the country and the people, combined with his personal relations with the leading members of the foreign and Egyptian communities, stood him in good stead. He managed, while keeping the Turks successfully at bay with an inadequate force, to maintain peace and order in Egypt as well as good relations between the military and civilian elements.

Perhaps one of the most remarkable tributes to his knowledge of how to handle men was afforded by the respect which the Australians openly showed for him. In the general outburst of regret at his being compelled to resign owing to the impossible position in which intrigues at home had placed him, Egyptians were almost as prominent as his own fellow countrymen. He was an invaluable asset to the Milner Mission, and it was mainly, if not entirely, thanks to his personal influence with the people of the country that his colleagues were able, in spite of the boycott, to get into touch with so many Egyptians of all classes.

The Mixed Tribunals.

According to reliable legal sources the Egyptian Government has decided to fill the two vacancies in first instance caused by the creation of two new foreign judgeships by the appointment of a Belgian and of a Greek Judge. I am also given to understand that the Ministry of Justice has agreed to the demand made by the German Government that Germans should be eligible, like the subjects of other non-capitulatory Powers, for elections as foreign assessors in the Mixed Courts. The Committee which has been requested to report on the re-organisation,

which the proposed reforms in the Mixed Courts will necessitate, has nearly completed its labours. The Government knows now the main lines of the Committee's recommendations, and it is hoped, though it is by no means certain, that Dr. Hafez Bey Afifi, Minister of Foreign Affairs, will be able to draft the Note to the Powers in reply to their inquiry before he leaves on March 13 for Europe.

Ismail Pasha Sidky.

Ismail Pasha Sidky has been nominated to the Board of the Wadi Kom-Ombo Company with the position of Managing-Director in succession to Mr. Ralph Harari. This follows his appointment to the Boards of various commercial and financial institutions, including the Deutsche Orientbank, and demonstrates the high opinion which those controlling these enterprises have of his administrative ability and experience of the affairs of the country. Sidky Pasha is, indeed, one of the few Egyptians who are capable of holding their own with their European contemporaries in the field of finance and economics, and it was because of the recognition of the unique position which he holds in this respect that his candidature for the direction of the new State Supreme Audit, which it was proposed to create, secured widespread support in the country. For reasons into which there is no need to go to-day, the creation of this very essential Department has met with considerable delay, and now that he is so occupied with other matters Sidky Pasha is no longer a candidate. As a result of this, what is a distinct gain for commerce is a serious loss to the State.

Belgrade, March 14.

A Drawing Together in the Balkans?

The resurrection of Yugoslavia has led to great activity among the Balkan States, as is evidenced by the many conferences held and agreements made during the last

two months, and by the renewed talk of a Balkan Locarno at Geneva. There would seem to be a movement towards the settlement of local affairs by agreement among the Balkan peoples, a revolt against the continuation of the system of intervention by the Great Powers in Balkan affairs for their own purposes. Turkey, Russia and Austria took turns before the War to dominate Balkan policy, and Italy has tried since the Armistice to carry on this tradition. It seemed too that she had almost succeeded in forming a complete chain of enemies round Yugoslavia, and this appeared all the more dangerous, as the internal political situation in this country was so precarious. But the consolidation of the internal political situation and the new confidence born of the hopes aroused by the formation of the new Government on January 6, have greatly changed the situation, and the strength and security of this chain are being rapidly diminished.

Yugoslavia and Greece.

The dispute with Greece over the question of a free zone in Salonika port and over the control of the railway from Ghevgeli to Salonika enabled Italy to separate Greece from her old ally of the Balkan Wars, and this process was made all the easier by a certain aggressiveness in Yugoslav foreign policy immediately after the War, as shown, for example, in the refusal to accept all suggestions made on Greek initiative because of a feeling that the initiative ought to come from Belgrade. The change of spirit in Yugoslav foreign policy can be judged by the fact that an agreement has already been reached on the vexed question of Salonika, and that at a cost of considerable concessions by the Yugoslavs; moreover a pact of friendship between the two countries, on lines similar to those of the Italo-Greek Pact concluded between M. Venizelos and Signor Mussolini last year, will be signed as soon as possible afterwards.

The Pirot Conference.

The Pirot Conference has practically finished its work. Agreements have been reached which will greatly facilitate frontier traffic, and it has been decided to institute a telephone line between Belgrade and Sofia. Conversations are still continuing with regard to measures to be taken to secure better co-operation and greater security on the frontiers, and it is hoped that arrangements will be made by which immediately on the occurrence of any frontier incident a mixed commission will be nominated to investigate the matter. For a first meeting after five years of hostility much has really been accomplished.

Negotiations with Hungary.

Another sign of the change in foreign policy is the attitude of the new Government in the dispute with Hungary over the State Domains in Belye and Topolovatz. Negotiations between Yugoslav and Hungarian delegates at Geneva resulted in the Hungarians' asking for the postponement of the examination of the matter by the League Council until further attempts had been made to settle it by direct conversations between the Powers concerned. This suggests a possibility of compromise, which was quite out of the question a few months ago owing to the determined stand which the Yugoslav Government of the day took on the matter.

Yugoslavia and Roumania.

Finally negotiations are to begin in Belgrade in a few days' time for the regulation of all outstanding frontier matters, arising mainly from the Trianon Treaty, between Yugoslavia and Roumania. The matters to be dealt with are hydrotechnical, such as the navigation of the Danube,

drainage of frontier lands, etc.; administrative, including payment of pensions and exchange of archives in the frontier districts; etc.; legal, questions of public and private justice; financial, the settlement of pre-War debts and of taxation problems arising in the frontier district; social, the right of workers and professional people to exercise their craft or profession on either side of the frontier; and commercial. It is understood that negotiations for the conclusion of a Commercial Treaty with Roumania will shortly be begun, once the new Roumanian tariffs come into force, and that this will be one of a series of commercial treaties which are intended to regulate economic relations between Yugoslavia and all her neighbours.

Home Politics.

The success or failure of the present Government will be judged by the degree of success achieved in solving the Serbo-Croatian question. Its first steps have succeeded in creating a new and better atmosphere in Croatia, and the King's exceptional tact in sending his own personal physician to examine the great Croat public worker, Dr. Hinko Hinkovitch, famous as the defender of M. Pribitchevitch in the pre-War trial, when he was charged with high treason, and as a member of the Yugoslav Committee during the War, and in sending also 100,000 dinars to enable him to go for special treatment to a Viennese sanatorium, has worked wonders. This same sympathy was shown in the King's grant of pensions to the widows of Pavle Raditch and Jura Basaritchek, and later in the sending of framed portraits of Prince Peter and Prince Tomislav to Mme. Pavle Raditch. His Majesty's approaching visit to Zagreb is awaited impatiently and will surely be the occasion of enthusiastic demonstrations of loyalty. The obvious favouring of the Zagreb Press as compared with that of Belgrade, which was favoured for so many years by former régimes, the freedom with which many Zagreb professors, industrialists, public workers and others who have come recently to Belgrade have been received in audience, and the promises made to Professor Belibrkovitch, Rector of Zagreb University, have made it quite clear to the people of Zagreb that they are getting at least equality of treatment now and have won their affectionate support of the new régime.

The dissolution of party and tribal organisations has now been completed by the dissolution of all the Youth Organisations—Srnao, the Serbian National Association of Youth, Orjuna, the Yugoslav Youth Organisation, and Hanao, the Croatian Association of Youth. Their headquarters in Belgrade and Zagreb have been searched, their archives seized and their organisation disbanded, and the District Administrators throughout the country have been ordered to deal in like manner with their branches everywhere.

Up to the present there are practically no cases of the arrest of opponents of the new régime, and this has created an excellent impression in a land where revenge and party spite have taught people to expect the drastic suppression of opponents. The Government has recently increased its powers of dealing with opposition, should it arise, by extending the Defence of the Realm Act to cover, besides the more serious crimes, of Communist and Anarchist propaganda, which are still amenable to a special D.O.R.A. Court and punishable by twenty years' imprisonment or even death, lesser offences such as propaganda likely to affect national union, arouse class or tribal hatred or lead to dissatisfaction with the new régime, its officials and institutions, refusal to accept the authority of the new régime or showing publicly that one is opposed to it. These crimes are punishable by fines of from 6,000 to 20,000 dinars and by from 1 to 5 years' imprisonment, but it is to be hoped that the Government intends merely to discourage idle talk and not seriously to try forcibly to suppress considered expressions of opinion and fair criticism.

Sofia, March 12.

King Boris's Foreign Tour.

King Boris has just started on a prolonged tour. This step, although it had long been expected, has created a sensation in the country. The King, who is accompanied by his sister Princess Eudoxia, and his medical adviser, Dr. Balabonoff, is first of all to consult specialists in Vienna for ear trouble. Popular opinion, however, adds other motives for his journey abroad.

Minorities.

Nowhere, perhaps, so much as in Bulgaria had the action of Dr. Stresemann in obtaining a debate at Geneva on the problem of minorities raised high hopes. Arising out of the intolerable position of the Bulgarians annexed to neighbouring States, and particularly of the Macedonian Bulgarians, a current of opinion forced the Government to send to Geneva a special delegation, which, if it has not been able to take part in the deliberations of the Council, of which Bulgaria is not a member, has at least shown the vital interest which Bulgaria has in the satisfactory settlement of this problem.

The decisions taken by the Council have aroused in all Bulgarian circles profound misgivings. Publicists and statesmen here are moved to doubt the efficacy of the League of Nations, which, according to them, has not the courage to probe to the bottom of the problem, and is limiting itself merely to studying the procedure which should be followed for the protection of minorities. As an example of this policy may be mentioned an article by the ex-President of the Council, M. Malinoff, in the *Zora*, demonstrating the dangers involved in the policy of "hush-hush" adopted by the League of Nations towards minorities, dangers which are all the more grave when they concern such a people as the Macedonians, who are accustomed to all kinds of sacrifice to obtain their rights.

There are, however, calmer minds which believe that a small beginning has been made at Geneva for the protection of minorities, and that this modest start will yield valuable results. This is the tone of the Government Press.

M. Bouroff at Geneva.

Nevertheless, this session of the Council of the League has not been entirely useless to Bulgaria, since it has been the means of M. Bouroff's meeting the delegates of other Balkan States and also the Ministers of the Great Powers, notably M. Briand and Sir Austen Chamberlain, to whom he has been able to explain not only the Bulgarian point of view on the problem of minorities, but also the present conditions of the pourparlers made by the Sofia Govern-

ment with the object of regulating different questions outstanding in the Balkans.

Favourable results are awaited from these interviews of M. Bouroff. The first indication has already been made in the energetic attitude adopted by Sir Austen Chamberlain on the subject of the execution of the Moloff-Caphandaris agreement concerning the liquidation of the property of Greek *emigrés* in Bulgaria and of Bulgarian *emigrés* in Greece. This agreement, which obliges the two Governments to pay into a neutral bank selected by the League certain instalments at certain times, has been invoked by Bulgaria, who has already paid in a considerable sum on account of Greece, who for her part has done nothing toward the carrying out of her agreement. M. Bouroff having protested and threatened to suspend all payments, Sir Austen energetically addressed the Greek representatives. It is hoped that after this intervention by the British representative the affair will be smoothed over, and that no harm will be done to the Greco-Bulgarian pourparlers now in progress.

It is also hoped that the question between Bucharest and Sofia of the sequestration of the property of Bulgarian subjects in Roumania will, thanks to the personal explanations of the authorised Ministers, have made good progress. The settlement of this question has been envisaged so far on the basis of an indemnity to be paid by Bulgaria; but this indemnity having to be deducted from the Roumanian share of Bulgarian reparations, and the Reparations Commission at Paris having refused to agree because Roumania has already gone beyond her rights, the Roumanian Government has proposed to Sofia to try to reach an agreement on a new basis, namely, letting it be understood that it would be ready to stop sequestration in return for economic compensation, such as a reduction in the import duties on the chief Roumanian products, wood, petrol, and salt. To this the Bulgarian Government replied that it would do so willingly, but that, Bulgaria being still, in her commercial relations with other countries, under the régime of the most-favoured-nation

clause, the reductions asked for could be realised only by the conclusion of a Commercial Treaty between Roumania and Bulgaria.

The Turco-Bulgarian Pact.

The signature, on March 6 at Angora, of the Turco-Bulgarian Treaty of Arbitration and Neutrality, was an important event.

This Pact, which contains nothing extraordinary, happily completes the Treaty of Friendship concluded between the two countries on October 18, 1925, and liquidates the questions outstanding between them. Under it both parties agree not to adhere to any political or economic combination which would be contrary to the stipulation of Article I of the Treaty of Friendship, which states that "there shall henceforth be peace and perpetual friendship between the Turkish Republic and Bulgaria." Non-aggression and neutrality are, therefore, implied. As for arbitration, it is provided for in a particular way. The Turks having proposed to exclude from this procedure affairs pertaining to the national sovereignty of each of the two contracting parties, it has been agreed, at the suggestion of Bulgaria, that for each case which gives rise to doubt under this heading, arbitration will first be put in hand to establish whether the affair does or does not affect the national sovereignty, and it is only in the case of a negative conclusion, to which the two parties agree unconditionally to submit, that the arbitration provided for will be normally adopted.

The signature of the Turco-Bulgarian Pact, the first concluded by Bulgaria, has been welcomed in the Press and in political quarters, which anticipate good effects from it, notably in commercial matters.

The Pirot Conference.

Another re-assuring manifestation is the Bulgo-Yugoslav Conference at Pirot, which will not fail to produce a little more conciliatoriness into relations between Bulgaria and Yugoslavia.

R. B. W. Holmes,
General Manager,
HAIFA.

The most important point of this Conference is the settlement of the question of bi-national properties, that is to say, of properties situated on both sides of the Bulgaro-Yugoslav frontier. This question particularly concerns the territories of Tsaribrod and Bosilegrad, which were detached in 1919 from Bulgaria and annexed to Yugoslavia. The population of these regions being purely Bulgarian, the Yugoslav Delegation at Pirot has proposed a radical solution by liquidation realised by way of exchanges or of expropriations. This solution, which would have implied the denationalisation and up to a certain point the depopulation of the region in question, was at once rejected by the Bulgarian Delegation, which declared that it could not even consider the proposal, having a mandate only to facilitate the exploitation of the properties, not to sell them. Finally, the two Delegations agreed to draw up a settlement providing for a special régime for the bi-national properties and leaving to the respective Governments the matter of deciding the question of liquidation. The settlement will imply the decrease of small incidents along the frontier, the line of which has been made in a faulty manner, cutting off entire villages from their fields, from their pasturages, and sometimes, even, from their sources of water.

After the drawing up of this agreement, the conference will proceed to the simplification of visas and of police formalities for the entrance of travellers from one country to another; then it will occupy itself with the constitution of a permanent mixed (Bulgaro-Yugoslav) body, which will have to preserve good order on the frontier and will, as soon as an incident is reported, hold an inquiry on the spot and establish immediately responsibility, and so prevent the matter from assuming undue proportions and envenoming relations between Bulgaria and Yugoslavia.

TRANS-JORDAN.

Amman, Undated.

Rains and Locusts.

The rains this season have been the heaviest recorded for the last ten years. The Jordan has been in flood for some weeks and has inundated the road for about half a kilometre on this side, and nearly a kilometre on the Palestine side. It was feared at one time that the Allenby Bridge would go, but fortunately this has not happened. There seems to be every prospect of a fine harvest, but this will not be of much practical value unless the plague of locusts can be abated. Mr. A. Kirkbride, with a contingent of men from the Trans-Jordan Frontier Force, have been camped in the Jordan Valley for some weeks, fighting the locusts with flame throwers. It has proved impossible to exterminate them before the eggs were laid, which means that further efforts must be made to destroy the young hoppers. In some cases the eggs can be dealt with by ploughing up the land, but often the nature of the ground renders this impossible.

The Elections.

The elections have been successfully carried through, in spite of a good deal of opposition. The Legislative

Council consists of six members for the Belka, of whom two Muslims, one Christian, and two Circassians (Muslims) represent Amman, and two Muslims Es Salt; Kerak is represented by three Muslims and one Christian; Ajlun sends two Muslims for Irbid, and one Muslim and one Christian for Al Husn, while the Badawin are represented by one Member for Amman and one for Maan.

General News.

Early in the year a punitive expedition was made by armoured cars against the Bani Sakhr tribe, in consequence of their late raid against a Najd tribe. About thirty camels were taken as a fine.

Sir Gilbert and Lady Clayton flew from Jerusalem to Amman on February 28, and spent the night at the British Residency en route for Baghdad.

Baghdad, March 8.

The High Commissioner.

After a series of delays caused first by snow and then by illness, Sir Gilbert Clayton arrived at Baghdad to take up his office of High Commissioner on March 2, having flown by Imperial Airways from Palestine. He was met at the aerodrome by the Acting High Commissioner, the Air Officer Commanding, the Prime Minister and members of the Cabinet, and the Presidents of the Chamber of Deputies and the Senate. Sir Gilbert inspected the guard of honour, and a number of presentations were then made to him and Lady Clayton.

The local Press, and in particular the organs of the Nationalist Party, have not been backward in offering advice and exhortation to the new High Commissioner.

The Wahhabis.

Another Wahhabi raid was reported from Kuwait on March 3. A large raiding party, numbering some six hundred with three hundred camels, attacked some tribesmen who were grazing their flocks not far from the town, and drove off a number of sheep. Pursuing aeroplanes were at once sent out from Shaibah, and replied to the raiders' fire with bombs and machine guns. One British aircraftman was killed; the losses of the Wahhabis, though believed to be great, are not yet known, but it is understood that the raiders crossed the frontier back into Najd.

EGYPT invites you to break your journey, see Cairo, travel along the Nile and visit Luxor and Aswan for the antiquities. Or from Cairo to Jerusalem and through Palestine. Everything arranged by the American Express before you leave England.

Baghdad Extension Scheme.

New housing schemes for Baghdad are in the air. The Ministry of Auqaf proposes to erect six hundred modern houses in a new residential quarter on the east bank of the river, south of the town, at a cost of fifty lakhs of rupees. The scheme includes an up-to-date market, wide roads and public parks, a primary school and an hotel. The Baghdad municipality is less ambitious, but it also envisages a garden suburb of six hundred modern houses, which it proposes to build on Government land just outside the south gate of the city. These plans, if successfully carried out, should do much to relieve the serious congestion of dwelling-houses inside the walls.

During the last two years more than one municipal garden has been laid out in such open spaces as are available, and that they are appreciated and made full use of by the citizens is obvious to any evening stroller in Baghdad. Next month a children's playground will be opened, complete with sand, swings, and see-saws, in the poor northern quarter—a step forward on which the Municipality is heartily to be congratulated.

The Baghdad Tramways, Light and Power Company, Ltd., took over the electric supply of the city from the Royal Air Force at the new year. Nothing has yet been made public on what form the new tramway is to take, but it is believed that the "trackless trolley" system, which eliminates the need for tramlines, will prove most successful in Baghdad's narrow streets.

Air Transport.

The influence of the air route in bringing Iraq within the reach of tourists was well illustrated by the visit last week of a party of eleven Americans, surely champions of the national art of hustling. Having "done" the Holy Land and Jerusalem in one afternoon, they flew to Baghdad by Imperial Airways, spent a day in visiting Babylon, Birs Nimrod, Karbala, the excavations at Kish, and the Hindiyah Barrage—varying impressions enough—another in a rush round Baghdad mosques and the King's Palace, with a side-track out to Kadhimain and the tomb of Zobaidah, and left the next morning at six by air for Cairo. So much for the Cradle of Mankind!

In this connexion it may be remarked that the opening of the new London-India air route will soon bring down to four days the ever-shortening journey home from Iraq, and will bring India within two days of Basrah.

General News.

The British Government's decision to send four flying boats to Basrah, which port, with the permission of the Iraq Government, they are to use as a temporary base while carrying out experiments in the Persian Gulf, was announced by Reuter in terms which gave a false impression and roused some hostility here. *Al Nadhdhah*, one of the Nationalist papers, had a head-line: "A new aspect of Iraq's independence. Basrah a British Naval Base!" A *communiqué* issued by the Press Bureau corrected this by explaining the facts of the case.

An effort is being made by the Ministry of Labour to improve the general conditions of the date-exporting industry, by the setting up of an expert advisory committee which will pay special attention to the sanitary conditions under which the dates are packed and pressed. An improvement in this respect would enable Iraq's unrivalled dates to compete on their merits with those exported to Europe by other countries, and to command a

far better price than they have done hitherto.

The new Egyptian Minister to Teheran was received by King Faisal and by the Acting High Commissioner on his way through Baghdad last week.

Sir William Himbury, of the British Cotton-growing Association, has just completed a fortnight's tour in Iraq.

PERSIAN NOTES.

A Good Winter.

Coincident with the extreme cold experienced in Europe, there has been very cold weather in Northern Persia, and the winter generally has been a good one, viewed from the point of view of water supply for the coming summer. All the hills are snow-covered, and agricultural prospects are bright.

The Perso-German Treaty.

The chief event of the moment is the conclusion of the Perso-German Commercial Treaty, the first of several new treaties on which the various Legations are busily at work. Count Von der Schulenberg has been the recipient of many congratulations, and is now about to proceed to Germany for a well-earned leave.

Agreement with Russia.

A minimum Customs Tariff Agreement with Russia has also been signed, giving that country the benefit of the lower of the two tariffs adopted last year by the Persian Government. The minimum Tariff is accorded to those countries which have concluded or offered to conclude new Treaties with Persia, and the maximum Tariff is now enforced in very few and unimportant cases.

Persia and Iraq.

Persia is showing commendable zeal in regulating and revising her relations with neighbouring and other Powers. It is all the more to be regretted that her relations with Iraq are left in such an unsatisfactory state. The chief reason advanced is that 400,000 Persians in Iraq enjoy no capitulatory rights, such as are accorded to other foreign subjects resident in Iraq. Public feeling is not improved by the Press, which continues to publish articles little calculated to promote improved relations.

Railway Progress.

Regular progress reports are published by the Railway Construction Syndicate, and it is evident that the work progresses fast. The original agreement was for the construction of 150 kilometres in the north and south, of which nearly half is now complete. A contract is now under discussion with the present contractors for the completion of the line from north to south, and an agreement has been signed with them for the construction of a barrage costing £200,000, and a steel bridge costing £1,000,000 at Ahwaz. The bridge and dam are to be erected on the site of the ancient barrage over the River Karun at Ahwaz.

Legislation.

The Majlis deserves praise for its manner of dealing with new legislation calculated to promote and develop industrial and economic prosperity. The Income Tax Bill has been promulgated in final form, the rate of tax being 2 per cent. instead of 6 per cent. as originally contemplated. The Bill is expected to pass, but the rate of tax may be reduced to facilitate its early passage.

Other Bills of interest are a Bill to establish a National Paper-Factory costing about £200,000, and to create a Match Monopoly with the object of protecting and assisting the Home Match Industry. Committees are engaged in framing measures calculated to open up more mines, and to promote industrial development generally by a wider system of concessions.

A concession is reported to have been concluded with a

H. H. Keeling
Hon. Sec.

German firm extracting salt in Italy, for the exploitation of salt mines in the Persian Gulf.

The tea industry is to be aided by the engagement of experts from China, and a definite arrangement has been concluded with a Czechoslovakian company for the establishment of an experimental sugar factory on Government's account.

On the initiative of the Shah, local regulations have been issued in Teheran to compel shopkeepers to affix prices to all articles other than those sold by weight or foodstuffs. The new regulations should do much to improve business methods and put an end to the old and wasteful system of bargaining.

Roads.

A new motor road is about to be constructed from Bandar Abbas to Kerman and Meshed, and the necessary credit has been sanctioned.

To improve the Bushire-Shiraz route, the proposal is under consideration of a German engineer who has offered to reconstruct the light railway from Bushire to Borasjun if given a concession for the purpose. It will be remembered that this means was adopted during the War, a light railway over this section being the only sure and reasonable method of traversing the marshy ground at the back of Bushire.

It is little realised that during the past eighteen months the Roads Department has succeeded in opening up 3,000 miles of road in Persia for motor traffic, which could not be traversed by cars before.

THE BALKANS—PAST AND PRESENT.

Mr. Otho Nicholson, M.P., presided in his own Parliamentary Constituency, the Abbey Division of Westminster, on Tuesday, evening, March 12, when Mr. H. Charles Woods gave an illustrated address at the Overseas' League in Park Place, St. James's.

Speaking under the title of "The Danger Zone of Europe," Mr. Woods first indicated the local and broader international reasons for which the Balkans were the occasion, if not the actual cause, of the World War. Subsequently he suggested that a much larger area of Europe had been Balkanised by the establishment of a number of small States and that Europe is still an armed camp. The lecturer considered the present situation far from satisfactory, but he thought that British influence should be employed in favour of the strict maintenance of the Treaties, especially of their Minority clauses. It is impossible to change one or more of the Treaties, he said, without having to modify them all; there is a greater dread of war than formerly and the League of Nations is a power for peace, particularly between smaller countries. Mr. Woods spoke for about an hour and a quarter, his address was followed with close attention, and at its close a number of comprehensive questions clearly demonstrated the interest of his hearers.

An outstanding feature of the lecture was the interesting and often very beautiful series of maps and photographic slides. The former were thrown on the screen at intervals to illustrate the speaker's historical and political remarks. The pictorial slides, for the most part made either from photographs taken by or from signed portraits given to Mr. Woods, depicted the scenery and customs of the various countries and illustrated the personalities who have played and are playing their parts in the Near East. About many of these the lecturer had something amusing or interesting to say.

In thanking the speaker, Mr. Nicholson said that it was highly desirable for the public to be furnished with information such as that supplied by Mr. Woods, and that it was essential for the law-makers in Parliament to learn something, as he had learned a great deal that evening, about problems so clearly explained by Mr. Woods.

NEWS IN BRIEF.

The Supreme Legislative Council of Yugoslavia held its first sitting on March 14.

Kholucy Bey, the new Egyptian Minister, presented his credentials to the Shah of Persia on March 13 in Teheran.

The police in Constantinople have arrested 40 Turks who have openly broken the law enforcing the wearing of hats instead of the fez.

The three Southampton-Napier flying boats for service in Iraq have completed their journey from Plymouth to Basrah, where they arrived on March 14.

The ice in the Yugoslav section of the Danube and in the Save was reported last week to be breaking up. Precautions have been taken to save bridges on the Save from the pressure of the ice.

Trotsky, under the assumed name of Zaidoff, is now staying at Tokatljan's Hotel, Pera, Constantinople, having left the Soviet Consulate there.

The report drawn up by the Governor-General on the finances, administration, and condition of the Sudan during 1927 has been issued as a Blue Book [Cmd. 3284, 2s. 6d.].

The King of Bulgaria, accompanied by his sister, Princess Eudoxia, arrived in Vienna on March 11. He interrupted his journey to Munich in order to consult Viennese aurists, and reached Munich two days later.

The Association of Jewish Friendly Societies held a reception in honour of Brigadier-General Sir Wyndham Deedes, formerly Civil Secretary to the Palestine Administration, on March 17, at the New Princes' Galleries.

Fighting continues in the Yaman between the Zaraniq tribe and the Zaidi forces under the Amir Saif-al-Islam Ahmad, eldest son of the Imam Yahya of Sanaa, who has been defeated at Bait-al-Fakih.

On March 12 a Commission of the Papal Order of the Holy Sepulchre, of which the Latin Patriarch of Jerusalem is Lieutenant of the Grand Magistracy, decorated the King and Queen of Italy and Signor Mussolini in Rome with the insignia of the First class of the Order, which is confined to Roman Catholics.

On the occasion of the signing of the Turco-Bulgarian Treaty of Arbitration and Neutrality, Tewfik Rushdi Bey, Turkish Minister for Foreign Affairs, and M. Liaptcheff, Bulgarian Prime Minister, exchanged cordial telegrams.

Mr. A. M. Samuel, in reply to Lieutenant-Commander Kenworthy, in the House of Commons on March 12, said that the total amount of interest and dividend received by the Government in its holding of shares and debentures from the date of the Government's first investment in the Anglo-Persian Oil Company in 1914 to the present date was £6,616,089.

Doctor Hafez Pasha Afifi, Egyptian Minister for Foreign Affairs, who left Cairo on March 13 for Naples, gave a party the previous afternoon at which Lord Lloyd and members of the Diplomatic Corps were present. He will be absent from Egypt for several months, during which Mohamed Pasha Mahmoud, Prime Minister, will take charge of the Foreign Office. Officially, according to *The Times*, Afifi Pasha's mission is to inspect the Egyptian Legations and Consulates in Europe, but the real object of his journey is to provide authoritative Egyptian representation in London during the coming months. Afifi Pasha will, in fact, spend only a very short time on the Continent before proceeding to London, where he will remain, according to present arrangements, until King Fuad leaves in June on his visit to the European capitals which his Majesty was unable to visit in 1926. During this visit Afifi Pasha will be in attendance on the King.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 28.

Political Responsibility.

"In South Africa, as elsewhere," Mr. Srinivasa Sastri, the retired Agent General in South Africa, is reported today to have said, "the ordinary man was seldom credited with what he spoke." The man in the street would put it differently—"ordinary politicians," he would say, "usually say, not what they believe is true, but what it would suit them to have believed." How much to believe of what the Indian political leaders say, of what their supporters in the newspaper press say after them—one is all the time concerned with that question. Sometimes one knows exactly what to think. Thus, if in the course of a debate of no-confidence in the Ministers in the Legislative Council in Bengal, in the course of which the charge of corruption has a dozen times been heard, a speaker says that he "has not the slightest doubt that, even if the Minister was a despicable wretch, anxious to parade his long purse at every door, public life was not likely to be contaminated"—one knows what to make of that. If one may credit the late Sir Asutosh Mookerjee, Judge of the High Court, Vice-Chancellor of the University, by far the ablest Bengalee of his day, public life in Bengal a few years ago was so contaminated as to provoke the cry of, "The whole thing's rotten, rotten," and he was not the only person likely to know that one had heard speak in that sense.

A Voice from the Past.

It is when it is a question of the utterances of the men nearer leadership that one's doubt begins. In reporting, on January 3, the proceedings of the Indian National Congress, I quoted Pandit Motilal Nehru as having said, "To have an adequate idea of the exploitation to which we have been subjected . . . it would be necessary to review the whole period of the British occupation of India." He went on to paint the picture of present-day India as the result at every turn of British exploitation. Well, I was reminded of that when in the course of some reading of Indian politics in the past I came to the maiden speech of Dadabhai Naoroji in the House of Commons. He was the first Indian ever to address the House from its own benches: all India that thought politically was listening. His theme was the same as Pandit Motilal Nehru's; i.e. India after the then count of years of British administration; and this is what he said, ". . . the result was that, aided by a noble and grand language in which the youth of India began to be educated, a great movement of political life—I may say new life—was infused into that country *which had been decaying for centuries.*" They were the centuries, Naoroji meant, before the British occupation began. A safe rule for anyone in England, when reading the utterances of any present-day Indian nationalist politician on the subject of success and failure of the British in India, is not to accept a word the man says, without the greatest reserve.

The Statutory Commission.

As the other day I quoted the *Pioneer*, saying that educated India refused almost solidly to countenance the Statutory Commission, I may draw attention to the words of Sir Annamalai Chetty in proposing the toast of the evening at a dinner given to Sir John Simon and his colleagues. "He looked forward," he is reported as having said, "to Sir John Simon and his colleagues for help in India's constitutional progress. From such a Commission India expected great things, and he did not doubt that their expectations would be fulfilled." That makes another

voice to add to those of Lord Sinha, the Indian Princes and Chiefs, and my own unnamed friend.

The Bengal Ministry.

Another set of Ministers in Bengal has been dismissed, but it is a matter of no importance; so let no words be wasted on it.

A Banking Inquiry.

We have been promised a banking inquiry, but one may doubt if much good will come of it. There is one point that in the now voluminous writings on the questions of Indian Banking and currency has not been sufficiently clearly made. It is that it is to be expected that, seeing that all the influential bankers and Finance Members who have worked in India, came out from Great Britain after years of training at home, it should have been too much accepted as a fact that whatever is a sound rule in England must be a sound one in India. We have just seen the Imperial Bank of India's discount rate raised a point: it now stands at 8 per cent. Sir George Schuster, our new Finance Member, answering questions in the Assembly about this, made a statement that one knows that Lombard Street would declare to be perfectly sound economics; but one would like to know what the late Professor Marshall would have thought of it, had he spent a year or two studying Indian banking and currency control on the spot. If those who are appointed to conduct this last of all the inquiries into our banking and currency do not include a Marshall among their number, there cannot be any really new light shed on the problem.

Bengal Chamber of Commerce.

Those whose special interest is in the trade and industry of India may be invited to read the full text of Sir George Godfrey's speech at the annual meeting of the Bengal Chamber of Commerce. One has been reminded by it of pre-War shortages in the supply of railway wagons; for a shortage is now upon us, and perhaps the worst there has ever been. It ought to be more within the competence of the Railway Board, one would say, to forecast the demand for wagons long enough ahead to prevent critical shortages; it has not proved so. Sir George Godfrey also dealt with the Grand Trunk Canal Project, which is one that the Chamber is strongly behind. As I have noted before, however, it is as much a question, in this malaria-ridden Province, for the Department of Public Health as for the shipping interests, and, until the Director of Public Health has declared himself satisfied, one does not want to see the canal begun.

All-India Muslim Ladies' Conference.

Hyderabad City has witnessed the eleventh session of the All-India Muslim Ladies' Conference, under the presidency of Lady Asman Jah. The proceedings were conducted in Urdu. One who often meets, as the writer does, the English and American women who work in the zenana hospitals scattered up and down India, knows what a crying need there is for enlightenment among the men and women of that community; how much the misery of their lives is due to old superstitions that make them turn away from sounder medical views than those of the hakims. An infant may die any moment in India because the omen of the taking of the beads is against giving it the medicine that the doctor has prescribed, the doctor being one who was moved to forsake her own land and people in answer to a Christian call for service among an alien people.

An interesting addition has just been made to the collection of portraits of eminent Judges at the Privy Council Office, Downing Street, through the loan, by his widow and sons, of one of the late Mr. Ameer Ali, the eminent Muhammadan jurist and the first Indian to be appointed a member of the Judicial Committee. The artist is Mr. Oswald Birley. It has been placed in the recently reconstructed Second Court, where Indian appeals are usually heard.

THE INDIAN PEASANT IN HISTORY.*

BY W. H. MORELAND, C.S.I., C.I.E.

(Continued.)

Here the authorities we possess require rather careful handling. We have glowing accounts of the work of a few agrarian reformers, great Kings like Sher Shah or Akbar, sagacious Ministers like Todar Mal in the North, or Murshid Quli in the Deccan, men who tried to treat the peasants equitably, and confine the claims on them within reasonable limits. The work of these men naturally receives prominence in modern textbooks; and the ordinary reader is apt to conclude that care for the peasant was a feature of the period taken as a whole. This was certainly not the case. Measured either by time or by area, these prominent events are mere episodes; when you reckon them up they account altogether for perhaps less than fifty years out of the six centuries of Muslim rule; and for the great bulk of the period the fortunes of the peasants were in the hands, not of great kings or sagacious ministers, but of a multitude of intermediaries, each man intent only on filling his pockets, and precluded, as I shall show, from doing anything in the way of permanent improvement. These intermediaries are the key to the agrarian history of the period; they were of various types, but the two figures which stand out decisively are the revenue-assignee and the revenue-farmer.

An assignee was usually one of the officers of the kingdom, and as such entitled to a salary defined in cash; but instead of being paid from the treasury, he was given what was called a *jagir*, that is to say, a district which was estimated to yield the amount of his salary as land-revenue; and it was his business to assess and collect the revenue from the peasants so as to obtain the promised salary, while it was his obvious interest to make the assignment yield more.

It is quite safe to say that the *jagir*, or assignment, was the most important agrarian institution of the Muslim period in India. You meet it all over the North, and almost all over the Deccan and Gujarat. One or two rulers tried to do without it for a time, but it always came back; and ordinarily more than three-quarters of the country was in the hands of assignees, who must thus be regarded as the peasants' real masters. What was the attitude of these masters?

To begin with, habits of luxury and extravagance prevailed among the ruling classes almost throughout the Muslim period. There was therefore constant and urgent need of money, which the peasants had to find. At the same time, there was an intense desire to accumulate large fortunes, and these, too, had to be provided by the peasants. To outshine your fellows in your lifetime by your hoards of cash and jewels; these were the chief social ambitions of the class from which the assignees were drawn.

In theory, two courses were open for their realisation. A man might set to work to develop his assignment, investing capital, encouraging the peasants to improve their production, waiting some little time for the result, and eventually enjoying a steadily increasing income drawn from the increasing prosperity of the peasants. That course was definitely ruled out by uncertainty of

tenure. An assignee might be shifted every year, or he might be able to retain his holding for some time; but he never knew from day to day what his fate might be. The struggle for productive assignments was very keen; to invest capital, or leave resources in the peasants' pockets, would have merely been to invite other claimants to come forward. The only prudent course was to squeeze your assignment dry, and then set to work to get transferred to one which still held a little money. That was the ordinary state of affairs throughout the Muslim period.

Now let us look at the other figure, the revenue-farmer. Perhaps you will say that there is not too much room for him, with so much of the country held in assignment; but assignees commonly farmed out the revenue to which they were entitled, so that farmers were numerous. Again, when land was reserved for the royal treasury, the officials often either let it in farm, or took the farm themselves; in either case, there was someone besides the treasury looking for an immediate profit. The characteristic of all these farms was their short duration. A year was the ordinary period; and three years is the longest I have read of up to the eighteenth century. Obviously, then, no farmer could dream of carrying out a policy of development; like the assignee, the farmer was bound by the conditions of his tenure to squeeze the country dry.

Again, it must be remembered that competition for these revenue-farms was usually keen. Farming was a regular business or profession; and success in the face of competition depended on ability, first to obtain a district with some money in it, next to extract that money out of it, and lastly to keep other competitors away until the mine was nearly worked out. All this involved the existence of some very undesirable classes, spies and informers, touts to push the farmer's interests, and "wreckers," as they were aptly called, to discredit his competitors. The final result was a large number of experts, who depended for their livelihood on gathering in every penny that the country could be made to yield. In essentials, then, there was little to choose between farmer and assignee.

In one respect, however, there was an important difference. The farmer's person was pledged for the fulfilment of his contract, and the penalties for failure were drastic. There are records of defaulters being flayed; but this measure was, I think, quite exceptional. Something more gradual was preferred, and an ordinary method was to keep the defaulter in prison, and flog him or torture him with rack and pincers, two or three times a week, until he either found the money or died of his wounds. If the farmers stripped the country clean, they often had a very strong motive for doing so; it was flog, or be flogged.

Ordinarily, then, the peasants' masters must have had the will to rackrent; they also had the power. You will remember that production and payment of revenue constituted a duty to the State; and flogging was a prescribed penalty for peasants who failed in that duty. Further, the practice was to sell the wives and children of defaulting peasants as slaves. With these powers at their disposal, assignees and farmers were in a strong position; peasants could rebel, or abscond, but short of such action they were helpless.

Perhaps the best illustration of the position, as it had developed, in what some people like to think of as the golden age of Shahjahan, is the argument which François Bernier put into the mouths of the assignees and farmers, with some of whom he was on familiar terms. Why, he makes them ask, "should the neglected state of this land create uneasiness in our minds? And why should we expend our own money and time to render it fruitful? We may be deprived of it in a single moment, and our exertions would benefit neither ourselves nor our children. Let us draw from the soil all the money we can, though the peasant should starve or abscond, and we should leave it, when commanded to quit, a dreary wilderness." To that argument there was no effective answer.

(To be continued.)

* Paper read before the Indian Section of the Royal Society of Arts on March 8. Sir Edward D. Maclagan, K.C.S.I., K.C.I.E., presided. The first part appeared in the issue of March 14.

EUROPEANS IN INDIA AND THE REFORMS.

Few speakers are better qualified to elucidate for the benefit of their fellow-countrymen the attitude of the non-official Europeans in India towards the reformed Constitution than Sir Walter Willson, whose paper on "Europeans in India and the Reforms" attracted a large and representative attendance at the meeting of the East India Association at the Caxton Hall on March 11.

Sir Walter Willson's able and disinterested service as the representative of the Associated Chambers of Commerce of India and Ceylon in the Legislative Assembly over a period of no less than six years has already formed the subject of an appreciative reference in *THE NEAR EAST AND INDIA*. It was unfortunate that the prior claims of Reparations necessitated the return to Paris of Sir Basil Blackett, who was to have presided, but the former Finance Member's place was well filled by Sir Clement Hindley, late Commissioner for Railways, and now Chairman of the Betting Control Board.

Sir Walter Willson said that in the Legislatures the European non-official, with his training and his ingrained sense of responsibility, could bring to the assistance of his Indian colleagues qualities which were much needed. Had Indians more vigorously cultivated this sense of responsibility the present confusion of Nationalist politics would probably have been avoided.

The speaker could not think that, in any changes which might come as a result of the Simon Commission, the centre of gravity would be less firmly fixed in Delhi and Simla than at present. On the other hand, he could quite imagine circumstances in which the Central Legislature would acquire even greater importance than in the past. European interests would, therefore, require greater vigilance and more assiduous solicitude than they had so far received.

Better organisation for the political field and for the maintenance of continuity, Sir Walter pointed out, was the primary need. The average non-official European had remained apathetic, and had not seen the need to be up and doing in the political field.

Fortunately, he continued, a few men were produced with the necessary public spirit and occasional political flair to replenish the thin red line, and upon the shoulders of these few heavy work fell. The community had asked of the Simon Commission a proviso that no discriminatory legislation of the sort asked for by Indian commercial bodies as between one British subject and another should be permitted in the new Constitution.

In conclusion, the lecturer emphasised again that the non-official Europeans wished to help India towards self-government; but they mistrusted speed and the clamant politician who frankly said he wanted them to go, who sought to harm their interests and to expropriate their concerns.

The Chairman said that, largely by the help of non-official Europeans, they had had in the last few years in India the extraordinary spectacle of a Government in a permanent minority in its own Parliament, yet carrying through an amazing series of important legislative acts perhaps without parallel in any part of the world.

Sir William Vincent, the former Home Member of the Viceroy's Executive Council, who was the first Leader of the Legislative Assembly, said that his own opinion of the reforms was one of surprise that they had been so successful. The new system was difficult to inaugurate, but if they looked at the matter dispassionately they would see that very much had been accomplished.

It was, he continued, remarkable what a large number of important Bills Government had carried through the Indian Legislature without serious objection and without the need for certification by the Viceroy; and also how few non-official Bills had been vetoed. He felt this to be a convincing argument that the members of the Assembly were not so lacking in responsibility as was sometimes thought.

INDIA AND THE LEAGUE OF NATIONS.

Lady Chatterjee, the wife of the High Commissioner for India, whose work as adviser to the Government of India on all questions affecting the employment of women and children in Indian industry is well-known to readers of *THE NEAR EAST AND INDIA*, was the principal speaker at the morning session of the conference organised by the League of Nations Union on March 7, when the subject of the discussion was "Women and Child Labour in the East." Lord Lytton presided.

Lady Chatterjee said that under the stimulus of industrial developments conditions were changing rapidly in certain areas in India. Overcrowding in tenements was one of the results, with a consequent high death-rate. The infantile death-rate under one year for Bombay was 316 per 1,000 births, but in certain wards it was between 300 and 500 per 1,000 births. In Calcutta the infantile death-rate for 1927 was 326 per 1,000.

Improvement trusts in both Calcutta and Bombay had improved housing conditions very considerably for industrial workers, and recent legislation, largely influenced by international labour conferences, had improved very considerably the lot of women and children by restricting the working hours and age of employment. Two difficulties that hindered the further expansion of industry were lack of imagination and the ignorance of the workers themselves. To overcome the illiteracy of the workers meant making primary education compulsory throughout India. What was needed was realisation of the fact that the problems of industry were not the concern only of the organisers of industry or of the Government, but of the nation as a whole.

INDIAN NOTES.

(Continued from page 355)

the defendant have now been definitely ended. Some eighteen months ago, or thereabouts, a Member of Parliament spoke in London on the conditions under which Indian widows live. The speech was reproduced without remark in the *Statesman*. It gave great offence to Indian opinion, and three prosecutions for defamation were instituted against the Editor. In each of these cases the magistrate came to the conclusion that no offence had been committed. But by various means, permissible under the law in India, the cases dragged on until last month. An application for a re-trial was then made in one of them, which had been previously dismissed by the Deputy Magistrate of Alipore. The magistrate held that the statements made in the speech were defamatory, but that the complainant could not have a legal grievance against the editor of the newspaper merely because he—the complainant—happened to have a widowed sister. Counsel, in moving for the re-trial, contended that the publication was not in good faith because there had been no expression of regret, and no steps taken to explain the publication until after a complaint had been lodged in court. Fortunately the application for a re-trial had to come before two Judges of the Calcutta High Court, and in dismissing it Mr. Justice Graham said: "I welcome the opportunity of saying, and I do so with a full sense of responsibility, that the way in which this matter has been exploited—I can use no other word—is nothing short of a scandal, and reflects on the legal advisers who are responsible for bringing the matter into court." With this expression of opinion every right-minded man must surely agree. The three prosecutions were instituted in three different places. In each of them there was an acquittal. Nevertheless the proceedings were kept going for many months, and would still have been in progress but for the High Court. The delays in civil suits, to which we referred the other day, are bad enough. But it is infinitely worse that a person who has been acquitted of an offence should be subjected for months to the annoyance and expense of further proceedings. It is high time for the Government of India to appoint yet another Inquiry Commission, and to charge it with the duty of investigating the administration of justice by the lower courts.

PERSONAL AND GENERAL

TO-DAY

March 21, 1929 (New Style).

March 8, 1929 (Old Style).

Shawwal 9, 1347 A.H., of the Muslim Calendar.

Adar II, 9, 5689, of the Jewish Calendar.

Sir Hardman and Lady Lever returned to London from Egypt on March 17.

Lady Castlemaine will arrive at Langham House, Ham Common, on March 26, on her return from Egypt.

The Earl and Countess of Albemarle, who are in Egypt, expect to return to London by Easter.

The Maharao Rajah of Bundi has been elected a life member of the East India Association.

Lord and Lady Airedale arrived at 3, Cadogan Square on March 16 on their return from India.

Sir James and Lady Leigh-Wood have arrived at 24, Great Cumberland Place on their return from Bombay.

Field-Marshal Lord Plumer and Lady Plumer returned to 22, Ennismore Gardens on March 15 from Italy.

Lady Norton-Griffiths arrived last week at 79, Cadogan Square from Egypt. Sir John Norton-Griffiths will return shortly.

Lord and Lady Greville have returned from a two months' trip up the Nile, and are now at Western Manor, Bicester.

Mrs. Maclagan, Lady Lloyd's sister, who has been staying at the Residency, left Cairo for England on March 17.

The Right Hon. Sir Herbert Samuel and Lady Samuel arrived at 35 Porchester Terrace, W.C.2, on March 18, on their return from Mentone.

Mr. Rushbrook Williams, who went out to Delhi for the session of the Chamber of Princes, has returned to St. James's Court, Buckingham Gate.

Sir Valentine Chirol, who has made good progress towards recovery from his recent attack of pneumonia, hopes to sail for England on March 24.

The Shah received in special audience on March 16 Sir Denison Ross, Director of the School of Oriental Studies, who is on a tour of the Near and Middle East.

The Persian Minister in London will hold a reception at 11, Prince's Gate to celebrate the Persian New Year on March 22 (to-morrow) from 3.30 to 7 o'clock.

The Earl of Selborne arrived at Plymouth on March 13 in the s.s. Orsova on his return from Egypt. The Countess of Selborne is travelling home by the overland route.

Sesostri Sidarouss Bey, Egyptian Chargé d'Affaires, will hold a reception at the Royal Egyptian Legation on Monday, March 25, on the occasion of the anniversary of King Fuad I.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.

Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts., may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan. Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

The marriage of M. Pantcho Hadji-Mischeff, Bulgarian Minister to the Court of St. James's, and Miss Theodora Le Gros, of Orlando, Florida, took place at the Bulgarian Legation in Paris on March 10.

On the occasion of the anniversary of the birthday of the Shah of Persia, Major-General Sir John Hanbury-Williams, Marshal of the Diplomatic Corps, called at the Persian Legation on March 14 to present, on behalf of the King, his Majesty's congratulations.

The Turkish Ambassador and Mme. Ferid Bey entertained at dinner on March 13 at the Turkish Embassy the following guests: Viscount and Viscountess Peel, Lord Queenborough, Mr. and Mrs. Amery, Sir Maurice de Bunsen, Sir Rhys and Lady Williams, Sir Walter and Lady Peacock, and Major John and Lady Gwendoline Churchill.

The Prince of Wales received at St. James's Palace on March 15, on behalf of the King, Mr. Robert Greg, his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Bucharest, when his Royal Highness conferred upon him the Honour of Knighthood, and invested him with the Insignia of a Knight Commander of the Most Distinguished Order of St. Michael and St. George.

Mme. Stancioff and Lady Muir gave a small afternoon party on March 14 at the Ritz Hotel. Their guests included Baroness Rubido-Zichy, Lady (Ian) Hamilton, Comtesse de la Panouse, Lady (Edgar) Bonham-Carter, Comte and Comtesse Capponi, Lady Blackett, Mrs. Emile Mond, Mrs. Cobham, Lady Barker, the Hon. Mrs. Wood, Miss Jessel, Mm. Wolkoff, Baron Chadenet, Mrs. Gilliat-Smith, the Dowager Lady Boyle, Miss Henderson, and Mme. Guépin.

NEW ALBANIAN HOLY SYNOD.

The members of the new Holy Synod of the Autocephalous Orthodox Church of Albania, which was formed on February 21 under the presidency of Mgr. Vissar (Bessarion) Juvani, Archbishop and Metropolitan of Tirana and Durrës (Durazzo), are, according to *The Times*, as follows:—

Mgr. Victor, Bishop of Shkodra (Scutari), who was previously a Suffragan of the Serbian Patriarch as successor of the former Patriarchs of Petch or Ipek; Mgr. Chamche, the new Bishop of Berat, who arrived recently from America; Mgr. Athanasi, Bishop of Gynokaster (Argyrokastro); and Mgr. Hoshteva, a Bishop without a see. The last three were specially consecrated in order to qualify for appointment.

Meanwhile Mgr. Basil Marko, former head of the Independent National Church, is acting as Bishop of Koritza *vice* Mgr. Hierotheos Militipopoulos, a Greek, who, like the former Bishop of Berat, has been deprived. The effect of these changes is to free the Orthodox Church in Albania from foreign political influences.

THE WEEK AT HOME

London, Tuesday Morning.

The Spirit of the Conservatives.

One need not be a political foe of the Conservatives to point out that the fighting spirit is not yet very evident among them. Their leaders, to judge from their public utterances, are on the defensive—always a handicap compared with the rhetorical offensive of the Liberals and of the Labour Party; but more significant than that, there is among the rank and file, at least as far as my slight observations go, a lack of enthusiasm. One has only to mix, say, with young followers of the Conservative Party and young protagonists of the Labour Party to notice an immense difference. And with female youth this difference is even more noticeable.

It must be largely from some such observations that the Stock Exchange place the probable number of Conservative seats as low as about 270. Of course, it is all guess-work: the tremendous apathy of imagined Conservatives may assert itself at the General Election in May. But if so, votes will be given rather anti-somebody than pro-somebody else. For myself, I rather think they will, being still of the opinion that the Conservatives will get back duly chastened. But if they do not, it will be because the fighting, incandescent, spirit has been so sadly lacking.

Strange Bedfellows.

Mr. Lloyd George still has many friends outside the Liberal Party—perhaps more outside than in it. It is now quite obvious, for example, that the blessing of the Rothermere and Beaverbrook papers is not to be withheld from the "wizard" who has promised, if he is returned to power, to reduce unemployment to normal dimensions without burdening the State with any additional taxation. The game of these two great newspaper trusts is manifestly to work so that the Liberals hold a balance of power.

It is a queer spectacle. Certain Liberal candidates would fain explain to their constituents that they do not believe in all this high-falutin talk about abolishing Unemployment, that the famous Lloyd George pledge is merely so much deception; and they have been rapped over the knuckles by the *Daily Express*, of all papers, for their pains! The arguments of this journal appears to be that, the Parliamentary leader of the Liberal Party having given the lead, reluctance to follow it is nothing less than disastrous treason.

This notorious unemployment promise, by the way, has made no impression on any observant person that I have met. It has, however, undoubtedly had an effect upon certain ignorant classes, particularly upon female voters. The historic smile of Mr. Lloyd George and the fact that he has indubitably hit on the head the question that will probable weigh more with the electors than any other are going to have an incalculable effect on the General Election. But by incalculable I do not mean immeasurable.

Violet Rays.

No fashion in curatives has ever had the vogue which the application of ultra-violet rays to the body has become in this country, as in other countries. But is it merely a fashion? There are those who swear to the beneficial effect of such rays, particularly upon the skin; others are inclined to pooh-poooh the indulgence as a fad.

It is on the side of the latter that the Medical Research Council, whose annual Report was last week published

by the Stationery Office, has come down. In that Report it is stated that, after exhaustive tests with children had been made, "It is obvious that exercise and fresh air are greatly preferable to indoor sessions around a lamp. . . There is no present reason to know that artificial light can do more in this way than a mustard plaster, which is infinitely cheaper." And the Report contains strong comments upon "commercial advocacy" and "popular credulity" in regard to artificial light.

This Report has considerably depressed the man in the street, who certainly pinned considerable faith in this artificial light treatment. Nor is he yet—to judge from my own experience—prepared to believe that remarkable results have not been obtained from it. Among the medical profession, on the other hand, which has certainly been disgusted by the commercialisation of artificial ray machines, bitter controversy may ensue. For there are experts—not money-making quacks—who profoundly believe in the virtues of this comparatively new discovery. But of their experiences the Medical Research Council has full knowledge, and since it is in the light of these and many other experiences that the Report has been made, it seems probable that it will in the main be accepted.

My own slight experience of ultra-violet light is that, despite the natural tendency to believe that something must result from all the queer sparks and splutterings, it is only of slight and temporary assistance, and does not wholly cure. But faith in this medium may have worked wonders in better patients than myself.

Shopping in Trains.

There can be few visitors to London who have not seen the remarkable underground shops at Piccadilly Tube Station. We thought this subterranean store rather wonderful when it was first opened, a few weeks ago; but already people are going further, and talking of the desirability of having shops on trains themselves!

It is not an impossible prospect, for if anything is certain in this fast-moving age, it is that our sons will regard our modes of travelling as hopelessly antiquated. The proposal has at any rate been made that our long-distance trains should be provided with retail shops, at which the traveller, bored of reading, talking, or sleeping could entertain himself (or, more probably, herself) with purchases. I should not be surprised to see this development, for it appears to be on the lines of the general tendency of the present age towards resourcelessness and the making of unnecessary purchases.

Sport.

We learned on Saturday of two defeats of England: at Murrayfield by Scotland, and at Melbourne by Australia. Neither was unexpected, and in neither were we disgraced. Scotland are very worthy holders of the Calcutta Cup: even English observers are quite satisfied that their fifteen was superior to England's this season.

Of the Test Matches, which at last have had their end, this is not the fitting place to write. But they have during this winter occupied so considerable a portion of our attention and thoughts that a letter from Home would be incomplete without mention of them. They must have been a mortification to the flesh. This cricket that has been played in Australia is hardly recognisable as a game: the glory, or at any rate the joy of it, has departed.

Our own batsmen were slow enough, Heaven knows, but the Australians seems to have beaten them even at that game. A hundred and fifty runs in a day! As things were, there is no gainsaying the fact that the Australians, for whom the success of the "youngsters" was as welcomed here as it must have been in Australia itself, deserved their last and consoling victory. The significant thing, the really memorable thing, about this last Test was the success of the men who showed in their batting some spice at any rate of adventure. Where there is no shame (in slowness of batting) there is no game.

ALTER EGO.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

NEWSPAPERS AND THE MIDDLE EAST.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Your strictures on the European and American Press correspondents in this part of the world who transmit "reiterated rubbish to the telegraph" about desert warfare, etc., in Arabia have been so constant and at times so vehement that on at least one occasion, in an editorial Note in your issue for February 7, you wrote, "Our readers must be wearied with our continual warnings against all this exaggerated nonsense."

Well, Sir, for once at least your tendency to discount *ex hypothesi* every report from "Western Asia" has misled you. "A short time ago, for instance, the rumour was spread . . . that at a great tribal conference at Riyadh, King Ibn Saoud had offered to abdicate. How any Arabic papers can publish these wild fancies passes our comprehension." So you wrote. May I invite your attention to the following parts of the Wahhabi King's speech at this conference, reproduced not from some wild Arabic paper, but from the very orthodox *Umm-al-Qura* and appearing in an English translation in the no less orthodox *Baghdad Times*, which thought the official "handout" from Mecca of such gravity as to print it in three instalments on January 10, 11, and 14. [These dates should be January 15, 16, and 17.—ED.]

Concluding, the King said: "I want you also to consider if I am fit for ruling you; if I am unfit for rule, elect one of the members of my family, who are present in this Assembly, and I will enthrone him and will give him proper support."

There is rarely smoke without fire, and while the shout "The Ikhwan are coming" may reverberate once too often, it is also possible for it to be disregarded once too often. As a matter of record, compare the authenticated (and belated) news of Wahhabi raids which THE NEAR EAST AND INDIA is reluctantly obliged to print in the same issues in which you score so pitilessly the misguided correspondents in the Middle East of British and American newspapers!

The difficulties these correspondents have to face in sifting the true reports from the false, the plausible from the patently inspired, are not diminished by your criticism, which though well meant, reminds one of Cowper's lines:

When some hypothesis, absurd and vain,
Has filled with all its fumes a critic's brain.

I am, etc.,

A JERUSALEM CORRESPONDENT.

Jerusalem, March 5.

[1. Our Correspondent, who conveniently slides over the numerous occasions on which newspaper correspondents in the countries bordering the Hijaz and Najd have reported, and have seen no fulfilment of, imminent invasions of the Mandated territories by the Wahhabis—an omission which certainly will not escape the notice of the diligent reader—provides, in an endeavour to trip us up, a rather striking example of the way in which false rumour concerning the intentions of King Ibn Saoud spreads in anti-Wahhabi or non-Wahhabi lands. That the Wahhabi leader did offer to resign at the tribal Conference at Riyadh referred to by our Correspondent is true; but—and this is the important point—it is so far from being the whole truth, that a bare report of it gives a wholly misleading impression; and it was the bare report of the "abdication" of which we wrote in the Note of February 7. That report would have led the uninformed to imagine that Ibn Saoud, uncertain of his own position, had irrevocably placed his future in the hands of those whom he had been so masterfully controlling. Actually at this tribal Conference at Riyadh nothing was farther from the

intentions of King Ibn Saoud than to abdicate, and anyone who has studied his career and is aware of the real nature of the man ought to have realised this fact. In order to play on the feelings of his tribesmen (a favourite device with the Wahhabi monarch) King Ibn Saoud does appear to have suggested resignation—but only in order to confirm his position!

Our Correspondent might have added, from the report in the *Baghdad Times* (from *Umm-al-Qura*) which he quotes, the really significant point of the Riyadh meeting: that the Wahhabi King obtained the precise effect at which he was aiming, namely, acclamation and shouts of approval of his lead. For what did the assembled delegates say on the King's uttering the words quoted by our Correspondent? Precisely what Ibn Saoud intended and knew that they would say: "Oh no, our lord! We have no desire for any King to rule over us except you, O Abdul Aziz." Nor, had our Correspondent quoted a sentence of the King coming a little before the "offer of resignation," would there have been much doubt on the real nature of this "abdication." For King Ibn Saoud had said:

It is not out of fear of any of you that I have asked you to assemble here to-day, for I have built up this kingdom single-handed, God the Almighty being my sole support; God has sent me victorious; but, indeed, it is out of fear of God that I have caused you to hold this conference; I have done so in order that I should not fall into self-conceit and undue pride.

Does that read like the word of a man who had really considered the possibility of the Conference's ending in his being no longer King?

2. As for our Correspondent's suggestion that the cry of "The Ikhwan are coming" may be disregarded once too often, we thank him; but would remind him that it is actually contained in the editorial Note of February 7 of which he complains!

3. His further suggestion that there is "reluctance" on our part to record "authenticated" raids by Wahhabis on mandated territories is gratuitous. There is not, nor will there ever be, reluctance to record any important event in Arabia: to suppose that every report of raids in Arabia is false would be childish. It would be interesting, however, to compare the number of "authenticated" Wahhabi moves against the mandated territories with the number invented, or at least sent over, by the newspaper correspondents in whose impossible defence this letter from Jerusalem has been forwarded to us.

4. We do indeed appreciate the difficulties of newspaper correspondents in the Middle East living many hundreds of miles away from the scene of the events which they report, and it would be unfair not to admit that there has been a slight improvement since the failure of their famous "Holy War" last year to materialise. Moreover, the passion for "sheik-stuff" cannot endure indefinitely.—ED.]

A BAGHDAD CHRONICLE

By R. LEVY, M.A.

Demy 8vo. With 4 plates. 15s net.

Mr Levy, Lecturer in Persian at Cambridge, records in this volume the social history of Baghdad under the Abbasid Caliphs. Interwoven with the politics of the period, he gives a picture of the daily life of the city, its customs and manners, and its typical citizens.

Cambridge University Press,
Fetter Lane, London, E.C.4

NEWS IN BRIEF

The Bulgaro-Yugoslav Commission at Piroi finished its work on March 16 and its recommendations were sent to the two Governments for final approval the following day.

Two British private aeroplanes, Blue Band and 'Will o' the Wisp,' arrived at Al-Awiliya, Tunis, from Catania on March 15, on the way to Egypt.

The French Air Union (Ligne d'Orient) announces the inauguration in May of a weekly seaplane service between Marseilles, near Marseilles, and Beyrout. The journey will take three days.

The conference of Hungarian and Roumanian delegations, which was to have opened in Vienna on March 15 to discuss the question of Hungarian optants, has been postponed until April 4.

The Arab-al-Jabal, a tribe in French territory, raided Trans-Jordan on March 8 between Azraq and Amman, and during the operations two prominent persons were killed and a number wounded. The tribesmen also captured considerable loot.

A Reuter telegram from Bandar Abbas says that Squadron-Leader E. B. Rice, of the Hinai station, on a return flight to Iraq, made a forced landing 90 miles east of Jask, owing to engine trouble. A relief aeroplane from Baghdad which took out a spare engine reports that Squadron-Leader Rice was unable to take off, as his machine was axle deep in the marshy ground.

The death is announced of General Sir Charles N. Trotman. General Trotman had served in the Eastern Sudan in 1884. In the European War he commanded the Royal Marine Brigade, and, for a time, the 4th Australian Brigade at Anzac. Afterwards he commanded at Cape Helles, and took part in the evacuation of Gallipoli. Subsequently he served both in France and in Salonika.

A fire, causing heavy damage, broke out on March 11 at the petroleum tank reserves near Sofia railway station, starting from the Roumanian Redevenza Company's dump, at which numerous barrels exploded. Anxiety was felt for the adjoining reserves of the Shell and Standard Oil Companies, and also for the houses in the neighbourhood, which were evacuated. The fire was localised after hours of effort, in which troops assisted the firemen.

The Inter-Allied Commission, having been informed by the Bulgarian Government of its desire for a postponement of the two next half-yearly instalments of Reparations due from Bulgaria, has made a detailed investigation and has reported to the Reparation Commission in Paris recommending the postponement of one-half of the payments in question, in order that these funds may be used for the restoration of public buildings destroyed in the regions affected by last year's earthquakes.

The Archbishop of Canterbury will leave England on Easter Monday for a four weeks' tour in the Mediterranean in Mr. J. Pierpont Morgan's yacht Corsair. It is expected that the Primate will visit Athens, Alexandria, and Jerusalem, and that visits will be paid to the high ecclesiastics in those cities, but they will necessarily be brief. At Jerusalem Sir John Chancellor, the High Commissioner for Palestine, has arranged a reception in honour of the Archbishop.

A series of anti-Bulgarian meetings was held during last week in Yugoslavia, Macedonia, and Rumania.

Drifting ice on the River Save on March 16 tore from their anchors 45 barges and ships which had been wintering at Belgrade, and smashed some of them to pieces against the railway bridge. There were no casualties.

Queen Marie of Roumania arrived in Paris on March 17 on a visit incognito and left later in the day for Dinard, where she will spend some days with her sister, the wife of the Grand Duke Cyril. While in Paris, Queen Marie called at Marshal Foch's residence.

The Egyptian Cabinet on March 16 approved the financial settlement which Ali Pasha Maher, Minister of Finance, and Mr. Leith-Ross, Deputy Controller of Finance in the British Treasury, had initialled, and letters recording the settlement are being exchanged between Mohammed Pasha Mahmoud, Prime Minister, and Lord Lloyd, British High Commissioner.

KING FUAD.

King Fuad, it is stated, has arranged to visit England in the course of the summer. He will travel on his yacht, Mahroussa, and proceed to Cowes. The Egyptian King will probably also pay a State visit to Berlin. He will be accompanied on his visit to England by Dr. Hafez Pasha Afifi, Egyptian Foreign Minister, who recently left Egypt for a tour of various capitals.

"THE NILE."

The Royal Egyptian Club is to be congratulated heartily on its publication, "The Nile," the second issue (February, 1929) of which has reached us. It is a most interesting Review, both as a mirror in *parvo* of the life and activities of Egyptian students in England, and for the high standard of much of its contents. All those who are interested in the progress of Egypt should make a point of reading "The Nile," and to this end it might be well to publish in the next issue the rate of subscription and an indication as to where it can be obtained. No. 2, it may be pointed out, has exposed the Editorial Committee of the Club to all sort of pains and penalties by omitting the names of the printer and the publisher!

ROYAL AIR FORCE HONOURS.

The *London Gazette* on March 15 contained the announcement of honours awarded to the under-mentioned officers and non-commissioned officers in the Royal Air Force. They had rendered "gallant and distinguished service" in the operations against the Ikhwan in the Southern Desert, Iraq, 1927-28, and in the Protectorate of Aden, 1928.

The awards are as follows:—

C.B.E. (Military).

Group Capt. E. R. C. Nanson, D.S.C., A.F.C. (Iraq).
Wing Comdr. H. R. Nicholl, O.B.E. (Iraq).

O.B.E. (Military).

Flight Lieut. H. H. James (Iraq).
Flight Lieut. A. R. M. Rickards, A.F.C. (Aden).

MEDAL OF THE BRITISH EMPIRE.

Leading Aircraftman A. Smith (Aden).

SECOND BAR TO D.F.C.

Squadron-Leader H. A. Whistler, D.S.O., D.F.C. (Iraq).

D.F.C.

Flight Lieut. V. S. Parker (Iraq).
F.O. (now Flight Lieut.) G. N. S. Stringer (Aden).

D.F.M.

Flight Sergt. N. Gardner (Iraq).
Sergt. (Pilot) E. Coleman (Iraq).
Leading Aircraftman C. G. Reeve (Iraq).
Cpl. H. J. Barber.

The following were mentioned in dispatches:—

Squadron Leader H. M. Burton, M.B.; Flight Lieut. R. Harrison, D.F.C.; Squadron Leader G. S. M. Insall, V.C., M.C.; F.O. R. B. H. Jackson (killed); Flight Lieut. (now Sq. Ldr.) R. Jope Slade, D.S.C.; Flight Lieut. (now Sq. Ldr.) C. L. King, M.C., D.F.C.; F.O. G. W. Longstaff.
Squadron Leader A. H. Peck, D.S.O., M.C.; Flight Lieut. M. W. C. Ridgway; Squadron Leader F. J. Vincent, D.F.C.; Cpl. A. J. Chopping; Sergt. (Pilot) H. J. Coppin, A.F.M.; Leading Aircraftman W. J. Singleton; Capt. J. B. Glubb, O.B.E., M.C. (Administrative Inspector, Iraq).
Squadron Leader (now Wing Comdr.) G. H. Bowman, D.S.O., M.C., D.F.C. (Aden); F.O. F. J. Moon (Aden); Aircraftman (A.-Sgt. Pilot) R. A. Markwick and Sergt. (Pilot) A. Newark (Aden).

NOTES AND NEWS

170, Strand, London, W.C.2.
Tuesday Morning.

Conditions in the Balkans.

At the meeting of the Anglo-International Bank, a report of which will be found elsewhere in these columns, the chairman, Sir Herbert Lawrence, in an interesting survey of conditions in the countries with which the bank is concerned, touched on the position in Roumania and Yugoslavia. As regards Roumania, Sir Herbert Lawrence emphasised the point that the country has such large resources that all that is necessary for their development is political tranquillity and efficient administration. In the Maniu Government it would appear that Roumania is assured of both these factors. Certainly the measures which have so far been taken for the development of the country and the encouragement of foreign enterprise are such as to give rise to considerable confidence as to the outlook. Conditions in Yugoslavia during the past year have been affected by the political situation. It is satisfactory to have confirmation from Sir Herbert Lawrence of the view taken by the trading community in Yugoslavia of the new situation, to which I referred recently. Like Roumania, Yugoslavia is in urgent need of a large foreign loan, and it may be noted that negotiations to that end are now in train. With the position improving in both these countries it is not too much to expect that this year will be the most favourable the Balkans have known since the War. A very great deal, of course, will depend on the coming harvest. If that fulfils expectations and the maize crop is not again a failure, conditions should rapidly improve, and should be reflected abroad in considerably increased orders for commodities of all kinds.

The Sudan's Trade in 1928.

Particulars are now available of the Sudan's trade in the past year. The value of the total trade was £12,805,872 as against £11,631,910 for 1927, or an increase of 10.09 per cent. which in the circumstances can only be regarded as very satisfactory. There was an increase in every heading except Government imports, the principal increases being in respect of exports and public imports. The value of all imports was £6,249,250 as against £5,957,532 for 1927. Government imports totalled £2,044,928, a decrease of £273,677, but public imports at £4,204,322, show an increase of £565,395. The falling off in Government imports, it is explained, is largely due to the completion by the end of 1927 of various works of development. In public imports there are a long list of increases, notable among them being cotton piece-goods which at £985,810 show an increase of 18.39 per cent., metals and metalware which at £303,037 are higher by 79.36 per cent., motor cars, cycles, etc., which at £175,206 show an increase of 76.21 per cent., and machinery, the imports of which totalled £190,374, which represents an increase of 75.56 per cent. The value of the exports was £5,614,891, an increase of £614,399 for which,

of course, cotton was largely responsible. Actually less cotton was exported from the country than in 1927, but higher values ruled, and the exports amounted to £3,604,455, an increase of £404,294 or 12.63 per cent. Other notable increases in exports were in gum arabic, 22,777 tons of the value of £724,468 being exported which constituted a record, and in hides, the exports of which totalled 2,309 kantars as against 1,065 kantars while the value was £215,990 as against £61,476. As I have already pointed out the export of dura remained prohibited during the year, but it was no longer necessary to import this commodity on a large scale, and it may be hoped that before long dura will again figure among the Sudan's important exports. The year, viewed as a whole, shows that the Sudan is steadily progressing, and in view of developments in cotton growing and provided that the dura harvest does not fail again in the near future it should be possible to look forward to a period of increasing prosperity.

Agricultural Machinery Markets.

If there is one commodity for which our manufacturers should find a good opening in the Near East it is for agricultural machinery. Every one of the Balkan countries with the exception of Roumania depends almost entirely on agriculture, and in Roumania agriculture ranks equally with oil as a staple industry of the country. As is already known, extensive orders are to be placed this year by the Balkan countries for agricultural machinery, notably by Bulgaria, and it is to be hoped that our manufacturers will now make a determined effort to see that they obtain a fair share of the trade that is going. It is well that they should be reminded at this juncture of the insignificant part played by Great Britain in the world's trade in agricultural machinery by the timely appearance of a series of reports on the trade of the Empire in agricultural machinery which has just been issued by the Stationery Office as the Eleventh Report of the Imperial

SHELL

Economic Conference. The four principal countries exporting agricultural machinery are the United Kingdom, Canada, the United States, and Germany, and it illustrates the position that in 1926 the United States was first in the trade, Canada second, Germany third, and the United Kingdom a bad fourth. The percentages of the trade for the various countries were 53.5 for the United States, 19.5 for Canada, 19.2 for Germany, and 7.8 for the United Kingdom. As regards the Near East, Germany held the advantage, being the principal supplier to at least two of the Balkan countries, and while these deliveries were doubtless made on account of reparations, the advantage accruing to Germany from the introduction of her agricultural machinery to these markets is obvious. Reviewing the position of the United Kingdom industry, the report states that "it must not be forgotten that the manufacture of agricultural machinery, although long established, is but a small part of a great engineering industry, whereas in the United States and Canada it is a very considerable element in the total engineering activities of those countries. . . . Between 1913 and 1923 the total turnover diminished, but to a much greater extent in the export trade than in home sales. Even the home market probably declined somewhat in volume between 1913 and 1923, and the President of the British Agricultural Engineers' Association estimates that it has contracted for a further 10 per cent. since 1923 owing to agricultural depression. . . . Definite efforts are being made to recover the trade which has been lost. Steps have been taken to improve the technical and sales organisations in important markets overseas. But, in spite of certain amalgamations effected since the War, there is still much duplication of effort. We are advised that foreign competition is likely to be more severe than in pre-War years."

Trade in the Near East.

Useful tables are given in the report showing the exports of various classes of agricultural machinery to the different countries for the years 1924 to 1927, and it may be of interest as showing the small part so far played by British industry in the Near East if I give some of the figures for the Balkan countries. The value of the exports to Bulgaria of mechanical power ploughs varied from £702 for 1926 to nothing for 1927, while that of animal ploughs was £70 for 1925, £155 for 1926 and nothing for the two other years. For Greece the figures for these two classes for 1927 were respectively £279 and £100, and these figures were easily the highest for the four years. The only entry for the period as regards Yugoslavia was £32 for animal power ploughs in 1927. The position as regards Roumania was a little better, the figures for the two classes being respectively £647 and £122. The trade in threshers and reapers and binders with these countries was on a more promising scale. Thus the value of Bulgaria's imports of threshers from the United Kingdom rose from £1,158 in 1924 to £8,139 in 1926 and was £5,312 in 1927, while that of reapers and binders was £2,015 for the last year. For Greece the

highest total for threshers was £8,517 in 1927 and for reapers and binders £658 for the same year. Roumania's highest figures were £1,606 for threshers in 1926 and £1,430 for reapers and binders in the same year, while Yugoslavia imported threshers in 1926 to the value of £3,511 and reapers and binders in 1927 to the value of £1,099. It is unnecessary to give the figures for grass and lawn mowers and planters and seeders for two of the countries had no imports from us and the other two had insignificant imports. As regards dairy machinery and cream separators the position was precisely the same. For 1926 and 1927 the values of the total exports of agricultural machinery to the four countries was as follows: Bulgaria £12,230 and £7,365, Greece £7,352 and £11,400, Roumania £4,858 and £1793, and Yugoslavia £4,603 and £1,805. It is obvious that it is time that a determined effort was made to improve these figures.

Greek Finances.

I referred last week to the desire of the Greek Government to remove petroleum from the Monopolies allocated to the service of the various loans. Another financial development of a different character is the request made by the Government to the British, French, and Italian Governments for their consent to the International Financial Commission taking over the administration of the public works loan. It should be explained that the Commission has refused to undertake this duty on the ground that its work consists in the administration of the old loans. There seems no valid reason why the consent should be withheld, and it is good to have this further proof that the Greek authorities realise the value to Greek credit of the work accomplished by the Commission.

The Chartered Bank Report.

We are rapidly approaching the period when the Eastern exchange banks hold their meetings. The report of the Chartered Bank of India, Australia, and China, which has now been issued, shows a decline in profits as compared with the previous year, and with a slightly smaller carry forward the amount available is £624,200, as against £729,400. Broadly speaking, trade has not been good in many of the areas in which the bank operates, and this factor and the increasing competition of the exchange banks, to which reference was made at last year's meeting, are no doubt responsible for the falling off in profits.

The Constantinople Municipal Loan.

After rather long-drawn-out negotiations the news is forthcoming that the Prefecture of Constantinople has informed the bondholders of the City of Constantinople 1909 Five per Cent. Loan that it is prepared to settle the dispute about the loan on certain terms. The proposals may be briefly summarised. The bondholders are to forgo all arrears of interest up to December 14, 1928, in consideration of the Prefecture's abandoning all claims to the Galata bridge tolls now held in suspense. The bridge tolls are to be paid into the bank again from June 1, 1929. From June 1, 1929, the annuities for the interest and sinking

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Pleven, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Doupnitsa, Gorna-Orehovitsa, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratza. It has also 86 agencies.

fund are to be £37,000 for eight years, £44,000 for four years, £50,000 for four years, and then £60,000 until the extinction of the loan. Annuities are to be employed for the payment of interest at $3\frac{1}{2}$ per cent. per annum on all outstanding bonds, and a balance for a "B" sinking fund, so as to extinguish the loan by 1962 at the latest. The coupon due on June 14 next is to be paid on September 14, and that due on December 14 on March 14, 1930. As it is beginning to be recognised that any settlement where Turkey is concerned is better than none, if only it is final and binding, it is to be presumed that the bondholders will be glad to accept these terms.

Rubber Fluctuations.

After quite a long period above 1s. the price of rubber has fallen to 11 $\frac{3}{4}$ d. and looks as if it may go down before there is a further recovery. There is no particular reason why the price should have weakened at this juncture except the dullness of business, and it would be wrong to attribute too much importance to what is only a passing phase in the market. Fluctuations such as this are to be expected at the present time, and it is not anticipated that there will be a really definite improvement in the price until the summer. It is sufficient to know in the meantime that consumption continues on the up grade and that the surplus stocks were apparently not nearly so large as they were thought to be. If the demand for the commodity in America develops as it has done in the first two months of this year it is going to be a very important factor in the price, for it will mean that to satisfy the world demand and to leave a satisfactory balance all the rubber than can be produced at present will be required.

COMMENTATOR.

ROUMANIA'S TRADE IN 1928.

Roumania's trade statistics for the past year make a poor showing compared with the totals for 1927, and the favourable balance of trade in that year of 4,274,630,760 lei was replaced by an adverse balance of 5,225,844,625 lei. The failure of the harvest in 1927 was chiefly responsible for this result. The figures for the two years were as follows:

	1927. Lei.		1928. Lei.
Imports	33,428,546,982	...	32,145,101,188
Exports	37,793,177,742	...	26,919,256,563
Balance	+4,274,630,760	...	-5,225,844,625

It is noteworthy that in the past year there was not a single month in which the balance of trade was favourable, but after July the largest adverse balance for a month was 170,295,714 lei for September. For the present year the position must be affected to some extent by the failure of last season's maize crop, but there are counteracting factors in the shape of the measures taken by the new Government to encourage trade by freeing it from restrictions and to further the development of industry by facilitating foreign enterprise, and it is possible that for, at any rate the second half of this year the trade figures will show a very decided improvement. That, however, will depend to some extent on the harvest.

ROUMANIA'S GRAIN PRODUCTION IN 1928.

The final figures have now been published for the production of cereals in Roumania in 1928. The totals for the principal crops compare as follows with the figures for 1927 (the totals representing thousands of metric quintals):

	1927.		1928.
Wheat	26,327	...	31,446
Rye	2,368	...	2,917
Barley	12,617	...	15,110
Oats	8,681	...	9,804
Maize	35,332	...	27,534

With the exception of maize all the totals for 1928 represented a considerable advance on the average for the five years 1923-27. It is to be noted that the area under cereals continues to be increased. Thus for 1928 the area sown totalled 10,823,300 ha as compared with 10,450,500 ha for 1927 and 10,179,100 ha for the average for the years 1923-27. The value of the 1928 crop is estimated at 64,323,000,000 lei of which wheat accounts for 26,258,000,000 lei and maize for 20,210,000,000 lei. The amount of the total crop available for export is put at 84,000 wagons.

According to a report in *Der Fruchthandel*, the Egyptian onion crop, as far as can be at present estimated, will be about 10 per cent. less than last season. The production last year was estimated at some 3 million bags of 1 cwt. each.

The first institution of the new Yugoslav régime, called the Supreme Legislative Council, was opened in Belgrade on March 14. The Bills which the new Council will study will be those relating to barristers, to the King's Attorney, and to the special Courts for Muslims.

Mr. Ernest Latimer has retired from the position of managing director of the Manchester Ship Canal Company, but retains his seat on the board of directors. Mr. F. A. Eyre, secretary and accountant of the company, has been appointed general manager. Mr. Mathew Missane, assistant secretary, has been appointed secretary. Mr. H. O. Whitelegg, assistant accountant, has been appointed accountant.

At the annual general meeting of the Yugoslav Air Transport Company it was announced that negotiations are in progress for the opening of services between Belgrade and Skoplje and between Zagreb and Maribor. Negotiations are also taking place in Vienna and Athens with a view to establishing an air service to link up Vienna-Maribor-Zagreb-Belgrade-Skoplje and Salonika.

An Athens message reports that in regard to the new Franco-Greek commercial treaty it is stated that the duty on Greek carpets will be fixed after signature of the Franco-Persian trade treaty. The duty on raisins has been reduced by 75, to 10 francs. A committee of French wine specialists is shortly visiting Greece to supervise the manufacture of wine from the grape. France on her part has reduced the duties on olives, medicinal plants, and olive oil. The duty on dry Greek wine has been fixed at 65 francs the hectolitre.

The Yugoslav mercantile marine, which has grown in ten years from 100,000 tons gross to about 300,000, has been further augmented by the sailing from the Clyde, on her maiden voyage, of s.s. Korana, a cargo boat of 8,800 tons dead-weight, owned by the Prekomorska (Trans-Atlantic) line. The keel has been laid at the yard of Messrs. William Doxford and Sons, Sunderland, of what will be the largest ship in the Yugoslav mercantile marine, and the keel for a sister ship will be laid in the same yard in the course of the next two or three weeks. The ships will be of 10,600 tons each, and will be used by the Yugoslav Lloyd for their regular service between Adriatic ports and South America.

LIVERPOOL

MANCHESTER

GLASGOW

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 19.

Stock Exchange business last week was of a light order, real activity being confined to one or two special sections, of which Gramophone shares were the most prominent. Monetary fears lessened, but they are not fully allayed, and the approach of the Budget (from which the taxpayer can hope for little, if any, relief) and of the General Election must be expected to keep the investment world quiet for the next few weeks. With markets quiet, the City had the more leisure to consider certain exceedingly important events of the week. The General Electric's policy of discrimination against American investors, to which we refer later, was the chief topic of discussion, for it raises national considerations of first-rate importance. The present state of the monetary world makes it exceedingly undesirable that anything should be done to discourage the entry of foreign capital into England. Another topic of vigorous controversy is the proposal of the Experts Committee to form a Reparations Bank. The official information of this new scheme so far available is ambiguous on certain vital points, and the banking world anxiously awaits further elucidation—although it does so with confidence in our two eminent representatives on the Committee, Lord Revelstoke and Sir Josiah Stamp.

Nationalism and Joint Stock Companies.

The proposal of the General Electric Company, 60 per cent. of whose capital is estimated to be held by American

SIR JOSIAH STAMP

SAYS UNEMPLOYMENT DEPENDS ON POLITICAL AFFAIRS.

Until there is a stable investment condition throughout Europe, which can only follow at some distance a settlement of political affairs, with its consequent power of attraction of capital and credit, unemployment must remain a chronic problem.

(Copyright: London General Press.)

shareholders, to create new ordinary shares available only for the British investing public was deeply resented by the American shareholders and has been widely condemned in the City. Last September, when purchases of this company's shares by American interests had reached a considerable scale, resolutions were carried restricting voting rights to British holders. These resolutions were defensible on the ground that British companies of this very important type should be under British control, though the principle is not of such importance in the case of a purely commercial concern like General Electric, as in the case of, say, a communication company like Marconi, which took similar steps. The reasonableness of the resolution was recognised by the American shareholders, none of whom opposed it. The resolution which was passed this week, is, however, on a different footing. It is unnecessary, for the British control of the company is already adequately assured. It has aroused American protests because the issue price of the new shares is to be below market price and under American law in such a case it would be compulsory to offer the new shares to existing shareholders first. On general principles too, it is to be welcomed. Firstly, foreign investment in this country is to be welcomed in so far as it assists our

industries. Secondly, Britain has large capital holdings abroad, which are being added to every year, and similar action in other countries would be likely to affect many British investors. It is, in fact, particularly to our interests that everything should be done to make finance more international rather than less. Responsible City opinion unanimously condemns the step, and the opposition aroused should be sufficient to prevent this very dangerous precedent being followed.

Nitrate Prospects.

The recent announcement that the member firms of the Chilean Government have agreed to continue the life of the Nitrate Producers Association for another ten years is of considerable importance to the nitrate industry, and has not received the attention which it deserves. The Chilean industry, which before the War held the field in all markets, has suffered severely from the competition of the synthetic product. The most effective means of meeting this competition lies in improved marketing arrangements, and this is precisely what the Producers Association effectively accomplishes, the more so since the North American interests have now joined the Association. The Chilean Government is subsidising the industry out of the excess on export duty, which amounted last year to about £2,000,000. The immediate future of Chilean nitrate is now distinctly brighter, and increased profits in the near future are to be anticipated. Taking the long view, however, caution is necessary. Both synthetic and natural producers are increasing output, but there are limits to agricultural requirements for this kind of fertilisers, limits which may be reached in the course of a few years. For these reasons, investors should confine their interest to those companies which have been able to pay dividends during the recent difficult years. Angela Nitrate has paid 10 per cent. for the last three years, the yield on the basis of this dividend being £4 2s. per cent. Lautaro, with the largest capital, has increased its area in Chile in a manner which should increase output and reduce costs. The ordinary shares of a smaller but sound concern, Pan de Azucar, yield £4 9s. per cent. In these cases, clearly a brighter future is discounted in the price.

Government Guaranteed Debentures.

Among the suggestions contained in the Melchett-Turner Conference's interim report on unemployment was a recommendation that the facilities of the Trade Facilities Acts should be re-instituted under more liberal conditions. Under these acts the Government assisted certain enterprises to make extensions or to undertake other capital expenditure which was considered of national benefit in helping to recapture some of our lost trade. The Government, in these cases, guaranteed debentures issued by these concerns both as regards interest and repayment, and the companies were therefore able to borrow on favourable terms. These debentures have attractions from the investor's point of view, since they are as safe as any British Government security, and can generally be bought to give appreciably better returns. The Pearson and Dorman Long 5 per cent. debentures, redeemable 1956, for example, yield £5 per cent., and a similar return is obtained on Perak River Hydro-Electric Power, 5 per cent. debentures redeemable 1951, or on Stanton Ironworks 4½ per cent., debentures which are redeemable between 1931 and 1945.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Freight and other Particulars, apply:

JOHNSTON LINE, LTD., 8, BLITHE Street, London, 86, Cross Street, Manchester.

and FURNESS, WATLY & CO., Ltd., Royal Liver Building, Liverpool.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Air Compressing Plant.—The Main Drainage Department of the Egyptian Ministry of Public Works invites tenders for the supply of Diesel engine, air compressors, cooling water circulating system, etc. May 1. (D.O.T.)

Lithographic Plates.—The Survey of Egypt invites tender for the supply of aluminium and zinc plates for lithographing and engraving purposes. June 15. (D.O.T.)

Photographic Materials.—The Director, Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of photographic materials. April 20.

Post Binders.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of loose leaf post binders for 1929-1930. July 3.

Diesel Generating Set.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at the Government Printing Press of a 120 K.W. D.C. Diesel electric generating set complete with buildings and foundations. May 15.

Needlework Materials.—The Egyptian Ministry of Education invites tenders for the supply of needlework materials required during the school year 1929-1930. The principal requirements are as follows:—White calico, 15,500 metres; unbleached calico, 4,000 metres; white linen for embroidery, 1,800 metres; zephyr coloured—width 80 cms., 9,000 metres; white lawns for underwear (Batiste), 2,000 metres; nainsooks for underwear, 3,000 metres; voiles plain colour, 3,000 metres; gabardine wool, 1,500 metres; creme flannel, 1,500 metres; coton perle, D.M.C., 10,500 reels; coton perle, D.M.C., 26,000 skeins; wool for knitting, 7,500 skeins; sewing needles, 10,750 packets; knitting needles, 2,500 pair; crochet needles, 7,000; darning needles, 700 packets; darning cotton, 2,000 skeins; pearl buttons, 1,500 dozens; thimbles, 1,500; scissors for embroidery, 1,000; measuring tapes 1.40 m. long, 804. (D.O.T.)

Portland Cement.—The Egyptian Ports and Lighthouses Administration invites tenders for the supply of 650 tons of Portland cement. March 28. (D.O.T.)

Electric Articles.—The Financial Secretary, Egyptian Army, War Office Cairo, invites tenders for the supply of electric articles to the Military Works Department, Egyptian Army, Abbassia, Cairo. April 4.

Various Stores.—The Director of Stores, Frontiers Administration, Arsenal, Alexandria, invites tenders for the supply of consumable stores, such as paints, ropes, brushes, leathers, ironware, canvas, duck, felt, nails. April 9.

Oils, Paints, Etc.—The Director-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of oils and paints for the year 1929-1930, March 18; bunting, ropes, etc., for the year 1929-1930, March 25; metals for the year 1929-1930. April 3.

Diesel Engine.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nadli, Cairo, invites tenders for the supply, erection, and guarantee of a 400 B.H.P. Diesel engine driving an air compressor together with auxiliary machinery. May 1.

Non-ferrous Metals.—The Ministry of Communications, Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of non-ferrous metals, iron and steel products, etc., required during the year 1929-30. April 3. (D.O.T.)

Clothing.—The Director of Stores, Frontiers Administration, Arsenal, Alexandria, invites tenders for the supply of clothing such as blankets, boots, tarbushes, jerseys, frocks, greatcoats, woollen cotton and linen cloth. March 21.

INDIA.

Cables.—The Indian Stores Department, New Delhi, invites tenders for the supply and delivery of paper insulated cables for 600 volts and 6,600 volts, respectively, together with joint boxes and joint compound, and for a steam engine-driven generator set of 30 k.w. capacity. The Department also invites tenders for the supply, delivery, and erection of one 5-ton overhead electric three-motor gantry crane and one 5-ton electric telfer (mono-rail) complete with track. (D.O.T.)

Pumping Plant.—The Indian Stores Department invites tenders for the supply of 5 complete sets of D.C. motor-driven bore-hole pumps for pure water supply. April 19. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, March 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mathura for Calcutta (Birkenhead, March 30); s.s. Maihar for Calcutta (Birkenhead, April 9).

Bibby Line.—S.s. Lancashire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 3).

British India Line.—S.s. Merkara for Colombo, Madras, and Calcutta (London, March 23); s.s. Masula for Bombay and Karachi (London, April 6); s.s. Margha for Colombo, Madras, and Calcutta (London, April 6); s.s. Morvada for Colombo, Madras, and Calcutta (London, April 20).

Cunard Line.—S.s. Bactria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea March 23); s.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool April 13 and Swansea April 16); s.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza. This steamer will also call at Volo if sufficient inducement offers. (Liverpool, Glasgow, and Swansea, April 27).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 23); s.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 4).

P. and O. Line.—S.s. Viceroy of India for Bombay (London, March 28); s.s. Behar for Calcutta (London, March 30).

Prince Line.—S.s. Portuguese Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, March 23).

Ellerman and Papayanni Lines.—S.s. Roumelian for Algiers and Malta (Liverpool March 22, Swansea March 23); s.s. City of Oxford for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 28); s.s. Lesbian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool March 30, Swansea April 4); s.s. Gerano for Algiers*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 6, Swansea* April 6); s.s. Algerian for Algiers*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 20, Swansea* April 20). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*ASSYRIA	Mar. 27	*ELYSIA	Apr. 30
*MASSILIA	Apr. 16	*ICASTALIA	June 4

*First class passengers only. Specially low fares. †Calls Port Sudan.

†First and third class passengers.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

In 1927-28 262,997 tons of coal were imported into British India, as against 531,814 tons in 1913-14.

Earl Winterton, replying to a question in the House of Commons, said, the surplus on the commercial lines of the Indian State Railways for 1926-27 and 1927-28 was Rs.9.13 crores (£847,500) and Rs.13 crores (£9,750,000) respectively. Of these amounts, Rs.7.59 crores (£5,692,500) and Rs.7.76 crores (£5,820,000), respectively, accrued to the general revenue of the Government of India.

The Bengal Iron Company announces that the usual half-yearly dividend on the preference shares will be paid on April 2. The directors state that the result of the year's working to March '31 will not be as satisfactory as that of the previous year. This is partly due to the falling off in orders for sleepers and pipes and partly to the fact that the Railway Board are not now entering into long-term contracts as formerly. This leads to the irregular employment of labour and to increased working costs. While orders for pipes and sleepers have been disappointing, the demand for pig-iron has been fairly good. The board anticipate that the profit-sharing arrangement with the Indian Iron and Steel Company will show a net result approximating that of last year.

Engineering Topics

(By our Engineering Correspondent)

Filter Beds.

An interesting contribution to our knowledge of filter beds, their behaviour under heavy load, and a method for inspecting and, if necessary, repairing them, has been given us recently, from which it appears that examination at regular and frequent intervals is necessary if the most satisfactory results are to be obtained. Certain it is that the cost of this though appreciable, is as nothing compared with the expense and inconvenience entailed if any of the filters have to be put out of action, especially if that course should be necessary at a time when the capacity of the beds was being taxed.

I understand that it may be, and often is, possible to obtain fairly satisfactory effluents even if the filter bed has several blown strainers, but if the turbidity of the raw water is high, the position is very different. In that event, if the capacity of the plant is at all taxed, the remaining filters may have to be operated under an overload, which may mean more trouble if the raw water contains considerable impurity.

Good results are said to be obtained by the following procedure. The filter is first washed in the usual way, the effluent valve shut off and the filter drained. The sand bed is then examined to see how much of the sand has been lost through the leak, and, incidentally, this tells whether or not there is any trouble in the under drains or if the fresh water is being admitted at too high a rate. The surface of the bed is then closely examined to see whether there are any "mud cracks," mud balls, or funnel-shaped craters. Mud cracks are a certain sign of clogged under drains, mud balls indicate improper washing, probably caused by too short a period of washing or too low a rate, and the craters, if present, indicate that either one or more of the strainers have "blown," or that some of the under drains have failed.

If any of the strainers are found to have blown, the filter should be put out of commission at once and kept out of use until repairs can be effected, as otherwise there

will be a loss of sand due to the passage, in appreciable quantities of unfiltered water. There is no particular difficulty in repairing a blown strainer as only a section of about 6 ft. of the bed surrounding the crater need be removed. It is possible to blow strainers by opening the wash water valve too quickly when high pressure wash water is used. If the strainers continue to blow in various sections of the filter, with ordinary and normal washings, the best course to adopt is to give the filter a complete overhaul and find out exactly what is wrong.

Concrete Pipes.

Some little time ago a number of large concrete pipes used for carrying water in a drainage canal situated under a road bed, were found to be badly decayed on the outside, up to the zone defined by the varying heights of the surrounding ground water level, whilst the interior and upper parts were intact. This was unusual and the attention of engineers generally was directed to the discovery. The nature of the decay seemed to indicate the action of waters containing sulphur or free sulphates, but a chemical analysis of all the water sources and the bulk water which could have come in contact with the concrete showed that the damage, whatever it might be due to, was not caused in that way. Investigation went to show that a good deal of the water which entered the pipes was heavily charged with carbonic acid and the decay of the concrete was attributed to that cause. This opens up an interesting and extensive field for discussion as a large number of water sources in this country give water containing appreciable amounts of carbonic acid and evidently care will have to be taken in connexion with such concrete masses as come into contact with the water.

An Interesting Query.

The question has recently been raised whether, after engineers or architects have specified that certain materials shall be used in a certain way, it is reasonable that a contractor should have to guarantee that there will be a certain result. For instance, if an architect or engineer lays it down that a certain brand of cement shall be used with a certain proportion of sand and crushed stone, with a certain percentage of water content, and mixed for a certain time, it is reasonable that he should also lay it down that the resulting concrete shall be of a certain strength and able to withstand a crushing strain of so many pounds to the square inch at a certain age.

The point appears to be this: the engineer or architect wants certain results and should leave the constructor free to follow his own methods of obtaining that result. If he has to follow a definite course, perhaps different from his usual course and do something in a certain way, surely the man who specifies the course should be responsible for the result. It is an interesting question.

Modern Swimming Bath Operation.

The danger to public health involved in the continuance of the ordinary and insanitary methods of filling up a swimming bath with fresh water and emptying it out again, swarming with bacteria, are now at last being realised. Much attention has recently been given to the subject in the Press over here, and for example there are 47 public swimming baths in London with an average attendance of 5,000,000 per annum, and the matter is particularly important for tropical countries. Apart from colds, sore throats, bad eyes, and paratyphoid, for example, more serious diseases can easily be conveyed, especially as the water may become contaminated in a few hours, so that the importance of the matter is obvious. The modern scientific method is sterilisation and general

purification in a continuous circuit so as to give all the time a water that is clear, sparkling, and entirely free from obnoxious bacteria. In this connexion there has been started up in England, at the Wolverhampton Municipal Baths, a fine plant which represents the latest equipment, as supplied by the Paterson Engineering Co., Ltd., Windsor House, Kingsway, London, W.C.2. for a large installation, including continuous filtration, sterilisation by chlorine gas, coagulent treatment, aeration and automatic temperature control carried out in a closed circuit.

At Wolverhampton there is a first-class bath having a capacity of 90,000 gallons, and a second-class of 110,000 gallons, and the whole contents of both baths are circulated through the filtration and purification plant every four hours, that is at the rate of 50,000 gallons per hour. The exact series of operations, in the following order, consists of straining, treatment with alumina ferric and soda ash coagulent to separate all the colouring matter, using two sets of chemical injection pumps along with storage tanks, filtration through five 8 ft. diameter sand pressure filters having a total of 250 square feet filtering surface fitted with compressed air cleaning, aeration to give the sparkling condition of fresh water, also by compressed air, using an electric-driven blower, continuous sterilisation with chlorine gas by the "Chloronome" apparatus, requiring generally about one part of the chlorine per two million parts of water, and in Great Britain a Calorifier to maintain the temperature of the water at 72 degrees F. in summer and 78 degrees in winter.

Some of the main points of interest, apart from the "Chloronome," are ample area in the sand filters with slow passage of the water, accuracy of admission of coagulents, and an improved type of aeration with a vent pipe for dissolved gases, while the circulation is maintained by means of an electric driven centrifugal pump with a capacity of 50,000 gallons per hour. Also over 1,800,000 gallons of water per 24 hours are now being treated with the "Chloronome" for sterilisation of towns water, sewage and sewage effluents, swimming bath water, and cooling water for engines and turbines to prevent organic growths on the condenser tubes.

Shell Company's Port Sudan Installation.

One result of the completion of the Makwar Dam has been a great increase in the consumption of kerosene and benzene in the Sudan, and to meet the growing needs of this market the Shell Company of the Sudan has constructed at Port Sudan storage tanks and a tin factory and a case-making plant. This installation, which may be said to mark an important stage in the Sudan's progress, as it is the first large industrial enterprise to be established in that region, was officially opened on March 8 by the Governor-General. The site of the installation is on the south side of the harbour, and covers an area of seventeen acres. The storage tanks provide accommodation for 1,000,000 gallons of kerosene and 2,000,000 gallons of benzene. The tin factory will be able to produce more than 1,000,000 tins per annum, while the case-making plant will have an output of 400,000 cases per annum. The installation also includes storage godowns while there is a special petroleum jetty at which large tankers will be able to discharge their freight direct into the tanks, while there are railway sidings where the tanks and wagons can be loaded for dispatch to the interior of the Sudan. Light and power for the installation is supplied by a central electrical generating plant, while a boiler house at the jetty supplies steam to tankers so that they can discharge their cargo with fires drawn.

Dorman, Long and Co., Ltd., Middlesbrough, have obtained a contract for the replacement of the superstructures of four fixed bridges on the Sherbin-Kalline line of the Egyptian State Railways.

COMPANY NOTES AND REPORTS.

CHARTERED BANK OF INDIA.

The report of the Chartered Bank of India, Australia, and China for the year ended December 31 last states that the net profit, after providing for all bad and doubtful debts, was £834,156 3s. 9d., inclusive of £206,893 4s. 8d. brought forward from the previous year. The interim dividend at the rate of 14 per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £624,156 3s. 9d., and the directors propose to pay a final dividend at the rate of 14 per cent. per annum, together with a bonus of 6s. 3d. per share, making 20½ per cent. per annum for the whole year, free of income tax; to set aside £40,000 on account of contingencies, and to carry forward the balance of £186,656 3s. 9d.

TRADE INDEMNITY COMPANY.

The report of the Trade Indemnity Company for the year 1928 shows gross premiums totalling £158,200, as compared with £127,508 for 1927. Premiums paid to reinsurers absorbed £78,863, as against £59,482, and claims paid and outstanding £41,367, against £45,602. After bringing in £30,463 from underwriting account, 1927, and providing expenses of £16,308, the balance carried over to meet contingent liabilities is £52,125, compared with £41,511. In respect of underwriting account, 1927, the amount transferred to profit and loss account is £10,621, compared with £20,186 from the 1926 account. With dividends and interest, etc., for 1928 totalling £18,573 and £9,445 brought forward, the total available is £38,641. After deducting income tax, commission, and amount written off office furniture, etc., amounting to £8,14, the directors have again placed £15,000 to general reserve, and recommended maintaining the dividend at 6 per cent., subject to tax, leaving to be carried forward £2,826.

ANGLO-INTERNATIONAL BANK.

The report of the Anglo-International Bank, Ltd., for the year ended December 31 last states that the business of the bank has shown steady improvement, whilst substantial progress has been made in the liquidation of the affairs of its predecessors. The net profit for the year amounted to £103,084 15s. 3d., to which must be added the balance brought forward from the previous year's accounts, £52,447 9s. 1d., the available balance thus being £155,533 4s. 4d., from which it is proposed to place to premises amortisation £10,000, contingency reserve £125,000—£135,000, leaving a balance to be carried forward of £20,532 4s. 4d.

NEW EGYPTIAN.

The net profit of the New Egyptian Company for 1928 was £81,400, against £50,291. The dividend of 3s. 6d. per share (23½ per cent.) on 500,000 shares absorbed £87,500, leaving to be carried forward £34,902. The net income from the estates was £14,367, against £12,704 for the previous year; this increase arises in a great part from income received from property purchased during the year. The sales completed amounted to 149 feddans, against 214 feddans in 1927. In Upper Egypt 9 feddans were sold at an average price of £107 7s., and in Lower Egypt 140 feddans were sold at an average price of £127 5s., against £115 13s. 5d. in 1927. As the Chairman advised shareholders at the last annual meeting, the directors have purchased in Lower Egypt the property of Taranis el Bahr, near the town of Mansourah, of about 1,438 feddans for £66 13s. 4d. per feddan. On the other hand, they have had to take back by expropriation feddans 5.00.08 in Upper Egypt and feddans 4.09.08 in Lower Egypt.

The Yugoslav Government is to subsidise Yugoslav shipping companies to the extent of 49.5 million dinars a year.

M. Alexander Budzgan, son of M. Budzgan one of the members of the Roumanian Council of Regency, has been appointed a director of the National Bank of Roumania.

Numbers are announced of Piræus, Athens, and Peloponnesus Railway Four-and-a-Half per Cent. bonds, drawn for repayment at par on April 15 next.

The report of the Bulgarian Agricultural Bank for 1928 states that the bank advanced loans last year to a total amount of 3,325 million levas, an increase of 574 millions on the figures for 1927.

The Bank of England are prepared to receive the coupons due April 1 on bonds of the Greek Guaranteed £2 10s. per Cent. Gold Loan of 1896. The necessary lists can be procured on application at the Dividend Pay Office.

The Bulgarian Government has allocated 110 million leva for the purchase during this year of agricultural machinery, which is to be resold to the farmer on easy terms. The purchase will include 8,000 ploughs, 6,000 harrows, 4,000 cultivators, 1,000 rollers, 5,000 sowing machines, and 1,000 threshing machines.

The latest reports received by the Roumanian Ministry of Agriculture are not so pessimistic regarding the damage done to the crops by the severe frost. In several regions the sowings were covered by a thick mantle of snow which gave them protection, and some agriculturists go so far as to say that some plants which are not so hardy as wheat and barley have escaped damage.

Company Meeting.

ANGLO-INTERNATIONAL BANK.

Conditions in the Near East.

Sir H. A. Lawrence's Address.

The third ordinary general meeting of the Anglo-International Bank, Ltd., was held on March 15 at Winchester House, Old Broad Street, E.C., General the Hon. Sir H. A. Lawrence, G.C.B. (the chairman), presiding.

The Secretary (Mr. J. Back) having read the notice of meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: During the past year your Board has continued to be engaged in liquidating the affairs of our predecessors and in building up the business of the bank. I am glad to be able to say that, although, as I mentioned last year, the process of liquidation is bound to be protracted in view of the widely-spread international interests of our predecessors, a considerable advance has been made; but until the liquidation is nearer completion your directors feel it expedient, whilst devoting close attention to the development of the business, to adhere to their policy of consolidating our position.

I will now refer to the principal items in the report and accounts which are in your hands. The cash in hand and with bankers, money at call, and balances with bankers abroad amount to £807,000. Adding to this British Government securities and Treasury bills, the total of our immediately available cash resources is brought up to £1,338,000.

As regards other investments, which chiefly comprise holdings in banks of first-class standing on the Continent, you will observe that we are pursuing the policy mentioned to you at our last meeting, and have further reduced this item during the year from £978,000 to £751,000. At the same time, we have maintained our valuable Continental connexions, and the shares remaining in our possession are valued at market or purchase price, whichever is lower.

We are continuing to develop the acceptance branch of our business, taking precautions to ensure that risks are well spread in regard to both countries and commodities, and you will note that acceptances and guarantees have increased since the previous accounts were laid before you from £2,637,000 to £3,147,000. Further indications of the expansion of business are to be seen in the increased figures for deposits and for advances to customers.

The profits for the period under review amount to £103,000, which, together with the sum of £52,000 brought forward from 1927, brings the total amount standing to the credit of profit and loss account to £155,500. Of this amount, it is intended, in order to strengthen our position, to place £10,000 to premises amortisation and £125,000 to contingency reserve, leaving a balance of £20,532 4s. 4d., which your directors propose to carry forward.

As a large portion of the bank's business is with the Continent, I should like to give you a short survey of the economic conditions prevailing during the past year in the countries in which we are chiefly interested.

The Succession States.

Our colleague, Sir Henry Strakosch, has recently submitted to the Finance Committee of the League of Nations a memorandum which contains some striking figures regarding the progress achieved in the Succession States. These figures show that the foreign trade returns of the Succession States have increased in steady progression from the equivalent of 1,870,000,000 dollars in 1922 to 2,944,000,000 dollars in 1927. This is a clear indication of the great advance which has been made in the past few years.

The financial policy of nearly all the Succession States has been characterised by a strengthening of, and an increased tendency to co-operation between, central banks. The process of stabilisation and currency reform has now been nearly completed and is a very satisfactory feature of the general situation. On the other hand, industrial enterprises have, on the whole, had a hard struggle to exist, and this was to be expected during a period of readjustment. There is still a serious amount of over-industrialisation, due to the desire of each politically independent State to be self-supporting in industry and a reluctance to recognise that their territories together form an economic entity. The progress towards economic co-operation has therefore been slow, but it is the earnest hope of all friends of these new countries that the present year will see a more rapid advance in this direction.

In Roumania the long delay in the completion of the arrangements for the urgently required foreign loan has had a somewhat unfavourable effect on the economic life of the country. The recent completion of these arrangements and the receipt of the proceeds of the loan has now enabled the Roumanian Government to carry out the stabilisation of the currency, which should be followed by a reduction in the abnormal rates of interest which have considerably hampered the trade of the country.

Roumania is endowed with such large natural resources that all that is necessary for their successful development is a period of political tranquillity and efficient administration.

In Yugoslavia the economic and financial position has been somewhat unfavourably affected during the past year by the political situation. Although it is as yet somewhat early to judge the effect upon the economic life of the country of the recent action taken by the King, the trading community in Yugoslavia appears pleased with the measures so far adopted. It is hoped that the new Government will be able to bring about internal stability and to complete arrangements for a long-dated foreign loan, which is required for the country's economic needs.

I informed you last year that our friends, the Croatian Discount Bank of Zagreb had amalgamated with the Croatian Slavonian Land Mortgage Bank. During the course of the year this combination was joined by the Bank of Bosnia, Belgrade, and the Bank of Commerce and Agriculture, Sarajevo, under the title of the Yugoslav Union Bank, Ltd. As a result of these amalgamations the bank is the biggest commercial banking institution in Yugoslavia. Arrangements are in course of completion whereby the bank will also absorb the Agrar- und Industrie-Bank, Belgrade. We offer our congratulations to the Yugoslav Union Bank on the honour conferred upon them in the selection of two of their directors, Dr. Stanko Sverljugo and Dr. Zelimir Mazuranic respectively, to hold the important portfolios of Minister of Finance and Minister of Commerce in the new Government.

The resolution was seconded by Sir Harry Goschen, Bt., K.C.E., and was carried unanimously.

The Eastern Telegraph Company, Ltd., announce the payment on April 15 next of a dividend at the rate of $3\frac{1}{2}$ per cent. per annum, less income tax, on the preference stock of the company for the quarter ending March 31, 1929, and a dividend of $2\frac{1}{2}$ per cent. on the ordinary stock, free of income tax, for the quarter ended December 31, 1928. The transfer books of the ordinary stock will be closed from April 2 to 9, both days inclusive.

Mr. J. C. Denison-Pender has been elected chairman of the Eastern Extension Australasia and China Telegraph Company and Western Telegraph Company. Mr. Denison-Pender is the elder son of the late Sir John Denison-Pender, who was chairman of the Eastern Associated Telegraph Companies for many years. He is chairman of the four West Indian cable companies recently acquired by the Eastern group, and is also a director of the National Provincial Bank and the Northern Assurance Company. His elder son, Mr. John Jocelyn Denison-Pender recently joined the Eastern Telegraph Company.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

Near East Markets

JAFFA ORANGE EXPORTS.

The Empire Marketing Board reports that the total direct shipments to the United Kingdom (including fruit transhipped at Port Said before the direct shipping season started) up to March 11 amounted to 1,023,000 boxes, as compared with 1,230,000 boxes at the corresponding date last year. Shipments to the Continent in the present season have amounted to about 280,000 boxes, and some 87,700 boxes have been despatched by rail via Kantara. The Board's Jaffa correspondent estimates that five to six more sailings with some 120,000 boxes will complete shipments to the United Kingdom this season.

NEAR EAST MARKET REPORTS.

The current issue of the Monthly Review of Barclays Bank, Ltd., contains the following reports:—

Egypt.

During the early part of the period under review, cotton prices hardened as a result of speculative buying, and export business, which previously had been very narrow, was brought almost to a complete standstill, as there was no support forthcoming from the trade. Quotations have since moved steadily downwards, and on February 15 Sakels showed a loss of 240 points, and Uppers a loss of 84 points. In addition to the lack of spot demand, several other factors have militated against the Sakel contract, including the continued weakness of the Liverpool market, the basis of which is below Alexandria, the curtailment of production by the Lancashire mills spinning Egyptian cotton and the weight of the Sudan Sakel crop, which is estimated at over 600,000 kantars, and is said to be of good grade and staple. On the other hand, the statistical position of Sakel is undoubtedly strong, and should anything like a normal demand develop, it is though, in some quarters, that considerably higher prices might result. January tenders, amounting to 65,000 kantars, were all taken up by one firm. Uppers have shown a steady undertone, despite the very large supply of short staple varieties this season, and there has been a good demand for spot, particularly for the medium grades. February tenders have not been heavy, the first amounting to 10,250 kantars, and the second to only 1,250 kantars.

The cotton seed market has, on the whole, been quiet, although there has been a fair demand for local consumption, and as arrivals have been small, stocks have diminished considerably. A large quantity, however, has still to be received from the interior. The cotton goods market has been fairly brisk, business being of a general nature. It is expected that with the approach of the native holidays, the market will, as usual, show greater activity. Manchester goods have been in satisfactory demand and prices have been steady, but arrivals have been small. Sugar has been active, and as the ruling quotations are low, consumers and speculators have shown a keen desire to operate. There have been large arrivals, but quantities afloat do not appear to be very great. Prices have fluctuated within narrow limits. The flour market has been steady and the demand for local consumption and for export has continued active. Arrivals have been moderate, and, with spot supplies firmly held, the tone of the market tends towards further improvement in prices. In the absence of trade support for imported rice, quotations have sagged, but, owing to the approach of the native holidays, the demand is improving and the market shows better resistance.

A little business in cabots is being transacted from day to day for local consumption, but there are no signs of a revival of the export trade. Spot supplies are limited. In the gunnies market, the demand for cotton sacks and onion bags has shown some improvement, but prices are little changed. Grain sacks have been in limited request. There has been a normal demand for cereals, and stocks are decreasing, except in the case of maize and barley, but prices are unaltered.

The Sudan.

Trading conditions in Khartoum continue dull and merchants consider that their expectations for the season have not been realised. The sesame market is stagnant, and prices for Port Sudan for both White and Red have fallen by P50 per ton, the latest quotations being P1775 for the former and P1675 for the latter. At the moment the Sudan sesame cannot compete with the Indian variety in the Egyptian market, the latter realising as much as £E21 per ton in Egypt. Business in groundnuts is dull and, except for a small demand from Egypt, there is little export trade. Prices are unchanged. Some excitement has been shown in the gum market, natural cleaned having recently risen from 38s. per cwt. c.i.f. London or the Continent, to 44s. There has been a shortage of about 600 tons in arrivals of new crop gum, compared with the same period last year. A good demand from all quarters, with the exception of the United Kingdom, is reported, but insufficient supplies are available. It is estimated that the total annual consumption is usually about 20,000 tons, although the latest returns for 1928 show

that 22,778 tons were exported, but this figure is considered a record. A shortage in the total crop would keep prices high, but, at the moment, it is impossible to give an accurate forecast of the probable yield, as great variations may take place before the end of the season in June. Supplies of coffee are deficient, owing to the lack of any arrivals through Gedaref, and the quotation has consequently risen to the high figure of P460 per kantar.

The tea market is dull and stocks are still very high, sales being slow. Business in flour has been normal and movement satisfactory. The dura crop has not realised expectations and no export is permitted, but as there is sufficient grain in the country to satisfy internal needs, prices are low. The rains were unfavourable, and this fact will, to some extent, affect the prosperity and purchasing power of the natives.

Palestine.

During the early part of the period under review, trade was slack and the general situation somewhat depressed. A revival in business has, however since become manifest, due, in part, to fresh arrivals of tourists, and prospects generally are more favourable. Heavy rains have been experienced all over the country and a plentiful supply of water for the summer is assured. In Haifa, much damage was done by the worst gale within memory, but it is difficult at the moment to ascertain the exact damage done to winter crops, which, in many cases, may have to be re-sown with the summer crops, as the seed has been washed away. The High Commissioner announced recently that all the obstacles delaying the commencement of the work on the Haifa Harbour were nearly overcome and he hoped soon to hear definitely that operations could be started.

Crop prospects generally are good in the Northern districts, and the hill crops in Haifa are said to be excellent, whilst reports from the Tiberias and Beisan areas are very favourable. In the South, cultivators are everywhere optimistic and the rainfall in the Beer-sheba district is very encouraging.

SUDAN PRODUCE.

The following particulars are taken from the February issue of the Monthly Report of the Central Economic Board of the Sudan Government:—

Dukhn.

Red Sea Province.—During December 45 tons of dukhn arrived at Port Sudan by rail and 15 tons in January.

Darfur Province.—The dukhn crop has now been harvested. It is below the exceptional crop of 1927/1928, but well above the average. Sales in El Fashar Market amounted to 2,204 ardebs.

Maize.

Berber Province.—The average prices of maize, per ardeb, were P.T.96 at Berber, Athara, and El Damer, and P.T.84 at Shendi. The maize crop on Kitab Pumping Station is reported to be fair.

Dongola Province.—Pumping Stations Reports:—Ghaba.—116 feddans are under maize and lubia cultivation. The maize, which is being cut, has given a poor yield. Gureir.—380 feddans are under lubia and maize cultivation. Most of the latter has been harvested. Kulud.—The maize crop, 150 feddans, promises to yield well. The majority should be ripe in about ten days.

Wheat and Barley.

Berber Province.—Pumping Stations Reports:—Gendettu.—The area under wheat and barley, 27 feddans, is much below normal.

FOREIGN EXCHANGES.

Country.	Method of Quoting.	Parity of Exchange.	Latest Quotations
Alexandria.....	Piastre to £	97½	97½
Amsterdam	Florins to £	12.107	12.12
Athens	Drachmæ to £ ...	25.22½	375
Belgrade.....	Dinars to £	25.22½	276½
Berlin	Marks to £	20.43	20.46
Berne	Francs to £	25.22½	25.23½
Bombay	Sterling to Rupee	18d.	18—18 1/64
Brussels	Belga to £	35	34.96
Bueharest	Lei to £	25.22½	815
Budapest	Pen to £	27.82	27.86
Caleutta	Sterling to Rupee	18d.	18—18 1/64
Constantinople	Piastres to £	110	987
New York	Dollars to £	4.86 2-3	4.85 7/16—½
Paris	Francs to £	25.22½	124.27—30
Prague	Kronen to £	24.02	164
Rome	Lire to £	25.22½	92.70—.75
Sofia	Leva to £	25.22½	674
Teheran	Krans to £	48	50½
Vienna	Sch to £	34.58	34.55
Warsaw	Zlotv to £	25.22½	43.3/16—7/16

Kikeilab.—Wheat looks very healthy and should give a good yield. Bouga.—A fairly high yield of wheat is expected. The area is 140 feddans. Kitiab.—The wheat crop is fair.

Dongola Province.—Pumping Stations Reports:—Ghaba.—Wheat looks healthy and promises to be a good crop. Area, 195 feddans. Gureir.—The wheat crop is reported to be developing well. Nuri.—Except on poor land, the wheat crop looks well. Kulud.—The earlier sown wheat is in ear and the whole crop looks well.

Dates.

Halfa Province.—The date crop is slightly less than last year. The small pump borrowed from Makwar with a view to experimenting with the watering of palm trees was working very well at Firket-Sukkot District. The average price of dates at Wadi Halfa in January were as follows:—Barakawi, per sack of 135 to 140 kilos, P.T.230; Gondeila, per sack of 140 to 145 kilos, P.T.276; Gorgoda, per sack of 125 to 130 kilos, P.T.160.

Red Chillies.

Bahr El Ghazal Province.—Two consignments of shatta weighing 15.70 kantars (of 100 rotls) were received in Khartoum from Yambio in January and were sold at P.T.375 per kantar. A sample was submitted to the Sudan Chamber of Commerce, who reported favourably on them. Merchants in Khartoum who inspected the shatta state that it is only slightly below Zanzibar grade, equal to Abyssinian chillies, and a little better than those from Nuba Mountains Province. The chillies are very small.

Tobacco.

Darfur Province.—The tobacco crop will probably be larger than last year despite the damage done by the very cold spell in December. 533 kantars were brought into El Fasher Market, where the average price was P.T.250 per kantar. Prices show a tendency to drop, owing to anticipations of a plentiful crop.

Livestock, Camels, Hides and Skins.

Halfa Province.—270 hides were exported in January.

Berber Province.—El Damder Cattle Market has been rather quiet, due in part to the poor condition of the animals and in part to the fair at Khashm El Girba.

Khartoum Province.—Trade in hides at Omdurman has been active for some time past.

Red Sea Province.—552 hides and 5,205 skins were exported in January.

Cultivation.

Nuba Mountains Province.—Reports confirm excellent crops throughout the province. Certain areas like the Moro (Talodi) Hills seem, however, to be below the average.

Berber Province.—Seluka and sagia crops are good and there appear to be no pests.

Khartoum Province.—Seluka cultivation on the White Nile, especially towards the south on both banks of the river, have, on the whole, been above the average. On both banks of the Nile and the Blue Nile they are apparently up to average and slightly above the average on the islands.

General.

The Fung Province.—There have been numerous applications for shop sites at Suki. Roseires Market has been active and large increases over 1928 were shown in tombac, gamsha, talh gum, ground nuts, and sesame.

NEWS FROM ALL SOURCES.

The number of motor vehicles in Roumania at the end of last year was 18,777, as against 15,895 at the beginning of 1928.

The Agricultural Bank of Egypt recommends a dividend of 10s. per share on the ordinary shares and £55 per share on the deferred shares.

The British-French Discount Bank, Ltd., which has offices in Athens, will open a branch in Piræus as from April 1.

A Vienna message states that the conclusion is reported from Bucharest of a cartel of all the Roumanian metallurgic industries.

The Bombay Gas Company recommends a final dividend at the rate of 3½ per cent., less tax, making 7 per cent. for 1928.

It is expected that tenders will be called for towards the end of May for the heightening of the Aswan Dam.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended February 20 amounted to £E8,468, making the total from April 1 £E298,526.

The traffic receipts of the South Indian Railway Company for the week ended February 16 amounted to Rs.11,93,315, making the total from April 1 Rs.5,43,96,240.

Bulgaria's egg exports in 1928 amounted to 10,600 tons, of the value of 638,000,000 leva, as against 12,400 tons, of the value of 730,000,000 leva for 1927.

In 1928 Greece exported 122,538 tons of wine, of the value of 492,822,416 drachmæ.

The Corinth Canal Company made a net profit of 1,382,230 drachmæ in 1928, as against one of 1,155,654 drachmæ in 1927.

An international radio exhibition is to be held in Bucharest between May 1 and June 15.

The Banca Commerciale Italiana is opening a branch in Shushak.

Mr. B. P. Greenwood, Controller of the Department of Commerce and Industry in Egypt, has been transferred to the Egyptian State Railways.

The Bengal Dooars Railway Company has declared an interim dividend of 4 per cent. on the ordinary stock, payable, less tax at 2s. 6d. in the £, on April 24.

The Khediyaal Mail Steamship and Graving Dock Company announces the payment on March 30 of a dividend on the cumulative preference shares at 5½ per cent. per annum for the six months ended December 31, 1928, less tax.

The directors of the Eastern Extension Australasia and China Telegraph Company, Ltd., have declared a final dividend for the year 1928 of 5s. per share, payable, free of income tax, on the 15th proximo. The share register will be closed from April 2 to 9, both days inclusive.

The production of crude oil in Roumania in 1928 amounted to 4,265,141 tons. The production of the principal districts was as follows:—Prahova, 3,007,794 tons; Dambovitza, 1,074,273 tons; Buzau, 112,512 tons; Bacau, 70,562 tons.

According to a Sofia message on March 17 Philippopolis, second city of Bulgaria, which was devastated by earthquake last April, has now, together with Pazardjik township, 25 miles to the west, been flooded as a result of the rapid thaw. The chief parts of the city are lying under several feet of water, 20 houses have collapsed, and 300 rendered uninhabitable.

A Cairo message states that the Council of Ministers on March 16 endorsed the agreement for the settlement of various outstanding financial questions with Great Britain which was initialled last month by Mr. Leith Ross, on behalf of the British Treasury, and Aly Pasha Maher, the Egyptian Minister of Finance. Mahmoud Pasha, the Premier, said that he hoped this decision would be taken as evidence of the present Cabinet's good will and friendship towards Great Britain.

The value of Egypt's imports in January was £E4,784,406, an increase of £E499,220 on the figures for January, 1928, while that of the exports was £E5,482,249, an increase of £E663,174 on the corresponding period of last year.

The report of the Mercantile Bank of India shows net profits for 1928 of £250,201, as against £257,179 for the previous year. With the allocation of £30,000, the reserve fund is raised to £1,450,000, while £15,000 is placed to the officers' pension fund. The directors have written £40,000 off freehold banking premises and recommend a final dividend on the "A," "B," and "C" shares of 8 per cent., less tax, again making 16 per cent., leaving £162,046 to be carried forward, compared with £164,846 brought in.

ADVERTISING IN "THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of *all* classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 13:—

Egyptian Futures.

Sakel Contract.—Quiet but steady markets have been the general rule during the past week, a slight improvement in the spot demand and advancing American markets helping to create a healthier undertone. In addition, near positions, as we anticipated, have started to close in with the later summer months, old dockets have passed into stronger hands for the time being, and as the holders are favourably situated in the matter of carrying premiums, we expect all deliveries up to July to work up closer to new crop values. The International Federation of Master Cotton Spinners' returns, just published, gives the world's consumption for the half-year ending January 31, 1929, as 497,000, against 467,000 for the same period ending July 31, 1928, and 489,000 for the corresponding term ending January 31, 1928. Stock figures total 182,000 bales, against 183,000 bales twelve months ago. Takings in the U.S.A. are up 11,000 bales on the half-year, Great Britain and Germany also show increases, this being rather surprising as textile conditions in both countries have been distinctly unfavourable for some time. Local trade reports have not been quite so depressing as recently; the demand, however, is far from encouraging, and the fact that the bulk of the offtake is for the lower and cheaper qualities is not a reassuring feature. Nothing of note has been recorded by the fluctuations in the Alexandria market, and straddle differences remain pretty much as last week; we notice the March position in Egypt has recovered from the weakness shown earlier in the month, and now stands at a more normal parity with later deliveries. We still consider that values will stabilise round the present level for some little time, and repeat our recent warning against the "short" side owing to the accumulated weak hedge position and the fact that the contract is running so far below spot values.

Upper Contract.—Dull markets with limited trading and a heavy undertone marked proceedings in this market during the earlier days of the week, and, as a consequence, we closed in somewhat with the American markets. During the past two sessions, more support has been in evidence, and one or two good buying orders have quickly caused the earlier recessions to be regained, and brought in their train a much improved one. Reports from Alexandria indicate a good export business with America; the spot and forward demand from home users also gives evidence of improvement. Stocks of Peruvian cotton here are very low, and with other staple varieties (except East Africans) beginning to harden in basis, the qualities covered by this contract should begin to develop increasing strength.

Egyptian Spot.

The improved tone to which we referred last week has been maintained, and, in spite of the gloomy reports from up-country, which are as prevalent as ever, there seems to be little doubt there is more business taking place. It is satisfactory to be able to record that the most noticeable improvement has taken place in what used to be considered the bread-and-butter qualities of the trade; we refer to Good Fair and Fully Good Fair Sakellaridis, qualities which, in so far as the Lancashire market is concerned, have been rather under a cloud for some time past. As we have frequently pointed out in our circulars of late, the selection of these qualities available on the spot here is a most indifferent one, and, should the demand continue, spinners are likely to find some difficulty in obtaining their requirements except at prohibitive prices. The higher grades have again failed to attract attention, but the demand for low Sakel at from 11½d. to 12d. has shown some slight improvement again.

In Sudan Sakels a large business has again been done and competition for the choice lots of new crop cotton has been keen. A good trade also has taken place in the lower qualities of last year's crop, which have been carried over into the current season. In Uppers, the usual steady business has continued, but we doubt if the actual turnover has shown much increase. Ninety per cent. of the business has been done in cotton at from 20 off to 50 on March contracts. The top grades remain neglected, but, as in Sakel, there has been some show of interest displayed in the low cotton at from 10½d. to 11d. White, Maarad, Nahda, Fuadi, etc., have aroused very little interest this week.

C.I.F. business is hard to find and difficult to put through when found. Forwardings to the trade last week amounted to 7,997 bales Egyptians and 1,793 bales Sudan Sakels. Estimated spot sales, 2,000 bales Egyptian and 3,450 bales Sudan Sakels. Quotations of Sakel show a net advance of 20 to 40 points. Upper and Pilon have been advanced 23 points on the week. F.G.F. Sakel to-day, 18.90d. F.G.F. Upper to-day, 12.97d. F.G.F. Pilon to-day, 13.60d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended March 7, state:—

Since our last report the futures market has been active and unsettled; the tendency at the close to-day was firm. The week's summary of price movements is as follows:—Sakellaridis: March, 37 dollars, 0.10 dollars up; May, 37.84 dollars, 0.28 dollars up; July, 38.20 dollars, 0.25 dollars up; November, 38.75 dollars, 0.50 dollars up; January, 38.90 dollars, 0.65 dollars up. Ashmouni: April, 23.63 dollars, 0.24 dollars up; June, 24.08 dollars, 0.22 dollars up; August, 24.43 dollars, 0.33 dollars up; October, 24.68 dollars, 0.28 dollars up.

Sakel.—The week commenced with quiet markets and a rather heavy tone. Against the first March tender, dockets for 20,000 kantars were issued. A fairly large proportion of these contracts had been sold to speculative long interests, and as the latter were naturally not in a position to take up the cotton, heavy sacrifices were made to get rid of the dockets, rather upsetting the equilibrium of the market for the time being. The tenders were, however, eventually received by commercial interests, and when they were out of the way, the market showed a better tendency; an improved demand from the trade and an advance of half a cent in New York helping, most of the ground lost was regained, and the trend at the close was very firm.

November new crop has, of all the list, been the delivery most actively dealt in. It is to this option that the speculative long positions have been transferred, and in addition, as at one time the difference between March and November reached 2 dollars, the premium on the latter month became an attractive inducement to exporters to use it in cover of their purchases of spot cotton. At the end of February the statistical position of Sakel was approximately as follows: Stock Alexandria, 1,340,000 kantars (including 350,000 kantars held by the Government); stock up-country, about 345,000 kantars; total, 1,685,000 kantars. At the corresponding time last year the stock of Sakel in Egypt was about 1,000,000 kantars. To complete this information, we should say that the exports of Sakel during the period from March to August last year amounted to 1,325,000 kantars. These figures reveal rather a

bullish position, but it should not be overlooked that this year's crop of Sudan Sakel is estimated at more than 600,000 kantars, against 475,000 kantars last year, and moreover, the consumption of Sakel in the textile districts is undergoing a decline which, although not at the moment appreciable, may attain serious proportions during the coming months.

The Sakel/Uppers straddle (March/April) this week stands at 1,337 points, against 1,351 points last week and 1,053 points at this time last year.

Uppers.—Fluctuations in this market have not been so pronounced as for Sakel. After a rather weak opening, prices recovered somewhat, but did not fully respond to the rise in New York. The demand from spinners has been fairly active and America is again said to have placed some large orders. At the end of February the statistical position of Ashmouni and Zagora was approximately as follows:—Stock Alexandria, 1,485,000 knatars; stock up-country, about 385,000 kantars; total, 1,870,000 kantars. At the corresponding time last year the stock of Ashmouni and Zagora in Egypt was about 1,775,000 kantars. We would add, by way of information, that the exports of these varieties during the period from March to August last year were 1,475,000 kantars.

The Ashmouni/American straddle (April/March) this week stands at 271 points, against 284 points last week and 727 points at this time last year.

The week's receipts amount to 123,505 kantars, against exports 158,411 kantars; the stock in Alexandria stands at 3,290,755 kantars. Spot.—We have had a week of fairly active markets at Minet el Bassal and sales amount to about 16,000 bales, of which we estimate 4,600 bales Sakellaridis, 10,250 bales Ashmouni and Zagora, 675 bales Pilon, and 475 bales other varieties.

Sakellaridis: Continues in moderate demand and a fair turnover has resulted, covering all grades, with the medium qualities once

again attracting most attention. Spot differences are without much change.

Ashmouni and Zagora: Continue in good favour and a good turnover has resulted, covering all grades, with the grades round Fully Good Fair attracting the bulk of the business. Spot differences are generally very firm and are unchanged for the grades above Fully Good Fair, but rather dearer for Fully Good Fair and below.

Pilon: A good business has been done, restricted, as we observed last week, by the poor selection on offer. Spot differences are quotably without change for the grades above Fully Good Fair, but dearer for Fully Good Fair and below. Desirable lots of good staple, which are not frequent, move off quickly at good prices.

Other Varieties: A good business has been done in Nahda and spot differences are inclined to harden. In White a fair business has been done at last week's rates, and a retail business in Maarad and Fouadi has taken place.

Up-country: Very little business has been done, and, in any case, the quality of cotton remaining unsold is negligible. New crop business has also been small.

Crop, 1929.—Climatic conditions have been variable. The preparation of the land is completed in most districts and sowing is being actively carried on. Expectations as to acreage remain the same as mentioned in our previous reports, that is, a slight increase, chiefly in Upper Egypt. We give below the figures registered by the principal Nile gauges to-day:—Malakal, 10.17 metres, against 9.82 metres last year; Roseires, 11.51 metres, against 11.19 metres last year; Wadi Halfa, 1.19 metres, against 0.79 metres last year. The discharge from the Assouan Reservoir registered to-day was 752 cubic metres per second, against 579 cubic metres per second last year and 833 cubic metres per second in 1927. The levels of the water in the Reservoir for the same three dates last year were 113.50 metres, 111.85 metres, and 113.57 metres respectively.

Notes of the Week.

Progress in Yugoslavia.

The new régime in Yugoslavia has now been able to pass from provision of the immediate needs of the moment to a consideration of a more comprehensive scheme of administrative reform. The Government's programme, as published, is a lengthy document, covering practically every department of the administration, and from the fact that nothing is said on the subject of the restoration of parliamentary government it may be inferred that it is the intention of the present authorities to carry through their programme at least to a stage at which its good effects will not be subject to interruption by public criticism. No other conclusion to the *coup d'état* of January 6 would be logical. Parliamentary institutions had been tried for ten years in the Tripartite Kingdom and had been found wanting; and, as far as could be inferred locally, there was no chance of their working successfully, until a complete change had been wrought in the body politic of the new State. It is the purpose of the Dictatorship to carry through this change, and for the moment no very convincing evidence is forthcoming to show that the Yugoslav public is averse from giving the authorities full scope for their experiment. Whether this good will on the part of the people will be proof against the excessive suppression of all comment on public affairs remains to be seen. Last week a well-known editor in Zagreb was murdered in the street, and, although there would not seem to have been any evidence to show at once whether the crime was personal or political, no reference appears to have been made to the outrage in the local Press. Reports emanating from the news factories of Vienna or Budapest regarding wholesale arrests of people in Croatia must await confirmation before they need be believed; but a ban on all reference to the murder suggests undue anxiety on the part of the régime whose success will depend in the long run on confidence in its own just cause as well as on the large measure of popular confidence that it can command.

Degrees in Dictatorships.

The course of events in Yugoslavia and in Egypt continues to afford an interesting contrast in the conduct of Dictatorships. From the outset the Yugoslav Government has taken no risks; politics, it decided, had proved a curse to the country, and, from the point of view of Yugoslav interests, altogether unworkable. They were, therefore, to be completely eliminated, and the question of their restoration would be left to the future to decide. In Egypt Mahmoud Pasha and his Cabinet have been unwilling to proceed to the same length. They do not admit that parliamentary institutions are impractical for Egypt, but they were confronted with the fact that the actual manipulation of the parliamentary machine by a certain party had put the mechanism of the State out of gear. Their main concern, therefore, it would seem, is to stop the running of the parliamentary machine just as long as may be required to allow the whole machinery of Government to be in proper working order once more. To this end interference with the liberty of the subject has been carried out sparingly. The time comes, however, in the face of persistent opposition, when the decision has to be taken whether the liberty of the few can be allowed to militate against what are regarded as the real interests of the majority. It is, therefore, not surprising that the report should be current that the Egyptian Government is considering the advisability of a law to protect the present régime; in other words, an enactment that will impose more or less drastic penalties on too active attempts to undermine the existing status in Egypt. It was to be hoped that, in the face of an external situation for which there is no immediate solution, the Opposition in the country would accept the obvious intention of the Ministry to get on with the work of government and would confine itself to practical criticism of proposed measures. Such, however, is not the way, apparently, of the Egyptian Opposition, and if the Dictatorship screw, which Mahmoud Pasha has been so unwilling to tighten, is now given a few extra turns, so that it conforms a little closer to the examples of Yugoslavia and Turkey, the major responsibility will rest on those who have not known how to temper opposition with intelligence and common-sense.

Islamic Scholarship.

No observer of Islam can fail to have realised the immense importance of the writings of such modern authors as Taha Hussein or Abdur Razzaq, whose scientific approach to historical and other problems really marked a revolution in the practice of Muslim writers. By Western Orientalists the work of these Egyptian writers was at once acclaimed; some even went so far as to say that a regeneration of Islam was impleid in their writings. However that may be, it is a fact worthy of record here that another important book has recently been issued from Cairo: it is called *Fajr al-Islam* ("The Dawn of Islam"), and is, apparently, a scientific investigation of the intellectual, political, and literary life of Islam up to the Umayyad period. According to the *Egyptian Gazette*, three men (Taha Hasein, Ahmad Amin, and Abdal Hamid al-Abbadi) are to be responsible for this compilation. It is the first volume, by Ahmad Amin, dealing with the intellectual life of this period, that has just been published. There appears to be little doubt that scholarship in Islam is taking on an aspect which makes Orientalists in the West unusually sympathetic with it. Not that there is any disposition to minimise the importance of the learning of the older kind of shaikh; but this new Islamic learning, this new attitude, is judged to contain the most exciting potentialities. For it is the method of the Western scientific spirit applied by Orientals to Oriental things.

Whither Islam?

Perhaps the most puzzling problem to-day is to discover the real direction in which that section of the Islamic world which is influenced by modern Muslim scholarship is tending. It is a problem which deserves the closest attention and one upon which it is difficult indeed to generalise. Many Mussulmans, of course, particularly in such countries as Egypt, Turkey, Syria, and Iraq, have become frank agnostics or atheists, but that process has been due, probably, rather to Western or so-called Christian influence, than to the independent discoveries of Muslim scholars. Will all this new learning in Islam lead to a re-interpretation, a reinvigoration of the Muslim faith; or will it, by casting doubt upon what had hitherto been implicitly believed, lead men away from the teachings of the Prophet Muhammad? It is impossible to dogmatise. There appear to be some grounds for supposing that in certain Muslim minds there is a duality, or there are two departments, by which room is provided both for acceptance of the new scientific discoveries by Muslim historians and for retention of the old beliefs. In a Western mind, acceptance of the new or higher criticism necessarily invalidates to some extent the older beliefs, but in Oriental minds such a process does not seem to be inevitable. Whether the Western attitude of mind towards such things—the Western "mentality," as it is loosely called—will ever be substituted, with all its paraphernalia of cause and effect, for the Oriental mind, in which effect does not always appear to follow cause, is one of those speculations which must always fascinate but cannot as yet be satisfied. But there is, in fact, no one direction in which Islam is advancing, for, as G. K. Chesterton once said of H. G. Wells, Islam appears to be "advancing in all directions." No generalisation is possible upon the present state of Islam to which there are not as many exceptions as there are examples.

Great Britain and the Yaman.

In the House of Lords on March 20 Lord Lamington once more ploughed his lonely furrow in regard to the Yaman. The noble Lord's harvest, however, is not yet. It is his regular custom to move for Papers on this subject, and, after he himself and the Government spokesman have delivered their unvaried speeches, to withdraw his motion. It is hardly extravagant, indeed, to say that the maintenance of the *status quo* in Anglo-Yamani relations

implies the continued absence of a Treaty with the Imam. The Earl of Plymouth stated that a full power has been forwarded to the Resident at Aden, authorising him to negotiate a preliminary agreement with the Imam Yahya on the basis of recognition of the complete independence of the Yaman and the defining of the frontier. But from Sanaa, never a word. From September to March nothing at all, apparently, has been done. In these circumstances one cannot help feeling that, since the Imam so manifestly dislikes the atmosphere of Aden, one of his representatives might be invited to London, where, if little else were achieved, it could be definitely shown to the Zaidi Imam that it is not Aden but British interests in Aden which have stood in his way. The present *impasse* can be satisfactory to no one.

French Policy in Syria.

There is, so far as one can see, a determination now among the French in Syria to develop as much as possible the economic or material side of their charge, while waiting for the political aspect of their tutelage to settle itself. To mention but two things in which France could notably aid, and is considering means of aiding the peoples of Syria: irrigation and foreign loans. Much has already been done, in spite of military and political complications, in spite of domestic embarrassment, in spite of the past fickleness of French currency (with which, of course, Syrian money is bound up); but the French themselves are the first to admit that very much remains to be done. We note, in that connexion, that a former High Commissioner in Syria, M. Henri de Jouvenel, speaking in Paris on March 21, described French policy as being directed to the most rapid economic development of Syria. This is undoubtedly a worthy policy, which should, in its working out, imply also a solution of the still unsolved political problem. M. de Jouvenel, indeed, seems to have gone so far as to say that there should be a thirty years' Treaty between Syria and France—a basis which would in his opinion be much more satisfactory and real than mere reliance upon a League of Nations which "did not give proper security." A Treaty on some such lines is not impossible, if capital, and particularly native capital, can be attracted to Syria. The only obvious danger to Syria's security comes from the Turks on the northern frontier, who show great stubbornness in defending a case which they have already submitted to arbitration and lost. In this Syrian-Turkish frontier question, at any rate, the French Mandatory Power is bound to be supported by all civilised opinion. On the whole, indeed, it must be said that the French in Syria of late have given abundant proofs of their good intentions—a fact which we do not doubt will be noticed by the High Commissioner of Palestine, Sir John Chancellor, on his present visit to Syria.

Aerial Photo-Archæology.

No one who listened to the lecture given last week by Mr. O. G. S. Crawford to the Royal Geographical Society, which is briefly reported elsewhere in this issue, can have failed to have his imagination stirred by the immense possibilities which lie to the hands of British archæologists in the Middle East. In Iraq and Trans-Jordan archæologists have an incomparable site; in the Royal Air Force that is stationed there they have an invaluable, although, so to speak, a fortuitous adjuvant; all that is lacking, therefore, is the money. Such money must be forthcoming. It is a national obligation, to which the countrymen of Layard and of Rawlinson cannot be deaf. But whence? We cannot help believing that Mr. Crawford will, by his lecture on what aerial photography has already accomplished for archæology in the Middle East, and by so successfully interesting the British Museum in his results that it houses the negatives taken by the R.A.F., have assisted in the framing of an answer to that question. Our readers may here be reminded of the suggestion publicly made a few weeks ago by Sir Edgar Bonham-Carter for the establishment of a British School of Archæology

in Iraq. Admittedly, excavation of Iraq is one thing and a thorough air survey is another; but it might be possible to dovetail the one with the other with extraordinarily happy results. We hope, at any rate, to have the opportunity shortly to return to this question of archæology in Iraq.

INDIAN NOTES.

Communism in India.

Without in any way questioning the wisdom of the Viceroy's action we cannot but regret that Lord Irwin was compelled to disallow, on the ground that the debate would be to "the detriment of public safety," the motion for the adjournment of the Legislative Assembly to discuss last week's sudden and drastic curtailment of the activities of Communist agitators in India. As a display of political sophistry the debate would have been highly entertaining. Whether the Opposition speakers would have been able to conform to the Speaker's ruling that the discussion should be confined to first principles only is more doubtful. Pandit Motilal Nehru, Mr. Jinnah and especially the Bombay industrial and commercial members, have based their opposition to the Public Safety Bill primarily upon the ground that the existing law was more than sufficient to deal with a situation, the gravity of which in large measure at any rate they recognised. In fact they have on occasion even gone so far as to invite the Government to take proceedings under the very same section of the Indian Penal Code, and the spectacle of such stalwarts protesting, now that the Government of India have accepted their advice, that they did not mean to be taken at their word would have been diverting in the extreme. Meanwhile it is satisfactory to find that, having at last decided to move, the Government has acted to some purpose. Complaints having been laid again thirty-one persons from various parts of India, all of whom are alleged to be Communists, warrants for their arrest on a charge of "conspiracy to deprive the King Emperor of the sovereignty of British India" were immediately issued and their arrests effected simultaneously in Calcutta, Bombay, Poona, Allahabad, Delhi, Madras, and other cities. The offence being a capital one under section 124 A. of the Indian Penal Code and triable in any part of British India, irrespective of the place where the particular offence may have been committed, the cases will be heard at Meerut, the trial, it is understood, opening in the middle of next month. The evidence on which the arrests have been made and the extensive house searches conducted will, no doubt, be disclosed in due course, but its nature was sufficiently indicated in the course of the debates on the Public Safety and Trades Disputes Bills, both of which measures, we are glad to note, the Government intends to have passed, if possible, this session in spite of the delaying tactics of the Opposition.

The Indian Coal Trade.

If there is one problem with which everybody who has any experience of the Indian coal trade is painfully familiar it is the question of the deficient supply of railway wagons for the transport of coal from the collieries to the consumer. It is thirty-five years ago since attention was first pointedly drawn by the Indian Mining Association—an association of colliery owners—to the fact that the collieries could not get wagons in sufficient number. And notwithstanding all the enormous railway extension and development which has been undertaken in the intervening years, the trouble is still acute. In fact, Sir George Godfrey, who was formerly a Railway Manager and for some time a member of the Railway Board, told the Bengal Chamber of Commerce towards the end of February that "never in my experience of railway traffic problems have I seen a gloomier outlook." And a few days later the Chairman of the Indian Mining Association said that "the black spot on the horizon at the moment is the most acute

shortage of wagons." We have no information as to what the position is at the moment. But past experience certainly does not suggest that wagon shortages can be speedily overcome. This particular deficiency was attributed mainly to abnormally large imports into Calcutta of rice and Australian wheat. Most of this grain had to be moved north-westwards, and it was taxing the capacity of the lines to the uttermost. The coal trade naturally got alarmed, being only too well acquainted with the troubles which ensue from a wagon shortage. The trade is just beginning to look forward to better times after a long period of difficulty. Since the War colliery owners have made vigorous efforts to recover lost, and to find new, markets. And they fear the possibility of another set-back if contracts cannot be fulfilled for lack of transport. From a statement which was made in the Legislative Assembly on March 4 by the Commerce Member of the Government of India it would seem that the Railway Board was alive to the seriousness of the situation. And no doubt the Board was then, and is now, doing everything possible to bring about an improvement. But it is only some two or three years ago that the Board claimed that the railways were stocked with wagons to a very large extent in excess of requirements. The situation which has now arisen would seem to suggest that there was something wrong with this calculation, or it may be that the resulting curtailment of supplies of new wagons has been too drastic. But whatever the cause, there is no doubt that the existing trade demands are, as they have been on so many occasions in the last thirty-five years, enormously in excess of the available transport facilities.

Mr. Robert Douglas Hare, C.I.E., of Queen's Gate Terrace, S.W., who died on February 9, aged 80, left estate of the gross value of £10,821, with net personality £10,717.

Sir Charles Raitt Cleveland, K.C.I.E., K.B.E., of Pattison Road, Childs Hill, N.W., who died on January 17, aged 62, left estate of the gross value of £6,217, with net personality £2,147.

The will of Mr. George Claudius Beresford Stirling, C.I.E. (67), of Mansfield, Roseville Street, St. Heliers, Jersey (net personality £8,449), has been proved at £16,717.

Five new passenger air liners, including three 23-seater Armstrong-Siddeley air liners, are to be added to Imperial Airways for use on the London to India air route. Imperial Airways will then have a fleet of 24 aeroplanes with seating capacity for 400 passengers.

The addition of two Puisne Judges to the permanent strength of the High Court of Judicature at Bombay has been approved, and Mr. Stephen James Murphy, I.C.S., and Sajba Shankar Rangnekar have been accordingly appointed.

THE DEAD SEA CONCESSION.

The attention devoted in Parliament to the subject of the Dead Sea concession must be regarded as an indication of the potential value of the undertaking, for Members of both Houses would hardly be found willing to devote so much oratorical effort to a business enterprise, unless it held out the prospect of assuming political or economic importance altogether out of the ordinary. It is unfortunate in these circumstances that no authoritative account of all the tangled negotiations leading up to the concession has as yet been published. On the numerous occasions when the matter has been discussed in the Upper or the Lower House *ex parte* statements have been made on behalf of one or other of the unsuccessful tenderers, but Government speakers have restricted their replies for the most part to an attempt to explain away, with a marked economy of words, the delay in making the award, and have not felt called upon to throw much light on the actual history of the concession. Last week the unravelling of the story, as far as Parliament is concerned, was carried a further stage, when the Viscount Templetown spoke in the House of Lords in the main to a brief which, he naïvely admitted, had been handed to him not long before he had entered the House. The statement in question, which he read at length, set forth the grievances of a group of unsuccessful tenderers which likes to be known as "the British group." It is identified with the names of Dr. Homer, Mr. Bicknell, and Mr. Tottie, of whom, as far as we are aware, only Dr. Homer survives; and, as the latter is a lady scientist, the reference in the statement to "Dr. Homer and his associates" suggests that either Hansard or Lord Templetown is singularly ill-informed, unless, indeed the compilers of the statement imagined that their Lordships would be more impressed by the "terminological inexactitude." In replying on behalf of the Government, the Earl of Plymouth so far abandoned the practice of official reserve in this matter as to state that he could not accept a number of statements made by Lord Templetown, and to dispose of the group's claim by revealing the fact that, before the concession was granted in principle to those who had been adjudicated to be the successful tenderers, the so-called British group had formally notified the Government of its inability to obtain the necessary capital in support of its tender. The general impression left in the minds of Members of both Houses of Parliament, it is feared, must be one of bewilderment as a result of these piecemeal elucidations, and many, no doubt, will adopt the attitude that, as there is evidently so much that they have not been told, there must needs be something sinister in the background of this concession.

To none of the speakers in the House of Lords' debate on March 20 nor to those who ask questions in the Lower House on the subject of the Dead Sea concession does it

seem to occur that, possibly, in a matter of admittedly far-reaching importance, and in itself highly complicated, the Government may be acting with not unnatural precaution for fear that otherwise the terms of the concession, when it has once been granted, might be found to have overlooked some salient detail. It would be thought that the potential importance of the Dead Sea salts required that the concession should be based on certain well-defined principles, among which must be that the exploitation should be carried out with the best available scientific knowledge of a practical, rather than of a merely theoretical, character; that there should be adequate financial support to enable the concession to be worked to the fullest extent; that there should be no limitation of output, and that the potash of the Dead Sea should not come under the control of any foreign monopoly, but should be used for the general betterment of agriculture both in the British Empire and in the world at large. These points are so axiomatic that it is difficult to believe that a British Government can overlook them; and when it was first announced that the concession had been granted in principle to certain tenderers, it would probably not have occurred to any member of Parliament to impugn the Government's common sense in the matter, if they had not listened to the *ex parte* statements of unsuccessful tenderers. The disappointment of the latter is comprehensible; but it hardly affords sufficient justification for those members of Parliament who have made themselves the mouthpieces of their grievances without taking the trouble to learn the facts regarding the case of the successful tenderers.

If ever there was an enterprise in regard to which an ounce of practice must be worth more than a ton of theory, it must be in respect of a concession for the exploitation of the Dead Sea salts. Apart from the chemical aspect of the problem, a multiplicity of questions are involved for which adequate provision can be made only on the spot with the help of exhaustive local knowledge. The so-called British group, whose offer Lord Plymouth described as "most satisfactory," was evidently conscious of its lack of practical experience, as, according to its own statement, it made repeated requests to send out commissions to work *in situ*. Its tender, it will be noted, was based entirely on theory or laboratory experiment. The successful tenderers, on the other hand, had the advantage of the years of careful investigation and practical experiment which one of them had spent on the spot, before any tender was made, and it is hardly a matter for surprise that those who had to adjudicate on the four tenders received should have set more value on experience than on theory, even if the latter were supported by the offer of more generous terms to the Governments concerned. The main consideration for these Governments had to be that the concession should be assured of the most expert exploitation while, very obviously, the participation of a Palestinian subject would be regarded as an advantage rather than the reverse. The actual terms of any agreement with the concessionaires were a matter for negotiation, and, as the event has shown, proved a more difficult, or at least lengthier, problem than adjudication on the tenders. The British Government, Lord Plymouth explained, was unable, in awarding the concession, to insist upon British control, but it had learned, as any Member of Parliament might have found out long ago, that the concessionaires to whom the concession had been granted in principle were resolved to have a British chairman for their company and a majority of British subjects and Palestinian citizens on the Board of Directors. He repeated the assurance that the Government is satisfied with the financial backing behind Mr. Novomeysky and Major Tulloch, and added that the points still remaining to be settled did not concern any other claim, but were connected with "the directorate and matters of that kind." Accordingly, it may be inferred that within the next few weeks the final decision in regard to a much vexed matter will be announced, for the benefit of Palestine and Trans-Jordan, and, we may hope, of the world at large.

*The Near and Middle East

From Our Own Correspondents.

Cairo, March 16.

The Palace.

During the past week Government offices have been shut owing to the Feast of Bairam, which celebrates the conclusion of Ramadhan, and to Independence Day, which fell yesterday. On the first day of the Feast King Fuad held a reception at Abdin Palace, which was very well attended, a noticeable feature being the unusually large contingent of notables from the provinces. This evening King Fuad gave a banquet in honour of the High Commissioner and Lady Lloyd, followed by a *soirée*, to which the leading British residents were invited.

Dr. Hafez Bey Afifi.

Dr. Hafez Bey Afifi, Minister for Foreign Affairs, left this week for Europe. Before his departure he gave a farewell tea party at his villa in Kubba Gardens, to which he invited the Diplomatic Corps and the leading members of the foreign community. Lord Lloyd was also present. Dr. Afifi will be absent from Egypt for several months, as it is intended that he shall be in London from now onwards until after the elections, in order to ensure that Egypt has an adequate representation in England during this important period. It was fully anticipated that he would be appointed to succeed Izzet Pasha, but his nomination for the time being has been postponed for various reasons, mostly connected with the local political situation, and the course of delegating him on a special mission to London has been chosen to meet the difficulty. Dr. Afifi will accompany King Fuad on his European tour this summer, and during his absence the Premier, Mohamed Mahmoud Pasha, will take over the Foreign Affairs portfolio.

The Season.

The season is at its full height. In spite of the additional accommodation with which nearly all the hotels have been provided since last winter, there is not a room to be had anywhere, and late-comers are being compelled to put up with whatever make-shifts are available. Whether, however, on balance, this will prove to be more than a normal season remains to be seen; for while the Nile steamers have throughout had full bookings, the hotels were during the early weeks by no means up to their usual complements. It is this feature of visitors steadfastly refusing to come out in the earlier part of the season and all concentrating on the later months which makes to-day's problem of handling the tourist traffic so difficult.

In the matter of entertainment visitors have by no means the same complaint to make as in previous seasons, for this year, in addition to a season at the Opera House, which, thanks to the efforts of the new Impresario, Cav.

Dalbagni, has surpassed anything that has been here for many years, there have been a succession of first-class operatic, comedy, and other troupes at the other theatres, and the hotels have vied with each other in the organisation of fêtes and fancy dress balls, which have provided more than sufficient amusement for those of our visitors who have had any energy left from their day-time excursions for night revels.

Spring Flower Show.

The Egyptian Horticultural Society held its annual show of spring flowers this week, and, as usual, it was opened by King Fuad, patron of the Society, who was received by the High Commissioner, its President. Although the show is a flower show, there were a number of exhibits of vegetables, fruit plants, and so forth, and the impression gained therefrom was that considerable progress had been made in all branches compared with previous years.

The Alexandria City Police.

The vacancy caused by the death of Miralai Ingram Bey has been filled by the appointment of Miralai Ablitt Bey as Commandant of the Alexandria City Police, his post of Assistant-Commandant of the Cairo City Police being filled by the promotion of Kaimakam Baker Bey. Ablitt Bey is no new-comer to Alexandria, having already served there as Assistant-Commandant. Throughout his service he has proved himself very efficient and popular, and there is every reason to expect him to make a success of his new post, which, owing to the conditions existing there, is no easy one to fill.

The number of British officers in the Police Force serving in the cities is becoming depleted, as a result of the death of one Commandant and the retirement of a second, particularly in regard to the material available for the senior posts, and something will have to be done in order to adjust matters in this respect.

French Industrial Exhibition.

The French colony has been *en fête* on the occasion of the Exhibition of French Industries, which has been held in the grounds of the Royal Agricultural Society. The Minister of Commerce and Industry, Monsieur Bonnefous, and a number of leading French industrialists came specially from Paris in order to attend the inauguration, which was performed by King Fuad in the presence of the Diplomatic Corps and of the Cabinet. The exhibition itself is well arranged, and contains a number of interesting exhibits, such as the latest ladies' apparel, both underclothes and dresses—in connexion with which a very good mannequin parade was held—wonderful jewellery from Cartier's, furniture, pianos, and so on.

Numerous Egyptians suggested that it was time that Great Britain held an exhibition of her products in Egypt, and there is no doubt that such a show would meet with great success and help enormously in the fight which representatives of British goods have to make against their Continental competitors. But it seems difficult after the

experience of the Medical Exhibition on the occasion of the recent Congress and of that at the recent motor show to expect British manufacturers to rise to the occasion.

At the same time, there has been held under the auspices of the Society known as "Les Amis de l'Art" an exhibition of French books and engravings, which was also opened by the King. It provided a most interesting survey of the progress made in the industry, and at the same time enabled us to see many of the rare old editions, which are normally kept in private collections.

The Egyptian Feminist Union.

A successful Kermess was given last week at the Gezira Casino by the Egyptian Feminist Union (of which Madame Hoda Shaarawy is the President) in aid of the Industrial School for Girls, which she has founded. Ladies of all the European communities assisted in the *tableaux*, which were exceedingly good, and the school must have benefited considerably, both from the attendance at the performances and the sale of the work produced by the girls. The School, which is situated just off the Mohamed Aly Street below the Rifai Mosque, is excellently run. The girls, who are taken in at an early age, are trained in needlework, dressmaking, weaving of tissues and carpets, and so forth, and when they have finished their course they are, as the work which they produce shows, fully trained to be able, either in their turn, to give instruction or take positions with dressmakers. There is also a dispensary on the ground floor, where the sick children of poor parents in the neighbourhood are attended, and the whole organisation reflects the greatest credit on Mme. Hoda Shaarawy and her assistants.

CYPRUS.

Nicosia, March 13.

The Greek Archbishop's Memorial.

His Eminence, the Greek Archbishop, has been, and is, receiving numerous replies from England to the communication regarding union with Greece; including letters from the Archbishop of Canterbury and York, Bishops and Members of the Houses of Parliament. Many of them, it is said, state that they will give their careful consideration to the proposals and claims.

Education.

A Greek member of the Legislative Council, of Papho, having submitted a resolution that a Greek Director of Education should be appointed, has been requested to state whether the proposal is that an Hellenic subject of Greece, or a British Greek subject of the island should be appointed. If a new departure is to be made, the matter is of no little local importance. Hitherto a British Chief Inspector of Schools for those of both communities—Greek and Turkish—has held the post, with native assistants. It would seem that the Greeks, for the most part,

are apparently indifferent on the matter of nationality, provided that the official be Greek, and they would propose that there be a separate Directorship for Turkish Schools.

Visitors to Cyprus.

The s.s. Samaria, which brought a large number of tourists to Cyprus, was unable to put in either at Famagusta or Larnaca, owing to rough weather. On Sunday, March 3, by the New York, of the Hamburg-American Line, about 380 tourists, chiefly American, landed at Larnaca. About 50 went to Nicosia, where they visited different places, and made purchases at the Museum and in the bazaars, where shops were open by Government permission. Others visited Famagusta, Salamis, and other points in the neighbourhood.

General News.

Of the two members of the deputation to Egypt who hoped to see Mr. Lloyd George, one, Mr. Michailides, has returned to Cyprus. The other, the Bishop of Kition, has remained in Egypt, hoping to see Lord Lloyd, on his return from the Sudan, on the subject of the nationality of Cypriots in Egypt, and other matters. It is understood he will probably visit Upper Egypt and Mt. Sinai before returning.

The Legislative Council has been summoned to meet on March 15, by the Acting Governor, Mr. Nicholson, and a number of draft laws will be considered. Information regarding the health of Sir Ronald Storrs is anxiously awaited.

A football match between a team from the British garrison at Polemedia, in the Limassol District, and one of a Nicosia club, took place on March 3, at the capital, before a large number of spectators: the Cypriot team was victorious by four goals to nil.

THE HIJAZ.

Jidda, March 10.

The Iraq Frontier.

In my last letter I contented myself with writing: "So far as can be gathered there is no reason whatever to connect the recent attack on a motor convoy . . . with the Wahhabis." Before saying more on the subject I thought it best to await the result of the investigation which had been set on foot by the King; and the result has just arrived in the last post from Riyadh. It is officially stated that none of the tribes subject to King Ibn Saoud was in any way connected with the crime; and it is difficult to see what other ultimate conclusion could be expected. According to the correspondent at Basra of one of the most respectable British newspapers, a party of raiders consisting of 200 men mounted on 100 camels and 40 horsemen made the attack at Jirfan, which is 70 miles from the nearest point of the frontier, and then vanished into thin air in spite of the strenuous efforts of all the King's aeroplanes and armoured cars and Intelligence Officers to track them down for condign punishment. The British newspaper-reading public has probably not the slightest idea how long it takes a horseman going all out to cover a distance of 70 miles, much less how long it takes a camel carrying two riders. But a picturesque story is a picturesque story, and it would be a pity to deprive the public of an opportunity to shudder at the very thought of those bloodthirsty Wahhabis. At any rate it may now be agreed that there is not a shred of truth in what was on the face of it a most improbable story. The sympathy of all, however, will go out to the unfortunate victim of the incident.

It may be mentioned in this connexion that the current issue of the Mecca newspaper devotes a leading article of four columns to the appointment of Captain J. B. Glubb as Inspector-General (or is it Governor-General?) of the whole of the Iraq desert. As the article was written at Riyadh it may be safely assumed that it reflects the official

ideal holidays exhibition

Royal Agricultural Hall, London, 20th June—3rd July, 1930

Increase your share of the rapidly-growing revenue from Tourist traffic by being represented at this International Travel Exhibition.

Applications for space and inquiries to:—

The Organising Manager,
ideal holidays exhibition,
7, Duke Street,
Manchester Square,
London, W.1.

attitude of the Najd Government; and all that can be said is that the prospect of peace and harmony on the Iraq-Najd frontier does not seem to be improved by the appointment on the Iraq side of one who is so definitely *persona non grata* to the other side.

Curiously enough, in this connexion the writer of the article referred to seems to absolve the Iraq Government of complicity in the chaos which is being steadily created on the frontier, and even holds out an olive branch in the form of an invitation to the Iraq authorities to negotiate a direct settlement of all differences between the two countries rather than be dragged by the persistent misrepresentations of a mischief-making foreigner into unavoidable trouble. The tone of the whole article is so bitter that, as an echo of the public opinion of the desert, it cannot be disregarded. In England and Iraq, but not here, it seems even to be whispered that the British Government has a secret understanding with King Ibn Saoud to create these alarming diversions on the frontier in order to facilitate the bringing of political pressure on the Iraq Government in connexion with pending negotiations on various matters still unsettled between the two Governments; and the occurrence of the recent alarms of Wahhabi raids just at the moment when the negotiations had reached a crisis involving the resignation of the Iraqi Cabinet seems to lend substance to such a suspicion. It may be well, therefore, to state categorically that there is absolutely no foundation for such a belief.

The whole matter deserves the very careful consideration of the British Government, particularly at the present moment when, as has already been made public, the differences between the Najd Government and Iraq on the question of the forts and the Protocol of Uqair are about to be submitted to arbitration. A friendly understanding between Great Britain and the Wahhabi kingdom is urgently needed in the interests of both parties. It was impossible to achieve it by direct friendly negotiations last year owing to a fundamental difference of opinion on the vital point; it will be possible to achieve it by arbitration regardless of the rival points of view. And nothing should be done by either party to jeopardise the prospect of arbitration. The sooner it takes place the better.

Ramadhan and the Pilgrimage.

The month of fasting has dragged out its weary length and is nearly over. The *Id* feast definitely falls on Tuesday next, March 12, and all Government offices and business will be at a standstill for four days. Thereafter the country will resume its normal hours and occupations, and motor transport will once more be active conveying the pilgrims who have fasted at Mecca to Madina. The total number of pilgrims already arrived from overseas is 34,783, which compares unfavourably with 53,444 pilgrims who had landed at the corresponding lunar date of last year. It is known now that the Javanese contingent will be some 10,000 short of last year, but it is hoped that India and Egypt will both do much better than they did a twelvemonth ago.

Meanwhile those who have spent the winter in the Hijaz have had nothing to complain about in regard to the

climate; the severe cold which Europe has been experiencing seems to have had a mollifying effect on the conditions of our southern latitude. Our maximum temperatures have seldom during this season exceeded 80 degrees.

European Community.

Commendatore Teodorani arrived here some weeks ago to take up the acting charge of the Italian Consulate, while Mr. Bird, the British Agent and Consul, left Jidda on March 6 for two months' leave on private affairs. Otherwise there is little to record of European activities here, and visitors have been rarer than in former years, though Brig.-Gen. C. R. Woodroffe is expected here shortly on a brief visit.

Later, March 10.

The Position of Captain J. B. Glubb.

The recent mail from Riyadh has now been followed by a special messenger with letters announcing that, in consequence of widespread resentment among northern tribes at alleged menacing activity on the part of Captain Glubb on the frontier, the King left Riyadh on March 1 for a tour through the provinces of Washm and Qasim and for a conference with tribal leaders convened to meet him at Buraida in the near future. This move indicates the King's firm intention of checking any tendency there may be on the part of the tribes to take up the challenge implied in a letter recently sent by Captain Glubb (who would seem to have no authority to correspond direct with Najd officials) to the Governor of Hayil demanding the immediate withdrawal of the Najd tribes from the pastures along the frontier (where they have a right to be by Treaty) on pain of attack by aeroplane. The King has no intention of allowing any hostility on the part of his tribes on the frontier.

General News.

Owing to this tour the King will not reach the Hijaz until late in April or early in May. The Prince Saoud, Heir Apparent to the Throne, will also be arriving here for this year's pilgrimage; and it would seem probable that advantage will be taken of his presence here to arrange for his formal recognition as Heir Apparent, a formality which is necessary in a country like Arabia where the principle of succession by election is still in force.

Shaikh Hafidh Wahba, who is at present in Egypt and who has now completely recovered from an operation he had to undergo recently, has been nominated to represent the Kingdom of the Hijaz and Najd at the forthcoming International Postal Conference in London next May. It is to be hoped that he will have, while in England, some opportunity of removing any misapprehensions that may still survive as to the pacific tendencies of the King's policy.

The King has addressed a personal letter to Mr. Crane, conveying his sympathy in connexion with the attack on his party on the Basra-Kuwait road, and explaining that the Wahhabi tribes had nothing whatever to do with it.

EGYPT invites you to break your journey, see Cairo, travel along the Nile and visit Luxor and Aswan for the antiquities. Or—from Cairo to Jerusalem and through Palestine. Everything arranged by the American Express—before you leave England.

Services for Travellers to India

SERVICES that smooth the path and take the trouble out of travel. Your steamship passages booked at no extra cost.

A uniformed man to meet you at Bombay or Calcutta. An office nearby to take care of your baggage, issue tickets and arrange tours to any point inland. It pays to summon American Express service to your assistance before you leave Europe.

ROUMANIA.

Bucharest, March 19.

Parliament.

The first fortnight of March closed with a very significant and forcible speech by M. Maniu, President of the Council, in reply to an interpellation by General Averescu, who in a four hours' speech had attacked the present Government for having forced itself into power by exciting the populace and "terrorising" the Regency. The Prime Minister replied in a masterly speech, refuting one by one all the accusations brought against his party and making clear once more the democratic principles underlying his party's policy. "Liberty without order," he said, "is impossible . . . and both must be enclosed in a frame of Law." This had been their line of conduct during ten years of opposition and would continue to be to the end. He then summarised the Government's programme, and said that the astonishing amount accomplished in the first four months of power should be a good guarantee for the future. Finally, he made chivalrous reference to his opponents and to his partisans, warmly thanking M. Titulescu for his share in smoothing over the strained political relations that existed some months ago, speaking with affectionate deference to M. Iorga and bringing a just tribute to the work of M. Ion and M. Vintila Bratianu. Finally, he expressed a warm regard for M. Mihalache, Minister of Agriculture, and his confidence in Parliament. Throughout the speech the personal element was completely submerged and the idea of the Parliament's duty to the Throne and to the nation was predominant. It was a fine oration on the part of a great statesman.

The Date of Easter.

M. Maniu replied with unflinching tact to an interpellation by Dr. Lupu (a former Liberal Minister) on the subject of the date of Easter this year. Formerly the Roumanian Church, in common with other Greek Orthodox Churches, adhered to the Gregorian Calendar (13 days later than the Julian Calendar adopted by other Churches). Since the War, however, a Royal Decree was issued enacting that henceforth the Julian Calendar should be adopted in Roumania, and accordingly the Holy Synod fixed the date of Easter this year as March 31. But the Patriarchs of Constantinople and Jerusalem, the Heads of the Orthodox Church, fixed the date of Easter according to Canonical rules of the Council of Nicœa (in 325) on May 5, and Greece, Serbia, and Bulgaria will observe this date. Now the Roumanian Church, although autocephalic, cannot introduce dogmatic changes without the consent of the Œcumenical Council of all the Orthodox Churches, but no such Council can at present be called, as the Russian Orthodox Church is non-existent under the Bolsheviks. Roumanians of all classes are accustomed to observe strictly the ceremonies of their Church, and the equivocal situation thus created has roused a storm of protest on all sides. In view of this, the Holy Synod authorised the celebration of Easter on May 5 in Bessarabia and in the north of Roumania (where the feeling appears to be strongest) but on March 31 in the rest of the country. No one, however, is satisfied with such an arrangement. In reply to Dr. Lupu's able speech, in which he pictured the sad plight of the Faithful, the Prime Minister stated that the Government could not interfere in matters of dogma and religion, which were exclusively in the competence of the Holy Synod; but he promised that the Government would assist in keeping order and in insuring that the Faithful should be at liberty to celebrate Easter on whatever date they considered right. Public opinion is not placated, however, and petitions are still being made to the Holy Synod.

Bessarabia.

It has been rumoured in certain sections of the Press both at home and abroad that there was imminent danger of Communistic troubles breaking out in Bessarabia. The Government at once made an official inquiry into the situation and established the fact that such rumours were totally unfounded, for tranquillity reigned throughout the

province. The peasants are waiting for the moment when the end of the frost will permit of their starting their spring ploughing and sowing. In the districts where the population suffered from famine last year because of the failure of the harvest the relief distributed both by the Government and the Red Cross appeared to be adequate and the population seem satisfied. General Cihosky, Minister of War, has just returned from a tour of inspection of the Dniester frontier and was well pleased with the attitude of the population there. The General informed the representatives of the foreign Press of the result of his inspection. His report of the frontier troops was also excellent. They were well fed and well equipped, and discipline was good; and he considered they could be trusted to prevent the infiltration of Bolsheviks from across the river.

The Memoirs of King Carol.

Referring to a series of articles recently published in the *Revue des Deux Mondes* by M. Diamandy, Roumanian Minister in Paris, in which certain passages from the private Memoirs of the late King Carol were quoted, Professor Iorga suggested in the Chamber that it would be appropriate to have these Memoirs published. The Prime Minister replied that it was hoped to obtain the consent of the Royal Family (to whom these Memoirs belonged) to their publication. At the same time the Prime Minister announced that the foundation stone would shortly be laid of a monument to the memory of King Carol, the Founder of Roumania's independence, and of a monument to the late King Ferdinand, under whom all the Roumanian provinces were united to form the present Roumanian State. This announcement was greeted with loud applause in the House.

The Union of Transylvania.

The tenth anniversary of the union of Transylvania with the Old Kingdom will be celebrated this year (on May 10) with great ceremony. Preparations have already begun at Alba Julia and at Cluj for these celebrations.

Foreign Affairs.

With regard to foreign politics, Government policy remains the same, and there are, fortunately, no new incidents to report, as is indicated in the *communiqué* issued yesterday by M. Mironescu, following the weekly reception given at the Foreign Affairs Ministry to the Diplomatic Corps and the Press. It is satisfactory to learn that on the question of Minorities at the Council of the League of Nations agreement was reached on the basis of M. Titulescu's proposal.

Court News.

At the Palace preparations are being made for the journey of Queen Marie, who leaves on the 14th inst., accompanied by Princess Ileana. Her Majesty goes *via* Paris to spend some weeks at St. Lunaire with the Grand Duchess Cyrille of Russia. She will then proceed to Spain on a visit to the Infanta Beatrice, and will also stay in Portugal. The Queen, who is not travelling officially, also proposes to go to Barcelona, to be present at the opening of the Exhibition there, and will return to Roumania early in May, in order to attend the fêtes in connexion with the Jubilee of the Union.

Princess Helen, the young King's mother, has just returned, after a short holiday abroad in the course of which she was present at Palermo at the marriage of Prince Christopher of Greece, her uncle, with Princess Françoise of France. During her week's stay in Rome she was the guest of the King and Queen of Italy, and she also visited her mother, the ex-Queen Sophie of Greece, at Florence.

Princess Ileana and Prince Nicholas are at present attending all the numerous fêtes and receptions being held in Roumanian society. The Regent knows well how to combine the busy affairs of State and the high mission with which he has been entrusted with social distractions and sport. He has taken part in all the winter sports organised in the Carpathians, and has won several prizes.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 7.

The Budget.

The letter of a week in which the Assembly has heard the Finance Member's annual budget statement must be largely devoted to the Budget, though it may very well be that readers in Great Britain would be satisfied with the brief announcement that the financial position of India, as disclosed in the latest financial statement, was satisfactory, or how far it was from being so. It may be said to be satisfactory, or even eminently so, considering that this is the third year of the period in which the transition was to be made from the time before, when provincial contributions were received by the Central Government, to this time, when none are received. "One way of presenting the picture," Sir George Schuster said, "was this: in 1927-28 the actual deficit was 182 lakhs, in 1928-29, 75 lakhs, and in 1929-30 it was 25 lakhs; so the deficit was actually steadily diminishing."

The Future.

There is to be no immediate new taxation, except an increase of two annas per gallon, from four annas to six, in the import and excise duties on motor spirit, the increased income being earmarked for the Road Development Fund. What may have to be done next year, or the year after, is for the Finance Member to consider in the meantime. There has been a long debate, as debates are counted in India, on the Budget; but in neither of Sir George Schuster's own two speeches, nor in any of the others, as they have been reported in the Press, has there been a single word said on what is the outstanding feature of India's immediate financial position; namely, that while in Delhi the accounts are being made up, and estimates formed, a body of men, with Sir John Simon at its head, is going round listening to one provincial budget-maker after another arguing that the Central Government takes much too large a share of the taxes collected in the Province. It may well be that Delhi will be faced with a new transition period; one in which the change will be made from this present time, and its division of the Provincial collections between Central and Local Governments, and a time when the division will be a much less favourable one for Delhi.

The Exchange Ratio.

The Finance Member dealt with the question of the exchange ratio in both his speeches. It is the question, of all those that could be dealt with in our annual financial statements, in which Great Britain is probably most interested. "On the ratio question to which Pandit Malaviya had referred," to give the *Pioneer's* report, "Sir George said he could not keep an open mind. It was a wrong policy to keep an open mind on such a question. He had made up his mind, and Government had taken a definite position and could not go back upon it. It was far better to be definite on this question than to indulge in uncertainties profitable only to speculators." The

agitation for the reopening of the question continues, however, many joining in it who should know better.

Borrowing Abroad.

Australia, New Zealand and Japan borrow in the London market as freely as that market will allow them to, and count themselves lucky to be able to borrow abroad, and not raise the already high internal money rates. India, being a land of politicians who can only see what they want to see, and as a rule only one thing at a time, is very sensitive about what are called the Home Charges. They include the annual remittances to London in payment of interest on the debt. This is part of what is so often spoken of as the "economic drain." The politicians would rather pay half as much again in interest charges, which is probably what they would have to pay, than deliver India further into the hands of the foreign bondholders. Accordingly what was meant at the time to be a binding engagement, was given—that no more sterling loans would be raised. It has not proved possible to stick to the agreement strictly. Hence the appearance of another stick with which to beat the Government dog.

Mr. Gandhi as Harriet.

The Harriet that I have in mind is she of "Struwel Peter," that classic of the German and English nurseries; the Harriet of whom at the end there is nothing left but a thin column of smoke, flanked by a pair of pink shoes and two weeping cats. She would play with matches, and finally set herself on fire. Mr. Gandhi will be burning foreign cloth, and has now burnt his fingers. He appears himself to enjoy it: having had a notice served upon him, forbidding him to set alight to a pile of foreign cloth in a public place in Calcutta, under pain of arrest, he struck his matches, and was arrested. They released him on bail, of course, and he is off to Burma, to preach the burning of foreign cloth there. There will be a test case in Calcutta, and, it is said, until the decision has been given, the Swarajists will keep their matchboxes in their pockets. There is always in Indian public affairs some Gilbert and Sullivan touch.

Inter-University Board.

The Inter-University Board has been in session at Patna in Bihar. It appears to have spent most time in considering the action required of the Universities in India in the work outlined in the Report of the Royal Commission on Agriculture; in the formation and activities, in other words, of the Council of Agricultural Research that the Government of India is to establish. Another matter that the Board has had before it is a proposal to extend the B.A. pass course to three years. This important proposal will be taken up at the Universities Conference that is to be held at Delhi in the autumn of this year. The deepest problem of education in India is a financial one; that is to say, it is beyond the power of any mere Inter-University Board to deal with; but the Board is obviously trying to do all that lies in its power for good.

Lord Burnham left India for England on March 22 in the British India liner, *Mashobra*. Lady Burnham will meet him at Port Said.

THE INDIAN PEASANT IN HISTORY.*

By W. H. MORELAND, C.S.I., C.I.E.

(Concluded.)

Such, in bare outline, was the régime under which the mass of the peasants lived and worked in Muslim India. The question naturally arises whether things were better in those parts of the country where Muslims did not rule. Here precise information is wanting; but there are signs that in the north and centre of India things were sometimes rather better in the Hindu States, because peasants sometimes sought a refuge there when oppression became intolerable. In the South, on the other hand, we know that over large areas farming prevailed in the worst possible form, the farms being auctioned yearly; and with that system it seems to me that rackrenting must have been inevitable.

One other factor in the situation must be noticed. The idea that the farmer or assignee should be content with a specified share of the peasant's produce did not wholly disappear. The recognised share ranged usually between a third and a half, that is to say, at or beyond the danger-point; but in addition to the basic claim, there were traditional supplementary demands, which in the aggregate made a substantial addition to the burden. Everybody concerned in the assessment or collection of the revenue wanted something for himself, "the tenth and the half-tenth," "the one per cent." and the "two per cent.," the fee for measuring the land, the fee for estimating the produce, and all the other traditional items which we hear of only in the records of unsuccessful attempts to prohibit them or regulate their amount; and these supplementary exactions must have operated to produce a clean sweep of everything the peasants were known to have in their possession. The régime under which the bulk of the Indian peasants lived during six centuries may be described briefly as rackrenting, under the whip.

The essential features of this régime may be summarised as follows: In the first place, no constructive policy of development was possible. The idea of development was indeed present, at any rate, from the fourteenth century onwards. Ghiyasuddin Tughlaq, the old soldier-king, held that governors and collectors could make or mar the kingdom; and he insisted on their duty to strive for steady extension of cultivation, with a gradual rise in revenue, not for such an immediate enhancement as should ruin the country. His doctrine, however, had no effective force, and his brilliant but eccentric son devastated a large area merely by the severity of his assessments, which drove the peasants into rebellion. In later periods, also, we meet similar ideas from time to time, but they scarcely ever came to fruition; the needs of the moment were usually too pressing for anyone to think about the future.

In the second place, there was no chance of a rise in the peasants' standard of living. No peasant could dare to be seen spending money, for that would mean increased demands by his masters. It was much better to bury money than to spend it.

In the third place, the life of a peasant had, at the best, very few attractions. It was much better to be a parasite than a producer; the parasite carried the whip, the producer must expect to feel it.

The essence of the whole agrarian system was thus a barren struggle to divide, instead of a concerted effort to increase, the produce of the country. The peasant tried, sometimes successfully, to hide his gains; his masters tried to discover and appropriate them. It seems to me to be beyond dispute that such a régime, prolonged through the centuries, would of itself suffice to produce the type of peasant which the earliest British administrators found in India, not much more than a century ago.

The history of the short intervening period is too well known to require recapitulation, but it may be well to recall that for some time English administrators tried to

work the system which they found in operation, and that the change was gradual. The whip was very soon discarded, but the nineteenth century was well advanced before the practice of rackrenting was formally condemned; it has not yet entirely disappeared, but for some time now the bulk of the peasants have been in a position to retain a portion of any profits they may make, and to spend them without the old anxiety as to the result. That is the central fact of the agrarian situation of to-day. Just three centuries ago, some English merchants in India wrote that what was wanted for the recovery of the country was to "give the people leave to lift up their heads in one year's vacancy from oppression." It would not be true to claim that oppression no longer exists, but it may fairly be said that now, for the first time for six centuries, and possibly for sixteen, the peasants have been given a chance of lifting up their heads.

It has seemed to me worth while to bring this view forward at the present juncture. The Indian administration, in the midst of its heavy preoccupations, has been called on to undertake a new and arduous enterprise; let us try to concentrate attention on the fact that the enterprise, though arduous, is by no means desperate. As I read the story of the past, it carries a message of encouragement and hope for the future. Recall for a moment the various theories I have enumerated as to the causes of the present situation. If we held that the peasants' apathy is the result of a special creation, we should have to admit that the only logical remedy is to scrap the peasants, and create new ones in their place. If we held that the situation is due wholly to the climate, logically we should have to set to work to juggle with the ecliptic, in an attempt to shift the Antarctic ice cap. Even if we held that diet is the primary factor, we should have to begin by attempting to change the thing which all social reformers know to be the most difficult to change from above.

On the view I have put forward, the task before the Indian administration is less arduous, though I do not say that it is easy or simple. It has to deal with the residual effects of causes which have now almost ceased to operate. They operated in any case long enough to produce a situation of the greatest difficulty, an ever-thickening crust of apathy and hopelessness, formed over the entire country; but the crust has now ceased to thicken, and in places, particularly in the Punjab, it is obviously wearing thin. There is now scope for work which would have been hopeless half a century ago, and would probably have been premature even when Lord Curzon initiated the policy of which the Linlithgow Report is the direct outcome. There is now a reasonable hope that a concerted and sustained effort, such as the Report advises, may break up the crust once for all, may liberate the stores of energy which are now dormant, and may convince the peasants in the mass that it is worth their while to strive for the ideals they have never wholly lost. That, as it seems to me, is the message of the past.

THE VICEROY'S VISIT.

A communiqué issued by the India Office states that the Secretary of State for India in Council has invited His Excellency the Viceroy to come to England in June next for short leave, not exceeding four months, in order to secure an opportunity of personal discussion with His Excellency. Lord Irwin has accepted the invitation, provided that the state of public affairs permits.

His Majesty the King has been pleased to approve the appointment of Viscount Goschen, G.C.I.E., C.B.E., Governor of Madras, to act as Viceroy and Governor-General during Lord Irwin's absence on leave.

On the occasion of the official announcement in October last of the extension of Lord Goschen's term of office until the autumn of 1929 THE NEAR EAST AND INDIA stated that it was understood the Governor of Madras would be appointed to office as Viceroy if, as was probable, Lord Irwin came home this summer.

* Paper read before the Indian Section of the Royal Society of Arts on March 8. Sir Edward D. Maclagan, K.C.S.I., K.C.I.E., presided. The two earlier parts appeared in the issues of March 14 and 21.

EUROPEAN COMMERCE IN SESSION.

(From a Correspondent.)

The proceedings of the last annual meeting of the Associated Chambers of Commerce of India and Ceylon furnish abundant evidence of the scope and variety of the activities of these organisations. The meeting was held at Calcutta in December, and was opened by the Viceroy in an impressive speech upon which comment was made in a recent issue of *THE NEAR EAST AND INDIA*. All but one of the constituent Chambers sent delegates, and the proceedings occupied two days. In that time no fewer than sixteen questions of varying degrees of importance were discussed, and resolutions concerning them were adopted.

A feature of this yearly gathering of the Chambers is that the Government of India is always represented at it by two or three members of the Governor-General's Executive Council. These official representatives are permitted to take part in the debates, and to explain to the meeting the views of the Government of India upon the resolutions. This arrangement imports a sense of actuality to the meeting, seeing that it enables the criticised to reply directly to their critics. It also discourages the admission to the programme of any but serious and practical resolutions. It induces the movers of resolutions, and for that matter other speakers as well, to exercise care and judgment in respect of their remarks; and it enables the Government representatives to learn at first hand the views of commercial men on the questions at issue.

The meeting in December was the tenth of its kind, and it certainly compared favourably with any one of its predecessors. The resolutions were all of an eminently practical and business-like character, and they seem to have been adequately discussed. Four of them had reference to income-tax, which in India is almost as sore a subject as it is in England. Five other resolutions dealt with railway matters. Six more were concerned respectively with the export duty on rice, the reduction of postage rates, commercial relations between India and other countries, importation and sale of vegetable fats, the prevention of thefts in ports, and the time allowed for the consideration by the Chambers of references from the Government. And the final resolution, which has been previously noticed in *THE NEAR EAST AND INDIA*, urged that in the new Indian Constitution discriminatory legislation or taxation should be barred.

Of the railway resolutions three were requests for the reduction of rates. One of those was a strongly supported demand for a substantial lowering of coal freights. Coal has to be carried immense distances in India, the Bengal coal fields being more than a thousand miles away from big consuming centres such as Bombay and Karachi. At these distances—in fact at anything above 700 miles—the price of the coal at the pit's mouth is merely an inconsiderable fraction of the railway freight. The latter becomes, therefore, the most important factor in the price. And as the existing scale of freights is something like 20 per cent. higher than the pre-War scale, the Chambers were able to make out a convincing case. The attitude of the Government of India was sympathetic, and in the Railway Budget introduced last month substantial reductions in long distance coal freights on all State Railways except the Burma Railway were announced. At the same time the Chambers consider that the rates for carrying liquid fuel should be lowered to a corresponding extent; and they adopted a resolution to this effect, which is understood to be receiving the Government's careful consideration.

The last of the three rates resolutions had reference to cotton. Freights on cotton have been enormously increased since the War and are now so high that they are said to be a heavy tax on the producer. Cotton values are now fifty per cent. higher than the pre-War value. But it was asserted that the farmer is actually worse off by

reason of the higher cost of production and of the great increase in railway freights. This was the case presented to the Chambers; and, although there was apparently a little apprehension that a reduction might be to the advantage chiefly of the foreign manufacturer, the resolution, pressing for a substantial reduction, was unanimously adopted.

The two other railway resolutions were in the nature of complaints against the State Railway Administration. One was to the effect that the penalty clause in the contracts for work done for State railways is too severe and should be relaxed. The second was that the State lines are very slow in paying bills for work done; and that in this respect they should bring their methods into line with modern business practice. Instances were cited where bills presented in June and August 1927 were still unpaid in September 1928. And it was said that one firm submitted two hundred and fifty bills to three railways during the period October 1, 1926, to September 1928; and that the average time between presentation and payment was three months and ten days. Sir George Rainy, representing the Railway Department at the meeting, said that the Government would see if something could not be done to bring about an improvement. The income-tax resolutions dealt exclusively with points arising out of the working of the Indian Income-Tax Act. They need not be specified here in detail, but one of them raised a curious question. A section of the Act empowers the Income-Tax Department to compel production of documents, and to enforce the attendance of any person for the purpose of examination, etc. Complaint was made that this section is utilised to enable the authorities to demand from an assessee information, not for the purpose of assessing him, but in order to assess other parties deriving income from such assessee. The income may be in the nature of rent, or interest, or payment for work done or services rendered. The Chambers thought that the authorities are using the section for a purpose other than that intended by the Legislature, and they accordingly urged that it should be amended.

It is not necessary to refer to more than two of the six miscellaneous resolutions which have been specified above. The resolution with reference to postage rates was very mildly worded. It merely asked that suitable reductions should be made as soon as the finances of the Postal and Telegraph Department should permit. Regarding commercial relations, the Chambers recommended that the Government should enter into and maintain commercial conventions wherever possible with all foreign Governments with whom India is not already in treaty. The idea underlying this proposal is that Indian products should nowhere be prejudiced by the absence of most-favoured-nation treatment, or by import restrictions and prohibitions which do not affect all countries alike. Difficulties in this connection have occurred in regard to Japan and Poland and are apparently apprehended in respect of other countries. The resolution regarding the export duty on rice was remarked upon a few weeks ago in these columns; and the remaining three resolutions are concerned with matters of primarily local interest.

It should be added that Sir George Godfrey, the President of the Association, occupied the chair at the meeting, and made an excellent opening speech welcoming the Viceroy, and remarking upon several outstanding questions. Among a number of interesting matters, he mentioned the startling fact that in the year 1928 more strikes occurred in India than in any previous year for a quarter of a century. It would seem, therefore, that the Government were certainly not acting precipitately when they decided that an investigation of Indian industrial conditions by a Royal Commission is urgently required.

Colonel H. F. L. Grant, D.S.O., has been appointed General Staff Officer, 1st Grade, Rawalpindi District, India, September, 1929.

TRAVEL IN YUGOSLAVIA.*

In dealing with an ever-increasing number of inquiries about Yugoslavia, perhaps the most difficult query to answer is that one so often asked: "What is travelling like in the country?" To say that it is good or bad, quick or slow, merely raises the question as to what is the standard of travel efficiency by which transport facilities may reasonably be judged.

Compared with the luxury travel of those parts of Europe most favoured by the tourist, Yugoslavia is far behind—but this is, after all, an unreasonable comparison. We can only fairly consider the question in the light of past and present political and economic conditions, and the demands that have to be met in regard to comfort, speed, and travelling fares. On this basis one can say that Yugoslavia shows up well, both in regard to its present facilities and particularly in regard to what has been done since the War.

It is beyond the scope of these notes to go into the details of the question of pre-War conditions; but it will suffice to say that after the War Yugoslavia found itself with a transport system ill-suited to its new conditions. Particularly in the former Austro-Hungarian provinces the railway system virtually radiated from Vienna and Budapest, and under the new régime a new orientation is needed as from Zagreb and Belgrade. The Serbian railways were not opened until 1884, and, in view of the chequered history of the country in the forty intervening years, it is not to be expected that travel facilities should be adequate either for local needs or for the foreign visitor.

The long and complicated process of welding these scraps of old systems into a complete whole has been begun, and much has been accomplished in the way of linking up dead ends: but the difficulties are enormous. One paramount difficulty is that of the variety of gauges in the present system. Of a total of 10,000 kms., about two-thirds is of the normal gauge, but only a small fraction of this is of double line (about 280 kms.). There are over 3,000 kms. of narrow gauge, but unfortunately of three different sizes.

During five years ending 1925 nearly 800 kms. of new lines have been constructed and opened for traffic, and every year sees improvement in facilities and general working. It is gratifying that some of the most difficult surveying and constructional work on the railways has been successfully carried out by one of the "boys" trained in this country by the Serbian Relief Fund.

Since the War the traffic has increased enormously—on an all-round average by over 200 per cent. The normal pre-War traffic at Belgrade was 12,000 trains per annum, in 1925 about 37,000; for Zagreb the figures are 11,000 trains in 1914 and 50,000 in 1925. This heavy increase in traffic makes speeding up impossible; indeed on the main lines, which were designed to carry a maximum of 22 trains per day in each direction, there are as many as 35 trains per day at present, most of them being freight trains. These are all considerations which vitally affect the travelling conditions of the country, although likely to be forgotten by the casual visitor.

To generalise, one may say that Yugoslavia is no place for the traveller for whom the express train-de-luxe, with registered luggage and a dozen other conveniences, are a *sine qua non*. On the other hand, the visitor who knows something of past and present conditions is likely to be pleasantly surprised at the reasonable comfort, cleanliness and punctuality of the trains. On my last five journeys between Zagreb and Belgrade the train has only once been more than 15 minutes late on the nine-hours' run.

If the traveller is prepared to adapt his plans to prevailing conditions, he may travel inexpensively and in fair comfort. The writer remembers the disgust of a lady from

across the Atlantic who found that five-day plans for a journey through Yugoslavia to examine the social life of the people would entail spending the whole time in train travelling.

To deal with some favourable features of rail travel the Government has stipulated that the sleeping cars run on the main lines by the International Sleeping Car Company shall be available for second as well as for first-class travellers. On branch lines where restaurant cars do not operate the time-tables frequently provide for a stop at a station, so that a meal may be taken at the buffet, and in several cases the meal may be ordered in advance. Passenger fares are moderately cheap for the people themselves, particularly by the slow trains, for which the charge is little more than half the cost of quick trains. In comparison with our own railways, a journey costing £1 third class in this country costs by express train 22s. first class, 18s. second class, and 12s. third class; or by slow train 16s. first class, 13s. second class, or 6s. 6d. third class.

Facilities exist in theory for foreign visitors to get considerably reduced fares, but the regulations which govern the issue of such tickets are so vague and irksome to travellers that they are of no practical value under present conditions. The lot of the foreign visitor has been eased during the last two years by the examination of baggage by the Customs in the trains and in other ways by the recognition by the Government that the foreign visitor is a source of revenue and so to be treated with consideration.

Some desirable changes that will come in time will be facilities for reserving seats in advance on the more important lines, and means for obtaining tickets in this country under the same conditions that tickets can be purchased for most other countries' lines. Under present conditions it is impossible to cope with special rushes of holiday traffic adequately, and generally speaking the train that provides comfortable travelling at ordinary times will be crowded to suffocation twice over on a public holiday or other special occasion.

Conditions for travelling by steamer on the Adriatic are much better; in fact, the services are maintained at a higher level of comfort and efficiency than are possible from the point of view of commercial profit. The two principal Yugoslav concerns, the Jadranska S.S. Co. and the Dubrovnik S.S. Co. between them have express services every day from either Venice, Trieste, or Sushak down the coast, and the former company has besides four coastal services per week, which have advantages over the express steamers in that they call at many interesting places on the mainland and islands. These services are maintained at their level of efficiency with a Government subsidy, no doubt to rival the Italian steamers which also serve the coast. Fares are particularly cheap: a first-class return ticket from Venice to Dubrovnik valid for a month, and allowing breaks of journey as desired, costs less than £2 10s.

The shipping companies have shown more enterprise than the railway administration in that tickets and time-tables can be obtained in London.

Motor traffic by road is beginning to develop, but is not yet organised on a sufficiently large scale to be an important factor. Postal motor services ply between rail-heads and outlying places and also maintain communication between remote places such as Cettigne, Cattaro, and Podgoritz, but the carrying capacity of the vehicles is small and the travelling uncomfortable. Motor cars and coaches are beginning to appear here and there, and in some cases should be better, but more expensive, means of travelling than the railway, as, for example, between Belgrade, Kraguyevatz, and Kraljevo. Many hotels and garages have private cars which may be hired for extended trips, but the uncertainty of getting a car and having to arrange terms or the spot prevent this mode of travel from being any great inducement to the traveller.

So far aeroplanes are playing but a small part in developing travel. There is a daily service from Paris to Belgrade en route for Stamboul, and a service between Belgrade and Zagreb in both directions every day.

* Paper read by Mr. Frederick Woodhouse at a meeting of the Yugoslav Society of Great Britain, held on March 21 at the house of Professor and Mrs. Seton-Watson.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

NON-ARAB TRIBES IN SOUTH ARABIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—(1) With all deference to Mr. Philby, I must say that he is regarding the question of South Arabian tribal origins from a rather narrow and, I think, illusory angle. The language test of race, which he admits alone provoked his challenge, is, as Dr. Rathjens recently pointed out in your journal, not of crucial importance.

(2) I have consistently stated that these non-Arabic languages of the Central South are Semitic, though they appear to be nearer to Ethiopic than to Arabic, so that Mr. Philby's argument that importance attaches to a test of racial origin based on a comparison of a score of words with their Arabic equivalents, is one that I do not accept. In his letter published in your issue of January 17, which has just reached me, the score of words is reduced to one, *viz.*, *Rimram*. *Rimram* surely partakes of the nature of "The flowers that bloom in the Spring, tra la." This is not an evasion of the point. I repeat, with apologies for having to do so, that I have collected vocabularies of some 400 words of each of three of these languages, fewer in the case of a fourth, with a sketch of their grammatical rules. And while these languages as spoken are not understood by the outside Arab, they must, belonging to the group to which Arabic also belongs, inevitably have, for philologists, much common derivation.

(3) Mr. Philby's suggested analogy between these South Arabian tribes and the three non-Arab elements he is able to comb out of the extensive parts of Arabia he knows, is not conspicuously happy. At least the essential conditions would seem to admit not so much of comparison as of contrast. His "Bani Khadir," "Sulaib," and "black freemen population of so many Oases of Najd" occur sporadically, the small degraded minorities of a population otherwise predominantly and without question Semitic Arab. My non-Arab tribes, on the other hand, constitute a continuous human belt stretching for at least a third way across the Peninsula, are physically and largely culturally distinct from the familiar Semitic Arab, and speak languages not understood by him. Indeed, it is the familiar Semitic Arab element that here may almost be said to occur sporadically.

(4) In the issue between Mr. Philby and myself I do not accept the position his letter would appear to assign for me. I do not presume to decide the origin of these tribes. The view which I hold, based on observation spread over the past four years and measured by three visits to Dhufar Province and a journey through the hitherto unexplored hinterland of South Arabia—a large part of the habitat of these tribes—is this:—

(a) That here we have a congeries of tribes of racial type quite distinct from the familiar Semitic Arab of Mr. Philby's recorded experience;

(b) that in the case of a clear majority, the Qara, Mahra, and Bautahara at least, they have close affinities with the N.E. African type described generally as Hamitic; and

(c) I am strongly inclined to believe that these South Arabians and North-East Africans are in racial origin one.

I cannot help feeling that had Mr. Philby but once been privileged to penetrate Southern Arabia he would have formed views not very different from those which Dr. Rathjens and I formed independently of one another from first-hand knowledge.—I am, etc.,

THE ALBANIAN ORTHODOX CHURCH.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The paragraph in your issue of March 14, about the "Albanian Orthodox Church," imposes on me, as the representative of the Œcumenical Patriarchate in this country, the necessity of making certain corrections, which I feel sure you will be willing to publish.

I shall not enter into the question of the independence of the Church of Greece in the early part of the last century; its inception was uncanonical, but finally it was recognised as a canonical Church by the publication of the Tomos of the Œcumenical Patriarchate in 1850, after a request to that effect had been submitted, canonically, both by the Bishops of Greece and the Greek Government. I wish rather to turn my attention to the assertion that the Œcumenical Patriarchate is repeating its history in refusing to grant independence to liberated Churches. Nothing could be more inaccurate than this. I will not refer only to the older churches of Russia, Roumania, and Serbia, which, after the political consolidation of those countries, acquired, in a canonical manner and without any difficulty, ecclesiastical independence as well, through the publication by the Œcumenical Patriarchate of the necessary Tomos at various periods. There is the quite recent instance of Poland, which only three years ago was granted its independence by the Œcumenical Patriarchate, having made its request canonically. It is indeed a fundamental principle of the Canon Law of the Orthodox Church that independence should be thus granted, but the Canons of the Church also require that the request be made in the time-honoured manner, which is that the Hierarchy, together with the Government of the country, should apply to, and make their request of, the Œcumenical Patriarchate. But in Albania (whence, after the political consolidation of the country, the four Metropolitans, of whom one was an Albanian, were expelled) no hierarchy existed, whilst the Council, composed of clerics and laymen, which assembled at Berat in 1922 and proclaimed the autocephaly of the Albanian Church was disavowed not only by the Œcumenical Patriarchate, as having come together and acted anti-canonically, but also by the Albanian Government itself. The latter, in fact, entered into negotiations with the Œcumenical Patriarchate and signed an agreement with it at Tirana in 1926, by which a decision was come to on the means of filling the vacant Metropolitan Sees of Albania, the names of the candidates for these vacancies, and the way in which the autocephaly of the Church should be proclaimed. Evidence of this agreement may be found in the correspondence between the then President, now King of Albania, Ahmed Zogu, and the Œcumenical Patriarchate. But the Albanian Government, having turned a deaf ear to the repeated invitations of the Œcumenical Patriarchate, finally violated the agreement that had been signed at Tirana; for, finding that the two Albanian Bishops and two of the candidates who had been agreed upon were unwilling to assist it in the arbitrary proclamation of the autocephaly of the Albanian Church, it acted in the following way. It took advantage of the presence in Albania of a Serbian Bishop (whose anti-canonical presence in Albania, in 1922, had been denounced to the League of Nations by the Albanian Government itself), and of another Bishop, an Albanian by birth, who had been uncanonically ordained in Serbian territory, to ordain three uneducated priests as Bishops, and with these five persons to proclaim the Church's Autocephaly. The Œcumenical Patriarchate protested against this *coup d'état* to the Albanian Government; but, as its protest was not heard, proceeded to excommunicate the ordained Bishops, and one of those who had performed the ordination, Bassarion, and, at the same time, requested the Serbian Church to punish the Serbian Bishop who had been guilty of this irregularity.

Such is the position at the moment. In all its actions in the matter the Œcumenical Patriarchate was guided solely by the Canons of the Orthodox Church, with whose

maintenance it had been entrusted and from which it cannot deviate without lessening its authority. But I am perfectly sure that, even after this second *coup d'état*, if the Albanian Government is willing to return to the straight and canonical path, the Œcumenical Patriarchate will not hesitate to reconsider its decision and to grant the wished-for autocephaly, as it has done for the other Churches also.

I may be allowed, I hope, to pass over the remarks, at the end of the paragraph, about the autocephaly of the Church of the Dodecanese, because they are inter-related with the whole Dodecanese question, which, as is well known, is not of a purely ecclesiastical nature. I know, however, that in this matter also, the Œcumenical Patriarchate would be willing to show the same disposition to settle the question if religious and educational freedom were assured for the inhabitants, who are its spiritual children.—I am, etc.,

GERMANOS, METROPOLITAN OF THYATEIRA.

London, March 22.

BIRD LIFE IN CYPRUS.

To the Editor of THE NEAR EAST AND INDIA.

Sri,—The Government not long ago passed a law for the protection of wild birds. Unfortunately the law permits the use of bird-lime. In England the use of this is forbidden and from time to time prosecutions are instituted and the offenders are heavily fined. In many other colonies bird-lime is prohibited. Yet here at the Easter holidays schoolboys will be amusing themselves catching birds with bird-lime. Public opinion is not aroused, and the only way to stop the practice is an amendment of the law.—I am, etc.,

GEORGE L. HOUSTOUN.

Kyrenia, Cyprus. March 11.

MEMORIAL AT BASRAH.

The Imperial War Graves Commission have announced that the memorial which has been erected at Basrah to the memory of British and Indian officers and men who lost their lives in Mesopotamia during the War, and who have no known grave, was to be unveiled by the High Commissioner for Iraq, Brigadier-General Sir Gilbert Clayton yesterday (Wednesday).

As designed by Mr. Edward Warren, the memorial consists of an arched stone colonnade with an obelisk nearly 60 ft. high as the central feature.

It commemorates 8,000 British and 33,000 Indian soldiers of all ranks who fell in the Mesopotamia campaigns, and have no known graves.

THE PERSIAN NEW YEAR.

A numerously attended reception on the occasion of the Persian New Year was held on March 22 at the Persian Legation, 11, Princes Gate. The guests were received by His Excellency Hovhannes Khan Mossaed and Madame Mirza Mohammed Khan Nabavi, wife of the Counsellor of the Legation. As this was the first large gathering in the new Legation, an opportunity was taken to admire the attractive suite of reception rooms with which it is provided. The Legation comprises Nos. 10 and 11, Princes Gate, and for the structural alterations, as well as for the decoration of the interior, the services of Mr. J. M. Wilson had been utilised.

The reception was attended by members of the Diplomatic Corps and by representatives of the British Government, and among others present, in addition to many members of the Persian community in London, were:—

Lord and Lady Allenby, Lord Aberconawy, Lord Montague, Lord and Lady Peel, Lord and Lady Reading, Prince and Princess Michael Soubatoff, Sir George and the Hon. Lady Barstow, Sir Edward and Lady Boyle, the Dowager Lady Boyle, Sir Bindon and Lady Blood, Sir Hugh and Lady Barnes, Lord and Lady Clanmorris, Lady Cunliffe-Lister, Sir Percy and Lady Cox, Sir Atul and Lady Chatterjee, Lady Chalmers, Mrs. L. S. Cobham, Lady de Gex, Prince Freydoun, Sir Harry and Lady Foster, Lord and Lady Greenway, Captain and the Hon. Mrs. Greenway, Sir John and Lady Gilmour, Mrs. E. Gibson Smith, Sir John and Lady Hanbury-Williams, Lady Humphrys, Lieut.-Colonel and Mrs. Dalzell Hunter, Captain and Mrs. A. Holland, M. and the Hon. Mrs. Mark Hambourg, Sir William and Lady Joynson-Hicks, the Hon. Lady Lloyd-Mostyn, Sir Clement and Lady Kinloch-Cooke, Sir Basil Kemble-Cook. Lord and Lady Lamington, Sir Edmund and Lady Lechmere, Sir John Lloyd, the Lord Mayor and Lady Mayoress, Lord Muir Mackenzie, Lieut.-Colonel Medlicott, Mr. and Mrs. Sydney Rogers, Mr. R. Said-Ruete, Miss Irene Scharrer, Mrs. Alec Tweedie, Baron and Baroness Quarles van Ufford, Sir Charles Wakefield, and Sir Arnold Wilson.

NEWS IN BRIEF.

General Alevra, Roumanian Minister of Communications, tendered his resignation on March 20.

Hussein Raghib Bey, the new Turkish envoy to the U.S.S.R., arrived last week in Moscow.

An appeal for £5,000 is being made by the Governor of the Blue Nile Province for the purpose of building an Anglican Church at Wad Medani.

The King of Egypt has signed decrees providing penalties for those who incite hatred of established authority and strengthening the Public Assemblies Act.

M. Kumanudi, acting Yugoslav Foreign Minister, on his way back to Belgrade from Geneva, on March 20, visited Mgr. Seipel, the Hungarian Chancellor.

M. Toni Schlegel, Managing Editor of the *Novosti*, was shot dead in Zagreb on March 22. He was a prominent publicist and the director of the publishing house of Yugo Stampa.

The American University students who are touring the world in a specially chartered liner known as the "floating university" arrived at Alexandria last week. They are spending a fortnight studying Egyptian politics and social problems.

A lecture on the Foreign Policy of Egypt in the Muslim Period was given by Mr. H. A. R. Gibb to members of the Egypt Exploration Society on March 20 at the Royal Society. Mr. H. I. Bell, who took the Chair, alluded to the serious loss sustained by the Society in the death of its President, Sir John Maxwell.

Lord Melchett, President of the English Zionist Federation, has given £5,000 to the Keren Hayesod Palestine Foundation Fund. This fund, which was established in 1920, has collected over £3,500,000 from Jews all over the world for constructive work in Palestine.

A Bill was last week submitted to the National Assembly in Angora, sponsored by Sirry Bey, the deputy from Yozgad, proposing a tax upon all unmarried men between the ages of 25 and 45; upon unmarried women between the ages of 20 and 35, and upon widowers and widows who are childless.

Russell Bey, Commandant of the Police in Cairo, has been appointed head of a new bureau created in Egypt to deal with the increase in the habit of using dangerous narcotics in that country and the activities of the traffickers in drugs. Russell Bey undertakes this new work in addition to his present duties.

According to the Berlin correspondent of *The Times* the introduction of the Latin alphabet in Turkey has had the effect of promoting the Turkish market to be the most important export field for German typewriters. In 1927, 61, and up to September, 1928, 48 German typewriters were exported, on an average each month, to Turkey. In the last quarter of 1928 the monthly average was 1,108, and in January this year 1,256. These figures, it is stated, hardly touch important Government contracts recently received.

The Greek Minister of Marine and Sir Percy Loraine, British Minister at Athens, on March 22 signed an agreement for a new British Naval Mission. The Mission will begin its duties on June 1 next and will serve for two years. Captain Lyon, head of the Mission, with the other members will arrive in Athens at the end of May.

Interesting acquisitions which have just been made by the trustees

Sir John Chancellor, High Commissioner for Palestine, who is on a visit to Syria, arrived at Beyrout on March 20. His tour of Syria includes the following places: Byblos, Tripolis, Hama, Baalbeck, Damascus, and the Jabal Druse, whence he will return to Palestine via Kunaitra. His inspection of Beyrout harbour and his inclusion of Tripolis in his tour have, it is reported, given rise to speculation on the choice of outlet of the Mosul pipeline.

The mechanisation programme for the Army during 1929 will include the completion of the conversion of the 12th Royal Lancers in Egypt as an Armoured Car Regiment, and it will appear in the 1930 establishments as such. The 11th Hussars on conversion appear in this year's tables as a car unit, and in consequence the final disbandment of the 12th Armoured Corps Company of the Royal Tank Corps takes place this month. A car company is temporarily retained in Egypt to assist in the conversion of the 12th Royal Lancers and will be withdrawn later.

of the British Museum include a prehistoric Persian pot, of the early Bronze Age, from Nihavand, with remarkable painted decoration of flying birds, presumably eagles. The relic is unique and shows the origin of the feather and wing-like decoration characteristic of these vases from Nihavand, the date of which is probably between 3,000 and 2,500 B.C. Other antiquities include a pair of early Sabæan (Bronze Age) horn-shaped Rhytons from Southern Arabia, of a rare type the red-slip ware being decorated with rudely-incised spirals and with bulls' heads in relief.

PERSONAL AND GENERAL

TO-DAY

March 28, 1929 (New Style).
 March 15, 1929 (Old Style).
 Shawall 16, 1347 A.H., of the Muslim Calendar.
 Adar II, 16, 5689, of the Jewish Calendar.

Lord and Lady Manners have arrived at Avon Tyrrell, Christchurch, from India.

Sir Edwin Lutyens returned to 13, Mansfield Street on March 23 from India.

Lady Castlemaine arrived at Langham House, Ham Common, on March 26, from Egypt.

M. Titulesco, the Roumanian Minister, returned to London on March 20 from Geneva and Paris.

Major-General Sir Philip Nash last week left Thurloe Lodge, Thurloe Place, for Egypt. He will be away for about a month.

Princess Aspasia of Greece arrived at Southampton from New York on March 22 in the White Star liner Olympic.

The Earl and Countess of Albemarle are expected to arrive at 7, Cadogan Square to-day (Thursday) from Egypt.

The Marquis and Marchioness of Tweeddale arrived at 22, Gloucester Square on March 22 on their return from Egypt.

Lady Noble and Mr. Michael Noble leave Marseilles on April 3 for a tour in Palestine, accompanied by Miss Rosemary Noble.

Sir John Benyon has arranged to sail for Egypt in the P. and O. Viceroy of India, which leaves Tilbury to-day (Thursday).

Sir Archibald and Lady Birkmyre arrived at 67, Queen's Gate, on March 23, from India. They travelled in the P. and O. Kaiser-i-Hind.

Mr. Rudyard Kipling, who is travelling in the Near East in connexion with the War Graves Commission, arrived at Jerusalem on March 21. The following day he inspected the cemeteries in the Jaffa district.

The Egyptian Chargé d'Affaires, Sesostris Sidarouss Bey, held two receptions at the Egyptian Legation on the evening of March 25 and in the afternoon of March 26 on the occasion of the anniversary of the birthday of King Fuad I.

Sir Valentine Chirol, who has, we are glad to say, made an excellent recovery, left the Residency, Cairo, where he had been laid up for three weeks, and started for Marseilles on March 24, on board the P. and O. liner Rawalpindi.

In celebration of the 108th anniversary of the independence of Greece, a Te Deum was celebrated at the Greek Cathedral of St. Sophia, Moscow Road, Bayswater, at noon on March 24. In the afternoon the Greek Minister held a reception at the Legation (61, Upper Brook Street) for members of the Greek colony.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.
 Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts., may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan. Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

Sir Atul Chatterjee, High Commissioner for India, and Lady Chatterjee returned from Geneva last week and will be in London for about six weeks.

Sir Sydney Barton, having been granted in 1926 a warrant dispensing with his personal investiture as Knight Commander of the Most Excellent Order of the British Empire (Civil Division), was received by the Prince of Wales at St. James's Palace on March 21, when his Royal Highness, on behalf of the King, conferred upon him the honour of knighthood. Sir Sydney subsequently kissed hands upon his appointment as his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Addis Ababa.

OBITUARY.

The death is announced of Lieut.-General Sir Charles William Grant Richardson, who had a distinguished record as an officer in the Indian Army. He served, among other places, in the North-West Frontier Campaign in 1894, in the third Afghan War, and in South-West Persia. From 1922 to 1926 he was G.O.C. Poona district.

Dr. Alexander Granville, C.M.G., died in London on March 24. He had seen much medical service in Egypt, where he was born. At one time he was President of the International Quarantine Board. He was the first Englishman not in Egyptian military service to be made a Pasha, and received many honours for the very notable medical services which he performed in the Near East.

We regret to have to record the death of Dr. Paul Lessinoff, Counsellor of the Bulgarian Legation in London, who died in Paris on March 19. Dr. Lessinoff was born at Sliven, Bulgaria, in 1884 and entered the Diplomatic Service in 1912. After a period of service at the Ministry of Foreign Affairs in Sofia, he was transferred to the Bulgarian Legation at Constantinople, and subsequently went as First Secretary to Washington. During their stay in London Dr. and Mrs. Lessinoff had made many friends, and much sympathy will be felt with the latter in her sad loss.

The death has occurred of General Sarraïl, who was known in England mainly for his command, during the Great War, at Salonika, and for his High Commissionership in Syria. He was in Greece from 1915 to 1917, and subsequently wrote an account of his experiences in "Mon Commandement en Orient." In 1924 he was appointed, by the Herriot Government, to succeed General Weygand in Syria, and it was during his régime at Beyrout that the Druse and Syrian rebellion broke out, and that Damascus suffered her historic bombardment. By the time that General Sarraïl was recalled to France he had few friends left in Syria.

The Yugoslav Council of Ministers on March 21 approved the Budget for 1929-30, which comes into force on April 1.

The India Office announces that the King has been pleased to approve the appointment of Sir Saiyid Muhammad Saadulla to be a Member of the Executive Council of the Governor of Assam, with effect from April 1, in succession to Khan Bahadur Kutub-ud-din Ahmad, whose extended term of office will then have expired.

THE WEEK AT HOME

London, Tuesday Morning.

The By-Elections.

Perhaps the most amusing aspect of the recent by-elections is the heart which each party pretends to derive from them. The Liberal gains have quite naturally had the effect of elating the followers of Mr. Lloyd George, who now talk openly of their expectation that he will command the largest number of seats after the General Election next May; the Labour Party is equally satisfied that the Liberal "revival" is a damp squib, and that the tide is running strongly against the Government; and the Conservatives, to be sure, profess that these unexpected defeats were just the very thing to wake their Party up.

Coming down to brass tacks, as they say, one may guess that the Liberals are the sincerest in their attitude. They are frankly overjoyed with their victories at Holland-with-Boston and at Eddisbury, for they believe that these two results signify at once the defeat of the Government and the fact that Labour will not be the largest party next June. And no one can deny them the right to do a little chuckling, particularly as (I think) their triumph is to be so short-lived. If the Liberals are not easily the smallest party in the House after the General Election, I shall be surprised indeed.

Nor can one believe that Labour should be unduly alarmed at these unexpected results. The industrial constituencies are bound to vote in the main for Labour at the real election, and this Party is almost certainly destined to obtain most of the fruits deriving from the Government's inevitable decline in prestige.

As for the Conservatives, it is their policy to minimise these by-elections and to profit by them. Perhaps their chief failing is their mental attitude, which is not yet by any means a fighting one. Quite obviously there is among them despondency, if not despair; and if this is not quickly banished, the deluge may descend upon them. Somehow or other, however, I think that they will wake up just in time.

The most remarkable thing is—and it is good for all parties—that the public seems to be taking a certain interest in the fight for spoils. For this, the Liberals should be most thanked, for it is they who have introduced the incalculable element.

A Landslide?

It is true, however, that not a few shrewd judges are talking of the possibility of a landslide in May. They are profoundly impressed with the decline of the Conservative vote, with the comparative stagnation of Labour, and with the tremendous impetus given to the Liberals. Those who favour a return to the present Administration, with alterations, are quite angry with Mr. Baldwin for not heeding their repeated warnings that a bold lead must be given on questions that are of national importance, and particularly the question of unemployment. The Prime Minister, in the opinion of such critics, is moving about in an unreal world, blissfully unconscious of what is certainly in store for him if he does not bestir himself and the rest of the Party.

Well, the thing is not impossible. But it may be that the return of the Liberals to a place in the sun will actually have the effect of helping the Government, in that it will modify the otherwise sure and very considerable increase in the Labour vote. Really, the whole matter is far too complicated for more than a guess to be made on who are to be our masters next May. I notice, for example, that the Stock Exchange makes out the Labour Party to be the biggest, and keeps the Liberals still at fewer than 100.

Oxford and Cambridge.

The attempt made by the "experts" to convince people that there was little to choose between the Oxford and Cambridge eights this year certainly impressed many, but the futility of it was plainly shown on Saturday, when Cambridge won more or less as they liked. The truth is that at no time before or during the race were Cambridge in danger of losing it; they always had infinitely more power and watermanship than Oxford had. And, of course, the gallant Dark Blues knew it well.

Few partisans are as a matter of fact disappointed that the centenary of the race should have been celebrated by Cambridge's just catching up to Oxford's total of wins. As for this talk of Oxford's decline in sport generally, it is so much rubbish. Oxford rightly expect, for instance, to win next year's Boat Race, for which Cambridge will no longer have their big, triumphant Old Blues. And they put up a thoroughly good show in the Rugger match.

Cambridge's win in the sports, on the other hand, was not quite expected, even by the most partisan and light expert. The removal of the arena, by the way, from Queen's Club to Stamford Bridge seems to have been popular, for the huge ground was quite three-quarters full.

The English Cup.

The penultimate stage has been reached in the English Cup. But not without surprises. Every football "fan" appears to be genuinely surprised that Portsmouth beat Aston Villa last Saturday, "the Villa" being the most popular team for the final at Wembley. Now it is Bolton Wanderers who are looked upon as certain to lift the Cup; but if I were a Bolton man I should have a most wholesome respect for Portsmouth.

Spring.

To some the arrival of spring means mainly the Lincolnshire and the Grand National (and one can only hope that, with a hundred to one chance coming home on each occasion, they felt truly vernal), but to ordinary people it means the shooting of flowers in their gardens and the burgeoning of the hedgerows. This year spring has come in with peculiar loveliness. No March winds have yet sullied the gentle growths; there is one continual blooming. The air has been of "ethereal mildness," so that, as one is out in the country, politics, Police Reports, and prices of petrol seem a thousand miles away.

There is no spring like an English spring, which is redolent with slow content and eager musing.

AERIAL PHOTOGRAPHY IN THE MIDDLE EAST.

Mr. O. G. S. Crawford, Editor of the quarterly *Antiquity*, lectured to the Royal Geographical Society on March 18, with Sir Charles Close, President of the Society, in the Chair. The lecturer referred to the pioneer efforts of Colonel Beasley, soon after the War, to develop archaeological research in Iraq by means of aerial photography. That work, imperfect though it was, was of immense value as showing what might be done. Unfortunately, however, it had not been followed up. Recently, however, the Air Ministry had awakened to the potentialities of the aeroplane in coming to the aid of archaeology, and the lecturer paid a most handsome tribute to the assistance he had received, when on a recent tour in Iraq and Trans-Jordan, from the Royal Air Force, mentioning in particular Squadron-Leader Insall, V.C.

Mr. Crawford claimed that, while the excavator was always necessary, and particularly so for buried cities, aerial photography could often accomplish more, could teach us more about the plan of an uninhabited town, than the excavator could possibly accomplish. He instanced Hatra, on which excavators had been at work for months without tracing the plan exactly. An aerial photograph, however, showed indisputably the outlines of the town.

Among the places on which the lecturer was able, by means of aerial photographs in the somewhat unsatisfactory form of slides, to throw a new light, were Samarra, Nineveh, Seleucia, Arbil, and Qasr al Azraq. He did not wish to exaggerate the importance of this new handmaid to archaeology, but he claimed that the future of archaeology was very really "in the air."

Afterwards, Sir Percy Cox emphasised the value, from his own experience in Iraq, of aerial photography in determining the nature and characteristics of old towns. He mentioned also, concerning the richness of buried or forgotten cities in Iraq and the people who inhabited them, that the present lack of population in Iraq made difficult any hope of an immediate revival with glories equal to those of Mesopotamia's past.

Sir Frederic Kenyon referred to the probable decision of the trustees of the British Museum to house a number of negatives—aerial photographs—for the use of archaeological students.

Dr. H. R. Hall heartily welcomed the co-operation of aviator with excavator, but he supposed that the new method was chiefly useful in such flat country as was the Middle East. He would much have liked to see how Egypt, in particular Sakkara, looked from the air.

Group-Captain Rees stated that the photography of ancient cities in Trans-Jordan was part of the ordinary routine of the R.A.F. pilot, to whom it was essential to recognise landmarks. He said that it was the habit of pilots to "date" settlements from the colours which they presented from the air, e.g., red for Roman remains, and so on. And whatever the R.A.F. had done for Mr. Crawford, they themselves were greatly indebted to the lecturer for having come among them and explaining what they had so often looked down upon ignorantly.

AN EGYPTIAN ANNIVERSARY.

March 25, the birthday of King Fuad, was celebrated at the Royal Egyptian Legation in London by a reception held in the evening by Sossiris Sidarouss Bey, Minister Plenipotentiary and Chargé d'Affaires. It is significant of the wide scope of the Legation's hospitality that a second reception on the afternoon of March 26 was necessary to prevent the over-taxing even of the spacious accommodation of Bute House. Among the guests on March 25 were:—

The members of the Diplomatic Corps, the Lord Chancellor and Lady Hailsham, Mrs. Stanley Baldwin, Violet Duchess of Rutland, the Marquess and Marchioness of Londonderry, the Marquess and Marchioness of Reading, the Earl and Countess of Lucan, the Earl of Meath, the Dowager Countess of Antrim, Mary Countess of Minto, Viscountess Allenby, Viscountess and Viscountess Bertie of Thame, Lady Norah Spencer-Churchill, Catherine Countess of Westmorland, Lord Cushendun, the Lord Mayor of London and the Lady Mayoress, Sir William and Lady Joynson-Hicks, Mrs. Amery, Sir Laming

and Lady Worthington-Evans, Sir John and Lady Gilmour, Sir Arthur and Lady Steel-Maitland, Sir Thomas and Lady Augusta Inskip, Lieutenant-Colonel and Mrs. Wilfrid Ashley, Major-General Sir John and Lady Hanbury-Williams, the High Commissioner for Canada and Mrs. Larkin, the High Commissioner for New Zealand and Lady Parr.

Lord and Lady Lamington, Lord and Lady Monkswell, Lord and Lady Inverforth, Lord Jessel and the Hon. Gladys Jessel, Lord and Lady Arthur Browne, Lady Helena Rous, the Mayor and Mayoress of Westminster, Lord Beaverbrook, Lady Norton, Lady Macleay, Lord Monteagle, Viscount and Viscountess Wolmer, Lord Headley, Lady FitzGerald, the Dowager Lady Boyle, the Dowager Lady Lawrence, Lord and Lady Lawrence, Lord and Lady Morris, Prince and Princess von Bismarck, Prince and Princess Wiasemsky, Prince Tongtor, Marquis Pallavicini, Comte and Comtesse La Combe, Baron and Baroness Gyllenstierna, Nobile Alberto Straneo and Donna Irene Straneo, Count and Countess Los, Count and Countess Rogeri di Villanova, Colonel Marquis Mayeda, Cap. Count and Countess Sommati di Mombello.

Field-Marshal Sir George and Lady Milne, the Hon. Sir Ronald and Lady Lindsay, Sir Hubert and Lady Montgomery, Mrs. Philip Snowden, Sir Harry and Lady Joan Verney, Sir Edgar and Lady Bonham-Carter, Lady Cory, Sir Edmund and Lady Wyldbore-Smith, Lieutenant-General Sir William and Lady Pitcairn Campbell, Colonel Sir Henry and Lady Lyons, Sir Holburt and Lady Waring, Sir Harry Brittain, M.P., Sir Boyd Merriman, Sir Clement and Lady Kinloch-Cooke, Sir Arthur and Lady Crosfield, Sir Montague Barlow, Sir Philip and Lady Nash, Sir Malcolm McLlwraith, Sir Robert and Lady Hutchison, Sir Francis and Lady Newton, Sir Arthur and Lady Newton, Sir Arthur and Lady Willert, Sir George Armstrong, Sir Percy Tottenham, Sir Ian and Lady Malcolm, Sir Arthur and Lady Colefax, Sir Gerald Fowler Burton, Sir Philip and Lady Gibbs, Sir Felix and Lady Helen Cassel, Sir Gomer Berry, Sir Roderick and Lady Jones, Sir George and Lady Berry, Sir William Horwood, Sir Herbert and Lady Cohen, the Hon. Donough and Mrs. O'Brien, Lady Cottier, Dame Alice Codman, Lady (edward) Beauchamp.

Lieutenant de Voisseau Antoine Sala, Captain and Mme. Papalexopoulos, Major and Mme. S. A. Vitez Bély, Lieutenant-Colonel Infante, Mr. and Mrs. Ray Atherton, Mr. Sadac Saburi, Mr. C. Laptew, M. Vilem Cerny, Dr. Salvador Martinez, M. and Mme. Ludvig Ekis, Dr. G. Suarez Solar, M. D. N. Clotori, Dr. and Mme. Hubrecht, M. and Mme. Mirza Mohammed Khan Nabavi, M. and Mme. Oscar Oxholm, M. and Mme. S. de Souza Leao Gracie, M. Eino Walikangas, M. and Mme. Steen, M. and Mme. Mollerson, Mr. and Mrs. F. Lamot Belin, M. Carlos and Mme. Nieto del Rio, Dr. Emilio del Solar, Luang Kamni Kolakarn, M. and Mme. Mohssen Khan Atabeki, M. and Mme. de Bourg, M. G. Constantinesco, Atta Amin Bey, Signor Guido Crolia, Dr. Oscar Aguilar, M. Pierre Saffroy, M. and Mme. Guieseppe de Grossi.

Lewa J. L. Carrol Pasha and Mme. Carol, Mr., Mrs. and Miss Whitley, Mr. and Mrs. W. H. M. Selby, Mr. and Mrs. Alfred Bossom, Mr. and Mrs. G. R. Warner, Brigadier-General Blakeney, Mr. F. Adam, Mr. and Mrs. Maudsley, Mr. E. F. Gye, Mrs. Alec Tweedie, Mr. Mark Patrick, Judge and Mrs. Clapcott, Colonel and Mrs. Thomas, Mr. Hubert Martin, Mr. and Mrs. Ch. Robertson, Mr. Blumenfeld, Admiral Royds, Mr. J. B. Monck, Mr. Andrew Noble, Mr. C. M. Lloyd, Mrs. O'Farrell, Mr. W. C. Luck, Mr. Philip O'Farrell, Mr. Samuel Samuel, M.P., the Hon. Patrick Balfour, Dr. Archibald Fleming, Mr. and Mrs. J. B. Melville, Brigadier-General and Mrs. Lionel Banon, Colonel Ronald Campbell, Mr. and the Misses Montague Bell, Mr. and Mrs. Philip Graves, Mr. and Mrs. J. T. P. Pownall, Captain Victor Cazalet, M.P., Mrs. Claude Beddington, Mr. V. Boxall, Mr. W. J. E. Binnie, Mr. Justice and Lady Horridge, Mr. A. L. Kennedy, Judge and Mrs. Harrington, Mr. C. W. Tonge, the Secretary of the Royal Geographical Society, Mme. Alvar and Miss Harting, Mr. C. L. Borrisow, Mr. Codrington, Mr. F. Mawardi, Mr. J. M. Furness, Mr. and Mrs. Noor El Din, Mr. A. Gamal El Din, the Egyptian Consul in London and members of the Consulate, the Egyptian Consul in Liverpool and Mme. Ismail, M. G. Cattai Bey, Radi Bey and Mrs. Radi, Mr. A. K. Safwat, and other members of the Egyptian Legation.

The Council and Senate of Manchester University have agreed to a resolution to ask the Court of the University to authorise the conferment of an honorary degree of Doctor of Science upon Sir Ronald Ross, in recognition of his great work as a medical scientist in the prevention of malaria. It is proposed that the degree shall be conferred at the University's commemoration of Founder's Day, next May 15, which is two days after Sir Ronald Ross' 72nd birthday.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Yugoslav Free Zone at Salonika.

The outstanding questions in regard to the Yugoslav Free Zone at Salonika have at length been settled by the signing of the new protocols in Geneva. The settlement of this question which has for years been a matter of dispute between Greece and Yugoslavia is a distinct achievement for the Greek Government, and one on which M. Venizelos is entitled to congratulate himself. The history of the negotiations may be briefly outlined. In the spring of 1914 an agreement was made between Greece and Serbia by which Serbia was accorded a free zone at Salonika, but the outbreak of the War naturally prevented its ratification. In November, 1922, the question of a free zone was re-opened, and ultimately on May 10, 1923, a new agreement was signed by which Greece ceded an area in Salonika to Yugoslavia for fifty years. By an agreement dated August 17, 1926, the area of the zone, originally fixed at 94,000 sq. metres, was to be considerably enlarged. Under the Pangelist régime a number of matters came up for settlement, but the conventions that were drawn up were never ratified, and these are the questions which have now been settled. The main points of the new agreement may be briefly summarised. The area of the Yugoslav Free Zone is restricted to that fixed in the 1923 convention. Steamers entering the Yugoslav Zone will be subject to Greek sanitary formalities, and no facilities for coastal trade will be enjoyed by steamers between the free zone and other Greek ports. Transit trade of third parties may not pass through the free zone for Yugoslav trade. Yugoslavia has no share in the administration of the railway between Ghevgheli, on her frontier, and Salonika. It must be pointed out that at the time of the original agreement Salonika was the natural outlet in the Mediterranean for Serbian trade, but this no longer holds good in the case of Yugoslavia which, in the last few years has been unceasing in the development of ports on the Adriatic coast and the necessary communications to serve them. Salonika may be in the future a very useful channel for Yugoslav trade, but it will not now fill the place in the country's commerce that it would have done in the case of Serbia if the War had not taken place. Apart, however, from the utility of the Salonika Free Zone to Yugoslavia the agreement is important as indicating the improvement in relations between the two countries.

Ottoman Debt Payments.

On another page in this issue will be found details regarding the resumption of the payment of the share devolving upon Turkey in the Ottoman Public Debt and of a contract concluded last January for the settlement of the Levant States' share of this debt. These contracts are recommended for acceptance by the various bondholders' organisations formed in Belgium, France, Germany, Great

Britain, Italy, and Switzerland. Bondholders of long term loans will signify their adhesion by the encashment of the amounts due, funds for which are available for payment from April 4 to May 31 next for the account of Turkey and the Levant States under the French Mandate. Holders of Lots Tures, drawn from April, 1925, to August, 1928, or undrawn will signify their adhesion by the deposit of their bonds, while holders of Treasury Bonds 5 per cent. of 1911 and 1913 and 6 per cent. of 1912 will do the same by the deposit of their bonds for subsequent exchange into "5 per cent. Bonds 1928 for the Consolidation of the Treasury Bonds of the former Ottoman Empire." When the total of the bonds thus presented or deposited represents 40 per cent. of the nominal capital of the Debt the contracts will come into force definitely.

Conditions in Egypt.

The position of the National Bank of Egypt reflects to a very important extent the existing economic situation of Egypt, and the satisfactory position which Sir Bertram Hornsby, the Governor, was able to unfold at the recent annual general meeting, a report of which will be found elsewhere in these columns, is an indication of the prosperity of that country. Dealing with the outlook Sir Bertram Hornsby was distinctly encouraging. He pointed out that the current cotton crop is estimated at about 7,500,000 kantars, and that it is selling freely at remunerative prices. The trade situation, he pointed out, has greatly improved, and for the year ended August 31 last a favourable trade balance replaced the adverse balance of the previous twelve months. He anticipates that the figures for the current year will not be less favourable. A feature of Egypt to-day, to which he directed attention, as illustrating the improved economic position, is the great building activity which continues. The general situation of the country is undoubtedly eminently sound, and fully justifies the proposed new programme of irriga-

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathen."

96 Branches in GREECE; also in LONDON, UNITED STATES, EGYPT and CYPRUS.

Affiliated Institutions in the United States:

NEW YORK: The Bank of Athens Trust Company, 1205, West 33rd St.
BOSTON: The Athens Bankers' Corporation, 15 Kneeland St.

tion works which, to use Sir Bertram Hornsby's words, will "add considerably to the resources of the country, and, by bringing more land into cultivation, will provide an outlet for the energies of the ever-growing population."

A Syro-Egyptian Bank.

A correspondent has sent me details of an interesting development of the activities of the Bank Misr, whose rapid progress was dealt with in these columns in a recent article on "Banking in Egypt." Following negotiations between Izz el-Din Effendi and Talaat Bey Harb, director of the Bank Misr, an agreement is reported to have been reached for the opening by the Bank Misr of a branch at Beyrout this summer under the name of the Bank Misr-Suriyyah. Half the capital of the bank will be subscribed by the Bank Misr and the other half by the Bank Izz el-Din. Talaat Bey Harb is expected to visit Syria in the coming summer to carry out this proposal. Besides the Beyrout office it is understood that there will be a branch at Tripoli and subsequently at other centres in Syria, and that it is proposed ultimately to extend the activities of the bank to Palestine and possibly to Iraq.

Yugoslav Shipping Orders.

It has been the fashion in certain commercial circles in this country to make light of the value of trade possibilities in the Balkans since the War. Conditions in that region have been very difficult, admittedly, in recent years, but it must be emphasised that there is not the slightest doubt that at the present time the economic situation in all the countries is steadily on the up grade, and if the openings for trade in the last few years have been restricted, and the conditions on which business could be done have not been to the liking of British firms, it is abundantly certain that the position from now onwards will be found to be vitally changed. The countries are now at a stage of reconstruction when they can afford to place large orders for purposes of development. The orders recently placed for shipping by Yugoslavia are a case in point. These orders which have either been completed or are in process of being carried out only represent the first instalment of business for British shipyards from Yugoslavia, for it is understood that further orders will shortly be placed, and that in the next five or six years £1,000,000 will be spent in this country on the construction of ships. Shipping is by no means the only important commodity for which Yugoslavia looks to this country. Coal is another, also machinery and wagons, and as Yugoslavia develops, and the indications are that under the new regime it will go rapidly ahead, the scope for trade will naturally increase. Yugoslavia is not an isolated oasis in the Balkans; conditions in the other countries at the present time are much the same. In short, the opportunities exist for British traders if they will only exercise the necessary initiative and take them.

Roumania and Foreign Capital.

The Maniu Administration is losing no time in translating its pledges into performances, and the steps it has already taken have gone a long way to restore Roumania's

credit abroad. The most important legislative achievement is the Mines Bill which has been passed by the Chamber and the Senate. The Bill provides for the equal treatment of foreign and Roumanian capital, and it is further laid down that free choice shall be left to foreign firms in the selection of persons up to 25 per cent. of their staff. The State reserves of oil lands are put into three categories—actual, probable, and possible. As regards the first two categories permission for exploitation will only be granted by special laws, but concessions in respect of possible oil lands can be given at once. Thus what M. Madgearu, Ministry of Industry, described not inaptly as the system of economic xenophobia established by the late Government is being brought to an end. Of course it was too much to hope that the Liberal Party would abstain from attacking the proposals, which they declared threatened the future of the petroleum industry and imperilled the interests of national defence. M. Madgearu, in a speech on the Bill in the Senate, replied very effectively to these criticisms. He pointed out that for one thing it was impossible to speak of a national policy as regards the petroleum industry in Roumania as before the War 98 per cent. of the trade was in foreign hands, and those mostly German, and that for another the Bratianu Law had proved a complete failure, while he stressed the point that the interests both of Roumanian capital and of Roumanian labour were protected, while the interests of national defence were also safeguarded.

Greek Finances.

From the statement issued by M. Venizelos on the financial condition of Greece it is evident that the criticism aroused last autumn by the proposal to reduce the interest on an internal loan has had a salutary effect. The occasion of the statement was a newspaper article suggesting that Greece ought to seek a composition with her creditors and that the service of the external debt should be either reduced or suspended. As regards the financial position of the country M. Venizelos drew a most encouraging picture, and not one that, in view of the facts, was in any way exaggerated. As regards the proposal with regard to the debt service M. Venizelos pointed out that the consequence of such a measure would be to depreciate Greece's credit abroad, and in view of the adverse trade balance the country's reserves in gold and foreign exchange would rapidly dwindle with the result that the value of the bank notes would diminish enormously. It is remarkable that any such suggestion should have been forthcoming, and the statement of M. Venizelos will effectually put an end, it may be hoped, to any such idea.

Suez Canal Traffic in 1928.

Compared with the figures for 1927 the statistics for the Suez Canal traffic last year made very remarkable reading, and if one had the totals for the transits through the Canal and the tonnage carried alone to go on it would be impossible to arrive at the conclusion that the world was making rapid progress in reconstruction after the War. The transits through the Canal last year totalled 6,084, a record number and an increase of 539 on the figures for the previous year. The net tonnage of the

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000

RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928.

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Plevan, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Doupnitza, Gorna-Orehovitz, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratza. It has also 86 agencies.

shipping and the volume of goods carried both set up new records at 31,906,000 tons and 32,622,000 respectively, representing in the case of the former an increase of 2,099,000 tons on the 1927 figures and in the case of the latter one of 3,099,000 tons. A significant feature was the fact that the increase in the outward traffic was slightly greater than that of the homeward traffic, the respective percentages being 10.7 and 9.7. A further point which calls for notice was the continued increase in the number of transits of vessels using only oil fuel, the number being 1,199 as against 1,146 for 1927. There was a slight decrease in the percentage of the tonnage flying the British flag, the figures being 56.8 as against 57.1 for 1927, and also in that showing the Dutch flag, the figures in this case being 10.4 per cent. as against 10.5 per cent., but the German share of the shipping showed a further increase, the percentage rising from 9.6 per cent. to 10.3 per cent., and only a matter of 30,000 tons of shipping now stands between the German flag and the second place on the list.

COMMENTATOR.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest March 19.

The Commercialisation Law.

Last week the new Law for the Commercialisation of State Enterprises was unanimously passed by Parliament. The modifications in this Law which have been introduced by the present Government are designed to encourage the collaboration of foreign capital in the development of Roumanian industries, as M. Madgearu, Minister of Industry and Commerce, explained when introducing the Bill. With the same object in view, similar modifications are being made in the Mining Law, which it is hoped to pass shortly.

Agricultural Credits.

The National Bank has opened a credit of 100 million lei for the benefit of vine growers. The Government has also given important credits for agriculturists, to enable the peasants to procure seed and the implements they require for the coming season.

In this connexion an interesting departure has been made by M. Garoflid, formerly Minister of Agriculture in the Liberal Ministry, who has founded an "Agricultural League" for agriculturists of all categories irrespective of class or political party. As the peasants and landed gentry gradually realise the importance of solidarity, this League may be expected to grow apace, and finally it may be possible to form one great organisation comprising the Agricultural Syndicates, Co-operatives and Agricultural Credit Banks.

Reorganisation of Railways.

The Government is working hard at schemes for the improvement of means of transport both by land and water. A scheme for the complete reorganisation of the Railway administration is under consideration. The new scheme, which has been accepted in principal by the railway authorities and the Government, was drawn up by a British accountant.

The Service Maritime Roumain.

The Service Maritime Roumain was notable in pre-War days for its fine vessels. The War, of course, worked havoc among its fleet, and steps are now being taken to reorganise the line so as to enable it to regain its former position.

New Ports.

The question is being discussed of re-opening the old port of Cetatea Alba in Bessarabia—which was closed during the War—and of establishing a second port in the same province. These two ports, intended to provide

an outlet for the products of Bessarabia by the Black Sea, will be of the greatest use in the development of the commerce of the provinces of Northern Roumania. The works will be carried out with Roumanian and Italian capital. To complete this work the Chamber of Commerce and Industry has undertaken the examination of a project which will facilitate the task of rendering the Dniester accessible to navigation and will permit traffic between Bessarabia and Bukovina through Galatz, Braila, and Constantza. Four cargo boats will form the service at first.

IDEAL HOLIDAYS EXHIBITION.

An International Travel Exhibition, under the popular title "Ideal Holidays," will be held at the Royal Agricultural Hall, London, in June next year. The Organising Manager is Miss Edith A. Browne, F.R.G.S., a pioneer of travel off the beaten track, who was for many years associated with the organisation of the International Rubber Exhibitions held in London, New York, Brussels and Paris.

It is recognised that holidays form a necessary part of the life of to-day and that large sums of money are spent on travel. But it has not yet been fully realised that propaganda for a country's holiday attractions, transport, hotels, the supply of holiday equipment and raw materials for the same are merely different branches of one great industry.

The object of the exhibition is to emphasize this essential fact by bringing the various branches of the tourist industry together under one roof for their mutual benefit; its aim to provide a common meeting-ground for all interested in holidays and travel.

PALESTINE ORANGE EXPORTS.

The Empire Marketing Board reports that the total direct shipments to the United Kingdom (including fruit transhipped at Port Said before the direct shipping season started) up to March 17, amounted to 1,084,000 boxes, as compared with 1,354,000 boxes at the corresponding date last year. Shipments to the Continent in the present season amounted to about 280,000 boxes, and 89,000 boxes have been despatched by rail via Kantara. The season may be regarded as nearly terminated, as according to the latest advices from Jaffa there should only remain some 50,000 boxes to be shipped to the United Kingdom.

It is reported that the Standard Oil Company of New Jersey has ceased its borings in Albania as the results do not promise a sufficient return.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

INDIA.

Generator Sets.—The date for the receipt of tenders for the supply of a steam engine driven generator set for the Indian Stores Department, New Delhi, has been extended to April 16.

Locomotives and Machine Tools.—H.M. Senior Trade Commissioner in India has forwarded various documents regarding the introduction of the Government of India Railway Budget in the Indian Legislature. It appears that 300 new locomotives are to be purchased; and that the proposed remodelling of railway workshops should provide an opening for machine tools and workshop equipment. (D.O.T.)

Pumping Plant.—The Indian Stores Department invites tenders for the supply of 5 complete sets of D.C. motor-driven bore-hole pumps for pure water supply. April 19. (D.O.T.)

EGYPT.

Calico and Shash.—The Surveyor-General of Egypt, Giza (Mudiriya) invites tenders for the supply of calico and Shash for map mounting for 1929-1930. July 10.

School Materials.—The Director of Stores, Ministry of Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of large quantities of school materials required for the schools during the year 1929-1930, such as Persian reed pens, white and coloured chalk, exercise books, special ruling for Arabic calligraphy, brown paper books for chalk drawings, and technical materials such as boxes of drawing instruments, set squares, slide rulers, drawing paper of different sizes, tracing paper. May 8.

Various.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for the supply of: coloured cotton waste; transformer and switchgear; structural material for footbridges at Birket el Sab and Samalout; steel twist drills; milling and involute gear cutters; rivets; tiles cement, earthenware and asbestos mill-board; canvas tents.

Electric Articles.—The Financial Secretary, Egyptian Army, War Office Cairo, invites tenders for the supply of electric articles to the Military Works Department, Egyptian Army, Abbassia, Cairo. April 4.

Various Stores.—The Director of Stores, Frontiers Administration, Arsenal, Alexandria, invites tenders for the supply of consumable stores, such as paints, ropes, brushes, leathers, ironware, canvas, duck, felt, nails. April 9.

Oils, Paints, Etc.—The Director-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of oils and paints for the year 1929-1930, March 18; bunting, ropes, etc., for the year 1929-1930, March 25; metals for the year 1929-1930. April 3.

Diesel Engine.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nadli, Cairo, invites tenders for the supply, erection, and guarantee of a 400 B.H.P. Diesel engine driving an air compressor together with auxiliary machinery. May 1.

Air Compressing Plant.—The Main Drainage Department of the Egyptian Ministry of Public Works invites tenders for the supply of Diesel engine, air compressors, cooling water circulating system, etc. May 1. (D.O.T.)

Lithographic Plates.—The Survey of Egypt invites tenders for the supply of aluminium and zinc plates for lithographing and engraving purposes. June 15. (D.O.T.)

Photographic Materials.—The Director, Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of photographic materials. April 20.

Post Binders.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of loose leaf post binders for 1929-1930. July 3.

Non-ferrous Metals.—The Ministry of Communications, Ports and Lighthouses Administration, Alexandria, invites tenders for the supply

of non-ferrous metals, iron and steel products, etc., required during the year 1929-30. April 3. (D.O.T.)

Diesel Generating Set.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at the Government Printing Press of a 120 K.W. D.C. Diesel electric generating set complete with buildings and foundations. May 15.

Needlework Materials.—The Egyptian Ministry of Education invites tenders for the supply of needlework materials required during the school year 1929-1930. The principal requirements are as follows:—White calico, 15,500 metres; unbleached calico, 4,000 metres; white linen for embroidery, 1,800 metres; zephyr coloured—width 80 cms., 9,000 metres; white lawns for underwear (Batiste), 2,000 metres; nainsooks for underwear, 3,000 metres; voiles plain colour, 3,000 metres; gabardine wool, 1,500 metres; creme flannel, 1,500 metres; coton perle, D.M.C., 10,500 reels; coton perle, D.M.C., 26,000 skeins; wool for knitting, 7,500 skeins; sewing needles, 10,750 packets; knitting needles, 2,500 pair; crochet needles, 7,000; darning needles, 700 packets; darning cotton, 2,000 skeins; pearl buttons, 1,500 dozens; thimbles, 1,500; scissors for embroidery, 1,000; measuring tapes 1.40 m. long, 804. (D.O.T.)

PERSIA.

Various Plant.—H.M. Vice-Consul at Hamadan reports that a local firm are desirous of receiving from British manufacturers full specifications and prices of the following plants:—(1) Small tin-making plant suitable for producing tins for jam, preserved fruit, etc. (2) Machinery for cleaning dried fruit, especially raisins, apricots, and peaches. (3) Machinery for cleaning and grading almond kernels. (D.O.T.)

TURKEY.

Motor Lorries.—It is reported with reference to the purchase of motor lorries by the Turkish Ministry of National Defence, that the military authorities are again inviting tenders. Public calls for tenders have not been issued, but the Ministry of National Defence has written direct to the local agents of firms which took part in previous lorry tests, inviting them to submit offers not later than April 30 next, and to have lorries for trial in Angora on May 15. The lorries required must be of the two to two and a half tons capacity. Lorries of the 6-wheeled type, or fitted with a caterpillar track, will be allowed to participate in the trials. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, April 12). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mathura for Calcutta (Birkenhead, March 30); s.s. Maihar for Calcutta (Birkenhead, April 9); s.s. Matra for Calcutta (Birkenhead, April 18).

Bibby Line.—S.s. Lancashire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 3); s.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 17).

British India Line.—S.s. Masula for Bombay and Karachi (London, April 6); s.s. Margha for Colombo, Madras, and Calcutta (London, April 6); s.s. Morvada for Colombo, Madras, and Calcutta (London, April 20); s.s. Hatimura for Bombay and Karachi (London, April 27).

Cunard Line.—S.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool April 13, and Swansea April 16); s.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza. This steamer will also call at Volo if sufficient inducement offers. (Liverpool, Glasgow, and Swansea, April 27).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 4).

P. and O. Line.—S.s. Behar for Calcutta (London, March 30); s.s. Kaiser-i-Hind for Bombay (London, April 12); s.s. Bhutan for Calcutta (London, April 13).

Prince Line.—S.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (Middlesbrough, April 4); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, April 3); s.s. Scottish Prince for Tunis (Manchester, April 25).

Ellerman and Papayanni Lines.—S.s. Lesbina for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool March 30, Swansea April 4); s.s. Polo for Algiers*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 6, Swansea April 6); s.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 13); s.s. Algerian for Algiers*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 20, Swansea* April 20); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 23). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan port via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.
LARGE STEAMSHIPS, UPPER DECK CABINS.
MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*MASSILIA ...	Apl. 16	*CASTALIA ...	June 4
*TELYSIA ...	Apl. 30	*CIRCASSIA ...	June 14

*First class passengers only. Specially low fares. †Calls Port Sudan.

‡First and third class passengers.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 26.

Apart from a certain amount of excitement in lead and copper shares due to a sharp rise in the prices of base metals, the Stock Exchange last week was uninteresting, with the volume of business passing still very moderate. Monetary fears are lessening, although all danger is not quite past, but as such fears lessen the approach of the Budget and the Election begin to exert a greater effect. The indication of the extent to which the attention of the Stock Exchange will be held by politics during the next month or two is given by the interest taken in the dealings in "Political Majorities" on the last few days of the week. A reduction in the Conservative vote was reflected in a considerable drop in the Conservative stock quotation, while Liberal stock jumped sharply on the Eddisbury result. If it were not for the approach of these obstructions to active business, markets would probably be paying more attention to what may be described as a definite improvement in the general trade position.

New Zealand Loans.

The New Zealand banking returns for the last quarter of 1928 suggest that the Dominion is in a prosperous state. In some quarters the immediate future is not regarded very hopefully, but the position at the moment supports a more favourable view. The December quarter banking returns normally show an unfavourable relationship between deposits and advances due to increased advances for the financing of the early exports, and decreased deposits due to heavy payments for imports. The present return shows a substantial decline in both advances and discounts as compared with the December quarter of 1927, and a very considerable rise in deposits, so that the excess of deposits over advances is higher than it has been in any December quarter since 1920. New Zealand is a popular borrower with investors in this country, on account of the conservative nature of her finances, so that New Zealand securities stand at high prices. Thus the yield on the 4 per cent. inscribed stock,

redeemable between 1943 and 1963, is only £4 16s. per cent., but the status of the investment may be said to justify this low yield. As an example of a short-dated stock offering a certainty of capital appreciation the 3 per cent. inscribed stock repayable on January 1, 1940, may be given. This stock is quoted at about 87, at which price the running yield is £3 14s. per cent., but the stock must rise some 13 points in less than 11 years.

Vickers' Accounts.

Vickers' accounts for 1928 show that the substantial increase in profits reported a year ago has not been repeated. But if such rapid progress has not been continued it may be said that the better position which resulted from the drastic reorganisation scheme which the losses of the post-War period necessitated has been maintained. Net profits, after charging income tax, directors' fees and debenture interest, amounted to £939,903, against £992,985 in respect of 1927. After payment of preference dividends, absorbing £418,190, £250,000 is transferred to reserves, compared with £238,210 last year, and the 8 per cent. dividend on the ordinary shares is maintained. The carry-forward is raised to £217,704 from £208,721. It is clear that although a higher dividend could have been paid, it is a better policy in the circumstances to strengthen the reserves. Vickers itself is, of course, now largely a holding company, and its assets mostly comprise shares in Vickers Armstrong, and in Metropolitan-Cammell Carriage Wagon and Finance Company. In addition the company holds £5,400,000 in cash and Government securities. The report refers briefly to the formation of the English Steel Corporation, which was formed to acquire the steel interests of Vickers and the associated companies, as well as of other iron and steel concerns if opportunities arise. This important fusion which should assist the group to benefit from any continuance of the present revival in the heavy industries, will doubtless be commented on at the meeting of the company. On the basis of an 8 per cent. dividend Vickers ordinary shares yield £4 10s. per cent. The ½ per cent. debentures, redeemable at 103 in 1972, return £5 10s. per cent.

Seasoned Industrials.

The steady flow of new issues of shares in companies formed to exploit patent rights and other untried processes is evidence that there is still money in the pockets of the public awaiting investment. The investor who is inclined to place funds in industrial securities would be well advised as a general rule, however, to avoid these "patent" issues. The risks involved in any industrial investment are sufficient, and attention should be confined to the shares of well-established concerns, "seasoned" industrials as they are called. Here it is known that there is a market for the company's products, and that that market can be profitably exploited. Moreover, the company's management has been tested by the accounts presented. There is, of course, a wide variety of such companies, but we may refer to some examples. On the ordinary shares of J. Lyons and Co. a yield of £4 4s. is obtained, and the same company's 4 per cent. debentures return £5 6s. per cent. The Bradford Dyers' Association's ordinary shares yield £5 per cent., while on the 4 per cent. debentures an income of £5 3s. is obtained. A yield of £4 12s. is obtained on the ordinary shares of Hovis, Ltd., and of £5 6s. on this concern's 6 per cent. cumulative preference shares. These three preference shares and debenture stocks may all be regarded as sound investments. Although the yields on the ordinary shares do not seem large, the shares contain chances of appreciation for the companies' business may be expected to increase, as their prospects are favourable.

The Yugo-Slavian Lloyd is to establish a regular monthly service between Shushak and the other Yugoslavian Adriatic ports and Buenos Aires.

WHEAT CULTIVATION IN EGYPT'S BASIN LANDS.*

BY ABDEL RAHMAN EFF SIRRY.

Of the agricultural products of Egypt wheat comes third in order of importance. It is well known that the wheat crop in Egypt is insufficient to meet the local requirements and that we always need to import a quantity of wheat and flour. In 1922, the remaining quantity of wheat, after taking the grain used for sowing, amounted to 878,098 tons, whereas the quantity consumed the same year amounted to 1,042,215 tons, i.e., we needed 164,114 tons of wheat from abroad. If the average yield per feddan be estimated at 4.55 ardebs (as it was in 1922), we need 235,000 feddans under wheat to enable us to dispense with its importation.

There is another way of making up this shortage. It consists in trying to increase the production, i.e., to increase the average yield per feddan. This is what we intend to attempt to do in Upper Egypt since it produces the lowest average yield, about 4.5 ardebs per feddan, while in Lower Egypt the feddan produces 4.76 ardebs and in Middle Egypt 4.83; but the wheat of Upper Egypt is the best wheat the land of the Pharaohs produces. The importance of the wheat crop is not restricted to the grain but it also extends to the so-called "tibn" which is needed as a forage for cattle for a part of the year.

Methods of Cultivation.

The dates for commencing the cultivation are fixed by those for the beginning of the basin drainage. The end of the period of cultivation is fixed accordingly. It may be delayed when the wheat is attacked by cut-worm, and the land resown.

As regards the methods of cultivation, the so-called "El Louk" method was previously the most widely spread. The ploughing method comes next. There are also other methods which are widely spread and are now much more employed than the first. It is incorrect to incorporate these methods in the ploughing method.

"El Louk" Method.—It was the earliest method employed, and, a quarter of a century ago, was the most widely used, but it is now the least employed. The cultivation according to this method begins immediately after drainage. The grain is sown and then covered by means of planks. It is usually preferable to sow a day after drainage. It is preferable as well to pass the planks twice over the grain to complete its covering. This method is not a familiar one. Its chief merit as compared with others is that it increases the "tibn." The expenses which this method entails are also less than those of any other method as the feddan in this case requires only two men for sowing and covering the grain. But the amount of grain produced is less than that produced when any other method is employed. This is due to the fact that the plant cultivated according to this method does not produce tillers. Thus the grain produces only one stem carrying one ear. One of the most important advantages of this method, however, is that the wheat is not at all attacked by the cut-worm. Inquiries have been made with the object of discovering the reasons of the decrease of the crop cultivated by this method but no reason is known except that the present quantity of silt brought by the water of the flood is less than that of a quarter of a century ago. This is due to lowering the water level in the basin lands, below what it was before the construction of the railway line between Assiut and Luxor.

The method practised until now in the blue "Nakl" soils (Nakl is an idiomatic word for the soils covered with a thick layer of silt brought by the flood) is the so-called "El Louk" method. When it is desired to plough such soils, they should be left for a long time until they become dry, though it is then difficult to plough them. Bean cultivators in the zones attacked by broom-rape believe

that the ploughing of lands for wheat growing helps the growth of broom-rape in the next year when these lands are cultivated with beans. They, therefore, prefer this method.

Ploughing Method (El Hirat).—In this method the land after being drained is left uncultivated until it becomes somewhat dry. The seed is then either sown and the land ploughed once for covering it, or the land is ploughed for the first time and the seed sown one week after and then a second ploughing is made to cover it. Some cultivators prefer to substitute for the first ploughing a *fassing* to enable them to perform this operation one week earlier. It is not usual for cultivators to use the *Zahafa*. The wheat cultivated by this method is distinguished by possessing tillers, as one grain breeds stools containing several side branches carrying ears which give a high yield of grain. This wheat, however, is subject to severe attacks of cut-worm, an insect rather dangerous in basin lands in many years. In the blue soils, the ploughing method is better than that of "El Louk" in lands where broom-rape is not common, as ploughing the land for wheat is considered to form a tilth for the next bean crop.

Hoeing Method.—The seed is sown about 8 or 10 days after the drainage of the land. It is then covered by the hoe. The feddan requires 8 to 10 men to do all the covering in one day. This method is used by the small cultivators as they do not possess enough ploughs and cattle. Besides, they prefer the ploughing method to that of "El Louk." Experience has proved that cultivation by the hoeing method results in few attacks by the cut-worm if compared with the ploughing method, with the result that it is widely spread. Small cultivators co-operate with each other in *fassing* their fields. The time of cultivation by this method is between the times of cultivation by "El Louk" and that by the ploughing methods. Owing to the sparse branching, the crop produced is less than that produced by the ploughing method.

"El Takhweed" or "Transfer" method.—It is the same as the method of hoeing, with the exception that on the fourth or fifth day of cultivation the land is ploughed in such a way that the plough leaves one furrow and ploughs the next; hence the name given to this operation, the "Takhweed" method. When every other furrow is ploughed, the plough transfers the seedlings from the ploughed one to the next; hence the name of this method, the "Transfer" method. Wheat is not damaged through this operation, though the field cultivated by this method does not appear flourishing to begin with. The plants, however, receive little damage from cut-worm. When the plant grows up it finds enough room to produce side buds and its stool becomes larger than that produced by the ploughing method. The most important point to ensure the success of this method is to do the "Takhweed" three days after sowing. In the damp heavy lands, this method is essential as it helps the land to dry by exposing a large part of it to the air and sun. Although cultivators do not give much attention to the direction of the plough, yet, if directed north and south it would be more useful for the exposure of the land from its eastern and western sides. There is no objection to using the "Transfer" method in ploughed land. This method has actually been tried and the best results have been obtained.

Replanting.—Replanting is not considered as a method of cultivation but is resorted to, during the last two weeks of January which is a late date for wheat cultivation, in the low lands from which water has recently been removed. Seedlings are taken from fields cultivated by the ploughing method, and a week after being planted they renew their leaves and make satisfactory growth, soon "making up" on the ordinary plants.

Varieties of Seed.

In basin lands, "Baladi" is sown, the best known variety of which is the so-called "Dakar" which is distinguished by its bright yellow colour and its heavy weight. There are also other varieties bearing local

* From an article in the "Agricultural Journal of Egypt."

names, the most distinguished of which is the so-called "Gawi." Although the "Baladi" wheat cultivated in basin lands is the purest commercial kind of wheat, yet care should be taken to select grain from crops non-attacked by rust or smut. The grain selected should also be of similar colour and size. Other factors to be taken into consideration are presence or absence of awns, their colour and size, etc. The selection of seeds from ears of the same type is a big step towards the increase of the yield per feddan. As regards the quantity of the seeds required for the cultivation of one feddan, it varies according to the methods of cultivation and the nature of the soil. In "El Louk" method of cultivation, plants must be numerous in order to combat the growth of weeds and to give a high yield, as they do not branch.

In the light yellow soils a small quantity of seed is required. In the heavy blue soils the greatest quantity of seed is required, whether the cultivation is according to "El Louk" method or otherwise, because, after being cultivated by "El Louk" method the soil becomes cracked and those grains die out which grow between these cracks. In the ploughing method the big clods retard the growth of the seeds. Generally speaking, the quantity of seed varies from 5 to 8 kēlas, and if some areas have been attacked by cut-worm and are re-sown later the quantity of seed required will be half as much again. It will be necessary to plough the land deeply till one reaches a damp layer.

It is known that wheat produces a high yield if manured with nitrogenous manures. Manuring became general in Miskawi, while the dryness of the soil and the difficulty of watering prevent the cultivators from reaping the advantages of manures. Some cultivators have recently used nitrate of soda at the rate of one bag per feddan, scattering it with the seed during the operation of "Tal-week" or during the first ploughing in the case of the ploughing method. This gives good results, and is practised by many cultivators, but we are of opinion that a great part of the manure is liable to be wasted if used in this way. Since the most suitable period for manuring wheat is about three or four weeks after sowing, we recommend to cultivators the use of manure during this period by scattering it after the evaporation of the moisture. There is no doubt that nitrate of lime is the most suitable manure for basin lands, because of its softness and its absorption of water. During the last two years this kind of manure was tried in certain parts of Assiut and Girga Provinces, and the best results were obtained in both "El Louk" and the ploughing methods of cultivation. As the atmosphere in Upper Egypt contains little moisture, it is essential to examine the nature of the soil and not to delay manuring particularly in the blue soils.

The average yield per feddan varies greatly from one year to another, this being largely due to variation in the appearance of the "Khamseen" or hot winds. If these winds blow through the crop during the fertilisation periods, i.e., the milk stage, they destroy the crop according to the severity of the winds. But if they blow after the fertilisation period, the damage is less, and this shows that in some years the winds may destroy the early cultivated wheat "El Louk," and in others that cultivated by the ploughing method, since the period between the two is about 20 days. As to the wheat cultivated by the hoeing or "Transfer" method the sowing date falls between the two periods.

Essentials for Increased Yields.

As we have already said, the average yield of wheat in basin lands amounts to $4\frac{1}{2}$ ardebs, which is less than that produced if attention is paid to the following points: (1) Selection of seed: Seed should be selected from a crop free from "rust" and "smut." It must also be of the same colour, size, and variety. Though some cultivators take special care in selecting their seed, the majority do not. (2) Tillage: We have already noticed the results obtained from the cultivation by "Transfer" or "Takh-

weed" method, which entails extra tillage. It is worthy of notice that "Tazheef" is not only important for the preparation of the land for the seed, but also entails the sowing of less seed. (3) Manuring: This is very important, but generally not used in "El Louk" method of cultivation. Manure can give good results without watering. We advise basin cultivators to manure their crop owing to the advantages obtained by those who apply manure. (4) Combating insect pests, especially the cut-worm, as hereafter explained.

The cut-worm: Since the cut-worm in basin lands is the most serious insect attacking wheat, which is the object of our study, we have found it necessary to write of it at some length, especially as it is a subject under investigation. One would at first like to know on what soil the worm can possibly survive when the land to be cultivated is submerged. As a matter of fact, it is unable to live under these circumstances. It has been noticed that the moths of this worm move from the desert to the fields during the month of October. The early groups alight on the wild grasses growing in the lands, which are left till they get somewhat dry before being cultivated by the ploughing method. It is already known that the growth of "El Louk" wheat and bersim in this period is not less than the growth of the wild grasses in the uncultivated land. However, the moth of the cut-worm does not attack the wheat and bersim crop. It prefers to lay its eggs on the wild grasses in the uncultivated land. Now it is improbable that the insect actually prefers the wild grasses to the bersim and wheat as food. Its preference appears rather to be connected in some way with the state of the land on which the plants are growing.

The fact that the moth chooses the uncultivated land which has not undergone "El Louk" operation is a subject worthy of study. It is possible that "El Louk" operation renders the land disagreeable in some way to the moth, and if so this would indicate a possible means of combating the pest. This theory is under investigation. At present cultivators rid their fields of the pest and prevent the damage it causes in this stage by leaving the "El Louk" wheat fields uncultivated till the larva is completely grown up and begins to pupate, then the pupae are collected by hand during ploughing. This is the method of control recommended by the Ministry of Agriculture.

Could we be sure that the following stages of the worm come from the moth of the first stage only, it would be necessary to make legislation that would ensure the collection of pupae from the land as referred to above; but it seems to me that there are other groups of moths which come continually from abroad from the same sources as the first ones. The damage done to wheat in the months of November and December is due to these moths, together with those of the first stage. This is another point which will be more fully investigated. Several observations have shown that the worm does not appear in "El Louk" land and does not attack its crop. As regards the wheat cultivated by the hoeing method, the attack assumes slight proportions, but it takes a severe form in the case of wheat cultivated by the ploughing method. This is due to the fact that the moth chooses the most suitable places to lay its eggs.

Since "El Louk" land is nearly flat, contains no hiding places, and is exposed to the heat of the sun, the moth goes to the ploughed land, which is broken into lumps and in which the moth finds wet places and shelter for its eggs. The lumps left after the operation of ploughing being smaller in size, the moth rarely hides there. Observations have shown the severity of the attacks on the heavy blue soils, which is due to big lumps of soil being left after ploughing, while in the light soils the ploughing leaves no big soil lumps.

The directors of the General Accident Fire and Life Assurance Corporation recommend a final dividend of $2\frac{1}{2}$ per cent. (making 5 per cent.) on the preference shares and a final dividend of 7s. per share on the ordinary shares (making 12s. per share), both payable May 1.

Motors and Motoring.

By G. B. B.

The Call of the Road.

By the time these notes appear we shall probably have some idea of the kind of weather we are to have this Easter. For the real road lover almost any weather will do, but all the same, although I claim to come within the category, I prefer it sunny and bright. And I expect most of my readers have a similar penchant.

Given fine weather, I anticipate bigger crowds on the road this year than ever before. Even the increase in the cost of petrol will not reduce the numbers, and although I am far from wishing to be a wet blanket I must remind drivers that an appreciable percentage of the cars they will meet will be driven by absolutely inexperienced drivers, and if there is any conceivable piece of stupidity of which the driver of that approaching car can be guilty, it is just as well to imagine that he is just about to perpetrate it and act accordingly. One cannot take too much care on the road now the number of careless and ignorant drivers is high. As an old friend of mine put it, a few days ago: "Twenty years ago every car driver was a model of road courtesy and correct behaviour; there was a spirit of what one might call 'Freemasonry' that was finer than anything ever seen on the road before; nowadays road courtesy is almost unknown." It is to be hoped that this Easter will usher in a revival of the old spirit when every driver showed consideration towards all other road users.

Re-treaded Tyres.

On more than one occasion I have mentioned the good service obtained from tyres which, apparently worn out and only fit for the scrap heap, have been re-treaded, with the result that they have lasted for a further two or three thousand miles. The cost of retreading is now very small and provided the canvas is not too badly cut or worn, good results can be guaranteed. The other day I showed a re-treaded cover to a motoring friend and asked his opinion as to the wear it had received. After carefully examining it, he hazarded 500 miles. As a matter of fact the cover had done nearly 15,000 miles in the first place and had run over 2,000 miles in its re-treaded state. So far as one or two of the best re-treading firms are concerned, I can speak personally as to the good quality of the rubber used and the care taken over the work.

Gas-driven Cars.

Possibly the increase in the cost of petrol, coupled with the probability, if not the certainty, of a further increase in the near future, will renew the activity of those experimentalists who, a few years ago, were doing so much towards developing the producer-gas principle for commercial vehicle driving. The suction type of producer had already gone far when the cheapness of petrol caused its development to slow down. A fair measure of success had been attained, and it will be remembered that in the report of a sub-committee of the Standing Committee on the investigation of prices, issued about the time to which I am referring, appeared the following:—"The use of portable gas producers should be extended, more particularly for transport lorries and omnibuses. This form of power would appear to be immediately available and opens up the most hopeful avenue of immediate relief (from high prices)."

Hitherto research in the application of this form of fuel to motor vehicles has been more or less in the experimental stage, but not so long ago a very definite achievement in perfection of the system was made by a certain firm of manufacturers, and a series of carefully compiled records of three-ton lorries under actual working conditions showed that a considerable saving could be effected

in the operation costs of commercial vehicles by the adoption of this suction gas principle.

A three ton lorry, it was found, fitted with one of these plants would carry a full load at the same speed as with petrol for 100 miles on a consumption of 300 lbs of coke costing, at that time, about 10s., the coke being then at £4 per ton. To-day, coke is much cheaper so that the running cost would be proportionately less. The same vehicle, running on petrol, would require 17 gallons for the trip, so that the actual saving can easily be calculated. Several three ton lorries equipped with that type of plan were in use for some time and the fuel costs, with coke at £4 per ton, worked out at 1.32d. per mile and 0.35 per net ton-mile.

The principle of the producer plant may be outlined as follows for the benefit of non-technical readers. A stream of mingled air and steam is drawn through a mass of glowing coke, anthracite or other suitable fuel, producing a highly combustible but impure gas. This gas is carried by piping, in a dust filter where all solid impurities are removed, and from thence it passes to another chamber where it is drawn through water and afterwards it is "scrubbed" by being passed through a grid containing moistened pebbles, thus eliminating one or two undesirable constituents which, otherwise, might gum up the engine. From thence, the gas is conveyed to the engine throttle, which takes the place of the orthodox carburettor.

The plant itself is not only simple but compact, and although the problems of design were not simple they have been practically overcome. For a lorry of the size mentioned, the gas-producing equipment measured only about 2 ft. by 4 ft. and could easily be fixed by the side of the dashboard. From this it will be seen that considerable time and attention had been devoted to the matter in order to bring so powerful a plant to so reasonable a size.

The Producer.

The producer itself was of mild steel plate, with welded joints, surmounted by a hopper of similar material, from which the coke was fed into the firebox. This was situated at the bottom of the producer and was fitted with a special refractory lining made of a patented composition. The fire-grid surrounding the incandescent fuel was a steel casting, and a novel point about the arrangement was that the bottom portion of the grid formed a trough containing water, which was kept at a definite level by a float feed, on the same principle as that employed in an ordinary carburettor. This device not only prevented overheating of the fire-grid, but also supplied the necessary steam for mixing with the air that was to be drawn through the coke. The tendency of the parts to overheat was thus satisfactorily solved, and the use of mild steel plate reduced the weight of the parts. It may be mentioned that the whole of the fire box could be removed, if required, by merely undoing a few nuts so that in the unlikely event of a liner burning out a spare could be fitted in a few minutes. I remember it was said at the time that a plant of suitable size could be fitted to a three ton lorry for about £100. What the price would be to-day I do not know, except it would be considerably below that figure.

It is reported that negotiations for fusion are taking place between the Croatian Banking Company and the Bosnian Industrial Bank.

The S.A. Charbonnages d'Heraclee made net profits of 7,970,166 frs. for 1928, against 8,381,195 frs. for 1927. A dividend of 52 frs. per ordinary share has been declared.

Sir Edmund Wyldbore-Smith has been elected a director of the Metropolitan Railway Company in place of Sir Harry C. W. Verney, who has resigned. Sir Edmund is a director of the Pullman Car Company and the Suez Canal Company.

Notice to Holders of Ottoman Bonds.

21st MARCH, 1929.

The COUNCIL of the REPARTITIONED PUBLIC DEBT of the FORMER OTTOMAN EMPIRE GIVES NOTICE to the HOLDERS OF OTTOMAN BONDS that the CONTRACT entered into in Paris on 13th June, 1928, between the Government of the Turkish Republic and the Representatives of Bondholders for the reorganisation of the Ottoman Public Debt, and for the RESUMPTION of PAYMENT of the share devolving upon Turkey in that Debt, has been RATIFIED under the conditions mentioned in a Communication issued this day by the Council, copies of which will be shortly available at the places of payment indicated hereafter.

Furthermore, a similar Contract, concluded on 19th January, 1929, with the Representatives of the Levant States under French mandate, for settlement of the share of the Ottoman Debt incumbent upon such States, has been ratified by them.

These two Contracts, which are recommended for acceptance by the various Bondholders' organisations formed in Belgium, France, Germany, Great Britain, Italy, and Switzerland, are submitted for the adhesion of Bondholders. Such adhesion will be signified in the following manner:—

1. For Bondholders of Long Term Loans, by encashment of the amounts, shown in the table hereunder, which sums are available for payment by the Debt Council as from 4th April, 1929, until 31st May, 1929, for the account of Turkey and the Levant States under the French mandate.

(A) LOANS PAYABLE IN POUNDS STERLING.

Loans.	Maturities.	Number of Coupon.	Gross amount to be paid in cash, subject to deduction of tax.
Unified Debt	Sept. 14, '24	42	£0 2 8
Osmanie 1890	Sept. 14, '24	—	0 1 11
Tombac Priorite	Aug. 14, '24	—	0 1 11
5 Per Cent. 1896	Jan. 14, '25	—	0 2 5
Customs 1902	Jan. 14, '25	44	0 1 11
Bagdad, Series I.	March 1, '28	51	0 1 11
4 Per Cent. 1904	Jan. 14, '25	37	0 1 11
4 Per Cent. 1901-1905	Jan. 14, '25	39	0 1 11
Tedjizhat-Askerieh	March 1, '28	46	0 1 11
Bagdad, Series II.	Jan. 2, '28	40	0 1 11
Bagdad, Series III.	Jan. 2, '28	32	0 1 11
4 Per Cent. 1908	Jan. 14, '25	31	0 1 11
4 Per Cent. 1909	Dec. 14, '24	30	0 1 11
Customs 1911	Jan. 2, '28	34	0 1 11
5 Per Cent. 1914	Nov. 14, '24	—	0 2 11

(B) LOANS PAYABLE IN FRENCH FRANCS WITH INCREASE.

Loans.	Maturities.	Number of Coupons.	Gross amount to be paid in cash, subject to deduction of tax (*).
Frs. 40,000,000			
Oriental Railways	Jan. 1, '25	—	Fr.frs. 10.25
4 Per Cent. 1903 Fisheries	May 1, '28	51	10.20
Soma-Panderma	Oct. 1, '24	27	10.20
Hodeida-Sanaa	Oct. 1, '24	27	10.20
Konia Plain Irrgn.	Interest due between 6-8-24 & 19-11-24	—	In full

(*) The equivalent of the amounts indicated in this column will be paid to Bondholders in sterling, at the sight rate of exchange on the day of presentation of coupons at either of the places of payment indicated hereafter.

(C) LOANS PAYABLE IN FRENCH FRANCS WITHOUT INCREASE.

Loans.	Date of drawings.	Numbers of drawings.	Gross amount to be paid in cash without deduction of tax.
Lots	Drawings of Oct.	328	Fr. frs. 168.95 per
turcs	and Dec., 1924,	329	Bond amortised and
	and of Feb., 1925	330	70.40% of Bonds drawn with premiums.

2. For holders of Lots turcs which have not been drawn, as well as for those whose Bonds were drawn from April, 1925 (No. 331) to August, 1928 (No. 351), by presentation of their Bonds, on which will be stamped an endorsement of adhesion.

3. For Holders of Treasury Bonds 5 per cent. 1911 and 1913 and 6 per cent. 1912 by deposit of the Bonds for the purpose of their subsequent exchange against new Bonds entitled "5 per cent. Bonds 1928 for the Consolidation of the Treasury Bonds of the former Ottoman Empire."

When the total of the Bonds thus presented or deposited by Bondholders represents a proportion of 40 per cent. of the nominal capital of the Ottoman Public Debt, the Contracts will come into force definitely.

The Council will notify Bondholders of this fact, and will give the necessary instructions for remittance of the "Consolidated Bonds" to the Holders of Treasury Bonds, with simultaneous payment of the first coupon attached to the new certificates, at the rate of £0 2s. 10d., as well as for exchange of documents of title for Arrears

(such as Coupons, Drawn Bonds, Scrip, etc.), which fell due before 6th August, 1924, against Bonds representing Arrears, redeemable in thirty years.

Should the proportion of assenting Bondholders not reach the percentage of 40 by the 31st May, 1929, the Contracts will be considered as null and void; the amounts already paid to the Bondholders will remain their property, and the Treasury Bonds will be returned to Depositors.

For all other information, the Council requests Bondholders to refer to the detailed Communications which they can obtain from the undermentioned Establishments, to whom they should PRESENT their COUPONS and BONDS for the PAYMENT indicated in this notice.

GREAT BRITAIN.—LONDON—Council of Foreign Bondholders, 17, Moorgate, E.C.2.

Ottoman Bank, 26, Throgmorton Street, E.C.2.

The above-mentioned PAYMENTS will also be made to BOND-HOLDERS in Austria, Belgium, France, Germany, Holland, Italy, and Turkey.

THE COUNCIL OF THE REPARTITIONED PUBLIC DEBT OF THE FORMER OTTOMAN EMPIRE.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF INDIA.

The report of the National Bank of India for the year ended December 31 last states that the net profits for the year, after providing for all bad and doubtful debts, amounted to £530,829 6s. 8d., and, adding £276,499 12s. 2d. brought forward, the available total is £807,328 18s. 10d. An *ad interim* dividend at the rate of 20 per cent. per annum, free of income tax, was paid on September 14 last, amounting to £200,000. The directors now recommend a further dividend at the same rate, and an addition of £50,000 to the reserve fund, raising it to £3,000,000. They propose to write £30,000 off house property account and to add £50,000 to the officers' pension fund, leaving a balance of £277,328 18s. 10d. to be carried forward.

BENGAL DOOARS RAILWAY.

The interim report of the Bengal Dooars Railway states that the approximate net earnings for the six months ended September 30, 1928, after allowing for Indian taxation, amounted to £44,716, which, with £49,342 brought forward, and £1,325 for interest, makes £95,383. Deducting £68 for loss on exchange and £7,200 for six months' dividend on preference stock, leaves £88,115. The board has decided to carry £20,000 to reserve and to declare an interim dividend of 4 per cent. on the ordinary stock on account of the year ended March 31, 1929, subject to British income tax (less relief in respect of Dominion income tax), leaving £52,114 to be carried forward.

The Bulgarian Government has received a number of offers for the exploitation of the chromium deposits recently discovered in the Rhodope Range.

ADVERTISING IN

"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of *all* classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

Write for advertisement rates to:

Company Meeting.

NATIONAL BANK OF EGYPT.

Conditions in Egypt and the Sudan.

Sir Bertram Hornsby's Speech.

The twenty-ninth annual general meeting of the shareholders in the National Bank of Egypt was held on March 21 at the head office of the Bank in Cairo. Sir Bertram Hornsby, C.B.E. (the Governor), presided.

The Governor, addressing the shareholders, said:—Gentlemen,—From the balance-sheet and profit and loss account which are in your hands you will see that the gross profit, at £1,127,579, is slightly less than that of 1927; but, on the other hand, expenses being £42,000 less, the net profit of £651,622 is nearly £37,000 more than last year.

In view of these satisfactory results your directors have decided to recommend an increase of 1 per cent. in the dividend, which, if you approve, will therefore be at the rate of 18 per cent., as against the 17 per cent. paid for the last few years.

On the assets side of the balance-sheet the total of our advances at £13,790,000 shows a marked increase as compared with the figure of £11,930,000, at which they stood last year. Of these advances, £5,900,000 are covered by merchandise, chiefly cotton, and £5,800,000 are covered by stocks and shares, the corresponding figures for last year being £4,921,000 and £4,498,000. These increased advances are the result of a larger demand for accommodation from our customers on account of the greater activity of the cotton market; they fall to be repaid as the season draws to a close.

Our holding of foreign bills at £4,965,000 shows an increase of £2,250,000 over last year, arising also from the active state of the cotton trade. The bulk of these bills bear the acceptance of first-class Banks, and they form an asset of great liquidity. Our holding of British Treasury Bills is not comprised under this heading, but is included under that of Government securities.

Our local Bills discounted show little change. They represent in part commercial bills and in part what are in reality advances to landowners for the purposes of their cultivation. We should have no difficulty in increasing this latter category but for the fact that it is not our practice to lend a larger sum than the borrower can conveniently repay out of the proceeds of his crop.

On the liability side of the balance-sheet you will see that the account of the Egyptian Government stands at £18,800,000. Of this amount, £8,000,000 were on deposit for fixed periods. Our deposits from the public, at £16,000,000, are lower by £800,000 than they were a year ago. This is explained by the fact that the figure of December 31, 1927, was swollen by deposits of a temporary character at our London Agency, which were withdrawn after the close of the year.

Note Issue.

The note issue calls for no special comment. The average issue for the year was about £27,700,000, against £28,600,000 in 1927, but the figure is affected by the withdrawal in the latter year of our notes from circulation in Palestine.

The maximum and minimum for the last five years were as follows:—

1924	...	...	£42,400,000	...	£26,900,000
1925	...	...	41,900,000	...	28,700,000
1926	...	...	35,300,000	...	25,300,000
1927	...	...	33,600,000	...	24,400,000
1928	...	...	33,900,000	...	22,300,000

I am happy to state that the prosperity of the Bank is only one indication of the prosperous state of the country in general. The cotton crop of the current season 1928-29 is estimated at about 7,500,000 kantars and is selling freely at prices which are remunerative to growers.

I referred last year to the surplus of funds in the country seeking investment and the consequent rise in the value of local securities. This movement continued during 1928 and it is now difficult to obtain any fixed interest security at better than a 5 per cent. yield. The ordinary shares of certain of the larger companies are capitalised on an even lower basis, which indicates an optimistic outlook for the future on the part of buyers.

Four years ago I drew your attention to the remarkable increase in the percentages of coupons of the Egyptian Unified and Privileged Debt paid in Egypt, as given in the annual reports of the Caisse de la Dette. In 1927 these percentages were 68 and 58 respectively, as against 16½ and 7½ in 1919. Though considerable purchases of these bonds have of late years been made on behalf of the Egyptian Government, the private holding has been largely extended; in either case the transfer of securities to this country from abroad represents an accretion to the public fortune.

Another indication of prosperity may be found in the great activity which still continues in the building trade. Visitors to Cairo and Alexandria are invariably impressed by the large and handsome buildings which have been erected of late years and by the improvements which have been effected in these two towns.

Egypt's Foreign Trade.

I make no apology for again submitting to you the figures of Egypt's foreign trade for the last five years. In accordance with past

practice each year is made to run from September 1 to August 31, so that, as nearly as possible, it may cover a complete cotton crop.

You will see that whereas the season 1926-27 resulted in an excess of imports over exports of some £2,500,000, the situation has been entirely reversed in 1927-28, exports showing an excess of about £2,750,000. It is to be expected that the figures for the current season will not be less favourable.

September 1 to August 31.	Imports.	Exports (including re-exports).
1923-1924	£47,440,000	£64,109,696
1924-1925	56,257,511	67,592,808
1925-1926	55,973,075	52,855,630
1926-1927	48,230,223	45,823,035
1927-1928	51,565,388	54,310,983

In the course of the year the Government decided to put into operation various projects which will increase the material and moral welfare of the country. The proposed programme of irrigation works will, when completed, add considerably to the resources of the country, and, by bringing more land into cultivation, will provide an outlet for the energies of the ever-growing population. In the meantime the capital expenditure involved should benefit the trade of the country.

In 1930 expires the last convention binding Egypt to its present Customs system, which, as you know, is on an "ad valorem" basis, the rate in general being 8 per cent., subject to higher rates for a few articles and to lower rates for certain others regarded as prime necessities. The Government is now studying the whole question of the modifications, whether of principle or of detail, which the interests of the country seem to require. From the point of view of trade and commerce, the essential requisite is that the system should be simple in itself and practical in its application.

The Sudan's Trade Development.

There is a steady growth in the foreign trade of the Sudan, as may be seen from the subjoined figures of imports and exports for the last five years:—

	Imports.	Exports (including re-exports).
1924	£5,474,910	£3,830,171
1925	5,437,727	4,168,364
1926	5,574,401	5,190,505
1927	6,155,314	5,229,419
1928	6,436,206	5,947,026

The chief item on the export side is cotton from the Gezira valued at £3,600,000, as against £3,200,000 in 1927. Other items of importance are gum and hides. Apart from goods imported on Government account, cotton piece-goods take first place among the imports, and are followed by tea, sugar, and tobacco, which seems to show that the native of the country is developing new tastes and habits.

The rains were satisfactory to the extent that sufficient maize was grown to meet local consumption without the necessity of recourse to importation; on the other hand, there was no surplus available for export.

Since the close of the year, our colleague in London, Lord Cullen of Ashbourne, has tendered his resignation, which we have accepted with the greatest regret, and we take this opportunity of expressing our thanks for the wise counsels which his long experience in the City of London has so admirably qualified him to give. In his place we have nominated Sir Otto Niemeyer, who has played such an important part in international finance. I shall in a moment submit this nomination for your ratification. The director who retires by rotation this year is Mr. M. C. Salvago, who offers himself for re-election.

In conclusion the directors wish to express their thanks to the sub-governors, the managers, and the staff for their services during the past year.

The traffic receipts of the South Indian Railway Company for the week ended February 23 amounted to Rs.12,11,778, making the total from April 1 Rs.5,56,69,899.

The traffic receipts of the Egyptian Delta Light Railways for the eight days ended February 28 amounted to £6,319, making the total from April 1 £304,845.

Near East Markets

CYPRUS EXPORTS INCREASING.

The report on Cyprus trade for January states that there was an all-round increase in imports, exports, and shipping. Imports at £170,251 were £30,481 in excess of those of January last year and 155,482 over the quinquennial average. A noticeable feature of the imports was the continued increase in seed potatoes. There were also increases in chemical manure, flour, motor cars, sugar and timber.

There was a very satisfactory improvement in exports of £38,915 as compared with those of January, 1928, and of £57,728 as compared with the quinquennial average, the total being £138,761. The most important increases were in minerals, cotton, potatoes, raisins, and wine. Exports of carobs declined.

During the month 29 steamers called at Larnaca, 32 at Limassol and 26 at Famagusta, as against an average of 27, 28 and 21 respectively.

FAILURE OF GREEK POTATO CROP.

The weekly report of Hambros Bank, Ltd., states that weather conditions in Greece have continued to be severe. They have had serious effects on all branches of agriculture. The potato crop has failed, and large quantities are being imported from Ireland, France, Holland, and Egypt, a few also from Belgium. It is feared that the tobacco plantations and the vineyards have suffered. The olive trees are very backward. The cattle industry and the dairy produce industry have also suffered. Eggs have had to be imported in large quantities from Egypt and Cyprus. The cultivation of flax and hemp is materially expanding, especially in the marshy parts of the country, and the corresponding industries of rope and cable making and of linen goods has substantially increased, reducing the imports of similar goods from abroad.

The production of the Anglo-Egyptian Oilfields for the week ended March 22 was 5,052 tons.

The Central Provinces Manganese Ore Company recommends a final dividend of 15 per cent., free of tax, in respect of 1928.

The Timisoara Bank and Trading Company made a net profit for the past year of 26,908,460 lei.

Last year over 500,000 acres were occupied by Roumania's vineyards, and the production of wine totalled 6,314,400 hectolitres.

THE AGRICULTURAL BANK OF EGYPT.

NOTICE IS HEREBY GIVEN that the TWENTY-SIXTH ORDINARY GENERAL MEETING of The Agricultural Bank of Egypt will be held at the Head Office of the Bank in Cairo, on Wednesday, the 10th April, 1929, at 4 o'clock p.m., for the purpose, among other things, of:—

- Receiving the Directors' Report;
- Receiving the Auditors' Report;
- Approving the Accounts for the period ended 31st January, 1929;
- Declaration of Dividends;
- Election of Directors;
- Election of Auditors and fixing their remuneration;
- And the transaction of the general business of the Ordinary General Meeting.

Every Shareholder holding a minimum of Five Shares has the right to attend the General Meeting, provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the Shares in London is the 28th March, 1929), when Cards of Admission and Proxy Forms will be handed to them at one of the following places:—

- In Egypt—At the National Bank of Egypt, Cairo.
At the National Bank of Egypt, Alexandria.
 - In London—At the National Bank of Egypt,
6 and 7, King William Street, E.C.4.
B. HORNSBY, President.
- Cairo, 14th March, 1929.

THE ROUMANIAN MARKET FOR WIRELESS APPARATUS.

Roumania is believed to offer a fair market for the sale of radio sets and equipment among the 3,000,000 to 4,000,000 people who dwell in the more thickly inhabited districts (says the American Consul at Bucharest, Mr. J. Rievs Childs, in a recent report). Potential users of radio are generally limited to the urban population, among whom the market for luxury articles is well developed. The trade in radio sets and equipment has been confined largely to Bucharest, but the establishment of a local broadcasting station, and the gradual elimination of high import duties on radio apparatus and equipment, and the modification of restrictions imposed by law on obtaining permits for the installation of receiving sets should stimulate sales of radio equipment considerably in all cities.

The Roumanian Radio Broadcasting Co., a joint-stock concern, with a capital of about £62,500, of which 60 per cent. of the stock is owned by the State, was registered in January, 1927, and began its transmissions in a regular manner on November 1, 1928, although experiments had been made previously. It has the only radio broadcasting station now operating in Roumania, and its range is about 200 kilometres. The set, however, has only been lent by the Marconi Company of London pending the erection of a 16-kilowatt station outside of Bucharest, which, it is expected, will be functioning shortly. The building housing the larger installation has been completed, and part of the apparatus has arrived, and the laying of cables connecting the station with the central studio and other institutions has been given to contractors.

At present all radio sets, whether imported or manufactured within the country, are required to be approved and stamped by the Director-General of the Post, Telegraph, and Telephone Service before they may be placed on sale. Another prerequisite to the installation of a radio set is the obtaining of a special permit, which is issued from the same office upon payment of an initial verification tax. In addition, there is also an annual tax, of which 70 per cent. accrues to the Roumanian Radio Broadcasting Co., and is at present its only source of income. Some 10,074 permits had been issued for the installation of radio receiving sets in October, 1928, and authorities estimate that many more unauthorised sets are in operation. At present the radio commission of the post office is approving applications for permits at the rate of about 225 weekly.

As a result of the local broadcasting facilities now offered, which include two daily programmes, an increasing demand for radio sets is anticipated during the coming year, which may possibly run as high as 8,000 units. The radio industry is in its infancy in Roumania, such sets as are manufactured locally representing entirely sets which are assembled from imported parts, and of which only the wooden cabinet is of domestic origin. The general tendency would seem to be to abandon even this practice and to depend upon complete working sets of standard quality of foreign origin.

German manufacturers were pioneers in the development of the Roumanian market. Since the use of radio by private individuals was authorised in 1925 they have continued to claim an important share of sales. The greatest demand is for sets of four to six valves, which are capable of picking up such neighbouring stations as Budapest, Vienna, and Prague. Sets which operate through the medium of batteries, eliminators, or chargers are still in demand, and it is believed they will continue to find a sale for some time without difficulty. The electric current supply in Bucharest and in most urban centres in Roumania, however, is such that it is feasible to use electric sets.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 20:—

Egyptian Futures.

Sakel Contract.—Strong Alexandria reports backed up by a moderate amount of speculative buying caused an advance of about 30 points during the sessions immediately following our last report. In the absence of adequate trade support, and owing to the American markets starting a retrograde movement, values since the commencement of the present week have been under pressure, so that on balance little change in the level has to be reported. Near positions continue to show strength, and this is having a stabilising effect on the whole list; recent tenders are gradually being absorbed, and the selection of tenderable cotton (apart from Sudan Sakels) now in stock here, is dangerously low. A slight improvement in the trade demand has again been recorded, and in certain of the lower long staple cottons a good business has taken place. The Alexandria market has been influenced by the possibility of America imposing a tax on imports of staple cottons, and some buying of actual from the country in question has certainly been in progress. We understand the tariff question will come before Congress some time about the end of April, and that there is every possibility of the measure being passed. We are quite prepared to witness values fluctuating round the present level for some little time, and, whilst holding no very definite views on the outlook, still consider that the local contract is not a safe medium for operations on the "bear" side.

Upper Contract.—Quite a sharp advance in values took place in this market, and in Alexandria, just prior to the week-end, reports that a tariff on imports of staple cotton into America caused spinners in that country to make heavy "prompt" shipment purchases in Egypt. This activity induced, in its main, considerable speculative activity, but, with the American markets later commencing to develop a strong reactionary tendency, earlier buyers started to liquidate their purchases, with the result that prices rapidly reverted to below last week's levels. The local trade demand is beginning to show signs of improvement, and more business in both spot and forward cotton has been transacted. We consider that the liquidation that has taken place during the past two sessions has improved the technical position of the contract, and would advise purchases round current rates.

Egyptian Spot.

The inquiry has been well maintained on the whole, but unfortunately reactions in futures have exercised a restraining influence on would-be buyers, and resulting sales have proved rather disappointing. Features of interest have been lacking, and purchases have been made for the most part within already well-defined lines. Sakel at from 50 off to 150 on March contracts has again been in favour. The recent purchases made in Egypt by America have naturally not tended towards any weakening in the basis, but have rather had the effect of attracting an increased amount of attention to the strong statistical position of Sakel, and cotton based on Alexandria becomes more difficult to move. On the face of it, Sakel looks much too dear. For example, cotton grading shy Fully Good Fair by Liverpool standards, and of only moderate staple, is on offer here at approximately 210 points on March, and is firmly held.

There has been no distinctive improvement in the offtake for the better grades, but increasing interest has been shown this week in the low and inferior qualities at from 6d. to 16½d. Uppers have met with the customary steady offtake, and the most popular range has again been 10 off to 20 on contracts. Some slight improvement has been apparent this week in the demand for cotton grading Good and above. The lower qualities of Pilon have been in moderate request up to about 14d. "Fancy" and experimental growths have suffered from neglect. A bright spot has been Sudan Sakel, which has met with a good response from the trade at prices ranging from 14.28d. to 23.74d.

C.i.f. business has been of a very patchy character. Forwardings to the trade last week were returned as 6,714 bales Egyptian and 1,819 bales Sudan. Estimated spot sales for the week, 1,900 bales Egyptian and 2,550 bales Sudan. Sakel quotations show a net advance of 25 points. Uppers are 2 points, and Pilon 5 points lower. F.G.F. Sakel to-day, 19.15d. F.G.F. Upper to-day, 12.95d. F.G.F. Pilon to-day, 13.55d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended March 14, state:—

Since our last report the futures market has been very active, and has been generally firm, especially in the case of the near months. The week's summary of price movements is as follows:—Sakellaridis: March, 37.66 dollars, 0.60 dollars up; May, 38.10 dollars, 0.26 dollars up; July, 38.35 dollars, 0.15 dollars up; November, 38.50 dollars, 0.25 dollars down; January, 38.66 dollars, 0.24 dollars down. Ashmouni: April, 24.12 dollars, 0.40 dollars up; June, 24.48 dollars, 0.40 dollars up; August, 24.59 dollars, 0.16 dollars up; October, 24.60 dollars, 0.01 dollars up.

Sakel.—Dealing in the March delivery has been the predominant

feature this week, and after having reached a discount of about 1 dollar under May and 2 dollars under November, this delivery recovered, and at the close of the week the discounts were reduced to ½ dollar and 1 dollar respectively. This change is due to a fairly pronounced improvement in the demand for spot cotton and to the fact that only 1,000 kantars were delivered against the second March tender. Spinners have shown decidedly more interest this week in our market than usual, and a fair amount of business has been done. America has been the principal buyer, which leads one to think that the proposed law, soon to be submitted to the United States Congress, imposing a tariff on all long staple foreign cotton, will in all probability be passed. This being the case, it is only natural to expect increased buying by American spinners with a view to getting as much cotton into the country as possible before the tariff becomes law.

November has been rather heavier this week on sales by straddle operators against purchases of the near Sakel positions; these operations are no doubt in anticipation of the proposed tariff. Speculators at present seem divided in their views, but we think the majority of local operators are working the bull side.

There is nothing of great importance in the latest news from the Sudan. Estimates of the crop remain unchanged at more than 600,000 kantars; exports to England are on the increase, and that market is now well supplied with Sudan cotton. The general tone of the market is certainly better, but we doubt whether the rise can be pushed much further. The situation in the fine spinning section of the industry is not brilliant and any serious rise will certainly further reduce takings.

The Sakel/Uppers straddle (May/April) this week stands at 1,398 points against 1,421 points last week and 1,160 points at this time last year.

Against the second March tender, dockets for 1,000 kantars were issued, bringing the total dockets issued against the first two March tenders up to 21,000 kantars.

Uppers.—This market has been extremely active, particularly in the near months. The possibility of the passing of the American Tariff Bill imposing an import duty on all foreign cotton has led American spinners to place large buying orders for Uppers. The natural result has been a change in the atmosphere and the disappearance of the heaviness of the market alluded to in our previous reports. We

do not think that the market has yet reflected the full benefit of the above-mentioned buying, and look for a further and more pronounced improvement in prices.

The Ashmouni/American straddle (April/May) this week stands at 299 points, against 269 points last week and 717 points at this time last year.

The week's receipts amount to 76,207 kantars, against exports 77,266; the stock in Alexandria stands at 3,289,696 kantars.

Spot.—Minet el Bassal has been open only four days this week, due to the native Bairam holidays. An improved demand has appeared and the resulting turnover shows a marked daily increase over last week. Fears of a restrictive import tariff which may possibly be imposed on "Foreign Cottons" by the United States Government have brought buyers in that country into the market for Uppers and, on a lesser scale, for Sakel, and have given the spot market here a decided fillip, coming on top of a good demand from other countries as well. Sales for the four business days amount to about 13,850 bales, of which we estimate 3,300 bales Sakellaridis, 9,850 bales Ashmouni and Zagora, 550 bales Pillion, and 150 bales other varieties.

Sakellaridis: Demand is improving and the medium qualities, which command by far the most attention, continue very scarce and hard to buy. Spot differences are distinctly dearer for Fully Good Fair and the grades below, and unchanged for the better grades.

Ashmouni and Zagora: The facts mentioned above, and their own relative cheapness compared to competing varieties, have combined to attract a good deal of attention on the part of buyers to these varieties. A good business has been done covering all grades, with the medium qualities in most demand. Spot differences are generally distinctly dearer.

Pillion: Continues in good favour and the spot situation is about as noted in our last report. Spot differences are rather dearer for

Fully Good Fair and the lower grades, and unchanged for the better qualities.

Other Varieties: A small business has been done in both Nahda and White at about last week's differences, and some few lots of Maarad and Fouadi have changed hands.

Up-country: The native festival of Bairam has caused a complete cessation of business up-country. Some revival is looked for after the holidays as the rise in prices may render holders more disposed to let go the cotton remaining in their hands.

Crop, 1929.—Weather conditions have again been very variable; as, however, we are still only at the commencement of the season, it is not expected that these conditions will affect the crop in any way.

In 1928 remittances from Greek emigrants in America through the Bank of Athens and the National Bank of Greece amounted to £4,660,634, as against £4,559,876 in 1927.

The British Industries Fair will be held next year at Olympia, instead of the White City. The Fair will, as usual, open on the third Monday in February, namely, February 17, and will remain open until Friday, February 28.

Motor dealers in Yugoslavia were somewhat disappointed with sales for the last six months of 1928 (says an American report). Although there were 15 per cent. and 50 per cent. increases in sales of passenger cars and trucks, respectively, for the first ten months of 1928, dealers had expected a much larger gain over 1927. Motor-cycle sales will probably total 800 units for 1928. The principal sales were divided between German and British light-weight models, both of these types being exceedingly popular in this market.

Notes of the Week.

Greece and Bulgaria.

There is no need to take too seriously the sudden accession of peevishness that has momentarily checked the progress of the restoration of good relations between Greece and Bulgaria. The trouble has arisen over the Bulgarian request for a further postponement of the half-yearly Reparations payment. As the Inter-Allied Reparations Commission had already granted one postponement, the request for a second caused great umbrage in Greece, where any weakness on the part of the Allies towards Bulgaria is contrasted with past insistence on the liquidation of Greek indebtedness and is accordingly resented. Although Greece's half-yearly share in Bulgarian Reparations amounts to £24,000 only, the non-payment of even this small sum might affect the precariously balanced Greek Budget, and for this reason Greek anxiety will be the more readily understood. The justice of Greece's contention that the Allied Powers have no right to be generous to Bulgaria at her expense would have been conceded at once, if it had been submitted to the proper quarter in the proper way. Unfortunately, M. Venizelos, whose instincts in regard to financial matters have always fallen far short of his flair for foreign affairs, has not been able to resist the temptation of an oriental deal on the subject of the mutual indebtedness of Greece and Bulgaria. To this end no attempt has been made on Greece's part to carry out the agreement signed with Bulgaria in 1927 regarding compensation for Bulgarian *émigrés* from Macedonia. As this agreement was concluded under the auspices of the League of Nations, the British Foreign Secretary at the recent meeting of the Council called Greece's attention to the omission, and his remarks have been so strongly resented by the Greeks that most of the annoyance caused by the Bulgarian request for a further postponement of Reparations payment has been diverted against Great Britain. M. Venizelos, accordingly, made a public announcement of Greece's refusal to be bound by any further concession made to Bulgaria by the Reparations Commission, and at once let loose a flood of acrimonious recrimination in the Greek and Bulgarian Press. Any disappointment felt in Western countries over his action is due to the fact that M. Venizelos has hitherto

been credited with a European, rather than a Balkan, mentality; he was expected to realise that any concession granted to Bulgaria would be made strictly on the merits of the case and with a view to hastening the reconstruction of that country and, consequently, the rehabilitation of the Balkans. The suggestion that the Reparations Commission is actuated by a desire to favour Bulgaria at the expense of Greece is too childish to be put forward seriously by any responsible person; but the Allied Powers would do well to take note of Greek peevishness and to call upon Bulgaria to see that, whatever concession is made in any other direction, Greece should be paid her due share of Bulgarian reparations. The sum involved is not worth haggling over; still less is it worth being the cause of widening the breach between Bulgaria and Greece.

The European Danube Commission.

A settlement has at last been reached between Roumania on the one hand and the other Powers represented on the European Danube Commission. This Commission, the oldest international body still in existence, dates from the Treaty of Paris of 1856. It was formed to guarantee the freedom of navigation on the Danube, and to design and carry out various works for improving the channel of the river from Braila to the sea. The territorial changes introduced since the Great War have brought both banks of the Danube from Braila to the Black Sea wholly under Roumanian jurisdiction, and Roumania has for this reason challenged the continued existence of an international body in control of Roumanian waters. The importance, however, of maintaining an adequate channel in the interests of shipping using the Danube makes the three Powers unwilling to abrogate the rights that they have exercised for the benefit of all maritime States during the last seventy-three years, and it is satisfactory to find that Roumania has now recognised this aspect of the question. She was undoubtedly entitled to certain powers within her own waters, which have now been transferred to her. The work of the Commission stands to benefit from the willing co-operation of the Roumanian representatives, in the place of the friction that has occasionally

manifested itself. From time to time the Roumanians have pressed the claims of the Kilia branch of the Danube delta to be made the main navigable channel in preference to the Sulina mouth. The advantages of the former for Roumania are obvious, as it would serve Ismail as well as the town which gives it its name. The European Commission, however, has resolutely opposed the change, and its judgment is, presumably, endorsed by experts. One effect of the altered conditions brought about by the War has been the rapid decline in the importance of Sulina as a port. For nearly all practical purposes of trade it has been superseded by Galatz, and to-day Sulina serves few other purposes than to house the Commission and its dependents.

Roumania's Mining Law.

It is not necessary to have a financial interest in any foreign mining company in Roumania to feel satisfied that Dr. Maniu's Government has done well, to lose no time in revising the Mining Law enacted by its predecessors in office. That Law, which was passed in July, 1924, laid down the principle that the exploitation of oilfields would in future be carried out only by "nationalised" companies. The rights of existing companies were safeguarded up to a point in respect of concessions already granted; but, as a mining property is a wasting asset and a company must depend on further extensions to prolong its life, the effect of the provisions restricting further exploitation to companies with fifty-five per cent. of their capital in Roumanian hands, with a Roumanian chairman and a majority of the Board Roumanian citizens, was, to spell trouble, if not disaster, for foreign mining enterprises in the country. It was not unnatural on Roumania's part to want to keep her oil resources as far as possible in her own hands; but the mistake made by the Bratianu Government was not to recognise its obligations to those foreigners whom the country had called to its aid at a time when it was wholly unable to develop its own oilfields. The Law of 1924 must have retarded the oil industry and so have failed to bring about the benefits to Roumania that it was intended to promote. There had been a falling off in production, and, as Roumania was notoriously unable to provide either the capital or the technical experience required, the provisions of the Law had to be circumvented by a demoralising form of camouflage, which exposed the Liberals to the taunt that this had been the main purpose of their egregious measure. The new Law removes the ostracism on foreign capital, while safeguarding national interests. Its introduction into the Roumanian Parliament was a bitter pill for the Opposition, who withdrew from the debate in protest against its passage by Dr. Maniu's substantial majority. Before the present Government's period of office comes to an end it is to be hoped that the new Law will have so far justified the expectations formed of it that public opinion in Roumania, regardless of party leanings, will have been able to appreciate its advantages over the measure that it supersedes. It is by no means the case that the new Law is ideal in the eyes of foreign companies, for it is held still to subject the industry to too much control and supervision by Government Departments.

Turkey's Task.

Several Continental newspapers have recently published an article attributed to General Ismet Pasha, the Turkish Prime Minister. The article is interesting, as, in addition to a review of Turkey's foreign relations, it examines the economic situation, in regard to which the Angora Government, as a rule, has little to say in speeches intended for home consumption. Ismet Pasha states that, while Turkey's position in relation to the international political

situation can be regarded as satisfactory, the same is not the case with the country's economic position. The climate of upper Anatolia, he points out, is very unfavourable, the soil is unfertile and hard to work. It is hoped by means of irrigation and improved methods of cultivation to increase production, but to achieve this result time and capital are required. Ismet Pasha states that Turkey could follow the example of other countries and raise the necessary loans; but the Turks do not regard foreign loans as the sovereign remedy. The interest which has to be paid abroad every year is a heavy tax on the State. Naturally, without a loan the process of increasing production will take more time, but the Turkish people "would rather suffer privations longer than mortgage the future of the country." Under the old régime recourse to a foreign loan was the usual means of bringing Turkey under the economic, and consequently political, vassalage of another State. Already ten per cent. of the annual Budget goes to pay interest on foreign loans; another thirty-seven per cent. is required for the Army, but the Prime Minister justifies this latter expenditure by Turkey's need for maintaining internal order and watching her frontiers. An attempt is to be made to "industrialise the country to a certain extent," so as to maintain its economic independence, and the Government looks forward to the day when within a generation Turkey will have a population of twenty-five million and will be self-supporting. Ismet Pasha's remarks, it is to be feared, are too vague to be practical, and in this respect presumably reflect the Government's programme. He overlooks the fact that it was not the act of borrowing that brought Turkey into difficulties under the old régime, but the failure to meet her indebtedness. Post-War reconstruction has taxed the knowledge and ingenuity of far wiser economic experts than Turkey can command, and until her authorities seek counsel and help abroad, the country is likely to plunge only deeper into an economic morass. In the meantime the practice of make-believe continues, and the unfortunate Turks are being deluded into supposing that steady progress is the order of the day. If only the Angora Government could bring itself to grasp the fact that no country and no foreign interests have any aims on Turkey's political or economic independence, but that from many quarters, both official and unofficial, help is available for the scientific development of Turkish resources, for the lasting benefit of Turkey, the outlook would be much brighter for a people who badly need enlightened government.

The Turkish Peninsula.

After the alphabet, the Turkish authorities seem minded to turn their attention to their geographical names. A writer in *Ikdam* inveighs against the retention in the language of such words as Anatolia, Thrace and Cilicia. The first, he explains, means "East," but why, he asks, should Greece be the Pole Star determining the locality of Turkey? For Thrace he would substitute "Edirneh," the Turkish for Adrianople; over Cilicia he is not so troubled, as the word nowadays has ceased to be a geographical name as far as the Turks are concerned, and serves only the purpose of the story of President Wilson, who mixed the region up with Silesia and wondered why the Turks should appear as claimants to it alongside with Germans and Poles. As for Anatolia, the writer in *Ikdam* has no other suggestion than the cumbersome term, the Turkish Peninsula. If the Turks are bent upon change, it is to be hoped that they will find a happier substitute. In their new rôle of connecting-link between Western civilisation and the East, they need not, however, be disturbed by having their habitat in Asia designated Anatolia. If the word has come to mean East, it is only because the sun rises in that quarter, and unless the modern Turk prefers to recall in some equivalent his nomad Central Asian origin, he might well be content to give a modern significance to Anatolia as the country of the new dawn that it is hoped has appeared for the Turkish people.

The Index to Volume XXXIV (July 5-December 27, 1928) of "THE NEAR EAST AND INDIA." is now ready, and copies will be forwarded to subscribers gratis on application to the Manager, *The Near East and India*, 170 Strand, London, W.C.2.

The Lebanese Presidency.

M. Georges Lutfallah has failed in his ambition of becoming President of the Lebanese Republic. On March 27 M. Charles Debbas was returned for another three years of office. The result could have been foreseen by any close observer of the situation, for despite the immense wealth of M. Georges Lutfallah and the very considerable propaganda waged in his behalf, it was known that his personality did not commend itself to the authorities in the Lebanon, who, indeed, are reported to have refused to "repatriate" him from Cairo to Beyrouth. The local Lebanese journals have recently been extremely active in canvassing the claims of this member of the Lutfallah family, pointing out the "injustice" of the present electoral system, and actually going so far as to call upon M. Debbas to resign. Whether their excitement will subside now that the die has been cast remains to be seen, but the matter would not seem to be one for general apprehension. After all, the financial resources of the Lutfallah family do not necessitate that one member of it should be President of the Lebanese Republic in order that one section of France's mandate should benefit by them. Nor should it be overlooked that the Lebanon is not Syria, which, indeed, may have been looking with a certain disdain at the rival ambitions of the two Greek-Orthodox candidates for the Presidency.

A "Jewish National Home."

Statistics are notoriously fallacious things, and it would be a superficial judgment which based the prospects of the establishment of a "Jewish National Home in Palestine" solely on the number of immigrant Jews into the Holy Land since the Great War. The numbers of Jewish immigrants into and emigrants from Palestine from 1922 to 1928 have just been published, and if they were treated as the last word to be said upon the establishment of a "Jewish National Home," the hopes of the Zionists and of those who sympathise with the Zionists could hardly be said to be bright. For during these years only 79,894 Jews had entered Palestine; and so considerable a number as 22,225 had left it. Of these immigrants, moreover, as many as 33,801 entered during one year, namely, 1925—a fact, by the way, which has largely been responsible for the troubles that have since overtaken the colonists in Palestine. It is probably true to say that no one, whether Zionist, British official, or Palestinian Arab, expected so small a number as between fifty and sixty thousand Jews to have been urged to, and to have remained in, Palestine as the result of the Balfour Declaration. Particularly was surprise caused when emigration exceeded immigration. Recently, however, the tide has turned slightly—very slightly—in favour of the immigrants, and Zionists are encountering their problem with refreshed hope. The only certain deduction from these statistics is that the original dreams of the Zionists after the Great War have gone for ever; it is quite generally recognised now that they were impracticable. On a saner scale, however, the Zionists are still dreaming their dreams; their ideal has been battered on contact with reality, but it has by no means been destroyed. If for the next generation or two only a few hundreds of Jews—say, between one thousand and three thousand—enter Palestine and remain there, the promoters of a "Jewish National Home" will be feeling that their work of making of Palestine a kind of spiritual centre or focus for world-Jewry will not have been in vain. But it is quite conceivable that there will be set-backs again and fresh emigration from Palestine. Much will depend on the working out of the temporary agreement between Zionists and non-Zionist Jews.

The "Haj."

Only a few weeks remain before the fourth normal Pilgrimage to be celebrated under Wahhabi auspices takes place. As our Jidda Correspondent has already noted, there are indications that certain sections of *hajjis*, notably those from the Far East, will not, owing to financial con-

siderations, be as numerous as they have been in the past year or two. Nor, if certain comments that have been made in the Egyptian Press are correct, will the number of pilgrims from Egypt be quite representative. It is, however, quite certain that the *Haj* of 1929 will be a considerable one. Many thousands of overseas Muslims are, of course, in the Hijaz already, and these will be largely swelled by newcomers in the next few weeks. It seems certain that India, for instance, will this year send considerably more *hajjis* than last year, when, it will be recalled, there were rumours of war between Iraq and Najd. Of these a large proportion, of course, are Shiahs—which in itself is a testimony to the faith that the Muslim world in general reposes in the ability of the Wahhabi leader to see that sectarian jealousies and hatreds are controlled. Admittedly, King Ibn Saoud likes the Shiahs no more than his *Ikhwan* approve of them, but a Muslim is a Muslim, and the Shiahs will assuredly not be discouraged by the attitude of the present keeper of the Holy Places. There is no such striking proof of the confidence which the Islamic world as a whole has in the good faith of the Wahhabis as the continued success of the Pilgrimage to the Holy Places under a régime of which few overseas Muslims can be found unreservedly to approve.

INDIAN NOTES.

The Fawcett Committee's Report.

In the main the findings of the Bombay strike inquiry Committee, so far as can be gathered from the somewhat meagre telegraphic summary of the report as yet available in this country, follow closely the forecast already given in these columns. The Committee, which was appointed by the Bombay Government in October last, with Sir Charles Fawcett as Chairman, has certainly carried out its somewhat thankless task with the greatest expedition consistent with the proper sifting of the facts. Although many of the self-appointed leaders of the operatives announced their intention of rejecting the Committee's findings, even before the inquiry began, the real trade union organisers have displayed a commendable sense of reason and responsibility throughout the proceedings. The result is that upon the majority of the various issues raised in the report agreement has already been reached between the two parties. Thus the Committee find that the millowners' amended standardization scheme and the proposed standing orders governing conditions

THE GRECO-YUGOSLAV TREATY.

The conclusion of a "Pact of Friendship, Conciliation and Judicial Settlement" between Yugoslavia and Greece is an event of much greater significance than has attached to any other recent pact of a similar nature concluded in Central or South-Eastern Europe. In the first place it is an agreement between two countries that were actually estranged, and which, if they had kept their pre-War dispositions and had not been restrained by the more pacific spirit of the day, might have drifted into seeking a solution of their controversy in war. Secondly, the Treaty signed at Belgrade on March 27, is, perhaps, one of the few pacts of its kind which concerns the two signatories alone and cannot cause, whether legitimately or otherwise, annoyance or uneasiness to a third country. Furthermore, the re-establishment of friendly relations between Yugoslavia and Greece is a matter pregnant with much potential benefit to the whole of South-Eastern Europe, for it creates the nucleus, that was previously lacking, of a general understanding between all the Balkan States. The estrangement of Yugoslavia and Greece implied aggressiveness, or, at least, cantankerousness on one side or the other; and, until this feature was removed, there could be little chance of the introduction of the proper atmosphere into the Peninsula. In this connexion the history of the protracted negotiations affords evidence of the truth of the saying that "not every evil is bad." The treaty that the Greek Government under General Pangalos signed with Yugoslavia was not an agreement concluded between equals. It is only fair to the Greek Dictator to say that he appreciated the importance of an understanding between Greece and Yugoslavia, and decided that Greek interests of the moment would be better served by a Treaty on the best terms that he could obtain than by no Treaty at all. The first two Governments in Athens that succeeded him could do nothing more than adopt an attitude of passive resistance and refuse to ratify the agreement. It was not until the internal discomfiture of Yugoslavia had played sufficiently into Greece's hands that M. Venizelos, with his shrewd exploitation of one of the weak spots in Yugoslav foreign policy, found himself able to negotiate with the Belgrade Government on equal terms; if not with more than a slight advantage on his side. The Yugoslav authorities of the day felt constrained to accept the inevitable, but even so it may be doubted whether any agreement would have been ratified by the Skupshtina, and it was left to the Dictatorship to bring about the final understanding between the two countries.

Although the Pact of Friendship places the formal seal on the establishment of correct relations between Yugoslavia and Greece, it was the agreement embodied in the

six Protocols, signed at Geneva on March 17, for the settlement of the Salonika question, that provides the real evidence of the changed relationship between the two countries. The Treaty is more or less of the stereotyped form that has received the *imprimatur* of the League of Nations and does little more than regulate the manner in which the signatories are to carry out obligations already imposed upon them by membership of the League. To some extent, indeed, it modifies those obligations by specifically excepting from the principle of arbitration certain categories of questions. The Protocols, on the other hand, recorded Yugoslavia's complete abandonment of the attitude which had dictated the terms that had virtually been imposed on the Government of General Pangalos, and her return to the spirit of the 1913 agreement, in which Greece and Serbia, as equals, undertook to compensate the latter for her exclusion from the sea by means of special trade facilities in Salonika. When this undertaking had been loyally fulfilled by Greece in the 1923 Treaty, Yugoslavia saw her opportunity of extracting better terms and refused to ratify this latter arrangement. Her action was in keeping with the spirit that seemed to inspire the whole of her foreign policy at that time, with the result that the Yugoslav people gradually came to persuade themselves that there was a conspiracy among all their neighbours to isolate their country from some sinister motive. The truth, however, was that, whereas throughout the Balkans a real desire for peace existed, no country could be sure of its position in view of the bullying tendency displayed by Belgrade. The reason for the latter was to be found largely in the unhappy state of Yugoslav internal politics, which compelled each party to try to outbid the other in chauvinism for the sake of its prestige at home.

In several notable respects the new settlement of the Salonika question differs from that which General Pangalos was constrained to accept. The area of the Yugoslav Free Zone, which was to have been enlarged by the agreement of 1926, reverts to its 1923 boundaries; Greek sovereign rights over the leased territory are carefully reserved in regard to port regulations; trade through the zone is to be restricted to Yugoslav merchandise, all other nationals being obliged to use the Greek Free Zone at Salonika. Finally, in regard to the railway line between the Yugoslav Free Zone and the frontier at Ghevgeli, there is to be no Yugoslav participation in the management of the railway, and when differences of opinion arise recourse is to be had, not to a French arbitrator, as stipulated in the Pangalist agreement, but to an arbitrator appointed by common consent by the two parties, or, where agreement cannot be reached, nominated by the League of Nations. The question of the ownership of the railway is settled by the cession to Greece in return for the payment of twenty million francs of all rights acquired in 1923 by a Yugoslav group from the Oriental Railways Company. One question at issue between the two countries would seem to have been left open. The Yugoslav Government was known to be anxious to have the right to import munitions of war through the Free Zone and over the Ghevgeli railway, but from carefully-worded statements regarding the protection of Greek interests it has to be inferred that, as Greece would not give her sanction to such a course, no reference is made to the subject. If this should prove to be the case, the discretion shown may serve as a model for Balkan negotiations in other directions. Yugoslavia and Greece have done well to compose their differences by a formal agreement; the next step in the consolidation of the Balkans should be for Yugoslavia and Greece to give practical effect to the spirit of the agreement by seeking to bring about a closer understanding between the two peoples.

*The Near and Middle East

From Our Own Correspondents.

Cairo, March 23.

British Education.

On March 18 last a great meeting was held at Victoria College when the Premier, Mohamed Mahmoud Pasha, paid that institution a visit and delivered an address on the value of British education. The event was important for more than one reason. It is the first time that any Premier of Egypt has delivered a public speech in English, and that any Egyptian Premier or Minister has made a statement in favour of the British system of education in Egypt. It was noteworthy also because the representative of the British Government and the head of the Egyptian Government sat on, and spoke from, the same platform. And so when Mohamed Mahmoud Pasha, who was accompanied by Ahmed Bey Loutfy Essayed, Minister of Education, took his seat on the platform with the High Commissioner, Sir Henry Barker, the President of the College Council, Mr. Reed, the Headmaster, Mr. Heathcote-Smith, the British Consul-General and Sir Ahmed Ziwer Pasha, the great hall was packed with an unprecedentedly large crowd, consisting of most of the leading members of all the local communities.

The Premier's speech was a remarkable effort. Delivered in perfect English the sentiments it expressed might just as well have been uttered by a Briton, and it was in itself a tribute to the system of which Mahmoud Pasha spoke so glowingly and, one could see, with such affection and conviction. He emphasised the peculiar advantages which the British system of education offers in the matter of traditions, discipline, and the giving to those, who come under it, the education in the wider humanities, which makes them capable, wherever they are, of understanding and appreciating the different ways in which, with men of different upbringing, different race, different religion and different language, the human mind and human nature may find expression.

The result of this speech, enhancing the opinion held of the Premier in British circles, must raise even further in the minds of the Egyptians the value of British educational institutions. Incidentally the fact that the Premier spoke from the same platform as the High Commissioner, and the warm tribute which Lord Lloyd paid to the Premier's efforts to further the interests of Egypt in every way, must inevitably discredit the stories circulated of disagreement between them, and of a disinclination on the part of the British Government fully to support the present Cabinet, just as the departure of Dr. Hafez Afifi Bey to Europe has put an end to the Wafdist rumours of an impending Ministerial crisis.

At the conclusion of his speech Mohamed Mahmoud Pasha referred to the generous effort which the Alexandria community has made to widen the sphere of English education by founding a Boys' Primary School, and he

declared the pleasure which he felt at learning that it intended to start a Secondary School for Girls to do for the latter what Victoria College has done and is doing for the boys. He added that he had no doubt that it would be brought to success and that the sooner this was done the better.

The Premier and the High Commissioner were fully justified in their eulogy of the effort which the British Community in Alexandria has made in the cause of British education. Within a year the community has subscribed the astonishing amount of over £70,000 towards the Boys' School Fund, which, with the help of land ceded at a very low price by the Alexandria Municipality and of a generous gift from the Malta Government, is now within but £6,000 of the total sum required for it. Awaiting the receipt of this balance the school has been started in hired premises. But so great is the demand for admission that it is quite impossible to cope with the applications until permanent premises are available. This the Committee very rightly refuses to provide until the whole sum required is completed, for, when the school's scheme was first launched an undertaking was given that no school would be built until sufficient money was available to endow it, and so to ensure that, as far as could be humanly foreseen, it would never be necessary to call upon posterity to keep the school going.

In regard to the Girls' School, for which £70,000 is required to provide similar endowment, there can be no doubt that it will fulfil a want, and that it will be possible to start it in the near future, for applications have already been received from the parents of boys being educated at Victoria College for admission of over a hundred girls to the new school, and substantial sums have already been subscribed or promised by some of the leading Egyptian families.

It may be repeated that subscriptions for either schools may be sent to, and will be gratefully acknowledged by, Mr. S. S. Murray, Honorary Treasurer, Barclays Bank (D. C. and O.) Alexandria.

Battle of Flowers.

The *Comité des Fêtes*, which, under the presidency of the Governor of Cairo, was responsible for its organisation, is to be heartily congratulated upon the success which attended the Battle of Flowers last March 17. This is the first event of its kind since the War, and the result showed that Egypt can in every respect worthily hold her own in this sphere, even though in certain cases flowers had to be brought from the Continent. Over thirty decorated cars entered for the Corso; every box on the course which extended round what is known as the "Small Gezira" close to the landing stages of the river steamers, was taken; and the route along which the procession wound its way was crowded with spectators, who fulfilled their part very well in the battle which waged from early in the afternoon until sun-down.

The défilé of cars was very good, and the owners had gone to much trouble. Among the decorated cars one

presented by the Ministry of Agriculture was very notable; and equally conspicuous in the allegorical category were the two cars representing the "Fiancée of the Nile" and the "Barrage of Aswan," both presented by the Ministry of Public Works. The first prize in the decorated and allegorical categories went respectively to Madame Charles Bæhler for her automobile decorated with red carnations, which was a wonderful sight, and to Mr. Gregorakis for his, which represented the "Crowning of Egypt." Amongst the commercial cars the first prize went to Messrs. S. and S. Sednaoui, Ltd., for "Spring en Fête," while there were several good groups of cavaliers dressed as Musketeers, Greco-Romans and "Tutankhamen" presented by the Department of Fine Arts.

The Oasis of Siwa.

The visit paid by King Fuad to the Oasis of Siwa and the Western Desert last autumn has drawn public attention to the attractions of that area, and as the means of access and the amenities at the disposal of travellers have been much improved, an impetus should be given thereby to the tourist traffic between Alexandria and Siwa. In this connexion visitors to this region will find, in addition to what the ordinary guide-books give, much interesting information on the Oasis, its people, customs and sport in "The Heart of Lybia" just published from the pen of Miss G. E. Simpson, who recently made a trip there under the guidance of Capt. Hellier of the Lybian Oasis Association, which has organised a service of cars, and has a resthouse at Mersa Matruh and a hotel at Siwa.

Belgrade, March 28.

The Government's Programme.

On March 21 King Alexander presided over a meeting of the Ministerial Council which determined the future programme of the whole Government on the basis of the programmes prepared for each individual Ministry by the

Minister concerned. The programme contains little that is startlingly new, but it emphasises certain tendencies and makes clear certain of the new Government's aims.

The main object of the Government, however imperfect the methods for its realisation may be as yet, seems to be the establishment of the economic life of the country on a sound basis and the securing of the material prosperity of the people. To this end the greatest economy is to be exercised by the Government, the number of civil servants is to be reduced to the minimum compatible with the efficient carrying on of their functions; a new Act dealing with the central organisation of the State is to be drawn up, and this Act is expected to provide for the grouping of Ministries which do similar work, in such a way as to enable their number to be reduced from 18 to 14, or fewer. Special care is to be devoted to the Consular Service, which is to be accounted equal to the Diplomatic Service in importance, since the economic relations of States are to-day of greater importance than their purely political relations. Further, the dinar is to be legally established on a gold basis at the level of its average value during recent months, and the convertibility of the notes of the National Bank into gold is to be guaranteed by the State. Part of any foreign loans secured will be devoted to this purpose. The Customs and railway policy of the State are to be thoroughly revised, with a view to stimulating and protecting home production and industry. Customs tariffs, railway freights, and other charges will be arranged so as to favour home products. Capital expenditure from budgetary income for building railways and roads will be limited to the strict minimum, and as much as possible will be made of national labour, by which is probably meant that forced labour will be used for railway and road construction.

The difficult question of peasant indebtedness is to be tackled by the formation of a privileged Agrarian bank with an initial capital of 300,000,000 dinars, later to be increased, if necessary, to 1,000,000,000. By the grant of credits to peasants on the security of land, stock, or crops at reasonable rates of interest, it is hoped that the sounder peasants at least will be freed from the clutches of the village moneylenders, who have great masses of the peasants in their power, owing to three successive bad harvests, and who extort from 30 to 40 per cent. interest on their loans. The latter are thus rapidly growing bigger and causing great anxiety and discontent among the peasants, who form over 80 per cent. of the people of the country. The bank will be freed from taxation, and have the same privileges in respect to the collection of debts as has the State Mortgage Bank. It is hoped that Yugoslav emigrants in other lands, especially in America, and foreign capital, too, will be interested in this bank, the security of whose deposits will be guaranteed by the State.

Cyrillic v. Latin Characters.

In the Ministry of Education it is proposed to investigate the question of the unification of the system of writing, and this is interpreted as meaning the possibility of the abolition of the Cyrillic Serbian script and the general adoption of Latin characters throughout the country. It is true that from many points of view the use of two different scripts creates great difficulties, and it tends to keep the Serbs and Croats divided and their local patriotism alive. Nevertheless, there will be some difficulty in persuading the older Serbs of the advisability of the change. In the Ministry of Religion the most urgent task is the conclusion of a Concordat with the Vatican. In the Ministry of the Interior the six different police systems now in force are to be completely unified, and the whole system is to be reorganised and put on a purely non-political basis.

This ambitious programme would necessitate at least two years of concentrated and arduous work, and this seems to indicate that the new Government estimates that at least this interval must pass before conditions are ripe

for a return to democracy. In view of the corruption of the Civil Service under the old régime and the fact that the same people have to fill the same posts, in the majority of cases even under the new régime, it will be seen that the Government has a difficult task ahead of it. It has tackled it so far courageously and not unskilfully, and it has now to try to reduce the crushing burden of taxation by lessening expenditure and increasing the level of prosperity of the people, if it is to win that enthusiastic support from the people on which its ultimate success must depend. It has, above all, to improve the administration, which in some cases, and especially in certain of the new provinces, where every effort should be made to make it most perfect, is inefficient and oppressive. To do this, some way must be evolved by which the people can safely and effectively voice their grievances and bring them to the knowledge of those in authority; for at present, owing to the strict control of the Press and the suppression of Members of Parliament, who were supposed to do this work formerly, this is impossible. If machinrey can be devised to secure this, and to effect improvements in the administration based on knowledge so obtained, the whole country cannot but benefit by the carrying out of this programme.

The Murder of Toni Schlegel.

Great sorrow is felt at the murder in Zagreb of Toni Schlegel, Director of the Press combine "Jugostampa" and chief Editor of the Zagreb *Novosti*. The murderers have not yet been caught nor their motives clearly ascertained; but it seems certain that the crime is a political one and that Schlegel, who was greatly liked and respected in Belgrade as in Zagreb, was killed because of his very effective services to the new régime, of which he was the most important representative in Zagreb.

The Greco-Yugoslav Pact.

The Pact of Friendship with Greece has been safely signed and sealed by Dr. Kumanudi and M. Karapanos, who both stressed the importance of the Pact from the point of view of its effect on the peace of the Balkans and of its showing the real desire of the two peoples for the renewal of the traditional friendship between their countries. M. Karapanos, too, praised the Yugoslav Government for the spontaneous way in which it had given up the concessions gained in the treaty with General Pangalos in 1926, when he said, "they had demanded and obtained too much," and for having renewed negotiations on the basis of the Conventions of 1923. The Greeks seem to be highly satisfied with their success, and the Yugoslav people seem relieved that the matter has at last been settled. In some circles it is believed that, now that the matter of transit *via* Salonika has been solved, its importance has disappeared. It is felt that, while transit *via* Salonika may be of considerable importance to Southern Serbia, the greater part of the country cannot afford to be dependent on a port in foreign hands and that nothing but loss will be occasioned by the investment of great sums in the development of the Yugoslav Free Zone in Salonika and the diverting of traffic which can pass through a Yugoslav Adriatic port to the South.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 14.

The Statutory Commission.

Sir John Simon has given India something to think over. He was speaking in reply to an address of welcome read by the Chairman of the Ootacamund Municipality. "If I may be allowed to qualify in one slight respect," said Sir John, "what you said in your address, I would say this: that no one should regard the Statutory Com-

mission or its members as though they were settling and deciding the Constitution of British India. Our task is very important, but it is not that. Our task is that of making a fair, honest and sympathetic report to the Imperial Parliament."

"A great responsibility," Sir John said in another place, "rests upon the Imperial Parliament. . . . If it was to discharge its duty towards India, it was necessary for Parliament to do its utmost to get a full, fair and sympathetic report of so complex and difficult a thing as the working of the Government in this immense country." And in short, as the whole House of Commons could not come to India, seven men were sent to inquire and report. It is not for them to settle the Constitution. To settle it is, and always was intended to be, India's own opportunity, the new Constitution being framed by India and Britain together. Presumably, if India does not think the report of the seven full, fair, and sympathetic, it will have to begin by proving that; for, unless the report is proved to be not fair, and is set aside, whatever India and Britain build together must be based on it. That is why the Nationalist boycott of the Commission is a mistake from their own point of view. It would be easier for Pandit Motilal Nehru and the others to exercise in India their influence upon the report than in Britain to prove it untrue.

The Assembly.

The Assembly has debated the questions of the army estimates, the import of foreign salt, foreign borrowing, and what is spoken of briefly as "the national demand." Those specially interested in this or that question will read the full report. The words of most importance in the statement of the Commander-in-Chief were undoubtedly these: "As Sir M. Dadabhoy had put it, they had stabilised the military budget at fifty crores, and, under the new arrangement with the Finance Department, any savings made would, subject to this limit of fifty crores, be carried over for the next year and not lapse." That should make for economy, if, as one so often has heard, money has been spent in the past on anything, towards the close of the financial year, that it could be spent on quickly, in order that it might not be allowed to lapse. I have myself heard a man say—not in the army, however—that he was sent for once, when the head of the Department said: "What could you spend five lakhs on between now and the end of the financial year?" What one wants in India is the creation of a spirit in the spending departments that there is an unrighteousness in spending money in this poor country beyond the needs of the moment.

The National Demand.

The debate on "the national demand" began on Monday, when Pandit Motilal Nehru moved that the vote for the Viceroy's Executive Council be reduced to one rupee. It was in intention a debate—the latest of a series—on the demand for constitutional reform, but in effect it was a discussion of the question: "Is India so solidly behind the Nehru Report, that it can be put before the British Parliament as an 'accepted' constitution—yes or no?" Pandit Motilal Nehru said 'yes,' but most of the Muslim speakers said 'no'; even some of those did who voted in the majority of 63 votes against 52 by which the 'cut' was finally carried. So it leaves us where we were, with the air only a little more cleared.

Muslim Unity.

If the Muslims are less divided than they were, it will have been because of efforts on the part of Mr. Jinnah and others, the report of which properly belonged to last week; but space failed me to mention it in my last letter. A conference at which the two main wings of the All-India Muslim League were represented, had met in the League's office at Delhi, and prior to this conference, there had been conversations between the leaders of the various

groups. Sir Mahomed Shafi did not attend the conference himself, but several members of his party were present. It is all rather involved a situation, even for those who have been trying to follow events on the spot, and one's report had better be deferred until one is more in a position to speak definitely. The League must hold a session before long, before which time, it is hoped, an agreed formula will have been arrived at.

India's Thanksgiving Fund.

The *Pioneer* has opened a Thanksgiving Fund as an expression of India's share in the common rejoicing throughout the Empire in the slow restoration of the King-Emperor to health. Though no single donation may exceed the modest sum of one hundred rupees, already over ten thousand rupees have been collected. The money is to be spent by the Viceroy and his advisers on the poor and needy. All sorts and conditions, from ruling Princes to Indian and English children, have contributed, and the value of this demonstration is not a thing to ignore. One hopes that the *Pioneer* will not close the fund too soon, and that its having shouldered the burden of collecting the money may add to the popularity of the journal and so to its usefulness:

Old Temples.

Professor Rakhal Das Banerji, whose name is associated with the Mohenjodaro discoveries, has added to his achievements by discovering, near the town of Baudh in Orissa, two temples of the oldest Bhuneshwar type of the eighth century. General Cunningham, who surveyed the old pilgrim route to Puri, missed these temples. They were hidden in that jungle that can so effectively hide building and tomb in India. Professor Banerji has also discovered in Baudh town an eleven-foot figure of Buddha, carved in black stone, and buried underground.

BURMA AND ITS FUTURE.

(From a Rangoon Correspondent.)

I have often asked myself where does the Far East strictly begin? Not in India, for India repeats in warmer miniature the lights and shades, the hills and valleys, the human types and customs and beliefs of Central Asia. Ethnologically I find my answer in Burma, for here is a race at one with those of Malay and Siam—a race that once owned suzerainty to China, and still dreams and laughs and gambles, well satisfied to be on the wrong side of the Celestial door.

The writer remembers, years ago, a series of posters that used to be displayed on the London hoardings. Their legend ran: "The child: what will he become?"—and the pictorial answer presented the alternatives, on the one hand of a middle-aged gentleman of smug affluence; on the other of a senile debauché. It was apparently impossible to count on the evolution of a normally healthy adult of normal tastes and common sense.

At one time, I think, in the past our attitude towards young Burma was not unlike that of the London poster. The Englishman is apt to forget, for one thing, that the schoolboy of the East is already adolescent, and that the undergraduate is a fully-developed man. Young Burma is young in experience and knowledge, rather than in outlook or application.

If the imagination is vivid, as it should be in the prime of life, yet sincerity is there, too. Fortunately, our attitude towards young Burma has grown mellow and more human. We no longer offer him the alternatives of self-conscious rectitude or senile despair. We are looking for normal, healthy development, and we are finding it. It is the old story of confidence begetting responsibility.

The fascination of Burma lies chiefly in its people. Here at Rangoon the population is too mixed to give a correct impression of Burma as a whole. Chinese, Japanese, and

Indian jostle each other in the crowded streets. They are employed chiefly as traders, in buying local produce and catering for local needs.

Up-country things are different and—may I say it?—more human. There is no concealment with the Burman. He will tell you quite frankly his likes and dislikes, and will admit his own faults with a sigh more than half lost in an engaging smile. He lives very close to Nature, and Nature repays his homage with a benevolence rare in the East. The rains and crops are alike dependable. Yet life is not humdrum, for there is always something or someone to laugh at or to laugh with.

In this perpetual afternoon—to travesty Tennyson—it is almost sacrilege to talk of business, yet in Burma trade and commerce are making great strides. Rangoon is no longer a seaport discharging surplus rice and teak and gathering silks and cottons in exchange. Here, rather, is an air port, in a country the size of Germany, the future halt for flights to Singapore and Australia. Events have moved rapidly since, three years ago, Mr. Kemp, of the Air Service, expressed his faith in the future of Rangoon as a convenient station for aeroplanes and seaplanes alike. Public buildings are growing up fast, roads are improving and extending.

Burma's natural resources are enormous. Under normal conditions she can find two million tons of rice to spare for export and another half-million tons as well to fill up gaps in Indian stocks. Her present wealth has not been squandered, like the forests of North America. It has been husbanded and improved, and is immensely more valuable than it was half a century ago. Burma's rubber resources have more than doubled themselves in three years' time, as also have her exports of cotton.

On the import side Rangoon is a bigger market for silk goods than either Calcutta, Madras, or Karachi, and is second only to Bombay. Artificial silk is making headway as fast here as in India, or faster. Cotton piece-goods are in demand of every shade and quality. Japan is Lancashire's strongest competitor here, as elsewhere, and studies the local markets carefully, catering for their varying requirements. Manchester will have to do her best if she means to recapture the Rangoon market, for it is fast slipping from her.

The political, social, and, indeed, economic, event of the past few weeks has been the visit of Sir John Simon and the members of the Indian Statutory Commission and the Committee of the Central Legislature. Inevitably their visit has witnessed a revival of the old question of separation in an aggravated and more intense form than ever. Although it is at least open to some doubt whether the question comes within the purview of the Commission at all, even the Governor himself has lost no opportunity of stressing the inequity of many features of the existing order of things, particularly on the financial side. In fact, we have the amusing spectacle of Burma's claims being forcibly and most capably advocated by the very man whose appointment was regarded as part of a deliberate plan to strengthen the existing union. And if Sir Charles Innes fails, it will be largely because of the non-co-operation of the very people who were most active in discrediting his intentions.

Personally I am still unconvinced of the wisdom of separation. In these days when tariff walls are admittedly a hindrance to trade development, is it in Burma's interests to form a tariff-girt enclave of her own? Much that she produces is also produced in India, and she buys very largely the same class of goods that India takes. Is it wise to convert a friend and an ally into a competitor? Again, America's strength admittedly lies in the enormous free trade area within her natural boundaries. Isolated, Burma would miss the value of her Zollverein with India. There are many arguments in favour of separation on other grounds, but I am firmly convinced that in the economic sphere the objections to such a course are, for the present at least, overwhelming.

INDIAN NOTES.

(Continued from page 419.)

of employment generally, are "fair and reasonable," a verdict in which, after protracted negotiations, the workers' authorised leaders have also concurred. Similarly, the Committee uphold ten out of seventeen demands advanced by the Strike Committee, all of which, with two exceptions, have already been conceded by the Millowners' Association's representatives. Two of the demands are held to be unfair, but their nature is not disclosed, and another three are stated to be partly unfair. On the vexed question of the proposed cut of seven and a half per cent. in weavers' wages, upon which the original negotiations broke down the Committee apparently consider that while the proposal is logically justifiable, expediency, in the shape of the urgent need for securing the co-operation of the labour leaders in working the standardisation scheme, renders the postponement of action essential. The precise meaning of this particular recommendation is not clear without the context for which the arrival of the full report must be awaited. In the meantime we can only share the hope voiced by the retiring Chairman of the Millowners' Association that the findings of the Committee, representing as they do such a substantial measure of agreement, will be loyally accepted by both sides.

Wireless in India.

Broadcasting in India is now nearly two years old. It is still, therefore, only in its early, though crucial stage of development. The further loss of over two lakhs of rupees disclosed in the latest report of the Indian Broadcasting Company, increasing the total deficit to date to nearly four lakhs of rupees, is, therefore, exceedingly disappointing. Apart from the broad questions of policy, disagreement upon which led to the retirement recently of all the European members of the Corporation, the main difficulty is, of course, the financial one. The Corporation's only sources of income, so far as we are aware, are its share of the licensing receipts and the proceeds of a ten per cent. tax upon imports of wireless sets and apparatus. The directors are inclined apparently to attribute the lack of financial support to the difficulty of collecting even their just dues under the latter heading and the continuance upon a large scale of "piracy," in spite of the prosecutions undertaken by the Government against persons found in possession of unlicensed receiving sets. That India would prove a wonderful field for wireless "pirates," whose attempts to stifle the movement in this country were only frustrated by vigorous action on the part of the Post Office, has already been pointed out in these columns. Unfortunately, in view of the fact that the Corporation and the Government of India have been endeavouring for over a year to devise equally effective measures to combat the menace, the prospect of their ultimate success can scarcely be regarded as rosy. And unless and until a means is found the future of broadcasting in Indian can only be regarded as distinctly perilous.

An Air Epic.

With less ceremony than that usually attending the departure of the regular Paris service, or even the Continental boat train, the eagerly-awaited England to India air mail was inaugurated by the departure from Croydon on Saturday of the "City of Glasgow" on the first stage of the 5,000 miles flight. By a happy coincidence the opening of the first Imperial air route, making as it does the beginning of an entirely new era in passenger and mail transport, proceeded by only one day another notable event in the history of British flying, the fifth anniversary of the Imperial Airways Company itself. Since April 1, 1924, the company has carried over 100,000 passengers, without a single accident resulting in injury, a total distance of over four million miles on London-Continental routes. The importance, not only to the Empire but also to the peoples of other nations, of so signal a

record, and of Saturday's culminating feat, requires no emphasis. To Sir Samuel Hoare, whose personal energy and enthusiasm have contributed so largely to the surmounting of what, at one time, appeared wellnigh insuperable obstacles to the realisation of the vision, to the Postmaster-General, for his compliance with the demand for an economic rate for air mail letters, to the authorities, and pilots of Imperial Airways and to the foreign nations who have granted the necessary passage and landing facilities, the Government and the business community in particular are deeply indebted. The value of the service, which will at first be confined to the carriage of mails, can best be realised by the saving of time. Although its utility is obviously not restricted to that sphere. According to the revised time table, the total distance of nearly 5,000 miles between Croydon and Karachi will be covered in just over seven days, or rather less than half the time now required for the journey by the overland route to Marseilles and thence by steamer to Bombay. We hope that the realisation of a project which on account of the several postponements has been viewed with some scepticism in India, will act as a stimulus to the authorities responsible for the Karachi-Delhi service. Obviously the present service cannot approach its maximum use and efficiency until the capital takes the place of the Sind town as the terminal port of a real England to India air service.

THE STATUTORY COMMISSION.

THE NEAR EAST AND INDIA understands that Sir John Simon and the members of the Indian Statutory Commission, with the exception of Lord Burnham, whose ill-health has necessitated his return in advance of his colleagues, will complete the present tour at Delhi on April 11, and will proceed direct to Bombay, whence they will embark in the Ranpura, two days later, for England.

The official arrival and reception of the members of the Committee of the Central Legislature have been fixed for June 8, and, as already announced in THE NEAR EAST AND INDIA, it is intended that Sir Sankaran Nair and his colleagues shall be the guests of the British Government for a short period after their arrival. The dates of the opening in London of the Joint Free Conference, in order to receive evidence in this country, have not yet been finally determined, being contingent to some extent upon the date of the General Election.

BASRAH WAR MEMORIAL.

The High Commissioner of Iraq, Brig-General Sir Gilbert Clayton, unveiled at Basrah, on March 27 a memorial to the killed and missing of the Mesopotamia Expeditionary Force. A salute of 19 guns was fired to mark the occasion. Among those present were a representative of King Faisal, the Senior Naval Officer, the Air Officer Commanding, and the British Consul. A guard of honour was furnished by the Royal Air Force.

The memorial consists of an arched stone colonnade 250 ft. long, with an obelisk 60 ft. high in the centre. It commemorates 8,000 British officers and men and 33,000 Indian troops who "returned no more." A wreath was placed on the memorial by the Mutassarif of Basrah, in the name of the King of Iraq, bearing the inscription: "In memory of those who fell, and for the glory of what they did for the liberation of this country."

Colonel Alexander Bowes Mein, J.P., late Indian Army, of Avenol, Saffrons Road, Eastbourne, who died on February 22, aged 76, left estate of the gross value of £42,201, with net personalty £41,975.

It is understood that the Government of India will make the seasonal move to Simla from New Delhi on April 11, and that the Government offices will open in Simla on April 12. These dates are provisional.

Statistics of industrial disputes in British India for the year ended December 31, 1928, show that the total number of working days lost during the year was 31,647,404, which is greater than the total number of working days lost in the five preceding years taken together. The corresponding figure for the previous year was 22,347,620 working days.

REFORMS IN PERSIA.—III.

BY MIRZA FIROOZ KHAN.

Tabriz.

Street Construction.

Reforms are proceeding also in street building, or rather in making the old and ancient towns and cities brand new, as they are known in the West. Hundreds, nay, thousands of houses—including many caravanserais and even mosques—are being torn down and destroyed in order to make new, wider and straight streets, and they are all being called *Khiaban* (avenue). Here, in Tabriz, we have already our Pahlavi *Khiaban*, but this is not sufficient, nor is it thought to be wide enough! Being the first wide street of Tabriz, and compared with the old, narrow and crooked streets, this *Khiaban* was considered to be very wide. But now, five years after its construction, it has been found that it is not half as wide as it should be, considering that it is not merely the man and the donkey that have to pass, but also a future street-car track, and, besides, a division for the carriages and wagons, another for motor cars and cycles, and the long caravans of camels, and so on; not to mention the bed for a brook of clean water on either side of the *Khiaban*, the water to be brought—as it has been planned—from Sayyid-Abad, some 15-20 miles to the east of Tabriz, on the Teheran road, in order that it may flow through these *Khiabans* (to be made in future) all the year around, to keep the air cool, to keep the promenaders happy, and to water the *khiaban* in the morning and evening.

It has been planned by the city fathers to have five more new *khiabans* in Tabriz, making six with the one we have already. Three of these *khiabans* are to cut the city from north to south, and two from east to west, parallel to the Pahlavi *Khiaban*. And these additional *Khiabans* are going to be much wider than the one we have. The plan is already being executed. Hundreds of houses, shops, magazines, bazaars, caravanserais, and mosques are being destroyed. Some of these houses were erected a year or two ago, and cost not a small sum of money to the owners, but that is not taken into consideration at all.

Mullahs and Sayyids.

The lunar names of the months have been changed long ago, including the month of *Moharram*, the month of Mussulman mourning, preparing the public to the fact that hereafter they are not going to be permitted to indulge in the shoutings which they have been wont to make for the past thirteen hundred and forty-seven years. Nor will they be permitted to cut their foreheads as in the past, to let the crimson blood flow on a white shirt, the gruesome spectacle of it making one shiver in horror! Already the necessary steps have been taken in that direction. For instance, all the coronets, flags, swords, shields, iron helmets, armoured shirts, long boots, and so forth, have been collected from the mosques, the people having been told that they are all military instruments, are needed by the military authorities, and that a peace-loving and Quran-preaching mullah-Imam need not keep such dangerous tools in his mosque, which is his house!

A propos of this, recently one of the native papers had the following cartoon: It was a smart-looking young man, clean-shaven, and a trim pahlavi on his nicely-trimmed head. He was the porter and janitor of a mosque. He had in his hand a large broom with a long handle and was

in the act of sweeping a few hundred grasshoppers—yes, grasshoppers in the entire body except their heads. From their white and blue turbans one could easily see that they are all mullahs and sayyids. The young porter was telling them: "Get out of here, you old vermin, we have no more need of you. I must keep this house clean hereafter."

A group of men—young and old—were discussing whether it was right or not that they should dispense with their "national" dress and put on *frangi* clothes. One of the younger men at once replied: "Why, man, Pahlavi wants his subjects to look trimmed and beautiful." ("Pahlavi" is the common title of His Majesty, the Shah. He is referred to either as "Shah Pahlavi" or simply as "Pahlavi," seldom as "Reza Shah," which ought to be his proper name and title. The Shahs of Persia before were never referred to as "Shah Qajar.")

If there is, and there has been, no strong objection to the change of dress and the tearing down of ancient and venerated mosques, it is because the two leading mujtahids of Tabriz—Mirza Sadigh Agha and Mirza Abdul-Hasan Agha—and a few hundred minor mullahs, who could excite the people to fanaticism and resistance, were exiled last July, thus making the road to reformation clear.

From times immemorial whenever one wanted either to sell or to buy a property, its documents were written and sealed by these mullahs, the seals of a few others also being pressed to the document as witnesses! Since the exiling of these mullahs the State has opened a new department with the proper men to manage it. It is called *Idaréi Sift Asnad* ("Department for Sorting Documents"), and it is now in this department that all such documents are being written and sealed by the special seal of that *Idaréh*.

The medical profession—doctors and dentists—are also being sifted. Quacks are forbidden and expelled from the race course, and those armed with regular documents permitted to continue their practice. But some quacks—using silver freely—can always find a loophole which they manage to get through.

The Popularity of Shah Pahlavi.

As to the reforms in general we hear some one has dared to suggest to His Majesty, the Shah Pahlavi, to take a trip to Europe—like Amanullah of Afghanistan—and learn all he can from the visit and introduce that which is good into Persia. And the Shah is said to have replied: "Nay, I will not go to Europe, but within three years I will put Persia into such a shape that the Westerners will want to come here for *tamasha*."

Shah Pahlavi is very unpopular with the mullahs and sayyids, but certainly His Majesty has made himself most popular among the masses. His name is already in history, and will occupy a much higher and respected chapter than any Nadir, Gambyses and Nooshiravan, both as a fighter, reformer and organiser. If he makes or does nothing else in the future, his name is certain to have the best place in the modern history of hoary Iran! His Majesty's popularity is indicated by the fact that anything good, new and beautiful is called after his name.

The Ceremonies of Moharram.

Since the names of the old months have been abolished long ago and among them, of course, the name of the month of Moharram, I would make myself bold to suggest that that month be called "Pahlavi," as a lasting tribute to the Shah, who has done, and is doing so much good for Persia. The abolition of the savage ceremonies which take place in the month of Moharram, and are closely connected with the name of that particular month, is the greatest thing in Persia. Nasreddin Shah Qajar once wanted to abolish these ceremonies by a game, but he failed. The Shah (Nasreddin) gave it out as his dream that Hazrat-Abbas had appeared to him in his dream and told him that he—the Imam—did not want to see his followers torture or lash themselves in any way which was

Hon. Sec.

not pleasant to him and did not require it. But his Majesty's dream did not work. Instead, it added fuel to the pyre! To see a man bleeding is bad enough, but to see a thousand or more men side by side, in a row, with clean shaven heads and a long shirt of white linen extending from his shoulders down to his knees, a blood-smeared sword in his hand, striking and gashing his head, the crimson blood flowing down upon his forehead, eye-brows, eyes—making him almost blind to see anything—his nose, mouth, mustachios, chin and the red current flowing down upon his white shirt and making brooks of dark-hued clots on the entire front of the man—well, it is a sight which will strike any brave-hearted man with horror, if not with fear! The abolition of these wild ceremonies will save the people (and the children) not only from its horrors, but will save many a man from death. For, some of these "head-cutters," as they are called, in their enthusiasm and fanaticism strike the sword with all their might and die on the same day from sheer bleeding! Although nearly every head-cutter has a friend or brother standing behind him with a large club in his hand to prevent him from striking the blow too hard, still the fanatic "bloody-head" gets a chance once in a while to give himself a fatal blow. Because, it is the common belief of the common people that to die on that day means to go straight to Paradise. The abolition of these ceremonies might enrage the fanatical masses now, but its benefits will be appreciated in history, and the Shah Pahlavi will become the idol of future generations.

(Concluded.)

THE NORTH-WEST FRONTIER.

On March 20 Wing-Commander A. A. Walser lectured to the Central Asian Society on "The North-West Frontier from the Air." He divided his lecture into two parts: a description of the organisation of the Royal Air Force on the Frontier, and an account of a tour he undertook from Peshawar to Chitral and Gilgit. The number of landing grounds, he said, were being gradually increased, although in such hilly country they presented considerable difficulties. As an instance of improvement in this respect he mentioned that use had recently been made again of the landing ground at Bannu, which had been out of action since 1919. Other difficulties with which the R.A.F. had to contend were hail and dust storms, currents of air in the mountain passes, and rapid changes in temperature. The climate was particularly severe on the machines, but the substitution of all-metal aeroplanes—a change which was already in progress—would be a considerable help, for wood and rubber deteriorated very quickly. Another great benefit was the institution of a meteorological service on the Frontier. The lecturer referred to the advantage of air travel over road or rail communication, and instanced the recent successful evacuation of Kabul of 586 persons. Lord Allenby, who presided, spoke of the heroism of the R.A.F. in discovering—what was always supposed to be the secret of success in war—what was "the other side of the hill."

THE AIR SERVICE TO INDIA.

After an eleventh-hour hitch, which threatened to delay the inauguration of the through weekly air services to India, the programme of Imperial Airways was carried out as originally planned, and the first flight started from Croydon last Saturday, March 30. Trouble had been experienced in reconciling the conflicting interests of Italy and Greece, the Italian Government having raised an objection to Athens as a port of call. In the end the objection was waived, and the route operated for the first time on Saturday was from Croydon *via* Le Bourget to Basle (first day), thence by night train to Genoa; from Genoa by aeroplane *via* Ostia (for Rome) to Naples (second day); from Naples *via* Corfu to Athens (third day); from Athens *via* Suda Bay to Tobruk (fourth day); from Tobruk *via* Alexandria to Gaza (fifth day); from Gaza *via* Rutbah and Baghdad to Basra (sixth day); from Basra *via* Bushire and Lingeh to Jask (seventh day); from Jask (3.35 a.m. G.M.T.) *via* Gwadar to Karachi, arriving at 11.45 a.m. (eighth day).

For the first few weeks it is proposed to carry mails only, without passengers; but on Saturday Sir Samuel Hoare, Secretary of State for Air, accompanied by Air Vice-Marshal Sir Vyell Vyvyan and by Mr. C. Ll. Bullock, his principal private secretary, travelled by the service as far as Egypt, where Service aircraft will take him for an inspection of the preliminary stages of the Cairo-Cape Colony air route. The start was made from Croydon Aerodrome at 10 a.m., and the Armstrong-Whitworth aeroplane (equipped with three Armstrong-Siddeley "Jaguar" engines of 395 h.p. each) arrived at Basle at 4.28 p.m., seventeen minutes ahead of its scheduled time. The second stage of the flight, to Alexandria Harbour, is performed by all-metal flying-boats, of the City of Alexandria class, designed and built by Short Brothers, Limited, of Rochester. From Alexandria to Karachi the type of machine used is the "City of Delhi" class, designed and built by De Havilland Aircraft Company, equipped, as are also the flying-boats of the second stage, with three Jupiter British engines of 425 h.p. each.

The Postmaster-General announces that the through air service between England and India is available for all classes of postal packets, except parcels. The air fees, to be prepaid by ordinary postage stamps, in addition to the ordinary postage and registration fee (if any), are per half-ounce: To Egypt and Palestine, 2½d.; to Iraq, 4½d.; to India, 6d. Letters for transmission by this service should bear in the top left-hand corner of the envelope the blue Air Mail label, or be clearly marked "By Air Mail."

The first homeward through service from India to England is due to leave Karachi on Sunday, April 7, arriving at Croydon at 2.15 p.m. on Saturday, April 13.

The through passenger fare between London and Karachi will be £130, or about £30 more than the combined train and steamer fare from London to Bombay; but the air service will take half the time required by the ordinary route. The actual flying time averages about seven hours a day, and will not, therefore, entail an undue strain on the passenger.

THE WEEK AT HOME

London, Tuesday Morning.

Eastertide.

It has been a marvellous Eastertide, a holiday which must have raised by a hundred per cent. the hearts of almost everybody. Sunshine such as the year had not previously shown, and the evidence of growth in Nature everywhere; a cleanness and kindly purpose in the atmosphere; and, above all, the apparent manifestation in all living things to begin anew.

This is the weather the cuckoo likes,
And so do I.

One remembered Thomas Hardy, for, though one rather antedated his words, some such sentiment was entertained by all. It is remarkable what a continuity of sunshine and a spring breeze can do for a countryside and countrymen that have hitherto been drab.

And yet—before the primroses and the daffodils and the bluebells could abundantly force their way through the warmed earth, the cold has reappeared. The winds and snows of March missed their train, and are coming on us in April.

The Budget.

The only political subject which one heard discussed over the holiday time—apart, of course, from the General Election—was Mr. Winston Churchill's Budget, for which he has, with the luck which is usually attributed to him, an unexpected surplus.

It is being taken generally for granted, however, that the benefits of this surplus will not be felt directly by the taxpayer. The experts do not appear to approve at all of Mr. Churchill's surplus, which almost everywhere is attributed to bad budgeting.

Unemployment.

There was abundant opportunity during the Easter week-end for making up one's mind on the now notorious promise of Mr. Lloyd George to reduce unemployment to normal dimensions without extra taxation, although whether the occasion was made use of I cannot say. There appears to be a wide disposition, manifested equally in the Conservative and Socialist camp, to treat this pledge as a mere "electioneering stunt," a disposition made stronger, if anything, by the ex-Premier's much boosted Albert Hall speech last week.

Honest or dishonest, however, sound or illusory, this pledge to reduce unemployment has made a very considerable impression, and if the Liberals do succeed in gaining a balance of power at the General Elections, it will be as a result of the combination of a handful of really intelligent men with a mass of ignorant and emotional voters. Reading his Albert Hall speech, one marvels at the hold which Mr. Lloyd George undoubtedly still possesses. But he always was a man rather to hear than to read.

Stonehenge.

In time, but only just in time, sufficient money has been subscribed to save Stonehenge from desecration by the creation of modern bungalows on the land surrounding the famous monument. It is extraordinary, among a cultured people such as we claim to be, that public men should have earnestly to appeal to the community to save things of which that community is often most proud. On hands and knees, as it were, men like Mr. Baldwin and Mr. Ramsay MacDonald and Mr. J. C. Squire implored the public to spare Stonehenge the litter of bungalows which have disfigured so many parts of this island.

However, the land adjoining Stonehenge is now safe in perpetuity. The barbarian builders for the nonce are defeated. But who knows next where they will burst out with their nefarious designs? Only eternal vigilance and eternal subscriptions, it seems, will save us from our vandals.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

April 4, 1929 (New Style).
March 22, 1929 (Old Style).
Shawall 23, 1347, A.H. of the Muslim Calendar.
Adar II, 23, 5689, of the Jewish Calendar.

General Lord Horne and Lady Horne have returned from Egypt and Palestine.

Sir Courtauld Thomson left Marseilles on March 29, for Palestine to visit the Hospital of the Order of St. John of Jerusalem, of which he is Chairman. He will arrive back in London on April 20.

Lady Maffey, wife of the Governor-General of the Sudan, who arrived in Cairo on March 20 from Khartoum, left the Residency, where she was the guest of the High Commissioner and Lady Lloyd, on March 24 for England.

Sir Philip Dawson, M.P., arrived in Cairo on March 17, accompanied by Lady Dawson. Sir Philip has been charged by the Egyptian Government to study the scheme for the electrification of the Heluan railway from a technical point of view.

Sir Sidney Barton, His Majesty's Minister Plenipotentiary to Abyssinia, left London on March 28 for Shanghai, where he has been Consul-General since 1922. After making a brief stay in China, in order to arrange for the transfer of his personal effects, Sir Sidney Barton will proceed to Addis Ababa, where he is due to arrive towards the end of June. He will be joined in Abyssinia by Lady Barton and their daughters in September.

"NOMADIC MOVEMENTS IN ASIA."

Sir E. Denison Ross, who returned (via Russia and Germany) from Teheran this week, will deliver the Aldred Lectures to the Royal Society of Arts on April 22, and 29, and May 6 and 13, at 8 p.m. His subject is to be "Nomadic Movements in Asia," and he is dividing it into sections dealing respectively with the Arabs, the Turks, the Seljuqs, and the Mongols.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.
Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts., may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan. Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

Book Reviews

GREECE.

"A GLIMPSE OF GREECE." By Edward Hutton. (London: The Medici Society. 18s. net.)

"GREECE OLD AND NEW." By Ashley Brown. (London: Methuen and Co., Ltd. 12s. 6d. net.)

Under a modest title Mr. Hutton, as might have been expected from his previous publications, has produced a very scholarly work, which must always rank high among the many books which modern Greece has already inspired. Although he set out on his journeyings with a Homer only, he has contrived to place so many other classical writers under contribution, that it seems immaterial in his case whether the volume is in his pocket or remains on a shelf at home. Ovid, Strabo, Aristophanes, Sophocles, Euripides, Lucian, Apollodorus, and many others are called upon to make a point or clinch a view as often as Herodotus, Thucydides or Pausanias. If Mr. Hutton leaves the reader with any regret, it is that so catholic a scholar should have a bee in his bonnet, and that its name should be St. Paul. The Apostle to the Gentiles is taken to task on the ground of being an indifferent tourist. "He must have seen Athens, and Corinth too, in all their beauty, but not a word escapes him on this subject. He was blind to such things, entirely lost in his mission, his propaganda." Again: "St. Paul . . . has left us no single word of description of Corinth, or of what he saw there of beauty and antiquity; the truth being that he saw nothing, being still blinded by that Light which struck him down on the road to Damascus. All the same one cannot help regretting that he was blind to the beauties of nature and art." Mr. Hutton is as fair to St. Paul as would be his reviewer at this point, and made no further comment on the book. After all, a ten-verse summary of a single speech out of the many that St. Paul must have made in Athens is hardly sufficient to determine the degree of his artistic sense. Like Mr. Hutton, he had read the Athenian poets intelligently enough to be able to quote from them, and it would be difficult within the compass of a few score words to make more telling points for the most enlightened audience in the world of those days than he did in his "potted" sermon from the Areiopagos. As for his letter to the Corinthians, why should he present them with an abbreviated guide-book on their own locality, when his sole purpose in writing was to deal with certain specific matters? Only a prejudiced mind could decide on such insufficient evidence that a man with such a master intellect as was St. Paul's was blind to the beauties of art and nature.

With this one caveat out of the way, we may pass to a fuller appreciation of the charm of Mr. Hutton's treatment of his subject. With his friend, Mr. Norman Douglas, he wanders through Greece, describing, explaining, conversing and annotating; a little pedantically, perhaps, at times, but always (with that one exception!) artistically. Of course, Mr. Hutton is very scathing about the retention of the Parthenon marbles in the British Museum; referring to the capture of Corinth in 146 B.C., he writes: "Rome Elgined her"; "Mummius was the Elgin of his day." His other grievances—and his love for ancient Greece adds a certain viciousness to his criticisms of modern Greece—are dogs, dirt, vermin and religion. Although his conversations with his travelling-companion cover the widest possible range of subjects, from the likelihood of Odysseus' suffering from sea-sickness to the delicacy of frogs' legs, it does not seem to have occurred to him that St. Paul may have had the same experiences, but with truer artistic rectitude will have said nothing about the first three, while being as emphatic as our author on the deficiencies of the fourth. Mr. Hutton staved long enough in Greece to be fired with a desire to reform the modern country lock, stock and barrel. On the subject of shepherds' dogs most visitors will sympathise

with his main thesis, even if not prepared to go the lengths of his suggested remedy:—

Let it be said here and now, once for all: Greece can never become a country really attractive to the tourist until this dog nuisance is put down by the Government with a strong hand. The execution of a few shepherds would be an excellent beginning. Their goats are a curse to the country and their dogs are vermin and wild beasts. One is at a loss to decide whether the shepherd should be reckoned more valuable than his accursed creations. It is possible—and one can well understand it, if it be so—that the Greeks do not want foreigners in any number poking about their country and bringing foreign money into it, enriching it as they have enriched Italy. That is a matter for them to decide. But if they do, the dogs must go, and the sooner the better. It is an amazing thing that the Greeks themselves have not stopped this nuisance. What is the good of liberating your country from the Turk, if you can't move about in it for the ravening dogs?

A taste for *rezzinato*, it is to be feared, comes only with a knowledge of modern Greek, but, once acquired, induces, or is generally found to accompany, a more tolerant outlook upon shortcomings that are so obvious to the traveller who requires all the comforts of home when on his journeyings abroad.

As for Greek religion, Mr. Hutton has so little use for it that the reader is left wondering whether his antipathy is physical or ethical. "During Lent it was with some little difficulty we could get anything in the way of meat to eat. . . . These fasts and the malaria are equally pernicious for the health and stamina of the country. . . . His (the Greek's) nationality at any rate no longer depends on his religion, which in many respects is exceedingly superstitious, inhuman, narrow and ugly, unworthy alike of Hellenism and of Christianity." And on another page: "The good people in England who hope to make a *rapprochement* with the Orthodox Church are the rashest of triflers, who must be quite unaware of what they are talking about. A few months in Greece would enlighten them, especially if their experience included the seasons of Lent and Easter. Anything more hopelessly un-European than the goings on at these seasons—I can use no other term—cannot be imagined."

So far we have shown Mr. Hutton in his less appreciative moods, which happily occupy only a minor portion of his book. He came to Greece to admire and to be thrilled, and he was not disappointed; but it was a shock to find the country of his dreams in such an unexpectedly primitive condition. These *contretemps*, however, serve in the book to keep his feet on earth.

After a stay in Athens the author and his friend undertake a tour of Greece by car, first to Eleusis, Thebes and Chalkis, through Boeotia to Delphi, thence to the Peloponnese, Corinth, through Argolis, Lakonia and Arcadia to Olympia. By interweaving his descriptions of what he saw with his annotations and classical allusions, with snatches of conversations with his companion and references to their never-long-absent anxiety about their creature comforts, Mr. Hutton has produced yet another delightful travel-book. In order that his insistence on certain shortcomings from the point of view of the motor-tourist-de-luxe may not discourage those who would either read him or follow in his footsteps, we may add some other quotations of a different kind. The travellers are passing through Phokis to Delphi:—

On every side the great mountains soon closed on us as we climbed up and up into their fastnesses. On these magnificent mountainsides the woods are firs, lovely great dark trees, with a little juniper and a few oaks just in the young leaf. We were in the midst of the most wonderful Alpine scenery, which yet had a certain beauty which the Alps never have, a quality and delicacy of colour and a nobility of form finer far than Switzerland: grace and force, the two inherent qualities of Greece. . . . For over an hour we wound about, up and up this splendid pass, till suddenly on the crest a new world was spread before us. There, far away across the sea, rose up the two snow peaks of Arcadia and the great mountains of the Peloponnese. Nowhere else in Greece did we encounter so sudden and so magnificent a landfall; only once, when in turning a corner of the Parnon range, we suddenly saw the valley of the Eurotas and the towered peaks of Taygetus, did a Greek landscape so catch our breath.

Here is Mr. Hutton on the Acropolis:—

We must be thankful for what remains. And, indeed, the ex-

quisite outward beauty of the Parthenon and the Erechtheion gives us the key to much that without them we could never understand. These temples, like all Greek temples, were not built for the accommodation of a vast congregation of worshippers. As their beauty suggests, the worshippers remained without: only the goddess and her priests entered into the cella.

And these temples were not only beautiful in themselves, and that chiefly externally, and for the pleasure and enlightenment of the Athenian people; their exquisite arrangement also in regard to one another must have given the greatest delight: not only were they of astonishing beauty in themselves, but altogether they made a beauty in this lofty place, sanctifying it with their own loveliness and their harmony one with another. Their melodious asymmetria must surely always have been one of the secrets of their charm. . . . The Athenians considered their buildings here as we might consider a piece of music, and with their unique beauty and harmony, their force and their grace, not only consecrated the sanctuary of the Acropolis itself but the city of Athens beneath it and the whole landscape to the far hills and the sea.

Compared with Mr. Hutton's volume "Greece Old and New" is very matter-of-fact, but none the less useful for that. Mr. Ashley Brown explains that he has endeavoured to embody the kind of general information which he found he needed himself when he first visited Greece. He has carried out his task most painstakingly, and the book is a very practical and informative companion to any visit to Greece. We cannot illustrate the style of the two authors better than by allowing them to describe a landing at the Piræus. Thus Mr. Brown:—

The first impression of the Piræus is not a happy one. The magnificent approach, the mountains of the Peloponnesus, the distant view of Athens and the blue and sunlit sea have given place to the squalid surroundings of industry. Steamers of all nationalities lie with their sterns towards the shore, which reveals nothing more enticing than quays crowded with boatmen who appear to live in a state of constant antagonism with each other. . . . Piræus is indeed essentially a port and not a good one at that. . . . The most convenient course for the tourist to pursue is, etc. . . . Failing such an arrangement, it is advisable to strike a bargain with the boatmen before leaving the steamer. A good boatman is a treasure, but the majority of boatmen in Greece, in my experience, do not come under that heading."

Mr. Hutton loquitur:—

Oh, that landing: worthier of the Spartans who did not encourage strangers than of the Athenians who did. Was ever a more inextricable and disorderly business? How much better they did these

things of old. [Three lines from Homer in proof thereof.] One might have carried a dubious Bulgarian passport; one might have imagined, from the confusion, that this was the first day since the beginning of the world on which the harbour and customs authorities now began to function—a kind of trial day; and that all of them had yet to learn the elements of their business. One hopes, at all events, Charon's boat will be cleaner and less crowded than that which ferried us over the dark waters of the Piræus to the Athenian shore.

The itineraries of the two authors cover much the same ground, but Mr. Brown includes in his descriptions Salonika and Mt. Athos, the Meteora Monasteries and Megaspelaion, and Corfu. He too covers the historical side of the places and buildings visited, but he relies on the help of modern authors to complete the story when necessary. Greece is too familiar a ground to most readers of THE NEAR EAST AND INDIA that they need follow either of our authors in their handling of the details of their subject. In "Greece Old and New" the visitor will find collected for him all the information that he needs to enable him to understand what he sees; couched, as has already been said, in a matter-of-fact way, and one less provocative than that adopted by the author of "A Glimpse of Greece." Mr. Brown's most daring essay is on the character of the Greek. He recognises the pitfalls that lie in wait for him; and, as he is careful to safeguard himself by pointing out that criticism directed against certain national characteristics cannot apply to every individual citizen, there is no need to attempt to summarise his cautious estimate.

Both books contain admirable photographs of, for the most part, familiar scenes.

“KHALIL OF ARABIA.”

“THE LIFE OF CHARLES M. DOUGHTY.” By D. G. Hogarth (Oxford University Press. 18s.)

If the position of Charles Doughty in English letters is not yet fixed, his position as an explorer in Arabia is certainly settled. His achievements in the year 1877-78

have, however, become so overloaded with romance, and his whole career with misunderstanding, that an authoritative life of one who was by nature and purpose shy or retiring was overdue. Only the other day, for instance, a distinguished Arabian traveller referred, to Doughty as an assertive Scottish Presbyterian who, by proclaiming himself a Nasrány wherever he went in Arabia, unnecessarily brought troubles upon his head. The world is fortunate—for Doughty is a world figure—that Dr. D. G. Hogarth was able, before his lamented death, practically to complete the very notable story of Doughty's life from 1843 to 1926. For there was no one who possessed in such a degree as Dr. Hogarth the requisite knowledge of exploration in Arabia, of geographical and scientific research generally, of University life, and of Doughty himself. This book is in fact a most admirable compilation, fully worthy of the subject and of Dr. Hogarth's last flowering. It is good that the Oxford University Press should have seen that its production does justice to the treasurable text.

Doughty was a Suffolk man, the second son of the "Rev. Charles Montagu Doughty, Squire of Theberton." His was a home in which loyalty and patriotism were taken for granted, and how much of a piece in this respect Doughty's later and middle years were with his earliest days, no reader of "Arabia Deserta" and his epic poems is likely to forget. But Doughty's patriotism was of the larger kind which does not so easily include lesser loyalties: it is not surprising, therefore, to learn from Dr. Hogarth that, when he went down from Caius in 1866, having graduated, he left Cambridge without much regret. It was about this time not only that he published a paper on the Jöstedal Brae glaciers, which, with geology as his passion, he had visited in 1864, but also set himself seriously to study, at the Bodleian, Early English literature—those pre-Shakespearean writers from whose pure model he never swerved in his later writings.

Doughty, however, never lost himself in over-specialisation, for he went from linguistics to geology, from archaeology to geography, from ethnology to history. It was between 1870 and 1874 that he really prepared the way, by travel in the Near East, for his great exploits in north-western Arabia. In 1874 and 1875, for instance, he was in Palestine and Sinai. Even now his mind was not wholly made up for Arabian adventure. But he passed from Aqaba to Maan and Petra, and thought of undertaking a geological exploration of Edom and Moab and especially of Wadi Araba and the Dead Sea basin. His request for a grant from the Royal Geographical Society for this pur-

pose was turned down. He thereupon decided to go to live with the Badawin at his own cost, and to this end prepared himself in Damascus.

He became known (says Dr. Hogarth) under the name of Khalil, which he caused to be engraved upon a seal, for use in Arabia. Used by all denominations which have Abraham to their father, whether in the flesh or in the spirit, and, therefore, not commonly given to Moslem children, this name was regarded by Doughty as a literal (i.e., consonantal) equivalent of his own prænomen in that Italian form under which he loved to hear it; and he took ill a friend's question why he had not engraved Hasan, or some distinctive Moslem name. He answered that he would not lie or feign to be a Believer.

The magnificent chapters in this book concerning the months (nearly two years) in Arabia are based on Doughty's diary. To all admirers of "Arabia Deserta" they will provide intensely fascinating reading, and they are indeed a perfect example of the correct use of bare material. Nowhere else, one thinks, are Dr. Hogarth's essential modesty and brilliant insight better exemplified. There is, however, no room to summarise them here; and the main facts are, of course, already known.

Doughty's capital purpose in writing "Arabia Deserta" was, Dr. Hogarth explains, literary. He wrote, in 1922:—

In writing the volumes "Arabia Deserta" my main intention was not so much the setting forth of personal wanderings among a people of Biblical interest, as the ideal endeavour to continue the older tradition of Chaucer and Spenser, resisting to my power the decadence of the English language: so that whilst my work should be the mere verity, for Orientalists, it should be also my life's contribution, so far to literature.

All his life, indeed, Doughty waged war on Victorian English: how he hated those composers and editors who would have made him speak "Middlesex-like"! But Doughty was also a true scientist, glowing with poetic conception. His biographer describes most justly the mood introduced by "Arabia Deserta," which is, as he says, differentiated from all other autobiographies of travel.

The mode must be rhythmic, conforming throughout to certain musical laws of resonance and cadence of which the author was both sole enactor and judge; the events and experiences narrated, and himself the one human character related to them throughout, must be spiritualised. Hence that strange detachment of the author from the self that he depicts, which has caused an acute critic (Prof. Barker Fairley) to describe that picture as Doughty reviewing Khalil. A quarter of a century ago the present writer, conscious of the pervasive effect of such spiritualisation, felt Khalil "to be less an individual than a type of all his kind undergoing a certain trial of spirit." He feels now that the hero of the narrative is presented not only as a Man but with something about him of the Son of Man; reading one is haunted by the words, "He was despised and he was rejected, a man of sorrows and acquainted with grief." . . . The spiritualised atmosphere is the determinant virtue of the book; the rhythm and magnificent phrasing of the English go for much, but for much less, in compelling those who can read "Arabia Deserta" at all, to read it again and again.

But, of course, Doughty was, as is pointed out in this book, no Christian. He was "an agnostic Humanitarian of heart-felt piety and deep reverence for any *credo* based on Reason." Hence his distaste for those Westerners, such as Burton or Palgrave, who assumed Islam in Arabia.

There is, unfortunately, no space left to deal with the later life of Doughty, with his experiences of publication, with the generosity of the Cambridge University Press, or with his epic poems. He lived continuously remote from the contemporary world, his ignorance of which was almost complete. But in the estimate of his few friends he never declined, and it was generally recognised that with his death on January 20, 1926, a great man was passing.

Doughty was a truly great man, and one cannot refrain from repeating the fact that he has here had what he so well deserved, an understanding, a reticent, and a most balanced biographer. No lover of Doughty will miss this book; nor will any admirer of the author of "The Penetration of Arabia" fail to assert that his rare hand penned some of his worthiest and most lasting words in this beautifully-produced biography.

A reward of 200,000 dinars (£727) has been offered for the discovery of the murderer of M. Toni Schlegel, Editor of the *Novosti*, of Zagreb, who was shot dead on March 22.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

British Trade with Egypt.

In the last few years the position of British trade in Egypt has left much to be desired. There is no doubt of the openings that exist, but the fact remains that for one reason or another our traders have so far failed to take advantage of them. In his address at the annual meeting of the British Chamber of Commerce of Egypt the President, Mr. S. R. P. Carver, emphasised the important point that Egypt wants to buy British goods as they are still recognised to be the best, but he added that "it needs a good salesman to study the local requirements and encourage local agents to advertise the goods properly, and not in the half-hearted way it is so often done owing to lack of funds." It is in short the old story with which we are so familiar in the Near East of not looking after the markets properly. Apart from the fact that British manufacturers are often much too casual in finding out what a market wants the truth is that they have not yet realised the value of publicity. That is the explanation of the small amounts they allocate for overseas advertising, and they have got to grasp the fact that it is continuity in advertising that pays if there is to be any pronounced improvement in trade. In the past year the value of Egypt's imports increased by roughly three and a half million pounds, that of the exports being up by about seven and three quarter millions, but as Mr. Carver pointed out, the British share of the imports is down by a million pounds, and represents 21 per cent. of the total as against 26 per cent. for 1927. The chief decreases were in textiles, railway wagons, and coal, while there were increases in respect of locomotives and stationary engines and woollens.

A British Exhibition in Egypt.

What is really required to place British trade in Egypt on its old footing is a comprehensive effort to bring the wide range of our manufactures before the Egyptian buyer, and Mr. Carver's suggestion of a British Exhibition in Egypt on the lines of the recent French Exhibition in Cairo is a thoroughly sound idea. I had occasion recently to criticise the number of exhibitions that are held each year on the grounds that they overlap. To be really useful to trade an exhibition must serve a definite purpose, and that would most emphatically be so in the case of a British Exhibition in Egypt. There must naturally be a certain amount of reluctance in following the lead of a commercial rival, but if we are not first in this case that is really no adequate reason for not adopting what experience has shown to be a very admirable means of trade development, and there is the advantage in being second in the field that we can make sure that our exhibition eclipses its predecessor. It must be emphasised that no half-hearted measures will do. If there is to be an exhibition it must be the best that can possibly be organised, in short, an absolute display of the potentialities of British manufactures in all lines in which trade is done with Egypt, and in those in which a possible market may be developed in the future. As Mr. Carver indicated, an exhibition of this kind must be an official undertaking; in other words, the Government must be responsible for it and must be prepared to allocate a reasonable sum for the purpose if it is to be a success.

Banking Competition.

At the meeting of the Chartered Bank of India, Australia

and China, the Chairman, Sir Montagu Turner, referred again to what he described as the excessive competition among the Eastern exchange banks, and pointed out that the exchange margins have been cut to vanishing point. The number of exchange banks in India and China, he declared, is much in excess of trade requirements, and he takes the view that there should be limits fixed beyond which business should be refused. Dealing with the trade position in India, Sir Montagu Turner drew attention to the fact that Japan, owing to the cheaper cost of production, is increasingly supplying unbleached and coloured piece-goods, and he emphasised the point that it is essential for Lancashire to take in hand the question of cost. The root factor in the situation is the fact that the purchasing power of India is little more than it was in pre-War days, so that the trade is bound to go to the countries that produce most cheaply.

Yugoslavia's Trade in 1928.

The value of Yugoslavia's exports in 1928 was 6,444.7 million dinars, that of the imports being 7,835.3 million dinars, there being thus an adverse trade balance of 6,390.6 million dinars. These figures indicate plainly the unfavourable trade position of the country, due in the main to the bad harvest of 1927, but to which the uncertainties of the political situation have also contributed. The position has now changed for the better in the political sphere as the new Government enjoys a considerable measure of confidence among the commercial community, but for the first half of this year at any rate the trade outlook will be affected by the failure of the maize crop in 1928. As I have already indicated, Yugoslavia is one of the important markets of the Near East which it behoves British traders to cultivate with assiduity. We are already getting important orders from that country for shipping, agricultural machinery, and coal, but even so our share of the import trade in 1928 was only 5.70 per cent., a lower percentage than for any of the past eight years. As in the four previous years the countries mainly concerned in the import trade were Czechoslovakia, Austria, Germany, and Italy. We have the advantage in this market as in other Near Eastern outlets that Yugoslavia desires closer trade relations with us, and it rests with our traders to see that adequate advantage is taken of this field for commercial enterprise.

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathens."

TRADE

MARK

If *your* car ran on solid tyres-

the tyres would carry the load. Those solid tyres you see on the steam wagon or petrol lorry are *load carriers*. But the pneumatic Tyre—which is composed of an outer cover and an inner tube—cannot carry *any* load. It is the air which carries the load, and the tyre maker only really provides “Air Containers” for the motorist to fill. Now, air is free, but many motorists begrudge the “Container” its proper “fill.” It is a costly, false economy! Without adequate air pressure the best tyres in the World cannot yield their proper service.

Any Dunlop Service Department will indicate the correct air pressure for a given tyre section. And Dunlop information—like air—is free!

C.F.H. 566

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 30.

The financial community separated in a rather happier frame of mind than had been anticipated. This is not due to any revival in stock market activity, for no such development is to be expected until the Budget and the General Election are safely out of the way. It is caused entirely by the relief which the past week has brought in the monetary position. In actual figures of market rates this relief will not be immediately reflected, because the usual squeeze connected with the end of the quarter will be enhanced by its coincidence with the Easter holiday. But the news from America reveals that the course of action being followed by the Federal Reserve authorities is such as to make a rise in American re-discount rates less likely, and this in turn removes the fear that the Bank of England will have to raise its discount rate. Added to this is the fact that the Bank of England is steadily replenishing its store of gold and strengthening its position. The stock markets have remained flat, but took comparatively little notice of Tuesday's collapse on Wall Street, or the subsequent recovery in that centre. In spite of the improved trade outlook, industrial shares remain dull owing to political factors.

Majorities.

The dealings on the Stock Exchange in "Majorities," i.e., forecasts of the probable election results, seem to be attracting more general interest this time than usual, perhaps because of the rather dramatic early jump in price recorded by Liberals. With regard to the political aspect of these dealings it should be pointed out that the quoted prices represent only the opinions of those dealing in these "stocks," and in the past Stock Exchange opinion has often proved a very poor guide to actual results. Nevertheless, these dealings provide an amusing speculation for those who can afford to take the considerable risks involved. Inquiries we have received, however, since our reference to these dealings last week, show that the risks are not always appreciated. If we suppose that Liberal stock is bought in £1 units at 90, the buyer will receive £1 for every seat that party wins above 90, but if it wins less than 90 seats he will have to pay £1 per seat of the difference. Hence if the Stock Exchange forecast at the moment when he buys is over-optimistic of Liberal chances to the extent of only 10 seats the speculator loses £10, while should the party obtain only its present number of seats, 45, he will lose £45. A similar argument applies, of course, to the "stock" of either of the other parties, so that these dealings involve the running of a very considerable risk, and in fact can only be regarded as a dangerous gamble. When you gamble in a share there is a limit to the distance it may fall. But the limit in this case is enormous.

Dividends Throughout the Year.

Investors who depend upon their investments for the major part of their income often find it more convenient that their interest or dividends should come to them in

regular instalments, say, monthly, than that they should receive it in larger instalments quarterly or half-yearly. A regular monthly income can, of course, only be secured by selecting investments with that consideration, among others, in mind, but it can be achieved by a distribution of investments such as is suggested in the following list. January and July may be provided for by the interest on L.N.E.R. 4 per cent. debentures, on which the yield is £5 3s. per cent. Interest on the 4½ per cent. debentures of the North Metropolitan Power Station Company, which yield £5 per cent., is payable in February and August. The Bank of Australasia pay its dividends in March and September, and the return on its ordinary shares is £5 16s. per cent. An income for April and October can be obtained from 3½ per cent. Conversion Loan, which yields £4 11s. per cent., and the months of May and November see the payment of the interest on the Belgian 7 per cent. Stabilisation Loan, which returns £6 7s. per cent. Finally, the interest on the Eastbourne 3 per cent. stock, which yields £4 19s. per cent., is paid in June, and December.

Corporation Stocks.

As a result of monetary uncertainty in the last few weeks gilt-edged stocks generally have suffered slight declines in prices and some of the stocks of British corporations are at prices which give yields in the neighbourhood of £5 per cent. Considering the standing of the security this yield must be considered very satisfactory. We may remind the investor who is inclined to consider a purchase of corporation stock that many of the issues which have been made in recent years, and which carry a relatively high rate of interest, are redeemable within a short time. Thus the Salford 6 per cent. loan is redeemable between 1936 and 1951, and the corporation may be expected to redeem such an expensive loan at the earliest possible date. Since such loans stand at prices above par there is the prospect of a loss on redemption, which reduces the attractiveness of the relatively high yield. Investors therefore would be well-advised to consider most closely the longer-dated loans and those bearing lower nominal rates of interest, many of which are very sound investments. A few examples of this class of security will show the order of the yields obtainable. The 3 per cent. debentures of the City of London, finally redeemable in 1957 give a return of £5 3s. per cent. On the 3 per cent. stock of the Brighton Corporation which are finally redeemable in 1953 the yield is £5 2s. per cent. A slightly lower return (£5 1s. per cent.) is obtainable on the 3 per cent. stock of the Nottingham Corporation, which is redeemable up to June 7, 1960.

PALESTINE ORANGE EXPORTS.

The Empire Marketing Board reports that the total direct shipments of Jaffa oranges to the United Kingdom including fruit transhipped at Port Said before the direct shipping season started) up to March 24, amounted to 1,162,000 boxes, as compared with 1,436,000 boxes at the corresponding date last year.

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Plevan, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Doupnitza, Gorna-Orehovitz, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratza. It has also 86 agencies.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Metal Cabinets and Safes.—The Survey of Egypt invites tenders for the supply of metal cabinets and safes required during the year 1929-1930. June 19. (D.O.T.)

School Materials.—The Ministry of Education, Cairo, invites tenders for the supply of various writing, drawing, and painting materials for use in schools. May 8. (D.O.T.)

Various Materials.—The British Commercial Secretary at Cairo has forwarded particulars of a call for quotations by the Gharbia Provincial Council for various materials required for weaving purposes by the Mehalla Weaving School—comprising steel reeds, Jacquard cards, neck cords for Jacquard harnesses, harness cord, lacing band, brass and glass mails. (D.O.T.)

Diesel Engine.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nadli, Cairo, invites tenders for the supply, erection, and guarantee of a 400 B.H.P. Diesel engine driving an air compressor together with auxiliary machinery. May 1.

Air Compressing Plant.—The Main Drainage Department of the Egyptian Ministry of Public Works invites tenders for the supply of Diesel engine, air compressors, cooling water circulating system, etc. May 1. (D.O.T.)

Lithographic Plates.—The Survey of Egypt invites tenders for the supply of aluminium and zinc plates for lithographing and engraving purposes. June 15. (D.O.T.)

Photographic Materials.—The Director, Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of photographic materials. April 20.

Post Binders.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of loose leaf post binders for 1929-1930. July 3.

Calico and Shash.—The Surveyor-General of Egypt, Giza (Mudiriya) invites tenders for the supply of calico and Shash for map mounting for 1929-1930. July 10.

School Materials.—The Director of Stores, Ministry of Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of large quantities of school materials required for the schools during the year 1929-1930, such as Persian reed pens, white and coloured chalk, exercise books, special ruling for Arabic calligraphy, brown paper books for chalk drawings, and technical materials such as boxes of drawing instruments, set squares, slide rulers, drawing paper of different sizes, tracing paper. May 8.

Various.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for the supply of: coloured cotton waste; transformer and switchgear; structural material for footbridges at Birket el Sab and Samalout; steel twist drills; milling and involute gear cutters; rivets; tiles cement, earthenware and asbestos mill-board; canvas tents.

Diesel Generating Set.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at the Government Printing Press of a 120 K.W. D.C. Diesel electric generating set complete with buildings and foundations. May 15.

Needlework Materials.—The Egyptian Ministry of Education invites tenders for the supply of needlework materials required during the school year 1929-1930. The principal requirements are as follows:—White calico, 15,500 metres; unbleached calico, 4,000 metres; white linen for embroidery, 1,800 metres; zephyr coloured—width 80 cms., 9,000 metres; white lawns for underwear (Batiste), 2,000 metres; nainsooks for underwear, 3,000 metres; voiles plain colour, 3,000 metres; gabardine wool, 1,500 metres; creme flannel, 1,500 metres; coton perle, D.M.C., 10,500 reels; coton perle, D.M.C., 26,000 skeins; wool for knitting, 7,500 skeins; sewing needles, 10,750 packets; knitting needles, 2,500 pair; crochet needles, 7,000; darning

needles, 700 packets; darning cotton, 2,000 skeins; pearl buttons, 1,500 dozens; thimbles, 1,500; scissors for embroidery, 1,000; measuring tapes 1.40 m. long, 804. D.O.T.)

INDIA.

Locomotives and Machine Tools.—H.M. Senior Trade Commissioner in India has forwarded various documents regarding the introduction of the Government of India Railway Budget in the Indian Legislature. It appears that 300 new locomotives are to be purchased; and that the proposed remodelling of railway workshops should provide an opening for machine tools and workshop equipment. (D.O.T.)

Pumping Plant.—The Indian Stores Department invites tenders for the supply of 5 complete sets of D.C. motor-driven bore-hole pumps for pure water supply. April 19. (D.O.T.)

PERSIA.

Various Plant.—H.M. Vice-Consul at Hamadan reports that a local firm are desirous of receiving from British manufacturers full specifications and prices of the following plants:—(1) Small tin-making plant suitable for producing tins for jam, preserved fruit, etc. (2) Machinery for cleaning dried fruit, especially raisins, apricots, and peaches. (3) Machinery for cleaning and grading almond kernels. (D.O.T.)

ROUMANIA.

Linseed Oil, Etc.—The Arsenal in Bucharest has issued a call for tenders for the supply of linseed oil, brake oil, machine gun oil, axle grease, lubricating grease jelly, yellow and white petroleum jelly. April 30. (D.O.T.)

TURKEY.

Motor Lorries.—It is reported with reference to the purchase of motor lorries by the Turkish Ministry of National Defence, that the military authorities are again inviting tenders. Public calls for tenders have not been issued, but the Ministry of National Defence has written direct to the local agents of firms which took part in previous lorry tests, inviting them to submit offers not later than April 30 next, and to have lorries for trial in Angora on May 15. The lorries required must be of the two to two and a half tons capacity. Lorries of the 6-wheeled type, or fitted with a caterpillar track, will be allowed to participate in the trials. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, April 12); s.s. Elysia for Bombay (Birkenhead, April 27). (For passenger sailings and dates see advertisement.)

Anchor Broeklebank Line.—S.s. Maihar for Calcutta (Birkenhead, April 9); s.s. Matra for Calcutta (Birkenhead, April 18).

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 17).

British India Line.—S.s. Masula for Bombay and Karachi (London, April 6); s.s. Margha for Colombo, Madras, and Calcutta (London, April 6); s.s. Morvada for Colombo, Madras, and Calcutta (London, April 20); s.s. Hatimura for Bombay and Karachi (London, April 27).

Cunard Line.—S.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool April 13, and Swansea April 16); s.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza. This steamer will also call at Volo if sufficient inducement offers. (Liverpool, Glasgow, and Swansea, April 27).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 4).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, April 12); s.s. Bhutan for Calcutta (London, April 13); s.s. Macedonia for Bombay (London, April 26); s.s. Bangalore for Calcutta (London, April 27).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, April 13); s.s. Scottish Prince for Tunis (Manchester, April 25); s.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandria, Mersina, and Cyprus (London, April 27).

Ellerman and Papayanni Lines.—S.s. Algerian for Algiers*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 6, Swansea April 6); s.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool April 13, Swansea April 10); s.s. Polo for Algiers*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 20, Swansea April 20); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 20); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, April 23); s.s. Manchurian for Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool April 27, Swansea May 2). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*MASSILIA ... Apl. 16 *CASTALIA ... June 4

*ELYSIA ... Apl. 30 *CIRCASSIA ... June 14

*First class passengers only. Specially low fares. †Calls Port Sudan.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA. 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

Engineering Topics

(By Our Engineering Correspondent)

Secondary Air in Furnaces.

According to a writer in a contemporary, although the importance of secondary air boilers has been recognised for eighty years or more by some engineers, few modern engineers seem to pay any attention to the matter. Personally, I have never met the engineer who did not recognise the importance of secondary air and who did not make as much use of it for the prevention of smoke and the proper consumption of fuel as he could. After all, the furnace of a boiler is very like the carburettor of a car in which primary, or as it is generally called by motorists "bottom," air enters below the jet and breaks up the spirit into fine spray. Every motorist knows that this spray then has to be diluted with "secondary" air, admitted above the jet, the quantity admitted being regulated according to the requirements of the engine. Shut off the "top" or secondary air and we have an over rich mixture, giving weak power and an emission of black smoke. Too much top air gives a weak mixture with equally bad, although different, results. Exactly the same thing occurs in a boiler furnace. Allow only bottom or primary air to be admitted and we have dense smoke and combustible gases given off, which, unchanged, escape by the flues to the stack. Admit the correct amount of secondary air and we have all these combustible gases consumed by the admission of oxygen, and we use the fuel to the best advantage. Too much secondary air means a poor fire, lack of heat, chilling of the boiler plates, and a host of other and subsidiary troubles. Every engineer, and, in fact, every capable stoker, knows this—or, at any rate, I thought he did—and regulates his secondary air according to requirements. It is with surprise, indeed, that I read that "few modern engineers seem to pay any attention to the matter." But we live and learn!

Slippery Road Surfaces.

A circular letter has been issued by the Minister of Transport to all highway surveyors in the country dealing with the question of slippery road surfaces, which is a

matter of more than usual interest to both road engineers and road users alike. It will be remembered that, in 1925, a letter was addressed to all country surveyors calling their attention to the urgency of the problem, and the great increase in the amount and weight of traffic the roads have to withstand since that date has added greatly to its importance. The new letter deals in the first instance with the construction of asphaltic and bituminous roads which has been the subject of prolonged discussion with various professional and technical bodies. As a result of these investigations, I am informed, the Minister has arranged for the publication, through the British Engineers and Standards Association, of seven specifications which represent the best practice of the day and which should henceforth be adopted by local authorities who wish to obtain grants from the Road Fund for these classes of work.

It must be recognised, however, that the conditions of the road surface is only one of many contributory causes of danger, and that whatever care may be exercised in the choice of materials, the road will still be subjected to the vicissitudes of climate. First, snow, sleet, hail and cold weather will all have their effect upon it, as also will the oil, grease and other miscellaneous droppings from engines and vehicles of all descriptions. That road surfaces can afford an equally secure grip or foothold under every one of these widely varied conditions is more than can be expected. Hence the importance of using the correct surface applications of gritting materials.

In the second part of the letter advice is given regarding this, and the best methods of dealing with carriage-ways by means of surface dressing and gritting are outlined. Probably the majority of road engineers will regard themselves as competent authorities on that side of the subject, but the advice given by the Minister is both sound and well meant. Here again, the aim is to encourage the general application of the process which recent experience has proved to be the most effective. Local authorities who desire to avail themselves of Road Fund grants will be expected to adopt these methods. In a progressive science such as road making and road engineering future modifications of practice may be found advisable, and in the event I understand that further and amended recommendations will be issued.

The letter proceeds to advocate the "banking" of curves in order to minimise the risk of side-slip at bends in the roads. Emphasis is also laid on the desirability of reducing the steep camber which still characterises some of our older highways. A special plea is made for the more careful maintenance of roadside wastes and verges, which are too often littered with road materials and rubbish or rendered dangerous by irregular ditches and hollows, thus giving legitimate cause of complaint to riders of horses and drivers of cattle who are debarred from or hampered in the use of facilities to which they are fairly entitled. Much perplexity has been felt by road users as well as highway authorities upon the vexed question of slippery roads, and Col. Ashley feels confident that the issue of authoritative recommendations, based on the most approved modern practice, will not only prove useful to many county surveyors and highway engineers, but will be received in the spirit in which they have been issued.

Barclays Bank (Dominion, Colonial and Overseas) announce that they have received the following cable from their Cairo branch:—"The Statistical Department of the Ministry of Finance announces that the total imports for Egypt for the month ending February 28 amounted to £E4,226,513, against £E3,773,775 for the corresponding month last year, and exports to £E4,549,319, against £E4,049,619 for February, 1928. Cotton exports were £E3,772,273; against £E3,394,694."

DIRECTORS' REPORT.

(Presented at the Seventy-fifth Ordinary General Meeting, 27th March, 1929.)

The Directors have now to submit to the Shareholders the Balance-sheet and Profit and Loss Account of the Bank for the year ended 31st December last.

These show a net profit, after providing for all bad and doubtful debts, of £834,156 3s. 9d. inclusive of £206,893 4s. 8d. brought forward from the previous year. The Interim Dividend at the rate of Fourteen per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £624,156 3s. 9d. and the Directors propose to pay a Final Dividend at the rate of Fourteen per cent. per annum together with a Bonus of Six shillings and threepence per share, making Twenty-and-a-quarter per cent. per annum for the whole year, free of Income Tax; to set aside £40,000 on account of Contingencies and to carry forward the balance of £186,656 3s. 9d.

The Directors have to announce with regret the retirement of their esteemed colleague Mr. Lewis Alexander Wallace, who for twenty-six years rendered valued service to the Bank as a member of the Board.

Sir Henry Pelham Wentworth Macnaghten, of Messrs. Wallace Brothers & Co., Ltd., has been elected a Director, and the Shareholder are now invited to confirm his election.

Sir Montagu Cornish Turner, Sir Henry Pelham Wentworth Macnaghten and Mr. Archibald Auldjo Jamieson, the Directors who now retire by rotation, present themselves for re-election.

The Auditors, Mr. David Charles Wilson, F.C.A. and Mr. Henry Croughton Knight Stileman, F.C.A., again tender their services. The Dividend and Bonus will be payable on and after Wednesday, the 3rd April.

By order of the Court, ARTHUR SCOTT, Secretary.

BALANCE SHEET 31st December, 1928.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the above Balance Sheet and Profit and Loss account with the Books, Vouchers and Securities in London and with the certified Returns from Agencies and Branches. In our opinion such Balance Sheet is full and fair and properly drawn up so as to exhibit a true and correct view of the Bank's affairs, according to the best of our information and the explanations given to us and as shown by the Books of the Bank.

Company Meetings.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

Economic Conditions in India.

A Difficult Year.

Sir Montagu Turner's Review.

The seventy-fifth ordinary general meeting of the shareholders of the Chartered Bank of India, Australia and China was held on March 27 on the bank's premises, 38, Bishopsgate, London, E.C. Sir Montagu Cornish Turner (chairman) presided.

The Chief Manager (Mr. W. E. Preston) read the notice convening the meeting and the auditors' report.

The Chairman said: Gentlemen,—From the annual report which is now before the meeting you will notice that our valued colleague, Mr. Lewis Wallace, acting under imperative orders of his medical adviser, found it necessary to resign his seat on the board, very much to the regret of his colleagues. Mr. Wallace had been a director of this bank for 26 years, and in that period had always shown a very keen interest in the affairs of the bank and gave it all the support in his power. We wish him, most sincerely, renewed health and strength in his present retirement from active work. (Hear, hear.) To fill the vacancy on the board thus caused we are glad to say that Sir Henry Pelham Wentworth Macnaghten has accepted the invitation of the directors to join the board, and thus the old and valued connexion with Messrs. Wallace Brothers is maintained. Sir Henry has had considerable business experience in the East, and will prove a valuable addition to the board. (Hear, hear.)

Features of 1928.

In moving the adoption of the report and statement of accounts I greatly regret that the results for 1928 have proved disappointing and less favourable than we anticipated at the commencement of the year. Just as trade conditions at home proved, in the working out, to be less favourable than anticipated, and the expected and hoped for improvement in trade generally petered out as the past year progressed, so in the East our hopeful anticipations have not been realised. I cannot say that there has been a great decrease in the volume of trade, but it has been a difficult time for merchants and bankers, especially in India and China, the causes for which I shall presently deal with.

India, as we know, has been for some months greatly disturbed by political turmoil, entirely detrimental to the interests of the country. Added to this, various disastrous strikes, fomented, we believe, by outside evil influences, have occurred in the railways, the mills, and other basic industries. These strikes have done more to prejudice the prosperity of India than any depression in the markets of the world which are consumers of Indian goods. At the present time firmness tempered with good judgment is required to prevent further mischief.

In my speech last year I referred to the absurd and excessive competition among the exchange banks to secure the business offering at nearly every trade centre in the East, with the result that exchange margins have been cut to vanishing point.

From every point of view this is deplorable and disastrous. It is true that the number of exchange banks both in India and China is much in excess of trade requirements, but to my mind there is no sense in working for nothing and taking risks merely to secure business. There should be limits fixed beyond which business should be refused. (Hear, hear.) I trust that an improvement will be made in this respect in the near future.

As regards the trade of India generally, there was a balance in favour of India of some £9,000,000 sterling for the nine months ended December, 1928. For the first two months of the year a favourable balance was shown in January, but in February an adverse balance of some 117 lakhs of rupees. This adverse balance was due chiefly to the import of wheat from Australia and Canada, which is now in course of development. India normally imports about 50,000 tons of foreign wheat, and the unusual imports which are now taking place are due to: (1) partial failure of the monsoon in the North-West Provinces and Punjab; (2) the restriction of the area under cultivation and poor crop of last year; (3) the higher standard of living among Indians in the big towns in the North of India—for what rice is to Eastern and Southern India, wheat is to Northern India—and in the case of failure of the monsoon, not only is there no balance of wheat in the country for exports, but, as is the case now, large imports are necessary.

In the Punjab the crop for last year was 20 per cent. below the normal, and in the United Provinces 7 per cent. The average crop in the Punjab and the United Provinces is about 9,000,000 tons, of which 8,000,000 tons are consumed in the country. At the present moment we believe some 800,000 tons have arrived or are in course of transit, from Australia and Canada to India, so that for this month there is likely to be again an adverse balance of trade. This 800,000 tons of wheat represents a sterling value of about £8,000,000. Had wheat been available for export bills would be offering to that extent.

India's Cotton Crop.

The cotton crop for all India is estimated round about 6,000,000 bales, and exports up to date from Bombay and Karachi are in

excess of those for last year by some 350,000 bales. Indian mills will also be consuming more if the insane policy of strikes in Bombay comes to an end through sheer exhaustion. I regret to say that there is no sign of improvement in the Bombay mill industry, which would seem to need drastic handling, but with a strike lasting for more than six months no result but disaster could be possible.

Exports of jute and tea have been quite up to the normal, and we should say that both the jute mill and tea industries are in a very healthy condition. A noticeable feature in the export trade of India has been the increased shipments of ground nuts, which now exceed 1,000,000 tons.

As regards imports of yarn and piece-goods it appears that though Manchester still maintains its hold on the trade in white goods, Japan is increasingly supplying India's requirements for unbleached and coloured piece-goods.

The increase in the sales of coloured goods from the Continent and Japan is undoubtedly due to the cheaper cost of production in those countries.

With cost of production in the United Kingdom on the present basis, sales of Manchester goods must suffer. The purchasing power of India is little, if any, above what it was in pre-War days, and in view of this India can hardly be expected to be in a position to purchase the same quantity of goods at higher prices.

Admittedly, Manchester goods still hold their own when quality, compared with price, is concerned, but when the purchasing power of the consumer is small price is a much more important factor than quality. It is, therefore, of prime importance that the question of cost should be seriously and efficiently tackled by the Lancashire mills. I welcome therefore the movement initiated by the Lancashire Cotton Corporation, Limited, and wish it all success. (Hear, hear.)

In Burma trade conditions, with the exception of timber and oil, have been decidedly unsatisfactory. The foreign demand for rice was weak, and prices accordingly dropped, and as a corollary the piece-goods market sagged and importers suffered.

In Ceylon the cloth bazaar has also suffered, its buying power being curtailed by the lower prices obtained for the principal exports, tea and rubber, especially the latter; but at the moment the outlook is hopeful.

As regards the Straits and F.M.S., the chief feature of interest has been the effect of the withdrawal of the restriction scheme connected with the rubber industry. The anticipation of this withdrawal caused perhaps even more trouble and anxiety than when the restriction actually came to an end in November, but it meant this—a reduction in price for spot rubber from 1s. 8d. per lb. to the lowest limit of 7½d. in November. That such a decline in price of the commodity eventuated without a great catastrophe, although, of course, difficulties have been created, is a remarkable testimony to the soundness of the trade. With the price of rubber at about 1s. a lb. and practically on rock-bottom basis, the outlook is healthy. The American consumption has increased, the world's consumption should increase, and with the economies effected and likely to be effected in the working of estates, we can look forward to the prospects of the rubber industry with confidence.

Improved Position in China.

Now about China, there has been a remarkable recovery during the past year. Civil war has stopped, and there are distinct signs of a will to peace on the part of the generals and party leaders who control the various areas in that vast country. They have been sitting round the same table for some months, and the Government at Nanking is now formally recognised as a Central Government representing the whole country. With the general desire for peace among its leaders, backed up by the powerful Chinese banking and commercial interests, I cannot believe that the present movement of troops will lead to anything like the recurrence of civil war. China is in a state of transition from civil war to settled civil government, and in that process troubles of minor magnitude are bound to arise. With the partial restoration of internal order there has been an immediate improvement in trade, the Customs figures showing an increase of Tls.8,000,000 for the past year.

Business in North China and Manchuria has been fairly good on the whole, and one of the outstanding features in that sphere has been the huge import of flour from Canada, due, we learn, to the Chinese peasantry now demanding a higher standard of living. There has been a great wave of emigration and development in North Manchuria, and we have opened branches at Harbin and Dairen, the former town being the trade-mart at the junction of the two main railways linking Europe and Eastern Asia. Last season's export from Manchuria to Europe of soya beans totalled 1,400,000 tons, and 600,000 tons to other countries, chiefly to Japan. The rapid spread of roads and motor transport throughout the interior of China gives promise of a general stimulus to trade.

Conditions in Japan.

In my speech last year I referred to the effects of the financial crisis of 1927 in Japan, when several banks had to go into liquidation: an interesting sidelight on the events which then took place is that 567 banks have since participated in various amalgamations, and the net decrease in the number of banks is no less than 317. At the end of 1926 the number of banks of all kinds operating in Japan proper amounted to the formidable total of 1,704, and there is little doubt that the weeding-out process to which I have just referred has been of great benefit to the country as a whole.

Trade and economic conditions in Japan showed no improvement during the past year, and the adverse balance of trade was approxi-

(Continued on page 441.)

ESTABLISHED IN CALCUTTA, 29th SEPTEMBER, 1863.

mately yen 122,000,000. The agitation in the Press and in certain financial circles for the lifting of the gold embargo still goes on, resulting every now and again in a wild gamble in yen, but no authoritative statement has yet been made by the Government of definite plans for the removal of the embargo—other than that it can only come about when the stabilisation of the country's finances has been completed and on a settlement of the China problem.

The news that an agreement has been reached between China and Japan in regard to the Tsinanfu incident is most satisfactory. The evacuation of the Japanese troops from Shantung which necessarily follows on ratification of the agreement will be helpful to the Nanking Government, and the ending of the boycott on Japanese goods in China and elsewhere will be decidedly beneficial to Japan.

Japan's business with the Straits and Siam has suffered very severely during the past year owing to the continued boycott of Chinese traders of Japanese goods, and until the country comes to a better understanding with China these conditions are not likely to show any great improvement.

As elsewhere in the East, the competition for every scrap of exchange business offering in Japan is of the fiercest kind.

As regards Mr. Hargreave's suggestion that the question of subdivision of the shares of the bank be considered, I may mention that this has not been lost sight of, but the board have decided that no action be taken meantime.

New Charter and Deed of Settlement.

The draft of the new Charter consolidating the provisions of the existing Charters has been prepared and settled by counsel. The matter is now being discussed with the Treasury.

As regards the new Deed of Settlement a draft has been prepared introducing new and up-to-date laws in place of the regulations contained in the present Deed of Settlement. These are being considered.

Turning to the balance-sheet, the item of bills of exchange and Treasury bills shows a reduction of £4,945,666 as compared with 1927. But of this amount over £2,000,000 is accounted for by the sale of Treasury bills held in India, proceeds of which were remitted to London. Against this we have an increase in cash of £999,000, and an increase in loans and bills discounted of £2,277,000. Sundry assets show an increase of £81,000. On the liability side loans payable show a reduction of £2,639,000.

In conclusion, I desire to express the thanks of the board to Mr. Preston, our chief manager, and his fellow-managers at head office, Mr. Bruce and Mr. Miller, for their untiring and ceaseless attention to the interests of the bank. (Cheers.) I would also thank, on behalf of the board, the managers abroad and the entire staff, home and foreign, for their loyal and devoted efforts to serve, in the best possible manner, the interests of the bank. (Cheers.)

I now move: "That the report now presented, together with the balance-sheet and profit and loss account, be approved and adopted."

Mr. W. Foot Mitchell, M.P., seconded the resolution.

Mr. Frederick Tomkinson said that, having regard to the extreme difficulties which had been experienced in carrying on business during the past year, the report submitted was most satisfactory. He wished to thank the Chairman for his speech, which, as on previous occasions, had been most illuminating. (Hear, hear.)

The motion was carried unanimously.

The Chairman next moved: "That a dividend at the rate of 14 per cent. per annum for the half-year ended December 31 last, together with a bonus of 6s. 3d. per share, free of income-tax, be now declared payable on and after the 1st proximo."

Mr. Colin F. Campbell seconded the resolution, and it was unanimously adopted.

On the motion of the Chairman, seconded by Mr. Edward F. Mackay, the election of Sir Henry Pelham Wentworth Macnaghten as a director was confirmed.

Re-election of Directors.

Mr. W. Foot Mitchell then proposed the re-election of Sir Montagu Cornish Turner, Sir Henry Pelham Wentworth Macnaghten, and Mr. Archibald Auldjo Jamieson as directors. In doing so he remarked that Sir Montagu Turner had been a member of the board for over a quarter of a century, and had presided over the business of the bank for some 23 years with most conspicuous success. Those who worked with him on the board felt that they could not possibly have a better chairman or a better leader—(Hear, hear)—and he (the speaker) knew that that confidence was echoed by all the shareholders, and every one who was interested in the success of the Chartered Bank. (Hear, hear.) He would like to add that he was sure all present would wish to express their deepest sympathy with Sir Montagu in the loss he had recently sustained by the death of Lady Turner. (Hear, hear.) The Chairman had already referred to the acceptance of a seat by the board by Sir Henry Macnaghten, and he (the speaker) would only add that the directors were quite sure he would make a most excellent and valuable colleague. Mr. Jamieson had already won his spurs, and they felt that in him they had a tower of strength and help which was of the greatest value to the directors. (Cheers.)

Mr. Henry Bateson seconded the motion, which was passed unanimously.

The Chairman said he would like to thank Mr. Foot Mitchell for the very kind terms in which he had proposed his re-election, and also to say that he very much appreciated Mr. Foot Mitchell's expression of sympathy. As to his own services, he could assure the shareholders that he would continue to do his best, and as long as he had such good colleagues and such able management at the head office to back him up he did not fear for the future. (Cheers.)

The auditors, Mr. D. C. Wilson, F.C.A., and Mr. H. C. K. Stileman, F.C.A., were reappointed, and after a cordial vote of thanks to the chairman and directors, the London management and the representatives of the bank abroad, proposed by Mr. E. T. Hargraves and seconded by Mr. F. Tomkinson, which was carried by acclamation, and was briefly acknowledged by the Chairman, the proceedings terminated.

NATIONAL BANK OF INDIA.

Profits Maintained.

Conditions in India.

Sir Charles McLeod's Speech.

The ordinary general meeting of the National Bank of India was held at the Wesleyan Hall, Bishopsgate, London, E.C., on April 2, Sir Charles C. McLeod, Bart. (the chairman), presiding.

The General Manager (Mr. Ross Munro) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—The report of the directors and the accounts to December 31, 1928, have been in your hands for some days, and I presume you will allow me as usual to take them as read. (Agreed.)

Before proceeding with the usual business of the meeting I desire to express our extreme regret at the loss we sustained by the death of our esteemed friend and colleague on the board, Mr. James Nicholson Stuart, who had been a director of the bank since 1903 and latterly deputy-chairman. Mr. Stuart took the keenest interest in its affairs and lost no opportunity of promoting its welfare. We shall miss his wise counsel and his kindly presence, and we the members of the board and many of our shareholders deplore the loss of a good friend. Mr. Stuart's place on the board has been filled by the appointment of Mr. Walter Shakespeare, of Messrs. Carson and Co., Colombo. We are pleased to have a representative of Ceylon as a colleague, and you will be asked to confirm this appointment.

I have also with the deepest of regret to inform you of the death of our valued general manager, Mr. Hegarty, who died suddenly on October 26 last. Mr. Hegarty had been connected with the bank since 1894, and had successfully filled the appointments of inspector of branches, London manager, and finally general manager. He was, as you are aware, a man of exceptional ability and deservedly most popular with our clients and our staff. We have appointed Mr. Ross Munro as general manager, and Mr. Lawrence, late manager at Colombo, as London manager. These two officers have had long and varied experience in the bank's service.

Net Profits.

As the result of our year's operations we are to-day placing before you figures which show net profits slightly less than a year ago, these being £530,829, compared with £541,098. The total amount available is increased from £796,499 to £807,328, but this increase is, of course, accounted for by the larger amount brought forward from the previous year. We propose to place £50,000 to reserve fund, raising it to £3,000,000 to write down premises account £30,000, to place to credit of officers' pension fund £50,000, and to pay a further dividend at the rate of 20 per cent. per annum, free of income tax, which, together with the similar interim dividend, absorbs £400,000 and leaves us with a balance of £277,328 to be carried forward.

I need scarcely add that these results have been obtained after having provided fully, as usual, for all bad and doubtful debts, and I trust you will agree with me, they may be considered satisfactory.

The Balance-sheet.

The balance-sheet figures do not exhibit any great change in any particular compared with those of the previous year, and such changes as there are are in keeping with the ordinary fluctuations which occur in connexion with a business such as ours. All rupee assets and liabilities are converted at 1s. 6d. per rupee, as was done in the previous year's balance-sheet, and the figures now before you show that our business has been maintained. A year ago I pointed out that there had been some contraction in current, fixed deposit, and other accounts and added that these fluctuations had to be looked for from time to time. On this occasion we have to record an increase,

(Continued on page 443.)

THEO. LEVI, Chief Accountant. B. HORNSBY, President. R. G. WESTROPP, Managing Director.

We have examined the above Balance Sheet and certify that in our opinion it is a full and fair Balance Sheet, and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, as shown by the Books.

RUSSELL & CO.,
Chartered Accountants.

Cairo, the 19th March, 1929.

**Profit and Loss Account for the Period from 1st February, 1927,
to 31st January, 1928.**

[illegible]

THEO. LEVI, Chief Accountant. B. HORNSBY, President. R. G. WESTROPP, Managing Director.

the total being £34,088,229, compared with £33,655,120. Bills payable and acceptances are slightly down.

Turning to the assets side of the sheet, our cash and bullion totals £5,333,827, against £4,530,707 last year, our Indian Government rupee securities £6,589,807, against £6,869,988, whilst our British Government securities, Indian Government debentures, and other securities are £6,261,485, against £6,396,922. These three items, cash, Indian securities, and sterling securities, total £18,185,119, and if we add to these other liquid assets in the shape of bills of exchange, which amount to £7,768,527, you arrive at a figure of £25,953,646, against a total liability of £34,088,228 in respect of current, fixed deposit, and other accounts. The proportion of liquid assets to current and fixed deposits is, therefore, a very strong one. Discounts, loans, etc., show, at £14,224,562, a small advance on a year ago.

The figure for house property and furniture is rather less than a year ago. It has been our policy for many years past steadily to reduce this item. As you have seen, we again propose to set aside £30,000 for this purpose, and as we have considerable further building to undertake to meet the requirements of the bank's premises, it is part of our policy to continue to appropriate such amounts as may be considered necessary to write down our property adequately as and when funds permit. I may also add here that, in common with others, we find it necessary to strengthen the position of the bank's pension fund for the staff, and I feel sure that whatever is found to be necessary in this respect will meet with your hearty approval. Before leaving the figure of assets and liabilities I would just add that our securities totalling nearly £13,000,000, are gilt-edged and stand in the balance-sheet at or under market value. The balance-sheet total of £41,639,338 compares with £41,489,781 a year ago, and these figures and profits, arising out of a year when business has given no opportunity for any marked improvement in any special direction, and has been, as in the past few years, beset with keen competition and small margins, I trust may be considered satisfactory to you.

India's Trade Balance.

India's trade continues to be steadily maintained, and the balance in favour of India during 1928 was higher at 56 crores of rupees as compared with Rs.51 crores in 1927. Exports of merchandise were also higher at 338 crores, as against 327 crores in the previous year. No doubt a good monsoon has helped this expansion.

It is customary to give you the net imports of gold into India during the year, which amounted to £15,814,000, as compared with £12,300,000 in 1927. Silver imports have fallen off considerably and have only reached £8,596,000, as against £11,400,000 in the previous year.

Industrial Conditions.

Indian crops, due to a favourable monsoon, were on the whole satisfactory; indeed, with few exceptions they were good.

As regards industries, the Bombay cotton mills continue in a very uncertain state; fitful starts have been made after the long strike, but owing to the unrest amongst labour no steady working has been possible, and in consequence no real progress has been made. A larger proportion than usual of Indian cotton has been exported. The jute industry in Bengal continues in a prosperous state and jute mills continue to show substantial returns, but these returns are apt to be misleading, as in many instances the older mills (which were erected when the cost of machinery was very much lower than it is now) have been able to build up large reserves and keep down the capital figure, which gives quite an incorrect impression of their earning capacity. I am of opinion that it would be wise for those who are in that position to capitalise part of their reserve funds in order to bring the capital more in line with the block expenditure and thus show a more correct result. It has now been decided to extend the weekly working hours from fifty-four to sixty, with effect from next July, and it will be interesting to note the effect of this. Tea has also had a fairly good season, and although prices have been considerably lower than in 1927, most concerns in India and Ceylon will show fairly satisfactory returns to their shareholders. The coal industry has been very depressed now for some years, but there are signs that more interest is being taken in the trade of late.

The Progress of the Moderates.

With the Simon Commission touring India it was perhaps too much to expect complete tranquillity in the political atmosphere. What thinking people can only regard as ill-advised exhibitions of racial prejudice have occurred here and there, as exemplified by bonfires of imported cloth, talk of a recrudescence of non-co-operation and ill-considered Legislative proposals such as the Inter Coastal Trade Bill. On the whole, however, the moderate element appears to be making some headway, and it is satisfactory to note, from recent events, that the Government appears determined to curtail the activities in India of, as reported in the Press, Moscow-taught and Moscow-paid agitators.

Exchange has ruled steadily round 1s. 6d. during the past year. Money has been in fair demand throughout the season and our funds have been employed to good advantage. The Imperial Bank rate, which averaged 6.196 per cent. against 5.726 per cent. in 1927, has

been moved up to 8 per cent., which is customary at this season of the year when demand for money is more insistent.

Question of a Reserve Bank.

The question of a Reserve Bank has been again mooted, but the Financial Minister in India, in speaking on the 6th of last month, indicated that before the matter could be taken in hand a Commission would be appointed to inquire into the general banking organisation throughout India. I gave our views on this subject last year and I would only add that in my opinion it is still premature to consider the establishment of a Central Bank on Western lines. It seems to us that India is already well supplied with banks anxious to do business for their clients on the most favourable terms, and no reputable firm or company has difficulty in getting banking facilities.

In East Africa progress continues fairly satisfactory, and expansion is taking place in cotton, sisal, coffee, and maize. Imports and exports in the three territories show considerable increases from the previous year. A plague of locusts caused considerable damage to the maize crop in some districts, and fears were entertained of a scarcity of food in these districts, but we have recently had assurance that there is no danger of a famine.

Before I conclude I desire to add, on behalf of myself and the other members of the board, our appreciation of the care and loyalty of our managers and staff, which is reflected in the present satisfactory position of the bank.

The Dividend.

I beg to propose:—"That the report of the directors and statement of accounts for the year ended December 31, 1928, be received and adopted, and that a dividend for the six months to December 31, 1928, at the rate of 20 per cent. per annum be paid on the shares of the company registered at this date, the same to be payable, free of income tax, on and after April 3, 1929."

After this resolution has been seconded by Mr. Langford James, and before I put it to the meeting an opportunity will be given to anyone who wishes to make any remarks or to ask any questions.

Mr. R. Langford James: I have much pleasure in seconding the resolution which has just been proposed.

No questions being asked, the resolution was put to the meeting and carried unanimously.

The Chairman then proposed that the appointment of Mr. Walter Shakespeare as a director of the bank be confirmed and that he be re-elected.

(Continued on page 445.)

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

L ET THE "NEAR EAST & INDIA" carry your message to the markets of the Near and Middle East. You will find it a paying proposition

Mr. Robert Miller seconded the resolution, which was unanimously adopted.

The Chairman further moved that Mr. Robert Miller and Mr. J. A. Toomey be re-elected directors of the bank.

The Hon. N. Julian Hawke seconded the motion, which was unanimously agreed to.

On the proposition of Mr. John Mitchell, seconded by Mr. Geo. R. Christie, the auditors (Messrs. Cooper Brothers and Co. and Messrs. W. A. Browne and Co.) were reappointed.

Vote of Thanks.

Mr. J. Irwin Davis: Before proceeding with the resolution which I have to propose I am sure we should all like to associate ourselves with our directors in an expression of our sorrow at the loss we sustained last year by the death of our late deputy-chairman, Mr. J. N. Stuart, who, as a director for many years, rendered most able and devoted service to the bank. We deeply regret, also, the sudden death of our general manager, Mr. Hegarty, which deprived the bank of a very able officer. We are fortunate in having as our new general manager Mr. Ross Munro, whose ability and long experience should prove invaluable in the control and management of the operations of the bank.

It is again my pleasing duty to propose a very hearty vote of thanks to our Chairman and directors for the care and prudence exercised in conducting the affairs of the bank during the past year, and also to the general manager, managers, and staff for their valuable services. We have every reason to be highly satisfied with the report and balance-sheet which has been placed before us. The feature of the annual reports for several years past has been the steadiness of the profits, and, although there is a slight falling off in the net earnings for the past year, the total volume of business has been well maintained. I think that a notable achievement and it must afford our directors genuine satisfaction, as it certainly does the shareholders. I am sure we all appreciate the very interesting and instructive address of our esteemed chairman. With regard to the managers and staff it would be difficult to over-estimate the value of their services. By their whole-hearted co-operation and efficiency they have contributed very largely to the favourable results of the year.

I shall now ask you to show your appreciation by passing a very hearty vote of thanks to all concerned, both at home and abroad.

Mr. J. D. Longmire seconded the vote, which was carried with acclamation.

The Chairman: Mr. Davis and gentlemen, on behalf of myself and my colleagues on the board, I have to thank you very much for your kind expression of appreciation of the services we have been able to render during the past year. Although, as I have remarked in my speech, competition is keener than ever, we will do our very best to place before you on the next occasion results which we trust will be considered satisfactory. Mr. Ross Munro has asked me to reply on his behalf and on behalf of the staff, and to thank you very much indeed for what you have said about them, which is very much appreciated. We shall take care the remarks which have been made are conveyed to our staff abroad, who also, I am sure, will be highly gratified at knowing what has been said about them here to-day.

The proceedings then terminated.

THE EASTERN BANK.

Conditions in India and Iraq.

Mr. Haskell's Speech.

The nineteenth annual general meeting of the Eastern Bank, Limited, was held on March 27 at the office of the bank, 2 and 3, Crosby Square, London, E.C.

Mr. J. S. Haskell (chairman of the company) presided.

The Secretary (Mr. R. Carter) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—As you have had the report and accounts in your hands for some days, with your permission I shall take them as read. (Agreed.)

As you will have observed, Mr. R. E. Sassoon, owing to prolonged absence abroad, has resigned his seat on the board, much to the regret of his colleagues. I am glad to say that his relations with the bank, as well as those of his eminent firm, continue most cordial.

In May last Sir Thomas Strangman was elected a director. As Advocate-General of the Bombay Presidency of many years' standing, enjoying also an immense private practice, he came into close contact with the leaders of commerce and people of that country. The intimate knowledge of Indian affairs thus acquired will be of the greatest service to the bank. We have already experienced the value of his advice, and I have every confidence that later on in the proceedings you will have no hesitation in confirming his election. (Hear, hear.)

The profits for the year, including the amount brought forward, amount to £164,469 19s. 8d. After carrying £25,000 to the reserve fund, thereby increasing it to £450,000, and writing down premises and furniture by £5,000 to £189,576 11s. 2d., we are able to recommend a final dividend of 5s. per share, which, with the interim dividend paid in October last, is equal to a distribution of 9 per cent.

for the year, the rate maintained during each of the seven preceding years. This will leave a balance of £44,469 19s. 8d. to be carried forward, an increase of £4,118 10s. 8d. as compared with last year.

A Good Monsoon.

India was once more blessed with a good monsoon. The figures relating to her trade in 1928 show an improvement upon those of 1927. Thus the imports and exports of merchandise during 1928 amounted to £186,000,000 and £235,500,000, against £185,000,000 and £245,000,000 in 1927. The imports of gold and silver in 1928 amounted to £15,800,000 and £10,800,000, against £12,300,000 and £11,300,000 in 1927. There was thus a visible balance of trade in favour of India of £42,35,000 in 1928, against £37,500,000 in 1927.

As regards the share of this country in India's trade, the figures for 1928 show a contraction of both imports and exports in comparison with those of 1927. Thus the merchandise imported from the United Kingdom amounted to £85,957,000 in 1928, against £87,312,000 in 1927, while the exports to the United Kingdom amounted to £54,352,000 in 1928, against £57,330,000 in 1927.

Of the decrease in imports, cotton goods accounted for £500,000. This particular decrease is, to say the least, unfortunate, if regard be had to the leeway it is necessary to make up in order to attain figures approaching those prevailing before the War.

There is, however, ground for hope. Competition such as has now to be faced in India and elsewhere can only be met by combined effort. That effort is to be made, at any rate, by a section of the Lancashire cotton trade, by a scheme of rationalisation which has been conceived under most favourable auspices. The scheme must necessarily take time to yield appreciable results. There is, however, every reason for believing that ultimately substantial results will be attained.

The year 1928 was in certain respects a trying one in India. It was marked by strikes in various industrial centres, particularly Bombay, where there was a stoppage of some six months in the cotton-mill industry. When it is realised that Bombay depends for its prosperity upon its local cotton industry to a greater degree than even Lancashire, it will be understood how serious this stoppage was to all whose interests lay in that important city.

The sinister feature about the strikes throughout India has been the Communistic influence in their inception and conduct. The general tendency of that influence is to destroy respect for law and order. The extent of the harm resulting from each fresh strike they bring about in the same locality is progressive. The last strike they caused in Bombay was one of the workers at the oil installations. Pathans were engaged to take the place of the strikers, who were mainly Hindus. Several fracas took place between the Pathans and the strikers. Then the Hindu millhands intervened and proceeded to murder Pathans wherever they were to be found. Other Muhammadans became incensed at the treatment accorded to their co-religionists and the disturbances became communal. Business in the city came to a standstill. Up to February 15 the official casualties numbered 143 killed and 791 injured. The true casualties were in all probability considerably higher. The seriousness of the outbreak was, no doubt, in large measure due to the lessening of respect for law and order as a result of the stoppage in the cotton mill industry.

Communism is not of indigenous growth in India. It is a foreign importation. The Public Safety Bill recently reintroduced into the Legislative Assembly, which provides in effect for the deportation of Communists who have come from without and the forfeiture and

FIRST OTTOMAN DEBT PAYMENT.

WITH reference to the Notice issued by the Council of the Repartitioned Public Debt of the former Ottoman Empire on the 25th March, 1929, the Securities and Coupons referred to therein can now be deposited under the conditions set forth below with the following:—

COUNCIL OF FOREIGN BONDHOLDERS, 17, Moorgate, London, E.C.2.

OTTOMAN BANK, Coupon Office, 123, Old Broad Street, London, E.C.2.

The coupons payable are those of the Long Term Loans. The Treasury Bonds will be accepted on deposit since they form part of the 40 per cent. of all Loans required for the entry into force of the Contract. They will not be consolidated into new Bonds until this 40 per cent. has been attained, after which the new Bonds will be issued, with simultaneous payment of the first coupon.

Loans payable in French currency will be dealt with only by the Ottoman Bank, Coupon Office, 123, Old Broad Street, London, E.C.2.

Coupons and Bonds must be left five clear days for examination.

Forms for listing, containing the formal adhesion to the Contracts, can be had on application at the above two establishments, and must be properly filled in and signed by the holder before presentation, otherwise the Coupons or Securities will not be accepted.

Securities despatched through the post will be at the risk and expense of the holders.

Deposits can be made at the Council of Foreign Bondholders, 17, Moorgate, between the hours of 11 and 3 o'clock (Saturdays excepted), or at the Ottoman Bank, Coupon Office, 123, Old Broad Street, between the hours of 10 and 2 o'clock (Saturdays excepted).

London, 2nd April, 1929.

control of Communist funds remitted to India, would go far towards cutting off the importation. It is to be hoped that on this occasion the Bill will become law.

Conditions in Iraq.

Trade in Iraq during 1928 showed little, if any, improvement over 1927. The economic development of the country will of necessity be a matter of time. It is in its present reincarnation still an infant. Of its ultimate future I have no doubt. Given an extensive irrigation system, skilled agriculturists and security of tenure, the agricultural possibilities are considerable. What was accomplished centuries ago can not only be repeated but improved upon in the future. The Government of H.M. King Feisal are alive to the situation. They have spent, and are continuing to spend, substantial sums upon irrigation. An Agriculture Department of the Government is ready to give advice upon modern methods to the individual, while an Agriculture Society recently formed under royal auspices aids co-operation. H.M. King Feisal is himself an enthusiast, his farms being equipped with modern machinery. The growing of cotton has commenced in earnest, the crop for 1928 amounting to 5,000 bales.

Iraq will shortly be brought nearer to this country by the new services to be started by Imperial Airways in April. Baghdad will then be a matter of five days' journey from London. Projects are in contemplation for linking the oilfields at Mosul with the Mediterranean by pipe and rail and for the extension of the railway system within the country. Iraq is desirous of having a currency of her own. The services of The Eastern Bank, Limited, will always be at the disposal of the Government in the furtherance of projects for the material advancement of the country.

Balance-sheet.

Turning now to the figures in the balance-sheet, our capital remains unchanged at £2,000,000 subscribed with £1,000,000 paid up. Our reserve fund is being steadily built up, and with the £25,000 to be voted to-day will stand at £450,000.

The figures on the liabilities side are much about the same as last year except that a decrease of £349,791 12s. 1d. is shown in our acceptances on account of customers. The decrease in this account was merely temporary and was quickly recovered in the early part of this year. The figure to-day is well over the £1,257,353 10s. 8d. shown on December 31, 1927.

On the assets side of the balance-sheet, whilst our cash in hand and at bankers, including bullion, is lower at £1,483,485 10s. 5d., it amounts to 24 per cent. of our current and deposit accounts. British Government and other securities, mainly short-dated, stand at £3,722,247 3s. 3d., valued at or under prices current on December 31. Loans receivable and advances show an increase of £342,000, and we are glad to say that a considerable portion of this increase is represented by advances against exports from this country to India.

Prospects for Current Year.

The prospects for the current year are still uncertain. There have been indications of an improvement in trade in certain directions, but a disturbing factor has been introduced by the rise in the Bank of England rate to 5½ per cent., followed by a rise in the Imperial Bank of India rate to 8 per cent. The latter, though the highest since 1924, is seasonable. A decline should take place when the export season is drawing to a close. The crucial factor is that of the Bank of England rate. If a further advance can be avoided—and great efforts are being made to that end—trade should adjust itself to the present rate and the improvement we have so long desired may not be appreciably checked.

The bank, as you are aware, is fortunate in its service both here and abroad. It is due in very great measure to the staff that the profits have been maintained and the position has been strengthened during the lean years we have experienced in recent times. You may rely upon them to make the most of all opportunities that may offer in the future. It will, I feel sure, be your desire to give expression to your appreciation of their services during the past year at a later stage of the proceedings. (Hear, hear.)

I beg to move "that the report and accounts be adopted and that a final dividend of 5s. a share, less income-tax at 3s. 8.627d. in the £ after allowing for relief in respect of Indian taxation, be paid on April 2 to members who are on the register on that date out of the net profits of the bank for the year ended December 31, 1928."

Sir James Leigh-Wood, K.B.E., C.B., C.M.G. (deputy-chairman), seconded the resolution, and it was carried unanimously.

The chairman next moved the re-election of the retiring directors, Mr. J. H. Batty, Sir Percy W. Newson, Bt., and Sir Thomas Strangman.

The resolution was also seconded by the deputy-chairman and unanimously approved.

On the motion of Mr. Salinger, seconded by Mr. Slater, the auditors, Messrs. Turquand, Young and Co. and Messrs. Lowe, Bingham and Matthews, were reappointed.

On the proposal of Mr. Joseph Nissim a resolution was moved amending certain resolutions relating to the remuneration of the directors. Mr. A. J. Raymond seconded the resolution which was carried unanimously.

Mr. Reginald Boulton proposed a vote of thanks to the chairman, directors, and staff, which was duly seconded and unanimously accorded, and after a brief acknowledgment by the Chairman the proceedings terminated.

COMPANY NOTES AND REPORTS.

COMMERCIAL BANK OF THE NEAR EAST.

The report of the Commercial Bank of the Near East, Ltd., for the year ended December 31 last states that the net profit for the year amounted to £10,532 17s. 11d.; add balance brought forward from the year ended December 31, 1927, £433 12s. 4d.—£10,966 10s. 3d.; deduct interim dividend at 6 per cent. per annum, less income tax, for the half-year ended June 30, 1928, which was paid on September 4, 1928, £4,800, leaving a balance of £6,166 10s. 3d. The directors recommend the distribution of this amount as follows:—To transfer to reserve fund, including the 5 per cent. required by the Articles of Association, £1,000; to payment of a final dividend for the half-year to December 31, 1928, at the rate of 6 per cent. per annum, less income tax at 4s. per £, making a total payment for the year of 6 per cent., £4,800; to carry forward to the current year, £366 10s. 3d. In September the bank's holding of 12,800 shares in the Commercial Bank of Greece was sold and from the profit realised therefrom the directors have transferred £8,000 to the reserve fund.

The British Overseas Bank announces that bonds of the Kingdom of Roumania 4 per Cent. Consolidation Loan, 1922, to the nominal value of £436,410 have been purchased for the sinking fund between October 1, 1928, and December 31, 1928, and that these bonds have been cancelled. Furthermore, the Roumanian Government has officially notified the British Overseas Bank that independently of the provisions of the sinking fund, bonds to the nominal value of £502,240 and 169,000 dollars have been repurchased by the Government and have been duly cancelled.

LIVERPOOL

MANCHESTER

GLASGOW

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 27:—

Egyptian Futures.

Sakel Contract.—Only minor fluctuations and few developments worthy of comment transpired in this market up to last week-end, but since this, mainly as a result of the weakness shown in the American departments, values have had an easier tendency, closing to-night at 40 to 35 points lower for near and 35 to 42 points decline for more distant positions on the week. Trading has generally been of a light character, and whilst a moderate amount of liquidation has been in evidence, trade calling at the cheaper level now ruling has been sufficient to absorb offerings without allowing the undertone to be seriously affected; in fact, all things considered, the market has revealed surprising stability. Trade reports, whilst still showing a most unsatisfactory state of affairs in the fine section, are not quite so pessimistic as recently; the majority of consumers, however, confidently expect values to work at a lower range, and accordingly limit purchases to their immediate requirements. The Liverpool stock has recently been well combed out, and the local basis is now beginning to work up closer to Alexandria rates; the contract values have had a similar tendency, the November position closing up to 32 points discount with the corresponding overseas option during to-day's trading.

With the holiday season imminent markets may suffer from lack of interest; in any case, there appears nothing in the immediate outlook to warrant anticipation of any material change in the level, and, this being the case, we advise a waiting policy. At the same time, we consider those who have been working on the "short side" should take the present opportunity to cover at least part of their commitments, as we cannot see the attraction in "bearing" a contract that stands at such a heavy discount with spot and replacement values.

Upper Contract.—The strong reactionary tendency in the American markets during the past three sessions has been fully reflected by the drop in values in this contract. Some heavy liquidation of old long contracts has been in evidence, and, with the trade holding aloof, the supply of contracts released has caused a heavy undertone to develop. In addition, further to depress sentiment, the Alexandria market has sent consistently poor reports, due mainly, we believe, to heavy liquidation of the April position. Our latest information is that a tariff on imports of outside staple cottons into America is almost a certainty, and should this be the case, and further buying from the above country eventuate, we consider the market would respond strongly.

Egyptian Spot.

The downward trend of futures has not been a feature likely to encourage buyers, and yet the general impression remaining is that there has been more business about this week. Sakel has been in fair request and practically all qualities have received attention from time to time, notably cotton at from 15d. to 17d. and from 100 to 200 on contracts. Spinners have again found difficulty in obtaining Fully Good Fair Sakel with anything like full staple, except at prohibitive prices. Alexandria has remained very stiff with offers of Sakel, partly on account of the strong statistical position, and partly because of the increased purchases which have recently been made by American interests, as a pre-tariff precaution.

We have repeatedly referred in these reports to the tightness of the Sakel position in Liverpool, and it is significant that this week, while Sakel futures have declined 18 to 25 points, the quotations for spot Sakel during the same period have been advanced from 5 to 30

points. The usual steady offtake has been experienced for Uppers, but during the past few days undeniable weakness has developed, particularly in the offers from Egypt. Pilon has been almost entirely neglected this week, but we are still of the opinion that sooner or later this cotton will come into good request again. Nahda has also suffered from a lack of interest, but much the same remarks apply here.

Sudan Sakel has been in very good request and the basis has remained firm. Almost all the business done this week has been in the top qualities, and although, as we have previously pointed out, these qualities constitute an unusually large proportion of the crop this year, rapid selling progress is being made, and we would advise those who are interested, and who have not yet done so, to cover at least part of their requirements without delay, and so take advantage of the selection still available.

C.i.f. business has shown some slight improvement, and forwardings to the trade last week were returned as 7,770 bales Egyptians and 2,308 bales Sudan. Estimated spot sales, 1,700 bales Egyptians and 4,000 bales Sudan Sakel. Quotations of Sakel show an advance of from 5 to 30 points. Those of Uppers and Pilon have been reduced 25 points. F.G.F. Sakel to-day, 19.20d. F.G.F. Upper to-day, 12.70d. F.G.F. Pilon to-day, 13.30d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended March 21, state:—

Since our last report the futures market has fluctuated very irregularly, but the close of the week was quieter, with a firm tendency. The week's summary of price movements is as follows:—
Sakellaridis: March, 37.65 dollars, 0.05 dollars up; May, 38.08 dollars, 0.02 dollars down; July, 38.25 dollars, 0.10 dollars down; November, 38.37 dollars, 0.13 dollars down; January, 38.55 dollars, 0.11 dollars down. Ashmouni: April, 24.02 dollars, 0.10 dollars down; June, 24.44 dollars, 0.04 dollars down; August, 24.35 dollars, 0.24 dollars down; October, 24.50 dollars, 0.19 dollars down.

Sakel.—The week opened with a very excited session, during which prices advanced rapidly, May at the highest reaching 38.65 dollars and November 39 dollars. At these high levels there was a good deal of hedge selling against spot cotton. At the low levels, some buying on the part of the trade appeared, which created a better feeling, and at the close to-day the market was firmer with a more encouraging tendency.

The demand from spinners has been only moderate, the expected support from America not being forthcoming. It is perhaps possible that some orders from American spinners were placed, but the quantity could not have been important. Basing ourselves on the latest reports received from our branches in the Delta, the Sakel crop of the current season probably amounts to 2,500,000 kantars. News from the Sudan is again more optimistic, and points to a crop considerably larger than the estimate issued by the Sudan Government. Although we consider the present level of prices rather high, we cannot overlook the possibility of a new advance on the first signs of an improved demand from the trade or any appreciable upward movement in New York, as either of these factors would be made the most of by local speculators, the majority of whom continue to favour the bull side.

The Sakel/Uppers straddle (May/April) this week stands at 1,406 points, against 1,398 points last week and 1,345 points at this time last year.

Uppers.—This market has followed the movement of Sakel, and April was forced up from 24 dollars to about 25 dollars, only to return eventually to 24 dollars. The demand from the trade has been very good, but there has been some heavy undoing of straddle positions by purchases in New York against sales of Ashmouni which have had a depressing effect on the market. The publication of the final American Ginner's Report, giving a figure of 14,260,000 bales against the estimate of December 8, which gave the probable production as 14,373,000 bales, was received by our market with indifference. The figure published is certain less than that generally expected.

Spot.—The improvement noted in our last report has been maintained, and this week has seen a series of active markets at Minet el Bassal, and quite a good business has been done. Sales for the five business days amount to about 18,750 bales, of which we estimate 5,500 bales Sakellaridis, 12,000 bales Ashmouni and Zagora, 1,000 bales Pilon, and 250 bales other varieties.

Sakellaridis: The demand continues to improve and a fairly good

JOHNSTON LINE, LTD., 6 Billiter Street, London, 86, Cross Street, Manchester, and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool.

business has been done. As for some time past, the medium qualities are in greatest request. Spot differences are unchanged and generally well maintained for the grades up to Good, but for the higher qualities they are rather dearer.

Ashmouni and Zagora: Continue in good favour with buyers, especially the medium qualities, and a good business has been done. Spot differences are unchanged. Below Fully Good Fair/Good, cotton is getting scarce.

Pilon: Continues in demand and a very fair business has transpired at about last week's differences.

Other Varieties: A fair business has taken place in Nakda without much change in spot differences. A small business has been done in White at last week's rates, and a few bales of Maarad and Fouadi have changed hands.

Up-country: There has been a little more activity in the villages, and it now seems certain that the crop will easily exceed 7,500,000 kantars, of which 2,500,000 kantars Sakel.

Crop, 1929.—The temperature has been variable, and this may effect germination; a large proportion of the acreage for cotton has already been planted, and, consequently, climatic conditions now become an important factor in the progress of the new crop. A slight increase in acreage is generally admitted, and it is expected that the area planted with Sakel will be about equal to that of last year. We give below the figures registered by the principal Nile gauges yesterday:—Malakal, 10.03 metres, against 9.74 metres last year; Roseires, 11.33 metres, against 11.14 metres last year; Wadi Halfa, 1.12 metres, against 0.69 metres last year. The discharge from the Assouan Reservoir registered yesterday was 717 cubic metres per second against 589 cubic metres per second last year and 630 cubic metres per second in 1927. The levels of the water in the Reservoir for the same three dates were 113.07 metres, 111.33 metres, and 113.54 metres respectively.

SUDAN SALT.

Sudan Salt, Ltd., has been registered as a public company, with a nominal capital of £250,000 in £1 shares, to acquire a concession to manufacture salt, gypsum, and other commodities at Port Sudan, and to adopt agreements (1) with W. B. Hopkins (on behalf of himself and all other shareholders of Port Sudan Syndicate, Ltd.), (2) with A. Comtomichalos, and (3) with the Port Sudan Syndicate, Ltd. The registered office is at Bevis Marks House, Bevis Marks, E.C.3.

The output of the Anglo-Egyptian Oilfields for the week ended March 15 amounted to 5,009 tons.

Nasmith, Wilson and Co., of Patricroft, Manchester, have obtained a contract for 12 boilers for Class B locomotives for the South Indian Railway.

The International Wireless Exhibition at Bucharest, arranged to take place from April 15 to June 1, has been postponed to August 5 until October 1.

The exports of locust beans from Cyprus in February amounted to 3,917 tons, reducing the present stock of locust beans in the island to 21,691 tons.

Sir Ernest Oppenheimer, M.L.A., has been elected to a seat on the central board of Barclays Bank (Dominion, Colonial and Overseas). Sir Ernest Oppenheimer was formerly a director of the National Bank of South Africa, Ltd., which now forms part of Barclays Dominion Bank.

Notes of the Week.

Reforms In Yugoslavia.

An essential step in any commonsense reform of the Yugoslav Administration has now been taken by the Dictatorship in the reduction of the number of Ministries. In spite of financial stringency Yugoslavia has hitherto indulged in the luxury of seventeen or eighteen separate Departments of State, some at least of which existed mainly for the purpose of allowing the party in power to reward individual political services or to bribe other parties for their support. When the present Government came into power, it found itself obliged to perpetuate, for the time being, all the existing Ministries, with the exception of that for the Unification of Laws, the existence of which, for the work that it had accomplished in ten years, was as much justified as a Ministry of Yugoslav Colonies would have been. General Zivkovitch's reform scheme has now abolished four Ministries—Religion, Agrarian Reform, Public Health and Posts and Telegraphs—the work of which will henceforth be carried out by separate departments in four of the remaining twelve Ministries. Other departmental changes, all with a view to economy, if not efficiency as well, are introduced at the same time. The Prime Minister is to determine the number of departments and sections that each Ministry may have, and each Minister will be held personally responsible for exercising close control over the personnel and the qualifications of officials in his Ministry. The office of Under-Secretary of State is abolished, and a Minister may have only one First-Class Assistant. A further feature of these administrative reforms is that they take effect *instantly*; no period is allowed for their introduction. Accordingly, simultaneously with the promulgation of the Order the Ministers affected handed in their resignations. Other posts were found for three; Dr. Kumanudi, who was Minister for Posts and Telegraphs, and acting Foreign Minister, alone retains Ministerial rank, receiving a Ministry without Portfolio, to enable him to continue to direct the Ministry of Foreign Affairs in the absence, owing to ill-health, of Dr. Marinkovitch. Dr. Vrosh Krul, who was Minister for Public Health, returns to the private practice from which he was taken in January in order to be given a seat in the Government.

The Problem of Finance.

In spite of the determination of the Yugoslav Dictatorship to deal drastically with the problem of financial economy, it has been obliged to make itself responsible for a Budget which, while balancing, provides for a higher expenditure than that of last year. There has not been time for the new Government to overhaul the national finances, and all that it has been able to achieve, in taking over the Budget prepared by its predecessors, is to insure that it shall conform more or less with facts. That a drastic revision of Yugoslav expenditure is required may be inferred from the fact that, with only three-quarters of the population of Roumania and with the same proportion of the foreign trade of that country, State expenditure in Yugoslavia has been in the past considerably greater than that of Roumania. The comparison must not, perhaps, be pressed too closely in view of possible differences in the methods of drawing up the Budgets of the two countries; but it is recognised widely in Yugoslavia that the present régime has a great opportunity for introducing more expert treatment of the intricate problem of State finance.

The Greco-Yugoslav Treaty.

From the point of view of length the Treaty of Friendship, Conciliation and Judicial Settlement between Yugoslavia and Greece is the most formidable, so far, of all the documents of its kind. Italy and Greece contrived to restrict their treaty of the same official designation to twenty-eight Articles. Yugoslavia and Greece have required thirty-six Articles, many of them sub-divided into two or more numbered sections. The last thirty-one Articles are devoted to the elaborate machinery for settling disputes, and it is necessary only to say of them that they leave nothing to the good sense or to the good will of the High Contracting Parties; both are carefully tied down, and mutual trust is conspicuous by its absence. The main interest centres in the early political Articles. The first Article reproduces Articles 1 and 4 of the Italo-Greek Treaty of September 23, 1928. There is, however, this notable distinction: that, whereas Article 2 of the Italo-Greek Treaty binds the other Party to remain neutral

during the entire conflict, in the event of one of the High Contracting Parties becoming the object of an unprovoked aggression on the part of one or more Powers, the Greco-Yugoslav Treaty says nothing on this subject. Consequently, it is for the jurists to decide whether the words common to both Treaties: "In the event of international complications, and should the High Contracting Parties agree that their common interests are, or are likely to be, endangered, they bind themselves to consult each other as to the measures to be taken in common to defend these interests" bear a significance in the Greco-Yugoslav Treaty that they may not have in the other. It is possible to conceive of circumstances in which under the terms of the Italo-Greek Treaty one Power could claim the military support of the other under Article 4, and the latter would refuse under the provisions of Article 2, which enjoins neutrality. In the case of the Greco-Yugoslav Treaty the Powers concerned can point only to Article 1, by which they are pledged "to consult each other as to the measures to be taken in common to defend" their common interests which are, or are likely to be, threatened. The second Article in the Greco-Yugoslav Treaty pledges the two parties not to have recourse to war against one another in any case, but specifies three sets of conditions to which this stipulation shall not apply. In this clause the Treaty recalls a similar undertaking embodied in the Treaty between Greece and Roumania.

Progress in Abyssinia.

After the lapse of more than two years an appointment has been made to the vacant post of Abuna, or Archbishop of Abyssinia. This appointment is in the hands of the Coptic Patriarch, and only an Egyptian can be nominated. Not unnaturally, with the stirring of new ideas in Abyssinia the Government in Addis Ababa has been anxious to secure some measure of emancipation from its Church's close dependence on Egypt. In the end a compromise has been reached; for the first time Abyssinian monks, to the number of five, are to be consecrated as Bishops, but on the express condition that they undertake not to consecrate a Patriarch. This latter privilege will remain with the Coptic Patriarch in Egypt; but, in order to meet Abyssinian requirements, Egyptian monks who may be desirous of qualifying in the future for Abyssinian bishoprics are to learn Amharic, with a view to being able to converse with their flock when in Abyssinia. It is to be regretted that the special position of the Egyptian Coptic Church in Abyssinia in past years has not been utilised to better effect for the "uplift" of the Abyssinians. The Abyssinian Church remains the great obstacle to progress in that country, and the reason must be sought variously in the Bishops' ignorance of Amharic, in the condition of the Coptic Church in Egypt itself, or in local circumstances in Abyssinia. In a country so backward in communications and in all material development the power of the clergy has remained paramount and, until they adopt a more modern outlook on things in general, the pathway of reform on which the King Regent has set out is likely to prove a slow and arduous one. A further step in the direction of improving communications in Abyssinia has been made with the granting of concessions for the construction of a railway from Gambella to the Sudan frontier and of a motor road from Gore to Gambella. Both the latter town and the trading post maintained by the Sudan Government on the frontier are in communication by river (the Baro and the Sobat) with Malakal at the junction of the Sobat and the White Nile.

Culture in Islam.

We referred in our issue of March 28 to the fresh evidence that there is a determination among scholars in Islam to conduct research upon the lines of Western scholarship, and we mentioned the publication of a new work in Egypt as instance of that resolve. It is pleasing to have confirmation of this phenomenon from Sir Denison Ross, Director of the School of Oriental Studies in London, who has just returned from a tour of the Middle

East. Not only in Egypt is this capacity for working to the standard of latest Western scholarship being shown, but also, in Sir Denison's opinion, in Persia. It is from Persia, indeed, that we should reasonably expect, given adequate facilities for modern methods of work, some of the most valuable contributions to Islamic literature to come. Fortunately Persia has as her King a man of genius, Riza Shah Pahlavi, who, although he must devote a very considerable portion of his time to the material development of his country, is not likely to forget that the Persians' intellectual powers are one of his country's greatest assets. To develop these so that modern Persia might show a literary flowering similar to past flowerings would be evidence that a happy mean between imitation of the so-called "materialisation" of the West and the continuity of an Oriental civilisation had been struck. If Sir Denison's judgment that three of the most remarkable things in the culture of the Middle East to-day are King Fuad's keen interest in Arabic learning, the Hebrew University on Mount Scopus, and the Shah of Persia's readiness to forward the intellectual development of his people, be correct, Western students of Islam and of the Islamic world may in the next few years be hard put to it to keep pace with the flow of original contributions from Egypt, Palestine, and Persia. Nor should it be overlooked that both in Iraq and in Syria there are indications that the recent tendency to confine literary "output" to journalism is being deemed an unsatisfactory and inadequate exposition of the Arabs' literary abilities.

King Ibn Saoud in Najd.

It was officially published in Mecca on April 7 that King Ibn Saoud's action in compelling the Mutair and other tribes whose hostility to Iraq showed itself in force to submit has been successfully concluded. Somewhere between Zilfi and Artawiya, the "home" of Faisal al Dawish and his fanatical *Akhwan*, the royal troops attacked the rebels who had refused to accept the counsel of the great leader of the Wahhabis. A short fight was sufficient to establish the dominance of the King's men; with the result that Faisal al Dawish, whose son is reported to have been killed in the skirmish, pleaded for pardon. Thus is the Wahhabi King's sway over his distant provinces in Najd made absolute; and thus, incidentally, is his good-faith towards the neighbours with whom he is in Treaty relations demonstrated. The effect of this welcome development in the domestic affairs of Najd should be very considerably to reduce the tension and anxiety ruling in Iraq beyond the disputed frontier-posts. Here is an earnest of King Ibn Saoud's loyalty, and it will be as profoundly welcomed in Iraq as in Great Britain. The Wahhabi leader's good intentions are proved beyond peradventure, and the growth of better relations between Iraqi and Najdi Arabs should now be assiduously fostered. It is to be hoped that one of the festering sores of the Middle East will, with the downfall of the pretensions of Faisal al Dawish, have been finally removed.

Progress in Trans-Jordan.

For those whose criterion of the progress of a country is a particular form of Government, the opening on April 2 of the first session of the Legislative Council of Trans-Jordan may not have seemed very impressive. Nor, indeed, was it so. For in the East, possibly more even than in the West, is Pope's couplet true:—

For forms of government let fools contest;
Whate'er is best administered is best.

Trans-Jordan is excellently administered, thanks largely to the British Resident, Colonel Cox, and his assistants. But the part played by the Arabs of Trans-Jordan is distinctly creditable to them. Belonging to a wholly artificial State, and under an Amir whose original wishes by no means coincided with the best interests of his State, the Trans-Jordanians have shown no little adaptability and sense of the fitness of things. Admittedly, the Treaty with Great Britain which has yet to be ratified would ill

become a State that had reached a more advanced stage than has Trans-Jordan: it is the cardinal error of the Nationalists who oppose it to presume that their own political feelings are shared to any considerable extent by the mass of the backward people of Trans-Jordan. There is little evidence yet that the country is possessed of any corporate political sense, and in the meantime concentration must be made upon material progress, the development of communications, of the natural resources of the country, and so on. Fortunately this fact is fully realised by those responsible for guiding the destinies of the young Amirate. A Semitic people is not usually slow to perceive the advantages of increasing material wealth, and while this first session of the Trans-Jordan Legislative Council may be recorded as possibly the first step to a fully representative Government, it is to the material development of the country that the discerning observer would more profitably turn his attention.

Turkey and France.

The Turkish journals appear to have been at pains to put up a barrage of inaccurate information regarding the state of affairs in Syria for the meeting between Tewfik Rushdi Bey and the Comte de Chambrun at Angora. Many points were down for discussion between the Turkish Foreign Minister and the French Ambassador to Turkey, such as the running of certain sections of the Baghdad Railway to Nisibin, but the most urgent of them was perhaps the problem of the Turco-Syrian frontier. There is, unfortunately, no sign yet that the Turks are inclined to budge from their morally and legally untenable position in this regard, and in the meantime the opportunity is naturally given for charges of ill-faith to be made. The journalistic campaign against the administration of Syria is deplored and protested against by the French Press. And, indeed, the only plausible reason for it is either to induce the French Mandatory Power to be less intransigent over the frontier question, under threat of creating an internal crisis in Syria, or to bargain with France by the old methods, e.g., give way on the frontier question provided that France gives way on the railway question. Obviously there is in Turkey at the moment an anti-French complex. But since such complexes have so often as causes both of appearance and of disappearance comparatively unimportant things, a Franco-Turkish *rapprochement* need not yet be despaired of.

The Jewish Agency and The Zionist Organisation.

Those Zionists who have consistently opposed the extension of the Jewish Agency to include non-Zionist Jews are taking care that the matter is kept alive until the meeting of the Zionist Congress next July. They never lose a chance of pointing out that this coalition of Zionist with non-Zionist means inevitably a "de-souling" of the Jewish National Movement, holding it as anathema that the Jew who, though professing a certain interest, even a keen interest in the future of Palestine, yet abhors the very idea of a ubiquitous Jewish national consciousness, should be allowed in the Jewish Agency on equal terms with those who have always upheld Jewish Nationalism and Palestine as its strongest and most permanent home. It would appear, however, that facts have been running against these exclusive Zionists. Yet when it is pointed out to them that the Zionist Organisation of itself does not command sufficient resources to make the present Jewish movement in Palestine a success, they suggest, either that a work of proselytising among non-Zionist Jewry should begin at once, or that the limits of a "Jewish National Home" in Palestine should be narrowed down to practicable limits—in any case, that the soiling of the Jewish National idea would be an even worse calamity than the failure of the present Palestine experiment. Whether such a line of argument will carry the day at the next Zionist Congress remains to be seen, but we think it scarcely probable. After all, it is Palestine and Palestine alone which Dr. Chaim Weizmann and his associates have as card to play with when they

appeal to Jewry for funds, and if that card be renounced, how shall the "National Home" benefit? Having put their shoulders to the wheel of "Eretz Israel," the Zionist leaders can scarcely be expected to relinquish their task in favour of some even more ideological endeavour; nor, we think, will they be generally blamed by Jewry for accepting, on the best terms that they could get, the temporary or permanent help of Jews who are at present non-Zionist. The whole problem, however, is one for Jews themselves to resolve. But it is the duty of the Mandatory Power for Palestine to keep an eye on the present trends of thought in all Jewish opinion which may affect directly or indirectly the future of the Holy Land.

INDIAN NOTES.

The Delhi Outrage.

The recent arrests of Indian Communist leaders on charges of seditious conspiracy have had singular consequences. For a parallel to the scene in the Legislative Assembly on Monday, when bombs were thrown at the Government benches, pistols fired and copies of a leaflet signed by the "Commander-in-Chief" of the "Hindustan Socialist Republican Army" distributed broadcast it is necessary to go back to the day, nearly nineteen years ago, when the murderous attempt upon the life of Lord Hardinge was so nearly successful. Happily on the present, as on the earlier occasion, the anarchists' missiles proved less destructive than they were intended to be. Though several occupants of the wrecked Government benches were injured only one—Sir Bomanji Ardeshir Dalal—was seriously wounded. The injuries to the Finance Member, Sir George Schuster, his colleagues in the Finance Department and Mr. S. C. Roy, we are glad to learn, were only slight, and Sir John Simon, who witnessed the outrage from one of the galleries, escaped unhurt. It is not necessary to look long for the motive underlying a crime obviously planned in imitation of the outrage in the Palais-Bourbon, in 1893, when the anarchist Vaillant flung a bomb into the French Chamber. The part played by Mr. V. J. Patel in a drama which so narrowly missed becoming a tragedy is less easy to explain. The effect of Monday's events upon the President's much-discussed ruling, which he has now deferred until Thursday, cannot be foreseen, but we hope that this latest demonstration of Communist methods will at last dispose Indian opinion generally to give the Government more active support in its campaign against a movement which

PRACTICAL POLITICS FOR THE BALKANS.

The Budget speech of the Greek Minister of Finance has shown the financial position of Greece to be more satisfactory than M. Venizelos allowed it to appear when he delivered his public denunciation of Bulgaria for having requested a second postponement of the half-yearly payment of Reparations. In the last two years Greece will have had a total surplus of revenue over expenditure of nearly £1,900,000, approximately seven per cent. of her annual Budget. The new Budget for 1929-30 shows a surplus of only £21,000, and in these circumstances the failure of Bulgaria to pay half the £48,000 due in annual reparations to Greece would entail a small deficit in the place of the small surplus. M. Maris, Minister of Finance, however, was careful to point out that the revenue for the current year had been estimated on the returns for 1928, which had been adversely affected by the visitations from which Greece had suffered during that year, and it may be inferred that the Greek Government counts on showing for the third year in succession a useful surplus. This satisfactory state of affairs has been achieved without the imposition of new taxes, and with a tendency to reduce gradually some of the existing fiscal burdens. The new Government, there can be no doubt, has in a comparatively short time done much to improve the financial position of Greece, and—no less important—to place the finances of the country on a sounder basis than they have been in recent years. Unfortunately, the substantial surplus which is now available on the working of the last two years will have to be utilised almost entirely on unproductive expenditure. Houses for refugees, schools, barracks, Law Courts, and the conversion of the old Royal Palace into a Parliament Building may be necessary and inevitable; but the money so spent brings no return. For productive expenditure Greece, can, however, point to the Vardar and Struma reclamation schemes, which are being carried out with foreign capital, and which should be the means of adding considerably to the future wealth of the country.

In a situation relatively so favourable it may well be a matter for surprise that M. Venizelos should have pleaded the poverty of Greece in support of his opposition to the Bulgarian request for a second postponement of half-yearly Reparations payments. In matters of this kind it is to be feared that primitive Balkan instincts leave little room for discretion, and still less for the promptings of statesmanship. The Greek Government has placed peace and friendly relations with its neighbours in the forefront of its foreign policy. The conclusion of a treaty with Yugoslavia and the opening of negotiations with Bulgaria could be regarded as confirmation of this attitude; but M. Venizelos' public outburst against the country with which he has proclaimed himself most

anxious to restore good relations has caused grave doubts to attach either to his sincerity or to his continued hold on public affairs. From the economic point of view it was of greater importance for Greece to re-establish close relations with Bulgaria than with Yugoslavia. The settlement of the Salonika question and a fresh treaty of friendship with Yugoslavia were more spectacular achievements from the diplomatic point of view, because they indicated a complete reversal of the relative positions of the two countries, as compared with the time when Yugoslavia denounced her former treaty of alliance with Greece. There is, however, no great volume of trade passing between Yugoslavia and Greek Macedonia, and the benefit that Salonika stands to derive from it will diminish proportionately to the success attending the development of the Yugoslav Free Zone. With Bulgaria, on the other hand, Greek trade relations are steadily growing in importance, in spite of the handicap of the long sea route by way of the Bosphorus or the equally inconvenient railway connexion *via* Nish or Adrianople (Karagatch). By common consent, a large expansion of trade between the two countries would result, if direct through communication could be established by linking up the Bulgarian railway from Sofia to Petritch with the Greek railway from Salonika to Dedeagatch. The interests of both countries call for the construction of the connecting line from Petritch to Demirhissar—those of Greece in a major degree—but it is clear that any agreement to this end could only follow the establishment of really cordial relations between the two Governments. Yet at the moment when the first steps towards a *détente* have been successfully taken the Greek Prime Minister runs the risk of setting the Balkan clock back several years by protesting, in the way most calculated to wound Bulgarian feelings, against the postponement of the payment of £24,000 due to Greece.

In view of the importance to Greece of direct communication with Bulgaria, if Salonika is to be rescued from the stagnation that threatens it, it might have been thought that Greek statesmanship would long ago have occupied itself with the best means of bringing about the construction of the connecting line of railway. It is, unfortunately, not merely a question of building a few miles of railway on either side of the frontier. The Bulgarian line between Radomir, on the Sofia-Kustendil railway, and Petritch is of narrow gauge, and to give real value to through communication with Greece this section of just over a hundred miles in length would have to be converted to standard gauge. Bulgaria, moreover, urges that from her point of view the expense of this undertaking would not be justified, unless she were simultaneously assured of a railway bridge over the Danube at Vidin, which would link up the Bulgarian and Roumanian railway systems. The construction of such a bridge would still further enhance the advantage to Greece of through communication with Bulgaria, as it would provide the port of Salonika with a hinterland extending to Roumania and Poland. Here, then, is a matter which might surely occupy the attention of Greek statesmen and prompt them to avoid occasions for still further embittering Greco-Bulgarian relations. It should be possible to devise some means by which Bulgaria would be enabled to devote the money that she owes to Greece by way of reparations to the railway construction necessary to bring the maximum amount of traffic to Salonika. Greece might have to forgo £48,000 or less annually, but with the certainty that she stands to benefit to the extent of many times that amount from new trade brought her way by means of the through communication *via* Demirhissar. So far as is known, however, the problem has never been considered by the two Governments with reference to the matter of Reparations, and it is a disappointment to find that the one man to whom Europe looks to lift the Balkans out of a morass of petty jealousy and invective, and to place Balkan relations on a sound practical basis can still be found to give Press and public, both in Greece and in Bulgaria, a fresh lead in "hymns of hate."

*The Near and Middle East

From Our Own Correspondents.

Baghdad, March 30.

War Memorial at Basrah.

One of the first public acts of the new High Commissioner, Sir Gilbert Clayton, was to unveil a Memorial which has been erected at Basrah by the Imperial War Graves Commission to the Missing of the Mesopotamian Expeditionary Force. The ceremony took place on March 26, in the presence of a large gathering of British and Iraqis. A guard of honour of the Royal Air Force was present, and the base of the Memorial was lined by naval ratings from H.M.S. *Lupin*. A salute was fired by the *Lupin's* guns, and an aerial salute was given by a flight of aeroplanes.

Later in the day Sir Gilbert Clayton paid an official visit to H.M.S. *Lupin*, and also received a number of Iraqi notables. A garden party in his honour was held at the British Consulate in the afternoon.

The new flying-boat base at Basrah is to be composed of six seaplanes, three of which arrived at Baghdad on March 13, having flown from Alexandretta in one day. They proceeded to Basrah on the following morning.

The Pilgrim Traffic.

Iraq is beginning to reap the benefit of her geographical position on the direct line of pilgrimage from India and Persia to Mecca. The cost of transport by motor across the Syrian desert to Damascus has during the last few years become progressively cheaper, until to-day a pilgrim can take a seat in a lorry for £4, or hire a whole car for £35. It is hoped that the number of Indians who are diverted by this cheap and speedy transport from the old sea route will increase steadily; and the appointment of a Protector of Pilgrims by the Government of India, recently noted by your Correspondent, should be a contributing factor. Indian Muslims may also be attracted to the Iraq route by the arrangements for round-tour tickets made by the Khedivial Mail Line, enabling pilgrims to return by sea from Jidda to Bombay or Karachi. An increase in the number of Persian pilgrims can hardly be expected until restrictions now in force are removed by the Persian Government, but it is hoped that this may come about in the near future.

The new and strict health regulations agreed upon at the Beyrout "Conference on the Pilgrimage" now enforce vaccination against small-pox and inoculation against cholera, and make it incumbent on every pilgrim to produce a medical certificate of freedom from disease. The importance of such measures in preventing epidemic diseases from entering and spreading throughout the country need not be emphasised.

The Crops.

This winter has been an exceptionally dry one in Central Iraq, but the introduction of mechanical pumps, by

bringing under cultivation large areas of land which are independent of rainfall, has greatly diminished the seriousness of the drought. Northern and Southern Iraq have had a normal amount of rain, and grain prospects are considered excellent.

The Department of Agriculture is undertaking a strenuous locust campaign this year. Poison bait can be obtained free by cultivators at sixty depots, and the ploughing up of infested areas near to cultivated land is being encouraged. The Department is also experimenting on a large scale with the South African method of spraying a poison solution on to vegetation in front of the oncoming swarms. Four thousand hand sprays have been obtained from the South African Government, and four motor lorry sprayers are to be used as well. Meetings have been arranged between the officials of the Iraq, Turkish and Syrian agriculture departments, with a view to closer co-operation in fighting the pest.

Medals for Iraqis.

The voting of Rs.17,000 for expenditure on Iraqi orders and medals caused some dissension in the Chamber of Deputies, one member holding the view that until complete independence had been achieved no Iraqi could be held deserving of decoration. It appeared that the first consignment of medals had already been received from Paris, and must, therefore, be paid for, the order having been sent immediately on the passing by Parliament of the Orders and Medals Law.

Cairo, March 30.

King Fuad's Birthday.

On March 26 King Fuad celebrated his sixtieth birthday. Owing to the event's following so closely after the Feast of Bairam, no reception was held, but an unusually large number of notables, many from the provinces, called at the Palace and signed in the register. In the afternoon the Governor of Cairo, Mohamed Sidky Pasha, gave a garden party in honour of the occasion at his villa on the Pyramids road, and in the evening the Minister of Finance, Aly Maher Pasha, gave a dinner at the Semiramis Hotel.

The British Chamber of Commerce.

The British Chamber of Commerce held its annual meeting in Alexandria last week, followed this week by

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

the general meeting of the Cairo Branch of the Chamber. Both Mr. Ralph Carver, Chairman of the Chamber, and Mr. Martin, Chairman of the Cairo Committee, had a good report to deliver on the work done by the Chamber, and, all things considered, the tone of their addresses was such as to confirm the note of optimism with regard to the future which has characterised recent writings on the subject. At the same time the new proposals for the revision of the Customs tariff will require very careful watching and scrutiny to ensure that British interests are adequately safeguarded. This duty may be safely left to the Chamber of Commerce and to the new Commercial Secretary, Mr. Turner, to whose sympathetic assistance both Mr. Carver and Mr. Martin paid tribute.

Associate-Members.

The Chamber has made two important alterations in its statutes. In the first place it has been decided to admit as associate-members, non-British merchants. This innovation is fully justified by the fact that a large proportion of British import trade in this country is done by merchants of nationality other than British, and it seems only right that all, whether British or otherwise, who are interested in British manufactures should be associated together in the work of promoting and protecting that trade.

The second amendment lays down that the Chairmanship of the Chamber shall, as from 1930, be held alternately for two years in Alexandria and in Cairo. This is a recognition of the important position which Cairo now holds as a centre of trade. Time was when all the foreign trade of Egypt was concentrated in Alexandria, where all the importers as well as the exporters were established. In the course of years, with the development of the provinces, importers began to open up agencies in Cairo and gradually to transfer to the capital their head-offices, until to-day it is no exaggeration to say that, while Alexandria still remains the centre of the export trade of Egypt, Cairo is now the centre of its import trade.

Alexandria versus Cairo.

Incidentally this amendment records the burying of the hatchet between Cairo and Alexandria. For some extraordinary reason marked jealousy existed always between the communities of the two cities. It was quite impossible to get them to collaborate, and the work of the British Chamber of Commerce suffered considerably from this. The War brought into being a somewhat better feeling, and a notable advance was recorded when, after the murder of Dr. Robson, at the end of 1922, Alexandria sent delegates to the celebrated mass meeting of protest, which was held at Shephard's Hotel. But it was not until the advent on the scene of Lord Lloyd that a real improvement in the relations between the two communities took place. It is no detraction of the value of the work done towards a *rapprochement* by individual members of the two communities to say that it is mainly owing to the active interest taken by the present High Commissioner in British trade in general and the affairs of the Alexandria community in particular that the welding together of the two communities, so to speak, into one body, as represented by the decision that the Chairmanship of the Chamber of Commerce should be alternately in Alexandria and Cairo, has been achieved.

EGYPTIAN MINISTRY OF EDUCATION.

EGYPTIAN UNIVERSITY, FACULTY OF SCIENCE.

APPLICATIONS are invited for the Post of PROFESSOR of ZOOLOGY.

The salary of the Post is £E1,140 (approximately £1,168) a year, and the appointment will be on contract, in the first instance, for three years, and subject to cancellation on three months' notice being given on either side. One month's salary will be paid on arrival in Cairo for travelling expenses.

Applications for the post should be addressed to the Dean of the Faculty of Science, Egyptian University, Cairo, and should reach him before May 20, 1929.

Intending applicants can obtain information with regard to the form of contract from the Director, Egyptian Education Office, 39, Victoria Street, S.W.1.

Granville Pasha.

The number of distinguished Anglo-Egyptians living, who played a part in the pre-War administration of Egypt, is becoming sadly small, and a notable void has been created in the ranks by the death of Dr. Alexander Granville. He was in every respect a credit and an honour to his country. Throughout his long career in Egypt, first as a member of the Medical Service, later as Director-General of the Alexandria Municipality and President of the International Quarantine Board, and during the War as Commissioner for the British Red Cross, his striking personality made itself felt on all who came into contact with him. Highly cultured and of outstanding intellectual ability, he possessed a charm of manner which was exceptional in the extreme. As a conversationalist, he was without equal, and it was a delight to spend time in his company even after ill-health had incapacitated him for active work. If anything, it was during these last years of his life, when he was compelled to become a mere looker-on, that the fine qualities of his character came to the fore to an even more pronounced degree than when he was an active participant in the Anglo-Egyptian arena which was so dear to his heart. Had illness not stricken him down, he would undoubtedly have continued to be one of the figures that counted in Anglo-Egyptian politics, for he enjoyed to an unusual degree the affection and esteem of the Egyptians, whose admiration for his ability and personality made them ever ready to listen to his advice.

A Memorial Meeting.

An interesting meeting to the memory of four distinguished members of the Egyptian Faculty of Medicine, who have died, *viz.*, Dr. Keatinge, Dr. Llewellyn Philipps, Dr. Aly Bey Ibrahim Ramez, and Dr. Mustapha Riad, was held this week in the Ewart Memorial Hall of the American University. The meeting was arranged by the Faculty of Medicine, the Royal International Society of Medicine, and the Egyptian Medical Society. Dr. Frank Madden, Dean of the Faculty, was in the Chair, and with him on the platform were Ismail Bey Teymour, representing King Fuad, Dr. Mohamed Shaheen Pasha, Under-Secretary of State for Public Health, and Dr. Aly Pasha Ibrahim, Sub-Dean of the Faculty. Mr. Madden paid a warm tribute to Dr. Keatinge and particularly to Dr. Philipps, who was an old and dear friend, with whom he had worked in close company and whose sterling merits and ability he had had constant occasion to appreciate. He was followed by Professor Soliman Bey Azmy, who had succeeded Dr. Philipps at the Faculty and by Dr. Aly Pasha Ibrahim, who spoke particularly of Dr. Aly Bey Ibrahim Ramez. Finally, Dr. W. H. Wilson, Emeritus Professor of Physiology, who is the sole remaining member of the staff, who joined with Dr. Keatinge, spoke very feelingly of his old Director and drew attention to the fact that there existed in the Hospital and Faculty no memorial, not even a scholarship, to commemorate any of these four distinguished members of the medical profession who had done such yeoman service for the cause of medicine in Egypt.

Sofia, March 27.

Communism.

In the month of May last year a secret conference was held at Vienna of the chief Bulgarian Communists under the famous Iskroff, President of the Balkan section of the Executive Committee of the Moscow International.

The Congress decided upon the immediate restoration of the Bulgarian Communist party which had been dissolved after the resolution of September, 1923, and upon the organisation of a new party capable of taking combined action in Bulgaria, Roumania, and Greece as soon as the order came from Moscow for doing so. For this purpose the delegates appointed a Central Committee of five well-tried conspirators, *viz.*, Ionko Panoff, George Christoff, Mladen Stoyanoff, Nicholas Kofarjieff, and a certain Sacho. Of these the most important was Stoyanoff.

Mladen Stoyanoff has played a part in many conspiracies. He participated in the organisation of the attempt on April 16, 1925, in the Cathedral of Sveta Nedelia, to blow up the King and Government. For this he was tried and condemned by court-martial to 15 years' imprisonment. But he soon escaped from prison, and has since then been busy in binding together subversive agents in Moscow, Vienna, Prague, Belgrade, and Sofia.

In June, Stoyanoff returned to Bulgaria to accomplish his mission. But the authorities were on the watch, and soon discovered that a conspiracy was on foot between the Communists and the extremist Agrarians, and that a revolutionary centre existed at Banki, a few kilometres from Sofia. In September the police were able to arrest two members of the Committee, Panoff and Christoff, Kofarjieff and Sacho having in the meantime gone to Moscow. But Stoyanoff still avoided capture. It was thought that, now his Committee was dispersed, he might renounce his activities. But since the beginning of this year the police have been convinced that Stoyanoff has remained somewhere in Bulgaria. They have proofs of his activities. They therefore began, on March 20, a round-up of suspected persons, in the course of which they discovered several automatic rifles of English make and revolvers. They also found indications that Stoyanoff had gone from Banki to Gorna Bania, in the neighbourhood of Sofia, and that this redoubtable leader had enormous sums from Moscow to distribute to Bulgarian Communists, and that in two or three months he has dispensed several millions of levas.

Some days after this discovery Stoyanoff was arrested. A considerable sum of money was found on him, and many instructions, which throw light on Moscow's intention to sow trouble in Bulgaria. The Russian plan, according to a written statement by Iskroff at Vienna, consisted in the establishment of revolutionary nodal points in public and private enterprises and in the Bolshevisation of all the trade unionists and especially the youth of the Universities and the Army. This plan betrayed a certain impatience. Not only were the students and soldiers slow in taking on Bolshevik ideas, but the Bulgarian Communists are tired of all these conspiracies, which wear them out, and the majority think of abandoning the struggle. As for the fanatics, they still hold to theoretical Communism, and are nearer Trotsky than Stalin.

CYPRUS.

Nicosia, March 27.

The Greek Archbishop.

His Eminence the Greek Archbishop has received a letter from Mr. Lloyd George's Secretary, acknowledging his recent memorial, and stating that he will give it his consideration. His Eminence, having heard that the Archbishop of Canterbury proposes shortly to visit Egypt and Palestine, intends, it is said, to send him his brotherly greetings, and an invitation that he will visit Cyprus.

The Executive Council.

The Acting Governor, Mr. Nicholson, has intimated to M. S. Stavrinaki, Greek Member of the Legislative Council for Nicosia, and also Member of the Executive Council, that the political views which he shares with the other elected Members of the Legislative Council, are inconsistent with the performance of duties which attach

to the position of a Member of the Executive Council. M. Stavrinaki has accordingly submitted his resignation from the Council. A Turkish Member of the Executive Council, who is also Delegate of the Evkaf Department, and is a leading member of the Ottoman Community, has also resigned his seat in the Council.

Island Trade Statistics.

As regards some recent statements that Cyprus is growing in popularity, some papers point out that experience does not confirm this view. Statistics, they say, clearly show that, taking any series of years, the imports largely exceed the exports, and that the wealth of the island, far from being increased, is steadily decreasing. Taking recently published figures for the eleven years 1918 to 1928, imports amounted to £16,364,783, and exports to £12,668,089, an excess in imports of £3,696,694. How, in such case, can Cyprus be progressing in prosperity, as recently implied by Mr. Amery? Whatever increase there may have been in one or two late years, it has been exceeded by that of imports.

General News.

Mr. Thomas, President of the District Courts of Nicosia and Kyrenia, has been promoted to be Puisne Judge in Trinidad. Great regret is expressed in both districts and in general. Mr. Thomas is held in the highest esteem in the island, not only by the Greeks, but by all communities.

The Hellenic national fête was celebrated by the Greek community on March 25, services being held in the churches and speeches made.

A triennial meeting of the Pan-Cypriot Athletic Sports will be held this year at Limassol, in the "Olympia" ground, when a large assembly and good entries are expected.

A large number of Cypriots, it is said, will visit the Holy Land for the Easter ceremonies.

Efforts are being rightly made to encourage cultivation of orchards and the export of the excellent island fruit. The Government has announced that a bonus of 4½ piastres (6d.) per case will be paid for those exported.

Constantinople, April 3.

Emancipation of Turkish Women.

Within the last week, Shukrie Hanoum, a law student, has been called to the Constantinople Bar. She is the fifth young woman to enter the legal profession in this city. One of her lady "confrères," if one may call her that, has recently been appointed Registrar of one of the Civil Courts in Stamboul and is reported to be carrying out her duties to the complete satisfaction of the judicial authorities.

The medical profession is also being resorted to more and more by Turkish families of the upper classes as offering a career for their daughters, particularly in the sphere of diseases and ailments of women and children, one well-known Turkish lady practitioner who specialises in these branches having duly qualified in one of the leading London hospitals.

Indications are not wanting that, given a continuance of the progressive movement in favour of the enlightenment and education of women in this country, a determined effort will be made by Turkish women within the

relatively near future to obtain the vote and, eventually, to enter Parliament. For the time being, this somewhat ambitious programme is being cold-shouldered by authorities in "high quarters"; but the day is probably not far distant when some concession may have to be accorded to the petitioners, bearing in mind the fact that the emancipation which has given birth to these aspirations is, when all is said and done, the outcome of a policy laid down and assiduously fostered by those very "high quarters" themselves.

Tax on Bachelors.

It has been instructive and amusing to follow the expressions of opinion which have lately been appearing in the Constantinople dailies on the subject of the draft Law laid on the table of the House of Assembly aiming at the imposition of a by no means negligible tax on Turkish bachelors. The correspondent and interviews published in the Press, many of them not devoid of an agreeable sense of humour, tend to show the wide divergence of views which, on paper at least, would appear to exist, on the subject of this proposed tax, between Turkish Benedicts and the young "Effendis" who elect to remain in single blessedness.

"We prefer," say the bachelors, in substance, "to eschew wedlock and to continue the devotees of celibacy until such time as the high cost of living and of education in this country should have dropped to a more reasonable level. Then, perhaps, we may think of connubial bliss and all the attendant responsibilities which that enviable state connotes."

"Ah!" counter the Benedicts, especially the pater-familias with numerous offspring, "that exactly is where the proposed tax is so relevant. We married men are doing our duty and bringing up children for the State, whilst being taxed proportionately more heavily than you. We are thinking of future Turkish generations, whilst you are thinking only of yourselves."

The question, of course, is as old as the hills. There would appear to be little prospect of the acceptance by the House of Assembly of an amendment by a married Deputy to the effect that 50 per cent. of the collected tax should be distributed by the Government among heads of families in proportion to the number of their children. The State itself, as matters now stand, requires every penny of revenue which it can raise for its own needs.

Comrade Trotsky in Constantinople.

If M. Trotsky's visit to the shores of the Bosphorus has fulfilled no other purpose, his presence in this city has at least been a boon to a numerous company of native and foreign Press correspondents on the look-out for arresting "copy." His rooms at Tokatlian's Hotel have for a fortnight past been the Mecca of a host of reporters who have been at great pains to bring off a "coup" by inveigling the erewhile colleague and lieutenant of Lenin to commit himself to something startling with regard to Russia and Communism generally and to the Third International in particular.

Comrade Trotsky, however, now that the "Reich" has definitely expressed regret at its inability to extend to him the hospitality of German territory, is far too shrewd and experienced a person to commit himself to the expression of either political or revolutionary views which might be distasteful to his present Turkish hosts. That the projected voyage to Germany has been definitely abandoned may be gathered from the fact that within the last few days Comrade Trotsky has signed a contract for the lease of a commodious house in the Shishli quarter of Constantinople, to which he is removing with his family from his hotel in Pera.

Visit of the U.S.S. Raleigh.

The recent visit to Turkish waters of the German cruiser Emden has been closely followed by the arrival in the outer harbour of Constantinople of the U.S.S. Raleigh, a four-funnelled cruiser, flying the flag of

Admiral Dayton. Stress is laid on the term "four-funnelled cruiser," there being an almost ineradicable impression in the minds of native lower classes that, the more numerous the funnels, the more powerful the warship, a two-funnelled super-dreadnought mounting 15-inch guns being considered greatly inferior in power to a four-funnelled light cruiser mounting nothing heavier than 6-inch guns.

The social amenities attending the American warship's presence have by no means been neglected, Admiral Dayton having entertained to dinner in his flagship Muhieddine Bey, the acting Governor of Constantinople and Prefect of the City, Shukri Naili Pasha, the Commander of the Third Army Corps, Vasfi Pasha, Turkish President of the Straits Commission, and many other officials and dignitaries.

The Turkish Navy responded to this hospitality by entertaining the American flag-officer and his staff at dinner on board the cruiser Medjidieh, anchored astern of the U.S.S. Raleigh off Dolma-Baghtche Palace.

Journey of Turkish Foreign Minister.

Dr. Tewfik Rushdi Bey, Turkish Minister of Foreign Affairs, is proceeding to Geneva within the next few days, in order to expound the Turkish point of view to the Commission on Disarmament, which is shortly assembling in that city. Tewfik Rushdi Bey will be attended by naval and military experts, and it is his purpose to proceed to Rome after the conclusion of the deliberations at Geneva, in order to return the recent official visit to Angora of Signor Grandi, Under-Secretary of State at the Quirinal.

It is conjectured in well-informed quarters that the Turkish Minister may be able to prevail upon the Italian Foreign Ministry to intervene as *amicus curiæ* between Turkey and Greece, with a view to overcoming the obstacles and difficulties which have recently brought the Greco-Turkish negotiations to a virtual standstill.

DR. HAFEZ BEY AFIFI.

Dr. Hafez Bey Afifi, Egyptian Foreign Minister, arrived in London on April 8, after an extended tour in Europe, in the course of which he visited Rome, Prague, Berlin and Brussels. At Brussels he was received in audience by the King of the Belgians on April 3. Dr. Afifi was met at Dover by Sesostri Sidarouss Bey, Egyptian Chargé d'Affaires, who travelled with him to London, and at Victoria Station by the Staff of the Egyptian Legation, Mr. J. B. Monck on behalf of the Foreign Office, and a large gathering of Egyptians and others. It is Dr. Afifi's intention to stay in London for about a month; he will then be in attendance on King Fuad during his Majesty's visits to Brussels and other European capitals.

Dr. Afifi's presence in London will enable Sesostri Sidarouss Bey to take up his post as Egyptian Minister in Athens, and it is understood that his Excellency will leave London for Athens at an early date, after the arrival in London of Abdel Malek Hamzeh Bey, the newly appointed Counsellor to the Legation.

THE Y.W.C.A. IN BULGARIA.

We hear from Bulgaria that the Bulgarian Section of the Y.W.C.A. is in need of funds to balance this year's budget and provide for a few improvements. As the Association is doing good work in Bulgaria and the Girls' Club at Sofia has brightened many a young life in that country, we hope that the appeal of the Secretary-General, Miss Dimitrieff (c/o Y.W.C.A., Legue 7, Sofia, Bulgaria), for contributions, however small, will meet with a generous response. Contributions may be sent to Miss Dimitrieff; or c/o Lady Muir, Blair Drummond, Perthshire.

The King and Queen of the Belgians entertained the Egyptian Minister of Foreign Affairs at luncheon on April 4 at the Chateau of Laeken.

MR. C. B. CHARTRES.*(From a Correspondent.)*

It is unusual but, happily of recent years at any rate, by no means exceptional, to find a man who has completed a very successful business career in India returning, or remaining on, for a further period of voluntary service. Two instances spring prominently to mind in that connection—Sir Walter Willson, whose invaluable work in the Legislative Assembly has frequently been the subject of appreciative reference in *THE NEAR EAST AND INDIA*, and Mr. C. B. Chartres, the late President of the European Association.

The final retirement last month of Mr. C. B. Chartres is a very real loss to the European community in India, and to the Council of the European Association in particular. The subject of this brief sketch went out to Calcutta in 1910 as Resident Engineer for the well-known firm of C. A. Parsons and Co., and was largely responsible for the introduction and popularisation of steam turbines upon an extended scale throughout the country.

In 1917 he joined the engineering firm of Burn and Co., of Calcutta, as a partner, and his ten years' tenure of that office was marked by a remarkable extension of the firm's business in various directions. During the last four years he was senior partner of the firm and Chairman of Burn and Co., Ltd., the Indian Iron and Steel Co., Ltd., and the Indian Standard Wagon Co., Ltd.

His entry into the public life of Calcutta was characterised by the same vigour and enthusiasm that had contributed so greatly to the success of his business career. In addition to his membership of the Council of the Institute of Civil Engineers (India), from the inception of that body, and of the Council of the European Association, which he joined in 1922, Mr. Chartres served for a short time on the Bengal Legislative Council and, for one session, as the nominee of the Associated Chambers of Commerce of India and Ceylon on the Legislative Assembly. In 1927, upon his retirement from active participation in business, he was unanimously elected President of the European Association, and devoted all his signal ability and energy to the rehabilitation of that body and, in particular, to the presentation of the European community's case before the Simon Commission. If the task was probably one of the most difficult with which he had ever been confronted, it was certainly not the least successful and his term of office saw a notable improvement alike in the prestige and the efficiency, not only of the central body, but also of the branches throughout the country, each of which he visited in person.

Although there had been little in his experience to familiarise him with the intricacies and problems of Indian politics, Mr. Chartres early revealed a remarkable grasp of his subject, and his public speeches were characterised by a welcome sincerity and directness of appeal. His

Presidential address, at the meeting of the European Association in Calcutta last month, will long be remembered as an eminently reasonable and broad-minded exposition of the case for Europeans in India, free alike from bitterness or aggressiveness, and is a valuable contribution to the discussion of the country's political future, from the standpoint of European interests.

THE BISHOP OF BOMBAY.

The King has been pleased to approve the appointment of the Right Reverend Richard Dyke Acland, M.A., Secretary of the Society for the Propagation of the Gospel in Bombay, to the Bishopric of Bombay, vacant by the resignation of the Right Reverend Edwin James Palmer, M.A., D.D.

The new Bishop is forty years of age, of which nearly twenty have been spent in India. The third son of the late Rev. Henry Dyke Acland, rector of Luccombe, Somerset, he graduated at Keble College, Oxford, in 1904 and was ordained in 1905, proceeding to India five years later as a Society for the Propagation of the Gospel missionary at Ahmednagar. Thereafter he was stationed in turn at Kolhapur, Sonai and Dapoli and since 1924 has been S.P.G. Secretary for the Diocese of Bombay, which covers an area of over 110,000 square miles, with a Church population of 19,000 and estimated total population (including the Indian States) of over 19,000,000. In 1928 the Rev. Dyke Acland was appointed an honorary Canon of Bombay Cathedral.

An appreciation of the services of Dr. Edwin J. Palmer, who greatly enhanced the importance of an appointment which he held for the unusually long period of twenty years, and the principal author of the Indian Church Measure, appeared in *THE NEAR EAST AND INDIA*'s issue of November 15, 1928.

The total remittances from the Government of India to the Secretary of State for India in Council during the financial year ended March 31, 1929, amounted to £30,810,000 by means of purchases of sterling in India. Of this amount, £2,625,000 was remitted on account of the Paper Currency Reserve.

The first batch of letters (registered and unregistered), postcards, and packets was sent by air mail from Karachi on April 7. In addition to the usual postage charges, the air fee is three annas (about 3d.) for Iraq, four annas (4½d.) for Palestine and Egypt, and six annas (6d.) for the United Kingdom for every half ounce. The post closes in Bombay on Thursday evenings. The first air mail is carrying thousands of souvenir letters from people in India to relatives in England.

The Maharaja of Jodhpur laid the foundation-stone of the Agricultural College at Benares University on April 2. Pundit Madan Mohan Malaviya, Vice-Chancellor, referred to the Maharaja of Jodhpur's generous grants to the University. His Highness has now added to these a donation of two lakhs of rupees (about £15,000) to endow a Chair of Agriculture. The Gaekwar of Baroda has resigned from his post as Chancellor. The Maharaja of Bikaner has been elected his successor.

"THE CHARACTER OF INDIA."

Mr. J. A. Chapman, the Librarian of the Imperial Library at Calcutta, has issued a second edition of his book, "The Character of India." The first edition was published in India in June of last year. But when the impression was exhausted the publisher did not see his way—the author tells us in the preface—to undertake a second edition. Nor could Mr. Chapman find a publishing house in the United States willing to accept the book. He has accordingly himself published the second and enlarged edition in India. It is, we think, regrettable that the volume should not be given a wider circulation than publication in India is likely to afford. For it presents a picture of India which well deserves to be studied by Englishmen, and for that matter by Americans also, in view of Miss Mayo's book.

Mr. Chapman's object is, as he puts it, "to reveal the character of India to the rest of the world." The publication of "Mother India" was the immediate cause of his collecting together the material upon which the book is based. He deems it to be imperative that our judgment of a foreign people should always be so full that it cannot be reasonably charged with onesidedness. And thus he argues that a foreigner's book on India should say an impressive word on what is most lovable in the Indian character. His quarrel with Miss Mayo is that she has unwarrantably stressed the dark side of the Indian picture, and has utterly failed to appreciate those better and brighter characteristics which a fuller and deeper knowledge of the people would have revealed to her. He makes no attempt to refute her arguments point by point: "I think hers was a book to strangle outright, and the only way to do that is to present another picture of India; one that will lead the more generous to say: 'Then that is your India.'"

Mr. Chapman has lived for many years in Bengal. It is with the Hindus of that province that he is best acquainted; and it is their character that he endeavours to reveal. He gives many interesting quotations from Indian authors, for instance, Dr. Rabindranath Tagore and Mr. Dhan Gopal Mukerji. To these he adds various impressions of his own—sketches of Indian life, and anecdotes and stories of Indian friends and acquaintances. He has certainly succeeded in presenting to the reader a view of India and of Indian character utterly dissimilar from the gloomy view presented by Miss Mayo and other recent writers. He is always interesting, but is apt to be a little discursive, and some of the sketches and stories would probably lose nothing by compression.

It might, perhaps, also be charged against him that he has a tendency to depart from his own rule that the judgment of a foreigner ought not to be one-sided. But everybody who has lived in Bengal, and has taken the trouble to know the people, will readily admit that there is much in the Bangali character to admire and to commend, much that is attractive and winning. To all these good qualities Mr. Chapman is keenly alive. He is in the fullest sympathy with the people; and his picture, although it may be idealised, bears the unmistakable impress of sincerity.

THE VICEROY'S VISIT.

An India Office *communiqué* states:—

"It is understood that since the news of his intention to leave India in June for a short visit to England became known, His Excellency the Viceroy has received several invitations to attend social functions of a public nature during his stay here.

"Lord Irwin is reluctantly compelled to refuse all such invitations as, after his arrival in the middle of July, he does not intend to be in London except when required for official work at the India Office, and has therefore decided to accept no engagements of a public or quasi-public character. It is hoped that this early announcement of his plans will prevent unnecessary trouble and disappointment."

INDIAN NOTES.

(Continued from page 419.)

is avowedly revolutionary, alike in conception and action. For the outrage must at least bring home to those who have professed to read the most reactionary intentions into a very obvious precautionary measure the effect which their inflammatory and passionate declarations must have produced on the ardent and impressionable youth of India.

The Commissions Return.

The Chairman and members of the Statutory Commission are due to leave Bombay for home on Saturday. The final conference was held at Delhi last week, the British Commissioners, the Indian Central Committee and the Provincial Committees attending. It is said that as many as seventy-two representatives were present, which is in itself evidence of the extent to which Sir John Simon and his colleagues have consulted Indian opinion. It may be safely said that no previous Royal Commission on any subject has ever given the Indian people such abundant opportunities of making their views known. The Conference, which was private, afforded the representatives a final chance of conferring together and of discussing matters with the Commissioners. As no report of the proceedings was issued rumour was immediately busy as to what had transpired. And it was said that Sir John Simon had hinted that the Commission would outline a Constitution capable of automatic expansion without the periodical investigations contemplated by the Government of India Act; and that he had instanced the Canadian Constitution as a model which might serve for India in certain respects. It is hardly necessary to say that Sir John Simon is, of course, far too able and experienced in public affairs ever to have made any such disclosures; and he lost no time in disavowing them. In a letter to Sir Abdul Ghaznavi he pointed out that no credence attached to the rumours; and that the views and recommendations of the Commission would be disclosed in their report and nowhere else.

SIR ALBION BANNERJEE.

An extraordinary issue of the Jammu and Kashmir Government Gazette expresses the Maharaja's appreciation of the valuable services rendered to the State by Sir Albion Bannerjee during the last two years in the Foreign Office, Department of Commerce and Industries and in connexion with the special investigation of the Committee which dealt with several important questions of retrenchment and reorganisation. His Highness extends to Sir Albion his best wishes for every success in his new sphere of activity. Mr. G. C. C. Wakefield, C.I.E., O.B.E., Development Minister, has succeeded Sir Albion Bannerjee in charge of the Foreign and Political portfolio.

Sir Albion Bannerjee left India last month on an extended tour of the Near and Middle East, during the course of which he proposes to visit Iraq, Syria, Palestine, Egypt, Turkey, Greece and Russia, proceeding thence *via* Scandinavia to London, which he expects to reach early in July. It is understood that on his arrival in this country Sir Albion will become Editor of a new non-party journal, for which he has received promises of support and co-operation from many political leaders in India and others interested in the development of Indian thought and culture.

Mirza Ali Mahomed Khan has been appointed by the Bombay Government to be Vice-Chancellor of the University of Bombay, in succession to Sir Chimanlal Setalvad, who held that post for twelve years. The new Vice-Chancellor, who graduated in 1894, is a solicitor by profession and brother to Mr. Justice Mirza Ali Akbar Khan. He is a well-known Persian and Arabic scholar, who has for many years taken an active part in University affairs, but what renders his appointment peculiarly interesting is that he is the first Muslim Vice-Chancellor in the history of the University.

THE END OF A CHAPTER.

The Statutory Commission has now finished its investigation in India. During the Commissioners' first visit in February and March of last year they made a preliminary survey of their undertaking. This they have followed up during the past six months by a detailed and minute inquiry, in the course of which they have recorded a mass of evidence from all classes of the people. They have visited every province of British India; and they have examined the position, the grievances, and the recommendations of every community, race and creed that appeared before them. We agree with Sir John Simon that it is impossible to exaggerate the importance of their task. They are not, it is true, settling and deciding out of hand the future Constitution of India. It is, of course, for Parliament, and not for them, to decide what that Constitution is to be. Their duty is to frame, and to submit to Parliament, a fair, honest and sympathetic report on the conditions obtaining in India. For, as Sir John Simon said at Ootacamund last month, if Parliament is to discharge aright its responsibility to India, it must in the first place have a fair, honest and sympathetic report before it. There is good reason to believe that the Commission will submit such a report. The whole trend of the investigation has been such as to indicate a thoroughly sympathetic attitude on the part of the Commissioners. And it is also satisfactory to note that the rumours of dissensions which were rife not long since have died away; and it may not, therefore, be too much to hope that the report will be unanimous.

When the Commission left for India last September we ventured the opinion that the boycott movement was dying, if indeed it were not already dead. We think that the events of the past six months have shown that this forecast was correct. The boycott has failed. Of that there is no reasonable doubt. It was launched as a protest against the decision of the British Government to make the Commission a Parliamentary body. The exclusion of Indians was held to be a gross insult to India. But it soon became apparent that unexampled opportunities of influencing not only the Commission, but Parliament also, were to be given to the Indians. There was consequently a sense of unreality about the boycott from its inception or very soon afterwards. And when Sir John Simon explained his proposed methods of working, namely, by means of a joint free conference as between the British Commissioners and a Central Committee and Provincial Committees, it was clear that the boycott must come to grief. Of the nine Provincial Legislatures all except the Legislative Council of the Central Provinces agreed to co-operate with the Commission, and to appoint each its own Committee. The Council of State came to the same decision, as regards the Central Committee. But unfortunately the Legislative Assembly failed to rescind the non-co-operating resolution which it had adopted by a very small majority early last year. In saying that the boycott has failed, we do not mean to suggest that all parties have co-operated with the Commission. Several groups have held aloof, but there has been no such general boycott as was threatened.

The non-co-operators are chiefly the members of the Congress or Nationalist party. They are mainly responsible for the document known as the Nehru report, which contains an outline of a Constitution for India on the basis of Dominion status. But the report has proved to be unacceptable to several important sections of the people. The Muhammadans are definitely opposed to it. In fact, opposition to it would appear to have had the effect of closing up the cleavage which has been apparent for some time in the Muslim ranks. What the Muhammadans apprehend is that they may become subject to a Hindu administration. And they insist that the future Constitution of India must contain proper safeguards for their rights, particularly in such matters as separate representation, a proportionate share in the services, non-co-operation in religious affairs, and language and education. As was stated by the Ahmaddiya community in the memorandum

which was noticed recently in these columns, "without such safeguards the reforms will be no reforms for the Muslims, and the representative form of Government will merely exist in name." As we have indicated, the Muhammadans are not alone in their attitude to the Nehru report. Not only has it been rejected by those who, like the Muhammadans, think that it goes too far; but those politicians who form the extreme wing of the Nationalist Party dislike it because it does not go far enough. And they maintain that nothing short of the complete severance of the British connexion will satisfy their aspirations. These men took command of the session of the National Congress which was held at Calcutta last Christmas. And the result was that the Congress adopted an absurd resolution to the effect that unless the British Parliament, on or before December 31, 1929, should adopt the constitution defined in the Nehru report, "the Congress will organise non-violent non-co-operation by advising the country to refuse taxation, and in such other manner as may be decided upon." This resolution obviously means the rejection of the Nehru report, seeing that its framers must have known perfectly well that it will be impossible for Parliament to come to a conclusion by the end of 1929. Its adoption was really a victory for the extreme section and was understood to be such. The resolution was, in fact, an intimation that, unless Parliament accepts the demand of the Congress civil disobedience and other forms of non-co-operation will be entered upon. It would not be easy to imagine more convincing evidence of the failure of the boycott.

Such being the political situation, it cannot be said that the Statutory Commission will frame its recommendations in particularly favourable circumstances. It will remain to be seen whether Mr. Gandhi and his friends who supported the Congress resolution will or will not attempt to carry out their threat. At first sight it would appear to be unlikely that they will move. Non-co-operation has failed so completely in the past that it can have but very few real supporters left. It must not, however, be forgotten that at the present time there is a good deal of labour unrest and active communist propaganda in India. And it may be that non-co-operators are looking to these movements for support. But even so we do not imagine that either the Government or the Commission will be greatly perturbed. At a time like the present it is clearly the duty of all in authority to pursue their declared policy calmly and deliberately, and to refuse to be unduly influenced by agitation or violence.

KARACHI-DELHI AIR ROUTE.

After prolonged consideration the Standing Finance Committee of the Legislative Assembly has reached a definite decision upon the conditions to be attached to the proposed extension of the Croydon-Karachi Imperial air route to Delhi and other Indian centres.

It is believed that at a meeting held last month complete agreement was reached on the terms to be offered to the operating company; and Government was authorised to carry out negotiations. The Committee sanctioned the required grant for a subsidy and for the preparation and upkeep of landing grounds, etc.

The operating company, it is understood, will be registered in India and will be under the complete control of Government. Government will secure three-fourths of the voting rights by holding 50 per cent. of the ordinary shares and the requisite number of deferred shares. The company will, it is understood, be required to provide for a 60 per cent. Indian directorate.

It is very likely that the service will start before the end of this year.

By 46 votes to 41 the Indian Legislative Assembly on March 28 restored the Salt Tax to twenty annas per maund. On March 22 the Assembly reduced the tax to sixteen, but it was expected then that the Government would get the Council of State to restore the tax and then urge the Assembly to confirm restoration.

THE SITUATION IN BULGARIA.

At a meeting of the Balkan Committee held in the House of Commons on March 13, Lady Muir gave an address on the present situation in Bulgaria. The following is a summary of her remarks:—

Bulgaria has recent "celebrated" the fiftieth anniversary of her liberation from the Turkish yoke. In the course of these fifty years she has touched the highest summits of glory, but to fall almost at once into the abyss of a national catastrophe. She has suffered from the mistakes of ill-advised leaders, from the pin-pricks and sword-thrusts of ill-disposed neighbours, and from the inexperience of some of her politicians; but her people—the peasants who represent 75 per cent. of the Bulgarian nation—have stood the test. There have been no revolutions and no Bolshevism, none of the serious outbreaks that have taken place since the Armistice in Germany, in Austria and in Hungary. The troubles that visited Bulgaria in 1926—due to Soviet propaganda—were soon quelled. Yet, since the War, occasions for the spread of Communism in Bulgaria have been innumerable, greater perhaps than in most countries, the principal being the accumulated years of fighting; the burdens of the Peace Treaty; the loss of territories peopled by Bulgarians; the presence on Bulgarian soil of destitute Bulgarian, Russian and Armenian refugees; the load of Reparations; and disillusion after disillusion, following conference upon conference with regard to Bulgaria's promised outlet to the *Ægean*. All these political and economic causes were, moreover, fostered owing to Bulgaria's position on the map by the immediate neighbourhood of Russia. Indeed, when Moscow chose Bulgaria for its victim in 1925, it had every reason to believe that it had made a wise selection in a defenceless country, surrounded by rivals. And yet, owing to the common sense of the Bulgarian peasant, Bulgaria instead of becoming a Bolshevik out-post has been since the Armistice the buffer State between Soviet Russia and Western Europe.

To summarize the position of Bulgaria to-day: this constitutional monarchy, ruled by the able, democratic and gifted King Boris, has, since January 1926, a government whose members belong to the co-called Democratic Entente. This party is largely composed of conservative middle-class elements. It originated in an opposition block comprising all the political parties of Bulgaria against the Agrarian Party, under Stambolisky. The present Bulgarian Prime Minister is the capable and hard-working M. Liaptcheff, who is ably seconded by M. Bour-off, Minister of Foreign Affairs, and by Monsieur Molloff, Finance Minister. The Cabinet is responsible to the Parliament or *Sobranie* elected last on May 29, 1927, for four years. On a total of 273 the Government have 168 representatives in the present *Sobranie*. The other Bulgarian political parties are:—

The Agrarian Party, composed largely of remnants of the late M. Stambolisky's followers. Since the death of Stambolisky in June, 1923, there have existed in the Agrarian Party two sets of opinion—the Extremists under Yordanoff and the Moderates led by George Markoff and Al. Radouloff. Since Stambolisky's death, and owing to their perpetual quarrels, the Agrarians are a weak and divided party. They number 46 members in the *Sobranie*.

The National Liberal Party, originally founded by the great Stambouloff is now split into three groups with 16 Members of Parliament; (they were in power in 1915 under M. Radoslavoff). Leaders: M. Smiloff and M. Tontcheff.

The Democratic Party, with a programme similar to that of the Government; leaders: M. Alexander Malinoff and M. N. Muschanoff. Twelve Members of Parliament.

The Macedonian Group, or party, whose members are elected from the Macedonian districts of Bulgaria. Leaders: M. Karanjulof, Dr. Stanisheff. Eleven Members of Parliament.

The Social Democratic Party, similar to the British Labour Party, is now in alliance with the Agrarian Ex-

tremists. Leaders: M. Yanko Sakeuzoff; M. K. Pastukhoff. Ten members of Parliament.

The Artisans Party or Progressists, under M. Tabokoff, have five Members of Parliament and represent the interests of workmen.

The Moderate Communist Party, with M. Christo Kalaydyeff have only three Members of Parliament.

The Communist Party proper or Bulgarian section of the Third International was suppressed as a political entity in April 1925.

The Radical Party or dissidents from the Democratic Entente, are only represented by two Members of Parliament. They have advanced democratic reform tendencies under M. Kosturkoff and Professor Stoyanoff.

With his majority of 105, M. Liaptcheff has not much to fear from this divided opposition.

Elections took place on February 10 for the new Municipal Councils in all the towns of Bulgaria, except Sofia, where they have been postponed until May. The Government received 70,314 votes as compared with 80,598 given to the Opposition, who by its divisions has permitted the Democratic Entente to gain more than 50 per cent. of the municipal votes. At the present moment, the home politics of Bulgaria appear to be calm and satisfactory, and King Boris has just gone abroad on a well-deserved holiday. He has not left the country since the autumn of 1927 and would not have passed the frontier, unless he had felt sure that the time was propitious.

There are three matters that call for reference: (1) The Reparations payments; (2) the Minorities question; (3) Bulgaria's relations with her neighbours.

Reparations.

The Bulgarian Government by increasing taxation, reducing salaries, and cutting down administrative expenses to a minimum have managed to balance the Budget for the coming year. Among the so-called "Secondary" payments that it has to meet are the following:—

(a) The agreement of March 28, 1924, fixed the cost of the army of occupation at 25 million gold francs (or £1,000,000), the amount to be paid in ten years with interest at 5 per cent.—the total will, therefore, be 31 million five hundred thousand gold francs. So far Bulgaria has paid 15 million five hundred thousand gold francs towards this debt; and 15,976,000 gold francs remain to be paid before September 1934.

(b) The present cost of the International Commission of Reparations in Bulgaria amounts to £7,400 per annum.

(c) The upkeep of the Greco-Bulgarian Commission for the so-called voluntary emigration costs Bulgaria £37,313 per annum.

(d) For the Tribunals of Arbitration, as foreseen by the Treaty of Neuilly (Art. 188), Bulgaria spends £4,470 per annum.

The total amount of Reparations Payments as fixed by the Treaty of Neuilly (Art. 121) was 2,250,000,000 gold francs (representing almost half the War Indemnity claimed by Germany from France in 1871). However, owing to the personal intervention of the members of the Inter-Allied Commission of Reparations, and the support of the British Delegate in particular, it was decided, under the Protocol of March 21, 1923, that Bulgaria should pay to the Allied and Associated Powers—within sixty years—the sum of 550,000,000 gold francs with interest at 5 per cent. Under this Protocol, Bulgaria is to pay yearly, on April 1 and October 1, up to April 1, 1983—two instalments which will be increased at each term, until October 1, 1934. The first instalment fixed was of 5 million gold francs. From October 1, 1934 up to April 1, 1983—the yearly payment will be 43,395,336 gold francs.

The reduction of Bulgaria's Reparation payments was obtained by the late Agrarian Prime Minister, Stambolisky, and is greatly due to the determined way in which he conducted the negotiations with Sir Elliott Colvin, Sir Basil Blackett, and the French members of the Commission, asking for no favours but simply setting down plain facts.

To return to Bulgaria's yearly payments as fixed by the Protocol of 1923—namely, 5 million gold francs twice a year (10), at first glance—to a British subject—the amount does not seem too overwhelming. Bulgaria fulfilled her obligations loyally until last year—without reminding the Allied and Associated Powers that moratoriums had been granted both to Austria and to Hungary. Last April the terrible blow of the earthquake shattered Bulgaria yet again, and under Article 122 of the Treaty of Neuilly the Reparations payment due in October, 1928, was postponed for six months. This act of *just kindness*, so to speak, was followed by the conclusion of the long-awaited Stabilisation Loan of £5,000,000—half a million to be allotted for the earthquake damages. However, the disasters and losses of all kinds caused by the earthquake amount to a sum of seven milliard leva, or about £10,000,000, equal to the whole Budget of the Bulgarian State.

The members of the Inter-Allied Commission living at Sofia have acquainted the Reparations Commission in Paris with the economic plight of Bulgaria—through detailed reports; and for the present the question of the temporary suspension of Bulgaria's next payment of 5,000,000 gold francs is being considered in Paris. The Bulgarian Government awaits the verdict of the Commission—consisting of the five International Delegates' decision by vote—with the greatest anxiety. According to Part VIII., annexe 2, of the Treaty of St. Germain (September 10, 1919), the delegates must be: a representative of the United States, one of Great Britain, one of France, one of Italy, and one delegate to represent and to be appointed on the principle of mutual consent by: Greece, Poland, Roumania, Yugo-Slavia, Czechoslovakia. These five men will have the right to examine the financial questions relating to Bulgaria—and to *postpone* (only to *postpone*) for one or two periods of six months each—the payment of the Reparation annuities, should they consider this opportune and justified.

At the very moment when the new Greek Minister at Sofia is endeavouring to convince the Bulgarian Government that Greece and her Prime Minister entertain feelings of sincere friendship towards Bulgaria, M. Venizelos declares to the Greek Parliament and the Press that he will be opposed to any postponement of Bulgaria's Reparations. According to the Greek Press, if Bulgaria were to obtain a moratorium, Greece would then have the right to repudiate her War debts towards the principal Allied and Associated Powers *pro rata* with her allotted quota of the Bulgarian reparations. As 12 per cent. of the Bulgarian reparations have been allotted to Greece, this reparation would involve a sum of 1,200,000 gold francs, in two payments.

Minorities.

As regards the Minorities question, Bulgaria has followed the last meeting of the Council at Geneva with the deepest interest, and is full of gratitude to Sir Austen Chamberlain for his defence of the Bulgarian claim regarding the bonds due to Bulgaria by the Greek Government in favour of the Bulgarian refugees dispossessed of their properties in Greece. It is to be hoped that this question may be solved before the next session of the Council.

Foreign Policy.

To turn now to Bulgaria's relations with neighbouring States. As regards Turkey, the situation is excellent and full of friendliness on both sides. A Treaty of Arbitration and Neutrality has been signed at Angora between Bulgaria and Turkey. Greece has just sent one of her best diplomatists as Minister to Sofia. Apart from the Reparations question, there has been a strong *rapprochement* lately between the two nations. Bulgaria is sending an able young Minister to Athens; a treaty of commerce is being drawn up, and a convention of extradition regarding criminals has just been signed at Sofia by Greek and Bulgarian delegates. In regard to Yugoslavia, I think I

may safely say that Bulgarian public opinion hailed King Alexander's *coup d'état* with satisfaction and hope, knowing him to be the warm partisan of a friendly union between the two Slav neighbours too often divided by feuds. On February 25 last these hopes were partly justified by the meeting at Pirot of a conference between a delegation appointed by the Bulgarian Government and one representing Yugoslavia—on the initiative of the personal Government of King Alexander. The attempt to place relations with Bulgaria on a more friendly footing was a move in the right direction; the opening of the frontier closed by Yugoslavia more than a year ago was another. It is hoped that a treaty of commerce may soon be concluded between Bulgaria and Yugoslavia. Economic interests would soon lead to a political understanding. As regards Roumania, I am glad to say that the relations are more friendly since the advent of M. Maniu than they have been for some time between the two countries. But the situation of the Bulgarian population of the Dobruja is still very critical owing to the frequent incursions and acts of vandalism in the Bulgarian villages of bands of Kutzo-Vlachs, and to corrupt administration.

Speaking generally, Bulgaria's one wish, one aim, one ambition is to live on friendly terms with her neighbours. This has been her foreign policy since the Armistice, and I am proud to say that she has not swerved one inch since from this programme of peace. But the question involves two sides; all the Allied representatives at Sofia can prove that Bulgaria has done everything in her power to meet the wishes of her neighbours, often sacrificing both her pride and her interests in order to remain a factor of the peace of Europe. The other side, including Roumania, and more specially Yugoslavia and Greece, have not such a good record to their credit.

The opinion of the Bulgarians is that the peace of the Balkans depends entirely on the fair treatment of the Minorities of Macedonia and the Dobruja. The Bulgarians do not claim a revision of the Treaty of Neuilly, but, on the contrary, the fulfilment of the Minority treaties, which admit, stress, and sanction the rights of these populations. The Bulgarians themselves can do nothing to secure this fulfilment; every political move of theirs in this direction is interpreted by neighbours as a wish for the revision of the Treaty of Neuilly. Desirous to avoid any blame, the Bulgarian Government have, therefore, adopted a policy which I might call that of "silent expectation"; they await the decisions of Geneva. Unfortunately, the eternal delays, postponed decisions and hesitations of the Council of the League, regarding the Minorities, may end by exasperating the populations themselves, whose patience has been taxed to breaking-point. The words of Joseph de Maistre, "Bury a Slav idea under a fortress and it will blow up the fortress," are as true to-day as they were a hundred years ago. I know that the question is enormous, affecting the whole course of international relations; but it might be dealt with, I think, by sections, starting with the most dangerous spots.

Following the abolition of four Yugoslav Ministries, the respective Ministers tendered their resignations to the King. The King accepted those of Dr. Tugomir Alaoupovitch, Croat Minister of Public Worship, and of Dr. Vrosh Krul, Dalmatian Minister of Public Health, but reappointed Dr. Kumanudi as Minister without Portfolio in order to make it possible for him to continue to act on behalf of Dr. Marinkovitch, Minister for Foreign Affairs.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

THE WEEK AT HOME

London, Tuesday Morning.

Liberals and Conservatives.

It is obvious that, as the General Election approaches, fear of a Socialist Administration is the dominating factor in a certain type of mind. Hence the number of suggestions that the Liberals and Conservatives should unite in face of the "common peril." These suggestions usually come, I think, from Conservative quarters, which appear to imagine that most Liberals are only little Conservatives gone wrong in some unaccountable but not very important way.

But the Liberals will have none of it. They've got Lloyd George, they got the men, they've got the money too; and, by Jove, they're going to have a shot at re-taking Constantinople. Possibly—I do not know—if Mr. Lloyd George were dead, and his moneys did not exist, many Liberals would be inclined to make an electoral pact with the Conservatives. But at the moment such a coalition is simply not practical politics. For what may happen after the Election we must wait and see.

Political Broadcasting.

How variously the different Parties reckon their chances may be gathered from the pother which is attending the B.B.C.'s announcement that an agreement has been arrived at over the use of broadcasting by the three parties before the Election. The compromise is this: for the period before the dissolution the Conservative claim of equal division between Government and Opposition speeches is allowed, and for the actual election period the Opposition claim of equal treatment for each of the three parties is allowed.

It has, of course, pleased nobody. But it will be surprising if full available use is not made of the microphone by the three aspirants.

What it all amounts to it is difficult to assess. For myself, I should have thought that public meetings and a reading of the Press would still count for more than the loud-speaker. Somehow or other one believes a thing more if one can see the fellow who makes the statement, or can see it in the notoriously hallowed print.

Deaths on the Roads.

If one were bluntly told that during every day last year over sixteen people were killed through street accidents in Great Britain, one would scarcely believe it. Yet it was so. Each year the number of accidents increases. In 1928 there were 6,138 deaths and 164,838 injured through street accidents. It is an appalling total.

Almost all these accidents were caused by mechanically propelled vehicles. The greatest Juggernauts were private cars and taxi-cabs; then come motor-cycles, motor vans, and lorries; and then motor-buses (the best driven vehicle of all) and coaches.

A curious feature of the statistics just published is that the motor-cyclist with his female appendage on the pillion who has been so much criticised does not come very high in the list. For this combination was responsible only for 488 deaths and 12,606 injured—compared with the 895 killed and 26,078 injured of the motor-cycle without pillion rider.

London, a terrifying place to live in, alone was responsible for 1,223 deaths. Is all this carnage in the country due simply to carelessness and recklessness, and cannot the ways of traffic-control and communication be made to take smaller stock of that rapidly declining feature of our population—the pedestrian?

Suffolk in the News.

Perhaps of all the counties in England Suffolk is still, what has been claimed for country in the West, "the quietest under the sun." Once it was great, a staff and symbol of England's mediaeval and Elizabethan power; but in the great mechanical changes that have come over the island since those times it has, fortunately, been over-

looked. Its present importance (as things are reckoned to-day) may be judged by the infrequency with which it "gets into the papers."

Recently, however, Suffolk has been in the limelight. First, Pakefield has made known its fears of going the way of Dunwich and Slaughden and many other places—into the sea. Erosion has here gone on at an unusual rate: in the last two years the ocean has gained eighty feet. The only feasible scheme of protection, it seems, is for Lowestoft to extend her defences to Pakefield and beyond. I do not think people quite fully realise the problem. For behind Pakefield cliffs (which are being daily nibbled away) the road is below sea-level. Once the sea reaches that road, Oulton Broad and the valleys of the Yare and the Waveney become sea. East Anglians who know their history are recalling that the sea once reached Norwich. If the prevention of this is not a State obligation, I do not know what is.

Another feature of Suffolk which has found itself unable to resist a remorseless foe is the picturesque light railway which runs from Halesworth to Southwold. This 3-ft. gauge line could not make itself pay in face of the keen motor competition, and after fifty years of running through delightful country—pinewoods, heath and marsh lands—by the Blyth river, through Wenhaston, Blythburgh, and Walberswick, closes down next Thursday. I am sorry, for it was one of the few mechanical things that can build themselves into a landscape.

And the third reason of Suffolk's appearance in the news is the publication of the desire of Southwold's Corporation to build houses on the well-known Common. For ventilation of this matter we have to thank *The Times*, which, with its unfailing instinct for selecting local news of national importance, has explained the situation fully. Briefly it is this. Southwold, a delightful resort, suffers, like many other resorts, the spectacle of certain houses inhabited only for a few months in the summer. It, or its Corporation, wishes to build a few more houses. But no adequate ground (as all those who know Southwold are aware) is easily available except the Common. Yet enclosure of a Common is something that goes against the grain of most Englishmen, who have suffered much in this way in the past from unscrupulous rich landowners. Southwold, then, is agitated as perhaps it has not been since the famous battle with the Dutch in 1672. Obviously it is improper for mere visitors to dictate to Southwold, but it must be hoped that a way of avoiding building on the Common will be found. The main chance seems to lie in a very sporting offer by a local landowner to give a smaller piece of ground to the Corporation. If his scheme goes through, the name of Loftus should be cherished both by the Southwold people and the visitors to that tranquil spot.

The "Realist."

The appearance of a new monthly journal is not in itself an event in England, for such things, particularly literary journals, regularly come and go: and their coming generally seems more important than their going. But a new monthly journal has just been started which seems to be peculiarly a product of our time and may fill a gap which has for some time been felt but which hitherto no one has had the courage to attempt to fill. It is called the *Realist*, and is published by MacMillan at two shillings a copy.

Its scheme is to "cover" science, industry, art, and economics, in such a way that the normally intelligent man may understand them: not so much to popularise the specialist as to explain him. In other words, a complete survey of scientific humanism as it is at present manifested is the aim of the *Realist*, which, if the first number is a true criterion of its worth, may well succeed in a very difficult ambition. I advise my readers to have a look at it, and consider whether, by means of its articles upon literature, architecture, science, music, agriculture, philosophy, and so on, they may not develop a synthetic view of life.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

April 11, 1929 (New Style).
 March 29, 1929 (Old Style).
 Dhulkaada 1, 1347, A.H., of the Muslim Calendar.
 Nisan I, 5689, of the Jewish Calendar.

Dr. Greig, Bishop of Guildford, is paying a visit to Yugoslavia.

Lady Helen Brocklehurst arrived in London on April 4 from the Sudan.

Sir Victor Sassoon has arrived in London from India and is staying at the Savoy Hotel.

Earl and Countess Grey will return to England from India during the middle of this month.

Viscount and Viscountess Ednam have arrived at 96, Cheyne Walk on their return from Egypt.

Sir Malcolm Hailey, Governor of the United Provinces, left Marseilles on April 3 on his return to India.

Mr. E. S. Edgar has returned from Egypt and the Riviera to 48, Albert Court, Kensington Gore, S.W.

Sir Charles Buchanan left London on April 4 to join the P. and O. s.s. Viceroy of India at Marseilles, for Bombay.

Lord and Lady Bellew, who have been spending the winter in Egypt, arrived at Plymouth on April 4 in the s.s. Macedonia.

Lady Chetwode, who has been staying in Egypt on her way home from India, will arrive at 44, Grove End Road, N.W., on April 15.

Air Vice-Marshal Sir Geoffrey and Lady Salmond arrived at Marseilles on April 5 in the P. and O. s.s. Rajputana on their way home from Bombay.

Sir Valentine Chirol, who is spending a short time on the Riviera after his stay in Egypt, will arrive at 34, Carlyle Square on April 15.

The Roumanian Minister left London on April 4 for two days in order to meet, in Paris, M. Mironesco, the Roumanian Foreign Minister.

Sir Ronald Storrs, Governor of Cyprus, and Lady Storrs sailed from Cape Town on April 5 by the Windsor Castle, after a visit to South Africa.

The marriage of Mr. Edward Herbert Keeling, M.C., and Miss Martha Ann Darling Munro, daughter of Mrs. William James Tayler Munro, of Docket Eady, Sheperton-on-Thames, was celebrated in Lincoln's Inn Chapel, London, on April 6. The Rev. H. E. Simpson officiated, and the bride was given away by her stepfather, Mr. William Munro. Mr. Howgrave Graham acted as best man; and there were four bridesmaids, a Maid of Honour and a child attendant. The reception was held in the Old Dining Hall of Lincoln's Inn, which has recently been restored.

Mr. E. H. Keeling was taken prisoner of war in Kut, but succeeded subsequently in effecting an adventurous escape from Anatolia and made his way across the Black Sea to Russia. He is now Conservative candidate for the Central Division of Southwark.

DOMESTIC ANNOUNCEMENT. BIRTH.

STANCIOFF.—On April 1, at Sofia, to Mr. and Mrs. Ivan Stancioff—a son (Ivan Nicholas).

Sir Geoffrey and Lady Corbett arrived at Marseilles on April 5 from Bombay in the s.s. Rajputana.

Sir Reginald and Lady Glancy, and Lady Devereil were among the passengers who arrived at Marseilles on April 5 in the P. and O. liner Viceroy of India from Bombay.

The Marquis Paterno di Manchi, Italian Minister Plenipotentiary in Egypt, left Cairo on April 7 for Cyrenaica in order to be there during the visit of the Governor of Tripoli to that province.

Vlora Pasha Jelaeddin arrived in Egypt on March 22 for the purpose of presenting a birthday gift to H.M. King Fuad from H.M. the King of Albania, consisting of two beautifully jewelled swords of antique workmanship.

Sir Kay and Lady Muir, with Miss Fedora Stancioff, left London to-day (April 11), for a month's tour, during the course of which they will visit the Bay of Naples and Sicily and spend some time in France.

Abdel Fattah Assal Bey, who has been appointed Egyptian Consul in London, previously held a similar post in Manchester, and prior to that in New York. He has had long experience in business and banking in Egypt, and takes a keen interest in sport.

The Archbishop of Canterbury left Victoria on April 1 by the Golden Arrow train for his cruise in the Mediterranean. He was accompanied by his secretary and one or two friends. Dr. Lang will visit Athens, Alexandria, and Jerusalem. The cruise will be made in Mr. J. Pierpont Morgan's yacht Corsair.

Abdel Malek Hamzeh Bey has been appointed Counsellor to the Egyptian Legation in London, where he is no stranger. Hamzeh Bey was a prominent barrister in Egypt. Before the War he was a keen Nationalist and during the War years lived in Germany and Switzerland. On his return to Egypt he was closely associated with Adly Pasha, whose Delegation to London he accompanied in 1921. He speaks English, French and German fluently.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.

Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan. Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

Book Reviews

A CAGED "WANDERVOGEL."

"FROM LEIPZIG TO KABUL." By G. Stratil-Sauer. Translated by F. Whyte. Illustrated (London: Hutchinson & Co 18s. net).

The author, as a young graduate of Leipzig University, became possessed of the desire to see the more unknown parts of the world and to learn something of them. But he had neither money nor influence, and the first part of the book tells of the pertinacity with which he provided himself with a little of both, and achieved his desire in being able to set out as a travelling agent of various firms. It is to be hoped that the business houses responsible for his motor cycle and his camera have done well out of it. Certainly their wares were good, and we are grateful to the latter for making possible the many excellent and most interesting pictures which are included in the volume.

His route took him to the southern portions of the Black Sea, through Eastern Anatolia to Armenia and Persia, and thence, by way of Iraq, to India and Afghanistan. His notes on his adventures are both interesting and unusual. He had great luck, for he seems to have displayed but little common sense in his studies. Thus, he made a street map of Trebizond and wandered about the neighbourhood making a geological survey, apparently going out of his way to arouse the suspicions of the Turkish officials, who, indeed, appear to have treated him, on the whole, remarkably well. Some of his generalisations, like most of his "purple passages," we could very well have done without, but he has some remarks to make on the luck of the present Shah of Persia's coming on the scene just when motor transport was making it possible to unite the country which are interesting. Throughout he travelled in the true *Wandervogel* spirit, and it is this spirit which makes his pages such pleasant reading.

His troubles began when, about thirty miles from Kabul, a wild fellow on horseback laughingly challenged him, on his motor cycle, to a race. When, after humouring his rival for a time, he put on speed, the Afghan's horse shied and threw him. Seeing that temper had mastered the Afghan, who was getting his rifle ready to shoot him, Dr. Sauer was, at last, forced to use his revolver in self-defence and crippled his man, who died nine days later. The result was his arrest on the charge of murdering a believer, and a trial which took, with very

many interruptions, nine months. During all that time, he was confined in the Kabul Jail, and the most interesting part of the book concerns his experiences, physical, mental and moral, while there. At last, after a sentence of four years' imprisonment had been passed on him, he was unconditionally pardoned and straightway took the quickest route home.

It is a curious story and its truthfulness and restraint are evident on every page. We are glad that he set out his adventures in print and that they have been given to us in English. Incidentally, the book gives a delightful impression of the author, though it is clear that any such intention was far from his thoughts.

On the whole the translation is well done, but it is a thousand pities that the proper names in Persia and other Middle Eastern countries are reproduced in the German transliteration of the original. Such words as "Aserbeidschan" and "Dschoulfa" are almost unintelligible to an English reader, while it takes time to realise that a "Sajed" is a descendant of the Prophet. C. S-W.

THE FUTURE OF CIVILISATION.

"KALKI, OR THE FUTURE OF CIVILISATION." By S. Radhakrishnan (London: Kegan Paul. 2s. 6d.)

The latest addition to Messrs. Kegan Paul's "To-day and To-Morrow" Series is a little book by the Indian philosopher, Professor Radhakrishnan, upon the future of civilisation. This subject is very much "in the air" at the moment, and it is particularly useful to have the views of an Oriental thinker to supplement, to modify, or to contradict certain theories that have attained some popularity in the West.

The author at once reveals himself as opposed to the fashionable school of Spengler, for although he perceives that the outward uniformity of the world, which is increasing, is matched by no inner uniformity—rather the reverse—he declines to believe that there will be any more regional civilisations. The future civilisation, in his opinion, will rise to a universal vision of man and of human life. "The unity of civilisation is not to be sought in uniformity but in harmony. . . . The faith of the future is in co-operation and not identification, in accommodation to fellowmen and not imitation of them, in toleration and not absolutism."

After examining the pass to which the world has now come, the sciences of psychology and sociology, biology and anthropology having undermined the foundations of orthodox theology everywhere, he states the problem; what is civilisation? He realises that the world is but half-civilised, yet he is an optimist. There must, he thinks, be a religious revival, a religious reconstruction. Not that any universal religion is possible, or even desirable—"A single religion for all mankind will take away from the spiritual richness of the world." In other spheres than the religious one he admits that the signs are not hopeful: internationalism, for instance, on which he appears to place considerable hopes, is but a poor growth. He therefore falls back on religious idealism as "the most hopeful political instrument for peace which the world has ever seen."

This is a thoughtful little work, without being in any way profound. Certainly it should be read by all who realise that the future of civilisation is at stake, and how great a part the East is bound to play in that future.

Major-General the Hon. Sir Reginald Arthur James Talbot K.C.B., late 1st Life Guards, of York Terrace, Regent's Park N.W., and States House, Medmenham, Marlow, Bucks, at one time A.D.C. to Queen Victoria, and a former Governor of Victoria, Australia, from 1860-74 Conservative M.P. for Stafford, who saw service in the Zulu War, the Egypt Campaign of 1882, and the Nile Expedition of 1884-5, left gross estate valued at £73,216, with net personalty £70,785.

PERSIAN NOTES.

Railways.

Despite the bad weather steady progress is reported in the north and south. According to newspaper reports over half a million pounds has been expended to date by the Railway Syndicate on Government behalf.

Khoramabad Road.

Owing to the exceptionally bad winter and the newness of the road there have been several landslides, and the road has been closed for two weeks. It will be open again very shortly, and traffic is likely to be heavy and continuous during the summer months. Khoramabad is to be made into a garrison town, and both Khoramabad and Burujird will be developed considerably. All merchants have been already warned to have all goods consigned *via* Khor Musa (Shahpur) and not *via* Basrah in future.

Travel to Iraq for Persian subjects has long been difficult, and the Police Authorities have recently issued a strict prohibition order on the subject, threatening extradition proceedings against those who evade the Law. This and other measures have greatly helped to increase traffic on the Khoramabad and Bushire routes.

Air Service.

It is announced that Messrs. Junkers aeroplanes will be able to land in Baghdad after March 21, and the service between Baghdad and Teheran will be very much improved by direct communication between the capitals.

Messrs. Junkers announce the success of a trial flight carrying merchandise between Teheran and Bushire. One aeroplane carried 6,187 kilograms of merchandise and 29 passengers between various points on the route in the space of three to four days. The merchandise consisted largely of opium and similar commodities.

General News.

Hamid Kholoussi Bey, the recently appointed Minister for Egypt, has arrived, and has presented his credentials. Count Schulenburg, Minister for Germany, has left for Berlin on leave, and is expected to return in August.

Sir Denison Ross and Lady Ross are staying in Teheran as the guests of the Minister of Education, and advantage of his visit has been taken by the authorities to give those interested an opportunity of hearing him lecture on Persian literature and Art.

The Press has accorded Sir Denison Ross a warm welcome, and great interest and pleasure have been shown in his visit generally.

The new Commercial Treaty with Russia, regulating Customs and Trade details, is about to be signed.

The Educational Budget has been published, showing an increase of £28,000. The principal increases are allotted to Khuzistan, Fars, and the Persian Gulf for the improvement of education generally.

Later.

"Nowruz."

The Nowruz Holidays, celebrating the Persian New Year Festival, have just been celebrated. Unusually cold weather prevented the usual general exodus to the Caspian or to the country. The holidays, which usually occupy at least a week, were reduced, at the special recommendation of the Shah that four days were ample for Government offices and Parliament. Schools were closed for ten days.

The Budget.

For the first time for many years, as was pointed out by the Minister of Finance in his Budget Speech, the Budget for the new year 1308 (March 21, 1929 onwards) was passed before the close of the old year. The figures given in newspaper reports disclose a deficit, which is to be made up by new taxation, notably the Government Monopoly of Tobacco Trade, extra Slaughter House Taxation and Match Monopoly.

The total expenditure is estimated at just under seven million pounds. Increased expenditure is allocated to

the Army, Roads, Education, Health, Navy, Aerodromes. £10,000 is allotted for new aerodromes, and so on. The Roads Department is to be incorporated in a special administration with Communication services and a Budget of £404,000. The Khoramabad road, especially the Dizful-Ahwaz section, receives a special allotment, and all existing roads are to be extensively improved.

The only criticism offered to the Budget was regarding the increased Army expenditure and the Budget was approved almost unanimously.

It appears that the Income Tax Bill is unlikely to become Law till next year, as there is much preliminary detail to be worked out for its elaboration.

Railways.

Good progress is announced in both northern and southern sections despite very bad weather. Over seven miles have been laid in the north, and work on the Port at Bandar-i-Shah and at Bandar-i-Gez is progressing under the direction of German engineers. In the south even better progress is announced, and the Port at Shahpur (Khor Musa) is already in use for unloading material direct from ocean-going steamships.

Tobacco Monopoly.

The Bill establishing a Government Monopoly of import, export, and cultivation of all kinds of tobacco has been passed, and is expected to give a good yield. Private traders will continue to trade under licence, and the price of imported tobacco is expected to rise appreciably.

Slaughter Tax.

This Bill has also been passed, and will not only give increased revenue but will also enable the authorities to improve the sanitary conditions of slaughter houses all over the country.

Postal Services.

Owing to the reduction of transit charges in Iraq, a reduction by two-thirds is announced in the rates chargeable for overland postage from April 1. This reduction, together with the improved service expected from the direct air communication with Baghdad, will do much to popularise the Iraq postal route.

From the first week in April, Junkers aeroplanes will maintain a direct service to and from Baghdad instead of to Qasrshirin as at present.

Sir Denison Ross.

Sir Denison and Lady Ross left Teheran on March 17, after the Director of the London School of Oriental Studies had been received in a special farewell audience by the Shah. Sir Denison and Lady Ross made themselves very popular in Teheran, Sir Denison's lectures on Persian literature and history aroused great interest. Sir Denison lectured in English in the British Legation, in French to the foreign community, and in Persian to a most distinguished audience at the Ministry of Education.

Governor-General of Fars.

Akbār Mirza Saremad Dauleh has been appointed Governor-General of Fars, in which area his father, the late Zill es Sultan, was for long Governor-General.

The Turkish Grand National Assembly on April 2 ratified Turkey's participation in the Litvinoff Protocol.

THE PERSIA SOCIETY.

President : Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

NEWS IN BRIEF.

King Fuad expects to arrive in Berlin on June 10 on a state visit.

The Greek Chamber was prorogued on April 3 and will reassemble after the elections to the Senate.

In the course of under-sea exploration work at Rhodes, a Greek statue of Venus has been discovered.

It is announced that the Albanian Government will shortly give an order to a British firm for arms, uniforms, and equipment for its gendarmerie of about 10,000 men.

The Turkish Military Mission sent some time ago to Afghanistan to reorganise and train the army of ex-King Amanullah, arrived last week at Odessa on its return to Turkey.

King Alfonso of Spain gave audience on April 3 to the new Yugoslav Minister, M. Dragomir Yancovitch, who presented his Letters of Credence.

A railway-conference was opened at the Haidar Pasha Station on April 4 in which Iraqi delegates took part to settle outstanding difficulties regarding the Nisibin-Baghdad section of the railway.

Seventy Anglo-Catholics left London on April 2 on a pilgrimage to the Holy Land. They formed the fifth yearly pilgrimage in connexion with the Anglo-Catholic Congress. The leader is the Bishop of Argyll and the Isles, Dr. Kenneth Mackenzie.

The British School of Archaeology in Jerusalem has restarted its excavations on the prehistoric site at Athlit Caves, near Mount Carmel. The party consists solely of women, and includes Miss Garrod, assisted by Miss Kitson Clark, of Oxford, and Miss Ewbank, as well as an American lady student.

The Ministry of Public Works at The Hague states that the British Government has given its consent to the use of the aerodromes in Iraq for the aeroplanes making the service between Holland and the Dutch East Indies. The service will not be resumed before September, when it will run every fourteen days in both directions.

Sir Cyril Kirkpatrick, the harbour expert, who arrived last week Egypt, is being again consulted by the Egyptian Government on the scheme for enlarging Alexandria harbour. Sir Cyril Kirkpatrick was one of the experts consulted three years ago by the Egyptian Government on Egypt's harbour schemes.

M. Rouphos, President of the Athens "Society for the Protection of Animals," at the annual meeting announced the abolition of the dog-catcher, and thanked M. Venizelos for having ordered an annual grant to the Society, to which fines for cruelty to animals are also to be paid. According to new proposals of the Greek Premier, steamships are to be compelled to load and unload animals in a humane manner.

The Italian Minister to Greece on April 2 had an interview with the Greek Minister of Communications on the question of the Italy-Greece section of the British air line between London and Calcutta. The service will be taken alternately by British and Italian machines, the first, an Italian, reaching Athens to-day (April 11).

It is announced from Sofia that, as the decision of the Reparation Commission with regard to the request for postponement has not been made known, the Bulgarian Government has transferred to Paris 2,500,000 gold francs (£100,000), representing one-half of the payment due on April 1, and has requested the Reparations Commission to grant a respite for the balance.

Rear-Admiral Walter Somerville Goodridge, C.I.E., whose death occurred last week, was born in 1849, and entered the Royal Navy in 1862. He served in Octavia during the Abyssinian expedition of 1867. During the expedition to Suakin in 1884-5 he was employed in the naval transport department, and for three years subsequently he was Principal Naval Transport Officer in Egypt. During this period he qualified as an interpreter in Arabic, Swahili, Persian, and Hindustani, and made careful study of the problems of Indian nautical defence, which he was able to apply when appointed Director of Marine under the Government of India in 1898.

London: E. MARLBOROUGH & CO., Ltd., 51 & 52, OLD BAILEY, E.C.4

It is stated from Angora that in the pourparlers concerning the Syrian frontier, in which the French Ambassador to Turkey has been engaged, an agreement in principle has been reached.

The text of the agreement between Great Britain and Egypt relative to the Ottoman Loan of 1855 and other financial questions has been published as a White Paper (Cmd. 3305, price 2d.).

The Egyptian Government has approved of the appointment of Sir Murdoch Macdonald and Partners as the consulting engineers for the heightening of the Aswan dam.

The King of Albania has received messages of congratulation from all parts of Albania on the occasion of the introduction of the new Civil Code which supersedes the conflicting systems and ancient usages hitherto in force.

Tewfik Rushdi Bey, Turkish Minister for Foreign Affairs, will attend the meeting of the Preparatory Commission for the Disarmament Conference in Geneva in the middle of this month. The Turkish delegation will include Colonel Tewfik Bey, Secretary-General to the Ghazi Pasha, General Jevad Pasha, and Mahmud Bey, Deputy for Seerd. It is announced that from Geneva Tewfik Rushdi Bey will go to Rome to visit Signor Mussolini.

The will of Major Walter Middleton, O.B.E. (48), of El Frasher, Darfur, Sudan, Egypt, and care of Lloyds Bank, Limited, Cor's branch, Pall Mall, S.W., of the Sudan Political Service, formerly serving in The Shropshire Light Infantry (net personalty £2,091), has been proved at £2,219.

It is understood, according to *The Times*, that the Government of Iraq proposes to convert certain of its contemporary postage stamps into provisional air post stamps by overprinting pending preparation of a more definitive issue for that purpose. Air post stamps in seven or eight denominations up to 25 piastres are included in some picturesque issues of similar style and execution to those now in use, but with entirely new vignettes, in course of preparation in Paris for the Governments of Syria and the Lebanon. The regular postage stamps of this series range up to 50 and 100 piastres.

The mail for Egypt, which arrived by the Imperial Airways new service on April 3, was delivered in Cairo the following morning—three days earlier than it had been conveyed by the ordinary overland route. Sir Samuel Hoare (Secretary of State for Air), with Mr. C. Ll. Bullock (his principal private secretary) and Air Vice-Marshal Webb-Bowen (Air Officer Commanding R.A.F., Middle East), left Aboukir on April 4 for Luxor en route to Khartoum and Malakal.

THE PRESS IN EGYPT.

A dinner was held on March 15 to mark the first anniversary of the inauguration of a monthly Press luncheon for journalists in Cairo. Mr. A. S. Merton, Correspondent of *The Times*, to whom the institution of the monthly Press Luncheon was due, was in the Chair, and among the 120 guests assembled were: Aly Gamaledin Pasha, Under-Secretary of State for the Interior, Mahmud Fahmy El Keissy Pasha, Director-General of Public Security, Monsieur Van Den Bosch, Procureur-General to the Mixed Courts, Judge Crabites and Mrs. Crabites, Hassan Khan Piranzar, Persian Chargé d'Affaires, Eeman Bey (Director Protocol Service) and Mrs. Eeman Ahmed Shawky Bey (the Prince of Arab Poets), Mr. Smart, Oriental Secretary to the British Residency, M. Giron (Secretary to the French Legation) and Mme. Giron, M. Toni, First Secretary to the Italian Legation, Dr. M. Schaefer-Rümelin, Secretary to the German Legation.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

BIRD LIFE IN CYPRUS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Mr. George L. Houstoun advocates amendment of the law to protect wild birds, so as to prevent snaring by bird-lime. All will agree with him that the birds of Cyprus should be protected as far as possible. But provision should probably be made to allow snaring in the case of *beccaficos*. In the spring immense flocks of the migrating *beccafico* (black-cap warbler), called in Greek *ambelopoli* (vine bird), visit Cyprus, and are caught chiefly by bird-lime (practically the only method available). Besides being sold fresh, they are preserved, or pickled in *commanderia* wine, or vinegar, and sold largely, and much appreciated.—I am, etc.,

ROLAND L. MITCHELL.

22, Lansdowne Crescent, London.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

A Yugoslav Artificial Silk Factory.

A self-evident indication of the improvement of the general situation in Yugoslavia is provided by the activities of a group of British capitalists. This group, with which it is understood that the Hon. Henry Mond is associated, has acquired the Timber Distillation Company at Teslitz, and it is reported that with the co-operation of Yugoslav capital the group intends to establish an artificial silk factory in the country for the purpose not only of meeting the local demand for rayon products, but also of exporting artificial silks to markets further East. Sishak, one of Yugoslavia's industries centres, has been named as the site of this important enterprise. The association of the two enterprises—that of the wood-pulp factory and the artificial silk undertaking—scarcely needs explanation, for the latter will obviously draw its raw materials from the Teslitz factory. The one thing necessary to assure the success of this development would seem to be the certainty of a home market for the artificial silk products. Last year Yugoslavia's imports of silk and silk products amounted in value to between £450,000 and £500,000, and no one who realises the strength of the artificial silk concerns could believe that without special measures it would be possible to develop an artificial silk industry in the country—that is on a lasting basis. It may, I think, be assumed that, following the example of other Near Eastern countries, Yugoslavia will impose something akin to a prohibitive duty on imports of artificial silk articles in order to develop the new industry. By this means the home market can be assured to it, but it will obviously have to stand on its own feet as regards the export trade.

A Palestine Exhibition.

There will shortly be an opportunity for people to see in London something of the progress achieved in Palestine under the Mandate, as a Palestine Exhibition and Fair is to be held at the Queen's Hall on May 13 and 14. Goods are to be shown by many Palestinian firms, while English firms interested in Palestine will also be represented, and it is hoped that one result of the undertaking will be to increase trade between Palestine and Great Britain and the Empire in general. The exhibits will include samples of pottery, wine, oranges, grape-fruit, grapes, soap, preserves, honey, sweets, coffee, knitted goods and woollen wear, marble, leather work, lace, embroidery, cigarettes, perfumery, and Bezalel ware. On the first day of the exhibition Lord Plumer is to perform the opening ceremony and Viscount Cecil of Chelwood will do so on the second day. The proceeds of the exhibition are to go to a fund which buys land in Palestine.

The New Turkish Tariff.

From what is known of the details of the proposed new Turkish tariff, which it is intended to bring into force at the end of August when the Commercial Convention attached to the Treaty of Lausanne lapses, it is evident that it will be designed as far as possible to mark a further stage in the policy of "Turkey for the Turks." The principal object aimed at by the tariff is the protection and encouragement of local industries. To achieve this it is stated that the import duties on commodities similar to those manufactured in Turkey will be increased by from 20 to 25 per cent. *ad valorem*. Luxuries will be subject to heavy duties, but there will only be a small increase

in the duties on articles not at present made in Turkey, while it is probable that raw materials required for Turkish industries and constructional materials which cannot be obtained in the country will be admitted free of duty. From the broad point of view the main interest in Turkey's new tariff is the further light thrown on the difficulty that will be experienced in bringing about any universal reduction of tariffs. It is only too evident at the present time that the tendency is rather to increase protective duties than to decrease them.

Great Britain and the Egyptian Market.

I referred last week to the decline in British exports to Egypt last year, and the matter is of such importance, in view of the outstanding interest to this country of the Egyptian market, that it calls for more extended comment. It has to be borne in mind that as regards Egypt it is no question, as far as we are concerned, of one-sided trade. Last year, when the value of Egypt's exports was roughly £E56,165,000 as compared with £E48,340,000 for 1927, the British percentage remained at 40. But when we come to Egypt's imports a different tale is to be told. The value of the import trade rose from £E48,685,000 to £E52,044,000, but the United Kingdom's share fell from about £E12,482,000 to £E11,326,000, while the percentage of the trade was 21 as against 26 for 1927, 22 for 1926, and 25 for 1925. The principal commodities in which there was a pronounced falling off in trade were coal, cotton piece-goods, and railway trucks and wagons. Taking the last commodity first, the value of the United Kingdom trade was £E118,959, as compared with £E673,198, or a difference of £E554,239. The imports of coal from the United Kingdom at £E1,455,545 showed a fall of £E400,573, while the decline in respect of cotton piece-goods was £E729,690, but this last total is subject to modification, as articles made of cotton and artificial silk are now enumerated separately, and the inclusion of the items under this head would mean a substantial reduction in this total. There is a considerable amount of comfort to be derived from the fact that to counter-balance these decreases there were notable increases in respect of numerous commodities. Thus the imports of woollen and worsted cloths showed an increase of £E85,278, those of boots and shoes £E8,511, those of cigarettes £E56,467,

those of locomotives £E181,644, those of stationary internal combustion engines £E144,856, and those of electric wire and cable £E79,132. These instances I have given, which could be considerably increased, serve to show the importance of the Egyptian market, and suggest at the same time that it is purely the combination of special factors at the present juncture that are responsible for the poor showing of our total trade. Coal and cotton goods are two of our staple export commodities, and when for any reason—in this case, of course, competition—they fall short of expectations, the consequent gap is bound to be felt even when, as in the case of Egypt, our trade is widespread and we are making headway in many directions. Taking the broad view, I must confess that I see little in the statistics to occasion pessimism. We know that British goods are viewed with favour in Egypt, and we also have definite proof that we are able to hold our own in many very important lines against foreign competition. This we were certainly not able to do a year or so ago. In addition we have the knowledge that the conditions which have operated to our disadvantage in the coal and cotton piece-goods trades are being gradually modified in our favour.

Greek Finances.

In view of the expenditure on works of development with which Greece will be faced for some years to come it is eminently satisfactory that the Minister of Finance, M. Maris, in presenting the Budget estimates for the current year, was able to give an encouraging account of the country's finances. On the 1927-28 Budget there was a surplus of 550,000,000 drachmæ, which is particularly notable seeing that the result has been obtained in a period in which the revenue has been affected by various adverse circumstances. For the current year the revenue is estimated at 9,665,613,375 drachmæ and the expenditure at 9,657,613,422 drachmæ, leaving a small surplus of 8,000,000 drachmæ, but as the revenue has been estimated on the 1928 returns it is reasonable to anticipate that this surplus, if all goes well, will be considerably increased. A noteworthy feature of the Budget is that it provides real evidence of efforts to curtail superfluous expenditure.

The "Come to Britain" Movement.

A further stage has been reached in the development of the "Come to Britain" movement, and the Provisional Committee, which was appointed as a result of the Mansion House meeting held just before Christmas, have now practically completed the preliminary arrangements. The Association, which will now, as a result of the inclusion of the Irish Free State within the scope of the Association's activities, in addition to Scotland, Wales and Northern Ireland, have the title of the Travel Association of Great Britain and Ireland, will be incorporated this week under the Companies Acts as a company limited by guarantee. Subscriptions of over £17,000 per annum have already been promised by H.M. Government, the great railway companies, steamship companies, hotels, and others. The work of the Association will, however, benefit every district and industry in the country, and Lord Derby and the Provisional Committee are anxious

that the Association should be in every sense a national one, and will, therefore, welcome small subscriptions as well as large ones. The minimum subscription is one guinea, and members will, in addition to their subscription, be liable for a guarantee of only £1 if called upon. Forms of application for membership will be available next week and copies can be obtained at the temporary offices of the Association at 35, Old Queen Street, London, S.W.1. The Publicity Sub-Committee appointed by the Provisional Committee proposes to institute forthwith a competition open to artists and art schools for a design suitable for use as a crest or badge of the Association. Prizes of £50, £20, and £15 will be offered. The Committee hope that a really striking design will be forthcoming suitable for use on all the literature, stationery, and advertising matter of the Association itself and its members. The Provisional Committee has appointed Mr. Louis Beale to be the first Director of the Association. Mr. Beale, who has recently returned from New Zealand, has taken up his duties and is engaged in formulating plans for the work of the Association, securing premises and other matters of organisation.

Motors for the Near East.

Another sign of the increasing interest taken by the United States in the Near East markets is provided by the news that the General Motors Corporation is to establish a large motor factory in Hungary for the purpose, *inter alia*, of supplying the Danubian, and presumably other Near Eastern countries. The move will no doubt be interpreted as a reply to the Ford activities, but the interest from the British manufacturers' point of view lies in the fact that this development means more intense competition in the Balkan markets. In that region the motor is only just commencing to come into its own as a result of the efforts that are being made by the various countries to provide a more satisfactory system of road communications, and it speaks volumes for the enterprise of the Americans that they are endeavouring to anticipate the demand for motors that they know will develop in due course. Their enterprise, as we know, does not stop at the question of supply; in at least one case in the Near East an offer has been made to construct a road in return for facilities. The advertisement that the markets for motors in the Near East are thus receiving will, it may be hoped, be appreciated by British manufacturers who have so far shown themselves singularly apathetic in regard to the Near Eastern outlets.

Abyssinian Railway Concession.

The interesting news is forthcoming that the Abyssinian Government has granted a concession for the construction of a railway from Gambella to the Sudan frontier to the Ethiopian Motor Transport Company. The importance of the concession lies in the fact that commerce between South-West Abyssinia and the Sudan passes through Gambella—coffee and cotton piece-goods being the principal trade items—and when the railway is in existence it is likely to have an important influence on trade development between the two countries.

COMMENTATOR.

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928.

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Pleven, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Doupnitza, Gorna-Orehovitza, Haskovo, Yambol, Kirdjali, Kustendil, Tater-Pazardjik and Vratza. It has also 86 agencies.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Glass Panes, Etc.—The Egyptian State Railways, Telegraphs, and Telephones, invites tenders for the supply of wire woven ribbed glass panes; copper wire for telephones; conduits earthenware; structural steel for footbridges; headstock liners for standard wagons.

Weighing Machines.—The Director-General, Physical Department, Sharia El Insha, No. 1, Dawawin Post Office, Cairo, invites tenders for the supply of weighing machinery. June 13.

Core Drill Outfit, Etc.—The Director of Projects and Resident Engineer, Nag Hamadi Barrage, Nag Hamadi, invites tenders for the supply of one core drill outfit with accessories and engine complete 4 in. diameter and suitable to drill down to 50 feet. Delivery complete at site of Nag Hamadi Barrage. April 30.

Calico.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of 2,200 pieces (40 yards) bleached calico. May 4.

Tent Cloth, Etc.—The Chief of the Stores and Economat, Ministry of Agriculture, 20, Falaky Strete, Cairo, invites tenders for the supply of 85,000 yards tent cloth, 360 tons of commercial sulphuric acid, and 150 tons of sodium cyanide to the Plant Protection Section. May 26.

Metal Cabinets and Safes.—The Survey of Egypt invites tenders for the supply of metal cabinets and safes required during the year 1929-1930. June 19. (D.O.T.)

School Materials.—The Ministry of Education, Cairo, invites tenders for the supply of various writing, drawing, and painting materials for use in schools. May 8. (D.O.T.)

Various Materials.—The British Commercial Secretary at Cairo has forwarded particulars of a call for quotations by the Gharbia Provincial Council for various materials required for weaving purposes by the Mehalla Weaving School—comprising steel reeds, Jacquard cards, neck cords for Jacquard harnesses, harness cord, lacing band, brass and glass mails. (D.O.T.)

Diesel Engine.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nadli, Cairo, invites tenders for the supply, erection, and guarantee of a 400 B.H.P. Diesel engine driving an air compressor together with auxiliary machinery. May 1.

Lithographic Plates.—The Survey of Egypt invites tenders for the supply of aluminium and zinc plates for lithographing and engraving purposes. June 15. (D.O.T.)

Photographic Materials.—The Director, Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of photographic materials. April 20.

Post Binders.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of loose leaf post binders for 1929-1930. July 3.

Calico and Shash.—The Surveyor-General of Egypt, Giza (Mudiriya) invites tenders for the supply of calico and Shash for map mounting for 1929-1930. July 10.

School Materials.—The Director of Stores, Ministry of Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of large quantities of school materials required for the schools during the year 1929-1930, such as Persian reed pens, white and coloured chalk, exercise books, special ruling for Arabic calligraphy, brown paper books for chalk drawings, and technical materials such as boxes of drawing instruments, set squares, slide rulers, drawing paper of different sizes, tracing paper. May 8.

Various.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for the supply of: coloured cotton waste; transformer and switchgear; structural material for footbridges at

Birket el Sab and Samalout; steel twist drills; milling and involute gear cutters; rivets; tiles, cement, earthenware and asbestos mill-board; canvas tents.

Metal Cabinets and Safes.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of metal cabinets and metal safes for 1929-1930. June 19.

Diesel Generating Set.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at the Government Printing Press of a 120 K.W. D.C. Diesel electric generating set complete with buildings and foundations. May 15.

Needlework Materials.—The Egyptian Ministry of Education invites tenders for the supply of needlework materials required during the school year 1929-1930. The principal requirements are as follows:—White calico, 15,500 metres; unbleached calico, 4,000 metres; white linen for embroidery, 1,800 metres; zephyr coloured—width 80 cms., 9,000 metres; white lawns for underwear (Batiste), 2,000 metres; nainsooks for underwear, 3,000 metres; voiles plain colour, 3,000 metres; gabardine wool, 1,500 metres; creme flannel, 1,500 metres; coton perle, D.M.C., 10,500 reels; coton perle, D.M.C., 26,000 skeins; wool for knitting, 7,500 skeins; sewing needles, 10,750 packets; knitting needles, 2,500 pair; crochet needles, 7,000; darning needles, 700 packets; darning cotton, 2,000 skeins; pearl buttons, 1,500 dozens; thimbles, 1,500; scissors for embroidery, 1,000; measuring tapes 1.40 m. long, 804. D.O.T.)

THE SUDAN.

Stores.—The Inspector, Headquarters, Egyptian Irrigation Department, Khartoum, invites tenders for the supply of running stores for steamers and launches, chiefly oil, grease, rope, iron bars and sheets, bolts and nuts, files, etc. May 4.

Lorry Chassis.—The Inspector-General of Irrigation, Khartoum, invites tenders for the supply of 2 four-wheeled lorry chassis without bodies, up to 30 cwt. capacity. April 23.

TURKEY.

Turntables.—The Administration Générale des Chemins de Fer et des Ports d'Etat invites tenders for the supply of five turntables. April 25. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, April 12); s.s. Elysia for Bombay (Birkenhead, April 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matra for Calcutta (Birkenhead, April 17); s.s. Magdapur for Calcutta (Birkenhead, April 30).

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 17); s.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 1).

British India Line.—S.s. Morvada for Colombo, Madras, and Calcutta (London, April 20); s.s. Hatimura for Bombay and Karachi (London, April 27); s.s. Manora for Colombo, Madras, and Calcutta (London, May 4); s.s. Warfield for Bombay and Karachi (London, May 18); s.s. Mulhera for Colombo, Madras, and Calcutta (London, May 18).

Cunard Line.—S.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool April 13, and Swansea April 16); s.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza. This steamer will also call at Volo if sufficient inducement offers. (Liverpool, Glasgow, and Swansea, April 27).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 4).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, April 12); s.s. Bhutan for Calcutta (London, April 13); s.s. Macedonia for Bombay (London, April 26); s.s. Bangalore for Calcutta (London, April 27); s.s. Razmak for Bombay (London, May 10); s.s. Novara for Calcutta (London, May 11).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, April 13); s.s. Scottish Prince for Tunis (Manchester, April 25); s.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, April 27).

Ellerman and Papayanni Lines.—S.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 13); s.s. Polo for Gibraltar*, Malta*, Algiers*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 20, Swansea* April 20); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 20); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, April 23); s.s. Manchurian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice*, Trieste, Fiume, and Shushak* (Liverpool April 27, Swansea May 2); s.s. Mardinian for Gibraltar*, Malta*, Algiers*, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool May 11, Swansea* May 11). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*MASSILIA ... Apl. 16 *CASTALIA ... June 4

*ELYSIA ... Apl. 30 *CIRCASSIA ... June 14

*First class passengers only. Specially low fares. †Calls Port Sudan

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

Motors and Motoring.

(By Our Motoring Correspondent)

Tyres and the Man.

A number of home truths for motorists were tellingly put by Mr. W. H. Paull, F.I.R.I., Technical Director of Dunlop Rubber Co., Ltd., in an informative paper read before the members of the Institute of Automobile Engineers which is now available in booklet form. The maker does not supply a complete pneumatic tyre, says Mr. Paul. He supplies a cover and a tube and it is the user who supplies the vital column of compressed air which carries the load, provides the yield and recovery to cushion the car, and gives that rigidity to a flexible cover through which the engine power can be transmitted to the road. "If we could imagine," continues Mr. Paull, "cars being delivered without springs—the user being left to provide a spring of suitable strength—no one would be surprised at a collapse if a spring of only half the proper strength were fitted. There is no more reason for surprise at the collapse of a pneumatic tyre carrying only half the proper inflation pressure, than at the collapse of a spring of only half the strength the load requires. Certainly under these conditions, collapse of a spring of only half the required strength would be far more frequent than the collapse of half-inflated tyres—but this only shows the superiority of the pneumatic suspension over the spring suspension." Mr. Paull points out that the object of the tyre maker is to provide means whereby the user can run his car on air, as he knows that air, compressed by the load it has to carry gives an element of perfect resilience. The tyre maker aims at interfering as little as possible with the efficiency of the column of compressed air.

As regards the power consumption of tyres, Mr. Paull states that each portion of the tyres of a car travelling along a road at 30 miles an hour is compressed and released about six times per second. Five-inch high pressure tyres fitted to a large car running at 50 miles an hour consume 7.2 h.p.; 6.75 in. balloon tyres on the same

car consume 11.9 h.p. at the same speed; at 25 miles an hour the four tyres of a light car consume about 1.8 h.p. if the tyres be $3\frac{1}{2}$ in. high pressure inflated to 40 lb., and 2.4 h.p. if they be 4.40 in. at 25 lb. Under normal conditions the power losses in the tyres represent about 30 per cent. of the total energy losses in the whole car.

"The tyre maker, states Mr. Paull, "has no reason to be ashamed of the progress in tyre manufacture, for tyres have been made which have stood up to speeds of over 200 miles per hour, to 182 miles in one hour, to 2,724 miles in twenty-four hours. There is still the greater test of providing at least 145 million tyres for cars in current use operating under every conceivable kind of condition all over the world."

Oil Cooling.

Probably the oiling system of the modern car is about the most perfect and foolproof part, in that it is usually so hidden away, in forced-feed pipes, pumps, and so on, that the average motorist cannot get at it to "adjust" it. Actually direct failures of an oiling system are almost unknown and so true is this that many makers are not troubling to fit any oil pressure indicator or other instrument to show that lubrication is proceeding normally.

There is one direction, however, in which the owner-driver may assist in the perfect lubrication of his car and engine, and that is by seeing that not only are grease cups, etc., kept filled, but that the oil used for the engine is changed at more frequent intervals. It has often been said that filtering oil is far from advantageous, and filtered oil is not so good as new oil and that it is less efficient. This happens to be a subject that I have gone into fairly closely, and I may say that, so far from the above being the case, filtered oil is as good as new oil, with the provision that it has not first been weakened by being mixed with petrol drawn past the piston rings or with ordinary mineral oil of less viscosity. Filtering takes nothing but foreign bodies out of oil, and the idea that filtered oil is less useful than fresh oil no doubt originated in the days when crank case oil rapidly thinned and deteriorated by a quantity of petrol—in those days, perhaps, almost paraffin—getting mixed with it in the manner mentioned. At the same time I should not recommend any owner-driver to put in an oil filter unless he has a whole fleet of cars, as the saving he would effect by filtration would be so small in these days of cheap oil that it would not pay the interest on the invested capital, let alone be enough to establish a sinking fund.

Oil cooling has been adopted with a number of modern engines, and it is not an easy matter to say exactly what benefits are, or can be, derived from such a system, although it is quite a simple matter to say what they should be. They should include a reduction in the amount of oil used, or rather consumed, there should be a reduction in the running costs, and there should be less wear and tear and a resultant longer life for the engine. But I do not know that all or even any of these result in practice. Probably there is some real, tangible, perceptible advantage although I, for one, am not aware of it. Also, I am inclined to agree with the engineer who said, recently, that although standard cars with few exceptions, make use of the sump as an oil reservoir, logically it is not the best place for the oil, as the chamber is heated by the engine, there is a certainty that particles of carbon will fall into it, any petrol drawn past the rings will fall into and weaken it, and under braking and acceleration the body of oil is swirled backwards and forwards and the bearings are without oil for a few seconds which does not do them any good. In view of the fact that the oil, carried in this way, gets hot, many

makers have adopted some method of cooling the oil in their cars, and obviously there is no practical limit to this. By increasing the size and altering the position of the oil-cooling radiator the temperature of the cooling oil could be kept down to that of the atmosphere or even lower when the car was running, but as an engineer I cannot honestly say that there would be any advantage, any added benefit, were that the case.

Road Dangers.

There is no need for me here to analyse the recently-published figures relating to road accidents caused by motor vehicles during the past year, not to draw more than passing attention to the large percentage of those that were caused by private cars and motor cyclists. Indeed, things seem to be going from bad to worse, and there is no doubt whatever that before long the foolish and careless driving of the small minority of motorists will result in the whole body being placed under some sort of road control. There are many ignorant drivers on the road—that matters little; they will learn and, indeed, are anxious to learn. There are nervous drivers on the road, but as the number of accidents increase these will disappear, abandoning motoring for some safer pastime. There are some drivers, inclined to be reckless, who have their nerves and their cars under iron control, and who can be trusted never to lose their heads in any emergency. There is the vast majority of considerate, courteous, careful drivers, and there is the minority of ill-mannered motorists who cause all the ill-feeling on the road, who are the direct or indirect cause of almost all the accidents; the minority who drive as though the road were their private property, who show neither courtesy nor consideration for other road users. Every motorist knows they exist; every reader knows that not a word of what I have written is exaggerated; every road user knows that they are not only a nuisance but a positive danger, and some of us know that unless they are educated, or dealt with in some way, we are all going to suffer.

Coil Ignition.

Now that magneto ignition has been largely superseded by coil ignition, as I prophesied it would as long ago as 1922, it is important that car owners should see that the battery used is always kept charged and in good condition. There are a number of good little text books obtainable which tell, in simple language, all that needs to be known about a battery, but perhaps the wisest thing to do is to send a post card to the makers of the cells, asking if they

supply anything in the nature of a directions chart or a descriptive booklet and follow implicitly, on all necessary occasions, the advice given therein.

COMPANY NOTES AND REPORTS.

SINAI MINING.

The net profit of the Sinai Mining Company for 1928 was £68,027, plus £6,964 brought in. The preference dividend takes £3,500, and the reserve for general purposes receives £30,000. The directors recommend a final dividend of 8½ per cent. on the ordinary and participating preference shares, making 12½ per cent. (free of tax), leaving to carry forward £3,992. An agreement was concluded in October for the purchase of the Nahman areas. A tonnage of ore equal to the transport capacity of the company's ropeway has been sold for shipment in 1929.

MYSORE GOLD MINING.

The report of the Mysore Gold Mining Company for 1928 shows that the total return of fine gold from all sources was 116,435 oz. The net profit on the year's operations was £177,894, plus £18,514 brought forward, and £4,645, dividends from subsidiary companies and other credits, making £201,053. Income tax absorbed £18,015, depreciation £20,000, and transfer to insurance and contingency fund £3,000. The final dividend of 1s. 6d. per share makes 2s. 3d. per share, and £20,043 is carried forward.

NATIONAL BANK OF EGYPT.

Position at January 31, 1929, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully-paid shares at £10 each), £2,825,000. Reserve fund: Statutory reserve, £1,462,500; special reserve, £1,340,625; current, deposit, and other accounts, £15,946,029; Egyptian Government, £19,044,485; Sudan Government, £215,521; Mixed Tribunals, £1,888,377; bankers' accounts, £432,447; cheques and bills payable, £202,091; sundry other accounts, £1,706,886.—£45,163,961. Assets: Government securities and securities guaranteed by the Egyptian Government, £21,224,553; sundry securities, £509,588; advances on merchandise, £5,093,035; advances on securities, £5,607,424; advances otherwise secured, £1,453,547; sundry other advances, £916,494; bills of exchange, £4,436,603; local bills discounted, £612,231; buildings and furniture, £214,530; money at call and at short notice, £1,847,625; bankers' accounts, £307,427; sundry other accounts, £976,116. Cash: Notes, £1,457,130; gold, £262,843; silver, nickel, etc., £244,815.—£1,964,788.—£45,163,961. Issue Department.—Notes issued, £29,900,000.—£29,900,000. Gold, £3,339,570; *British Treasury Bills, £11,610,430.—£11,950,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £1,500,000; British Treasury Bills, and British War Loan, £13,450,000.—£14,950,000.—£29,900,000.

*By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

Roumania's grain production for 1928 (in metric quintals) was:—Wheat 31,446, rye 2,917, barley 15,110, oats 9,804, and maize 27,534.

There was a slight decline in Yugoslavia's exports in January, the figures being 298,957 tons of the value of 425,707,784 dinars, as compared with 311,488 tons of the value of 430,299,250 dinars in January, 1928.

It is reported that the credit offered to Roumania by the German Federation of Industries is for RM.125 millions. Roumania is to order goods for this amount from Germany and to issue bonds for 75 millions to be taken up in Germany. Bonds for the remaining 50 millions are to be taken over by a group of American banks. It is as yet uncertain whether Roumania will accept these terms.

The revenue derived from the monopolies for the service of the Greek Public Debt in January amounted to 135,233,742 drachmæ, as against 119,393,539 drachmæ for January, 1928, which shows an increase of 15,840,202 drachmæ. Customs receipts in January amounted to 145,468,062 drachmæ, as against 134,291,829 drachmæ in January, 1928. The gross receipts of the Port of Piræus amounted to 76,465,409 drachmæ in January, as against 71,141,839 drachmæ in January, 1928, and those of Salonika to 43,266,160 drachmæ, as against 40,964,894 drachmæ, respectively.

An Athens message states that M. Venizelos, speaking at Salonika on April 7, said the Government was negotiating with a British firm to carry on public works in Epirus. The firm thought it would be able to carry them out without cost to the State and at a profit to its shareholders, and if this optimism proved to be well founded on examination the works would be started at once. Otherwise the work might have to wait until work at Vardar and Strymon was finished and the Budget was relieved of the loans for these works.

ADVERTISING IN

"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of *all* classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 9.

There has been quite a bright tone in the Stock Markets in this short holiday week, gilt edged stocks, in particular, being favourably affected by the Bank of England's addition to its gold stocks and by the repayment of Five per cent Treasury Bonds. Home Rails benefited from favourable traffic returns, but were later subjected to some profit taking. "Anglo-American" securities were adversely affected by Wall Street uncertainties and there was no definite trend in industrials. Tea and rubber shares were quiet, but the restriction of output discussions encouraged some public interest in oil shares.

The improvement in the monetary outlook lends some support to the view that the Stock Markets will remain firm in spite of the coming General Election. There are tentative signs of an improvement in trade, as evidenced by the increased traffics on the railways and the decline in the unemployment figure. On the other hand, there are influences at work in the markets making for reactions, and developments in Wall Street may continue in an adverse direction, so that, apart from gilt-edged stocks, which may continue to make headway, Stock Exchange values are unlikely to make much advance until the Elections are over.

Lever Brothers' Accounts.

Lever Brothers must be regarded as one of the largest of the world's combines, for its issued share capital amounts to £56,628,000, in addition to £7,332,000 of debenture capital, and it has interests in over 200 associated concerns, apart from its own works at Port Sunlight. Thanks to the sound basis upon which the business has been built up, and the established demand for its products, the company has had a good record during the difficult period since the War, and 1928 was another satisfactory year. Net profits, it is true, show a slight decline at £5,274,075 against £5,390,287 in 1927, but 1927 was a particularly favourable year, and compared with 1926 the latest profits represent an increase of £347,109. Dividends on the privately held ordinary shares are maintained at 5 per cent. and £200,000 (compared with £272,000 last year) is allocated to reserves, bringing that fund up to £500,000 while the carry-forward is increased by £58,542 to £160,337. Total interests in associated companies amount to £58,925,564 out of a balance-sheet total of £68,309,448. The auditors state that an average return of 9.6 per cent. was shown on these investments, which suggests that the valuation in the balance-sheet is justified. Trade in general in future years may be expected to be maintained, and the West African trade should prove more profitable as a result of the recent fusion between the Niger Company, a subsidiary of Lever's, and the African and Eastern. As stated above the ordinary shares of Lever Bros. are privately held. The 7 per cent. cumulative preference are quite well secured and yield £6 4s. per cent. On the 5 per cent. debentures, redeemable 1931-41, a return of £5 2s. per cent. is obtained.

Hotel Profits.

The accounts of the Gordon Hotels, which include the May Fair, the Metropole, the Grosvenor, and the Victoria in London, in addition to other well-known hotels on the South Coast and in France, show a large increase in turnover and in profits. Business done increased from £1,395,297 in 1927 to £1,516,160 and the net profits were £98,548 in 1928 against £80,525 in the preceding year. The directors have decided not to raise the dividend on the ordinary shares from 5 per cent., which has been paid since the reconstruction scheme of 1924, but to carry £10,000 to reserve and to increase the carry forward. They have also decided to provide for the replacement

within 42 years of the sum spent on the May Fair Hotel, although there will then remain 52 years of the lease unexpired. This lease will therefore become a very valuable asset. The ordinary shares of Gordon Hotels Ltd., yield £6 19s. and the 4½ per cent. perpetual debenture stocks give a return of £6 4s. per cent. Last year was a fairly favourable period for hotel companies, for the recently published accounts of the Savoy Hotel showed that profits had increased from £183,358 in 1927 to £193,400, permitting the dividend to be raised to 12½ per cent. from 10 per cent., although the considerable sum of £93,936 was carried to reserves, etc. In view of the strong financial position of this company, and the strong reserves which have been built up, the yield on the ordinary shares is only £5 4. per cent., but the 4 per cent. preference shares, whose dividend was covered more than 11 times last year, return £6 1s. per cent.

Waterworks.

Shares and debentures of public utility undertakings are favourites with many investors. Gas and electricity supply corporations, particularly the latter, generally attract most attention, but an issue of debentures by the Southend Waterworks Company reminds us of the merits of investments in waterworks. Water is an essential of life, and, unlike most commodities, is without a substitute. Moreover, the majority of the companies have a virtual monopoly of the water supply in the areas which they serve. In these circumstances, it is not remarkable that the revenue of these undertakings is fairly stable when it is not progressive, and that they are able to maintain regular dividends. The range of stocks, it is true, is much narrower than it was some years ago, for many waterworks have been taken over by local authorities. Whether this fate awaits the remaining companies remains to be seen, but in any case it is most probable that the shareholders will have no substantial ground for complaint. The attention of those seeking a steady income from their investments may be directed to the Ordinary stocks of the Newcastle and Gateshead Water Company, which yield £6 4s. per cent., the "A" stock (10 per cent. maximum) of the South Staffordshire Water Company which returns £5 17s. per cent., or the Ordinary stock of the Sunderland and South Shields Company, on which the yield is £5 18s. per cent. All these companies have maintained steady dividends for a number of years. For the consideration of the ultra-cautious the 4 per cent. permanent debentures of the South Staffordshire Water Company may be mentioned on which a return of £5 3s. per cent. is obtained.

The death took place recently, at his home in Cairo, of Mr. Edward Davies Bryan, joint founder of Messrs. Davies Bryan and Co., the outfitting firm. Mr. Bryan was born near Wrexham in 1861 and went to Egypt in 1888 to join his brothers in a small shop which had been opened in 1886. Branches of the business were subsequently established at Alexandria, Port Said, and Khartoum, and a few years before the War the Cairo business was installed in its present premises.

The profits of the Anchor Line (Henderson Bros.) for 1928 amounted to £287,986, as compared with £285,319 for 1927 and £229,085 for 1926. The directors propose to write off for depreciation £266,626, compared with £270,289, and, after providing for the dividend on the £325,000 preference capital, to carry forward a balance of £96,660, as against £80,609. In their report the directors state that the Indian freight business has shown an improvement, but is still disappointing.

EXPERIMENTS AGAINST COTTON PESTS IN EGYPT.

"Preliminary Experiments with Dusting and Spraying against Insect Pests of Cotton." By Ibrahim Eff Bishara. Bulletin No. 77 of the Technical and Scientific Service of the Ministry of Agriculture, Egypt. (Government Press, Cairo. P.T.5.)

As everyone familiar with the work of cotton growing is aware insect pests constitute one of the principal problems to be dealt with in the cultivation of this crop. These pests vary according to the country, and some regions are far less troubled with anything of the kind than others, but happy indeed is the territory which can show a clean sheet as far as cotton is concerned. This little brochure, which forms one of a long series of valuable contributions to various aspects of scientific agriculture issued under the auspices of the Egyptian Ministry of Agriculture, serves the very useful purpose of drawing attention to the important work that is being done to safeguard cotton from the ills to which it is heir. It describes the preliminary results of work carried out in the effect of various dusts and sprays on cotton pests. The chief of these pests is, of course, the pink boll worm, which was discovered in Egypt in 1910, and whose activities may be gauged from the fact that from 1916 onwards it has been responsible annually for a loss of twenty-five per cent. of the crop. Up to the present time the control measures have been directed principally to the destruction of the larvæ in the period between the cotton seasons. In the summer of 1927 sodium fluosilicate was tried against the pink boll worm at the Experimental Farm at Giza on a small scale. It was mixed with an equal amount of flour, and the plants were dusted in the early morning on July 11, July 23, and August 9. Every ten or twelve days samples of green bolls were examined, and the result showed a reduction in boll worm infestations of about 54 per cent. The effect of the substance on the cotton plant itself was practically nil, and it is noteworthy that the plants were free from aphid attack which, it has been observed, usually follows dusting with arsenicals. Naturally this experiment on a small scale could not be regarded as conclusive, but it is stated that it was hoped that further trials on a larger scale would be made in the following season.

The writer goes on to describe tests with castor oil against the pink boll worm in which he was associated with Mr. N. W. Barritt, Senior Botanist, who was first to suggest the use of this substance. The crude castor oil was diluted with some petroleum so that it might be sprayed freely, and in the first test, at Giza Farm, there was one treatment only, one gallon of castor oil being used on one 24th of an acre. The result proved that castor oil is repellent to the boll worm. In the second test at Gemmeiza there were two sprayings, while in the third experiment there were also two sprayings but less water was used than in the second test. The writer points out with regard to the three tests that the effect is in direct relation to the amount of oil used, and that the treatment is rather costly. Experiments were also done in the 1927 season by several people in dusting the cotton plants with calcium arsenate, and the writer describes tests on an experimental plot at Messin in Behera Province, his conclusion being that a much better control can be obtained with sodium fluosilicate. The writer finally describes tests with this substance against the cotton leaf worm which is troublesome in Lower Egypt. The experiments carried out were quite successful, but it was too late in the year to try it on cotton, so that had to be left for a subsequent season.

The gross production of crude of the Phoenix Oil and Transport group for March was 41,007 tons.

The Direct Spanish Telegraph Company announce that Admiral H. W. Grant, C.B., has been elected a member of the board and that Mr. J. C. Denison-Pender has been appointed the chairman.

BRITISH CHAMBER OF COMMERCE OF TURKEY.

Annual Report.

The annual meeting of the British Chamber of Commerce of Turkey was held at Constantinople on March 12. The following extracts are taken from the report for 1928 presented at the meeting :—

Customs Matters.

By articles 35 and 43 of the Law No. 306 of June 7, 1926, modifying the existing Customs Laws, by which proprietorship of goods remaining in Customs sheds over one year was lost, and after selling such goods by auction and paying storage, shipping and discharging expenses, the amount remaining in the hands of the Customs was handed over to the Treasury. By Article 5 of the Law No. 365 of June, 1926, containing certain additional articles to existing Customs Laws, the assessed Customs duty had first to be paid, if, upon reclassification under a higher tariff number by Customs, it was decided to return these goods to the country of origin. These two matters were discussed at the request of the Council by the delegates of foreign Chambers of Commerce and referred by them to their respective Commercial Secretaries with a view to endeavouring to obtain a modification of the Articles in question. At a later date Colonel Woods, the Commercial Secretary, informed the Council that a draft law was before the Assembly referring to the provisions of the old law, according to which, after paying all charges on goods sold by auction that had remained for over a year in Customs, any balance was held at the disposal of proprietors of the goods.

Registration of the Chamber.

The Chamber has not yet received the formal recognition of the Turkish authorities. As stated in the last annual Report, to meet the wish expressed by the Director of the Legal Bureau, the Memorandum and Articles of Association of the Chamber were, while retaining their own phraseology, remodelled in the simpler form of the statutes of the French Chamber of Commerce, which has already been registered. This simpler form of the statutes was translated into Turkish by our legal adviser and again submitted to the Governor of the city. These statutes have received the approval of the Legal Bureau and have been referred to the Police authorities. The situation would seem to be complicated by the fact that several members of the Council, in whose name the appli-

cation for registration was made, have since either died, retired from business, resigned, or left the country. We can but express our appreciation of the interest and efforts of the Director of the Legal Bureau of the Vilayet to have these formalities completed. The Chamber finds itself in the abnormal position of being permitted to carry on without having received formal recognition.

Discharging and Landing Charges.

The question of landing charges was discussed at several Council meetings. As a result of these discussions comparative figures of the charges for discharging and landing certain goods before and since the establishment of the Port Monopoly were published in the May issue of the Journal. No recent complaints have been received concerning landing charges and members state that considerable improvement has taken place since last year, when serious congestion existed and delays occurred in tracing goods discharged.

Turkish Nationality Law.

The Council was much concerned regarding the interpretation to be put upon certain clauses of the new Turkish law on nationality published early in the year. It received information from other local foreign Chambers that these clauses might be interpreted by the Turkish authorities in the sense most unfavourable to foreigners, namely that a child born in Turkey after January 1, 1929, of foreign parents, would be considered a Turkish subject, if either of its parents had been born in Turkey. The Council felt it was not the intention of the Turkish legislators to impose this drastic change on foreign residents without due and reasonable warning, and that the alternative interpretation more favourable to foreigners, to which the clauses readily lent themselves, would prove to be the correct interpretation. This favourable interpretation was to the effect that children born in Turkey of foreign parents who, or either of whom, had been born in Turkey on or after January 1, 1929, would become Turkish subjects. In other words, the law would in this essential only affect the children of the next generation.

Although the other foreign Chambers were inclined at first to consider that matters had gone too far to allow of any reasonable hope of modification of the unfavourable interpretation, these Chambers eventually agreed to lay the matter before their respective Embassies, and the Council submitted its point of view to the British Embassy.

The result of the activities thus initiated have proved eminently satisfactory. In the February Journal we were able to publish extracts from the French translation of the "Instructions Relative to the Applications of the Nationality Law." This instruction, which is confirmed from official sources, is to the following effect: "Is a Turkish citizen any child born in Turkey of foreign parents who were themselves born in Turkey on or after January 1, 1929."

New Turkish Alphabet.

The Council would again point out that from December 1, 1928, Turkish in Arabic characters must not be used in advertisements, notices, or handbills. Quite a number of British articles on this market contain in their wrapping, or on the container itself, a form of guarantee or directions for use in Arabic characters. No doubt, the application of the law will be lenient in the matter of goods already on the market, but if shippers and manufacturers wish to avoid possible delays in the Customs in the matter of opening, obliterating or destroying notices and wrappings, they must conform to the new law and have their Turkish advertising matter in the new Latin characters. At the same time they should bear in mind that this innovation is not a mere phonetic adaptation of Turkish in Roman characters to be lightly undertaken by anyone with a slight knowledge of Turkish, but it is a language; and the authorities are very strict about the correct use of this language.

NEWS FROM ALL SOURCES.

The sixth international automobile show at Zagreb will be held on April 20-28.

It is announced that the Bulgarian 5 and 10 leva banknotes are to be withdrawn from circulation and replaced by nickel coins of corresponding denominations.

Sir Charles Wright Macara, Bart., head of Henry Bannerman and Sons, a former president of the Federation of Master Cotton Spinners and Manufacturers, left unsettled property value £15,681 (net £14,975).

The importation into Roumania of second-hand machinery for the textile, furniture, tanning, and boot and shoe trades is prohibited. In future only new machinery and parts will be allowed to enter the country.

The motor vehicles in use in Egypt at December 31 last included 14,122 private cars, 6,311 taxicabs, and 4,045 lorries and omnibuses. The motor vehicles registered during the second half of 1928 included 2,199 private cars, 868 taxicabs, and 667 lorries and omnibuses.

The oil refineries of Roumania treated 4,133,261 tons of crude oil during 1928, compared with 3,533,346 tons in 1927, and produced in these years 4,046,345 tons and 3,455,713 tons of petroleum products, respectively. The yield of motor spirit totalled 978,471 tons, as compared with 840,340 tons in 1927, while illuminating oil production was 693,895 tons, as against 574,170 tons.

According to a report of the Egyptian Ministry of Agriculture, weather conditions have been favourable to the development of the onion crop, and no disease has been encountered. The early crop in the Nile Islands in the province of Upper Egypt has reached maturity and growers are gathering and forwarding the produce to the market at Alexandria. The crop is reported to be a normal one.

An agreement is reported to have been arrived at by the Danube Navigation Co., Vienna, the Hungarian River Navigation Co., the South German Lloyd, and the Bavarian Lloyd for a pooling of earnings. The group is now in negotiation with the Czechoslovak, Roumanian, and Yugoslav Danube navigation companies for the issue of a uniform tariff for Danubian transport.

A Circular signed by the Greek Minister of War, addressed to all the Legations in Athens, requests that it should be made known generally that offers and tenders in adjudications should be made out in the Greek language in order to facilitate the examining Commissions at that Ministry, except in very special circumstances, when the offers should be in French.

On March 26 the launch took place by Messrs. John Readhead and Sons, Ltd., West Docks, South Shields, of the steel screw steamer *Brika*, for Messrs. Frank C. Strick and Co., Ltd., of London. The vessel is designed to carry about 7,340 tons on a light draft, and is of the following dimensions, viz.:—384 ft. overall by 52 ft. 3 in. by 28 ft. 3 in. The vessel has 10 steam winches with derricks to each. She has large clear holds and hatchways suitably placed.

The annual report of the Association of Yugoslavian Banks states that during the past year there were 723 banking institutions in Yugoslavia with an aggregate share capital of 2,065,000,000 dinars. The reserve funds of these banks amounted to 675,000,000 dinars, the deposits to over 7,500,000,000 dinars, and current accounts to about 5,000,000,000 dinars. There were five banks with a capital exceeding 50,000,000 dinars, whilst there were 22 banks with capitals ranging between 10,000,000 and 50,000,000 dinars.

The output of crude oil in Roumania during February was about 325,000 tons, as against about 305,000 tons in the preceding month, and 205,000 tons in February, 1928. The output of the principal companies during the month was as follows (in tons):—*Sireaua Romana*, 50,467; *Astra Romana*, 46,477; *Phoenix Oil*, 32,517; *Sirius*, 25,216; *I.R.D.P.*, 17,801; *Petrolul Romanesc*, 13,538; and *Colombia*, 10,912.

During the calendar year 1928 the yield of revenues pledged for the Bulgarian Seven per Cent. Refugee Settlement Loan of 1926 amounted, at the parity of exchange, to about 3,352,000 dollars, or approximately 2½ times the annual service requirements of the loan. This figure compares with about 3,000,000 dollars, or approximately 2½ times the requirements for 1927. The revenues pledged for Bulgarian Seven-and-a-Half per Cent. Stabilisation Loan of 1928 yielded during 1928 about 9,806,000 dollars, or over 4½ times the annual service requirements, compared with a yield of 9,154,000 dollars, or over 4½ times the requirements in 1927.

A Yugoslav Ministerial Circular provides that the Yugoslav Chamber of Commerce at Salonika may issue certificates of origin in respect of all goods purchased in its area, whether out of free circulation or from Salonika entrepôts or transit warehouses, regardless of whether the goods are of European, coastal, or trans-oceanic origin. These certificates must be legalised by the Yugoslav Consul-General at Salonika, and goods covered by such certificates must be cleared through the Skoplye, Bitolye, or Ghevelli Custom Houses.

ECONOMIC CONDITIONS IN BULGARIA.

[The following notes are taken from the bulletin of the British Bulgarian Chamber of Commerce of Sofia, dated March 31.]

General Situation.

Restored communications brought about a quickening in trade turnover all over the country, and more especially a revival in retail sales. Prices are reported to be firm for most kinds of imported goods. Imports remained active during the whole of March. Orders continue to be placed abroad, chiefly for textiles, machinery, and building materials. Peasant consumption of imported goods is believed to continue to increase. The following tables illustrate the general trend in imports in 1928 as compared with 1927.

	1928.	1927.
	In millions of leva.	
Machinery and tools ...	908	692
Cotton and cotton goods ...	1,784	1,688
Metals and their products ...	968	792
Mineral oils and raw rubber ...	246	202
Wooden products ...	269	208
Paper ...	220	176
Motor cars and railway carriages ...	246	98

The prevailing monetary and credit conditions are probably contributing to encourage large orders for goods. It remains to be seen whether the absorptive capacity of the market will allow an easy distribution of the goods on remunerative prices and against short term payments. It is believed in some business quarters that the agricultural producer holds considerable reserves of grain, and is likely to dispose of them as soon as definite forecasts for the new crops are possible. However, even an approximate estimate of such reserves would be sheer guesswork.

Plans for irrigation work in Southern Bulgaria appear to have attracted some attention in foreign and especially in British quarters, where the practical side of the scheme is reported to be under consideration.

Negotiations between Yugoslavia and Bulgaria on frontier and transit points at issue appear to have made some headway. The results are not yet being made public. Conversations are likely to be continued.

The problem of organising agriculture with respect to increased output is still occupying a prominent place in specialist circles and in public opinion. One hundred million leva of credits have been granted for the purpose, and there is an extensive plan under consideration.

Imports and Exports.

The trade balance during the month of February closed with a deficiency of 143,000,000 leva, while during January the deficiency amounted to 122,000,000 leva. Exports during February amounted to 15,711 tons for 285,297,000 leva, and there were imported 12,510 tons for 428,732,000 leva, while during January there were exported 19,478 tons for 418,384,00 leva and imported 20,064 tons for 540,568,000 leva. The following table shows the main export items in February, as compared with those for January:—

	February.	January.
	Tons.	Tons.
Wheat ...	441	568
Barley ...	2,075	1,688
Maize ...	3,958	4,579
Tobacco ...	1,503	2,649
Fowls ... pieces	42,778	9,996
Cattle ... heads	2,725	1,986
Oilcakes ...	2,140	3,097

Of the goods exported during February, the largest decrease as compared with January, is shown by tobacco.

Miscellaneous.

The quantity of notes in circulation during March shows a slight increase over the preceding month. On March 7 the notes in circulation amounted to 3,893,900,339, leva, on March 14, to 3,920,470,229, and on March 22 to 3,915,515,554 leva.

There is to be observed a general levelling in the foreign exchange reserves of the National Bank, due to the revival of exports during the month at issue. Thus on March 7 foreign exchange amounted to 2,669,963,436, on March 14 to 2,620,975,833.50, and on March 22 to 2,545,828,595.50 leva. The gold reserve percentage for March is 46.48 per cent.

Receipts of the State Treasury for February show a slight increase as compared with January. In February the regular receipts amounted to 559,382,000 leva, while in January they were 513,100,000. Receipts of the State Treasury from April, 1928, to the end of February, 1929, aggregated 6,469,542,000 leva, as against 6,020,655,000 leva last year. There is consequently an increase in the present Budgetary year of 488,887,000 leva. This increase is due to larger receipts from direct and indirect taxation, fees and imposts, communications, etc.

The wholesale commodity index number (on the basis of 1914 equals 100) for February was 3,267 as compared with 3,211 for January and 2,999 for February 1928. The general level of wholesale prices has thus risen by 1.7 per cent. as against January and by 8.9 per cent. as compared with February, 1928.

Forthcoming Tenders.

According to reliable information, the following tenders will be invited in the near future by the Ministry of Railways.

1. 500 tons ordinary cylinder lubricating oil. Estimated cost 3,200,000 leva. Adjudication to take place on April 26. Terms of delivery: 100 tons in two months, 200 tons in three months, and 200 tons in five months after signature of contract.

2. 100 tons cylinder lubricating oil for overheated steam. Estimated cost 1,400,000 leva. Adjudication to take place on April 30. Terms of delivery: 40 tons in three months, and 60 tons in four months after signature of contract.

3. 900 tons machine lubricating oil. Estimated cost 5,220,000 leva. The date of adjudication is not yet determined. Terms of delivery: 250 tons in three months, 300 tons in four months, and 350 tons in five months after signature of contract.

4. A 12 ton crane on rails, operated by hand, for loading and unloading cargo in the port of Lom on the Danube. Adjudication to take place on May 27. Estimated value 700,000 leva.

5. A floating crane for loading and unloading cargo at the ports of Bourgas and Varna on the Black Sea. Adjudication to take place on May 14. Estimated value 3,000,000 leva.

Tenders will also shortly be invited for:—

1. 750 tons of metallurgical coke. Approximate amount of order—1,500,000 leva. Terms of delivery: 100 tons in two months, 200 tons in three months and 450 tons in four months after signature of contract.

2. 300 tons of foundry iron in ingots. Approximate amount of order—1,080,000 leva. Terms of delivery: 100 tons in two months, 100 tons in three months and 100 tons in four months after signature of contract.

The Serbian Farmers' Federation has submitted a memorandum to the Yugoslav Government asking that the export of agricultural products should be organised through co-operative societies.

The fruit harvest in Roumania last year was an average one both as regards quantity and quality. The approximate yields (in tons) were: Walnuts 82,210, plums 812,600, apples 265,660, pears 87,490, cherries 113,750, apricots 14,680, peaches 4,040, and quinces 18,180.

Imports of machinery and parts into Greece will in future pay 30 per cent. of the normal tax, but full exemption will be granted where the imports are intended for the equipment of new industrial concerns, or for the extension of the plant of existing concerns.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended March 28 state:—

Since our last report the futures market has been very active and heavy fluctuations have been the order of the day. The week's summary of price movements is as follows:—Sakellaridis: May, 37.84 dollars, 0.24 dollars down; July, 38.10 dollars, 0.15 dollars down; November, 38.20 dollars, 0.17 dollars down; January, 38.40 dollars, 0.15 dollars down. Ashmouni: April, 23.46 dollars, 0.56 dollars down; June, 23.88 dollars, 0.56 dollars down; August, 23.91 dollars, 0.44 dollars down; October, 23.96 dollars, 0.54 dollars down.

Sakel.—After a very firm opening, with May quoted at the highest at 38½ dollars, the market reacted sharply, losing about 1¼ dollars in two sessions as a result of the weakness in New York. At the lowest prices some profit-taking buying appeared, and this, with the aid of some purchases by the trade, was sufficient not only to check the decline but to restore some firmness to the market, and a good part of the lost ground was regained. The demand from spinners this week has been only moderate, Lancashire being the principal buyer. There is no feature of special note in the situation. There cannot be any very large positions, either long or short, open on the market, and the outlook is rather for a period of stabilisation with prices at about present levels.

Against the third March tender, dockets for 5,250 kantars were issued, bringing the total for the three March tenders to 26,250 kantars.

The Sakel/Uppers straddle (May/April) this week stands at 1,438 points, against 1,406 points last week and 1,355 points at this time last year.

Uppers.—The close of the week was very firm, with a tendency for the recovery to go further. We do not think that spinners have done much new buying this week, but consider that the orders placed recently had not been entirely covered, and export houses took advantage of the low prices to hedge any such orders.

The statistical position continues to be very strong, and the fact that ½ dollar on April is being paid for Fully Good Fair on the spot market is another proof of the strength of Uppers. If, as is said, speculators are heavily short of April, the liquidation of their

positions in this delivery may afford them more than one disagreeable surprise.

The Ashmouni/American straddle (April/May) this week stands at 279 points, against 310 points last week and 785 points at this time last year.

The week's receipts amount to 98,928 kantars, against exports 207,602 kantars; the stock in Alexandria stands at 3,115,520 kantars.

Spot.—This week has seen a slight falling-off in demand from abroad and a consequent lessened activity at Minet el Bassal, very possibly due to the approaching Easter holidays. Sales for the five business days amount to about 13,400 bales, of which we estimate 3,650 bales Sakellaridis, 9,100 bales Ashmouni and Zagora, 300 bales Pillion, and 350 bales other varieties.

Sakellaridis: Only a moderate demand has appeared and the resultant turnover is not impressive. The poor available selection of the medium qualities, for which there is by far the best demand, is quite possibly limiting the amount of business done, as it is impossible to offer these qualities in decent quantities. Spot differences are generally unchanged from last week but well maintained, and for Fully Good Fair and the grades below they are inclined to harden.

Ashmouni and Zagora: In these varieties also there has not been the same demand as last week, and a smaller business has resulted, in which all grades except the best have shared, with the medium qualities once more in greatest favour. Spot differences are generally unchanged from last week.

Pillion: A moderate business has transpired at last week's differences.

Other Varieties: In Nahda a fair business has been done, and a small business has been done in White. Spot differences for both varieties are without change. A very fair business has also been done in Maarad and Fouadi.

Crop, 1929.—Climatic conditions have again been variable, and our up-country branches report that the weather has had a harmful effect on the germination of the young plants. Resowing is in progress on a small scale more or less everywhere. An immediate improvement in the weather would restore the situation; on the other hand, a continuation of the present unsettled conditions may cause a serious delay, with the eventual consequences attendant on a late crop.

GREEK DEBT SERVICE.

The following official final figures have been received from Athens for the year 1928, showing the amount of security available and the annual amount required for interest and redemption of the undermentioned loans:—

	Amount available.	Amount required.
7 Per Cent. Refugee 1924 ...	7,822,690	922,500
6 Per Cent. Stabilisation 1928 ...	6,301,465	684,653
6 Per Cent. Public Works 1928	5,387,039	265,720

For the purpose of the above figures, exchange has been calculated at the stabilised rate of 375 drachma per £1, and the amounts available have been reduced by all contingent prior charges which have not yet become definitely payable by the Greek Government:—

The production of the Attock Oil Company for March amounted to 45,198 barrels.

The annual meeting of the Champion Reef Gold Mines of India will be held at the Cannon Street Hotel, E.C., on April 17.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for March was 63,100 tons.

Negotiations are in progress for a new provisional commercial treaty between Roumania and Austria.

The daily output of the Phoenix Oil and Transport Company, Ltd., is now reported to be about 140 wagons (1,400 tons), derived from the following fields: Gura Ocnitza, 370 tons; Moreni, 180 tons; Piscuiti, 200 tons; Runcu-Tzontzesti and Chiciura, about 500 tons; and Tzintei, 140 tons daily.

The consumption of petroleum products in Roumania in 1928 amounted to 2,139,846 tons, as against 1,368,477 tons in 1927. The figures of the various products are as follows (in tons):—Motor spirit 102,547, illuminating oil 135,140, lubricating oil 36,888, fuel oil 117,755, paraffin wax 3,535, fuel oil 689,493, consumed in refineries 1,051,538.

Near East Markets

MARKET CONDITIONS IN SYRIA.

The French *Moniteur Officiel* contains the following report on the Syrian market for the three months ended December 31 last.

Business, which had remained stagnant in the course of the previous three months, but had shown slight signs of revival in September, improved more rapidly in October. Transactions, less important, it is true, than those of the corresponding period of 1927, were carried out in all articles of import—textiles, hosiery, foodstuffs, and construction materials. The abundant rains give ground for hope of a better crop next season than that of 1928 which was distinctly short, chiefly in cereals, and encourage the anticipation of a larger purchasing power in the interior in 1929.

It is worth while noting the real and continued development in the course of recent months of some local industries, such as tanning, hosiery, and the weaving industry—a development which is partly due to the reduction of the Customs duties on raw materials. In general it cannot be said, however, that 1928 has been a satisfactory year. Failures and liquidations have been numerous, and all commerce has been affected in consequence. But the situation seemed to have improved somewhat by the end of the year; credits are again normally granted by the banks, and it may be considered not an undue assumption that the market will recover the desired stability.

BULGARIA'S TEXTILE INDUSTRY.

Woollen and cotton cloth was woven by hand in the homes of the peasants when Bulgaria was still a province of the Ottoman Empire. The woollen cloth, known locally as "shayak," was made into national costumes by an artisan class of tailors. The widely developed cottage industry, with a network of tailors for the disposal of its production, formed the basis for the creation of a modern textile industry in Bulgaria. A factory to manufacture woollen cloth for the Turkish Army was established at Sliven in 1834. After Bulgaria's political liberation in 1879, the Government encouraged the woollen industry, with the result that it grew steadily and gradually was adapted to the weaving of finer goods. The centre of wool manufacture, the best developed of all Bulgarian industries, has been since Turkish times at Sliven and Gabrovo (says an article in the United States "Commerce Reports.") In 1926, the latest year for which statistics are available, Bulgaria had 31 wool mills, with 37,746 spindles and 764 looms, as against 31 mills, with 40,193 spindles and 792 looms, in 1925. In 1926 Gabrovo ranked first, with 16 establishments, having 14,820 spindles and 266 looms, followed by Sliven, with 7 mills, having 8,094 spindles and 320 looms.

The total capital investment in the Bulgarian wool manufacturing industry in 1926 was approximately £740,000, of which mills in Gabrovo accounted for £297,000 and mills in Sliven for £223,000. Of the 31 mills in the country, 16 had a capitalisation of about £20,000 each, and 11 a capital of £7,000 to £20,000. The foregoing figures on capital investment are based on the present depreciated currency of Bulgaria, whereas the greater part of the investment was made prior to the War, when the lev was at par. The actual value of land, buildings, and machinery, consequently, is considerably higher than the figures indicate. In 1926 the industry employed 3,003 people, of whom 1,153 were in Gabrovo mills and 1,060 in Sliven mills.

In 1926 wool mills in Bulgaria reported a production valued at £627,400, as against £699,600 in the previous year. Wool fabrics accounted for £455,000 of this value and the output amounted to about 1,725,000 yards. The

mills also produced 683,000 lb. of yarn for sale, with a value of £109,200, and 18,000 blankets, worth about £11,200.

The greater part of the raw materials consumed in the wool mills is imported. Although considerable quantities of wool are produced in Bulgaria, the quality is inferior and is suitable only for the production of rough woollen cloth; consequently wool and wool yarns for the better grades of goods are imported, generally from France, Belgium, and Italy.

The principal centre of cotton manufacturing is the Black Sea port of Varna, which has 19,600 spindles and 600 looms. The entire country has 20,450 cotton spindles and 1,277 looms. The total capitalisation of the cotton industry is placed at approximately £185,000. In 1926 the industry reported a production of 13,733,000 yards of cotton cloth. The greater part of the output consists of plain cloth for general use. Production of the finer grades is restricted at present, although there is a tendency to increase the output of such goods.

Sericulture.

Conditions in Bulgaria are favourable for sericulture. Production of silk cocoons has increased slowly during recent years, except in 1928, when it was estimated at 4,189,000 lb.; against 4,454,000 in 1927 and an average of 3,377,000 for the five years 1922 to 1926. In 1926 Bulgaria had 4 silk-reeling establishments with 80 basins, and another plant commenced operations in 1927. There were also 6 silk-weaving mills (of which 3 were in Sofia), with a total of 92 looms. The equipment of the mills, however, is said to be inadequate for dyeing and finishing and most of the goods are converted outside the country.

Knitting developed in Bulgaria as a domestic handicraft, but in recent years factories have been established. In 1926 there were 8 knitting mills, exclusive of a much greater number of co-operative enterprises; of the latter, 4 were located in Soa. The industry uses domestic yarns as well as imported cotton and rayon yarns. The immediate needs of the greater part of Bulgaria's population are met by local production of knitted goods.

In 1926 Bulgaria had 10 flax, hemp, and jute manufacturing establishments with 1,540 spindles and 280 looms. Hemp is grown in the country but not in sufficient quantities to satisfy local requirements, and hemp yarns, as well as linen and jute yarns, are imported for weaving. The country also has a number of cordage mills.

Bulgaria's Imports of Textiles.

In 1927 Bulgaria imported 15,375 metric tons of textiles, with a value of £3,219,400, of which cotton manufactures accounted for 10,496 metric tons, worth £2,174,800, and wool manufactures for 531 metric tons, valued at £433,200. Imports of raw cotton amounted to 1,362 metric tons, worth £117,600, most of which was brought in from Italy. Receipts of unmanufactured wool and tops totalled 1,445 metric tons, with a value of £227,400. In cotton manufactures the two most important items were cotton yarn and cloth; the former amounted to 7,342 metric tons, valued at £1,011,600, and the latter to 2,684 metric tons, worth £867,200. Imports of rayon yarns and threads totalled 129 metric tons, with a value of £65,000.

Of the 15,375 metric tons of textiles imported into Bulgaria in 1927, Italy supplied 6,867; Great Britain, 2,527; Czechoslovakia, 1,701; Austria, 767; and Germany, 658. The same sequence of countries was maintained in the distribution of trade in cotton manufactures; Italy supplied 5,031 metric tons, or more than double the quantity imported from Great Britain.

An agreement is reported to have been concluded between the Persian Ministry of Posts and Telegraphs and the Iraq postal authorities for the extension to Baghdad of the Junker air service for mails, which at present stops at the frontier.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated March 28, state:—

Currants.

The main item of interest during the month was the announcement by the Central Currant Office of its readiness to purchase at any time any quantity offered of the 1928 crop up to the equivalent of 46s. 6d. per cwt., duty paid. This undertaking naturally had a steadying influence on holders, and induced buyers to display a considerable degree of confidence. They keep to their cautious policy of carrying small stocks, but a more optimistic feeling prevails and a good undertone is manifest. The approach of the holidays has had a restraining effect in the closing days of the month. The falling off of imports of Thompson's seedless from California would suggest that the consumption in the U.S.A. is absorbing the surplus stock, and indications point to diminishing quantities arriving from now onwards, which should certainly benefit the consumption of the little dried grape, and be another factor in the establishment of a firm market. S.s. Bantria, Esneh and Bactria arrived during the month, but quantities were small and had no influence

on quotations. Values show little change, with the exception of medium grades which are slightly in buyers' favour. Sales were: Pyrgos 45s. 6d., Amalias and Patras 46s. to 47s. 6d., Zante 46s. 9d. to 47s. 3d., Gulf 47s. to 51s., Vostizza 49s. to 56s., Vostizza Smalls 49s. to 52s. Quotations: Pyrgos 45s. 6d., Amalias and Patras 46s. to 47s. 6d., Zante 46s. 9d. to 47s., Gulf 48s. to 50s., Vostizza 48s. 6d. to 55s.

Sultanas.

Smyrna.—We have experienced a quiet and featureless state of affairs, and in the absence of support a drooping tendency prevailed. Business has been difficult to negotiate, the few transactions noted being medium grades at 36s. to 36s. 6d., and good qualities from 44s. to 50s.

Greeks have attracted most attention, and sales were: Ordinary qualities 32s., Good 44s. to 54s., few Choice lots 60s. to 64s.

Figs.

Naturals.—A few Genuines changed hands at 31s. to 32s.

The cost of living index in Roumania is roughly 56 times what it was in August 1914.

Notes of the Week.

Roumania and The Powers.

The visit of the Roumanian Foreign Minister to Paris and to London has its significance more in the opportunity that it has afforded for the establishment of personal touch between the Governments concerned than in the importance of the subjects discussed. The advent to power of the Government of M. Maniu has entirely removed the restraint that formerly characterized the relations between Roumania and her Western Allies. Not that there has been at any time official unfriendliness in those relations; but there was a consciousness of a lack of common interests as a result of the policy adopted by the Roumanian Liberal Party of banging the door in the face of all foreign enterprise in Roumania. Before the War no great store was set on the national susceptibilities of others in furthering the cause of economic penetration in a foreign country, and political influence was freely enlisted in the support of this penetration. The responsibility for this state of affairs did not rest wholly on the penetrating Power; the country penetrated was in part to blame by reason of the indifference and lack of enterprise of its own people. All this has now been changed as a result of the War. Where a nation shows a desire to be master in its own house in economic as well as in political affairs, foreign interests, at least in the case of the Western Powers, are concerned only to obtain openings for the investment of capital and fair treatment for the business help that had previously been invited. Reciprocity, or a "gentleman's agreement," is all that is required to-day between the two parties. The Bratianu Government, however, was unable to appreciate any such arrangement; it could not differentiate foreign capital from foreign dominion, and to avoid, as it thought, the latter, it not only cold-shouldered the former, but also adopted an attitude of aggressiveness towards all foreign enterprise that had previously been summoned to assist in the development of Roumania. Such a policy could not fail to alienate foreign opinion, for while there was readiness to make every allowance for any fiscal muddle-headedness that underlay that policy, it was gradually shown to be merely a symptom of a misanthropic mania which was directed not only against foreigners, but also against all Roumanians who were not members of the

Liberal Party. It was a policy that received no general endorsement from the Roumanian people, and had, indeed, already begun to be abandoned by the Bratianu Cabinet. M. Mironescu, on behalf of the Government of Dr. Maniu, is able to point to the effective steps already taken during the first five months of office to bring Roumania wholly into line with the policy of international reciprocity.

The New Roumanian Policy.

A striking result of the new policy adopted by the present Roumanian Government is to be seen in the attitude of foreign capital. To-day Roumania has no lack of loan offers. She is in the position of those who, having nearly died of hunger, are suddenly confronted with an abundance of food and must eat cautiously to avoid killing themselves by over-eating. Unless she is careful, she will run the risk of over-taxing the financial capacity of the country by an attempt to make up for arrested development in too many directions at once. After the lean years that she has experienced it is inevitable that development must come slowly at first, if the evils of an artificial boom are to be avoided. That the attitude of the Maniu Government in the matter of foreign affairs should be followed by various international *rapprochements* was inevitable. A healthier tone has characterized the still unfinished negotiations on the Optants question with Hungary; an inquiry into the grievances of Bulgarians and Turks in the Dobruja has been instituted; a feeling of greater confidence in the good will and capacity of the Bucharest authorities has manifested itself in Bessarabia. It may even prove a blessing in disguise that Communism has chosen an early date to show its hand. The return of a Communist majority in the municipal elections of a Transylvanian town, with the resultant election of a Communist mayor, has caused considerable misgivings and is being taken as the text for many sermons by the Opposition. It is in the first place a tribute to the fairness with which elections are now conducted in Roumania. Whether, on the other hand, the establishment of impartial administrative methods for four or five months has brought an accession of strength to Communism, or whether the latest manifestation has to

be traced to the maladministration of previous régimes is a matter that can be decided only on the spot. It is certainly better, if Communism has to be in Roumania, that it should come out into the open than resort to bombs and revolvers.

The European Danube Commission.

A further achievement on the part of the new Roumanian Government is the settlement of its dispute with the European Danube Commission. This body, consisting of representatives of Great Britain, France, Italy and Roumania, has been in charge of the River from Braila to Sulina at the mouth. Ever since the Armistice Roumania has challenged its jurisdiction, especially over the stretch between Braila and Galatz; and in 1926 the question was referred to the Permanent Court of International Justice at The Hague, which pronounced in favour of the Commission's contention. The negotiations between the two parties, however, continued, and with the help of the Secretariat of the League of Nations agreement has now been reached. In brief, the Commission retains its control of the River from Braila to the sea, but all juridical rights in respect of that section of the Danube are vested in Roumania. Thus, all employees of the Commission are to be amenable to the discipline of their hierarchical chiefs, without consideration of nationality; all offences committed within the Commission's jurisdiction will be tried by Roumanian Courts, and only in cases of appeal will reference to a Mixed Court, on which foreign representatives will sit, be allowed; further, the three foreign Governments waive their right to keep guard-ships in Roumanian waters. The compromise reflects the more rational outlook on international relations for which the new Roumanian Government is responsible, as compared with its predecessors, for Roumania originally demanded the total suppression of the European Danube Commission, and the extension of the competence of the International Commission of the Danube to include the section from Braila to the sea, as well as the suppression of all foreign jurisdiction over this section.

The Dictator's Axe in Yugoslavia.

On the morrow of the reduction of the number of Ministries in the Yugoslav Government from sixteen to twelve, King Alexander has signed a Decree pensioning thirty-seven of the most prominent generals in the Army. In the meantime a considerable number of State and municipal employees—600 of the Belgrade Municipality alone—have been dismissed or pensioned. The Dictatorship wields its axe with complete impartiality, and its single-mindedness of aim is above challenge. It will be interesting, therefore, to see whether the good sense of the nation will rally to the support of the Government, recognising that the latter is conscientiously trying to work out the country's salvation. Wholesale dismissals from comfortable posts cannot be effected without creating grievances, and up and down the country there will be many, ex-officials or ex-politicians, striving to stir up the waters of dissatisfaction. Traces of their handiwork would seem to have been discovered in Zagreb, where the students are showing signs of a desire to kick against the pricks. The placarding of the city with subversive posters, purporting to be signed by the "Croat Revolutionary Organisation of Young Men" is certainly a challenge to the Dictatorship to tighten the screw; but it is to be hoped that the Government will not rely only on the strong hand, but will also take the people more fully into its confidence. That efforts should have been made to delude the Croat peasantry into supposing that the new order entertains designs against their interests suggests that the Belgrade authorities have overlooked the fact that where information is withheld suspicion and misrepresentation quickly make their way. The Croat peasants are more likely to be guided by what they hear than by what they read. The Government very rightly sets more store on deeds than on words, but it cannot afford to leave the country exposed to the misrepresentations of malcontents. If it recognises that its drastic

measures, however necessary, in the general interest of the country, do press heavily on the people, at least to the extent of depriving them of their former safety-valve, irresponsible talk, it will endeavour to make up for the void in some other way. With the establishment of a Broadcasting Station in Belgrade, the Government might consider the desirability of installing loud speakers in every village, in order to bespeak the interest of the people in its measures for their good.

Greece and Turkey.

Whether the credit should belong to Italy or not, there can be no doubt as to the far more satisfactory atmosphere in which the negotiations between Greece and Turkey have been conducted during the last week or fortnight. A month ago the Turkish Press was fulminating against the Greeks and calling for the exercise of "sanctions." The seizure of Greek property in Constantinople followed, but was quickly stopped. The first indication of the new *mot d'ordre* was given in a Constantinople paper under the heading of "An important dispatch from our Editor-in-Chief"—a Deputy in close touch with the Angora authorities, who had championed the policy of reprisals on the Greeks, and had solemnly announced that the reason for the protracted negotiations was to be found in M. Venizelos's determination to provoke a war with Turkey. Telegraphing from the capital in the last week of March, he stated that the Turko-Greek negotiations were following, albeit a little slowly, a normal course, that interested circles were persuaded that the questions at issue, which turned on rights and agreements, would sooner or later meet with a logical solution, and that Angora was "seriously convinced" that M. Venizelos was pursuing and would pursue a reasonable and peaceful policy. More recently a step that cannot fail to be gratifying to the Greeks has been taken in the promotion of the chief Turkish delegate on the Commission for the Exchange of Populations to be Minister of Education, a post which remained vacant for some time after the death of Nejati Bey, was then held for a few weeks only by Vassif Bey, who resigned owing to disagreement with the Prime Minister, was refused by the next Deputy to whom it was offered on the ground that he shared Vassif Bey's views, and was finally given to Jemal Husni Bey, who is succeeded on the Exchange Commission by Vassif Bey. The Turkish Foreign Minister is due to spend a few days in Rome after attending the Disarmament Conference in Geneva, and, although his visit is represented as an act of courtesy in return for the visit of Signor Grandi to Angora, it may be expected that the improved atmosphere of the Greco-Turkish negotiations will not be disturbed before Tewfik Rushdi Pasha has seen Signor Mussolini.

The Afghan Kaleidoscope.

The situation in Afghanistan remains as vague as at any time since the abdication of King Amanullah. From the latest reports it would appear that General Nadir Khan is gaining the conviction that King Amanullah's star is not sufficiently in the ascendant to justify his unqualified support of a ruler who has given offence both to the still powerful mullahs by his interference with Islamic traditions and to the more warlike of the tribes by his incontinent flight from Kabul. If, therefore, Nadir Khan finds himself at the head of a strong enough force to advance on the capital, he is unlikely to reveal his intentions with regard to the future of the Afghan throne until he arrives there. He continues to affect the rôle of Kingmaker rather than to appear as a candidate for the kingship himself, and he is now credited with the intention of appointing another member of King Amanullah's family. Reports to this effect, however, can be little more than *ballons d'essai* at this stage. Nadir Khan has still to reckon with the Amir Habibullah, whose fortunes as well as those of any other claimant for the throne may prove to be linked up in some way with their potential usefulness to Soviet Russia.

Persian Recognition of Iraq.

As we foreshadowed in our issue of February 28, the notification to the League of Nations that changes are proposed in the judicial administration of Iraq has quickly had a mollifying effect on Persian opinion. The Shah of Persia sent a telegram of congratulation to King Faisal, and now it is announced that Iraq will be officially represented in Teheran on the anniversary of the Shah's coronation on April 25. This improvement in Persi-Iraqi relations is an occasion for unqualified gratification, and points to a consummation which has long been wished: the recognition of Iraq by Persia. No artificial restrictions could indefinitely strain the ties which bind, and must always bind, Iraq and Persia together. Not only is there the bond of the Shiah religion, but to a large extent also the two countries may progress coincidentally. Many of Iraq's problems are Persia's problems also, and although it would be foolish to overlook historic differences between the Persian and Arab races, it is the duty of every right-minded man in the Middle East to endeavour to bring them closer together, working in co-operation in the great reforming movement of the Middle East. We may be permitted to congratulate both the Teheran and the Baghdad Administrations on this latest development, the importance of which is nicely signified by the choice of Rustum Beg Haidar, King Faisal's Private Secretary, as head of the Iraqi delegation to Persia.

Turkey and Persia.

It is time that is allowed to solve most problems in the East where they concern Oriental States alone. Even in these days of "Westernisation," "modernisation," and so on, international difficulties are frequently exempted from that passion for rapid solution which is made so manifest in matters pertaining to dress, education, and so forth. Who would have thought, for example, that the troubles which broke out nearly two years ago between Persia and Turkey, owing to the activities of Kurds on their common boundary, should only in this last week have been regarded as settled through the medium of an official agreement to set up a commission to deal with any frontier incidents which may arise? This delayed agreement is hardly a sign that Turkey and Persia are as anxious to work in complete harmony as is sometimes indicated. The truth lies probably in the fact that neither Turkey nor Persia was willing to admit that she was in the wrong—Turkey arguing that Persia sheltered and urged the anti-Turkish Kurds to attack Turkish troops, and Persia arguing that for a matter which concerned Turkey and her Kurds she could not be held responsible. Whether the end has been reached of anti-Turkish activities on the part of Kurds remains to be seen. It has been the habit of Kurds in the past to be quiescent for an interval and then to break forth with undiminished vigour. It will be instructive to observe whether in the eradication of this habit the statesmanship of the Republic is superior to that of the Sultanate.

Egypt and Arabia.

Neither the Kingdom of the Hijaz and Najd nor the Yaman has yet been officially recognised by Egypt, whose intercourse with these two States, however, is likely rather to increase than to diminish. The difficulty between Egypt and King Ibn Saoud would appear to be still the "Mahmal" controversy—the refusal by the Wahhabi monarch to allow the old Egyptian privilege of using Egyptian troops to guard the interests of Egyptian *hajjis* in the Holy Land. But this obstacle seems to be largely an academic one, if the number of Egyptian *hajjis* be any guide. This year, for instance, there were, by April 4, 14,545 Egyptians reported as desirous of making the pilgrimage—compared with the 13,500 in 1928, and the 16,000 in 1927. For practical purposes, therefore, the withholding by Egypt of recognition of the Wahhabi régime does not amount to very much. In regard to the Yaman, however, which has, of course, been recognised by Italy and by Soviet Russia, it is interesting to know that the Imam Yahya recently wrote (or is alleged to have

written) to King Fuad requesting that the Egyptian Government should recognise Yamani passports, and that the Egyptian Government has stated that no difficulty exists in the way of such recognition. Hitherto any Yamani going to Egypt *via* Aden had to have a British passport (? visa) or, *via* Massowa, an Italian passport. It will certainly be interesting to see which comes first, British or Egyptian recognition of the independence of the Yaman.

INDIAN NOTES.

Lord Irwin's Action.

"I have no fear that my action will not command the approval of that vast majority of India's people who have faith in India's future and whose first desire is to see their country prosperous, contented and secure." Lord Irwin's confident belief that responsible opinion throughout the country would approve the two important decisions announced in his address at the joint session of the Central Legislature on Friday, has already proved to be well-founded. Indeed, it would be difficult to visualize any other reception, even in India, to a speech in which sound argument, studied moderation, alike of tone and text, and inflexible determination were so happily mingled. After associating himself with the universal feeling of indignation at last week's bomb outrage, which he rightly characterises as a threat levelled through the corporate person of the Assembly at the whole constitutional life of India, the Viceroy pertinently reminded his hearers that in such a matter reprobation alone, even if unqualified, was not everything. "To condemn a crime in one breath and in the next to seek an excuse for it by laying the blame on those against whom it is directed is no true condemnation," Lord Irwin remarked, with, no doubt, a lively recollection of the favourite tactics of the leaders of the Opposition benches. If there have not been wanting those in both countries who have feared lest Lord Irwin's administration had pushed their policy of forbearance and conciliation almost to the point at which those virtues become a weakness, their misgivings have been finally dispelled. Confronted with an issue "more far-reaching than ordinary political controversy and, indeed, fundamental to all society," the Viceroy has acted promptly and with decision. The protection not only of its own officers whose lives are threatened, but equally of private citizens, who have frequently been innocent sufferers from the revolution-

TURKEY IN EARNEST.

This year the Turkish Republic will reach an important landmark. The Commercial Convention attached to the Treaty of Lausanne will have run its course, and in August Turkey will be free to arrange the details of her own Customs Tariff. To this end a Commission has been sitting to investigate the subject of tariff reform, and its conclusions in the form of a draft Law have been submitted to the Grand National Assembly. From the statements that have been in circulation regarding this measure it has to be inferred that the new Customs policy is keeping two main objects in view: to increase materially the revenue derived from the Customs and to promote the industrialisation of Turkey. Accordingly, there is to be a general increase in all Customs duties; those on luxuries will be enhanced to a very considerable extent, those on articles that can be manufactured or produced in Turkey will be frankly protective in character to a degree not yet known, and those on imports of first necessity which the country itself cannot provide will be increased to a smaller extent. The principle involved is an eminently natural and legitimate one. It appears at first sight to be also easy of application, and it is to be supposed from the comments of the Turkish Press that it is in this spirit that the subject is being approached by the Turkish authorities. Experience, however, suggests that the problem with which Turkey is confronted is not quite as simple as it is commonly supposed to be by the Turks. The purchasing power of the country is not great, and it will probably need no very large increase of tariffs to affect the volume of imports, so that the Government, instead of augmenting the Customs revenue, may find itself in receipt of a diminished total. To avoid any such disappointment it would be advisable to subject each item of the tariff to a very careful scrutiny rather than to adopt the rough-and-ready division between goods made or produced in Turkey and those that can be obtained only from abroad. In the probable absence of the necessary statistical information special attention should be paid to the representations of those who have first-hand experience of the trade in the various articles. Steps have been taken by the Chambers of Commerce and other organisations to lay their views before the Turkish authorities, and it is to be hoped that these will be examined in no captious spirit, but under the conviction that the well-being of the trading community is not incompatible with the interests of Turkey.

If any doubts exist in the minds of traders that the Turkish authorities may be tempted to give the new tariff a sentimental rather than a scientific basis, they will have

been created by actual events in the country and by the public utterances of those who are understood to reflect the opinion of Turkey's rulers. The movement in favour of home, as against imported, products received a notable stimulus in the first week of April from a mass meeting held in the University of Stamboul under the auspices of the National Union of Students. At this gathering those present took an oath to wear only clothes that were made of Turkish material. It is true that they were told that they would not be required to scrap the clothes they already have until these are worn out, and the undertaking is to buy only Turkish clothes in the future. Now, it is more than probable that, if these massed enthusiasts gave the subject a thought, they imagined that the purchase of home-made clothes would be as simple a matter as the changing of the fez for European headgear. In the latter case, however, the Turks had at their disposal not only most of the hat-makers of Europe, but also—as the event suggested—all the second-hand hat-dealers of the world. If the country is to wear only Turkish-made clothes, it is probable that a fair percentage of Turkey's fourteen million will have to go unclad for a long time before the first garments are ready, as there can be no question of the existing factories' being able to supply the country's need in the immediate future. The effect of enhanced duties on clothes and piece-goods will be to encourage the establishment of textile factories in Turkey, but time must be allowed for these to materialise and for their output to catch up the demand. If in the meantime all imported clothes and materials are to be taxed as though Turkey were already able to meet all the requirements of her population, grave hardships will be imposed on the latter. The case in regard to textiles is applicable to other items in the Customs tariff. The danger, therefore, is that the existence of one or more establishments connected with any particular industry will cause the category of imports in question to be taxed on the principle that the country is already self-supporting in that class of goods. In tariff reform, as in other matters, the Turks will be well advised to advance slowly.

The failure of certain industrial enterprises established under the best possible auspices proves that the industrialisation of the country is not going to be achieved by the mere waiving of a presidential wand. Turkey is primarily an agricultural country; her people may have the qualities of good industrial workers, but the experience in management and in business methods in general that she can call upon is altogether inadequate. Her most conspicuous success in any walk in life is in the profession of arms, and it is not without significance that it is the only sphere in which she has deliberately and willingly accepted foreign teachers and systematically set the whole country to school under them. If the Turks aim at a similar measure of success in economic affairs, they must adopt the same methods in business. They have had no feelings of false pride in placing their army under foreign supervision, and there is no reason why they should not require their business men to undergo the same kind of training. They have before them the brilliant success achieved by Japan by such methods; and, if they care to extend their inquiries, they will find that many of the troubles through which Australia has had to pass have been due to the patriotic, but misguided, belief that what other countries have done the Australians also can do, regardless of the fact that a small population necessarily commands less experience and less ability than are to be met with in larger communities. The individual Turk is not asked to regard himself as inferior to any European; but he is urged to reflect that in five or six years the Turkish nation cannot expect to command the business instinct and experience that other countries have taken as many, and more, decades to evolve. For this reason the Turk need not be ashamed to learn of others and to profit by their experience. By so doing, he will reach far more quickly the goal that he has in view. No one grudges him his aspirations; for a progressive and well-developed Turkey is going to be of much more use to the world at large than a backward and undeveloped country.

*The Near and Middle East

From Our Own Correspondents.

Belgrade, April 11.

The Ministerial Changes.

The changes in the Administration foretold in the Government's programme have been carried out very thoroughly and without delay. Four Ministries have already been abolished, and it is expected that other changes will be completed shortly. The Ministries abolished are the Ministry of Religion, whose work will be carried on by the Ministry of Justice, the Ministry of Public Health, incorporated in the Ministry of Social Policy, the Ministry of Posts and Telegraphs, whose work will be done by the Ministry of Public Works, and that of Agrarian Reform, which has been joined to the Ministry of Agriculture. The control of the waterways of the Kingdom has been taken from the Ministry of Agriculture and put in the hands of the Ministry of Public Works, which has also been entrusted with the building of all new railway lines, formerly a department of the Ministry of Communications. It has long been considered that eighteen Ministries was too many for a small and none too well-to-do country, but during the period of intense party political strife the number of Ministries could not be reduced, since they were needed to provide posts for satisfying the leaders of the various political factions. Thus the tendency was to increase the number of Ministries to the utmost, and when no new ones could be imagined the post of Under-Secretary was created in various Ministries—the Under-Secretary being a political personage almost as important and well paid as a Minister, whose duties usually consisted in drawing his pay and doing party organising work. The post of Under-Secretary has now been abolished, but where assistance is needed the post of Assistant Minister has been created as a non-political, permanent, expert position—a first step towards creating a permanent non-political Civil Service. At a dinner which he gave in honour of Dr. Alaupovitch and Dr. Krul, the Ministers of Religion and of Public Health, who resigned as their Ministries had been abolished, General Zivkovitch thanked them for their services in helping to form the new Government and for the sacrifice shown in standing down when their tasks were fulfilled. He laid stress on the need for this spirit of willing service and self-sacrifice, which the new régime hopes to introduce throughout the whole of the State administration. Dr. Kumanudi, who was Minister of Posts and Telegraphs, has been appointed a Minister without Portfolio, to enable him to continue to act as Minister of Foreign Affairs in the place of Dr. Marinkovitch, who is still away on sick leave. It is understood that Dr. Marinkovitch is progressing very favourably and will return to duty about the middle of May. A further change in the administration is the regulation providing for the direct responsibility of Ministers for their work and their liability to be tried under the new Act for the prevention of corruption and the misuse of power.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

Formerly Ministers were so protected by their party friends that they could rarely be brought to book.

Economy Measures.

In the interests of economy and efficiency a great number of State and municipal employees have been dismissed or pensioned off. These include officials of the Ministry of Foreign Affairs of the rank of Plenipotentiary Minister downwards and over 600 employees of the Belgrade Municipality. While everyone agrees that a radical thinning of the ranks of these functionaries was essential, there is considerable criticism of the sudden way in which so large a body of educated people has been thrown out of employment without warning, since they cannot be absorbed into business for many months and thus a nucleus of dissatisfied people who appear to have a grievance against the Government will be created. By April 15 every Minister must submit to the President of the Council proposals for the reorganization of his Ministry in accordance with the Government's programme, and so still further reductions of staff may be expected.

The Budget.

The Finance Act, including the Budget for 1929-30, has now been passed into law by the King's Decree. Dr. Shvrlyuga has pointed out that this Budget is in essentials the one prepared by the late Government, and that, while considerable paring has been done, no radical changes have been possible in so short a time. The Budget balances at 12,464,474,912 dinars (approximately £45,000,000), a slight increase over last year, and is made up of two parts, the cost of Government, 7,945 million dinars, and the outlay on State undertakings, 4,519 million dinars, which is naturally recovered together with a profit, as shown by the entry of 6,698 million dinars as revenue from State undertakings. The accounts for last year are now completed and show that there was a surplus of 13,650,966 dinars actual revenue over actual expenditure.

Broadcasting in Yugoslavia.

The Belgrade Radio Broadcasting station, equipped with the most up-to-date Marconi apparatus, has already begun to function on a wave length of 455 metres, sending out news, lectures and concerts every day. English listeners-in will find the concerts of Yugoslav folk-songs most enjoyable, and the Serbian Gipsy orchestra, which plays almost every night, very interesting.

The Pirot Conference.

While the comment of the Belgrade Press immediately following the close of the Pirot Conference suggested that

agreement had been reached on all the points raised, it appears that the wish was rather to the thought, for it is now officially announced that, while agreement was reached on a mass of minor details, two of the most important questions remained unsettled. These are the questions of estates divided by the frontier, so that part lies in one country and part in the other, and that of the formation of a frontier zone to hinder unauthorised persons from crossing the frontier. The Yugoslav delegation proposed that divided estates should be broken up and so arranged that they should lie completely on one or the other side of the frontier. The Yugoslav delegation also proposed that a zone of twenty kilometres wide should be established, into which no one but the inhabitants and frontier officials should be allowed to pass. This would make raids such as are alleged to be made by Bulgarian *komitajis* into Yugoslavia from Bulgarian territory and by Bulgarian refugees (agrarian) into Bulgaria from Yugoslav territory much more difficult. The Bulgarian delegation, at the direct command of their Government, refused to consider either of these proposals, even though the Yugoslav delegation reduced the width of the proposed zone to ten kilometres. This refusal is taken by the Belgrade Press as indicating that the Bulgarian Government either does not wish or dare not take any step which would effectively prevent frontier incidents and hinder *komitaji* activity.

Negotiations with Roumania.

Negotiations between delegates from Roumania and experts representing the Yugoslav Government have begun for the settlement of all the many minor questions outstanding between the two countries. The most important questions being treated at present are that of the property of religious institutions in the frontier districts and that of the old 14th Frontier Regiment. It is believed that no difficulties will be encountered, and that negotiations will be satisfactorily concluded in a few days' time.

ROUMANIA.

Bucharest, April 4.

The General Situation.

The money market is stagnant, as the country is still suffering from the depression caused by the financial stringency which prevailed last year and which was enhanced by the failure of the maize harvest, for this cereal usually provides the most important surplus for export; consequently the new taxes recently imposed are proving difficult to collect. Moreover, the long and exceptionally severe winter has entailed the destruction of the autumn-sown crops in certain parts of the country. This is a heavy blow to the farmers, following, as it does, the disappointments of the last harvest, and the peasant owners of small holdings have difficulty in obtaining credit. In order to provide some relief the State has set aside considerable sums for loans, both in cash and in kind—seed, implements, etc. M. Mihalache, Minister of Agriculture, has received the sanction of Parliament for the measures he proposes to adopt in this connexion. He also gave the Chamber a short summary of the Bill he is preparing for the protection of agriculture and of the farmers, who had to suffer under the last régime from very heavy taxation. This Bill, he said, would shortly be submitted to Parliament.

Recent Legislation.

The new Mining Law was passed last week, first by the Senate and then by the Chamber of Deputies. The Liberal Opposition, after having announced its disapproval of the Law (even going so far as to lodge a protest against it with the Regency) rose and left the Chamber while the vote was being taken, only one of their members remaining behind to voice their formal protest against a Law which was contrary to their fundamental principles expressed in the Constitution. They argued that the acceptance of foreign capital was prejudicial to Roumanian

capital and to the interests of the State itself, as the sub-soil of Roumania will soon become the property of foreigners. M. Madgearu, Minister of Industry and Commerce, brilliantly defended the Law, pointing out the errors in the arguments of his Liberal opponents, who, he said, forty years ago had opposed a similar Law introduced by the late Peter Carp, and had thus prevented the profitable exploitation of much of the mineral wealth of Roumania. He showed also (reading the relevant articles), that, although full freedom and protection are accorded by the Law to foreign capital investments, the interests of Roumanian capital and of the State are fully protected. Finally the Hungarian minorities also protested against the Law, and left the Chamber, saying that it compromised the exploitation of the mineral waters of Transylvania. M. Madgearu, however, showed their fears to be groundless and read an article providing for the protection and continuation of all engagements entered into before the passing of the Law. The Minister was heartily applauded, and the Bill was passed unanimously, after having received the warm support of Professor Iorga.

Reorganization of the Gendarmerie.

Another important measure has also been passed, that for the reorganization of the gendarmerie or rural police force. Hitherto there has been one policeman in each village, who was apt to become a small local tyrant. Henceforth there will be fully equipped police stations established at convenient centres, and sufficiently staffed to provide prompt police assistance wherever it is required. The necessary telephone and transport services will be arranged, between the villages and the police station. M. Goga (for the People's Party) offered some objections to this Bill, which was ably defended by its author, M. Pompiliu Ioanitescu, Under-Secretary of State for the Interior. The police corps will be composed of ex-non-commissioned officers, re-engaged for the purpose.

Easter Vacation.

Parliament closed at the end of last week for the Easter vacation, after holding an all-night sitting in order to pass one or two important Laws, for which no time had been found.

M. Madgearu went to Vienna. It is noticeable that the pre-War habit of Roumanians of means running over to Vienna, for a few days' holiday, has begun to reassert itself, and this is a clear sign of the gradual return of the country to pre-War conditions: even if Vienna be greatly changed, and the visitors from Roumania of a different category.

Miscellaneous.

The Danube is reported to be free from ice and open to navigation as from the present date.

A solemn mass was celebrated in Bucharest for Marshal Foch and was attended by the members of the Roumanian Government and the Diplomatic Corps. The Cathedral was crowded and numbers of the general public were unable to obtain admission. The whole Press of Roumania contained warm expressions of sympathy and admiration for the late Marshal.

Great satisfaction is expressed at the settlement of the long-contested question of the jurisdiction of the European Commission of the Danube, between Galatz and Braila. In 1927 the Court of The Hague confirmed the claim of the Commission to jurisdiction over that area, but this decision has now been superseded by agreement.

THE HIJAZ.

Jidda, March 31.

Consular Movements.

The Turkish representative, Abdul Ghani Bey Sani, returned to Jidda this week from his visit to the Yaman, where in conference with the Imam various outstanding

matters relating to Turkish derelicts in south-west Arabia were finally settled. Most of the Turks who wanted to leave the Yaman have, as a matter of fact, already done so, and most of the rest have put down roots too deep to disturb and may be regarded as forming already an integral part of the Yaman population. Sani Bey states that, apart from an Italian doctor at Sanaa and another at Hudaïda, there appear to be no Europeans in the country at the moment; the German aviators have apparently disappeared, while the American road engineers do not seem to have materialised. His general impression is that Sanaa has changed but little either materially or morally since the time when he was Secretary-General to the Wali, Tahsin Husain Pasha, twenty years ago, though parts of the road from Hudaïda to Sanaa (the beginning and the end) can now be, and are regularly traversed by motor car.

Sa'id Bey Matar, who has been acting as Egyptian Consul for some months and has been in the Hijaz exactly a year, leaves Jidda to-day for leave prior to proceeding to his new appointment at Teheran. As already reported, he is succeeded by Ashmuni Bey, who has already been here two months and who, it is to be hoped, will stay long enough to see the mutual recognition of the two countries; already far too long delayed. Nevertheless it is surely ridiculous to suggest, as one of the leading London papers has suggested recently, that relations between the two countries are in danger of becoming strained over the Mahmal question. One would have thought that the question of an armed Egyptian escort for the Egyptian Mahmal (if and when sent again) had been disposed of for ever, and that all intelligent people had realised that Egyptian soldiers as such will never be seen among the pilgrims so long as King Ibn Saoud is the ruler of this country. He really does not need their services for the maintenance of peace and order in his territories; it may seem strange, but it is true. As for the obstruction of the work of the Egyptian Consul at Jidda, which is also suggested, it may be pointed out that the Egyptian and Hijaz-Najd Governments have not yet formally recognised each other, and that, therefore, *ipso facto* their representatives have no official status in the territories of each other. The ordinary courtesies of diplomatic intercourse are, of course, withheld by both Governments, but this means little more than the absence of red carpets and guards of honour at departures and arrivals.

The French gunboat, Diane, recently paid a short visit to Jidda.

The Iraq Frontier.

The steps recently taken by the King of the Hijaz and Najd for the reorganising of his hitherto somewhat casually-recruited army, the appointment of the Heir-Apparent as Commander-in-Chief of the forces, and the grand review of the whole army arranged to take place in the Qasim seem to have given rise to extraordinary flights of imagination on the part of those who prefer fiction to fact. Reviews and manœuvres are the usual accompaniments of military administration in all the countries of the world, and it is difficult to understand why in Arabia alone they should be represented as an imminent threat to the peace of the world. It may,

**HAIFA—BEIRUT—DAMASCUS—BAGHDAD

therefore, not be out of place to state again that peace with his neighbours is the main aim and object of King Ibn Saud's policy. The existence of the Iraq forts, which were the *jons et origo mali* between the two countries, is a continuing danger to their mutual peace, but one may be confident that Sir Gilbert Clayton and arbitration between them will provide a satisfactory solution for this problem in the near future. At that one may leave the matter. It is interesting to observe that the Iraq paper, *Al Istiqlal*, has strongly raised the question of the wisdom of the recent appointment of Mr. Glubb to a governorship of the desert.

The King.

The King arrived at Buraida in the Qasim on March 7, and it is semi-officially indicated that his return to the Hijaz may be expected shortly. In fact a committee has been appointed to arrange the details of a suitable reception for His Majesty on his arrival.

The Pilgrimage.

The number of pilgrims already in the country is now about 38,000, as against 58,000 at the corresponding period of last year. The position is, therefore, not satisfactory, although there is still hope that Egypt and India, whose pilgrims generally arrive late in the season, will do something to swell the numbers to normal proportions. Special steps have been taken to reorganize the health and medical arrangements, and the Amir Faisal has recently carried out an exhaustive inspection of the measures taken by the Health Department. The prolonged spell of cool weather has naturally proved somewhat distressing for the pilgrims from the world's warmer climes.

The Hijaz Government.

During the past three years the King has devoted a good deal of attention to the reorganization of the Hijaz Government, and readers of THE NEAR EAST AND INDIA may be interested to have a brief sketch of the scheme which has resulted up to date, though they must realise that it is yet far from being complete and in its final form. When the King is in the Hijaz the executive government vests, of course, in him alone, and all decisions taken require his authority before coming into force. In his absence the executive head of the Government vests in a Supreme Council called *Majlis al Niyaba*, which may be rendered "Council of Regency." Its President is the Viceroy of the Hijaz, the Amir Faisal, and there are three members, namely, the Director of Foreign Affairs, the Finance Minister, and the nominated Vice-President of the *Majlis al Shura*, or Elective Advisory Council. In

foreign affairs the Director of the Department at all times deals direct with the King, whether absent or present, and the Viceroy has no direct responsibility for them, though he is kept acquainted with all matters of importance dealt with by the Director. In all other matters the Council as a whole exercises the King's prerogatives in his absence, and its decisions are signed by the Viceroy in the equivalent capacity of Prime Minister. He is also Minister of the Interior, which comprises all administrative departments other than those which come under the Minister of Finance (and, of course, the Foreign Department). The Supreme Council is advised by the *Majlis al Shura*, which consists of 13 members, namely one nominated by the Vice-President, 5 elected members for Mecca, 3 elected members each for Madina and Jidda, and one elected member for Yanbu. The President of this Council is *ex officio* the Viceroy, supported by the nominated Vice-President and another elected by the Council from among its own members.

Thus there is a form of Cabinet-Government, which has been developed in accordance with the special needs of the country, and the Cabinet may be regarded as comprising the Viceroy (as Prime Minister and Minister of the Interior), the Minister of Finance (presiding over all matters relating to revenue, expenditure and accounts), the Director of Foreign Affairs, and a Minister without portfolio. Under these Ministers each Department has its administrative head or directive council (as in the case of the Judicial Department, which is administered by a committee of judges); and each Department is divided up into sub-Departments, each with its own sub-head. The scheme works very effectively, and perhaps its most satisfactory feature is the strongly centralised financial control, which obviates any dissipation of the State revenue by administrative schemes undertaken without regard to the financial resources requisite for their inception. It is understood that a Budget is now in course of preparation for all the Departments which may be regarded as having more or less reached the shape in which they are likely to remain. Fixed provision being thus made for them, the balance of revenue will be available for public works and other improvements, for the Army and Civil List, and so forth.

ABYSSINIA.

Addis Ababa, March 18.

The New Order.

Abyssinia would appear to have now settled down under the rule of King Tafari. In the capital the situation is, and has been throughout, normal. From time to time one hears of trouble in the provinces, but nothing of a serious nature. Owing to the almost complete absence of communications with the outlying districts, it usually happens that the least disturbance is exaggerated into a serious revolt.

Wireless Development.

We have recently seen the issue, by the Abyssinian Government of notices calling for tenders for the erection of a central wireless station, capable of communicating with Europe and receiving from America; and for five subsidiary stations, capable of transmitting and receiving up to about 800 kilometres for use in the interior. Although it may be thought in some quarters that the development of Abyssinia is not such as to justify the erection of wireless stations, such is not the opinion here. Apart from the advantages of wireless communication with Europe, the erection of stations in the interior cannot fail to bring the provinces into closer relations with the capital. At the present time there are no roads, but merely tracks, to the provinces, and the other means of communication is by telephone, which works very badly.

Lack of Provincial Co-ordination.

Frontier troubles, and interference by provincial governors with the caravans of foreigners, are a frequent source of trouble to the central Government. The German

Minister, Herr Prufer, together with Signor Porta, Secretary of the Italian Legation, have just returned from an extensive caravan tour in the north of Abyssinia. It is understood that in spite of being furnished with proper passes by the central Government, they were kept under arrest in their camp for a whole week by the men of Ras Guksa. These men were armed and were most truculent, and it is more than likely that, had any resistance been offered, murder would have been committed. Again it is understood that M. Le Blanc, who with his party recently arrived in Addis Ababa in Renault cars from Egypt via Roseires, was also held up quite illegally by some local chieftain.

Such incidents cause great annoyance both to the foreign Powers, and to the central Government. It may be said that in general the latter does its best to prevent such incidents, but, owing to the absence of communications, its task is difficult.

Police and Judiciary.

Life in the capital on the other hand is most secure. It often astonishes the newcomer that, whilst practically everybody goes armed, it is very rare that any shooting takes place. During the past few years not a single European has been murdered in the capital; and, further, not a single case of highway robbery on a European has occurred. Thefts and burglaries, of course, take place, but not to a greater extent than elsewhere. The friction that arises out of such cases is caused not so much by the event itself, as by the complete uselessness of the police force, especially in regard to the detection of crime. However, this force has only been formed since Ras Taffari's visit to Europe in 1924, and one cannot expect the police force to be taught its duties in a day. Much might be done, if the services of an ex-Chief of Police of one of the more advanced countries were engaged to train and organise the police force.

It is hoped that at last the difficult problem of the Special Court which decides cases between Abyssinians and foreigners is being tackled. Apart from technical details, one of the main causes of its bad functioning is that the judges are for the most part men of small position, who command no respect from the Abyssinians, and in consequence never can enforce their own orders. Recently Dr. Martin, well known to English readers, has been appointed President of the Court, and with the assistance of the Legal Adviser, Maître Auberson, a Swiss advocate, he has seriously taken in hand the re-organisation of the Court.

From the point of view of foreign residents, the reform of the police force and that of the Special Court are two of the most vital needs at the moment, and it is anticipated that such reforms would greatly reduce the work of most of the Legations, as well as removing frequent causes of friction between them and the Abyssinian Government.

Cairo, April 6.

The Duke of Gloucester.

The Duke of Gloucester passed through Egypt this week on his way to Japan. He was met at Port Said by the High Commissioner and by Ahmed Bey Hassanein, First Chamberlain of the King, who also delegated Said

Zoufekar Pasha to welcome him on his arrival at Cairo station. The Duke paid a visit to King Fuad at Abdin Palace, and after lunching at the Residency he went to Gezira, where he played polo. In the evening he dined with the 10th Hussars, and at about 10 p.m., accompanied again by the High Commissioner and Hassanein Bey, left by car for Suez where he rejoined the Morea.

King Fuad.

I understand that the plans for King Fuad's visit to Europe this summer are now practically settled. He will leave Egypt towards the end of May and be in Berlin about June 10, where he will pay an official visit. He will then go to Prague and Berne—both officially—and after a few days in Paris will cross over to England, which he will reach towards the end of the first fortnight in July. King Fuad's visit to England will be of an entirely informal character, and will possibly include a few days at Cowes and a short time on the Scottish moors. On the conclusion of his stay in England he will go to Vichy for a cure and on his way back to Egypt, which he will reach towards the end of October, he will pay an official visit to Madrid.

The Prime Minister.

The Prime Minister gave a banquet of 130 covers this week at the Semiramis Hotel in honour of the High Commissioner and Lady Lloyd. The other guests were the Ministers, the chief Court officials, the leading British Government officials, and principal British residents. For the first time members of the British community in Alexandria were invited, and among the British guests were Sir Philip Nash, Sir Cyril Kirkpatrick, and Sir Philip Dawson, who are advising the Egyptian Government in regard to the various engineering schemes apart from irrigation, which are now before it. I understand that Mohamed Mahmoud Pasha intends to be in London when King Fuad is there, but this, like the details of His Majesty's European tour, is subject to alteration up to the last moment.

The Mixed Courts.

It is now officially stated that Judge Hugh Holmes, of the Mixed Courts of First Instance of Cairo, has been nominated by the Egyptian Government as Procureur-Général to the Mixed Court of Appeal in succession to Mr. Firmin Van Den Bosch, who recently resigned. This is the first time that an Englishman has held this important post. Hitherto the Procureur-Général has been selected from among subjects of the smaller Powers, and at least on three occasions the post has been held by a Belgian. I understand that the view of the Egyptian Government is that if the Procureur-Général to the Mixed Courts has to be a non-Egyptian, as must obviously be the case, then it would be better to have an Englishman in view of the special position which Great Britain holds in this country in the matter of the protection of foreign interests.

The nomination of Judge Holmes has been received with satisfaction in British as well as in foreign and Egyptian circles, for he has served in the Courts during the past eight years, having come out in 1920 as Judge of the Cairo Native Court, from which he was transferred to

EGYPTIAN MINISTRY OF EDUCATION.

EGYPTIAN UNIVERSITY.

FACULTY OF SCIENCE.

APPLICATIONS are invited for the Post of PROFESSOR of ZOOLOGY.

The salary of the Post is £E1,140 (approximately £1,168) a year, and the appointment will be on contract, in the first instance, for three years, and subject to cancellation on three months' notice being given on either side. One month's salary will be paid on arrival in Cairo for travelling expenses.

Applications for the post should be addressed to the Dean of the Faculty of Science, Egyptian University, Cairo, and should reach him before May 20, 1929.

Intending applicants can obtain information with regard to the form of contract from the Director, Egyptian Education Office, 39, Victoria Street, S.W.

the Cairo Mixed Court at the end of 1924, and he is highly esteemed by his colleagues and his chiefs. Mr. Holmes, who comes of a legal family, being the son of the Right Honourable Lord Justice Holmes of the Irish Court of Appeal, has had a distinguished career. He was educated at Charterhouse and Trinity College, Dublin (where he was classical scholar and senior moderator). At King's Inn he took First Victoria Prize and the John Brooke Scholarship in Law, and was called to the Irish Bar in 1910. He served in the Royal Air Force from 1914 to 1919, becoming in 1918 Brigade-Major of the 29th Division Artillery, with which he served in Gallipoli and France, and he holds the M.C. with Bar and the Belgian Croix de Guerre. After the War he acted as Counsel to the Attorney-General of Ireland, and took silk in 1920 prior to coming to Egypt to take up his appointment in the Native Courts. Mr. Holmes was Judge-Advocate in the second conspiracy trial in 1923.

Hotel Development.

The hotel trade in this part of the world is about to undergo an important development. Already arrangements have been made for floating a company to run first-class hotel in Palestine starting with Jerusalem, in which the Egyptian Hotels Company, Ltd., is very closely interested. Now I learn that next autumn the same company will open a hotel in the Fayoum, one of the most attractive regions of Egypt which, since the opening of the motor road across the desert from Cairo by King Fuad two years ago, is being much patronised by tourists.

The opening of hotels throughout the provinces is also under consideration. This will fill a great need, for in the principal provincial towns there is no decent accommodation. But it is to be hoped that in extending their activities to the provinces the hotel magnates will not apply there the high tariff they have fixed in Cairo and Upper Egypt, which has aroused much justifiable complaint on the part of residents, who will to a great extent be the main patrons of these provincial hotels.

Assisting the Fellahin.

The Ministry of Finance is at present studying a proposal for further assisting the fellahin. Briefly it consists in making advances to owners of thirty feddans and under who take seed and manure from the Government, the advance being based on the area under cotton with a maximum of two to two and a half pounds per feddan to include the cost of the seed and manure required for that area. The idea is, on the one hand, to induce the fellahin to avail themselves more of the facilities to obtain good seed and manure at reasonable prices from the Government, instead of dealing with the local Greek bacals and receiving very inferior and mixed seed at an exorbitant price, and, on the other hand, to save the fellahin from having to go to the local usurer for funds to carry on agricultural operations, as is the case at present. The advances will be divided into three instalments payable at the three important periods of the crop—preparing the land and sowing, combating the pests and reaping—the will be repayable with the land tax one month after the crop is due.

For the time being the scheme is to apply only to cotton, but in view of the recommendations of the rice expert recently engaged to report on the manner in which the crop could be improved it is also to extend to rice and possibly to wheat. And it is to work in with the scheme for advances on crops in the sense that any cultivator who wants an advance on his crop will be able to obtain it after deduction of the amount owing for seed, manure and agricultural operations.

Incidentally there is another proposal under consideration for the separation of a sum of two millions from the general reserve to constitute what might be called a cotton reserve to which the annual revenue from the cotton tax, about £1,300,000 will be added. This cotton reserve is to be used for advances against crop and for research work in connexion therewith. The proposal is a very

wise one, for the general reserve, which at present amounts to £40,000,000, has been almost entirely earmarked for the development works recently formulated and it is a sound precaution to secure, before it is too late, a fund which will certainly be required for assisting the cotton growers and protecting the quality of the crop in the future just as much as possibly even more than this has been required in the past.

April 9.

The Air Mail.

The inauguration of the London-Karachi Air Mail is of outstanding importance to Egypt in the matter of communication with the Continent. At the present moment in actual time in transit there is little difference between the air service and the faster of the Mediterranean steamers. But the timing of the departures from London eastwards and Alexandria westwards is such as to provide a service, economising three days on the outward journey in direct competition with the slow intermediate mail and providing on the homeward journey an additional quick mail. Thus the air-mail leaves London on Saturday, reaching Cairo the following Wednesday, whereas mail posted on the same day in London, having to come by an intermediate steamer, would not be delivered in Cairo until the Sunday week following its despatch from London. In the opposite direction the air mail, which leaves Alexandria on the Wednesday, will be delivered in London on the following Monday, the same day as the P. and O. mail despatched from Port Said the previous Sunday, and a day earlier than mail conveyed by the Sitmar line leaving Alexandria on the Thursday.

GALLIPOLI DAY.

The anniversary of the historic landings at Gallipoli (April 25) will be celebrated this year by the laying of wreaths at the foot of the Cenotaph. To the Australians it is also Anzac Day, and Major-General Hon. Sir Granville de Laune Rylie, High Commissioner for Australia, who was General Officer Commanding Australian Forces during the War, accompanied by Major-General J. H. Bruche, Australian Military Representative to this country, will lay wreaths to commemorate the Anzac landing. Wreaths will also be laid by representatives of the British and French Armies and the Royal Navy. Before the ceremony at the Cenotaph a service for Australians will be held at St. Clement Danes.

M. Venizelos opened his senatorial election campaign in Salonika last week. The elections have been fixed for April 21.

An Italian general has been appointed chief of the military chancellery of the King of Albania.

The Yugoslav Foreign Office on April 8 announced that the Cabinet had ratified the Salonika Convention, signed on March 17 in Geneva and recently ratified by the Greek Parliament.

The Archbishop of Canterbury, whose proposed visit to Jerusalem has been abandoned, arrived at Dubrovnik (Ragusa) on April 11. He is expected to return to England on April 29.

A British colonel and three majors are reported to have reached Tirana, as the first of nine additional British officers appointed instructors to the Albanian gendarmerie under General Sir Jocelyn Percy.

Sir John Chancellor, the High Commissioner, opened the Palestine and Near East Exhibition at Tel Aviv on April 8. There was a very large gathering, the occasion marking the 20th anniversary of the foundation of Tel Aviv.

The King of Bulgaria called upon President von Hindenburg in Berlin on April 9. The President, on account of his recent indisposition, did not return the visit in person, but sent his card through the Secretary of State, Herr Meissner.

The Grand National Assembly at Angora last week voted a modification of the nationality law, which is interpreted as meaning that all children born in Turkey of foreign parents, after January 1, 1929, become Turkish subjects. On reaching their majority the children have the right to opt for their parents' nationality.

PERSIA AND THE PERSIAN GULF.

Sir Lionel Haworth, who has recently retired from the post of British Resident in the Persian Gulf, lectured to the Central Asian Society on April 10 on "Persia and the Persian Gulf." Sir Michael O'Dwyer was in the Chair.

The lecturer, who has spent 35 years in India, Persia, and the Persian Gulf, mainly in the latter, began by explaining the importance of the Gulf to the Empire, showing that it lay on the direct air route from London to India. He then contrasted Persia as it was 20 or 30 years ago with Persia as it is now, governed by a Shah who "means business." Formerly Persia was nothing less than "Gilbert and Sullivan." The Shah's main object was the making of money; the soldiers were unpaid; corruption was rife.

The connexion between Great Britain and the Persian Gulf was traced in chronological detail, and the story was told how first the Portuguese, then the Dutch, and then Napoleonic pretensions in the waters of the Gulf were dethroned by the British. How was it, the lecturer asked, that this triumph had come about? How was it that this island of England could find men (as, for instance, in the middle of the eighteenth century) to go out to serve in the Gulf in the almost certain knowledge that they would die there? In answering this question, Sir Lionel Haworth referred to his theories of civilised dominance. The Britons, he said, were descended from the Norsemen, who could not stop at home. Britons, then, went everywhere, and to every place in which their influence was now paramount they brought two things: peace and honourable dealings. It was the same story in the Persian Gulf. About the year 1600 the East India Company decided to attempt to trade with Persia, and it was directly from this decision that the subsequent cleaning up in the Gulf of such things as piracy, slavery, and gun-running derived. This achievement in the Gulf was a wonderful accomplishment and a wonderful heritage, which should not be thrown away.

Sir Lionel explained in some detail the countries and rulers bordering the Gulf—Persia, which, he said, really owed its independent existence to England, who had saved it from absorption at the hands of Russia; Iraq, which, threatened as it was by the Wahhabis on the south and the Persians on the east, owed its security to the British mandate; King Ibn Saoud, whose use of Wahhabism had been remarkable; and the rulers of the Trucial Coast, whose unchanged nature was tempered only by the strong arm of Great Britain. Nor was this rôle of Great Britain the result of mere chance, for he believed it to be an immutable law of politics that where a civilised Power, such as Great Britain, clashed with an uncivilised Power, such as could be found in parts of Africa or on the Trucial Coast of the Gulf, the interests of civilisation must prevail. To assume the opposite was unscientific. In conclusion, Sir Lionel suggested that the policy of the British Empire in the Middle East needed closer watching than it now received, to guard against the possibility of the frittering away, through the indulgence of an exaggerated sentimentalism, of the heritage bequeathed to the present generation by the magnificent service of Englishmen in the past.

In the subsequent discussion, Sir Louis Dane referred to his tour in the Gulf with Lord Curzon in 1903. He told many picturesque stories of his being marooned on Hanjam, and of its being subsequently turned into a radio station and a place of calling to report for the Navy, of the despair and final success of Mr. Reynolds, Mr. D'Arcy's expert, in locating oil in the Gulf, of the parading of seasick Arab chieftains before an inexorable but ultimately pleased Viceroy, and of the Liberals' attempt to reverse British policy in the Gulf after the election of 1906, particularly mentioning the proposal to allow the Russians to come down to Charbar.

Sir George MacMunn spoke of the fascination of the Gulf, emphasising the achievements and attractiveness of the great Arab dhows in the Gulf.

The Chairman summed up the meeting by saying that it was a matter for congratulation that the Foreign Depart-

ment of the Government of India still had some say in the future of Persia, but that it was a matter of grave doubt whether the Locarno spirit as cultivated by the Foreign Office was really applicable to the East as known by the Political Officers of the Government of India.

NEWS IN BRIEF.

Following the voting of the 1929-1930 Budget, the Albanian Parliament has been prorogued by King Zogu.

A gift of 250,000 dollars (£50,000) has been made to the American University at Beyrout by Mr. Julius Rosenwald.

The appointment of Brigadier-General Sir Gilbert Clayton as High Commissioner for Iraq and Commander-in-Chief has been gazetted.

The new British Naval Mission to Greece, in charge of Captain G. H. D'Oyly Lyon, R.N., will leave England for Athens on May 24.

An official dinner was given on April 11 in Athens in honour of Sir Samuel Hoare, British Air Minister, who arrived there in the India-England air service aeroplane from Alexandria.

Pending the ratification by the American Congress of the Lausanne Treaty, the Turkish Government has prolonged for another year the commercial *modus vivendi* with the United States.

Admiral Sir Roger Keyes will lay a wreath on the Cenotaph on April 23 (St. George's Day) in memory of officers and men who lost their lives in the naval operations which closed Zeebrugge.

The King has approved of the Great War, Battle Honour "Gallipoli, 1915-16" as one of the ten selected honours of The Cameronians (Scottish Rifles) in substitution for "Gallipoli, 1915."

The German Company which has been operating for two years in Persia with Junkers machines has started a direct air-mail service between Baghdad and Teheran, connecting with the London-Karachi air mail.

The Greek Government has instructed its Minister at Angora to accept the basis of the last Turkish proposals for a general settlement of all pending questions arising from the exchange of populations.

In connexion with the Memorial Service to the 29th Division (Gallipoli, 1915-16), which is to be held at Holy Trinity Church, Eltham, at eleven o'clock on April 25, reserved seats may be had on application, before the 20th inst., to the Vicar.

Signor Grandi, Italian Under-Secretary of State for Foreign Affairs, arrived at Durazzo on April 12 from Bari in the light cruiser Brindisi, which was escorted by Italian destroyers. Signor Grandi's official visit to Albania came to an end yesterday (April 17).

The Queen Dowager of Roumania, accompanied by her daughter Princess Ileana and attended by Princess Bibesco, is expected to arrive at Algeciras on April 22. Her Majesty will then embark in a Spanish gunboat for Ceuta on a visit to Spanish Morocco.

A conference between the Turkish and Iraqi railway authorities and the International Sleeping Car Company met recently at Hajdar Pasha (the Asiatic terminus opposite Constantinople) to discuss through railway facilities between Constantinople and Iraq. It is hoped eventually to issue through tickets from London to Baghdad.

A concession for the construction of a railway from Gambella to the Sudan frontier, a distance of about 60 miles, has been granted by the Abyssinian Government to the Ethiopian Motor Transport Company, which already has a concession for a motor road from Gambella to Goré.

The King has been pleased to approve the following awards to the undermentioned personnel of the Royal Air Force in recognition of distinguished services rendered by them during the recent evacuations from Kabul:—Air Force Cross—Squadron-Leader Reginald Stuart Maxwell, D.C., D.F.C.; Flight-Lieutenant Ronald Ivelaw-Chapman, D.F.C., and David Forgham Anderson, D.F.C.; and Flying Officers Claude William Leighton Trusk and Lionel Hubert Anness.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 28.

The Meerut Arrests.

Having begun my letter last week with a word of the Viceroy at Kotah State in Rajputana, I was about to pass to the chief item of news of the week—the Meerut arrests—when one of those sudden fevers to which men are liable in India, especially when the Clerk of the Weather is changing from one season to another, caused me to drop my stitch. As the matter forming the chief preoccupation of the public mind, the Meerut arrests, continued into this week, my having dropped that stitch has not mattered. We call them the Meerut arrests because they were made under warrants issued by the District Magistrate of that not-often-heard-of place, who has the Meerut Conspiracy case on his file; but they were made over an area including Bengal, Bombay, the United Provinces, and the Punjab, and under the special sanction of the Government of India. It is no hole and corner matter. Complaints having been laid in the Court of the District Magistrate of Meerut against thirty-one persons, including Mr. Philip Spratt, of whom one heard a good deal at the time of the East India Railway strike at Lilloah and Howrah, and Mr. B. F. Bradley, the Court, in the ordinary course of law under the Criminal Procedure Code, issued processes.

The Conspiracy.

The Home Member, replying to a question put by Pandit Motilal Nehru in the Assembly, gave the foregoing information, as also the further intimation that the charge against the thirty-one was that of "having conspired, at various places and at various times, extending over a period of several years, to deprive the King-Emperor of the sovereignty of India, by promoting the objects of the Communist International through various methods, such as: The incitement of antagonism between capital and labour; the creation of Workers' and Peasants' Parties, Youth Leagues, etc.; capturing Trade Unions and nationalist organisations; and propaganda by speeches and through newspapers." The case, the Home Member stated, was *sub judice*, and he hoped the Assembly would appreciate that Government's policy was to bring before the Courts under the ordinary law a conspiracy which, in their opinion, was an infringement of the ordinary law of the land. Pandit Motilal Nehru moved the adjournment of the House nevertheless, in order that the policy and action taken by the Governor-General-in-Council and by the Provincial Government at the Governor-General's instance might be discussed, and the President, allowing the motion for the adjournment, overruled Government's objection that the matter was *sub judice*, but emphasised that only the policy behind the arrests and the searches could be discussed. There was no debate, however, for the Viceroy disallowed the motion as prejudicial to public safety. That being the Government view, a correspondent of THE NEAR EAST AND INDIA must feel that he in his turn is disallowed from discussing that policy.

The Spirit Abroad in India.

Even those, however, who would go farthest in leaving this battle between the Government and the Communists to be fought out in the comparative security of the District Magistrate's Court in Meerut, are aware of a connexion between it and the general unrest in India and the spirit that is now abroad. "Why," you will hear a man ask, and he may be one who in years not so very distant was himself a member of the Governor-General's Council,— "Why has the Communist International chosen India as a field to work in and not Australia, South Africa, Canada, or some other part of the British Empire? Because," for he will go on to answer his own question, "democratic government obtains in those parts, and the Communist International would have no chance there." That may not be the true answer to the question, as it is certainly not the only answer that one could think of giving; but it may still be the only answer worth considering. It is the answer that I have just been told that we must all consider, and told by one who not so long ago was a member of the Governor-General's Council.

The Future.

The answer may be given even without any great certainty on the speaker's part that it is the right one to give; "for even if it is not so; even if," he would go on to say, "the Communist International would see in an India that had reached full Dominion status a much more promising field for its propaganda than Australia or Canada, the fact remains that the introduction of democratic government in India is overdue, and the risk of it must now be run." "If Great Britain is not prepared to run it," his argument will proceed, "what do you think will happen? This will happen: that the first time there is any serious conflict anywhere in Asia, and no matter between what Powers, if Great Britain is drawn in, India will not follow her lead as a matter of course as she followed it in the South African War and in the Great War: India will say, 'Now is the time to bargain. Let us side with whichever Power gives us the strongest guarantee of the grant of self-government, and the strongest pledge to assist India to defend herself as a self-governing country.'" The speaker would be as ready to see India part of the Japanese Empire or any other non-British empire as ever his ancestors were that India should be part of the British Empire. Nothing to him matters now except that India should be free and self-governing.

The Solution.

To those who share my recent interlocutor's view, which I have thought I must give, even if I am not prepared to discuss it, such a thing as the Meerut Conspiracy case is an irrelevancy; the inquiry now being conducted by Sir John Simon and his colleagues is equally an irrelevancy. Mr. Gandhi's anti-foreign cloth crusade, if it succeeded, which from the nature of things it cannot, would make the already plain no plainer; for it is already too plain. India, in this view, has passed the stage of constitutional experiments, and the thing now to be done, for it is the only thing worth doing, is for the Prime Minister of Great Britain to settle direct with the India leaders what safe-

guarding of British commercial interests in India may be asked for by Great Britain and conceded by India. The part of those not ready to accept and act immediately on that view is the part that George III. played in the revolt of the American Colonies.

Dropping the Statutory Commission.

The logic of this view that I am trying to give is that, as the Statutory Commission's inquiry was from the beginning out-of-date and unnecessary, the last stages of it should be rushed through, or that it should even be dropped altogether, and the stage cleared for such a conference between the British Parliament and the Indian leaders as Sir John Simon foreshadowed in his speech at Ootacamund. I asked my interlocutor why, if that was so, the fact had not been made plainer. "There is no one to make anything plain to," he replied: "the Viceroy is in the hands of the machine, and the machine is a thing without a head and an intelligence." My friend was thinking of the possibility of "getting a move on" in India itself. There is no possibility. "The head and intelligence" is in Great Britain—the Prime Minister.

In General.

There is not much other news this week, and none of it has more than a passing interest. There has been an adverse vote in the Assembly over the salt tax; the Budget cannot now be passed in time to make the collection of taxes under it legal from the beginning of the new financial year without resort to special powers; Mr. Gandhi's trial in Calcutta has begun, and so on. None of that has more than a passing interest.

THE LIFE OF GENERAL DYER.*

REVIEWED BY COLONEL G. M. ORR, C.B.E., D.S.O.

Mr. Colvin has done a service in giving all the facts about the happenings at Amritsar in 1919, which brought General Dyer's name so prominently before the public, and about his subsequent treatment. It is evident how much was withheld at the time from both Parliament and the people, in order, presumably, to create a favourable atmosphere in which to inaugurate the reformed constitution.

In his account of General Dyer's life up to 1919, his biographer very naturally stresses those traits of his character which were impugned by the construction put on his actions and on his reported evidence before the Hunter Committee. As a soldier, General Dyer was trained in the practical experience of the Indian Frontier, added to which was the broadening influence of the Staff College at Camberley. And so his life passed until the Great War gave him the opportunity of an independent command. His conduct of the operations in the Sarhad, where Persia, Afghanistan and Baluchistan meet, is well described as a little masterpiece. Their successful issue was due in a peculiar measure to Dyer's understanding of human nature, to his military imagination, his power of quick decision and his drive. Then came the rebellion in the Punjab with its ominous conjunction with an invasion from Afghanistan. In both General Dyer took a decisive part.

In the Afghan operations, the military qualities so well displayed in the Sarhad again carried his brigade by forced marches in terrible heat to the successful outwitting of the enemy, when the latter's success would have jeopardised the major operations on the Khyber front. General Dyer had already gone through the ordeal of Amritsar.

Mr. Colvin has brought out clearly what so many are still ignorant of: the situation in Amritsar and the Punjab; the deliberate gathering of ten to twenty thousand persons in the Jallianwala Bagh after General Dyer, by

beat of drum at eighteen different places in the city, had prohibited gatherings of any sort on pain of being fired on; General Dyer's arrival at the Bagh with but 50 armed Indian soldiers in the face of this concourse who were being incited to further murder and arson by speakers from a platform; the reasons for General Dyer's instant decision to fire, and particularly for continuing to fire.

The Jallianwala Bagh affair took place on April 30. On April 14 the Government of India expressly laid down the necessity of preventing the spread of disorder "by all means however drastic," and gave the officers responsible "the fullest assurance of countenance and support." General Dyer's action was approved by all his superiors. The Governor of the Punjab described it as the decisive factor in crushing the rebellion. On September 19 his action was fully upheld in the Legislative Council. He commanded first the 45th Brigade and then the 5th Brigade in the Afghan operations. On January 30, 1920, he was nominated to officiate in command of a division.

Meanwhile the Coalition Government, by the insistence of Mr. Montagu, at a time when the Cabinet was pre-occupied with affairs at home and in Europe, was about to introduce the Montagu-Chelmsford reforms through Parliament. The Secretary of State for India, it is to be feared, was therefore inclined to lend too ready an ear to those who for their own purposes mis-stated the events of 1919, and heed too little the counsel of those who could have impressed on him the truth. As a consequence the Hunter Committee was appointed to inquire into the disorders in the Punjab, Delhi and Bombay, but not into the events at Peshawar and elsewhere, which, as history has shown, had a direct bearing on those in the Punjab.

The composition of the Committee is rightly criticised. Apart from the lack of any member with executive experience in Indian administration, of the three Indian (all lawyers) two were obviously inclined to view General Dyer's conduct from the beginning in the most unfavourable light. Before this Committee General Dyer was called in November at a time when he could not procure any of his papers. In no sense expecting to find himself as an accused person he was unrepresented and undefended. The Committee was not constituted as a court to try any individual, nevertheless the Chairman allowed the three Indian lawyers to cross-examine him as if he was a prisoner in the dock. The irregularity of such a procedure is justifiably stressed. Much has been made of General Dyer's reported answers in his evidence. Mr. Colvin shows on good authority that the evidence as published was patched up. A copy was never given to General Dyer to check, and when he eventually saw the published report in May, 1920, he failed to recognise some of his reputed statements, and denied others, but it was too late.

The Hunter Report was presented to the Government of India on March 8, but already three days previously General Dyer had received an order to report to the Commander-in-Chief. At the time he was a very sick man in hospital, but in response to further orders he eventually went, with a medical officer, to Delhi on March 23. He had no inkling of the bomb which was to explode in his face. He was there informed by the Adjutant-General that the Commander-in-Chief agreed with the censure of the Committee (whose report Dyer had not seen) and he was to be deprived of his command. General Dyer pointed out to the Adjutant-General that, as he had never been tried, he should not be condemned; to the Commander-in-Chief he said nothing—at the Adjutant-General's request. Then there followed some most curious and contradictory orders regarding his departure to England, which almost suggested that he was a prisoner. What his brigade thought was very evident by the unparalleled demonstration by the native troops on his departure.

General Dyer arrived in England on May 2, only to find that his punishment was to be followed up by an attempt to dismiss him from the Army. From this disgrace he was saved by the Army Council. In spite of the insistence of the Secretary of State for War (Mr. Winston

* "The Life of General Dyer." By Ian Colvin. (W. Blackwood, 20s. net.)

Churchill) who said he had decided to throw Dyer out, the Army Council, we are told, refused to take action, at any rate until Dyer had stated his case in reply to the Hunter Report, which he had as yet not seen.

Then, by the Secretary of State's orders, the Report was not sent to General Dyer until June 9 so that no reply in defence would be received before the debate on his case came on in the House of Commons. In that debate Mr. Montagu not only suppressed certain evidence, but entered upon an attack on General Dyer which went far beyond anything alleged even by the Hunter Committee. It was not until the case was debated in the House of Lords that Dyer received the first act of public vindication. The second act came with Mr. Justice McCardie's famous verdict that he had acted rightly and had been punished wrongly. In July 1927, when Dyer was on his death bed an appeal was made to the Government of the day to right the wrong done by a previous Government. It was in vain. While the rebels and murderers of 1919 were either already amnestied or released, General Dyer was not to be pardoned.

Whatever view we may take of the "doctrine of terrorism" and the "minimum amount of force" necessary in the situation with which General Dyer was confronted, Mr. Colvin's book is deserving of the attention not only of the historian but also of those who, in the future, are likely to be faced with similar emergencies. For the lessons of Amritsar have not yet been learnt and until they are the British officer must continue to bear an unwarrantable burden of responsibility. Happily he can be relied upon to do his duty at all times and in all places, regardless of the consequences to which his action may afterwards expose him, in the judgment of a supine officialdom.

THE STATUTORY COMMISSION.

Sir John Simon and the remaining members of the Statutory Commission, accompanied by Mr. W. T. Layton, the Commissioners' financial assessor, Sir San-karan Nair, and Sir Arthur Froom, the Chairman and a member, respectively, of the Indian Central Committee, sailed from Bombay for England on April 13. The other members of the Indian Central Committee will follow by next Saturday's mail.

Before his departure sent the following telegram to the Viceroy:—

"My colleagues and I leave India with the warmest feelings of gratitude for countless kindness from many quarters. We have accomplished the first stage of our task and enter the next with an ever-increasing desire to contribute what we can to the happy future of good relations between Great Britain and India."

A brief sketch of the Commission's second, and last, tour, the completion of which, as Sir John Simon recalls, marks the end of "the first stage of our task," appeared in last week's issue of THE NEAR EAST AND INDIA. The inquiry concluded with a final conference at Delhi, at which, in addition to the British Commissioners, the Members of the Indian Central Committee and the Provincial Committees, in all some seventy-two representatives, were present.

Although the proceedings were held in camera, it is understood that Sir Philip Hartog, chairman of the Auxiliary Committee on Education, laid a summary of the Committee's report before the joint conference, which afterwards received from Mr. W. T. Layton, the financial assessor, an interesting explanation of the various financial aspects of the revision of the present Constitution. The report of the Hartog Committee, which was appointed to prepare a review of the progress of Indian education, reveals many points of fundamental interest to the political future of India. In view of the primary need of a well-directed policy carried by effective and competent agencies, the Committee, it is understood, believe that the effects of the devolution of education, has been unfortunate, and

regard it as essential that the whole question should be considered anew.

A feature of Mr. Layton's report is his conclusion that the present position, on both political and financial grounds, necessitates a radical reconstruction of the financial relation of the provinces and the Central Government and his tentative belief that the provinces, as now constituted, cannot form independent fiscal units.

INDIAN NOTES.

(Continued from page 483.)

any movement, and the misguided youths who are its tools, and often themselves its victims, is a primary function of which no Government can divest itself and remain worthy of the name. From the beginning the Public Safety Bill, in spite of the patent absurdity of the efforts to construe it as an attack on Indian Nationalism, has met with obstruction from the Nationalist and Swarajist parties. Since its re-introduction in a modified and admittedly improved form this session, the opposition has persisted, aided and abetted, in fact if not in intention, by the President's strange reluctance, and final refusal, to sanction the renewal of the debate, pending the hearing of the Meerut cases, in spite of his earlier willingness to allow a discussion on the arrests themselves. The Viceroy's decision, on the one hand to put an end to legalised obstruction from the Chair and, on the other, to secure to the Government forthwith the powers sought under the Public Safety Bill, is entitled to, and will, we are confident, receive the support of every well-wisher of the country and its peoples.

Bengal and Dyarchy.

There seems to be no immediate prospect of any improvement in the working of the reformed system of government in Bengal. The province is still without Ministers, and it will presumably remain in that unsatisfactory state for an indefinite period. It is true that the best interests of the people may not, and probably will not, suffer by reason of the deficiency. But the position shows with fatal clearness that Bengal is unlikely to be a success if, and when, it becomes an autonomous province. The Government seem to think that there is even yet a chance of their finding a stable Ministry among those members of the Legislative Council who support dyarchy. And this hope is to some extent justified by the fact that, in the Council last month, the Swarajists' motion to refuse the vote for Ministers' salaries was rejected by a large majority. As was pointed out in the debate there could be no Ministers if no salaries were voted; and this practical argument seems to have sufficed for the majority. The Swarajists, of course, had nothing good to say of the existing system of government. They want to get rid of dyarchy, root and branch. They regard it as an enemy more to be feared than the old bureaucratic system of administration. It is an attempt to give them self-government gradually and by instalments. And they will have nothing to do with any such attempt. They must have full and complete independence and self-government forthwith. As for dyarchy every vestige of it must be destroyed. "The blight of a fatal curse is upon it," said one of their speakers. "It casts no shadow; it bears no blossom; it brings forth no fruit; it only cumbers the ground with its unwholesome luxuriance." Irresponsible talk of this kind is calculated to discourage every well-wisher of India. For it is almost impossible to believe that men who so characterize the existing Indian Constitution would act in a sane and responsible fashion if complete self-government were introduced. They are much more likely to maintain their present attitude of non-co-operation and to refuse to work any new Constitution, however democratic it may be. In India the surest way of achieving popularity is to be violently anti-Government, and this rule will continue to apply even when the Government is exclusively Indian.

PERSONAL AND GENERAL

TO-DAY

April 18, 1929 (New Style).

April 5, 1929 (Old Style).

Dhulkaada 8, 1347, A.H., of the Muslim Calendar.

Nisan 8, 5689, of the Jewish Calendar.

Dr. Hafez Bey Afifi, Egyptian Minister for Foreign Affairs, is staying at the Carlton Hotel.

Lord and Lady Sinha arrived last week at Queen Anne's Mansions, Westminster, from Switzerland.

The Rt. Hon. Sir Samuel Hoare arrived at 18, Cadogan Gardens on April 14 on his return from Egypt.

The Duke of Atholl left London on April 11 for Port Said. He will be away for about three weeks.

Lady Buckland arrived at Plymouth in the s.s. Rajputana on April 12 on her return from India.

Countess Grey arrived at 33, Eaton Place on April 16, on her return from India. Earl Grey will join her on April 20.

Members of the Indian Students' Union were invited to take tea with the Lord Mayor and the Lady Mayoress at the Mansion House on April 16.

M. and Mme. Alfonso Sanges last week arrived from Egypt at their villa, Moora, in Capri, where they are staying before returning to London in June.

The Prince of Wales, attended by Captain J. R. Aird, on April 13 inspected the Welsh Guards at Chelsea Barracks prior to their departure for Egypt.

Lady Chetwode and Miss Chetwode, who have been in Egypt and Albania on their way home from Bombay, arrived at 44, Grove End Road on April 15.

Mr. A. Pitcairn, District Agricultural Officer, Tanganyika, has been appointed Assistant Director of Agriculture, Cyprus.

The Earl and Countess of Abingdon arrived in Paris last week from the British Legation in Athens, where they have been staying.

M. Mironescu, Roumanian Foreign Minister, who arrived in London on April 10 on a short visit, stayed at the Ritz Hotel until April 14, when he left for St. Germain and Bucharest. He was received on April 11 by Sir Austen Chamberlain and also by the Prime Minister.

Sir Ronald Ross, Director-General of the Ross Institute and Hospital for Tropical diseases, has been awarded this year's Manson Medal, given triennially by the Royal Society of Tropical Medicine and Hygiene to those of outstanding eminence in the field of tropical medicine and hygiene.

Dr. W. Filchner will lecture to the Royal Asiatic Society, in conjunction with the Central Asian Society, on April 22, at 5 p.m. on "My Central Asian Expedition, 1925-28." At this lecture, which will be given at the Royal Society of Arts, John Street, Adelphi, a film will be shown.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.
Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan. Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

Lieutenant-Colonel Sir Leslie Orme, Wilson has been elected a member of the board of management of the Seamen's Hospital Society.

A marriage has been arranged between Dr. Harold Temperley, Fellow of Peterhouse, Cambridge, and Miss Dorothy Temperley, daughter of the late Canon Arthur and Mrs. Temperley.

Mr. David Patrick Hall, Director of the administrative department of the Egyptian Ministry of Foreign Affairs, is shortly resigning his post on the completion of ten years' service with the Egyptian Government.

The Persian Minister will hold a reception at the Persian Legation, 11, Princes Gate on Wednesday, April 24, at 9.30 p.m., on the occasion of the anniversary of the coronation of his Imperial Majesty the Shah.

At the luncheon parties given by Mrs. Alec. Tweedie at her flat last week, the guests included the Persian Minister, the Dowager Maharani of Cooch Bihar, Field-Marshal Sir Claud and Lady Jacob, Sir Leslie and Lady Wilson, and Sir Denison and Lady Ross.

The Egyptian Council of Ministers has approved of the appointment, as consulting marine engineer to the Sudan Irrigation Service, of Commander Llewellyn Vaughan Morgan, M.V.O., D.S.C., R.N., who has been employed in the Signal Dept. of the Admiralty since 1926.

Prince and Princess Andrew of Greece, who, with Prince Paul of Greece, travelled specially from Paris, acted as host and hostess at a Ball and Cabaret which took place on April 11 in the Cunard liner Berengaria in Southampton Docks, in aid of Southampton Children's Hospital Extension Appeal and the Stage Guild.

Mr. W. A. Selby Bigge will address the Near and Middle East Association on April 25, at 8.45 p.m., on "The Peasant and Politics in the Balkans." The lecture will be given, by kind permission of Mrs. Bruce Dick, at 55, Harrington Gardens, South Kensington. Constance Lady Boyle will preside.

It is reported from Amman that Lieutenant-Colonel F. G. Peake, Officer Commanding the Arab Legion in Trans-Jordan, while on a visit recently to Um Jimal, on the Syrian frontier, was captured by a band of Syrian Badawin against whom action was taken recently by the Trans-Jordan Frontier Force. He was, however, rescued and returned to Amman unhurt.

THE WEEK AT HOME

London, Tuesday Morning.

The Budget.

True to the steady and unelectrifying standards set up by the present Conservative Administration, Mr. Winston Churchill in introducing his Budget yesterday pursued a most reasonable and level-headed course. His proposals, which follow the usual line of making such reductions in taxation as to be of the greatest good to the greatest number, have escaped very severe criticism.

The Opposition naturally seek to lower the probable effect of the Budget by calling it flat and hum-drum, by deploring the absence of large constructive measures, by lamenting that nothing is being directly done for unemployment, and so on. In this process they are to some extent being abetted by Conservatives, some of whom were eagerly waiting Mr. Churchill's Budget as a "surprise-packet." This section of the party in power is rather puzzled by the Government's refusal to play what they consider to be the normal political game, to provide sensations, and the fact that this Budget is on the whole one of sweet reasonableness seems gravely to have disappointed them.

Quite apart from different sections of interested people—those who wanted reduction of income-tax, the motorists, and so forth—who pretend to be indignant at the Chancellor's indifference to their complaints, the lack of a rallying-cry, in the sense of a final inducement to the electorate to return a Conservative majority, which the Budget in some quarters was expected to produce, has caused depression.

But since the Budget is acknowledged even by the Opposition to be reasonable in its absence of fireworks, it may have such a quiet influence as will surprise the more sensation-minded Conservatives.

The Liberals' Unity.

Psychologically the Liberals are quite the most interesting feature of British political life to-day. The party preaches unity, and yet it possesses it not. When is a party not a party? When it is Liberal.

During the past few days there have been striking declarations, by men who must under any conceivable examination, be called Liberals: Viscount Grey, and Mr. Vivian Phillips. Viscount Grey's address to the Liberal Council was chiefly remarkable for the adroit distinction which he drew between Mr. Lloyd George's notorious

policy for unemployment and the pledge about the curing of it in a year. Naturally, as an honest man, Viscount Grey would have none of this pledge. And yet he would have us vote for the Party of which Mr. Lloyd George controls the destinies. A curious phenomenon.

Mr. Phillips, again, who bears the Asquithian mantle with courage and unceasing loyalty, addressed those who, because he had refused to accept Mr. Lloyd George's pledge, wanted to pass a vote of no confidence in him, and denied the right of individual opinion always granted (in theory) in the Liberal ranks. He routed his critics at Edinburgh, and will go forward as a Liberal who, as much as any other man, has discredited Mr. Lloyd George's unemployment pledge.

Britain's Millionaires.

It is always interesting to learn how the other half of the world lives. The analysis just issued by the Commissioners of Inland Revenue shows that in 1927 there were 94,676 persons in receipt of incomes over £2,000—super tax-payers. Of people with incomes of more than £100,000 there were 147. One particularly interesting fact emerges, which is that there are more people in Great Britain with incomes from £2,000 to £2,500 than there are in the United States.

For myself, I am surprised that there are fewer than 100,000 paying super-tax. And that number seems doomed to decline. For 1927 there were fewer super-tax payers than in the previous year. And in 1927 the nation's gross taxable income, about 2,904 million pounds was the lowest since the end of the War. Severe taxation and general stringency are said to explain this diminution.

The Foundling Site.

You may sneer at your millionaires, but they unquestionably have their uses. The proprietor of the *Daily Mail*, Lord Rothermere, for instance, has just gained the admiration of everybody for securing the Foundling estate in Bloomsbury from those who would have converted it into flats and shops.

He has an option to buy in at a little over half a million pounds. Already he has put down a deposit of £50,000 and is paying 5½ per cent. interest on the balance until June 30, 1931. In all probability London's patriots will complete his good work.

Lord Rothermere's aim is to save the Foundling Hospital as a children's park, with permission for the Boy Scouts to use it for one month each year as a camping ground. His is a very generous gesture, which must be carried through to its admirable end.

A Political Squabble.

That is one side of Lord Rothermere. Another is to be seen in the correspondence which he has recently had with the *Morning Post* on the subject of his political acumen, and particularly of his apparent support for Mr. Lloyd George. Lord Rothermere's contention is that the *Post*, in attacking Mr. Lloyd George (and so dividing the anti-Socialist vote) is playing into the hands of the Socialists—at which queer allegation the organ of "Die-Hard" Conservatism is, not unnaturally, a little upset.

Political consistency, however, has never been a strong point with journals of the stamp of the *Daily Mail* or the *Daily Express*. They are independent of party, and therefore, perhaps, more inclined to back personalities. Their proprietors, as men of the world who are unable to bind themselves down to any rigid party dogmas, rather approve of the *flair* and courage displayed by Mr. Lloyd George. He alone is playing the game of politics according to their rules. They are piqued that their constant cry to the Conservatives to galvanise themselves seems to be unheeded.

At the moment the "independent Conservative," who looks forward to the return of Mr. Lloyd George in some power, is exceedingly unpopular with the official Conservatives.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Britain and Yugoslavia.

It is a long road that has no turning, and at least signs are apparent that one of the aims that this paper has kept steadily in view during the eighteen years of its existence—the strengthening of economic ties with the Balkan States—is gradually to be achieved. On another page will be found the prospectus of a company that has been formed to take over, by means of a controlling interest, a Yugoslav undertaking, with a view to developing large chemical works and extensive timber concessions in Bosnia. The fact that the new company will not be altogether a stranger to Imperial Chemical Industries, Ltd., suggests that the technical side of its activities will be well provided for. The share holding that the Yugoslav Government retains in the undertaking lends weight to the promise given by the Ministry of Forests and Mines to afford "all support and protection" to the company's interests, and should enable it to steer clear of all those vexatious misunderstandings that are apt to arise when the people of a country are left in doubt as to the identity of their own interests with those of the foreign concerns operating in their midst. For Yugoslavia the co-operation of British supervision in an enterprise which through the extent of its operations is assured of a prominent position in the economic development of the country is an important landmark, and the success of the undertaking, we may hope, will lead to further British co-operation in the great task of reconstruction that awaits the Yugoslav State. The good sense of the Yugoslav people can be trusted to see that, whatever their political future may have in store, the steps now being taken to further their material development shall suffer no setback from political changes. It has been a constant grievance to business interests in the country that in the distractions of political strife no time could be found for laying the economic structure of the State on a satisfactory basis, and it is, therefore, not without significance that, at such an early stage in the political lull now existing, a notable enterprise should be launched with British capital.

The Budget.

It may not inaccurately be said of Mr. Churchill's fifth Budget that it has no outstanding characteristic, and the descriptions of it in the House and outside as an electioneering Budget are very wide of the mark. It has certainly not been designed for vote-catching. If it had been, it would have been far different from what it is. A slight reduction in the income tax on small incomes, a penny off beer, and similar allowances, all of them necessary and desirable, would have justified the criticism that the Chancellor of the Exchequer was using his last Budget as an election manifesto. But there are none of these things, and the only concession of any interest is the further step towards a free breakfast table (an ideal on which, I believe, all parties are agreed) by the removal of the duty on tea, a step, by the way, which is not calculated to arouse any overwhelming enthusiasm—at least that is my opinion. Briefly it would appear that the Conservative Party has deliberately scorned the opportunity that was theirs in a pre-election Budget, and have contented themselves by adhering to thoroughly sound finance, leaving the expected trade improvement to provide the means for the alleviation of taxes in the future. It is rather a splendid gesture, but whether it will be appreciated as

such by the new electorate is another matter. The Conservative Party deserve to succeed again, if only for their transparent honesty. If they go down, it will be an omen of evil portent for the future political history of this country.

The New Turkish Tariff.

The view taken in business circles here connected with the Turkish market in regard to the proposed new Tariff is that Kemal Pasha is much too optimistic in imagining that he can use a tariff as an instrument to force a non-industrial, and, it might be added, a non-industrious people, into industrialism. It is not questioned that there are certain directions in which it may be possible to develop quite considerable industrial activities, but it is justifiably held that the existing tariff gives all the protection needed for those industries that are possible in Turkey. An example will serve to show the highly protective nature of the tariff. A shirt, containing no silk, and priced say at 10s. would be liable to a duty of 80 per cent., bringing the price to 18s. It is not surprising that a British firm importing that class of goods into Turkey should have found it necessary to import the raw materials instead of the finished goods and to manufacture the articles in Turkey. To continue with the example of the shirt, it may be mentioned that the raw materials are subject to a duty of from 11 to 15 per cent., but, and here is the important point, labour is so cheap in Turkey compared to what it is here that despite the duty and the freight charges, it is possible to produce the said shirt for sale at from 7s. 6d to 8s.. That means that the shirt could be exported to this country to compete quite advantageously on the English market.

Industries in Turkey.

Apart from clothing the commodities at present manufactured in Turkey include such things as hardware, tinware, brushes, boots and shoes, beer, soap, cement, and tinned fruits, and headgear. As regards the last commodity, it is significant that the Turkish market is now regarded as hopeless for any but the most expensive style of hats. The list of industries is not comprehensive, but it will serve to indicate the lines on which there may be scope for development. As I have already indicated, how-

BANK OF ATHENS

BOSTON: The Athens Bankers' Corporation, 15 Kneeland St.

ever, it would be foolish for the Turkish Dictator to pin such faith as he apparently does in a tariff. An increase in the duties will not in an instant expand a few factories so that they can supply the whole of Turkey, nor will it give Kemal Pasha the labour he requires without which industrial expansion in any direction will be impossible. Admittedly he has done much to create a new Turkey, and if by edicts he could change the Turkish character he would no doubt ultimately achieve his ambition. But the average Turk has never had any aspirations to be regarded as a worker. Armenians and others are the workers in Constantinople and not the Turks. *Hoc opus, hic labor est* sums up the problem before Kemal Pasha.

Conditions in Iraq.

From the report on the cotton industry of Iraq, which will be found elsewhere in this issue, our readers will appreciate that Sir William Himbury is not merely an expert on cotton growing but also a keen observer, and critic, of developments in the regions he visits. The present report, which is the first of a series, gives a very valuable glimpse of developments in Iraq with special reference to cotton growing. The ground it covers may be gathered by the interesting comments on port conditions at Basrah and, later, on the difficult conditions for motoring. As a cotton producer, Iraq may already claim to be achieving some success, for the cotton crop of 1928 amounted to 5,400 bales, which constitutes a striking advance, when it is borne in mind that the crop of 1921 amounted to only 60 bales. Nearly the whole of the crop is grown on irrigated land, and it is interesting to note that roughly 200 more pumping installations were erected in 1928, bringing the equipment thus employed up to 40,000 h.p. British agricultural machinery manufacturers who are prone to disparage the Near East markets may well have cause to pause at these figures which are a plain indication of the outlet that will exist in Iraq as the work of development proceeds. Sir William Himbury has a good deal to say with regard to the new concession of the Diala Company, now the Latifiyah (Iraq) Estates. He thinks it will take two or three years for results, but that, given good management, satisfactory dividends will be forthcoming. His recommendation that the Iraq Government should establish a seed farm to insure the supply of pure seed of all kinds to farmers is thoroughly sound, and its adoption may be regarded as an inevitable stage in the country's agricultural progress.

COMMENTATOR.

YUGOSLAVIA.

That Yugoslavia is attracting increasing attention in Great Britain is shown by the interest now being displayed in the country as a travel centre. Tours in Yugoslavia are a feature of all travel literature, and special pamphlets dealing with the country are second to none in the attractiveness of the appeal that they make. The Yugoslav Express Agency, Ltd., of 25, Cockspur Street, London, S.W.1. issues a series of these, which rightly stress many parts of Yugoslavia as a delightful goal for

the traveller bent on fresh woods and pastures new, offering a wonderful variety of beautiful scenery and a picturesque blending of old and new, of East and West.

In the domain of permanent literature, we have also a pamphlet entitled "Yugoslavia Since 1918," by the Rev. R. G. D. Laffan, issued by the Yugoslav Society of Great Britain. In the Preface it is stated that the pamphlet is the first of a series of publications which the Society hopes to issue. In view of recent events it was felt that a general political survey must take precedence over all other subjects, and it is hoped to follow up this pamphlet by an Economic Survey, showing the great possibilities of development in Yugoslavia, and by a Guide Book. Mr. Laffan, who is a Fellow of Queen's College, Cambridge, was liaison officer with the Serbian Army during the Great War and has remained in close touch with events in the country since that time. His summary of the history of the last ten years gives in concise form a careful and dispassionate account of Yugoslav affairs during that period. It should certainly be read by everyone who wishes to understand the course of events since last January.

Copies of "Yugoslavia since 1918" may be had (price 1s.) from the Secretary, 62, Chester Terrace, London, S.W.1.

SMYRNA SULTANAS AND THE WEATHER.

In a report dated March 31 Messrs. C. J. Giraud and Co., of Smyrna, state that the sales of sultanas to that date are estimated at 45,200 tons, and the unsold stocks remaining are put at 4,000 tons. The season is now at its close. On the figures given above the yield for the year has reached about 50,000 tons, distributed as follows:—Quantity exported to date, about 37,300 tons; estimated stocks on shippers' hands against engagements, 1,000 tons; Alcohol Monopoly consumption, 7,000 tons; leaving a stock still available of between 3,500 and 4,500 tons.

Demand during the past month has been steadily slackening, the small inquiry concentrating on the cheapest descriptions against outstanding engagements to the Alcohol Monopoly. Stocks remaining consist mainly of medium qualities, fine grades having practically run out. The yield during the past season has proved somewhat in excess of the early estimates, and qualities have been sound, of good development, and with a higher proportion than usual of the outstanding growths.

It is as yet too early to make any reliable forecast for the coming season. We have recorded one of the severest winters experienced for over a generation; cultivation on the vineyards has been considerably delayed, the vines are fully three weeks to a month late in their maturity, and no sign of budding is yet apparent. As a result of such abnormal atmospheric conditions, some uneasiness prevails, the more so that past records show that winters of exceptional severity have a detrimental effect on the vines. Shippers will probably incline to a policy of reserve until the outlook can be gauged with some greater degree of certainty.

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tchernovo, Gabrovo, Pleven, Vidin, Elhan, Stara Zagora, Lom, Sirok, Slivnitsa, Dupnitsa, Gorna-Orehovitsa, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratsa. It has also 86 agencies

COTTON GROWING IN IRAQ.

BY SIR W. H. HIMBURY.

[Sir William H. Himbury, managing director of the British Cotton Growing Association, has just returned to this country from a visit to the cotton regions of India, Iraq, Egypt, and the Sudan, which countries he visited in the order named. We give this week his preliminary report to the Association on the cotton industry of Iraq; the reports on the position in Egypt, the Sudan, and India are to appear subsequently. Sir William Himbury, who arrived at Basrah from Karachi on January 24, makes some interesting comments on that port.]

Basrah Port.

Major Swann and Mr. Byford, as representing the Harbour Authority, met me and I was given the opportunity of inspecting the very large storage sheds and other accommodation. A large amount of money was spent here during the War, and the appearance of the port with its wharves, up-to-date trains along the front, the storage sheds 50 ft. long and 100 ft. broad, etc., is not unlike that of the Manchester Ship Canal. I was pleased to notice the large amount of cargo about, some of which was for Persia, and one thing I was particularly glad to see was the large number of pumps, for irrigation purposes, the makers being Messrs. Hornsby, Fielding, Blackstone, etc. The streets and all utility buildings are well designed but not elaborate, and in many places quite nice trees are growing and gardens have been made; in fact, the whole place gave me the impression that the authorities, of which Colonel Ward is the head, had a definite policy. I was also glad to hear that the port was now self-supporting. Four years ago I thought it was 50 years ahead of its time, but I now believe if the development inland only continues that in a few years' time this place will not be more than adequate.

"Mesowhite" Cotton Production.

The production of American long staple cotton (grown from Webber seed and now known as "Mesowhite") in Iraq, during the past eight years, ranges from 60 bales in 1921 to 3,500 in 1926. In 1927 there was a falling off to 1,800 bales, but in 1928 it had reached 5,400 bales. The temporary setback in 1927 was due principally to the low prices that prevailed towards the end of 1926. Planting is usually done before the middle of March, although the tendency in recent years has been for farmers to delay their applications for seed until they are actually ready to plant. It was very encouraging to find that by the end of January many farmers had registered their requirements, and everything points to 1929 providing a fresh record. A remarkable increase in the number of pumping installations is noticeable, and over 90 per cent. of the cotton crop is produced on estates irrigated by this method. Approximately 200 engines were erected in 1928, bringing the total capacity employed on irrigation to over 40,000 h.p.

There is no doubt that a wave of enthusiasm for the cultivation of cash crops, or crops for export (and especially cotton) is going through the country. One Member of Parliament told me he had reaped 42 tons of seed cotton from 35 acres of land, which worked out at over 600 lb. of lint per acre, and there are many other important growers who have done almost as well. H.M.

King Faisal is one of the keenest of growers, and I was conducted personally over some of his estates. He has three or four farms, one near the Palace being named "Wazirizah," which is 4,000 acres in extent. Last season His Majesty had 400 acres under cotton on his estate, from which he told me he reaped 1,600 lb. of seed cotton (or 400 lb. of lint) per acre. The land was well cultivated and laid out with decent buildings, etc. Wheat and barley are also grown. His Majesty then took me over a new farm called "Harthiyah" of some 12,000 acres. Irrigation was done by means of pumps driven by Crossley and Tangye engines. My only criticism, however, was that I thought they were rather in a cramped position. Five or six tractors ("Fordson" and "International" makes) were doing excellent work. His Majesty intends to plant 2,400 acres with cotton this next season, from which he hopes to get 1,500 bales of 400 lb.

The Latifiyah (Iraq) Estates Concession.

I also took the opportunity, whilst at Baghdad, to visit the old Diala Company's new concession, and was accompanied by Mr. Webster, Director of Agriculture, and Mr. Garbett, lately of that Department, but now with the company. A nasty sand storm was blowing, which made it most uncomfortable, and it was not possible to see much. No cultivation, however, has yet been started, as a canal 45 kilometres must be dug first. This, of course, is a big business, but I understand it will be commenced immediately. The area is 60,000 acres. About 10 per cent. is poor land, hilly or sandy, and not much good. Some 10,000 acres will have to be commanded by pump, the other by flow. The land irrigated by pump will probably be best. Some of the land here appears to be rather salty, but generally I consider the land is not bad, but average Iraqi land, a proportion of it being probably above the average. It is intended to cultivate by tenants, and also by direct cultivation. The former means the tenant gets 40 per cent., the landlord 40 per cent., and the Government 20 per cent. for flow land, and 10 per cent. on pump land of all crops. I consider the lower, or flow land more suitable for wheat and barley, which crops the tenants know, and I expect this will be the scheme, at least for a time. On the pump land cotton should do well, and the resultant seed will later be distributed to growers below. Personally, I think it means two or three years before any tangible result can be shown, and the shareholders will have to wait, but they should eventually get decent dividends, if the place is well managed. As regards labour there are two fairly large tribes available as tenants as soon as the land is commanded by water. Naturally to develop 60,000 acres some organization is necessary, which means the spending of money. I understand the amount of land it is proposed to give to each tenant is 100 masharas (one mashara equals about $\frac{1}{2}$ of an acre), or about 60 acres.

Ginneries.

I found our ginnery in first-class order and (with the exception of some cotton, the property of the Association which had been kept over so that I might see the ginning), the whole season's crop of 5,000 bales had been dealt with in five months. To employ a large plant less than half of the year is uneconomical, and, of course, adds to the cost of ginning, as the technical staff has to be kept on the permanent pay roll. Some growers and merchants,

however, consider the cotton should be dealt with more speedily, but considering they get preference, even before the Association's own purchases, I do not think they have any cause to complain. Furthermore, additional storage is being provided and other facilities which will have the effect of dealing with 8,000 or 10,000 bales within the five months, will be put into operation for next season. There has been talk for some time of an "opposition" ginnery, although I fear the promoters scarcely realise what the actual cost means. The principal body is known as the Agricultural Society, and I believe they have certain funds, but evidently the only object they see for using such funds at the moment is to duplicate the facilities already existing. Many of the people see that the cotton crop is going to grow in size, and imagine there will be money in the business of ginning. It has been pointed out, however, that our early efforts resulted in losing a good deal of money, and, if the crop does increase, we should not only provide extra plant, but greatly reduce our fees. The most important part of our work has been the selection of sound seed and the disposition of same. This can only be done properly by the control being in our hands. It was through the joint efforts of the Agricultural Department and the Association that Iraq cotton has not only maintained its high quality, but that the industry has made the progress it has, and I do not think we should be satisfied to see others come in and undo our work. If they do, it would be for the Association to decide seriously whether it was worth while continuing in the country. Later on, if the progress made was satisfactory, and the selection and disposition of the seed safeguarded, it would then be time for some arrangement to be made to hand over the ginning to a company, or co-operative body, who would carry on the work we are now doing without any great danger of a setback. I firmly believe there is no doubt, that if we retired before some body of a semi-philanthropic character took our place, and a slump in price should occur, the peasant grower would have a bad time.

By Rail to Kirkuk.

With the kindness that has always been shown me by Colonel Tainsh, the Director of Railways, I was enabled to gratify an old desire to visit the northern part of the territory, my objective being Mosul, and the trip was made all the more instructive by Colonel Tainsh himself accompanying me. We took the train from Baghdad to Kirkuk. On this journey the surrounding country is pretty flat until Quaraghan Junction is reached, where there is a long bridge over the river. Here there are hills between 500 to 600 ft. high, which in the spring are a mass of flowers, jonquils, narcissi, anemones, etc. It is quite pretty country, and there is also a large lake in which one can fish. We had a pleasant journey, and finally arrived at Kirkuk, the head of the railway, at 6 p.m. on Saturday, February 2. Kirkuk is an old town, about 1,000 ft. above sea level and about two miles from the railway station. Quite a range of hills is visible and a very extensive valley showing excellent soil, and a great deal of cultivation, mostly wheat and barley. One sees tens of miles of such land, either with green crop, or ploughed ready for sowing. Another feature is the flocks of sheep, which are large, with plenty of wool. In colour one notices white, black, red and a mixture. If only these sheep were graded, a good wool export industry would be assured, in addition to which the mutton in Iraq is considered of excellent quality.

Erbil and Neighbourhood.

The following morning a start was made in motor cars for Erbil. The ground over which we motored was pretty rough, deep ruts, and one got well shaken up. It also commenced to rain, with the result that the road got sticky, and about five miles from Erbil we got into some deep mud and it was a case of shaking the car from side to side to get her through. After considerable trouble and delay we arrived at Erbil, and called on Captain Chapman, the Administrative Inspector. In view of the condition of the roads rendered unfit by the rains he advised us not to proceed, and more especially as I had to return to Baghdad by February 5, so as to be able to leave for Cairo on February 7. Erbil is situated really in Kurdistan, and the people here are robust and virile, but a wild lot; big men with most prominent chins, long hair, and very bushy eyebrows and moustaches, big baggy trousers, long sleeved shirts and Zouave jackets, some most elaborately decorated, and with several weapons stuck in their waistbands. The town itself is built on a small hill or mound about 1,500 ft. above sea level, and looks rather like the old towns one sees in Italy and Roman France. It has the appearance of a fortified place; it is also said to be the oldest inhabited town in the world. The soil is rich and they get enough rain (19 to 20 inches per year) to grow cereals extensively. One peculiar feature which is noticeable here is the special form of irrigation, i.e., an ancient system known as "Karez." It is practised in Persia, Northern Iraq, and Afghanistan, where the land is situated at the foot of the hills. The method is to sink shafts some 60 to 80 feet to the water table and connect them underground by a tunnel on to the ground surface. The well of the tunnel is just large enough to allow the body of one man. The tunnel may extend for half a mile, but has an opening about every 100 ft. so that the man has bored 100 ft. at a time. These wells are sometimes 100 ft. apart, and the men who have made them have acquired great skill in directing their tunnel underground and in maintaining the necessary slope to it to bring the water to the surface at the right place. Few of these "Harez's" are now in use, and it is supposed that only a few men are left who know how they are made. In the markets I noticed walnuts, currants, raisins and apricots, all dried; onions, broad beans, etc., and in large quantity for sale.

What is needed here at once is an extension of the railway from Kirkuk to Erbil, and thence to Mosul. It would help the people to market their crops and also be of very great value for strategic purposes. One other big trouble is the large amount of damage done by locusts, and the Government have spent many thousands of pounds sterling in a campaign to destroy this pest. It is almost impossible, however, to be successful, unless neighbouring countries adopt a similar policy.

Seed Farm Required.

I strongly recommend the urgent importance of the local authorities spending some money on a Demonstration or Seed Farm. As already pointed out the growing of crops for export is taking a firm hold, and so far the authorities have only been able to supply seed produced by various individual farms, under anything but first-class conditions, and one of these days I fear there is going to be serious trouble. We have done valuable work in looking after cotton seed at the ginnery, but this operation should be accompanied by the production and supply of pure seed of all products to those thousands of Iraqi farmers who are making an attempt to get a living out of the land, and who need this assistance.

I should like to tender my thanks to H.M. King Faisal, and also to Colonel and Mrs. Tainsh; Colonel and Mrs. Ward; Judge and Mrs. Alexander; Dr. and Mrs. Leonard Woolley; Mr. and Mrs. Hedgcock, Captain Chapman and Mr. Eastwood for the warm welcome and courtesy shown to me whilst in Iraq.

Engineering Topics

(By Our Engineering Correspondent)

Fuel Economy.

There are few subjects more interesting to engineers generally than that of fuel economy. That is receiving much attention at the present time, and readers of THE NEAR EAST AND INDIA will agree that there are many ways in which economies in the use of fuel for industrial purposes may be effected which are not open to any objection but which have not as yet been generally adopted.

For many years there has been an impression that bituminous coal was unsuitable for boiler use. This fallacious impression is dying, but it is dying hard, and it is safe to say that many coal users are burning high-grade coal because they are unaware that they could obtain satisfactory results from grades of lower quality. Within the past few years there has been a great development in the utilisation of coal under the steam boiler, and many steam plants are now burning bituminous coal, practically without smoke and the consequent loss of the more volatile constituents. This has been brought about by continued improvements in the design of furnaces and by increased attention on the part of stokers and boiler-house staffs generally.

Smoke Prevention.

One has only to visit some of our manufacturing districts to notice variation in the smoke output from different chimneys. In many a fairly steady stream of dark smoke emerges from the stacks from the first thing in the morning to the last thing at night. In some instance this may be due to carelessness or lack of training on the part of the stoker; more often it is due to the use of a "smoky" coal and an absence of knowledge as to how to deal with it. It is now possible to design and operate boiler plants burning a high volatile coal which will be practically smokeless under the usual operating conditions, and which give off neither a black nor a dense grey smoke, except when a fresh fire is being built. Banking the fire, shutting dampers, etc., cause smoke of a light shade only, a fact which has been amply demonstrated in many factories, as well as in laboratory tests. I remember that in one experimental furnace, which was designed for burning a highly bituminous gassy coal, it was impossible to make what is generally known as black smoke.

The Required Conditions.

Coal can be burned smokelessly, no matter what its grade may be, just as can gas, fuel oil, or pulverised coal if the equipment is properly designed, adjusted, and used. Oil fuel, as a matter of fact, is capable of giving off a peculiarly dense black smoke if due care is not taken, yet, as everyone knows, when properly burned no smoke

whatever is given off. All authorities on the subject of combustion and smoke prevention agree upon the following conditions as requirements for a smokeless furnace when a specially smoky coal—in the ordinary view—is used.

The coal should be fed into the furnace in small quantities and at regular intervals, and the more nearly the feed approaches a continuous and uniform supply the better are the results. Readers interested in this question of improving the stoking, and incidentally reducing the fuel bill, in factories with which they are connected financially, should take an early opportunity of discussing the matter with one or more of the specialist firms who are experts in mechanical stoker construction. The air supply should be slightly in excess of the theoretical amount required, and should be admitted principally through the fuel bed, with an auxiliary supply admitted at the front or the rear of the furnace to burn the gases given off from the coal bed.

The temperature in the furnace should be sufficiently high to ignite the gases given off by the fuel. There should be a fire-brick combustion chamber of sufficient dimensions and so designed as to cause a thorough mixture of the gases and air, permitting complete combustion before the mixture reaches the boiler surfaces. Speaking technically, when smoke is given off there is also a loss of carbon monoxide and other combustible gases. The loss due to the visible carbon which we call smoke seldom amounts to more than one per cent., but the loss due to the escape of practically invisible but combustible gases amounts to as much as ten per cent.

High Temperatures.

Contrary to the general opinion, it has been found that with extremely high temperatures more smoke is produced and more unburned gases are lost up the stack unless exceptional care is taken in the stoking. High temperature, is of course, due to a supply of air approaching the theoretical amount, and on account of the difficulty of obtaining a complete mixture of the gases and air some gas is allowed to escape unburned. The combustion gas most frequently found in the unburned flue gases is carbon monoxide, a gas which is nearly always present when the stack gives off black smoke, indicating imperfect combustion. Hydrogen and hydrocarbon gases may also be expected to be present in connection with the first-named gas, but on account of the difficulty of determining the small percentages of these gases they are seldom recorded, though the loss due to their escape is considerable. Space, unfortunately, forbids this question of smoke prevention being discussed further and thoroughly here, but occasion may be taken to refer again to it in a future article.

THE BONDHOLDERS' REPORT.

The report of the Corporation of Foreign Bondholders for 1928 contains a good deal as usual about developments in the Near East. The principal feature of the period was, of course, the Ottoman Debt settlement, in regard to which the Council is not sparing of criticism regarding the delay in the negotiations and the attitude of the Turkish Government. On the other hand, a justifiable tribute is paid to Bulgaria for the terms undertaken by her in 1926 in the effort to re-establish her credit. It is not without significance that a large number of pages of the report (the price of which has been raised to 7s. 6d., or 8s. by post, to reduce the enlarged cost of production) are devoted to the default of Mississippi and other Southern States of the U.S.A. "It is with regret," it is stated, "that the Council have to note that another year has been allowed to elapse with what President Roosevelt once termed 'a painful and shameful page in our history' still on record." We give the following extracts from the report:—

Bulgaria.

The arrangement of 1927 appears to be working in a satisfactory manner and a further credit of £5,000,000 has been obtained under the auspices of the League of Nations, in addition to the Settlement Loan of 1926.

Greece.

The gross receipts in 1927 applicable to the service of the old gold loans in 1928 amounted to 2,250,020,994 drachmæ, against 1,867,258,789 dr. in 1926, and of these sums, the plus-values, which are derived from the Monopolies, the stamp duties, and part of the tobacco duties, yielded 200,293,830 dr. and 226,709,436 dr. respectively.

The total gross receipts in 1927 subject to the Control of the International Financial Commission were 3,891,669,534 dr. and £24,734. This total includes, in addition to the 2,250,020,994 dr. mentioned above: (1) the portion of the revenue from the tobacco duties which is not applicable to the plus-values (12,330,176 dr.); (2) the customs receipts of the ports of Corfû, Patras, Laurium, and Volo (201,826,047 dr.), which constitute an additional contingent security of the old gold loans, and those of the ports of Salonika and Kavalla (526,390,795 dr.), on which the Five per Cent. Loan of 1914 has a first charge; (3) the gross receipts of the revenues assigned to the Refugee Loan of 1924 (901,101,522 dr.); and (4) the receipts from the Refugees Settlement Commission for extraordinary amortisation of the Refugee Loan (£24,734).

With regard to the dispute between the Greek Government and the International Financial Commission, mentioned in the Council's two previous reports, as to the method of calculating the plus-values of 1926 and 1927, payable in 1927 and 1928, which had been referred to arbitration, the award of the arbitrator was published in November, 1928. Pending the result of the arbitration the Commission had agreed, in the interests of the bondholders, to a proposal of the Government to add in each year to the minimum interest and sinking fund 24 per cent. and 8 per cent. respectively of the nominal interest, these additions representing the amounts which the Government considered to be not in dispute.

The terms of the arbitrator's award were that the Government is to add 5,000,000 gold francs annually to the plus-value interest as compensation for the depreciation of the drachma, resulting from the Government issues of paper in past years, subject to the deduction for ten years of 500,000 gold francs per annum in compensation for the former irregular method of conversion of the plus-values. The effect of the award on the plus-values of 1926 and 1927 was that the total additions to the minimum interest rates payable under the Law of Control to the three groups into which the old gold loans are divided were to be 54 per cent. of the original interest for the first two and 56 per cent. for the third group in respect of 1926, and 54 per cent. for all three groups in respect of 1927. The total additions to the minimum amortisation rates were to be 14 per cent. of the original interest for the first group and 12 per cent. for the second and third in respect of 1926 and 10 per cent. for the first and 12 per cent. for the second and third in respect of 1927. These additional payments, less the 24 per cent. for interest and 8 per cent. for amortisation for each year already agreed to, were to be made on the coupons next payable in every case.

In 1928 the gross receipts for the service of the old gold loans were 2,335,606,345 dr. and the portion applicable to the plus-values was 232,399,929 dr. With the additional receipts from the Monopolies and other sources, the total gross receipts in 1928 were 4,063,836,240 dr.

The total additions to the minimum interest rates payable in 1929 in respect of 1928, are 57 per cent. of the original interest to the Monopoly Loan, 58 per cent. to the Funding Loan, the Five per Cent. Loans of 1881 and 1884, and the Piræus Larissa Loan, and 56 per cent. to the Rentes. The total additions to the minimum amortisation

rates are 12 per cent. to the Rentes, and 14 per cent. to all the other loans.

The general financial situation of Greece continues to be satisfactory. The loan of £4,070,960 and 17,000,000 dollars for the purpose of stabilising the drachma, of liquidating arrears, and of continuing the work of establishment of the refugees, which was successfully issued in January, 1928, under the auspices of the League of Nations, will be supplemented in due course by the loan of 12,167,000 dollars contracted with the United States Government. In May, 1928, the drachma was legally stabilised at the rate of 375 drachmæ to the pound sterling, simultaneously with the establishment of the Bank of Greece as the sole bank of issue.

As the result of the financial reforms undertaken by the Greek Government, the accounts of the year 1927-28 showed a considerable surplus. In the Budget for 1928-29 receipts balance expenditure, and although the course of events renders it now improbable that the receipts will attain the estimated figure, it is anticipated that the expenditure also will fall short of the estimates by an amount sufficient to balance the accounts.

The Greek Government has undertaken a programme of public works for which it is estimated that loans to the extent of £22,000,000 will be required. As a first instalment, a loan of £4,000,000 at 6 per cent., guaranteed by the surplus of the assigned revenues, was issued in December, 1928.

Turkey.

As announced in the Council's fifty-fourth annual report, a draft agreement for presentation to the Turkish Government had been approved by the representatives of the bondholders in February, 1928, after years of negotiations, and it was hoped that, at last, an end would be put to default by the early submission of the agreement to the Grand National Assembly of Turkey for ratification. Further questions were raised, however, and the National Assembly adjourned until November last.

Ratification by the Grand National Assembly took place on December 1, 1928 (a day later than the agreement contemplated), but was accompanied by reservations which confused and complicated the issue.

It should be mentioned that, with a view to regulating and settling all outstanding questions and possible causes of dispute between the Turkish Government and the Debt Council, the two parties had entered into, and had signed, a mutual discharge and release, attached to the contract. Turkey now excludes from this all operations relating to the issue of Turkish currency notes.

During the War, when the Debt Council was composed of Austro-Hungarian, German, Italian, and Turkish members, it agreed to co-operate with the Ottoman Government, at the latter's request, in the various issues of currency notes made from 1915 to 1918, and such co-operation has existed in all subsequent operations and control relating to those issues. This co-operation is governed by various issue contracts entered into between the Ottoman Government and the Debt Council at the time, and under them the Government specifically relieved and discharged the Debt Council from all risks or loss in connexion with the issues. Moreover, the contracts provide for arbitration in the case of any dispute arising between the two parties. Owing to the War, the French and British Members of the Debt Council were absent from Turkey, and, directly they heard of its action, they protested in writing against it.

At the end of 1927 the present Turkish Government made an issue of new currency notes to replace the War issues, and for an equal amount. The result of the exchange was that, although the total value of the old notes returned fell short of the total of the new issue—as was to be expected, in certain denominations they exceeded the number recorded as being in circulation. It is for this reason, apparently, that the Turkish Government, in ratifying the contract, has made a reservation as to note issues. The Debt Council disclaimed responsibility and referred the Government to the issue contracts, and suggested that the questions generally should be settled by immediate arbitration. The reply of the Turkish Government, dated December 31, 1928, took the form of an inquiry whether the Debt Council accepted the law of ratification, embodying the reservations, as it stood, or not.

Having been notified, in the meantime, that the Turkish Government had proposed to the British Government, for Palestine, that the question of the proprietorship of the three funds mentioned above should be settled either by direct negotiation or by arbitration, the Debt Council asked the Turkish Government on January 21, 1929, whether or not the latter considered that the reservation could affect the article of the contract which stipulates that the annuity payable to bondholders is to be subject to no deduction whatever. The Turkish Government replied that, if it were established that the Debt Council had a responsibility in connexion with the note issues, the matter would be settled according to common law and to the stipulations of the issue contracts. The Debt Council, having thus made every effort to overcome the difficulties created by the Turkish reservations, finally decided that, in all the circumstances, it was in the best interests of bondholders that they should be accepted as they stand.

It is to be presumed that the object of Turkey in making an agreement with her creditors was the re-establishment of such credit as she previously enjoyed through the existence of an autonomous and efficient Debt Administration in effective control of her finances. Her attitude during the negotiations has, however, been such as to endanger, if not to defeat, that very object. The essence of credit is confidence, and it will require many years of strict fulfilment of the terms of the new arrangement to erase the memory of the delays and uncertainties which have been experienced by the bondholders of the old debts ever since the Treaty of Lausanne.

ACROSS THE NEAR EAST BY MOTOR CYCLE.

A motor cycle tour from England to Australia is to be commenced this month by Mr. John Gill, a Bradford engineer, on a Vincent "H. R. D." sidecar outfit. The route to be followed in Europe is Calais, Paris, Toulon, Trieste and thence across the Balkans to Constantinople. The route to be followed through Asia Minor will be dependent on conditions, but the provisional itinerary is by way of Mosul, Baghdad, and Teheran, and then through Baluchistan to Karachi and thence to Delhi, Cawnpore and Calcutta.

The machine is almost a standard Vincent "H. R. D." production, being a 600 c.c. side valve model "E." The alterations from standard in this particular machine are that an extra member is added to the front forks to ensure lateral stiffness for use with the sidecar, the bottom gear is specially low to ensure ample power in difficult sections, a special racing type magneto is fitted to ensure the utmost reliability in this important unit, and finally competition type tyres are fitted. The tour is being undertaken with the object of demonstrating the reliability of the company's machines and to enable foreign traders and motor cyclists to inspect the motor cycle at first hand. It is hoped thus to reach a largely untapped market and to prove still further the quality and value of British goods to purchasers in the overseas markets.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

BULGARIA.

Cast Iron Pipes, Valves, Etc.—The Ministry of Railways, Posts, and Telegraphs invites tenders for the supply of 451 tons cast iron pipes ranging in diameter from 50 to 200 m.m. and 120 wheel valves together with a quantity of bends, tees, etc. May 7. (D.O.T.)

EGYPT.

Weighing Machines and Balances.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply of platform weighing machines, counterscales, and Beranger balances.

Tent Lining.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of calico cotton blue, tent lining for the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. July 1.

Various.—The Director-General of Prisons, No. 43, Sharia El Bustan, Cairo, invites tenders for the supply of various articles required for the year 1929-1930, viz.: (1) cotton, cloth, clothing, sacks, etc.; (2) buttons, eyelets, needles, threads, etc.; (3) fuses for blasting, twines, enamelled articles, miscellaneous articles, etc.; (4) paints, metal polish, blacking boot, heel balls, naphthalene, tar, acids, etc.; (5) leathers, native and English; (6) fibres, Indian, cane rattan, etc.; (7) lamps and electrical articles, etc.; (8) copper hardware; (9) tools (carpenters, saddlers, shoemakers, smiths), machines, files, etc.; (10) buckles, nails, ironmongery, belting, steel plates, tool steel, etc.; (11) dyeing of clothing, cloths and threads. May 25.

Filters, Etc.—The Egyptian Ministry of the Interior invites tenders for the supply of (a) filters and accessories, and (b) crude oil motor and pumps. May 15. (D.O.T.)

Steel Piping, Etc.—The Ministry of the Interior invites tenders for the supply of 5,100 metres steel piping assorted 4150 metres of 176 m.m. diameter, 900 metres of 102 m.m. diameter, 50 metres of 79 m.m. diameter, together with a quantity of specials, valves, hydrants, etc. June 3. (D.O.T.)

Steel Piping, Etc.—The Ministry of the Interior invites tenders for the supply of 13,330 metres steel piping assorted, from 80 m.m. in diameter, together with a quantity of cast iron and steel specials, valves, hydrants, etc. June 2. (D.O.T.)

Weighing Machines.—The Director-General, Physical Department, Sharia El Insha, No. 1, Dawawin Post Office, Cairo, invites tenders for the supply of weighing machinery. June 13.

Tent Cloth, Etc.—The Chief of the Stores and Economat, Ministry of Agriculture, 20, Falaky Street, Cairo, invites tenders for the supply of 85,000 yards tent cloth, 360 tons of commercial sulphuric acid, and 150 tons of sodium cyanide to the Plant Protection Section. May 26.

Metal Cabinets and Safes.—The Survey of Egypt invites tenders for the supply of metal cabinets and safes required during the year 1929-1930. June 19. (D.O.T.)

Lithographic Plates.—The Survey of Egypt invites tenders for the supply of aluminium and zinc plates for lithographing and engraving purposes. June 15. (D.O.T.)

THE SUDAN.

Stores.—The Inspector, Headquarters, Egyptian Irrigation Department, Khartoum, invites tenders for the supply of running stores for steamers and launches, chiefly oil, grease, rope, iron bars and sheets, bolts and nuts, files, etc. May 4.

TURKEY.

Bridges.—The Direction Générale des Chemins de fer et des Ports d'Etat invites tenders for the supply of two steel bridges. May 5. (D.O.T.)

Passenger Coaches.—The Administration Générale des Chemins de fer et des Ports d'Etat invites tenders for the supply of 236 springs for passenger coaches. May 4. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, April 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Magdapur for Calcutta (Birkenhead, April 30); s.s. Malakuta for Calcutta (Birkenhead, May 9).

Bibby Line.—S.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 1).

British India Line.—S.s. Morvada for Colombo, Madras, and Calcutta (London, April 20); s.s. Hatimura for Bombay and Karachi (London, April 27); s.s. Manora for Colombo, Madras, and Calcutta (London, May 4); s.s. Warfield for Bombay and Karachi (London, May 18); s.s. Mulbera for Colombo, Madras, and Calcutta (London, May 18).

Cunard Line.—S.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza. This steamer will also call at Volo if sufficient inducement offers. (Liverpool, Glasgow, and Swansea, April 27); s.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement offers (Liverpool May 11, Swansea May 14).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 4); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 25).

P. and O. Line.—S.s. Macedonia for Bombay (London, April 26); s.s. Bangalore for Calcutta (London, April 27); s.s. Razmak for Bombay (London, May 10); s.s. Novara for Calcutta (London, May 11).

Prince Line.—S.s. Scottish Prince for Tunis (Manchester, April 25); s.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, April 27).

Ellerman and Papayanni Lines.—S.s. Polo for Gibraltar*, Malta*, Algiers*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 20, Swansea* April 20); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool April 20, Glasgow April 20); s.s. Manchurian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool April 27, Swansea May 2); s.s. Fabian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 4); s.s. Mardinian for Gibraltar*, Malta*, Algiers*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool May 11, Swansea* May 11). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli, (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*ELYSIA ... Apl. 30 *CIRCASSIA ... June 21
†CASTALIA ... June 4 †MASSILIA ... July 23

*First class passengers only. Specially low fares. †Calls Port Sudan.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSRILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 16.

A new Stock Exchange account opened last Monday, and, since the Budget falls within its currency, it opened with a quietness which persisted throughout the week. There has been little evidence of disposition to speculate on the possibility of individual features, popular or unpopular, in Mr. Churchill's programme. The most encouraging feature of the week has been the growth of confidence in the monetary outlook. None of the active sections of the Stock Markets call for much notice, with the exception, perhaps, of Rhodesian copper shares, which reacted further on the slump in the price of the metal.

The most discussed topic of the week was afforded by the issue of the wireless merger terms, to which we refer below. The allocation of shares in the new company to various classes of existing shareholders is an exceedingly complicated business. But there seems to be one flaw in the proposed terms. On the face of it the Marconi £1 shareholders appear to have some cause for a grievance, and they will doubtless make a big effort to obtain better terms.

Ordinary Shares as Permanent Investments.

The fact that the great insurance companies, as was disclosed at the recent annual meeting, are increasing their holdings of ordinary shares might be taken to support the view that for the ordinary investor ordinary shares are more satisfactory as a permanent holding than are fixed interest-bearing securities; but these institutions, although they must have chief regard to safety, are in a different position from the average investor. It must be remembered that they still hold large quantities of British Government Stocks, and also they have the most expert advice in choosing their investments. The ordinary shares of a well-established company with expanding profits and large reserve funds are as good an investment as may be found, but the difficulty is to select such a company, and to be sure that its profits will continue to expand. Industrial profits are subject to three groups of factors causing fluctuations: factors affecting industry as a whole, factors affecting that particular industry, and factors affecting the individual company. Many of these are unforeseeable,

such as, for example, the effects of the development of competition through the discovery of a new scientific process, or the effects of a change in management through death. Hence, ordinary shares cannot be other than a somewhat speculative investment. On the other hand, the factors affecting the security of a fixed interest bond such as a government or municipal loan are easier to assess. If the investor confines himself to government or municipalities of good repute he may expect to get a regular income and to have as little worry as possible with regard to his investments.

Swedish Match Profits.

The powerful Swedish Match Company continues to add to its virtually world-wide interests, and the report for 1928, which has just been issued, refers to the acquisition of shares in the British Match Corporation and the Fabrica Nacional de Fosforos of Haiti. The company has agreements with many Governments granting it a monopoly in their countries, and in 1928 such agreements were concluded with Esthonia, Latvia, Yugoslavia, and Hungary. In all, it now has interests in over thirty countries. Output is said to have been larger in 1928, and also exports, in spite of the establishment of a factory in India, which naturally reduced shipments to that quarter. Profits for 1928 amounted to 48,961,568 kr., a very substantial advance on the 50,436,615 kr. earned in 1927, and this is the seventh consecutive year in which considerable increases in profits have been recorded. The dividend, however, is to be maintained at 15 per cent. for the whole year, and it is proposed that an interim dividend of 5 per cent., the same as last year, should be paid in respect of the current year in the latter part of 1929. The "B" ordinary shares of the Swedish Match Company, which are available for non-Swedish investors, yield only £4 per cent., but in view of the progress the company is making, contain reasonable prospects of appreciation. An interest in the company can also be obtained through Kreuger and Toll, the allied finance company, whose new 5 per cent. debentures can be bought to yield about £5 16s. per cent.

The Cable-Wireless Merger Terms.

The general principles upon which the wireless-cable merger is to be based have been known for some time, but the details were not published until this week. The merger has arisen out of the progress made in the development of "beam" wireless, which threatened to ruin the previously very successful cable companies. Wireless, however, does not provide secret communications, and it was therefore considered essential in the national interest to preserve the cables. For this purpose an Imperial and International Communications Company is to own all the communications assets of the Marconi Wireless Telegraph Company and of the cable companies, while a merger company, Cables and Wireless, Ltd., is to hold the whole of the ordinary capital of these companies. It is the shares of the latter company, which are of three classes: 5½ per cent. preference, 7½ per cent. "A" ordinary, and "B" ordinary, which the public will hold. Ordinary shareholders in the cable companies are to be offered £165 of the preference shares, £108 18s. of the "A" shares, and £26 of the "B" shares of the new company for each £100 of their holding. Preferred shareholders and holders of the £1 ordinary shares in Marconi are to be offered £131 10s. of the preference shares, £205 8s. of the "A" shares, and £150 5s. of the "B" shares for each £100 held at present. Holders of Marconi 10s. ordinary shares obtain the most favourable share in the equity of the new company, as they are to be offered £81 10s. of preference shares, £205 8s. of the "A" shares, and £150 5s. of "B" shares.

The Archaeological Council in Athens on April 9 examined the Acropolis architects' report on the Parthenon frieze, in which the suggested lowering of the plaques of the frieze was discountenanced owing to the risk of breakage in the process. The architects favour covering the anaglyphs by means of glass.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

Payment may be made in full on Allotment and Interest will be allowed on the amount prepaid at the rate of 5 per cent. per annum.

THE CORNHILL ISSUES CORPORATION, LIMITED: of 3, London Wall Avenue, London, E.C.2, has been authorised by the Company to invite applications for the above-mentioned 725,000 Ordinary Shares of £1 each at par through its Bankers:—

BARCLAYS BANK LIMITED, Head Office: 54, Lombard Street, E.C.3; 1, Minorities, London, E.1, and Branches.

WESTMINSTER BANK LIMITED, Head Office: 41, Lothbury, E.C.2; 1, Finsbury Square, E.C.2, and Branches.

Directors:

THE RT. HON. LORD BLEDISLOE, P.C., K.B.E., D.Sc., F.C.S., 52, Sloane Street, S.W.1 (Director, Gloucester Railway Carriage and Wagon Company, Limited), Chairman.

SIR JAMES CALDER, C.B.E., 32, Park Lane, W. 1. (Director of The Distillers Company, Limited; Chairman of Calder's, Limited).

RENE PAUL DUCHEMIN, 27, Quai de la Tournelle, Paris (Officier de la Légion d'Honneur; Président de la Confédération, Générale de la Production Française).

THE RT. HON. VISCOUNT ELIBANK, D.L., 238, St. James Court, S.W. (Chairman of The Peřak River Hydro-Electric Power Co., Limited).

MAJOR CYRIL FULLARD ENTWISTLE, M.C., LL.B., 14, Hill Street, W.1. (Director of The Cornhill-Issues Corporation, Limited).

MILIVOJ CRNADAK, Yurievskia 26, Zagreb (Vice-President of the First Croatian Savings Bank; President of the Chamber of Commerce, Zagreb, Yugoslavia).

Technical Adviser:

DR. W. R. ORMANDY, D.Sc., F.I.C., F.C.S., etc., Consulting Chemist and Engineer, London.

Technical Advisers to the Destilacija Drva D.D.

PROFESSOR H. SUIDA, D.Ph., etc., President Chemical Section, Technical High School, Vienna.

M. JACQUES MAUGER, Chemical Engineer, Managing Director "Maison Camus Duchemin," Paris.

Bankers:

BARCLAYS BANK LIMITED, 1, MINORITIES, LONDON, E.1.

WESTMINSTER BANK LIMITED, 1, Finsbury Square, E.C.2.

Solicitors:

To the Company: ALBERT M. OPPENHEIMER, 31, Queen Victoria Street, E.C.4, and 27, Behrenstrasse, Berlin.

To the Vendor: MAYO ELDER & CO., 10, Draper's Gardens, E.C.2.

Local Legal Adviser:

DR. STEPAN POSILOVITCH, 7, Berislaviceva, Zagreb.

Registrar and Transfer Office:

A. ENGEL, 4, Bucklersbury, E.C.4.

PROSPECTUS.

OBJECTS.—The company has been formed for the purposes specified in the Memorandum of Association, and in particular to acquire a controlling interest of over 77 per cent. of the share capital in the Destilacija Drva D.D. (called in English, "Wood Distillation Company"), to finance that concern and by that means to develop and exploit its chemical works and timber concessions in Bosnia, Yugoslavia.

WOOD DISTILLATION COMPANY.—The Company was established under Yugoslavian law at Zagreb in 1921 for the purpose of acquiring from the Government, for a term expiring in 1946, a Lease Contract of the Chemical Plant, Sawmills, Railways, Forest and Equipment, originally installed by the Bosnian Timber Exploitation Company, a subsidiary of the great German Wood Distillation Company, named Holzverkohlungs Industrie A.G., of Constance. Under the direction of the First Croatian Savings Bank, the enterprise has been entirely reconstructed and modernised. The present Government has agreed to extend the Lease Contract until 1971 on very favourable terms.

Timber Concessions.—The Wood Distillation Company holds rights from the Yugoslavian Government and Mussalman Church Administration over approximately 33,000 hectares (about 80,000 acres) of Forest limits from which the Government have granted felling rights for the Sawmill and Distillation Plant. The Directors consider that these Concessions, together with certain other smaller Forest reserves available, will ensure an ample supply of wood for all purposes.

Wood Distillation Works.—It is the largest single installation of its kind in Europe. It is specially equipped in a thoroughly up-to-date and comprehensive manner for the carbonisation annually of 200,000 stack metres of wood for the economic manufacture of Acetic Acid, Acetone, Formaldehyde, Methyl Alcohol, Charcoal, and allied products.

The "Suida" Patents.—These belong to the Wood Distillation Company, and relate to the well-known "Suida" Process for the direct manufacture of Acetic Acid and the recovery of weak Acids. These processes have been operated on a commercial scale for the last two years and the Directors consider these patents to be of the greatest commercial importance.

Sawmill.—This has a capacity of 100,000 cubic metres per annum. The eminent firm of Carl Gottlieb, Vienna, Sawmill Engineers, have contracted to reconstruct and modernise the present Sawmill and conditioning plant at an inclusive cost of £12,070. In addition, the Directors intend to arrange for the installation of an automatic wood-working plant for the mass production of manufactured and part-manufactured Beechwood articles. These include Textile Bobbins, Boot Lasts and Heels, Piano Wrist-planks, Parquet Floorings, Dairy Requisites, Tool Handles, as well as specially prepared Prime Lumber for the Automobile, Furniture, Building, Brush-making, and other Industries. Owing to the exceptional quality of the Forests and the accessibility of consuming markets, the Directors look for constantly increasing revenue from this source. As the demand for these timbers is steadily increasing, the continued prosperous operation of the Sawmill with such exceptionally low Stumpage costs (and with the waste and low grades being absorbed by the Distillation Plant), is assured.

Installation.—This includes a well-equipped Power Station, houses for the staff and workpeople, warehouses and other buildings. The Distillation Factory employs 700, the Sawmill about 200, and the Forest about 1,500 to 2,000 workmen. Local working conditions are excellent. Labour is cheap, efficient and abundant. Water, both river and artesian, is in ample supply for all industrial and domestic requirements.

Railways.—The lease includes about 150 kilometres Government standard gauge railways, directly penetrating the forests, together with Stations, Sidings, and Rolling Stock, providing direct contact with the Central European railway system and ensuring efficient transport to Susak and Dubrovnik, Fiume, Trieste, the Ports of Call of the Cunard, Ellerman, and Ellerman-Wilson Lines.

Coal Resources.—With seams running under the very ground area of the factory, the Wood Distillation Company works its own Brown Coal Mines, from which all its industrial and domestic requirements are supplied at a very low cost. Tests as to the suitability of this coal (which is high-grade Lignite) for Distillation and Low Temperature Carbonisation are now being made by competent specialists. This potential development is of special interest to the Yugoslavian Government as a much-needed national source of supply of Motor and Industrial Fuel, upon which a heavy protective import tariff is imposed. The reserves of Coal already exposed are more than adequate for all present and potential requirements. The amount keeps pace with the factory demand of about 100,000 tons per annum. The Directors anticipate considerable profit from this source in the future.

GOVERNMENT CO-OPERATION.—The capital of Wood Distillation Company is 20,000,000 dinars, divided into 100,000 shares of 200 dinars each, of which 20,000 are priority (or preference) shares, carrying a preferential dividend of 6 per cent. per annum, but in other respects ranking equally with the 80,000 ordinary shares. The Yugoslavian Government holds these 20,000 priority shares, and is therefore interested in the success of the Wood Distillation Company. The Company will acquire 77,042 of the 80,000 ordinary shares, and thus be in the position of a partner with the Government, and the works consequently will continue to enjoy particular protection under Preferential Tariffs. There are no debentures or mortgages outstanding on the real estates and goods of the Wood Distillation Company. An official Declaration received from the Ministry of Mines and Forests at Belgrade is included in the Prospectus.

THE PROPERTY VALUATION of Messrs. Bradshaw, Brown and Co., Valuers, Billiter Square Buildings, London, E.C.3, sets the value of the Leasehold Land and Buildings, Fixed and Loose Plant and Machinery, Railways, Rolling Stock and Transport Vehicles being the property of the Wood Distillation Company, Limited, at £471,096.

TIMBER CONCESSIONS VALUATION.—Messrs. Toplis and Harding and Russell, Surveyors and Valuers, established 1790, of 28, Old Jewry, London, E.C.2 (and at Manchester, Cairo, etc.), report upon these forests as follows:—

The Cornhill Issues Corporation, Limited.

3, London Wall Avenue, London, E.C.2.

Dear Sirs

18th March, 1929.

We have attended at Teslie, Bosnia, and have inspected the Forest Concessions with a view to advising you as to the present market value thereof, and we have had the advantage of access to the Government official records of the principal concession, namely, the State Forest.

A summary of our detailed report of even date shows that the forests are mainly Beech, but contain a considerable quantity of coniferous timber, the proportions being approximately three of Beech to one of Conifers, and in our opinion the approximate quantity of timber at present contracted for with the Government is at a very moderate estimate 4,200,000 cubic metres. We are satisfied that further large quantities of suitable timber are available within the Concession area and that such, together with the annual increase by natural growth, will provide an ample supply of wood for all purposes during a period of 42 years.

The quality of both Beech and coniferous wood leaves nothing to be desired, and the enterprise is fortunate to have an unlimited market on the site for inferior qualities in the form of a Distillation Plant.

In arriving at our figures, we have made every possible allowance for cost of extraction, and have assessed the value of the prepared timber at a figure somewhat lower than the present market price. We would add that since we inspected the Estates the price of Beech wood has been and is steadily increasing.

Apart from the revenue accruing from the Distillation Plant we estimate the net annual income from these forests to be the sum of £98,000, which will accrue to Chemical and Wood Industries, Limited.

We value the concession at the sum of £750,500.

Yours faithfully, (Signed) TOPLIS & HARDING & RUSSELL.

TECHNICAL ADVISER'S REPORT.—Dr. W. R. Ormandy, D.Sc., F.I.C., F.C.S., late Bishop Berkeley Fellow of the Owens College, M.I.A.E., M.I.Pet.Tech., M.I.Chem.E., London, reports as follows:—

The Cornhill Issues Corporation, Limited,

3, London Wall Avenue, London, E.C.2.

Dear Sirs,

23rd March, 1929.

I have inspected the Plant and Equipment of the Wood Distillation Co. at Teslie, and I am able to express my opinions as follows:—

WOOD DISTILLATION.—The plant at Teslie is the largest of its kind in Europe, and I find it to be well managed, very well arranged, and in excellent working order. It is capable of dealing yearly with 160,000 stack metres of wood, and with slight additional plant, would be capable of dealing with 200,000 stack metres, of which there is more than ample cheap supply. There is a growing and very profitable market for Charcoal, Acetic Acid, etc., within the country, and the output of the Works not consumed in Yugoslavia is sold through the European "Cartels" at maximum prices.

"SUIDA" PATENTS.—I have examined the working of these Processes upon a commercial scale, and have scrutinised all the contracts entered into as between the Wood Distillation Company and its licensees through the medium of "Maison Camus Duchemin," of Paris, and the terms of the Licences granted to or on behalf of such important concerns as—

GERMANY: I.G. FARBENINDUSTRIE A.G.
BELGIUM: TUBIZE ARTIFICIAL SILK COMPANY.
FRANCE: SOCIETE DES PRODUITS CHIMIQUES DU BOIS.
SOCIETE DES PRODUITS PYROLIGNEUX.
GREAT BRITAIN: BRITISH ACETATE SILK CORPORATION.
SPAIN: S.Y. "ARANA" WOOD DISTILLERIES.
POLAND: ZAKLADY CHEMICAL WORKS.

together with documents relating to negotiations which are nearing completion for the disposal of Licences to some of the most important Chemical concerns in the United States, Canada, Sweden, Japan, etc. I am of opinion that these Patents and Processes (besides their great value to the economic working of the Distillation Plant at Teslie) are already proven commercially. I estimate that the "Suida" Patents have a capital value of £120,000.

Yours faithfully, (Signed) W. R. ORMANDY.

GENERAL MANAGER'S REPORT.—Dr. Sigmund Pordes, General Manager of the Wood Distillation Company, reports as follows:—

The Cornhill Issues Corporation, Limited.

3, London Wall Avenue, London, E.C.2.

Dear Sirs,

Zagreb, 28th March, 1929.

After having thoroughly discussed all matters concerning methods and conditions of manufacture at the Teslie works with Dr. W. R. Ormandy, London, Mons. Jacques Mauger of Paris, and Professor H. Suida of Vienna, as technical advisers, and the late Mr. Arpad Karolyi, as General Director of the Wood Distillation Company, I beg to report that actual experience and proven results demonstrate that the Wood Distillation plant now that it has been completely modernised is earning net profit at the rate of £71,360 per annum from the sale of chemical products alone. It is clear that this figure is capable of considerable expansion as methods improve and certain economies are effected. Domestic and International "Cartels" dispose of the entire output of the Distillation and Chemical Plant.

The "Suida" processes have now been operated in conjunction with First Croatian Savings Bank on a commercial scale during the past two years. In addition to the great value to the economic working of the Distillation Plant at Teslie these patents are already producing a revenue of about £10,000 per annum, which figure it is anticipated will, from negotiations now pending, be increased very shortly to at least £20,000 per annum.

Further, I beg to report that arrangements have been made with the Government to enable the Establishment of an Artificial Silk factory on a strongly protected basis. Negotiations are pending with one of the most successful manufacturers of Artificial Silk for their own exclusive process to install a complete Plant to begin with as a first unit for the manufacture of one ton a day of Artificial Silk for an inclusive capital outlay of £230,000. The plant will be guaranteed to be ready for manufacture within twelve months. Contractors guarantee both quality and quantity of output as well as maximum cost of production under their own skilled and experienced technical direction. Apart from the unique position through the aforesaid protection, which excludes foreign competition, we enjoy the following advantages:—

- (1) The most essential Raw Materials are manufactured cheaply on the spot.
- (2) Ample cheap power can be generated from our own coal resources.
- (3) The local water supply is abundant and tests prove its suitability for Artificial Silk manufacture.
- (4) Buildings, land, offices, etc., are available from the Company.

The Company has also received offers by Yugoslavian Textile Mills to take over the entire output at market figures, which would leave the Company with a minimum annual profit of £112,200.

Yours faithfully, (Signed) SIGMUND PODES.

PAST WORKING.—Past profits have been absorbed by expenditure from revenue upon renewals and extensions to bring the enterprise to its present high state of efficiency, and by heavy interest charges on Bank Loans. Further large amounts were spent out of the Company's revenue for the development of the "Suida" Patents which are 94 in number and which resulted in obtaining World Rights for these unique processes, thus enabling the Company to dispose of them by granting Licences, practically all over the world, for Wood Distillers and for Acetate Cellulose Manufacturers.

FUTURE POLICY.—The Directors intend to advance the necessary funds to enable these loans to be cleared off and themselves to finance the development of the very valuable privileges and resources placed at the disposal of the Wood Distillation Company by the Government.

ESTIMATED PROFITS.—The Directors estimate the earning capacity of Chemical and Wood Industries, Limited, as follows:—

Interest on Advances to the Wood Distillation Company	...	...	36,000
Timber as per Report of Toplis & Harding & Russell	...	...	98,000
Chemical Works as per Report of Dr. S. Pordes, £71,360 of which over 77 per cent. accrues to this Company	...	...	54,947
Interest on £230,030 reserved for Artificial Silk Factory	...	...	11,500
			<u>200,447</u>

After making the necessary provision for Directors' fees and remuneration, management, technical and administrative expenses, there would remain a net profit of about £100,000 for the first year, which would be equivalent to about 10 per cent. on the capital of the Company. This profit should be substantially increased in future years, as it does not include any profits from the Artificial Silk Factory to be established, nor from the plant to be installed for the manufacture of Beechwood articles. There are also developments to be expected from the further disposal of licences for the Suida processes and the exploitation of the Coal Resources.

PURCHASE PRICE.—This Company acquires from the Vendor 77,642 shares of the Wood Distillation Company, Ltd., at the price of £275,000, which will be satisfied by the allotment of 275,000 fully paid Ordinary Shares of £1 each, of

which 175,000 will be allotted to the Engelsch-Nederlandsche Financierings Maatschappij, who are interested with the Vendor in the Shares being acquired.

LOCAL BOARD, MANAGEMENT AND TECHNICAL STAFF.—The Company, in addition to holding a controlling share interest in the Wood Distillation Company, has the right to and will nominate the Local Boards of Directors. All questions of Management, Technical Staff and Policy are also governed by the London Board with the exception of the Yugoslavian Government's right to nominate one-fifth only of the Board of the Wood Distillation Company. The Board will be supported by very competent Technical Advisers.

WORKING CAPITAL.—This Company will advance against cover at local rates of interest to the Wood Distillation Company, for the purpose of repaying its present Bank loans, a sum of about £300,000, of which amount working capital is represented as to approximately £175,000 in the form of Stocks of Materials, Sundry Debtors, and Cash. After making allowance for the modernising and reconstruction of the Sawmill, and all preliminary and other expenses, this issue provides a further sum of about £310,000 in cash, which enables the Company to set aside the sum of £230,000 for the proposed erection of the Artificial Silk Factory and plant and provision of working capital therefor. The balance thereafter of £77,000 in cash the Directors consider sufficient for all general purposes.

DIRECTORS' INTERESTS.—Mr. Rene Paul Duchemin is interested under an agreement whereby he is entitled to five per cent. commission on the amounts paid to the Wood Distillation Company by the grant of licence contracts in connexion with the "Suida" Patents.

Major Cyril Fullard Entwistle is a Director of and holds 2,000 shares of £1 each in the Cornhill Issues Corporation, Limited.

Prospectuses and Forms of Application may be obtained at the offices of the Company, and from the Company's Bankers and Solicitors, and from The Cornhill Issues Corporation, Limited, 3, London Wall Avenue, E.C.2.
LONDON, 16th April, 1929.

Throughout its branches the Westminster Bank has inaugurated a new facility for small savings in the home, equally applicable to children and adults. For some time this bank has experimented with the older form of metal money-box, but it has now abandoned that in favour of a very strong fibre safe, light and small enough to be carried in the pocket or handbag to and from the bank. It takes the shape of a hollow book, which forms a receptacle for coins and notes, and from which it is impossible to extract the contents until it is opened at the bank. Neither its pleasantness of appearance nor its comfort in handling detract from its efficiency, and it is calculated to appeal to many who would hesitate to carry the older type of metal safe-box in public. Compound interest is allowed on every 10s. paid in, and all the usual interbranch facilities for deposit and withdrawal are available. The safe may be obtained at any branch office.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

CABLES AND WIRELESS.

There is some not unnatural confusion in the public mind in regard to the inter-relation of the Imperial and International Communications Company, the Cables and Wireless Company, the old cable companies, and the Marconi Company.

Cable and Wireless, Ltd., will hold all or nearly all the shares in the old cable companies and the Marconi Company. All the communication assets held by the cable and Marconi companies will be transferred to the Communications Company in exchange for shares in that company. Although the preference shares of the Eastern Company and the debenture stock of all three cable companies will continue to be held directly by the public, both the old cable companies and the Marconi Company will in fact have little more than formal existence under the new régime.

The Cables and Wireless Company, the head of which is Mr. Denison-Pender, the son and grandson of former heads of the Associated Cable Companies, will conduct all the non-communications business of the old cable companies and Marconi Company, particularly the manufacturing business of the Marconi Company. For the conduct of this business, it is intended that a management committee shall be appointed consisting of Mr. Denison-Pender, Sir Basil Blackett, Mr. Kellaway and Lord Inverforth. The Chairman of the Communications Company is Sir Basil Blackett, and the conduct of the Communications Company will be in his hands and in those of the managing directors, Mr. Denison-Pender and Mr. Kellaway.

The membership of the boards of all the companies will be identical, but there will be a differentiation in the offices they hold in the different companies. The differentiation is important because of the necessity for drawing a clear distinction between the communications business of the company, in which the Government is interested through the Advisory Committee representing the Governments of the British Empire, and the non-communications business of the company with which the Advisory Committee is not concerned.

The investing public will thus be directly concerned only with the Cables and Wireless Company, but it is the Communications Company whose operations and prosperity will be of special interest to the public in general, as it is this company that will carry all their telegraphic messages.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at February 28, 1929, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully-paid shares of £10 each), £E2,925,000; reserve fund: statutory reserve, £E1,462,500; special reserve, £E1,340,625; current, deposit, and other accounts, £E15,876,231; Egyptian Government, £E18,532,397; Sudan Government, £E233,633; Mixed Tribunals, £E1,883,152; bankers' accounts, £E283,386; cheques and bills payable, £E222,164; sundry other accounts, £E1,745,444—£E44,504,532. Assets: Government securities and securities guaranteed by the Egyptian Government, £E21,933,595; sundry securities, £E514,308; advances on merchandise, £E4,711,825; advances on securities, £E4,767,847; advances otherwise secured, £E1,429,087; sundry other advances, £E838,823; bills of exchange, £E3,716,391; local bills discounted, £E681,747; buildings and furniture, £E217,366; money at call and at short notice, £E2,398,500; bankers' accounts, £E420,079; sundry other accounts, £E969,112. Cash: Notes, £E1,370,382; gold, £E262,711; silver, nickel, etc., £E272,759—£E1,905,852—£E44,504,532. Issue Department.—Notes issued, £E28,900,000—£E28,900,000. Gold, £E3,339,570; *British Treasury Bills, £E11,110,430—£E14,450,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,500,000; British Treasury Bills and British War Loan, £E12,950,000—£E14,450,000—£E28,900,000.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916).

THE AGRICULTURAL BANK OF EGYPT.

NOTICE IS HEREBY GIVEN that at a GENERAL MEETING of the above-named Company, held in Cairo on the 10th April, 1929, it was decided that a DIVIDEND of 10s. per Share on the ORDINARY SHARES of £5 each and £55 per Share on the DEFERRED SHARES of £5 each should be PAID on and after the 12th April, 1929, at the National Bank of Egypt in Cairo, Alexandria, and London (6-7, King William Street, E.C.4.).

Payment will be made in London less Income Tax. The said Dividends will be paid to the holders of Ordinary and Deferred Share Warrants to Bearer on presentation of the respective Dividend Coupons (Ordinary No. 26, Deferred No. 25) at the above Banks.

Forms for listing the above-mentioned Coupons will be supplied on application by the Bankers above mentioned.

Coupons must be left with the Bankers for previous examination.

By Order,

B. HORNSBY, President.

Cairo, 10th April, 1929.

Company Meetings.

AGRICULTURAL BANK OF EGYPT.

Dividends Maintained.

The report of the directors on the working of the bank for the year ended January 31 last, submitted to the shareholders at the twenty-fifth ordinary general meeting held at the offices of the bank in Cairo, on April 10, states:—

The directors have to report that the net profits of the bank for the financial year 1928/29, established in accordance with Article 40 of the Statutes, amount to £E550,038.999. From this amount there have to be deducted: (i) interest on debentures, £142,471.876; (ii) provision for the reserve fund, £E7,713.664; (iii) provision for the special reserve fund, £E21,316.506—£E171,502.046; leaving £E378,536.953. And there have further to be deducted: (iv) dividend on £1,250,000 preferred shares, £E48,750; (v) commission to the National Bank of Egypt, £E13,119.674—£E61,869.674; leaving £E316,667.279, which is available for distribution as dividend on ordinary and deferred shares. The ordinary shares have to receive, in the first instance, dividend at the rate of 5 per cent. per annum, £E120,900; balance, £E195,767.279. This balance of £E195,767.279 is available for the ordinary shares to the extent of one-half, or £E97,883.640, and for the deferred shares to the extent of one-half, or £E97,883.639.

Ordinary Shares.

The amounts therefore available for dividend on these shares are as follows: Balance from the year ending January 31, 1928, £E113,886.926; interest for the year, accrued on the above balance, £E5,694.346—£E119,581.272; dividend at the rate of 5 per cent. per annum, as stated, £E120,900; further amount available, £E97,883.640; total, £E338,364.912. The directors propose to pay a dividend at the rate of 10 per cent. per annum, requiring £E411,800, and to carry forward the balance of £E96,564.912.

Deferred Shares.

The amounts available for dividend on these shares are as follows: Balance from the year ending January 31, 1928, £E61,560.323; interest for the year, accrued on the above balance, £E3,078.016; total, £E64,638.339; further amount available, £E97,883.639; total, £E162,521.978. The directors propose to pay a dividend of £55 per share, requiring £E107,250, and to carry forward the balance of £E55,271.978.

In recommending the payment of the same dividends as those declared for the past four years, the board draws the attention of shareholders to the fact that this course again involves a reduction in the sums carried forward to the credit of the ordinary and deferred shares.

The encashments made on account of the annual instalment and of the instalments in arrear from previous years have been satisfactory, but there is an inevitable decrease in the profits available for distribution owing to the reduced annual instalment and to the small amount of arrears carried forward for collection. These causes will probably operate with increased effect in the future.

During the course of the year the last of our holding of National War Bonds was converted into 5 per cent. War Loan, and in the profits of the year is included a sum of £E37,500 which was realised from this conversion. No further profits will be available from this source.

Mortgage Company of Egypt, Ltd.

A dividend on the ordinary shares of 15 per cent. and a bonus of 2 per cent. were paid for the year ended March 31, 1928.

Collections for the current year have been good, whilst business in new mortgages has been on a similar scale to that of the past two years.

Following a recent decision of the House of Lords on the question of residence of companies registered in England and carrying on their business outside the United Kingdom, the Commissioners of Inland Revenue have notified the Mortgage Company of Egypt that, as from the year 1923/24, income tax will be claimed only on dividends and interest paid in England. This decision has favourably settled the question of income tax under discussion between the Commissioners of Inland Revenue and the Mortgage Company.

Arrears.

Out of the instalments in arrear on January 31, 1928, amounting to £E92,547, a sum of £E87,450 has been either collected or written off during the year; the amounts collected are included as profit in the profit and loss account for £E57,966 as capital and £E29,445 as interest.

The instalments due to 1928/29 which have not been collected in the year amount to £E36,497, of which £E11,564 are for interest; no credit has been taken for this latter sum in the profit and loss account as, in accordance with the Statutes, only interest actually encashed can be included in the profits. The balance, £E24,933, representing capital due and not recovered in the course of the year, has, as required by the statutes, been deducted from the receipts before arriving at the net profits for the year.

Any encashments on the total outstanding arrears—£E41,594—will be included in the profits of the year in which they are effected.

Output and Collections.

We have made during the year 188 "A" Loans for a total of £E5,668 and 78 "B" Loans for a total of £E28,410.

The total of loans exceeding £E1,000 each was £E68,176 on January, 1929. The arrears on these loans were £E5,747.

A sum of £E355,744 was collected out of the annual instalment of £E392,241; and a sum of £E87,411 was collected from the arrears, making a total collection of £E443,155, as compared with £E540,585 for last year.

The percentage of the annual instalment collected is 90.7 per cent., as compared with 82.6 per cent. in the previous year. There is also an improvement in the percentage of the collection of arrears, which has risen from 91.1 per cent. to 94.4 per cent. These high percentages of collection are due chiefly to the satisfactory price at which cotton could be readily sold during the period of the months of collection.

Expropriations.

The number of expropriations made by the bank during the year are as follows: Number of cases in hand on 1/2/28, 880; number of cases begun during 1928/29, 1,062; total, 1,942; cases settled, 1,247; balance, 695; cases brought to expropriation, 81; balance pending, 614.

In 20 of these cases of expropriation 72 feddans were bought in by the bank, and in 61 remaining cases 288 feddans were bought in by third parties.

COMMERCIAL BANK OF THE NEAR EAST.

Steady Progress Continued.

The seventh annual general meeting of the Commercial Bank of the Near East, Limited, was held on April 10 at the offices of the company, 4, London Wall Buildings, E.C. Mr. C. H. D. Moberly (the managing director) presided.

The Secretary (Mr. P. J. Bailey) having read the notice convening the meeting,

The Chairman said:—On behalf of the board, I have to regret, and to apologise for, the absence of our co-directors, Messrs. Empedocles, Petrocochino, and Merlin, who are detained by their duties in Athens. As the report of the directors and the accounts for the year ended December 31, 1928, have been in your possession for some days, I propose, with your permission, to take them as read.

Trade shows a slow and gradual improvement notwithstanding the heavy burden of post-War taxation. The business of the bank both here and abroad has been slowly and steadily increasing in spite of the difficult conditions in the Near East.

You will observe that we have sold our holding of shares of our associated bank, the Commercial Bank of Greece, at a good profit. They were purchased by banking interests in London and Greece who acquired at that time a substantial holding of shares in the Commercial Bank of Greece. I may mention that the Commercial Bank of Greece still hold their shares in this bank.

Our profits for the year 1928, excluding the profit on the sale of the Commercial Bank of Greece shares, amounted to £10,532 17s. 11d., as against £9,914 5s. 5d. for the year before, and they may be considered satisfactory. With regard to the future, we look for the steady progress experienced since the bank was founded to continue under conditions which we have reason to hope are gradually becoming more settled.

In conclusion, the Chairman proposed:—"That the report of the directors and the statement of accounts for the year ended December 31, 1928, be received and adopted, and that a final dividend for the year 1928, at the rate of 6 per centum per annum, less income tax, be paid, on the shares of the company on and after April 11, 1929."

Mr. D. J. Cassavetti seconded the resolution, which was carried unanimously.

The traffic receipts of the South Indian Railway Company for the week ended March 16 amounted to Rs.12,24,329, making the total from April 1, 1928, Rs. 5,93,39,673. For the corresponding periods of the previous twelve months the totals were Rs.12,13,613 and Rs.5,98,90,157.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 10:—

Egyptian Futures.

Sakel Contract.—Quiet and rather featureless markets have been the general rule since the date of our last report; outside interest in this contract continues to be restricted, and under the circumstances it is not surprising that fluctuations have been governed, to a great extent, by the prevailing tendency in the American markets. Trade reports from the fine section furnish little encouragement, and the recent decision to continue short time working for a further month confirms the difficulties under which spinners are at present labouring. In the course of events, this persistent cutting down of consumption in Lancashire should have been reflected in the value of the raw material, yet the markets hold their ground, with Alexandria in particular resisting a decline to a level more in conformity with the ruling basis in other qualities. It would appear as if the early summer months are going to prove the testing period for holders; during this period the contract markets will come under increasing pressure unless either a distinct turn for the better takes place in the trade outlook, or, alternately, unfavourable new crop developments commence to exercise their influence on the situation. A large stock of Sudan Sakels is in process of accumulating here, and whilst Continental and other consumers are now engaged in filling part of their requirements out of this cotton, the majority of local buyers, through force of circumstance, can only purchase in minor quantities. The cotton in question is of very desirable quality, and will certainly prove a price restraining factor as far as our market is concerned for the next few months. Taking a close view of the position, it appears unlikely that any material change in prices will take place, and on this account we hesitate to advise operations.

Upper Contract.—The action of this market has been distinctly disappointing to those anticipating higher prices, as, in spite of the recent encouragement from the American side, the undertone has remained heavy, and values barely maintained at our last circular rates. Trade purchases have latterly only been on a moderate scale, and whilst at times improving advices have been received from Alexandria, these have invariably been followed by lower quotations.

Egyptian Spot.

Business in this department has been distinctly quiet, and for the nine business days under review, sales of Egyptian cotton have averaged just over 200 bales, and those of Sudan Sakel just over 300 bales daily. Unsatisfactory news from India and China has recently cast a depressing atmosphere round the trade locally, and spinners are not in a mood to increase their commitments more than is absolutely necessary to keep machinery going. Features of interest have been lacking, although the general inquiry has covered a fairly wide field. The bulk of the Sakel demand has been concerned with cotton grading Strictly Good Fair to Strictly Fully Good Fair, and spinners are finding it increasingly difficult to find this cotton, particularly at the lower end of the scale, e.g., cotton selling at from pass to 50 on contracts. The selection available here is the worst we have seen for some years, and until more of the lower qualities of Sudan Sakel arrive from the Gezira, there appears little prospect of relief. Fortunately, it will not be long now before this cotton arrives. There has not been much demand for cotton grading Good and over. Inferior qualities at from 12d. to 14d. have been in good request most of the time.

Uppers have been in steady request and the tone of the Upper market has shown some improvement. Most of the business done has been in cotton selling at from 12½d. to 12¾d. The top qualities have been neglected as usual. Quite a brisk inquiry has been noted for Pilon cotton at from 12½d. to 13¾d., but the selection available within this range is extremely limited and spinners have shown little interest in the more expensive cotton. The medium qualities of various "special" growths, such as Maraad, Fuadi, Nahda, etc., have met with a moderate uptake. Sudan Sakel has been in fairly good request, but the Easter holidays caused a certain amount of dislocation to business. The basis remains firm. Tokar Sakel is not finding favour at the prices at present demanded.

C.i.f. business has been very quiet, and Alexandria remains very firm. Forwardings to spinners for the week ending the 5th inst. were returned as 6,649 bales Egyptian and 1,370 bales Sudan. Estimated spot sales (9 days), 2,000 bales Egyptian and 2,900 bales Sudan Sakel. Quotations of Sakel since the 27th ult. show a reduction of 20 to 35 points; those of Upper and Pilon remain unchanged on balance. F.G.F. Sakel to-day, 18.90d. F.G.F. Upper to-day, 17.70d. F.G.F. Pilon to-day, 13.30d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended April 4, state:—
Since our last report the futures market has been quieter, with a somewhat weaker tone. The week's summary of price movements is as follows:—Sakellaridis: May, 37.06 dollars, 0.68 dollars down; July, 37.40 dollars, 0.70 dollars down; November, 37.50 dollars, 0.70 dollars down; January, 37.72 dollars, 0.68 dollars down. Ashmouni: April, 23.35 dollars, 0.11 dollars down; June, 23.72 dollars, 0.16 dollars down; August, 23.85 dollars, 0.06 dollars down; October, 23.65 dollars, 0.31 dollars down; December, 23.98 dollars.

Sakel.—On account of the Easter holidays the market was only open for three days during the past week. The three sessions were rather quiet, and prices sagged a little under the pressure of liquidation of long positions and some speculative sales. The trade has been more or less entirely out of the market on account of the absence of any interest on the part of spinners, and the few orders that were placed by the latter were "on call" based on November.

A new estimate of the Sudan Sakel crop has just been issued by the Sudan Government, giving as the probable production 601,700 kantars. This figure we consider somewhat on the small side, and it seems to us that 650,000 kantars will be nearer the reality. We give below the statistical position of Sakel in Egypt at the end of March: Stock, Alexandria, 1,260,000 kantars (including 300,000 kantars held by the Government); stock, up-country (about), 250,000 kantars; total, 1,510,000 kantars. At the same date last year the stock of Sakel in Egypt was about 1,680,000 kantars. We would add, for purposes of comparison, that exports for the period April to August, last year, amounted to 1,100,000 kantars.

The above figures indicate a rather strong position, but it must not be overlooked that the Sudan Sakel crop, which, as mentioned above, will amount to about 650,000 kantars, against 475,000 kantars last year, is available almost in its entirety, as it has only just made its appearance on the Liverpool market. Our opinion about the market is that a distinct revival in the demand from the trade will be necessary to maintain prices at the present levels, but that a continuance of the present lack of interest on the part of spinners will inevitably lead to lower quotations.

The difference between Sakel and Uppers (May/June) is 1,334 points this week, against 1,316 points last week, and 1,396 points last year.

Against the first April tender, 11,750 kantars were delivered. The week's receipts amount to 157,411 kantars, against exports 236,084 kantars; the stock in Alexandria stands at 3,036,847 kantars.

Spot.—This week has been a short one, due to holidays, and Minet el Bassal has only been open three days. Sales amount to about 9,200 bales, of which we estimate 2,400 bales Sakellaridis, 6,450 bales Ashmouni and Zagora, 200 bales Pilon, and 150 bales other varieties.

Sakellaridis: Has met with a moderate demand and a fair turnover has resulted, covering all grades up to Good, with the medium and lower qualities in most demand, as for some time past. Spot differences are unchanged for Fully Good Fair, rather dearer for the grades

le'ow,, and inclined to ease a little for the better grades.

Ashmouni and Zagora: A fair demand has been dealt with and a moderately good turnover has resulted, in which all grades have shared, with the qualities round about Fully Good Fair receiving the most attention. Spot differences are without much change but very firm and well maintained.

Pilion: A moderate business has been done at last week's differences. Other Varieties: In White a retail business has been done, and a moderate trade has taken place in Nahda. Spot differences are unchanged for both varieties.

Up-country.—The approach of the date for the shutting down of ginning factories, fixed by law for May 1, has injected some activity into business in the villages. The total outturn of the crop looks like being about 7,650,000 kantars, of which Sakellaridis accounts for 2,450,000 kantars.

Crop, 1926.—Weather conditions have improved somewhat and sowing is now on the point of completion. Quite a number of complaints of poor germination in the Central Delta are current; in the remaining districts the state of the crop is considered as satisfactory.

The traffic receipts of the Suez Canal from March 23 to April 5 amounted to 44,860,000 francs.

It is reported that the intense cold of February and March had considerable influence on citron plantations in Greece. In the Island of Crete the damage is estimated at the present time to amount to approximately 20 per cent. of the crop, and the production in Epirus has been reduced by 10 to 20 per cent.

NEWS FROM ALL SOURCES.

The Egyptian Markets propose a final dividend of 5 per cent. and a bonus of 1 per cent., making 11 per cent. for 1928.

The deposits of the Banca Marmorosch Blank and Co., Bucharest, increased from 3,223,000,000 lei to 3,926,000,000 lei in 1928.

The Eastern Telegraph Company, Ltd., announce the payment by warrants on May 1 of interest for the half-year ending April 30 on their four per cent. mortgage debenture stock. The transfer books of the debenture stock will be closed from April 25 to April 30, both days inclusive.

The traffic receipts of the Egyptian Delta Light Railway for the ten days ended March 20 amounted to £E7,755, making the total from April 1, 1928, £E321,080, which represents an increase of £E24,280 on the corresponding figures for the previous twelve months.

Sir Walter Frederick Mievile, of Wilbury Road, Hove, at one time President of the Egyptian Maritime and Quarantine Board of Health, and engaged on special diplomatic missions to Vienna, Berlin, and Paris, left estate of the gross value of £17,397, with net personalty £15,689. Among other bequests he left £50 for a memorial tablet in the Church of St. Mark, Alexandria, Egypt. A bookcase and contents, with his decorations and medals, to the University of Oxford, for the Bodleian Library. His books on Egypt and the Sudan and other books the executors may deem fit to the Corporation of Hove for the public library.

Notes of the Week.

Italy and Yugoslavia.

A Press war between Italy and Yugoslavia, quite in the approved style of the more unregenerate days of Fascism, would hardly call for notice outside the two countries, if it had not given rise to official action on the part of the Yugoslav Government. The campaign was opened by the publication in an Italian paper of the alleged regulations of what was described as a Yugoslav secret organisation, called "Orjuna." Italians were invited to believe that membership of this society required its subordinate officers to move about as living arsenals on a small scale, with a view to suitable action in the enemy's (*scilicet* Italian) territory, according to a detailed plan of action which combined in a subtle way the approved methods of Bolshevism, savages and the latest detective novel. Most countries have newspapers that with advantage they could do without, and one or more of these can be relied upon to publish irresponsible and provocative nonsense about neighbouring States, friendly or otherwise; at the present time several French newspapers are making allegations about British action in Afghanistan which would have to be regarded as offensive if that particular type of journal were taken seriously either inside or outside its own country. The Italian Press, however, differs from others in that no statement in any one paper is regarded as too outrageous for repetition throughout the whole Press. Accordingly, the "revelations" of the *Giornale d'Italia* are slavishly reproduced by all Italy's newspapers, and that well-disciplined country works itself up to a typical degree of indignation over—it would be difficult to say what. If the "Orjuna" regulations happened to be genuine, the enterprising journal that discovered them missed an opportunity in not staging at its own expense a dress rehearsal of the organisation's subordinate officers on Italian soil. It would, while adding to the gaiety of nations, including, one might hope Italy's, have furthered the Italian quarrel

with Yugoslavia, as the "Orjuna" is one of the numerous organisations that have been suppressed by the Yugoslav Dictatorship. The Yugoslav organisation may well have been not altogether harmless from the point of view of the Belgrade authorities, but only the Italian Press could be sufficiently lacking in humour not to have discovered that the forger had again been at work in regard to these particular regulations.

The Yugoslav Retort.

In view of the provocation, the counter-offensive of the Yugoslav Press against Italy is pardonable, even if to be regretted. It was held in leash by the Belgrade Government for three days, and official restraint was only removed when the formal protest was made to the Italian Government. The burden of the Yugoslav retort is that the action of the Italian Press represents a time-honoured barrage to conceal fresh Italian movements in Albania. Signor Grandi, Under-Secretary for Foreign Affairs, has paid a visit to Tirana, and from this and other symptoms the Yugoslavs conjure up a forward movement on Albania's part for territorial aggrandisement. It may be supposed that, if Albania is foolish enough to allow herself to be made the stalking-horse of Italian designs, Italy would have no objection to seeing King Zogu burn his fingers. The policy would not be creditable to Signor Mussolini, in view of his protestations of peaceful intentions; but then, as the Yugoslavs rightly point out, his tactics in allowing his disciplined Press to bear-bait Yugoslavia is no less discreditable. The most reasonable explanation, presumably, is that *Realpolitik* still plays its part in Italy. Yugoslavia has recently signed a pact of friendship with Greece, has had an amicable, if not altogether conclusive, conference with Bulgaria, and is, in general, trying to remove the cold-shoulder ban which the attitude of previous Governments in Belgrade had tended to bring upon her. Signor Mussolini, accordingly, may

consider that "to trash for over-topping" may act as a healthy corrective to the Yugoslavs without exposing him too seriously to the charge of deliberately endangering the peace of Europe. In the meantime it cannot be altogether ruled out as impossible that King Zogu has succeeded in establishing for the first time a credit-balance on his side with the gift of a Greek marble head discovered last year in Albania.

The Appeasement of Yugoslavia.

Until King Alexander finds himself able to move freely among his subjects in any part of his Kingdom the work of the new Government will remain incomplete, however efficient its administration may become. For this reason it is to be hoped that the King will not be prevented from carrying out his intention to spend some months in Croatia this year. It had been arranged that he should go into residence in a palace near Zagreb in May, but there are now rumours that the visit may be postponed as a result of the murder of Toni Schlegel, the well-known Croat publicist. Such a change of plans could hardly fail to produce the worst possible impression in the country. It would seem to invest with considerable importance isolated exhibitions of non-acceptance of the present régime. In a matter of this kind care, it might be thought, would be taken to differentiate between dispossessed politicians and the people as a whole. The former are not likely to be dislodged from an attitude of captious criticism; but it was to be hoped that the measures taken by the new régime for the better administration of the country would have so impressed the nation as a whole that it would rally round King Alexander and his advisers, leaving room for no serious challenge. If this result has not been achieved already, it may be worth while for the Belgrade authorities to examine the causes for any lack of general support. Satisfactory as has been the improvement in Yugoslavia's relations with her Balkan neighbours, it must not be overlooked that the main *raison d'être* of the suspension of the Constitution is to establish satisfactory conditions at home, in particular to bring about mutual understanding, harmony and co-operation between the various elements of the Yugoslav people. To postpone this achievement through paying too much attention to foreign affairs would amount to self-condemnation on the part of the Dictatorship. A change of Ministers would have sufficed to bring about a fresh orientation of Yugoslavia's foreign policy; to effect a thorough overhauling of a corrupt and effete system of administration, it was necessary to "scrap" the whole genus of Yugoslav politician and to build afresh with men who could place national issues above personal interests.

Balkan Relations.

It was, perhaps, inevitable that the conclusions of a treaty of friendship and judicial settlement between Yugoslavia and Greece should have been received with misgivings in Bulgaria, and equally that expression should have been given to these misgivings in the Bulgarian Press without much reflexion. A wiser course of action would have been to have suspended judgment until the real significance of the treaty could be more accurately gauged, if only to avoid an unnecessary exhibition of Bulgarian resentment, which can only further embitter relations in the Balkan Peninsula. The event has proved that Bulgarian fears were misplaced, for there is not the least chance that Yugoslavia and Greece in concert will act towards Bulgaria after the Treaty any differently from the manner in which they would have acted without the Treaty. The Belgrade Government has been at pains to inform the Sofia authorities that the Treaty will in no way affect Yugoslav policy towards Bulgaria, and as an earnest of this assurance it has lost no time in ratifying the protocol of the Pirot Conference. In other words the Yugoslav Government has accepted the three points agreed upon by the delegates—the simplification of frontier formalities, regulations for frontier supervision, and the establishment of a permanent Mixed Commission to investigate frontier incidents at once and on the spot—

and has waived the other proposals put forward by the Yugoslav delegates—the liquidation of properties divided by the frontier line and the establishment of a neutral zone. Relations between Greece and Bulgaria, on the other hand, remain for the moment, as it were, in cold storage at the old degree of tension as a result of M. Venizelos's denunciation of Bulgaria's request for a further postponement of her reparations payments.

Yugoslavia and Bulgaria.

If the desire on the part of the Yugoslav Government to correct false impressions in Bulgaria regarding the Greco-Yugoslav Treaty is responsible for the prompt ratification of the Pirot Protocol, the Treaty will have had already a beneficial result on Balkan relations. Hitherto all the States have protested their peaceful intentions and good will one towards another, but no definite step had previously been taken in the desired direction. It is not to be expected that all past bitterness can be wiped out by a single stroke of the pen and satisfactory relations at once established between the different States. What is required is that the Governments concerned should be content with small beginnings and trust to the cumulative effect of practical exhibitions of good will. The Belgrade Government has broken the ice with the Pirot Protocol. If it can take a further step by removing disabilities on its Bulgarian-speaking subjects in South Serbia, in respect of language and Church observances, there will be no serious differences outstanding between the two countries. Needless to say, the cause of a good understanding will not be furthered by official receptions in Bulgaria to Yugoslav politicians who try to air their internal political differences in foreign countries. It is difficult to understand how the Sofia Government has contrived to allow Bulgarian soil to be used by Dr. Ante Pavelitch for propaganda against the existing régime in Yugoslavia, to which it is indebted for the initial improvement in Yugoslav-Bulgarian relations. If Dr. Pavelitch's denunciation of Belgrade has any effect at all, it will be in the direction of stirring up Macedonians to commit fresh crimes, and directly or indirectly Bulgaria will suffer. Ordinary prudence, it would be thought, would have prompted the Bulgarian Government to allow the Croat Leader sanctuary in Bulgaria only on condition that he abstained from political propaganda.

The Afghan Struggle.

The claimants for the Afghan throne have now entered the arena, and the first item in the Homeric struggle is an exchange of words. King Amanullah has issued his proclamation to the inhabitants of Southern Afghanistan, in which he denounces his rival as a murderer and a menial. The Amir Habibullah's retort is to recite King Amanullah's crimes against Islam, of which he is able to enumerate twenty-six, and to conclude by likening his rival of Kandahar with his shaved upper-lip to a butterfly. For the rest, preliminary skirmishes between the opposing forces are stated to have taken place, but the colour of reports of the actual fighting when battle is really joined will probably depend on the source from which they are received. If, as seems possible, the Amir of Kabul is attacked simultaneously by King Amanullah from the south and General Nadir Khan from the south-east or east, he is hardly likely to be able to offer any prolonged resistance. The last word may yet rest with Nadir Khan.

The Extended Jewish Agency.

The policy of co-operation as between Zionist and non-Zionist which was signalised in the famous pact between Dr. Weizmann, representing the Zionist Organisation, and Mr. Louis Marshall, representing non-Zionist American Jewry, and which was endorsed by the "Actions Conference" at Berlin at the end of last year, is now being worked out among the different Jewries of the world. The whole policy has, of course, to come under the scrutiny and to obtain the blessing of the Zionist

Congress which meets at Zürich next July, but no one anticipates that the Zionist Revisionists and other Zionists hostile to the recent actions of the Zionist Organisation will be sufficiently strong to prevent the sanctioning of proposals which for many years have lain at the back of the minds of most Zionists. In any case, Anglo-Jewry, which, taken in the mass, may be said strongly to disapprove of Jewish Nationalism and of political Zionism, took, on April 21, the historic step of being represented on the extended Jewish Agency which co-operates with the Mandatory Power in all social and economic matters affecting the Jewish National Home in Palestine. At the moment it is the Zionist Organisation which is held by the Mandatory Power to be representative of Jewry, and which, therefore, forms the Jewish Agency, but a change in the wording of the Mandate could easily be made so as to include (what has always been presumed) the representation of non-Zionist interests. What effect this linking up of the forces of Zionist and non-Zionist, or of "political" Zionist and "practical" Zionist, will have on the fortunes of Palestine it is difficult to predict. If money flows unceasingly to the aid of the Jewish colonists in Palestine, there must, it would seem, come about at least some realisation of the general Zionist ideal. But whether, if this happens, those Jews who are at present non-Zionists, will be persuaded that it is desirable to foster a Jewish Nationalism, remains to be seen.

Faisal Al Duwish.

If the report be true that Faisal al Duwish, the irreconcilable leader of the Mutair, has died of the wounds which he received a few weeks ago in a battle with the forces of King Ibn Saoud, romanticists who have no interest in the peace of the Arabian desert alone will be found to deplore it. For Faisal really was the symbol, as he was probably the instigator, of all the trouble in the years after the War between Nadj and Iraq. A fanatic who regarded fighting as the only right mode of living, he has met death in a way which he must have known was inevitable and which he probably would have preferred. Yet not quite; for it was against the *mush-rakin* of the rest of Arabia, not against his King, of whom he received, in the few days before his death, what was surely an affecting pardon, that Faisal al Duwish dreamed always of fighting. But certainly it is with no feelings of sentimentality, such as would be very foreign to the inhabitants of his settlement at Artawiyya, that the report of Faisal's death should be received. His disappearance is the best thing for King Ibn Saoud, for Nadj, and for Iraq. In recent years, his Mutair, who once were the spearhead of the *Akhwan* movement, and upon whom Ibn Saoud probably relied more fully than upon anyone else, had become identified with the policy of irreconcilability with Iraq. Faisal al Duwish probably imagined, knowing his King's views upon the "frontier posts" in Iraq, that his own actions would never be disapproved of, except verbally. He was never a man who could see the country behind, and greater than, the tribe. And yet it was just because King Ibn Saoud realised that the interests of Nadj were greater than those of the Mutair that he resolved to sacrifice him who had previously been one of his most useful lieutenants. It is in the elimination of such warriors as Faisal al Duwish, whose memory, however, will not be allowed to grow dim, that peace in Central Arabia depends. Inevitably it will be a very long process.

INDIAN NOTE.

"The Two Indias."

By a coincidence the Report of the Indian States Committee was completed and submitted to the Secretary of State at the close of the week in which the Chamber of Princes passed its momentous resolution declaring unqualified opposition to movements in British India towards complete independence of the British connexion. Nothing

could have brought into clearer relief the differences between "the two Indias" upon which the Committee lay such stress than the dramatic events of the intervening period. Until the Princes themselves have had time to study and pronounce upon the Report, reviewed at length in another part of this issue, the judgment of the commentator must of necessity be suspended. In any attempt, however, to appraise the value of what is certainly the most important and authoritative contribution yet made to the discussion of a singularly difficult problem it is essential to remember that the scope of the inquiry was strictly limited, contrary to the wishes and desire of the Princes themselves, and that Sir Harcourt Butler and his colleagues have wisely confined themselves to the specific tasks imposed upon them. They were appointed only to report upon the existing relations between the Paramount Power and the Indian States, to inquire into the existing financial and economic relations between the States and and British India, and to make recommendations for the "more satisfactory adjustment" of the latter only. While the Committee has accordingly declined to limit, or indeed to define, the term Paramountcy, on the ground that the Paramount Power must be "left free to meet unforeseen circumstances as they arise" it finds that the relationship has been "on the whole harmonious and satisfactory." At the same time certain charges in procedure are suggested, designed to improve the administrative machinery in several important respects. In particular it advises that in future the Viceroy—not the Governor-General in Council, as at present—should be the Agent of the Crown in all dealings with the States, a recommendation which together with the strong opinion that "the rights and obligations of the Paramount Power should not be assigned, without the consent of the Princes, to a new Government in British India responsible to an Indian Legislature," must be accounted the outstanding feature of the Report.

The Battle of Shaiba (Mesopotamia, 1915) was celebrated by the 1st Battalion the Norfolk Regiment with a general holiday.

King Zogu of Albania has sent to Italy as a present to Signor Mussolini the head of an ancient Greek statue known as the Goddess of Butrinto, found in Albania.

The King of Bulgaria, who arrived in Brussels from Germany on a two days' visit on April 17 as the guest of King Albert, the following day laid flowers on the tomb of the Unknown Soldier in Brussels. In the evening the King and Queen of the Belgians gave a dinner at the Château of Laeken in honour of King Boris. Among the guests were M. Jaspars, Prime Minister, and M. Hymans, Minister for Foreign Affairs.

THURSDAY, APRIL 25, 1929.

THE CAPITULATIONS IN EGYPT.

It is common ground between Great Britain and Egypt that Capitulations as they exist to-day in the latter country are an anomaly. In the first place, they have been abolished in Turkey and Persia, two countries that cannot claim to be ahead of Egypt in civilization; furthermore, they have been admitted from the days of Lord Cromer to be an embarrassment to the European no less than to the Egyptian. That they were necessary and justified in the past is not in dispute. The Egyptian demand for their suppression or modification would carry less weight, if it could merely be urged that they favour foreigners at the expense of Egyptians. The fact is that they constitute a grave impediment to the full development of Egypt, in which all who live in the country, whether foreign or native, have an interest. On the other hand, they provide just those immediate advantages to the foreigner which are apt to loom large in the eyes of the individual, and in this circumstance is to be found the reason why repeated attempts to deal with the Capitulations have met with failure; for it is in the power of any one State among the dozen or more enjoying Capitulations to veto any effort at reform. To-day, however, the position has undergone some modification. Great Britain has taken upon herself the responsibility for the protection of foreign interests in Egypt in the final adjustment of Anglo-Egyptian relations. The question of the Capitulations, therefore, resolves itself practically into one between Great Britain and Egypt, for no serious objection is likely to be raised by other Powers against any solution that satisfies the British Government, in view of the onus that will rest on the latter for the protection of foreign interests. This aspect of the case may tend to increase the caution with which Great Britain approaches the subject, but it should at least simplify the negotiations, in so far as there can be no question of bargaining for the retention of privileges *qua* privileges, but merely of providing safeguards for such foreign interests as are recognized universally to be entitled to protection in every country. While, therefore, the Egyptian Government has drawn the attention of all the Powers concerned to the need for introducing reforms into the Capitulations, it will naturally set special store on the preliminary negotiations with Great Britain, and this matter, it may be supposed, will form the main subject of any discussions that the Egyptian Foreign Minister, Dr. Hafiz Bey Afifi, may have with the Foreign Office during his stay in London.

Over fifty years ago, it has to be remembered, the more striking inconveniences arising at that time from the Capitulations were removed by the establishment of

the Mixed Tribunals, composed partly of foreign, and partly of Egyptian, judges, to which civil and commercial suits between foreigners and Egyptians or between foreigners of different nationalities are submitted. These Tribunals have also a limited jurisdiction in penal matters, and in contraventions of police regulations. The Assembly of the Mixed Court of Appeal, moreover, can authorize the application of new legislation to foreigners, provided that the penalties imposed do not exceed those fixed for contraventions (a fine not exceeding £E1 or up to seven days' imprisonment), subject to no objections being raised by any Capitulatory State within three months. The lapse of time and changed conditions, however, have served to throw more stress on inconveniences arising from the Capitulations which were not so prominent in 1876. For criminal offences foreigners remain subject only to Consular courts applying their own national laws, with the result that offenders are afforded an opportunity of evading or delaying prosecution by claiming foreign nationality; at the same time the domicile of a foreigner cannot be entered by the Egyptian police without Consular authority and only in the presence of a Consular delegate—an obvious handicap in the execution of search warrants for the repression of drug traffic and similar offences. Again, the Egyptian Government has to obtain the consent of all the Powers concerned before legislation applicable to foreigners can be promulgated or direct taxation can be imposed on foreigners. One inevitable result of this discrimination is to retard reforms in every direction, as no Government is prepared to impose on Egyptians new obligations that will not be shared by foreign residents in the country, who are no less interested in its progressive administration.

It is not unnatural that those who have enjoyed special privileges in the past should be unwilling to forgo them, and in the case of Egypt much has happened in recent years to give rise to a genuine conviction in the minds of many that the suppression of the Capitulations might leave foreign interests exposed to dangers that they do not incur in other countries. If Egypt, however, is required to recognise this side of the question, it is only fair that foreigners should recognize equally another incontrovertible fact, that neither in Turkey nor in Persia did they willingly surrender their right to Capitulations, however gracefully they may have acquiesced in the latter case; and that it is only a fortuitous circumstance, as it were, that gives them through the special position of Great Britain in Egypt an opportunity to negotiate in the matter of the suppression or modification of the capitulatory system. For the moment other Powers are probably content to see Great Britain incur the onus of driving a bargain on the subject of the Capitulations, and it is quite possible, if experience elsewhere is any criterion, that they are using the occasion to explain to Egypt that they, indeed, are willing to acquiesce, whereas all the recalcitrancy is centred in Great Britain. Although the Egyptian Government is not likely to accept this version of Great Britain as the sole villain of the piece, it may find it difficult to reconcile the British Government's expressed readiness to see the Capitulations abolished with any excessive consideration for the susceptibilities of other Powers that are adopting a more or less passive attitude in the matter. There would seem much to be said for taking advantage of the present favourable conditions in Egypt and in England for settling a question that might well come up for settlement at a later date in circumstances far less conducive to a policy of give-and-take. Concessions, without doubt, will have to be made by foreigners; but by concluding the negotiations at once the British Government makes sure of a longer trial run of the new order under the additional safeguards—over and above written stipulations—of good will, efficiency and co-operation. It would materially strengthen the position of a friendly régime in Egypt to be able to record an early success in the removal of what is admitted on all sides to be an anomaly that can be excused but not justified in existing circumstances.

*The Near and Middle East

From Our Own Correspondents.

Jerusalem, April 12.

The "Season."

Jerusalem's "season" is now in full swing. The voice of the tourist as heard in the land is not now so completely American as it has sounded in past years. Instead of the cyclonic world tours which gave the six hundred or so victims two nights and a day for "doing" Palestine, a more constant feature is the leisurely pilgrimage whose sole objective is the Holy Land, and which stays its week or ten days and bestows its financial blessings a little more widely than can the lightning tours whose benefits are confined to two or three hotels and tourist agencies. Such "pilgrimages" have been arriving from many European countries—the Anglo-Catholic Pilgrimage is at present with us—and they can be counted upon to grow into a more and more regular feature with the increasing cheapness of motor transport, improvement of roads, and increased hotel accommodation. Thus what is, after all, Palestine's main industry (which unpleasant people persist in calling "tourism") is flourishing, and promises to become more flourishing.

Enterprise of Tel Aviv.

Tel Aviv, once more under its "bourgeois" mayor, Mr. Mayer Dizengoff, has risen to the occasion. First it organised such a "Purim Carnival" as was never seen before—you might even have innocently supposed that the "Graf Zeppelin" was specially chartered from Germany to grace the carnival with a shower of confetti—and now it is marking its twentieth anniversary with a large scale "Palestine and Near East Exhibition," which is daily attracting its thousands of visitors and, to all appearances, making good business. The High Commissioner opened the Exhibition and said pleasant things—that here was a brilliant record of the activities and success achieved by the City of Tel Aviv and by all Palestine; it proved that the people here knew how to produce: they must learn now the art of selling. He was glad that most of the foreign firms that were exhibiting were English firms.

Feelings of Hope and Fear.

After the harsh winter the onset of real spring weather, with a few cold spells, is symbolic of the general condition of things. There is a real feeling of hopefulness following the past two years of depression; and the scoffs from abroad at the pitiful little "turn of the tide" in immigration figures do not in the least damp the enthusiasm with which the "turn" has been welcomed here. The unemployment crisis is a thing of the past; the Public Works Department announces a big programme of building—including a Post Office at Jaffa, and, in Jerusalem, the High Commissioner's House, the Rockefeller Museum, the Post Office, the Government Arab College, and the Mental Hospital at Bethlehem; and there is always the Haifa Harbour "to be commenced within the next few months."

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

But these warm, bright spots of the Palestine (Jewish) Spring are offset by a few chilly griefs. Among these are at least two which the local Hebrew Press labels in its headlines as *Shaaruriyah* (which is the Prophet Jeremiah's word for "a fearful and horrible thing"). An English firm is now setting up an electric power station and laying the cables to provide municipal electricity for Jerusalem; it is employing a great deal of local labour, but it is giving no work to Jews, in spite of the fact that the majority in Jerusalem is Jewish. If no change is effected the Jewish public proposes to "take the necessary steps to defend its honour." In Tel Aviv much soreness was felt that the Government presumed, after the municipal elections, to insist on the right to choose the town's Mayor and Vice-Mayor from among the elected councillors. It only made things worse, and Tel Aviv's protests more helpless, when the Government selected the same two whom the Municipal Council had already elected. Worse was to follow. At the Mandates Commission of the League of Nations the Palestine representative had claimed that the education of the Palestinian in self-government was being fostered by means of a generous measure of municipal autonomy. A few weeks ago a new "Municipalities Ordinance" appeared which gave Government authorities general powers to intervene in cases of financial irregularities or other mismanagement in municipal affairs. Here again was "a fearful and horrible thing": autonomy was but an idle word if it did not include the privilege of bankruptcy.

Archæological Activities.

Several small scale archæological expeditions have begun work in the past few weeks—the British School at Jerash in Trans-Jordan (under Mr. J. W. Crowfoot) and at Athlit (under Miss Garrod), an American party at Tel el-Nasbe, and a Danish party at Shiloh. It is rare that Palestinian archæology produces anything of really picturesque appeal, but it has done so at last in the little Byzantine synagogue discovered two months ago at Bet Alpha, a small Jewish colony near Beisan, and excavated by Dr. E. L. Sukenik on behalf of the Hebrew University. The feature is an extensive mosaic flooring, with colours bright and fresh, giving the signs of the Zodiac and illustrations from the Old Testament; there are but a few small parts damaged, and the whole is extremely attractive, although its artless simplicity is more amusing than impressive. The Department of Antiquities has undertaken to protect it and roof it in. This mosaic has escaped the fate of a similar one discovered by the Dominicans ten years ago at Ain Duk, near Jericho, in which all except the geometrical patterns had been obliterated in a period of iconoclastic zeal among the Jews in the eighth century, when they removed from their synagogues "the likeness of anything." The archæologist holds that the Bet Alpha mosaics were saved from destruction because the synagogue collapsed, probably by an earthquake, before the iconoclastic period, though the casual visitor is tempted to think that they were saved as being quite unlike "anything in heaven or on the earth."

The Question of Negotiations.

The presence of Dr. Hafez Bey Affi in London has caused the local Press to be full of telegrams reporting his movements, and of comments on, and forecasts of, the object of his visit. Previous Cabinets have all so much adopted the habit of trying, as soon as they were in the saddle, to negotiate a settlement of the outstanding political questions, that there has been considerable tendency in Egyptian circles to expect that one of his main occupations would be this problem. Dr. Hafez Bey's interview denying any such intention has come opportunely, although many still adhere to their previous belief.

In this connexion, when Dr. Hafez Bey says that the present is not the moment to attempt a settlement he would appear to be perfectly right. The one mistake which his predecessors since 1922 have made has been to try, in a desire to enhance their political prestige, to force the pace in this respect and, regardless of whether the omens were good or not, to insist on opening up discussions with the British Government. The net result has been that Egypt has lost ground instead of gaining, and the Mahmoud Cabinet is showing great common sense and rendering a service to its country by refusing to allow political considerations to lead it to follow the unfortunate

example of its predecessors.

The question of the transfer of limited jurisdiction to the Mixed Courts, brought forward by the Egyptian Government, is now being studied with the Powers and, although the present Cabinet is credited with the desire to go forthwith one step further and convert the question into one of full transfer of jurisdiction, there is little prospect of this proposal getting any further, as the foreign communities do not favour it. And in the matter of taxation the same quarters regard complete freedom as fraught with danger.

There are, nevertheless, one or two matters in regard to which agreement could be made, such as the *ghaffir*-cess, the motor car tax and the stamp duty. But except for such matters it is considered in well-informed circles improbable that any important question will be raised in London, by Dr. Hafez Bey Affi, whose main mission is to establish direct relations between the Mahmoud Cabinet and the British authorities in England so as to create there an atmosphere favourable to the present régime.

Premier in Menufia.

Last Sunday was an event in the annals of the Menufia, the province which is the most fertile and the most densely populated in the country. The Prime Minister, accompanied by the Ministers and a large number of guests including the Diplomatic Corps, travelled from Cairo to Kafr El Zayat *via* Benha and Menuf, and inaugurated the new branch-line connecting those two important centres. Incidentally this line will provide a part of the most productive area in the Delta with rail communication with Alexandria and the other market centres of the country, which it has sadly lacked, and it will be followed by the construction of other similar lines which will remove the great grievance which the inhabitants of this productive province have long nursed in this respect.

Mohamed Mahmoud Pasha, who was everywhere enthusiastically received, took the opportunity, at a reception at Menuf, to reply to the attacks made by the Wafd on the present régime and to justify the legislation which has recently been introduced in order to frustrate the attempts of Nahas Pasha and his colleagues to disturb public order. It was an excellent statement of the situation, and a convincing reply to the mendacious accusations made by the Wafd. It administers a rebuke to that body, the continuation of whose activities, it pointed out, merely served as a justification for the prolongation of the existing régime, and it announced the Government's firm intention neither to tolerate any attempts to upset the present régime nor to abandon its post until it had achieved its aim, which is to pave the way for a satisfactory constitutional life, only to be achieved, "by combating factors of deceit and intimidation, by ensuring liberty and by guaranteeing the freedom of elections so that they should not take place under a régime of terror and so that freedom of opinion in Parliament may be worthy of a true democratic Government." This declaration, which was couched in moderate but firm language, constitutes a further and very welcome refutation of the rumours put about—obviously by the Wafd—of disagreement within the Cabinet and between the Cabinet and the Palace, foreshadowing a ministerial crisis.

New Train Service.

For the occasion, the two new *trains de luxe*, the "Sunshine Express" and the "Star of Egypt" were used to convey the official party along the new line. The "Sunshine Express" consists entirely of Pullmans, which will provide a daylight service between Cairo and Aswan during the season, while the "Star of Egypt" is to do for Upper Egypt what the "Blue" train does for the Riviera. Incidentally the Pullmans, which were introduced about a year ago on the ordinary expresses, are proving a great success. At first the public, particularly Egyptians, did not take to them, but to-day they are so popular that often there is scarcely a seat to be had, and the time would

appear not to be far distant when on the more frequented trains several of these cars will have to be run.

Ulama at the Residency.

On April 8 the High Commissioner entertained the Ulama and members of the Mehkemeh Sharia at the Residency. Over a hundred were present, including Sheikh Mustapha El Maraghy, Rector of Al Azhar, Sheikh Abdel Megid Selim, Grand Mufti, Sheikh Mussa El Nawawy, President of the Sharia Court, two former Rectors of Al Azhar, Sheikh Bekhit and Sheikh Abdel Rahman Korraa, and Sheikh Abdel Rehim Pasha El Demerdashi. Tea was served in the conservatory, and afterwards the guests sat about in the grounds. The High Commissioner, who was assisted by his staff and a number of Arabic-speaking British officials and residents, moved round during the whole afternoon amongst the Sheikhs, who appeared thoroughly to enjoy the occasion, and were, indeed, very loath to move when the time for departure came. The "Sheikh" parties, which contribute much to the establishment of a friendly atmosphere with an element otherwise quite out of touch with the European community, are now an annual feature. They usually take place during Ramadhan, but this year's event had to be postponed owing to the High Commissioner's absence in the Sudan.

Memorial to Rupert Brooke.

In 1921 an international literary and artistic group was founded in Belgium and Egypt under the name of "La Lanterne Sourde" with the object of promoting friendly intercourse among writers and others interested in literature and the arts. It has done much good work in Cairo under the direction of its President, M. Paul Vandenberght, Professor at the Higher School of Commerce, and himself a distinguished man of letters. "La Lanterne Sourde" has now formed a Committee for the purpose of erecting a monument to Rupert Brooke on the Island of Skyros, where he lies buried. The "Rupert Brooke Committee" will in fact shortly open a fund in Egypt and in Europe for the purpose of collecting money by public subscription to carry out this object. M. Venizelos, President of the Greek Republic, Lord Lloyd, High Commissioner in Egypt, and Sir Percy Loraine, British Minister at Athens, have consented to be Presidents d'Honneur, and M. Caclamanos, Greek Minister in London, and M. Pierre Metaxas, Greek Minister in Cairo, will be patrons. An Executive Committee will be formed to include Mr. R. A. Furness, a former Oriental Secretary to the Residency, who was a life-long friend of Brooke, as Treasurer, M. Vandenberght as Secretary, and Henri Naus Bey and M. Politis, First Secretary to the Greek Legation in Cairo, as advisers. Khalil Bey Mutran, the distinguished Arab poet, will also be a member, and it is hoped to persuade the great Alexandrine poet, Kafafy, and Ahmed Shawky Bey, the Prince of Arab poets, to join it as well so that it may be representative of Arab as well as British and Greek literature. It is proposed to entrust to a Greek sculptor the work of designing and erecting the monument, which it is hoped will be ready

for unveiling in the spring of 1930, and the Committee intends also to arrange for the publication of a volume of "International Homage to Rupert Brooke" and a French and an Arabic translation of his works, which have already been translated into Greek.

CYPRUS.

Nicosia, April 10.

The Holy Synod.

In recent meetings the Greek Archbishop and Synod have considered in what manner the Greek Community in Cyprus could best participate in celebrating next year the centenary of Hellenic independence. As one project it is proposed to commemorate the martyrdom of Greek prelates in the island during the war of 1821. Over £1,000 have been already contributed by the Bishops, Abbots, Churches, and Monasteries towards a monument in marble to be erected within the precincts of the Greek Cathedral Church at Nicosia.

The Archbishop has continued to receive numerous replies to the memorial which was addressed individually to the Speaker and Members of the House of Commons, and to other persons.

The Legislative Council.

It is much to be regretted that once more a crisis should have arisen in connexion with recent debates in the Council. In a recent discussion over a draft law (March 15) an elected Greek member expressed himself in a manner not compatible with the rules to which members are subjected—so much so that the Acting Governor stated that he could not summon the Chamber to reassemble until members learned to conform with the rules of the Council. This has led the elected Greek members to send a letter to the Acting Governor, Mr. Nicholson, dated March 30, in which they protest against "the offensive words and threats" against the whole Chamber—on account of the words of one member—which they consider to be unjustifiable.

It is, indeed, strange that Greek leaders cannot, or rather will not, realise that their persistence in subordinating island interests and co-operation with the Government to ideals which they well know to be impracticable can only injure rather than promote their political aims. It is the more so since, in view of pronouncements of M. Venizelos, their attitude can only tend to embarrass the Hellenic Government and receives no support from Greece.

It is no wonder that visitors to the island, who come in increasing numbers, should conclude that the present policy of what they call obstruction to progress can but lead to changes in the Constitution, involving a diminution of the powers and privileges now enjoyed, and the appointment of a nominated Council.

A Nicosia Scandal.

The character of certain places of so-called entertainment in the capital is such as to call for the prompt atten-

tion of the authorities. Unseemly orgies are said to take place, and have called for severe comments by visitors, including Europeans. The manner in which these places are conducted constitutes a veritable scandal. Both the respectable public and the Greek Press are rightly insisting that an end should be put to the scenes that take place, by intervention of the Municipal Council and the police.

The Governor.

It is a matter for much regret that the work of Sir Ronald Storrs has been interrupted by ill-health. The Governor's leave expires on May 17. His duties are being carried out by Mr. Nicholson.

General News.

The Acting Colonial Secretary, Mr. Beattie, is proceeding on leave, his duties being taken over by Mr. Hart Davis, Commissioner of Nicosia, who is replaced by Mr. Montague.

The Ven. Archdeacon Buxton, Chaplain at Nicosia, has been invited by the Anglican Bishop in Jerusalem to visit that city in order to take part in the reception to be given to the Archbishop of Canterbury on or about April 16.

Sofia, April 9.

A Ministerial Crisis.

Part of the recent stabilisation loan was, as is known, earmarked for the railways in Bulgaria, which are national property and are worked directly by the State. But to authorise this allotment, the Financial Committee of the League of Nations, which supervised the issue of the loan, has made as a condition the reorganisation of the Railways Department according to a plan drawn up by it and agreed to by the Bulgarian delegate, M. Moloff, Finance Minister.

It appears that M. Moloff went too far in the concessions which he made at Geneva, the details of which are not even yet precisely known in Sofia. This circumstance has provoked quite recently a grave political crisis, which was overcome only through the proverbial dexterity of the President of the Council. When the Sobranye were discussing the State Budget for 1929-30, in which the Railways budget does not appear, as there has to be first a special law concerning the reorganisation of the Department on an autonomous basis, according to the Financial Committee's scheme, they had to examine the elaboration of this projected law. Thereupon a sharp conflict broke out between M. Moloff and his colleague of the Railways, Posts and Telegraphs Department, Mr. Rusko Majoroff. This conflict, created by profound disagreement on the conditions to which M. Moloff had subscribed—conditions which apparently allowed M. Charron, the League's Commissioner, the power of intervening arbitrarily in the administration of the State in general and of the Railways Department in particular—largely centred round the method of nominating the Director-General of the Railways, M. Moloff insisting, on the request of M. Charron, that this nomination be made for a period of five years, with the guarantee of no change during this period, and M. Majoroff replying that this procedure was equivalent to making the Director and consequently the administration of the Bulgarian Railways independent of the particular Minister, whose position would be largely diminished, although it would be he who would shoulder

all political responsibility. Such a proposal, according to M. Majoroff, impinged on the sovereignty of the country, and was inadmissible. Agreement proving impossible in the Cabinet, M. Majoroff declared to the President of the Council that he preferred resignation to acceptance of such inroads upon his powers, particularly as this diminution of his office had been imposed from abroad. His letter of resignation, according to the papers, was clearly directed against M. Moloff, whom he accused of undue complaisance towards the League's Commissioner.

The affair threatening to become serious, M. Liaptcheff set himself to employ the arts of conciliation, and he was able to obtain from M. Charron an appreciable modification of the formula of reorganisation prescribed by the Financial Committee. Thus the crisis was avoided. The compromise adopted is much to the advantage of M. Majoroff, who, having received full satisfaction, withdrew his resignation, agreeing for the time being to the nomination of a General Director of Railways for an unspecified time, but stipulating that, one year from the passing of the law of reorganisation, the Minister of Railways himself must bring before the Cabinet a project for the definition of the rights and duties of the General Director. The duration of the Director's mandate is thus determined by the proposition of the Minister, who remains master of the situation. For his resignation would have meant the defeat of the whole Cabinet, which was already affected by the constant dissensions in the Government group of the Democratic Entente.

This solution of the conflict implies, however, another problem, which people have already begun to exploit. The general opinion is that the gallant attitude of M. Majoroff has brought to the country considerable concessions. This concession could have been obtained even at Geneva, in the course of negotiations with the Financial Committee. As they were not obtained there, the obvious conclusion is that M. Moloff did not defend his country's interests with the necessary vigour. Hence there is a widespread impression that M. Moloff is largely responsible for the considerable difficulties experienced by Bulgaria in connexion with this matter. In these circumstances, it is not impossible that the Finance Minister may shortly resign, thus provoking another ministerial crisis.

The Communist Conspiracy.

The Bulgarian police have recently undertaken particularly delicate investigations which have led to the discovery of all the ramifications of a vast subversive organisation, of which the centre is the capital, and which was effectively directed from Moscow, through a central Communist committee operating at Sofia. The aim of this organisation was, apparently, the secret re-establishment of the old Communist party officially dissolved and prohibited by virtue of a special law passed after the revolutionary riots of September, 1923. Actually, it was attempting, by means of spending money throughout the country, to create a powerful Bolshevik conspiracy, which, when the moment arrived, could undertake serious revolutionary action.

The importance of this affair should not, however, be exaggerated. The action prescribed to the Bulgarian Communists by the Executive Committee of the Third International consists no longer of preparation for an armed rising, which the Bolsheviks appear to have completely abandoned after so many fruitless attempts, but rather of the organisation of what might be called economic and social sabotage in sowing the seeds of anarchy in industrial and commercial enterprises, in the unions of the postal, telegraph and railway workers, and above all in the Army.

Numerous arrests have been effected by the police. The most important of these is that of the Political Secretary of the Central Committee, Mladen Stoyanoff. When found, he had on him a considerable sum of money in dollars, as well as correspondence concerned with the conspirators.

ROUMANIA.

*Bucharest, April 18.
(By Air Mail.)*

Easter Holidays.

The last fortnight has been almost entirely devoted to holidays, and few political events of importance have taken place. Easter passed without incident and was celebrated in the greater part of the country on March 31, in spite of the protests which had been raised on this subject. In Bessarabia, however, Easter will be held on May 5, according to the Gregorian Calendar. The fact that such a situation is allowed is surely a sign of the religious tolerance of the Roumanian authorities.

Communism in Roumania.

The Opposition Press has made much of certain so-called "Communist" incidents which have been reported from Timishoara. It appears that the police interrupted a meeting and proceeded to the arrest of a number of Communists; but no importance can be attributed either to the meeting or to its results. The incident has served the purpose of the Opposition in allowing it to point to the unwisdom of the Government's recent suppression of martial law, which had been in force ever since the Armistice, and which was a strong instrument in the hands of the Governments of the past years for the support of their authority. M. Maniu's desire, however, to introduce complete liberty and to take no repressive measures except against crime must, undoubtedly, be regarded as forming the principal strength and wisdom of his policy. Up to the present events have proved him to be right; for, apart from a few disturbances caused by paid agents, the great mass of the workmen have remained perfectly calm and loyal.

New Legislation.

Parliament re-opened on April 12 and has already passed an important Law relating to house leases. When in the years 1920 and 1921 the Roumanian currency fell in value from 25.22 lei to the £ to 1,000 and 1,200 lei to the £, and the cost of living rose, while salaries and fixed incomes increased very little or remained stationary, the Government intervened to protect holders of house leases from their landlords, who in many cases attempted to raise rents at an alarming rate, especially as house accommodation was very scarce in the capital. At that time hundreds of people were flocking from the newly-acquired provinces, and many merchants, both Roumanian and foreign, were seeking to gain a footing in this greatly extended market. No doubt, the Law resulted in injustice to landlords in some cases, but on the whole it prevented much more undeserved suffering than it caused, by forcing the landlords to extend their pre-War contracts with very slight increases for a certain number of years. Although the cost of living is still very high, conditions generally are gradually becoming more normal, and the new Law has removed some of the disabilities of the landlords.

Two other important Laws have likewise been passed, one authorising the Ministry of Public Works to spend a considerable sum on road construction, especially in Bessarabia, where made roads are almost non-existent and where the soft and loamy nature of the soil makes road transport almost impossible at certain seasons of the year. The other Law relates to secondary education. Another measure for general administrative re-organisation is under discussion.

The Encouragement of Agriculture.

During the Easter vacation the Minister of Industry and Commerce, M. Virgil Madgearu (who has also temporarily taken over the portfolio of Communications on the resignation of General Alevra) paid a visit to Vienna, where he discussed with the competent members of the Austrian Government preliminary proposals for the conclusion of a Commercial Treaty between Roumania and Austria. As already mentioned, the present Roumanian

Government is anxious to afford every encouragement to all agricultural pursuits, as is only natural in a country where three quarters of the population are peasants working on the land. The authorities have already shown great concern at the rapidly declining figures of the export of cattle and livestock of all kinds. They have already announced their intention of abolishing all export taxes (on livestock in any case and, perhaps, on all other exports) and they are now trying to prepare the way for a satisfactory cattle trade with the neighbouring countries.

Negotiations for a similar Commercial Treaty have begun with Yugoslavia. M. Madgearu has announced that it is hoped to have the new import tariff to submit to the Legislature in June next. The new tariff is designed to afford the necessary protection to Roumanian industries, without, however, placing an unnecessary burden on many articles of import which cannot be produced in this country.

Weather and Crops.

Roumania has suffered this year from the severest winter that has been known for generations, and it seems as if spring would never establish her reign. Now in the middle of April there is not a green leaf to be seen, while as a rule the lilac bushes are already in bloom and the horse chestnut buds ready to burst into leaf and flower. After some encouraging soft rain there was another cold spell this week, and several degrees of frost were registered at Sinaia and Predeal, in the Carpathians, while even in Bucharest the thermometer fell below zero Centigrade. To-day, however, April 18, there is brilliant sunshine from a clear sky, and this should portend the final advent of spring. In spite of the severe weather the official bulletin of the Ministry of Agriculture announces that in most districts the autumn sown wheat and the vines have survived, though barley and rapeseed have suffered. The spring sowings will be late, as the ground was frozen hard until well on in the year, making ploughing impossible, but with favourable weather from now on there is no reason why any losses caused by the frost should not ultimately be restored. The maize sowings have already begun, and it is to be hoped that this crop will fare better than its two predecessors.

The Minorities.

The special Commission appointed by the Government to consider the Minorities question met on Sunday, April 14, when the Minister of Education read a report on the various memoirs received from the representatives of the Minorities confessions, asking for State subsidies for their schools in proportion to the number of scholars and teachers. The Minister also read a report on the claims of the Minorities in connexion with their religious faith. The Commission finally passed a resolution that the policy of the Government concerning the Minorities must be based upon the principles of respect of the Peace Treaties in the spirit of the decisions of Alba Julia and within the limits prescribed by the Constitution.

Constantinople, April 18.

Revision of Custom Dues.

In accordance with the terms of the Treaty of Lausanne, Turkey, in the course of this summer, will attain her complete independence in all matters relating to the im-

position of customs dues on imported commodities of foreign origin.

It is quite evident from the statements and figures already published in the local papers that the Mixed Commission of the Grand National Assembly, which is charged with the duty of framing the new tariff, is not likely to err on the side of moderation in dealing with the importation into Turkey of foreign goods. A tariff barrier is to be built up, which, whilst having the unquestionably legitimate object of protecting and fostering the development of home industries, will deal a very serious blow to the trade in certain foreign commodities of almost daily necessity which Turkey is not yet in a position to produce herself.

The following items are taken haphazard from the figures published in the Turkish Press, the tariff being established on the basis of the metric system at so many Turkish Liras per 100 kilogrammes, packing cases, tins, boxes, bottles and other recipients being subjected to the same duty as may be levied on their contents.

Foreign confectionery, Ltq. 150 (or say £15); roasted coffee, Ltq. 110 (£11); chicory, Ltq. 35 (£3 1cs.); Chocolate, Ltq. 150 (£15); cocoa, Ltq. 60 (£6); pickles, Ltq. 105 (£10); vinegar, Ltq. 150 (£15); edible oils (other than olive), Ltq. 60 (£6).

Whatever may be said with regard to foreign confectionery—and one must admit that Turkish *lokoums* and *shakers* are by no means to be despised—it would be idle to pretend that either Anatolia or Thrace can produce a single coffee bean or cocoa pod; and coffee, when all is said and done, is the principal beverage of the Anatolian population. Chocolate is being consumed more and more every day by the native population—Cadbury, Fry and Nestlé heading the list in popularity—and the new import duty will make this article of consumption prohibitive in price to all but the opulent.

It is when one glances at the figures of the projected tax on foreign wines, spirits and mineral waters that one realises how serious an effort is to be made to keep these *articles de luxe* off the Turkish market, France and Great Britain being the principal sufferers in this respect.

Sparkling wines, Ltq. 500 (or say £50); table wine in bottles, Ltq. 150 (£15); tonic wines, Ltq. 250 (£25); whisky, gin, vermouth, etc., Ltq. 240 (£24); liqueurs, Ltq. 450 (£45)—all per 100 kgs.

As an outcome of the projected tariff reform Turkish shipowners are seriously perturbed at the proposed duty of 100 per cent. on all imported second-hand vessels. This measure, they fear, will cripple the coastal carrying trade in so far as private ownership is concerned, and will give the State-owned "Seir-i-Sefain" a practical monopoly so far as Turkish waters are concerned. Second-hand vessels are almost invariably bought by Turkish shipowners for the simple reason that they cannot command sufficient capital to place orders for new ships.

Straits Commission.

A somewhat serious divergence of views has arisen between the Turkish President, Vassif Pasha, and the foreign members of the Inter-Allied Straits Commission, which body deals with all matters appertaining to the demilitarized zone of the Dardanelles, the Sea of Marmora and the Bosphorus—in other words the passage from the Mediterranean to the Black Sea—over the question of the transit through these waters of foreign men-of-war.

The Turkish President has taken a firm stand on the question of the inaccessibility to all foreign warships of the Gulf of Ismidt, which the Turks have come by degrees to look upon as a *mare clausum*—the truth being that the upper or Eastern reaches of this gulf have become, within the last few years, Turkey's principal naval base. The British Naval Member on the Commission has taken an equally firm stand, in which he is undoubtedly supported by Whitehall.

It may not be out of place to quote in this connexion Article 23 of the Treaty of Lausanne which deals with navigation within the disputed area:—

"The High Contracting Parties agree to recognise and do hereby adhere to the principle of the free passage, by sea and by air, in peace and in war, of the Straits of the Dardanelles, and the Sea of Marmora and the Bosphorus as provided in the Special Convention drawn up this day with respect to navigation within the Straits, etc."

It would certainly appear from this Article that the whole of the Sea of Marmora was explicitly included in the demilitarized zone. If the Turks have built up a strong naval base within the demilitarized area, it is not altogether surprising that awkward questions should be put to their representative on the Allied Straits Commission, particularly in view of the fact that a Soviet warship was allowed to enter and cruise in the Gulf of Ismidt not so many weeks ago.

Greco-Turkish Negotiations.

M. Diamandopoulos, President of the Greek Delegation on the Mixed Commission for the Exchange of Populations, returned from Athens within the last few days and proceeded to Angora in order to communicate to M. Pappas, Greek Minister in the Turkish Capital, the latest counter-proposals of the Greek Government for a settlement of all outstanding differences between the two countries. In the meanwhile, the Turkish Foreign Minister is at Geneva, whence he will proceed to Rome. Some time, therefore, must elapse before the negotiations can be resumed.

M. Diamandopoulos, in an interview which he granted to a Press correspondent on his way through Constantinople, had little to say beyond the fact that both sides were convinced that it would be possible in a short time to settle all outstanding differences to the satisfaction of all parties concerned, provided—and this proviso would appear to constitute the crux of the whole question—that Turkey put forward reasonable demands and did not insist on claiming from Greece monetary compensation for the difference in the value of exchanged properties beyond the present financial capacity of the Hellenic Government, burdened as the latter was with the installation of so many Greek refugees from Turkey.

THE Y.M.C.A. IN YUGOSLAVIA.

A Bulletin of the Y.M.C.A. in Belgrade states that the Association now has about 1,500 members in Yugoslavia.

One of the best things so far attempted in the Yugoslav Y.M.C.A., continues the report, is the Training School for Workers, which was held from February 25 to March 2. Delegates, both Orthodox and Protestant, to the number of between 50 and 60, representing 12 or more centres, attended the school, and nearly 30 of them were able to stay for the whole course, which was planned to give training in the work of the Y.M.C.A. Lectures were given by an Orthodox Bishop and three priests, by Pastors of the Reformed and Lutheran Churches, by Mr. Tracy Strong and Dr. T. Hooft from the World's Committee in Geneva, and by the Y.M.C.A. staff in Belgrade. On the last day of the School the Queen graciously allowed us to take to the Palace two junior members (a Serbian boy from Belgrade, and a Hungarian-speaking boy from Subotitz) to present to the Crown Prince an album of photographs most artistically arranged by Mr. Taggart, depicting the Camp held last summer at Mlini, to which the King had given two tents. It was the first deputation ever received by the five-year-old Crown Prince, and he did it with a charming dignity. He thanked the two boys in Serbian, and the Queen told them how deeply touched she was that their fellow-members in the Y.M.C.A. should have sent so delightful a present to the little Prince.

On April 12 a party of 13 English Jews set out to make a voyage round the Dead Sea in Mr. Novomeysky's motor-boat, intending to return to their starting-point on the following evening. When it was learned that they had not returned anxiety was felt, and, according to *The Times*, every possible means of rescue was brought into action, including fresh boats from Jaffa, aeroplanes, large bodies of Palestinian and Trans-Jordanic police, and numbers of Arabs who had been engaged in the campaign against the locusts. The party were sighted with the motor-boat on the coast of Moab on April 15 and later the whole party safely landed in Palestine. The party included one of the sons of Sir Herbert Samuel, the former High Commissioner, and Mr. Sacher, a member of the Zionist Executive. The mishap was due to lack of petrol.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 4.

Politics.

At a Provincial Liberal Conference, at a meeting, in other words, of men of moderate views, Sir Tej Bahadur Sapru moved that the Conference record its conviction that "no scheme of constitutional reform which falls short of responsible government with the status of a Dominion for India will meet the requirements of the country, or satisfy the national self-respect." There is, then, this much in common between Sir Tej Bahadur Sapru and the former member of the Executive Council whose views I tried to summarise last week; the feeling in each that Dominion status must be given at once, whatever the risks involved, because without it India would lose her self-respect. There is an appeal in that to the sense of justice and fair-play that every Englishman is born with; the sense that reconciled the Conservative Party of Peel's time, or Lord Derby's and Disraeli's, to the several extensions of the franchise. They thought them unwise and likely to bring the demagogue and other evils into English politics; but they would run that risk rather than that Englishmen should not look each other openly in the face, as men who respect each other do. I am afraid that we have reached the same point in India. Men cannot be expected to think only of what would make for good government in India: they feel that there is something humiliating in their present position, and that they must break away from it.

The Argument.

The same argument that my friend of last week used—that not to give Indian self-government with no further question of its being right to do so would be to drive India into the hands of any future enemy of Great Britain—is very much Sir Tej Bahadur Sapru's. His resolution went on:—"This Conference desires that the British Government and Parliament should take note of the increasing dissatisfaction of the people of India with their present state of dependence, and the growing estrangement between the people and the Government, and, for the sake of amicable relations between the two countries, not less than for the prosperity, contentment, and happiness of Indians, no time should be lost in establishing Dominion self-government in India." That is the same argument in other words, and even the words are not so very different. Sir Tej Bahadur Sapru would have us understand that "anything in the nature of tinkering with the present highly unsatisfactory constitution, or even provincial autonomy without a responsible central government, will not be supported by any section of progressive Indian opinion." That is, not in public conference, and what is wanted is something that can be defended in public conference with the speaker's self-respect. There is no escape; no more than there was when great constitutional changes were forced on men in the Past.

The Muslim League.

The Provincial Liberal Conference was at Lucknow. There has been a meeting of the Muslim League at Delhi. The report is that Mr. Jinnah found the Shafi section irreconcilable, and had to give up his attempt to bring it back within the League fold; that the Subject Committee split into two camps over the Nehru Report; that the majority supported it, and the minority walked out, headed by Moulvi Mahomed Yakub and the Ali brothers; and that the last scene of all was one of rowdiness and blows with lathis. Mr. Jinnah himself would have rejected the Nehru Report. He circulated a lengthy historical document on the subject of the attempts to secure a communal settlement, in the course of which he observed: "The Nehru Report proposals can, therefore, at best be treated as counter Hindu proposals to the Muslim proposals, and as no agreement has been reached, it is for the League to take such action as . . . the League may think proper. . . ." The party among the Muslims with most

cohesion in its ranks appears, Mr. Jinnah notwithstanding, to accept the Nehru Report. So they are with Sir Tej Bahadur Sapru and the Liberals.

The Public Safety Bill.

The Public Safety Bill was down for discussion, with the prospect of a quiet and successful voyage, when the President of the Chamber, arguing that the acceptance or rejection of the Bill was bound to affect the course of the Meerut trial, suggested that before he gave any ruling Government should consider the advisability either of postponing the further stages of the Public Safety Bill or of withdrawing the case against the Meerut prisoners. The Home Member agreed to take up the Trade Disputes Bill that day, but wished to make it clear that it would be dangerous to public interests to postpone consideration of the Public Safety Bill. It is now for Government to decide. There seems point in the President's contention, that a full discussion of the Bill is impossible without reference to matters that are *sub judice*. He might have to call every other speaker to order.

The All-India Hindu Mahasabha.

One of the declared objects of the Hindu Mahasabha is "to preserve and increase the numerical strength of the Hindus." Mr. Ramananda Chatterji, the President of the Mahasabha, has been defending the action that this declared object, if pursued, must involve. One can hardly think the time well-chosen to bring such a matter prominently before the public. One turns with relief to other parts of Mr. Chatterji's address, as his plea for the "untouchables." "Permanent and hereditary untouchability," he said, "is not only wicked and shameful, but it is also an absurdity. Those who believe in untouchability of this sort tacitly and indirectly give greater rights to various lower animals, including plague-carrying rats, than to human beings. Those who are holy and pure ought to be able to raise and purify those who are not by their company and contact." Unfortunately it is not really a case of the pure and the impure, but of castes who have inherited the privileges of ancient ruling races. These have not to overcome the pure man's distaste for contact with the morally vile; they have to surrender social rights and privileges that all their upbringing has taught them to regard as valuable. There is that, and there is something else.

India: the Enigma.

What that something else is is impossible for any non-Hindu ever fully to understand. Meredith Townsend has this in his "Asia and Europe," a book worth re-reading at this time:—"The process which now goes on endlessly then went on endlessly, till India was a sweltering mass of beliefs, ideas, religious customs, and rules of life all or nearly all instigated by fear, by an acute dread that somehow, after so much labour, so much self-denial, such hourly bondage to ceremonial precaution, the end might ultimately be missed. The essence of the life in Hinduism, if not of its creeds, is fear—fear of the unknown result which may follow upon error either in conduct or in faith or in ceremonial. A single belief, the belief in his pre-existence, which is firmly accepted by every Hindu, fills his mind with vague terrors from which, while that conviction lasts, there cannot be by possibility any full relief." That deadly evil might come of a Hindu's touching an untouchable is now part of his creed; his fear has worked that as a conviction into his bones. A single Hindu, Mr. Ramananda Chatterji or another, may stand up and speak as if free of that fear. All the same, in the dark places of his soul it is there; in the dark moments of his life it will emerge. It will take centuries to eradicate it wholly from the Hindu, if it ever is eradicated. I myself don't think it ever will be.

The King has been pleased to appoint, Mr. Stephen James Murphy, Indian Civil Service, and Mr. Sajba Shankar Rangnekar, to be Judges of the High Court, Bombay. The appointments constitute an addition of two Judges to the permanent strength of the Court.

THE REPORT OF THE INDIAN STATES COMMITTEE.

If in many respects the Report of the Indian States Committee, issued simultaneously in India and in this country last week, is a disappointing document, the fault cannot in fairness be laid at the door of the Committee itself. The fact that, for instance, the Butler Committee has failed, as others before it have failed, "to find some formula which will cover the exercise of paramountcy" must not be allowed to detract from the interest and value of the most authoritative and comprehensive pronouncement yet made on the real relations between the Paramount Power and the Indian States, and on the economic and financial aspects of the relationship between British India and the States.

Moreover, while the Committee is unable fully to concede the validity of many of the arguments so ably presented for their consideration by Sir Leslie Scott and the other Princes who preferred to conduct their own cases, it accepts a number of the most important principles, and the fact that the signatories—Sir Harcourt Butler (the Chairman), the Hon. Sidney Peel, and Professor W. S. Holdsworth—are unanimous is itself a point of first-rate importance.

The Committee was appointed at the close of 1927, its terms of reference being: "(1) to report upon the relationship between the Paramount Power and the Indian States with particular reference to the rights and obligations arising from:—(a) treaties, engagements and sanads, and (b) usage, sufferance and other causes; and

(2) to inquire into the financial and economic relations between British India and the States, and to make any recommendations that the Committee may consider desirable or necessary for their more satisfactory adjustment." The request for the investigation originated at a conference convened by the Viceroy at Simla in May, 1927, when a representative group of Princes pressed for an independent examination of the relationship existing between themselves and the Paramount Power and the best means for securing effective consultation and co-operation between British India and the Indian States, and for the settlement of differences. The Princes also asked for adequate investigation for certain disabilities under which they felt they laboured.

After a tour in India, in the course of which fifteen States were visited, and some 48 witnesses informally examined, the Committee returned to this country where, in the autumn of 1927, Sir Leslie Scott put forward the case on behalf of the Standing Committee of the Chamber of Princes and a large and representative number of Princes. The report notes that divergent views on important matters are held by the Princes themselves, and that the States of Hyderabad, Mysore, Baroda, Travancore, as well as Cochin, Ranpur, Junagadh and other States in Kathiawa and elsewhere preferred to state their own case in written replies to the Committee's questionnaire.

After pointing out that the term "Indian States" is in fact extremely elastic as regards both size and government, ranging from Hyderabad, with an area of 82,700 square miles and a population of 12½ million, to minute holdings in Kathiawa amounting in extent to a few acres only, the Report, it is explained, is concerned in the main with two classes only—namely those, 108 in number, which are members of the Chamber of Princes in their own right, and the 127 others, the rulers of which are represented in the Chamber by twelve members of their Order elected by themselves. These two main groups of States, the rulers of which have, in greater or lesser degree, political power, legislative, executive and judicial, over their subjects, have a population of nearly 67 million and an area of about 592 million square miles.

But however wide the difference between State and State, however important their diversities, their rulers and the great majority of their subjects are united in their loyalty to the Crown and note is taken of the out-

standing part which the Princes have played in Imperial history, especially in such times of crisis as the Mutiny and the Great War. While their efforts to improve their administration on the lines generally followed in British India have already been attended in many cases with conspicuous success, the rulers and their peoples are equally united in their desire to preserve their internal sovereignty and their semi-independent status from any encroachment.

The Committee's recommendations are necessarily based upon an examination of the history and evolution of the relationship between the Paramount Power and the States and a historical survey of the fact and development of paramountcy leads the Committee to examine in detail the opinion of Counsel, textually printed in an appendix to the report, on the legal and constitutional aspects of the question.

While Sir Harcourt Butler and his colleagues agree that relationship of the States to the Paramount Power is a relationship to the Crown, and that it is not correct to say that "the treaties with the Native States must be read as a whole," they are unable to accept "the novel theory of a paramountcy agreement limited as in the legal opinion." The relationship is not merely contractual but "a living growing relationship shaped by circumstances and policy, resting, as Professor Westland has said, on a mixture of history, theory and modern fact." "Treaties, engagements and sanads, where they exist, are of continuing valid force but have necessarily been supplemented and illumined by political practice to meet changing conditions in a moving world."

British paramountcy, though it has already lost and should continue to lose any arbitrary character in full and open discussion between the Princes and the Political Department, must continue to be paramount and therefore must be left free to meet unforeseen circumstances as they arise. On paramountcy alone can the States rely for their preservation through the generations to come.

As readers of THE NEAR EAST AND INDIA are aware, one of the primary objects of the Princes in asking for the inquiry, and one of their most insistent demands, was to receive an assurance that without the agreement of the Princes the rights and obligations of the Paramount Power should not be assigned to persons who are not under its control—for instance, an Indian Government in British India responsible to an Indian Legislative. The Committee, after pointing out that if any government in the nature of a dominion government should be constituted in British India, such a government would clearly be a new government resting on a new and written constitution, and is "a contingency, raising questions of law and policy which we cannot now and here foreshadow in detail," feels bound nevertheless to record its strong opinion in favour of meeting "the really grave apprehensions of the Princes on this score."

No practical proposals for new machinery to deal with the financial and economic relations between British India and the States were submitted to the Committee. In fact it considers that any schemes of a federal character, such as for example, the proposals advanced by the European Association in that connexion, are at present wholly premature. At the same time the need for some practical recognition of the existence and varying circumstances of "the two Indias" is admitted and the Committee indicates various changes in procedure, based on experience, which should lead to the removal of grievances and the settlement of outstanding questions. In particular it recommends that in future the Viceroy—not the Governor-General in Council as at present—should be agent for the Crown in all dealings with the Indian States.

Another important recommendation is that substantial matters of dispute between the States themselves, between the States and the Paramount Power, and between the States and British India should be referred to independent committees for advice. Further, there should be full and frank consultation between the Political Secretary and the Standing Committee of the Chamber of Princes or

their technical advisers. In order that this may not be left to chance there should be a fixed number of meetings on fixed dates, not less than three in every year. The Committee also attaches great importance to revised methods for recruiting and training officers for the Political Department, and it is suggested that the time has come to recruit separately from the universities in England for service in the States alone.

On the vexed question whether the States are entitled to a share in the Maritime Customs it is recommended that an expert body should be appointed to inquire into the reasonable claims of any State or group of States to such a share, and, *pari passu*, into the adequacy of their contribution to Imperial burdens. If, as the Committee hopes, and believes, a financial settlement, in which the reasonable claims of the States under other heads could also be considered, should result, on the lines of agreements made in the past between the Central and provincial governments it may be that in a financial settlement of this kind will in time grow up closer political relations between the States and British India. The States' claim to consultation in matters of general policy as to Maritime Customs is also conceded and proposals for adjustments of relations in other financial and economic matters, railways, salt, posts and telegraphs, etc., are made. A guiding principle in shaping the recommendations under this part of the terms of reference is that of building up on existing foundations and creating conventions, from the practice of which a spirit of joint action will, it is hoped, arise. While, as previously stated, the Committee finds that any schemes of a federal character are at present wholly premature the door has been left open for constitutional developments in the future and there is nothing in the Report "to prevent the adoption of some form of federal union as the two Indias of the present draw near to one another in the future."

In an eloquent concluding passage the signatories to the Report at the same time lay stress upon "the need for great caution in dealing with a body so heterogeneous as the Indian Princes, so conservative, so sensitive, so tenacious of internal sovereignty." Nevertheless the Committee concludes, "we confess that our imagination is powerfully affected by the stirrings of new life and new hopes in the States by the progress already achieved, and by the possibilities of the future."

"To that future we can merely open a vista. Our terms of reference do not invite us to survey the distant hills and the valleys that lead to them. But we are confident that the Princes, who in war and peace have already rendered such signal service, will play a worthy and illustrious part in the development of India and the Empire."

General Pangalos, former Greek Dictator, was last week committed for trial at the assizes on a charge of having fired from the balcony of his political headquarters in Athens on a crowd which jeered at him on the eve of the General Election in August last.

The Indian delegation to the 12th Session of the International Labour Conference, which will open in Geneva on May 20, will include Sir Atul C. Chatterjee, High Commissioner for India in London, Mr. R. P. Paranjpye, member of the Council of India and Mr. A. G. Clow, I.C.S. (Government delegates); Mr. Kasturbhai Lalubai (employers' delegate); and Mr. N. M. Joshi, member of the Legislative Assembly (workers' delegate).

At the invitation of the Viceroy of India Mr. Srinivasa Sastri, former agent of the Government of India to South Africa, has left India for East Africa, where he will confer with Sir Samuel Wilson and others on questions affecting Indians in relation to the Hilton Young federation proposals. It is now considered unlikely that Mr. Sastri will find it necessary to come to England to consult the Colonial Office.

The King's Indian Orderly Officers for this year will be Subadar Major Autar Sing Negi, 1st/18th Royal Garhwal Rifles; Subadar Dhum Sing Chauhan, 3rd/18th Royal Garhwal Rifles; Subadar Tirkha Ram, 5th/6th Rajputana Rifles; Subadar Girdhari Chand, 1st/19th Hyderabad Regiment. They are due to arrive at 49, St. George's Road, S.W.1, about April 19. The British Officer-in-Charge will be Major R. C. Duncan, O.B.E., 2nd/5th Royal Gurkha Rifles.

THE PALESTINE EXHIBITION AND WEST-END FAIR.

Preparations for the Palestine Exhibition and West-End Fair to be held at the Queen's Hall, London, on May 13 and 14, for the benefit of the Jewish National Fund, are actively in progress. A meeting of workers took place on April 18 at 35, Porchester Terrace, the residence of Sir Herbert and Lady Samuel. Lady Spielman presided, and a number of reports were read indicating what had already been arranged and what still remained to be done. Mr. C. Q. Henriques announced that over £2,000 worth of Palestinian produce and goods were on the way from Palestine and would constitute a splendid representation of Palestine's development and progress. Mrs. R. Horowitz gave details of the 26 stalls and stated that over £700 had already been obtained by means of different functions arranged by stall-holders. Mrs. R. Nahon spoke on publicity arrangements and gave details of the exhibits which were to constitute the Art Section of the Exhibition. Mrs. E. Pinder Davis read a report on behalf of the Catering Committee.

At the conclusion of the "business" part of the meeting the Rev. Michael Adler gave an eloquent account of his impressions of a recent tour in Palestine. He said that, whatever his opinions had been before he went out to Palestine, he now felt that it was incumbent upon every Jew and Jewess to do everything in their power to assist in the great work in Palestine. He had been struck by the reality of accomplishment, by the real, live and solid work that had been done. The whole country seemed to be teeming with life and vigour, in contrast to what formerly was the case. Old Jerusalem was a museum of wonders, but there was no life there. Numbers of Jews had been satisfied to go to Palestine to die; theirs was a profession of holiness, but it was unproductive, with little hope of life and progress. The new Jewish life was to be seen in the towns, but still more in the colonies. In the Valley of Jezreel, for instance, the spirit of the people manifested itself in a great constructive effort which was reclaiming the land and making it a permanent Jewish possession. When he saw the younger generation planting trees on the "New Year for Trees," he had a feeling that he was in the presence of a great moral force which was building up a homeland that they could regard as their own.

For the Exhibition proper the £2,000 worth of goods now being sent over from Palestine are selected from a very wide range of arts and industries. These will occupy fifteen stalls down the centre of the Queen's Hall. Stalls will also be occupied by institutions such as the Hebrew University, Zionist Executive, etc. Among the articles sent over are quantities of embroidery, Jewish and Arab silver work, Badawin straw work, local sweets, carpets, soap, silks, olive oil, almonds, fruit and objects of religious interest. Among the exhibits will be a model of the new Library of the Hebrew University, a photographic copy of Einstein's original manuscript of Relativity, and what is, perhaps, of more topical and immediate interest, a full-size reproduction of the mosaic pavement, representing the sacrifice of Isaac on Mt. Moriah, unearthed from an ancient synagogue at Beth Alpha, the earliest known example of Jewish pictorial art (the third century A.D.).

BULGARIAN CELEBRATIONS.

The Millenary of the "Golden Age of Tsar Simeon I." is to be commemorated in Bulgaria this year on May 12, and on May 15 is the jubilee of the country's emancipation from Turkish jurisdiction. The two events will be marked by celebrations, extending over the three days, which in the case of the Millenary will centre round the town of Preslav, the first capital of the Bulgarian Tsars of the Middle Ages, the ruins of the original town being situated in the neighbouring village of Pliska. Religious services will be held in the new Church of that town, and on this occasion the "sacred fire" of the old Bulgarian Tsars will be lighted. It will be kept in the Church for three days, and will then be conveyed by relays on May 15 to the Royal Palace at Sofia to be presented to King Boris.

The ceremony of transporting the "sacred fire" will be performed by relays of runners, provided by the Sofia Sport Club and the National Federation of Sports, who will pass on the fire to its destination by means of lighted torches. Leaving Preslav at 3 a.m. on May 15, it is due to reach Sofia the same evening at 8 p.m. by way of Osman Pazar, Tirnovo, Gabrovo, Shipka, Kazanlik, Kalofer, Philippopolis, Tatar Pazarjil and Ihtiman. The last stage from the King's palace at Vrania to Sofia will be performed by the best runners of the two clubs.

The programme of celebrations will include also gala performances in the National Theatre at Sofia and the solemn benediction of historical monuments, as well as suitable ceremonies and festivities throughout the country.

The Earl of Plymouth (Under-Secretary, Dominion Affairs), in answer to Viscount Templeton, stated in the House of Lords on April 16 that the Executive Committee of the Palestine Arab Congress had been informed that the extraction of salts from the Dead Sea was of such a technical and speculative character that it was not suitable for Government development. The Palestine Trans-Jordan Government had decided, in principle to grant the concession to Major Tulloch and Mr. Novomeysky, provided suitable terms and conditions could be agreed upon and that satisfactory financial guarantees could be furnished.

HOW TO GET THE BEST OUT OF YOUR CAR

No. 2. Concerning the Carburetter and "BP"

Use as full an air supply as possible without causing misfiring. Air costs you nothing.

A carburetter adjusted to give the utmost fuel economy will give the cleanest exhaust.

An extra air inlet operated from the steering wheel or the dash is an economical investment.

Watch for air leaks in the fuel supply system. They cause misfiring and bad starting.

Run on "BP" and get most miles per gallon.

PUT THE BEST IN

"BP"

It Pays to use "BP"

PERSONAL AND GENERAL

TO-DAY

April 25, 1929 (New Style).

April 12, 1929 (Old Style).

Dhulkaada 15, 1347, A.H., of the Muslim Calendar.

Nisan 15, 5689, of the Jewish Calendar.

Viscount Inchcape left London on April 17 for Paris.

The Maharain of Cooch-Bihar arrived last week at Princes hotel, Hove.

Sir Courtauld Thomson arrived at 59, Pont Street on April 22 from Egypt.

Sir Mancherjee Bhownaggee returned to London last week from his winter stay at Menton.

The Marquess of Reading has been elected a Vice-President of the East India Association.

Mrs. Lloyd Baxendale and Miss Baxendale have returned to England from India.

The newly-appointed Counsellor to the Egyptian Legation, Abdel Malek Hamza Bey, arrives in London to-day (Thursday) to take up his duties.

Mr. Abdel Aziz Ghalib has been appointed to succeed Mr. Abdel Fettah Assal as Egyptian Consul in Manchester.

Sir Francis Humphrys, former British Minister in Afghanistan, left India on April 20 for England in the Rawalpindi.

Lord and Lady Strathcona and Mount Royal, who left England in December last for India, are expected to return to 14, South Audley Street tomorrow (Friday).

Field-Marshal Viscount Allenby and Viscountess Allenby left 24, Wetherby Gardens on April 18 for Falmouth, for a fortnight's stay.

The Maharaja of Rajpipla arrived at Marseilles from Bombay on April 19 in the P. and O. s.s. Ranchi on his way to England.

The Prince of Wales received Dr. Hafez Afifi Bey (Egyptian Minister for Foreign Affairs) at St. James's Palace on April 19.

The Prince of Wales, attended by Captain J. R. Aird, was present at Chelsea Barracks on April 19, and witnessed the departure of the Welsh Guards for Egypt.

Mr. Edward P. Lawton, American Vice-Consul in Cairo, left Egypt on April 9 for the United States. He expects to return to Cairo in August.

Sir Valentine Chirol, who has made a complete recovery from his illness when in Egypt, returned to London last week. From Marseilles he travelled across France by motor car.

Sir George and Lady Godfrey, Sir Charles and Lady Low, Sir Alexander and Lady MacDougall, and Sir Binod and Lady Mitter were among the passengers in the s.s. Ranchi, which arrived at Marseilles on April 19 from Bombay.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.
Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan. Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

Princess Aspasia of Greece left London on April 20 for Paris. She was accompanied by Mrs. Horlick.

M. Hadji-Misheff, Bulgarian Minister to the Court of St. James's, and Madame Hadji-Misheff are leaving London on April 27 for Bulgaria, for a short stay over the Orthodox Easter holidays.

Sir Ronald Storrs, Governor of Cyprus, has returned with Lady Storrs from a brief visit to South Africa, undertaken for health reasons. It is understood that he has benefited from the long sea voyage.

Mr. F. A. G. Cook, who was at one time assistant British Vice-Consul in Cairo, since when he has held an appointment in Morocco, has been appointed to the British Consulate at Jidda.

Mr. Ifor L. Evans will deliver a course of five public lectures at King's College, London, on "Agrarian Reform in the Danubian Countries," beginning on Thursday, May 2, at 5.30 p.m. The remaining four lectures will be delivered on the following Thursdays at the same hour.

The wedding took place at St. Jude's Church, Gloucester Road, London, on April 18, between Miss Joyce Evelyn Mary d'Erf Wheeler and Mr. Robert Law Whishaw. The bride is the only daughter of Dr. and Mrs. Percy d'Erf Wheeler, formerly of the English Hospital, Jerusalem, and now of 56, Edith Road Kensington, and grand-daughter of the late Bishop G. F. Popham Blyth, D.D., who was for twenty-seven years Bishop in Jerusalem and the East. The ceremony was attended by many Near Eastern friends.

Rear-Admiral M. E. Dunbar-Nasmith, V.C., C.B., who has been appointed Rear-Admiral submarines, in succession to Rear-Admiral H. E. Grace, C.B., to date September 2, was commanding officer of E11 during the War and made repeated cruises in the Sea of Marmora, destroying eleven Turkish ships of war and many other hostile craft. His final cruise in those waters lasted forty-seven days. For these services he received in 1915 the Victoria Cross and promotion to commander, and in the following year was advanced to the rank of captain.

The latest times for posting at the General Post Office for the air mails are:—India, Iraq, and Persia, Friday, midnight; Egypt, Palestine, Italy, and Greece, Tuesday and Friday, midnight; Paris and all parts of the Continent, 6 a.m. each day (9 a.m. for Paris only).

THE WEEK AT HOME

London, Tuesday Morning.

Broccoli and Disraeli.

The leader of the Conservative Party has spoken. Last week, when the ears of everyone were waiting on his words, he told us two things: that English broccoli was penetrating into the Continental market, and that, as Disraeli came back in 1874 with a majority of about fifty, so would the Conservatives come back this time with a similar majority. The first statement was irrelevant, the second a striking departure from the Prime Minister's policy of performance without promise.

Quite certainly this long-heralded speech set no one aflame. The Premier in politics has no incandescent quality. He is too studied, too honest, too bare. That he has an effect is true, but mainly, I think upon those who can and do think, who appreciate an Englishman who will promise no more than he can probably perform.

But how different is Mr. Baldwin from the Prime Minister! Immediately after the Drury Lane affair, he made a speech to journalists which had an exquisite touch of banter and good-humour. In these occasional speeches, whether he has to talk of literature, cricket, politics as opposed to party politics, and so on, he is superb. These, and one or two magnificent non-party utterances in the House, not such compilations as the "broccoli speech," are what he will be remembered by.

Sinister Mr. Snowden.

The Conservatives had a little luck last week, when Mr. Snowden, Chancellor of the Exchequer in the Labour Administration, bitterly attacked our debt settlements, accused France of "bilking" her obligations, and likened the Ally upon whom Great Britain depended for the four most memorable years in history to Bolshevik Russia. It was folly, supreme folly, this speech: but it was the man. I believe that beneath all his reasonableness, his "safety," Mr. Philip Snowden is an embittered fanatic.

To call the fuss that his comments at once caused a mere electioneering stunt is childish, for those comments, coming from one of the brightest intellects in the Party which may conceivably be next in office, were tremendously significant. Immediately the Conservatives pursued the heretic, who, though as thoroughly repudiated by his chief, Mr. Ramsay MacDonald, as a colleague could be, refused to withdraw his untimely words. But it may well be that those who will make most capital out of this

affair will be the Liberals, who through the admirable medium of Mr. Runciman declared masterfully their acceptance of the doctrine of the continuity of contractual international obligations, by whatsoever party those obligations be entered into. Seeing that it is the foreign policy of the Liberals which is often suspected by those who are Liberal in sympathy as far as domestic affairs go, Mr. Runciman's sound statement may gain a considerable number of votes.

A way out has, of course, been sought by the Labour Party, which suggests that, not repudiation but revision by negotiation of international agreements was at the back of Mr. Snowden's mind. This, if the affair be examined, makes nonsense. If neither France nor Italy is ever willing to increase their payments to us—and such an increase is inconceivable—how can there be revision by negotiation?

But it is interesting to notice that nothing, whether Budgets, or Prime Minister's speeches, or Mr. Snowden's outburst seems to have much effect on the Stock Exchange "majorities," which, though making the Conservatives still just the biggest party, leave them at the mercy of a Liberal-Labour coalition. That this Stock Exchange list is a reliable guide is accepted by very few people, however; it is so extraordinarily insensitive (to their ideas!).

Problems of the East Coast.

I referred the other week to the danger of building on Southwold Common. The good news is announced that for the time being, at any rate, the danger is passed. A compromise has been reached, employing the good offices of Mr. Loftus (who is, as I said he would be, a national hero). But this compromise is not a solution, and the matter will inevitably receive more publicity.

Of another matter—coastal erosion—not the glimmering of a solution has yet been seen. A meeting will be held shortly in London to appeal for State help in the protection of the East Coast against the sea, and if anyone has a strong case for State aid it is these threatened East Anglians. Their problem is, of course, not unique, but it is more acute than anywhere else in England.

On Stopping a Razor.

The intellectual standard of those who habitually read the correspondence columns of *The Times* is not usually considered very high, but occasionally in the august columns of that paper subjects are treated which touch the fundamentals of life. Everybody knows, for instance, that those are worthier men who prefer a "cut-throat" razor to a "safety." But who—and this is *The Times'* point—is the better man: he who strops after or before shaving?

All sorts of fanatics have rushed in to solve the problem. Theologians, philosophers, men of action, and—most irrelevant of all—even barbers have been quoted. But our quest is still unsatisfied. The only sensible thing for the average man (by whom one always means oneself) to do is to go on doing what he has always done: that is, strop, in Shelley's words, both "before and after."

London's Theatres.

The theatres just now are providing a normal amount of excellent entertainment, but there does not appear to be very much of really dramatic and artistic value. First of all, of course, comes "Journey's End," the War play which has encountered no serious criticism at the hands of those best qualified to judge it: I mean those who served in the War as its author, Mr. Sherriff, served.

Another play which is said to stir the middle of one is the newly-arrived "negro play": "Porgy." With the cult of the negro it has nothing to do: its popularity does not depend either on the ignorant, unashamed devotees of "Jazz," nor on the informed admirers of "Spirituals." The critics' comments vary so much that it will certainly be widely seen.

For the rest, it is mostly the usual kind of light fare that is found to be so excellent a digestive to a good dinner. After all, few of our London theatres have ambitions above that.

THE ACHIEVEMENT OF PERSIA.

Three years ago to-day Riza Khan was crowned Shah in Teheran. The anniversaries of all coronations are regarded by Persians as providing opportunity for general congratulation and festiveness, but the anniversary of the coronation of Riza Shah Pahlavi is a real occasion, not an excuse, for the expression of such sentiments. For whatever doubts may originally have been held upon the success of the Pahlavi régime, whatever anxieties may still be entertained upon its probable duration, it must generally be admitted that the ruling Shah is a genius. He has fortified, revived, transmogrified Persia in a way that is remarkable for its constancy as for its excellence. Persians, of course, habitually conceive many excellent schemes, but it is long since they have seen one who had the determination to realise them.

Comparisons in the Middle East, which, although it is often regarded by Western observers as a mass of territories all inspired or destined to progress in more or less the same way, is really extraordinarily diversified, are not particularly helpful. It is the fashion, for instance, to compare the progress of Persia with that of Turkey or of Afghanistan. Turkey is the criterion, naturally; but it by no means follows that those Muslim countries which have not reached her stage of Westernisation fall behind Turkey. Mustapha Kemal Pasha has an infinitely easier task in Turkey than Riza Shah Pahlavi has in Persia in the carrying out of reforms. The nature of the two peoples is entirely different: the one disciplined, indifferent, non-intellectual, the other individualistic, critical, highly intellectual. The physical nature of the two countries, again, is different, and whereas the tribal spirit in Turkey is, except in the East, practically dead, in Persia it is the primary factor in the situation (although this fact is not always sufficiently realised).

In spite of inherent difficulties, however, Persia has accomplished much during the last year or two under the compelling leadership of Riza Shah and the clever counsel of his Minister of Court, Taimur Tash. These two men, the one uncultured yet open-minded and determined, the other highly cultured and sophisticated, present a most remarkable combination. The one is necessary to the other, for the capacity to advise is of little use without the will to enforce. Whether this complementary partnership is the ideal arrangement may be open to argument, but it certainly is working well from the Persian point of view. To speculate on what would happen were either the Shah or his Minister of Court to disappear is to pose one of those fascinating questions upon the duration of the work of nearly all reformers in the East—or in the West, too, for that matter—yet it is a question that cannot be answered. But you do not belittle the achievement of Fascism in Italy, of Kemalism in Turkey, of Wahhabism in the Hijaz, or of Pahlavism in Persia, by asking whether these countries will not slip back when death arrives to Signor Mussolini, the Ghazi, King Ibn Saoud, or Riza Shah. That there is in all these countries a corpus of opinion being formed which is thoroughly imbued with the ideas of the rulers of these lands may be taken for granted—it must be abundantly so in such an intellectual and appreciative a country as Persia—but to assume that Nature has in waiting a series of such personalities as are now strutting the stage in the lands mentioned is to show oneself to be possessed of hope rather than of historical sense. Great men have but rarely sons of genius, and where the succession is not dynastic anything may happen.

No reasonable observer can suppose that the habits of a nation can be radically changed in a generation. You may make men, even tribesmen, wear a Pahlavi hat, but hats do not alter the *modus operandi* of the mechanism underneath them. You may erect the whole paraphernalia of the latest forms of Western governance—representative institutions, a free Press, and so on—but the assumption underlying such governance, that opinion is

freely, not corruptly extracted, that views are honestly, not servilely, preferred, must be a slow growth. You make miles of motorable roads, in place of caravanserai tracks, but you do not thereby destroy in a twinkling the poetical spirit and produce a practical one. To look for change in the essential character of the Persian nation is a task for which only the superficial or the minute observer is qualified. Its standards are different from the standards of the West. No one knows this better than Riza Shah. And so it is upon their activities, their productivities that he is concentrating in an endeavour to inform them on more Western lines.

Can this be done? Can there be, for instance, a free Parliament where bribery is not only the rule but even the accepted rule? Can independent opinion be expressed where fear of the dominant authority seems to be complete? It is by no means impossible. The Persian character, admittedly, is often limp and lax, at any rate in the towns; the qualities for sustained effort are not generally attributed to this gifted people. But all things are relative. The Persian year 1308 is not in every respect the Western Christian year of 1929. To judge Persian morality by present Occidental standards is not only unfair but also stupid. Corruption and bribery, for example, though they may be rife in Teheran, are not unknown in the West: it was not a Persian, but an Englishman, who fewer than two hundred years ago said that every man had his price. The attainment of so nice a sense of political values as is possessed, say, in England to-day, is not witnessed commonly in the rule of one man.

But that some change must overtake the Persian character would seem to be inevitable. For the things which Riza Shah Pahlavi has to his credit are emphatically of the kind which affects the direction of activity. He himself shows a record of hard work which must be reflected in his subjects. Persia cannot very well be on the Council of the League of Nations without the Persians' inquiring more into this strange West without which they have lived so happily for centuries. She cannot have abrogated the Capitulations without assuming a national, as distinct from a racial, sense of importance and dignity. She cannot possess an efficient Army without vivid memories of Persia's past greatness. Her people cannot travel by car and train and aeroplane without revolutionising—it is to be hoped for the better—ideas of the value of speed and comfort. The possibility of all such changes Riza Shah has either already supplied or is supplying. It is a tremendous achievement.

A word may, however, be said upon the less desirable aspects of these reforms. The greater part of this Persian Nationalism is healthy, and wholehearted sympathy should be extended to it. But there is one aspect of it which is unessential, uncharacteristic, and in the long run unhelpful to Persia's best interests. We refer, of course, to that aggressive side of Persian Nationalism which, for instance, claims suzerainty over regions which even Cæsar never or scarcely ever knew, and which is apt to place the townsman above the tribesman. The Teheran Administration must, if it is to ensure the progress of Persia—which all right-minded people must desire—realise two things: that the British Empire is a neighbour not to be spurned or played with, but one whose co-operation is in Persia's own interests; and that the process of gaining outward uniformity in Persia, in crystallising Persian patriotism, so to speak, must not

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

involve the disappearance of the fine and lasting qualities of the Persian tribesmen. From the Persian's own point of view, the raising of such questions as those affecting her suzerainty over Bahrain or Muscat is particularly to be deplored; one must hope that it represents merely a passing phase and not an essential facet of the Persian revolution. It is, after all, the way of Nationalism in general rather than of Persians in particular to be ferocious, ungrateful, slightly "impossible." In the Middle East, especially, material progress has outstripped the mental adaptability of its inhabitants, who are, with their roads and their railways and their aeroplane services, in a strange and wonderful world. This point of mechanical development has come suddenly: there has been no gradual leading up to it as there has been in the West from which it is derived. In a sense, therefore, while the reformers in Persia are to be accounted lucky in that their appearance happens to coincide with mechanical means of centralisation, this very future involves a fresh problem of adaptability—which is the radical problem of all reforms. But there can be little doubt that, when the clouds of aggressive Nationalism in Persia have rolled away, the solid mass of achievement inspired by Riza Shah Pahlavi will be revealed, and that its praises will be sung not only by Persians but by the civilised world in general.

ON SYRIA AND THE PERSIANS.

The April issue of the *Asiatic Review* contains two articles which will be found to be of very considerable interest by readers of THE NEAR EAST AND INDIA. They are "Syria," written by Capt. D. McCallum under the auspices of the Asian Circle; and "National and Racial Characteristics of the Persian Nation," written by Sir Arnold T. Wilson.

The former British *liaison* officer in Syria treats his subject in a straightforward, realist way. He explains the folly (and the unpopularity among Frenchmen) of the notorious Angora Accord of 1922 between France and Turkey—that agreement which created more problems than it solved. He describes the workings of the Mandate in Syria, emphasising the lack of military discipline among the Syrians, the unfortunately rapid change of French High Commissioners, the difficulty of religious differences, and the problem of the currency. He then explains the two Governments now in Syria—the Government of the Lebanon, and the Government of the State of Syria. Upon the future he makes no prophecy. He is, however, quite certain that if France were to relinquish her Mandate, Syria would soon be annexed to Turkey. His final suggestion is that trade barriers between the artificial Mandated States in Arabia should be abolished.

Of the Persian people Sir Arnold Wilson writes with informed, discriminating, but enthusiastic praise. In Persia, he points out, there is neither linguistic nor physical uniformity (as there is, for instance, in Arabia). It is owing to the fact that the Persian's racial composition is so mixed that the Persian exceeds any other Asiatic in adaptability. A peculiarly interesting paragraph deals with the question of dissimulation—the Shiah doctrine of *taqiyyah* which has, unfortunately, "permeated the daily life of the people." Honour is prized in Persia more than life. Loyalty, as shown to the writer by his servants in Persia, is complete. Persian hospitality is famous. The Persian has, moreover, a love of travel and of poetry, and a sense of humour which are not easily matched in the Middle East. Sir Arnold writes instructively on the Persian's fondness of generalisations, his freedom from caste distinctions (the idea of social equality antedating the Arab conquest of Persia), his endurance, his love of beauty, and his courage. Sir Arnold's conclusion is notable:—"A belief in the possibility of progress is not the least important contribution of Christian thought to the world; and this belief Persians share with us, more wholeheartedly perhaps than any other Eastern race, and with more discrimination than most, for, whether rich or poor, they have hitherto retained their freedom of that burden of endless personal wants which we call comfort and the lust for the

possession of chattels which oppresses us of the West. Their reputation and their sense of dignity are independent of material circumstances; that is, perhaps, the most important lesson that we may learn from them."

THE C.M.S. IN THE SUDAN AND PERSIA.

We learn from the Church Missionary Society that the recent visit to the Southern Sudan of the General Secretary of the Church Missionary Society has resulted in enlarged opportunities for work to the Society. His visit to Khartoum has also had important results for the work at Omdurman. The hospital there has been seriously understaffed of late. This fact, together with the opening of a Government hospital in the town, raised the question of the wisdom of continuing the mission hospital. When Mr. Cash arrived on the spot, however, he found not only that the missionaries were enthusiastically in favour of keeping it open, but that the Government had no wish to see the C.M.S. hospital closed, and were prepared officially and unofficially to give it support. More significant still, Muslims of the town begged that it might remain open and raised no less than £400 towards its maintenance.

The Persian Mission of the C.M.S. has sustained a great loss by the death on February 20, from typhoid fever, of Dr. E. F. Malony, after less than three years' service. Through the shortage of staff he was placed soon after his arrival in charge of the men's hospital at Isfahan, and stayed there until Dr. Schaffter's return, when he went to Kerman. Dr. Malony was a nephew of Bishop Malony, formerly of Chekiang.

NEWS IN BRIEF.

M. Venizelos left Athens on April 16 for Calamata on an electoral tour.

King Fuad will pay an official visit to Madrid in October for three days.

The Anti-Corruption Law promulgated in Yugoslavia recently came into force on April 18.

The King of Yugoslavia on April 15 signed the ratification of the Geneva Protocol prohibiting the use of gas in warfare.

According to a message from Belgrade every male Yugoslav of military age must work at least for six days each year building new roads.

The Inter-Allied Rhineland High Commission has prohibited the Russian film "Storm over Asia" in the occupied area.

The King of Yugoslavia has appointed the former head of his General Staff, General Petchitch, to be his Minister in Brussels.

The Bishop of Guildford, Dr. Greig, arrived in Belgrade last week after a journey in Dalmatia, where he has visited the Patriarch of Serbia, Mgr. Dimitrije.

Prince Kiamil Fazil Pasha, son of the late Prince Mustapha Fazil Pasha and first cousin of the King of Egypt, died at Nice on April 18 at the age of 70.

Sir Abdul Kerim Ghuznavi has been appointed temporary member of the Council of the Governor of Bengal, to succeed the Nawab Ali Chowdhury, who died on April 17.

The Archbishop of Canterbury left Athens on April 19 for a cruise to Delos and other islands. The Metropolitan of Thebes gave him a fine Seventeenth Century New Testament.

The cordiality of the welcome extended by the Albanians to Signor Grandi, Italian Under-Secretary for Foreign Affairs, during his visit to Tirana, is reported to have given great satisfaction in Italy.

It has been announced officially that the meeting of the Ministers for Foreign Affairs of the three Powers of the Little Entente will be held in Belgrade on May 20, 21, and 22.

Tewfik Rushdi Bey, Turkish Foreign Minister, who has been attending the session of the Disarmament Commission at Geneva, last week arrived at Berlin to sign a treaty of friendship, arbitration, and neutrality with Germany.

Mr. G. M. Dyce-Keele, Editor of the *Daily Gazette*, Karachi, has been appointed Deputy Director of Information to the Government of India, in New Delhi, for eight months, in the absence on leave of Mr. J. Coatman, the Director of Information.

A Royal Decree issued in Belgrade on April 21 places on the retired list and on State pensions the ex-Premier, M. Liuba Davidovitch; the ex-Premier, M. Velja Vukitchevitch; the ex-Foreign Minister, M. Nintchitch; and M. Pribitchevitch, a former colleague of M. Raditch, in the fight against Belgrade. Altogether forty Yugoslav Ministers have thus been informed that their services will not again be required.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Britain and Greece.

I referred last week in these columns to the strengthening of British relations with Yugoslavia through the formation of an important new company—Chemical and Wood Industries, Ltd. As a matter of fact, since the War, especially in the last year or so, British interests in the Balkans have been more particularly centred in Greece than in any other of the countries in that region, a fact of which this week's meeting of the Hellenic Corporation comes as a reminder. There are many reasons why this should have been so. Greece's position on the Mediterranean is one, her history stretching back into the mists of antiquity is another, while conditions in that country since the War have on the whole been more favourable to enterprise than in Roumania, Yugoslavia, and Bulgaria. Greece, like these countries, has had her political vicissitudes, and the problems with which she has been faced have been in some respects more difficult than those with which any country in the Balkans has been confronted, but throughout her credit has been well maintained, and the fact that she has always met her obligations has had a very considerable influence on the attitude of British finance towards the country. Last year marked a definite turning point in the country's history, and now with a surplus on the Budget, and with many schemes in train for the development and adequate utilisation of natural resources, Greece is in a position to face the future with a very considerable, and, be it added, most justifiable measure of confidence. It is a matter for extreme satisfaction that in the development of New Greece Britain is playing no unimportant part as evidenced in the work of the Power and Traction Finance Company, in the important contract obtained for irrigation and drainage by Henry Boot and Sons, and by the participation of British capital in Greek enterprises through the Hellenic Corporation.

The Hellenic Corporation.

At the meeting of the Hellenic Corporation a very interesting survey of the position in Greece was given by the Chairman Sir Eric Hambro. He commenced by emphasising the difficulties of Greece following the conclusion of the Greco-Turkish War when Greece was faced with the task of providing for large numbers of refugees at a time when the country's industries were impoverished and lacked the means of modernising their plant and machines. Obviously assistance accorded to these industries would be of the greatest value in helping to reconstruct the country, and one of the objects for which the Hellenic Corporation was formed was to assist in this work. Sir Eric Hambro pointed out that with the issue of the Stabilisation Loan early last year and the resultant stabilisation of the currency a new era was begun in Greece's financial history, and he further laid stress on the point that the return to power of M. Venizelos has assured a stable government to the country for some years. The way therefore is plain for steady industrial development which is the more necessary because, as he pointed out, the increase of 25 per cent. in the population through the advent of the refugees has created a vastly larger demand for commodities of all kinds. Sir Eric Hambro was able to pay a tribute to the vitality shown by Greek industries

in general, especially the smaller ones, but he commented on the lack of co-operation in evidence among small concerns engaged in the same trade leading to undue competition. The Hellenic Corporation has been successful already in bringing about co-operation in a few cases. The outstanding need for proper communications was emphasised by Sir Eric Hambro, and he expressed satisfaction at the policy of the Government in developing arterial roads. He believes that in Greece roads and not railways are the key to economic communications, a view which is no doubt inspired by the knowledge of the effect of road competition with railways in other countries where there are no heavy industries and where distances are short.

Anglo-Egyptian Oilfields.

At the general meeting of the Anglo-Egyptian Oilfields a year ago the Chairman, Sir Reginald Macleod, K.C.B., suggested that the output of the company would be in excess of 200,000 tons. Actually it has risen to the highly satisfactory total of 256,522 tons which compares with 180,230 tons for 1927 and 169,211 tons for 1926, while so far during the current year the production has averaged about 5,000 tons per week. The improvement in the company's position is reflected in the proposed dividend of 22½ per cent. on the "B" shares for the past year which compares with 17½ per cent. for 1927 and 12½ per cent. for 1926. Ten years ago a dividend of 25 per cent. was paid, but, of course, on a much smaller capital. In view of the progress of the company the chairman's speech at the annual meeting will be awaited with particular interest.

Sudan Cotton Industry.

An excellent idea of the progress in the development of cotton growing in the Sudan will be gathered from the comprehensive report of Sir William Himbury to the British Cotton Growing Association which will be found elsewhere in these columns. It was three years since Sir William Himbury had visited the Gezira, and he describes the work accomplished in the interval as enormous—praise which speaks for itself. As he indicates, the Gezira scheme, even so far as it has gone, has made a tremendous difference to the population, and instead of the people

BANK OF ATHENS

NEW YORK: The Bank of Athens Trust Company, 205, West 33rd St.
BOSTON: The Athens Bankers' Corporation, 15 Kneeland St.

being affected from time to time by famine they now have quite adequate food resources. The prosperity which has come to the Gezira region through cotton has still to percolate through the Sudan, but already the influence of this region is being felt to some extent in the general economic situation, and as the cotton industry develops the process will gradually tend to be more pronounced. Dependence in the main on one crop has, of course, very obvious shortcomings, but there is perhaps less risk in regard to Sakellaridis cotton than in the case of some other crops, and the risk, such as it is, must be taken as cotton is the crop most eminently suitable for the country. A particularly interesting part of Sir William Hinbury's report is that in which he deals with the position in the Gedaref region where efforts are being made to develop the cultivation of American cotton. As he points out, the chief problem in this region is the question of population which in its turn is governed by the supply of water. It is eminently satisfactory to know that there is real keenness on the part of the people to grow cotton. That means that the first stage in the work has been accomplished.

Sudan Trade Expansion.

The January trade figures show that the Sudan has made a very promising start in the current year. There is an increase more or less substantial in respect of every one of the main headings, the principal increases being in exports, public imports, and Government imports. The volume of trade for the month totalled £E889,893 as compared with £E615,087 for the first month of 1928, or an increase of £E274,806 which cannot but be regarded as a most satisfactory result. Taking the items in detail Government imports are up by £E32,982 at £E145,450, while public imports show an increase of £E99,255 at £E409,434. The total for imports is £E554,884 or an increase of £E132,237. A feature of the previous year was the falling off in Government imports due to the completion of certain works of development; the figures now given suggest that this phase has now passed, and that the present year will see a substantial increase under this heading. The value of exports at £E278,007 shows an increase of £E118,699 for which, of course, cotton is mainly responsible. This season's cotton crop has exceeded expectations, and as good prices are being realised the Sudan is naturally benefiting thereby. For a considerable time to come it is possible to anticipate larger crops in the Gezira, and the value of the export trade will therefore be more pronounced as the years pass.

War Debts.

It is not often that the House of Commons is the scene of a *faux pas* such as Mr. Snowden was guilty of in discussing the question of War Debts, and it was satisfactory to have the statement of his leader that no idea of the repudiation of existing contracts was in question. It is to be regretted, however, that the matter should have been raised at all, certainly in the form in which it was. Everyone realises that the economic recovery of every country affected by the War would be immeasurably quicker if it were possible to cancel all the War Debts. That was

the British policy, but unfortunately America did not see eye to eye with us on this matter, and so we had no option but to make a settlement with America, and then to proceed to arrange terms with our various debtors. The time will come, let us hope, when America will take a different view of the position, but until that happens there is nothing to be done.

COMMENTATOR.

NEWS FROM ALL SOURCES.

The Liubliana (Yugoslavia) Credit Bank has declared a dividend of 6 per cent.

Czechoslovakia has made a purchase of 700,000 kgs. of tobacco from Yugoslavia.

The production of the Anglo-Egyptian Oilfields for the week ended April 19 was 5,393 tons.

The Greek Naval Air Service has placed a contract for six torpedo-carrying aircraft with the H. G. Hawker Engineering Company.

The Bengal-Nagpur Railway Company have placed a contract with Messrs. Beyer, Peacock and Co., of the Gorton Foundry, Manchester, for sixteen locomotives, each of a weight of not less than 232 tons.

An extra-ordinary meeting of the Minerva (Roumania) Oil Company is to be held on April 30 to consider an agreement with the debenture holders and resolutions to reduce the capital from £500,000 in £1 shares to £276,886 5s., divided into 297,485 shares of 5s. each and 202,515 of £1 each. This is to be effected by cancelling capital to the extent of 15s. a share on the 297,485 of £1 issued and reducing the nominal amount of these to 5s. each.

The report of the Société Anonyme du Behera for the year to January 31, 1929, shows a net profit of £E76,376, against £E74,620. Interest on preference shares absorbed £E21,615, 5 per cent. on the ordinary capital of £E250,000 takes £E12,500, and £E4,226 is placed to statutory reserve. The directors propose a dividend on the ordinary shares of 15 per cent. (making 20 per cent.), carrying forward £E81,514, against £E80,980 brought in.

The directors of the Peninsular and Oriental Steam Navigation Company announce a dividend at the rate of 5 per cent. per annum on the preferred stock (less income tax), and a dividend of 5 per cent. (actual) on the deferred stock of the company (free of income tax) for the six months ended March 31 last. Warrants will be payable on May 16.

An article of the Turkish Nationality Bill, which has been passed by the National Assembly, reads: "Children born in Turkey after January 1, 1929, of parents who themselves were born in Turkey are Turkish subjects, but on attaining their majority they shall have the opportunity of opting for their parents' nationality. In that event, however, they will be compelled to leave Turkey."

The report of the Alexandria Water Company for 1928 states that the balance from the revenue and expenditure accounts, carried to profit and loss accounts, amounts to £179,491, an increase of £4,009. A sum of £14,009 made as income tax provision, not now required, is written back into the profit and loss account. There has been written off for machinery depreciation £27,096, £766 for depreciation on new offices, and £370 for depreciation on stocks of material in hand; £6,000 has been set aside for compensation claims, and £6,000 for workmen's retiring allowances. After allowing for these deductions and an interim dividend of 4 per cent., already paid, there remains £130,200, from which is deducted 6 per cent. to complete 10 per cent. on the capital of £840,000, £50,400, leaving £79,800, of which £39,900 is due to the municipality and £39,900 to the shareholders, which, added to the above 6 per cent., represents a total of 10s. 6d. for the final dividend, making 14s. 9d. per share for the year.

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Pleven, Vidin, Sliven, Stara-Zagora, Lom, Sistriv, Shoumen, Doupnitza, Gorna-Orehovitz, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pezardjik and Vratza. It has also 86 agencies

COTTON GROWING IN THE SUDAN.

BY SIR W. H. HIMBURY.

[This is the second of the preliminary reports by Sir William Himbury to the British Cotton Growing Association on the regions visited by him in his recent tour. The first—on Iraq—was given in these columns last week. From Iraq Sir William Himbury went to Jerusalem, and then, after a short stay in Cairo, proceeded on February 13 to Khartoum.]

The Gezira.

On the 20th I left for Wad Medani, the headquarters of the Sudan Plantations Syndicate. On leaving Khartoum not much cultivation is observed until Hassaheissa is reached. Here the Syndicate have their new extension, and it is the place where their two latest ginning factories are built. From there on through Tayiba, Wad Medani, Barakat, etc., one sees cotton in the fields, in large bags at stations, or on camel back. Mr. MacIntyre, my host, and Mr. Poyntz Wright, met me at Wad Medani, and we motored to Barakat.

During the few days I spent in the Gezira I was out somewhere every day. The amount of work that has been done since I was through here three years ago is enormous; 130,000 acres are under cotton of the Sakel type. The blocks of land are about 15,000 acres each and are under supervision of inspectors who have two sub-inspectors under them. These officials are supplied with "Baby Austin" cars and are continually round the area, and therefore always in touch with the tenants. All the blocks were clean, being remarkably free from weeds, and the cotton I saw looked healthy and was being picked rapidly. One noticed little on the ground, and when the cotton is taken to the tukl (a round house of brick) by the tenant it is carefully shaken and freed from dirt and leaf before being bagged.

In one or two places in the southern blocks Thrips had done damage. The land was good, but the pest had got such a hold in the early stages that its depredations were bound to affect the yield of such areas, and it is only to be expected that in 130,000 acres of cotton one must look for weak patches; therefore it is nothing to get alarmed about. On the other hand it is necessary for the scientists to get busy and find some means of eradicating the pest. To give some idea of the size of these blocks, one morning we went out for 2½ hours in the motor car, and yet we had only skirted round one 15,000 acre block, so that a careful examination would have taken a great deal of time.

The railways now advertise a special trip for tourists to the cotton fields, dam, and ginneries, and one such party paid a visit whilst I was there. From this it will be gathered that the railway authorities are enterprising people and make what they can out of the venture. Incidentally, Mr. MacIntyre tells me that he pays about £300,000 a year for freight, which must be of importance to the railway. The greatest benefit, however, must be to the people. When he first went to the Gezira the population was often decimated by famine, and although the Government organised distributing centres where dura was given out, many of the people got themselves into such a comatose state that they were unable to walk to these places and obtain the relief. To-day they have plenty of grain and milk from camels, sheep, goats and cows.

Ginneries and Workshops.

I also visited the four ginneries at Barakat and the two latest at Hassaheissa. They are all magnificent plants, 80 gins in each with two hydraulic presses, and tramways for moving the seed cotton and lint. They are sprinkled and well laid out in every way. These plants with houses for the staff, workshops, etc., run into £70,000 each, but they are capable of dealing with 150,000 bales in about four months. The work here is done under the best possible methods to produce a really

good grade of cotton. I watched the graders grade the seed cotton, the head man having been here for 23 years. They are Greeks and appear very capable. I also know there is not much really wrong with the grading of Sudan cotton, considering the large quantity handled.

The workshops are large and kept busy repairing the ploughing engines and tackle—62 sets, or 124 engines together with the implements; also 32 locomotives for the cotton railway. The carpenters' shops, where all the woodwork for European houses and buildings is made, have up-to-date tools. The motor garage, repair shops and spare stores are likewise good. Many kinds of lorries, "Chrysler," "Baby Austin" and other cars are employed on the estate, and naturally there is the electric light plant which supplies light for the houses. The labourers' lines of "tukls" were also well arranged and clean, the passages or streets being under constant inspection, and a large bath is available for the labourers.

The Syndicate's Staff.
