The Syndicate is fortunate in having a most excellent European staff who thoroughly understand their job. The service is a good one and there is some competition for it. All the men I saw were keen on their work, feeling they are helping in a real effort of development, and were watching the business grow bigger and bigger yearly. I believe the total staff numbers about 180. Hard work necessitates some relaxation, which is necessary for keeping good health, and recently clubs have been inaugurated; there are two, one south and one north, complete with a good polo ground, tennis courts, billiards tables, and library. Food can also be supplied, and one good rule is that there is no treating. I think these places are excellent for a young man from home of the "official" or "commercial" type who is thrown on his own resources in a great country like the Sudan; they help him to find friends quickly, and yet he is not encouraged in extravagant living.

The Gezira is really a wonderful place; it is splendidly organised, and reflects the greatest credit on the Sudan Government and Mr. MacIntyre and the Management of the Sudan Plantations Syndicate who have encountered and overcome enormous difficulties in the past. I do not think there is another such place in the whole cotton-growing world. Here, at least, the Sudan has been able to set an example of first-class development to the local people, and it has only been possible by the authorities wisely leaving the commercial management with the Sudan Plantations Syndicate, whose organisation, as I have before said, deserves the commendation of all interested in Empire development.

Research Work.

No report on the Sudan would be complete without reference to the very excellent research which is being carried out in that country. Whilst at Khartoum, in company with Mr. Davie, Director of Agriculture, I visited the Research Farm at Shambat, where I met Mr. Bailey and Mr. King (his assistant), Mr. Kenckington, who is doing some good work on roots, and Mr. Massey, the botanist. I was much impressed with Mr. Bailey's work; he has some splendid results with "crosses" from Sea Island and Sakel, and has some types showing a larger fruiting and better plant growth than the present type of Sakel. He has also a very good Affi. Some of these types, however, possess some disadvantage, such as low ginning percentage, but Mr. Bailey has this in hand, and he told me that his types varied from 22 per cent., to 30 per cent. of lint. Some very good types of the American such as Tanguis, Webber, and a variety called "Derelict" were also being grown. I asked him what time he thought it took to establish a cross and get sufficient seed to plant the Gezira, and he reckons nine or ten years. I know he fully realises the importance of getting something out quickly, and I think one type is going to the Seed Farm in the Gezira this next season; nevertheless I do appreciate Mr. Bailey's difficulty, and a little hurry might undo

years of work. I was also interested in Mr. Kenchington's work on roots. These are photographed in the different stages, and it is shown that at Shambat the plants have a great difficulty to get their roots very deep down, and they search the soil carefully and throw out long lateral roots, and in these roots "kinks" may be noticed where they have had difficulty in avoiding hard substance. Some of these laterals, extended five or six feet, which means that they would extend from one row of cotton well into another. He has discovered that Black Arm is prevalent in the seed before planting, and by treating with heat can be destroyed. It requires a very good temperature—some 80 degree, and here of course is the danger. Seed is also treated for Pink Boll Worm up to 60 degrees, but 80 degrees is a more serious matter, and the operation would have to be carefully done. There is a suggestion that instead of a higher temperature one of 65 degrees with a longer period might answer the purpose. This, I understand, is being tried.

Whilst in the Gezira I visited the Seed Farm, which is in charge of Mr. Craig, V.C. He is an old Empire Cotton Growing Corporation student of six years ago—one of the very first. He grows some 1,300 acres of cotton, all of the Sakel type, some from small plots, and the larger plots by tenants. He produces about 800 ardebs of seed, of which about 400 go to Kassala. It is planted there, and later the seed resulting from the crop is brought back to the Gezira, so that last year's good Kassala cotton is due in no small measure to the seed raised by Mr. Craig on the Syndicate's Seed Farm. I examined a good many of the plots; some cotton looked better than others, and in places he will exceed $4\frac{1}{2}$ kantars (a kantar equals approximately 100 lb.)—other places not more than $3\frac{1}{2}$ kantars. He also has his own ginnery, six roller gins in a nice building, together with a full hydraulic press, so that the whole cotton can be ginned and pressed on the spot without fear of mixing with other varieties.

On another occasion I visited the Research Station in the Gezira. Here experiments are conducted in cultivation, manuring, watering, etc. On one block they were seeing how long cotton could be continuously grown, and so far it had been grown on the same block for over ten years. Yields had gone down, but had been made up for by the application of fertilisers, sulphate of ammonia, gypsum, etc. The later is considered very useful as it lifts the soil up. It is suggested that some 4 tons might be put on each acre, and on 150,000 acres this would mean 600,000 tons, and as the gypsum comes from some distance it would cost about £4 per ton, to say nothing of the work in the tenant distributing it over the land. Of course this is not an economical proposition at the moment. In the Entomological Section work is being done with Pink Boll Worm, Thrips, etc. Thrips continue to be a nasty pest in places, and there is still a doubt as to what happens to this pest at certain times of the year.

One thing has been pretty well proved in the Gezira, and that is that cotton is very much better after lubia than any other crop. This was recognised by the Syndicate some time ago. On the other hand, it is pretty patent that dura is a very exhausting crop, and it would seem that too much is being grown. Granted the people must have their food, they do produce more than their needs, and this crop must in time affect the fertility of the soil.

The Gedaref Region.

The Government railway authorities having kindly made arrangements for a saloon to be attached to a construction train, I left Barakat on February 24 for Gedaref, a district lying between Kassala and Makwar. When the railway was first constructed to Kassala the policy in view was eventually to extend the line to Gedaref, which was completed over a year ago, and recently the extension from Gedaref to Makwar was completed. This now gives two outlets for cotton and produce from the Gezira, either from Wad Medani to Khartoum, Atbara and Port Sudan, or via Gedaref, Kassala and Thamian to Port

Sudan. In addition this new railway passes through rich agricultural country with great potential possibilities. From a cotton point of view I was most anxious to see something of this area, where already a certain amount of cotton is being produced on the rain-grown principle.

The Agricultural Department had arranged that one of their Inspectors, Mr. John Smith, should show me round. He has great experience of this district, having toured it very thoroughly on camel back, an operation that occupied several months. On this occasion we went in motors, and I spent two very interesting days visiting many important villages, one being Galoa-el-Nahl. The Naza, or Chief, is Musa Yacub, a Hausa, his father having come from Northern Nigeria some years ago. This man was intelligent, and keenly interested in cotton, and he produced some seed cotton for my inspection, grown, I understood, from Webber seed imported from America. It was very good grade and staple, but a bit weak. I am told that the chief trouble in this area is Thrips. I visited another village named Balos, where I saw many small fields of standing stalks, and although leafless, they looked regular and well-grown plants, and gave the appearance of having yielded well. At many other places widely scattered I was shown samples of seed cotton which had been grown in the past season. Everywhere I found the people very anxious to grow cotton, and they listened most attentively to what we had to say.

When one considers the possibility of this district for cotton there are many matters to take into account. The country itself is large and undulating, parts well wooded, so that when the land is cleared very often the gum trees are burnt with the grass. In time this practice will no doubt be changed, and the timber will be saved for sale or made into charcoal. The rivers, or khors, dry up so that there is no possibility of irrigation. The rainfall is between 17 and 20 inches, which seems ample to grow good crops of dura, simsim, and cotton, but water is badly needed during the year for man and his beast. In this country there are large quantities of camels which are used for transport purposes, and even now that the railway is built, they will still be needed for bringing in produce from areas 30 to 40 miles distant from the railway. There are also large herds of cattle and sheep, and a fair trade is done with Abyssinia in a good class of oxen. At the present time the inhabitants and the stock have to depend on their water supplies from wells. This is not too plentiful, and moreover a wastage of labour, as it is a big business to raise water from wells dotted about at long distances. Mr. Smith has, however, a scheme for making what are known as "hafirs." This is going to be a khor, or depression, and digging out a tank, so that when the water runs or dries up in the shallow depression a certain amount is captured and remains for some time in the earthen tank or pool. One notices such places in fields at home.

A Population Problem.

Another of the snags here is that of population. It was at one time about 2 millions, and is now only about 50,000. This is attributed to the Khalifa's rule, who decimated the country. Some of his old troops are settlers here now. Evidently when they found his power waning they thought it better to become respectable. Another section of the population are what is known as felatta from Northern Nigeria. They have been here some time and are good cultivators. With water supplied it should ease the labour difficulty greatly. I believe there is also a proposal to bring in some surplus felatta from Kassala, where there is a bit of a land hunger; a number of 20,000 is mentioned, but if this proposal is carried out it must be done carefully and with a policy. I do not think it would be advisable to fill the present villages with extra people. The land round such places is already well cultivated and the newcomers would have to go farther afield or cultivate played-out land, which might cause trouble. I would propose that new villages should be created and the emigrants given help in the building of their houses. The Government might even go so far as to break up a large acreage of

20,000 or 30,000 acres with power tackle and so give them a good start. Later, if ploughing was necessary, a charge might be made for it. I consider something of this kind is required if a large number are going to be settled and fairly quick development looked for.

As regards cotton, I am told the crop has increased from 1,400 kantars to 10,000 (estimated), over 7,000 having already been received. Cotton, however, suffers from attacks of Thrips, which very often reduces the yield by 50 per cent. This trouble I think might be overcome to a certain extent by altering the dates of planting—either earlier or later—but, of course, it will mean smaller yields. I have no fault to find with the soil, which is very good in places, and more than average throughout the whole area. The real limiting factor, however, is population, and, as already explained, this largely depends on water. A pleasing feature was the keenness of the people to grow cotton, and they evince much interest in its cultivation and in picking cleanly.

One of the most gratifying features in the Sudan is the great enthusiasm of the officials, from Sir John Maffey, the Governor-General, downwards. There appears to be one great object in life—the welfare of the people under their charge. I was given every possible help to get about the country and see for myself what the conditions were. All information was placed at my disposal; criticism and suggestions were welcomed, so that one feels it an honour to give of one's best to assist in the development of that very promising country.

Motors and Motoring

(By Our Motoring Correspondent)

Accessories and Finish.

As all readers of THE NEAR EAST AND INDIA are aware, there was a marked tendency at one time to turn out cars resplendent with plating, French polish, enamel, cut glass, and with decorative trinkets on the dashboard. That era was immediately succeeded by one in which all-black finish was preferred. Ornament was religiously eschewed, and even tyre covers were black-leaded in order to enhance the general effect of gloom. It is a relief to realise that the swinging pendulum has now stopped halfway, and that we now have that touch of colour, refinement, and quality, and that unostentatious but good finish in our cars that shows their class at a glance. Elsewhere, I once said that I dislike our present methods of carrying spare wheels; I do not like the arrangements for carrying luggage; I am not, as a general thing, impressed with the great beauty of our windscreens and frames, nor of our hoods, nor, for that matter, with the puttee-like bandages some of us swathe round our springs. I could start at the radiators of a good many cars on the road, and grumble steadily as far as the back number plate. But at the same time, I am bound to say that, crude and inartistic as I believe a large number of our cars to be, they are vastly superior to some of those seen on our highways a few years ago.

For one thing, although it is essential that the finish of a car should be in harmony, it has been realised that to a great extent that harmony depends upon simplicity—the simpler and less obtrusive a fitting may be the more harmonious it really is. A further point is that the unobtrusive, so long as it fulfils its purpose, need not be large, and if it be both simple and small it is easier to clean and keep clean. The private motorist, until he has had his car a week, puts in hours a day with a piece of chamois leather and some polish in attending to polish and paintwork. After the first week he tires of this, and by the end of the month is wishing that utter misfortune will overtake, and that right quickly, the miscreant who invented polished brass and nickel-plating. To coach-builders, therefore, I say: keep your designs simple, avoid the use of nuts in places where fingers may be pinched, use smooth folds rather than abrupt bends, give sweeping

outlines rather than corners, and, above all, avoid the use of anything which will tarnish or, for other reasons, need to be kept clean. Contrast, if you are not clear as to my meaning, the high grade, neat little typewriter of to-day with the heavy, high, polished, glittering, and troublesome machine of fifteen or twenty years ago, and if that contrast does not give some hints as to means whereby car bodies and finishes can be made still more simple and attractive, I shall be surprised.

A Great Achievement.

The completion by a British motor cycle of 25,000 miles on the Monthéry track in France in 23 days is a genuine triumph for British workmanship. Something in the nature of a sensation has been caused throughout the Continent, and there is no doubt that this wonderful performance has added very materially to the prestige of the British motor cycle. *Motor Cycling* points out that it must be remembered that the test, which surpasses anything of the kind previously attempted, was equivalent to three years normal usage, at an exceptionally high average speed, crowded into as many weeks. It would have been an extraordinarily creditable achievement for a much larger and more costly machine. That it should have been accomplished with an absolutely standard 350 c.c. model in its first season of active production, and selling at under £50, is something of which every British rider may well feel proud.

Carburettors.

That there is room for improvement in carburettor design goes without saying. There is room for that in most things. But between that and saying there is no good carburettor on the market is a far cry, and, as an engineer, I think it doubtful whether carburettor design can be improved to any appreciable extent. I am looking at the matter as a commercial proposition, and not as a laboratory product, bear in mind.

When one comes to the subject of automatic carburettors, possibly the position is different. It has been said that there is not, nor ever has been, an automatic carburettor on the market. Actually however, there have been a number, some of which have been excellent. By automatic carburettor is, of course, meant a device which will, without any attention from the driver, or any outside adjustment—any adjustment, in short beyond that affected automatically by the engine speed—automatically adjust itself to varying conditions of air or fuel supply, temperature of added air, density of fuel, amount of added air, atmospheric density according to height above sea-level, and speed of engine. The records of the Patent Office are choked with specifications relating to these appliances, and embodying the use of shutters, special jets, graduated choke tubes, valves, bellows, mechanical governors, compensating pressure devices, and other ingenious or complicated devices, but none of them has worked or works as perfectly as could be desired. A humorist said once that an automatic carburettor was one which gave an incorrect mixture at all engine speeds, a statement which perhaps was not quite accurate. But certainly we have some distance yet to go before we can bring out a perfect, or even nearly perfect, automatic carburettor.

The semi-automatic carburettor is a different proposition, and many of the types on the market are all that could be wished. In these, as in many other things, the simplest forms are often the best, and inventors have in many instances defeated their own object by adding complications, in the form of varying jets and multiple shutters to what, after all, should be a very simple piece of mechanism.

Permission has been granted to land and store lumber within the limits of the free zone at Salonika (says an American Consular report). On account of the inadequate fire-fighting equipment, no lumber has been allowed to be warehoused within the zone. The fire-extinguishing system has now been greatly improved, and space for warehousing lumber has been reserved in the western area in the zone.

CYPRUS EXPORTS INCREASING.

The report on Cyprus trade for February states that imports during the month totalled £114,369 and were £15,716 less than in February, 1928, but £13,389 above the quinquennial average, 1924-1928. Decreases are recorded in flour, machinery, and cotton yarn and goods; but increases took place in motor cars, sugar, timber, sacks, iron and steel.

There was a continued increase in the value of exports to £123,283, which was £42,378 above the quinquennial average and £23,796 in excess of the total for February, 1928. The principal increases were asbestos (£18,577), carobs (£3,578), potatoes (£7,385), and barley (£2,721). Large quantities of potatoes, barley, oranges, cotton, raisins and terra umbra were lying on the quays at the end of the month, and it is anticipated that there will be a considerable increase in exports during March.

There was a decrease in shipping owing to rough weather; 20 vessels called at Larnaca, 24 at Limassol and 19 at Famagusta as against an average of 27, 28 and 21 respectively.

BULGARIA'S TOBACCO INDUSTRY.

An excellent idea of the importance to Bulgaria of its tobacco industry is given in an article in the monthly report of the Banque Nationale de Bulgarie. The area under tobacco in 1927 amounted to 54,127 ha., and the production amounted to 21,530,802 kgs. The country possesses 56 cigarette factories, 35 of them being large concerns. At the end of 1927 the capital invested in the 35 principal factories amounted to 7,867,538 leva. These factories used in 1927 3,853,688 kgs. of tobacco of the value of 2,565,472 leva; and their production of cigarettes totalled 3,921,163 kgs. of the value of 9,704,848 leva.

The P. and O. Company's liner Bangalore will inaugurate the new cargo service between Southampton and Calcutta on April 27.

A Bill providing a credit of 500,000,000 lei (£600,000) for the construction of new roads in Bessarabia, and for six bridges between Moldavia and Bessarabia, was last week laid before the Roumanian Chamber.

Air Vice-Marshal Sir Sefton Brancker, British Director of Civil Aviation, conferred in Athens on April 17 with Dr. Christo Manos, Greek Minister of Communications, about the air service between London and Calcutta.

A Bucharest message states that the Government has endorsed the report of the French expert who was invited to examine the condition of Roumanian railways and make suggestions for their re-organisation. The total outlay provided for the year 1929 amounts to 3,000,000,000 lei, which will be drawn from the loan of 35,000,000 dollars recently concluded abroad for public works.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

BULGARIA.

Cast Iron Pipes, Valves, Etc.—The Ministry of Railways, Posts, and Telegraphs invites tenders for the supply of 451 tons cast iron pipes ranging in diameter from 50 to 200 m.m. and 120 wheel valves together with a quantity of bends, tees, etc. May 7. (D.O.T.)

EGYPT.

Tent Cloth (Cotton Duck).—The Egyptian Ministry of Agriculture invites tenders for the supply of 85,000 yards of tent cloth (cotton duck). May 26. (D.O.T.)

Water Tower.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of a steel water tank with steel frame-work tower complete with necessary piping and fittings as well as an electric water level indicator. June 1. (D.O.T.)

Weighing Machines and Balances.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply of platform weighing machines, counterscales, and Beranger balances.

Tent Lining.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of calico cotton blue, tent lining for the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. July 1.

Various.—The Director-General of Prisons, No. 43, Sharia El Bustan, Cairo, invites tenders for the supply of various articles required for the year 1929-1930, viz.: (1) cotton, cloth, clothing, sacks, etc.; (2) buttons, eyelets, needles, threads, etc.; (3) fuses for blasting, twines, enamelled articles, miscellaneous articles, etc.; (4) paints, metal polish, blacking boot, heel balls, naphthaline, tar, acids, etc.; (5) leathers, native and English; (6) fibres, Indian, cane rattan, etc.; (7) lamps and electrical articles, etc.; (8) copper hardware; (9) tools (carpenters, saddlers, shoemakers, smiths), machines, files, etc.; (10) buckles, nails, ironmongery, belting, steel plates, tool steel, etc.; (11) dyeing of clothing, cloths and threads. May 25.

Steel Piping, Etc.—The Ministry of the Interior invites tenders for the supply of 13,330 metres steel piping assorted, from 80 m.m. in diameter, together with a quantity of cast iron and steel specials, valves, hydrants, etc. June 2. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, April 27); s.s. Tarantia for Bombay (Birkenhead, May 9). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Magdapur for Calcutta (Birkenhead, April 30); s.s. Malakuta for Calcutta (Birkenhead, May 9).

Bibby Line.—S.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 1).

British India Line.—S.s. Hatimura for Bombay and Karachi (London, April 27); s.s. Manora for Colombo, Madras, and Calcutta (London, May 4); s.s. Warfield for Bombay and Karachi (London, May 18); s.s. Mulbera for Colombo, Madras, and Calcutta (London, May 18).

Cunard Line.—S.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza. This steamer will also call at Volo if sufficient inducement offers. (Liverpool, Glasgow, and Swansea, April 27); s.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement offers (Liverpool May 11, Swansea May 14).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 4); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 25).

P. and O. Line.—S.s. Macedonia for Bombay (London, April 26); s.s. Bangalore for Calcutta (London, April 27); s.s. Razmak for Bombay (London, May 10); s.s. Novara for Calcutta (London, May 11).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, May 7).

Ellerman and Papayanni Lines.—S.s. Manchurian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool April 27, Swansea May 2); s.s. Fabian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 4); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, May 6); s.s. Mardinian for Gibraltar*, Malta*, Algiers*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool May 11, Swansea* May 11); s.s. Voltorno for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 11). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syra and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port.

ANCHOR LINE
LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*TELYSIA	...	Apl. 30	*CIRCASSIA	...	June 21
*ICASTALIA	...	June 4	*MASSILIA	...	July 23

*First class passengers only. Specially low fares. †Calls Port Sudan.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA. 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE.

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London April 23.

Few Budgets can have had so slight an effect upon Stock Exchange markets as that which Mr. Churchill produced on Monday. The gilt-edged market was inclined to condemn the Chancellor's Sinking Fund policy, but the effect on quotations was offset by an improvement in the monetary outlook. All the same, it is not possible to find any responsible expert who expects money rates this year to be as low as they would have to be if Mr. Churchill's National Debt interest estimate is to be justified. Apart from this there was a little marking up of tea shares followed by some profit taking, and that was the limit of the effect of the Budget on the markets.

A general topic of discussion was Mr. Snowden's speech, which, whether he meant it or not, conveyed the unfortunate impression that a possible Chancellor of the future might flirt with the idea of debt repudiation. City condemnation of the indiscretion was quite universal.

Chinese Loans.

Few persons are so well placed for estimating the position in China as the Chairman of the Hong-Kong and Shanghai Banking Corporation, and his speech at the recent annual meeting, which has just been published in this country therefore deserves careful consideration. On the whole he takes a moderately hopeful view, although he pointed out that financial re-organisation and systematic budgeting was making little progress, that military expenditure was still very heavy, that the railways had been allowed to get into a poor state, and that the irregular taxation of trade and the enactments of local authorities still handicapped business. On the other hand, he emphasised that a spirit of progress was apparent. The political situation is still obscure, but when a government is fairly well established this spirit may be expected

to impel it to seek foreign capital to restore the railways and to assist in Chinese development. Recognition of the necessity for further foreign loans must lead to an acknowledgment of obligations already incurred, but the uncertainty of the present position of holders of Chinese securities is reflected in the quoted prices. Those who may be inclined to consider such securities should realise their speculativeness, and restrict their attention to the loans on which the service has been maintained. Among these the $4\frac{1}{2}$ per cent. Gold Loan of 1895, repayable by 1943 yields £7 5s. per cent. and the Re-organisation Loan of 1913 finally redeemable in 1960, for which the security is the Salt Revenue and surplus Maritime Customs, returns £8 5s. per cent.

Tea Shares.

The remission of the duty on tea had been pretty generally anticipated in the markets and tea shares had, in the jargon of the Stock Exchange, been a "good market" for some little while. The abandonment of this duty is expected to benefit the producers of the lower grade, non-Empire, tea most at first, since in the past there has been a small preference in favour of Empire grown teas. It should, however, also help to stimulate the consumption of the dearer teas and in time these may receive equal benefit. In any case the trend of consumption in recent years has been in favour of the better qualities, and it is thought that this tendency is likely to continue. At present stocks of tea in London are high, and the hopes widely held at the beginning of the year that by June a considerable impression would be made on these stocks do not seem likely to be fulfilled. The immediate position may, however, be due in part to the holding up of tea in bonded warehouses to wait the Budget announcement and it is also believed that stocks in producing centres are fairly low. Investments in plantation companies of all kinds are necessarily of a speculative nature, but as a result of this high yields are obtainable, and, for mixing purposes, some tea shares are not unattractive. Thus, the shares of the Assam Company return £7 8s. per cent., and those of Upper Assam £8 6s. per cent., while Borelli return £10 per cent.

Rio Tinto Profits.

The full accounts of the famous Rio Tinto Company for 1928 show a better position than was to be expected from the preliminary announcement of a reduction in the dividend from £2 10s. per share to £2 per share. Profits on sales, in fact, increased from £1,221,346 to £1,669,782, but the company had to provide £265,950 to meet arrears of taxes arising out of a customs dispute. The directors have also considered it advisable to allocate £200,000 to an "emergency account," so that a reduction in the dividend was unavoidable. The report states that deliveries of ore from the mines both in Spain and elsewhere increased over the figures of 1927, while it was fortunate that the heavy claims for tax arrears fell in a year in which profits were swollen by advances in the price of the metal. The average price of standard copper in 1928 was £63 14s. 9d. compared with £55 13s. 11d. in 1927, and the average price for the last three months of last year was £67 17s. 9d. Since the turn of the year, of course, the metal has risen to much higher levels, at one time being quoted at over £90, and in spite of the recent relapse still stands at over £80 for standard. It is therefore reasonable to expect still larger profits for the current year. The future prospects of all copper mining companies must, however, largely depend on the extent to which demand will expand to meet Rhodesian production. On the basis of the present dividend the yield on Rio Tinto ordinary shares is £3 7s. per cent., which seems rather low for this kind of investment.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

HELLENIC CORPORATION.

Improving Conditions in Greece.

Development Works.

Satisfactory Result of First Year's Trading.

Early Interim Dividend Foreshadowed.

Change of Name to Hellenic and General Trust.

Sir Eric Hambro's Speech.

The first ordinary general meeting of the Hellenic Corporation, Ltd., was held at the company's offices, 41, Bishopsgate, London, E.C.2, on April 22. The Chairman (Sir Eric Hambro, K.B.E.) presided.

The Secretary (Mr. T. S. D'A. Hankey) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—As your directors' report, together with the balance-sheet, has already been circulated, I shall, with your consent, take them as read.

Before commenting on the figures you have been given, I propose to recall to your minds the objects for which your company was formed, together with some indication of the progress made in carrying out these objects. As you know, following the late war between Greece and Turkey, very large numbers of refugees were transferred to Greek territory. These people represented many industries and brought with them all the necessary knowledge and experience to enable them to carry on the work to which they were accustomed; they were, however, almost entirely destitute of capital, and consequently unable, without assistance, to establish themselves economically in their own country.

Further to this the ravages of war, which Greece had been carrying on more or less continuously for about ten years, had left old industries of that country impoverished, old-fashioned, and again without sufficient capital to bring their plant and machinery up to date. Many of these old industries were of primary importance to the welfare of the country, and built up to exploit her natural resources.

With a return to peace, however, and with the advent of a stable Government, reorganised finances and a balanced Budget, it became obvious that any help afforded to the industries I have referred to would contribute enormously to the future prosperity of the country. The desire to assist in this important work was one of the many objects of forming the Hellenic Corporation, and therefore, a short *résumé* of the affairs of Greece as we see them to-day may perhaps be in place.

A New Era in Greece.

I think we can say that a new era in the financial history of Greece began early in 1928, when the Stabilisation Loan was issued in London and New York, the currency thereby being stabilised, and the Greek Bank of Issue created under the auspices of the League of Nations. Coupled with this, the return of M. Venizelos to the political arena and his election as Prime Minister with so vast a majority, assured for some years to come a stable Government, headed by a man of international fame and respect, of undoubted loyalty and patriotism and with the moral strength necessary to consolidate the sound position which he inherited.

During the year under review the diplomatic relations between Greece and her neighbours have been placed on a satisfactory footing. The ratification of the agreement with the United States has ensured that sufficient funds for the re-establishment of the refugees are available and, finally, the balance of the Greek Budget, with a surplus for the third year in succession, has proved that the country is living well within its income. From the industrial view-point the very fact of the sudden increase of population to the extent of some 25 per cent. has created a demand for every kind of manufactured

goods and agricultural produce, which can only be met by increased industrial and agricultural output.

As has been proved in many countries since the War, the stabilisation of currency on a gold basis has as an inevitable effect a temporary disorganisation of industry. Greece, during the last year, has been no exception to the rule, but her case has been greatly ameliorated by the fact that before the currency was stabilised at 375 dr. to the pound sterling, that rate had ruled for nearly two years already under the management of the National Bank. Thus the beginning of 1929 sees many industries already working normally.

Greek Industries.

As you may imagine, during the last year your company has investigated in Greece a great number of industrial enterprises of all kinds, and I have been impressed by the vitality shown, especially amongst the smaller interests. It has been evident, however, that a lack of co-operation between a great many small companies in the same trade has led to undue competition, and it is to be hoped that industrialists as a whole will realise what has already been realised in other countries, that co-operation and co-partnership are the foundation of progressive and profitable business. I am glad to say that the efforts of your company have already succeeded in bringing this about in one or two cases.

Our investigations, however, have shown us that, as a whole, Greek industry, although in its infancy, is a very live child, and, so long as the industrial brains of that country confine themselves, when possible, to expanding those industries which are natural to the country and which are not entirely dependent on a high tariff wall, there is no doubt that such industries present to the foreign investor a profitable and sound medium for the investment of his funds. Greek labour is good and the climate excellent, added to which the presence of many natural harbours makes it possible to economise in transportation costs.

Development of Roads.

Hitherto one of the factors that have perhaps hindered the prosperity of the country has been the lack of proper communication from inland to the sea, and it is gratifying to note that one of the first actions of the Government has been the development of arterial roads. I say this pointedly, as I believe that roads, and not railways, are for Greece the key to economic communications. In few cases are distances long, and it has been proved in other countries that in short distances the road can always compete with the railways, especially in a country where heavy industries, such as steel, coal, etc., are non-existent and not required.

Another task which is being courageously undertaken and which will contribute enormously to the agricultural prosperity of Greece, is the drainage of large tracts of swamp land in Macedonia and Thessaly. These lands, hitherto useless, are being converted into rich alluvial plains, which will again help Greece in eliminating from her trade balance the necessity of importing great amounts of foodstuffs.

As you will have read in the directors' report, we have stated that a great part of our funds were not fully employed until the second half of the year. You can understand that industrials in a new country—I think I am right in referring to Greece as a new country after the troubles she has gone through—cannot be looked into thoroughly in a short time; thus it became necessary to keep liquid a large portion of the company's funds during the investigations we were making, so as to ensure that your money would be profitably invested with the greatest amount of security.

This delay was greatly increased by the very severe epidemic of dengue fever which broke out in the large cities of Greece and which incapacitated as many as 25 per cent. of the business population of Athens at the same time, making it impossible to proceed with our investigations during that period.

Company's Operations Outside Greece.

Having given you this *résumé* of our business in so far as Greece is concerned, I should now like to turn for a moment to the business of your company outside that country, and to give you an outline of the policy which your directors have tried to pursue.

Although the creation of the company was inspired by the desire to help the development of Greek industry, it has been obvious from the first that no trust company could consider putting all its eggs into

one basket, so that while, on the one hand, we have diversified as much as possible our Greek industrial interests, we have ensured that the funds of the trust have been invested in their proper proportion throughout the world. With this end in mind, it has occurred to us that the fact that we are in reality a general trust company should be more clearly brought out in our name, which now associates us with Greece only, an impression which is, in our opinion, misleading. We are, therefore, about to ask you at the extraordinary general meeting to sanction the change of the name of your company to the Hellenic and General Trust.

As regards all these other investments, I can assure you that your directors have not failed to take advantage of opportunities for remunerative investment, both in this continent and in America, which have offered themselves during the past year; and in this connexion it may be mentioned that the valuation of your company's investments as shown in the balance-sheet is, in fact, considerably below the present market price, thereby constituting a reserve which I have every confidence will become an asset of increasing value.

The development of Greek industries, to which I have already referred, together with the opportunities which exist in other fields of investment, are such that your directors are confident that further funds can be remuneratively and safely employed. It is proposed, therefore, to issue in the near future the remaining £500,000 of unissued capital on a basis which will be determined later and which will give preferential treatment to present shareholders.

The Accounts.

Turning to the accounts, I propose to say a few words of comment on the figures which you have before you. These show that, after providing for income tax and all other charges of a similar nature, there is, for the period under consideration, a net profit remaining to be carried to the balance-sheet of £29,130 6s. This represents nearly 6 per cent., free of tax, on the issued capital, and, bearing in mind the considerable disadvantage under which we were working for a large part of the year (which has already been explained), I think we are justified in regarding this—the first year's trading of a company opening up partly new ground—as quite satisfactory. Out of this sum your directors propose to write off the whole of the preliminary expenses, amounting to £13,357 os. 9d. This sum includes the stamp duty already paid on the second £500,000 of the authorised capital (at present unissued) amounting to £5,000, so that the remainder of the capital can now be issued bearing a very light burden of preliminary expenses.

The fact that it is proposed to carry forward the whole of the balance remaining—that is, £15,773 5s. 3d.—should not be taken as any indication that the results for the period under consideration have in any way fallen short of expectations. Your directors are, however, of the opinion that in the case of a company still in its early stages the interests of the shareholders are best maintained by a policy which might, to some, seem ultra-conservative, and it is for this reason that they have decided not, at present, to recommend the payment of a dividend, which has, in fact, been earned during the past year. I have, however, great hopes that it may appear justifiable to mark the continued progress in the consolidation of your company by the declaration at an early date of an interim dividend in respect of the year 1929-1930.

Services of Local Board and Staff.

Before ending I should like to place on record our indebtedness to our Athens board, whose loyal co-operation during the past year has been a very great factor in our progress; also to the National Bank of Greece who have rendered us the greatest possible assistance. Our thanks are also due to the office staff, both in Athens and London, for the capable and conscientious way in which they have carried out their duties.

I now beg to move: "That the directors' report and accounts for the year ended January 31, 1929, be and the same are hereby adopted."

Mr. Alfred Wagg seconded the motion, which was carried unanimously.

The retiring directors (Mr. J. Drossopoulos, Mr. A. N. Diomedes, and Mr. R. d'Erlanger) were re-elected, and Messrs. Peat, Marwick, Mitchell and Co. were reappointed auditors.

Extra-ordinary General Meeting.

At an extra-ordinary general meeting which was subsequently held resolutions were passed changing the name of the company to "Hellenic and General Trust, Ltd.," and altering the articles of association:

LATIFIYAH (IRAQ) ESTATES.

Arrangement Concluded With Government.

The adjourned ordinary general meeting of Latifiyah (Iraq) Estates, Ltd., was held on April 22 at the registered offices, 16, St. James's Street.

In his address to the shareholders, the Chairman (Sir Edward Manville) stated that the provisions of the agreement with the Iraq Government, whereby the company obtained the grant of the Latifiyah estate, were being carried out, and the work of excavation had now been started on the first portion of the main irrigation canal. He desired to record that they believed that the Government of Iraq had met them very fairly in the difficult and complex negotiations which they had carried on with them during the past three years, and the settlement of all outstanding questions enabled them to freely co-operate with the company in its efforts to develop Iraq's agricultural resources. The directors were proposing to co-opt Lieut.-Col. J. H. Stanley, C.B.E., as a director. At the present time Lieut.-Col. Stanley was away in the East. They would like once again to place upon record their great appreciation of the valuable services that he had rendered to the company. He was largely responsible for the successful conclusion of the negotiations with the Iraq Government, and until the appointment of Mr. Garbutt was closely engaged in furthering their interests in Baghdad, where he had to reside continuously under very trying climatic conditions. They were informed that some of the best agriculturists in Iraq live in the neighbourhood of their property, and from particulars which they had on their files of the sheikhs, serkals, and cultivators they appeared to be assured of an ample supply of suitable cultivators and labourers. They were also fortunate with regard to communications, as the main motor road from Baghdad to Hillah and Museyeh traversed the property about eight miles from the head of the canal.

The company's manager reported that satisfactory progress was being made.

The report and accounts were approved and adopted.

The directors of the Calcutta Electric Supply Company have decided to recommend to the general meeting, to be held on May 8, the payment of a final dividend on the ordinary shares of 7 per cent. (actual) in respect of the half-year ended December 31, 1928, making, with the interim dividend already paid, a total of 12 per cent. (actual) for 1928; also a bonus in cash of 4d. per ordinary share, both payments being subject to income tax at the rate of 2s. in the £.

Barclays Bank (Dominion, Colonial and Overseas) announce that they have received the following cable from their Cairo office:—"The Statistical Department of the Ministry of Finance announces that the total imports for Egypt for the month ending March 31 amounted to £E4,262,958, against £E3,885,024 for the corresponding month last year, and exports to £E5,249,710, against £E4,367,712 for March, 1928. Cotton exports were £E4,086,386, against £E3,387,909."

CYPRUS CROP PROSPECTS.

The report on Cyprus crops for March states that the weather continues to be very favourable for the new wheat crop: The demand for local wheat is poor; offers are also poor, 7s. per bushel. Barley is a good crop, and the yield is expected to be above the average. Offers and demands are poor; the quotation is 2s. 8d. per bushel. The export demand for potatoes is increasing. Prices are £8 to £9 per ton. The export of cotton is steady, with prices falling slightly. Seed cotton is 3s. 7d. to 4s. per stone. Oranges of the Jaffa type are £3 3s. per 1,000; round oranges are £1 15s. per 1,000. Heavy weather interfered with the preparation of the tobacco fields, and the germination of the seed and growth of the seedlings. Considerable interest has been shown in the planting of tobacco this year, both of cigarette and Latakia kinds, and the production promises to be the largest for some years.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, in a report dated March 31, state:—

Arrivals in Kordofan stations (including Tendelti) amounted during the last ten days of February to 841 tons, as against 1,335 tons last year, a shortage of 494 tons or 37 per cent. This brings the arrivals for the whole month of February to 2,033 tons and the shortage of that month as against last year to 1,514 tons or 43 per cent. During March arrivals amounted to 7,909 tons, as compared with 2,703 tons for the same month in 1928, i.e., a shortage of 794 tons or 29 per cent. The shortage in Kordofan and Tendelti arrivals this season to-date totals, therefore, about 3,000 tons.

It must be remembered that 1928 was an exceptionally early crop, due to the absence of any winter weather. The large arrivals began early but finished early. If we make comparisons with other years we find this season's new crop arrivals, December/March, are not less than 1,200 tons greater than for the same period for the largest crop recorded, i.e., 1926. If we allowed for the effects of the Ramadan holidays which came within the period for 1929 but not 1926, the difference would be still larger. Against the same period, season 1927, this season's arrivals are no less if we allow for the Ramadan holidays, and the same thing applies to 1923, whilst in the case of the remaining two years, 1924 and 1925, the arrivals this season are much larger, even if we make no allowance for the Ramadan holidays.

Taking El Obeid as the standard, from February 18 to 22 prices rose 6s. 9d. per cwt., remained firm until the 25th, and then fell some 4s. 3d. by the 28th. During March prices rose, the total increase touching 7s. 6d. per cwt. on the 7th, but before the close of the day prices had fallen 5s., the net increase being 2s. 6d. Prices continued to fluctuate within 6d. until the 27th, when prices rose 1s. 3d. and so remained to the end of the month, when the market closed at 3s. 9d. above the price paid on March 1. The high prices here have not reflected prices paid overseas, but have been entirely due to exporters competing one with the other to cover their low-priced commitments.

The tendency of prices will depend upon whether we get the large arrivals expected in April/May/June. The weather is now definitely favourable, and reports go to show that the high prices are encouraging the natives to go great distances in the interior to collect gum. The dura crop was small, and whilst we are inclined to discount the supposed effects of the size of the dura crop on the collection of gum, this would, if anything, tend to increase collection.

Last year there was a tendency to ship January/February contracts in January and February/March contracts in February, but this year the reverse was the case, whilst more gum than usual was delayed by the force of circumstances to the last days of the month. We estimate that the total exports for February would be about 2,750 tons and the total quantity of January/February would thus be about the same as last year.

Owing to floods and gales a portion of the bridge of boats at Mosul broke from its moorings on April 14. The river temporarily was impassable, but a motor-boat ferry for cars was organised.

At present few vacuum cleaners are used in Roumania (says an American Consular report). About 10 per cent. of the population live in so-called better-class homes. Vacuum cleaners are used principally by hotels, institutions, and to a relatively small extent in residences. The market is controlled largely by German, Austrian, and French concerns, who maintain direct selling agencies, and offer long credit terms to reliable dealers.

The death took place in a nursing home in London last week of Sir Aubrey Brocklebank, Bart., chairman of the shipping firm of Thomas and John Brocklebank, Ltd. (Anchor Brocklebank Line). Sir Aubrey was born in 1873, and succeeded to the title on the death of his father in 1911. He was a director of the Cunard Steam Ship Company, the Suez Canal Company, and other important companies.

IRREGULAR PRICES FOR IVORY.

Messrs. Hale and Son report that the quarterly ivory sales, held on April 16, comprised 29 tons (against 30½ tons same time last year and 43½ tons in January last), viz., 10½ tons Zanzibar, Bombay, Mozambique, East African, Rhodesian, and Siam, 1½ tons Abyssinian, 3½ tons Egyptian (3¼ tons Alexandrian and ½ ton Malta description), 10 tons West Coast African and Congo, and 3½ tons land carriage, also 7½ tons mammoth tusks, ½ ton sea horse tusks and boars' tusks, and 2 cwt. rhinoceros horns; total, 37 tons 2 cwt.

There was a fair attendance of buyers and a generally good demand, America, the Continent, and the Home trade competing. A quiet tone prevailed throughout. Prices were irregular, for whilst good quality soft and hard large tusks brought fully last sale rates, generally there was a decline of £2 to £3 per cwt. for both descriptions. Billiard ball ivory was firm.

Egyptian soft and large medium tusks were steady to £2 to £3 per cwt. lower. Hard were £2 to £3 per cwt. easier, soft and hard scrivellos were steady, ball scrivellos firm, and soft bangle tusks rather easier. A parcel of Malta scrivellos brought about previous rates.

NEAR EAST MARKET REPORTS.

The April issue of the Monthly Review of Barclays Bank, Ltd., contains the following reports:—

Egypt.

During the earlier part of the month under review very quiet conditions prevailed in the raw cotton market, but, subsequently, great activity was in evidence. At one time, quotations showed considerable weakness and receivers of early March futures paid large premiums to transfer their interests to May. The turn in the market came when bad weather was reported in America, which delayed planting, while, in addition, the fear of floods in that country caused the trade to buy largely, with a consequent appreciation of prices. Moreover, a hurried covering by short interests further assisted in the upward movement of quotations. Rumours that the United States might impose a heavy tax on long stapled cotton imported into that country also affected the position and buyers in America placed orders for large quantities of Egyptian cotton, which led to a hardening of premiums. The spot market has, therefore, been active and the daily sales have been well maintained. The quantity of cotton remaining in the interior is not large, and, with the present offtake, should not prove unwieldy. Planting has been completed in all Southern districts, but cold winds and threatened rain have delayed preparation in the Northern Province. Stocks are rapidly becoming normal and, with steady shipments, should assume a less formidable aspect. Only slight fluctuations have occurred in cotton seed, but a bad offtake for oil has kept prices low, with a weak tendency. In the interior, there are still large supplies of seed which will not be required for sowing and which will find their way into the market, thus tending to counteract any immediate attempt to raise prices. Stocks are still somewhat heavy, but are being gradually reduced, although the takings for local mills have declined. The cotton goods market has continued moderately active, owing to the native holidays, business being of a general description at unchanged quotations. Manchester goods have been in fair request at steady prices; spot supplies are moderate. The demand for sugar has been satisfactory, but under the influence of the producing centres, spot holders showed a strong desire to dispose of their stocks. At the time of writing, however, greater firmness is noticeable, but conflicting opinions exist as to the future course of the market. There has been only a small demand for export.

At the commencement of the period under review the flour market was steady, but owing to heavy arrivals, some weakness was experienced and prices declined. Greater activity, however, has been shown recently and the downward movement appears to have been arrested. In the rice market, there has been a preference for the Egyptian product, quotations for which have been steady both for local consumption and for export. Rangoon and Siam rice, however, after making a moderate improvement early in the month, have since shown an easier tendency. Little business has been transacted in cabots, and the demand for exports has been poor. Stocks are reduced and prices have been irregular.

A good demand for onion bags has continued in the gunnies market, but prices have been weak, owing to the heavy arrivals. There is a plentiful supply of all other varieties of gunnies, but the general tone of the market for these descriptions has been poor and

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

prices have fluctuated. The demand for coffee has been highly satisfactory and quotations have shown a gradual tendency to advance; stocks are reduced and are of poor selection.

The Sudan.

Conditions generally during the period under review have been dull. At the time of writing, quotations for sesame are £E17 for white f.o.b. Port Sudan and £E16.300 m/ms. for red. The market for groundnuts is stagnant and there is no change in the position since a month ago. A steady demand has maintained the improvement in the coffee market, and PT460 per kantar is still being obtained, owing to the continued shortage of supplies. The market in hides has been weak, and, there being practically no demand for export, very large quantities are still on hand.

The recent activity in gum has continued and considerable fluctuations in prices have been experienced. Owing to the heavy demand for export, prices rose to 51s. per cwt. for natural c.i.f. European ports, but fell to 48s. 6d. when the market closed down for the Ramadan Bairam holidays. Apparently these high prices have not been paid by overseas buyers except, perhaps, in one or two instances. Although arrivals to date are smaller than in the same period last year, they are greater than in previous years. On the whole, the crop appears to be late and it is not yet possible to give any accurate forecast of the probable yield for the season, but heavy arrivals indicate that it will be a large one. The import market has experienced a fair amount of business, although the Ramadan Bairam holidays have interrupted operations. Prospects, however, appear brighter and an improvement is anticipated.

The latest reports received regarding the cotton crop are satisfactory. At the end of January, 103,000 kantars of the Gezira Sakel crop were picked; the Government's estimated yield is 460,000 kantars. The quality of the Tokar crop is said to be good and prospects generally are considered better than last year.

Palestine.

An appreciable improvement has occurred in trade conditions generally, due partly to the approach of Easter and partly to the constant arrivals of tourists. It is hoped that commercial interest both in Palestine and abroad will be aroused by the Palestine and Near East Exhibition and Fair to be held at Tel-Aviv from April 7 to 30. The Exhibition will represent the economic development—industrial, agricultural, and commercial—of Palestine. It has now been decided that the construction of the Haifa Harbour is to be carried out departmentally by the Palestine Government and the work is likely to start early in June.

The Jaffa Orange Show, held during February, was very successful, and a considerable improvement over previous years was noticed in the sorting and packing. The orange season is now practically at an end and the final shipments are expected to be made not later than the beginning of April. Prices in the United Kingdom have continued to improve, the latest quotations ranging from 17s. to 25s. per case. In Germany, prices have been between RM14 and RM18, but in Holland they have been less favourable. The heavy rains throughout the country have caused a considerable amount of damage in low-lying areas, but in the hill district crops are excellent and prospects for the summer crops are favourable. Hill pasturage is better than it has been for many years. In the north, wheat and barley show signs of a record yield, and in the south, conditions are also good. For the time being, there is little fear of a locust invasion, as the swarms have moved to the other side of the Jordan and quantities have been destroyed by flame guns.

COMPANY NOTES AND REPORTS.

INDO-EUROPEAN TELEGRAPH.

The report of the Indo-European Telegraph Company, Ltd., for the year ended December 31 last states that the company's lines worked efficiently during the year. One interruption of some days' duration occurred in the early part of the year in the Crimea owing to weather of exceptional severity, but working was maintained over lines kindly placed at the company's disposal by the Soviet Government. Communication over the Black Sea (Odessa-Constantinople) cable was maintained throughout the year. The average times of transmission between Karachi and London as well as on the company's other main circuits between London, the Continent, and Persia and India were satisfactory. Arrangements were made, in co-operation with the Indo-European Telegraph Department, for the installation of regenerators at various points on the line between London and Karachi in both directions.

The company's revenue from all sources amounts to £291,833 10s. 7d., as compared with £318,139 18s. 1d. for 1927, showing a decrease of £26,305 18s. 6d. The expenses are, on commercial and general account £126,967 8s. 4d. and on maintenance account £80,491 11s. 3d., making a total of £207,458 10s. 7d., as against £212,562 2s. 2d. for 1927, a decrease of £5,103 2s. 7d. The revenue account accordingly shows a balance of £84,375, which sum is carried forward to profit and loss account, and after deduction of income tax is reduced to £67,376 9s. To this is added the balance brought forward from 1927, £19,990 19s. 6d., making a total of £87,367 8s. 6d. The interim dividend already paid absorbs £10,625. The directors have provided £15,000 for writing down the following:—Expenditure on reconstruction of line in Russia and Poland (£12,500), cost of Persian section of line (£1,000), and freehold and leasehold property (£1,500). They now propose to declare a dividend for the year ended December 31, 1928, of £1 2s. 6d. per share (making with the interim dividend, already paid, 7 per cent. for the year) and a bonus of 15s. per share, both free of income tax. They also propose to hand over £15,000 to the trustees of the retirement trust fund, leaving a balance to be carried forward to 1929 of £14,867 8s. 6d.

LATIFIYAH (IRAQ) ESTATES.

The report of the Latifiyah (Iraq) Estates, Ltd., for the 18 months ended December 31 last states that following on the ratification by the Senate in Baghdad of the Bill providing for the grant to the company of the Latifiyah Estate, arrangements are now being completed to carry out the provisions of the agreement whereby the Government of Iraq undertakes to construct and maintain a main irrigation canal with all the necessary ancillary works for providing a supply of water for the estate. The tender of an approved contractor for the construction of the first 20 kilometres of the canal has been accepted by the Director of Irrigation, and the company's representative in Baghdad advises that a large number of men are engaged on the work of excavation, which is proceeding satisfactorily. The cash consideration for the grant of the Latifiyah Estate (including stamp duties) amounting to £15,478 9s. 8d., has been deposited with the Iraq Treasury at Baghdad, and it has been reported to the directors that the Tapu deeds will be issued as soon as the survey of the roads and the railway which intersect the estate has been made. The company's manager in Iraq (Mr. W. D. Garbutt) officially took up his duties on March 1, and when he has had an opportunity of determining the method of working the property he will pay a visit to the United Kingdom to confer with the Board and settle the policy of agricultural development to be adopted when water is available.

HELLENIC CORPORATION.

The first report of the Hellenic Corporation, which covers the 13 months to January 31, 1929, shows a net profit of £29,130. The directors propose to write off the preliminary expenses (including stamp duty on unissued portion of the capital) amounting to £13,357, leaving £15,773 to be carried forward. Owing to unavoidable delays in organising the foreign connexions, a large portion of the company's funds had to be kept liquid and could not be advantageously invested until the second half of the year. Now that the organisation of the company has been successfully completed, the directors propose to issue the remainder of the capital at an early date, giving the present shareholders preferential treatment. It is further proposed, in order to make it clear that the company's activities are not entirely confined to Greece, that the name of the company be changed to "The Hellenic and General Trust, Ltd."

A Bucharest message states that the Roumanian Credit Bank is to raise its capital from 200,000,000 lei to 400,000,000 lei, with participation by the Austrian Creditanstalt and British and American banks.

The directors of the British India Steam Navigation Company, Ltd., have resolved to pay on May 16 interim dividends of 2½ per cent. less income tax, on the 5 per cent. preference stock and 4 per cent. (free of income tax) on the ordinary shares for the half-year ending March 31.

The traffic receipts of the South Indian Railway Company for the week ended March 23 amounted to Rs.12,46,886, making the total from April 1, 1928, Rs.6,05,24,731, as compared with Rs.6,11,38,077 for the corresponding period of the previous twelve months.

ADVERTISING IN "THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of *all* classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

The Manager, "The Near East and India," 170 Strand,
London, W.C.2

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 17:—

Egyptian Futures.

Sakel Contract.—We have experienced a very quiet week in this market, and with both trade and speculative interests operating on a very minor scale, values have been rather easily depressed by the undercurrent of uncertainty prevailing in most commodities at the moment. Conditions in the fine spinning section are reflected in the very moderate offtake latterly in evidence for the various Sakel qualities; very few orders are going out of Egypt for shipment cotton, and whilst the spot sales here show a slight improvement this is solely due to mills deferring the purchase of their reduced requirements to the last possible moment. The statistical position about which so much has been written in recent months has latterly become quite overshadowed by the falling off in demand; present stock figures in Egypt total about 1,500,000 kantars; last season from now to the end of August about 1,100,000 kantars were exported. We doubt this figure being attained during the coming months, certainly not unless trade conditions show a distinct improvement. Ginning figures to the end of March were 2,270,795 kantars, which rather indicates a somewhat smaller final outturn than generally anticipated. With regard to daily events in the market, small liquidation orders have been continually in evidence, and these have caused gradual price recessions, near positions being slightly more affected than new crop months. Under ruling conditions we consider that commitments should be kept within close limits; with the trade demand running on present lines, a further decline is quite probable. On the other hand, any stimulating outside developments would disclose a strong technical position and result in a sharp reaction.

Upper Contract.—This market continues to be depressed through lack of sufficient trade support to neutralise the liquidation of stale "Bull" accounts; thus a gradual decline has been in progress throughout the week, and values have again lost ground in comparison with the American contract. The weakness has been even more marked in Alexandria; we understand that stocks of qualities at the other side, ranging from St. F.G.F. downwards, are moderately scarce, but supplies of the top grades plentiful, and these latter are evidently weighing heavily on the contract position. The offtake for cotton out of the local stock has slightly improved during the past few days; the movement, however, will have to extend materially if we are to revert to the healthy undertone of a few weeks ago.

Egyptian Spot.

The inquiry during the past week has not been in any way brisk, and yet in spite of this, and the fact that spot quotations have declined daily almost without exception, quite a good business has been done. Spinners appear to be slowly increasing the amount of their spot purchases, partly on account of the stiff prices ruling in Alexandria and partly because they are reluctant, under existing trade conditions, to commit themselves further ahead than is absolutely necessary. Owing to the narrowing of the differences on the futures board carrying Uppers no longer appears quite as attractive as it formerly did, and holders of stocks here have lately shown an inclination to meet the demand.

Sakels.—Quite a good inquiry has been in evidence for cotton at from pass to 150 on May contracts, but other qualities, both below and above this range, have been less popular this week.

Sudan Sakel.—A steady demand has continued and the cotton continues to move out of sight. Nevertheless, stocks are now accumulating, and except for the very top qualities, a good selection is available here. Shipments containing the medium qualities (SSS and SSSS) are now arriving. The basis has remained very firm.

Kassala Sakel.—This year's cotton is some of the best ever produced by this company, but the high prices asked are at present acting as a check on business.

Tokar Sakel.—This has proved a great disappointment, both in grade and (surprisingly) in staple. Spinners are showing no eagerness to acquire this cotton at current prices.

Uppers.—The usual steady, but this week somewhat sluggish, demand has continued. "Ten off to 10 on" has once again covered the bulk of the business, but here and there a contract has trickled through for cotton up to 50 on. Other qualities neglected.

Pilion.—In moderate request only, and principally for the lower qualities.

Nahda, Maarad, etc.—These have suffered from neglect.

C.i.f. business has been quiet, but forwardings last week were returned as 7,167 bales Egyptian and 2,600 bales Sudan. Estimated spot sales for the week, 2,300 bales Egyptian and 2,050 bales Sudan Sakel. Quotations of Sakel have been reduced 55 to 70 points; those of Upper 39 points, and those of Pilion 15 to 25 points (G.F. and F.G.F. unchanged). F.G.F. Sakel to-day, 18.30d. F.G.F. Upper to-day, 12.31d. F.G.F. Pilion to-day, 13.30d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended April 11, state:—

Since our last report fluctuations in the futures market have been more moderate than recently; the tendency at the close of the week was undecided. The week's summary of price movement is as follows:—Sakellaridis: May, 36.81 dollars, 0.25 dollars down; July, 37.18 dollars, 0.22 dollars down; November, 37.53 dollars, 0.03 dollars up; January, 37.68 dollars, 0.04 dollars down. Ashmouni: April, 23.23 dollars, 0.12 dollars down; June, 23.60 dollars, 0.12 dollars down; August, 23.78 dollars, 0.07 dollars down; October, 23.77 dollars, 0.12 dollars up; December, 24.09 dollars, 0.11 dollars down.

Sakel.—We have had a series of more or less featureless markets during the week. After a rather firm opening, prices receded slightly on some sales for speculative account and hedging against spot cotton, but the cheaper prices brought out a little commercial buying, under the influence of which most of the lost ground was regained. The report that short time in Lancashire will be extended for a further month was naturally not greeted with much satisfaction by our market. There cannot be any large positions open on the market, and speculators remain divided in opinion, part favouring the bear side and part the contrary. The demand from spinners this week has been rather poor; on the other hand, Sudan Sakel in Liverpool has attracted a little more interest than has been the case for the last two or three weeks. We are of the opinion that the market will continue to move round about present levels, for if the absence of any large business from spinners makes for a lower level, the present supply, especially of tenderable grades, is not of sufficient weight to exercise any real pressure on prices. The Sakel/Uppers straddle (May/June) this week stands at 1,321 points, against 1,334 points last week and 1,432 points at this time last year.

Uppers.—There is little or nothing new to report in this market, which has more or less followed the fluctuations of Sakel. We continue to have a very favourable opinion on the future course of prices of Uppers, as the interest of spinners in this variety from every consuming quarter of the world is far from flagging. The Ashmouni/

The Egyptian Government is to establish a Cotton Bureau, the organisation and direction of which will be under Mr. J. L. Craig, Financial Secretary to the Ministry of Finance.

American straddle (June/May) this week stands at 309 points, against 342 points last week and 881 points at this time last year.

Against the second April tender, dockets for 1,750 kantars were issued, making the amount tendered since the beginning of the month 13,500 kantars.

The week's receipts amount to 121,825 kantars, against exports 139,367 kantars; the stock in Alexandria stands at 3,019,405 kantars.

Spot.—Total sales this week amount to about 13,400 bales, of which we estimate 5,300 bales Sakellaridis, 7,000 bales Ashmouni and Zagora, 900 bales Pilion, and 200 bales other varieties.

Sakellaridis: The medium grades have been most in request, as has been the case for some weeks past, and it is not easy to find good style cotton in any large quantity. A fair business has been done in low grades, but above Fully Good Fair to Good the turnover has been very restricted. Spot differences remain more or less unchanged all round.

Ashmouni and Zagora: At the beginning of the week the demand slackened off somewhat, with a resulting easing in spot differences, but during the last two or three sessions buyers again came into the market and spot differences hardened to last week's levels. Grades round about Fully Good Fair are now becoming more difficult to buy, although short staple cotton in this range is still fairly plentiful. Practically no business has been done in the better grades, and low grades only show a very small turnover.

Pilion: There has been rather a better demand for this variety, covering all grades from Good Fair to Good, but spot differences have not altered.

Other Varieties: A very small business has been done in Nahda, Foudi, and Maarad.

Crop, 1929.—Weather conditions have again been variable, the

nights being often very cool. The crop in the Central and Southern Delta is consequently somewhat backward. Sowing has continued in the North Delta and the proportion of land which now remains unsown is insignificant.

The Oriental Gas Company announces an interim dividend of 3½ per cent., less tax.

The Roumanian Government has laid before the Chamber a Bill asking for a credit of 500,000,000 lei (£600,000) for the construction of new roads.

Bulgaria's exports of tobacco in the first two months of this year amounted to 4,152 tons of the value of 384 million leva, as against 5,932 tons and 554.1 millions in 1928.

Yugoslavia's output of minerals in 1928 was as follows (in tons):—Coal, 5,050,000; iron ore, 450,000; lead ore, 50,000; copper ore, 328,000; raw copper, 15,000.

The directors of the Dunlop Rubber Company, Ltd., announce for the year ended December 31, 1928, a dividend of 20 per cent. (against 25 per cent.) on ordinary shares after crediting trading account with £1,500,000 from reserves appropriated from profits in former years. The sum so credited is less than the company's losses consequent upon the removal of rubber restriction. The balance carried forward is £800,000 against £578,000. The general reserve, after crediting premium on shares, is £3,000,000, against £2,600,000.

Notes of the Week.

The Greek Senate.

After a lapse of sixty-one years Greece has returned to a bi-cameral system of government. The Senate instituted in the reign of King Otho was abolished in 1863; it was a nominated body, and its revival even on an elective basis was ruled out of court, not so much because objection was taken to the principle of a Second Chamber, as because experience had proved Greece's difficulty in selecting suitable members to form one. When the Constitution was revised in 1911 no strong body of opinion championed a return to the bi-cameral system; but in the draft Constitution of the Republic provision was made for an Upper Chamber, and its institution was voted by Parliament, only, however, in the face of considerable opposition. The recent senatorial elections were contested on a party basis, for M. Venizelos had declared that he would regard the results as an indication of the nation's attitude towards his Government and would resign, if his Liberal Party did not obtain a majority of seats. In the result over seventy Liberals were elected out of ninety-two members. The power of the Senate is strictly curtailed. It is intended primarily to be a revisionary body, but its value for this purpose, if it is merely to reproduce the composition of the lower House, must remain problematical. As its consent is necessary to the dissolution of the Chamber of Deputies by the President, its existence serves to strengthen the power of the Chamber in the State.

The Situation in Yugoslavia.

The main significance attaching to the presence in Bulgaria of Dr. Pavelitch, a former Croat deputy and an official of the Croat Federalist Party, arises from its possible effect on Yugoslav-Bulgarian relations. The Belgrade Government has, not unnaturally, taken exception to the action of the Bulgarian Government in allowing a political refugee to become the centre of anti-Yugoslav demonstrations; but, apart from this aspect of the matter, Dr. Pavelitch's activities would not seem to have much

bearing on the situation in Yugoslavia. They have, however, revealed the fact that the Dictatorship is exercising a strict control on the movements of Yugoslav subjects and has refused passports to all former Croat Deputies, Dr. Pavelitch being the only one who has succeeded in leaving the country, apparently by means of a hurried departure at the time of the establishment of the present régime. Circumstances invariably alter cases, and it may be that the general attitude of Opposition deputies in the Balkan Peninsula affords some excuse for the Belgrade Government's determination to run no risk of its intentions being misrepresented in other countries. On the other hand, there must be many prominent Yugoslavs, whether Deputies or not, who can show good cause for travelling abroad, without entertaining political or unpatriotic designs, and whose detention at home may be prejudicial not only to them personally, but also to the economic progress of the country. Moreover, all superfluous curtailment of personal liberty must be prejudicial in the long run to the régime imposing it. The general endorsement that greeted the Dictatorship and its early measures both inside and outside Yugoslavia was based largely on the practical common sense that appeared to inspire the Government's attempt to free the country from the consequences of politics run riot. It would be prejudicial to Yugoslav interests, if wider restrictions than the original purpose of the Dictatorship required were to be indefinitely enforced. Nothing is more likely to create misgiving abroad than the muzzling of all public opinion and the suppression of free movement for Yugoslav citizens. For this reason it might be better to run the risk of the denunciations of a Pavelitch than to retard the development of the country, which calls for the unhindered ingress and egress of its business men.

The Egyptian Regime.

Both in Yugoslavia and in Egypt justification for the suspension of parliamentary institutions was found in the hopeless deadlock to which these had reduced each country. Whether owing to the differences in the two

sets of conditions or because the Government in Egypt is really the more constitutionally minded, there can be no doubt that the latter régime has succeeded in applying its declared policy with far less dislocation of public and private life. It is also to be noticed that, whereas the Yugoslav Dictatorship shows no inclination to refer to the possibility of an early return to constitutional methods, Mahmoud Pasha rarely loses an opportunity of recording—with obvious sincerity—his desire to restore the normal functioning of Parliament. In a recent speech to a provincial gathering the Egyptian Prime Minister reverted to the subject, pointing out that, while governing was a great and heavy responsibility at any time, its most difficult form was when it was not supported by Parliament. He declared that his Government was not a party, but a national, Government, which had come into power in exceptional circumstances, and that its efforts would be directed to paving the way for a satisfactory constitutional life. This, he added, could be achieved only by combating factors of deceit and intimidation, by insuring liberty and by guaranteeing the freedom of elections, so that they should not take place under a régime of terror and so that freedom of opinion in the Parliament may be worthy of true democratic government, and not of demagoguery. The existing régime had been adopted only as a remedy for a bad state of affairs and would come to an end as soon as that bad state ended. In some quarters, particularly in Great Britain, there is a tendency to argue, on the basis of local conditions, that no circumstances can arise to justify the suspension of a Constitution. It is a facile doctrine, which obviates the trouble of trying to understand the situation that led to such a step or to gauge the sincerity of the attempt that is being made to restore a constitutional régime. In the case of Egypt there is good reason for supposing that the present Government, which, after all, contains members of the Liberal Constitutional Party, would welcome an early return to constitutionalism to enable it to deal with international matters that in the meantime have to remain in abeyance. In these circumstances the Opposition has it in its power to hasten or to retard the date of the resumption by Parliament of its duties. It will be of interest to see which course it adopts.

Italy and Turkey.

The tendency to attach importance to Tewfik Rushdi Bey's visit to Signor Mussolini is not unnatural, and it will certainly not be discouraged by either Turkey or Italy. For the Turks it is a source of considerable satisfaction that they have been able to link their Republican star with a Great Power constellation, and they are anxious that the significance of their friendship with Italy should not be lost either on Greece, in view of the protracted negotiations over the exchange of populations, or on France, with whom no settlement has yet been reached regarding frontier questions and the transfer of the Adana-Mersina railway. On the other hand, there are several reasons why undue importance should not be attached to the Rome meeting. A visit from the Turkish Foreign Minister was due in return for Signor Grandi's visit to Angora, and Turkey is now concerned with the negotiations of commercial treaties with Italy and other countries. At the same time the fixed resolve of the Ghazi not to recognise Italy's *protégé*, King Zogu of Albania, must serve to remind the Italian Government that there are limitations to its influence in Angora, and will prevent the Turks from imagining that they are sacrificing their independence if they allow Italy to play a leading part in bringing about lasting peace and friendly relations between Turkey and Greece.

Persia and Iraq.

The long-delayed recognition of Iraq by Persia is now an accomplished fact. It is a matter for general gratification. In the first place, the Shah of Persia is to be congratulated on having perceived the good intentions underlying the proposal to give to Iraq a uniform system of judicial administration, and for having at the earliest possible opportunity taken means to effect a *rapprochement*

with the Baghdad authorities; and in the second place, King Faisal of Iraq deserves similar congratulations for having followed up the Persian lead in the wisest possible manner. In large measure this consummation, the recognition of Iraq by Persia, which was officially accorded on April 25, is due to the efforts of the two monarchs. The constant endeavours of British authorities both in Iraq and in Persia should not, however, be overlooked, for it has been the persistent aim of Great Britain to bring the two countries closer together. A very irksome problem has now been solved, and there must be a general feeling of optimism in regard to the increasing contact of Persians and Iraqis. This development is worth noting even apart from its intrinsic importance, for it shows irrefutably that the statesmen of Persia can act independently, and are responsive to good intentions. Taken all round, this Perso-Iraqi *rapprochement* may be regarded as one of the most heartening signs in the Middle East at the present time. It is a distinct feather in the cap of the chief representatives of the countries concerned, Persia, Iraq and Great Britain.

Iraq's Neighbours.

Iraq now has the satisfaction of being at peace and on reasonably good terms with all her neighbours. With Turkey she now has excellent relations, although there is still much room for development in the commercial sphere; with Syria her frontier is not yet precisely defined, but that is a matter of little immediate importance; with Najd her present relations are infinitely better than they threatened to be a few months ago, when the question of the frontier posts raised in an acute form the nature—since demonstrated—of King Ibn Saoud's control over his outlying tribes; and with Persia she is now, it is to be hoped, on the happiest terms. The absence of Persian recognition and the absence of Persians from the pilgrimage to the Shiah Holy Places implied considerable material, as well as moral, loss to Iraq, whose dignity and whose sense of stability are rightly enhanced by this latest move of the Shah. Increased co-operation between the two countries is certainly to be looked for. A beginning has been made with the decision to allow the Junkers aeroplane service from Teheran to Qasr-i-Shirin to be prolonged to Baghdad. For other improvements of a similar nature there is ample scope. As the British representative remarked before the meeting of the Permanent Mandates Commission last November, when the subject of Perso-Iraqi relations was reviewed, the Iraq Government has already put forward several proposals for the closer co-operation of Persia with Iraq. It is absurd, for instance, that there should still exist no direct telegraphic communication between Baghdad and Teheran, all telegrams having to go *via* Bushire. Surely the Persian Government, now that it has recognised Iraq, will be willing that the two countries should be connected by a wire. Similarly the telephonic services between Baghdad and Teheran should be linked up. And it is scarcely conceivable that the Teheran Administration will any longer persist in its refusal to have a combined Customs post at the Iraqi-Perso frontier by Qasr-i-Shirin, for the convenience of passenger and goods traffic. Obviously the Baghdad-Khaniqin railway should be prolonged ten miles to meet the Persian frontier. In such practical developments as these there is ready opportunity for the manifestation of further good will.

The New Iraqi Cabinet.

The news is announced, just as we go to press, of the formation of a new Cabinet in Baghdad under the leadership of Taufiq Beg Suwaidi, who was Minister of Education in the Administration of Sir Abdul Muhsin Beg—who, it will be recalled, resigned last January, but who in deference to his King's wishes continued to act as Prime Minister. It is difficult at the moment to speculate upon the probable duration of the new Cabinet, which, by the way, retains in their same offices four men who were in the last Cabinet, but the formation of it, and particularly

the choice of Amin Beg Zaki as Minister of Defence in place of Nouri Pasha Said, would seem to indicate a significant break with what had been said to represent practically unanimous Iraqi opinion. We refer, of course, to the differences which had arisen between Great Britain and the Iraq Government on the question of Iraq's defence. So far as we can remember, Amin Beg Zaki is the first Minister of Defence definitely to reject Conscription as the solution of Iraq's problem in this connexion; he goes even further, and stipulates the continuance of British armed support to Iraq for an indefinite period. Whether his pronouncement in this respect—which more or less is an echo of British counsel on the question—represents a change in the attitude of King Faisal towards Conscription, and how far it is shared by Arab educated opinion in general, remain to be seen. At first sight, however, this new Cabinet, so long awaited, would appear strikingly to vindicate the British thesis on Iraq's major problem, and new hope will be generated that the whole Anglo-Iraqi Treaty will now be ratified.

The Kurds of Iraq.

There has been more than one sign during recent months that the Kurds of the northern liwas of Iraq have become a little anxious about their future under the Baghdad Government, and emphasis has been laid upon the privileges of autonomy in certain matters, which indeed, have always been accorded to them, but which were laid down authoritatively by the League of Nations Commission at the time when the future of Southern Kurdistan was in the balance. The report which we print elsewhere seems to be a fair example of the sort of spirit which is at present agitating these Iraqi Kurds, as the comment of *Al Shaab* is a fair indication of the general Arab attitude towards "the Scotsmen of Iraq." No one can wish, however, that the Kurds and the Arabs of Iraq should drift farther apart. It is not sufficient to say that everything that can be done for the Kurds is being done. That may be so in theory, but the fact remains that the Iraqi Kurd is apt to feel that he is "out of it." The remedying of this state of affairs lies largely in the hands of the majority, namely the Arabs. More might be done by Baghdadis in authority to convince the Iraqi Kurds that absorption does not necessarily mean domination; the personal relation counts for so much in these things. To be sure, the Kurds are aware of the material advantages which lie to their hands in Arab Iraq, and it is not without significance that Arabic is a compulsory subject in Kurdish schools (though it is a mistake to suppose that it is a language of instruction, except in certain higher classes). At the same time, you do not divest the Kurd of his essential racial identity by giving him the means of material prosperity; and if he be neglected, he is apt to appeal to higher or outside authority—with possibly unfortunate results on those from whom he appeals. The Kurds are really too valuable an element in the Iraq State to be allowed to become *difficiles*; let not the Arabs be content with saying: "What more can these fellows want?" but let them examine the Kurdish problem afresh, and discover precisely why the hoped-for amalgamation has suffered a setback.

INDIAN NOTES.

The Return of the Commission.

After seven crowded months of travel and inquiry Sir John Simon and his colleagues have returned to this country and have received a deservedly cordial welcome from all sections of their fellow countrymen. The task to which they set their hands over eighteen months ago now enters upon its second and final stage, and the first part has been discharged with exemplary patience, courtesy and skill. Although the Prime Minister's hope that "the opinion of every man of good will, Indian or British, who has anything to contribute to the very difficult

problem of India's future shall be accessible to the Commission and be given the fullest weight in its conclusions" is destined, in part at least, to remain unfulfilled, the Commission has undoubtedly enjoyed the wholehearted co-operation of the majority of the most important sections of Indian society. While Sir John Simon would be the first to admit and has publicly acknowledged the invaluable assistance which the Commission has received throughout the inquiry in all quarters, the chief credit for the results already attained must be given to the Commissioners themselves. Their Chairman has handled many a difficult situation, both inside and without the "joint free conference," with conspicuous success and has, if possible, strengthened his high reputation for judgment, tact and force of character. The same may equally be said of Lord Burnham upon whom, until his regrettable breakdown, fell the heavy burden of presiding over the sittings on the rare occasions when Sir John Simon was unable to be present. In fact, all the members, and not the least the representatives of the Labour Party, have thoroughly justified their appointment and given the Chairman the most energetic and loyal support in the discharge of their onerous and responsible task. Nor would it be fair or proper to withhold an, if possible, even greater meed of praise for the example and conduct of Sir Sankaran Nair and his colleagues of the Indian Central Committee, to whom a most cordial welcome is extended.

Mr. Sastri's Mission.

The departure of Mr. Srinivasa Sastri for East Africa, at the special request of the Viceroy, in order to advise and assist Sir Samuel Wilson in the preliminary discussions on the Hilton Young Commission's report, has been received with widespread satisfaction in all three countries. No side of the East African question needs more statesmanlike handling than the position of the Indian community in Kenya, and no one is better qualified to ensure that the forthcoming negotiations are conducted on both sides in a spirit of mutual forbearance and reason than the late Agent-General of the Government of India in South Africa. For Mr. Sastri is no stranger to the situation with which he will be called upon to deal. After the Imperial Conference of 1921, and the Washington Conference on Disarmament, at which he represented India, he visited the Dominions as the representative of the Government of India to press for the release of Indian residents from certain social and political disabilities, a mission which, discharged with consummate tact and discretion, has contributed greatly to the strengthening of the Imperial connexion. His more recent services as a member of the

A BULGARIAN BLUNDER.

Once again two Balkan peoples have been set by the ears owing to the failure of a Government to resist the temptation of administering pinpricks for no other purpose than to gratify time-honoured spite. Dr. Ante Pavelitch, a former Croat Deputy and an official of the Croat Federalist Party, who appears to have been living in Vienna since the establishment of the Dictatorship in Yugoslavia, arrived in Bulgaria on April 19 in response to an invitation from the National Committee of the Macedonian Refugees in Bulgaria. Both at Vidin and in Sofia he was received with noisy demonstrations—the semi-official organ of the Bulgarian Government states, with no hint of disapproval, that he was "*l'objet d'ovations frénétiques*"—and in the capital he delivered a speech which, with its references to a common front of Croats and Bulgarian Macedonians against the Government of Belgrade, could not fail to cause offence to the present régime in Yugoslavia. The immediate result has been a protest from the Yugoslav Government to the Bulgarian Government; a tardy apology from the latter in which it expresses regret for the "undesirable developments," adding that it had been surprised by the course of events and disapproved of them; and, inevitably, a fresh outburst of mutual recrimination between the Yugoslav and the Bulgarian Press. The former is now able to state that in countenancing anti-Yugoslav demonstrations Bulgaria has proved once again that she does not sincerely desire to live on good terms with Yugoslavia, and has confirmed Bulgarian responsibility for the present unsettled relations, which harm every Balkan State and keep Europe in a condition of uncertainty. Thus the gradual improvement in Yugoslav-Balkan relations since the inauguration of the Yugoslav Dictatorship, which had found practical expression in the Pirot Conference and the immediate ratification of its Protocol by Yugoslavia, has received a set-back, and expressions of popular resentment in each country must interpose delay in the next step towards a comprehensive *rapprochement*.

On the present occasion there can be no question as to where the whole responsibility for the "incident" rests. The Bulgarian Government has committed a grave blunder, for which its apology to the Yugoslav Government cannot be regarded as offering adequate amends. Under the conditions now existing in Yugoslavia, no prominent Yugoslav politician ought to have been given a Bulgarian visa without reference to the Sofia authorities. If the latter did not feel called upon to withhold from Dr. Pavelitch permission to enter Bulgaria, they ought to have made the grant of a visa conditional upon a promise by Dr. Pavelitch in view of his political history to abstain from all public utterances and political activity. The

cause of good neighbourly relations between the two countries would, therefore, seem to require something more than a promise to prevent future demonstrations or to interfere in the case of an undesirable speech. It would have been better to show a genuine resolve to prevent any possibility of the recurrence of regrettable incidents by giving Dr. Pavelitch notice to leave Bulgaria within twenty-four hours, unless he undertook to abstain from any form of political activity during his stay in the country. The fact that he had been invited by the National Committee of Macedonian Refugees was sufficient to lend a political, and, therefore, undesirable, aspect to his visit, and the Bulgarian Government must have realised that it was playing with fire in allowing him complete freedom of action and to be the object of public demonstrations. No one supposes that the Government had any hand in Dr. Pavelitch's visit and subsequent indiscretions, but its attitude of aloofness towards his arrival exposes it to the charge that it made no attempt to resist the temptation to pay back the Yugoslavs in their own coin. Bulgaria has suffered in the past from the right of asylum accorded on Yugoslav territory to her political refugees, and here was an opportunity of welcoming a Yugoslav malcontent. The fact that the present régime in Belgrade is the only one since the Armistice to give practical evidence of a desire to live on better terms with Bulgaria seems to have carried no weight with the Sofia Government. Instead of seizing an occasion for placing the Yugoslav people under an obligation by refusing permission to Dr. Pavelitch to use Bulgarian soil for public denunciation of, and ostentatious intriguing against, the Belgrade Government, it turned a blind eye to proceedings which could only result as they did, regardless of the fact that it was thereby weakening its own position. The failure to protect Bulgaria against Dr. Pavelitch and then the unwillingness to make adequate amends for the mission are calculated to shake the confidence of those friends of Bulgaria who have been inclined to see in the attitude of successive Yugoslav Governments the major responsibility for the unsatisfactory nature of the relations between the two countries.

It is significant of the wrong-headed line of reasoning that is brought to bear on the subject of Bulgaria's relations with her neighbours that the Sofia Press should ask how Yugoslavia can protest against the utterances of Dr. Pavelitch when she has been guilty of housing Bulgarian political refugees who have used her soil for launching attacks on Bulgaria. The answer is, of course, that two wrongs do not make a right, and that the Yugoslavs see no more incongruity in attacking the Bulgarians for allowing anti-Yugoslav demonstrations than the Bulgarians do in proceeding to adopt against Yugoslavia a line of policy of which, when it was adopted by the Yugoslavs against them, they have complained for the last five or six years. If new relationships are to be introduced in the Balkan Peninsula one country has to take the first step, and an ideal opportunity of placing herself on a new footing with Yugoslavia offered itself to Bulgaria on this occasion. That she has failed to take advantage of it invalidates her claim to be above all others, a single-minded champion of the cause of Balkan peace. Even if a sense of the fitness of things were lacking, it would have been thought that self-interest might have prompted the Sofia Government to act otherwise. Neither Dr. Pavelitch nor his denunciation of the Belgrade Dictatorship could do Bulgaria any good; on the other hand, a Yugoslav protest in Sofia and a Bulgarian apology in Belgrade are derogatory in the present instance, where there has clearly been a breach of the comity of nations. In seeking to pay off old scores against its neighbour the Bulgarian Government could hardly have expected to do any serious damage to Yugoslavia, but it has courted the fate of "losing face" in Europe, where it was hoped that an end had been set to the petty-minded spite that has been so largely responsible for the troubles in the Peninsula.

*The Near and Middle East

From Our Own Correspondents.

Belgrade, April 25.

Storms on the Horizon.

Rain from a clear sky would seem to be a Balkan speciality; for, whenever the political heavens seem particularly blue, squalls are to be expected. Thus it is that, after the apparently successful attempts of the new Yugoslav Government to clear up all differences with its neighbours and replace tense suspicion by friendship, a series of unexpected disputes arises to destroy much of the good work accomplished. It is suggested that Italy, which was responsible, at least, for the beginning of these storms, believing mistakenly that Balkan peace is against her interests and that she can divide and rule the Balkan States, deliberately provoked the trouble, in order to keep the Balkan States at loggerheads. It may, of course, be pure coincidence that the sudden attack on Yugoslavia in the closely censored Italian Press, the visit of Signor Grandi to Albania and of Dr. Pavelitch to Sofia should have followed so closely one upon the other, but it seems to lend colour to the widely-held belief that there is a strong connexion between Italy and the activities of the Bulgarian *komitajis*, the Albanian Kossovo Committee, the few remaining Montenegrin rebels, and all other groups which can be found in the countries surrounding Yugoslavia that desires her downfall.

The *Giornale d'Italia's* "Revelations!"

At a moment when Signor Galli, Italian Minister in Belgrade, had been congratulating himself on a distinct improvement in Italo-Yugoslav relations a sudden and quite unprovoked attack was made in the *Giornale d'Italia* on Yugoslavia, which was accused of plotting to attack all its neighbours without a declaration of war and preparing on all its frontiers *komitaji* organisations, secret services, terrorist gangs, etc., at enormous cost under the direct supervision of the Chief of the General Staff. "Documents" were produced to prove the truth of these allegations. The documents are now stated to have been taken from a propaganda book issued by the Awakening Magyars in 1925 and then proved to be completely false by the Yugoslav Government, and the whole case made out in the *Giornale d'Italia* is condemned as false and fantastic. While the European Press has paid little serious attention to these Italian alarms the Yugoslav Press was indignant and asked what could be the meaning of such violent attacks in an official newspaper. They pointed out the similarity of Italy's new tactics and those employed by the Austrians before the War, when preparing public opinion in Europe for an attack on the independence of one of the Balkan States and the curious coincidence of these attacks with a visit of Signor Grandi to Tirana.

Signor Grandi's official visit to the Albanian capital was the occasion of many banquets and speeches, speeches in which much reference was made to Albania's great future and rapid expansion with the help of her Italian ally.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

Yugoslav suspicions were further aroused by a recrudescence of Bulgarian propaganda, tolerated by the Albanian Government, among the Slav population of Albania. It is rumoured also that Signor Grandi proposes shortly to visit Sofia. These coincident movements, together with the usual mass of spring rumours, have created a widespread belief that Italy is planning and financing a great offensive of Bulgarian and Albanian *komitajis* against Serbian Macedonia.

The Bulgarian Incident.

This belief has been strengthened by the visit to Sofia as the guests of the Bulgarian Macedonian Committee of Dr. Pavelitch and M. Perchetz, Croatian Frankovatz, who fled the country without any apparent reason immediately after the *coup d'état* of January 6. This visit was made the occasion of many speeches against Yugoslavia and the town was placarded with anti-Yugoslav notices. Offensive articles appeared in the Press and plans were made in public meetings for action which should break up the present Yugoslavia and "set free" the Macedonian and Croat peoples. The Croatian newspapers hastened to point out that Dr. Pavelitch had been one of Stephen Raditch's greatest opponents and that he had no following in the country and could in no way claim to speak for the Croat people. Dr. Pavelitch and M. Perchetz have both been charged, under the Defence of the Realm Act, with high treason and will be tried *in absentia*. But the Belgrade Government was not disturbed by the action of Dr. Pavelitch as much as it was disappointed at the attitude of the Bulgarian Government, in allowing such hostile demonstrations to be made publicly without attempting to prevent them or even troubling publicly to dissociate itself from them. A protest was made through M. Neshitch and in reply M. Bouroff expressed his personal regret at the incidents, but said that his Government could not prevent such peaceful demonstrations, prepared by their political opponents to injure them, and could not be expected to refuse to receive political refugees. Pointing out that they had always been most correct in refusing to allow the Bulgarian Agrarian Refugees in Yugoslavia to speak at public meetings or to take public action of any sort against Bulgaria, the Yugoslav Government expressed itself dissatisfied with this reply and demanded an answer from the Bulgarian Government as a whole. To-day the Bulgarian Minister in Belgrade called on General Zivkovitch and Dr. Kumanudi and in the name of his Government expressed regret for the disagreeable and undesirable incidents which occurred during the visit of Dr. Pavelitch to Sofia, which had surprised them and which they strongly condemned, and promised that they would frustrate future attempts to renew such demonstrations.

In connexion with the trial of Dr. Pavelitch for high treason *Vreme* states to-day that it is said in Sofia that Dr. Pavelitch met M. Stanisheff, President of the Macedonian Committee, in Vienna and that they agreed to found there an organisation similar to that of the Macedonian Committee for terrorist action in Croatia. It is stated that Toni Shlegel, the Zagreb editor who was

murdered recently, was the first of the victims of this organisation, which intends to try to get funds from Balkan emigrants in America to widen its action and to publish newspapers in Geneva, Vienna and Sofia.

The Government Axe.

The Government relentlessly continues its policy of reform and economy. A few days ago fifty ex-Ministers, who had been drawing full pay as Ministers at his Majesty's disposal, were pensioned off, or, if they had not served long enough as active Ministers to earn a pension, dismissed. Even the Army is undergoing the same weeding out, and thirty-seven generals, including the Chief of the General Staff, Divisional General Peshitch, have been pensioned, to make way for younger and more efficient officers on a lower scale of pay. Plans have also been completed for the abolition of many of the unnecessary departments in the various Ministries, many of which were created merely to find jobs for political friends. Departments are to be limited to from three to nine according to the needs of efficient administration, and great savings will thus be accomplished. At the same time the statistical section of all Ministries is being transferred to the Presidency of the Government (Prime Minister's office), so that the Cabinet will have at its disposal a complete set of statistics and the latest possible information from all Ministries. The Central Press Bureau for the distribution of information to the Press will also be established in the Presidency.

Cairo, April 20.

The Air Mail.

The Imperial Airways and the Italian Company, who are operating the mail service between Genoa and Alexandria, are still in negotiation with the Egyptian Government in regard to the agreement which they must make with the latter in the matter of the organisation of the mail service. An agreement already exists between Imperial Airways and the Egyptian Government on the Baghdad and Basrah mail service, and all that will be necessary will be to amend this agreement so as to cover the use of Alexandria as terminus of the Genoa-Egypt service and Aboukir as that of the Far Eastern service.

It is now a settled matter that the mail to and from India will not pass through Heliopolis, as was originally arranged. The sea-board is obviously, from the strategic as well as the economic standpoint, where the junction between sea and land plane should be made, and Alexandria and Aboukir will continue to be used as the termini respectively of the Western and Eastern sections of the Indian air-mail route until the amphibious aerodrome is ready at Dekheila, where the transfer will be made directly on the spot from sea to land plane and *vice versa*. It is expected that Dekheila will be ready in two years' time, when it will constitute one of the most important air-junctions of the world.

The City of Cairo.

The Egyptian Government has just brought into being a Town Council for Cairo, composed of the Under-Secretary of State for Public Works as President, the Governor of Cairo, the Assistant-Under-Secretary for

Finance, the Directors-General of the Tanzim, Public Buildings and Drainage Departments, the Commandant of Police, the Director of the Arab Museum, the head of the Municipalities Department, the Director of the Department of Fine Arts, the Chief Engineer of the Railways, the Sanitary Inspector of Cairo and four notables. This Council must be consulted before any decision is taken in regard to sanitation, buildings, town planning and also the budgetary proposals of the Departments dealing with such matters. It will, in fact, have all the attributions of a Municipality except that it will have no taxation or executive powers.

The decision is a step in the right direction, since it will serve to co-ordinate the work of the various Departments concerned, which have hitherto acted quite independently of one another and at times have given rise to confusion, unnecessary expense and irreparable damage. One cannot help feeling, however, that, as a body by whose opinions presumably the Ministry of Public Works will be guided in its policy in regard to the development of the City of Cairo, it is too big, and that probably more satisfactory results would have been obtained from a commission of less ambitious and less unwieldy proportions.

Incidentally, while the creation of this commission cannot fail to meet with general approval, since it fills a long-needed want in the matter of co-ordination, one is constrained to think that Government Departments are overdoing things in the matter of committees and sub-committees. Nowadays, no matter what the question at issue, the only way of solving it seems to be by the appointment of a committee or sub-committee to report. And as a result of this practice, the time of some officials, who should be occupying themselves with important executive work, is entirely taken up with committees. The most striking example is the case of the Under-Secretary of State for Finance, who, it is stated, sits on over thirty committees. Obviously, able and capable man though he is, it must be a physical impossibility for him to pull his proper weight on each of these committees, let alone attend to his executive duties, and the same applies in varying respects to all the other Government officials. It is not surprising that there is much complaint of delays in dealing with matters which normally should be decided by the executive officer himself, but responsibility in regard to which is nowadays passed on to committees.

The Royal Horticultural Society.

The season may be regarded as definitely concluded with the closing of the Semiramis Hotel, which has now taken place. The last event of any importance to be recorded at that hotel was the annual Rose Show of the Royal Horticultural Society, which was held on April 13. It was opened by Lady Lloyd, who left Cairo in the evening with her son, the Hon. David Lloyd, on a short visit to Jerusalem. The show itself revealed a great extension of activity amongst exhibitors, but the display of roses was, in quality, not as good as in previous years. On the other hand, the annuals, which always form a part of this show, were better than usual. In any case both the attendance and the size of the show indicate the interest taken nowadays in such matters, which is a tribute to the painstaking perseverance of those who direct the destinies of the Royal Horticultural Society.

THE HIJAZ.

Jidda, April 11.

Affairs in Najd.

For many years now Faisal al Dawish and Sultan ibn Bijad have been the bogey-men of the Wahhabi movement, names of terror to the timid of all neighbouring lands; and, to judge by newspaper reports, they often appeared simultaneously in two places hundreds of miles apart, such was their magic reputation. And there was reason for the terror in which they were held, for they were doughty

warriors of the old-fashion, of the days of chivalry, and were always in the forefront of battle with a large tale of scalps to their credit. But they were the subordinates of one greater than themselves, and that is a fact which both the public and they themselves seem latterly to have forgotten. They both in the past have faithfully served their master, who is not one to forget good service, and who did, indeed, load them with gifts and honours. Their master has patiently watched the devil claim them for his own with evil promptings of their own importance. He had to realise too that the cause of their growing intransigence was one with which he sympathised, for King Ibn Saud takes precisely the same view of the forts on the Iraq frontier as they did and do. He could not, however, allow them to dictate the manner in which the problem should be tackled, or the policy which he should follow. In assembled conference he explained his policy and in conference none dared to challenge it; but Faisal and Sultan ventured to show their personal disapproval in another manner. If their King would not take steps they thought necessary, they would do it for him; and they prepared to do so by collecting a force of malcontents ready for any venture promising loot. Again the King forbore, and sent messengers inviting them to submit their grievance to the religious Courts. A second time he did the same. The third time he struck, and he never strikes but he strikes hard. Two hours of battle sufficed, at the end of which Faisal was carried off the field of Sibilla, near Zilfi, to Artawiya, seriously wounded; one of his sons, Bandar, was killed with a number of other rebels; and the other son, Abdul Aziz, fled with Sultan ibn Bijad to temporary shelter at Artawiya, whence the following day they sent in their women and children to intercede with their king. A pardon was granted on condition of the reference of the rebels' case to a religious Court, and the two leaders were ordered to proceed at once to Shaqra or Riyadh, to surrender their persons to the local authorities. It is improbable that

they will ever again be heard of as disturbers of the peace. And the friendly presence of Sir Gilbert Clayton at Baghdad has evoked a signal gesture of friendliness from the King of Najd, who is now free to return to the Hijaz, and is expected to arrive *via* Madina about April 25. The Amir Saoud, the Heir Apparent, will accompany him.

International Postal Conference in London.

Shaikh Hafidh Wahba, Minister of Education in the Hijaz Government and General Adviser to the King, left Jidda to-day to attend the Postal Conference to be held in London in May. He is accompanied by a representative of the Postal Department here, and by a Secretary. Shaikh Hafidh is a well-known Egyptian Nationalist, who took a prominent part in the movement a decade ago and who since 1923 has been in the service of King Ibn Saud. He has thus followed the fortunes of his master through the critical period which witnessed the establishment of his ascendancy over a great part of Arabia. He also played a prominent part in the negotiations at Jidda with the various missions conducted by Sir Gilbert Clayton. He is expected to arrive in London on May 4, and his presence there will doubtless provide him with many opportunities of explaining the true state of affairs in the Hijaz and Najd to British circles, official and unofficial, which are interested in such matters. He will be residing at the Hyde Park Hotel, and is expected to remain in England several months.

French Representation at Jidda.

News has just been received of the departure from Beyrouth on the French battleship Baccarat of M. Maigret, who was formerly French representative at Jidda. He is due to arrive here on April 23 and his appointment would seem to indicate an intention on the part of the French Government to raise the status of its representation here to that of a Consulate-General. On such a decision the French Government is to be heartily

congratulated, and it is to be hoped that it will derive no little advantage from the consultations it will inevitably have with King Ibn Saoud on Arabian affairs in general, and on Syrian affairs in particular. A satisfactory solution of the Syrian problem may yet be found at Jidda. It is also to be hoped that the British Government will not any longer delay in taking the hint offered in a previous letter regarding the improvement of the status of its representative here. Meanwhile we have the arrival of a second Vice-Consul here, Mr. Cook from Tetuan. We now seem to have a Consul, four Vice-Consuls (of whom two are Indians) and a pro-Consul—too many guns, but all of small calibre for the size of the ship. A change of status surely cannot be much longer delayed.

The Pilgrimage.

There is still little definite news of the numbers of pilgrims to be expected from India and Egypt, and the total number already in the country from all sources does not exceed 40,000. Trade is consequently somewhat dull, and the optimists are already beginning to think of next year. Meanwhile the summer has just begun, and we have had our first experience of maximum temperatures over the 90 degrees mark with minima of 77 almost daily. These are, of course, Jidda temperatures, and Mecca has been much hotter. In the five towns of Mecca, Madina, Jidda, Taif, and Yanbu during the last week of March there were 21 deaths from smallpox and the same number from dysentery, while deaths from ordinary causes numbered 298, of which 193 were children. A good deal of vaccination and inoculation is being done in the various hospitals. An effort is also being made to plant trees in the streets of Jidda, but lack of water is an obstacle to arboriculture in these parts.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 11.

The Assembly Bombs.

The Legislative Assembly has certainly been the point in India in the fiercest light this week. On Monday two bombs were thrown and pistol shots were fired from the Visitors' Gallery. Fortunately no one was killed; those injured were injured in such non-vital parts as arms and thighs; but the intention of the bombers was doubtless to kill right and left, and—what are the members to think of it all? What are we all to think of it? The Assembly had had the Trade Disputes Bill under consideration; had finished with it, and the House was crowded with members and visitors; for the President was to give his ruling on the Public Safety Bill. Sir John Simon was one of those present in the President's Gallery. Then, as if someone had said that two bombs and some pistol shots would be better arguments for proceeding with the Public Safety Bill than any of those that the Government had been able to produce, and as if speaking of the devil does make the devil appear, the bombs were thrown and the pistol shots were fired. The Assembly has stood adjourned since Monday. It will meet to-day, when the President, it is reported, will move a resolution condemning the outrage, expressing sympathy with those injured and gratification at the providential escape of the other members of the House. Then the House, a little more sober in its mind no doubt, will pass to other matters. And let us pass too. Monday's crime is not really an argument for or against anything. Some may say: "That settles it; India is in no state to be given self-government." It does not really settle anything.

Bad Political Capital.

Men are under a strong temptation to make political capital out of anything that happens. It is often very bad capital. The only thing really worth saying about the Assembly crime (just to say one thing before I pass on myself) is that we must be on our guard against the

temptation to make bad political capital out of it. Such capital as some Anglo-Indian newspapers are trying to make. Under the caption "Armed Coercion," one writes: "If public men in India really desire to help the Government to suppress the unsocial movement which produced Monday's crime, they should at once offer to co-operate with the Government in any measure they may find necessary to achieve that result. The silence of the Opposition leaders on this matter is not the least deplorable phase of this unhappy business." That is bad political capital. What the paper inaccurately calls an "unsocial movement" is the movement of which the Opposition leaders are the leaders on its sane side. In any great political movement the bad side of human nature will come uppermost in moments.

Afghanistan and Neutrality.

The greatest care is being exercised to preserve India in her position of neutrality *vis-à-vis* Afghanistan. How delicate and difficult a matter it is, however, and how many dangers there are to guard against, is shown in the latest official *communiqué* on the subject. Care has to be taken that our frontier districts are not used as bases by any of the contending parties, and that our frontier tribes should not be embroiled. No British subjects are to be allowed to cross the frontier into Afghanistan. All Afghan combatants seeking a temporary refuge in India have to be disarmed, and they must return to Afghanistan within a reasonable time. The movements of ordinary Afghan traders, it has been decided, should be unrestricted, but the entry into India of high personages likely to want to settle in India as political refugees has had to be discouraged, though transit is given freely for a direct journey to a foreign destination.

The Banking Inquiry.

If the proposed banking inquiry in India is not fruitful, it will not be because it was set about lightly. The *Pioneer* on Monday published a letter on the subject from the Government of India to the Local Governments five columns long. It is proposed to entrust the inquiry, not to one body, but to a number. There will be a Central Committee, a number of Provincial Committees, and a final reference to a number of non-Indian experts, say, three or four, chosen by the Government of India either from England or from other countries with well-developed systems of rural credit and industrial banking. It is proposed that the Central Committee should meet first in May, and that its first work should be to consider a memorandum laying down in detail the heads of the inquiry to be undertaken by the Provincial Committees. The actual inquiry, it is hoped, will begin before August, and that in ten months it should be ripe for the reference to the non-Indian experts.

Social Reform.

The social reform movement in India is far from being the thing of yesterday that many people think it is. There are even some who think that it was Miss Mayo's "Mother India," or the feeling evoked by that book, that brought it into existence, and these same people seem to be afraid lest Miss Mayo's new book should kill it. The social reform movement is at least half a century old. If not much ground has been covered, it may well be, as an Indian writer has just put it, "because of the excessive zeal of the reformers to break away from the past, unmindful of the Hindu heritage for the preservation of which the President of the Hindu Mahasabha Conference at Surat put in such a strong word." One would warn the National Union of Societies for Equal Citizenship in England, which is reported to be about to embark on a survey of the position of women in India, that a civilisation does not take this or that shape after centuries without there being strong forces to mould it. A civilisation is the adjustment of human beings to the conditions of life where they have to live it. It may theoretically be better to strive and cry, but in a land made for lotus-eaters, only lotus-eaters will be happy enough to survive.

THE KINGDOM OF NEPAL.

BY BRIGADIER-GENERAL THE HON. C. G. BRUCE,
C.B., M.V.O.

Few people realise that there still remains a purely Hindu State buried in the Himalayas and although it may be described as situated in the sub-Continent of India, it is not wholly of that continent, either racially or by religion. And few people realise also, even among all those Englishmen who spend their lives in India, that the hill state of Nepal is such as I have described it. Although connected politically by most friendly bonds with the British Empire, it is a kingdom absolutely and entirely independent and self-contained.

It occupies a stretch of no less than 500 miles of the central Himalayas, its southern boundaries marching with Bengal and the United Provinces, and its Northern boundary with Tibet. There cannot be any country in the world which contains in itself such extraordinary contrasts, either of climate or of fauna and flora. In fact, of the greatest altitudes measured on the earth's surface, a very considerable number are contained in the Nepal Himalayas, including the greatest of all, Mount Everest.

But, after all, the greatest interest in the Kingdom lies in its inhabitants. The term, Kingdom of Nepal, includes the long stretch that I have mentioned, 500 miles in extent, its eastern boundary being the Singalela Ridge which divides the British territory of Sikkim from Nepal on the east and the Maha Kali River, forming the boundary between the Nepal Kingdom and the British District of Kumaon on the west. It is nowhere broader in its whole length than 170 miles, and probably the average is not more than 140 miles.

This stretch of country is known as the Kingdom of Nepal, but the term Nepal has always, through the centuries, been applied to that small valley some 17 miles long by 7 miles broad in which is situated the capital, Khatmandu, which is the seat of the Government and where the British Envoy also resides.

Wild and barbarous as all the hill country was until about 150 years ago, the history of this Nepal Valley dates back in contrast for an immense period. Its history is lost in the dim past, but it is almost certain that there was even in the time of Buddha, circa 560 B.C., already an established civilisation in that Valley, and beyond that we know, as an historical fact, that the great Emperor Asoka himself visited Nepal and was the greatest Buddhist missionary of his time. Though Hinduism was already established in that Valley, Asoka introduced, as a living faith, the creed of Gautama Buddha, and it may be said that even to this day, although Nepal poses as one of the last strongholds of orthodox Hinduism, Hinduism and Buddhism have thrived side by side.

For many, many centuries, the whole of the civilisation—in fact, the only real culture of this part of the mountains—took its origin from the Nepal Valley and from the Mongolian race who inhabited it, a race known as the Newars.

The Valley itself is one of very vivid interest. Its three great cities of Khatmandu, Patan, and Bhatgaon, are to this day almost unique in their interest. There one finds towns which show a very intensive civilisation of a strange type, bearing no doubt a certain relation in architecture to the ancient religious art of India, but also very clearly striking quite a different note, for the whole outlook on life, the appearance, not only of the buildings, but the natural architecture of the country and also of the inhabitants, is as strange and different from anything in India as it is possible to conceive. The first note that is struck is a Chinese note. The pagoda-like structures of all the ancient temples, and the architecture generally, are strangely reminiscent of China and of Chinese influence.

The modern history of Nepal is in its way a great romance. This Newar race, in whose hands have always lain the whole arts and crafts and culture of Nepal, is even to this day predominant in the valley, but it is now a long time since the Newar influence in the government

of Nepal has gone. For during many, many centuries there was gradually being formed throughout the mountains a race, which, although it spread right through the Himalayas and their foothills away off into Kashmir, and began on very broad lines, consisting of a mixture of the better types of the Aryan inhabitants of India and the hillmen which formed its most virile branch in this portion of the Himalayas. For here the best blood of the Brahman and Rajput classes in India intermingled with the Mongolian clans which had settled in the mountains, traversing the Himalayas from the north and from the east on to the southern slopes of the main Himalayan chain.

Thus in the course of centuries grew up a mixed warrior class which now forms the dominating race throughout the hills, and the romance of the Nepal Kingdom is the rise of the most worthy representative of this mixed race to power, and the establishment of the Gurkha Kingdom in Nepal. For this mixed race, who occupied this portion of the Himalayas, took to themselves the name of Gurkhali, or followers of the King of Gurkha, when the King of that same diminutive kingdom issued from his mountain fastness and invaded and conquered the valley of Nepal.

This warrior king was called Prithwi Narain Shah, the King of the little mountain State called Gurkha, having as his subjects many of his own mixed clan, as before stated, and numerous pure Mongolian hillmen of different tribes and classes. To all of these he gave the name of Gurkhali, or follower of the King of Gurkha, and during the course of time, as he conquered either by arms or politics, the many numerous and analogous small mountain kingdoms, he gave to the also the same title of Gurkhali.

When Prithwi Narain was strong enough, he declared war against the Newar kings of the central valley, the hub of the whole system, and after fighting with various results for twenty years, established himself as the one great over-lord of the Nepal Valley and of its riches and resources. A man of any capacity or genius placed in such a position had in front of him the possibility of acquiring the whole hill country.

Prithwi Narain was a man of great ambition, and, in fact, it is fairly clear that he and his successors were men of considerable vision as well. They were able to organise, for instance, their wild hillmen into the semblance of an army, and took for their model the troops of the John Company already established in India. They had undoubtedly profited by the semi-Europeanisation of some of the native States, and so, by about 1793, the Nepal army was considered to be already in a state to carry out the ambitious schemes of its rulers.

By that time the new rulers of Nepal had acquired nearly all the hill country west of Kumaon and Garhwal, and had also pushed up into Sikkim; on the way thither conquering and absorbing the eastern Mongolian tribes and their lands, who were also allowed to call themselves, and join in as, followers of the King of Gurkha.

In 1793, however, the ambitious upstarts then ruling in Nepal, thought themselves capable of tackling the Chinese Empire and its dependents. They invaded Tibet, advancing as far into it as the banks of the Tsan-po but were finally driven back by a Chinese-Tibetan army who dictated terms to the Gurkhali within a day's march of Khatmandu, luckily for themselves completing this treaty before the winter snows cut them off from their retreat via the Kuti and Kerong passes.

The Gurkhalis' ambitions were, however, even by now not satisfied, and their conquests of the west took them past Simla and right up to the Kangra Valley and almost to the Kashmir border, a very attenuated outpost, however, and soon the Sikhs, with whom they also came to loggerheads, drove them back.

The ruling classes, who had so quickly risen from a state of semi-barbarism to a very considerable power, suffered dreadfully from over-conceit, and the many setbacks which so undeveloped a nation and government

naturally received, did not prevent them from an aggressive outlook towards the Indian Government, which culminated in a declaration of war in 1814.

For two years the war waged with fluctuating results, until General Ochterloney brought it to a conclusion at the Battle of Bichia-Koh, after which the Treaty of Segowlie was signed, which Treaty has been the basis of all the good feeling between Nepal and the British Government ever since.

(To be continued.)

THE STATUTORY COMMISSION'S RETURN.

Sir John Simon and the members of the Statutory Commission, reached London on Friday on their return from their second and final tour. The Commissioners, who were accompanied by Sir Sankaran Nair, Chairman of the Indian Central Committee, Mr. W. T. Layton, the Financial Assessor to the Commission, and Mr. Rama Rau, Joint Secretary in the Finance Department of the Government of India, seconded for special duty with the Commission, received a warm welcome from a large and representative gathering, which included Lord Burnham, who has happily completely recovered from the indisposition which necessitated his return in advance of his colleagues.

Sir John and Lady Simon, on alighting from the special saloon coach in which the party had travelled from Folkestone, were greeted by Lord Templemore, representing the King, and the Prime Minister. Lord Peel, the Secretary of State for India, and Lady Peel, Lord Birkenhead, Lord Reading, Lord and Lady Winterton, Sir Arthur and Lady Hirtzel, Sir Atul Chatterjee, High Commissioner for India, Lord Inchcape and Sir Harcourt Butler were among the many members of the Government and prominent officials and others present. The company also included: the Maharajadhiraj of Burdwan, Sir Malcolm and Lady Seton, Sir Stephen Demetriadi, Lady Limerick, Sir Maneckji and Lady Dadabhoy, Sir Louis Kershaw, Sir Campbell Rhodes and Miss Rhodes and Mrs. C. R. Lane Fox, Mrs. Hartshorn and Mrs. C. R. Attlee.

An interesting incident in the arrival ceremony was the presentation of an address of welcome to the Chairman and members of the Commission by the President, Mr. S. Hamid Ullah, and a deputation from the Chief Punjab Association, London. The address, which was read by Mr. Chaman Hall, the hon. secretary, stated that the signatories had followed with interest and solicitude "the arduous task of vital importance to India and the Empire," on which the Commission had been engaged. They were assured, from the sympathy and patience shown by Sir John Simon and his colleagues, that India's requirements would be faithfully and wisely judged when the time came for a report to be presented to Parliament. They also expressed their appreciation of Lady Simon's lively sympathy with the cause of India's womanhood.

Special precautions were taken to provide against any disturbance from a demonstration which had been arranged by the London Branch of the Indian National Congress, the League against Imperialism (British Section) and the Workers' Welfare League of Indians. The procession which had been planned was not allowed by the police to leave Hyde Park, but some small isolated groups reached Victoria Station, where three arrests were made.

Sir John Simon made the following statement to the Press on landing at Folkestone:—

We have returned after seven months' hard work, very fit and well. Lord Burnham, as you know, had unfortunately to leave us at Madras and come back before us, but we rejoice to hear that he is now quite restored to health.

"During our tour this year we have throughout worked with the Indian Central Committee, under the chairmanship of my friend, Sir Sankaran Nair, and with a series of local committees elected in each case by the provincial to acknowledge most gratefully their public-spirited co-

operation. The material we have collected on every phase of the Indian problem is now available for the second stage of our task, that of reaching conclusions and writing our report.

"We hope on June 8 to welcome in London our colleagues of the Indian Central Committee, who have come to resume their conference with us, more particularly on questions connected with the relationship between the Indian and Home Governments. The Indian Committee intends to write its report in England and to complete it by October. Our own document is not likely to be ready before the end of the year.

"Now the General Election intervenes, I know I am expressing the view of my colleagues when I say that we most earnestly trust that India will be kept entirely outside all party controversy. We have worked together in this spirit and will ourselves do everything possible to preserve this to the end. Much will be heard of Indian affairs in the next Parliament, but we trust that nothing will be heard of them during our domestic discussions of the next six weeks."

THE NEW GOVERNOR OF MADRAS.

The appointment of Lieutenant-Colonel the Right Hon. George Frederick Stanley to be Governor of the Madras Presidency in succession to Lord Goschen of Hawkhurst, whose term of office will expire in the autumn, is announced. Colonel Stanley, who is Lord Derby's brother, is the Conservative member for East Willesden and has already intimated that he will retire from Parliament at the coming General Election. He has acted as Parliamentary Secretary to the Ministry of Pensions since November, 1924, and has also served as Controller of the Household in 1919, as Financial Secretary to the War Office in 1921-22, and as Parliamentary Under-Secretary to the Home Office in 1922-23.

The India Office also announces that the King has approved the appointment of Sir Norman Edward Marjoribanks (Member of the Governor's Executive Council) as Acting Governor of Madras in place of Lord Goschen for the period beginning in June next during which the latter has been appointed to act as Governor-General while Lord Irwin is absent on leave, and until such time as Colonel Stanley takes up his duties as Governor.

INDIAN NOTES.

(Continued from page 547.)

Habibullah Deputation to South Africa and, since 1927, as the first Agent-General to the Government of India in that Dominion are common knowledge. Warm testimony to his outstanding achievements in the latter difficult and delicate post has been borne by the Prime Minister, by the Press and by the representative leaders of every party in the Union. His success was not merely due to his gift of oratory, though his mastery of the English language, in the opinion of so undisputed an authority as Lord Balfour, entitles him to the highest place in the ranks of contemporary British orators. His power of appealing to the idealism of his audience and his sound and practical common sense have won for him the confidence and support of statesmen and people alike. Other great Indians had visited South Africa before him, but there is no doubt that it was Mr. Sastri's personal character and culture which did most of all to bring about the welcome change in the attitude of South Africans generally towards their Indian fellow-citizens. Mr. Sastri is also well-known to the Kenya Indians, for he was Chairman of their deputation to London at the time of the 1923 controversy, and he visited Kenya again on leaving South Africa early in the New Year. There is much in the Hilton Young report which is distasteful to a rapidly growing community occupying at present a somewhat indeterminate position, and the counsel and experience of Mr. Sastri will be invaluable both to the Indians and to the Government.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

NON-ARABS IN SOUTH ARABIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—As you have not yet forbidden the continuance of the correspondence, I venture to reply to Mr. Thomas' letter in your issue of March 28, and I am sending him a copy of this letter in case he may wish to reply to it. Since writing my letter of January 2, I have seen Mr. Thomas' very interesting account of his journey in the *Geographical Journal* and the map illustrating it. I am aware there is still much more which I have not seen of his material, but I am still sceptical of his conclusions and, as he has called in Dr. Rathjens in support of his views, I cannot refrain, with all due deference to that scholar, who so far as I know has not yet published his views, from repeating that he found early Hamitic survivals at Jidda, whose age certainly does not exceed 300 years! But that is a side issue. Arabia is full of African elements, and particularly the coastal population of Arabia in all parts within my experience is about as corrupt as it could possibly be. Yet Mr. Thomas talks of "uncontaminated survivals of early races" as the discovery of a long and exceedingly valuable journey in the course of which he was never 30 miles distant from the sea. And on his own showing the peoples inland of his line of march were all Arab tribes, Jannaba, and so on. The Hijaz coast presents precisely the same phenomenon and the pilgrimage keeps the influx alive, while economic reasons have probably put an end to it in Mr. Thomas' country—I would suggest in quite modern times.

But Mr. Thomas is very cavalier in his treatment of linguistic problems. He tells us that to the Arabs of Jaalan the region of his tribes is known as Hadra; the sea along their coasts is known as Bahr al Hadri; and the group of tribes itself is known as Ahl al Hadara. And he seeks to connect this quite common modern Arabic word, indicating roughly "downwardness" or "belowness"—they go down to the sea and up to the desert here as they do in Najd—with the Genesis tribal designation of the people of the Hadhramaut, which has remained unchanged from the days of Genesis to our own. Hazarmaweth was the country of the Hadoram, as Hadhramaut is to-day the country of the Hadharim—not a consonant of the two names changed by the intervening millenia. Then he attacks the problem of Dhufar and suggests that the original form of the name was Dhu Afar, Afar "in the Hadara languages" meaning *red* or *clouds*. Curiously enough Afar in the Arabic language means *red* and also *dust*, which in Arabia can often be equated with *clouds*. He then ignores the inconvenient fact that the *Dh* in the rival words is not the same letter of the alphabet, either as written or pronounced. He further ignores the more abstruse point that the word as envisaged by him would be written (in Arabic of course) and pronounced Dhu'l Afar not Dhu Afar. He ignores the Sephar of Genesis, and he ignores the meaning of "victory" underlying the name of the place and preserved, if my memory serves me—I cannot verify this fact in my scanty library—in a later Greek rendering of the name. Ras Nus near by almost certainly preserves the Greek name "Nike" as Ras Barnus on the Egyptian Red Sea coast preserves that of "Berenike." Mr. Thomas is mistaken in thinking that I had reduced the original score of words to one, namely *Rimram*, which he skates over lightly with a Gilbertian air. Let him try the same method with any of the other words, say *Samn* or *Rim* or *Ithal*, all excellent specimens of Arabic words. What do the Ahl al Hadara call them?

Mr. Thomas is mistaken in thinking that the Sulaib and the African elements of the Najd population occur only sporadically. In many places like Khaibar, for instance, they form the whole population of considerable towns or villages; and they occur inland where one would expect

to find the uncontaminated survivals of the aboriginal population. Yet no one has ever suggested that they are that. As for Mr. Thomas' restatement of his position under three heads, (a) (b) and (c), his remarks apply bodily to the black populations of the oases of Central Arabia and to considerable sections of the fishing communities of the Hijaz and Yaman coast. But they do not in any way support his claim to have found any "uncontaminated survivals of early races." In all that I have so far seen of his work, I find nothing inconsistent with the theory that in race and in language the ethnographical framework of Arabia is Semitic and Arabian with occasional patchwork insertions due to sporadic immigration from Asia and Africa, which has been continuous from the earliest days of human movement to our own. The existence of a purely African community in the middle of Arabia does not prove that it was there from the beginning of time; much less does it do so on the coast.

Nevertheless I am still anxious to see some more of Mr. Thomas' linguistic material, and equally anxious though less likely to see the tribes which have provided it.—I am, etc.,

H. ST. J. B. PHILBY.

Jidda, April 16.

The Turkish Grand National Assembly at Angora on April 24 passed the first reading of the law whereby Army officers are prohibited from marrying before attaining the age of 25.

Dr. Adolf Weissmann, the well-known Berlin music critic, died suddenly from heart failure at Haifa on April 23. He had lectured a few days earlier at the Hebrew University in Jerusalem.

The death occurred on April 27 of the Voivoda (Marshal) Stepan Stepanovitch, a national hero of the Serbians. At the outbreak of the Great War it was Stepanovitch who mobilised the whole Serbian Army. He was in the great retreat of 1915, and he conducted the victorious advance against the Bulgarians from the Salonika front. After the War he persistently refused to enter the political arena. A State funeral was given at Tehatchak on April 30.

PALESTINE EXHIBITION

and

WEST END FAIR

MAY 13th and 14th,

at the

QUEEN'S HALL, W.1

ADMISSION 1/-

THE EXHIBITION COMPRISES A NOTABLE
DISPLAY OF PALESTINE ARTS AND
CRAFTS AND OTHER PRODUCTS.

The Opening ceremony is to be performed
on the first day, Monday, May 13th, by
FIELD MARSHAL LORD PLUMER,
G.C.B., G.C.M.G., G.C.V.O., G.B.E.
and on the second day, Tuesday, May 14th,
by
VISCOUNT CECIL OF CHELWOOD,
P.C., K.C.

Tickets and further particulars
may be obtained from:—

PEASANTS AND POLITICS IN THE BALKANS.*

BY J. A. SELBY BIGGE.

The background of the subject of this article is really a question: "Will Eastern Europe follow the revolutionary path of the West in its culture, politics or economics; or will it develop a new line of civilization according to its own latent disposition and its own potential powers?" In looking at the peasant as he is, we may get an insight into what he may become. In looking at the Balkans, we may get a clue as to what will evolve out of the vast territory of Eastern Europe.

As the mentality of the peasant is a rural problem it may be appropriate to deal first with those factors in his pedigree that affect his outlook on life. Unfortunately the Balkan peasant is not registered in the stud book either of history or of ethnology. The anthropological studies of the Balkan peasant seem to lead to bloodshed rather than to scientific conclusions. The ebb and flow of conquest and the perpetual whirlpool of inner colonisation and migration have in some cases merely mixed up contrasting types and in others have fused them together. In the circumstances one may be justified in making one's own guess at the significance. Taking the Slavs first, we find two points of importance, the relative uniformity of the race and the immutability of their characteristics. Thus between the fifth and tenth centuries there was a slow percolation of Slavs into the Balkans, differentiated probably only by tribal peculiarities. These tribes fused with the indigenous populations and also with the intermittent waves of barbarians. Yet the result of the fusion is remarkably uniform, while the stirring of the cauldron by war and colonization has tended to blend the local peculiarities. At the geographical extremes there are, of course, certain differences to be observed, and at various points there are small pockets of highly differentiated people; but, generally speaking, the Slav characteristics have survived in fairly uniform and stable form.

With the Greeks we find a different process. The indigenous Hellenes were fused with Albanian Slav and Vlach blood on the mainland; with Turkish and Armenian blood in Asia Minor, and with any passing blood in the highway of the islands. As there is one type of Slav, so there are dozens of types of Greeks. Yet the Greek is and has always been profoundly and immutably Greek, not by virtue of his blood, but by reason of his cultural unity. To sum up, the Slavs are in general homogeneous and are distinguished by the characteristics of their blood;

the Greeks are in general heterogeneous, and are distinguished by the characteristics of their culture. These factors, I believe, have persisted through all the tumults of Balkan history. The practical significance of these factors may be difficult to define. The Slav, one may say, from the dominance of his blood is distinguished by a static temperament, a slow and conservative intellect, a leaning towards tribal and patriarchal customs, an aptitude for communal rather than individualistic enterprise, and by a close adherence to the soil. The cultural dominant in the Greek has produced a dynamic temperament, an outlook that is essentially individualistic, a mind given to inquiry and adventure, and hence tending to be unstable, a keen intelligence with a definite aptitude for organization such as trade and public institutions, but without much real inventive and constructive qualities.

A similar guess may be hazarded in regard to the linguistic question. The Slavs, I suggest, originally spoke a variety of tribal dialects, which became fused or differentiated according to historical or geographical factors, but which were on the whole minor variations of a common tongue. The Greeks, whatever and wherever they were, have always continued to speak various dialects of Romaic, the language being to a certain extent anchored to the liturgy and preserved by the priest. At the opening of the 19th century, however, the intellectuals of each country invented and endeavoured to impose on their countrymen a national literary language—partly a distillation of the common patois and partly an archaistic revival. The language of each country was thoroughly nationalized and incidentally made almost unintelligible to the illiterate peasant. These new languages were superimposed on the patois through the channels of the schools, the army and the Administration. Eventually, these were used extensively as weapons of nationalistic propaganda. With respect to the peasant, the importance of the language question has been exaggerated. At home he speaks his patois and will always do so. The little he learns of the literary language at school or in the army may be useful for purposes of trade or for understanding, or evading, the regulations of the Administration. The Balkan minorities would learn the language for themselves, if it were to their advantage, provided, of course, that such an advantage were offered in a tactful and conciliatory manner. The forcible imposition of a foreign language on a minority, with the definite intention of denationalising that minority, is bitterly resented by the peasant. Unfortunately this procedure has become a tradition of Balkan administration.

In dealing with the acquired characteristics of the Balkan peasant, I will refer only to a few salient factors in history which have left a fairly prominent impression on his mind and character. In chronological order there are the first period, between the fifth and tenth centuries; the second period, between the tenth and fourteenth centuries; the Ottoman domination and the period of Liberation. In the first period we have an amorphous mass of people mainly Slav in the north, but more heterogeneous in the south. On this mass impinged the culture of Byzantium, providing the first civilization for the Slavs, and replacing the dead Hellenism of the Greeks. From this period until to-day the Greeks became *Romaioi*, looking to Byzantium as their *Polis*, their cultural capital. This Byzantinism, or cultural aspiration, has been the mainstay of the Greeks throughout their troubled history, and is deeply rooted in the hearts of the peasantry. Hellenism, that is to say, a racial and nationalistic aspiration, is quite another matter. It is a comparatively modern invention, and is of quite secondary interest to the peasant.

The second period is that of the Serb and Bulgar Empires, which may be regarded as merely military adventures on the lines of that of Alexander the Great. If there was any national basis of antagonism, it was one of Slav *versus* Byzantine. As for the peasant he was a serf, subjected to all the rigours of Feudalism. Now one might suppose that these events belong to a distant and shadowy

past; on the contrary, they are the basis of modern political controversy, and constitute a clear proof of historic rights over a neighbour's territory. How far is this epoch a factor in peasant mentality to-day? It is certainly present in the peasant's consciousness—it has been carefully put there; but I am rather doubtful as to how deep it is rooted and as to how long it would survive a radical change in the position of the peasant in regard to the State.

Under Ottoman domination, each race, generally speaking, suffered in proportion to the propinquity to the capital of the oppressor. In regard to the Balkans as a whole, it is remarkable to what a small extent the Ottoman system Turkified the subject races. Like the Byzantine Empire, it was a theocratic cultural unit rather than a racial one. The deepest impression on the peasant mentality was made by the domination of the big landlords, whether Turk, Albanian, Bosnian or other Muslims. The system was, moreover, backed up by the brutality of the Janisaries. It was this system, combined with crushing taxation, that reduced the peasantry to a condition worse than feudal serfdom and produced that psychological factor that might be called the rayah-complex, which still survives in parts, in the form of a certain secretiveness and suspicion, and sometimes in the form of a superficial subservience suggestive of canaille. Unfortunately the Ottoman system adopted and reinforced the old Byzantine tradition of corruption and cruelty. These traditions have, alas! persisted even into modern times and have stained many a noble page of Balkan history.

As for the period of Liberation, one might summarize it as a nationalistic movement, originating from the current of liberty set up by the French Revolution, initiated in each country by the intellectuals, whose training was cosmopolitan rather than native. But the real driving power behind the movement was, I suggest, the peasants' hunger for land. Generally the effect of this epoch on the peasant was to endow him with a sense of nationalism and patriotism, a greater pride in himself and a wider outlook in general, but he had to sacrifice local autonomy for centralised government, and this has caused discontent in many provinces. Unfortunately, this movement of Nationalism clashed with another movement—that of Economic Imperialism. The interaction of these two movements has prescribed the course of Balkan history from the Congress of Vienna until to-day. The effect of these variations on the "theme of intervention" has been to give Balkan people an exaggerated idea of the importance of their country, to produce an animosity against their neighbours, and to perpetuate that aptitude for diplomatic wrangling that they inherited from the Ottoman and Byzantine systems.

With this general idea of the inherited and acquired characteristics of the peasant, we are now in a position to look closer at the actual workings of his mind in relation to economic and political problems. I propose to deal with this, by starting in the centre of his environment and working outward towards his mental horizon.

The centre of the peasant's consciousness is his home—that is to say, his family and his land. At once, there

arises the problem of numbers in relation to production. The family is the most prolific in the world, and in spite of a high death rate, shows an enormous rate of increase. The land, however, is far from prolific, and at the best is limited, not only in area, but also in potential productivity. The obvious danger is the splitting up of the land among the heirs, until the units are incapable of supporting a family. The alternatives are three: emigration, which is now restricted; the development of industries either in the home or in the factory; the intensification of cultivation, which has natural limits. It is quite possible that the Balkan peasant may, like the French peasant, modify both his birth and death rate and attain to a certain equilibrium between his increase and his production. But this possibility belongs to the peasant of the new era, for it implies a profound change. The outstanding feature of the Home is its asceticism. The peasant grows his own food and his womenfolk make his clothes, otherwise his wants are few. In economic terms, the peasant is a bad consumer, and constitutes a bad market for manufactured goods.

The next circle of the peasant's environment is the village. Village life and village organisation has always been the most stable and permanent feature in the State. It is governed by the strict law of custom and tradition. With its own hierarchy of officials and its own institutions, it is almost a minute State. Economically it is practically self-supporting, when necessary (though the small handicrafts may be situated in the market town). Contact between villages is in some parts limited, as is contact with the market. This isolation has a stagnating effect on the life of the village. The remedy seems to be a motor bus rather than an expensive railway. Certainly waiting in a Han for two or three days on the chance of a lift is bad economics. That the social stagnation of the village can be dissolved, was amply proved by Stepan Raditch's organisation of village clubs in Croatia. Now this tradition of organisation, combined with a certain communal instinct, should augur well for the future of a co-operative movement, especially if the organisation is decentralised enough to allow the village to play its part within the framework. The question of leaders or administrators drawn from the peasants, depends, I think on the creation of a class of well to do peasants (like the Russian Kulaks). The limitation of holdings under Agrarian Reform has an important bearing on this point. Personally, I feel that the village is naturally the primary unit on which any organisation, political or economic, should be founded.

The next circle of environment is that where the national administration impinges on the secluded life of the peasant. Continuing from the last point, the peasant is distinctly susceptible to nationalistic propaganda—certainly he has been well dosed with it in the past. As regards the irredentist propaganda such as that of the Komitaji, the Andartes, who still champion the cause of the unfortunate Macedonian, I fancy that the peasant is heartily sick of their attentions which involve exactions from their champions and penalties from their oppressors. In the past, their predecessors the Kelph, Haijdouk,

Kurdjute were quite deservedly worshipped as heroes. But, I think the peasant now realises that the motives behind these modern organisations are often sinister in the extreme. Since first Gladstone threw up his hands in horror at the Macedonian atrocities, it has been realised that an atrocity is an excellent form of publicity. I will remind you that the original Internal Committee of Macedonian peasants wanted autonomy, while the Sofia Committee were only concerned with an association. Now the peasant can easily be roused for a fight, especially against a hereditary foe, but it must be a short and exciting scrap lasting, say, between seed-time and harvest. The peasant has no love of military service. Service in a Balkan Army, even in peace time, is not attractive or lucrative, while the system of recruiting is vile, the absentee's family and goods being at the mercy of the recruiting squad—in fact I have seen a whole village go up in flames during recruiting. The fundamental objection of the peasant to service is his tie to the land. Furthermore, I believe that he is by nature essentially peaceful, and that, if chauvinistic propaganda were abated, he would vote wholeheartedly against a war or any form of militarism. I must remind you that the intervention of the Army in politics has been one of the curses of Balkan life. As to taxation, I think the peasant feels much as we do, though he may express his feelings more forcibly. I have already mentioned the aspect in regard to revenue. As regards gendarmerie, the Balkan gendarme always strikes me as extraordinarily efficient. In normal conditions, I think he commands the respect and appreciation of the peasant. But when the gendarmerie is used as a weapon of suppression, as is now the case in Macedonia, Montenegro, Croatia and elsewhere, the peasant feels insulted and vindictive. Unfortunately this practice is an established Balkan tradition. Even Venizelos brought his Cretan gendarmes with him in the revolution of 1915.

Moving to the somewhat wider circle of home politics, we find ourselves in the thick of the Balkan muddle. Each State seems to have provided itself with a highly centralised system of government—probably based on the French model. This system was unfortunately planted in the soil of Turkish and Byzantine tradition. Thus we find the system of Rousvetiar, by which every official post in the country depends on the gift of the Ministers in office of their dependents. As a result when the Government changes quarterly, as often happens, the officials are changed quarterly. Thus there are always three-quarters of the officials waiting and scheming for the places of the quarter that are in office. Now if you are only in office for a quarter of the year, you must make sufficient money in that time to subsist on for the remaining three-quarters of the year, and also reimburse yourself for the expenses of getting there. Hence arises the attendant system of backsheesh, or graft. As a result politics become a question, not of selecting a policy, but of selecting a man or a clique. It is in fact a question of backing a horse for a place, the place being anything from head of a Government department to village postmaster. It is a fascinating game, much more amusing than horse racing, but both the political and economic consequences are disastrous. Only a place like Chicago can afford to support such a system. Hitherto, this national sport has made little appeal to the peasant—in fact free elections are comparatively an innovation. Moreover the capital—the centre of all political activity in a centralised system—was remote, and there was no direct contact with the machinery of government. As a result the whole business of politics was carried on in the cafés of the capital, while the interests of the banker and the industrialist were the only serious considerations. The peasant and the agrarian interests are outside the circle. But times are changing, and the peasant, having won both his land and his liberty, is beginning to take a serious and practical interest in politics. Already he controls the real economic power, and through sheer force of numbers he can grasp the political power when he is ready. How far he will alter the system of centralisation and abolish the evils of Rousvetiar and backsheesh remains to be seen. I think the strong provincial movement against centralism, together with the rise of Agrarian interests will profoundly modify the form of the States. The peasant's horizon is that of foreign politics. This seems a strange interest for the man who has cared little for his home politics, but it is widespread and very intense. It originates from the days of the struggle for liberation, when the combinations and permutations of the Great Powers were of vital importance to every oppressed household. It has, of course, been stimulated by chauvinistic propaganda. I think the traditional point of view is that, given the right opening in the diplomatic game, any national movement can be set on foot—or, in other words, that a certain backer approached in a certain mood will see him through any wild adventure. I fear it is horse racing over again, but a far more dangerous sport than that of home politics. But in this case I feel that if there were no backers or bookies, there would be racing. Perhaps one day they will be replaced by the International Totalisator.

"WATCHMAN, what of the NIGHT?"

DAY and NIGHT are alike to ARMENIANS in the Refugee Camps in SYRIA, except that NIGHT INTENSIFIES their sufferings.

WINTER'S NIGHT has passed after the severest storms and gales yet recorded in Syria, and the damage to Mission property, Camps, Huts, and frail lives through exposure, will entail heavy expense. Will readers of "The Near East and India" help the Armenian to more healthful and helpful conditions, by supporting us in

FEEDING CARING SHELTERING
the for the the
HUNGRY FATHERLESS OUTCAST

Our present need is for help in establishing hundreds of refugees on the land in Syria, through the League of Nations Settlement Scheme. The settlers are working magnificently and this constructive effort deserves wholehearted support.

Will You share in this great work?

ANNUAL MEETING
May 9th, at 3 p.m.

Central Hall, Westminster.

Chairman:
THE RIGHT HON. LORD RADSTOCK, C.B.E.

Speaker:
ADMIRAL SIR RICHARD WEBB, K.C.M.G., C.B.

Gifts welcomed by Capt. G. F. Gracey, D.S.O., General Secretary. Cheques made payable to:—

FRIENDS OF ARMENIA

47, Victoria Street, London, S.W.1. Treasurer: S. F. Hurnard, Esq., J.P.

It is reported from Moscow that M. Stark, the Soviet Ambassador to Afghanistan, arrived there on April 22.

Herr Müller, a director of the Reichsbank, left Germany last week for Angora at the invitation of the Turkish Government. He has been asked to examine the financial situation and report on the possibility of creating a Turkish State Bank.

The death occurred at Northampton on April 26, in his 50th year, of Colonel (Hon. Brigadier-General) Harold M. Grenfell, C.M.G., M.V.O. Joining the 1st Life Guards in 1892, he served with the Nile Expedition in 1898, being present at the battle of Khartoum. He also served in the South African War, retiring from the Army in 1914. After the outbreak of the Great War he returned to duty, and was a D.A.Q.M.G. at the War Office, and in 1917 was created C.M.G.

PERSONAL AND GENERAL

TO-DAY

May 2, 1929 (New Style).
 April 19, 1929 (Old Style).
 Dhulkaada 22, 1347, A.H., of the Muslim Calendar.
 Nisan 22, 5689, of the Jewish Calendar.

Sir Kay and Lady Muir will return to London from Sicily on May 10.

The Hon. Mrs. Fitzalan Howard has left London for a month's yachting cruise to the Greek islands.

Sir Ronald and Lady Storrs returned to London from South Africa on April 22.

Colonel the Hon. George Lane-Fox arrived at 88, Eaton Square, on April 26, from India.

Sir John and Lady Simon, who arrived in London on April 26 from India, left the following day for Fritwell Manor.

The Bulgarian Minister and Mme Hadji-Mischeff have left London for their country house in Bulgaria, where they will spend the Orthodox Easter.

Abdel Malek Hamza Bey, the newly appointed Counsellor to the Egyptian Legation, arrived in London on April 24 and has taken up his duties.

Sir Maneckji and Lady Dadabhoi, with their daughters, have arrived in England and have taken up their residence at Kingsnympton Hall, Kingston Hill, Surrey.

The Archbishop of Canterbury arrived at the Piræus on April 24 after visiting a number of islands in the Egean. He left the following day for England.

The Persian Minister held a reception on April 25 at 11, Princes Gate to members of the Persian colony, to celebrate the anniversary of the coronation of the Shah.

The Admiralty announced on April 24 that Commander R. H. Bevan and Lieutenant-Commander R. V. Symonds-Taylor are lent for duty with the British Naval Mission to Greece.

Major-General Sir Reginald Ford, K.C.M.G., C.B., D.S.O., and Lady Ford returned from India on April 21. Their address for the present will be care of the United Service Club, Pall Mall, S.W.1.

The Maharani of Cooch Behar, the Maharani of Baroda, Princess Tikka Rani of Kapurthala, and the Maharaj Rana Bahadur of Jhalawar were among the passengers in the P. and O. liner Ranpura, which arrived at Marseilles on April 25.

Sir John Simon and other members of the Indian Statutory Commission arrived in London on April 28 after an absence of seven months. Sir John and Lady Simon were guests of the National Liberal Club at luncheon on April 30.

Dr. Hafez Afifi Bey, Egyptian Minister for Foreign Affairs, gave a luncheon on April 23 at the Carlton Hotel. His guests were Sir Austen Chamberlain, Sir Cecil Hurst, Mr. W. H. M. Selby, Mr. C. Mark Patrick, Sesostri Sidarouss Bey, Mr. G. Cattai, and Mr. R. A. Radi.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.
 Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan. Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

The Prince of Wales received at St. James's Palace on April 24, on behalf of the King, Sir Ronald Storrs, Governor and Commander-in-Chief of Cyprus, and invested him with the Insignia of a Knight-Commander of the Most Distinguished Order of St. Michael and St. George.

A luncheon was given on April 22 by the Egyptian Chargé d'Affaires at the Carlton Hotel. His guests included the Egyptian Minister for Foreign Affairs, Lord and Lady Henry Cavendish-Bentinck, Sir Rennell and Lady Rodd, Sir Edward Goschen, Mr. and Mrs. F. C. Bentinck, Sir Percy Tottenham, Mr. and Mrs. J. T. E. Pownall, Mr. J. M. Furness, Mr. A. F. Assal, Mr. G. Cattai, and Mr. and Mrs. R. A. Radi.

The High Commissioner of India and Lady Chatterjee left London on April 28 for the Continent and will be away until the beginning of June. Sir Atul Chatterjee has gone to Geneva to attend the meetings of the League of Nations Consultative Economic Committee, of which he is a vice-president. Thereafter he will be one of the principal representatives of India at the International Labour Conference.

Admiral Sir Richard Webb, K.C.M.G., C.B., is to speak on the work of the Friends of Armenia at the Society's Annual Meeting at Central Hall, Westminster, on May 9. The Rt. Hon. Lord Radstock will take the Chair at 3 p.m. Friends of work for the Armenians will be glad to take this opportunity of hearing the Admiral, who was formerly British High Commissioner at Constantinople.

LONDON CYPRUS BROTHERHOOD.

Col. Beattie, Acting Colonial Secretary of the Colony of Cyprus, and Captain Gunnis, A.D.C., Private Secretary to the Governor of Cyprus, who are on leave in London, paid a visit on April 24 to the School of the London Cyprus Brotherhood, at the Pulteney Institute, Peter Street, W.1, where over 200 Cypriots are receiving free instruction in English. The visitors, after inspecting the School and examining the students, congratulated the Headmaster and staff on the rapid progress made.

Capt. Gunnis is in particular taking keen interest in the Brotherhood, and has helped considerably in the development of the School for the teaching of English in London, as well as of the School which was established in Nicosia three years ago.

At the last meeting of the Council of the Arab Horse Society the following new members were elected:—

Mr. Frank Holmes, Millhill, Sandon, Chelmsford, Essex; Mr. Wilfrid C. Lavington, Poplar Cottage, Bracknell, Berks; and Lt.-Col. F. C. Lewis, C.I.E., Monteagle Farm, Yateley, Hants.

Where to stay in the East

These four prominent hotels are owned and operated by:

NAJEM HOURY & SONS, LIMASSOL, CYPRUS.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

THE WEEK AT HOME

London, Tuesday Morning.

The King's Health.

There was profound satisfaction with the news contained in the King's pronouncement last week upon the state of his health. "Just what was wanted," "Just what one would have expected," was the sort of comment one heard.

The nation is manifestly relieved to know that the King will soon be able to go to Windsor, and to undertake the duties consequent upon a General Election. The Day of Thanksgiving will be a day whose meaning remains within the breast rather than expresses itself in inevitably worn words. But foreign nations have now obtained some idea of the kind of thing which binds Britons together and makes them stick to institutions where other men have dispensed with them.

Political Speculations.

All eyes are now turned, in so far as they are turned on any one thing, upon the General Election, which is to take place on May 30. Guesswork is abundant. There are but three ways of estimating, and they are all unsatisfactory. One cannot remember an Election where anything might so unsurprisingly happen.

The three criteria are, first the Stock Exchange "majorities," which no decent party man will admit are within fifty of the truth; secondly, the official forecasts of party headquarters, which again are of little use unless you happen to belong to the particular party making the forecast; and thirdly, there is the individual's own fancy, which inevitably must be founded on too narrow a basis, if it have any foundation at all, indeed.

There seems, however, to be a fairly general impression that if anyone's stock has gone up during the past week, it is that of the Prime Minister's. His speech at Bristol was infinitely better than that at Drury Lane, which invited more arrows than it shot. Mr. Baldwin has probably now convinced all those who are ready to be convinced that steadiness, not "stunts," is the greatest need of the nation.

The Liberals, and particularly Mr. Lloyd George, continue to go their hilarious, well-subsidized way. They also have probably captured as many votes as they will secure at the General Election. It is barely possible that the ex-Premier will be able to reveal more details of his

famous "Unemployment Pledge" so as to convince persons now sceptical.

The party whose chances it is probably the most difficult to estimate is the Labour Party. They have recently kept rather quiet, as if they had something up their sleeve. The Conservatives have shown their hand—even their presumed trump-card, the Budget, is now known; the Liberals blazed out their battle-cry some weeks ago; only the Labour Party is desisting from offering its choicest repast. This being so, the Party may conceivably come on with a swoop at the finish. That, I rather fancy, is what their leaders are hoping for.

The Great Golf Stream.

It was extremely pleasant to read how England beat America at golf in Yorkshire last week-end. So rarely does the American fail at anything to which he applies himself—and everyone knows with what science, sacrifice, and satisfaction the American applies himself to his games.

But I must confess that I myself am not immersed in the "great golf stream." These superhuman scores of your Duncans and Compstons shrivel my brain. It was, therefore, pure patriotism that made the heart beat faster at the downfall of Hagen and his men. For how can one pretend that the game one has sometimes played is the same game as that played by these professionals. I never look back on my own golf without thinking of those immortal lines of Tom Kettle, who was killed in 1916:—

Playing one day at the seaside, I was topping my balls on the tees,
And the sand and the bent were littered with fragments of double D's;
Piffle supreme I was playing, and varying "slice" with "pull,"
But I hit one ball a wallop like a kick of a Spanish bull.

Other Sport.

The week-end has been full of sport, for Football was finishing and Cricket beginning.

At Wembley Bolton Wanderers walked off with the Cup again, rather to the disappointment of the South, which, no matter whence the men came who composed Portsmouth's team, claimed the losing side as their own. It is rather good to see this North and South rivalry—which in a queer way shows that the game—or at any rate, the particular team—is "more than the players of the game."

The Harlequins just managed to win again the seven-a-side Rugger, which has "caught on" with tremendous success.

As for Cricket, most clubs began last Saturday. Though they themselves are not affected by the new alterations in the regulations of the Game, they were busy discussing them. Club cricketers look at things, of course, from a very different angle from that of County cricketers, and they rather hope that the higher and wider stumps and the new l.b.w. ruling will never be extended to their already quite satisfactory sphere. However, the changes are purely experimental, and it may very well be that the Counties will be dissatisfied with them.

Sweepstakes.

The morality of those who decline to indulge in sweepstakes at the time of the Derby is not necessarily higher than that of those who annually, and for a few brief weeks, entertain hopes of a radical change of fortune in their lives. But it does seem rather hard luck that small sweeps should sometimes be stopped when such a huge thing as the Stock Exchange Sweep is allowed to continue. Heaven forbid that there should be any further interference with the liberties of the private citizen; yet it is anomalous that the Home Secretary should confess, as he confessed last week, that he cannot intervene in the Stock Exchange Sweep because that is a private lottery, and it is only public lotteries that are illegal. The Stock Exchange Sweepstake has, of course, had far more publicity than any other lottery in the whole country.

The whole law concerning these things is, of course, ridiculous. They order these matters better on the Continent.

NOMADIC MOVEMENTS IN ASIA.

With Sir Arnold T. Wilson in the Chair, Sir E. Denison Ross delivered the first of his four Aldred Lectures before the Royal Society of Arts on April 22. The four nomadic movements which Sir Denison has chosen as the subject of his lectures extend over about a thousand years. They are:—the sudden exodus of the Arabs of the Arabian Peninsula into the lands of the Byzantine Emperors and of the Chosroes of Persia in the Seventh Century; the migrating movement of the Turks in a westerly direction from their habitats in Mongolia and Northern China in the Eighth Century; the penetration by the Seljuqs in the Ninth Century—a corollary to the second movement; and the most extensive movement of all, that of the Mongolians under the sons of Chingiz Khan in the Thirteenth Century. The characteristic of these movements was that they were real immigrations, not, like the campaign of Alexander the Great, for instance, or of Mahmoud of Ghazna, or of Tamerlane, mere raiding expeditions or military exploits. A Western simile was to be found in the contrast between the occupation of N.W. France by the Norsemen—which was an immigration—and the conquest of England by the descendants of these Norsemen—which was a military invasion.

Sir Denison, after referring to his recent travels in the Middle East, particularly in Khuzistan (Arabistan) where he saw intimately into the life of the unchanged Arab, began an examination of the career of the Prophet Muhammad and of the foundation of Islam as a religion, explaining how it was that, from the most unpromising material, a united nation in arms was formed in Arabia. The *badawin*, though they always had their tribal attachments, loved independence above all things. These *badawin*, having to endure extremes of climate, hunger, thirst, and having no home, led a perfectly aimless life, but strangely enough clung to Arabia, whereas its desolation had caused other inhabitants of Arabia to move northward into Syria, Palestine, Mesopotamia, and Babylonia. They possessed but one cultural asset: love of poetry. And with the rise of Islam even that disappeared. Real *badawin* poetry did not survive Islam. The designation Arab Literature and Art to-day meant, not Arabian, but the product of that merging of the descendants of the early *badawin* invaders with the cultural races of the Near and Middle East.

The situation in Arabia before the rise of Muhammad was briefly described. Persians controlled the Yaman and the Hadhramaut, the Ghassanids (under the suzerainty of Constantinople) ruled in Syria, while the Hijaz contained large Jewish colonies driven out of Palestine. Some of the Arabs were Christians, the majority heathen. The religion of these pagans was little more than a degraded fetishism. Suddenly, Muhammad, of the Quraysh, arose. He, who had often met Jews, Christians, and Zoroastrians, resolved that the Arabs should have a "Book" and that all gods except Allah should be exterminated. At first he attempted to convert the Jews and Christians in Arabia, being determined that Islam should be the religion of the Arabian Peninsula.

In relating the details of the Prophet's career, Sir Denison emphasised the fact that the Quran contained, not the words of Muhammad, but the words of God. And he amusingly related how he had just seen in Paris a new French translation advertised of the Quran, which, according to the advertisement, was written by Muhammad. The lecturer could hardly believe a translator capable of making such an erroneous attribution as this was completely equipped for translating the Quran!

Between 622 and 632, the lecturer pointed out, the Prophet was constantly engaged in warfare. But before his death he had practically achieved his purpose of making the new religion the religion of the whole Peninsula. Yet from the very fact that, during the ten years mentioned, Muhammad had taken part in no fewer than twenty-seven battles and had organised forty-seven expeditions, he can scarcely have had much inclination

to think (what some scholars have attributed to him) of converting the outside world. The Arabs as a whole felt little drawn towards either dogmatic beliefs or ritual practices. This fact explained the intransigent form given by the Prophet to the creed he preached. Propaganda in the real sense did not come until sections arose in Islam (owing to disputed decisions of inheritance). It was interesting to contrast Christian schisms, which were all dogmatic, with Islamic schisms, which nearly all related to the question of succession to the Caliphate—on which Muhammad had made no pronouncement at all.

The civil war in Arabia gave Islam its warlike character; but it was largely chance—the successes of generals like Khalid ibn Walid—which tempted the Muslims to foreign conquest. The first trans-frontier move was a hot-headed raid into Trans-Jordan, where, however, Byzantine troops defeated them at Muta. In 631 Muhammad organised a huge expedition of revenge into Syria. But in the following year he died, appointing no successor. He could not have realised, therefore, that he had founded not only a new religion but also an empire, that he was not only the Prophet of God and Islam but also virtual King of Arabia.

The battles organised by Abu Bakr against the Persians and Syrians were then related. Under Omar the task of overwhelming the not unwilling Arabs in Syria and Iraq progressed rapidly.

What were the causes of this triumphant movement of the Muslims? They were partly economic; in a large measure, political; ostensibly, wholly religious. But it was the Muslims' love of fighting and of loot that was their strongest impetus: the occupation of fresh territory was their main objective.

Conquest of other Semitic peoples, however, was much easier for the Muslims than that of non-Semitic populations, and the fact was adduced by the lecturer that Zoroastrianism in conquered Persia put up a much longer fight than was often supposed by those who imagined that Islam at once submerged all other religion in Iran.

One most important factor in the success of the Muslims was the good treatment meted out to all who submitted without resistance. When the population showed no opposition, it was allowed to retain its own religion and to continue in possession of its land: all that was required was the payment of a capitation tax—the price of protection received from the conqueror. The Muslims were forbidden to acquire land; they had no occupation but that of a soldier living on the produce of the conquered peoples who cultivated the soil. In these circumstances, a demoralising effect was discernible in the Arabs of the desert, who, particularly in the North and East (but not so much in North Africa) tended to become luxurious and effeminate.

In proposing a vote of thanks to the lecturer, the Chairman expressed dissent with the description of the nomadic Arab's life as an aimless one. Nor did he see the harm in describing books in which the words of God were spoken through the mouth of a prophet as bearing the authorship of that prophet. We still alluded, for instance, to the Book of Jeremiah.

It is announced that Ibn Humaid, head of the Ataibah tribe, has surrendered unconditionally to King Ibn Saoud, who, it will be remembered, recently defeated and subsequently pardoned Faisal al Duwish and Sultan ibn Bijad.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

THE DEAD SEA CONCESSION.

A White Paper has been issued giving the names of the financial supporters of Mr. Novomeysky and Major J. Tulloch, to whom the concession for the extraction of salts from the Dead Sea has been granted. The supporters are:—

Messrs. Basil Montgomery and Company, London;
Messrs. C. Tennant, Sons, and Company, Limited, London;

Messrs. Pauling and Company, Limited, London;
Mr. Leslie Urquhart (Chairman of the Russo-Asiatic Consolidated Company, Limited, London);

The Jewish Colonial Trust, Limited, London;
The Palestine Economic Corporation, New York.

"It is understood," the White Paper adds, "that the Earl of Lytton will be the chairman of the company that will be formed to operate the concession, and that directors of some of the firms mentioned above will be on the board of directors of that company."

"It is also understood that it is the intention of Major Tulloch and Mr. Novomeysky, in agreement with their financial supporters, that the articles of association of the company should contain a provision to the effect that the chairman of the company should be a British subject, and that British subjects, or British subjects and Palestinian citizens together, should form the majority of the board of directors of the company."

DIVIDE AND RULE IN IRAQ.

The Damascus newspaper, *Al Shaab*, published in its issue of April 10 the following message under the above title:—

Four Kurdish deputies in the Iraq Parliament have presented to the Prime Minister and to the High Commissioner a petition in which the following demands are set out:—

1. The creation of a new liwa in the north with the town of Duhuk for its seat of government (*markaz*).
2. Twenty per cent. of the Iraq Government revenue to be earmarked in the interest of the Kurds in the northern districts.
3. Compulsory instruction in the Kurdish language.
4. The withdrawal of the Iraq Army from Kurdistan, the constabulary and militia created by Great Britain for special purposes being deemed sufficient for the maintenance of public order.
5. The nomination of two Kurdish Ministers in the Iraq Government.

These are the principal demands submitted by certain Kurdish chieftains to the Prime Minister and to the High Commissioner.

In an editorial note on this report *Al Shaab* says: "The post brings the news of the demands presented by the Kurdish deputies at Baghdad. If we endeavour to put in terms the necessity of reforms in Kurdish districts or any conditions lending themselves to the usefulness of such reforms, we should no doubt see that this movement has been engineered by Great Britain herself, and that she has encouraged it in order to create on the political horizon of Iraq a new difficulty in face of which it will be impossible for any Government that may be formed there to remedy its consequences without great trouble and anxiety. And then they say that they are in the East to spread civilisation and serve humanity."

A PERSIAN ANNIVERSARY.

In celebration of the anniversary of the coronation of the Shah of Persia, Hovhannes Khan Mossaed, Persian Minister to the Court of St. James's, held a reception on the evening of April 24 at 11, Princes Gate. The guests were received by the Minister and by Madame Nabavi, wife of the Mirza Mohammed Khan Nabavi, Counsellor of Legation, and the attractive suite of reception rooms in the new Legation presented an animated scene throughout the evening.

Among those present were the members of the Diplomatic Corps and representatives of His Majesty's Government. The general company included: The Marquis and Marchioness of Reading, Viscount and Viscountess Peel, Lord and Lady Aberconway, Lord and Lady Greenway, Baron and Baroness Quarles van Ufford, Sir Samuel and Lady Maud Hoare, Sir Edward and the Hon. Lady Packe, Sir and the Hon. Mrs. Dalzell Hunter, Mr. and Mrs. C. Isbell, Mr. and George and the Hon. Lady Barstow, the Dowager Lady Boyle, Sir Edward and Lady Boyle, Sir Charles and Lady Wakefield, Sir Reginald and Lady Wingate, Sir Arnold and Lady Wilson, Sir Charles Marling, Sir Hugh and Lady Barnes, Sir Harry and Lady Foster, Sir Henry and Lady McMahon, Sir John and Lady Bland-Sutton, Sir Denison and Lady Ross, Lady Beecham, Lady Struthers, Sir Thomas Arnold, Sir John and Lady Cadman, Sir Basil Kemball-Cook, the High

Commissioner for the Irish Free State, Mr. and Mrs. F. Ashton-Gwatkin, Lieutenant-Colonel and Mme. E. C. de Hostos y Ayala, Mr. and Miss Anquill, Mr. and Mrs. A. V. Apar, Mr., Mrs., and Miss Montague Bell, Mrs. and Miss Stuart Browne, Mr. Ronald Balfour, Mr. Maurice Bridgeman, Mr. and Mrs. W. D. Braithwaite, Mr. and Mrs. F. W. R. Butler, Mr. and Mrs. Cannicott, Mr. and Mrs. E. W. Card, Mr. and Mrs. H. Couzyn, Mrs. Oscar-Campbell, Mr. and Mrs. J. C. Clarke, Mr. and Mrs. H. R. Cooke, Mr. and Mrs. A. T. Davies, Mr. and Mrs. K. Essayan, Mr. E. Eldred, Mr. and Mrs. Heath Eves, Mr. and Mrs. W. Fraser, Mr. and Mrs. Robert Finlater, Mr. and Mrs. Gunter, Captain the Hon. C. K. Greenway, Mr. H. A. Gwynne, Dr. and Mrs. F. W. Goodbody and Miss Goodbody, Mr. and Mrs. A. C. Huntley, Mr. and Mrs. Hacobian, Mr. and Mrs. S. Holford, Mr. and Mrs. V. A. Caesar Hawkins, Lieut.-Colonel and the Hon. Mrs. Dalzell Hunter, Mr. and Mrs. C. Isbell, Mr. and Mrs. P. Izmidlian, Mr. and Mrs. B. R. Jackson, Mr. and Mrs. E. H. Keeling, Mr. Kelly, Mr. and Mrs. H. A. Laidlaw, Mr. Hamilton Lamplugh, Mr. Norman Lamplugh, Colonel Medlicott, Mr. J. B. Monck, Dr. B. McDermott, Mr. and Mrs. F. Morris, Mr. Thomas MacDonald, Mrs. Patrick Ness, Mr. and Mrs. Norman Napier, Dr. J. and Miss Bapsy Pavry, Mr. and Mrs. Sydney Rogers, Mr. and Mrs. H. Shahinian, Mrs. E. Gibson Smith, Mr. and Mrs. Said-Ruete and Miss Said-Ruete, Mrs. Alec Tweedie, Mr. G. R. Vansittart, Mr. and Mrs. Van Gelder, Mr. and Mrs. Kenneth Williams, Mrs. A. R. Waite, Mr. G. R. Warner, Mr. and Mrs. Herbert White, and Mr. and Mrs. G. C. Whigham.

NEAR AND MIDDLE EAST ASSOCIATION.

Mrs. Bruce Dick was At Home at 55, Harrington Gardens on April 25 to the Near and Middle East Association to hear Mr. J. A. Selby Bigge speak on "The Peasant and Politics in the Balkans." The Dowager Lady Boyle presided, and among those present were: The Bulgarian Minister and Mme. and Mlle. Hadji-Mischief, Sesostris Sidarouss Bey, Lord Danesfort, the Count de Salis, the Hon. Lady White-Thomson, Sir Edward Boyle, Sir Frederick and Lady Graham, Lady Tighe, Lady West, Herr Karl Zeileissen, Brigadier-General Burt, Major Arthur Bentinck, Mr. and Miss Montague Bell, Mrs. Westley Watson, Mme. Yovanovitch, Mrs. Carrington Wilde, Mr. Ronald Mitchell, Mrs. Beauchamp Tufnell, Mrs. E. Gibson-Smith, Miss Edith Durham, Mrs. Margaret Hasluck, and Mrs. and Miss Hawkes.

On May 16 the Near and Middle East Association is giving a Dinner of Farewell to His Excellency Sesostris Sidarouss Bey, C.V.O., who is leaving London shortly to take up his appointment as Egyptian Minister to Greece and Yugoslavia. The dinner will be held at the Ambassador Club. Lord Lamington, Vice-President of the Association, will preside and the guests will be received by the Dowager Lady Boyle. Rosette Anday, the Hungarian prima donna from the State Opera, will sing. Full particulars may be obtained from the Secretary of the Association, 7, St. James's Terrace, Regent's Park, N.W.8.

29th DIVISION "GALLIPOLI DAY."

The 29th Division "Gallipoli Day" dinner was held on April 25 at Café Royal, the Chairman being Lieutenant-General Sir William Marshall. Among those present were:—

The High Commissioner for Australia, the High Commissioner for New Zealand, Général de Division M. Deprés, Chef d'Escadron Th. Gaillard, Admiral of the Fleet Earl Jellicoe; Admirals Sir George Hope, Sir Roger Keyes, and Sir Richard Phillimore; Rear-Admiral C. M. Staveley; Engineer Rear Admiral H. Lashmore, Captain Unwin, V.C., R.N.; Generals Sir Walter Braithwaite, Sir Ian Hamilton and Sir Beauvoir de Lisle; Lieutenant-General Sir Aylmer Hunter-Weston (President, 29th Division Association); Major-Generals D. E. Cayley, C. G. Fuller, and Sir Stuart Hare; Brigadier-Generals C. P. Aspinall-Oglander, the Hon. Charles Bruce, R. E. T. Hogg, C. J. Perceval, and Sir Ormonde Winter; Colonels H. E. M. Douglas, V.C., H. M. Farnar, J. H. Gibbon, and A. F. Thomson; Lieutenant-Colonels D. Cogan, D. E. Forman, B. Freyberg, V.C., C. Kennedy-Craufurd-Stuart, Lord Seymour, J. H. Stephen, Sir Leslie Wilson, and E. T. Wright (Honorary Secretary, 29th Division Association); the Rev. F. C. Devas; Commodore H. Douglas King; Squadron Leader H. C. Fuller; Majors H. Bettelheim, H. H. King, W. G. Marchbank, F. S. Modera, J. J. Paskin, and F. R. Way; Captains R. C. Bell, O. Blount, E. J. Bowie, J. Cowan, F. W. Cox, G. T. Cregan, P. R. Cuddon, G. H. S. Dixon, T. Darling, P. C. Denys Franks, L. W. Griffiths, H. E. V. Huggitt, M. F. Healy, K. Macrae Moir, G. H. Moberly, C. R. Nightingale, S. C. Renny, T. C. Ratsey, G. Smith, F. H. Watson, D. R. Williamson, and T. Wrigley; Serjeant A. M. Sullivan, K.C.; Messrs. A. Austing, H. J. Bloodworth, S. G. Ball, J. J. Gerks, G. E. Keech, E. M. McLachlan, T. Reeves, G. C. Stedham, and G. V. Kenny-Siewwright, and the Rev. H. C. M. Campbell.

Mrs. Isidore D. Morrison, a prominent Jewish lawyer in New York and an active Zionist, has given £20,000 and promised a further £2,000 per annum for the establishment of an ophthalmic institute in connexion with the Hebrew University in Jerusalem.

NOTES AND NEWS

170, Strand, London, W.C.2.
Tuesday Morning.

Palestine in 1928.

The experience of Palestine last year is a good example of the kind of thing which happens from time to time to a country which places its chief dependence on agriculture. There was a crop failure through drought, which affected even the orange plantations, and the result was that the whole economic life of Palestine was affected to some extent. Instead of it being possible to export cereals, wheat and other grains had to be imported, which largely explains the anomalous position of an increase in imports in a year of depression. Then the yield of oranges was lower, and consequently the staple article of Palestine's export trade was found wanting, hence the substantial fall in the export trade. Finally, certain of the country's industries were hit by the smaller agricultural yield, with the result that there was a decline in the export trade and it became necessary to import raw materials to make good the shortage of the local products. As shown in an article, which will be found elsewhere in this issue, Palestine has come fairly well out of a period calculated to test her capacity almost to the utmost extent. The great developments on which the hopes of the country's future are based are still things of the future, and it is eminently satisfactory in the circumstances to know that in the past year further steady progress was made in establishing a number of the varied industries of the country on a firm foundation. It is no mean achievement, for instance, for Palestine to be able to compete successfully with the cheap products of Japan at home and to carry the competition triumphantly to neighbouring markets. The defeat of Japanese stockings may be a relatively trifling thing, but those who are looking to Palestine to justify herself will hope that this will prove to be only the beginning and that just as an export trade is being satisfactorily developed in such commodities as cement (the export of which now amounts to over 11,000 tons) so in the course of time Palestine will be able to supply other products for which at present she offers an easy market for other countries.

Greece's Tobacco Industry.

The tobacco industry throughout the Balkans in recent years has suffered from over production with the result that the disposal of stocks has been a matter of some difficulty. Greece, however, has been more fortunate than other countries, and the stocks existing in 1927 were not of an unwieldy character, amounting to no more than 4 to 5 million okes. Conditions last year were not favourable for the Greek tobacco crop, and the production fell from 48,350,000 okes to 44,500,000 okes, a decrease of roughly 10 per cent. As it happened, compensation for the smaller output was forthcoming to a large extent in the higher prices which ruled as compared with 1927, and by January last the great part of the crop had been sold at prices from 20 to 25 per cent. in advance of those of the previous year. The export of tobacco in 1928 amounted to 48,903,000 kgs. of the value of 3,211,897,148 drachmæ as compared with 52,722,000 kgs. of the value

of 3,417,639,884 drachmæ for 1927. It is interesting to note that the chief purchasers of Greek tobacco are Germany, who took 23,648 tons as against 19,320 tons in 1927; Italy, with 8,858 tons as against 14,125 tons, and the United States, with 8,409 tons as against 10,565 tons. The fall in American purchases was due to the existence in that country of large stocks of tobacco. It will be remarked that Germany's consumption of Greek tobacco is rapidly increasing, while other countries which took larger amounts in 1928 were Egypt, with 2,239 tons as against 1,961 tons, Austria with 1,672 tons as against 868 tons, and Belgium with 1,520 tons as against 962 tons. It is a fortunate thing for the Balkan countries that in the case of three of them tobacco is one of the most important crops, for while other commodities such as cotton are liable to fluctuations the continual increase in the consumption of tobacco makes the crop one which in normal circumstances must always be remunerative. The thing to be guarded against is over-production; and it may be assumed that the lesson of the last few years will not have been wasted.

The Orange Trade.

The staple industry of Palestine—the production of the Jaffa orange—is dealt with in detail in a report of the Empire Marketing Board on the world production of, and trade in, oranges, which has just been issued. While Palestine ranks fourth among orange producers, after Spain, Italy, and the United States, and her production is relatively small, being about one-twelfth of that of Spain who is responsible for nearly 70 per cent. of the total production of oranges, she occupies a very special position among orange growing countries on account of the qualities of the Jaffa, the only rival to which comes from Cyprus. Stress is laid in the report on the efforts to extend the production of the fruit, and it is pointed out that the area under cultivation has been more than doubled between 1924 and 1928 and that the rate of planting is apparently increasing. In 1923 the total area under orange plantations was 5,400 acres, but in 1928 the area had risen to 13,600 acres. As it takes from six to eight years before an orange tree begins to yield fruit, it follows that the 8,000 acres planted since 1923 have not yet had time to begin to affect production, and as the report points

out, within a few years the production is likely to be increased by 100 per cent. Two other countries in the Near East are dealt with in the report—Cyprus, a possible rival to Palestine, and Syria. Of Cyprus it is pointed out that the quality of the fruit is said to compare not unfavourably with the Jaffa product, and that on the assumption that the fruit is similar in size to the Palestine orange the exports for 1927 would represent over 90,000 cwt. That represent roughly one-eighteenth of the exports of Palestine, but it must be remembered that Cyprus is a newcomer in the field, and the efforts that are being made to extend the cultivation of the fruit will mean that in a few years' time a much larger quantity of fruit will be available for export. Syria's export of oranges are smaller than those of Cyprus, the figures for 1927 being 72,000 cwt., and the fruit is sent principally to Egypt and Turkey.

The Indo-European Telegraph Company.

At the meeting of the Indo-European Telegraph Company the Chairman, Mr. H. L. M. Tritton, was able to give a satisfactory report on the working of the company's lines during the year. He referred particularly to the average times of transmission between Karachi and London. It only takes a fraction of a second to send a message between these two points, and in the circumstances the company's record for accuracy in transmission is particularly noteworthy. Arrangements have been made with the Indo-European Telegraph Department for the installation of regenerators at various points on the line, and this system is now in operation on one line and has resulted in a material increase in speed. The receipts of the company for the year showed a decrease of £26,305 which is attributable to Beam wireless competition and to reduced rates. It is satisfactory to learn that the reductions have been followed by an expansion in traffic and that the company's subsidiary traffics are also showing an increase.

COMMENTATOR.

PALESTINE TRADE IN 1928.

Unfavourable Conditions.

In the light of the improvement in the trade of Palestine which was in evidence in the closing months of 1927, and enabled the figures for that year to show a considerable advance on those for 1926, there was reason to anticipate that in the absence of adverse conditions the returns for 1928 would record a substantial recovery from the depression from which the country has been suffering. Unfortunately the past year's crops were a complete failure, and the export trade has suffered in consequence, while an inevitable result has been a decline in the purchasing power of the population shown in the smaller imports of cotton piece-goods. Setbacks of this kind are inevitable in the case of agricultural countries, and it is unnecessary to lay undue stress on this development, as, apart from the failure of the crops, the year was, broadly speaking, one of progress. An indication of this was the

greater demand for labour in connection with the building trade and the extension of the orange groves, while the general financial position was better. It is worthy of note that the tourist traffic showed an increase, as this promises to be an important factor in the future. A feature of the year was the further extension of the area under oranges, and this concentration on the industry which has served Palestine so well in the past is undoubtedly sound policy. The exploitation of the Dead Sea minerals, and the industrial development which may be expected to follow the construction of a modern harbour at Haifa (which is now to be undertaken by the Government departmentally) and a pipe line and a railway to that harbour from Iraq will no doubt modify Palestine's economic situation out of all knowledge, but except for the harbour these projects are still, so to speak, "future music," and for a very long time to come the Jaffa orange is likely to occupy the first place in the list of exports. In recent years the extension of the orange groves has been pursued unceasingly, and the production of this fruit, whose popularity is on the up grade in European markets, will shortly begin to reflect the increase in the number of trees. It is true that competition in the world's markets as regards oranges is tending to become more severe, but there is no reason for thinking that the Jaffa, with its special attributes, will fail to hold its own.

A survey of the trade figures for 1928 compared with those for 1927 is given in the following table:—

IMPORTS.			
	£P 1928.		£P 1927.
Local Consumption ...	6,770,818	...	6,184,454
Transit Trade ...	177,447	...	131,029
Specie ...	17,949	...	262,569
Total Imports ...	6,966,214	...	6,578,142

EXPORTS.			
	£P		£P
Palestine Produce ...	1,487,207	...	1,899,759
Transit Trade ...	177,447	...	131,029
Specie ...	22,254	...	3,430
Re-Export ...	177,892	...	246,592
Total Exports ...	1,864,800	...	2,280,810

From the above table it will be seen that there was a substantial increase in imports, and a considerable falling off in exports. The total for the imports was the highest for the past three years, but was roughly £P800,000 below the figures for 1925. On the other hand the figures for the exports were considerably better than those for 1925 and 1926. The increase in the imports was due to a large extent to the necessity for the importation of wheat and other cereals to make good the shortage of the home crops. Wheat heads the list of the increases in the imports with £P111,569, while other substantial increases are in motor cars, £P90,912; benzine, £P57,994; wearing apparel, £P57,718; wood and timber, £P56,815; olive oil unrefined, £P44,353; sesame,

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928.

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Plevan, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Doupnitza, Gorna-Orehovitza, Haskovo, Yambol, Kirdjali. Kustendil, Tatar-Pazardjik and Vratza. It has also 86 agencies.

£P37,651; silk tissues, £P31,614; iron bars, girders, and sheets galvanised, £P26,169; woollen tissues, £P26,044; wheat flour, £P25,733; and iron tubes, pipes and fittings, £P19,781. The chief decrease in the imports is in cotton piece-goods, £P133,142, other substantial decreases being in cement, £P24,759 (an indication of the development of the local industry), coal, anthracite, briquettes, etc., £P23,376; rice, £P19,594; and sole leather, £P16,865. As before Egypt occupies the first place in the list of countries from which Palestine draws her imports with £P1,899,930 or 28.10 per cent., as against £P1,755,538 or 28.39 per cent. for 1927. Syria is second with £P944,654 or 13.91 per cent. as against £P882,132 or 14.26 per cent., while the United Kingdom is third with £P781,905 or 11.63 per cent. as against £P847,697 or 13.71 per cent. These figures are for direct imports, and the figures for Egypt no doubt include a proportion of goods which came from the United Kingdom.

In the exports a long list of decreases has to be recorded, the principal decline, as already indicated being in the case of oranges which are down by £P189,126. The exports totalled 2,202,435 cases of the value of £P648,678 as against 2,658,249 cases of the value of £P813,574. The decline was, of course, due to the drought. Other decreases are in melons and water melons, £P63,872; olive oil, £P55,938; sesame, £P47,477; tobacco leaves, £P35,530; wheat, £P29,576; dura, £P24,796; barley, £P22,683; lentils, £P14,720; wool, raw and waste, £P10,465; laundry soap, £P10,090; and cigarettes, £P7,510. The principal increases in exports are in sunflower cakes, £P9,709; wines, £P9,504; cement, £P8,816; sesame oil, £P8,501; sunflower oil, £P6,283; and stockings, £P4,914. It will be noted that the decreases are principally in agricultural produce. As a matter of fact Palestine industries were steadily making progress during the year, and where there was a decline in trade it was due to the adverse conditions. Thus the oil and soap trade was affected by the poor olive crop, the

exports of olive oil falling from £P68,468 to £P12,530, while the exports of laundry soap totalled 5,164 tons of the value of £P233,013. The Nesher cement factory had a good year, 11,459 tons being exported as compared with 9,013 tons in 1927, while the local market is now almost entirely supplied with the result that there has been a marked decline in the imports of this commodity.

Other features of the country's trade may be briefly summarised. There was a substantial falling off in the area under tobacco last year, the figures being 7,926 dununs, as against 10,305 dununs in 1927, while the yield of tobacco and tombac fell from 546,742 kgs. to 322,322 kgs. Though the locally grown tobacco has not so far proved the success that was anticipated, the cigarette manufacturing industry has continued to make further progress, and the production of cigarettes in 1928 totalled 493,715 kgs., as against 401,818 kgs. in 1927 and 379,078 kgs. in 1926. As a result of the expansion of the local industry it is reported that imports of cigarettes, except certain high-grade brands, are declining. The wine industry also made progress during the year, the increase in the exports being 250 tons. A development of special interest is the success of the local textile industry which produces stockings which have supplanted Japanese and other imports, while a substantial export trade has been developed with neighbouring countries. Another industry which is making headway is that of the manufacture of boot leather and leather goods. Here too progress is being made in the development of an export trade. This survey by no means covers the industrial activities of the country, but it is sufficient to indicate that the unfavourable trade figures for the years are in this case an insufficient index of the very real progress that is being made in Palestine in a large number of directions—progress which must before long be reflected in a very real, and, it may be added, very apparent, improvement in the country's economic position. It is a piece of bad fortune for Palestine that, like some of the Balkan countries, she should have suffered from adverse weather conditions last year. As a matter of fact, Palestine was harder hit than they were, for while in their case one crop was affected, in Palestine every crop suffered. It is not an experience which is likely to be repeated two years in succession, and one may therefore confidently anticipate that the figures for 1929 will make a much improved showing.

The output of the Anglo-Egyptian Oilfields for the week ended April 26 was 5,204 tons.

Messrs. Swan, Hunter and Wigham Richardson, Ltd., Wallsend, have received an order for a sloop for the Indian Navy.

Captain Evan Cadogan Eric Smith, M.C., has been appointed a director of the National Provincial Bank. Captain Smith is a director of Thos. Cook and Son (Bankers) and Thos. Cook and Son.

Sir John Denison Pender, chairman of the Eastern and other associated cable companies, and a director of the Atlas Assurance Company and of the P. and O. Company, who died on March 6, left £237,503.

John I. Thornycroft and Co., Ltd., have obtained a contract from the Greek Government for the construction of two 55 ft. motor torpedo-boats capable of travelling at 40 miles an hour and carrying two 18 in. torpedo tubes, in addition to depth charges and Lewis guns. The same firm have recently obtained orders for six-wheeled motor vehicles for service in Roumania.

A Tirana message states that the scheme for a National Bank with Albanian capital has matured. The National Bank has just been founded in Durazzo. To start with the capital will be 1,000,000 gold francs, divided into 10,000 100 gold franc shares. With its headquarters in Durazzo, it will undertake every kind of banking operation.

The accounts of the Madras Electric Tramways (1904) for 1928 show a gross profit of £29,099. After debiting interest and London office expenses, and transferring £7,500 to depreciation and renewals, there remains £12,212, add £2,191 brought forward, making £14,403. The directors recommend that the balance of the cost of issue of the 5½ per Cent. (Registered) Debentures be written off, £6,700, leaving to be carried forward £1,703. In consequence of lower fares and the introduction of season tickets, the number of passengers carried during 1928 showed a large increase on 1927. A marked improvement in traffic receipts and net revenue resulted.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 30.

Markets have been quiet and rather inactive during the past week, and for this the shadow of the forthcoming General Election may be held to be partly responsible. The reparations setback has so far had little, if any, effect upon the gilt-edged market which has responded to the steady improvement in the monetary outlook. Five per cent. War Loan kept steady at 103 before being marked down at the end of the week. There was a little scattered selling of French and other European stocks as a result of developments at the Paris Reparations Conference, and there was some liquidation of Home Rails at the beginning of the week, but this was of a special character, and there was some hardening after the publication of the traffic returns in mid-week. Industrials were very quiet, the settlement being one of the smallest for some time past.

The London money market has taken quite calmly the rise in the German Bank Rate to $7\frac{1}{2}$ per cent., which is a reflection of the uneasiness caused by the steady flow of gold from Berlin to Paris, which has been going on for some time, and no substantial hardening in rates here is anticipated.

Redemption Dates.

Many fixed interest-bearing securities, Government or corporation stocks, or the debentures of public companies, etc., are redeemable at a future date. British 5 per cent. War Loan, for example, is redeemable between 1929 and 1947, i.e., the Government has the power to redeem this stock at any time now, and must do so, if it has not done so before, in 1947. Some securities, however, are irredeemable, such as Austrian $4\frac{1}{2}$ per cent. Treasury notes and in this case the holder is entitled to receive his interest half-yearly, but can never require the borrowing Government to repay the capital sum. With redeemable securities, however, the date at which redemption is possible, or at which it becomes obligatory, is important from the investor's point of view. When the security is standing at a price above that at which it is redeemable, the investor has to consider a loss on redemption which he must set against the income from his investment. On the other hand if the stock is quoted below the redemption prices there is a prospective profit. The shorter the time before redemption, the greater the loss or gain per annum, and therefore where (as is frequent) the borrower has the option of redeeming during a period covering several years, the conservative investor should consider the latest date for redemption, when the stock is quoted below the redemption price, and the earliest date when it is quoted above. Coventry 6 per cent. stock, for example, standing at 106 gives a "flat" yield of £5 14s. per cent. But the stock is redeemable in 1938-1948. Since the interest is high, redemption at the earliest date must be anticipated so that the prospective loss of £5 in nine years reduces the yield to £5 7s. per cent. On the other hand, Croydon 3 per cent. redeemable 1940-60, is quoted at 69.

The "flat" yield is £4 7s. per cent., but the yield allowing for redemption at the later date is £5 1s. per cent.

Speculation in Rhodesian Copper Shares.

At this week's meeting of the Rio Tinto Company reference was made to the "great cupiferous area" discovered in Northern Rhodesia in which the old-established Spanish company has taken a substantial interest. Although the Tinto's participation has for some while past been an open secret, its public announcement was regarded as giving a cachet to an enterprise still regarded by some people as of the wild-cat order, and a rally in the market for Northern Rhodesian Shares followed. In the prevailing conditions of lethargic uncertainty it proved a mere flash in the pan. For a long time the British public refused to believe in the copper possibilities of Northern Rhodesia, despite the fact that important American interests had been quietly absorbing the shares of the leading companies. Realisation of the true position synchronised with a period of inflation in the price of copper itself—in which an appreciable reaction has since occurred. In the absence of any fresh stimulating factors, home speculators are disposed to hold their hands; nor is this attitude likely to be departed from in the near future. The possibilities of this area are, indeed, enormous, but even the shares of established copper mining companies must be regarded as speculative, and current prices of the Rhodesian group, few of which are as yet actually producing, discount prospects heavily.

Dunlop Rubber Company.

As was indicated with the announcement of the reduced dividend, the fall in the price of rubber following the end of the restriction scheme caused very severe losses to the Dunlop Rubber Company. In the report, which has just been published, the directors explain that not only had stocks of crude rubber to be substantially written down, but, also, that selling prices of manufactured rubber goods fell in sympathy and manufacturers' profits were therefore reduced. In this connexion it should be remembered that the company is the second largest producer of crude rubber in the world (producing over 16,000,000 lb. per annum), and in addition is a large manufacturer of many classes of rubber goods, both directly and through subsidiaries. It is stated that a portion of the losses incurred was met from earnings, although a transfer of £1,500,000 from general reserve was also required. As a result it was possible to pay a dividend of 20 per cent. (against 25 per cent. last year) on the enlarged ordinary capital and to raise the carry-forward from £578,580 to £801,278. The directors state that trading conditions are now normal again, and that the volume of business last year both at home and abroad was satisfactory. Although the American subsidiary did not earn a profit in 1928, its position is steadily improving, and with the growing demand for pneumatic tyres, and the development of the Macintosh factories, a recent acquisition, the outlook for the company may be considered favourable. The ordinary shares of the Dunlop Rubber Company yield £6 13s. per cent., on the basis of the current dividend, and the very well-secured $6\frac{1}{2}$ per cent. "A" cumulative preference shares return £5 9s.

AGRICULTURAL BANK OF BULGARIA

Head Office — SOFIA — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

COTTON GROWING IN INDIA.

By SIR W. H. HIMBURY.

[This is the third of the preliminary reports of Sir William Himbury to the British Cotton Growing Association on the cotton growing regions visited during his recent tour. The report on Iraq was given in these columns on April 18 and that on the Sudan last week.]

In connexion with the Association's work, and in accordance with the agreement which we have with the Government of India, I left London on December 13 last to visit the Punjab to maintain touch with the cotton development work in that province. I arrived at Bombay on December 28, and after spending a few days in the State of Bundi and two days at Lahore, I arrived at Khanewal on January 4. At this stage, it may perhaps be useful to state briefly what the interests of the Association in the Punjab are, and I cannot do better than quote from a statement that has been drawn up for the information of the Governor, who was expected to visit the Estate at Khanewal in January, but owing to a feeling of dissatisfaction which had sprung up in a body of ex-Service men, who were attempting a march on Government House to give vent to their grievance, His Excellency was unable unfortunately to keep his appointment, at all events up to the time of my leaving India. In this report it was stated that: "The Farm boundary starts at a point $2\frac{1}{2}$ miles from Khanewal town and comprises seven Chaks having an aggregate area of 7,221 acres in one block."

The Khanewal Estate.

The land was first reclaimed by temporary cultivation in 1916, when various small contractors took land on rent and sublet to tenants. Practically no levelling or jungle clearance was done until the area was taken over by the Association in August, 1920. Between 1920 and 1922 the whole of the estate was levelled and the jungle cleared. Four villages were built by the Association at the same time. The unit of tenancy is a square of 25 acres. Three men and two pairs of cattle are required for cultivating each square, which is divided into ten equal parts of $2\frac{1}{2}$ acres, called "lines." The line is the unit for purposes of rotation. Briefly, we have four lines of cotton, three lines of wheat, and three lines of fodder and fallow. These are cultivated on a three years' rotation in each square. Lines of the same number are under the same kind of crop in each square. Thus, for example, line No. 1 in any square on the farm will have the same crop as line No. 1 on all other squares at any season.

At the corner of every four squares an area of $\frac{1}{4}$ acre is allotted to tree plantations. This arrangement serves many useful purposes. Thus, timber for roofing is grown on the estate; protection is afforded to the cattle when resting; cattle manure is available where it is most needed, and fuel is supplied at least in part to replace cattle dung which is normally used for fuel. Trees have not been planted along roads, as the resulting damage done to crops on adjacent land does not compensate adequately for the benefit that would accrue from the fuel which would thereby become available.

The managerial staff of the B.C.G.A. (Punjab), Ltd., is comprised of three graduates of British Universities, of whom two are Honours graduates in agriculture. The executive staff on all the farms controlled by the Association consists of 10 agricultural graduates and others trained at the Lyallpur Agricultural College, and about 110 non-technical field supervisors (Munshies). The farm

manager in charge of the Khanewal Farm is Sardar Datar Singh. In each of the seven Chaks there is an assistant manager and two Munshies. Assistant lambardars have been appointed amongst the tenants, one for each main water-course, making a total of 17. Each assistant lambardar gets certain concessions, such as extra water, selected squares, and a small subsidy from the development fund. In return for this they are expected to devote part of their time to the welfare of the tenants of the 15 or 20 squares which they represent.

Tenants.

The total number of tenants now settled on the farm is 240. On the average about sixty tenants leave the farm each year. Most of these either revert to their own lands or take up temporary cultivation on lands of better quality in the colony area. Prior to 1926 quite a number of tenants purchased their own squares and left the farm in order to develop these. About 15 to 20 tenants are compelled to leave each year owing to their inability to cultivate the land according to instructions. There is generally a large waiting list of tenants to take over squares on the Khanewal Farm, and there is also a big demand from other landlords for our tenants who have been initiated into our agricultural practices. The outstanding debts against the tenants settled on the land in 1920 were taken over by the Association. By 1924 practically all debts had been liquidated. Owing to a succession of poor crops of cotton during the year 1926, 1927, and 1928 tenants' debts have again increased appreciably. Each tenant is provided with a pass book which is periodically entered showing his exact position.

Method of Cultivation.

All the major crops on the farm are sown in lines, and in the case of cotton intercultivation is carried on until the end of July. This largely accounts for the conspicuous absence of weeds on the farm. The wooden country plough continues to be used for special purposes, but all tenants use improved implements to the extent which experience has proved to be economic. The supply and upkeep of all implements is carried out in co-operation by the farm and the tenants. A fully-qualified mechanic is employed to look after all implements and machinery.

In general the batai share-system of tenancy is adopted on the farm, but 750 acres have been allotted to direct cultivation by the Association. A set of Fowler's steam tackle with anti-balance plough is used to plough this land to a depth of about 9 inches. Subsequent cultivation is done partly by bullock draught and partly by tractor. It has been found that a small "Farmall" tractor can do the work of 12 pairs of bullocks working country ploughs when the former is used solely for discing and cultivating the land after ploughing with steam tackle. Arrangements are under consideration for extending the area under direct cultivation.

About half of the land is considered as good quality. It has been divided into three classes, as follows:—

Class "A"—155 squares. Good land.

Class "B"—98 squares. Medium land.

Class "C"—51 squares. Poor land.

The tenants of Class "C" land are generally anxious to vacate their squares and to take over elsewhere land which is more productive. In order to minimise the frequent change of tenants on the poor squares, land revenue and water charges on these squares are remitted to the tenants and distributed proportionately among the "A" Class squares.

The major crops on the farm are cotton and wheat. The approximate area under cotton each year is 2,500 acres and under wheat 2,000 acres. The cotton yields on the farm are generally from 50 to 100 per cent. higher than average yields on Zamindari lands in the locality, and wheat yields are from 30 to 50 per cent. higher. These higher yields are attributed partly to the superior quality of seed and varieties grown and also to the improved methods of cultivation. The outstanding feature of the annual cotton yields is the very considerable drop

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

during the years 1926, 1927, and 1928. During these years the cotton crop within a radius of about 50 miles of Khanewal has been affected with a disease. Various theories have been advanced to account for this disease, which seriously affects both the quality and yield of all cotton varieties, but more especially the American types.

During the present cotton season a careful examination of the cotton plant from the time of sowing revealed the fact that during the months of June and July the crop was infested with a very small insect pest commonly known as "white fly" (*Aleurodes Gossypii*), whose eggs are laid in thousands on the underside of the leaf. Immediately this discovery was made the Department of Agriculture was asked to investigate the life history of the pest and to recommend preventive and remedial measures. Practically nothing was hitherto known about this pest in any country. Subsequent investigations have shown that the pest exists all over the cotton zone in the Punjab, but that it exists only in comparatively large numbers in that part of the cotton zone where both the yield and quality of the American types were exceptionally poor. An assistant entomologist was recently deputed to study this pest at Khanewal, and he has already made some observations on its life history.

We hope to succeed in overcoming the effects of this pest by the methods indicated below :—

- (a) Our late crops sown in June, 1927, gave more than double the yield of our early crops sown at the end of April. It is believed that the 1928 data will confirm the 1927 results.
- (b) By manuring the crop with sulphate of ammonia in 1927 there was an additional net profit averaging Rs. 12 per acre. This experiment is being repeated this year on 500 acres.
- (c) Various insecticides have been experimented with. The use of rosin compound for spraying the crop is efficacious and may prove to be economical on a commercial scale.
- (d) Different varieties of cotton show different degrees of resistance to the disease. Thus 289F is consistently more resistant than 4F, and the red-leaved Desi type known as "Multani" appears to be the most resistant of Desi types. The American variety 4F has, without exception, proved unprofitable during the past three years, but we continue to grow it in deference to the wishes of the Department of Agriculture. Some of the varieties grown by us on a small scale for the Cotton Research Botanist (Mr. Trought) show a considerable degree of resistance. The growing of the disease-resistant varieties offers the best means of overcoming this pest.
- (e) We hope to be able to minimise the damage by destroying all weeds and cultivated crops on which the insect lives in the early spring months.

Seed Distribution.

The usefulness of the Association as a source of supply of pure seed is clearly indicated in the figures given below. These figure represent the quantities of pure seed of wheat and cotton sold direct to the Agricultural Department for distribution to Zemindars all over the Punjab :—

Year.	Cotton. Mds.	Wheat. Mds.
1921-22	210	3,000
1922-23	4,273	9,300
1923-24	5,900	7,376
1924-25	5,196	2,430
1925-26	3,110	10,125
1926-27	9,991	8,567
1927-28	5,103	31,959

In addition to the quantities given above, from 1,000 to 6,000 mds. of cotton seed have annually been sold direct to Zamindars.

It is of interest to know that the cotton variety 289F which has proved its superiority under local conditions was brought to prominence entirely by the Association.

This cotton is one of Mr. Milne's selections at Lyallpur, of which a few ounces were given to Mr. Roberts in 1921. It has been valued at 150 points over Middling American. It has the merit of having a longer staple than 4F and cannot be used to the same extent for mixing with Desi varieties.

In addition to the Farm at Khanewal we have approximately 70,000 acres under lease for temporary cultivation in plots, ranging from 3,500 to 15,000 acres each, some of which is irrigated by flow and some by "lift" with pumps. I visited one of these estates, viz., Chak Shahana which consists of over 5,000 acres, 4,000 acres of which are under cultivation, including about 1,600 acres under cotton. The land is cultivated by tenants on what is known locally as the "Batai system, i.e., "fifty-fifty." We are responsible to the authorities for rents and overlordship, and I might say they gain a great deal by granting these temporary leases, which practically proves the value of what was formerly waste lands; it is also of great value for educational purposes.

Furthermore we have an interest in an estate in the State of Bundi. The actual capital invested is small, most of the money having been found by other interests; nevertheless we are allowed control; 1,140 acres are under cultivation, the crops being sugar, ground nuts, linseed, cotton, capsicum, etc., but of the possibilities for cotton I could form no great opinion. The land is watered from a reservoir, and the barrage was constructed by us. This is 1,800 ft. long, the masonry at the bottom being 20 ft. tapering to 8 ft., and it is capable of storing 400 million gallons of water. The real trouble here is that of tenants. The State is a small one—only 200,000 population, and the tenants can only be obtained by taking them from some other land. The land itself, however, is good, and there are distinct possibilities in the place, but I feel it would be run more economically by the local Government, who can, if necessary, pass ordinances and rules for the better working of this demonstration estate which no outside body could do. The inauguration of the scheme has undoubtedly been of immense benefit to the Government inasmuch that water has been provided for a large area, and in also demonstrating what crops can be profitably grown; but progress under present conditions and ultimate success, so far as the company is concerned, must be slow.

Ginneries.

In addition to the very large acreage which is being cultivated on modern lines, there are now ginneries at Khanewal containing both saw gins (with complete pneumatic attachment) and roller gins. This plant is capable of dealing with over 15,000 bales of 400 lb. per working year. There is a similar plant at Burewala, and another one is under construction at Vihari. In addition there is a ginnery on one of the estates at Iqbalnagar in

the Montgomery district, which is under lease to us. All these factories are modern and up-to-date buildings, complete with warehouses, godowns, etc., and a large quantity of cotton is handled, both of the Indian and the improved types. Altogether our interests in India are very important, and, fortunately, we have in Professor Roberts (the Managing Director), a man of exceptional ability, great energy and enthusiasm. With such a man it is only natural that the staff under him should be of like calibre. Personally, I consider that great credit is due to Professor Roberts and his staff for the work they are doing.

Sukkur Barrage.

Before leaving India I was most anxious to see what progress had been made at Sukkur in connexion with this great scheme of irrigation. I spent two days on the works and was shown over everything by Mr. Musto, the Chief Constructional Engineer. A tremendous amount has been done since I was there last. It is a colossal undertaking; there are 45 miles of broad gauge and 35 miles of narrow gauge railway being used; also 100 steam craft of all sorts. The cutting of the huge blocks of stone of many tons in weight, the making of cement blocks each weighing 10 tons, etc., is all done in the most up-to-date way, every possible labour-saving device being used; 16 spans of 60 ft. each were completed last year, and the engineers expect to complete a further 23 spans this year. This will leave 27 spans for the following year, and make 66 spans in all. There are 7 canals, 4 on one side, i.e., on the left bank, and 3 on the right, all the masonry for which is practically completed. The work in the river itself is most interesting. Large coffer-dams are made by driving H-iron columns deep down into the mud; these columns are then locked together, the appearance being that of a lake surrounded by a corrugated iron fence. Some 5 sets of pumps on barges are then engaged in pumping the water out. One of these dams is, I believe, one of the largest ever made. It is 23 acres in extent and many thousands of men are engaged excavating the mud, which is then loaded on to donkeys and carted away. Altogether there are something like 10,000 men on this work. The barrage is not expected to be completed until 1932, and will cost over 16 millions sterling. I do not propose giving full details here of this subject, but shall hope to do so in a later report.

A Bucharest message states that the Government Economic Delegation, composed of the Ministers of Finance, Industry, Labour, Communications, and Public Works, is considering the offer of a loan of 75,000,000 marks by the Reichskredit Gesellschaft, of Berlin, for the purpose of buying railway material and agricultural implements and machinery.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

BULGARIA.

Various.—The Ministry of Railways, Posts, and Telegraphs invites tenders for the supply of a floating crane (May 14), material for the construction of two iron bridges (May 27), and a crane of 12 tons (May 27).

EGYPT.

Various.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for the supply of materials for water service; mild steel beams; complete cross members; timber; replace boilers for locomotives.

Electric Lighting Sets.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of electric lighting sets required for the Government Workshops, Bulaq, Cairo, May 25.

Tent Cloth (Cotton Duck).—The Egyptian Ministry of Agriculture invites tenders for the supply of 85,000 yards of tent cloth (cotton duck). May 26. (D.O.T.)

Water Tower.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of a steel water tank with steel frame-work tower complete with necessary piping and fittings as well as an electric water level indicator. June 1. (D.O.T.)

Weighing Machines and Balances.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply of platform weighing machines, counterscales, and Beranger balances.

Tent Lining.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of calico cotton blue, tent lining for the Department of Ordnance Services, Egyptian Army, Citadel, Cairo, July 1.

ROUMANIA.

Slaughterhouse, Etc.—The Municipality of Braila invites tenders (a) for the building of a slaughterhouse, and (b) for the refrigerating installation and ice making plant. May 30. (D.O.T.)

Compressor.—The Municipality of Cluj invites tenders for the supply of one compressor for cooling plant in the ammonia system with corresponding cooling coils for air cooling and one A.C. electric motor and condenser, required in connexion with the extension of the cold storage installation at the Cluj Slaughter House. May 30. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, May 9). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakuta for Calcutta (Birkenhead, May 9); s.s. Mahrona for Calcutta (Birkenhead, May 16).

Bibby Line.—S.s. Leicestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 15).

British India Line.—S.s. Manora for Colombo, Madras, and Calcutta (London, May 4); s.s. Warfield for Bombay and Karachi (London, May 18); s.s. Mulbera for Colombo, Madras, and Calcutta (London, May 18).

Cunard Line.—S.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Gruz, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu*, and Ancona if inducement offers (Liverpool May 11, Swansea May 14); s.s. Bactria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea June 5). *The Bosnia is definitely calling at Corfu.

Johnston Line.—S.s. Avimore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 4); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 25).

P. and O. Line.—S.s. Razmak for Bombay (London, May 10); s.s. Novara for Calcutta (London, May 11).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, May 7).

Ellerman and Papayanni Lines.—S.s. Fabian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 4); s.s. Voltorno for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow May 9, Liverpool May 11); s.s. Flaminian for Gibraltar*, Malta*, Algiers*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool May 11, Swansea May 11); s.s. Oporto for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool May 23, Swansea May 30); s.s. Mardinian for Gibraltar*, Malta, Algiers*, Syra*, Smyrna, and Constantinople (Liverpool May 25, Swansea May 25). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syra and Cyprus via Alexandria; Greek ports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*ICASTALIA ...	June 4	*MASSILIA ...	July 23
*CIRCASSIA ...	June 21	*TELYSIA ...	Aug. 9

*First class passengers only. Specially low fares. †Calls Port Sudan.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

Engineering Topics

(By Our Engineering Correspondent)

The Progress of Science.

It is a rather curious fact that whilst the professional almost invariably regards the efforts of the amateur with pitying scorn, the history of scientific progress is largely the history of amateur achievement. This is so in the engineering world; indeed so true is it in that direction that it would almost seem as though one of the essentials of success were engineering ignorance. Watt was a mere amateur when he revolutionised our ideas about steam; one cannot say with any truth that Joseph Wilson Swan was an engineer when he charred the cotton thread that led to the invention of the electric lamp. Isaac Newton must have been an amateur in nearly all the realms of science that were enriched by his discoveries. Mr. H. P. Gillette has just reminded us that he was a professor of mathematics at Cambridge, and that he remained an amateur in every other scientific direction. He scanned no stars through telescopes, he took the data prepared by Tycho Brahe and simply deduced the law of gravitation. He journeyed, an amateur, into the realms of physics and enriched the world by his discoveries in acoustics and optics. As an amateur he outstripped his contemporary professionals. Shall we attribute this merely to genius, we are asked, or shall we try to find the principles employed by original thinkers and the conditions under which original thought is best conducted. Let us consider some of the conditions which assist the original thinker. One of these is clearly, as Mr. Gillette says, a freedom from old theories that so dominate the mind as to blind it to the truth of new ideas. It is characteristic of most professional men that they become extremely intolerant of new theories. The longer they believe in the truth of an old idea, the more sceptical they are of the prospect of there being any possibility of error in it, or of any new line of thought that conflicts with that with which they are so accustomed. While a new theory has a marvellous efficacy in solving scientific enigmas, an old theory is equally effective in turning the mind away from new and possibly more correct solutions. "The amateur therefore enjoys a not mean advantage over the professional

in that he is not wedded to any corpses. His mind's eye moves freely and quickly over hypotheses; the new is regarded as impartially as the old. He pauses with no sense of 'auld lang syne' amid well-known theories but is impressed with them only in so far as they can explain the visible facts. So new and old theories look much alike to the amateur, whereas to the professional only the old cause him to lift up his glass and say, 'May you live long and prosper!' Lest it be assumed that we regard the professional expert as being irretrievably handicapped by his expert knowledge, as Henry Ford seems to think, let me hasten to say that it is not his knowledge that handicaps him so much as his tendency to rest satisfied with what he knows."

Two generations ago German scientists were stressing the importance of training in original research. Probably of all professions that of engineering is the one in which original research counts for least. Our engineers go on, year after year, following the lines which others have laid down, imitative, unoriginal, content to progress by continually improving on the work of their predecessors, and leaving it to the amateur to cut clean across the course of preconceived ideas and to give us new starting points. It is a great mistake to think that training in original research work is not needed in engineering. It is really the only kind of mental training that matters. And it is just because engineers are neglecting that branch of intellectual activity, that the amateur who has specialised in it, is so frequently able to outstrip his professional brethren and to give us new methods and new ideas.

Steel Building.

As a result of a good deal of research work into the conditions affecting steel buildings, a considerable saving in the cost of these structures will probably result. It is estimated that on the structural frame of a characteristic steel building a reduction in cost from 8 to 10 per cent. will be brought about, which means, roughly, a reduction of about 2½ per cent. in the total cost. Developments of this kind are of distinct importance, as they will inevitably affect to an appreciable degree, the amount of construction work of that kind that will be undertaken.

The departure from recognised practice to which I refer is the raising of the permissible stress on structural steel to a base value of 18,000 lb. per square inch. It is high time that this raising of value was made, as for years past steel manufacturers have been improving the quality and the reliability of their products. Engineers generally, for some inexplicable reason, have overlooked this, and have continued to design on lines that were laid down about 40 years ago.

Other and newer methods of manufacture have, however, brought about a reconsideration of the status of steel construction with the result that it was realised a few years ago that this method of building was lagging behind its later competitors and should be brought up to a parity with them. As a result there came about the preparation of the authoritative specification of the Institute of Steel Construction. How generally construction interests have supported and are supporting the proposed higher working stresses may be realised from the fact that already 127 cities in the United States have accepted the new figures, whilst a further fifty have the matter under earnest consideration. What move in a similar direction will be made in this country remains to be seen, but undoubtedly the time is ripe for something of the kind to be done.

An Interesting Mechanical Stoker.

In many different industries the water tube boiler is being more and more employed, especially in conjunction

with higher pressures and the use of steam turbines, and in this connexion interesting developments are taking place with the "Underfeed Type E" mechanical stoker. Also as regards marine work, 26 vessels of the Dutch Steamship Company, the Koninklynke Paketvaart Maatschappij, of Amsterdam, are now operating, mostly in the Far East, with these stokers, whilst a number of other vessels belonging to the same company are being equipped. The vessels are all equipped with water tube boilers, and the "E" stoker, a production of the Underfeed Stoker Company, Ltd., of London, is specially designed for both land and sea-going conditions to operate small water tube boilers, burning up to, say, $2\frac{1}{2}$ tons of coal per hour, a large number of industrial plants being also at work.

The design is that of a coking stoker, operating with a steam reciprocating ram situated at the centre underneath the hopper, this ram being adjustable in speed so as to deliver any desired amount of coal from 120-5,400 lb. per hour, thus allowing ample flexibility. The coal is merely thrown into the hopper as required and the ram then pushes it in a trough in front, situated between each side of the sloping grate bars, which are of extremely novel and ingenious design, hollow in construction, and having a reciprocating motion. The coal fills the trough and flows over along each side and down the bars, while at the top part coking commences, all the gases and vapours being driven off and burnt in the combustion chamber, the top part of which is constituted by the tubes of the boiler. The residual caked product then burns as it travels slowly down the inclined bars, aided by the slight reciprocating motion, the ash and clinker accumulating on the flat supporting arrangement shown and being pulled out through the front of the stoker by means of firedoors at intervals. Also the operation is aided by means of a forced draught fan connected by trunking underneath with dampers under accurate control by means of levers in front of the stoker by the side of the steam-driven ram.

The passage of air is arranged on the most scientific principles, being partly discharged from the windbox underneath through a series of tuyeres or openings at the top of the inclined grate, directed through the trough. All the remainder, however, passes down inside the hollow reciprocating bars, which are thereby cooled, and afterwards the hot air comes up between the bars in the ordinary way to burn the coked material, the net result being entirely smokeless combustion. Also, of course, a steady steam pressure is maintained, since cleaning out in the ordinary sense of the term is eliminated, while it may be pointed out that the amount of steam taken by the ram is approximately $\frac{3}{4}$ per cent. of the production of the boiler, and this together with another $\frac{1}{2}$ per cent. absorbed by the fan, represents a figure less than ordinary mechanical draught with hand firing.

against cattle plague. The gross receipts from the cattle markets, etc., exclusive of slaughter houses, show a decrease of £735 as compared with the year 1927, the total being £58,055, against £58,790. The gross receipts from the general markets for the year under review were £32,049, as compared with £32,526 for the year 1927, a decrease of £477. The net receipts from the slaughter houses worked during the year were £938, against £1,101 during 1927, a decrease of £163. No further slaughter houses were taken over by the Government during the year, the number worked by the company remaining at thirty-five. The expenses in the trading account show an increase of £416 under rents, salaries, and wages; and £180 under maintenance and repairs of markets. The net profit derived from the sale of miscellaneous articles and sundries was £9,917, as compared with £8,008 for the previous year, an increase of £1,900. This increase is due to improved trading conditions generally in Egypt. An arrangement has been concluded with the Egyptian Government under which the Government's participation in the company's gross receipts is increased to 62 per cent. for the year 1928, and 63 per cent. for the year 1929 and until the end of the concession. In consideration of this, the Government have authorised the continuance of the existing augmented tariffs until the end of the company's concession and have granted the company an adjustment in the fixed allowance for expenses which is deducted from the gross receipts before the Government participate. Further, the Government have agreed to use their best endeavours to transfer the unauthorised markets now being held on the roads, in the vicinity of villages, into this company's enclosures, and have also under consideration an increase in the tariff for sheep and goats from 2 m/ms to 3 m/ms per head. The above arrangement has relieved the company from the possibility of a reversion to the pre-War scale of tariffs and consequent serious loss of revenue, and in all the circumstances is considered to be a reasonably favourable settlement. In accordance with the terms of issue, the redemption of the £75,000 1st 5 per cent. debentures was duly effected on June 1, 1928.

The net revenue from all sources for the year 1928 amounted to £54,211 14s. 9d., as compared with £54,616 8s. 8d. during the previous year, a decrease of £404 13s. 11d. After deduction of the amount of £28,584 9s. 7d., which it is estimated will be required to meet payment of the Government's share of profits for 1928, a balance of £25,627 5s. 2d. remains, which, with the amount of £14,198 6s. brought forward from 1927, makes a total of £39,825 11s. 2d. to be dealt with. The fixed charges comprising the annual premia for the amortisation of the share capital and debentures and debenture interest amounted to £3,782 3s. 1d., leaving a balance of £36,043 8s. 1d. available for distribution. The directors recommend the payment of a final dividend (No. 49) on the ordinary shares for the year ended December 31, 1928, of 5 per cent., and a bonus of 1 per cent., making with the interim dividend of 5 per cent. paid in November, 1928, a total of 11 per cent. for the year, absorbing in all £19,217, and in accordance with the terms of the memorandum of association of the company, and subject to the settlement of the proportion of profits due to the Government, the payment of a dividend (No. 19) on the deferred shares at the rate of £8 14s. 10 32-75d. per share for the year 1928, which will absorb £2,623 0s. 8d., and leave a balance of £14,203 7s. 5d. to be carried forward, which balance is also subject to the settlement above referred to.

HAMBROS BANK.

The report of Hambros Bank for the year to March 31 last states that after making provision for rebate on bills discounted, bad and doubtful debts, and income-tax, the profit was £347,670. Adding £92,603 brought forward, there is available £440,273. After setting aside £150,000 to contingency reserve, the directors recommend a further dividend of 15 per cent., less tax, on the £10 shares, making 22½ per cent. for the year, less tax, and a further 3 per cent., less tax, on the £1 "A" shares, making 6 per cent. for the year, less tax, £91,073 being carried forward.

CABLES AND WIRELESS.

Cables and Wireless, Ltd., announce that it is anticipated that circulars will be posted by the Bank of England on May 17 to:— (1) the ordinary stockholders of the Eastern Telegraph Company, Ltd.; (2) the ordinary shareholders of the Eastern Extension Australasia and China Telegraph Company, Ltd.; (3) the ordinary shareholders of the Western Telegraph Company, Ltd.; (4) the £1 preference shareholders, the £1 ordinary shareholders, and the 10s. ordinary shareholders of Marconi's Wireless Telegraph Company, Ltd., giving the terms of the offer of exchange of their respective holdings for shares in Cables and Wireless, Ltd.

COMPANY NOTES AND REPORTS.

EGYPTIAN MARKETS.

The report of the Egyptian Markets, Ltd., for the year ended December 31 last states that the number of cattle market days lost during the year in consequence of cattle plague was 507 as compared with 167 during the year 1927. Economic conditions in Egypt continued to improve during the year under review, the decrease in receipts was due to a larger number of market days being lost as compared with 1927 owing to inoculation of animals as a precaution

Company Meeting.

INDO-EUROPEAN TELEGRAPH COMPANY.

Efficiency of the Service.

Dividend and Bonus Maintained.

Installation of Regenerators.

Mr. H. L. M. Tritton's Address.

The sixty-second ordinary general meeting of the Indo-European Telegraph Company, Ltd., was held on April 25 at the company's offices, 18, Old Broad Street, London, E.C.

Mr. H. L. M. Tritton (the chairman) presided.

The Secretary (Mr. T. O. Stevens Perry) having read the notice convening the meeting and the auditor's report,

The Chairman said:—Gentlemen,—I presume it to be your pleasure to take as read the report and accounts for 1928 which are in your hands. (Agreed.)

I now beg to move:—"That the directors' report and accounts for the year 1928, duly audited, as presented to the meeting, be and are hereby received and adopted; that a dividend for the year ended December 31, 1928, be and is hereby declared of £1 2s. 6d. per share—making, with the interim dividend already paid, 7 per cent. for the year—and a bonus of 15s. per share, both dividend and bonus free of income-tax, and payable on May 1, 1929, to shareholders registered on April 11, 1929; that £15,000 be handed to the trustees of the retirement trust fund."

The Late Sir John Denison-Pender.

I should like, before proceeding farther, to refer to the death, on March 6, 1929, of Sir John Denison-Pender, G.B.E., K.C.M.G., who had been associated with telegraphs for about 50 years. His was a life of devotion to the great interests which absorbed his attention, the wonderful network of world-wide communications which he controlled, and the splendid record of his life's work entitled him to the lasting gratitude of the Empire. Our company may join with his own companies in lamenting his loss, for he was a great friend to us at all times, and especially during that difficult period in our history which occurred during and after the War.

Our relations with the various Governments through whose territory our line passes continue to be satisfactory.

The company's lines worked efficiently during the year. There was, however, one exceptional interruption during the month of February in the Crimea owing to the worst blizzard experienced in those parts for many years, but I am glad to say that working was, after a short interval, resumed over wires kindly placed at the company's disposal by the Soviet Government.

Communication over the Black Sea Cable was maintained throughout the year. Unfortunately, owing to ice floes near Odessa causing ships to drag their anchors, the cable was broken in the middle of February of the current year. It has since been restored and is working satisfactorily.

Speed and Accuracy.

The average times of transmission between Karachi and London, as well as on the company's other main circuits between London, the Continent, and Persia and India, were satisfactory, and our record, always an exceptionally good one, for accuracy has been maintained. During the year under review arrangements were made in co-operation with our friends and partners, the Indo-European Telegraph Department, for the installation of regenerators at various points on the line. At this moment the system is actually in operation on one line, in both directions, between London and Karachi, and has produced a very material increase in speed. Steps have been taken still farther to improve the service between the Continent and Persia and India, for which purpose, as shareholders are aware, there exists a special line from Berlin.

Revenue Position.

I asked shareholders last year to bear in mind that the company's revenues during the year under review would be bound to show a diminution by reason of the Beam wireless competition. The falling off in revenue, whether owing to this competition, or whether to the reduced rate, would have been still more apparent but for a certain expansion of traffic following on the reductions, and an increase in the company's subsidiary traffics. Shareholders will appreciate that the full measure of prosperity enjoyed in recent years may not be so easy of realisation in the future.

As you are aware from my remarks last year, this company is not included in the merger, but shareholders may rest assured that their interests are protected under the terms of the Joint Pursu-
Agreements.

The Accounts.

Passing now to the accounts for 1928, the decrease in receipts, as compared with 1927—namely, £26,305, I have already explained. Expenditure is less by £5,103. This matter of expenditure is one which is constantly engaging the attention of your board.

The directors have provided a sum of £12,500 for writing down expenditure on reconstruction of line in Russia and Poland, £1,000 in writing down the cost of the Persian section of the line, and £1,500 in writing down freehold and leasehold property, making a total provision of £15,000.

The directors recommend the maintenance of the dividend at 7 per cent. and the payment of the same bonus as last year of 15s. per share, free of tax, equal to 3 per cent., making a total distribution for the year from all sources of 10 per cent., free of tax.

A payment to the retirement trust fund of £15,000 is proposed, and I am sure this will have your approval.

Subject to the foregoing, there remains a balance of £14,867 8s. 6d. to be carried forward to 1929. This compares with £19,000 last year, which, however, as I then explained, was somewhat larger than usual.

Tribute to Management and Staff.

I cannot conclude my remarks without paying a tribute to the management and staff both at home and abroad.

To maintain the company's line between London and Teheran in a high state of efficiency, which I claim it to be, requires constant and unremitting attention and care, and the satisfactory results attained are the outcome of the hearty co-operation of all concerned.

Mr. F. J. Brown, C.B., C.B.E., seconded the resolution, and it was carried unanimously after the Chairman had replied to some questions.

On the motion of Mr. Claude H. Tritton, O.B.E., seconded by Sir Rayner C. Barker, C.I.E., the retiring directors (Mr. H. L. M. Tritton and Mr. F. J. Brown, C.B., C.B.E.) were re-elected.

The auditors (Messrs. Kemp, Chatteris, Nichols, Sendell and Co.) were reappointed on the proposition of Mr. E. J. Waldron, seconded by Mr. F. Carpenter.

The proceedings terminated with a cordial vote of thanks to the chairman, directors, and staff, proposed by Mr. Mason and seconded by Mr. Brodie James.

The Fourth International Fair at Salonika will be held from September 15 to 30.

Negotiations are now in progress for a revision of the existing commercial treaty between Poland and Yugoslavia.

The Hyderabad (Deccan) Company recommends a final dividend for the year 1928 of 1s. 6d. per share (less tax), making 3s. per share.

The Oriental Telephone and Electric Company recommends final dividends for 1928 of 3½ per cent. on the preference shares, less tax, making 7 per cent., and 8 per cent. on the ordinary shares issued on December 31, 1928, free of tax, making 12 per cent., free of tax.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 24:—

Egyptian Futures.

Sakel Contract.—Weakness in both the Alexandria and American markets immediately after our last report, and continuing up to the commencement of the present week, was primarily responsible for the sharp drop in values experienced during that period. For some little time those operating on the long side have shown disappointment at the continual absence of trade support, and once the other markets developed a pronounced downward swing our contract, under the pressure of liquidation from local and Continental sources, declined rapidly. With the May position approaching the 17d. level spinners began to show more interest, and, encouraged by this, and also by the steadying up of the overseas markets, prices began to rally. We close to-night with a much improved undertone in evidence, the decline on the week being reduced to 21 to 22 points for near and 23 to 37 points for new crop positions. During the past few days there has been a welcome improvement in the spot demand, and this has been reflected in the firmer tendency of the May position. Apart from a limited quantity of old and undesirable dockets, there is little cotton in the local stock that could be tendered except at a material sacrifice, and on this account we rather anticipate a gradual closing up in old and new crop differences. From reports received the new crop does not appear to be making a very favourable start, and cables have been received this week complaining of damage from heavy rains; whilst so far this news has not been made much of from a market point of view, it may readily, at a later date, come into great prominence as a "bull" factor. Until we have more definite signs that the trade are able to operate at the ruling level we consider that commitments should be restricted to minor quantities; at the same time we hold the view that the liquidation of the past week leaves the contract in a position to respond quickly to any change of sentiment in either the Alexandria or American markets.

Upper Contract.—More activity has been witnessed in this market than we have been accustomed to for some little time. Liquidation of old "bull" accounts, weak Alexandria advices, and declining American markets all contributed in the earlier days of the week to influence values to a lower level. More latterly, however, a healthier undertone has been in evidence, and a recovery from the lowest point touched has been recorded. At one period the July position narrowed down to 185 points over the corresponding delivery in the American market; the difference has since widened to 200 points, and we expect it to stabilise round this figure for some little time. Trade reports are not satisfactory, but we believe business would develop if buyers had the assistance of steady markets. The Liverpool stock is attractive both from a price and quality point of view in comparison to the overseas markets; for the near future fluctuations will probably be closely allied to the tendency in the American markets. However, in view of the statistical position and the consistently heavy weekly American reduction in the supply figures, we consider moderate purchases on any further decline a reasonable risk.

Egyptian Spot.

During the early part of the week all futures markets continued to display a sagging tendency and spot values declined in sympathy. The daily inquiry dwindled in consequence, and trade interest at first sight appeared to have dried up. Nevertheless, the daily sales showed little, if any, shrinkage, a somewhat unusual effect. During the last few days a better tone has developed, the demand has livened up again, and it is apparent that, provided no further break occurs, spinners are prepared to take advantage of current levels. As we have previously pointed out in these circulars, Liverpool is distinctly cheaper than Alexandria at present, and this fact is becoming more widely appreciated each week.

Sakels.—There has been no change in the general character of the inquiry for this cotton. Good Fair, and Fully Good Fair at from 50 off to 150 on May has attracted most attention with a limited offtake in evidence for the low qualities at from 11d. to 12.50d., and also, to some extent, for Fine.

Sudan Sakels.—The customary steady offtake has continued, chiefly for the better qualities, and the basis has remained very firm. Murad, Nahda, etc.—Only a limited inquiry has been witnessed, but both these growths remain popular with certain spinners and the offtake is lively to improve rather than diminish.

Tokar Sakel.—Some inquiry has been noticed, but spinners are slow to bid, and sales have been negligible.

Upper.—A very steady business has continued, almost entirely, in cotton ranging from 25 off to 25 on May contracts. Stocks are ample, but staple lots are hard to find and are eagerly sought after. The better grades have again been neglected.

Pilion.—In quiet request only and principally for the low or medium qualities.

C.I.F. business has shown a slight improvement, and forwardings to the trade last week were returned as 6,954 bales Egyptian and 2,142 bales Sudan. Spot sale (estimated), 2,700 bales Egyptian and 2,200 bales Sudan Sakel. Quotations of Sakel show a decline on the week of 65 to 70 points; Uppers are 63, and Pilion 55 points lower. F.G.F. Sakel to-day, 18.10d. F.G.F. Upper to-day, 12.08d. F.G.F. Pilion to-day, 13.05d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended April 18, state:—

Since our last report the futures market has been very weak, and the close to-day was at practically the lowest prices quoted. The week's summary of price movement is as follows:—Sakellaridis: May, 35.29 dollars, 1.52 dollars down; July, 35.67 dollars, 1.51 dollars down; November, 36.33 dollars, 1.20 dollars down; January, 36.60 dollars, 1.08 dollars down. Ashmouni: April, 22.52 dollars, 0.71 dollars down; June, 22.70 dollars, 0.90 dollars down; August, 22.75 dollars, 1.03 dollars down; October, 23.13 dollars, 0.64 dollars down; December, 23.40 dollars, 0.69 dollars down; February, 23.50 dollars.

Sakel.—We have had a succession of weak markets, and prices have lost ground at every session; May from 37 dollars closed to-day about 25½ dollars, and November has declined from 37½ dollars to about 36½ dollars. The decline may be attributed to the somewhat heavy tone of the New York market, which has had the effect of discouraging local long operators and inducing liquidation of their positions. Apart from these liquidating sales, which were on a fairly large scale, the reaction was accentuated by attacks on the part of short sellers, which became so much bolder as prices declined that the open short position must now be of fairly respectable proportions.

In spite of the appreciable fall in prices, the demand from spinners has continued to be on the very poorest scale, which is somewhat surprising, as the most recent reports from consuming centres seemed to foreshadow a certain amount of activity in the event of any reaction owing to the very limited stocks held by spinners. We consider the level which prices have reached to be reasonable, and, bearing in mind the statistical position, which is rather on the strong side, we do not expect that the reaction can be forced much further; on the contrary, we expect that the first sign of an improved trade demand would produce a recovery.

The Sakel Uppers straddle (May/June) this week stands at 1,250 points, against 1,321 points last week and 1,297 points at this time last year.

Uppers.—Contrary to all expectations, this market has again lost ground, and the premium over New York at the close to-day is practically at the lowest of the season. The decline has been caused by fixing of spot cotton and by some speculative sales. The demand from the trade shows a slight falling off, which has been reflected in the volume of business done at Minet-el Bassal. We are of the opinion that the recent drop in prices will play its part in reviving spinners' interest in this variety.

The Ashmouni/American straddle (June/May) this week stands at 240 points, against 309 points last week and 801 points at this time last year.

The week's receipts amount to 119,389 kantars, against exports 157,456 kantars; the stock in Alexandria stands at 2,981,338 kantars.

Spot.—This week has been a poor one at Minet el Bassal with only a small demand from abroad and a very mediocre turnover. Sales amount to about 10,000 bales, of which we estimate 4,350 bales Sakellaridis, 4,700 bales Ashmouni and Zagora, 800 bales Pilon, and 150 bales other varieties.

Sakellaridis.—A small business has been done, chiefly in the medium qualities. Spot differences are generally unchanged, except for Fully Good, which is somewhat cheaper.

Ashmouni and Zagora.—The demand has fallen away a lot and this week's turnover is distinctly poor. All grades have been dealt in, with the medium qualities in most request. Spot differences are generally unchanged.

Pilon.—A fairly good business has been done, chiefly in the better qualities, at about last week's differences.

Other Varieties.—In White a small business has been done. Spot differences are inclined to harden. A few lots of Nahda and Maarad have also been done.

Up-country.—The approach of the date for the closing down of ginning factories has stimulated business in the villages, and the residue of unginned cotton is being rapidly sent to the factories; the latter have speeded up to cope with it and regular arrivals of moderate volume are to be expected in Alexandria during the coming fortnight.

Crop, 1929.—Weather conditions have been favourable and the young plant has consequently benefited. On the whole, the state of the crop is normal, the sole exception being the plantations in the south and centre of the Delta, where there is a slight delay.

The capital of the Roumanian Credit Bank is to be increased from 200 to 400 million lei.

Vickers-Armstrongs have recently received orders for six hydraulic capstans for the Calcutta Port Commissioners and two electric capstans for the East Indian Railway.

A Bill providing a credit of 500 million lei for the construction of new roads in Bessarabia and for six bridges between Bessarabia and Moldavia has been laid before the Roumanian Chamber of Deputies.

A recent issue of the Greek Official Gazette contained a Decree providing for the temporary duty-free admission into Greece, under certain conditions, of single soft yarns of artificial silk and floss silk to be used in making carpets intended for export. The yarns must be imported in quantities of not less than 100 kilograms, of either kind.

Notes of the Week.

The Nile Waters Agreement.

The Government of Mahomed Mahmoud Pasha has given fresh proof of its claim to be a Government "of performance" in the conclusion, within a year of its taking office, of a comprehensive agreement with Great Britain regarding the use and control of the Nile waters. The subject has been for many years one of urgency and vital importance to Egypt; but a settlement was impossible so long as the question was made to serve political ends and was used to stir up feeling in the country against Great Britain. With the suspension of parliamentary institutions the subject could be taken out of the realm of politics, and could be discussed with the single aim of arriving at a practical commonsense arrangement. The length of the negotiations in the new atmosphere testifies to the technical difficulties involved, but the nature of the agreement illustrates the hollowness, and, from the Egyptian point of view, folly, of the attempt to make political capital out of the question. Egypt is now able to proceed, full steam ahead, with the great programme of irrigation works which has long been recognised as essential to the agricultural development required to meet the needs of her rapidly increasing population. The works immediately affected by the agreement include the raising of the Aswan Dam, already in train, the building of the Gebel Aulia Dam on the White Nile above Khartoum, which can now be pushed on without fear of further interruption, and preliminary surveys for a barrage at the Nile's point of issue from Lake Albert Nyanza and for a canal through the Sudd region. The agreement deals also with the Makwar Dam, with a view to regulating the use of the waters of the two Niles for the purposes of the Sudan, and at the same time provides for the continued close co-operation between officials in Egypt and in the Sudan. The conclusion of any of these arrangements by an Egyptian Government which was animated by hostility to Great Britain, or affected to believe that the latter's presence in the Sudan was necessarily inimical to Egyptian interests, would have so stultified its own policy that it was obliged to subordinate the urgent needs of the country to its political programme. The present Government, on assuming office, laid down the principle that Egypt could not afford the luxury of arresting her material develop-

ment in order to indulge in political slogans that had no chance for some time to come of being carried into practice.

Theory and Practice.

By a coincidence the two Governments in Egypt and Great Britain which have concluded the business Agreement regarding the use and control of the Nile waters are both asking their respective countries to appreciate the advantage of achievement over words. At the end of four years of office Mr. Baldwin points to a programme the effects of which have already made themselves felt for good or ill, according to the political views of the critics, in the everyday life of the nation. In Egypt the Government of Mahmoud Pasha had to begin so much at the beginning that for some time to come his political opponents will have opportunity to belittle, or to attempt to belittle, his rate of achievement. Even the simultaneous erection of hospitals in a number of places will for a few years make a restricted appeal, until their distribution throughout the country has been able to counteract the narrow horizon of the fellaheen. The big irrigation works now being undertaken directly affect the well-being of every Egyptian; but time must elapse before they result in adding to the water supply of the individual cultivator or in throwing open more land for cultivation. Of the value to the country of the programme now being put into execution there can be no real doubt; and a Government would be less than human if it hesitated to throw its achievements on the scrap-heap merely to do homage to the theoretical superiority of constitutionalism over un-constitutionalism. No small part of the dilemma that must sooner or later overtake the Egyptian Government consists in the fact that, while it will not be able to round off its great achievements until equally satisfactory agreements on a number of other matters have also been reached with Great Britain, these agreements will require for their consummation the resumption of parliamentary institutions. How long, therefore, is it likely to be before the simple-minded fellaheen can learn to appreciate achievement, even though its full results for him still lie in the future, more highly than vague promises, however attractively or violently worded, for the most part incapable of being fulfilled? The education of the fellaheen

has much to do with the answer, and this problem is also being approached on scientific lines by a practical Government. Whether the intelligentia of the Opposition can be persuaded, after the example now set it, to pin its political faith on practical programmes rather than on unattainable utopias remains to be seen.

The Dead Sea Concession.

The promise that the names of the chief financial supporters of Mr. M. A. Novomeysky and Major J. Tulloch, to whom the Dead Sea Salts concession was given in principle some time ago, was fulfilled last week, when the Secretary of State announced them in the course of a speech on the Colonial Office vote in Committee of Supply. At the same time Mr. Amery stated that the long negotiations had "now practically come to a conclusion satisfactory from the point of view of both the Palestine and the Trans-Jordan Government." It may, therefore, be expected that the actual concession will be signed, or at least initialled, this week, and that the task of proving the commercial value of the hidden wealth of the Dead Sea will have been advanced an appreciable stage. In view of the lateness of the season, from the point of view of manual labour on the shores of the Dead Sea, it is unlikely that any large scale development will be begun before October; but there will be time for preliminary arrangements to be made for a comprehensive survey of the whole ground and for some extension of the tentative operations already in progress. The composition of the group supporting the concessionaires, and in particular the acceptance by Lord Lytton of the post of Chairman of the company to be formed to work the concession, would appear to have allayed the misgivings of those who were inclined to detect some subtle conspiracy in the whole affair. The exploitation of the Dead Sea salts is to be undertaken on a comprehensive and scientific basis, and if the confident anticipations of those who have already investigated the subject are realised, both Palestine and the agricultural world in general stand to benefit largely from what should ultimately become a vast enterprise.

Iraq and Najd.

Now that the mists of doubt are to a considerable extent rolled away from the vexed question of the Iraq-Najd frontier, it is possible to examine this matter in a purely dispassionate manner, with possession of the point of view of both sides. The moment is the more opportune in that two things have happened since last the problem was debated. In the first place, Sir Gilbert Clayton, whose attitude and good will in this matter are perfectly understood by King Ibn Saoud, has taken over the High Commissionership of Iraq; and in the second place, King Ibn Saoud has triumphantly vindicated, by his quelling of Faisal al Duwish and of Sultan Ibn Bijad, his own good intentions towards Iraq. From this last fact alone it appears to be abundantly clear that those were absolutely in error who sought, in justifying the hostile attitude of Faisal al Duwish and his supporters, to lay the blame for the trouble on those officials of the Iraq Government whose one (and whole-time) duty it is to preserve peace on the frontier. Rumours of the evil intentions of the other side float down from Central Arabia as easily to Mecca and Jidda as to Basrah; and it must always be remembered—though it is desirable to hear both sides of the case—that propaganda comes with no less facility to the adherents of the Saudis than to the devotees of the Sharifians. To take a detailed example: it has been suggested from Jidda that much of the recent unrest on the northern frontier of Najd was due to the menacing attitude of the Iraqi authorities, and the name of Captain Glubb has been mentioned in this connexion as synonymous with new and intolerable pretensions to hegemony in the desert area. Nothing, however, could be further from the truth than this picture. For the fact is that the poor shepherd tribes of Iraq have in recent months been wantonly attacked, and that the obvious and first duty of all Iraqi authorities is to protect such tribes. The record

of the Royal Air Force and of Iraqi soldiers in this southern desert area is alone, however, sufficient to disprove the allegation made in certain pro-Wahhabi circles of provocation against the Najdis. For on the whole the armed forces of Iraq have, as King Ibn Saoud must well know, been remarkably forbearing. It is, indeed, owing to the essentially patient and correct spirit of Iraq that King Ibn Saoud has taken action against his erstwhile strongest supporters, and it is in the cultivation of this spirit, mirrored in the good will of the Wahhabi King, that the greatest hopes for peace along Iraq's southern frontier must lie.

Progress of the Middle East.

The Secretary of State for the Colonies was on April 30 able, in speaking on the Colonial Office vote for the fifth year in succession in the House of Commons, to point to some remarkable figures showing the decrease of British financial obligations in the Middle East. In examining events from week to week, one is sometimes apt to overlook the magnitude of the post-War British experiment in the Middle East. It is useful, therefore, occasionally to contrast the present with the conditions prevailing, say, five years ago, to forget the trees, that is, and investigate the wood. Take Iraq as an example. Five years ago the air was full of rumours of war between Turkey and Iraq. To-day Turkey is, with Mosul in Iraq, one of Iraq's best friends. The figures speak for themselves. In 1922-23, as Mr. Amery pointed out, British expenditure totalled over £8,000,000; in 1925-26, £4,000,000; and the present figure is £1,650,000. Of that figure, £1,200,000 represents the normal cost in this country of the four Air Force squadrons which are in Iraq. In Palestine and Trans-Jordan, again, the same decrease in expenditure is notable. In 1925-26, Great Britain was spending in Palestine and Trans-Jordan £740,000. To-day, the total expenditure is £64,000, of which £40,000 is in respect of the civil administration of Trans-Jordan, and £24,000 a contribution towards the cost of the Trans-Jordan Frontier Force. Where be your Rothermeres and Beaverbrooks now? And the millions being wasted in desert and sand? It was interesting to note, in the debate which followed Mr. Amery's instructive survey, the attitude of representatives of the Labour Party in regard to the Middle East. Lieut.-Commander Kenworthy asked whether the British Government were "still pressing the Iraq Government to impose conscription on the subjects of the King." And Colonel Wedgwood asked whether the British Government were "going to unite together the two elements (Arab and Jew in Palestine) and then hang on by force, as we are doing in India, in Egypt, and in Iraq, against the united will of the people." That such questions should be asked by the chief members of the Opposition who take an interest in Middle Eastern affairs is pathetic, for they show such a lamentable misunderstanding of Great Britain's true position in the Middle East. Mr. Ormsby-Gore was able to point out that British troops would never be used in Iraq to enforce Conscription; but Colonel Wedgwood's fantastic outburst on the anti-British cohesion of Arab and Jew in Palestine extracted no answer. It is scarcely likely, however, to find echo outside the walls of the privileged House.

Turkey and Syria.

It may or may not be coincidence that at the time of negotiations between the French Ambassador and the Ankara authorities on certain frontier and railway matters as between France and Turkey, a Turkish raid should have been reported upon the Antioch district. This last raid—the culmination of a series of Turkish incursions into Syria—ended in the capture of the notorious Cholar Mustapha; and it is to be hoped that no further bandits will arise to confirm the impression held in certain quarters that Turkey has not yet become reconciled to the retention within Syria of Alexandretta, Antioch, and Aleppo. However this may be, no progress has yet been reported in the problems outstanding between Turkey and French Syria. The French Ambassador, the Comte de

Chambrun, is not to be envied in his task and duty of wearing down Turkish obstinacy, but he may possibly derive comfort from the example of Turkey's attitude towards the Mosul affair. As constant dropping wears away a stone, so unswerving resolution in her rightful attitude may yet enable France to prevail over Turkey in the disputed frontier question.

Syria's Unsettled Problem.

The fact that agreement has not yet been reached on the frontier problem between Syria and Turkey (nor, as a consequence, between Syria and Iraq) reminds one that the internal political condition of Syria is as obscure as ever. The Constituent Assembly is still indefinitely suspended; the temporary Ministry of Shaikh Taj al Din is still in purposeless office; the Nationalists still hold the uncontested field. What will the solution be? No one knows. Recently there were several important Frenchmen sent to Syria to investigate the problem anew. M. André Buere was appointed as a kind of Minister Plenipotentiary, or High Commissioner's delegate, at Damascus—a welcome indication of French realisation of where the real power in Syria lies; and such experts as M. Robert le Caix, French Delegate to the Permanent Mandates Commission, and M. Maugras, Oriental Secretary at the Quai d'Orsay, went to Syria a few weeks ago to study conditions. In France itself, increasing anxiety is being shown over the *impasse* in Syria. It is to be hoped, therefore, that at last some real step will be taken in the political defining of the real status of this unhappy land. Immediate independence is out of the question, but a reasonable compromise is surely not beyond the wit of French and Syrian men of good will.

INDIAN NOTES.

The Banking Inquiry.

In deciding, tentatively at least, upon the scheme for the projected banking inquiry outlined in the Finance Department's recent letter to the Provincial Governments, Sir George Schuster appears to have shown a correct appreciation of a somewhat difficult situation. The Finance Member's desire to secure the co-operation of all parties from the beginning has necessarily involved some delay, but has undoubtedly been justified by the results. There was always, moreover, the danger that, unless the main points to be investigated were clearly demarcated beforehand, the inquiry would lead to a mere accumulation of uncorrelated facts from which nothing but general platitudes could be drawn. Happily the preliminary discussions with the representatives of the Legislature and the trade and industrial organisations have now disclosed a general consensus of opinion as to the broad lines on which the inquiry should proceed and as to its main objects. The first stage is to be devoted to the collection of evidence and the analysis of the principal directions in which the provision of additional banking facilities will be most fruitful. This work will be entrusted to Provincial Committees, who will institute in a few selected areas an intensive survey of local conditions. There will also be a Central Committee, constituted by the Government of India and working in close touch with the Finance Members, which will appoint sub-committees to visit important industrial centres. When these various bodies have completed their labours the Government of India proposes to invoke the aid of a small number of outside experts, who will examine, with the Central Committee, the evidence accumulated during the first stage of the inquiry and assist in the preparation of the final recommendations. The scheme is an ambitious one, but the plan of campaign is, we think, well adapted to the special conditions, and although the results of the inquiry are not likely to be discernible for many years to come, Sir George Schuster is to be congratulated on having made the first step towards the solution of one of India's most pressing problems.

Bengal and the Jute Industry.

A recent debate in the Bengal Legislative Council suggests that even the politicians are at last realising the importance of the jute industry to the province. For they seem now strongly to support the recommendation of the Agricultural Commission that a Central Jute Committee should be constituted. The jute industry owes its existence to European enterprise and for that reason it has never been popular with the politically minded classes. But nowadays as many as seventy-five per cent. of the shareholders in the Calcutta jute mills are Indians; and possibly this may be making a difference. Of late years political agitators have tried on numerous occasions to persuade the Bengali peasant to restrict his cultivation of jute. But the peasant has consistently refused to be influenced by their arguments. He continues to grow jute, and in so doing he shows his instinctive wisdom. For he thereby tends to keep the price at a reasonable level, and so to rule out substitutes and the consequent breaking of his monopoly. In the course of the debate in the Legislative Council there were the usual grumblings about the foreigners "who have made their pile out of jute while leaving the cultivator to suffer." Irresponsible talk of this sort seems to be inseparable from the debates in most of the Indian legislatures, and it need not be taken too seriously. The fact that the jute industry would not, in all probability, be in existence to-day but for the much abused foreigner was, of course, conveniently forgotten. But what was satisfactory about the debate was that all parties seem now to recognise that the material welfare of Bengal depends very largely upon jute. If this unquestionable fact is fully realised it may not be too much to hope that there will be no more foolish attempts to mislead the cultivator. The local Government is, of course, strongly in favour of the appointment of a Central Jute Committee to work on the lines suggested by the Royal Commission. As we explained in a previous issue, the principal objectives of the Committee would be so to improve the quality of the fibre as to enable it to maintain its relative cheapness as compared with other fibres, to enlarge the out-turn, and to perfect the methods of manufacture. The Committee would undertake the research work necessary in the investigation of these problems; and it would watch over the interests of every branch of the trade from the field to the factory. Growers, merchants, and manufacturers would all be represented on it, as would also the Agricultural Departments of the three jute-growing provinces, namely, Bengal, Bihar and Orissa, and Assam.

THURSDAY, MAY 9, 1929.

THE PROTECTION OF MINORITIES.

By far the most important subject under discussion at the last session of the Council of the League of Nations during March was the protection of minorities in relation to the League's responsibility in the matter of implementing the general guarantee that it was given to minorities in States created or enlarged under the Peace Treaties that their interests shall be safeguarded. As a result of the Council's deliberations a Committee of Three was appointed to study proposals submitted by the Canadian and German delegates and to report to the Council at the June session to be held in Madrid. This Committee has been in conference in London, and, although its proceedings have been private, the attempt to deal with the difficult problem is being followed with considerable interest and has given rise to animated discussions throughout Europe. The proposals before the Council in March recommended modifications of the existing procedure in regard to petitions submitted by minorities to the Council. Under the terms of the Minorities Treaties the signatory States undertook to assure to all the inhabitants within their frontiers protection of life and liberty and free exercise of their religion, without distinction of birth, nationality, language, race or religion. Nationals belonging to racial, religious or linguistic minorities are to enjoy the same treatment in law and fact as the other inhabitants, and in particular are to have the right to establish and control religious, educational and social institutions at their own expense, and to use their own language and exercise their own religion freely in these institutions. As the provisions of these Treaties were placed under the guarantee of the League, an obligation is imposed on the latter to take action in the event of the provisions' being infringed. The Treaties, indeed, empowered any member of the Council to bring before it any infraction, or danger of infraction, of these provisions, and the Council was thereupon to "take such action and give such direction" as it might deem proper and effective in the circumstances; but the Treaties were silent as to the machinery to be set up to make the guarantee effective. It soon became obvious that no member of the Council of his own volition and experience was likely to raise the question of infractions, and the obligation of watching over the interests of minorities resolved itself into the problem of dealing with the actual complaints of the minorities themselves in the form of petitions. The procedure adopted has been for petitions to be received by the Secretariat, and, if they satisfy certain stipulated conditions, they are sent to the Government concerned for its comments. These comments, when received, are circulated together with the petition to all members of the Council, but the actual examination of them devolves on a committee of three, of whom one is the President of the Council. If the committee decides against the petition, nothing more is done in the matter; if it considers that the petition merits the attention of the Council, it reports to this effect to the latter, but even then the matter lapses, unless a member formally raises the question of the infraction of Treaty provisions involved. In the case of unsuccessful petitions, no communication is made from the Council to the claimants, nor are the latter informed of the nature of their Government's counter-statements.

In these circumstances it is hardly a matter for surprise

that minorities are apt to contend that the League is neglectful of their interests and is not carrying out its obligations under the Treaties. To meet these charges the Canadian delegate, Mr. Dandurand, proposed that petitions in the first instance should be submitted by the complainants to their own Government; if the latter is unable to satisfy them, the petition and the Government's remarks on it are to be sent to the Council, which is to form a Committee, consisting of all the members of the Council or their substitutes, to consider them. This Committee may, if it thinks fit, refer the question to the Council, which will deal with it in such manner and will give such directions as may seem proper and effectual in the circumstances of the case. The German delegate, Herr Stresemann, supported the Canadian suggestions, but went further, as he proposed that, in addition to improving the procedure in dealing with petitions, the Council should not exclude from the discussions, as hitherto, the nations interested, and that the Council should examine in what manner the League of Nations can exercise the responsibility of guarantee outside the mere question of petitions. In the end the Council decided to appoint a Committee of inquiry to consider the proposals, and it was announced that any State member of the League could present its observations to the Committee. Neither the raising of the subject in the Council nor the further investigation by the Committee of Three has been to the liking of some of the States with minorities, and advantage has been taken of the opportunity offered for the presentation of their views on the subject by Poland, the Little Entente and Greece in memoranda which are understood to be couched in almost identical terms.

Behind the wish to improve upon the existing procedure for dealing with petitions is the knowledge that in most cases the conditions under which the minorities in question live still leave much to be desired. It may be doubted, however, whether there is any short cut to the goal in view. The Peace Treaties omitted to provide any machinery for making the League's guarantee for the protection of minorities effective; there is little likelihood of the necessary machinery's being accepted by the States concerned, and it is out of the question that the League should attempt to enforce it. Something might be done to remove the reproach that minorities are now in the position that they may submit properly authenticated instances of infractions of the Peace Treaties and yet have no notice taken of their complaints, merely because no member of the Council wishes to incur the odium of having to interfere on his own responsibility in the affairs of a friendly State. The granting to minorities of their legitimate rights—rights which are guaranteed them by the Peace Treaties and which the States concerned have pledged themselves to respect—is an international matter, a moral obligation imposed on the Council as a whole, and should not be made dependent on the individual action of any one member. Yet this is the procedure laid down by the Treaties, and it is certain that there is no prospect that any modification of their provisions to the required end will be accepted by the States concerned. It must be left to time and the good sense of the offending Governments to supply the remedy. Already in Roumania a new Government has come to power with a far more enlightened attitude towards minorities than any of its predecessors. Other Governments will discover by degrees that the policy of suppression or oppression does not pay in the long run, and will tire of being branded as still mediaeval or Oriental in their outlook and methods. They will then realise that concern in the fate of their minorities was not prompted by any desire to encroach upon the sovereignty of the State, but by anxiety to promote that State's real interests. In the meantime the minorities should be given to understand that Europe has no intention to countenance intransigence, still less to encourage it; and that grievances can be listened to only when there is evidence to show that the minority has recognised that it too has duties and has been making a whole-hearted effort to give loyal allegiance to the State to which it belongs.

*The Near and Middle East

From Our Own Correspondents.

THE HIJAZ.

Jidda, April 20.

The Pilgrimage.

Present indications suggest that the number of pilgrims from Egypt is going to be well in excess of that of previous years, and a total of some 20,000 is talked of as being not improbable. This is a welcome sign of recrudescence of interest in their religious duties among the people of Egypt. By a recent mail a number of Egyptian officials and doctors arrived without the necessary *visas* to their passports, and they would have had only themselves to blame, if they had been refused permission to land—as would presumably have happened in any other country. In the Hijaz, however, such matters are dealt with on common-sense lines, and it is understood that the persons in question were allowed to land on handing over their passports to the authorities for return to the Najd Agency at Cairo for the affixing of the necessary *visas*. Such situations are bound to occur when neither Government recognises the representative of the other in its territories and each insists on the *visa* of its representative being obtained for admission thereto. It would seem that mutual recognition cannot long be delayed, if only to remove an anomaly which is bound to create friction and unpleasantness.

Great Britain and the Hijaz.

It is understood that the British Consul, Mr. Stonehewer Bird, who is at home on leave, will proceed direct to India to take part in a conference with the Indian authorities on various matters connected with the Indian pilgrimage organisation. It is not certain that he will return to Jidda, as the normal period of two years' exile at Jidda will have expired, so far as he is concerned, before his mission is finished. Thus it seems that Jidda is to enjoy yet another interregnum in the matter of British representation. During the last four years, covering the whole of the reign of King Ibn Saoud, a total period of three years has been tided over with acting incumbents of the office.

The Duty of Najdis.

It is reported that Faisal al Dawish has succumbed to the wounds received by him in the recent action at Sibilla. A dangerous firebrand is thus removed from the scene, and it is to be hoped that his untimely fate will serve as a warning to less able men who have tried to follow in his footsteps. After the action King Ibn Saoud addressed the temporal and spiritual leaders present at the concentration and in his address laid down four simple principles for their future guidance as follows: (1) Matters of religious concern are not for the mass to interpret; that is the task of the *Ulama* who have the Quran and the Traditions of the Prophet to guide them; implicit obedience to their decrees will be enforced with the utmost rigour. (2) The Government is entitled to obedience, and the subject has no right of encroachment on the Government's prerogative in any matter whatsoever; no action shall, therefore, be taken except under the orders of the Government. (3) Individuals and associations are forbidden to foregather for the discussion of matters of policy or religion except on the initiative of the Government, as such gatherings only serve to mislead the ignorant. (4) The honour, life and property of Muslims and

those under the protection of Muslims are to be respected as laid down in the Quran.

These principles were promptly accepted by all present, who duly swore allegiance to them on the King's hand. King Ibn Saoud a few days later paid a visit to Artawiya, and it may be assumed that for a long time to come the voice of sedition will not be heard in the land.

Postal Rates from the Hijaz.

For some reason not explained the standard letter-post rate has been raised to one and a half from one and a quarter *Qarsh Miri* (11 QM are equivalent to two shillings) for all letters sent abroad. The new rate is thus fourpence, all but a small fraction, a heavy tax on private and business correspondence. But the general rate of taxation in the Hijaz is admittedly extraordinarily high, and there seems to be no prospect of any reduction of rates. Considering its size and its amenities, the Hijaz is a very expensive country to live in, and this factor must certainly deter thousands of pilgrims every year, thus affecting the general economic prosperity of the country. If one per thousand of the world's Muslims performed the rites of pilgrimage every year the annual number of pilgrims would easily be more than double those of a bumper year under present conditions. But nothing like one per thousand of the Muslims of the world can afford the £50 which under present condition it costs to make the pilgrimage in the simplest manner.

Vital Statistics.

The climate continues to be reasonably mild with an average minimum temperature of 77 degrees, the average maximum being in the region of 86 or 87. During the week April 5 in the five towns of the Hijaz 11 deaths were recorded from smallpox, 22 from dysentery and four from typhoid; while deaths from ordinary causes number 234 (110 men, 50 women and 74 children). There is, therefore, nothing abnormal in the vital situation.

Raids from Trans-Jordan.

In connexion with a false report of a raid from Najd on Trans-Jordan territory which has recently been published in some of the English and Egyptian papers the current issue of the Mecca newspaper publishes interesting statistics of raids by Trans-Jordan tribes on those of Najd. According to the *Umm al Qura*, from October, 1925, to March 1929, 68 separate raids took place, during which 91 people are alleged to have been killed, 15,414 camels and 3,690 sheep to have been taken and other odds and ends to have been appropriated. Since June of last year the figures (included in above) are 34 raids, 58 killed, and 5,066 camels and 3,200 sheep taken. Raiding is obviously no monopoly of the Najd tribes, and it appears that raids have been more frequent and more expensive to their victims during the last nine months than in the previous three years. Is the Trans-Jordan Government less energetic in stopping them than of yore?

Sofia, May 1.

Bulgarian Literature.

On the occasion of the jubilee of the liberation of Bulgaria and of the millenary of the old and powerful Kingdom of Tsar Simeon, who made Byzantium tremble at his name, the Minister of Public Instruction organised a "fête" of Bulgarian literature, which was celebrated last Sunday and which, with suitable exhibits, showed the enormous intellectual effort made by the Bulgarians since their renaissance, dating from the end of the 18th century, and especially since the constitution of present-day Bulgaria.

Fire at the Sobranye.

Holy Week seems to bring misfortune to the Bulgarians. During Holy Week of 1925 the horrible outrage in the Cathedral took place. Last year, again, in Holy Week the earthquake in the valley of the Maritsa occurred. And this year, the time has been marked by an outbreak of fire in the Sobranye building. A fire, due to a short circuit, broke out on the morning of April 30, gutting a part of the Assembly Hall, notably the platform, the Presidential tribune, and the Royal Throne. Happily, the fire was quickly mastered, thanks to the heroic efforts and the excellent organisation of the firemen, and the building was saved. The damage is not very considerable.

Bulgaria and Minorities.

The question of minorities, so vital to Bulgaria, has been the subject of a debate first in the Parliamentary Committee for Foreign Affairs and then at the Sobranye. The debate was marked by the success of M. Bouroff, who had often been accused of slackness in regard to minorities, but who received the unanimous approval of the deputies of all parties by his analysis of the memorandum which he has addressed on this subject to the Committee of Three. The sending of this memorandum was represented by M. Bouroff as Bulgaria's duty towards the League of Nations, which had invited all its members for comments upon the operation of the machinery for the protection of minorities.

Everyone who spoke insisted on the necessity of securing effective protection for the Bulgarian minorities as a means of consolidating peace in the Balkans, without going outside the Peace Treaties.

The Bulgarian memorandum explains the condition of the Bulgarian minorities in Macedonia and the Dobruja, and claims the right to defend their case at Geneva. It also asks the League to verify the answers made by interested States to the petitions sent up by these Bulgarian minorities.

A Bulgaro-Yugoslav Incident.

The sending of this memorandum caused considerable vexation at Belgrade, where the Macedonians are claimed as Serbs and consequently no rights of minorities are given them. This vexation needed but a pretext to burst out. The pretext was provided by the unexpected arrival at Sofia of two Croat emigrants, M. Anté Pavelitch and M. Gustav Pertchetz, leader and Secretary respectively of the Croat Federalist Party, bitter enemies of the Serbs and particularly of the dictatorship of King Alexander. As M. Pavelitch had been the defender of the Macedonian students recently condemned at Skoplye because they had tried to organise themselves on an ethnic base, as Macedonians, all the Macedonian emigrants gave to him and his companion a rapturous

welcome. This naturally resulted in strong anti-Serb speeches. Were these two Croats on a mission in Bulgaria? It is scarcely credible. However, during their short stay at Sofia the Croat-Macedonian union against the Serbs was proclaimed. The Serbs were exasperated. Their Government made a diplomatic *démarche* to M. Bouroff, who, understanding the real cause of this anger at Belgrade, replied through the Bulgarian representative at Belgrade that the Government knew nothing of the arrival of these two Croats, that it was, therefore, surprised by their virulent declarations, but that it would not admit on its territory the organisation of conspiratorial activities against the security of its neighbours nor the uttering of offensive words towards their Kings.

The incident is now closed.

GREECE.

Athens, April 28.

Triumph of M. Venizelos.

By winning nearly three-fourths of the 92 seats of the newly constituted Senate, which have been filled by popular vote, M. Venizelos has obtained a striking vote of confidence, and a unified personal control is thus assured for the country for some time to come. The best comment on the results is supplied by a Royalist paper. It says, in effect, that whatever mistakes M. Venizelos may have made (and they are many), the people are not going to vote against him until they see another leader or another Government capable of replacing him.

This admission is significant of the change of feeling. The same article acknowledges that, during his tenure of office, M. Venizelos has not, as it was supposed he would, murdered, imprisoned or provoked his political opponents, and it also pays a tribute to his sagacity in threatening to resign if he did not obtain a majority. It concludes by asking rather peevishly, "Shall we always be faced by the same dilemma, when we go to the polls, of voting for a bad affirmation in order not to vote for a useless negation?" Such is the opinion that Royalists hold of their own leaders.

An analysis of the voting shows that the much-talked-of abstention did not take place to any great extent, the numbers of those who voted not being very much less than in August last. The Popular Party obtained ten seats, the Democratic Union only one, the extreme Royalists and the Communists none. In spite of a personal visit to Salonika of M. Papanastassiou, his party there (Democratic Union) received only 5,000 votes, as against 30,000 given to the Liberal Party. In view of the fact that the principal tramline was blocked for two hours while he held a meeting in front of the White Tower, it is surprising that the citizens of Salonika gave him as many votes as they did.

The first Senate in Greece came into existence in 1843. It lasted for 18 years and then died a natural death, coinciding with the fall of King Otho. Its members were nominated by the King, it never received popular support, achieved nothing, and was not reconstituted by the National Assembly of 1864. It is to be hoped that the new Senate, of which M. Zaimis is to be President, has a career of greater usefulness before it.

Meanwhile the physical activity of the Prime Minister is unabated. Apart from long working-hours, and constant interviews, he frequently appears in public: he even went down to the Piræus, of which he is a citizen, to record his vote on Sunday last; he was present at the laying of the foundation-stone of the new University Laboratories at Goudi, and has now undertaken the tedious journey to Missolonghi to attend the annual commemoration of the Sortie, interviewing at Patras on the way deputations from the regions of West and South-West Peloponnese which have been lately terribly ravaged by hail. On the best estimates, 70 per cent. of the current vines have been destroyed. This is the third great calamity which has fallen on Greece within a year, the others being the Corinth

earthquake and the floods in Macedonia. One does not wonder that the country continues to give its confidence to a man who spares himself so little.

"Tourism" and Archæology.

The tourist season is drawing to its end. Statistics are not available, but one has the impression that there have been more visitors than ever. The Hellenic Travellers extend their programme year by year. This year, Thermopylae was included, and, as the new roads come into being, North and North-West Greece will be brought within their radius.

Meanwhile, the Archæological Schools are opening their campaigns. The British School has concluded its annual excavation in Macedonia. Two prehistoric sites were dug, one at Langaza, a spot familiar to many members of the Salonika Army; another on the west coast of Chalcidice. At both sites good results were obtained. Another excavation by members of the British School is being carried on in Lesbos. The main activity of the School will, however, be in Crete during the next few years, where the promising site of Eleutherna will be excavated. Mr. Payne, who is to succeed Mr. Woodward as Director, will shortly make a preliminary examination of the site, preparatory to work on a larger scale next year. Italian archæologists also are giving their attention to Crete again; and an extensive programme of work has been laid down. Renewed work at Phaestos and Hagia Triadha is contemplated, as well as at the famous site of Lyttos, which was first examined by Balbherr and Taramelli thirty years ago.

The Salonika Fair.

Serious alarm is felt in Salonika about the fate of the Annual Fair, which, after having met with only moderate success last year, is now threatened with extinction, partly owing to the contemplated Panhellenic Exhibition at Athens in 1930 and partly to the demands of the military authorities, who require the ground on which the Fair buildings are situated. It is clear that if an annual Fair is to be held at all, Salonika is the only place in Greece for it; at the same time it must be admitted that the Fair, as at present managed, is not worthy of a great city. For one thing, in an Exhibition which claims to be international, or, at any rate, inter-Balkan, works of art by untrained village hopefuls should not be admitted. The only English exhibit seems to be a reaper and binder which (one hopes one is mistaken) does duty every year. Half-empty exhibition buildings also create a depressing effect. Organisation on a large scale is not a strong point with Greeks, and one fears that visitors from Central Europe, where these things are better understood, are not favourably impressed by the somewhat haphazard arrangements of the Fair. Moreover, Salonika is passing through a financial crisis, as is evident from the half-empty restaurants and places of entertainment. For Greeks have the capacity, in times of stress, of tightening their belts, so to speak, physically and mentally, and appear to go without food and amusements when money is close, so that one can almost gauge the prosperity of a town by the

number of people in the restaurants and cinemas. Building is at a standstill, apart from some desultory work on the sea-front, and the city as a whole has an air of stagnation.

Cairo, April 27.

The Under-Secretaries.

There have been several changes in Under-Secretaryships. The most notable are the appointment of Hussein Bey Sirry, Surveyor-General, as Under-Secretary for Public Works, the promotion of Mahmud El Falaky Bey, as Additional Under-Secretary of State for Finance, an interchange of posts between Aly Gamal Eddin Pasha, Under-Secretary for the Interior and Rashwan Mahfuz Pasha, Under-Secretary for Agriculture, and the promotion of Mahmud Fahmy El Keisy Pasha, Director-General of Public Security, to Additional Under-Secretary for the Interior.

Hussein Bey Sirry's promotion is well merited. The able son of a distinguished father, he has shown himself to be a capable engineer well fitted for his new post. The creation of a second Under-Secretaryship for Finance meets a long felt want, for the present Under-Secretary, Ahmed Bey Abdel Wahab, has far too much to do. Finally, the promotion of Keissy Pasha will give much pleasure to those who know his character and the value of his work, and it is a distinct satisfaction to know that in his new post he will specially occupy himself with the administration of the Department which he has directed with such ability.

Drugs and Cotton.

The two Bureaux which the Government has just created should both of them prove of great value. The Drug Bureau, which is to co-ordinate the work of the various departments at present dealing, each from its own point of view, with the traffic, should materially assist in the campaign which is being waged here. Already the Bureau is on the track of what looks to be the international organisation, which has been directing the infiltration of noxious drugs into Egypt and the adjacent countries, and co-ordination with the Vienna police has proved most satisfactory. It is estimated that the minimum number of persons in Egypt to-day habitually indulging in drug-taking is half a million, and this is

daily increasing. It is interesting to note that of the 21,000 prisoners in the State prisons, 5,000 are detained either for using or trafficking in drugs.

The Cotton Bureau will fill a much-needed want, since it will do for cotton on the economic side what the Ministry of Agriculture has done so far on the agricultural side. It will also in time materially assist that administration by the information which it will collect from the outside markets, in developing cotton cultivation along lines which will secure the most favourable prices for the Egyptian variety. At the same time the Bureau will help the Government with data and early information in coming to a decision when circumstances arise which call for its intervention.

British School at Alexandria.

The British community in Alexandria, already distinguished for its public spirit and patriotism, added another laurel to the sheaf which it already possesses on April 19, when Lord Lloyd, at a meeting held to celebrate the official opening in hired premises of the new British Boys' School, announced that the total amount required to enable building to be started had been subscribed.

The project for this school was launched only a year ago. Lord Lloyd, shortly after his arrival in this country, was very impressed by the disproportion between institutions giving education on British lines and those established in this country by other foreign communities, and he ordered an inquiry to be made into the question. This inquiry was carried out by the Consul-General in Alexandria, Mr. Heathcote-Smith, and in the autumn of 1927 an informal meeting of the community was held in Alexandria under the presidency of the High Commissioner to consider what steps should be taken to remedy the situation in this respect. A committee, composed of the most representative members of the community, was formed and in March last year the scheme was launched by Lord Lloyd at a mass meeting at Victoria College, which will remain memorable in the annals of the community.

The scheme provided for four schools, a primary intermediate school and a secondary college for boys and two similar institutions for girls. Of these, the secondary college for boys already existed in Victoria College, which had been founded in 1903, in memory of the late Queen Victoria, to give a form of education on British public school lines to boys of all communities, preference being given, of course, to the sons of British parents. It was decided that of the three new schools, the Boys' Primary Intermediate and the Girls' College were the more immediately necessary; the former to provide education of a commercial nature for the children of British families who could not afford to send them home for this purpose, and incidentally to supply the growing demand for English-speaking personnel in this country; the latter to do for girls what Victoria College had done, and was doing, for boys.

Accordingly an appeal was made for £E140,000; of which £E70,000 would be for the Boys' School, £E60,000 for the Girls' College and £E10,000 for Victoria College, and it was decided that, as the Boys' School was probably the more urgent, the funds should be devoted in the first place to that school and to meet what Victoria College needed. At the same time the Committee, bearing in mind the tendency manifested in the past to start public enterprises without adequate funds for their maintenance and the irritating manner in which the community has continually been called upon to subscribe to keep such institutions going, laid down that the building of no school should be undertaken, unless and until the funds available provided an endowment adequate to avoid further appeals for its maintenance.

The response to the appeal was from the start magnificent. Within the first few weeks the amount promised was such as to prompt the Committee to regard it as sufficient to justify opening the school in hired premises, in order the sooner to meet the demand which it was

assured existed for the style of education which this school was to give. Convenient premises were secured, a headmaster, Mr. W. R. Thompson (formerly assistant-master at the John Ruskin Central School for Boys, near Croydon) was engaged from England, and on October 3 the school opened its doors. Already at the outset justification was forthcoming. Instead of the 40 to 50 boys, which the experienced members of the community had forecast as being the probable number of applications at the start, 80 boys presented themselves on the first day, and since then the number has steadily increased until to-day it has attained one hundred. Next term accommodation will be increased to 120 and there seems no doubt now that within the next two years the full complement of 300 to 350, for which the school is designed, will be in attendance.

Meanwhile, subscriptions continue to come in. The Malta Government came forward with a donation, which, in view of its restricted Budget, was a remarkable testimony of its interest in the school, and the Alexandria Municipality generously ceded a piece of ground on what is known as the Chatby site, at a most advantageous price. After the visit of Mohamed Pasha Mahmoud to Victoria College last month it was decided that the time had come to celebrate the official opening of the Boys' School, which it had not been possible to do last autumn, and that an attempt should be made to try to get the fund complete by the time Lord Lloyd came down to preside over the ceremony.

This was fixed for April 19 and provided a most dramatic termination to what has throughout been a romantic venture. On Monday, April 15, the General Committee held a special meeting and decided that, while maintaining £E80,000 as the minimum sum for capital requirements for the Boys' School and Victoria College, it would be possible to start building operations as soon as £E77,000 had been subscribed. The total amount promised at that time was £E71,000, which included subscriptions from all the residents in Alexandria in a position to give substantial amounts, and it looked as if the task of getting the remaining £E6,000 in four days was impossible. Still the Consul-General and his Executive Committee, who had already performed wonders in this respect, set to work. By Wednesday evening the figure outstanding had been narrowed to £E2,000, all in relatively small donations. By Thursday evening the margin was under £E1,000. Friday noon it had fallen to £E500, and by the time Lord Lloyd reached the school for the ceremony the Treasurer was able to certify that the £E77,000 had not only been reached but overpaid—the feature of the eleventh hour subscriptions having been small donations from clerks and similarly situated British subjects, who thus testified not only to the widespread interest taken in the scheme itself, but also to their desire to see that an enterprise backed by the High Commissioner, with which the good name of the British community in Egypt was associated, should succeed.

The past week has been indeed a romantic one in the annals of the British community in Alexandria, and the result is one of which everyone of its members may be justly proud. The effort which the subscription of this £E80,000 within a year represents is truly remarkable especially as every section of the community, and every class in it has co-operated. But, while it demonstrates the public spirit and patriotism with which the British community in Alexandria is permeated, it could not have been achieved, had there not been the magnetic personality of Lord Lloyd at its back, and had not the Committee, which supported him and did the spadework under the inspiring direction of Mr. Heathcote-Smith, throughout been guided by a singlemindedness of purpose, which leaps to the eye when one reads the minutes of the innumerable meetings held during the past eighteen months, and notes the regularity of attendance, the earnestness of the discussions and the constant willingness

to give a helping hand in the smallest matters on the part of men who could have found in their own work every reasonable excuse to be relieved of such duties.

Teheran.

The Shah's Coronation.

The anniversary of the Coronation of Reza Pahlavi, Shah of Persia, will be celebrated on April 24 by a State Banquet at which the representatives of the Powers will be present.

A reception will afterwards be held in the Golestan Palace.

Diplomatic News.

M. Le Comte de Sercey, great grandson of the first French Minister to Persia after the fall of Napoleon the First, has been appointed First Secretary to the French Legation in Teheran.

M. Bergeron has arrived to take up his post as French Consul at Teheran.

Mr. L. Treatt, Chargé d' Affaires at the American Legation, who has been seriously ill with pneumonia, is now convalescent.

Anglo-Persian Oil Company.

Petroleum has been found by the Anglo-Persian Oil Company at a depth of 1,966 feet in No. 9 well at Naft-Gol.

The Anglo-Persian Oil Company have made the following donations: 7,000 tomans to the Lion and Red Sun Society (Persian Red Cross), this sum to be an annual payment; also, 5,000 tomans to Teheran Municipal Hospital, and 2,000 tomans to the Public Hygiene Administration.

The proposal of the Company that the railway line from Ahwaz should be extended to the petroleum reservoirs, the Company to pay all expenses, has been approved by the Ministry of Public Works.

General News.

Twenty-one students, chosen by competitive examination, will be sent to Europe this year for technical training in railways, mines, steel foundries and so forth.

The German-American Railway Syndicate has laid 11,100 metres of railway lines in the north, 5,170 metres at Ahwaz and 800 metres at Bandar Chapour.

The contract for the bridge across the Karun River at Ahwaz has been given to the English firm of the Patent Shaft and Axletree Co. It will weigh about 2,000 tons.

The first aeroplane to carry the mails direct from Teheran to Baghdad left on April 9 and returned on the 12th. The actual flying time was 3 hours 20 minutes. (Time by car 3 to 3½ days.)

The compulsory wearing of the Pahlavi hat is reported to have caused serious disturbances in south and south-east Persia, the tribes turbulently resenting the innovation.

The President of the Royal Diwan of Iraq, Rustam Beg Haidar, is due to arrive in Teheran on April 23 on a visit to the Shah on behalf of King Faisal of Iraq.

Dost Mohammed of Bompoor has arrived in Teheran, where he will live in future and receive a monthly pension. This famous bandit formerly terrorised the region between Douzdab and Kermanshah on the Afghanistan and Baluchistan borders.

Sayyid Mustafa Khan Kazémi, Mirza Hamid Khan Sayah and Mirza Fazlollah Khan Hatemi are the Persian delegates, and Messieurs Apressoff, Sakanoff and Zalkined are the Russian Delegates at the approaching conference on the administration of the Caspian Sea Fisheries.

Commandant Del Prato and Signor De Zan, Italian specialists engaged to advise as to the purchase of the necessary boats for the adequate supervision of the Caspian Sea and the Persian Gulf, have arrived at Bushire to study the question.

At the International Postal Congress to be held shortly in London, Persia will be represented by Mirza Rahim Khan Ardjoumand.

CYPRUS.

Nicosia, April 28.

A New Mining Project.

A wealthy American company—the Smelting and Refining Company of New York—will, it is said, shortly start mining operations near Amathus, the old Phœnician Settlement about six miles east of Limassol, having come to terms with the holder of rights there. In the extensive burial grounds of Amathus (called by the Turks *Eski Limassol*—old Limassol) excavations have been carried out for the British Museum and other applicants since the British occupation. In the country to the north are traces of old mining works, and picturesque metamorphic rocks are to be seen. Terra umbra has been exported in considerable quantities from the vicinity.

A Fruitless Meeting.

The meeting of the Holy Synod and Greek Members of the Legislative Council, convened by the Archbishop and "Ethnarch" came to no conclusion on its agenda relating to the political situation and Greek aims. It was considered that a larger and more representative meeting, to include mayors of towns and larger villages, and other persons, should be convened, in order to discuss the policy and future action of the Greek community with regard to its aims.

Island Education.

It is understood that when Canon Newham, Director of Education, retires in June, his successor will be appointed either from England or possibly from Palestine. Great dissatisfaction continues to be expressed in Greek papers that a Greek will not be appointed. Both people and Press are unanimous in paying the highest tribute of esteem to Canon Newham, on account both of his character and qualifications, and the eminent services he has rendered to the cause of education during his long residence in Cyprus—services which, it is stated, perhaps excel those of any Englishman who has worked in and for the island. He has endeared himself to people of all communities. The English School which he founded and directed has educated many hundreds of boys, especially Greeks and Turks, many of whom have obtained Government employment. It is also greatly due to him that athletics and games, especially football and hockey, now so popular in the island, have taken firm root in Cyprus.

General News.

In accordance with directions from the Colonial Office,

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

the Greek Archbishop has been informed that the Prince of Wales and the Duke of York have received the memorial sent to their Highnesses, as Members of the House of Lords.

In an athletic sports contest between the American School at Larnaca and the English School at Nicosia, the former were successful, and retain the challenge shield presented by Sir Hamilton Gould Adams when he was High Commissioner in Cyprus.

Mr. Thomas, formerly President of the District Court of Nicosia, was entertained by the Judicial body of Nicosia, on the eve of his departure to take up his appointment as Puisne Judge in Trinidad.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 18.

The Public Safety Bill.

The President of the Assembly, last mail day, gave his anxiously awaited ruling on the Public Safety Bill, the question being whether the proceedings must be stayed until the Meerut Conspiracy charges had been adjudicated on, or until the charges had been withdrawn. The President, arguing that no debate was possible during the pendency of the Meerut trials other than one that would be a "fraud and a farce," ruled the Bill out of order. Mr. V. J. Patel's ruling was set forth in a long and well-reasoned statement, but one, in view of what has since happened, out of which the interest has faded. Even on the day itself the President's statement must have been of less interest than a communication from the Viceroy that was read just before the House adjourned. It gave intimation of the Viceroy's intention to address a joint sitting of both Houses on the morrow.

The Viceroy's Statement.

The main purpose of the Viceroy, in calling the two Houses together to hear him, it was then disclosed, was to announce his decision to issue an Ordinance embodying the provisions of the Public Safety Bill as amended by the Select Committee of the Assembly. This Ordinance was immediately issued, the Governor-General availing himself of the authority conferred upon him by Section 72 of the Government of India Act. The purpose of the new powers conferred by the Ordinance on the Governor-General-in-Council, as the Viceroy was careful to point out to the Houses, is preventive. They will affect none who are content to employ their liberty in India for legitimate ends by legitimate means. Moreover, the conditions under which the new powers will be used to protect the public safety have been the subject of very full and careful consideration.

The Rules of the House.

That was the Viceroy's main purpose. He had another, or even two others. One was to inform the Houses of a decision of the Government with regard to the rules of debate. The President's ruling of the day before debarred the Government from asking the Legislature for the power it stood in need of, and made it impossible for either Chamber to record its decision upon the Government's proposals, or to form its own judgment whether or no it could usefully conduct its debates on the proposals within the rules. The situation that had arisen might arise again, for the only appropriate person to interpret the rules under which either House works is the President of that House. The Government must therefore secure by due authority, and would do so, His Excellency stated, without delay, such amendment of the rules as might be necessary to prevent any recurrence of a similar interruption in normal legislative procedure.

The Bomb Outrage.

The Viceroy had also his word to say regarding the

bomb outrage of the beginning of the week. Men had always been tempted, he said, to seek to promote political aims by resort to crime. Such deeds of violence could never be completely disentangled from the setting in which the ideas behind them had been nurtured. Some men must have thought and spoken before the other men resorted to crime; and dangerous words, written or spoken, by one man were only too frequently a poisonous seed in the soil of another man's perverted imagination. From such roots sprang the impulse driving human beings to ruthless and shameless crime, and invested it with a false halo of self-sacrifice. The members of the two Houses—this was not said, but it was understood—were to put that in their pipes and smoke it. That is to put it as the man in the street expresses himself, but none the worse perhaps for that.

The Lesson Taken to Heart.

If that lesson, or any other lesson on the need of conciliatoriness in speech, could be taken to heart in India, the situation would be more hopeful. I might have made my heading, "The Lesson Not Taken to Heart"; for speaking immediately afterwards Mr. Srinivasa Iyengar condemned the Viceroy, without qualification, for arrogating to himself appellate jurisdiction over the President of the Assembly, and for "unfairly pressing" the bomb outrage into his service. "It is nothing short of scandalous," said he, "for the Government cynically to say that they will change the rules. That the Viceroy should directly intervene in this peremptory and intransigent fashion is a striking commentary on the so-called British justice, Parliamentary tradition, and all clap-trap of that kind to which we have been treated both by our alien rulers and their Indian allies." It is such talk as that of which the Viceroy was thinking, when he spoke of the setting in which the ideas behind political crime are nurtured. Harder things by far are said daily in India of the British and their so-called justice; but it is only when a man in the position of Mr. Srinivasa Iyengar speaks as he has just done that those without his sense of comparative responsibility, and with no sense of their own, begin their wilder utterances.

The Statutory Commission.

The Statutory Commission has left the shores of India in an atmosphere of peacefulness, and, because our minds are so occupied with more pressing matters, an atmosphere almost of contemptuous indifference. The logic of events has opened eyes—my own, I admit, much more than some others—to the fact that the task of the Commission must now be regarded as that of journeyman inquirers, not of master-builders; and it may prove that the inquiry, costly as it has been, was not necessary. If it is a sound view that the dynamic of time and change has now brought us to the point where a great constitutional experiment is inevitable, one the risks of which simply must not be thought of, for thinking makes cowards of us all, then that should have been laid down first as a principle, which would have meant a task for the Commission quite other than it has accomplished. It would have had to report, not how the existing Constitution has worked, but what the leading men in India desired the new one to be. One is forced to think at times that of the two reports, the Nehru Report and the Commission's, the first is so much more important than the other that it is the only one worth one's studying.

Editor and Printer Sentenced.

I have quoted some words of Mr. Srinivasa Iyengar. The impression may have gained ground in England that not enough is done to check such language. I may therefore draw attention to the terms of imprisonment to which the editor and printer of an article in the *Banglar Katha* have just been sentenced, terms of six and three months' simple imprisonment. The article contained this: "The Government, just as it keeps soldiers who use rifles to kill, uses paid spies to incite men to murder. The British

Empire stands on force and falsehood. Traps of falsehood are laid by this system of Government in order to cripple the soldiers in the present struggle for emancipation." That, said the Chief Presidency Magistrate of Calcutta, is not fair comment.

Bank Rate and Exchange.

The last two crores of emergency currency having been repaid to Government by the Imperial Bank, a reduction in the Bank Rate was certain to follow, and the rate has in fact been reduced to 7 per cent. It has also been announced, a statement which is thought to indicate that Government has fears for the future course of exchange, that the issue of Treasury Bills will be resumed. It was hoped that recourse to this step would not be had until later in the year, and then only if money had become a drug in the market. It is not that at present, though call money at the end of last week commanded no more than $3\frac{1}{2}$ per cent. If the fact of money being a drug in the market is injurious, it may be objected against those who criticise the resumption of Treasury Bill issues so soon, better to take action before it becomes one. These are all matters for the consideration of those who are to conduct the promised banking and currency inquiry.

THE KINGDOM OF NEPAL.*

By BRIGADIER-GENERAL THE HON. C. G. BRUCE,
C.B., M.V.O.

(Concluded.)

From the Treaty of Segowlie dates the entry of the Gurkha soldier into the British Army. It must not be supposed, however, that the people mentioned, the Newars and those followers of the King of Gurkha, formed the only inhabitants of this interesting kingdom. The inhabitants are extraordinarily mixed. Passing from south to north, and speaking in terms of geography, Nepal is divided in this manner. A great belt of jungle land lies on its southern border, a marvellous preserve for game of all kinds. Beyond this, foothills, notably the Mahabharat range, again cut the country off from British India. Then there is a great belt of semi-temperate country, of very deep cut valleys, and steep and high mountain ridges of forest and cultivated land always rising back towards the great Himalayan range. It is an extraordinarily deep cut country, each little valley inhabited by different Mongolian tribes, cut off from their neighbours by great rivers and immensely steep and high ridges. The first belt of the Terai is inhabited by much the same class of people that live in Northern Bengal and the United Provinces, plus certain aboriginal tribes.

The great districts behind are the home of that great mixed race the Khas, and many Mongolian clans now classed as Gurkhas. But even beyond that there are relics of many other races that have been dumped in this part of the Himalayas, largely Mongolian in origin; towards the west they bear a much nearer relationship than the other parts of the hills to types of the inhabitants of Kumaon, the nearest British district.

It is really a terrible jumble of races and languages, both from east to west, quite as great a jumble as it is of climates, but the whole forms in itself one of the most interesting portions of the whole Himalayas.

Prithwi Narain, the adventurous King of Gurkha, established himself in 1768 in the Nepal Valley, and from that date the whole history of modern Nepal dates. He was succeeded by numerous descendants, none of whom was really of any account at all. But soon, no later in fact than 1800, an entirely different element entered into the Gurkha Government. From about that date, the Prime Minister of Nepal succeeded in dominating the

ruling family and by degrees from that domination grew up a condition practically analogous to that of Pepin in the time of the Carolingians in French history. In fact, the Prime Minister, as did Pepin, became the real ruler of the kingdom, whereas the hereditary sovereign was no less than a *roi fainéant*.

From that date until the great Jang Bahadur established himself, about 1847, as Prime Minister, the whole history of the country really ranged round the great faction fights of the leading politicians as to who was to become hereditary Prime Minister. About 1847 Jang Bahadur arose, the son of a Nepali officer who held a general's rank in the army. He was a man who distinguished himself from a boy by his intense daring and also his ambitious spirit. A clever politician, a wonderful judge of men, a great athlete and sportsman, he early came to the front. It is not necessary to go into all the details of the fights, murders and horrors, which in those days were the necessary attributes of local politics and what one might call the evolution from barbarism to the present condition of things in Nepal. But in so short an article as this, it will only be necessary to mention that Jang Bahadur came to full power by the complete destruction of the opposing clans, claimants for the Prime Ministership.

He should never be judged according to our modern standards, for considering the ethics of his surroundings, he showed throughout his life a remarkable moderation. He was the first great Nepali representative who visited England, which he did some few years before the Indian Mutiny, and so struck was he with all he saw, and so educated was he by his experiences, that when the Indian Mutiny broke out he promptly threw all his power on to the side of the Indian Government. The result was a contribution of some 10,000 Nepali soldiers who took a most active and useful part in finally crushing the Mutiny.

From that date our relations with Nepal have never looked back. When the Great War broke out in 1914 the Maharaja who is now in power, H.H. Sir Chandra Shamsher Jang Bahadur, telegraphed to the Indian Government placing the whole power of the State at the disposal of the King Emperor. We had at that time some 20 battalions of regular Gurkha troops and some eight battalions of military police and others already serving the Indian Government. During the War 33 battalions of regular troops were kept up to strength, the military police and others were also supplied with recruits, losses of all sorts were made good, and last, but not least, a contingent of some 12,000 Regular Nepali troops were sent down by the Nepal Government for the internal defence in India. Labour Corps were also raised and actually during the whole war some 200,000 men came from Nepal to assist the British Government, an almost inconceivable contribution from so small and poor a State, especially when it is considered that only a portion, possibly a quarter of the inhabitants of the whole Nepal Kingdom, belong to what is known as military tribes.

Over and above this, His Highness supplied the Indian Government with an enormous quantity of logs for use as sleepers in Mesopotamia, a most valuable contribution; also blankets, spices, and, as a personal gift from himself, some 36 machine guns. Such has been the result of the good feeling established between the British Government and Nepal and such has been the result of the continual employment of these subjects of the Nepal State known to the army as our Gurkha troops. It is a very remarkable instance, almost unique in history, of a State not tied by treaty to another, going to the utmost possible limits in self-sacrifice, both of men and goods, solely from the sympathy between the two.

In 1921 a new and far more satisfactory treaty was completed and the British Resident in Nepal has, after 100 years, been raised to the status of Envoy. Nepal, however, has, always kept itself to itself, and probably from its own point of view this is quite correct. *Khatmandu* is connected with India by the only roadway which can be called a road, that connects the whole king-

* The first part of General Bruce's article appeared in the issue of THE NEAR EAST AND INDIA of May 2.

dom with the Indian Empire. British travellers are not allowed to wander at their leisure in Nepal, in fact, they can only visit the Capital by special request or on duty with the Resident, or on the Resident's invitation. Probably this isolation is a deliberate policy of Nepal, and so in a way is responsible for the present unsatisfactory condition of the country. In no possible way could the country be considered as rich, the standard of living in the village is probably low, money as money is scarce, barter is by far the commonest method of the exchange of goods. But the people still retain to this day the simplicity and freshness and an unspoiltness which is a great contrast to what one meets not only in other parts of the Himalayas but almost in any other district in India, added to which the dominant features and descent of the people is Mongolian and their attitude of mind is an entirely different one to the Indian. They have, for instance, a bubbling sense of the ridiculous and a cheerfulness, almost boisterous, when happy, not noticeable in any other district. They work very hard, and have to, as the country is a man-carrying country, and beasts of burden are few and far between, the roads are poor and very bad and very steep. The result is a hardy people and if it were not for the deep cut valleys and consequent malaria which is often contracted by the hillmen when visiting fairs, etc., the country would doubtless have an extremely healthy population.

All Governments can be criticised and the Nepal Government lays itself rather open to criticism by the fact of the enormous proportion of its revenue which is spent on its military budget, for the whole country is run on militaristic lines, and the size of the army, whether only the regular troops or their second line militia, seems to the ordinary person to be enormously beyond their requirements, especially as the average training or possibility of the training of the troops, is so far behind all requirements as understood to-day.

But there are, no doubt, many considerations which would not occur to the ordinary onlooker and though one may regret that internal communication, facilities for education, and medical help are few and far between, no doubt the Nepali Government officials would justify their military expenditure in their own eyes. At any rate, it may be said that it is little regretted by the actual Government as the keenness to join the regiments is one of the most remarkable things in the life of the hill peasant. Among the Mongolian tribes and the military classes there is hardly a single householder in the land who has not a cadet in either the local army or the British army, and it is strange the extent to which this same military outlook dominates all classes and all methods of Government. In many ways the result has no doubt been beneficial, producing a discipline throughout the land which otherwise could not have been brought about.

AN INDIAN ZOLLVEREIN.

(From a Correspondent.)

Of the various questions examined in the recently published report of the Indian States Committee one of the most interesting and important is the question of the maritime customs. Customs duties are levied in India by the Government of India and they are, of course, paid by all consumers whether in British India or in the States. So far as regards the States they are therefore an indirect contribution to the central revenues. In the past when the Indian import tariff was restricted—as it was from 1894 to 1916—to a general rate of 5 per cent. the peoples of the States had very little, if any, practical grievance in the matter. But nowadays things are altogether different.

In 1916 the general rate of import duty was raised to 7½ per cent.; in 1911 it was further enhanced to 11 per cent., and in 1922 to 15 per cent., except the rate on cotton goods which was kept at 11 per cent. Moreover,

the Government of India are now adopting a policy of discriminating protection with resulting protective duties on certain manufactures. But the States are not largely industrialised. Their peoples are chiefly importers and consumers rather than manufacturers. And, as we have said, whenever an inhabitant of one of the States buys a dutiable article which has been imported into India from abroad he contributes to the central revenues. But unlike the ordinary payer of taxes, he gets nothing in return. The proceeds of the central revenues are not expended on the States. They are enjoyed by British India exclusively. The States maintain that they contribute as much as Rs.70 lakhs to the customs revenue or rather less than 22.5 per cent. of the whole. And they claim that they are entitled to a share in this revenue, such share to be arranged with individual States on an equitable basis.

It is evident from the report that the Indian States Committee devoted much care and attention to this important question. They do not accept the view, which was put forward by the States, that the customs duties are in fact transit duties. For they hold that every country has from its geographical position the right to impose customs duties at its frontier, and they point out that such duties have been imposed by British India, and also by the maritime and frontier Indian States for a long period without objection or protest by the inland States. But at the same time the Committee express the definite opinion that the States have a strong claim to some reliefs. They were not consulted by the Government of India on the question of the raising of the duties; and the majority of them get no benefit from protection. Their subjects have to pay the enhanced prices of imported goods. In fact they pay a double customs duty, for their taxable capacity is, of course, reduced to the extent of the maritime duty. This is, the Committee point out, a real and substantial grievance which calls for a remedy. At the same time they remark that if the States are admitted to a share of the customs revenue of British India it may be legitimately claimed by British India that the States should bear their full share of Imperial burdens, on the well-established principle that those who share receipts should also share expenditure.

The Committee think that the ideal solution of the problem would be a customs union or zollverein, together with the abolition of internal customs in the States themselves. They do not claim that this idea originated with them as it was in point of fact put forward some years ago. Germany is, of course, a classic example of a successful customs union. More than a hundred years have passed since Prussia took the first step by the establishment of free commercial intercourse between the several Hohenzollern provinces. And by 1836 practically all the German States, except Austria, had associated themselves with Prussia in the Union. A common external tariff was instituted; and the commercial barriers between State and State were eliminated as were also the internal custom houses. It is unquestionable that the movement gave a great impulse to German trade, and to the sentiment and fact of German unity, tended to promote the construction of railways, to improve the postal arrangements, and to foster commercial intercourse, thus preparing the way for future organic political change.

The results to be anticipated from an Indian customs union might not be on a scale commensurate with the results achieved in Germany. But the Committee would seem to be justified in claiming that there would be solid advantages to India. The union would mean that there would be a common tariff which would be administered by the Government of India even in the maritime States. All inland customs would be abolished; and the customs revenue would be divided among British India and the different States according to population. Furthermore, representatives of the States would require to be associated with the Indian Legislature in the determination of policy. So large a departure from the existing system would obviously have to be preceded by an

exhaustive investigation. The Committee point out that the questions to be examined are very intricate; and they recommend that an expert body should be appointed to inquire into (a) the reasonable claims of a State or a group of States to share in the customs revenue; and (b) the adequacy of the contribution made by such State or States to Imperial burdens. This investigating authority—upon which, of course, the Princes would be represented—would consider the question of the establishment of a zollverein. And the Committee express the hope that such an inquiry would lead to a financial settlement which would in time tend to promote closer political relations between the States and British India.

Meanwhile the States unquestionably have, as the Committee point out, a claim to consultation in matters of general policy affecting the maritime customs. The general principle of consultation where possible should be admitted, the Committee think, and the Tariff Board should be instructed to consult the Political Department and the States whenever the interests of the latter are affected.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE "ORJUNA."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With reference to your "Notes of the Week" in your issue of April 25, we all know that the "Orjuna" is suppressed—on paper. Is it suppressed in fact? Anyone who knows the Balkans in general and Yugoslavia in particular may be pardoned if he doubt it.

As to the details published in the *Giornale d'Italia* with regard to this Society, everybody acquainted with the Balkans is aware that they are entirely in keeping with the regulations or instructions of secret societies of the kind. Even if the details published are forgeries, they at least "ring true."

Are they forgeries? If there were reasons to suppose they are, it is probable that the Italian Government would have prevented their reproduction throughout the Italian Press after their publication in the *Giornale d'Italia* or, alternatively, the copies of the *Giornale d'Italia* in which the details were published would probably have been confiscated (please note that there is no censorship in Italy). There is reason to suppose, therefore, that the Italian Government is aware that they are not forgeries.

If they are not forgeries, it is a service to civilisation that the facts should be known. I should like to know on what grounds THE NEAR EAST AND INDIA presumes them to be forgeries, beyond the *démenti* (inevitable in the circumstances) of the Yugoslav Government. Without wishing to be rude, I wish that THE NEAR EAST AND INDIA were a little less afraid of giving offence to certain Balkan States, because the appearance of treating these States as if they were conducted like those of Western and Northern Europe is utterly misleading to the profane reader and is not justified merely for the purpose of pouring oil on troubled waters, especially if at the same time it means gratuitously calling in question the honesty of a civilised Western nation and its Government.—I am, etc.,

J. S. BARNES.

April 26. Hôtel Mont-Fleuri, Lausanne.

[It may be doubted whether our Correspondent is in a better position than we are to decide whether the regulations attributed to the "Orjuna" are genuine or a forgery. Our correspondent would seem to be satisfied that they must be genuine, because the *Giornale d'Italia* and the rest of the Italian Press published them. We judged the regulations by internal evidence, and were inclined to dismiss them as a forgery, because they did not ring true with the military instinct of the Yugoslav

people—a feature lost upon the Italian Press. Our correspondent argues that—although "there is no censorship in Italy"—the *Giornale d'Italia* would probably have been confiscated for publishing the regulations, if they had been a forgery, or the other papers would have been prevented from reproducing them. We had regarded the publication merely as a newspaper indiscretion, and had not contemplated a situation in which the absence of censorship is so effective that publication entails "reason to suppose that the Italian Government is aware that they are not forgeries." If responsibility for publication attaches to the Italian Government—which we do not for one moment suppose or believe—the indiscretion becomes an outrage. The Italian and Yugoslav Governments are nominally in friendly relations. The "Orjuna" has been suppressed by the present Yugoslav Government, and consequently, officially, there are no regulations in actual existence. If, therefore, the Italian Government has satisfied itself that the suppression was bogus and that the regulations were still binding on the members of the "Orjuna," there were many more honourable ways open to it of performing this particular "service to civilisation" than by hurling the Italian and the Yugoslav Press at one another's throats.

Our correspondent is right in supposing that we always try to avoid "giving offence," not, however, from any sense of being afraid, but as a matter of ethics. Experience proves, however, that offence is often taken without being offered, sometimes, indeed, at the publication of the truth. It is, therefore, the more incumbent on any newspaper which values its reputation not to lend itself lightly to untruths and forgeries. With any conclusive evidence that the "Orjuna" has not been suppressed, and that its members considered themselves bound by the regulations published in the *Giornale d'Italia*, our correspondent would find that our criticisms of Yugoslavia would be far more telling than those of the Italian Press. In the meantime the silence of the latter in regard to proof of the authenticity of the alleged regulations lends support to the instinctive belief that they were, in effect, a forgery and their publication by Italian newspapers an unfriendly blunder.—ED.]

THE SYRIAN PRESS.

[Under the heading of "The Syrian Press" we hope from time to time to indicate how Arabs at Damascus are looking upon local and outside affairs. Naturally we cannot endorse all the views expressed, but we feel that a service will be done to students of the Middle East if the local view is considered and remembered.—ED.]

The Alpha and Omega of the Syrian Question.

The following article appeared in the Damascus newspaper, *Alif Ba*, on April 20. It was signed by Yusuf al-Issa, Editor and proprietor of the paper.

"We hold no brief for M. Robert de Caix, but we do not deny that we admire him. He cannot be regarded as a champion of our cause as we see it, but he is a capable politician who knows his business, urbane in his bearing, keen in carrying through his appointed task—in one word an adversary, but an intelligent one. If we wish our national cause to succeed, it is for us to meet the intelligence with an intelligence equal to his.

"These considerations impose themselves upon us perforce. It is not our habit to discuss personalities, but a wise man who looks our political situation to-day squarely in the face, and not through the spectacles of his sympathies and interests, sees that the Syrian question is in the hands of M. Robert de Caix—not in those of the Haut Commissariat. Here perhaps we have the reason of the silence that reigns, and it is this fact that leads us to make M. Robert de Caix, who is now staying at Beyrout, the subject of our reflections. In the meantime our parties and leaders behave as if they knew nothing of that watchful eye among us, looking down upon, counting, taking note of every single item, while they are busily engaged in squabbles and polemics, negotiating, exchanging compliments, and, should their opinion be asked, having nothing good to say of their opponents, each of them imagining every afternoon that the morrow will bring the solution he affects. The result is that the observer is delighted with all their mutual bad opinions of each other. . . .

"It seems to us, and we hope we may be wrong, that the great

impending change, expected from day to day, will not be carried into effect before M. Robert de Caix's departure. It seems to us that this capable man, when he returns to Europe, will postpone this change until he has presented his report to the League of Nations. More than this, it seems to us that this report will not be in accordance with our aspirations, and will contain a magnified picture of our differences, simple and accidental as they are, differences that do not touch essentials, and that he will make of them a striking indictment of our habits, our political education, our unripeness for self-government, urging in support of his thesis all the negotiations, all the interviews he is now having with our leaders, whatever their views and parties. And if we add to his report the already unfavourable attitude of the League of Nations with its doubts of our capacity for self-government, we shall see plainly enough the solution for our cause that the future is likely to have in store for us.

"We said at the beginning of this short article that the representative of France before the Mandates' Committee of the League of Nations is an able and intelligent man, and that it is our duty to imitate him, to walk in his steps. But have we, we wonder, the qualities we find in him? If we answer in the affirmative, we may be accused of self-sufficiency. But if history condemns us for being in political strategy less capable than he, is it prudent to confer with him, to negotiate with him, to give him every possible sort of information, to scratch for him (so to speak) each others' faces, and to provide all the documents he needs to prove his case against us?

"This is the question we ask our politicians. We do not look for a public answer. We merely beg all and sundry to put this question and answer it for themselves. If we do so, we shall learn that we are sharpening weapons to be turned to-morrow against our own breasts. It is the part of the wise man to be warned before the event."

The Rivalry of East and West.

In its issue of April 12 *Al Shaab* wrote: "At this hour we stand at the parting of the ways. The Eastern peoples as one man call aloud for security and peace, freedom and independence from the all-powerful West, which has raised her hand against us, lording it over us with oppression, greed, and despotism.

"We are at the beginning of a decisive struggle in which the West looks for every means of victory, while the East rises up to escape from her servitude and bondage, taking to that end every weapon and every method that the peoples used of old.

"See, we have reached the hour when the whole East stands face to face with the united West, the one calling for freedom and independence, the other striving by every means in her power to maintain her 'spheres of influence' in the fair lands of the East. We are on the eve of a prolonged struggle between East and West. Nay, in the midst of a struggle blazing up between two adversaries, a struggle of which the issue will lie with the stronger, the one that has the power to see victory through.

"The East has already made her preparations for this struggle, has found the weapons she requires. She is strong in the education of her sons, strong in her men of energy; she glories in a goodly company of chiefs, who will lead her to the gates of life. Look round at the peoples of the East, all of them to a man, from India to Persia, to Afghanistan, to the Arab lands, Syria, Iraq, Palestine, Trans-Jordan, to Egypt and the countries round it. Then turn to China and what belongs to her. Do you not see the mighty upheaval, the peoples striving to reach the gates of life with giant strides, with superhuman endeavour?

"We hear—the struggle is about to blaze forth. Here visits, there conferences, following one on the heels of the other; so the thing will be set on foot. . . . This is the dawn of the civilisation in the East, the beginning of the ruin of the civilisation of the West.

"At this hour when breasts are reeking with bitterness, when hearts are full of thoughts of vengeance, when ambitions are afire, nothing will serve but that the West should consent to look upon the East on equal terms, as man to man. We are on the road in which the East marches to freedom and independence. Our culture, our civilisation begins. We should escape from the overlordship and hegemony of the West. Proudly we look forward to the struggle. We hope for victory and success.

Daybreak already peeps forth from the glow of dawn. The sun's rays shine over the fair lands of the East. Hasten forward towards life, ye sons of light!"

BIRD LIFE IN CYPRUS.

IN THE NEAR EAST AND INDIA of March 28 a correspondent in Cyprus called attention to a defect in the Island's Law for the Protection of Wild Birds, inasmuch as, in spite of repeated amendments, as late as 1925 and 1927, the use of birdlime for catching birds had not been prohibited. It is satisfactory to note that a subsequent amendment of the Law has been enacted which prohibits the use of lime or any other adhesive substances for the purpose of killing, taking, or capturing any game or wild birds. It is pointed out in an explanatory note that "the practice of using birdlime results in the destruction of a large number of useful insect-eating birds to the detriment of agriculture, and the practice generally is a cruel one."

A party of 180 Yugoslav tourists under the leadership of Colonel Bozanovitz arrived last week in Salonika.

RECEPTION AT THE EGYPTIAN LEGATION.

Sesistris Sidarouss Bey, Egyptian Chargé d'Affaires, in London and Minister Plenipotentiary, held a reception at the Royal Egyptian Legation on May 2, to enable a wide circle of guests to meet His Excellency Dr. Hafez Bey Affi, Foreign Minister of Egypt. A feature of the evening was the musical programme provided by the Detmar Dressel Trio (Mr. Detmar Dressel, violin; Mr. Sheridan Russell, violoncello; M. Ivan Philippowsky, pianoforte) and Mlle. Dora Labbette.

Among those present, in addition to the members of the Diplomatic Corps, were:—

Lord and Lady Hailsham, the Duchess of Atholl, Violet Duchess of Rutland, the Marquess of Londonderry, the Marquess and Marchioness of Winchester, the Marquess and Marchioness of Huntly, Marchioness Curzon of Kedleston, Marchioness Townshend, the Marquess of Reading, the Earl and Countess of Lucan, the Earl and Countess of Shaftesbury, the Earl and Countess of Stradbroke, Admiral of the Fleet Earl Jellicote, Countess Jellicoe, and Lady Gwendoline Jellicoe, Louisa Countess of Antrim, Mary Countess of Minto, the Countess of Carnwath, and Catherine Countess of Westmorland, Field-Marshal Viscount Allenby and Lady Allenby, Lord and Lady Bertie of Thame, Lord Cross, Lord d'Abernon, Lord and Lady Bearsted, Lord and Lady Dunedin, Lord and Lady Inchcape, Lord Doneraile, the Dowager Lady Swaythling and the Hon. Joyce Montagu, Charlotte Lady Inverclyde, Lord and Lady Buxton, Lady Fitzgerald, Lord and Lady Strathpey, Lord Lugard, Lord and Lady Clanmorris, Lord and Lady Lamington, Lord Danesfort, the Dowager Lady Lawrence, Lord and Lady Lawrence, Lord Elphinstone, Evelyn Lady Alington, Lord Beaverbrook, Lord and Lady Jessel, Evelyn Lady Malcolm, the Dowager Lady Boyle, Lord Morris, Lord Headley, Sir William and Lady Joynson-Hicks, Mr. and Mrs. Amery, Sir Laming and Lady Worthington-Evans, Mr. and Dame Caroline Bridgeman, Lt.-Col. Sir Vivian and Lady Henderson, Sir Arthur and Lady Steel-Maitland, Sir Samuel and Lady Maud Hoare, Mr. and Mrs. Philip Snowden, Sir Harry and Lady Brittain, Sir Assheton Pownall, the Lord Mayor and Lady Mayoress of London, Baron and Baroness d'Erlanger, Field-Marshal Sir George and Lady Milne, Sir Ronald and Lady Lindsay, Major-General Sir John and Lady Hanbury-Williams, the Lord Chief Justice and Lady Hewart, Mr. Justice and Lady Horridge, the High Commissioner for Australia and Lady Ryrie, the High Commissioner for Canada and Mrs. Larkin, Colonel and Alderman Sir Charles Wakefield, Lady Dorothy Mills, Major-General Sir John and Lady Davidson, Sir Maurice and Lady Amos, Sir Otto and Lady Niemeyer, Lady Maffey, Sir Denison and Lady Ross, Sir Robert and Lady Sanders, Sir George and Lady Berry, Sir Edgar and Lady Bonham Carter, Sir John and Lady Norton-Griffiths, Sir Montague Barlow, Sir Kenyon and Lady Vaughan-Morgan, Sir Philip and Lady Nash, Sir Roderick and Lady Jones, Sir Felix Cassel, Sir Harry and Lady Joan Verney, Sir Hamar and Lady Greenwood, Sir Malcolm McIlwraith, Sir Edmund and Lady Wyldebore-Smith, Sir Thomas Arnold, Lady John Kennedy, Sir Hugo and Lady Hirst, Sir Clement and Lady Kinloch-Cooke, Sir Alfred Lewis, Sir John Leigh, Lady Sassoon, Sir Edward and Lady Hiffe, Sir Henry and Lady McMahon, Mr. Samuel Samuel, Mr. and Mrs. J. B. Melville, Mr. and Mrs. Dudley Docker and Mr. Bernard Docker, Mr. Woods Humphrey, Mr. Blattner, Mr. Patrick, Brigadier-General and Miss Blakeney, Mr. and Mrs. J. R. Scott, Mr. and Mrs. R. G. Peckitt, Mr. Ernest A. Perris, Mr. and Mrs. Maudsley, Captain R. Gordon Canning, Mr. and Mrs. Sidney Kendrick, Mrs. Cobham, Captain and Mrs. Walker, Mr. and Mrs. Charles Robertson, Mr. and Mrs. Montague Bell, Mrs. Maxwell Davis, Mr. S. H. Thorne, Mr. and Mrs. J. T. Pownall, Lt.-Colonel F. E. Freemantle, Mr. and Mrs. A. L. Kennedy, Mr. and Mrs. Eric MacLagen, Mr. and Mrs. George Pilcher, Mrs. O'Farrell, Mr. Philip O'Farrell, Mr. and Mrs. H. G. Judd, Lady Chalmers, Sir Frank and Lady Newnes, Count and Countess di Villanova, Sir Edward and Lady Manville, Sir John and Lady Cockburn, Lady Petrie, Mr. and Mrs. Spender, the Hon. Henry and Mrs. McLaren, Mr. and Mrs. Gladwyn Gebb, Mr. Alfred J. Waley, Sir John Simpson, M. J. Cicurel, Mr. and Mrs. Lewis, Mr. Launcelot Oliphant, Mr. and Mrs. H. W. Malkin, Mr. and Mrs. G. R. Warner, Mr. J. B. Monck, Mr. and Mrs. Selby, Mr. R. G. Leigh, Mr. and Mrs. Bland, Mr. A. M. Noble, Major and Mrs. Sterling, Mr. and Mrs. Samuel Courtauld, Mr. and Mrs. Jocelyn Godefroi, Mr. and Mrs. Diskhoff, M. Ressonico, Dr. Pavle Karavitch, M. Paul Ecomomou-Gouras, Mrs. Inigo Jones, Mr. F. N. Doubleday, Captain and Mrs. Trevor-Parker, Captain H. Gordon Farrar, Captain and Mrs. Philips, the Hon. Michael and Mrs. Buller, Mrs. Vischér, Mr. and Mrs. E. G. Parker, Mr. and Mrs. A. K. Buttery, Captain and Mme. Papatexopoulou, the Hon. Mrs. Cecil Campbell, Abdel Malek Hamza Bey, Consul A. F. Assal Bey, Consul E. Ismail, Mr. and Mrs. Nour el-Din, Mr. Gamal el-Din, Mr. and Mrs. R. A. Radi, Mr. C. Cattani, and Mr. A. K. Safwat.

The Secretary of State for India has approved the grant of a Good Service Pension to Major-General M. R. W. Nightingale.

It is reported from Simla that Mr. John Hunter Davies, I.C.S., Political Officer and British Consul for Kerman and Persian Baluchistan since March, 1927, died of pneumonia at his post on May 3.

PERSONAL AND GENERAL

TO-DAY

May 9, 1929 (New Style).
 April 26, 1929 (Old Style).
 Dhulkaada 29, 1347 A.H., of the Muslim Calendar.
 Nisan 29, 5689, of the Jewish Calendar.

Lady Irwin is expected to arrive in London from India on July 12.

The Duke of Atholl will arrive in London from Egypt about May 14.

Sir Dorab and Lady Tata arrived at the Hotel Metropole last week from India.

Lady Worsley returned to 8, Great Cumberland Place on May 4 from India.

Mr. and Mrs. Eugen Spier left Carlton House Terrace on April 30 for Yugoslavia.

Mrs. Seymour Hughes returned last week to 28, Eccleston Square from Egypt.

The Maharani of Cooch Behar arrived last week at the Mayfair Hotel from India.

Mme. Ferid Bey, wife of the Turkish Ambassador, returned to London last week from the Continent.

Mr. and Mrs. Rushbrook Williams have returned to St. James's Court from their visit to Vancouver and New York.

Field-Marshal Viscount Allenby and Viscountess Allenby returned to 24, Wetherby Gardens on May 1 from Falmouth.

Mrs. F. C. Madden left for Cairo on April 30, accompanied by her elder son and daughter. They expect to return to England shortly.

Sir Dhunjibhoy and Lady Bomanji, who last week arrived from India, are staying at their house at Harrogate, where they are taking the cure.

The Hon. Charles, the Hon. Peter, the Hon. Richard, and the Hon. Anne Wood, the sons and daughter of the Viceroy of India, arrived from India at 88, Eaton Square, on May 3.

Sir Henry Hatt, Sir Edward Packard, Sir William Myley, and Lady Jarvis were among the passengers in the P. and O. Ranchi which left London on May 3 for a cruise to Palestine, Greece, and the Mediterranean.

Shaikh Hafidh Wahba, Minister of Education in the Hijaz Government and General Adviser to King Ibn Saud, has arrived in England and is staying at the Hyde Park Hotel. He is the representative of his Government for the International Postal Conference which is being held in London this month.

Major-General W. H. S. Nickerson, V.C., C.B., C.M.G., M.B., K.H.S., late Royal Army Medical Corps, has been selected for the appointment of Director of Medical Services in India, in succession to Major-General Sir Walter H. Ogilvie, K.B.E., C.B., C.M.G., K.H.P., Indian Medical Service, who will retire on September 2.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.
 Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

The Earl and Countess of Stair, with Lady Jean Dalrymple, the Hon. Colin and the Hon. Andrew Dalrymple, left London on May 2 in the P. and O. Ranchi, for a cruise to Palestine, Greece, and the Mediterranean.

The annual Indian Empire garden party, for officers and civilians who have resided in Aden, Borneo, Ceylon, China, Cyprus, India, Iraq, Malaya, Palestine, Persia, and Siam, with their wives and daughters, will be held at the Ranelagh Club on Wednesday, July 3.

Dr. Hafez Bey Affi, Egyptian Minister for Foreign Affairs, who has been spending the last month in London, will leave in a few days for Paris *en route* to Egypt. Dr. Affi expects to return in July, when King Fuad will be making an unofficial visit to England.

General Sir Edward Bulfin presided, in the absence through indisposition of Field-Marshal Viscount Allenby, at the Egyptian Expeditionary Force dinner, which took place on April 29 at the Trocadero Restaurant. Among those who accepted invitations were:—

General Sir George Barrow, Lieutenant-General Sir Walter Campbell. Major-Generals: Sir Granville Ryrie (High Commissioner for Australia), Sir Stuart Hare, Sir Arthur Money, Sir John Longley, C. L. Gregory, G. Dawnay, E. S. Girdwood, W. H. Bartholomew, and E. Evans. Brigadier-Generals: E. M. Morris, E. M. Paul, R. C. Boyle, W. B. Emery, A. H. Leggett, Sir Ernest Gascoigne, and C. A. Fisher. Colonels: A. B. Robertson, J. Brown, J. S. Matthew, W. V. Nugent, W. E. Davies, A. P. Wavell, H. S. Salt, A. H. Tubby, and Lord Roundway. Captains: E. Unwin, R.N., V.C., and W. B. Macdonald, R.N. Also many officers representing most of the formations of the Egyptian Expeditionary Force.

Mr. H. Charles Woods, who was assisted in receiving his friends by Mrs. Woods, gave a reception at the Carlton Hotel on May 1. Among some sixty guests were: the Roumanian Minister and Madame Titulescu, the Hungarian Minister and Baroness Rubido Zichy, the Greek Minister, the Minister of the Serbs, Croats and Slovenes, the Persian Minister, the Estonian Minister, the Bulgarian Chargé d'Affaires, Baron and Baroness Engerth, Prince Soumbatoff, M. Rizo Rangabé, the Hon. Lady White Thomson, the Hon. Edward Strachey, the Hon. Mrs. Robert Ryder, Sir Percy and Lady Cox, Lady Heathcote, Sir Edward Boyle and the Dowager Lady Boyle, Lady Burton, Sir John Henry, Miss Pavry, Mrs. Frank D'Arcy, Mr. Harris Brown, Mr. H. V. Cobb, Miss Parsons, Sir Brumwell and Miss Thomas, Mr. and Mrs. Michael de Lembeke, Dr. G. P. Gooch, Mr. and Mrs. Montague Bell, Mrs. Tufnell, Mr. Neil Grant, Miss Marian Bower, Captain Cazalet, Mrs. W. L. Courtney, Mr. P. M. Francke, Dr. and Miss Clemow, Miss Hepworth Dixon, and Mrs. Alec Tweedie.

THE WEEK AT HOME

London, Tuesday Morning.

"Femina Dux."

There appears to be little fear that the misogynists who prophesied the doom of England, should women ever possess the superior voting power, will be justified. No one, in fact, seems unduly alarmed at the announcement just made that for the General Election at the end of the month there will be about a million more females able to vote than males. For the truth is that women will no more vote as women than men have voted as men. Who was it, after all, that gave women the vote? Men, of course. To presume that there is an anti-male complex in the hearts of Englishwomen (or of any woman for that matter) is really rather childish.

But if it is granted that they will not vote as women, the question is: how will these newly enfranchised females vote? It is being answered in three ways—but if there were more than three parties, answers would be more numerous! The Conservatives assert that women always plump for steadiness, that they will, in fact, check the tendency of mere democratic man to go too fast; the Liberals believe that Mr. Lloyd George has appealed directly to the imagination and instinct that are the woman's peculiar possession; and the Labour Party confidently hope that the majority of the new voters will choose that party which numbers among its adherents most of their male co-equals in life.

Yet nobody knows. It may well be that this incalculable new factor will be negligible, and it certainly seems probable that a large percentage of the new voters will not trouble to vote at all. For the logic of democracy is one thing, the practice of it quite another.

The Rival Parties.

The respective policies of the three parties are now fairly generally known. The Conservatives are all for what they call "steadiness"; the Liberals have mainly to distinguish them from anybody else the famous "Unemployment Pledge" of Mr. Lloyd George; and the Labour Party, in Mr. Ramsay MacDonald's interpretation, at any rate, adopts a soft tone in its proposals of reform.

But how much will depend on what the parties promise to do, and how much on what they actually did when they had the chance, it is difficult to estimate. There are those who say that past accomplishment, or lack of it, those who think that the electorate sees all the way

counts for little at General Elections: it is the most specious promiser who gains most votes. And there are through the politician who promises everything at Elections, and yet forgets all about his promises when at Westminster.

The issue is still extraordinarily open. With 1,600 candidates for 615 seats anything may happen. One curious thing, however, is noticeable. The Conservatives, who certainly are reckoning upon a clear majority over the other two parties combined, are taking great pains to counter the attempts of Mr. Lloyd George to win votes. They seem, in fact, to be spending more powder and shot on the Liberals than on the Labour Party. Yet very few men can be found to believe that the Liberals will even as much as double their present number of 46 seats. The fear of the Conservatives must be that the result of the Election may be to place the Socialists in office on Liberal conditions. Perhaps their fears are justified. Nobody knows how the respective party leaders will act if no one party has a clear majority. But if none has a majority, we are surely in for an era of frequent General Elections.

The Royal Academy.

Critics of this year's Academy may be roughly divided into two classes: those who think it worth while to assert the general excellence of the standard, while admitting that no great works are contained in the exhibition, and those who care not a fig for technical excellence so long as it does not represent inspiration or at least the progress of modern artistic thought. But as the Academy is mainly a social function, which has never pretended to be representative of the nation's artistic capacity, still less the occasion of artistic youth's desire *épater le bourgeois*, those who plead for the inclusion of more vital forces in art are to some extent wide of the mark.

For me, I confess that this hundred and sixty-first Academy seemed a very empty one. As nothing "out-stands," one may as well state the works which appealed most to oneself. These were a portrait by Augustus John of "J. L. S. Hatton," a magnificent piece of unexaggerated painting, a couple of Orpen portraits, a negro head by Glyn Philpot called "Baltazar"—and also this artist's almost pre-Raphaelite "Three-fold Epiphany," the colouring of which is exquisite—three portraits by Hugh Gunn, and some interiors by the Elwells and by Davis Richter.

The water colours, however, which by the way, are this year wholly contained in the south rooms, are very much more refreshing than the oils. To come from the oils to them with their Ackermans, and David Muirheads, and Squirrels, and Briscoes, is almost like coming from the dead to the living. There is, too, plenty of interest in the rooms devoted to black and white and architecture, but of the sculpture there is little to be said.

I suppose that of the whole show the works that will be most commonly talked about will be the "Cornish Concertina-players," by Miss Manning-Sanders, the Laura Knight circus studies, the Brockhurst portrait of Henry Rushbury, and the one "problem picture" of the Exhibition, "Night's Candles are Burnt Out," by John Keating.

The Portland Vase.

After all the fuss that had been made about the Portland Vase—letters were written on it in *The Times*, and photographs of it appeared *ad infinitum* in all the newspapers—it has not been sold at Christie's! The nation had practically said good-bye to it, for anything from £50,000 to £100,000 was expected to be realised by its sale.

In the event, however, only £29,000 was offered; and this was refused by the Duke of Portland. The economics of the art market are past understanding. America will pay what price you like for Old Masters, for Tudor buildings, for oak panelling, and so on: and yet for the Portland Vase none of her aureate sons will compete!

Book Reviews

ZORASTRIANISM.

"ZORASTRIAN RELIGION AND CUSTOMS." By Ervad Sheriarji Dadabhai Bharucha. (Bombay: D. B. Taraporevala Sons & Co. Rs.3.)

That Zoroaster was a religious genius is now generally admitted. The survival of Zoroastrianism alone, when other religions of the ancient world such as those of Egypt, Assyria, Babylonia, or Rome, have disappeared, could indicate no other conclusion. And yet, despite the existence of thousands of Parsis in India and in Persia, there still prevails considerable misunderstanding of the real doctrines of Zoroaster. It is, therefore, with a friendly welcome that this third edition of Sheriarji's well-known essay should be greeted.

This essay, which was first published in 1893, was originally written for the Rahnumai Mazdayasnan Sabha. Ten years later came a second edition. This third edition is due to the piety of the author's grandson, Mr. Farrokh Erach Bharucha, and it contains an introduction by Dr. Jivansi Jamshedji Modi.

As an introduction to a detailed study of Zoroastrianism, this little book may be heartily commended. It explains lucidly the essence of the Zoroastrian scriptures, the Gathas and the rest of the Avesta, and proves clearly that Spitama Zarathushtra (Zoroaster) preached a pure monotheistic creed. Later, of course, the religion degenerated into a kind of polytheism. Muhammad, for instance, supported the monotheistic Christians as against the polytheistic Iranians. And even some Parsis themselves appear to have imagined (what is very commonly imagined in the West) that their founder had attributed equality to Good and Evil. This hypothesis of the equality of Ahura Mazda and Ahriman, and of identifying deities with the objects over which they preside, has caused great confusion, and has led, for instance, to the Zoroastrians being called "fire-worshippers." Zoroaster himself, however, never regarded any element or deity as independent of Ahura Mazda, the Supreme God. This prophet appears to have regarded fire as merely an indispensable creation of Ahura Mazda.

The significance of Zoroastrianism is sometimes missed. It is not only a picturesque survival. Emphatically a religion is worthy of study which has survived since about the twelfth century B.C., and which could boast as adherents such men as Cyrus, Darius, Xerxes, and the founder of the Sassanian dynasty. And at the present moment, when Persians appear to be peculiarly apt to look back to the days of their greatness in pre-Islamic times—and it was, of course, the Muslim conquest of Persia which almost destroyed Zoroastrianism there—a fresh examination of Zoroastrianism is timely. We repeat, therefore, that this scholarly little work should be widely studied. It will certainly lead on to longer and later studies of Zoroastrianism.

WHAT IS IT?

"SUSAN GOES EAST." By Irene Rathbone. (London: John Lane. 7s. 6d. net.)

The author of this book writes well, and manages her self-imposed burden of the epistolary method capably. Indeed, we have noticed only one serious lapse in this respect. When writing (in a not very enlightening way) of the state of China at the time noted on her letter, she falls into the trap of adding in her next sentence: "This, however, is now *vieux jeu*, so much has happened since." But what is not at all clear is why the book was written at all. It looks like a novel, but the very thin thread of narrative proclaims that its appearance is deceptive. Is it a book of travel, as the title would seem to indicate? It clearly is not, for the information given of the places visited (chiefly Japan, China, India and Egypt) is mostly either entirely vague or inaccurate. It hardly helps one to understand Malaya, for instance, to be told:—

It seems that in the Malay Peninsula there are three races: the original Malays, chocolate-coloured, lean and lazy; the Chinese,

who peacefully penetrate and do all the business; and the Tamils, a brand of Indian; quite what the latter do, or why they are there, I don't know.

Nor does there seem any special value in the extraordinary statement that it is not safe to bathe in the sea near Singapore because of the —crocodiles!

What is it then? Perhaps it is a kind of psychological study. For Miss Rathbone has given us a picture of a modern woman, not quite in her first youth, who has done work in the War and is now trying, quite selfishly, to make up her mind to settle down. She accordingly shows us this young woman studying every man she meets, but interested only in assessing his adaptability or otherwise to feminine use. The result is a book of little value or interest, and just slightly unpleasant to the taste. And we doubt whether the authoress herself had any definite idea of her object in writing it.

C. S-W.

ON THE OUTSKIRTS OF THE JUNGLE.

"GHOND THE HUNTER." By Dhan Gopal Mukerji. Illustrated by Boris Artzybasheff. (London: Dent. 6s. net.)

In "Ghond the Hunter" we have an account of the life of a boy in a village of Northern India. Ghond is an orphan boy of a high caste family. He is brought up by his aunt, a delightful person. At the end of the book he has not really entered on his career as a hunter, and other volumes are evidently intended to follow this one at the request of the correspondent from America, who is mentioned in the first chapter. Besides the descriptions of animals and the accounts of adventures with them in the jungle, there is much that should interest English and American children in this record of many daily doings of a boy living in surroundings so unlike their own and brought up to look at life from such a different point of view. There are charmingly written descriptions of various festivals in Ghond's village. He travels, too. One chapter is called "We visit Agra, Delhi, and Kashmir," and his impressions of the new places which he sees are given in the simple and dignified manner which distinguishes the whole narrative. Those who have read some of the stories of animals by this author, and who thus already know Ghond, will be particularly interested to hear of his early life. The black-and-white illustrations are graceful and decorative and help to make a most attractive volume.

J. B. A.

THE BRITISH PRESS.

"THE BRITISH PRESS." A Survey, a Directory, and a Who's Who Edited by Herbert Tracey. (London: Europa Publications. 3s. 6d.)

This little book is a useful summary of the present condition of the Press in Great Britain. It provides not only a directory, but also an interesting general survey of the astonishing changes that have come over British journalism in recent years, which emphasises well the "commercialisation" of certain sections of the Press. The incompleteness of the Journalists' Who's Who is recognised by those responsible for this booklet, and hopes are entertained by them of dragging writers from their self-created obscurity for the purpose of future editions.

BOOKS RECEIVED.

"History of the Byzantine Empire." By A. A. Vasiliev. (Madison, Wisconsin: University of Wisconsin. 3 dollars net.)

"The Autobiography of Ousama." Translated with an Introduction and Notes by George Richard Potter. With 4 Plates and a Map. (London: George Routledge and Sons, Ltd. 12s. 6d. net.)

"India—Stepmother." By Sir Claude H. Hill. (London: William Blackwood and Sons. 12s. 6d. net.)

"A History of Arabian Music to the XIIIth Century." By Henry George Farmer, M.A., Ph.D., M.R.A.S. (London: Luzac and Co. 15s. net.)

"An Indian Journey." By Waldemar Bonsels. (London: George Allen and Unwin, Ltd. 7s. 6d. net.)

"The Dutch Power in Ceylon. 1602-1670." Edited by P. E. Pieris. (London: Luzac and Co. 17s. 6d. net.)

THE ROYAL ACADEMY.

There are a few names in this year's Royal Academy, which opened on May 6, that are of peculiar interest to readers of THE NEAR EAST AND INDIA. There are, for instance, two miniatures hung of M. Paul Mak, Court Artist to the Shah of Persia, one of which, "Tamerlane's Court," is a magnificent example of the artist's unique genius. Another artist with whose work our readers are familiar is Mr. Charles Cain, who is represented by a masterly dry-point—again of Iraq—called "The Jackals' Hour." Mr. Fred Richards has two recently made etchings of "The Mecca Gate, Jeddah" and of "Jerusalem from near the Jaffa Gate," and Mr. Michael Ross one of "Vranya, Bulgaria." In the architectural section, the two works of Mr. J. M. Wilson—"Post Office, Basrah, Iraq," and "House in Abadan, Persia," will attract attention, as will Mr. Edward Warren's "Memorial to the Missing, Basrah, Mesopotamia."

THE NEW IRAQI CABINET.

The composition of the new Cabinet in Baghdad is as follows:—

Taufiq Beg Suwadi	...	...	Prime Minister, Foreign Affairs, and Auqaf.
Abdul Aziz Beg Qassab	...	...	Interior.
Daoud Beg Haidari	...	...	Justice.
Yusuf Beg Ghanima	...	...	Defence.
Khalid Beg Sulaiman	...	...	Education.
Hajji Abdul Muhsin ash Shallash	...	...	Communications and Public Works.
Shaikh Salman al Barraq	...	...	Irrigation and Agriculture.

General Balbo, Italian Under-Secretary of State for Air, arrived in Athens on May 3 from Rome *via* Corfu in order to discuss matters concerning the London to India air service, and paid a visit to Dr. Christomanos, Greek Minister of Communications.

Kiazim Pasha, with the other members of the Turkish military mission to Afghanistan, returned to Constantinople on April 28. The mission left Kabul on April 9 by aeroplane to Termez; a few days were spent at Moscow.

M. Firmin van den Bosch left Alexandria on April 30 for Belgium on leave, preliminarily to retirement from the post of Procurator-General of the Mixed Tribunals, which he has held for the past ten years. Mr. Holmes, who is to succeed M. Van den Bosch, does not take over his new duties until October, when the latter's leave expires.

The death has occurred of Lieut.-General the Hon. Sir Frederick W. Stopford. He saw much military service abroad, including Egypt and the Sudan. In the Great War, Sir Frederick was appointed to a command in the Dardanelles. His handling of the Ninth Corps at Suvla Bay met with some criticism, and after August 15, 1915, he took little further active part in the War. He was 75 when he died.

It is reported that a violent earthquake was felt in Turkistan on May 2, affecting nearly all the populated districts. In Ashkhabad and Firouza 100 buildings collapsed, one person being killed and 26 injured. The town of Germab was completely destroyed, ten persons being killed and 15 injured. Particularly violent tremors, accompanied by subterranean rumblings, were recorded on the Persian frontier and in the mountains, where destruction was most widespread.

ITALIAN SELF-TAUGHT, GRAMMAR with KEY

By G. DALLA VECCHIA and A. C. PANAGULLI.

For learning the Language by the Natural Method. It contains Classified Vocabularies, Travelling by Rail, Road and Sea, Cycling, Motoring, etc. Commercial, Naval and Military Terms, etc. Conversations, so arranged that they may be learned AT A GLANCE, with ENGLISH PHONETIC PRONUNCIATION, Tables of Money with illustrations of Coinage, Weights and Measures.

A course of simple and practical lessons in the Grammar and construction of the Italian language, progressively arranged and fully illustrated with model sentences; useful exercises throughout, and an Alphabetical Vocabulary.

Crown 8vo. 316 pp. Green Cloth, 6s. net. Postage 4d. extra.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25, post free. London: E. MARLBOROUGH & CO., Ltd., 51 & 52, OLD BAILEY, E.C.4

NEWS IN BRIEF.

King Fuad formally opened the Princess Fawkia Ophthalmic Hospital in Alexandria on May 3.

Sir John Simon has been elected President of the National Union of Liberal Clubs.

It is announced at Alexandria that the first Italian air mail arrived there on April 29.

While passing through Constantinople, Mr. Sidney Webb had a meeting with Trotsky, the exiled Soviet leader.

The King of Egypt has accorded Prince Abdul Moneim, eldest son of the last Khedive Abbas Hilmy Pasha, a pension from the privy purse.

At the Greek Cathedral of St. Sophia, in Moscow Road, Bayswater, Easter was celebrated on May 5 according to the Greek calendar.

Refik Bey, Turkish Minister of Health, has left for the United States on the invitation of the Rockefeller Foundation to study methods of public hygiene.

About 200 persons serving terms of imprisonment benefit by an amnesty proclaimed in Bulgaria on May 3 on the occasion of the Orthodox Easter.

Field-Marshal Lord Plumer was nominated President of the M.C.C. in succession to Brigadier-General the Earl of Lucan, at the annual general meeting of the club, at Lord's, on May 1.

The Liubliana University, which will celebrate its tenth anniversary next month, has been re-named King Alexander University, the King having consented to become Patron.

The death occurred last week of the Syrian poet, Chekrik Ganeni, at Antibes, on the Riviera. He was the author of one well-known play, "Antar," which was produced at the Odeon Theatre.

Two deserters, a German and a Pole, from the French Foreign Legion in Syria, recently succeeded in reaching the coast of Arabia in a dhow after an adventurous journey through Iraq and Persia.

The Dowager Queen of Roumania and her daughter, Princess Ileana, after dining at the Roumanian Legation, left Madrid on April 29 for Barcelona on their way home, after spending several weeks in Spain.

The King of Yugoslavia, his Ministers and Generals and the diplomatic representatives of Serbia's Allies in the Great War, were present at the funeral of the Voyvoda Stepan Stepanovitch at Tchatchak on April 30.

The King of Egypt, on May 4, opened the new ophthalmic hospital in Rodelfarag, one of the most densely populated suburbs of Cairo. It is thoroughly equipped with all facilities for the most up-to-date treatment and is the largest in the country.

Signor Mussolini and the Turkish Foreign Minister, Tewfik Rushdi Bey, have exchanged ratifications of the Italo-Turkish Treaty of Neutrality and Conciliation signed on March 13, 1928. Tewfik Rushdi Bey left Rome on April 30 for Venice, where he spent two days, and has now returned to Turkey.

Sir Frederick Halliday, who has been Chief of the British Police Mission in Greece since its institution by M. Venizelos in September, 1918, will retire when his contract expires in September, and proposes to quit Greece when his leave is due in July. Another officer from London will proceed to Greece to take Sir Frederick's place.

As the result of the accidental escape of gas fumes while she was having a bath, the death occurred at Nice last week of Princess Mamidie, daughter of Princess Refia and Damad Fuad Bey, and granddaughter of Abdul Hamid, former Sultan of Turkey.

Captain Moir and Flying Officer Owen, who resumed their flight to Australia in a Vickers-Jaguar aeroplane from Cairo on May 1, arrived at Bandar Abbas on May 3, having flown nearly 2,000 miles in two and a half days.

All officers of the Hinaidi Garrison, including the Air Officer Commanding in Iraq, and 500 men, attended the military funeral accorded to the pilot of the Dutch seaplane D:22 which crashed on May 2 at Baghdad.

The President of the Permanent Court of International Justice, acting under Article 92 of the Treaty of Lausanne, has appointed M. Niels Vilhelm Boeg (Denmark) Judge of the Mixed Court in Cairo, as successor to Baron Nordenskjöld, who has resigned from the office of President of the Greco-Turkish Mixed Arbitral Tribunal.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2;
Tuesday Morning.

Road Construction in Roumania.

The Maniu Administration are losing no time in undertaking the difficult task of setting Roumania's communications in order, for which purpose, of course, a large part of the loan raised this year was earmarked. The problem of communications in Roumania is not merely one of railway transport, though that is the most pressing issue, but also of roads which are in much the same case there that they are in the other Balkan countries. The question is therefore one which should rightly be treated as a whole if due regard is paid to the competition to-day of the motor with the railway, and with their extensive programme of railway reconstruction on which almost £3,000,000 is to be spent in the current year the Government are combining a large road and bridge building scheme for the first phase of which 500,000,000 lei (roughly £612,000) has been voted by Parliament. It is eminently satisfactory to know that the contract for the scheme of road construction has been allocated to a British firm, Stewart and Partners, Ltd., the well-known contractors of London and Belfast, thus adding one more to the successes that have been obtained of late by British enterprise in the Near East. It is estimated that the work, which will include the construction of a number of new roads which will link up the principal towns with each other and with the Danube, will take ten years to complete, and will entail the expenditure of several million pounds. The nature of the work entailed in reconditioning the road system of the country and making it fit to serve modern requirements may be gathered from the fact that of the total length of roads in Roumania amounting to about 50,000 miles only about 7,000 miles can be described as really well constructed. The position with regard to bridges is much the same, over half of them being of wood, of which roughly only one-third are classed as good.

Athens Light and Power Agreement.

It is satisfactory to learn that the discussions which have been proceeding between the Greek Ministry of Communications and the directors of the Greek company representing the Power and Traction Finance Company in regard to the electric lighting of Athens and the Piræus have resulted in a definite agreement. The main question at issue was the voltage. The company has used a current of 220 volts, which, as I pointed out when the matter first came up for discussion some months ago, is the rate approved by the International Convention held at Chicago in 1926. Unfortunately there were one or two fatalities, and the view was consequently taken by the Greek authorities that the rate was a dangerous one, and a current of 110 volts was asked for, which, of course, would have entailed the alteration of the existing installations. It has now been decided that the present voltage shall remain, but the Distributing Company undertakes to supply, free of charge, step-down transformers which will be capable of reducing the current from 220 volts to 42 volts, thus making the use of three-phase current entirely safe, and it will also carry out interior installations which will be paid for in 36 monthly instalments. The only other feature of the agreement which calls for notice is the provision for State control of the installations by the establishment of a State office to which the Distribution Company will contribute 300,000 drachmæ annually for three years and 200,000 drachmæ annually after that period.

The Nile Waters Agreement.

The comprehensive Anglo-Egyptian Agreement on the utilisation and control of the Nile waters constitutes a landmark in the relations between Great Britain and Egypt whose importance it would be difficult to over-estimate. The complete development of the resources of the Nile is essential for Egypt if that country is to support her rapidly growing population; it is scarcely less vital for the continuance of the steady economic progress of the Sudan. A number of projects of the first order still remain to be carried out before the river "which is Egypt" can be made to yield all the assistance it can to the lands through which it runs. These include, in addition to the raising of the Aswan Dam (tenders for which are to be invited in course of a few weeks), the Gebel Aulia, or White Nile, Dam to control the waters of the White Nile and to provide water for Egypt's summer needs, a "by-pass" for the Nile round the Sudd area to decrease the loss of the White Nile waters, works at Lake Tana which, of course, would have to be carried out by agreement with the Abyssinian Government, and a reservoir at Lake Albert to provide for the storage of the Nile waters. The last two projects are probably matters of the distant future, and it is the White Nile Dam scheme which is immediately affected by the agreement. As long as there was uncertainty in Egypt as to her position there was a reluctance to press forward with irrigation schemes, particularly so when such schemes entailed the construction of works outside the country. Now that the air has been cleared by the agreement and the needs of Egypt and the Sudan as regards water are fully safeguarded, all reasons for delay are removed, and it is considered probable that Egypt herself will undertake the task of constructing the White Nile Dam. If things had gone according to schedule this Dam should have been begun a few years ago, so that there is some leeway to be made up.

Kassala Cotton Company.

At last year's general meeting of the Kassala Cotton Company details were given of the plans for the development of the company's new concession area in the Gezira which comprises approximately 46,600 feddans of land of the same quality as that of the adjoining areas of the Sudan Plantations Syndicate. The report now issued gives brief details of the progress of the work. Up to

HOW TO GET THE BEST OUT OF YOUR CAR

No. 3. Concerning Ignition and "BP"

See that the make and break distributor and sparking plug points are adjusted correctly. The latter should be one-fiftieth of an inch apart.

It pays to keep contacts and plug points clean. Dirt means a weak spark which in turn means poor combustion.

A stiff brush dipped in petrol provides a better means of cleaning sooted plugs than scraping.

The nut securing the porcelain of a plug should never be screwed up too tightly or a plug failure may ensue.

Run on "BP" and have no combustion troubles.

PUT THE BEST IN

"BP"

It pays to use "BP"

ANGLO-PERSIAN OIL CO. LTD
British Petroleum Co. Ltd. Britannic House, Moorgate, E.C.2
Distributing Organization

December 31 last £39,331 10s. 5d. had been expended in levelling, minor canalisation, the erection of buildings, and other development work, and it is estimated that to complete the equipment of the area a further expenditure of the same amount will be required. The area available annually for cotton will be about 15,400 feddans, and it was anticipated that 5,000 feddans would be planted this autumn and the balance in the autumn of 1930. The major canalisation has been completed by the Sudan Government well in advance of schedule, however, and the company's development work has kept pace with this acceleration of the programme, and in consequence the whole area of the concession has been allotted to tenants, and it is anticipated that the whole 15,400 feddans will be planted in cotton this autumn. This rapid progress naturally alters the company's position, and shareholders will await the coming meeting with special interest, for cotton in the Gezira is not subject to fluctuations occasioned by uncertainties of water supply as in the Gash Delta and it is possible that the Chairman may be able to foreshadow a distribution at this time next year. It remains to be added that for the past year the company made a net profit of £13,098 12s. 9d., consisting of interest, the commission for the marketing of the Sudan Government's 1928 crop from the Gash area, etc., which, with the addition of the amount brought forward, £77,262, 4s. 6d., and with the deduction of the Debenture interest, leaves a balance of £62,281 12s. 3d. which is to be carried forward.

COMMENTATOR.

THE ZAGREB FAIR.

(From Our Own Correspondent.)

Zagreb, May 1.

The Zagreb Samples Fair, which was held from April 21 to 29, has celebrated a quiet jubilee—its twentieth recurrence. The exhibition was devoted almost exclusively to motor cars and agricultural implements and machines. To the ordinary lay visitor it was not a picturesque show. As a friend put it: "If you're not a motorist, one car is awfully like another." But the mere number of cars was interesting, especially as we are always told that motoring is a very expensive sport in Yugoslavia and that the roads are anything but ideal. Many of the cars were high-priced makes, too. The agricultural machinery was not content to stand mute and idle as it used to do, but was whirring and buzzing as if a dozen harvests were in progress. And then there was the inevitable sound in the very doorway. Judging by what one overhears in this country (and you cannot stroll through the town of an evening without getting scraps of the radio programme at odd moments), the gods of the broadcasting stations have given up trying to distribute serious or modern music, and are giving the old favourites, rendered in their day (and ours, if we are old enough) by the aggressive barrel-organ and the dear old hurdy-

gurdy. Well, well—*plus ça change, plus c'est la même chose*, and we don't seem able to get away from that.

There was a collection of photographs of the landscape beauties of Yugoslavia, with very fine pictures of the Plitvitza Lakes and the Slovene watering-places most noticeable among them. There was also a poultry show, which was the distinctive feature of the Fair. For two or three years past the Liubliana and Zagreb Fairs have begun to incorporate something in the nature of our rural shows with their original programme, and the value of this move can hardly be over-estimated. In Zagreb I saw prize Orpingtons and Leghorns which did every credit to Croatian poultry farmers and fanciers, and some excellent specimens of the handsome native Styrian breed. Of course, there were models of poultry runs, incubators, etc. It is clear that also in the matter of poultry-farming conditions in this country are naturally favourable, and once the Yugoslav peasant is persuaded to exchange the good old haphazard ways that have served him so long for modern methods he ought to do well in this line. The fashion revue held every evening in the big hall proved very popular. In connexion with the Fair the Vienna Philharmonic gave two greatly appreciated concerts, likewise in the big Fair Hall. Music, after all, is best heard at first hand.

The National Bank of Roumania has raised its rate of discount from 6 per cent. to 8 per cent., and the rate of interest on advances from 7 per cent. to 9 per cent.

In order to encourage the export trade in oranges and lemons between Cyprus and the United Kingdom, and thus enable exporters to find new markets for Cyprus-grown fruit, the Cyprus Government is offering a bonus of 4½ piastres (equivalent to 6d.) for each standard case of oranges and lemons, the produce of Cyprus, shipped to the United Kingdom during the year 1929.

The Near East Development Syndicate has been registered as a private company with a nominal capital of £2,500, in £1 shares, to acquire the rights and benefits of claims upon which mining licences have already been granted on asbestos areas by the Ministry of Mines of Bulgaria. The registered office is at Salisbury Square House, Salisbury Square, Fleet Street, E.C.4.

The Messageries Maritimes announce that specially reduced rates for *bona fide* students proceeding to Egypt will again be in force this year, as follows:—1st Class, £20 for the return fare Marseilles to Port Said or Marseilles to Alexandria; 2nd Class, £15, which latter figure will also apply first class by intermediate steamers. These rates will apply to students travelling by Messageries Maritimes steamers leaving Marseilles for Port Said or Alexandria between May 15 and August 20 and returning from Egypt by a steamer leaving before October 20.

The report of the Calcutta Electric Supply Corporation for 1928 states that 147,967,366 units of electrical energy were sold, compared with 129,090,227 units in 1927. The number of houses connected at December 31 last was 37,626, compared with 24,985 at the same date in 1927, an increase of 2,641. The profit, after allowing for depreciation, was £401,803, against £398,588, debenture interest (second mortgage) took £27,500, preference dividend £48,888, the sinking fund on the second mortgage debentures £12,500, and reserve for taxes £32,000. The directors recommend transferring to reserve £75,000, to insurance fund £3,000, to retiring gratuity fund £2,000, and a dividend on the ordinary shares of 7 per cent, making 12 per cent., together with a bonus of 4d. per share on the ordinary shares (less tax), reserving for distribution to domestic consumers £22,550, carrying forward £41,130, against £47,682 brought in.

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928.

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Pleven, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Doupnitsa, Gorna-Orehovitsa, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratza. It has also 86 agencies.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 7.

Dull is the only epithet applicable to the past week in the stock markets, and the prevalence of dullness causes no surprise. The approach of the General Election is and will continue to be a big factor; and to the uncertainties arising out of the American situation has been added some obscurity regarding the monetary position and future on the Continent. The cumulative effect of these considerations prevented the gilt-edged market from enjoying the strength which might in other circumstances have been afforded by the Bank of England's large acquisitions of gold. In the speculative and industrial sections a very widespread inertia prevailed, relieved only to a slight extent by a momentary flicker of American interest in one or two securities. It is fairly clear that circumstances are overwhelmingly unfavourable to any substantial stock exchange movement during the next few weeks. Nevertheless, the nervousness felt in some quarters in the City at the end of last week on the score of possible results of a breakdown of the Reparations Conference is passing away. Even if a breakdown does occur, no very serious reverberations are now expected.

Prospectuses.

At the present time, when there appears to be a renewal of activity in the new capital market, it may be helpful if we remind investors of a few of the considerations to be borne in mind in studying prospectuses. Obviously one of the most important considerations is the profit which the capital to be raised is expected to earn. Where an existing business (or businesses) is being bought, then the investor should expect a full statement of profits earned in, say, the five preceding years; he should not be content with an average figure, for this may cloak serious fluctuations, or a decline in the later years. On the other hand, where full figures are given, and a very sharp rise is shown, it may be that these profits have been deliberately swollen by sales of property or investments. It should also be mentioned that profits should be given for regular accounting periods, for, if figures are given for uneven periods, fluctuations may be hidden. The question of goodwill follows naturally from the consideration of profits, for goodwill is valued on the past profits. The vendor of the business must be expected to require something for the goodwill, but goodwill is a valuable asset only so long as the business prospers, and should therefore be valued conservatively. The investor should also trace carefully the contracts between vendors, promoters, and issuing houses. It is true that this is often exceedingly difficult, but the more difficult it is the more necessary is it that it should be done, because the larger the sums paid to those interested in the flotation of the company, the less is left to earn dividends for those who become shareholders.

Rubber Trust.

The accounts for 1928 of Rubber Plantations Invest-

ment Trust, which has just announced that foreign holders of its shares will have no voting rights, show, as did those of Dunlop Rubber Company, which we discussed a week ago, the effects of the abandonment of the restriction scheme. Profits fell to £310,564, compared with £352,953 in 1927 and £416,502 in the preceding year. In order to maintain the dividend of 15 per cent. it was necessary to transfer £50,000 from the dividend equalisation fund, which now stands at £100,000. In addition to this fund there is, however, a general reserve of £721,178, while issued capital amounts to £2,250,000. The accounts of most rubber companies for the current year cannot be expected to show a very great improvement on those for 1928, since the present market price of rubber is well below the average price on which last year's earnings are based, although the restoration of "free" production should mean savings in overhead costs. Investment in rubber shares is necessary speculative, but the risk is reduced by investing in such a company as this, which has holdings in several companies, and which, in addition, is largely interested in tea. Apart from its investments in tea companies, it owns estates in Sumatra totalling 36,000 acres, of which 8,544 acres are planted and 7,709 acres in bearing. Its crop last year amounted to 6,104,598 lb., compared with 5,167,076 lb. in 1927. As we showed a fortnight ago, the outlook for tea growers may be regarded as favourable. The ordinary shares of the Rubber Trust, allowing for the final dividend included in the present price, return £7 10s. per cent.

Electrical Engineering Profits.

While Associated Electrical Industries (formerly known as Metropolitan Vickers) report slightly increased profits for 1928 at £258,772, against £254,749 for 1927, the profits of British Thomson Houston declined from £462,444 in 1927 to £422,729 last year. In their report the directors state that the volume of the output was comparable with that of the preceding year, but that competition at home and abroad kept prices at low levels and accounted for the decline in profits. Last November the ordinary capital of British Thomson Houston, and a majority interest in the Edison Swan Electric Company and in Ferguson Pailin, was acquired by Associated Electrical Industries, but no dividends from these companies were taken into the accounts of 1928. This amalgamation should enable substantial economies to be effected, and apart from this the outlook for these companies, as for the whole of the electrical industry in the next few years, is distinctly promising. The development of the "grid" system, the national electricity supply scheme, is itself an important source of demand, and it appears also that there has been an improvement in the competitive power of British manufacturers in foreign markets. Nevertheless, the price of the ordinary shares of Associated Electrical Industries, which yield £3 13s. per cent., seems to discount the future rather heavily. The 8 per cent. cumulative preference shares of the same company, returning £5 19s. per cent., may, however, be regarded as a satisfactory industrial investment, as their dividend was covered rather more than twice on last year's earnings.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production, and tobacco co-operatives. The Bank transacts every description of banking operations.

PUBLIC SECURITY IN EGYPT.

In view of the attention directed last year to the question of public security in Egypt, as a result of the marked increase in crimes reported during 1927, the Report on the State of Public Security in 1928 by Mahmoud Fahmy Elkaisy Pasha, Director General of Public Security, is of special interest. The following extracts are taken from this Report:—

Introduction.

The publication last year of the report on criminal statistics of 1927 created a great sensation, because it indicated that the number of crimes committed in Egypt during 1927 had greatly increased, as compared with those of the previous year. The increase attracted great attention and led to many discussions, in both Chambers, as to the necessity of a full investigation into the real causes of the increase during past years in general and 1927 in particular.

H. E. the then Premier took a special interest in the matter, and in view of the fact that Mudirs are directly responsible for the public security of their provinces, he asked their opinion as to the real causes of the increase of crime; and requested them to submit to the Ministry proposals for its prevention. He also considered it necessary to consult the Chiefs of the Parquet in view of the fact that it is they who carry out the investigations of crimes and discover the true motives that lead to them. The Premier's object was to have a collection of the opinions of the Chiefs of the Parquet and proposals of the Mudirs, to enable him to study them with the idea of discovering the real causes of the increase of crime and to adopt the best measures for its prevention, and for the maintenance of order.

The Premier's interest, however, did not stop at that, for, in order to secure a radical remedy for this state of affairs, he considered it necessary to secure the co-operation of a technical body. He, therefore, issued an arrêté appointing a committee under the presidency of H. E. the Under Secretary of State for the Ministry of the Interior and including as members H. E. the Public Prosecutor, the Director General of the European Department, the Assistant Royal Counsellor to the Ministry of the Interior, the Mudir of Gharbia province, the Director General of Public Security, the Director General of Inspectorate, the Assistant Inspector General of Troops, Ministry of War, and the Director of Equipment and Finance, Ministry of the Interior.

Another arrêté was issued later adding to the above Committee T. E. Mohamed Safwat Pasha, Mahmud Abdel Razik Pasha, Mahmud Rashad Pasha, Ahmed Ramzi Bey and Mohamed Youssef Bey, ex-members of Parliament, and Russell Pasha, Commandant of Cairo City Police. The Committee was charged with the study of all the means that might lead to an improvement in the maintenance of order and public security. A special study was to be made of the question of Omdas and also legislation was to be enacted that might tend to remove misunderstandings between individuals. The present police organisation was to be divided into judicial and disciplinary sections, and the syllabus of the Police School to be modified so as to give men and N. C. O.'s sufficient training to carry out intelligently the system of Police duties which might be adopted. The present Ghaffir system in the provinces was also to be amended, Ghaffirs to be replaced by conscripted recruits who were in excess of the need of the Army. An alteration in the present system of omdaship in the towns and villages was also to be studied so that it might work in with the new scheme alluded to, in so far as concerns public security and the carrying out of the executive duties which are now performed by Omdas. The law of Vagrancy and Suspects was also to be revised so as to include clauses which would secure the advantage of proper control of this class of person. Other means were also to be considered which might help to the reform of such individuals. Also a

system of identity cards was to be considered, such as is in force in some European countries.

A full meeting of the committee was held on December 15, 1927, and after discussing the various duties with which it was charged, it decided to appoint a sub-committee consisting of T. E. Mahmud Abdel Razik Pasha, Mohamed Safwat Pasha, Mahmud Rashad Pasha, the Public Prosecutor, Ahmed Ramzi Bey, Mohamed Youssef Bey, and Russell Pasha to study all the questions covered by the Ministerial arrêté, together with the various factors which might affect the increase or decrease of crime. The results of its studies were to be submitted to the General Committee. The Ministry placed at the disposal of the Committee all the data and statistics it possessed, together with the special reports on the state of public security received from Mudirs, Governors and Inspectors of the Interior, or Chiefs of Parquet.

It is obvious that in order to apply a general radical remedy to the state of public security, it is necessary to make a careful study of all the previously mentioned important questions, each of which requires an exhaustive inquiry. For it may be that the general radical remedy depends on the treatment of various phases of the subject which are closely connected with it. Thus, a special system has been proposed to replace the system of Ghaffirs in towns, villages and ezbas. It recommends the replacement of Ghaffirs by conscripted recruits who are in excess of the needs of the Army, in compliance with the order dated September 29, 1927. Now, in order to carry out this proposal it is necessary to provide barracks for the recruits, either by building or renting, not only in the capitals of the Provinces, but also in the Police Districts and villages where police outposts exist, because if these recruits are not given special quarters, but allowed to mix with the inhabitants, the end would be immorality and corruption, owing to their youth and meagre pay. Subsequently, it would be necessary to study the system intended to replace that of the omdaship so as to make it compatible with the new system of Ghaffirs in so far as it affects public security and the carrying out of the various executive duties which are now performed by the Omdas.

All these questions and the various factors, whether economic, moral, scientific or regulative, which affect the increase or decrease of crime, require an exhaustive study and a long time must elapse before they can be put in force. However, as a remedy was urgently required, the Ministry decided to take action in another direction, namely, to reinforce the Police whilst the Committee proceeded with its studies; and an additional force of 400 men was to be provided for the provinces. As the creation of this force was an urgent matter the Ministry of War was requested to furnish troops whose services might be available for use at the earliest possible moment by the Ministry of the Interior. This request was acceded to, and a force of 300 men of two years' service was supplied, the balance to be made up from 1927 recruits who would be available as soon as their training was completed. As this force had been created with the object of affording rapid assistance in emergency, it was thought best to quarter half of it at Quesna, in the centre of the Delta, and the other half at Assiout, so that places in need of help could be quickly and inexpensively reached.

The Camel Corps had also proved to be very useful in the maintenance of public security, especially in the provinces adjoining the deserts. But the Corps, owing to its numerical weakness, had failed to cope with brigands and smugglers, and it was therefore found necessary to reinforce it by 150 men. A request to this effect was granted and the work of creating the force is going on. It is hoped that it will prove a great help in the maintenance of public security in outlying districts.

The Need for Increasing the Police Force.

As the maintenance of public security necessitates the increase of Police Posts in different areas, and as the duties of the Traffic Police have increased; and will continue to increase, owing to the augmentation of motor

DUNLOP RUBBER CO. LTD.

St. James's House, St. James's Street, London, S.W.1.

Branches throughout the World.

traffic, the unavoidable result is that an annual increase in the police force will have to be demanded for many years to come. This is especially necessary, as, under the present system, the different Ministries and Departments continually apply to the Police Authorities for help in carrying out a variety of duties. These calls are on the increase, and involve the diversion of a considerable proportion of the Police Forces from their proper work of picquetting.

I shall not exaggerate if I state that no improvement in the condition of public security can be attained as a direct result of any modification in the existing laws or systems—however useful such modifications may appear to be—so long as the force available for maintaining it remains in its present weak condition.

Public Security in 1928.

The number of crimes committed in 1928 was 7,569 as against 7,950 in 1927, distributed as follows among various categories:—

Categories of Crimes.	1927.	1928.	In-crease.	De-crease.	Percentage of increase or decrease.
Wilful murder	1,264	1,258	—	6	.04
Attempted murder	1,115	1,128	13	—	1.16
Manslaughter	279	284	5	—	1.79
Assault causing disability	337	363	26	—	7.71
Theft with violence	677	654	—	23	3.39
Attempted ditto	170	153	—	17	10.00
Arson	2,438	2,095	—	343	14.06
Poisoning of cattle	116	84	—	32	27.58
Destruction of crops	278	246	—	32	11.51
Rape and indecent assault... ..	308	303	—	5	1.62
Threats and menaces	204	199	—	5	2.45
Obstruction of trains	67	70	3	—	4.47
Recidivism	380	384	4	—	1.05
Forgery	177	218	41	—	23.16
Embezzlement	37	35	—	2	5.4
Corruption	18	12	—	6	33.33
Kidnapping	32	33	1	—	3.12
Other categories	53	50	—	3	5.66
Totals	7,950	7,569	93	474	4.79
					net decrease : 381

It will be seen from the above table that the number of crimes committed this year was 381, or 4.76 per cent. less than that of last year. With the exception of a few cases of attempted murder and obstruction of trains, the responsibility for the increase in the above categories, as explained in last year's report, does not fall on the police authorities, nor on the systems adopted for the prevention of crimes. Nor should the increase be taken as indicating the real state of public security in the country. For some of those crimes, such as manslaughter or assault causing disability, are often committed in a state of temporary excitement and for trivial reasons. While others, such as forgery, are committed in circumstances which are entirely beyond the control of the police.

Of the crimes of wilful murder and attempted murder in the year under review 169 were murders of illegitimate children and 55 cases were committed on persons who were at the time themselves engaged in the commission of a serious crime, such as murder, serious theft, arson etc. The number of crimes caused by enmity, 1,002 in all, is still great, and, as was pointed out in last year's Report, cannot be combatted except by the spread of education amongst the masses of the people and by the establishment of a system of reconciliation which would obliterate the causes of feuds between families. The number of wilful and attempted murders in which firearms were used amounted to 1,388, i.e., 58.17 per cent. of the total number.

The Causes of Decrease.

The decrease in the number of crimes this year is due to several causes, the most important of which are the following:—

First.—The reinforcement of the police forces in 1926. We pointed out in last year's report that the number of

policemen charged with public security duties was far less than the work demanded. This was owing to the spread of progress in late years, to the construction of buildings outside the inhabited areas, *esbas*, villages, and police posts, and to the many laws and regulations pertaining to the various Ministries in the carrying out of which a large part of the force, originally designated for the maintenance of order and public security in the country had to be used. The effect of this was that the percentage of the force charged with patrol duties in some of the *Markazes* fell to 11.7 per cent. of its original establishment.

We also pointed out that it was necessary, in order to maintain public security and to enable the force to carry out its duties, to increase the number of policemen in the proportion of the increase of work and the development of civilisation.

The Ministry then considered, and is still considering, the annual reinforcement of the police until its strength reaches the limit which will enable it to carry out its duties satisfactorily. In the Budget proposals for 1926 the Ministry asked that the provincial police forces be reinforced by the addition of 49 officers and 778 men and N. C. O.'s, as a permanent base for every Bander, Markaz, and police post. Of the numbers asked for only an addition of 30 officers and 496 men and N. C. O.'s was approved, to which 10 other officers and 142 soldiers were added later from the town forces, thus the total increase for the provinces amounted to 40 officers and 638 men and N. C. O.'s. This force commenced to be formed in the latter part of December, 1926, but owing to the lack of qualified men, the Ministry was unable to complete the force until July, 1927. It was not therefore utilised as a whole until 1928, when it was able to carry out more patrols than it did the previous year. This had a beneficial effect on the state of public security, as we shall explain later.

It may be pointed out here that the Ministry considered it necessary to reinforce the police forces in 1928 because it noticed that the forces at the new police posts (amounting to 41) were under establishment and also that it was very necessary to increase the forces so as to establish traffic bureaux in some towns and a new district at Mahmudia. In August, 1928, an increase of 46 officers and 596 men and N. C. O.'s was approved, and the force was attached on October, 1928, with the exception of 27 mounted policemen, as the required number was not available from the cavalry, or the school of police, from which the first batch is expected to graduate in June, 1929. It is hoped that this increase will have a beneficial effect on the state of public security in 1929.

Second (Patrols).—One of the effects of the increase of the police forces in the provinces was to enable the policemen to carry out more patrols this year than they

did last year, namely, 186,600 patrols in 1928, against 173,784 in 1927, an increase of 12,915 or 7.4 per cent. It must be pointed out here that, as a proof of its increased interest in the patrols, and in order to enable the forces to attain the object for which they were designed, the Ministry decided to establish a system which would ensure the carrying out of those patrols in the most satisfactory manner. It therefore issued instructions imposing upon the Inspector of Nizam and Ghaffir, the Police Commandant and Assistants, Inspectors of Ghaffirs and Assistants in the provinces, and the Mamours of the Markazes, to follow some of the patrols and make sure that they were carrying out their duties. Other instructions were also issued to the effect that the identity card of every person under supervision should bear his photograph so that the patrol could identify him and prevent impersonation.

There is no doubt that the increase of patrols this year and the supervision of these patrols by higher officials, had a great effect on criminals, by intimidating them. It also caused the police to be constantly on the alert, a factor which has led to the decrease of crime in most of the mudirias.

Third.—The reinforcement of the Ghaffir force. In some provinces one of the most important factors which led to the increase of crime in 1927 was the weakness of the guarding forces in many villages, and the fact that those forces remained in that weak state from the middle of 1926 to the latter part of 1927. The Ministry reinforced the Ghaffir forces in the villages, where the state of the public security necessitated such a reinforcement. The greater part of these reinforcements went to the provinces of Dakahlia, Gharbia, Menufia, Minia, Assiut, Kena, and Sharkia. This increase greatly improved the state of public security in those localities.

Fourth.—The new system of guarding zones outside the inhabited areas in the provinces of Giza and Qaliubia.

It was decided last year to replace the Ghaffirs system in some of the Mudirias by another system which would enable the force to concentrate all its energy on the maintaining of public security in the most satisfactory manner. A part of the Ghaffir force in Giza and Qaliubia was therefore replaced by a new force chosen from reservists; and a special system was instituted which brought about a decrease of the number of crimes in those two provinces, especially of serious crimes. The decrease amounted to 43 at Giza and 76 at Qaliubia, as we shall explain in the chapter dealing with the new system.

Such are the main causes which have led to the decrease of crimes that afford an indication of the true state of public security in the country. The increase in the other crimes, viz., forgery, manslaughter, assault, etc., is not due to causes connected with the men of Public Security, for they cannot prevent such crimes.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.
Water Tower.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of a steel water tank with steel frame-work tower complete with necessary piping and fittings as well as an electric water level indicator. June 1. (D.O.T.)

Weighing Machines and Balances.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply of platform weighing machines, counterscales, and Beranger balances.

Tent Lining.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of calico cotton blue, tent lining for the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. July 1.

Drugs, Etc.—The Director of Stores, Ministry of Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of the drugs required for the schools during the year 1929-1930 (May 25), and painting and decorating materials required for the Trades Schools during the year 1929-1930 (June 17).

Water Mains.—The Ministry of the Interior invites tenders for the supply and installation of a system of water mains. The principal materials required are 15,350 metres of double wrapped steel piping, 127 sluice valves with flanged ends, 49 hydrants, 10 column and 9 drinking fountains. June 1. (D.O.T.)

General Stores.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka, Nazli, Cairo, invites tenders for the supply of general stores for the year 1929-1930. June 20.

Undervests.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of undervests, cotton, white, to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. July 24.

Surgical Instruments and Glassware.—The Department of Public Health, Cairo, invites tenders for the supply and delivery of surgical instruments and surgical glassware required for the Central Stores, Cairo, from May 1, 1929, to April 30, 1930. June 3. (D.O.T.)

INDIA.

Rotary Converter, Etc.—The Indian Stores Department, Simla, invites tenders for the supply and delivery of a 500 k.w. 6-phase rotary converter, starting panel, etc. May 27. (D.O.T.)

TURKEY.

Steel Piping, Etc.—The Ministry of the Interior invites tenders for the supply of 5,100 metres steel piping assorted, 4,150 metres of 176 m.m. diameter, 900 metres of 102 m.m. diameter, 50 metres of 79 m.m. diameter, together with a quantity of specials, valves, hydrants, etc. June 3. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, May 31). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahrona for Calcutta (Birkenhead, May 16); s.s. Mahsud for Calcutta (Birkenhead, May 25).

Bibby Line.—S.s. Leicestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 15).

British India Line.—S.s. Warfield for Bombay and Karachi (London, May 18); s.s. Mulbera for Colombo, Madras, and Calcutta (London, May 18).

Cunard Line.—S.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Corfu, Bari, Gruz, Venice, Trieste, and Fiume, also at Messina and Catania if inducement offers (Liverpool May 11, Swansea May 14); s.s. Bantria for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, June 5).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 25); s.s. Dromore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 15).

P. and O. Line.—S.s. Razmak for Bombay (London, May 10); s.s. Novara for Calcutta (London, May 11); s.s. Rawalpindi for Bombay (London, May 17); s.s. Burdwan for Calcutta (London, May 24).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, May 18).

Ellerman and Papayanni Lines.—S.s. Flaminian for Gibraltar*, Malta*, Algiers*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool May 11, Swansea May 11); s.s. Mardinian for Gibraltar*, Malta, Algiers*, Syra*, Smyrna, and Constantinople (Liverpool May 25, Swansea May 25); s.s. Oporto for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool May 25, Swansea May 30); s.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool May 29, Swansea May 30). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syra and Cyprus via Alexandria; Genoa and Port of Spain via other convenient port.

Motors and Motoring.

(By Our Motoring Correspondent)

Self-starters and Starting-up.

A few years ago it was the exception to find a car that was equipped with either an electrical or a mechanical self-starter. Now, of course, it is the exception to find any car which is not so fitted. So far, that is all to the good. It is a marked advance in development and a lengthy step in the evolution of the "no-trouble" car. But in one respect we have not kept pace with development. We have fitted the self-starter, but have not taught the motor-driving public, as a body, how to use it.

When a man, in the old days, made up his mind to start up his car on a cold and frosty morning, he used to do all sorts of things to lighten his labour; poured boiling water in the radiator, hung scalding hot rags round the carburettor, and roasted his plugs in a gas jet or the kitchen fire. He used a little drop of good petrol for priming, and even with all that was prepared to grind away at the starting handle for some minutes before he got even a back fire. Now he just makes himself comfortable with a rug round his knees, sits back in the car, and sets the self-starter going. And if the engine does not fire at once he blames everybody who has ever had anything to do with the apparatus.

Fair Play for Mechanism.

That all this imposes a heavy and quite undue strain on the accumulators is not considered by a driver of the class referred to; he feels that anything advertised and sold as a starter should start, and that's all there is to it.

Then again, many a man seriously ill-treats his self-starting apparatus in traffic. If his car had nothing of the kind fitted he would keep his engine gently running and inch his way along on the clutch. When he has a car with a self-starter, that same man, apparently desirous of advertising his possession to the world, will stop his engine at every traffic block and on every other possible occasion for the sake of restarting it by the automatic device. It is not dealing fairly with what is, after all, a delicate piece of apparatus, to subject it to treatment of this kind.

The Extreme.

In this, as in practically every other matter, we get men who go to the opposite extreme and stuff cotton-waste into the air pipe and flood the carburettor and squirt petrol into the cylinders and fix easy starting petrol flooders on the induction pipe. Many a man has wondered why his engine would not fire when all that has been wrong with it is that it has been choked with petrol and so starved of air that the mixture in the cylinders was actually non-explosive. It was recently pointed out that after a few miles running at high speed the oil in an engine crank case would be found to be thin; much thinner than when it was first put in. The usual explanation of this is that the heavy running has used up all the "nature" in the oil. As a matter of fact, it has become diluted by petrol vapour which has leaked past the rings. How much more, then, does this oil get diluted when the cylinders are liberally "doped," the induction pipe and valve chambers filled with raw spirit, and the engine slowly turned over?

As a matter of fact, there is no need to do more than adjust the carburettor so as to give perfectly easy starting, by hand, in ordinary weather. When that is done it will be equally correct for the self-starter. If the weather is unduly cold, similar measures should be taken to those which would be adopted for hand starting and—and here is the golden rule—the self-starter should be used as little and as carefully as possible.

Starting Up.

During the present cold weather many find their engines difficult to start, and, further, complain that they do not pull well when started, but are sluggish for some time. The starting difficulties incidental to cold weather are nearly always due to insufficient mixture reaching the cylinders, the incorrect proportion of air and vaporised fuel in that mixture, and to incorrect setting of the throttle. It may be argued that the latter item covers the other two, and to some extent that is correct. Given the spark in the right position and the throttle-setting as it should be, any engine should start.

Quite a number of motorists open the throttle too wide. "Give her plenty of mixture," say they, regardless or ignorant of the fact that at the comparatively slow-starting speed of the engine the cylinders will get about as full of gas with a narrow as with a wide throttle opening. As a matter of fact, the smaller opening of the throttle causes a more rapid rush of air through that opening to fill the cylinder, and one of the direct results of that is that more petrol will be sucked from the jet and the mixture will be richer. I have known many a motorist dope his cylinders, flood his carburettor with petrol, and adjust his throttle opening so as to ensure a much too-rich mixture entering the cylinder, and then wonder why his engine does not start. The golden rules for easy starting are: Plug points fairly close together; no air leak in the induction system; pistons free from gummy oil, ensured by a small injection of petrol or paraffin; a little flooding of the carburettor, and a correct setting of the throttle. Of course, if the engine will not start easily from cold, fill the radiator with warm water. But there should be no need for that if the smaller details mentioned are seen to properly.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

RANGOON, CALCUTTA, and COLOMBO

To **BEIRA, DELAGOA BAY, DURBAN, EAST LONDON**
PORT ELIZABETH, MOSSEL BAY, and CAPE TOWN.

ECONOMIC CONDITIONS IN BULGARIA.

[The following notes are taken from the bulletin of the British Bulgarian Chamber of Commerce of Sofia, dated April 30.]

General Situation.

Owing to unfavourable weather conditions, a part of the winter sowings are reported as more or less seriously damaged. The progress of several crops has suffered considerable delay, and the general opinion is that the yields will probably prove disappointing in more than one district.

The position of the treasury continues to be satisfactory. Foreign trade figures are showing a decreased activity on both sides. The opinion prevailing in business circles is that, as a consequence of the not encouraging outlook for agricultural production, the peasant consumers are limiting their purchases.

Monetary conditions are still easy. There are, however, signs of a possible hardening in the coming months, as a result of the general trend prevailing in foreign money markets.

If the pessimistic forecasts with regard to the harvest prove correct, the sale of agricultural machinery, tractors, etc., will suffer a marked slowing down and payments for machinery sold last year are likely to suffer some delay. Relatively large shipments of goods of this kind are reported to be on the way to Bulgaria and the market could easily become overstocked.

Agriculture.

Since the publication of the Order of the Ministry of Agriculture concerning the application of Article 94 of the Law for Improvement of Agriculture Produce and Preservation of Land Properties providing for the free entry of artificial manures, materials, and preparations used in agriculture, many protests have been addressed to the Ministry requesting that the Order be abrogated. Certain merchants are even claiming that the Order should be considered null and void, having been issued after the coming into force of the new Law on Public Health, according to which the lists of materials and preparations used in agriculture shall be prepared, amended, and supplemented by the Direction of Public Health in collaboration with the Ministry of Agriculture. It is hoped, however, that these protests will remain without practical results.

Imports and Exports.

The trade balance for March closed with a deficiency of 91,000,000 leva, while for February, the deficiency amounted to 83,000,000 leva. Imports during March totalled 23,175 tons for 644,811,000 leva, and there were exported 17,920 tons for 553,440,000 leva, while in February the imports were 12,509 tons for 428,744,000 leva and the exports 15,711 tons for 345,138,000 leva.

The trade balance for the first quarter of 1929 closed with a deficiency of 297,000,000 leva, while the deficiency for the corresponding period of last year was 274,000,000 leva. Imports during the same quarter aggregated 55,749 tons for 1,614,124,000 leva, and the exports amounted to 53,109 tons for 1,316,962,000 leva, while imports for the corresponding period in 1928 were 61,344 tons for 1,732,128,000 leva. Imports during the first quarter of 1929 decreased by 118,000,000 leva or 6 per cent., while exports decreased by 201,000,000 leva or 11 per cent. The chief export items for the period January-March as compared with the same period of 1928 were:—

	1929.	1928.
Wheat	1,438	4,694
Barley	5,545	1,529
Maize	14,900	26,238
Flour	675	3,826
Tobacco	6,381	7,766
Fowl	108	368

Forthcoming Tenders.

The Ministry of Railways is inviting tenders to take place on June 4, for the supply of 200 tip-wagons for narrow gauge line and spare parts. The approximate amount of the order is 1,900,000 leva. A 5 per cent. caution (95,000 leva) is required with offers.

Production of the Pernik Mines.

The production of coal of the Pernik Mines in the first quarter of 1929 amounted to 361,869 metric tons, or 74,457 metric tons more than in the corresponding period last year. Sales of coal during the same period amounted to 315,441 metric tons, showing thus an increase of 60,209 metric tons over last year's first quarter.

Miscellaneous.

The wholesale commodity index number (on the basis of 1914 equals 100) for March was 3,290, as compared with 3,267 for February, and 3,021 for March, 1928. The general level of wholesale prices has thus risen by 0.7 per cent. as against February and by 8.9 per cent. as compared with March, 1928. This steady increase in the cost of living is mostly due to the soaring prices in the following groups of commodities: foodstuffs, building materials and various.

The receipts of the State Treasury for March show a further increase as compared with January and February. In March the regular receipts amounted to 611,794,000 leva, while in February they were 559,382,000 leva. Receipts from April, 1928 to March 31, 1929, aggregated 7,081,311,121 leva as against 6,643,473,858 leva last year. There is consequently an increase in the present Budgetary year of 293,611,121 leva. This increase is due to larger receipts from indirect taxation, fees and imposts, communications, etc.

The quantity of notes in circulation during April shows an upward movement customary for the season. On March 31, the notes in circulation amounted to 4,100,715,000 leva, on April 7 to 4,145,281,000 leva, and on April 15 to 4,137,728,000 leva. There is to be observed an increase in the foreign exchange reserves of the National Bank, due to increased exports. Thus on March 31, foreign exchange amounted to 2,557,105,000 leva, on April 7 to 2,703,407,000 leva, and on April 15 to 2,706,719,000 leva.

The American dollar, the English pound sterling, and the French franc have retained a steady rate in March, i.e., 139.674.45 and 544.20, respectively. The German mark fell from 3,300 to 3,298. The Swiss franc and the Italian lira were selling at 2,674.20 and 727.50 respectively, while the Yugoslav dinar and the Roumanian lei retained their former rates. The Czechoslovakian krone went up from 411.70 to 412.20, and the Turkish pound fell from 68.85 to 68.45, while the Greek drachma retained a steady rate at 181.10.

According to official data furnished by the Labour Section of the Ministry of Commerce, Industry, and Labour, the number of employees in industrial undertakings during the first three months of 1929 shows a general increase as compared with that of the corresponding period of last year.

Bulgaria's imports of textiles in 1927 amounted to 15,375 metric tons, of the value of £3,220,000, of which cotton manufactures accounted for 10,496 metric tons, of the value of £2,180,000, and wool manufactures for 531 metric tons, of the value of £433,000.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volos, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

Near East Markets

CYPRUS EXPORT TRADE EXPANDING.

The report on Cyprus trade for March states that the imports during the month totalled £146,903, an increase over those for last month. The total value was £5,731 less than in March, 1928, but £22,695 above the quinquennial average. Machinery accounted for the decrease as compared with March, 1928. Increases were recorded in flour, motor cars, petrol, and, owing to the shortage of olive oil in the island, there was a considerable importation of edible oils. The increased importation of barley and other products resulted in an increased importation of sacks.

There was a continued increase in the value of exports which at £141,889 were £17,690 above those for March, 1928, and £36,036 above the quinquennial average. The principal increases were: asbestos (£15,366), cotton (£6,343), lace (£1,942), oranges and lemons (£1,031), potatoes (£15,442), raisins (£1,609). Barley of the 1928 crop to the value of £7,019 as compared with a quinquennial average of £909 was exported during the month. Of barley 71,487 bushels were exported during the months January to March as compared with the total export in 1928 of 27,712 bushels. Decreases as compared with March, 1928, are recorded in the export of pyrites, carobs, silk, and wine.

There was an increase in shipping at all ports; 28 vessels called at Larnaca, 29 at Limassol and 25 at Famagusta, as against an average of 27, 28, and 21 respectively.

YUGOSLAVIA'S IMPROVING INDUSTRIAL POSITION.

Yugoslav official reports state that, in general, the year 1928 was more favourable for Yugoslav industry than was the year 1927. The improvement (says the Monthly Review of the Anglo-International Bank, Ltd.) was particularly noticeable in the timber industry. Evidence of this is seen from the fact that the export of timber was actively carried on during the year 1928. Timber was the principal article of export during the year, and the actual value of the timber and timber products exported reached the figure of 1,134 million dinars. The stabilisation of the French franc was a favourable factor for the Yugoslav timber industry, while, during the past year, a considerable quantity of timber was sold to the Mediterranean countries and also to the Near East. There was a 20 per cent. rise in prices as compared with the year 1927. Italy was the principal purchaser of Yugoslav timber, followed by Hungary and France. A quantity of 1,617 wagons of tannin was exported during the year; this is considered rather unsatisfactory in view of the fact that the tannin factories can produce 4,500 wagons of tannin yearly.

Steady progress is being made in the textile industry, and this industry is now nearly able to meet home requirements. This may be seen from the falling off in the imports of textile products from abroad. The finished products in this industry are now coming into the country in steadily decreasing quantities, while the amount of raw cotton being imported for the textile industry is rapidly increasing. After supplying the home requirements for sugar, which amounted to 8,500 wagons for 1928, 3,000 wagons were available for export. The brewing and distilling industries did not develop very much, partly because the home demand was weak, and partly because competition from abroad was powerful and well organised. The paper industry during 1928 was employed on the average up to 60 per cent. of its capacity, while, for the period in question, 30,000 tons of steel were manufactured in the country. The production of copper ore was 327,750 tons and of copper 15,100 tons.

The situation in the milling and meat industries, however, is still far from satisfactory.

Steady progress is being made in the artificial manure industry, and there is a steadily rising internal demand for this product. Nine thousand wagons of carbide and 7,500 wagons of cyanide were produced in the country, while 4,246 wagons of these two products, worth 125 million dinars, were exported during the year; 2,713 wagons of soda, worth 70 million dinars, were exported during the period, while home factories supplied 70 per cent. of the national requirements of naphtha.

The amount of coal produced was well up to the average in previous years, and it is estimated that 4.2 million wagons of coal were raised from the pits during the year 1928. Capital requirements of the country's industries are steadily increasing, and there is always a most active demand for foreign capital.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report, dated April 30, state:—

Currants.

It is a satisfaction to be able to report that the present month has witnessed a greater display of interest, which is especially welcome and encouraging, coming as it does, after a lengthy period of lethargy. A more confident undertone has been manifest, and although no weight of buying has taken place, a steady day to day movement was experienced. Buyers, however, still persist in their policy of not anticipating requirements, being content to provide for their immediate needs. A review of the situation leads to the conclusion that the technical position of the market is strong, and but for additional supplies from Australia there would be a shortage before the end of the summer, unless Greek shipments should come on a much larger scale than they have done recently.

S.S. Bothnia and Manchurian with small quantities were the only arrivals during the month. Prices are practically unchanged for Low and Medium grades, but slightly higher for Fine and Choice. Sales were: Pyrgos 46s. Smalls 45s. 6d., Amalias and Patras 46s. to 47s. 6d., Gulf 48s. to 50s., Vostizza 49s. to 57s., one parcel of outstanding merit realised 62s. Closing quotations:—Pyrgos 46s., Amalias and Patras 46s. to 47s. 6d., Gulf 48s. to 50s., Vostizza 49s. to 57s.

Sultanas.

Smyrna. In the early days business did not show any movement, nor has there been any expansion of trading, although the reports of damage to the Californian crops have caused buyers to take a little more interest than earlier in the month. A few sales were transacted at 37s. for Medium fruit, Good to Fine 39s. to 45s.

Greeks were disposed of, Good qualities 45s. to 52s., Choice 58s. to 60s.

Figs.

Genuines.—Almost cleared at 32s.

The gross production of crude oil in April of the Phoenix Oil and Transport group of companies was 34,048 tons.

The period during which ploughs and plough carriages may be imported into the Serb-Croat-Slovene Kingdom free of Customs duty has been extended to September 30.

The Indian Stores Department has given contracts to the Hanomag Co., of Hannover-Linden, Germany, and Messrs. Henschel and Son, of Kassel, Germany, for 22 and 25 boilers respectively for broad gauge locomotives for the Indian State railways.

The traffic receipts of the South Indian Railway Company for the week ended March 31 amounted to Rs.16,72,140, making the total for the year Rs.6,21,96,871, as compared with Rs.6,20,02,837 for the year ended March 31, 1928.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 1:—

Egyptian Futures.

Sakel Contract.—This market has been subject to increasing pressure throughout the past week, and consistent liquidation of old "bull" accounts has forced values to the lowest point recorded since the early days of the season. Whilst there seems little doubt that we are now feeling the influence of the reduced quantities of Sakel being consumed in the various fine spinning centres, other factors have played a more prominent part in forcing the decline of the past few weeks; we refer to the prevailing "bearish" sentiment operating in most of the commodity markets at the present time and the general tendency to anticipate, or discount, the effects of ample supplies from the crops just planted. In spite of the weight of cotton forced out by the decline from speculative sources our premium over the American contract has only narrowed about 20 points on the week, whilst in certain quarters opinions are strongly held that we must close in materially to attract the necessary amount of trade support; supply figures hardly endorse this view. The local stock of Sakels of all qualities in recent returns only amounts to 17,000 bales and in equivalent Egyptian weights 30,000 bales of Sudans. During recent sessions the Alexandria market has fluctuated in an extremely erratic manner, sharp reactions being followed by even more pronounced periods of weakness. So far, there have been no signs of the anticipated manipulation of the May position; in fact, at to-day's close the month in question closed on the verge of the 33 dollars mark, a decline of nearly 2½ dollars on the week.

Trade reports still continue unsatisfactory, but on the whole spinners have operated rather more freely in actual, probably covering open yarn sales; in addition, the market has received a certain amount of support from price-fixing on the scale down. For the immediate future, the course of this contract will probably be governed to a large extent by the action of the American markets; however, we now appear to have worked down to a level when any reaction in the latter would find a ready response, as apart from being thoroughly well liquidated, a fair amount of short selling has recently been encouraged by the persistent downward movement.

Upper Contract.—In conformity with other markets, values in this contract show a substantial decline since we last wrote. Throughout the week, heavy liquidation of old long accounts has been in progress, and in addition, the market has had to absorb "stop-loss" reversals of straddles entered into some time ago against sales of American. The trade has been buyers on the down scale, but not in quantities sufficient to create the necessary resistance to neutralise the amount of cotton it has been called upon to absorb. During the later trading to-day rather an improved tone has been in evidence, and we close with prices showing a slight recovery from the low point reached yesterday.

Egyptian Spot.

We mentioned last week that the substantial drop which had occurred in values was beginning to attract the attention of buyers. During the past week the decline has made further progress, and instead of having the customary effect, that is, scaring buyers out of the market altogether, the demand for spot Egyptian has actually improved, and the total sales show an increase of 300 bales over last week's total. At the moment there is no sign to indicate that anything in the nature of a permanent recovery is at hand, and yet, if sales of 500 bales can be recorded in a dropping market, it is highly probable that something in the nature of a scramble for cotton will occur, if, and when, a recovery takes place. The spot sales to-day were estimated at 1,000 bales Egyptians, apart from Sudan, a figure we have not seen for a long time past.

Sakel has been in fair request, but most of the inquiry has been concerned with the medium and lower grades, particularly the latter. For example, much more interest has been shown this week in cotton at from 11½d. to 15½d.

Uppers have contributed largely to the sales. The difference with American cotton remains very steady, but current levels (F.G.F. about 11½d.) are attracting an increased amount of attention, both from spinners and speculators.

Sudan Sakels have been in fair request and the basis for some of the lower qualities has been reduced by 50 points.

Maarad, Nahda, White, and Tokar Sakel have all suffered from neglect.

Pilion has been in good request for all qualities and the basis is hardening steadily.

C.i.f. business has again shown some improvement, but the forwardings to the trade last week were again reduced at 3,763 bales Egyptians and 2,296 bales Sudan.

Spot sales (estimated), 3,000 bales Egyptians and 1,100 bales Sudan Sakel. Quotations of Sakel show a reduction of 70 points on the week. Uppers have been reduced 56 to 66 points, and Pilion 55 to 65 points. F.G.F. Sakel to-day, 17.40d. F.G.F. Upper to-day, 11.45d. F.G.F. Pilion to-day, 12.40d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended April 24, state:—

Since our last report the futures market has been very active, with an undecided tendency. The week's summary of price movement is as follows:—Sakellaridis: May, 25.28 dollars, 0.01 dollars down; July, 35.68 dollars, 0.01 dollars up; November, 36.24 dollars, 0.09 dollars down; January, 36.54 dollars, 0.06 dollars down. Ashmouni: June, 22.62 dollars, 0.08 dollars down; August, 22.76 dollars, 0.01 dollars up; October, 22.86 dollars, 0.27 dollars down; December, 23.20 dollars, 0.20 dollars down; February, 23.40 dollars, 0.10 dollars down.

Sakel.—The movements of the previous week's market have been repeated this week; after an extremely strong beginning, prices fell violently, but at the close of the week a better tone has again prevailed. The impression conveyed by the result of the movements of the market is that of a certain resistance to any decline below 35½ dollars for May and 36½ dollars for November. The sharp rise and fall of prices registered at practically every session are due to speculative manipulation, as the trade continues to maintain its attitude of indifference to what is happening on the market. Some small orders were placed by spinners at the lower prices, but the quantities involved were too small to have the least influence on prices. The statistical position remains on the strong side, but this factor is given little or no consideration for the moment in view of the apathy of the trade. The market is undoubtedly somewhat over-sold, which is an additional factor restraining those operators who continue to favour the bear side. Considering both the statistical and technical positions of the market, we think that 35 dollars is a reasonable level for Sakel, and, failing any appreciable weakness in New York, a material decline from present prices seems to us unlikely.

The Sakel Uppers straddle (May/June) this week stands at 1,266 points, against 1,259 points last week and 1,252 points at this time last year.

Uppers.—This market has also been subjected to rather violent fluctuations, although not as pronounced as those of the Sakel market. The weak tone of New York has somewhat depressed our

market, but prices, generally speaking, have been well maintained. The April position went out at a heavy discount below June on some last-minute fixings of old up-country on call purchases. The demand from spinners continues to be regular but of only moderate volume. If the present difference over American is maintained, everything seems to point to a continuation of this demand during the summer months, and, should this be the case, the season will finish with a negligible carryover, in spite of the enormous increase this year in the production of Ashmouni and Zagora varieties. Unless the decline in New York goes further, we consider the present level of prices fully justified.

The Ashmouni/American straddle (June/May) this week stands at 290 points, against 240 points last week and 800 points at this time last year.

Against the third April tender, dockets for 9,000 kantars were issued, which brings the total tender against April contracts up to 22,500 kantars.

Spot.—This has been another quiet week at Minet el Bassal, with no really noticeable improvement in the demand from abroad. Sales for the five business days amount to about 9,250 bales, of which we estimate 4,000 bales Sakellaridis, 4,600 bales Ashmouni and Zagora, 550 bales Pilon, and 100 bales other varieties.

Sakellaridis.—The demand, though small, has broadened a little, and some attention has been paid to the better grades. The medium and lower qualities, which have been in fair request for some weeks past, attract most attention. Spot differences are generally unchanged, but Good and better show a tendency to ease a little.

Ashmouni and Zagora.—A small business has been done, chiefly in the medium grades, though small lots of the better qualities have changed hands. Spot differences are steady and firm without much change from last week.

Pilon.—Has met with some demand and a fair business has transpired at about last week's differences.

Other Varieties.—A retail business has been done in White and Nahda. Spot differences for both varieties are without quotable change. In Maarad a fair business has been done.

Up-country.—The Ministry of Agriculture has deferred the date for the closing down of the ginning factories up-country until May 7.

Crop, 1929.—Weather conditions this week have been exceptionally variable, but apart from the slight delay mentioned in our report last week, the crop is progressing normally. Resowings this year have not been as numerous as last year, which augurs well for the quality of the cotton of the coming crop.

It is announced by Lloyds Bank that, in view of the approaching retirement of Mr. W. H. Cooper from active service, the directors have appointed Mr. G. H. Chattaway, formerly assistant secretary, to be secretary.

A Cairo message states that it is understood that the Egyptian State Railways have awarded Messrs. Milburn a contract for 100,000 tons of Welsh colliery-screened steam coal and Messrs. Tabb Burtleson a contract for 80,000 tons.

The directors of the South Indian Railway Company have decided to pay on July 1 an interim dividend from surplus profits of 2 per cent., less income tax (compared with 2 per cent. paid on July 2, 1928), making with the interest guaranteed for the half-year ending June 30, namely, 1½ per cent., less income tax, a total distribution for the half-year of 3½ per cent.

Notes of the Week.

Egypt and Great Britain.

If concrete proof were needed of the present satisfactory state of Anglo-Egyptian relations, it is provided in the conclusion of the Nile Waters Agreement. Three years ago the Nile Commission issued its report, which represented a business-like arrangement between Egypt and Great Britain for the regulation of irrigation schemes in the interests of Egypt and the Sudan. No Egyptian Government, however, during the next two years had the courage to sign that report, as it was supposed to clash with Egyptian claims to the Sudan and, most certainly, gave the lie direct to the Wafd contention that Great Britain was resolved to exercise a stranglehold on Egypt by keeping control of the Nile. Although the report was not signed by the Egyptian Government, its provisions for everyday purposes were acted upon; but the main object of the Commission was stultified by Egypt's refusal to avail herself of the advantages awaiting from the official adoption of the report. As long, therefore, as Egypt was content to be dominated by a parliamentary majority which insisted that all schemes for the material development of the country must be subordinated to the political struggle against Great Britain, no real provision could be made for the most urgent needs of her agricultural population. Fortunately for the latter Mahmoud Pasha has laid the foundation of a new policy. By accepting the principle that differences of opinion can exist side by side with good will and honourable intentions, he has been able to concentrate on matters of immediate importance to Egypt. Discussions with the British Government on the subject of the Nile Waters—a closed subject with the Wafd in power—enabled Lord Lloyd to remind the Egyptian Prime Minister that the British Government had already acknowledged the natural and historical rights of Egypt in those waters, and he added that his Majesty's Government "regard the safeguarding of these rights as a fundamental principle of British policy," and give Egypt "the most positive assurance that this principle will be observed at all times and under any conditions that may arise." The ground is now cleared for the carrying into effect of the big programme of further irrigation works for which the country has been waiting for many years.

Reciprocity in Egypt.

If the major benefit from the Nile Waters Agreement rests with the Egyptians, it is also of advantage to Great Britain to be able to deal with a Government on terms of friendly understanding and mutual good will. There is no desire to interfere in the internal affairs of Egypt; but when the dividing principle separating political parties is whether Anglo-Egyptian relations shall be characterised by friendship and understanding or by uncompromising hostility, it is only natural that British sympathies should be with those who stand for the former, and that, after experiencing many years of the hostility, British interests should wish for a long tenure of office by the party of good will. As the fate of every Government turns, sooner or later, on the attitude of the people as a whole—which is not necessarily the attitude attributed to it by the Opposition—every Ministry that is not actuated by merely selfish or party motives must be anxious to accomplish what will be appreciated by the country. Egypt to-day aspires to be mistress in her own house, and, although it is hoped in time to be able to convince her that the special position marked out for Great Britain will make no practical difference to her complete independence, there can be no question that the old order represented by the Capitulations has to go. The Capitulations cover a wide sphere; but, whatever can be urged for gradual modifications in judicial matters, there would seem to be only one principle which can be insisted upon in regard to a new fiscal policy in Egypt, that there must be no differentiation between Egyptians and foreigners. For the advantages enjoyed by the latter it is, no doubt, possible to find justification in the past, and it is only natural that, in the disinclination for change, a case can be made for allowing things to remain as they are. Questions of taxation, however, cannot be brought without violence within the four corners of the Reserved Points, and much can be said for a spontaneous recognition of the Egyptian point of view in regard to ordinary fiscal matters. On this subject it should be possible for British residents in Egypt to set an example that other foreigners will have to follow. Every Government must recognise the right of those engaged in the country's commerce to present their opinions in regard to proposed

changes in the Customs tariff, and due regard should be paid to their representations in the interest of the country itself; but a final adjustment of conflicting interests should be reached which will at least leave no room for the Government's good faith to be impugned. The Egyptian Government has asked the British Government to agree to the principle that foreigners should not claim exemption from taxation imposed on the people of the country. It is not unnatural, in view of the existence of a political organisation in Egypt that has shown its policy to be hostility to foreign interests at all costs, that foreign Powers should wish to safeguard themselves against a future possibility of taxation which, while nominally levied on all, in actual practice would affect only foreigners. When the necessary safeguards to this end have been obtained, it must be to the interest of the British and other Governments to enable the present Egyptian Ministry to add to the services already rendered to the country this achievement of the elimination of the exemption, no longer justifiable, of foreigners from certain forms of taxation.

The Dead Sea Concession.

An unexpected departure from a procedure which has the sanction of parliamentary custom and invariable business practice was made last week when the Draft Preliminary Agreement and Draft Concession relating to the Dead Sea Salts were published in the form of a White Paper and laid on the table of the House of Commons before either had been signed by the contracting parties. From an explanation given by the Secretary of State for the Colonies it transpired that an answer given by him to a supplementary question last June was held to imply a promise that this course would be adopted, and the documents were, accordingly, laid before Parliament in spite of the subsequent declaration by Lord Birkenhead in the House of Lords that such a step could not possibly be taken. As will be seen from the text of the Introductory Note, which is published together with the Draft Agreement elsewhere in this issue, the documents are in the form in which they have been communicated to the prospective concessionaires (Major T. G. Tulloch and Mr. M. A. Novomeysky), and in which they will be signed subject to a few possible modifications of minor importance. It is understood that the few modifications contemplated have since been made, and that signatures were to be appended to the documents on May 14, the day on which these Notes were being printed. From the published terms of the Concession it will be seen that the Governments concerned have been at pains to safeguard the interests of Palestine and Trans-Jordan. A royalty of five per cent. of value in bulk at works is to be paid on all potassium chloride, bromine and magnesium chloride produced and sold, and the Company is to pay to the Government (i.e., Palestine and Trans-Jordan jointly) a share in the profits fixed according to a sliding scale. An important clause in the Concession prohibits absolutely the Company "from making without previous written consent of Government any contract, arrangement or understanding with any company, person or undertaking for restriction of output or for raising or keeping up prices in such manner as to restrict output." The concessionaires on the other hand, have gained their point in scotching the fantastic estimates of output with which rival tenderers had endeavoured to win approval for their claims. By Clause 8, "the Company will be required to work continuously and with all due diligence and to produce the equivalent of the following minimum quantities of potassium chloride of 80 per cent. purity, viz., During the third year of the concession, 1,000 tons; during the fourth year, 1,500 tons." Only during the eighth to the tenth years inclusive is the minimum output fixed as high as 10,000 tons per annum, and thereafter at 50,000 tons. There can be little doubt that these figures can be exceeded, but the principle that fixed them is a sound one.

Agitation in the Persian Oil Fields.

Once more attention is called to the inadequacy of the sources of intelligence in the Middle East; and yet again Basrah is the chief offender. We refer to the agitation which broke out at Abadan on May Day, and which was said to have reached such dimensions as to have necessitated the sending of British naval forces to protect British subjects in the oil fields. As a matter of fact, there was not a word of truth in this latter report. What happened appears to have been this. Bolshevik agents in Persia, following their well-known plan of attempting to subvert a country by attacking first its oldest and most important institutions, inspired certain Persian subjects in the Anglo-Persian oil fields in the early days of May to start an agitation, to strike, and to riot. At once the Governor-General of Khuzistan took action, in which, it is to be noted, he was strongly supported by the authorities at Teheran. He arrested over forty ringleaders, and is said to have deported them—although their destination is so far unknown. The situation, owing to the resolute action of the Persian authorities, at no time got out of hand, and it is highly satisfactory that the Persians themselves found such rapid and effective means of dealing with the position. It is to be hoped that the discontented and misguided Persians who followed the promptings of their anti-British advisers, will have seen in the dispatch of Persian troops from Ahwaz to Abadan an unmistakable symbol of Persia's determination not to tolerate disorder in what is the largest industry in the country. There is, as we go to Press, no news of any fresh disturbance in the oil fields, despite the fact that the deportees have been inevitably branded as martyrs, but those who know the Islamic East best will wait until Muharram, always a time of strained feelings, is over, before presuming that all danger is past. In the meantime, however, we may be permitted to congratulate the Persians authorities responsible on their handling of a delicate and potentially ugly situation.

The Afghan Tug-of-War.

Afghanistan continues to manipulate her three-card trick to the bewilderment not only of the world of on-lookers, but also, it may be imagined, of the cards themselves. King Amanullah, the Amir Habibullah of Kabul, and General Nadir Khan have all been "spotted" with the utmost confidence as the occupant of the Afghan throne; but the only certain fact in a complicated situation is that Amir Habibullah remains in Kabul, while the other two have made no appreciable progress in supplanting him. In contradiction of the report that Ghazni, a key position on the road from Kandahar to Kabul, had been occupied by King Amanullah's troops—a report formally "confirmed" by one of the King's representatives in India—it is now stated that his troops have been defeated before the town, which is held, if not by the Amir Habibullah, at least for him by local forces. General Nadir Khan, moreover, has apparently met with defeat in his march on Kabul, and has withdrawn some distance to reconsider the position. Afghanistan, in other words, has reverted to type, and it is only necessary for any leader to pose as a claimant for supreme authority to draw upon himself the hostility of tribes with a preference for independence. If it should prove correct that Herat has been seized by a partisan of Amir Habibullah, it is plain that the latter's plight is by no means as desperate as has been represented. The defeats of King Amanullah's troops and of General Nadir Khan's forces may have been effected by tribes acting primarily on their own behalf rather than in any spirit of loyalty to Amir Habibullah; but for his standard to be raised in Herat would suggest that his handling of the position in Kabul has been more effective than his enemies care to admit. In the meantime the Moscow Government is busy reporting incursions from Afghanistan into Soviet territory. If there is any truth in the reports, the movement must be incidental to the general upheaval in Afghanistan, for which King Amanullah is responsible. Whether the alleged incursions

are to be used as a pretext for introducing into Afghanistan some practical form of support for the Soviet's candidate for the Afghan throne remains to be seen.

Egypt and the Hijaz.

Despite the fact that a number of about 20,000 Egyptians are taking part this year in the Pilgrimage to the Holy Places, the relations of the Mecca and Cairo Governments are still far from satisfactory. Not long ago a small "incident" arose which shows how desirable it is that the two countries, which have so much in common, should recognise each other. Members of the Egyptian Medical Mission, who sailed from Suez on April 18, arrived in the Hijaz without the regular passport visas. Naturally the Custom officials of the Hijaz Government had to examine the medicine and other materials in the possession of persons not holding correct passports. Happily, however, the incident appears to have been closed in a commonsense manner. But it does recall the fact that Egypto-Wahhabi relations have never been cordial. Last century, of course, it was Egyptian troops under Mehmet Ali and his son who for the time being quelled the Wahhabi pretensions to dominance in Arabia, and although such a step on the part of any Islamic Power in the world is at present out of the question, the historic disapproval by highly placed Egyptians of Wahhabi governance in the Holy Places seems to persist. Into a matter which is the affair of Muslims alone it is no part of the duty of non-Muslims to probe; but it may be remarked that to the outsider it seems odd to call the Wahhabi movement a "sectarian" movement. How certain things that the Wahhabis did in the earlier part of the conquest of the Hijaz aroused the resentment of Sunnis and Shiahs is easily to be understood; but one would have thought that the firm control shown by King Ibn Saoud, and his determination not to allow excess, would have won over at least most of the Muslims of the Sunni persuasion. It will, at any rate, be interesting to see how much longer Egypt will persist in withholding recognition from her neighbour across the Red Sea.

INDIAN NOTES.

The Aftermath of Bardoli.

The report of the Committee appointed to inquire into the complaints raised against the new land assessment imposed on the cultivators of the Bardoli and Chorasi talukas of the Surat District constitutes the worst rebuff which any Local Government in India has received for many years, and may have far-reaching results. The Committee has indeed decided that there is no legal objection to the assessment being based on rental value. No one, however, seriously doubted this. The real question is whether the system of placing practically complete reliance on recorded rentals, to which the Settlement Commissioner, and, following him, the Government of Bombay, had pinned the official flag, is capable of giving satisfactory results. The Committee has decided that it cannot do so in this part of Gujarat owing to disturbing factors. But factors equally disturbing are likely to be met with in almost every other part of Bombay, and it looks as if the old empirical method of fixing re-assessments by local conditions must again be resorted to, and the attempt of the Settlement Commissioner to introduce a semi-official method must be written down as a failure. The finding is likely to prove most embarrassing to the Bombay Government in its efforts to revise the assessments in force elsewhere. Perhaps even more regrettable, because more directly shattering to the public confidence in the fairness and efficiency of the methods of Government, is the sweeping condemnation of the work of the Settlement officer, and, by implication, of the officers and Departments which accepted and approved his facts and conclusions. If the statistics were "carefully compiled, demonstrably incorrect, and completely reliable," to quote the words of the Committee, the ordinary man, and cer-

tainly the critic of Government, will think that the Collector, the Commissioner of the Division, and the Settlement Commissioner, and finally the Revenue Department of the Secretariat should have been able to discover some inkling of the truth. *Prima facie*, one would almost imagine that the Committee itself had been somewhat carried away by the effect of its findings. It is difficult to believe that, with the great rise in agricultural prices for the last thirty years, the increased share of Government in the greater amount received by the cultivator should be only 5.7 per cent. As, however, the Government of Bombay has accepted this figure, and has thereby bowed its head to the storm of criticism that is bound to follow, there is no more to be said on the sufficiency of the assessment now accepted. Of all the features of the case, however, the most lamentable and the one that is likely to have the most widespread result, is the justification afforded to the methods used by Mr. Vallabhbhai Patel with the monetary sympathy of his brother, the Speaker of the Legislative Assembly. It cannot be doubted that these methods were directed against the system of Government and were in their nature subversive of law and constituted order. Now, however, that the grievances alleged are shown to have had a solid foundation of fact, few, and probably among Indian publicists almost none, will be found to condemn the method of exploiting them. The effect of the report on the finances of the Bombay Government will be serious, since it will make it almost impossible to get other re-assessments carried into effect: but still more serious is the blow to the prestige of the Government and its Revenue officers.

THE PILGRIMAGE.

(Continued from page 612)

This dominance of the Wahhabis, by the way, provides an unforeseen damper on the hope expressed by Burton in 1855, when he wrote:—

The Eastern world moves slowly—*appur si muove*. Half a generation ago steamers were first started to Jiddah; now we hear of a projected railway from that port to Mecca, the shareholders being all Moslems. And the example of Jerusalem encourages us to hope that long before the end of the century a visit to Mecca will not be more difficult than a trip to Hebron.

We still "hear of" the projected railway from Jidda to Mecca, and also from Madina to Mecca; yet there have, we think, been only two non-Muslim Europeans, and both of them Englishmen, to reach Mecca this century, Wavell and Eldon Rutter. Not yet is there any sign that a return will be made to the practice of the first century A.H., when non-Muslims could stay in Mecca.

THE PILGRIMAGE.

With the advent of the Pilgrimage season, thoughts are inevitably turned to the present condition of Islam, to its future, and to the prospects of the Hijaz in particular. How long will the Wahhabi régime over the Holy Places endure? Is it increasingly acceptable to the world of Islam in general? Does Islam as a whole greatly care in whose hands Mecca and Madina lie? Is the *Haj*, as a performance obligatory upon Muslims, likely to endure indefinitely; or will it, with the partial substitution of particular nationalistic for general Islamic sentiment, gradually decay? Such are some of the questions which arise when one considers this *Haj* of 1347 A.H., the rites of which will be celebrated in a day or two. There can, manifestly, be no dogmatic answer to any of them. But an examination of present conditions may help to indicate probable tendencies. First, let us look at the numbers attending the Pilgrimage—and in this connexion it should be remembered that what really binds Muslims together is, not the Caliphate, upon which the unity of Islam never really depended, but the institution of the *Haj*. How have faster methods of transport, improved comfort in travelling and in sojourn in the Holy Places, greater financial resources among a large number of Muslims, affected the numbers of *hajjis*? Unfortunately, there are no reliable statistics available. It is commonly supposed that the construction of the Hijaz Railway (begun in 1899 and finished in 1904), in the time of Abdul Hamid, gave a great impetus to the Pilgrimage, but certain experts have inclined to dissent from this view. The number of pilgrims by land has never been satisfactorily checked. For the present purpose, therefore, it is the overseas *hajjis* who must be the criterion. According to Massignon ("Annuaire du Monde Musulman"), the number who have passed through Jidda since 1891 varies roughly between 36,000 and 108,000. In 1907, the Turkish officials claimed that there were 280,000 *hajjis*. In the last normal year before the Great War—which for the Ottoman Empire was 1910-11—90,049 pilgrims passed through Jidda, and it was calculated that about 35,000 more came by the overland route. These figures may be compared with the 83,000 given by Ali Bey in 1807, and the 200,000 given by Keane seventy years later (when, however, the rites on Arafat took place on a Friday). In 1919 there were said to be only 22,000 pilgrims—the reason for the small number being obvious; and in 1922, 56,319 *via* Jidda, and 10,000 by land. But in 1927, it was estimated that there were a quarter of a million of the Faithful at the time of the Pilgrimage; nor have the decreases last year and this been very considerable. One of the main features of the Wahhabi régime in the Hijaz, in fact, has been the success of King Ibn Saoud in establishing absolute security, and so attracting what has been called the "one crop" of the Holy Land of Islam, namely, pilgrims.

Yet there are two things which one cannot help feeling may ultimately militate against the Pilgrimage. One is the point which was made by the late Dr. D. G. Hogarth,

who was inclined to think that the number of pilgrims had declined since the establishment of the Hijaz Railway: that the Hijaz was gradually losing its perennial quality of "other-worldliness." In a sense the introduction into the Hijaz of certain modern scientific instruments and ways—however desirable in themselves—would appear to imply, though not of absolute necessity, the gradual disappearance of an honoured but still primitive institution. In describing the *Haj* as "primitive," we have, as there is scarcely need to say, no intention whatever of reproach: there are many things in religions other than Islam which have survived to a considerable extent the impact of Western science; but it does seem at least possible that the "opening-up," as it is called, of the Hijaz, may entail a smaller frequenting of its hitherto inhospitable or at least rigorous shores. The less the hardship, the less the attraction and the merit. The other point is the growing Nationalism of the various lands of Islam. This Nationalism, an excellent thing in many ways, is in our view unquestionably modifying the old Islamic bond. Of the nationalist countries in the East, Turkey is in the van: and how many Turkish *hajjis* have there been since the advent of Mustapha Kemal Pasha? The more "Westernised" Islamic nations become, in short, the more they tend to look to the "Arab" institution of the Pilgrimage as something which, if not barbaric and unnecessary, at least is the primary concern of another race than their own. This applies mainly, of course, to those countries which have in whole or in part their political independence; among the millions of Muslims who are now under the control of some Western Power the duty of making the Pilgrimage will certainly seem for the longest time the most urgent and wholesome. And even if all Islamic countries, from the Barbary States to the Dutch East Indies, which at present, when funds permit, supply some of the most devout *hajjis*, become so Westernised and locally patriotic as to dispense with the obligation of performing the *Haj*, the Arabs of the Arabian Peninsula will in all probability continue to celebrate the immemorial rites for centuries and perhaps millenia to come.

Having indulged in these speculations, we may return to the questions which we posed at the outset. The condition of Islam is divided, and its future appears to lie rather in the political bond, with the implication that the institution of the Pilgrimage may suffer a decline, Turkey, for instance, which is the chosen pattern for so many Muslim States, may choose to lead a *bloc* of Middle Eastern States, but through her political, not through her religious prestige. Those Muslims who are at present subject to a non-Muslim Power will naturally emphasise their religious differences, and among them the call of the *Haj* may be expected to be insistent and long heard. But even among them the nationalistic and scientific voice will in time express itself, and then the cry of Arabia may seem a remote one. It is possible, of course, that this process of "Nationalisation," of "Westernisation" in the East will suffer a set-back, and that there will be a religious revival in the various Islamic lands. In that case, Arabia would almost necessarily become again the fountain-head and inspiration. Of the Wahhabi régime it is difficult to write with Olympian conviction, for the history of Arabia must enforce on one the danger of generalisation and of prophecy. It has to be remembered that Wahhabi doctrines are still widely disapproved of in the Islamic world; Egypt, for example, still withholds her recognition of King Ibn Saoud because she believes that the Holy Places should not be in "sectarian" hands, but rather in the hands of a Mixed Commission of Muslims. Nor are the Shiahs really reconciled to the "iconoclasts of Islam." The proof of the pudding, however, is in the eating, and other Wahhabis may well retort that in spite of this alleged disapproval by sections of Islam, pilgrims in their hundreds and thousands still pour into the Hijaz. There is, it must be admitted, no sign yet of any weakness in the Wahhabi régime; nor is it to be expected at any rate while King Ibn Saoud lives.

(Continued on page 611.)

*The Near and Middle East

From Our Own Correspondents.

Baghdad, May 1.

Communications.

The aeroplanes of the Junkers Company, which has been operating in Persia for two years, are now to fly direct from Teheran to Baghdad, no longer stopping, as they have done in the past, at Qasr-i-Shirin. The German Company is now to work in close co-operation with Imperial Airways, and this should result in a dove-tailing of time tables which will do much to bring Persia into closer touch with Europe. The Baghdad-Teheran service is at present a weekly one, but is to be run bi-weekly in the near future if the increase in flying traffic in the Near East is as rapid as it is generally expected to be.

The improvement in Perso-Iraqi relations has been signalled by the departure for Teheran of an Iraqi delegation, which was received in audience by the King before it left. The Prime Minister, Cabinet Ministers, and several deputies also bade the delegation farewell.

Parliament.

In the Chamber of Deputies, Naji Beg as Suwaidi, ex-Minister of Justice, moved to indignation by the very intermittent appearances in the House of certain deputies, proposed that the names of absentee members of Parliament should be entered on the minutes of each meeting. The special sub-committee to which his proposal was referred for comments reported that Article 122 of the Internal Rules and Regulations of the Chamber already dealt with this matter, and recommended that the provisions should be applied to every deputy who absented himself from three consecutive meetings; if this failed, other methods for securing regularity could be devised. Naji Beg complained that the present Parliament was not altogether fulfilling its mission of providing a link between the people and the Government, and attributed its failure to the deputies' lack of interest in the proceedings of the Chamber.

The Locust Campaign.

The efforts of the Department of Agriculture to combat the locusts have met with considerable success in the northern liwas of Kut, Diyala, Kirkuk, Arbil, Sulaimania and Mosul, where depôts had been instituted well in advance of the annual descent. The South African method of spraying with poison has proved efficacious if used in the early stages of hatching, and the older method of poison bait is also being employed. The motor lorry sprays of which mention has been made before in these letters are being used with great success over large areas. In the southern liwas a fresh invasion of locusts from Najd is causing uneasiness, but the opinion of experts is that conditions in Iraq are not favourable to the Najdi locust, and that the swarms are likely to leave the country again without causing as much damage as their brethren from the north.

General News.

Latifiyah Estates, Ltd., is now well embarked on its

project of developing the land granted it on a *Tapu sanad* by the Iraq Government. It will be remembered that Diala Plantations Ltd., the original Company which was floated to finance the Asfar Concessions, was replaced on a smaller scale by Latifiyah Estates, Ltd., when the Asfar Concession was proved to be unworkable. Under the terms of the new concession, the company now holds 60,000 acres of land between Hillah and Baghdad. The estate will be irrigated by a new canal from the Euphrates, now being constructed by the Irrigation Department south of the Yusifiyah canal; the cost of this work is to be repaid to the Iraq Government by instalments over a number of years. Digging on the canal, undertaken by a Baghdad firm of contractors, has now been going on for some eight weeks, and is being greatly accelerated by the use of two Maclaren ploughing sets, which were brought out to Iraq by the original Diala Company for agricultural purposes. The building of the masonry head works will be carried out by the Irrigation Department.

A tour of the northern liwas was planned by the High Commissioner to take place early in May, but this has now been indefinitely postponed.

ABYSSINIA.

Addis Ababa, April 18.

A New Aboona.

About two months ago the Egyptian Government opened a Consulate in Addis Ababa, and the Consul, Farak Effendi Mikail Mousa, took over from the British Legation the conduct of Egyptian affairs. The new Consul is a Copt, and it is not unnatural to suppose that the opening of a Consulate by the Egyptian Government in Abyssinia has some connexion with the question of the appointment of a new Aboona.

Abyssinia has been without an Aboona since the death of Aboona Matheos in December, 1926, which was followed closely by the death of the Patriarch in Egypt. The election of a new Patriarch took some time, and pending this election the appointment of a new Aboona was naturally in abeyance. As soon, however, as a new Patriarch had been elected, the Abyssinian Government sent to Egypt Sahlé Sedalou, Minister of Education and Fine Arts, to discuss unofficially the question of the appointment of the new Aboona.

In Abyssinia there exists a considerable body of opinion to the effect that the Aboona should no longer be an Egyptian, but that he should be an Abyssinian; and further, that in addition Abyssinian bishops should be appointed. On the other hand, the Coptic Church in Egypt considered that it was essential that the Aboona should be an Egyptian, and was further opposed to the appointment of Abyssinian bishops, since following the rule of the Church, three bishops can consecrate an Aboona.

This difference has of late been solved by a compromise, which has recently been made public. By it, the Aboona shall, as in the past, be an Egyptian. On the other hand,

**HAIFA—BEIRUT—DAMASCUS—BAGHDAD

five Abyssinian bishops are to be appointed, but they are to undertake to obey the orders of the Aboona, and further to swear that they will not consecrate any Aboona or King, under pain of ex-communication. Such a compromise should allay any fears in Egypt that Abyssinia may in the future elect its own Aboona without reference to Egypt, and on the other hand will ensure that in case of internal trouble, matters will not be further complicated by the consecration of rival Kings.

Road and Railway Concessions.

Some 18 months ago Messrs. Danalis and Zervos, a firm well known in Gambella and the Sudan, obtained from King Taffari a concession for the construction and working of a motor road from Gambella to Goré. The importance of such a road cannot be overestimated, as at the present time the track between these places is extremely difficult, and in addition, the country through which it passes being very unhealthy, the mortality in pack animals is very great, and in consequence the cost of transport exceedingly high. Work has already been started on this road and some sixty miles are at present available for use.

Following on this concession, the same firm has obtained a further concession from the King, authorising them to construct and work a railway from Gambella to the Sudan frontier. It is understood that work will be begun on this railway without delay, and it is hoped that it will be completed within three years.

Further developments are awaited here with great interest, as the trade *via* Gambella becomes more important each year, and the importance of replacing the present obsolete transport system of mules and porters, by motor and rail transport is obvious.

Cairo, May 4.

The Alexandria Union.

The Alexandria Union held its first general meeting on April 30 under the presidency of Emine Yehia Pasha. The attendance included the Consular representatives of all the Great Powers, except the United States, and the heads of the foreign and Egyptian communities. It was, in fact, a meeting representative of all the commercial and financial interests of Egypt's second capital. The Union, it may be recalled, was formed in December, 1927, on the initiative of Yehia Pasha, to secure co-operation in economic and financial matters between all sections of the population of Alexandria, and to watch over and promote the interests of that city. The speeches made by the President, and the report of the year's work read by the Secretary-General, Maître Vatimbella, showed con-

clusively that the Union had been very active and successful in results, in its defence of the interests of the city, and the nature of the attendance at this general assembly, as well as the speeches made, indicated just as clearly that it is becoming a real factor in the creation of that atmosphere of mutual confidence and good understanding which is fundamentally essential for the welfare of Egypt and the wellbeing of its cosmopolitan population.

It is interesting to note that among the questions which had the attention of the Union, and in regard to which it took action with the responsible authorities, have been, the proposed transfer of the Mixed Courts of Appeal from Alexandria to Cairo, the need of a new loan to provide the funds necessary for the execution of projects having for object the development and improvement of the city, the modification in the Organic Law of the Municipality for the extension of its borrowing powers and amendment in the system of election of members of the Council, the extension of the port, the Ramleh Tramway concession, the creation of a Popular University and a public hall for the reception of prominent visitors and the members of the various congresses which are periodically held in Egypt, the Olympic Games and regulations in regard to bathing, traffic, public hoardings, town-planning, cinemas, and so forth.

The Late Dr. Madden.

The death of Dr. Frank Madden, Dean of the Faculty of Medicine in the Egyptian University is a serious blow to the cause of medical education in Egypt. He had been resident in the country for over thirty years, during which he had rendered great services to the people both as a practitioner and as professor in surgery, and had gained the confidence and esteem of all Egyptians who came into contact with him, whether patients, students or colleagues. It was because of his wide experience of local affairs, his professional ability, and the influence he exercised over the members of his profession that, when the post of Director of the Kasr El Ainy Hospital and School of Medicine fell vacant some four years ago, he was selected to fill it, and that, when the State University was formed and it was decided to incorporate the School of Medicine in it, he was appointed Dean of the Faculty of Medicine with the post of Vice-Rector of the University itself. And he filled the double, one might say the treble, rôle admirably. It was entirely thanks to his efforts that the recent Congress of Tropical Medicine proved such a success, and that such a good send-off was given to the School of Medicine in its new career. It really looked as if a new era had opened for the cause of medicine in this country.

But these posts carried with them new responsibilities. Apart from the normal duties, there was the detailed work of the erection and organisation of the new buildings for the hospital and school of medicine for which King Fuad laid the foundation stone last December. Over and above, as Vice-Rector, Dr. Madden had to assume all the administrative work of the University due to the promotion of the Rector to the portfolio of Education, and the desire not as yet to fill the senior vacancy. While in addition there fell to him a great part in the administration of the new

EGYPTIAN GOVERNMENT.

EGYPTIAN GOVERNMENT.

EGYPTIAN UNIVERSITY.

FACULTY OF LETTERS.

APPLICATIONS are invited for the Post of LECTURER in EGYPTIAN HISTORY (Græco-Roman period) vacant at the beginning of October, 1929.

The salary is £E540 a year, and the appointment is on contract for three years. One month's salary will be allowed for travelling expenses.

Applications, with copies of Degree Certificates and of testimonials, should be addressed to The Dean of the Faculty of Letters, Egyptian University, Cairo, so as to reach him not later than May 31st, 1929.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are invited for ASSISTANT Masterships for teaching English in Egyptian Government Secondary Schools.

Candidates should be between 22 and 34 years of age and should have a University Degree (preferably in Honours) and some experience of teaching in Secondary Schools. Preference will be given to applicants who also have a Diploma in Teaching.

The initial salary offered is £E450 a year (about £461) for applicants with at least two years' previous experience, and £E405 (about £415) for applicants with less than two years' previous experience.

The appointments are on contract for five years, and renewable at the end of that time.

Full particulars and Form of Application may be obtained from The Director, Egyptian Education Office, 39, Victoria Street, London, S.W.1.

law regulating the profession of medicine, surgery and dentistry in so far as concerned the granting of permission to practice. So much work and so much responsibility should never have been allotted to one man, and Dr. Madden paid with his life for his devotion to duty and to the cause which he had so much at heart.

That this was recognised when only too late and that his sacrifice was appreciated by all those qualified to judge was proved at his funeral, when practically everyone having anything to do with medicine or medical education followed his remains to their last resting place, conspicuous among the mourners being Egyptian students, nurses, male and female, and doctors—most of whom had passed through his hands during their studies—all of whom testified by their demeanour to their affection and respect for him and their grief at his passing.

Antiquities and Opera.

The two services directing the Antiquities and the Royal Opera House have been transferred from the Ministry of Public Works from which they have hitherto depended, to the Ministry of Education, where they will henceforward form part of the newly created Departement des Beaux Arts. The explanation given, in the case of the Antiquities service, is that the syllabus of the University includes courses in archæology and training in antiquities work, and that it is more satisfactory that the service producing and the service employing trained staff should be under the one head, so that there should be co-ordination, which exists with difficulty if the services are under different administrations. From that point of view the transfer is justified, though when it comes actually to the practical side of the work there is some doubt whether under the Beaux Arts, as it is at present staffed, the change of master will be satisfactory to all concerned.

For the Opera the transfer is fully justified, since the administrative work has been entirely concerned with the

arrangements for the season's programme, and, in fact, has been carried out, to a great extent latterly, under the dual control of the Public Works and Education Ministries. Possibly the removal of this dual control and the attachment of the service to the Beaux Arts will result in an improvement in the productions to which Egypt has had to submit for several years. With the solitary exception of the past season, when Cavaliere Dalbagni surpassed himself, and incidentally spent money out of his pocket, in providing Egypt with fare more worthy of the institution and of the audiences it was desired to attract, there has been much to complain of in the matter of opera and other forms of entertainment, and it is to be hoped that one of the results of this change in control will be, on the one hand, to ensure a continuation of the excellent precedent set up by Signor Dalbagni, and on the other hand, a readjustment in prices which have aroused much complaint and have accounted, notably in the case of the Atkins season, for the poor houses recorded night after night.

Constantinople, May 1.

The Children's Week.

In an agricultural and semi-pastoral country like Turkey, the financial situation of the State must, in the last resort, depend to a great extent upon the ability of the yeoman-

General Manager,
HAIFA.

farmer and agricultural labourer, aided by the Government, to restore to Anatolia in the near future—say within the next decade—that pre-eminent position which Asia Minor enjoyed before the outbreak of the Great War as the granary of the Near East in general and purveyor of brewing barley to English markets in particular. In order to attain this object, it is essential that the population of Anatolia should go on steadily increasing instead of diminishing, as it has now been diminishing for so many years past. It is noteworthy that the civil authorities, aided by several benevolent and charitable institutions, foremost among which is the "Society for the Protection of Children," have at last turned their serious attention to that dominating factor in the whole problem, the high rate of infantile mortality in Anatolia.

The dearth of medical practitioners in Asia Minor is, obviously, one of the main causes of the trouble, and, until the Government devise some scheme by which, either for monetary or other considerations, medical men can be induced to take up a practice in the uplands of Anatolia rather than remain in the principal cities, little progress is likely to be made in coping with this trouble.

It is to the credit of governing circles, however, that they have at last recognised the seriousness of the position. If their preliminary efforts have been mainly directed towards the saving of young children's lives in Constantinople and Angora—at least a beginning has been made, the effects of which, given time and money, may eventually extend to those far-off homesteads in Anatolia where little ones are perishing from infantile diseases for want of proper medical treatment and suitable nourishment.

Allied Reparations Claims Commission.

Much dissatisfaction is felt among members of the pre-War British colony in Turkey—many of whom are still residing in this country—at the slow progress which is

being made by the Commission sitting in Paris, to whom has been entrusted the duty of dealing with the payment of claims arising out of damages sustained by Allied nationals on Turkish territory during the War. Much of this damage, due either to occupation of business or private premises, seizure of merchandise, requisitions and, in many instances, to looting pure and simple, occurred during the last quarter of 1914—fifteen long years ago—and, except for an advance of approximately 40 per cent. made to claimants some five years ago, practically nothing further has been heard about the matter. The hardship would appear to press principally upon business firms established in Turkey before the War who, through requisitions and seizure of stock when the principals had to leave the country, have been so severely handicapped that, what with the serious trade depression now ruling on the Turkish market, it is all they can do to keep going.

Turkish State Bank.

The Turkish fiscal authorities have been disappointed in their anticipations over the forthcoming visit to Angora of Dr. Schacht, the eminent German financier, in connexion with the laying down of the frame-work of the Turkish State Bank. Dr. Schacht's projected trip to Angora would have meant no more, in any case, than the tendering by him to the "Malie" of certain advice with respect to the management of Turkish finances in general and the "rôle" to be assigned to the State Bank in connexion therewith in particular. In his stead there will arrive within the next day or two Dr. Müller of the Reichsbank, who will offer suggestions to the Angora Government, after he has studied the situation, on that all-important and absorbing question—how to raise the capital, which in well-informed financial circles is placed at about ten million pounds sterling, for running the State Bank.

For the time being, at all events, the only tangible contribution towards this capital which the Government appears to be in a position to make, is the hypothecation of the State Jewels, which have been estimated by various European experts—notably one from the Rue de la Paix, Paris—to be worth anything between five and six million pounds sterling. The technical difficulty in this matter, of course, is one of finding a suitable market for either the sale or the mortgage of so large a parcel of precious stones, the remnants of former Imperial splendour. Much water may, therefore, have to flow under the bridges of the Golden Horn before the proposition, even with the best German expert advice, assumes the shape of practical politics.

Constantinople Municipal Loan.

To the numerous public holidays now celebrated in Turkey, it might not be out of place to add that of April 30—so far unoccupied in the calendar—in commemoration of the signature by the Prefect of the City of Constantinople and Mr. A. G. M. Dickson, representative of the bondholders of the 1909 Constantinople Municipal Loan, of a contract that finally puts an end to a long series of heart-breaking negotiations which, thanks mainly to the dilatory tactics of the local municipal authorities, have dragged on for the better part of ten years. Whether the settlement is a satisfactory one or not from the bondholders' point of view is a matter of opinion. The rate of interest has been reduced from 5 per cent. to 3½ per cent., and other sacrifices have been consented to by the bondholders. Good, bad, or indifferent, it is at all events a settlement of a very unsatisfactory state of affairs and, as such, is infinitely preferable to a solution by judicial proceedings which had been instituted by the bondholders before the Anglo-Turkish Mixed Arbitral Tribunal and which, owing to the resignations of successive Turkish judges, threatened to drag on to the Greek Kalends.

As to whether the settlement of this long outstanding matter will lead to the opening of the doors of the London money market to the financial requirements of Turkey, perhaps the less said the better. The experiences of the

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

WESTMINSTER BANK
LIMITED
HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

British bondholders—and the bondholders are nearly all British in the matter of this relatively insignificant loan of one million pounds sterling—have been so trying and disheartening that much time must elapse before the British investor, with his fingers badly burned, is likely to pay much attention to Turkish municipal financial requirements once again, quite irrespective of the requirements of the Turkish Treasury. The latter, however, still maintains its attitude of *noli me tangere*—"we do not require foreign capital and can run our own financial matters unaided."

Indications, budgetary and otherwise, are not wanting, however, to show that this attitude cannot be maintained indefinitely—and then, at the very outset of any hypothetical negotiations and in its crudest form will arise that perennial question in the financial history of this country—the very crux of the whole position—the problem of satisfactory guarantees for the potential investor in Turkish funds.

ROUMANIA.

Bucharest, April 30.

The Financial Situation.

It is an indisputable fact that the dominant subject of general pre-occupation at the present time is the existing financial crisis. Yet it is not a matter for great surprise, inasmuch as all countries with a depreciated currency passed through a similar experience at the moment of stabilisation, and in the case of Roumania it is the more natural in that stabilisation was carried through at a time when a severe trade depression already reigned owing to the Budget deficit and to six years of disastrous harvests. There is no doubt that the country has yet hard times to pass through, especially as this year the long winter season has retarded all work in the fields by at least two months. Moreover, the revenues paid into the Treasury up to the present show about the same deficit as they did last year for the same period. Nevertheless it is hoped that the harvest will make this good, even if it is only a medium one. Great hopes are placed in the effects of the important laws recently passed offering facilities for the investment of foreign capital in Roumania, more especially in agriculture, which forms the basis of the country's wealth; for it is on the successful development of agricultural production much more than on the loan that the Government depends for the realisation of its new programme, and in this they have the encouragement of M. Rist, the French delegate at the National Bank (appointed under the stabilisation loan agreement). In short the balancing of the State Budget in Roumania depends more than in other countries on the harvest results, and less on the fiscal programme.

Foreign Politics.

The foreign political situation has been described by the Minister of Foreign Affairs as excellent, at the last weekly audience that he accorded to the members of the Diplomatic Corps and to representatives of the foreign Press.

His recent visits to France and England he describes as entirely satisfactory in their results, and he emphasises very particularly the cordiality of the reception officially accorded him in each of these countries.

Incidentally the Minister of Foreign Affairs again disposed of the unfounded insinuations published in the Opposition Press that the recent private visit of General von Seekt to Dr. Maniu at Cluj was of some hidden political importance. This visit, he said was entirely one of courtesy. The Prime Minister formerly resided for many years at Cluj, and he still passes his holidays there. He was there during the Easter holidays, and General Seekt, passing through Roumania on business, considered it his duty to pay a visit to the President of the Council of Ministers. There is no further importance to be attributed to this incident.

The official Press has also vehemently denied certain allegations to the effect that Great Britain and Germany were not receiving their fair share of Roumanian Government orders and attributing this fact to the presence of M. Rist at the National Bank as comptroller of stabilisation.

Village Gymnastic Organisations.

A lively controversy has arisen in the Press and in political circles during the last few days on the subject of the gymnastic organisation of young peasants in the villages. The Opposition accuse these institutions of a Fascist tendency, at least in appearance, while the Government describes these "green guards" as merely an organisation of citizens to effect the reciprocal control required to-day in the villages as a result of the new measures taken for the readjustment of the rural gendarmerie. There are no longer gendarmes stationed in the villages, where they almost always exercised undue power often amounting to tyranny. Henceforth their functions will be confined to purely police duties in prescribed areas surrounding the points where they are established.

Army Agitation.

Reports have recently been circulated that organised agitators exist in the Army for the purpose of founding secret organisations; but nothing has yet been discovered to confirm these rumours (the origin of which is regarded as suspect), and perfect discipline reigns in the Army. Had there been any truth in the reports, the facts would undoubtedly have been discovered, for the Roumanian has no aptitude for secret plots and conspiracies.

Administrative Re-organisation.

The most important subject of consideration at the present moment in the domain of internal politics is the Bill for Administrative Re-organisation, which contains formidable innovations. This Bill is founded on a principle which transforms the whole administrative system into an electoral one. The aim of the new system is to arrange the administration of the country according to its natural and historic divisions. This Bill, which is submitted by the Government as embracing the integral principles of the programme of the National-Peasant

Party, will be violently combated by the Opposition parties who consider that it is opposed to the spirit of unity predicated in the Roumanian Constitution; that decentralisation spells disintegration, and that the principle of universal suffrage has not yet taken a sufficient hold on the population as a whole to admit of the successful application of such an administrative revolution. The Government, however, seems to consider this Bill an integral part of its programme.

The Position of Women.

Among other reforms, the above Bill accords a new position to women in the Constitution. They are reckoned as citizens with a right to vote, but with important restrictions. The Union of the Women of Roumania entered a protest against these restrictive provisions, which exclude from the right to vote all peasant women. It is curious to note the general resistance offered by women citizens of the educated classes to restrictions which apply solely to peasant women in the villages. M. Mihalache, Minister of Agriculture, and the only Member of the Government who is really of peasant origin (he still wears the peasant costume), has drawn attention to this fact and offered a tribute to this laudable solidarity, which he said did honour to the educated women of Roumania, who thus champion the cause of their peasant sisters. At the same time he pointed out that all great national movements in Roumania have originated with the peasant class.

The contrary-minded parties apparently do not wish to oppose the granting of the vote to women, doubtless because of the extreme reserve with which it is included in the Bill for Administrative Reform.

In this connexion it is noticeable that the Liberal Party—the only one which is to be feared—appears to be divided into two camps. The one, represented by the adherents of M. Vintila Bratianu, dreads all new laws which appear to threaten the xenophobe and protectionist structure of his Party's legislation, and is accordingly waging a violent campaign to prevent the present Government from carrying out their projects. The other point of view, adopted by M. Duca, tends on the contrary to let the present Government wear itself out and exhaust itself in combating the many difficulties it will have to face, and then to deal it a fatal blow, when the Liberal Party will have an excellent opportunity of taking over once more the direction of the affairs of the country.

THE LEBANON HOSPITAL.

The thirtieth annual meeting of the Lebanon Hospital for Mental Diseases, Asfuriyeh, Beyrout, will be held at Friends' House, Euston Road, on May 21, at 5 p.m. Dr. R. Fortescue Fox will take the Chair, and among the speakers who have recently visited the Hospital will be Mr. Charles Jacob, of Dublin, Mr. Oscar Darton, and Miss Hilda Fox (General Secretary).

THE ID-UL-AZHA.

On the occasion (May 20) of the festival of Id-ul-Azha, Mr. Abdullah Yusuf Ali will speak at the London Mosque, 63, Melrose Road, S.W.18, on "The Holy Prophet's Life as an Inspiration for the World." The Imam of the Mosque, Moulvi Farzand Ali, will receive friends in the grounds of the Mosque. Prayers will be said at 11 a.m.

Rauf Bey Fico, the new Albanian Minister for Foreign Affairs, has sent Signor Mussolini a telegram assuring him of his determination to develop so far as possible the ties of friendship uniting Albania and "her great ally." In reply Signor Mussolini has declared that he too will follow the same course.

The death is announced of Lieut.-Colonel Sir Henry Blyth Hill, Bt., D.S.O., late Royal Irish Fusiliers. He served in the Sudan campaign of 1898, being attached to the Egyptian Army till 1908. He was present at the battle of Khartoum and in the subsequent operations against Ahmed Fedil and on the White Nile, was at one time Governor of Berber and Bahr el Ghazal, and received the Medjidieh and Osmanieh Orders.

NEWS IN BRIEF.

The Grand Cross of the Legion of Honour has been awarded to Prince Nicholas, Co-Regent of Roumania.

King Boris of Bulgaria, with his sister, Princess Eudoxia, arrived back in Sofia on May 10 from their two months' trip abroad.

It is reported from Jerash (Trans-Jordan) that a synagogue has been discovered beneath an excavated church there. It most probably belonged to the Jews living in Gerasa before the Jewish revolt.

The new weekly air mail from Teheran to Western Europe, via Moscow and Berlin, and the air mail and passenger service to Meshed started last week.

Bulgaria, Roumania, Yugoslavia, and the International Commission of the Danube sent representatives to the Central European Waterways Conference which was opened in Budapest on May 11.

The succession of bad crops in Anatolia as a result of droughts is said to have caused an economic crisis, which is bringing much distress on the peasantry.

An anonymous Zionist resident in England has given an endowment of £1,050 per annum to the Hebrew University of Jerusalem for the establishment of a Chair of International Peace, to be called after Dr. Chaim Weizmann.

The Sultan of Zanzibar, accompanied by Prince Abdulla Bin Khalifa and Shaikh Saif Bin Sulaiman Albusaidi, sailed from Zanzibar on May 10 for Mombasa to join the liner *Matiana en route* to England.

Among the appointments made by the Secretary of State for the Colonies are the following:—

Cyprus.—Mr. P. S. Walsh, to be President, District Court.
Palestine.—Miss V. W. E. Rogers, to be Nursing Sister.

According to a Brussels message, King Fuad of Egypt has presented the Queen Elisabeth Institute of Egyptology with £1,000 towards the issue of an encyclopaedia of ancient Egypt. This work will be compiled under the direction of an international committee.

The Greek Government on May 10 decided to postpone the re-assembly of the Chamber and Senate as the result of an outbreak of smallpox. The Minister of Health has issued special regulations in regard to people arriving in the country from England.

During February last 483 persons entered Palestine as immigrants, including 378 Jews; 218 had entered as travellers (including 128 Jews) and were given permission to remain permanently. Persons leaving the country permanently numbered 146, including 104 Jews, 63 of whom had settled in the country subsequently to June, 1920.

The representative of the Bishop of Gibraltar arrived on May 10 in Belgrade on his way to unveil the memorial at Nish in remembrance of the British soldiers and nurses who died there during the Great War. The King of Yugoslavia sent a wreath and was represented at the unveiling by the Commander of the troops at Nish.

A new Order, that of King Ferdinand, has been founded in Roumania in honour of the tenth anniversary of the establishment of Greater Roumania. It consists of Grand Crosses, Grand Officers, Officers, Commanders, and Members, and is limited to 120 persons divided among these classes.

The Persian Minister of Finance, Prince Firuz Mirza, Nusret-ed-Dowleh, read a telegram to the Mejliss from the Governor-General of Khorasan on May 9 reporting the extent of the damage done by the earthquake of May 2 to Shirvan and 30 neighbouring villages, whereupon the Mejliss voted 25,000 tomans (£5,000) for relief.

The King of Yugoslavia has signed a decree depriving the Chambers of Commerce and the Chambers of Craftsmen of the right to elect their members. Henceforth the vacancies in these Chambers will be filled by nominations made by the Prime Minister in agreement with the Minister of Commerce.

According to a message from Constantinople, an association for the expulsion from Turkey of missionaries has been formed there by about 100 members of the Turkish Press. This association has for its object the obtaining of an order from the Government which will forbid the residence in Turkey of missionaries engaged in the dissemination of Christianity.

The death is reported of Lieutenant-Colonel Walter Frederick Bird, Indian Army, on May 7 at Naini Tal, where he was stationed in his capacity as Deputy Assistant Director of Supply and Transport, Eastern Command. In the Great War Colonel Bird served in France, Gallipoli, and Egypt; but was back in India early in 1917, sharing in the operations which were found necessary, first among the Mahsuds and next, early in the following year, against the Maris. He was, according to *The Times*, also in the third Afghan War of 1919 and the Waziristan operations of 1920-21. He was twice mentioned in dispatches. His appointment as D.A.D., Supply and Transport, Eastern Command, was made in September last.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 25.

The Political Tangle.

There are three main schools of political thought in India; the Indian politicians, the men of business, represented by the Associated Chambers of Commerce and the European Association, and the officials. The views of the last are those of which the general public hears least. The officials either speak *in camera* before such bodies as the Statutory Commission, or they do not speak at all. I have just had an opportunity to learn the views of an official holding high office up-country; for he and I were fellow-travellers for a few hours at the end of last week. In his view the curse of the situation is that the Indian politician—there is significance in the fact that the Indian politician is always spoken of as a politician, never as a statesman—is supremely able as a dialectician and debater, far more able than the Englishmen in the Assembly who are put up to answer him, but has very little other capacity, and knows least of all how to govern. On my remarking that, now that India has thrown up such men as Lord Sinha, Pandit Motilal Nehru, Sir Tej Bahadur Sapru, and others in their class, the country must be given a chance to show how it could govern itself, my companion objected that the British must either govern India, or clear out; for it was unreasonable to ask them to stay and be murdered. If the maintenance of order and the security of human life depended on the Indian politicians, the end of a self-governing India would come within six months. It would not be only the English, the few who had remained, who would be murdered, but the politicians and those who had sided with them. The English left behind would naturally side with the established Government. The enemies within and without India of any Cabinet responsible solely to an elected Parliament would be without number, and of the fact of these enemies, my companion said, the pandits take no account whatever. In (he named a frontier country) they are ready to the last strap and the last button. As I recently reported an Indian politician's views of things, I thought I would report this official's views also. If the Indian politicians have really no capacity for governing, their opportunity to show what they could do would be a short one.

The Indian States.

The Butler Committee's report was published in London, and will have received its share of attention there. Our interest is not quite the same as yours will have been. Your interest was that the old good relations should be maintained between the Indian States and the British Crown. While that is our interest also, naturally, our special interest is to see whether the Indian politicians who are grasping at the reins of government in British India will have the sense to leave the Indian States free to maintain the relations that please them with the British Crown, or whether they will repeat the mistake of Nationalist Ireland over Ulster. Nationalist Ireland would have had her wish years sooner, if she had not so long stipulated that in no case should Ireland be divided. To judge from a statement by Sir Tej Bahadur Sapru on the subject of the Butler Committee's report, the Irish Nationalists' mistake is to be repeated. He said: "The Report will be judged not by its recommendations on individual issues but by its recommendation on the big constitutional issue, and from that point of view I can only say that it creates a division between British India and Indian India all the more injurious to both because it almost threatens to be permanent."

"Slaves of the Gods."

The *Pioneer* has published a long review of Miss Mayo's "Slaves of the Gods" by Pandit Jawaharlal Nehru, Pandit Motilal Nehru's son. One may turn to it for a time as a relief from the contemplation of the political imbroglio. Like "Mother India" "Slaves of the Gods"

deals with the social life of India. Any review of it must disclose the writer's views on that subject. That is the interest of Pandit Jawaharlal's review—that it discloses his views on the subject of the social life of India, and the modern movement to reform it. I will come to that in a moment. Pandit Jawaharlal does not think very highly of Miss Mayo as an author. "There is hardly an Indian of note," he says, "from Gandhi and Tagore downwards, who has not condemnèd her travesty of Indian life. Even those who were dragged in by her in support of her argument have turned against her and denied her. Yet, with amazing self-confidence, or is it conceit and arrogance, she has gone her way and not profited by past experience." She knows too well, her unkindest critics say, on which side her bread is buttered.

Indian Social Life.

Now for Pandit Jawaharlal on India's social life. "It matters little," he says, "what Miss Mayo says or writes. India will carry on in spite of her. What does matter to every Indian is the condition of men and women in this country and the many evil customs we suffer from. Katherine Mayo may indulge in exaggerations and falsehood, but there can be no doubt that the real sting in what she writes lies in the kernel of truth that it contains. This hurts."

"For the fact is that Indian society is in a bad way, and our old and outworn customs cling to us like the Old Man of the Sea and are as difficult to be got rid of. Why we are crushed under this weight of custom and tradition is another matter. Miss Mayo would have it that it is all due to the Hindu religion, to our 'ancient code's inhibitions.' Religion has much to answer for in all parts of the world, and India has certainly suffered enough from it. But other and more important factors go to build the fabric of society, as Miss Mayo may find out when she starts to learn a little. The economic condition of the people has something to do with it."

India's Economic Condition.

This is what the Pandit has to say about the interaction of India's economic condition on the social fabric: "To understand the problem of India . . . we have to come back, not to religion, as Miss Mayo imagines, but to her economic condition, to her great poverty and the causes that have produced it. For India is a strange medley to-day of the old and the new, having little of good of either and much of evil. Her social structure, her family system, are relics of feudalism and of an agricultural and pre-industrial age; how can they fit in with modern conditions. And yet modern conditions have proved no blessing to her as yet. The industrial age has come upon her stealthily, and deprived her of her old economy, but it has given her little to replace it. Industrialism has not meant wealth for this country, or a higher standard of living, or education, or better health, or the spirit of co-operation, or the power of organisation, or any of its other virtues. So unhappy India, at the same time feudal and capitalist, agricultural and industrial, suffers from the vices and shortcomings of both, and has few of their virtues."

Indian Dialectic.

That, by the way, is a very good example of the dialectic of which the Indian politician is such a master. While one may agree that the economic condition of India counts for more in her social system than Hinduism does, one must object that her economic condition has its roots in things older far than feudalism, so still older than feudalism broken into by industrialism. The economy of the great mass of the population of India is the same to-day as it was ten thousand years ago. There is no real sense in talking of that India as having been deprived of her old economy by an industrial age coming upon the country stealthily. But to show that in a statement as short as the Pandit's, and as seeming to bear its truth on its face as the Pandit's statement does—that is far beyond any power of dialectic that I possess.

THE REFORMS IN BENGAL.

(From a Correspondent.)

The decision of the Governor of Bengal to dissolve the Bengal Legislative Council did not come as a surprise. Indeed, it is difficult to see what other course of action was open to Sir Stanley Jackson. The Council was elected at the end of 1926 and it met for the first time on January 10, 1927. In the ordinary course it would, therefore, have continued until the end of the present calendar year. A majority of its members have been all along in favour of working the Reforms. But although this was the case, no Ministry that would hold together could be constituted. In the circumstances there was therefore nothing for the Governor to do but to dissolve the Council and to give the constituencies the opportunity of deciding whether the Reforms are to be worked or not.

At the time of the last election the Swarajists were admittedly the best-equipped and most efficiently organised political party in the province. They dominated the elections and managed to capture thirty-five out of forty-six general seats. Nevertheless, they did not have matters all their own way, as at the opening session dyarchy was restored to Bengal by a large majority. They have, however, succeeded in making it impossible for any Ministry to hold office; and they are now making a great effort to strengthen their position. That they may succeed in this seems to be not unlikely. For it is anticipated in the province that they may secure as many as forty-five seats; and that in addition there may be eight other Hindus who will refuse to support dyarchy, while there will be only four in favour of it.

If this forecast should prove to be correct, it may be that after the election it will be even more difficult to form a stable Ministry than it has been hitherto. And in that event those functions of the Government which, under the Reforms, are to be exercised by Ministers will presumably revert to the Governor and his Executive Council. This is not likely to be to the detriment of the province, but it would mean that dyarchy would be suspended.

The latest news suggests that the Muhammadans in Bengal are even more divided than they were at the time of the last election. In fact, there would hardly seem to be a chance of unity among them; and one of their best-known leaders, Sir Abdur Rahim, has withdrawn his candidature, and has decided not to seek re-election to the Council. His reason is that he sees no likelihood of his co-religionists acting together as a political party; and there would certainly appear to be good ground for thinking that in this he is right. But it is said to be rumoured in Calcutta that his withdrawal may do more than anything else to promote unity among the Muslims.

This may or may not be correct; but in any case Sir Abdur Rahim will be a distinct loss to the Council. He is a barrister, who formerly practised in the Calcutta High Court. He was then appointed to a judgeship in the Madras High Court, in which capacity he served with distinction, on two occasions officiating as Chief Justice of Madras. He was a member of the Royal Commission on the Public Services in 1913. And after his retirement from the Madras High Court he was appointed to the Bengal Executive Council. Recently he has been prominent in the political life of the province in the capacity of a Muhammadan leader. When he relinquished his membership of the Executive Council he was succeeded in that office by Nawab Ali Choudhuri, whose death occurred at Darjeeling last month.

The Nawab belonged to a Mymensingh family, and was educated at St. Xavier's College, Calcutta. In the pre-reform days he was a member of the Imperial Legislative Council, and of the Eastern Bengal and Assam Council, and of the Bengal Council. In the first reformed Bengal Council he represented Mymensingh, and was appointed a Minister, an office which he held from 1921 to 1923. He was not a brilliant statesman, nor was he an attractive speaker. But he was a quiet, steady, hard worker who seriously tried to carry out the duties of his

office and who had devoted much time and attention to public affairs. In him the Muhammadans of the province have lost a leader who could be trusted to take a sane view of political questions and who always had the interests of his community at heart.

LIABILITY OF NON-RESIDENTS TO INCOME-TAX.

Mr. Pilcher, Member for Penryn and Falmouth, is to be congratulated on eliciting an important statement from the Financial Secretary to the Treasury on the liability of non-residents to income-tax during the Third Reading debate on the Finance Bill.

The position arising out of two decisions of the House of Lords in March 1928, appeared to be, Mr. Pilcher stated, judging from the circular issued by the Board of Inland Revenue in February, that a person living overseas, if he had a residence of any kind in this country, was chargeable to British income-tax if he stayed here even for one week in the year. The serious injustice to military and civil officers employed by the Crown in the Dominions and India of such a decision was obvious.

Another ruling, the Member for Penryn said, was to the effect that although a person might have no residence in this country, yet if he came to this country for a period of three months in a year over a period of four or five years he might be mulcted in income-tax in respect of the whole of his income, either received in or sent to this country. This, he pointed out, was a serious hardship in the case of many people whose whole occupation was abroad and who regularly spent three months of the year in this country. Some of the Judges in the Dominions were entitled to a minimum statutory average leave of three months, and they had to spend part of that period of leave out of this country; otherwise they would be charged income-tax here.

Mr. A. M. Samuel, Financial Secretary to the Treasury, replying on the debate, said he was glad that Mr. Pilcher had given him the opportunity to clear up a misunderstanding. The letters which had appeared in the Press on the matter had been written under a misconception of the position.

A British subject working in India or elsewhere abroad who made occasional visits to this country incurred no income-tax liability at all by visiting this country if maintaining no place of residence here and being in this country for less than six months in an income-tax year. Even if he maintained a place of residence here, the liability he incurred was limited to the amount of his foreign income which was received in or brought into this country. It had been suggested that the employees of British subjects in India or the Malay States who were paid by commission were liable to income-tax here merely because the employer was a British subject. That suggestion, Mr. Samuel said, was entirely without foundation.

Fears had been expressed as to the effect of income-tax on visitors coming to this country and as to the future of the "Come to Britain" movement. He wished to clear up those widespread misapprehensions. A circular issued last February by the Inland Revenue authorities stated that no part of a visitor's income from sources outside the United Kingdom was subject to United Kingdom income-tax unless he was chargeable as a person residing in the United Kingdom.

A visitor, he added, who maintained no place of abode in the United Kingdom and whose visits were not habitual but only occasional was not regarded as a resident in the United Kingdom unless he had been in the United Kingdom for a period or periods equal in the whole to six months in the income-tax year beginning April 6. A visitor who became chargeable as a resident was liable not on the whole of his income arising from abroad, but only on so much of that income as was received in or remitted to him in the United Kingdom.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

IRAQ AND THE WAHHABIS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—On receiving THE NEAR EAST AND INDIA, your Baghdad Correspondent makes a practice of turning first to the letters dealing with the countries adjoining Iraq. They are always interesting, and at times have the added interest of showing the other side of a question affecting Iraq. At times the desire to retort seems irresistible, until reflexion suggests that your Correspondents must know their own countries better than an outsider could do; but the letter from the Hijaz which appeared in your issue of March 28 cannot be allowed to pass unchallenged.

In this particular instance, your Baghdad Correspondent is privileged to have first-hand information of the recent occurrences on the Iraqi-Najd frontier. Your Hijaz Correspondent admits that his is anything but first-hand. King Ibn Saoud is reported to have made an official investigation into the murder of Mr. Bilkert. The investigators reported to Riyadh, and Riyadh sent to Jidda an official explanation which was read (and believed) by your Hijaz Correspondent.

The facts are as under. On January 21, the day on which Mr. Bilkert was shot, a raiding party of about two hundred men, mostly Ajman with a sprinkling of Mutair, attacked about thirty tents of the Iraq Juwarin and Zoba tribesmen encamped a short distance from the Iraq frontier within Kuwait territory. The fight occurred in an open gravelly plain between Raudhatain and Safwan. Through the centre of this plain runs the Zubair-Kuwait motor road. When a British officer examined the scene of the fight, he found débris and dead horses scattered on both sides of the road. It was along this road that the motor car of Colonel Watson (from Kuwait) and the two cars of Mr. Crane (from Basrah) had to pass. Both parties ran into the raiders and were fired upon, but only one person was killed—Mr. Bilkert.

The Iraq tribes in the vicinity had no opportunity that day to try to hold up passing cars. They were fighting for their lives, against overwhelming odds, and nearly all were killed, including a number of small boys butchered in true Akhwan fashion by the "bloodthirsty Wahhabis." The evidence all points to the cars being held up by the Akhwan raiders, flushed with victory and massacre, and reckless as to what they did.

Your Hijaz Correspondent is inclined to treat this unfortunate incident as a picturesque story dished up by stunt-loving journalists for the "British newspaper-reading public," at whose gullibility and ignorance in believing the story he is pleased to mock. But is it the newspaper-reading public which is gullible and ignorant? There is no question of a large raiding party having "vanished into thin air in spite of the strenuous efforts of the King's aeroplanes and armoured cars and Intelligence Officers to track them down for condign punishment." News of the raid was received within a few hours of its taking place. During the fighting the Iraq shepherds actually saw the R. A. F. machines in the distance. But the raid took place in Kuwait territory, and the frontier could not be crossed by aeroplanes without permission. It was not until the third day that permission was received, and by then the Akhwan raiders had returned to Najd, divided their loot (4,500 sheep and 500 donkeys), and dispersed.

The wording of King Ibn Saoud's *démenti* is significant: "It is officially stated that none of the tribes subject to King Ibn Saoud was in any way connected with the crime." This is but a repetition of previous excuses. Apparently a tribe never is subject to King Ibn Saoud when engaged in raiding. In this case, the Ajman and Mutair are recognized as owning allegiance to Najd; the raiders started from Najd territory, and returned thereto with

their loot. Nevertheless, they are not apparently subject to King Ibn Saoud!

The information concerning Captain J. B. Glubb also needs correction. He is not Inspector-General, nor Governor-General, of the whole Iraq desert. He fills the humbler rôle of Administrative Inspector of the Southern Desert, and his primary task is to defend the Iraqi shepherds against the wanton raiding of the Akhwan. This he does with great efficiency and at great inconvenience and personal risk. It is no doubt annoying to the Akhwan to find that the group of unsuspecting shepherds which their spies reported to be peacefully grazing their sheep has suddenly decamped on the appearance of Capt. Glubb's Ford with the intelligence that a raid is imminent; or to find the R. A. F. patrols active on the very day on which they had planned an attack. No wonder there is resentment at his presence. He doubtless is "definitely *persona non grata*" with the Akhwan, and for an excellent reason; to the burglar, the barking of the watch dog may well appear to be "menacing activity."—I am, etc.,

YOUR BAGHDAD CORRESPONDENT.

Baghdad, May 1.

[Reference may be made to our "Notes of the Week" on this subject in the last issue, of May 9.—ED.]

THE NILE WATERS AGREEMENT.

The following is the text of the Note addressed by the Prime Minister of Egypt to Lord Lloyd, the High Commissioner, Cairo:—

1. In confirmation of our recent conversations, I have the honour to communicate to your Excellency the views of the Egyptian Government in regard to those irrigation questions which have been the subject of our discussions. The Egyptian Government agree that a settlement of these questions cannot be deferred until such time as it may be possible for the two Governments to come to an agreement on the status of the Sudan, but in concluding the present arrangements expressly reserve their full liberty on the occasion of any negotiations which may precede such an agreement.

2. It is realised that the development of the Sudan requires a quantity of the Nile water greater than that which has been so far utilised by the Sudan. As your Excellency is aware, the Egyptian Government has always been anxious to encourage such development, and will therefore continue that policy and be willing to agree with his Majesty's Government upon such an increase of this quantity as does not infringe Egypt's natural and historical rights in the waters of the Nile and its requirements of agricultural extension, subject to satisfactory assurances as to the safeguarding of Egyptian interests as detailed in later paragraphs of this Note.

3. The Egyptian Government therefore accept the findings of the 1925 Nile Commission, whose report is annexed hereto and is considered an integral part of the present agreement. They propose, however, that, in view of the delay in the construction of the Gebel Aulia Dam, which, under paragraph 40 of the Nile Commission's Report, is regarded as a counterpart of the Gezira scheme, the dates and quantities of gradual withdrawals of water from the Nile by the Sudan in flood months, as given in Article 57 of the Commission's Report, be modified in such a manner that the Sudan should not withdraw more than 126 cubic metres per second before 1936, it being understood that the schedule contained in the above-mentioned article will remain unaltered until the discharge of 126 cubic metres per second is reached. These quantities are based on the Nile Commission's Report, and are, therefore, subject to revision as foreseen therein.

4. It is further understood that the following arrangements will be observed in respect of irrigation works on the Nile:—(i) The Inspector-General of the Egyptian Irrigation Service in the Sudan, his staff, or any other officials whom the Minister of Public Works may nominate, shall have full liberty to co-operate with the resident engineer of the Sennar Dam in the measurement of discharges and records to satisfy the Egyptian Government that the distribution of water and the regulation of the dam are carried out in accordance with the agreement reached. Detailed working arrangements agreed upon between the Minister of Public Works and the Irrigation Adviser to the Sudan Government will take effect as from the date of the confirmation of this Note.

(ii) Save with previous agreement of the Egyptian Government no irrigation or power works or measures are to be constructed or taken on the River Nile and its branches or on lakes from which it flows so far as all these are in the Sudan or in the countries under British administration which would, in such a manner as to entail any prejudice to interests of Egypt, either reduce quantity of water arriving in Egypt or modify date of its arrival or lower its level.

(iii) The Egyptian Government in carrying out all the necessary measures required for the complete study and record of the hydrology of the River Nile in the Sudan will have all the necessary facilities for so doing.

(iv) In case the Egyptian Government decide to construct in the Sudan any works on the river and its branches, or to take any

measures with a view to increasing the water supply for the benefit of Egypt, they will agree beforehand with the local authorities on the measures to be taken for safeguarding local interests. The construction of the above-mentioned works shall be under the direct control of the Egyptian Government.

(v) His Britannic Majesty's Government in the United Kingdom of Great Britain and Northern Ireland shall use their good offices so that the carrying out of surveys, measurements, studies, and works of the nature mentioned in the two preceding paragraphs is facilitated by the Governments of those regions under British influence.

(vi) It is recognised that in the course of the operations here contemplated uncertainty may still arise from time to time either as to the correct interpretation of a question of principle or as to technical or administrative details. Every question of this kind will be approached in a spirit of mutual good faith.

In case of any difference of opinion arising as to the interpretation or execution of any of the preceding provisions, or as to any contravention thereof, which the two Governments find themselves unable to settle, the matter shall be referred to an independent body with a view to arbitration.

5. The present agreement can in no way be considered as affecting the control of the river, which is reserved for free discussion between the two Governments in the negotiations on the question of the Sudan.

Lord Lloyd replied:—

In confirming the arrangements mutually agreed upon as recited in your Excellency's Note I am to express the gratification of his Britannic Majesty's Government in the United Kingdom of Great Britain and Northern Ireland that these discussions have led to a settlement which cannot fail to facilitate development or to promote prosperity in Egypt and the Sudan.

His Majesty's Government in the United Kingdom concur in your Excellency's view that this agreement is and should be essentially directed towards the regulation of irrigation arrangements on the basis of the Nile Commission Report and has no bearing on the *status quo* in the Sudan.

In conclusion I would remind your Excellency that his Majesty's Government in the United Kingdom have already acknowledged the natural and historical rights of Egypt in waters of the Nile. I am to state that his Majesty's Government regard the safeguarding of these rights as a fundamental principle of British policy and to convey to your Excellency the most positive assurances that this principle and the detailed provisions of this agreement will be observed at all times and under any conditions that may arise.

DEAD SEA SALTS CONCESSION.

[Documents relating to the Dead Sea Salts Concession were issued as a White Paper (Cmd. 3326. Price 3d.) on May 9. We print them in *extenso* herewith.—Ed.]

The documents printed in this Paper are in the form in which they have been communicated to the solicitors of the prospective concessionaires (Major Tulloch and Mr. Novomeysky); but there are a few points of minor importance upon which final agreement has still to be reached. Subject to the modifications, if any, that may be agreed upon, it is proposed that the preliminary agreement should be signed in the form in which it appears and that the concession in the form of "heads of agreement," as shown, should be scheduled to the agreement. The "heads of agreement" for the concession will later be put into the form of a final concession by the solicitors of both parties.

It is not anticipated that any amendments of substance will be made before signature to either the preliminary agreement or the concession.

DRAFT PRELIMINARY AGREEMENT.

AN AGREEMENT made the _____ day of _____ 1929 BETWEEN THE CROWN AGENTS FOR THE COLONIES whose offices are at No. 4 Millbank in the City of Westminster (who and the Crown Agents for the Colonies for the time being are hereinafter called "the Crown Agents") acting for and on behalf of the Government of Palestine and the Government of Trans-Jordan (hereinafter called "the Governments") of the one part and NOVOMEYSKY of _____ and TULLOCH of _____ (hereinafter called "the Applicants") of the other part

WHEREAS the minerals of the Dead Sea form part of the natural resources of Palestine and Trans-Jordan and it is desired to provide for the public control of any concession for the development thereof in the interests of the populations of Palestine and Trans-Jordan

NOW IT IS HEREBY AGREED as follows:—

1. THE Applicants within 12 months from the date hereof at their own expense or that of the Company to be formed as hereinafter provided shall procure

(a) That a Company be formed and registered in Great Britain or Palestine under the name of _____ (hereinafter called "the Company") with the object amongst others of the acceptance and fulfilment of the obligations specified in the heads of concession set forth in the Schedule hereto.

(b) That shares in the capital of the Company to the nominal value of not less than £100,000 shall be paid up in cash or shall be bona fide unconditionally subscribed for at par in cash payable in instalments by responsible parties approved of by the Crown Agents so as to ensure that £100,000 in cash will be available as and when required for the operations of the Company.

2. EVERY statement or representation having reference to the matters or any of them specified in the Schedule hereto that it is proposed to set forth in any prospectus notice advertisement or circular inviting public or private subscriptions to the capital or Debentures of the Company whether issued in Palestine Trans-Jordan the United Kingdom or elsewhere by or on behalf of the Applicants or the Company shall first be submitted to the Crown Agents together with the whole of such prospectus or other document before the same shall be issued. Such prospectus or other document shall not be issued if the Crown Agents shall within 14 days after it has been so submitted serve on the Applicants or the Company as the case may be a notice expressing objection thereto or to any part thereof. If after the service of such notice the Applicants or the Company shall issue or cause or permit to be issued any such prospectus or other document to which objection shall have been expressed as aforesaid it shall be lawful for the Crown Agents or the Governments by notice in writing to be served on the Applicants or the Company to refuse to grant the Concession or if the same shall have already been granted to determine the Concession PROVIDED that any omission to express objection under this Clause shall in no way be deemed to imply approval of any statement or representation contained in implied by or referred to in any such Prospectus or other document and the Crown Agents shall not by reason of any such omission to express objection be stated or represented or deemed in any way to have authorised or approved or been party or privy to the issue publication or circulation of any such Prospectus or other document and no statement or representation to the effect that the Crown Agents have approved or have not objected to such prospectus or other document shall be made by the Applicants or the Company or by anyone on their behalf.

3. NOT less than one half of any capital or debentures of the Company in excess of a total of £250,000 shall be offered for public subscription and Palestinian Citizens and Trans-Jordan Nationals shall have a prior right to the allotment of not less than one-fifth of such public issue.

4. THE Applicants or the Company will pay to the Crown Agents for and on behalf of the Governments all the usual and proper legal costs payable by the Governments to their Solicitors for and in respect of their costs charges disbursements and expenses incurred in and about and incidental to the negotiation preparation printing approval and execution of this agreement and of the heads of concession set forth in the Schedule hereto and the perusal and approval of any document mentioned in Clause 2 hereof and the completion and execution of the said Concession and the negotiation preparation approval and printing thereof and of any modifications or alterations therein which may be proposed or agreed to and further will pay to the Crown Agents all fees incurred by them with their Technical Advisers with the previous consent of the Applicants.

5. IF the Applicants or the Company shall within the said period of 12 months from the date hereof have fully complied with the above conditions then the Governments will grant to the Company a concession comprising the terms which are set forth in the Schedule hereto.

6. IF the Applicants shall fail to comply with any of the conditions of this Agreement within the periods specified this Agreement shall forthwith cease and determine but such termination shall not entitle the Applicants to any compensation or relieve them from liability to make any payments due to the Crown Agents or the Governments under Clause 4 hereof or otherwise.

7. DURING the said period of 12 months provided this Agreement shall so long continue in force the Governments will not without the consent of the Applicants grant any other concession lease licence or right conflicting with the provisions of the said draft Concession.

8. WITH respect to this Agreement the person for the time being administering the Government of Palestine and acting as High Commissioner for Trans-Jordan shall as regards anything to be done or suffered by the Governments hereunder be regarded as a principal and shall be empowered to bind the Governments and to sue and be sued under the title of "High Commissioner."

9. ALL disputes and differences that may arise between the Crown Agents and the Applicants touching anything to be done or suffered hereunder shall be referred to Arbitration and this shall be deemed to be a submission to Arbitration within the meaning of the Arbitration Act 1889 or any Statutory Modification thereof for the time being in force.

10. ANY notices requiring to be served hereunder may be served on the Crown Agents at No. 4 Millbank aforesaid and on the Applicants at 1 Finsbury Square, E.C.2.

11. NEITHER the High Commissioner nor the Crown Agents nor any member or officer of the Governments shall be in any way personally bound or liable for the acts or obligations of the Governments or either of them under this Agreement or answerable for any default or omission in the observance or performance of any of the acts obligations matters or things herein contained.

IN WITNESS whereof one of the Crown Agents for the Colonies and the Applicants have hereunto set their respective hands and seals the day and year first above written.

DRAFT CONCESSION. (Heads of Agreement.)

(NOTE.—Throughout this document the term "Government" means the Governments of Palestine and Trans-Jordan jointly.)

1. THE Concession to comprise a lease at a nominal rent of 4 square kilometres of land for evaporation purposes abutting upon the north-western end of the Dead Sea, and any further land abutting on the Dead Sea actually required for auxiliary works other than evaporation in connexion with the working of the area of 4 square kilometres. The location of all such lands to be agreed subject to reservation of parts required for roads or other public facilities as shown by annexed plan* but tracks indicated thereon by chain lines will be given up when they traverse areas mutually agreed for evaporation pans. Compensation to be paid for land required but not shown in the plan. Any additional State land which may be required, either for evaporation or for auxiliary works, shall be granted on terms to be agreed upon which normally will include a fair rent based on the value thereof disregarding any increase in land value due to the operations or requirements of the Company. Any compensation payable to occupiers and the cost of expropriation of any land in private ownership shall be borne by the Company.

2. THE term of the Concession to be for 75 years.

3. THE Concession will confer the right to obtain by evaporation or otherwise howsoever from the Dead Sea the mineral salts therein and to render marketable sell and dispose of same. For a period of 25 years the Government will not exercise or grant to or permit to be exercised by any other person firm or corporation rights to recover the said mineral salts or any of them for commercial purposes and after the said period of 25 years will not do so without first offering the same to the Concessionaires on terms not less favourable to them than those of the present Concession. If such terms are not accepted by the Concessionaires within 12 calendar months the Government shall be at liberty to grant such rights to other applicants on terms not more favourable to such other applicants than those offered to the Concessionaires. The right of the Concessionaires to recover mineral salts from the waters of the Dead Sea shall in no way limit the right of the Government to grant mining licences for areas around the Dead Sea including rights to collect salts there.

4.—(i) Within a belt of 5 kilometres measured from the present shore line of the waters of the Dead Sea and for a period of 10 years from the date of the Concession the Government will not grant a licence for the mining of potash or other salts named in the Concession without first offering the licence to the Concessionaires on terms provided for by the Mining Ordinance.

(ii) In the event of the waters of the Dead Sea receding the Concession will extend to the collection of salts covered by the Concession in any area within the present limits of the Dead Sea which may be left exposed by the recession of the water.

5. THE Concessionaires shall either (a) allow the continuance of evaporation for the production of common salt by persons who have an established right to conduct such operations or (b) supply such persons with common salt at a nominal price.

6 FRESH water required for the production of salts drinking washing or sanitary purposes and the general purposes of the undertaking and its employees may be obtained subject to existing rights of user from the River Jordan or any convenient affluents to the Dead Sea. But water power must not be used to generate electricity. Subject to any existing rights the Concessionaires shall be permitted to bore for water and subject to the Government's approval to quarry on State land without payment of royalty or rent for materials necessary for the undertaking. The Company must pay, by way of lease or purchase for all rights of way, land and materials in private ownership or on land which is in private ownership, required for the purpose of drilling for or obtaining water or of quarrying.

7. ANY lands required for the purposes of the Company will be expropriated by the Government at Company's expense.

8. THE Company will be required to work continuously and with all due diligence and to produce the equivalent of the following maximum quantities of potassium chloride of 80 per cent. purity, viz. :—

During the third year of the Concession, 1,000 tons.

During the fourth year, 1,500 tons.

During the fifth year (provided that the metal road between the Dead Sea and Jerusalem is completed to the Dead Sea), 3,500 tons.

During the sixth and seventh years, 5,000 tons per annum.

During the eighth to the tenth years inclusive, 10,000 tons per annum.

During each subsequent year, 50,000 tons.

Provided always that the Company shall be granted an extension of the said periods if it shall be prevented by circumstances (other than insufficiency of capital) not due to its own act, neglect or default from completing within the periods indicated the construction of the necessary plant and transport lines.

9. THE Company will be absolutely prohibited from making without previous written consent of Government any contract arrangement or understanding with any Company person or undertaking for restriction of output or for raising or keeping up prices in such manner as to restrict output.

10. THE royalties will be as follows :—

On potassium chloride bromine and magnesium chloride produced

and sold five per cent. of value in bulk at works. Royalty will be payable from the beginning of the Concession. The value of each product shall be fixed half-yearly and shall be the value free at works in bulk of each product arrived at by taking the sale prices during the previous half-year and deducting therefrom the proper costs of transport insurance and marketing plus a profit of ten per cent. on such costs.

Notwithstanding the provisions of Clause 30 a minimum royalty calculated on the output specified in Clause 8 will be payable whether those quantities are produced and sold or not unless the Company has been prevented from producing and selling them by the Act of God or insurrection, riots or war or civil war in Palestine or Trans-Jordan; but any payment of royalty in excess of actual production may be set off in the year next following against any excess of production in that year beyond the specified output for that year.

The rate of royalty per ton to be thus paid on quantities not produced and sold shall be based on the average sale price during the previous two years less the deductions specified above.

These royalties to be ascertained by the Auditors and paid on 1st February and 1st August in every year in respect of the production during the period of six months ending on the preceding 31st December and 30th June.

11. THE Company will pay to the Government a share in the profits of the undertaking and for the purpose of ascertaining such share the following provisions shall apply :—

The profits of the undertaking shall be the gross receipts less the following deductions :—

(a) All expenditure on account of actual and proper working expenses, including repairs, maintenance, renewals and replacements.

(b) The royalties paid to the Government.

(c) Interest on and amortisation instalments of loan capital.

(d) Allocation to a reserve fund not exceeding in any one year ten per cent. of the certified cost of construction and equipment and provided that such allocation does not increase the reserve to more than one-half of the certified cost of construction and equipment.

Such profits shall in each year be allocated to the Company up to a sum sufficient to pay ten per cent. on the sum approved by the Government from time to time for the purpose plus an amortisation instalment sufficient to redeem that sum at the expiration of the Concession period. Any remaining profits shall be shared with the Government in the following proportions :—

Up to the equivalent of 5 per cent. on the sum approved for the purpose, 20 per cent. to the Government and 80 per cent. to the Company; as to any further profits, 40 per cent. to the Government and 60 to the Company.

The sum approved by the Government from time to time for the above purpose shall be the excess of the total capital cost of construction and equipment over the amount raised by loan capital such excess being increased as follows to cover the provision of working capital, flotation expenses and all other capital expenditure :—

(a) During the first ten years of the Concession by 100 per cent. of the said cost of construction and equipment.

(b) During the eleventh and all subsequent years of the Concession by 60 per cent. of the said cost of construction and equipment.

Any income derived from the investment of the reserve fund referred to in (d) above shall be treated as part of the gross receipts of the undertaking for the purposes of this clause; and also any portion of that fund which shall be withdrawn from reserve.

Any sums standing to the credit of the said reserve at the end or termination of the Concession shall belong to the Government and the Company in the proportion of 40 and 60 per cent. respectively.

The whole of the figures required to be ascertained in order to comply with the Clause are to be ascertained and certified by the auditors of the Company.

Any sums payable to the Government under this Clause are to be paid within one month after the annual general meeting of the Company at which the accounts are passed.

12. THE Company shall not make any contract or arrangement whether for the disposal of the Company's products or otherwise so as to deprive the Government improperly of any profits in which it would otherwise be entitled to participate.

13. THE Government shall have :—

(1) The right to take up on most favoured terms a percentage of any capital issues made by the Company after the first issue; and

(2) The option at a later date to convert into a holding of shares in the Company its financial interests by way of both share of profits and receipts of royalty.

14. THE Company to keep at all times at its principal office all proper and usual books of account to be open at all reasonable times to inspection by the Government upon reasonable notice.

The Auditor of the Company to be subject to the Government's approval. He is to prepare once every year a proper balance-sheet and profit and loss account a copy of which is to be forthwith supplied to the Government.

15. THE Company to send to the Government every year with the copy of the account as mentioned under paragraph 14 a return of products (a) recovered and (b) sold showing in case (b) the price free at works in bulk together with a statement of royalties and share of profits which will be certified by the Auditor.

16. THE Government subject to Clauses 30 and 31 may by one

* Not reproduced.

month's notice determine the Concession on the happening of any of the following events, viz. :—

(a) If the Concession or any interest therein or any power conferred thereby is assigned sub-let or otherwise disposed of without its previous written consent.

(b) If the Company fails to work the Concession properly and efficiently.

(c) If the Company fails to produce on the average of any three consecutive calendar years the output specified in Clause 8.

(d) If before the end of a period of ten years from the date of the Concession the Company has not satisfied the Government that it intends to erect plant and construct works adequate to produce the equivalent of the minimum of 50,000 tons of potassium chloride of 80 per cent. purity specified in Clause 8 to be produced annually after the end of the tenth year and that it can command the capital needed for the production, transport and marketing thereof.

(e) If the Company fails to comply with any other condition of the Concession after three months' notice.

(f) If the Company fails to pay to the Government any sums due within six months of the due date.

(g) If the Company goes into liquidation other than voluntary liquidation for the purpose of re-construction with the approval of the Government.

(h) If the Company commits a breach of Clause 9.

(i) If the Company commits a breach of Clause 12.

17. IF the Government terminates the Concession the whole of the plant and works shall vest in it, but the Company on payment of all sums due to the Government may remove all machinery belonging to it on the ground within twelve months unless taken over by the Government at a valuation.

On the expiration of the Concession by effluxion of time the whole of the plant and works of the undertaking shall pass to and vest in the Government without payment.

18. THE Company shall not be entitled to gold, silver or other precious metals and their ores, precious stones, antiquities or mineral oil, whether on or beneath the shores or under the waters of the Dead Sea, or under or upon any lands in the occupation of the Company.

The Company shall give the Government immediate notice of any such discovered and the Government shall have the right to get the same on payment of fair compensation for any surface damage.

19. THE Government to have the right to enter upon any lands for the purpose of exploring for and obtaining any such discovered subject to payment of compensation for any damage, etc.

20. THE Government to reserve the right to construct railways, roads, tramways, electric wires or cables, pipe lines, or any other works on, under or through any lands used by the Company subject to proper compensation. The Government to have the right to enter for purposes of survey, inspection, etc.

21. THE Company shall not issue or raise any debentures or other loan capital except with the Government's approval in writing of the terms of issue and rate of interest.

Not less than fifty per cent. of any capital issued after subscription of the first £250,000 shall be offered for public subscription and Palestinian Citizens and Trans-Jordanian Nationals shall have a prior right in allotment to twenty per cent. of all such public issues. Adequate notice of impending issues and proper facilities shall be given for this purpose.

22. PROSPECTUSES etc.—No Prospectus, statement in lieu of prospectus invitation to subscribe or other documents to be published or circulated unless previously submitted to and not dis-

approved by the Government or the Crown Agents within a time to be specified.

23. ALL the Government's requirements relating to Public Health to be complied with and Company to comply with such provision of the Mining Ordinance and the regulations thereunder as may be applied by the Government to the Concession and to any other regulations for the proper control of the Company's operations which may be prescribed from time to time by the Controller of Mines in either territory.

24.—(A) The Government of Palestine will within two years from the date of the Concession make up the existing road from the Dead Sea to its junction with the Jerusalem-Jericho road, so as to render it fit for heavy lorry traffic, and will so maintain it so long as the Company requires to move its products by road transport. When the said Government commences the construction of the road the Company will contribute £5,000 towards its cost, which sum will be repayable by deductions from amounts subsequently falling due under the terms of the Concession to be paid by the Company to the said Government, but not otherwise. If extraordinary damage is caused to this road or any other Government roads by the traffic of the Company, the Company may be required to pay the cost of the repair of such roads necessitated thereby.

Vehicles employed by the Company on the public highways shall comply with the following specification :—

(a) Lorries.—Maximum axle load—3½ tons with single pneumatic tyres; 5 tons with double pneumatic tyres.

(b) Six-wheel lorries.—6 tons on the four back wheels.

(c) Trailers.—3 tons on each axle.

(d) Lorries must be fitted with 4-wheel brakes.

(e) Trailers must be fitted with brakes and articulated with the lorries for steering.

(f) The minimum radius of curves to be negotiated on the roads is 26' 0".

(g) Allowance must be made for a gradient on the roads of 1 in 8.

(h) Maximum speeds that will be permitted are :—

(aa) Lorries 12½ miles per hour.

(bb) Lorries with trailers 10 miles per hour outside municipal areas and 8 miles per hour within municipal areas.

(B) As and when the transport requirements of the Company render it necessary the Government will, if desired by the Company, grant permission for the construction by the Company of an aerial ropeway or telerage from the Dead Sea to the Railway outside Jerusalem or to the Railway at Beisan, and will grant or expropriate at the Company's expense the land require for the pillars and all necessary rights of way. The rate to be charged for transport of the Company's products over the Jaffa-Jerusalem Railway shall, failing agreement, be referred for decision by a recognised British Railway expert selected in case of difference by the President of the Institution of Civil Engineers in Great Britain. The Government shall have the right to charge rent for any State lands granted to the Company for the erection of pillars etc., in connexion with aerial rope wires or telerage.

(C) If the Government constructs a line of Railway from the Dead Sea northwards to Beisan and/or southwards to Akaba, the Government will discuss with the Company the rates to be charged for transport of the Company's products over such Railway and over the other Railways owned by the Government, and failing agreement the question shall be referred for decision by a recognised British Railway expert selected in case of difference by the President of the Institution of Civil Engineers in Great Britain.

If the Government does not engage to construct such Railways in time for use when the traffic of the Company demands such facilities, the Government will, if required by the Company, grant the right to the Company to construct either or both at the Company's option and will grant or at the Company's expense expropriate the necessary land.

The terms of the Concession which will be granted by the Government for Railway construction shall be settled by agreement or in case of disagreement by reference to a recognised British Railway expert nominated in case of difference by the President of the Institution of Civil Engineers in Great Britain.

The Government shall have the right of final decision in fixing the route and gauge of the railway. Any claim made by the Company in respect of increased cost involved by the amendment of the Company's scheme by the Government shall in case of disagreement be settled by reference in the same manner.

The Government shall have the right to acquire the railway, if required for public purposes, on payment of compensation and failing agreement the amount of such compensation shall be determined by reference in the same manner.

The expenses of reference to a Railway expert shall be shared equally by the Government and the Company.

25. THE Company may navigate vessels on Dead Sea for purposes of their business, subject at all times to Government Ordinances and regulations.

26. THE Company are not to pollute the water of any river or stream.

27. THE labour resources of Palestine and Trans-Jordan to be employed, but other sources may be resorted to with Government's previous permission.

28. IN time of War Government to have right of pre-emption of products.

29. IF any taxation is hereafter imposed on the production of export of potassium chloride, bromine or magnesium chloride or any tax on the profits or turnover of the Company, payments made

to the Government by the Company in respect of such taxation shall be deducted from payments due by the Company to the Government under this Concession as royalty or share of profits. This provision shall not apply to income tax levied in Palestine or Trans-Jordan.

30. EXCEPT in cases (if any) in which these presents expressly provide to the contrary, no failure or omission by the Company in the observance or performance of any of the stipulations, agreements or conditions herein contained and on the part of the Company to be observed or performed shall give rise to any claim or demand against the Company or in any manner operate to the prejudice of the Company or be deemed a breach of this Concession if it be shown to the reasonable satisfaction of the Government that the default has arisen from any of the following causes, namely, the Act of God, insurrection, riots, war, strikes or combinations or lockouts of workmen not properly attributable to the improper acts or defaults of the Company or any other extraordinary or unforeseen circumstances which the Government may reasonably consider to be beyond the control of the Company.

31. ANY Disputes between the Government and the Company to be decided by the Courts of Palestine with the right of appeal in such cases as the Law permits, except disputes which are under Clause 24 to be referred to a recognised British Railway expert and disputes on technical matters which shall, on the application of either party, be referred for decision to an expert selected in case of difference by His Majesty's Principal Secretary of State for the Colonies, such expert's fees being paid by the Company. Disputes relating to immovable property in Trans-Jordan to be decided by the Courts of that country.

(In the final document the word "technical" must be defined with references to the clauses concerned.)

32. NO power to assign, lease, sublet or otherwise dispose of the Concession without previous consent of Government.

33. THE Concessionaire or the Company to pay all the usual and proper legal costs of the Government and the Crown Agents of and incidental to the agreement, the Concession, and all or any other matters, arising thereout or connected therewith, and any technical costs incurred with the previous consent of the Concessionaire.

34. ANY payments received by the Government under the Concession shall not be deemed to imply that the Government waives its rights in respect of any antecedent breach of the Concession.

35. THE person for the time being administering the Government of Palestine and acting as High Commissioner for Trans-Jordan shall as regards anything to be done or suffered by the Government hereunder be regarded as a principal and shall be deemed to be empowered to bind the Governments and to sue and be sued under the title of High Commissioner.

36. NO personal liability on High Commissioner, Crown Agents or any Government Official.

38. MARGINAL NOTES.

ARMENIAN RELIEF.

The annual meeting of the Friends of Armenia Missionary and Relief Society was held on May 9 in the Central Hall, Westminster, under the Chairmanship of Lord Radstock, the President. A sale was also held of work done by Armenian refugee widows and orphans.

Admiral Sir Richard Webb said that no nation had suffered through the Great War as had these Armenians. That nation had not only lost more than one-third of its people by starvation and massacre, but had been dispossessed of its fatherland and its only real home. To-day there were in Syria 85,500 Armenian refugees living in makeshift camps at Beyrout, Aleppo, and Damascus; camps which were put together in the most temporary manner by these refugees ten years ago. No sanitary preparations were then made, and few or none had been possible since. Their present condition was a menace both to the Armenian refugees themselves and to the indigenous population of Syria. The League of Nations for years had tried to remedy the problem and had launched in Syria a constructive agricultural and urban settlement scheme, which was now working and had commanded the financial support of the French Mandatory Power, as well as the favourable support of Near East experts.

The annual report included a list of funds received by the High Commission, which showed that the Lebanon Government contributed £24,000; British sources, £17,800; other sources, £10,173; and League sources, £4,094. Armenians themselves had given to the Erivan Settlement £100,000 and the Syrian Settlement £1,200, and had also promised to the latter a loan of £10,000.

INDIA HOUSE.

In reply to a question in the House of Commons last week, the Under-Secretary of State for India said that work on India House was commenced in February, 1928. A scheme for the decoration of certain portions of the building by Indian artists has been approved by the Government of India and it is understood that artists have recently been selected in India for a preliminary course of study in Europe. Details of the manner in which the work will be executed, Lord Winterton added, have not yet been settled and he was unable to make any definite statement as to when it is expected that the building will be finished.

NEWS IN BRIEF.

A fire at the Piræus has done damage estimated at 15,000,000 drachmæ (£40,000).

The Turkish Ministry of the Interior has decided that according to the law Turkish women may vote at municipal elections.

It is reported from Teheran that the earthquake of May 2 opened a fissure 24 miles long and 9 ft. wide.

The celebrations began in Bucharest on May 10 to commemorate the tenth anniversary of the Constitution of Greater Roumania.

Dr. Aly Bey Ibrahim, F.R.C.S., has been appointed to succeed the late Dr. Madden as Dean of the Faculty of Medicine in Egypt.

Inayatullah Khan Samiyre, Mozaffar-ed-Dowleh, Under-Secretary in the Ministry of Education, has been appointed Persian representative in Iraq.

Sir Austen Chamberlain has given notice under Article II. (2) of the Persia Order in Council, 1928, that the jurisdiction of the British Consular Courts in Persia should terminate on and after May 10.

It is officially stated that the services of one Indian, with special qualifications, are at present utilised by the Empire Marketing Board for occasional lecture purposes.

The Dowager Queen Marie of Roumania and Princess Ileana returned to Bucharest on May 6 after spending six weeks abroad, chiefly in Spain.

Habib Pasha es Saad and the Lebanese Cabinet resigned on May 9 after being defeated in the Chamber. A general election is expected.

Herr Rudolf von Kardorff, the new German Minister to Greece, was received in audience by President Konduriotis in Athens on May 8, and presented his Letters of Credence.

Dr. Taha Hussein and Abdel Hamid Abadi Effendi will represent the Egyptian Government at the Congress of Spanish History which is to be held at Barcelona in the autumn.

A Royal Decree has been issued appointing M. J. Eeman, of the Antwerp Court, and Maitre A. Marvis, lawyer of the Mixed Courts of Appeal, as judges of the Mansoura Mixed Tribunal.

Forty-five British public school boys, who are returning from Australia, landed at Suez on May 7 and motored to Cairo, where they spent the day. They had tea at the Residency, and rejoined the ship at Port Said the following day.

The Financial Commission of the Turkish Grand National Assembly has decided that the proposed tax on Turkish bachelors cannot be imposed. Instead, it is planned to grant aid to parents of large families.

Air Vice-Marshal Sir Sefton Brancker, Director of Civil Aviation, arrived at Croydon Aerodrome on May 7 on his return from Athens, where he has concluded negotiations for the permanent operation of the Imperial Airways London-India Air Mail route across Greek territory.

The Shah of Persia has given 7,000 tomans (£1,400), his son the Valiahd 3,000, and the Soviet Embassy 5,000 to the relief fund for the victims of the earthquake in Khorasan. A Red Crescent mission has arrived in the afflicted area from Ashkabad to assist the Governor-General, who is already distributing relief.

As a result of King Tafari's successful negotiations, five Abyssinian monks left Addis Ababa on May 10 with a delegation headed by Nagadras Seleke, Finance Minister, for Cairo. They will be consecrated Bishops by Mgr. Yonnes XIX., Coptic Patriarch of Alexandria.

Dissatisfied with the Roumanian Government's attitude to the "Green Guard" organisation in Transylvania, M. Bratianu has announced that the Liberal Party will withdraw its confidence in Dr. Maniu's Cabinet, and will prepare its campaign to overthrow him, to begin when necessary.

THE WEEK AT HOME

London, Tuesday Morning.

"Who Goes Home?"

Parliament is dissolved and from May 10 to May 30 we consequently are, according to my recollection of Rousseau, a really free people. After that, we shall, of course, be represented again, or mis-represented, as the case may be.

The last scenes at the dissolution were quite affecting, because, in spite of its frequent fatuity and the common notion of it as a farce, Parliament does form friendships which often enough are permanently upset by the fickle electorate. There is, as G. K. Chesterton found, pregnant rhetoric in the historic cry: "Who Goes Home?"

And a voice valedictory . . . Who is for Victory?
Who is for Liberty? Who goes home?

The White Paper on Unemployment.

Considerable surprise has been expressed over the week-end at the Government's producing as a White Paper the official Conservative answer to Mr. Lloyd George's plan for the cure of unemployment. It is issued formally under the ægis of the Chancellor of the Exchequer, the Minister of Labour, the Minister of Transport, the Postmaster-General, and the Minister of Health. But ought what is in essence a party document to be printed at public expense?

It certainly seems strange. Of course the Conservatives were extremely annoyed at the Liberals' presumption in asserting that the permanent officials were very favourably inclined to Mr. Lloyd George's scheme. And I suppose that they could protect themselves by saying that, whereas Civil Servants cannot reply to this Liberal presumption, it is the manifest duty of Ministers to protect the reputation of the permanent officials. One has the uncomfortable feeling, however, that this precedent may prove to have been a bad mistake.

Admittedly, it was the duty of the Government to ask the various Departments which would be affected by the Liberals' Unemployment proposals for their opinions on the scheme; but it is impossible to segregate in the White Paper the official Party opinion in this matter from the opinion of the permanent officials.

One thing is obvious, however: that Mr. Lloyd George's scheme, however impracticable it is considered by his opponents, is recognised as having struck the imagination of the public, and as being worthy of such ostentatious refutation.

Political Tempers.

At the moment it looks as if this General Election might be one of the most equably contested in history, owing largely, one supposes, to the general public indifference. Few tempers have yet been lost, and discourtesies have been very seldom manifested. What spite there is seems to be being vented on the Liberals, who in the opinion of both Conservatives and Labour Party are maliciously endeavouring to prevent a clear majority either way. For instance, Mr. Winston Churchill, whose calmness has not yet attained a monumental degree, bitterly attacked Sir John Simon the other day, but it did little harm to the head of the India Commission.

On this point of desiring a clear majority Mr. Baldwin and Mr. MacDonald are at one. Neither wishes to be in a position at the end of the Election where a stab in the back from the Liberals is possible. In spite of this expressed desire, however, it is evidently in many people's minds that this is what will occur. In which case, national politics will lose stability, business will go down from the uncertainty, in fact the whole country will suffer from a period of frequent elections.

A Novel Insurance.

There are over 1,700 candidates for 615 seats at the General Election. Some of these are stared in the face by defeat; they are putting up mainly for experience and reasons of party expediency. But defeat, either feared or anticipated, is the inevitable lot of many more, and it is for this latter class that an ingenious form of insurance has been devised.

A plan has been evolved at Lloyd's whereby not only the risk of forfeiting the deposit money will be covered, but the defeated candidate may also recover expenses up to £1,000. What the insurance brokers need to know is: the total electorate, the result in the constituency of the four previous elections, whether the candidate has previously stood, and if so, with what result. Armed with this knowledge, the brokers are prepared, except in the case of absolutely forlorn hopes, to offer terms, which will naturally vary for different districts and different men.

Among the Liberals, I should imagine, there should be very considerable interest displayed in these insurance proposals—unless all expenses are to be paid out of the Central Fund. But what an amazing development there has been of the insurance business in the last few years!

Sport.

Hagen has walked off with the Open Championship at golf once again. His game was nothing less than superb. We had no sooner finished chuckling at the record gained by the Englishman Alliss, in going round in 69, than this equable American "goes and does it" in 67! Really there was something Homeric about his win: his standard was almost unapproachable.

Great Britain, after raising hopes by winning the Ryder Cup, drank deep and bitterly in the Open, in which America gained the first three places. Of course, one way of regarding it is to say that the Ryder Cup achievement was all the greater because of the manifest merit of the Americans . . . but not many people are looking at it in that light.

In Cricket, the chief topics have been the new rules for the Counties (wider and taller stumps and a new ruling in l.b.w.), the rain-affected wickets, and the form of the South Africans. The larger wickets seem as yet to have made little difference, but there have been one or two cases of batsmen first snicking the ball and then being given out l.b.w.

The South Africans, who must be appalled by our wintry May weather, have made a quite fair start. Obviously their fielding is to be their strong point; their bowling seems varied enough; and their batting, though not quite strong enough to score 400 in a second innings to defeat Surrey, has possibilities almost to No. 10. With sunshine and faster wickets, they should at least be a match for the strongest counties—possibly stronger. **ALTER-EGO.**

PERSONAL AND GENERAL

TO-DAY

May 16, 1929 (New Style).

May 3, 1929 (Old Style).

Dhulhijja, 6, 1347 A.H., of the Muslim Calendar.

Iyar 6, 5689, of the Jewish Calendar.

Sir Kay and Lady Muir arrived in London on May 10 from Sicily.

Sir Hugh and Lady Stephenson arrived at Marseilles on May 10 from Bombay.

The Maharaja of Rewa has arrived at the Esplanade Hotel, Frinton-on-Sea.

General Sir John and Lady Shea have arrived at 101, Ebury Street from India.

Mr. and Mrs. Claude Macdonald have returned to 76, Lancaster Gate from Egypt and Italy.

Lady Noble has returned from her trip to Palestine, and has gone to Ardkinglas, Inverary.

Lady Strickland arrived at Plymouth on May 9 in the P. and O. s.s. Rawalpindi on her return from Egypt.

The Hon. Florence McNaghten left Marseilles on May 10 in the P. and O. liner Maloja on her return to Bombay.

Sir Binod Chandra Mitter made affirmation as a member of his Majesty's Most Honourable Privy Council on May 7.

Dr. Hafiz Bey Affi, Egyptian Minister for Foreign Affairs, having concluded his visit to London, left on May 11 for Paris.

Lady Schuster left London on May 9 for Marseilles, where she embarked in the P. and O. liner Maloja on her way to Bombay.

M. Titulescu, Roumanian Minister, left London on May 7 for Berlin, having been invited to address the German Reichstag.

Captain and Mrs. Ernest Platt left London last week for Rome en route to Bucharest, to attend the International Agricultural Congress.

Viscount Inchcape left London on May 13 for Paris to attend the meeting of the Suez Canal Company, returning to London the following day.

At Oxford, Mr. S. R. K. Glanville, M.A., Lincoln College, was elected on May 9 to the Laycock Studentship in Egyptology at Worcester College.

Dr. A. B. Cook has been appointed to represent Cambridge University at the 50th anniversary of the Society for the Promotion of Hellenic Studies on June 24.

SITUATION REQUIRED.

AN ENGLISHMAN, well educated, desires position in Egypt. Good organiser and supervisor; also experienced in commercial travelling, would undertake management of club or hotel; wife (who has vast experience) willing to assist if desired. Age 34, height 5ft. 11ins., please write; H L., Box 135, "The Near East and India," 170, Strand, W.C.2.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE, Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

Nashaat Pasha, Egyptian Minister in Berlin, paid a short visit to London last week.

Mr. Harold Wynne, Director of Posts and Telegraphs in the Sudan, is representing that country at the Universal Postal Union Congress.

The Prince of Wales received at St. James's Palace on May 8, on behalf of the King, Major W. H. Oxley, upon his appointment as His Majesty's Military Attaché at Belgrade.

The Duke and Duchess of York received the Iraq Minister and Madame Jaafar at 145, Piccadilly on May 6. Their Excellencies had the honour of being received by the Queen at Buckingham Palace on May 9.

At a dinner party given by the Prince of Wales at St. James's Palace on May 10, his guests included the Turkish Ambassador and Madame Ferid Bey, and Field-Marshal the Lord and Lady Plumer.

Viscountess Elibank opened the Saroj Molini Dutt Memorial Association Indian Bazaar, in aid of the Women's Institute Movement in India, at the Lyceum Club on May 14. Lady Sinha will open the bazaar on May 18.

Hassan Mazloun Pasha, Director-General of the Administration of Egyptian Posts, is the chief Egyptian delegate at the Universal Postal Union Congress now being held in London. He is accompanied by Rofail Sidham Bey, Chef du Service International of the Egyptian Posts.

Prior to the Court which the Queen held at Buckingham Palace on May 9, her Majesty received his Highness Sultan Sir Mahomed Shah Aga Khan, and the Aly Khan (and Sao Kin Maung, Sawbwa of Mongmit). Lieutenant-Colonel Stewart Patterson, Political Aide-de-Camp to the Secretary of State for India, was in attendance.

Professor Sir Flinders Petrie, F.R.S., F.B.A., will give a public lecture on Recent Discoveries by the British School of Archaeology in Egypt at Beth-Peleth, Palestine, at University College, London on Thursday, May 23, at 5.30 p.m., and on Saturday, June 1, at 3.0 p.m. The lecture will be illustrated by lantern slides. It is open to the public without tickets.

The death occurred on May 12 in Sofia of Constantine Minkoff, Secretary-General to the Bulgarian Ministry for Foreign Affairs.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Question of Tariffs.

The problem of tariffs has again come up for discussion at Geneva. It will be remembered that the Economic Conference of 1927 made certain recommendations, the effect of the translation into action of which by the countries concerned would have gone far to free trade from the handicaps to which it is subjected. Developments since 1927 have shown clearly how far many countries are prepared to go in the direction of the reduction of tariffs. Here and there there have been concessions, and in a few Near Eastern countries considerable reductions have been made in tariffs, but what has been gained in this direction has been more than counterbalanced by measures taken in the opposite direction, and it has been made fairly clear that a protective tariff is regarded by a number of countries as a legitimate instrument not merely for the protection of existing industries, but also for the development of industries for which most or all of the raw materials are lacking—industries, in fact, which could not possibly exist without the assistance given to them by the tariff. And the protective process is going on. Turkey, for instance, as I have already pointed out, is framing a new tariff in which the duties will be considerably increased for the purpose of the protection of such industries as can be developed in the country. It is obvious that industrial expansion in the case of a country like Turkey must be somewhat circumscribed by a variety of factors; it is equally clear that that consideration is not likely to carry much weight when it comes to drawing up a tariff. The question of tariffs came up for discussion at Geneva before the Consultative Economic Committee of the League, and the question was raised as to the manner in which official and general public interest may be stimulated in the recommendations of the Economic Conference. An interesting contribution to the discussion was that of M. Loucheur, the French Minister of Labour, who pointed out that Europe is in the position of a continent divided against itself, and he expressed the opinion that if this state of affairs continued for another ten years there would then be higher Customs barriers than there are now. No one who has followed recent developments can doubt that that is likely to be the case.

The White Nile Dam Scheme.

As I pointed out last week, it is the White Nile Dam Scheme which will be immediately affected by the Nile Projects Agreement. The objects for which the construction of this Dam is desired are the provision of a reservoir for increasing Egypt's summer water supply and to provide for the storage of the waters of a high flood until they can safely be allowed to pass along the river. The effect of a dam on the White Nile will be that it will be possible to restrict the flow of the Nile to the waters of the Blue Nile, reserving the White Nile waters until they are actually required. This means that the danger of flooding at periods of high Niles will be obviated. The Nag Hamadi Barrage, which is now in process of construction, is an essential preliminary to the construction of the Dam, as the restriction of the White Nile discharge during the flood period makes it necessary to provide for the raising of the Nile level and thus make possible the filling of the basins in any flood.

Effects of the Dam.

It is anticipated that the Dam will have an important

influence on developments in the White Nile Province. The land at present watered by the Nile in that province is not of the quality of that in the Gezira, but the land higher up is relatively good, and while land now cultivated will be submerged as a result of the construction of the Dam, it will be possible to bring the better land under cultivation. It is estimated, indeed, that the raising of the reservoir level will permit the irrigation by flood of much larger areas than the present population could put under crop. I have already touched on the immediate utility of the Dam to Egypt in the provision of a summer water supply, which will permit the cultivation of a large additional area. Important as the Dam will be to-day, it will only reach its fullest usefulness when the other works higher up the river have been constructed—the by-pass through the Sudd region and the Lake Albert Dam. That, of course is a matter of the distant future, and it is mentioned merely to show that the various Nile projects are not isolated enterprises, but are all part of a carefully drawn up plan, the ultimate result of which will be that Egypt and the Sudan will be able to make use of the full resources of the stream which has been the source of life in the Nile Valley from the earliest times.

The Greek Internal Loan.

The credit of no Near Eastern country stands higher on the London money market than that of Greece who has found it comparatively easy to raise loans here for her various requirements. The proposal has now been put forward that the Greek 8 per cent. Internal Refugee Settlement Bonds should be introduced on the London Stock Exchange, and it is understood that it is desired that they should be introduced also on one of the European Exchanges. This loan came into prominence last year over the proposal of the Greek Government to reduce the rate of interest, a project which rightly came in for strong criticism on the ground that it would adversely affect the country's credit and was promptly dropped when the authorities perceived its real incidence. The bonds stand at about 91, at which rate they give a very good yield, and as the possibility of a reduction of the interest no longer exists there is no reason why there should not be a good demand for them.

NOTES FROM YUGOSLAVIA.

*(From Our Own Correspondent.)**Belgrade, May 9.***Competition for Concessions.**

Whether it is owing to the advent of the new Government with its increased stability and absence of party differences or to the tardy recognition by the investing world that Yugoslavia with her vast undeveloped resources, great mineral and agricultural wealth, and virile people is an excellent subject for their attention the spring has brought great activity among foreign financial groups seeking concessions, contracts, and investments in this country.

A Rothschild Loan.

A few days ago an agreement was initialled in Belgrade between the representative of the Rothschild group of banks and the Yugoslav Government, subject to the approval of the principals in London, whereby this great financial group agrees to discount fifteen million dollars' worth of the bonds of the Swedish Match Trust loan which was recently secured in return for control of the Match Monopoly in Yugoslavia. It is understood that the rate of discount is $7\frac{1}{2}$ per cent. and that the money will be used to stabilise the dinar, already quite stable in practice for over three years, but threatened somewhat by the fall in the stock of foreign currencies held by the National Bank, and used for intervention purposes when any tendency to fall showed itself. It will also allow the Government to proceed with certain large construction works which were held up for lack of the necessary financial resources. It is believed that this is the forerunner of a much larger loan which the group intend to offer to this country in the spring.

Belgrade Power Station Tenders.

Several British tenders have been received for the contract for the building of a new electrical generating station in Belgrade. There is very keen competition for this contract, and it is believed that it will be given, other things being comparatively equal, to the firm which offers the best credit terms.

French Capital Active.

French capital is exceedingly active here. Not long ago the French secured the concession for the development of the water powers of the rivers Krk and Cettina in Dalmatia, which, at the end of the War, were taken over by the Italian company "Sulfid." The Italians failed to make use of their concession, and have now been persuaded to sell out to this French company, which takes the name of "Sufied." In return for the sole rights of exploitation for 50 years the company has to guarantee to raise the production of electric power from its present level, 110 million kilowatt hours, to 550 million kilowatt hours in three years' time and at least 900,000,000 within ten years. During this time the company undertakes to invest in this country at least 450,000,000 francs, which will be devoted to the development of the chemical industries already established in Dalmatia, and producing nitrates, calcium carbonate, phosphates, and other valuable products for agricultural and industrial use, and for founding an aluminium industry. Not only will Yugoslavia benefit by the electrification of the Dalmatian coast, and perhaps of the greater part of her railway system, and the great supply of cheap power, but the company undertakes to employ only local labour, which means that the young men of this beautiful but barren coast will no longer be forced to emigrate. It is estimated that at least ten thousand workers will be directly employed by the company within the course of a few years. The French have also secured the contract for the draining of the Panchievo swamp. This will increase the cultivable land of the country by nearly 1 per cent., will make the building of the Belgrade-Panchievo railway far easier and less expensive.

PALESTINE EXHIBITION AND WEST END FAIR.

The opening ceremony in connexion with the first day of the Palestine Exhibition and West End Fair, held on May 13 and 14 at Queen's Hall, London, was performed by Field-Marshal Lord Plumer. Lord Melchett was in the Chair and was supported by Field-Marshal Lord Allenby. Lady Allenby and Lady Plumer were also present on the platform.

In his opening speech Lord Melchett spoke of the objects of the Exhibition and Fair. As to the economic future of Palestine there could be, in his opinion, no question, but there might be some doubt as to whether the Jews would be in time to make the most of their opportunities. Jewish settlement in Palestine, unlike settlement in most countries which implied large grants of land, had to be carried through by means of the purchase of every single dunam. The Jewish National Fund existed for that purpose, and it had been responsible for the purchase of over 75,000 acres. If land were not bought rapidly enough, they would find that it had passed into the possession of those who were no longer willing to part with it. Non-Jews were becoming impressed with the economic possibilities of Palestine, situated as it was on one of the important highways of the world. For this reason it was essential that the money at the disposal of the Jewish National Fund should be replenished, and he appealed to all those present, and those who would yet attend the Fair, as well as to the Jews throughout the world who would not be able to attend it to help the Fund. He himself had given £15,000, and he mentioned it only to encourage others to give as they could.

Before declaring the Exhibition and Fair opened Lord Plumer spoke of the pleasure that it gave him and Lady Plumer to be present that day, as it recalled vividly the three happy years they had spent in Palestine. The present satisfactory state of affairs in the country he attributed in large measure to two factors: public security

EGYPTIAN GOVERNMENT.**THE ASWAN DAM**

THE EGYPTIAN GOVERNMENT intends shortly to invite tenders from contractors for the further thickening and heightening of the Aswan Dam. The work comprises the building of about 400,000 metres cube of masonry and concrete and other works.

The drawings, contract and specification are now being drawn up, and will be obtainable early in June this year either from the Reservoirs Department of the Public Works Ministry, Cairo, Egypt, or the Consulting Engineers, Sir M. MacDonald and Partners, 72, Victoria Street, London, S.W.1. The exact date will be advertised later.

These documents will be obtainable upon payment of twenty Egyptian pounds (£E20) and after making a deposit of five thousand Egyptian pounds (£E5,000) in cash. A further deposit of two per cent. (2%) of the amount tendered less the above-mentioned £E5,000 will be payable on submission of tender: the said deposits to be held as a guarantee of the good faith of tenderers. Full detailed conditions as to these deposits will be obtainable from a memorandum to be attached to the contract documents. The two per cent. deposit will be returned within 3 months of the adjudication to unsuccessful tenderers.

This preliminary notice is made so that interested contractors may make such arrangements as they think fit for the inspection of the site of the works at the very earliest date possible to them after the receipt of the contract documents, especially as it may be impossible after the 20th June, owing to the annual rise of the River, to see the foundation into which the thickening work will enter.

NOTE.—One Egyptian Pound (£E1) = £1 os. 6d.

that had been established and the marked diminution of racial differences. It would not be true to say that all racial differences had been eliminated, and that would not be the case for many years to come; but racial antagonism was no longer in the forefront of the lives of the people and they had come to realise that they could both live in the same country, and that the more they worked together and loyally co-operated the greater the advantage to them all as Palestinians as well to them individually. A third feature of the work of the British administration of Palestine was the increased facilities of transport and increased communications. What was now needed was greater facilities for oversea transport, and these would be provided by the developments at Haifa, referred to by Lord Melchett. Lord Plumer then declared the Exhibition and Fair open.

Lord Allenby stated that he had been asked to support Lord Plumer, but as he had learned from knowing him over a long period, and as his appearance on the platform had shown, if there was one thing that Lord Plumer never needed, it was the support of any one else. For himself he could not claim to have taken any part in the building of the Jewish National Home, but possibly he had assisted in digging the hole in which the foundations had been laid. His task that day was to move a vote of thanks to Lord Plumer and to Lord Melchett in taking the Chair.

The vote of thanks was seconded by Mrs. Dulcie Sassoon, Chairman of the Executive of the Exhibition, and the gathering then proceeded to the more serious business of the day, the inspection of the Exhibition and the purchasing of goods from the stalls.

The objects for which the Exhibition has been held is to demonstrate by a display of the products of Palestine the progress which the country has made since Great Britain took over the Mandate, to promote Palestinian industries and to develop trade with Great Britain, and to raise funds for the Jewish National Fund. Those who visited the Palestine Pavilion at Wembley were agreeably surprised by the wealth and quality of the commodities which Palestine produces. In the period which has elapsed since then a great advance has been made, and in no direction has this been more noticeable than in the broadening of the basis of the country's industries. The fruits of this were to be seen in this week's Exhibition where the range of exhibits included grapefruit, lemons, honey and preserves, tobacco, pottery and glassware, knitted goods, lace and embroidery, leather ware, lingerie, marble and cement ware, etc. This list, which could be considerably extended, is sufficient to show the extent of the field now covered by the industries of Palestine. The production of the Jaffa orange has ensured a very considerable trade with Great Britain in the past; the exhibits showed that there is scope for extension of commerce in a number of directions. The Jewish National Fund is, of course, one of the chief factors in the progress of Palestine to which the Exhibition paid such eloquent testimony. It buys land for permanent Jewish settlement, and reclaims it. So far it has purchased about 75,000 acres, and has settled some 15,000 Jews on it. The value of the work done by the Jewish National Fund in this direction speaks for itself, and it is anticipated that one

result of the Exhibition will be to give a substantial further impetus to this important movement for Jewish settlement. A notice of the Exhibition would be incomplete without reference to the original full size reproduction of the mosaics of the Synagogue flooring discovered at Beth Alpha. This was only one of the features of the Art Section of the Exhibition which contained a number of most interesting exhibits from various private collections. There is only one criticism that can be passed, and that is that it was a pity that the Exhibition should have been open only for two days. A wealth of wonderful organisation went to its preparation, and one could give no higher praise to the large number of helpers responsible for it than to say that a week would have been none too long a time to give London an opportunity of visiting Palestine in miniature.

On the second day the opening ceremony, which takes place as these pages go to press, was performed by Lord Cecil of Chelwood, with Sir Hugo Hirst in the Chair, supported by Lady Waley Cohen and Sir Meyer Spielman.

During March 4,679 tons of locust beans were exported from Cyprus, reducing the stock of locust beans in the island to 17,012 tons.

The Ionian Bank announces an interim dividend at the rate of 6 per cent. per annum (3s. per share), free of tax, for the half-year ended February 28, 1929, payable on and after June 4.

His Majesty's Stationery Office has published the 61st number of the Statistical Abstract for British India (Cmd. 3291), price 4s. net. This is the sixth number of the new series.

The East Indian Railway is carrying out surveys with a view to laying new broad gauge lines from Son East Bank to Patna Junction, a distance of 75 miles, and from Bindhki Road to Mutuar, 24 miles.

The traffic receipts of the Egyptian Delta Light Railway for the ten days ended April 20 amounted to £E8,280, making the total from April 1 £E17,037.

The traffic receipts of the South Indian Railway Company for the thirteen days ended April 13 amounted to Rs.23,77,645, as compared with Rs.23,33,377 for the corresponding period of the previous year.

The *Notiziario Ortofrutticolo*, of Rome, in a report on the situation of citron crops in Greece, states that in spite of the damage caused by frost, which is estimated at 20 per cent., the Patras crop will be about the same as last year, viz., 70 tons, as the production from new plantations will compensate for the loss referred to above. The Candia crop, which is much more important, is estimated to have been damaged to the extent of 15 per cent., but the loss will be mitigated to some extent by the production from new plantings. Last year's crop amounted to 2,200 tons, and exports went mainly to Italy, Germany, United Kingdom, and United States.

AGRICULTURAL BANK OF BULGARIA

Head Office — SOFIA — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

PUBLIC SECURITY IN EGYPT.

*(Continued from page 602.)***The New System of Ghaffir Service.**

We mentioned in last year's report that the system of guarding has many faults and that it cannot be reformed unless it is completely changed. We also pointed out that the only remedy to this state of affairs is to dispense with part of the actual Ghaffir force and replace it by reservists, who should wear uniform and be under military control, and who should be paid out of the wages of the discharged ghaffirs. This force should be charged with the duty of night patrolling in the agricultural roads, and be exempted from day duties, so that it can carry out its night work in a more satisfactory way.

We also mentioned in our last year's report that it had been decided to carry out this proposal, and that a start had actually been made; as a trial, at Giza Mudiria in the latter part of September 1927. A sufficient time has now elapsed since the beginning of the trial, and we, guided by the reports which have been received to this effect from the Governors of Giza and Qaliufia, must now mention the different stages through which it has passed, and the effect it has produced on public security.

The first condition required by this system was to ascertain the number of ghaffirs who could be dispensed with so that they might be replaced by men from the reserves. After the matter had been discussed by the Ministry and the Mudiria, it was decided that the proportion should be 18 per cent. of the total number of ghaffirs in the Mudiria after deducting the ghaffirs of ezbas, motor-engine pumps, out of the way buildings, and telephone workmen. In deciding upon this proportion care was taken not to weaken the remaining ghaffir force charged with the duties of guarding in the villages. In fact, the ghaffirs replaced were those originally taken from the villages for the purpose of guarding farms and public roads. But although the proportion in itself was moderate, it was decided at the beginning of the application of the system that the replacement should not be made all at once, lest it should have a bad effect on the state of public security. The replacement, therefore, was effected in three stages, the last of which was in July 1928.

The new force was drilled on the public square, where ghaffirs are usually drilled, and was subsequently distributed amongst the markazes in the proportion of the number of the discharged ghaffirs in every markaz. Care was taken that none of them should be posted to the markaz to which their village belonged, so that individuals should have no connexion with friend or relation, which connexion might affect their honesty. On the other hand, each was posted in a Markaz not far from his native village so that his travelling expenses, when he had to go back to his village, should not be great.

The result of the distribution of the force was that each markaz and police post was allotted ten men forming two patrols, each patrol consisting of five men headed by a non-commissioned officer. The police posts were only allotted five men each, forming one patrol only. Markaz El Saff, however, was treated exceptionally. Owing to the small number of ghaffirs discharged in it, on the one hand, and to the numerous police posts existing in it, on the other hand, patrols of only four men, one of whom was a N. C. O. were posted to it.

The total number of the force thus created amounted, according to the latest reports to 150 men, made up as follows: 1 shawish, 25 ombashis, 2 ombashis (hon.) 2 wakil ombashis, 120 men. An officer with the rank of Sagh (Major), of the army officers at the Ministry, was given command over this force. It was decided to make the uniform of the force of a military type, so that it should resemble that of the police, and be distinguished from that of the ghaffirs, and so that its members should have a higher prestige in the eyes of the public. Brass plates were also provided for the men, on the model of

those carried by the police and with a slight difference in form.

Duties of the Force.

The main work for which the force was created was to patrol the agricultural zones, public roads, and other places outside the inhabited areas and ezbas. In this way the force is primarily responsible for the maintenance of security in all those zones. Its men are not charged with any day duty except in the most urgent cases, and, at any rate, they are not allowed to do any work that has no connexion with the maintenance of public security. The programme of the daily duties of the forces is left to the Mamours in the markazes and to the officers of the police outposts, who lay down, each in his own zone, the schedule of the patrols. But before the patrol starts on its beat, one of the officers inspects it to make sure that it is complete as to number and arms, and it is supplied with strong electric torches for use in time of need.

It is the duty of these patrols, when passing through a village or an ezba, to record their passage in the inspection note-books, and to obtain information about suspects and those under police supervision. It is not, however, the duty of patrols to inspect the ghaffirs, but persons in charge should write down whatever they may notice in the course of their beats and, on their return, submit it to their chiefs at the markazes and police outposts. Besides the above patrols, it has been found advisable, in order to make the inhabitants, and particularly criminals, feel the existence of this force, to make them parade as a whole once every two weeks and march for an hour at least through the market of the capital of the markaz, and to return at the end of the day to patrol a beat in the roads leading to the villages, at the time of the return of the inhabitants to their villages, so as to guard them, their cattle, and their belongings.

It is now possible, owing to this new system, to send out organised patrols continuously and on a large scale; such patrols consisting of men devoted exclusively to this type of work. In the past these patrols were composed of village ghaffirs who were usually exhausted by the services demanded of them in day time, or by their own private jobs. No better evidence of this can be given than by comparing the number of beats carried out by this force through villages and ezbas this year with those of last year, i.e., 34,228 as against 28,782, an increase of 5,446 beats or 18.9 per cent. It is noteworthy that the men of this force were often able to respond to cries for help in serious cases and that during their beats they often apprehended individuals who proved to be suspects.

The Guarding System in the State Railways.

The task of guarding, in the Railway Administration, was, up till 1920, left to irregular guards appointed and controlled by the Administration in a way that was not troubles of 1919. The thefts were not only confined to them. The Administration of Public Security had no control at the time over this system, which experience had proved to be inefficient in preventing or discovering thefts which had increased to such an extent in the past that the Administration paid in 1920 more than £E50,000 in indemnities, exclusive of the sums paid during the troubles of 1919. The thefts were not only confined to merchandise sent by rail and for which the Administration was responsible, but also included a great deal of railway materials and passenger personal effects for which no indemnity was payable.

This state of affairs made it necessary to devise a special

JOHNSTON LINE**Mediterranean, Black Sea and Danube.****REGULAR SAILINGS from:**

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Rates of Freight, Insurance and other information apply to:

**JOHNSTON LINE, LTD., 6 Billiter Street, London,
86, Cross Street, Manchester.
and FURNESS, WITBY & CO., Ltd., Royal Liver Building, Liverpool**

system for guarding, compatible with the importance of the indemnities which the Government had had to bear. A special Railway Commandant's Bureau was therefore created which was charged with the duty of organising the guarding system in the different branches of the Railway Administration. The system was put in force in 1921. It divided the Railway Command's field of action into six following sections: (1) Cairo Section, with Cairo Station as centre, and including the Governorate of Cairo, and the provinces of Giza, Qauiubia, Fayum, Beni-Suef up to Wasta Station, and Beheira up to Khatatba. (2) Lower Egypt Section, with Tanta as a centre, and including the two provinces of Gharbia and Menusia. (3) The Eastern Section, with Zagazig as a centre, and including the provinces of Sharkia and Dakahlia, and the two governorates of Suez and Canal. (4) The Gabbari Section, with Gabbari Station as a centre, and including the Governorate of Alexandria and the rest of Behera province. (5) Minia Section, with Minia as a centre, and including the zone between Wasta and Tama. (6) Sohag Section, with Sohag as a centre, and including the zone between Tama and the end of Upper Egypt.

The forces were distributed among the said sections, and the result of the system was that in the Budget of the following year the indemnities were reduced from £82,500 to £33,000. The improvement continued in the years that followed. The indemnities paid by the Railway Administration decreased gradually until, in 1927-1928, they reached the sum of £459 as against £50,377 in 1919-20; i.e., a decrease of 99.09 per cent. It is noteworthy that the thefts committed in later years were of articles of insignificant values, for the thefts numbered, in 1928, 536; and the total indemnities paid amounted to £459, viz., an average indemnity of 856 millimes per theft, as against 787 thefts in 1921-1922, whose indemnity amounted to £9,021 or an average of £11.541 for every theft.

The object of the creation of the Railway Commandant's Bureau was to organise the system of guarding in the different branches of the State Railways, to prevent thefts in them, and to trace thefts which actually occurred. Later on, it was considered advisable to utilise the new bureau to the furthest limit of its geographical competence. It was therefore charged with the following duties: (1) To confiscate arms and articles prohibited by the law. (2) To draw up *procès verbaux* and register complaints.

It was not the duty of the Railway Commandant's Bureau to investigate crimes that were committed within the zones of their competence excepting in the absence of the judicial Zabt authorities of the Administration or of the Parquet. But it was noticed that many of the inquiries carried out by the officers of the Railway Commandant's Bureau were filed for lack of evidence without notifying the police or the Parquet. The statistics of crimes of the two authorities were therefore incomplete, and the Administration of Public Security issued instructions on July 10, 1927, requesting that all communications received by the different sections of the Railway Administration regarding thefts and other crimes committed within the zones of their competence should be registered immediately in the "Information Book" and in register No. 17. The Judicial Officers and their assistants now carry out the necessary inquiries and send the *procès verbaux* to the local police authorities for registration. The instructions require also that every section of the Railway Commandant's Bureau should be in close touch

with the local police so as to tighten the control over criminals having antecedents of thefts from railways. In this way they may be carefully supervised.

From an examination of the various duties with which the men of the Railway Commandant's Bureau are charged it has been found that the need is very great for increasing the number of officers. The Ministry will study this question in the near future, especially as, according to the latest instructions, the officers of this Bureau are charged with investigating all cases, which necessitates their frequent absence.

Besides the lack of officers, it must be pointed out that the number of regular ghaflirs provided for guarding purposes is far less than what is required. Guarding has therefore been only extended to 111 of the most important stations out of a total number of 447 stations. The guarding of goods trains has only been extended to forty trains per day, whereas a much greater number leave the different stations every day unguarded. Statistics prove that against 17 thefts which took place in 1927 in guarded trains, there were 244 thefts in unguarded trains. Moreover, in view of the fact that the pay of civil policemen in the lowest grade at the Railway Commandant's Bureau is not proportionate with the importance of their work, especially if we remember that by the very nature of their posts they are exposed to various temptations, it has been considered advisable to demand the increase of their pay to bring it up to a level compatible with the extent of their responsibilities. The demand has been inserted in next year's Budget proposals.

Traffic Control.

One of the results of the increase of motor vehicles and their wide use has been the increase of traffic within the last few years, both in the governorates and the Mudirias. This increase is causing great anxiety. The number of motor cars, motor cycles, and carriages in the two governorates of Cairo and Alexandria in 1914 was 19,507, and in 1928 it rose up to 55,995. The total number of these vehicles in 1924 was 43,655, and in 1928 it reached 76,766. This enormous increase, together with the insufficiency of the number of traffic policemen, have caused many accidents resulting in death or injuries.

The number of deaths caused by drivers' negligence or recklessness reached 413 this year, as against 365 in 1927 and 292 in 1926, i.e., an increase of 48 this year and 121 last year. Unintentional injuries amounted to 5,813, as against 4,893 in 1927 and 3,587 in 1926, an increase of 920 cases over those of last year and of 2,226 over those of the year before. The number of cases considered accidents reached 1,141, as against 924 in 1927 and 857 in 1926, viz., an increase of 217 for this year and of 284 for last year.

This state of things led the Ministry to study the matter very carefully, and, as a remedy to safeguard life, certain measures were adopted to regulate traffic in the capitals of the provinces and on the main roads which connect the different parts of the country. A sum of £15,137 was provided in the 1928-1929 budget for two traffic bureaus, one for Lower Egypt, with Tanta as a centre, and the other in Upper Egypt, with Assiut as a centre. The bureaus were to examine motor cars technically, issue permits, keep special records, and establish a special force for the control of traffic in the provinces.

As the present law governing motor vehicles, and dating back to 1913, was legislated at a time when the use of motor cars had not assumed its present dimensions, motor cars not being then one of the important means of conveyance that they are now, the Ministry of the Interior appointed a committee to lay down the project of a new law envisaging all the conditions necessary to ensure the safety of the public, and which would be compatible with the recent developments. The committee has carried out its duty and submitted a project of the law which is now being studied by the General Assembly of the Mixed Court of Appeal. It is greatly hoped that this law, when passed, will achieve its end.

Engineering Topics

(By Our Engineering Correspondent)

Reduction of Weight of Structures.

The question of reducing the weight of buildings and other structures is one that is receiving rather a lot of attention just now in engineering circles. It is felt that as the modern tendency is more and more in the direction of big work, it is necessary to reduce, by every means in our power, the weight of such structures without impairing, in any way, their strength. Already the question of re-assessing the strength of structural steel has been mooted, and in some districts it has been decided that too great a strength has been required, and that estimates as to its supporting powers have been too conservative. The direct result of that will be that lighter steel work will be used, and that, in itself, will bring about some reduction in weight.

Actually, it is only by the reduction of weight that structures, on a scale believed to be impossible a few years ago, are being erected. Whilst the increase of scientific knowledge of the design of structures has in part helped to bring this about, it has been pointed out, and rightly, that the metallurgist has contributed greatly by giving us metals and alloys that, whilst being much lighter than those hitherto in use, have much greater strength than the basic metals and their modifications previously employed.

In no direction has progress on these lines been greater or more marked than it has been in aeronautical engineering. The conquest of the air was largely due to the work of the chemist and metallurgist in reducing the weight and increasing the strength of metal alloys. To provide machines that would fly with safety, it was necessary to reduce weight whilst at the same time increasing strength. In the past the necessity to build steamships that could go for long voyages without refuelling was a great incentive to discover ways and means whereby fuel could be burned more economically. The efficiency of the marine boiler and the marine engine were increased, and this improvement had a great effect on the design of land engines and boilers. From this it is safe to say that the lessons we have learned from aircraft and aeronautical engineering will, in due course, be applied in the building of skyscrapers and bridges and in the design of machinery generally.

How rapidly reduction in weight can be secured without losing efficiency is shown by what has been accomplished in the design of internal combustion engines, especially in connexion with those of the Diesel type. The *Canadian Engineer* has just been going fully into the subject, and tells us that in 1913 the average weight of such engines per horse-power was 550 lb. By the end of 1920 this had gone down to 330 lb., and by 1927 to the remarkably low figure of 110 lb. In submarine engines up to 750 b.h.p.

British engineers are now able to turn out engines which weigh only 40 lb. per b.h.p., and it is said that in a new German armoured cruiser the engines weigh only 17½ lb. per brake horse-power. In this calculation, however, it seems probable that the calculations have failed to take into account the weight of the fly-wheel. Be that as it may, however, the reduction in weight is little short of remarkable.

Consideration also shows us that the use of high-pressure steam has brought down very considerably the weight of steam-engines, and with steam pressures now generated up to 1,000 lb. per sq. inch we may with confidence look forward to still further reductions.

There are now under construction suspension bridges of extra long span and designed to carry loads that are much greater than the average, and their construction has only been made possible by the fact that for every pound of modern steel used, much greater strength can be secured.

The limits to which steel cables can be used in mining hoists have been extended in a like manner, and have rendered it possible to mine at depths once thought impracticable. The open truss type of steel joist is an interesting example of one of the latest efforts to cut down the unnecessary weight of buildings, and it is in buildings of the ordinary type that so many possibilities of reducing unnecessary weight present themselves. The conservative attitude of so many engaged in the building industries is the barrier to further and marked progress in this direction.

It will be readily admitted that there have been failures in big structures lately, but it can be shown that these have been due to causes other than those connected with the correct reducing of the weight of structures. Insufficient this, that, or the other has been allowed and failure has resulted. To-day scientific knowledge and the possibilities of testing the strengths of materials are so great that in most machines and structures the possibility of reduction in weight can well be estimated; and in many cases it only depends upon the provision of suitable materials and new methods. The problem of reduction of weight presents a never-ending subject for research and a constant challenge to the skill of the engineer.

Sir W. G. Armstrong, Whitworth and Co., Ltd., have been awarded a contract by the High Commissioner for India for the construction of 11 4-6-2 locomotives and tenders for the Eastern Bengal Railway.

The Bengal-Nagpur Railway have given a contract to the Metropolitan Cammell Carriage Wagon and Finance Co. for 80 all-steel 90-ton wagons specially designed for the conveyance of iron-ore, and also for 20 bogie rail wagons, each of 64 tons.

ABYSSINIAN ROAD TO ERITREAN PORT.

The construction of a highway from the port of Assab in Eritrea to the town of Dessie in Abyssinia and the concession of the Abyssinian Government of a free zone in the port of Assab are the subjects of an Italian royal decree recently published which puts into effect the convention signed August 2, 1928, by the Italian and Abyssinian Governments (says an American Consular Report). An Italian-Abyssinian company will be formed, with an exclusive concession for the motor transport of freight and passengers, which concession it may not concede to another company. The Abyssinian Government may furnish its part of the capital directly to the company or it may underwrite it with shares through others. The development of plans outlined below is important from the Italian economic standpoint, as it will necessitate a very considerable outlay for Italian motor cars in equipping the freight-carrying organisation planned, and will give Assab and the Italian interests there a predominating place in the foreign trade of Abyssinia, both import and export.

The decree intimates that work will be immediately undertaken on the construction of the highway, but that the actual work probably will be delayed, pending the selection of the proper routes from the Abyssinian frontier to Dessie and the conclusion of arrangements with the tribes inhabiting the territory through which the road will pass, to insure their non-interference with construction and operation. The direct line which the road would normally take in reaching Dessie is said to cross large tracts that are under water approximately four months of each year. It is not believed that plans contemplate the construction of a raised causeway, and consequently it will be necessary either to make a long detour over higher ground or to provide for an annual interruption of traffic by floods. Furthermore, the road when completed may divert traffic from the French-owned railway operating between Addis Ababa and Jibuti. It is believed, however, that this will not prevent the work from being carried out by a reasonably early date.

The Abyssinian Government will construct that part of the road from Dessie to the Italian boundary toward Assab, and the Italian Government will construct the section from the port of Assab to the Abyssinian border. The Abyssinian Government may construct the stretch in its own territory at its own expense or through a company in which the Government may participate as a stockholder. A commission of experts will first make detailed plans covering the work, its organisation, and the methods of putting it into operation; the constitution of the company for motor transport, and the question of income and obligations to be assumed by the company; the cost of constructing and maintaining the road; the selection of technicians and skilled workmen; and the taxes and customs to be paid on the road. It will also establish local regulations, judicial competence, etc.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.
Water Mains.—The Ministry of the Interior invites tenders for the supply and installation of a system of water mains for the town of Keneh. The principal materials required are 5,630 metres of cast-iron pipes, together with a quantity of specials, valves, hydrants, and drinking fountains. June 15. (D.O.T.)

Breakwater and Jetty.—The Alexandria Municipality invites tenders for the construction of the Silsileh Branch of the Port-Est Breakwater and the Silsileh Jetty. October 29. (D.O.T.)

Water Tower.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of a steel water tank with steel frame-work tower complete with necessary piping and fittings as well as an electric water level indicator. June 1. (D.O.T.)

Weighing Machines and Balances.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply of platform weighing machines, counterscales, and Beranger balances.

Tent Lining.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of calico cotton blue, tent lining for the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. July 1.

Drugs, Etc.—The Director of Stores, Ministry of Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of the drugs required for the schools during the year 1929-1930 (May 25), and painting and decorating materials required for the Trades Schools during the year 1929-1930 June 17).

Water Mains.—The Ministry of the Interior invites tenders for the supply and installation of a system of water mains. The principal materials required are 15,350 metres of double wrapped steel piping, 127 sluice valves with flanged ends, 49 hydrants, 16 column and 9 drinking fountains. June 1. (D.O.T.)

General Stores.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka, Nazli, Cairo, invites tenders for the supply of general stores for the year 1929-1930. June 20.

Undervests.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of undervests, cotton, white, to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. July 24.

Surgical Instruments and Glassware.—The Department of Public Health, Cairo, invites tenders for the supply and delivery of surgical instruments and surgical glassware required for the Central Stores, Cairo, from May 1, 1929, to April 30, 1930. June 3. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, May 31). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahsud for Calcutta (Birkenhead, May 25); s.s. Matheran for Calcutta (Birkenhead, June 4).

Bibby Line.—S.s. Shropshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 29).

British India Line.—S.s. Warfield for Bombay and Karachi (London, May 18); s.s. Mulbera for Colombo, Madras, and Calcutta (London, May 18).

Cunard Line.—S.s. Bactria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, and Gruz, if inducement offers (Liverpool June 8, and in Swansea June 11); s.s. Bantria for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, June 5).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 25); s.s. Dromore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 15).

P. and O. Line.—S.s. Burdwan for Calcutta (London, May 24); s.s. Rawalpindi for Bombay (London, May 24); s.s. Nankin for Calcutta (London, June 7).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, June 1); s.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, June 8).

Ellerman and Papayanni Lines.—S.s. Mardinian for Gibraltar*, Malta, Algiers*, Syra*, Smyrna, and Constantinople (Liverpool May 25, Swansea* May 25); s.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool May 28, Glasgow May 30); s.s. Lesbian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Shushak (Liverpool May 29, Swansea May 30); s.s. Roumelian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa (Liverpool, June 8); s.s. Gerano for Gibraltar*, Malta*, Algiers*, Patras, Piræus, Syra, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool June 27, Swansea* June 27). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 14.

The Reparations crisis has vied with the approach of the elections as a potential cause of market disturbance, but the markets have shown a rather striking degree of *sang-froid*. The volume of business is not large, but the tone is good, and considering that the present Stock Exchange Account closes actually on polling day the absence of weakness is remarkable. Some big investors, it is true, are buying bills instead of stocks and shares, but they do not appear to be selling out stock and share holdings for the purpose.

Possibly the most interesting development of the week has been the indication that the Bank of England is adopting the policy of "neutralising" its increased stocks of gold. It is assumed by many competent observers that, as last year, the Bank will aim at maintaining stability in money rates. If this is correct, it would mean two things: first, that there is little likelihood of a reduction in Bank Rate this summer (unless a wholly unexpected cheapening of money in New York should take place), and secondly, that the Bank will endeavour so to fortify its position that it will be able to withstand the autumn gold drain without raising the rate.

Stocks or Shares?

The clerical work in company offices which is involved in recording the changing ownership of capital varies considerably, according to whether the capital is in the form of stocks or of shares. The difference is mainly due to the fact that, according to British company law, shares must each have distinguishing numbers, but with stock this is not necessary. The recent decision of Lever Brothers to convert their 68,000,000 shares into stock has turned this academic problem of long standing into a very practical question. In this case the company estimates to save £50,000 a year on clerical expenses, and certainly with the huge number of shares representing the capital of some of the very big modern companies, the work of recording the changing ownership of every share must be formidable. Whether the numbering of shares is worth the trouble involved is one of those points on which experts differ, the Stock Exchange taking the view

that it is valuable for identification purposes and as a safeguard both to the proprietor and the dealers, while accountants, on the whole, declare that this protection is not, in fact, material, and in any case is not worth the trouble caused. The relative marketability of shares and of stock is also a factor influencing opinion on the matter. It is generally admitted that, despite the advantage of stock which can be dealt in fractional amounts the public deals more readily in shares than in stock. The fact that stock has hitherto been quoted on a £100 basis has, also, probably frightened off many small investors, but this fear can be removed by the method of dividing stock into £1 amounts, as, for example, has been done by the P. and O. Company.

J. & P. Coats' Profits.

The optimism of the Chairman of J. and P. Coats and Co., the well-known thread concern, at the last general meeting, has proved justified, and the profits in 1928 rose to £3,929,058. These earnings, which compare with £3,729,642 in 1927, are the highest in the history of the concern with the exception of the period of inflated prices just after the War. An analysis by a leading firm of dealers of the profits of the company for five year periods since 1905 shows that the average annual profits were £2,863,439 from 1905-10, £2,683,847 from 1910-15, £3,362,432 from 1915-20 and £2,999,246 from 1920-25 (a period affected by the severe depression of 1920-21). They suggest that the figures for the last two years appear to indicate that the annual average is again advancing. The rise in profits in 1928 permits of the increase of the cash bonus on the ordinary shares from 6d. to 1s. per share, the total distribution now equalling 20 per cent., while the earnings amount to 24.4 per cent., on the ordinary capital. The allocation of £250,000 to dividend equalisation reserve is not continued, but a special allowance of £500,000 is made for depreciation, and the carry forward is raised from £676,895 to £825,954. Reserves and forward now amount to nearly £8,000,000 against an issued ordinary capital of £14,750,000. In view of the strong financial position and expanding profits of this concern, the yield of £5 14s. per cent. may be regarded as very satisfactory.

Swedish Industrial Securities.

The two small group of Swedish Industrials—of whom Swedish Match, to which we referred a few weeks ago, is the leader—are deservedly esteemed by British investors. The four companies, Swedish Match, S. K. F. (the Swedish Ball Bearing Co.), Separator and Elektrolux, have certain similar characteristics. The international activities of Swedish Match are well known, S. K. F., whose British subsidiary is the Skefco Ball Bearing Co., and Separator are also, however, if account is taken of the operations of subsidiary companies, the largest concerns in their respective industries in the world. The former, controlling 30 per cent. of the world's ball bearing market, forms a self-contained unit including distributive organisations in every important country. Elektrolux, though less well-known, is the largest manufacturer in the world of vacuum cleaners, and is developing the refrigerating appliance side of its activities. This company has producing subsidiaries in England, France and Germany, and its sales are world-wide. Other features which the members of this small group have in common are that, in spite of the difficulties of trading in many countries in recent years, their profits are increasing, while their finances are all in a sound state. The ordinary shares of S. K. F. yield £4 13s. per cent., of Separator £5 11s. per cent., of Elektrolux £6 12s. per cent., compared with £4 1s. per cent. in the case of Swedish Match. These shares, therefore, "pay for their keep," and make particular appeal to the "long term" investor.

Mr. William Wilfred Carey, of Oberland, St. Martins, Guernsey, late Assistant Commissioner of the State Domains, Cairo, who died on February 18, aged 72, left estate in England of the gross value of £26,761, with net personality £14,159.

CONSTANTINOPLE MUNICIPAL 5 PER CENT. LOAN, 1909.

Meeting of Bondholders.

A meeting of the bondholders of the Constantinople Municipal 5 per cent. Loan of 1909 was held at Winchester House, London, E.C., on May 14, under the chairmanship of Lord Revelstoke.

The Chairman said:—Some of those who are present to-day will remember that you were called together on November 9, 1921, on which date you empowered the Committee, over which I have the honour to preside, to act on your behalf. To-day's meeting has been called for the purpose of submitting to you the terms of a settlement, which after 8½ years of effort, varied by many vicissitudes, has been at last approved by the Prefect of Constantinople on the one hand and by your representative on the other. The main heads of this settlement have been circulated, and it now awaits ratification by the two parties concerned.

Before rendering you an account of our stewardship, it is fitting that I should make brief reference to the Committee itself. Formed in 1921 with a membership of seven, under the chairmanship of the late Sir Henry Babington-Smith, it has lost, owing to the greatly regretted death of that distinguished man in 1923, and to the resignations at a later date of Mr. de Bilinski, and, quite recently, of Mr. Whittall, three of its original members. It now consists of a board of five, the vacancy caused in Constantinople by Mr. Whittall's resignation having been filled by Mr. Pears.

When the Committee began to function the amount of bonds deposited was £641,840. This amount steadily increased until in January, 1924, bonds to a nominal value of £934,000, representing 96 per cent. of the total outstanding, had signified their assent. Since that time, further deposits have been received, so that, for practical purposes, we can now say that we speak with the unanimous voice of the bondholders.

Apart from paragraphs which have appeared from time to time in the daily newspapers, we have made no formal communication regarding the negotiations, because there has been nothing definite to report. This is not to say that we have been idle. The Committee has met at frequent intervals; there have been constant informal consultations; and correspondence between us and our representatives in Constantinople has been continuous. Your interests have not been lost sight of for one moment, and we have never ceased to press your claims on the Turkish authorities.

In the unsettled conditions which prevailed between the Armistice and the declaration of peace with Turkey, we found ourselves unable to register any progress. It was not until the Treaty of Lausanne was signed, in October, 1924, that a turning-point was reached in our negotiations. This Treaty provided, among other things, for the constitution of mixed Arbitral Tribunals, to sit in Constantinople. As soon as we were advised that your case lay within the competence of these Tribunals, which finally came into being on April 19, 1926, we decided that claims covering the totality of your interests should be lodged within the period laid down by the rules. A difficult period in our history ensued, and our thanks are due to our legal advisers, Mr. Godfrey Warr in this country, and Maître Apikian, who conducted our case for us in Constantinople, for the successful way in which they met and surmounted the difficulties of legal procedure.

In addition to the gentlemen named, I should like to acknowledge the very valuable assistance which we received from Mr. R. E. Vaughan Williams, K.C., and from Mr. Owen Wells, the Agent of H.M. Government attached to the Mixed Arbitral Tribunals in Constantinople. Many and anxious were the consultations which we held as to the form which our memorials ought to take. Eventually the claim lodged on behalf of the Witan Investment Co., one of the original subscribers to a substantial amount of the bonds, was put forward as a test case, pending a decision in which it was arranged that the remainder of the claims should be stayed.

The Municipality deemed it their duty to resist our claim, and we found ourselves involved in a prolonged legal controversy with a formidable, if courteous, opponent. The competence of the Arbitral Court to hear our case was denied, and it was even pleaded that no valid contract subsisted between the City and the holder of the City's signature. Pleading and counter-pleadings, memorials and counter-memorials, were exchanged. Eventually these preliminaries to the case proper (that is, a decision as to whether the Court had competence to try the case or not) were settled, and settled in no uncertain fashion, by a reasoned and sweeping decision of the Court in our favour.

Once this had been done, it became evident to us that the question which remained to be solved was one, not of principles, but of terms. It was not, however, until we received an intimation from Constantinople to the effect that it would be agreeable to the Municipality to discuss proposals for a settlement out of court that we became aware that our opponents viewed the matter in the same light. Provided fair terms could be agreed, there was much to be said for a settlement by mutual consent, under the auspices of the Arbitral Court. We did not hesitate, therefore, to invite the member of the Committee who seemed best qualified for the task, Mr. A. G. M. Dickson, to visit Constantinople and to enter into personal negotiations with the Prefect.

Mr. Dickson left London last November and has just returned, having successfully accomplished his mission. He is with us here to-day, and will be prepared to answer any questions on matters of detail which bondholders may like to put to him. He has conducted

the negotiations with marked ability and patience, and the bondholders owe him, in my opinion, a deep debt of gratitude. He was able to announce, by a telegram which appeared in *The Times* of March 18, the conclusion of the settlement which is now before you. It has been approved, in draft form, by Mr. Dickson on behalf of the Committee, and if you and the Turkish authorities ratify its terms in due course, it will be submitted to the Mixed Arbitral Tribunal, and a Consent Decree, embodying its terms, will be recorded.

I turn now to a brief examination of the terms themselves. The essential features are: First, all monies received by the bank, and at present held in suspense in respect of arrear coupons, are released for equal distribution in full discharge of the coupons representing those arrears. Secondly, the bondholders are reinstated from June 1 next in the security of which they have been deprived. Thirdly, the Municipality undertakes to pay an annuity, rising gradually from £37,400 per annum to £60,000, at which last figure it is to be maintained from 1945, until the final extinction of the loan. Fourthly, the rate of interest on the bonds is reduced from 5 per cent. to 3½ per cent. Fifthly, the residue of each annuity, after payment of interest, is to be applied to amortisation.

Roughly speaking, the reduction in interest, from now on, will be compensated by the increase in the sinking fund, and in practice, although of course no holder can be compelled to sell under par, the sinking fund is likely to operate by purchase, at any rate in the earlier years, at prices considerably below par; and this process will have the effect of accelerating redemption and enhancing the market price of the bonds.

Coupons, which were formerly payable on June 14 and December 14, will henceforth be payable on September 15 and March 15 in each year. Drawings by lot, or purchases for the sinking fund, will take place annually in April and October, and the first amortisation, if the present arrangement enters into force, will be effected in October next. The Prefecture will commence paying into the bank the revenues pledged to the loan in virtue of Article 11 of the original contract from June 1 next, and the sums so paid in will be converted into sterling each month gradually by the bank.

Under the original contract the service of the loan was entrusted to the National Bank of Turkey. It has now been arranged, at the Prefect's suggestion, that the service shall be entrusted to the Banca Commerciale Italiana. As soon as the agreement is ratified by the Turkish Government, its acceptance by bondholders will become effective by the encashment of Coupon No. 38, payable September 15 next. There will be no further formality for any bondholder to go through except the encashment of the coupon. I would emphasise this point as, in the event of this coupon not being encashed before September 14, 1930, the rights of the non-presenting bondholder to the present arrangement would, under the terms of the agreement, lapse.

Now with regard to the arrears. Certain sums have been paid at irregular intervals into the National Bank of Turkey at Constantinople on account of the bridge tolls. These sums now form the fund which is referred to in the heads of agreement as being released to the bondholders by the Municipality. It is estimated that, after paying all expenses, there will remain in the hands of the bank, available for distribution against the arrears of interest, a sum which would represent a payment of not less than 2s. per 10s. coupon on each unpaid coupon, i.e., Nos. 9 to 22, and Nos. 28 to 37 inclusive. This cash payment would be made immediately after encashment of Coupon No. 38, against surrender of the said arrear coupons or of certificates representing the deposit thereof. These are the main features of the proposed arrangement, and it is now my duty to ask whether you agree to the proposal which I have roughly outlined to you. The Committee have no hesitation in recommending you to do so.

I have had the honour to receive a personal letter from the Prefect himself, and I will conclude my remarks by quoting to the meeting its final sentence:—"It has been my good fortune to make this agreement, which I hope will be beneficial to both parties, and I earnestly desire to assure you that from now the Municipality of Constantinople will always faithfully execute its obligations under this agreement." You will agree with me, I feel sure, that such an assurance from this quarter is exceedingly welcome; first, because as business men we know that the intention underlying a contract is often more important than the words in which the contract is framed; second, because the permanent estrangement of the great City of Constantinople from the financial centres of Europe would be a state of things which the business world would most sincerely deplore.

The Chairman then moved the following resolution:—"That this meeting of holders of bonds and coupons in the Constantinople Municipal 5 per cent. Loan, 1909, confirms the draft agreement approved on April 30, 1929, by the Prefect of the City of Stamboul and Mr. A. G. M. Dickson on behalf of the Committee of Bondholders for the settlement of the dispute as to the fulfilment of the terms of the loan and agrees that the Galata Bridge Tolls held in suspense shall be divided equally between the holders of coupons in arrear prior to June, 1929, subject to the deduction of all fees and expenses incurred by the Committee, and appoints Mr. Godfrey Warr, solicitor, of 85, Gracechurch Street, in the City of London, and Maître Apikian, avocat, of Arslan Han, Galata, in the City of Stamboul, to act jointly and severally as their mandataires in the matter of the withdrawal of their claims in connexion with the above loan now lodged before the several Mixed Arbitral Tribunals constituted under the terms of the Treaty of Lausanne and approves the steps taken by the Committee since its formation to safeguard their interests."

The resolution was carried unanimously.

Company Meeting.

ORIENTAL TELEPHONE AND ELECTRIC COMPANY.

A Satisfactory Year.

Sir Henry McMahon's Speech.

The thirty-fifth ordinary general meeting of the Oriental Telephone and Electric Company, Limited, was held on May 14 at the Abercorn Rooms, Great Eastern Hotel, Bishopsgate, E.C. Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., C.S.I. (Chairman of the company), presided.

The Secretary (Mr. T. K. Brown) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: You will no doubt have observed some slight modifications in the manner in which various items in the accounts have been set out on this occasion. These are the outcome of suggestions made by your auditors, in which the board fully concur, as their object is to secure greater simplicity and clarity in the annual statement. On the credit side of the revenue account, the working expenses and depreciation are now shown as a deduction from gross revenue, thus indicating at a glance the net operating profit earned locally by the company's two branches at Singapore and Mauritius, while the contribution of the China and Japan Company towards directors' fees has been transferred to the debit side of the account, where it now appears as a deduction from the amount provided for that purpose by the Oriental Company. On the debit side, also, pension liabilities are now shown under one heading, which includes pensions payable, as well as the company's contribution to the staff provident fund, whereas formerly the pensions were included in "expenses in London," which tended to inflate that item somewhat unduly. The "appropriation account" has been omitted entirely, as it appears unnecessary to set out again in a separate account what already appears in the directors' report.

As regards the balance-sheet, the modifications are but slight, and need little comment. On the debit side the reserves have been regrouped, and certain explanatory remarks have been added in connexion with the debenture stock redemption account and sinking fund. The balance of profit for the year amounts to £89,551, as against £72,118 for last year—an increase of £17,433. This increase is due to the inclusion of nearly £10,000 from the Bombay Company, representing two years' dividends of 2 per cent. each for 1927 and 1928, as mentioned in our report; some £1,900 additional from the Rangoon Company, and an increase in the profit of our own two branches of over £6,000. Since our accounts were closed, we learn that the directors of the Bombay Company are recommending a dividend of 4 per cent. instead of the 2 per cent. we had allowed for. This additional 2 per cent., amounting to about £5,000, will, therefore, have to be included in our accounts for the current year.

With regard to the profit at our branches, I should explain that instead of charging all overall charges to revenue, as we have done in the past, we have this year allocated these between capital and revenue on a basis recommended by our consulting engineers, in order that in future the cost of supervising capital works shall not be borne by revenue. The effect of this, therefore, in the first year of the change, is that larger branch profits are shown than would otherwise have been the case, though in consequence of the increase in the capital costs of plant account, there will be relatively larger charges for depreciation in future.

With regard to the disposal of the available balance, you will observe from our report that we propose this year to incorporate the bonus of 2 per cent. in the dividend. When this additional distribution was first made in 1920, it took the form of a bonus because the directors wished to reserve to themselves some latitude in case circumstances might arise in which its continuance would not be justified. In fact, for the year 1923 it was not paid; but our position is consolidated, and we feel satisfied that it may be incorporated in the dividend. We are also proposing to place a sum of £15,680 to general reserve, thus raising the account to £100,000, which we consider to be only prudent in view of the continued expansion of the company's business.

Bombay has done considerably better last year than the year before, with an increase of 615 exchange lines as against 547 in 1927, and, thanks to the prudent and cautious policy initiated and carried out by the chairman, Mr. Bunbury, and his colleagues, the difficulties with which that company was at one time beset, are being gradually and successfully surmounted. Trade conditions have been none too good during the past year, and that the company should have made such progress in face of adverse circumstances may, I think, be taken as a happy augury of its future prospects.

The Bengal Telephone Corporation continues to make good progress, with an addition of over 900 exchange lines during the year. The message rate system of charges, which was introduced in September, 1924, has proved, and continues to prove, highly successful, both from the company's point of view as well as from that of the public, 3,800 new exchange lines having been added to the system at the date of that company's last annual report in June, 1928.

The Madras Company records its highest increase of recent years, viz., 124 new exchange lines, and we learn from the directors that new business continues to flow in regularly and that the prospects

for 1929 are good. A new issue of share capital is being made by the Madras Company, which will bring up the total share capital issued from Rs.17,05,610 to Rs.20,000,000. The proceeds of this issue (about £22,000) will be devoted to works necessary to provide for the expansion of the company's business, and the Oriental Company will take up its proportion of the new issue, viz., 25,754 shares.

In conclusion, I think we may be well satisfied with the result of the year's working, showing as it does an ever-increasing degree of development and prosperity. And I must again pay tribute to the good work of our own staff both in London and in the East, as well as to that of the directors and staffs of our associated companies, in whose well-being and progress we are now so largely interested.

The motion was carried unanimously.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 8:—

Egyptian Futures.

Sakel Contract.—The movements in the American section have entirely ruled the situation this week, and there has not been sufficient interest displayed in Sakels as a separate unit to cause any decided alteration on its own. During the early part of the week, in conformity with the above, the initial easiness ceased, and a temporary change of sentiment took place, which induced some buying by local operators. Alexandria and the Continent also sent buying orders, and sellers at that time being scarce, a somewhat exaggerated advance occurred which, at the highest point, carried July contracts to 17.32d. There proved to be little beyond this advance, however, and when the New York market broke last Monday, liquidation caused a sharp reaction of nearly 50 points from the top. To-day another rebound of some 20 to 25 points sent values once again past the 17d. level, the feature of the day being heavy buying of the November option. Altogether a difficult and uncertain market has been experienced. At the moment, the premium of Sakel over American is showing a slight tendency to widen.

The Sakel crop appears to be progressing favourably, and it has evidently obtained a good start. On the other hand, Sakel at round about 17d. is proving a fairly attractive proposition from the spinners' point of view. Stocks of Sakel the world over are not large, and yet there is probably more being consumed this year than has been the case for the past two or three years. A sidelight on the local position was seen here this week when the purchase of a few hundred May Sakel caused that month to narrow from 20 to 6 points with July, in a very short space of time.

It must be remembered too that outside influences are affecting all markets at present. We refer to the possibility of a strike in Lancashire, the political situation, the Reparation Conference, and the collapse in wheat. These influences are, of course, only temporary in character and yet in spite of them there is undoubtedly some improvement in the Egyptian section of the trade. This is supported by last week's forwardings, the steadily improving c.i.f. and spot inquiry, and the fact that the Bolton Master Spinners decided yesterday to release their members from any voluntary obligations to work short time. Whilst we cannot at the moment see any very important movement taking place in the near future, the market is far from being stagnant. The progress of the American crop will continue to exercise by far the greatest influence, unless, of course, something in the nature of a catastrophe should occur in lower Egypt.

Warsaw	Zloty to £	43.38	43 3/16—7/16

Upper Contract.—This market has been quiet and featureless and the bulk of the small business has been done in the July position. Movements either way have been in conformity with those in the American market. The near month has hardened 12 points in relation to July on fixing of actual, and on the week values show an advance of 17 to 30 points. Although a steady offtake for actual cotton continues, the local stock contains a large proportion of cotton which is not likely to tempt buyers except as a last resort, and as the season advances this will probably bear on the near position. Under existing conditions we do not see much to attract operators to this contract. The difference with American (July/July) has remained very steady at around 200 points.

Egyptian Spot.

A keen interest has again been shown by spinners in spot cotton and fair sales have been recorded. Unfortunately, the fluctuations in futures have had a disturbing effect and purchases have been limited in quantity. Nevertheless, the demand has shown definite signs of broadening, and spot prices here have hardened. With Sakel contracts under 17d., even though the premium over American remains at 700 points or thereabouts, the level is undoubtedly attractive to spinners. The local stock of Sakel, as we have pointed out before, is becoming depleted of the more desirable qualities, and, when a buyer has to look to Alexandria to supply other than his immediate requirements, he finds the basis on that side harder to negotiate. Good Fair, to Strictly Fully Good Fair, has covered most of the inquiry, but there does seem to have been a slight tendency for the demand to lift towards the higher grades.

Uppers.—The usual steady offtake has continued, at from about 15 off to 15 on contracts, and this week there have been signs that here, as in Sakels, the demand was inclined to move upwards the better qualities. There has been so little inquiry of late for the Good to Fine cotton that it was rather surprising to discover what a very limited selection is available here.

Sudan Sakels.—These have been very much neglected of late, but it seems probable that, owing to the decreasing stocks of Sakel, consumers will shortly be glad to avail themselves of the comparatively large stock of this cotton now on the spot in Liverpool.

Pilion has been in moderate request only, and it has been the lower qualities which have been principally affected.

Maarad, Nahda, White, etc.—These have all figured in the demand, but only to a very limited extent.

C.i.f. business.—We are of the opinion that this is slowly but steadily improving. Forwardings to the trade last week were returned as 9,619 bales Egyptian and 2,294 bales Sudan. Estimated spot sales for the week, 2,700 bales Egyptian and 50 bales Sudan. F.G.F. Sakel to-day, 17.85d. F.G.F. Upper to-day, 11.75d. F.G.F. Pilion to-day, 12.70d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended May 2, state:—

Since our last report the futures market has been very active, but the tendency has been extremely weak. The week's summary of price movements is as follows:—Sakellaridis: May, 34.35 dollars, 0.93 dollars down; July, 34.62 dollars, 1.06 dollars down; November, 35.22 dollars, 1.02 dollars down; January, 35.47 dollars, 1.07 dollars down. Ashmouni: June, 22.20 dollars, 0.42 dollars down; August, 22.38 dollars, 0.38 dollars down; October, 22.49 dollars, 0.37 dollars down; December, 22.81 dollars, 0.38 dollars down; February, 23.09 dollars, 0.31 dollars down.

Sakel.—The continuation of the decline in New York has encouraged bears in our market to increase the violence of their attacks, and these, aided by liquidations of old bull positions and some belated fixing of up-country purchases, have caused a practically uninterrupted decline. From 35½ dollars, at which level we left the May position last week, this option during the present week fell to 33 dollars. At to-day's session, however, a violent reaction took place, and prices rose more than a dollar.

In spite of the magnitude of the decline, spinners remain apathetic, and the small orders placed were on a scale only very slightly larger than last week. The present unsatisfactory condition of the textile trade in general, and particularly in Lancashire, is the only explanation which can be offered for the lack of demand. The recent decline has brought the market down to a rather more reasonable level, and as soon as it shows signs of steadying, we look for a better demand for Sakel, which will help to stiffen present prices.

The Sakel/Uppers straddle (July/June) this week stands at 1,242 points, against 1,306 points last week and 1,313 points at this time last year.

Uppers.—We have had a succession of relatively weak markets, due to some speculative selling and hedging of spot cotton. At one time, the difference between the near months here and those in New York was as low as 2½ dollars, but at the close of the week it has widened again to about 3 dollars. Notwithstanding the decline and the fall in the premium over American, the demand from the trade has only slightly improved; the quietness in business for these varieties is likewise attributable to the poor conditions ruling in the textile trade. We can only repeat our opinion that at the present level the price of Uppers is very reasonable, and that spinners would be well advised to take advantage to complete their requirements for the present season, and even to commence to take an interest in new crop.

The Ashmouni/American straddle (June/July) this week stands at 365 points, against 349 points last week and 767 points at this time last year.

The week's receipts amount to 147,608 kantars, against exports 155,955 kantars; the stock in Alexandria stands at 2,922,424 kantars.

Spot.—We have had a somewhat better week at Minet el Bassal with a slightly improved demand from shippers, and a consequent improvement in the week's turnover, which amounts to about 13,100 bales, of which we estimate 5,550 bales Sakellaridis, 6,750 bales Ashmouni and Zagora, 450 bales Pilion, and 350 bales other varieties.

Sakellaridis.—Rather more interest has been shown this week in this variety, and a somewhat improved business has been done, chiefly in the medium and lower qualities. Spot differences are without change, with the exception of Fully Fair and below, which are rather dearer.

Ashmouni and Zagora.—Have been in better request and the business done, although not very large, is an improvement on last week. All grades have been dealt in, with the medium qualities in most favour. Spot differences are unchanged.

Pilion.—A moderate business has been done, covering all grades, at about last week's differences.

Other Varieties.—In White a fair business has been done at last week's differences. A small business has transpired in Nahda, and spot differences are slightly easier. A few bales of Fouadi have changed hands and a fairly good business has been done in Maarad.

Up-country.—The great majority of ginning factories have closed down, but arrivals in Alexandria will continue for some days, as up-country holders of ginned cotton are not in any hurry to send it down at once in view of the poor demand at Minet el Bassal and the recent decline.

Crop, 1929.—Weather conditions this week have been fairly favourable, but the delay shown by the plantations in the Central and South Delta has not been recovered. The acreage is still estimated as slightly larger than last year, with the increase almost entirely in Upper Egypt.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended April 10 amounted to £E8,757.

MICA AND ALL ELECTRICAL INSULATING MATERIALS.

Contractors to the British, American, French and Italian Admiralty and War Office.

Notes of the Week.

The Little Entente.

This week has witnessed in Belgrade one of the periodical meetings of the Foreign Ministers of the three States comprising the Little Entente. From the fact that in a programme covering a whole week only four sessions of two hours each on the first two days were to be devoted to formal conferences, while for the remaining days a tour of Yugoslavia, ending up on the Adriatic coast, had been planned, it was to be inferred that the subjects under discussion, if important, would not be numerous. Indeed, apart from the original fear of a *Hungaria Rediviva* that brought them together in the first instance, it is not easy for the three States to find matters affecting them all equally. A fresh link has recently been forged in regard to Minorities, with a view to presenting a united front against any tendency on the part of the League of Nations to interest itself in a practical manner in the fate of Minorities. The memoranda presented by the three Governments to the League's Committee of Three in London are understood to have had a common basis, if they were not actually couched in the same terms, and the discussions this week in Belgrade will have enabled the Governments of Czechoslovakia, Roumania and Yugoslavia to decide upon their plan of campaign when the Committee of Three report to the Council of the League next month in Madrid. With this matter of Minorities and the question of the renewal of the treaties constituting the tripartite pact of the Little Entente the Belgrade agenda will practically have been exhausted, in marked contrast with the score and more of questions awaiting settlement between Roumania and Yugoslavia, recently drawn up for the purposes of a joint conference. It is this lack of points of practical contact affecting the three States equally that lends an air of artificiality to the Little Entente, a weakness which the regular meetings twice a year are, no doubt, designed to counteract. The value of the Little Entente remains a negative one, for of itself it

stands for nothing positive that is not already covered by the League of Nations. On the other hand it serves to distract the attention of Roumania and Yugoslavia from the importance of regulating the interests that they both have in common with the other States of South-Eastern Europe—interests of vital concern to their material progress, in contradistinction to the purely political tendencies of the Little Entente.

Discipline in Yugoslavia.

The heavy hand of the Dictatorship still remains the prominent feature in the public life of Yugoslavia. It was hoped that King Alexander had only to announce his policy, which entailed the temporary suppression of politics and politicians with a view to allowing the country to get on with the work of reconstruction, in order to have the whole nation rallying round him. For one reason or another, however, the support of the friends of the new régime has never been sufficiently in evidence to conceal the disaffection of those who are opposed to it. It would be an evil day for Yugoslavia, if it had to be recognised that the country definitely prefers the muddled existence of political strife and administrative non-achievement that characterised the first decade of the united State to the ordered progress that it was the aim of the Dictatorship to bring about. The fact remains, however, that the different units of the Kingdom show little sign of merging their separate identities in a unified Yugoslavia. There is a tendency still to judge the new régime by its attitude towards sectional interests. In spite of the King's impartiality in the selection of his Ministers and officials, Croatia is inclined to look upon the Sovereign as more Serb than Croat, if only because he has failed to trust himself without reserve among his Croat subjects. Even if Serbian public opinion endorses a business Government, there is reason to suppose that Serbian military officers regard the new régime as not zealous enough in

consolidating the supremacy of the Serbs in the Yugoslav State. The situation, therefore, is not as satisfactory as it ought to be. The banishment of M. Pribitchevitch to a small Serbian town suggests that the authorities are satisfied that political intrigue is still being carried on by the politicians, and they may be inclined to take the matter the more seriously in view of the dissatisfaction caused by the recent removal of a large number of senior officers from the ranks of the Army. Yugoslavia does not stand to benefit in any way from a military *pronunciamento*.

Missions in Turkey.

The formation of an association by the Turkish Press for the expulsion of missionaries need not occasion surprise abroad. The old conception of the "Gentleman Turk" was based, and rightly based, on a type of man who possessed both self-respect and self-confidence; he was conscious of possessing much that he valued which the foreigner lacked, so that he could look upon the latter with good-humoured tolerance and extend to him the courtesy which instinct and religion enjoined. Republican Turkey has exchanged this peace of mind and lethargic contentment for restlessness and suspicion. For the new Turk it is the foreigner who possesses all that he, the Turk, would like to have; he feels resentful, and has neither time nor inclination for the old-time courtesies. Nor are foreigners the only objects of suspicion. Delation, which used to be a monopoly of Yildiz Kiosk and its paid agents, would now seem to be in danger of becoming a national habit. It is difficult to explain in any other way the frequent discovery of "plots," which, after an initial attempt to represent them as threatening the existence of Turkey, assume proportions that qualify them for mention only in a summary of police news. Whether "nerves" breed delation or are caused by it would be difficult to say in the case of modern Turkey. The Turkish Press appears to encourage both, and it is enough for one or two cases of the conversion of adherents of Islam to Christianity to be reported to set all the newspapers agog. On the side of the Turks it may be said that they have prohibited by law proselytising among minors, and require the tacit acceptance of this prohibition by members of foreign missions who elect to remain in the country. If, therefore, there should be a genuine attempt made to convert a Muslim boy or girl to Christianity, it will have brought the missionary within the arm of the law. For Turkey as a whole, however, foreign missions represent an inestimable boon as educational centres, still badly needed in a backward country, in spite of the praiseworthy efforts now being made by the Angora Government to spread education among the people. It is to be hoped, therefore, that in the present instance the Turkish Press is not acting in intelligent anticipation of the Government's intentions, but that the latter will assert its own common sense and leave the missionaries alone, even though it may feel called upon to emphasise the fact that no Turk is allowed to change his or her religion, unless he or she is of age.

Great Britain and Iraq.

On top of the formation of a new Cabinet in Baghdad comes the news of a banquet at the Palace in honour of the High Commissioner, Sir Gilbert Clayton. The sentiments expressed at this gathering were of the most correct kind. King Faisal outlined his belief that the difficulties outstanding between Great Britain and her Ally, Iraq, would shortly disappear, and especially remarked Sir Gilbert's interest in constructive schemes for the country. In reply, the High Commissioner, recalling the days when he watched, from the Arab Bureau at Cairo, the progress of the Sharifian movement, paid testimony to King Faisal's loyalty to England, and expressed a hope that before he himself left Iraq he would see this historic land take her seat in the Assembly of the League of Nations. The realist who is inclined always to discount the value of

words uttered upon such formal occasions as this official welcome to the High Commissioner may possibly prefer to wait for the action implied in the optimistic words expressed, but most observers will permit themselves to hope that a new atmosphere is sensible in Baghdad, that around King Faisal a sentiment of healthy and tolerant patriotism is forming—and Sir Gilbert expressly stated that "no Arab should ever forget King Faisal's achievement in the cause of freedom"—and that the new stage of economic development upon which Iraq is evidently entering will, indeed, imply not only material prosperity but adequate political unity also. It may be that additional prosperity will solve some of the political problems in Iraq which so far have proved most hard nuts to crack.

Persia, Russia, and Afghanistan.

It would not be surprising if the report were true that the Persian Minister of Foreign Affairs has protested against such attacks on Persia's motives as have been made recently in the *Izvestia*. As is stated in the Persian letter contained in this issue, the Russian journal suggested that Persia was preparing to invade the province of Herat, and that such an infringement of Afghan sovereignty could not be allowed by the Moscow Government. The precise reason for making such a suggestion is a little difficult to discover, for no sane observer of the Middle Eastern situation can imagine that Persia of her own volition would attack the integrity of Afghanistan. That she did have designs on Herat in the middle of last century is, of course, well known; but it was Great Britain which then stopped that particular development. Perhaps one should, in this connexion, remember Moscow's tendency to accuse Great Britain of that which the Russians themselves are doing, or are preparing to do, certainly it would be only at Bolshevik instigation, if at all, that Persians could be induced to attack Afghanistan. Yet the whole possibility seems a little remote. Ex-King Amanullah, if not exactly a national hero in Persia, has probably the sympathy of the majority of highly-placed Persians. That minor troubles on the Afghan-Persian frontier should arise during the interregnum in Afghanistan is very natural, and Persian authorities would be failing in their duty if they did not take all reasonable measures to stop it; but to attribute such measures to Persian malice or to British intrigue is to display an attitude of mind which must be described rather as incorrigible than intelligent.

Franco-Turkish Relations.

The seriousness of the present condition of Franco-Turkish relations was well exemplified on May 13, when the President of the Turkish Republic, Mustapha Kemal Pasha, granted an audience to the French Ambassador, Comte de Chambrun, who during the past few weeks has been striving hard at Angora to arrive at an understanding on frontier and railway matters. Why the Ghazi took this unusual step—for he never receives foreign representatives except on ceremonial occasions—has not yet been made clear, but there can be little doubt that the main problem discussed was the long-disputed Franco-Syrian frontier. The opportunity was doubtless taken by the President to refer to the complaints recently made by Turks in Northern Syria of their sufferings under the French Mandate, and to point out the decay of such towns as Alexandretta and Aleppo under Syrian, or French rule. It has been stated, on the other hand, that the negotiations on which Comte de Chambrun has been engaged had virtually come to an end, and that this interview with the Ghazi was in the nature of signifying a successful climax to them. If that is correct, the sooner the results of the negotiations are published, the better for Syria, France, and Turkey. Another suggested explanation of the Ghazi's granting of the interview is the desire of Turkey to show the world that a close understanding with Italy is not the be-all and end-all of her present foreign policy. There may be something in this,

but in itself it strikes one as an insufficient reason for creating a precedent.

The Zionist Movement.

There have recently been made two notable public utterances on the nature of Zionism, a subject that assumes greater and greater importance as the time approaches for the consummation of the Extended Jewish Agency. These two statements, made respectively by Sir George MacDonogh before the Palestine Mandate Society in London, and by Dr. C. G. Montefiore before the League of British Jews, have caused grave heartburnings among those Zionists who are first and foremost Jewish Nationalists. Sir George appears to have spoken of a "Jewish National Home" as being synonymous with a "spiritual centre." Dr. Montefiore disapproved in toto of the very conception of a "Jewish National Home." He regarded Jewish nationalist aims and hopes as "bad for the great mass of Jews everywhere." It was in his view a "retrograde and objectionable idea" to suppose that the Jews were a people no less than the Danes or the Swedes. For the Jews were, to him, a religious brotherhood, a religious community "whose only *raison d'être*, whose only true value, is religion and religion alone." Thus was the immemorial problem of whether the Jews are a race or a religious community put: "by all means let many Jews become prosperous Palestinians, but greater than Palestine is Judaism." These sentiments, of course, open the flood-gates to all kinds of controversy. And perhaps that is no bad thing. There appears to exist at the present time a vast amount of sentimental interest in the fate of the Jews in Palestine which is not well thought out. Both Jews and non-Jews are wont to be found supporting a "Jewish National Home" in Palestine who, when directly questioned, disfavour the idea of a Jewish nationalism, or at any rate think it quite impracticable. One cannot help feeling that greater clarification in purpose is necessary if the Balfour Declaration and the Mandate for Palestine are to be truly implemented. Sentimentality alone never founded a State; but it often wrecked experiments. But that clarification is an obligation upon the Jews themselves.

INDIAN NOTES.

After Five Years.

It is appropriate that the Bombay Government should be the first local administration in India to bring into operation the provisions of the Trade Disputes Act which became law last month. Over five years have elapsed since, as was earlier noted in these columns, the Bombay Government, upon the recommendation of the Reed Committee, drafted the first Bill to provide for the investigation and settlement of trade disputes. Unfortunately in deference to the Central Government's desire to initiate the legislation on an all-India basis, the measure was dropped and Bombay has paid more dearly than any other province for the Government of India's procrastination. With the publication of the rules under Section 19 of the new Act the local Government is now in a position to intervene in the present protracted dispute in the mill industry in a more definite manner than has hitherto been possible. Whether its intervention upon the new basis will prove any more effective is open to considerable doubt. It is noteworthy that the rules require that the parties themselves shall state the matters in dispute and set out the issues for decision and are concerned primarily with the procedure before and after the establishment by the Court of Inquiry of a Conciliation Board. Happily, the latest reports suggest that the firm stand taken by the Millowners' Association in regard to the all-important question of picketing, for which the Act itself makes little or no provision, is already achieving the desired result and that the operatives, with the aid of the protection afforded by the Association's own pickets, are returning to work in increasing numbers.

India and Sugar.

The anomalous position of India in regard to its sugar supplies has been pointed out from time to time in these columns. In the fiscal year ended March 31, 1928, India imported 725,800 tons of sugar, valued at roughly 14½ crores of rupees. Its own production over the same period was 171,000 tons, besides *gur* or raw sugar amounting to over 3 million tons. Deducting re-exports, the annual consumption of sugar in the country is about one million tons and of *gur* 3 million. Sugar is made direct from the cane, as well as from *gur*, and in 1926-27 over 52,000 tons of sugar were made by refining *gur*. Mr. Wynne Sayer, Secretary of the Sugar Bureau, Pusa, in the course of an interesting review of the Indian sugar trade in 1927-28, published as a supplement to the *Indian Trade Journal*, makes a suggestion in this connexion which, if followed, will greatly help the growth of the indigenous sugar industry. After pointing out how the latter is handicapped by the competition of foreign sugar, he observes that it would be far better in the interests of the sugar industry, as well as of the consumers of sugar, if the import duty on raw sugar were graded as in the United Kingdom, so as to leave a refiner's margin of profit. "Cane sugar factories," he remarks, "should then be able to refine raw sugar in the off season and thus reduce their cost of production over the whole working season; capital would feel safer in sugar investment and the waste going on at present in *gur* making will be reduced by more cane going direct to the factory." "If India," Mr. Sayer adds, "could import sugar from any part of the world where it was cheapest and refine it at a profit, she would no longer be dependent upon a particular market for her supplies and her consumers would be safeguarded against victimisation by any supplying country." The proposal seems to be a sound one and will, we hope, receive the early attention of the authorities.

SIR G. BIRDWOOD MEMORIAL LECTURE.

The Sir George Birdwood Memorial Lecture was delivered by Captain P. Johnston-Saint, M.A. (Cantab), F.R.S. (Edin.), Indian Army (retired), of the Wellcome Historical Medical Museum, at a meeting of the Indian Section of the Royal Society of Arts on May 10. Sir E. Denison Ross, C.I.E., Ph.D., presided and the subject chosen by the lecturer was "An Outline of the History of Medicine in India." The lecture will be reprinted in an early issue of the Society's *Journal*.

RECONSTRUCTION IN TURKEY.

Although considerable publicity has been given of late to Turkey's foreign relations, it is evident that her rulers are in reality more exercised in mind over the domestic situation. There has been something in the nature of a mobilisation of Press and politicians to camouflage the Government's recognition of the necessity for a complete change in its economic policy. Only last summer the Prime Minister spoke against the idea of a foreign loan; to-day his attitude has been entirely abandoned. Turkey, Ismet Pasha explains, is politically "saturated"; she needs to devote her attention to economic matters. Accordingly, the question of the cost of living is being discussed with a freedom that would have been impossible a year ago; and no opportunity is lost of stressing the country's need of foreign capital, as well as the attractions that Turkey is alleged to possess as a field for foreign investment. As a practical step towards attracting this capital, the Government has invited a German banker to Turkey to advise it in connexion with the formation of a State Bank, and has come to an agreement with the Bondholders for the resumption of the payment of interest on the Constantinople Municipal Loan secured on the Galata Bridge Tolls. It is to be feared, however, that both the Angora Government and the writers who do its bidding have a long way to go before they bring themselves to see the situation as it presents itself to the foreign on-looker. The settlement of the Constantinople Loan is made the subject of much self-complacent moralising by one of the Government's pen-men, who declares that the agreement is to be welcomed with great satisfaction, as the "punctual payment" of debts is one of the best ways of securing consideration, and Constantinople can be regarded as having overcome one of the obstacles which presented it from obtaining the foreign capital which all towns, great or small, require for their development. It may be doubted whether the bondholders will share the Turkish writer's satisfaction or endorse his view that by the recent agreement Constantinople, or Turkey, has been rehabilitated in the eyes of European finance. In the liquidation of big war debts something may well be said for an adjustment of the scheme for repayment to the capacity of the debtor country in the face of developments which have overtaken the greater part of the world. The Constantinople Loan, however, did not come within this category; it was for a million pounds only, and the source of revenue earmarked for the service of the Loan has remained ample to cover the payment of the interest and amortization. Turkey's default was not due to any incapacity to pay, but to her then frame of mind, which, after the example of Soviet Russia, made her refuse to recognize any necessity to meet her financial obligations.

The mad fit has passed, but with it the country's capacity to pay even the small amount required for the full interest on a million pounds loan. Turkey has had to compound with her creditors in this matter; but so elementary are her views on financial affairs that she affects to find in the arrangement cause for satisfaction and to believe that it will create a good impression abroad.

Turkey, unfortunately, still contrives to live in an atmosphere of make-believe. For years now the population has been taxed beyond its strength, in the attempt to subordinate the economic situation to political theories. The country has been living on its capital instead of on its income, and it is now confronted with the early prospect of being at the end of its resources. In the meantime, as it has been unable to meet its indebtedness, even if it had been willing to do so, the harm done to its reputation has been cumulative, with the result that an agreement in regard to one small loan with its creditors, who have preferred to cut their losses and to accept what they can get, will not go far to rehabilitate that reputation. It is no question of ill-will towards Turkey, but merely one of common sense and business practice. The unfriendly feeling has been all on the Turkish side, causing the Government to persuade itself, while trying to persuade the country as well, that financial help from abroad was impossible without foreign domination. Yet the Turks know well that the domination of which they complain was not due to the financial help accepted, but to the failure to pay their way and to meet their obligations, owing to laxity and mismanagement in the administration of Turkish finance. With less xenophobia in high quarters in the early days of the Republic, it might have been possible by now for Turkey to have been placed, if not in a flourishing condition, at least on a sound economic basis on which there would be a chance of building up national prosperity. When, however, the start comes to be made, as it will have to be made, sooner or later, the country will have to face the additional handicap of five years' delay.

Whatever success the Angora Government has had in other spheres, it is evident that it has failed in its economic policy. This failure is the more to be regretted, as a sound economic basis is essential to the permanency of the reforms and material developments associated with the Republic. To-day the whole nation is agitated by the cost of living, which is attributable, according to its own authorities, to the excessive rates of interest prevailing, which are stated to range from forty per cent. to as much as a hundred per cent. in some districts, to the shortage of stocks of merchandise and to the lack of productive work. The latter, it is obvious, is the basic cause, and it appears as if the Turkish authorities, while allowing their attention to be diverted to spectacular reforms, have neglected to make provision for the fundamental needs of the country. The Turkish Republic started under many serious handicaps, not least among them being the compulsory withdrawal of by far the more productive element of her population. The first consideration, therefore, of the Government ought to have been to stimulate production on the part of the population that remained. To this end irrigation and other public works of a productive nature were an immediate necessity, and these could be carried out only by foreign capital and under foreign supervision. The policy of the Government, however, was such as to keep foreign capital at a distance, and it is only after three bad harvests that the urgency for irrigation works has been fully appreciated, when they are actually needed to keep the people of Anatolia alive, as distinct from being a means to providing surplus produce for export. Fortunately the ground is now prepared for the retrieving of past mistakes, and if the Government will take its courage in both hands and make use of the best advice available through the agency of foreign Governments rather than by trusting to its own ability to discover suitable experts, Turkey may yet be set upon her feet without violence to her existing political institutions.

*The Near and Middle East

From Our Own Correspondents.

Jerusalem; May 4.

New Buildings.

Passover in Jerusalem is always a season for the more important events and inaugurations of the year because of the large influx of tourists and notable visitors. This last week the two chief functions have been the "opening exercises" of the "Nathan and Lina Straus Health Centre" in the northern Jewish quarter in Jerusalem, Zichron Mosheh, and the "public viewing" of the massive block of buildings on Mount Scopus, which is to house the "Jewish National and Hebrew University Library." Mention should also be made of the laying of the foundation stone of the Qeren ha-Qayemet building in the new Jewish quarter, Rehavia, on the hill overlooking Jerusalem on the west, where in the near future all the buildings required for the Zionist administration are to be set up. Gradually Palestine Jewry is making good what has hitherto been a pronounced drawback—its lack of buildings of any scale and distinction. Both the Health Centre and the Library Buildings are among the biggest in Jerusalem and are by no means lacking in distinction. Unlike some other communities which have done extensive building in Jerusalem, they have not introduced a ready-made foreign style which fairly sneezes at you by its utter incongruity with the surroundings. The Library, although it is a conspicuous landmark, perched on the brow of the highest crest on the eastern skyline, is not too obtrusive: it is restful in comparison with the huge German tower further to the south, which the 1927 earthquake tried but failed to bring down.

Tel-Aviv's Anniversary.

Tel-Aviv, unexhausted by its Purim Carnival and its Near East Exhibition, two days ago celebrated the twentieth anniversary of its founding. Amidst the floods of oratory a little address by Major Campbell, the District Commissioner, Southern District, in Hebrew made the greatest impression. It was a little deed of kindness which almost atoned in the minds of the Tel-Avivians for the rebuffs they have suffered of late, from officialdom—publicly branded in Parliament as bankrupt, their municipal rights and autonomies interfered with or even filched, and forbidden to send their telegrams in Hebrew script. It was not so much what he said—that had the correct official balance—but the language in which he said it. It is a growing complaint in Jewish circles that they never find in their British administrators any interest in the idealism and ideals which lie behind the efforts—often very self-sacrificing if sometimes misguided—of the Jewish national movement. In part, of course, this is only the reaction of Jewish exuberant articulateness to the Englishman's reticence and unimaginative concern over nothing save the task of the moment; yet it might do no harm if a few British officials would sometimes show that

they were trying to penetrate the mind of the Jewish "natives." The Jews' complaint may be unjustified, but they claim that it is significant that of the higher officials (non-Jews) two only are reputed to have any knowledge of Hebrew, whereas all of them have tried to learn Arabic.

General News.

This week we have had the usual combination of Eastern Holy Week ceremonies and the Nebi Musa processions, with May Day thrown in, and a wholly new complication in an invasion of, it is estimated, ten thousand Coptic Christians. The police have proved equal to the very heavy strain, and nothing in the nature of a disturbance of the peace seems to have arisen up to the present beyond the arrest of a Communist interrupter of a May Day labour meeting.

After a long period of quiet the Wailing Wall question has been raised again. The Muslim Supreme Council are carrying out minor structural alterations to the south of the Wailing Wall courtyard. The Jewish Press at once revived the rumour of a Muslim intention to build a mosque there, though it would seem that the Muslim Council's idea was to pen up a means of access from the south of the courtyard to the Haram entrance immediately west of the Mosque al-Aksa. This would greatly affect the "privacy" of the Jews in their prayers before the Wall. The Deputy District Commissioner at once stopped the work when it was brought to his notice, but not, the Jews exasperatedly complain, because it was of the nature of a possible breach of the *status quo*, but merely because no building permit had been secured.

THE HIJAZ.

Jidda, April 26.

Rain in April.

According to such meagre statistics as are available (*vide* Admiralty Hand-book of Arabia, 1916) rain never falls at Jidda except during the period from October to February, though there is a local tradition of a downfall in April in 1906. On April 21 of this year the rule was again broken, as, following upon a week of stuffy, cloudy weather with occasional raindrops, we were visited by a deluge which lasted several hours and produced .75 inch of rain. The temperature reacted curiously to the sudden shock, the minimum reading falling from 80 degrees to 65 in 24 hours, while the maximum of the second day was actually one degree lower than the minimum of its predecessor. At the same time the barometer soared upwards and a gale from the north heralded the return of the interrupted summer, which we are now again enjoying (*sic*). In five successive days the maximum temperature readings were 92, 79, 82, 88, 93. The rainfall was widespread and appears to have been particularly heavy in the neighbourhood of Madina, causing serious interruption of the heavy pilgrim visitations to the Prophet's city which are usual at this season owing to the arrival of the annual contingents from India and Egypt. For the most part such pilgrims try to get their visit to Madina in

before the actual date of the Pilgrimage, in order that they may be free thereafter to return home without delay.

Consular News.

The new French Consul, M. Maigret, arrived at Jidda on the French sloop *Baccarat* on April 25, within about ten days of leaving his last post at Baghdad. It is understood that, after the Pilgrimage, he will return to Baghdad to hand over formal charge to his successor there, and then return to Jidda to release M. Gault from the active charge of the Consulate here.

The Turkish Diplomatic Representative, Abdul Ghani Bey Sani, and Madame Sani celebrated the anniversary of the Turkish National Assembly with a well-attended dinner-party on April 23.

The King's Movements.

The usual official deputations have already left for Madina to greet King Ibn Saoud on his return from Najd on behalf of the citizens of Mecca and Jidda; and triumphal arches are in process of erection for the passage of the King through Jidda on his way to Mecca. But so far there is no definite news when he will actually arrive at Madina, and it is not even certain whether he has left the Qasim. The recent rains have doubtless interfered with communications to some extent.

The Pilgrimage.

Your Iraq Correspondent seems to think that Iraq lies on the "direct line of pilgrimage from India and Persia to Mecca." To some extent at the present time this may be true of Persia, but a glance at the map will show that it is not so for India, whence ten days will bring the intending pilgrim to Jidda at a cost of about £10. The suggested alternative route *via* Iraq can, therefore, scarcely be called either "cheap" or "speedy" in com-

parison with "the old sea-route." Indeed, whereas pilgrims wishing to see Iraq or Damascus *en route* may dribble in by this route in hundreds, the old sea route is at present bringing the rest direct to Jidda in their thousands. The number of visitors is rising rapidly, though it is scarcely likely to rival in total that of last year, much less that of the year before. In those years the number of pilgrims actually in the country by the middle of the month of Dhil Qada was respectively 70,644 and 97,506, whereas the official statistics up to and including to day (16th Dhil Qada) show a total of only 54,220. There has, however, been a recent improvement in arrivals, and three more ships are expected from India, while Egypt is doing unexpectedly well, and its contingent is expected to exceed the 20,000 mark. It is also to be hoped that the coming conference in India will result in increased numbers coming from that country in future years.

The Iraq Frontier.

It would seem that the first accounts published in Iraq and thence sent here somewhat exaggerated the real scope of the recent appointment of Captain Glubb. The facts are still far from clear, but, now that the disappearance of Faisal ibn Dawish, the Wahhabi bogey-man, leaves the coast clear for peace on the frontier, it is hoped that Abu Hunaik, his Iraqi counterpart, will not raise ripples on the calm surface of the desert. Sir Gilbert Clayton's assumption of office at Baghdad has been greeted by a remarkable peace-gesture on the part of the Wahhabi monarch; and it is to be hoped that his period of office will not only not be disturbed by untoward incidents, but will also see the laying of sure foundations of peace and amity between the two countries. If Sir Gilbert can achieve that, he will have done more for the prosperity of Arabia than anyone during or since the War, and he will have contributed materially to the establishment of cordial relations between the Arabs and Great Britain.

Teheran, May 5.

Persia, Russia, and Afghanistan.

Much interest and comment have been aroused in Teheran by an article published in *Izvestia*, the official organ of the U.S.S.R., in which it is stated that Perso-Afghan relations have been seriously disturbed by the internal dissensions in Afghanistan, "promoted by English intervention," which permits the unruly Afghans to raid Persian border villages. These raids promote a certain tension between Persia and Afghanistan which is accentuated by the constant articles in the Press of Teheran, deprecating the lack of order in Afghanistan. These Press articles, the Russian writer continues, coincide with the Anglo-Persian Treaty negotiations, and thus, according to *Izvestia*, is the ground being prepared for the occupation by Persia, backed by England, of Herat, on the ground of the necessity of occupying that town in order to control the frontier bandits.

This allegation is strenuously denied by the Persian Government, which declared in the Majliss that, whilst offering moral sympathy and support to ex-King Amanullah, it has no intention of interfering in the internal affairs of Afghanistan, but that it will endeavour effec-

tively to protect its border towns and villages from the ravages of bandits.

Coronation Anniversary.

The anniversary of the Coronation of the Shah was celebrated by a reception at the Municipal Buildings on April 23, and on the 24th, following a dinner given by the Shah to the representatives of Foreign Powers, a magnificent reception was given by Taimour Tash in the Gholstan Palace. The guests were received in the famous Peacock Throne room, and some of the magnificent jewels recently discovered in a walled-up room in the Palace were on view, as well as the official swords in their scabbards of diamonds.

General News.

All the Crown Jewels are being valued at the moment by Monseigneur Peletan and his colleagues of Mansion Boucheron, of the Rue de la Paix, Paris. They declare that no such treasures have ever been seen before.

Four Chinese specialists have arrived to facilitate the growing of tea in Lahijan.

An Iraqi Legation will shortly be opened in Teheran following the formal recognition of Iraq by Persia.

The European and American colony is deeply grieved at the death of Mr. R. Wallace Treat, the American Chargé d'Affaires, as the result of septicæmia following pleurisy.

Belgrade, May 9.

Meeting of the Little Entente.

The annual meeting of the Foreign Ministers of the Little Entente is to take place towards the end of this month. M. Benesh, Czechoslovak Foreign Minister, should arrive in Belgrade on May 20, and M. Mironescu, Roumanian Foreign Minister, is expected to arrive the same day. Conferences with Dr. Kumanudi will begin the same afternoon and be continued on the 21st and the morning of the 22nd. The serious part of the programme having been completed, an excursion has been planned to Kovilyatcha Banya, thence to Sarayevo on the 23rd and finally to Dubrovnik on May 24. There, amid the natural and historic beauties of that most charming Adriatic resort, the Foreign Ministers of these three allied lands will conclude their deliberations.

The Conversion of Yugoslav Muslims.

Great enthusiasm was shown by the population of Andriyevitza when Idris Nikotchevitch, son of one of the leading Muslims of the district, was baptised into the Orthodox Church. It is only some fifty years since the Muhammadahs of the Plavo Gusitza district, which lies between Montenegro and the Sanjak, were converted from Christianity, and many of them still bear purely Christian names. It is believed that many of the young Muslims of the district will follow this example.

The Death of Voyvoda Stepanovitch.

Great sorrow was felt throughout Serbia at the death of Field-Marshal (Voyvoda) Stepanovitch, whose victories on the Tzer were of immense value to the Allies in the early days of 1914, when the whole situation was so fraught with danger, and who led the Serbian Second Army in 1918, when they broke the enemy ranks on the Salonika

Front and began the tremendous advance which forced the Austrians to beg for peace. It was chance which led to Stepa, son of a purely peasant family, being sent to school at all. When minding the family herds he was gored by a bull and sent into Belgrade to hospital. As he was unable to work for some months later, he was allowed to remain in Belgrade and to attend school, where he showed ability and won scholarships to the Artillery School. He took part in seven wars and proved himself a great leader of men. His funeral was attended by King Alexander himself, and his coffin was borne from the tiny church of Tchatchak, where he retired to live quietly after the War, by the Minister of War, the Chief of the General Staff, the senior Admiral and the Commandant of the Forces.

SYRIA.

Damascus, May 3.

A Students' Strike.

Although rebellions and political movements are not unknown in the schools and universities of Europe, the political activities of the students and school boys in the Near East do not win the favour of the critics at home. They think these young men and boys would be better employed at their lessons or their lectures. But these young men's too often foolish hearts throb with patriotic pride. They want to play their part. Sometimes even there may be a little part to play. The Minister of Education at Damascus, no less distinguished a person than the well known litterateur, Muhammad Effendi Kurd Aly, proposed to reduce his educational budget by £S.75,000, a sum not so large indeed as it looks, but considerable enough, the students thought, to curtail the usefulness of the Syrian University at which the economy was aimed. They struck. They paraded the streets, and when the Director of the "Frères Chrétiens" Schools refused to allow his particular contingent to return to work, they conducted a funeral ceremony at which the Frères' school was to be interred. The comedy over, some seventy of the Frères' pupils (the Director still proving obdurate) have been re-distributed, and the £S75,000 is to be restored. In a country where public opinion, as we understand it, does not at all exist, it is difficult to deny that these young men have rescued for education a sum of money that might easily have been lost. It was very naughty of them, but what of certain rebellions that we can remember at home?

Educational Varieties.

The students' and schoolboys' strike opens a larger question, the principles taught in the schools here. The different leanings are innumerable, but there are four main currents. The Government schools, the Ahali (or national) schools, the Confessional schools (of various denominations) and the Secular schools. The best friends of education can hardly say that much love is lost between these different types. Indeed there is often something too much like a state of war. He would be a bold man who in this domain should throw down the challenge of a Kellogg Pact. How could he reconcile, for instance, the principles championed on one side by Jeanne d'Arc and on the other by Jean Jaques?

School of Oriental Studies, London Institution

Frontier Unrest.

We have entered upon the spring, very charming in the Ghuta of Damascus, and with another merit. The Bedouin raiding season runs from October to April. It ought now to be over, and indeed it would be, had not Ruwalla, ruled over by Nouri Sha'lan (who prefers to his tents the fleshpots of Damascus), dared to look Anaiza in the face. Both sides still mean business, but it is hoped that the military authorities, who are exercising all their tact, will prevent hostilities.

Another sort of raid is inclined to be of monthly occurrence and endemic, the little troubles on the Turco-Syrian frontier. Both sides publish categorical *communiqués* with detailed lists of killed and wounded, but here too there is good hope that with the frontiers definitely settled, the reign of peace may now begin.

M. Robert de Caix.

The name of M. Robert de Caix is as well known in Syria as it is at Geneva. With the arrival of June comes the time for the report that M. de Caix furnishes year by year to the League of Nations. This year he has spent several weeks in visiting the different constituent parts of the Syrian Mandate. He has been recently to Homs, the scene of some local disturbances, to Damascus, the political capital of Syria, and to the Jebel Druse. His report should be looked forward to with the greatest interest. M. de Caix knows Syria at first hand. He has made it his business to be master of his facts.

A Good Harvest.

One good thing at least he will be able to report—the promise of a bumper harvest. The winter rains were abundant, and though during the first weeks of April there was a moment of anxiety, two days of heavy and continuous rain put the matter out of doubt. We hear little of locusts or indeed of any pest. The corn bins should bulge once more. And here it should not be forgotten that the peasant sees the hand of God. Syria, too, is a Holy Land. The only little grumble that makes itself heard on this score in the Press is the report that the Zionists are buying agricultural land in the Hauran. A note of warning has been sounded in an article published by the Nationalist *Al Shaab*, which apostrophizes the Government for allowing Zionists or their agents to buy good land, said to belong to the Muslim Waqfs, in the Kawab district of the Hauran, the scene, it appears, of St. Paul's extraordinary vision.

Cairo, May 11.

The Water Agreement.

This has been a great week for Egypt. On the one hand, there has been the signature of the agreement in regard to the Nile water. On the other hand, there has been witnessed the inauguration in the Rod El Farag quarter of Cairo of the largest and most up-to-date Ophthalmic Hospital in the country, and the laying of the foundation-stone of the first of the series of hygienic artisan dwellings, the provision of which formed part of the economic and social development programme enunciated by the present Cabinet when it took office last summer.

In seeking a settlement of the water question Mohamed

Mahmoud Pasha was undoubtedly prompted by two important considerations. The first was that something must be done, if not to recover the lost ground in Egypt's agricultural development, at any rate to prevent the continuation of a state of affairs which in the long run was bound to create serious internal trouble. The second was that, if in other realms any further concessions were to be hoped for, it was necessary, on the one hand, to inspire Great Britain once again with confidence in the good faith of Egypt which the ten years of the Wafd régime forfeited, and, on the other hand, to eliminate one by one the elements in the situation which by their nature readily gave rise to controversy.

The Nile Waters Agreement, which adequately guarantees the interests of both Egypt and the Sudan, is, like the recent financial arrangement, itself a good business transaction, "based on principles of justice and fairness being dictated by good will and mutual confidence." The two settlements should pave the way, by the gradual settlement of the various other points still outstanding, for the conclusion by Egypt and Great Britain of the agreement which, as all those having at heart the interests of both countries hope, will consolidate in a permanent manner the relationship of Egypt to the British Empire.

Although Mohamed Pasha Mahmoud and his colleagues, when they took office, enunciated what many regarded as a somewhat ambitious programme of reform, they are certainly beginning to "deliver the goods," and are showing what can be done in the realm, not only of internal constructive work, but also of external affairs, if party politics are set aside and attention is concentrated on the good of the country.

The Mixed Tribunal's Jurisdiction.

The Mixed Court of Appeal, *toutes chambres réunies*, has just delivered judgment on two highly important points submitted to it in connexion with its jurisdiction. These points were: whether, as the Egyptian Government maintained, the mixed jurisdiction was restricted to the subjects of the Capitulatory Powers, to subjects of Powers who had been signatory to the convention establishing that régime but had since renounced their Capitulations, to subjects of States which had arisen out of the War and been formed by the dismemberment of former Capitulatory States and to former subjects of the Russian Empire, or whether it also extended to subjects of non-Capitulatory Powers as well as Ottomans and ex-Ottomans. The Mixed Tribunal has declared that its jurisdiction extends to all foreign subjects, whether of Capitulatory or non-Capitulatory Powers, but that Ottomans and subjects of States formed of the dismemberment of the Ottoman Empire must continue to come within the jurisdiction of the Native Courts, as before the War. The judgment contained the pertinent remark that to admit that former Ottoman subjects should henceforward enjoy the benefit of the Capitulations would be all the more inadmissible, since their own Government had suppressed them in regard to foreigners of every nation. This decision puts an end to the serious conflict which had arisen between the Mixed and Native Tribunals, in which

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are invited for ASSISTANT Masterships for teaching English in Egyptian Government Secondary Schools.

Candidates should be between 22 and 34 years of age and should have a University Degree (preferably in Honours) and some experience of teaching in Secondary Schools. Preference will be given to applicants who also have a Diploma in Teaching.

The initial salary offered is £E450 a year (about £461) for applicants with at least two years' previous experience, and £E405 (about £415) for applicants with less than two years' previous experience.

The appointments are on contract for five years, and renewable at the end of that time.

Full particulars and Form of Application may be obtained from The Director, Egyptian Education Office, 39, Victoria Street, London, S.W.1.

the latter claimed jurisdiction over the subjects of non-Capitulatory Powers and Ottomans.

The Late Dr. Madden.

The inquest on the late Dr. Madden, which took place before Mr. Lomas, the British Consul in Cairo, resulted in the verdict that "death was caused by a gunshot wound in the head self-inflicted while temporarily of unsound mind induced by over-work in his duties with the University and Hospital, for the forwarding of the best interests of which Dr. Madden devoted all his faculties, physical and mental." This decision is in entire accord with local opinion, Egyptian as well as European, which feels that Dr. Madden sacrificed himself in the accomplishment of his duties.

The Faculty of Medicine met this week to elect a new Dean, and the unanimous choice fell on the sub-Dean, Dr. Aly Bey Ibrahim, who has accepted the nomination. Dr. Aly Bey stands above all his Egyptain contemporaries, and is highly esteemed by the leading medical men of Europe. It was in recognition of his ability that on the occasion of the recent Medical Congress in Cairo Sir Berkeley Moynihan adopted the unusual procedure of investing him here, instead of in England, with the F.R.C.S. which the Royal College of Surgeons had conferred on him.

Public Debt Commission.

The post of British Commissioner on the Public Debt Commission left vacant by the recent death of Mr. Harry Farnall is to be filled by Sir Robert Greg, at present British Minister at Bucharest. Sir Robert is no stranger to this country, having been on the Agency staff before the War and, after the declaration of the Protectorate, Director-General for Foreign Affairs in the Egyptian Government. He is known to be very fond of the country, and the appointment enables him and Lady Greg to fulfil a desire long cherished by them to be able to settle in Egypt. It is understood that Sir Robert Greg will not take over his duties until October.

M. Van den Bosch.

Monsieur Firmin Van den Bosch, who has resigned from the position of Procureur-Général of the Mixed Courts, has left for Belgium. Before his departure there was a series of receptions, dinners, and tea-parties given by the Mixed Courts, the Mixed Bar, the Alexandria Municipality and all the institutions with which M. Van den Bosch has been connected during his twenty years' residence in Egypt. At most of these he was the recipient of souvenirs testifying, as much as the words which accompanied their presentation, to the deep affection and profound respect which he has inspired, and the sincere regret which everyone, Egyptian or non-Egyptian, who has had the privilege of knowing him, feels at his withdrawal from the active arena, forensic and otherwise, of Egypt. Rarely has any man left this country amid such a widespread and heartfelt demonstration of sympathy and esteem as has the retiring Procureur-Général of the Mixed Tribunals.

The 1st Battalion Lancashire Fusiliers has been moved from Egypt to Gibraltar.

The Finance Committee of the Roumanian Chamber, with Dr. Mihail Popovici, Finance Minister, in the chair, met in Bucharest on May 14 and 15 to discuss the reduction of State expenditure. It was decided to discuss all occasional personnel employed in the public services, and abolish the Ministries of Health, Arts, and Public Works, which are to be amalgamated with the Ministries of Labour, Education, and Communications respectively. It was agreed in principle to abolish all existing State Under-Secretaryships.

The report of the French experts who have been engaged on an appraisal of the Persian Crown Jewels has been submitted to the Shah. According to this the bulk of the jewels consists of diamonds, brilliants, pearls, and about 13 lb. of emeralds. The largest emerald was valued at £15,600. A string of pearls was valued at £20,000. It was not possible to determine the total value of the brilliants as the collection contained the famous Dari-i-Noor (Sea of Light) which, in the opinion of the experts, was beyond valuation.

NEWS IN BRIEF.

The King of Italy, accompanied by the Queen and the two younger Princesses, left Taranto on May 17 on a visit to Rhodes and other islands of the Dodecanese.

General Alevra, Roumanian Minister of Communications, has resigned. His duties will be taken over temporarily by M. Madgearu, Minister of Industry and Commerce.

A permanent treaty of friendship between Persia and France was signed at Teheran on May 15. Commercial and Customs treaties are to be concluded later.

Mr. George Newell, of Egmont Road, Sutton, Surrey, late manager and secretary of the Imperial Bank of Persia, London, who died on February 23, left estate of the gross value of £46,009, with net personality £43,998.

A Yugoslav squadron, consisting of the cruiser Dalmatia, Admiral Britsa's flagship, six destroyers, two submarines, and one transport, anchored in the main roadstead at Corfu on May 16. The flotilla remained in these waters under yesterday (May 22).

Pamir (Central Asia) is to be visited by a Russian geological expedition, which will explore the upper reaches of the Muk-Su River for gold. Another geological expedition will explore the Pamir summits.

Sir Henry Felix Woods, K.C.V.O., of Hotel Renaissance, Monte Carlo, for 40 years in the service of the Turkish Government, under which he became an Admiral and a Pasha, who died on February 18, aged 86, left property in this country of the gross value of £2,833, with net personality £2,817.

The newly-created Greek Senate was opened in Athens on May 16 by a brief religious ceremony conducted by the Archbishop of Athens. The Catholic Archbishop was also present. This was followed by the reading of the decree by M. Venizelos, convoking the Senate for the first time since 1862. The Senators then took the oath.

Brilliant scenes were witnessed in Sofia on May 15 on the occasion of the fiftieth anniversary of Bulgarian liberation, and the tenth anniversary of the accession of King Boris. The arrival of the King was greeted by a salute of 101 guns. Afterwards there was a brilliant parade, in which all the troops in Sofia took part.

General Pangalos and General Nider and M. Vogopoulos, who were respectively Under-Secretaries for War and the Interior during his dictatorship, were arrested and imprisoned on May 16 on warrants from the Greek Parliamentary Commission on charges of breach of faith and contravention of the law defining the responsibility of Ministers.

On the occasion of the celebration by the Roumanian people of the tenth anniversary of their day of National Unity on May 20, the British Army was represented by the following Mission, which left London for Bucharest on May 17: Lieutenant-General Sir George N. Cory and Lieutenant-Colonel A. E. Grasett, and Captain E. C. Hayes, General Staff, the War Office.

Near East Markets

INCREASED CYPRUS EXPORTS.

The report on Cyprus trade for the March quarter states that a decrease is recorded in the total value of imports as compared with that of the previous quarter, but a small improvement of about £1,000 is shown on the figures for the corresponding period of last year. The principal increases occur in motor cars, edible oils, timber, sacks, and cotton yarn and thread. Decreases are shown in cotton piece-goods, petrol and benzine, petroleum and paraffin, machinery, and unmanufactured tobacco and snuff.

Exports show an increase over both the previous quarter and the same period of last year, the principal ones being in asbestos, potatoes, raw cotton, and mules. Decreases are recorded in carobs, silk cocoons and raw or wound silk, raisins, and wool.

NEAR EAST MARKET REPORTS.

The May issue of the Monthly Review of Barclays Bank, Ltd., contains the following quarterly reports:—

Egypt.

At the beginning of the period under review the cotton market was steady, but during the last few weeks quotations have gradually developed a weaker tendency, owing to lack of demand, coupled with favourable advices of the newly planted crop. Exports have been maintained at a high level and arrivals are declining. The Government estimate of the crop would appear to have been approximately correct, as almost 7,500,000 kantars have come into sight. Upper Egyptian, up to Fully Good Fair to Good, has been in steady demand, as well as Sakellaridis below Fully Good Fair. All these grades have now become scarce, and only the better grades, for which little demand is apparent, are available in any quantity. Reports on the growing crop continue good, although the growth is from 15 to 20 days late, owing to cold weather at the time of planting.

Quotations for cotton seed have gradually declined throughout the quarter, and prices are at the lowest point of the season. Although the actual stock is not very heavy, large quantities of sowing seed are still in the interior, and these will shortly be forwarded for sale in Alexandria, as resowing is unimportant and a greater provision of seed than necessary has been made. A falling off in demand for cotton seed from Europe has also contributed to the listlessness of the market, which can barely absorb arrivals at falling prices. The market for cotton goods, although steady, was disappointing, as the native holidays failed to stimulate demand and stocks accumulated. Holders are endeavouring to dispose of their existing stocks, before placing fresh orders.

Sugar prices were steady at the beginning of the period under review, but fluctuated later, under the influence of the producing markets and of speculative interest. Demand has been satisfactory and supplies ample. Flour has been in good request for local requirements and for export, but heavy arrivals induced weakness. Stocks are large and the advent of the new crop in Egypt and Palestine makes the future course of quotations uncertain. The rice market has been somewhat uneven, with prices fluctuating in sympathy with quotations in Rangoon and the Sudan, but recently a reduction of stocks has led to greater steadiness.

The turnover in cabots has been poor, as the demand has been purely local, at declining prices. In the gunnies market, onion bags were in good request at the beginning of the quarter, but latterly the demand has fallen off and declining markets in Calcutta have led buyers to hesitate over placing new business. The onion market opened at high prices, but owing to a glut in the consuming centres, quotations fell heavily. Coffee has been irregular, with no outstanding feature. Cereals have been in small supply, but imports acted as a check to any sharp rise in prices and the market has been steady.

The Sudan.

Trade in the Sudan has been quiet. The Tokar cotton crop failed to realise expectations, owing to unfavourable weather and to attacks

of bollworm and locusts. Goods, which had been imported in large quantities in anticipation of better trade, were, in many cases, left in the warehouses and are only being sold gradually. The gum market opened at high prices, owing to small arrivals as a result of cold weather, and traders suffered losses on their early forward sales. A good demand has been maintained at steadily rising quotations. The coffee market has been satisfactory, and, as arrivals from Abyssinia were small, prices have been firmly held. Sesame has been steady.

The Gezira cotton crop is good and, although prices have fallen, they are still remunerative. The effect of the circulation of the money for this crop is beginning to be felt and traders are reporting better inquiries for goods.

Palestine.

The orange season finished at the end of March. Shipments were 288,242 cases less than last year, due to bad weather during the blossoming and picking periods, and the season has not been good, owing to the low prices realised for the fruit. The lack of cereals, as a result of last year's bad crop, led to an import of flour, prices for which have ruled steady during the quarter. An influx of tourists and visitors to the Fourth Palestine and Near East Exhibition and Fair at Tel-Aviv has led to an increase in trade.

NEWS FROM ALL SOURCES.

The traffic receipts of the Suez Canal from May 4 to 10 amounted to 19,510,000 francs.

The directors of the Aboukir Company recommend a dividend of 5 per cent., free of tax.

The traffic receipts of the South Indian Railway Company for the week ended April 20 amounted to Rs.12,79,403, making the total from April 1 Rs.36,57,048.

The death has taken place at his home in Onslow Square, S.W., of Sir George Gough Arbuthnot, at the age of 81. Sir George, who was educated at Eton, was formerly a partner in the firm of Arbuthnot and Company, bankers and merchants, of Madras.

A Cairo message states that according to official reports from the provinces, the Egyptian cotton crop has been seriously affected by the unusual rain and cold prevailing in the latter part of April, combined with the ravages of the cotton worm.

The directors of the Guardian Eastern Insurance Company propose, subject to audit, to recommend to the annual general meeting, to be held on June 3, that a dividend for 1928 be declared at the rate of 5 per cent. on each ordinary share, payable on June 29, subject to income tax.

The net revenue of the Oriental Telephone and Electric Company for 1928 was £89,551, against £72,119. The directors recommend a final dividend of 8 per cent. (free of tax) on the ordinary shares, transferring to general reserve £15,680, carrying forward £34,425, against £25,243 brought in.

For the quarter ended March 31 last the Hellenic Electric Railways report that 6,648,631 passengers were carried on the railways, an increase of 197,366, while 1,381,685 passengers were carried on the tramways, an increase of 183,370. The gross receipts of the railways were 18,845,334 drachmæ, an increase of 883,489 drachmæ, while those of the tramways were 1,302,731, an increase of 173,143 drachmæ.

Barclays Bank (Dominion, Colonial and Overseas) announce that they have received the following cable from their Cairo branch:—The Statistical Department of the Ministry of Finance announces that the total imports of Egypt for the month ended April 30 amounted to £E4,925,033, against £E4,590,505 for the corresponding month last year, and exports £E5,306,502, against £E5,060,554 for April, 1928. Cotton exports were £E3,919,108, against £E3,483,531.

A Bucharest report states that in important wheat-growing districts of the Lower Danube great damage has been caused to growing crops by frosts, so that many fields will have to be resown. Other districts have suffered less, as, for instance, in Banat and Moldavia. The prospects of this year's wheat crop seem to be already unfavourable, as the recent sudden and far too early hot weather is not propitious to spring wheat.

For the first two months of the current year Yugoslavia had an unfavourable balance of approximately 154 million dinars, compared with 344 millions for the same period of 1928. The improvement is due to the decrease in imports. In February the imports totalled 70,191 tons, of the value of 403,985,563 dinars, as against 85,593 tons, of the value of 621,659,706 dinars in February, 1928.

Company Meetings.

KASSALA COTTON COMPANY.

Full Area to be Planted This Year.

Sir Frederick Eckstein's Services to the Sudan.

The Hon. Arthur M. Asquith's Speech.

The sixth ordinary general meeting of the Kassala Cotton Company, Ltd., was held on May 16 at Winchester House, Old Broad Street, London, E.C. The Hon. Arthur M. Asquith, D.S.O. (the chairman), presided.

The Acting Secretary (Mr. J. F. Bourne, A.C.A.) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—I presume that you will agree to take the balance-sheet and accounts as read. (Agreed.)

Before dealing with these I am sure that you and the company's staff abroad and at home would like me to express our great gratification at the honour recently conferred by H.M. the King on Mr., now Sir, Frederick Eckstein. (Cheers.) His services to the inhabitants and Government of the Sudan have extended over a period of nearly 25 years, and amongst these services was the leading part which he took in the formation, and has since taken in the guidance, of this company. The construction of the Kassala Railway could not have been undertaken when it was but for the financial support of this company, and the irrigation works in the Gash Delta were designed and executed, and cotton-growing on the share system was organised there by this company. The Kassala Railway has since been extended to the Sennar Dam and the irrigation works on the Gash have again in this past season proved the soundness of the lines upon which your managing director, Mr. MacIntyre, designed them. Our company may therefore, I think, legitimately take to itself a share of pride and pleasure in the recognition bestowed upon Sir Frederick Eckstein for his outstanding services to the Sudan. (Cheers.)

I am told that some people, reading only abbreviated Press notices of companies' results, and seeing "Kassala Cotton Company, profit £13,098, as against £91,269 last year," have been perturbed by these figures. Those who have followed our fortunes will know that there is no cause for anxiety, and that everything is proceeding according to plan, or better. I pointed out last year that we could have no revenues from cotton in 1928 nor in 1929. Our revenues during those two financial years must be limited to interest receipts and the modest commission which we receive for marketing the Government's cotton produced in the Gash Delta. Our accounts for the year ending December, 1930, should show the proceeds of our share of the cotton to be planted this autumn. We came into the year 1928 with a balance in hand of £77,262, and there was left at the end of the year a balance in hand of £66,281, which is after charging £28,079 interest on debentures for the year. This balance of £66,281 should be enough to provide for debenture interest charges and all other outgoings in excess of revenue in the year 1929.

Operations in the New Area.

I visited our concession in the Gezira last December and I was much impressed by the magnitude of the task of the organisation, within two years, of an area of 46,000 acres of land so as to make it capable of being intensively cultivated in 30-acre holdings by perennial irrigation. This development work is dismissed in our report in two or three lines, and I feel that I ought to try to give you some idea of the local conditions and of the work involved, so that you may have some proper appreciation of the labours on the company's behalf of Mr. Fleming, our manager, whom I am glad to see at this meeting to-day, and of the engineers and others of his and the Sudan Plantations Syndicate's staff who have borne the heat and burden of this work.

Our headquarters at Wad Shair are nearly 30 kilometres from the Sudan Government railway. Here, early last year, Mr. Fleming and Mr. Telford, our engineer, installed themselves in grass huts on the treeless and featureless expanse of flat, brown earth. Rainfall in this part of the Gezira is scanty and uncertain, and the plain was honeycombed with banks made by the inhabitants to pond up and to make the most of such rain as falls. Even so, they have only managed in the past to raise a fair crop of grain one year in four or five. They bury their grain and subsist on it over the lean succeeding years. In the development of the area for irrigation, all these rain banks have had to be levelled, and the watering and feeding of men and bulls employed on this task is in itself a considerable problem.

Then there was the question of canalisation. By the end of May last year 126 kilometres length of minor canals had been excavated, chiefly by imported Egyptian labour and partly by machinery. In October, 200 Egyptian labourers were imported, and since then a further 586 kilometres length of minor canals has been dug. Meanwhile an extensive building programme has been carried out. Arrangements were made for an extension of the Sudan Plantations Syndicate's light railway to serve our area, and by this bricks and other building materials were transported 40 kilometres or more to their destination. By the end of next month—that is, before the coming rainy season—the building programme will be completed.

All our staff will be housed in solidly constructed brick bungalows, and the necessary stores, offices, and clerks' accommodation will have been provided. Add to this that 15,000 acres of land have been ploughed, ridged, and prepared for cotton by windless cultivators, and I am sure that you will agree with me that the preparation of this great area, most of it a year ahead of time, reflects the greatest credit on all those who have worked for it in the Sudan. (Cheers.)

That brings me to the most important and agreeable feature of our report. Last year we led you to hope for the planting this autumn of one block—that is, 5,000 acres of cotton. Mr. MacIntyre, in his speech at our meeting, added that, "If all goes well we hope also to get a part of the second block planted." Actually, bar accidents, we should have all three blocks, or some 15,400 acres, under cotton this autumn. (Cheers.) Allotment of the land to tenants has been made in collaboration with the authorities of the Sudan Government. This in itself is no small task, as it involves settling into their individual holdings some 1,500 families of native tenants. Their satisfaction at the establishment of a network of irrigation canals, with the security which it holds out to them of water and food for man and beast, is evidenced by our having had to turn away scores of applicants for tenancies.

Finally, I should like you to understand that for the present acceleration of our programme we are much beholden to the Sudan Government for the whole-hearted efforts of their Irrigation Department and contractors.

We are also deeply indebted to the Sudan Plantations Syndicate and their engineers, and not least to their chairman, Mr. MacIntyre. (Hear, hear.) Without this co-operation we could not possibly have done the work in the time, nor anything like so economically. No one who is not acquainted with the local conditions can appreciate the benefits that this company enjoys through having the Sudan Plantations Syndicate as its largest single shareholder. Apart from development work, I will give you two instances of the advantages which our company derives from this connexion. First, the four members of our British administrative staff who moved with the company from the Gash to the Gezira, and the six new members since recruited, were all attached for some months to experienced members of the Syndicate's staff to learn from them the methods of supervising cotton-growing by perennial irrigation, as practised in the Gezira. They have thus had opportunities of acquiring knowledge which otherwise they could only have acquired with long and probably costly experience. Secondly, we have opportunities of obtaining from the Syndicate Seed Farm selected pedigree cotton seed for sowing the area, an advantage the importance of which it is difficult to exaggerate. On our side we are glad to think that the Syndicate has received one benefit at least from us. Mr. Alexander Telford, who served us so well in the execution of irrigation on the Gash and in the layout of the canals of our present area, having finished his work for us, has been appointed as chief civil engineer to the Sudan Plantations Syndicate. He carries with him our best wishes for the future.

I now beg to move: "That the report of the directors and statement of accounts to December 31, 1928, now laid before the meeting, be and are hereby received and adopted," and I will ask Sir William Himbury, who has recently returned from the Sudan, to second this motion. (Cheers.)

Statement by Sir William Himbury.

Sir William H. Himbury:—I should like to begin by saying how pleased we are in Manchester at the honour which was given by his Majesty to Sir Frederick Eckstein. (Cheers.) I have worked with and known Sir Frederick for about 25 years—very dark days, some of those, long before the Sudan plantations had reached the

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 2.

The Political Tangle.

I remarked in my last letter that in India one does not hear men spoken of as statesmen but as politicians. Two days later I found myself in a railway carriage with an Indian, an old man. To draw him into talk I asked what his avocation was. He had been of the Bar, he told me, but now lived in retirement. "Then you are not one of our statesmen?" I said. He leant forward, to bring his face nearer to mine, and said, "There are very few statesmen in this country—there are plenty of politicians. I should not call even Ghandi a statesman; he is a saint and an idealist, but he is not a statesman. Pandit Madan Mohan Malaviya, Pandit Jawaharalal Nehru—they are only politicians. Pandit Motilal Nehru—yes, he might perhaps be called a statesman. Mr. Gokhale was a statesman. Kisto Das Pal was a statesman; Mr. Srinivasa Sastri is a statesman—all the rest are only politicians."

The Errors of the Past.

There had been two men, my companion said, turning now his attention to British politicians, who had made grave mistakes in their dealings with India, Mr. Montagu and Lord Birkenhead, two men of widely opposed views. The first had given India Dyarchy, a thing that nobody wanted, and the second had been responsible for the decision that the Statutory Commission should be composed of members of the British Houses of Parliament only. What would have been the harm of making it a body composed of five members of the British Houses of Parliament and a Hindu and a Muhammadan? What had been the consequence of having no Indians as members of the Commission proper? There has had to be joint committee of members of the Indian legislature—seven Indians to sit with the Commission; seven Indians to summon to London, and they are none of them men whom India herself would have wished should be her spokesmen.

The New Constitution.

With all that one might readily enough agree. With what else my companion said one might also agree. It was, to put it briefly, that a way must be found to give the few statesmen that India does throw up among her many politicians a real share in shaping the political future of the country, while keeping India within the British Empire; for the English officials must stay and help to govern India; without their help India could not and would not be well governed. Others than officials too must stay; India could not stand only on her own feet. The Congresswalas wanted all the English to clear out. Theirs was the more vociferous party; it shouted loudest; but it had very little influence. No one need consider the Congresswalas. The great majority of thinking Indians knew too well that India could only be peaceful and prosperous as a part of the British Empire.

The Provincial Councils.

As there are to be new elections for three of the Provincial Councils—those of Bengal, Assam, and the Central Provinces—there is a chance for such moderate men as my companion of that train journey through the United Provinces to show how much support they command in the country as compared with the Swarajists. Even if the last should carry these elections, it will not prove that India is lost to the Empire; for the Swarajists, besides being the most vociferous party, are undoubtedly the best organised party. An attempt is being made, here in Bengal, to organise opposition to the Swarajists. There is to be a new party—they will call themselves Independent Nationalists—and a member of this party is to be put up against the Swarajist wherever possible. The best known of these Independent Nationalists are Mr. J. N. Basu, President of the Indian Association, Mr. J. N. Gupta, and Mr. Bepin Chandra Pal. They may meet with little success at the forthcoming elections, through being as a party so much an eleventh-hour thing; but the movement may grow, and bear fruit in the future.

Bombay Mill Strike.

There is again a very serious strike situation in Bombay, or there was at the end of last week. There was even talk then of a general strike. The conference between the Labour Union and the Mill Owners' Association broke up on Wednesday, on what has since appeared to have been an honest misunderstanding. Each side has issued a statement, and the statements are in flat contradiction. The suggestion had been made in conference that there should be a joint committee to investigate the cases of alleged victimisation case by case. Each side now says that it was the other side that rejected this suggestion. The news at the end of last week was that almost all the mills had shut down, and that about a lakh and a half of workmen were idle. There has been some communal rioting in Bombay. Whether it is an indirect outcome of the strike is not at present clear from this side.

Agricultural College and Research Institute, Lyallpur.

One turns so gladly from the political news in our newspapers to anything that is not politics, either of the State or of the parish pump, but nevertheless has interest for any one who watches developments in India. In that category one would place the work that is being done in the various agricultural colleges and research institutes. If I have put the name of one of them at the head of this paragraph, it is only because I have been reading of the work that has been done at Lyallpur in the Punjab. It covers the whole field—inter-breeding of Indian grain with imported seed, the prevention of crop disease, the destruction of vermin (crop diseases and vermin, locusts, etc., are said to involve the Punjab farmers in the loss of fifteen crores of rupees annually), inoculation of seed, irrigation, manuring, dairy farming, and so on. The good of that work will endure, it may be predicted, long after the present political face of India is happily too deeply forgotten to be more than dimly imagined.

A Little Story.

I have thought I would end my letter this week with a little story of my travels. You in England may well be puzzled by the apparent contradiction between the report, which would be true, that India is a country of statesmen, however few, and men in numbers who have distinguished themselves in law, medicine, scientific research, literature, art, technical pursuits, and business—the contradiction between that report and the report, also true, that India must continue in leading strings for longer than any man alive can foretell. How does that last fact come to be? It is that the mass of the people are as little children. My story is to bring that home to people on your side. It will show you how childish they can be. It was walking with an Indian, a man who received his education at Aligarh, a man capable of giving one an opinion of a particular professor that one would recognise as true, a man holding a post of importance, a man who lives his life among highly educated, well-read, widely-travelled men of affairs. This man and I, in the course of our walk, came in sight of a snow peak of the Himalayas rising above the forest-clad hills of the immediate landscape. He stopped and stared at the everlasting snow, and then to my astonishment and bewilderment said, "Is that a chalk hill?" They live so much, these Indians, in the narrow atmosphere of their homes, that show them suddenly their own Everest or Kinchin-junga, and they may take them for chalk hills.

THE INDIAN POST OFFICE.

(From a Correspondent.)

The results of the working of the Indian Posts and Telegraphs Department for the year 1927-28, as disclosed in the report of the Director-General, appeared in the Indian newspapers towards the end of last month. It is to be regretted that Indian official publications are generally issued so long after the close of the year to which they relate, that they thereby lose much of their interest and value. This is certainly true of the Post Office Report, which always contains important and useful particulars well worthy of prompt publication.

The Postal Branch of the combined Department has worked at a considerable profit for a number of years past. In fact, in 1926-27 the profit exceeded Rs.21½ lakhs. During 1927-28 there was still a profit, but it was less than Rs.4½ lakhs. According to the report this big reduction was attributable to a general revision of the pay of the Postal subordinate staff. The pay of Postal subordinates in India has always been low, and no reasonable person ought to object to an increase. But even a small increase must be of necessity expensive, seeing that the Post Office employs 108,700 persons, most of whom are, of course, in subordinate positions. There are 22,000 post offices, and 166,600 miles of mail lines.

The business of the Post Office is expanding satisfactorily. In 1926-27 the posted articles—letters, newspapers, parcels, etc.—aggregated 1,293 millions; and in 1927-28 they increased to 1,348 millions. These are large figures, seeing that the literate population of India is inconsiderable. Every year the literate classes are realising more and more clearly the advantages of the easy and rapid means of communication which the Post Office affords them; and every year the volume of postal business is consequently developing. Forty years ago the total number of articles posted did not exceed 300 millions in the twelve months, or less than a third of the present total. Nor is it only in the number of articles posted that there has been a great development. In 1927-28 the value of the 38½ million money orders issued aggregated Rs.92 crores. And no less than Rs.27 crores was collected for tradesmen and others on value-payable articles.

Like the Post Office in this country, the Indian Post Office undertakes many functions and duties other than

the collection and delivery of letters and parcels, and the issue of money orders. For example, it collects a large sum in the way of Customs duties for the Government of India. It pays military pensions, and it undertakes life insurance business in respect of certain classes of Government servants. It is also in charge of the postal and telegraphic stores which are in reserve in the event of the mobilisation of the Army; and it does many other useful things in the public interest. The Indian Post Office also carries on a Savings Bank business of quite respectable proportions. It has more than 2½ million depositors, whose deposits amount to Rs.32½ crores.

The Telegraph Branch of the combined Department is less successful financially than the Postal Branch. It has not shown a surplus since 1922-23; and the figures for 1927-28 were considerably worse than those of the preceding year. There was a net deficit of rather more than Rs.29 lakhs, as against a deficit of about Rs.11½ lakhs in 1926-27. This position is due to a decline in revenue, expenditure having been reduced.

That decline is attributed to the introduction of reduced rates for foreign telegrams; to an increase in the share of the cost of combined offices debited to the Telegraph Branch and credited to the Postal; and to the writing down of the book value of certain stocks to current market rates. It is also stated in the Report that the public are disposed more and more to use the cheapest classes of foreign telegrams; and that this tendency is responsible to some extent for the reduction of revenue.

The Telephone Branch of the Department likewise showed a loss on the year's working. The expenditure increased by Rs.7 lakhs, while the revenue expanded by only Rs.4 lakhs. The net result was a deficit of rather more than 1½ lakhs, against a surplus of over Rs.1½ lakhs in 1926-27.

INDIA AND THE LEAGUE OF NATIONS.

The forceful criticism by Lord Lytton of the Budget of the League of Nations at the last ordinary session of that body held in November last attracted widespread attention in the Press. In the final report of the Indian delegation, signed by Lord Lytton, the Nawab of Palanpur and Mr. S. N. Mallik, it is remarked that "although Lord Lytton's speech had necessarily to be made at the very end of the Assembly session, when some of the delegates had already left Geneva, has undoubtedly served to draw attention not only to the financial administration of the League, but also to the importance of broadening the basis of its activities."

It was inevitable, the report points out, that in the years immediately following the War, international activity should concentrate upon the urgent problems of European reconstruction. The phase which demanded that concentration, however, is now passing and it is timely to remind the nations that the preoccupation of the League with European affairs must pass with it. Actual insistence upon reasonable economy is, therefore, in itself an important function.

"The part," the report proceeds, "which the Indian delegations have consistently played at Geneva in demanding the observance of sound financial principles has, we believe, been of value to the League in promoting its efficiency and in maintaining its prestige. But it is of, at least, equal importance to secure that the League observes in practice that universality which it claims in principle. We believe that financial pressure can be usefully and legitimately employed to this end provided it is used with discretion and with a full sense of responsibility. Fair-minded persons are beginning to recognise that the non-European countries and India, in particular, cannot reasonably be expected to acquiesce in a constantly increasing budget which is distributed among the States members on the assumed basis of an interest proportionate to economic capacity. So long as the main incidence of the League's activities remains unchanged we hope that

the action which we took this year may in the near future have its due effect upon the total cost of the League's activities, upon the relative share of India in that cost and upon the relative value to India of the results of the League's expenditure.

"We conclude by observing that if India is to demand that her practical interest in the work of the League should approximate more closely to her share of the expenditure, it is all the more necessary that the advantages which India already enjoys in consequence of her membership the League should be appreciated at their true value.

"Nothing that we have said should be taken as supporting the view that the advantages which India already derives from the League are negligible. These advantages have always, on the contrary, been considerable and they are becoming more so. They include, in particular, a degree of international status which India would not now enjoy, nor be able to obtain, if her separate signature of the Treaty of Versailles had not made her an original member of the League."

THE INTERNATIONAL LABOUR CONFERENCE, 1929.

The personnel Indian delegation to the twelfth session of the International Labour Conference, which opened at Geneva on May 13, it is officially stated, is composed as follows:—

To represent the Government of India—Delegates: Sir Atul Chatterjee, High Commissioner for India, and Dr. R. P. Paranjpye, Member of the India Council. Adviser and substitute delegate: Mr. A. G. Clow, I.C.S. Advisers: (1) Colonel H. H. Hunson, Deputy Traffic Manager, Calcutta Port Trust, Mr. A. Dibdin, India Office, London.

To represent Employers, Delegate: Mr. Kasthubhai Lalbhai. Advisers: Mr. P. Mukerjee, President of the Punjab Chamber of Commerce, Delhi; Mr. R. K. Shanmukham Shetty M.L.A., and Mr. B. Das, M.L.A.

To represent Workers: Delegate: Mr. N. M. Joshi, M.L.A.; Advisers: Mr. B. Shiva Rao, President of Madras Labour Union; Mr. V. R. Kallappa, Treasurer of the All-India Railwaymen's Federation, Mr. Abdul Matin Choudhury, M.L.A., and Mr. G. Sethri. Mr. Dibdin will also act as secretary to the Delegation.

THE VICEROY'S APPEAL.

The Viceroy has issued an All-India Thanksgiving Appeal to commemorate the recovery of the King-Emperor. The appeal states:—

"In response to the desire which has been expressed privately to me by individuals and publicly in the columns of the Press, I have decided to open an All-India Fund to commemorate the recovery of his Majesty the King-Emperor from his long and dangerous illness.

"I propose that the proceeds of this appeal should be utilised for the alleviation or prevention of sickness and disease in India, and I intend in due course to take the advice of both official and non-official persons throughout India, before submitting for his Majesty's approval my suggestion as to the particular object to which the Thanksgiving Fund should be devoted."

It is added that subscriptions should be sent to the Private Secretary of the Viceroy at Simla.

Although he piloted an aeroplane for the first time only last September, obtained his licence as recently as March, and has never been on a long-distance flight, Mr. P. M. Kabali, a young Indian, is to start on a solo flight to India on May 25. The flight is being made in his own machine, which is capable of carrying 60 gallons of petrol—sufficient to carry him 1,000 miles only. The journey will be made by stages, and will finish at Karachi. On May 13 Mr. Kabali was entertained at tea at the National Liberal Club by Colonel Nawab Sir Umar Hyat Khan, Sir Dorabjee Tata, and others. Among those present was the Maharaja of Burdwan. The airman received a number of good wishes, including messages from Lord Peel, Secretary of State for India; Lord Winterton, Under-Secretary for India; Sir Atul Chatterjee, High Commissioner for India; Sir John and Lady Simon; the Aga Khan; and Sir Arthur Froom.

OBITUARY.

SIR VICTOR COUTTS TROTTER.

The death, which occurred at sea on May 12, of Sir Victor Murray Coutts Trotter, Chief Justice of Madras, deprives the Indian Bench, and the Madras High Court in particular, of one of its most distinguished members. After a school and University career of unusual brilliance—he was a scholar of Balliol, where he won the Hertford Scholarship, and after taking a first class in both "Mods" and "Greats," he was elected Eldon Law Scholar—Victor Coutts Trotter acted for a time as Deputy-Professor of Greek at Liverpool University. Called to the Bar in 1901, he joined the North-Eastern Circuit, where he early acquired a good practice and a reputation for practical acumen and an unusual depth of knowledge of the law, which resulted in his election in 1910 to the Lectureship in Criminal Law and the Law of Evidence at Oxford.

Five years later he was appointed a Puisne Judge of the Madras High Court, and in that capacity served as a member of the Committee appointed in 1923, with Sir Edward Chamier as Chairman, to consider the proposed institution of an Indian Bar. His most notable contribution to the inquiry was the memorandum which he added to the report on the connected question of the vakil system, the continuance of which he strongly advocated, on the principal ground that the adoption of the single agency would inevitably lead to an extension of the evil of touting, already widely prevalent in India. The memorandum had the enthusiastic support of the late Mr. S. R. Das, afterwards Law Member of the Government of India, and another of the Indian members of the Committee, and is largely responsible for the continuance of the existing system.

Before the inquiry was completed Coutts Trotter was selected, in the early part of 1924, to succeed Sir Walter Schwabe as Chief Justice of Madras, when he also received the honour of Knighthood. In contrast to his earlier record his term of office in the senior appointment was relatively uneventful, but he maintained the general regard and liking which he had enjoyed from the beginning of his Indian connexion, and his death, at the comparatively early age of 55, is deeply deplored by a wide circle of friends in both India and this country. Sir Victor leaves a widow and four children—two sons and two daughters.

MR. J. T. MARTEN.

Although Mr. John Thomas Marten, whose death, at the age of 57, is reported from Juan-les-Pins, France, rose to be a senior member of the Executive Council of the Central Provinces, and actually officiated as Governor during Sir Montagu Butler's leave to England in 1927, he will be best remembered for his work in connexion with the Indian Census of 1921.

Educated at Clifton, New College, Oxford, and University College, London, Marten went out to India in 1896, where he ultimately became a Deputy Commissioner in the Central Provinces. Appointed Superintendent of the Census Operations in the C.P. and Berar in the summer of 1910—a task which he accomplished with great ability and distinction—he afterwards served as Chief Secretary, and in 1921 was entrusted with the responsible duties of Census Commissioner for the last Indian census, taken in 1921.

In many respects, notably on account of the widespread influence of the Gandhi non-co-operative movement, his task was more difficult than any which had confronted his distinguished predecessors, but his report, which devoted particular attention to a feature that had not been previously dealt with to any great extent—the occupational tendencies as revealed by the returns—is a particularly valuable document. At the end of 1925 he was selected for membership of the C.P. Executive Council and created C.S.I. in 1927. At the time of his death he was on leave preparatory to retirement.

H.E. SESOSTRIS SIDAROOUSS BEY.

A striking testimony to the popularity that H.E. Sesostris Sidarouss Bey has won for himself during his five years' residence in London, for the greater part of which time he has acted as Chargé d'Affaires at the Egyptian Legation, was afforded at the farewell dinner given in his honour by the Near and Middle East Association at the Ambassador Club on May 16. Some 250 of his friends were present on the occasion, and the capacity of the Club was overstrained to accommodate them. Lord Lamington, who, with the Dowager Lady Boyle, received the guests, presided at the dinner, in the absence of the Chairman of the Association, Lord Henry Cavendish Bentinck. In reply to the toast of his health, proposed by Lord Lamington and seconded by the Greek Minister, M. Caclamanos, Sidarouss Bey referred to the kindness he had invariably received during his stay in London, both from officials of the Court and of the Foreign Office, and from very many others. He spoke of the cordial relations now existing between Egypt and Great Britain, and emphasised the importance of the presence in England of large numbers of Egyptian students at the universities and elsewhere, who by associating with British students, and sharing their studies and games, had a great opportunity for cementing the relations between the two countries. While sincerely regretting his departure from London, he congratulated himself on being called upon to represent Egypt at two such centres as Athens and Belgrade. Sir Denison Ross proposed the health of Abdel Malek Hamza Bey, the new Counsellor at the Egyptian Legation, who will succeed Sidarouss Bey as Chargé d'Affaires, when the latter leaves for Greece in June. In an able speech Hamza Bey laid stress on the need for the close co-operation of Egypt with Great Britain and spoke of his own resolve to help, as far as in him lay, to promote good and cordial relations between the two countries. He hoped that he would receive and deserve the kindness and friendship that had been accorded to Sidarouss Bey.

At the close of the speeches a vocal recital was given by Mlle. Rosette Anday, of the State Opera, Vienna.

Among those present were:—The Greek, Siamese, Estonian, Latvian, Iraq, and Cuban Ministers, the Mexican Minister and Madame Ortiz, the Roumanian Minister and Madame Titulesco, the Italian Chargé d'Affaires and Countess Roberi di Villanova, the Chinese Chargé d'Affaires and Madame Wei-Cheng Chen, the Colombian Chargé d'Affaires, Dr. Van Scherpenberg (German Embassy), Count and Countess de Lapre, Lieutenant-Colonel and Madame Infante (Italian Embassy), Colonel Vitez Beldy, M. Jan Wszelaki (representing the Polish Minister), Mr. Karovitch (Legation of the Kingdom of the Serbs, Croats, and Slovenes), Dr. Aguilar (representing the Venezuelan Minister), Abdel Malek Hamza Bey, M. Georges Cataui, M. de Bourg and M. Clement Ressonico (Swiss Legation), M. Laptev and M. Constantinesco (Roumanian Legation), Lord and Lady Lawrence, Lady Lamington, Lord and Lady Jessel, Lord and Lady Louth, Lord Headley, Lord Waring, Lord Arnold, Lady Cottier, Baroness d'Erlanger, Baroness de Goldsmid, the Hon. Lady White-Thomson, Sir Edward and Lady Boyle, Sir Frank and Lady Newnes, Sir Denison and Lady Ross, Sir Malcolm McIlwraith, Sir Reginald Macleod, Sir Henry and Lady Mullenew-Grayson, Sir Henry Imbert-Terry, Sir Arnold Lawson, Sir Brumwell Thomas, Sir Clifford Cory and Miss Cory, Sir Hugo and Lady Hirst, Sir William Clark, Sir John Cockburn, Sir H. J. Waring, the Countess di Balme, Dr. and Frau Von Halem, Sir Henry and Lady Cowan, the Hon. Georgina O'Brien, the Hon. Donough and Mrs. O'Brien, Mr. and Mrs. R. G. Warner, Mrs. L. S. Cobham, Mrs. Alec Tweedie, Mr. and Mrs. Montague Bell, Dr. and Mrs. Moody, M. and Madame Radi, Dr. E. H. Griffin, Mrs. Menteith Ogilvie, Mr. and Mrs. Posgate, Mrs. Stewart Erskine, Miss Vaughan-Morgan, Mrs. Wesley Watson, Major and Mrs. J. S. Gordon Canning, Mrs. Inigo Jones, and Mr. Wynand Wolff.

PALESTINE EXHIBITION AND WEST END FAIR.

On the second day (May 14) of the Palestine Exhibition and West End Fair the Chair was taken by Sir Hugo Hirst, who said that he had been invited to take part in this function as the representative of industrial developments. In referring to the genius of Mr. Rutenberg, Sir Hugo said that the work of the harnessing of the Jordan was progressing slowly, but the propagation of power generally had proved a great success. Palestine was going to be a new gate to the East.

Viscount Cecil of Chelwood said: "As far as I know, only one serious difficulty has ever threatened the success of this great experiment. There was in the early years, there is, perhaps, still, a racial difficulty of which we are all aware. But I think I may say with some confidence that that difficulty has disappeared. Certainly we do not hear so much about it now, and there is no doubt about it in this matter 'a country is happy that has no history.' I am assured that you will find scattered all over the country Jewish colonies established with no kind of defence, like our garden cities in Hampstead, etc., and there they stand within sight of Arab cities. This reflects the utmost credit on the British administration and on the population that has co-operated so loyally. I am inclined to say that the two great achievements of the War and the settlements after the War were the League of Nations and the establishment of a Jewish National Home. They were both of them the fulfilment of an age-long aspiration. Since history began thinking men and women had always sought and imagined a way

by which the nations should be organised for peace and from the dawn of history there has always been present to us the conception that after a long period of dispersion a Jewish nation would again find a home in the sacred land of Palestine. At any rate on one side of it they have a common source. The same Hebrew prophets who wrote about turning swords into ploughshares and spears into pruning hooks were those who inspired the restoration of the Jewish home in Palestine. The two situations were closely connected. The rule of peace throughout the world was itself closely connected with the restoration of the Jewish nation. At the moment we have only taken a hesitating step in that direction. We have established a Jewish home in Palestine. What is now a national home may develop into something much greater and more important in future years. Certainly I am confident myself that just as the Jewish nation has, under conditions of great difficulty, exerted through individuals a tremendous influence on the history of the world, so such a race is bound to have an influence as great on the world's future history. In however small a degree, we are proud in having taken part in this great step in what may well develop into an event of world importance."

Sir Meyer Spielman thanked Viscount Cecil for coming there that day to help them. He said that the object of the Exhibition was: first, to advertise Palestine; secondly, to take steps for the acquisition of land in that country; and thirdly, to show by our loyalty that we were supporting the British mandate as British citizens. Lady Waley Cohen also spoke.

THE UNIVERSAL POSTAL UNION CONGRESS, 1929.

No other gathering can compete from an international point of view with the Universal Postal Union Congress. The League of Nations has its fifty-four members, with a few States either at or looking towards the door with a view to admission; but the Postal Union embraces eighty countries, and few, if any, of them are unrepresented at the Congresses which it is now sought to hold every five years. The last met at Stockholm in 1924; the ninth is now in session in London and is expected to last some six weeks. It was opened by the Prince of Wales on May 10 in the Royal Gallery of the House of Lords, and its daily meetings are being held at Burlington Gardens. There are some eighteen hundred items on its agenda, covering all the ramifications of postal enterprise, including parcel post, money orders, insurance, and the like. To celebrate the occasion, the British Post Office, traditionally chary in the matter of stamps for special purposes, has made a special issue of stamps, for which, perhaps, the most that can be said is that it is in keeping with the strictly utilitarian purpose of such bits of paper and, while avoiding any appeal to the artistic sense, maintains the tradition which excludes all mention of the country of origin.

On May 14 the delegates to the Congress were entertained at Dinner by His Majesty's Government at the Hotel Cecil. There were in all some 260 guests, the Postmaster-General, Sir William Mitchell-Thomson, being in the Chair. As, on the occasions of these Congresses, many of the delegates are accompanied by their wives, the gatherings, now that they are on a quinquennial basis, tend to have the character of a family reunion, comparable with conditions in Geneva, with the added advantage that business is relegated severely to the Council chambers, and international politics impose no restrictions on fraternisation. At the dinner speeches were restricted, after the loyal toasts, to the toast of the Postal Union Congress, proposed by the Chairman and to the reply by the *doyen* of the Congress, M. Krains, of Belgium. Full opportunity could, therefore, be taken by the guests of the ample time allowed after dinner for extended social intercourse, and notes of the quinquennium since the Stockholm meeting were freely exchanged.

Among the delegates from the Near and Middle East at the Dinner were:—Mr. H. A. Sams, Director-General of Posts and Telegraphs in India, Rai Bahadur P. N. Mukerji, Rao Sahib L. P. Kulkarni, Hassan Mazloum Pasha and M. Rafael Sidhom (Egypt), Ali Raana Bey, Youssouf Arifi Bey, Mr. D. Gumbly (Iraq), General D. Stefan Mihali, M. Th. Pentheroudakis, M. Kosta Zlatanovitch, M. Eugene Syrenvitch, M. N. Boshnakoff, M. Michael Savoff, Mirza Rahime Khan Arjomende, Shaikh Hafiz Wabha and Abdul Kader Muhtaseb (Hijaz).

The memorial to British soldiers and nurses who lost their lives in Serbia during the Great War was unveiled on May 12 at Nish in the presence of the British Minister, the Bishop of Nish, three Yugoslav Cabinet Ministers, and the Rev. J. H. Sharp, representative of the Bishop of Gibraltar.

The Marchioness Curzon of Kedleston has instructed Messrs. Knight, Frank, and Rutley, in conjunction with Messrs. John D. Wood and Co., to sell the rare old English and Italian furniture, antique Persian carpets, Italian and Oriental embroideries, pictures, etc., at Montacute House, Somerset. The sale has been fixed for July 10 and following day. The catalogue includes many fine pieces of old English furniture, as well as pictures, Sixteenth and Seventeenth Century Italian, Persian, Turkish, and Chinese embroideries, and Persian carpets and rugs.

THE WEEK AT HOME

London, Tuesday Morning.

Whitsun and Politics.

Whit Monday was Nomination Day for the General Election, but if any one was aware of the fact he very carefully concealed it. For against holiday time, politics simply had no chance whatever. During this release from work the General Election was quite forgotten.

As a matter of fact, there is still little sign of its being at all extensively remembered. If a foreigner in England were to be told that a week from the day on which this issue of THE NEAR EAST AND INDIA is published, one of the most momentous elections in the history of the British Empire is being held, he could scarcely believe it. For there is little real enthusiasm, still less real conviction.

Those who have always been good Party men still cherish the belief that calamities may ensue if their own men do not get in, but among the newer generation—which, after all, will (if it votes) decide this Election—such sentiments are not entertained. The fact is that politicians as such are apt to be considered by our quintessentially realist youth a rather poor set of men, whose rival antics have in the past taken up far too large a section of the national interest. To the leaders of the three parties there certainly does not adhere that kind of loyalty which, whether justified or not, was so manifest in the past decades.

And if one cannot vote for a man—well, it involves an examination and a weighing up of the different principles of the various parties: an intellectual exercise in which the modern generation is seldom inclined to indulge. Thus it seems that the voting will be largely determined by habit or instinct; which in itself is a violation of the very basic conception of democracy.

The obvious thing to say is that the result of this Election lies on the laps or the knees (physical details are apt to involve one in controversy nowadays: perhaps our young women no longer boast of laps) of the Goddesses. But whatever the result is to be, no one, as I say, cared a fig for it over the Whitsun holidays, when fresh air and green fields and hedgerows were the object of universal endeavour.

Party Prospects.

That this indifference of the public is so widespread is not the fault of the party organisers. These officials have indeed been labouring most strenuously, and such leaders as Mr. Baldwin and Mr. Ramsay MacDonald have been working very hard indeed. The Liberals, too, are trying to make sure that this time every Liberal votes for a Liberal candidate.

But the fire refuses to break out into flame. There is no incandescence in our politics to-day. Mr. Baldwin has a good following, because Mr. Baldwin as a man is generally liked. Similarly with Mr. MacDonald, who, however, has so toned down the Labour programme as to rob the newest party of the exciting interest which it should create among those who are not yet supporters of it. Even Mr. Lloyd George creates considerable enthusiasm, although one cannot help feeling that something is lacking in the party which makes its appeal to the youth of to-day by showing in its advertisements the faces of eminent men almost all of whose achievements were performed before the War.

However, confidence in the result is loudly expressed by responsible officials. The Conservatives, in particular, seem blissfully happy about it all—and indeed they would look very foolish if the extension of the franchise to young women, which they must have estimated would work in their favour, proved to be the deciding factor in their downfall. Authoritative Labour speakers speak with absolute conviction of a decline in the Conservative number of seats of anything between 100 and 150. And Liberal leaders, so far from being content with the 100 seats which most people are prepared to see them get, talk of obtaining 200.

In short, each Party enters upon the Election with good hope. The chief fear of the two major parties is that the Liberals, under the most practised politician of the time, may secure the balance of power. I am sorry that I have not sufficient information to be able to share fully in the hopes of any of the Parties.

The Table Cloth.

Far more interesting than our political changes are our changes in our social habits. One interesting change that is being noted is the return to the use of the table cloth.

Everyone knows how, for various reasons—chiefly economic, I think—the table cloth went out of fashion. It was seen at breakfast, and after that no more. Mats, of course, were substituted.

But with a certain old-fashioned type this “bare” table was never popular. And it seems that salesmen have cleverly exploited the psychology of these *laudatores temporis acti*, who felt that they were merely picking at a meal unless they could eat and drink it from a well-laundered table cloth. A commercial campaign has been launched, with the result that the end of the depression in the linen industry is announced.

Now, it seems, we are to have all sorts of gay table cloths, with original designs and of ingenious tints. Whether this development will achieve its purpose, however, I rather doubt.

Another change that is coming is the substitution for the square napkin of the oblong napkin, which is said to be more economical than the older type.

Golf and Cricket.

Golf has rather monopolised the eyes of sportsmen in recent days. There was a thrill of pride and relief when the news came through that Miss Joyce Wethered had defeated Miss Collett, the American champion, for if Hagen's victory in the Open had been followed by the triumph of an American lady, gloom would have been complete. Miss Wethered, however, displayed not only superlative golf, but also superlative temperament—for Miss Collett was miraculous in the first round.

I don't think, either, that grief was very widely expressed that the champion of our Open, Hagen, was again defeated by Duncan last week. Duncan is a genius, but a most unreliable one.

At cricket the affect of the rain has been seen in the low scores. It is the condition of the pitch, much more than the new experimental regulations, which is responsible for the excellent achievements of the bowlers.

One good thing noticeable is an improvement in the temper, or rather the *tempo*, of the Counties. Notts in particular have shown forcing cricket; they look like being the most dangerous rivals to Lancashire at the moment. Into the Lancashire v. Yorkshire match, however, the real spirit of cricket is never allowed to enter. On the first day, Saturday, Lancashire scored fewer than 200, and Hallows the first man in took over four hours to score fifty and the whole day to get his century! What fragrance can there be in this “War of the Roses?”

ALTER EGO.

In honour of the coming sixth anniversary of the proclamation of the Republic the Turkish Grand National Assembly has passed an Amnesty Bill which will benefit 15,000 prisoners, none of whom, however, are political offenders.

Mr. Meredith Atkinson, literary secretary to the New Health Society since 1925, has died after a short illness at the age of 46. In 1922 Mr. Atkinson was appointed honorary commissioner in the Russian famine area, and investigated relief work and refugee areas in Yugoslavia, Bulgaria, Greece, and Turkey.

The death was reported last week from Bologna of Alessandro Count Bosdari at the age of 62. Count Bosdari had a brilliant diplomatic career; after being Counsellor to the Italian Embassy in London at the beginning of 1900, he represented Italy, among other places, in Sofia during the Balkan Wars, and Athens during the Great War. Count Bosdari, who was a Knight of the Sovereign Order of St. John, was also at one time Governor of Rhodes.

PERSONAL AND GENERAL

TO-DAY

May 23, 1929 (New Style).
May 10, 1929 (Old Style).
Dhulhijja, 13, 1347 A.H., of the Muslim Calendar.
Iyar 13, 5689, of the Jewish Calendar.

The Aga Khan has left London for the Continent.

The Maharaja of Rajpipla left London on May 21 for Paris.

Viscount and Viscountess Inchcape spent the Whitsun holidays at Glenapp.

The Prince of Wales received Lt.-Col. Sir Francis Humphrys at St. James's Palace on May 15.

The Marquis of Reading was the guest of the National Liberal Club at luncheon yesterday (Wednesday).

The Maharaja of Alwar arrived at Marseilles on May 17 in the s.s. Viceroy of India from Bombay.

The Overseas Section of the Forum Club will give an afternoon reception on June 6 in honour of the Sultan of Zanzibar.

Field-Marshal Viscount Allenby and Viscountess Allenby left Wetherby Gardens on May 17 for Amesbury, where they spent the Whitsun holidays.

Mrs. and Mr. S. X. Constantinidi, formerly of the Greek Diplomatic Service, have arrived in London, and are staying at 10, Cambridge Square.

The Turkish Ambassador and Mme. Ferid Bey will hold a reception at the Turkish Embassy on Tuesday, June 4, at 10 p.m.

The Bulgarian Minister and Mlle. Hadji-Mischeff will return to London on June 4 from Sofia, where they have been spending a short holiday.

Lady Beecham, Mr. Adrian Beecham, and Mr. Thomas Beecham have returned to 19, Grosvenor Square after spending the winter in Egypt, Palestine and Italy.

Professor W. R. Taylor, head of the department of Semitic languages at the University of Toronto, has been appointed for one year to lecture at the United States School of Oriental Research, Jerusalem.

Sir Oswald Bosanquet, Sir Ismail Sait, Sir Mahomed Yusuf, and Sir Cowasji and Lady Jehangir arrived at Marseilles on May 17 in the P. and O. Viceroy of India from Bombay.

Mrs. Walter Tibbits arrived at the end of last week at the Park Lane Hotel from a tour of exploration made in India under the personal autograph advice of the late Marquess Curzon of Kedleston, Viceroy and Governor-General, and President of the Royal Geographical Society. While in the territory of the Nizam of Hyderabad she was the guest of his Highness.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.
Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

Sir Basil Blackett, K.C.B., K.C.S.I., will be the chief guest, and Sir Hubert Carr will preside, at the Calcutta dinner to be held at the Hotel Cecil, London on June 4.

The Hon. Anne Wood who recently returned from India, will be spending the summer with the Countess of Iveagh at 11, St. James's Square, until the arrival of Lord and Lady Irwin.

Sir Frederick and Lady Johnston arrived at Marseilles on May 17 in the P. and O. s.s. Viceroy of India from the Residency, Bushire, Persian Gulf, en route for England.

The King has approved the appointment of Lieutenant-General Sir Robert A. Cassels, Adjutant-General in India since 1928, to be A.D.C. General to the King *vice* Lieutenant-General Sir A. Skeen.

The Maharaja of Kapurthala is expected to be the chief delegate representing the Indian princes at the meeting of the Assembly of the League of Nations at Geneva in September.

A permanent treaty of friendship, commerce, Customs, and navigation between Belgium and Persia was signed at Teheran on May 11.

Count de la Torre de San Braunlio has arrived in Tirana as Chargé d'Affaires of the newly created Spanish Legation to Albania.

A general relief fund has been opened at Teheran to aid the sufferers in the recent earthquake in Khorasan.

It has been decided by the Albanian Cabinet to make a general census of all Albanian subjects. The registration will take place in all countries where Albanians reside on the same day, some time in August next. The preparatory Commission has already been appointed.

Admiral Koundouriotis, yielding to the urgent requests of the Premier, M. Venizelos, and a deputation of 30 Senators and Deputies, promised on May 15 to accept candidature for the Presidency of the Greek Republic.

The Greek Government on May 15 decided to carry into effect the agreement arrived at between M. Kafandaris and M. Moloff, Greek and Bulgarian Foreign Ministers, and to pay the sum of £3,740,000 on account of the Bulgarian migrants. In the case of future payments, however, Greece will ask the League of Nations Finance Committee that her debt to Bulgarian migrants may be paid not at par value, but at the rate of exchange quotations of the voluntary emigration loan debentures. A first instalment of £205,000 was paid by the Greek Government last week.

Book Reviews

INDIA—PLAIN AND COLOURED.

"**DAUGHTERS OF INDIA.**" By Margaret Wilson. (London: Jonathan Cape. 7s. 6d.)

"**SLAVES OF THE GODS.**" By Katherine Mayo. (London: Jonathan Cape. 7s. 7d.)

"**AN INDIAN JOURNEY.**" By Waldemar Bonsels. (London: George Allen and Unwin, Ltd. 7s. 6d.)

The first book in the above list is a delightfully sympathetic story centring round a young American missionary lady, absorbed in her work among the Untouchables in the Punjab, self-sacrificing and full of zeal, yet gifted with the power of seeing herself and her surroundings with humour and, as it were, from the outside. It is, perhaps, not impertinent to suggest that the book is, partly at least, autobiographic. The author certainly writes with a sure hand on matters which she evidently knows thoroughly. She writes sincerely and without effort at effect, and her art gains thereby. Though the Untouchables take the main place in the tale, we are introduced to Indians of all kinds and standings and of both sexes, so that we have a real picture in miniature of Indian life and feeling. It is one of great truth and insight. Though the deplorably dark shadows of Indian sexual relations and their significance are fairly met and fully acknowledged, we are allowed to see much which falls entirely outside them. No one can read this book without gaining some real knowledge of the working of the Indian mind and learning something of Indian life in various strata. And we should add that no one can read it without concluding that the Indians are lovable people and not so very different from ourselves as we are sometimes told. Most confidently do we recommend this charming sketch in black and white to all of our readers.

Miss Mayo is not content with black and white. Nor has she any concern in showing us the background, foreground, and middle distance of her pictures. Everything is painted in the most lurid colours available, and the lime-light is focussed relentlessly on the one aspect of Indian life which she is, for the time, engaged in exposing to her readers, with the single intention of securing from them utter loathing and damnation for it. Sexual relations, the status of women, the treatment of Untouchables and of the lower animals are her subjects. Every one of her twelve tales professes to be founded on fact, and we do not doubt that this is so. The Hindu record in these matters is hideously black, as indeed is becoming increasingly realised by themselves. But "facts" become more or less unrecognisable when treated by a writer who, though she has an experienced pen, positively wallows in "sobstuff," and allows her characters to express themselves in words and thoughts entirely foreign to them. Nor does she act wisely in contrasting the evil Hindu with the saintly Muslim in these matters. The girl in "The Poison Spider" escapes from her Hindu relatives with a chivalrous Afghan, who tells us what he thinks of Hindus and their sexual practices. Yet it was only the other day that the Afghan Pretender at Kabul issued a manifesto denouncing ex-King Amanullah for, among other things, prohibiting child marriage!

This kind of writing is mere propaganda. It is neither art nor truth. Truth has many facets, and those who concentrate their attention on one or two only must fail to

see it. It is all very well to admit in her Preface that there are other facts, but the presentation even of undoubted facts in a picturesque manner when such facts bear only on specified abuses, gives a cruelly unfair picture of India. Miss Mayo has already done much to call the attention of Indians to these terrible blots on their civilisation, and her message has awakened many consciences among them. But this book is not likely to further any such desirable ends. It will certainly be received with anger in India, for it is quite manifest that Miss Mayo has overreached herself. What it will achieve is an increase of that hatred and contempt for Hinduism which was, in America and to some extent here, the result of the appearance of "Mother India." It will not do so in the case of those who are able to allow her denunciations their true proportion in Indian life and mentality. But ignorant readers will be far more numerous. We already hear much of a general feeling in the United States that India should be excluded from the comity of civilised States, and, only the other day, we found one of our own most respected and sober weekly journals writing of "that vile superstition which is known as modern Hinduism." These phenomena are due almost entirely to Miss Mayo. Does she really think that the reforms which she so eagerly desires, in company with all friends of India, will be hastened by the narration of one-sided "facts," smothered in what we can hardly call anything but "sloppiness"? If so, we regret that we cannot agree with her, and we regret it all the more because we fully appreciate how real and how firmly fixed are these terrible evils against which she is fighting, and also the whole-hearted zeal with which she has set herself to do what she can to combat them. But she has yet to realise that there is little to choose between *suppressio veri* and *suggestio falsi*.

In Herr Bonsels' book we leave the region of lurid colour and loud propaganda and enter into one of quiet observation, philosophical meditation and subdued tints. It is a "best seller" in Germany, and no doubt its success there has been, in part, due to the liberal allowance of easy, comfortable—and cheap philosophy. We imagine that there is not a similar appetite for this diet with us. But, apart from this (to our mind) defect, "An Indian Journey" has much to recommend it. A sensitive and observant young man, not without a welcome sense of the whimsical, and with considerable literary gifts came in the course of his wanderings about India to Cannanore, on the Malabar Coast. He ignored the Europeans to a great extent, and busied himself in getting to know something of the Indians and their ways, in which pursuit he was assisted by a perfectly delightful "boy" who, with a cook, comprised his entire establishment. After sitting at Cannanore in the indefinite way of India, he packed up and trekked to Mangalore by jungle roads, the Western Ghats and backwaters. This journey, again, was carried out without any thought of time, and, indeed, a long period was taken up with gradual recovery from a severe attack of jungle fever. His observations on his journey are, where not marred by "philosophy," very pleasant reading, and show far more real understanding of India and its inhabitants, human and otherwise, than is contained in Miss Mayo's book. Incidentally, we would observe that he in no way shirks the black spots; indeed, he tells a little story himself which might well be the "facts" underlying a thirteenth tale of her book. His time at Mangalore is of less real interest, because he represents himself as getting mixed up in the doings of a "philosophic" politician which end in a highly melodramatic manner. The book is a pleasant one and its pleasantness is considerably enhanced by the dainty little sketches which the author has interspersed in the text. There is nothing to show whether this is a translation or an English version written by the author. If the former is the case, the fact that we are in doubt about it shows how well the work has been done.

THE EAST INDIA COMPANY IN CHINA.

"THE CHRONICLES OF THE EAST INDIA COMPANY TRADING TO CHINA, 1635-1834." Vol. V, Supplementary. By H. B. Morse. (Oxford: Clarendon Press. 15s. net.)

Dr. Morse's invaluable chronicle of two centuries of the trade with China, which was reviewed in these columns three years ago, was incomplete for the period 1743-1774, for which the records were either partly or entirely wanting. Duplicates of some of the missing records have since been found in the Legation at Peking, and from them Dr. Morse has pieced together this supplementary volume. It may be described in his own words as fragmentary, but of exceeding interest. The new materials throw much fresh light on the three-handed game which was played for so long at Canton, between the foreign traders, the local merchants, and the mandarins, all interested in the development of a profitable commerce, but each party intent on securing most of the profit for itself. The supplement, like the original volume, will be found indispensable by all Indian libraries concerned with economic history. India does not indeed occupy much space in it, but no Indian student can afford to neglect the particulars it furnishes regarding the transfer of funds from India to China for investment in goods for Europe. Ordinarily such remittances were made in silver, the commodity which China always wanted most, but about the year 1769 India was short of silver, and there is much of interest in the expedients by which Warren Hastings and others endeavoured to put Canton in funds.

"NICKY" AND "SUNNY."

"THE LETTERS OF THE TSAR TO THE TSARITSA, 1914-1917." Translated by A. L. Hynes. Edited by C. E. Vulliamy. Introduction by Dr. Hagberg Wright. (London: John Lane. 15s. net.)

It is well to have these letters, in supplement to those from the Tsaritsa to the Tsar, and it is fortunate that their introduction to the English public has fallen into such good hands. We have nothing but praise for the way in which the three collaborators have carried out their duties, though we cannot help wondering whether Mr. Vulliamy is not a little too positive that the letters show how entirely the Tsar was kept in the dark on happenings of an unpleasant nature. Has he not, perhaps, overlooked the nature of these letters? They are intimate little notes, many of them simply love-letters; and matters of State are, as one would expect, almost absent from them except when he has to answer the Tsaritsa's questions and arguments on internal matters of government. There seems to be some foundation for his theory during the early times when the Tsar spent his time showing himself to the troops, and certainly the following sentence from a letter written on June 23, 1915, is disquieting:—

"No sooner had I finished playing dominoes than N. (the Grand Duke Nicholas) appeared and showed me a telegram he had just received from Alexeiev, which said that the Germans had just broken through our lines and were penetrating far into the rear.

Still, the poor man had to have some recreation, which seems to have consisted mainly of taking exercise, playing dominoes, reading romantic second-class English "best sellers," and pasting photographs into albums. The book gives us the self-limned portrait of a very lovable man, thinking of everyone before himself, very simple in his tastes, an entirely devoted father and husband, and wholly conscientious. A man tragically out of place as autocrat of Russia, yet ever mindful of his duties as such, and a man who, when faced with the inevitable result, took it in a spirit of perfectly simple fortitude and resignation, his last letter, written after the blow had fallen and all hope had gone, being not about himself but about the concerns of one of his faithful followers.

This book throws no new light on the War or on Russian politics, but it is a valuable and deeply interesting human document.

HOW TO GET THE BEST OUT OF YOUR CAR

No. 4. Concerning Tyres and "BP"

It is advisable to inspect your tyres once per week to ensure that the correct pressure recommended by the makers is maintained.

Stones embedded in the tread should be removed daily. Watch for cuts in covers. If wet and grit penetrate to the casing it rots the fabric.

Oil is bad for tyres. It disintegrates the rubber. Over-lubrication of hubs and axles should therefore be avoided.

Test your wheels for alignment. If they are out of track, excessive tyre wear will result.

Run on "BP" and get a good run for your money.

PUT THE BEST IN

"BP"

It pays to use "BP"

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Turkish Exchange.

The recent weakness of the Turkish exchange, which has been over 1,000, is due in the main apparently to certain exceptional factors. The pending introduction of a new tariff with duties of an almost prohibitive character has resulted, as is invariably the case in similar circumstances, in a great expansion of imports, as importers desire to have as large an amount of goods in stock as possible before the application of the new duties. Another factor, and one which is probably more important, is the extensive importation of wheat and flour as a result of the failure of last year's crop. It is ominous for Turkey that the outlook for this year's cereals crop is so far anything but favourable. There is time for the position to improve, and it is to be hoped that climatic conditions will henceforth be favourable, for a further failure of the crops this year as well would be a serious matter for Turkey.

Protection in Turkey.

Turkey's experiment in high protective duties is rather like the fable of putting the horse behind the cart, for no one outside Turkey imagines that the country will be able for years to come, if it ever will, to supply the local population with the necessities of life. The pledges of young Turks to wear nothing but national products may be pleasing to Kemal Pasha as evidence of the new spirit which inspires the country, but if it were carried literally into effect his popularity would probably suffer, for Turkey has cold winters. The general belief that now obtains in Turkey as to the efficacy of protection is strikingly illustrated in the case of the coal industry which has recently presented to the Government a demand that customs duties should be imposed on foreign coal for bunkers, that all official and national organisations should be compelled to burn Turkish coal, and that a variety of other protective measures should be introduced so as to safeguard completely the Turkish market. The cynic might be inclined to say that the Turks were bent on developing an inferiority complex, while it will afford the advocates of reduced tariffs a further example of the long furrow that must be ploughed before there is any prospect of bringing about anything in the nature of free trade.

The Kassala Cotton Company's New Concession.

At the annual meeting of the Kassala Cotton Company, a report of which will be found elsewhere in these columns, the Chairman, the Hon. A. M. Asquith, was able to give a most encouraging account of the development work on the company's new concession in the Gezira. It had been thought that it would be possible to plant 5,000 acres with cotton this autumn, but progress has been so rapid that it is now anticipated that the whole of the area available for cotton, about 15,400 acres, will be planted this year. That this is an immense achievement needs no emphasis. The task of organising within two years an area of 46,000 acres of land so that it can be intensively cultivated in 30-acre holdings by perennial irrigation is a wonderful piece of work, the magnitude of which cannot be illustrated in a few words. Among the work involved was the canalisation of the area, the ploughing, ridging, and preparing for cotton of 15,000 acres, and an extensive building programme. Mr. Asquith pays a whole-hearted

tribute to the work of the Irrigation Department of the Sudan Government, which has greatly furthered this acceleration of the programme, and to the Sudan Plantations Syndicate, without whose co-operation "we could not possibly have done the work in the time nor anything like so economically."

Sudan Trade Improvement.

For the first two months of this year the figures for the trade of the Sudan show a very marked improvement on the totals for the corresponding period of the previous year. There is an increase in respect of every one of the chief items in the list, while the total volume of the trade at £2,511,825 shows a rise of £551,009. The value of the total imports at £1,139,125 has risen by £213,204, and of this increase £153,495 is accounted for by public imports, while Government imports are £59,709 up at £348,267. Exports at £1,286,364 show an increase of £313,332, for which the larger exports of cotton and the higher prices for that commodity are largely responsible. While it will be impossible to say that the position is quite satisfactory in the Sudan until the supplies of dura are such that the export of it is again permitted, the figures I have given show very plainly that developments in the Sudan are in the right direction. The country is now in a position to benefit more and more by its cotton crop, while the increase in public imports shows that the purchasing power of the population as a whole is on the upgrade.

A Syrian Cement Industry.

I am indebted to a recent American Consular Report for the interesting news that a project is on foot for the manufacture of cement in the Damascus region. I suppose that the success of the cement industry in Palestine is in some measure responsible for this development. Whether conditions in Syria are as favourable for such an enterprise as they have been found to be in Palestine must remain to be seen. So far there is no question that the industrial progress made in Syria since 1918 has been considerably less than that of Palestine, for which the fact that the former country lacks the inspiration and assistance which the latter receives from external sources is no doubt responsible.

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms. The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfer on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Plevan, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Doupnitza, Gorna-Orehovitza, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratza. It has also 86 agencies.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 21.

Business in the Stock Markets was quiet with the approach of the Whitsuntide holiday but the tone remained good, and prices fluctuated only between narrow limits. Tightness in the money market was responsible for a slight easing in the gilt-edged market, but there was a better tendency among Home Rails on satisfactory traffic figures, though there was little increase in actual business. Industrials showed no decided trend, activity being mainly confined to securities in which New York is interested. Margarine Union, however, displayed conspicuous activity, being heavily bought from Amsterdam. America was buying Rolls Royce shares and some of the electrical stocks. Rubber shares were marked up on the rise in the price of the commodity, and the Oil share market brightened up towards the end of the week.

The end of the present Stock Exchange account coincides with the date of the General Election, and it is hardly to be expected that markets will display any increase in activity until after then.

Dominion Government Stock.

The appearance of the prospectus of a new issue on behalf of the Australian Government—even although it was only in connection with a conversion operation—will, no doubt, have reminded many investors of the merits of Dominion and Colonial Government Stock, which, largely because of their merits, are apt to receive too little attention. These securities are, of course, of a gilt-edged standing, and rank close to British Government obligations, so that the yields are not generous. We have, however, often emphasised the fact that all investors should obtain a good holding of really first-class securities, and that, at any rate, unless one is in a position to run risks, the yield is not the most important consideration in an investment. The younger portions of the British Empire have naturally looked to Britain for the finance of their development, and the investor who is considering investment in these securities has a wide choice. Only a few stocks can be mentioned here, but they may be taken as indicative of the yields generally obtained. It should be noted that some colonial and dominion loans bearing nominally high rates of interest are subject to redemption at an early date, and therefore are not suitable as permanent investments. Amongst Canadian securities the Province of Quebec $4\frac{1}{2}$ per cent. registered stock redeemable in 1954, yields £5 per cent. The same return is obtained on the South African 5 per cent. inscribed stock, redeemable 1940-60. A rather higher yield, £5 2s. per cent. is obtainable on Australian 5 per cent. registered stock, and stocks of some of the Australian States, which under the recent agreement are now guaranteed by the Commonwealth, give still better returns. Queensland $3\frac{1}{2}$ per cent. inscribed stock, redeemable 1940-70, for example, yields £5 9s. per cent.

Rubber.

Since the rapid rise in price of January and February last, which carried quotations from 9½d. up to 1s. 1½d., the rubber market has been fairly quiet, but this week, under the impetus of favourable U.S. April consumption figures, prices have been firmer and bargains for the latter part of the year, or for the first quarter of next year have been done at over 1s. The outlook for the next few months, is, however, uncertain, because the market has not yet had a period of normal running since restriction was abandoned. The widespread adoption of the principle of "resting" trees, as Messrs. Wm. Jas. and Hy. Thompson point out in their "Rubber and Tea Quarterly," makes it unlikely that a formidable increase of output is to be expected in the near future, but the action of native producers on small estates is an incalculable factor. If prices rise above 1s. market calculations

may be upset by unexpectedly heavy native production. As regards prospects in the more distant future the growing consumption of rubber, especially in centres other than U.S.A. remains a hopeful feature, and at the same time important additions to growing areas are unlikely in the near future. There is, therefore, reason for holders of shares in rubber companies to be optimistic, but others who may be contemplating purchase of such shares should remember that a considerable element of speculation is necessarily involved. Not only must prosperity in a plantation industry be expected to fluctuate, but the extent to which share prices vary in sympathy with the prices of the commodity makes the market one in which only the expert should attempt to speculate.

Distillery Profits.

The business of ministering to the public's thirst continues to prove profitable judging by the recent dividend and profits announcements of prominent distillery companies. John Walker and Sons report profits of £744,917 in the year to March 31, 1929, against £668,347 a year ago, but are not increasing the dividend of 25 per cent. on the ordinary shares. The profits of Buchanan-Dewar for the same period amounted to £1,226,175, compared with £1,166,792 in the preceding year, permitting the raising of the dividend from 28 per cent. to 30 per cent., the highest since the ordinary capital was doubled in 1924, while White Horse Distillers are declaring a dividend of 40 per cent. for the year against 27½ per cent., of which 5 per cent. was tax free, last year. At the same time the latter company is placing £50,000 to reserve, and carrying forward £66,407. Last year nothing was allocated to reserve (although the Pensions Fund received £20,000) and £37,556 was carried forward. All those companies are subsidiaries of Distillers Ltd., which controls the making of nearly all the well-known brands of whisky. These increased earnings, which are probably due to an expanding export trade, have therefore encouraged buying of the parent company's shares. These constitute a promising industrial investment, for apart from its well-established whisky trade the concern is developing the industrial spirit side of its activities, and there are considerable possibilities in this direction. Its dividends are not declared until July, but on the basis of that declared last year, the ordinary shares yield £5 5s. per cent. The 6 per cent. cumulative preference shares, which are well secured, both as regards capital and income, return £5 13s. per cent.

The Madras and Southern Mahratta Railway is to construct a new broad-gauge line from Ellore to Budramkota, on the Gadavari River.

The Egyptian Delta Land and Investment Company announces a dividend for the year ended December 31 at the rate of 15d. per share.

According to *Der Fruchthandel* fruit crops in Bulgaria last year were somewhat light, but in spite of this fact there was a development in the export trade due to the efforts of the exporters. There was a strong demand for Bulgarian grapes on the Vienna market, and out of the 4,000 tons of grapes taken by that market nearly 1,000 tons came from Bulgaria. This is reported to be due in a large measure to improved packing. Exports of plums were also satisfactory in spite of the small crop. Some 70 trucks were consigned to German and Austrian markets, and the excellent condition of the fruit on arrival made it possible to re-export from Hamburg to the United Kingdom. The season for fresh fruit in Bulgaria is very short.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

PUBLIC SECURITY IN EGYPT.

*(Continued from page 633).***Drug Traffic.**

In former days the only drugs known in Egypt were hashish and opium. Cocaine was only used for medicinal purposes. But when the Great War came to an end the chains of militarism were broken and the use of cocaine and other drugs spread all over the world and, unfortunately, reached Egypt. There was no law against the unlawful possession of cocaine and heroin until March 1925, when a law was passed inflicting punishment on every one who trafficked in or possessed those drugs without licence, condemning him to imprisonment for a period of from one month to three years, and to a fine from ten to three hundred pounds, or to one of the two punishments, provided that that of imprisonment should not be less than six months and that of the fine should not be less than £50 in the case of a repetition of the offence. As a result of the promulgation of this law the number of cases tried by the courts increased.

It was formerly thought that the use of narcotics and trafficking in them were confined to the capitals of governorates, Mudirias and Markazes. But it was found out later, that the disease had attacked all parts of the country, cities, villages and ezbas alike, even the most remote hamlets; and that it had become rampant amongst all classes of society, men, women, educated and illiterate alike. In fact, the spread of the disease has now reached such proportions that addicts often present themselves to the police and beg to be arrested and put in prison so that they may be cured of the dreadful habit. Formerly addicts usually drugged themselves when alone, but it was now found that they practised the habit in parties and in special places assigned to the purpose. One of these places, in Alexandria, was recently raided by the police, and 34 natives were arrested using cocaine and amongst them, it is sad to relate, was a youth of fifteen years of age.

The number of narcotic victims who entered the lunatic asylum from January 1 to November 30, 1928, reached 94 as against 105 in 1927, 265 in 1926, 244 in 1925, and 207 in 1924. Though this year's number is comparatively small, it does not represent the real number of narcotic victims, as, owing to the lack of accommodation, only very serious cases are admitted into the asylum. In a letter addressed to me in 1927, the Director of the Mental Diseases Hospital says that the hospital cannot accommodate all those who are sent to it, and that it is consequently obliged every year to discharge hundreds of individuals before they are finally cured. Their number is not small, for they have averaged in the last three years about 750, all of whom may relapse into their old habits; and the danger is not as much in their number as it is in the fact that they are liable to produce children who are mentally and physically weak. Children so produced are on the rapid increase.

The number of prisoners, whether for trafficking in, or addiction to narcotics, up till December 12, 1928, amounted to 4,634. The quantity of drugs confiscated this year in all Egypt amounted to 19,340 kilos. as against 12,720 kilos. last year. It will be seen that the traffic in narcotics is widespread; that its use has greatly increased, and that its victims have become so numerous that the nation as a whole is threatened morally, physically, and economically. It is therefore imperative that this danger be combatted by all measures. The police authorities have exerted praiseworthy efforts in this respect, and many of them have faced great dangers in trying to confiscate narcotics or arrest traffickers.

It is also noteworthy that the Coast Guards, the Frontiers Administration, and the Customs Officials carried out, within their spheres, a strenuous campaign against smugglers. But it must be stated here that although the efforts of these various administrations were directed

towards one and the same end, namely, to fight against the spread of narcotics in the country, each one of them acted separately according to information obtained, and irrespective of whatever information the other administrations might have possessed, and which might have helped in tightening the control and arresting the smugglers. It is therefore essential that the efforts of those various administrations, together with those of the police should be so co-ordinated that the campaign may be more effective. This can only be attained by the appointment of a committee representing the various administrations, together with the postal administration to study the different methods of combatting the smugglers. The appointment of such a Committee will bring about a better co-ordination of the efforts of those administrations in their campaign against the smugglers and in their efforts to devise the best methods to prevent their escape.

As a matter of fact, a committee was formed this year under the presidency of the Director-General of the Customs Administration, and with the membership of the Assistant Director of the Coast Guards Administration, O.C. Camel Corps, Frontiers Administration, Director of the Administrative Service of the Administration, and a delegate from the Ministry of Finance. The first object of the committee was to study the conditions arising from tobacco and other materials being smuggled into the country to avoid paying customs duties. As the smuggling of these materials (which concerns the Customs Administration) is connected with the smuggling of narcotics (which concerns public security) it occurred to us to demand representation on the said Committee, because common interest necessitates the co-ordination of all efforts in the campaign against smuggling in general, including the smuggling of narcotics. The Ministry of Finance approved of the collaboration of the Public Security with the Committee, and the Acting Assistant Director-General of Public Security joined the committee, which is still proceeding with its work.

The Administration of Religious Institutions having this year appointed a number of Ulemas to preach in the various provinces and try to instal a higher standard of morality amongst the people, the Department of Public Security sought their help in the campaign against narcotics, that they might call the people's attention to the danger of these drugs which destroy their health, weaken their minds, and impoverish them. The Public Security also furnished these preachers with instructions and facts received from the Public Health Department in connexion with the subject. It is greatly hoped that the advice of these preachers will have a beneficial effect.

Apart from the previously mentioned means for fighting this evil, the Government must at once proceed to establish the reformatory, to which article 36 of the new law alluded, so that Courts may be empowered to send culprits to it for a period of not less than six months and of not more than one year, instead of condemning them to imprisonment. The observations of the prison doctors, as stated in the memorandum of H.E. the Director of Prisons, indicate that 20 per cent. of those convicted for addiction to narcotics need, at the outset, treatment in the hospital, and that 40 per cent. of them are too weak to work, so that the Department is obliged to place them with the weak prisoners who are given light duties not necessitating any great effort. It is therefore essential to hasten the establishment of this reformatory, not only for the reception of those condemned, as stipulated by the law, but also for the reception of all drug addicts, who present themselves and wish to be cured of the habit. Such a reformatory would be like a hospital of mental diseases, containing convicts and lunatics. Moreover, the judicial authorities should help in the campaign against narcotics by wasting no time in giving judgment on cases submitted to them, so that the lapse of time between the drawing up of the *procès verbal* and the issuing of the sentence should not be used by the trafficker to dispose of, by selling, whatever supply of drugs he may have in his possession.

These are the means that may have an effect in the lessening of the evils arising from addiction to narcotics. These means must not, however, be closely depended upon, and the government should resort to other measures to ensure control over the production of drugs by factories abroad, instituting, at the same time, measures for the control of their disposal. This control can only be effected by an international treaty on the basis of the one which was concluded in 1925, at Geneva pertaining to the control of traffic in arms and ammunition. In this proposal we are only striving for a humane object for which all civilised nations strive.

The Criminal Bureau.

This bureau superintends all the work connected with crimes in all parts of the country, draws up the regulations which tend to prevent perpetration of crimes, or discovers those which have been committed. The means employed to realise this end were formerly limited to daily notices, detailed reports on important cases, or general statistics of the crimes committed in the provinces and governorates, but not in districts and towns. It was, therefore, found necessary this year to fill up this want; the Ministry therefore prepared several forms to obtain necessary detailed information, and as a result, fuller statistics required by the Department of Public Security are now available and help the reader to appreciate the progress of crime in the various parts of the country.

It must be remarked that the statistics of the Ministry of the Interior vary from those of the Ministry of Justice, because the Department of Public Security gives its statistics on the basis of limiting the crimes to those committed during the judicial year only, and in accordance with the manner in which they were disposed of; that is to say either temporarily filed, the accused convicted, or acquitted, or the cases still remain under the consideration of the Courts or the Parquet. It also deducts from the number of crimes (which the Ministry of Justice does not) those in which the committing judges decide that there is no reason to prosecute, and the cases which the assize courts consider misdemeanour. Likewise cases of old offenders coming under article 50 of the Penal Code, in which the accused are either acquitted or the cases are temporarily filed by the Parquet. As for the Ministry of Justice, its statistics are based on the number of crimes which come before the committing judges, or are filed temporarily in the course of the judicial year, whether these crimes were committed in the year in which the statistics were prepared, or in the previous years.

In the interests of work, some bureaux of the Ministry have been annexed to the Criminal Bureau, those, in fact, whose work is strongly affiliated to that of this bureau, such as the Bureau of Criminal Investigation (which was annexed in 1924), the Ghaffirs Bureau, which had been under the Personnel Bureau, and was annexed in 1926. Much other work also, which formerly had been distributed amongst other sections was now allotted to this bureau. Important additional duties so transferred included the demolition of ezbas, the deportation of foreigners, the extradition of criminals and other work of various kinds intimately connected with public security.

The Criminal Bureau also publishes the Administrative Gazette which appears once every fortnight, and is sent to all the provinces, governorates, districts, towns and police officers, giving all the information which may help to discover the persons accused or sentenced who have escaped, as well as the prisoners, persons under police supervision, soldiers, ghaffirs and others who have absconded or deserted.

Passports.

There were no restrictions to migration to and from Egypt before 1914, but since the World War it has been found necessary to watch those who arrive in the country, so that persons who are a danger to security or to morality should not easily find their way here. A special office was therefore opened for the purpose, in the Ministry of the Interior, its powers then being derived from the

authority of martial law. This office continued to carry functions until 1923 when the abolition of Martial Law was being considered. A ministerial order was therefore issued on July 4, 1923 laying down the necessity of obtaining permission to enter Egyptian territories; and it was in conformity with this order that this Ministry in concurrence with the Ministry of Foreign Affairs issued instructions to the Egyptian Consuls and to the Passport Offices in Egypt, following, as much as possible the principles laid down by the Emigration Congress which was held in Rome in 1924. These instructions authorise Egyptian Consuls to grant visas direct to tourists and to the principal merchants and their representatives. They are also authorised to vise passports, for limited periods, to persons who wish to come to Egypt in urgent cases. In other cases, emigration into Egypt is not allowed, and applications have to be referred to this Ministry which will make sure of the financial position of travellers, that they are not of criminal antecedents and that their profession is one which is not harmful to the country.

The Ministry has lately decided, with a view to encouraging tourists passing through Egyptian ports, who wish to visit Egypt while their steamer is in port, and whose passports are not vised to allow them to enter the country, to be given, by the passport offices in these ports, temporary permits for a period not exceeding 48 hours, on payment of a reduced tax of P.T. 20. A decision to this effect was taken on January 1, 1929.

As to foreigners who, from inquiries made by the police, are found to be a source of danger to security or to morality, these are expelled from the country after obtaining the concurrence of their Consuls. It was in consequence of this direct supervision at the ports that no undesirables were able to enter Egyptian territories, with the exception of a small number who were smuggled into the country and who were afterwards expelled. In order that the supervision may be more strict, we are of opinion that the number of secret police at the ports should be increased, after training them in this work. As for the emigration of Egyptians, restrictions have been made to protect them whether as individuals or parties, so that no Egyptian is allowed to leave before the Ministry has made sure of his financial ability. As for parties, they will not be allowed to leave before the Ministry has ascertained that the work they propose to do abroad is permissible and not dishonourable, that they are to receive proper wages, that their work will be under proper sanitary conditions, and that proper provision is made for their return journey. It was in consequence of these restrictions that the Ministry was able to effect the return to the country of a large number of Egyptian workmen, the Government not incurring any expense for his return. The Government also refused to allow a party of Egyptians to leave for countries which are not suitable to their health.

This year the Ministry sent an official of this office to England to study the police regulations and modern system adopted in watching the ports, as well as all that concerns emigration. Another official will be sent to France for the same purpose.

The Technical Bureau.

The bureau supervises the execution of all technical stipulations contained in licences in connexion with buildings, etc., to ensure the safety of the public and the employees in the cinemas, theatres, and dangerous establishments generally, and undertakes their inspection. Its functions also include the following:—

1. Control of Cinema Films.—This Bureau carried on the control of films since its formation in 1921 up till this year, when a special commission was appointed for controlling films, censoring plays, and examining gramophone discs. In fact, the Technical Bureau, though not the proper authority to control films, yet has made laudable efforts to do so during the past years. The number of cinema plays received in 1928 was 1,380, with a length of 1,624,642 metres, against 1,268 with a length of 1,001,870 metres in

1927, and 1,344 with a length of 1,272,185 metres in 1926. As for the plays which were not considered in keeping with public security or morality, and were not allowed to be exhibited, they were in 1928 seven, against nine in 1927, and four in 1926. As for the number of plays from which the parts against morality or security were removed, it was 128 in 1928, against 223 in 1927, and 66 in 1926. In addition to the above, this Bureau reviewed this year 8,570 films of children's and other plays, which are usually exhibited in houses, and which were not previously subject to control. As a result of this continuous increase in the number of films received, a proportion was subject to considerable delay awaiting its turn for examination. However, in December last the Ministry took steps to triple the number of films to be examined daily.

2. Photography.—This Bureau took photographs connected with some bureaus under the Department of Public Security, such as those of servants, artisans, deported persons belonging to foreign nationalities, the bodies of murdered and unrecognised persons, etc.

3. Inspection.—The engineers of this Bureau inspect the places under its jurisdiction in all parts of the country, to make sure that their owners carry out the stipulations required for the safety of the public and workmen. When they discover any infringement, measures to prevent danger are taken as required, according to the regulations.

It has been observed in recent year that the labours of the Technical Bureau increase year by year in importance owing to the increase in the resources of the country and in its advancement and civilisation. The Ministry therefore decided to send one of the engineers of this Bureau to England to study the regulations governing factories which make explosives of all kinds, as well as how to store and transport them, and all works connected with petroleum and other dangerous materials, whether as regards their manufacture, storing, or transport. Also public establishments, such as theatres, cinemas, etc., with a view to the safety of the public and the workmen. He returned at the end of last year, after having been trained in all this work.

It is to be regretted that the Technical Bureau, in spite of its endeavours to carry out its important duties, is unable, with its present personnel, whose number does not exceed five including the Director, to cope with all the calls made upon it, as is proved by the fact that the number of applications under consideration has increased from 228 in 1922, to 1,863 in 1928, and the number of tours of inspection made by the engineers has increased from 26 in 1923 to 337 in 1928 (besides inspection of cinemas and theatres in Cairo). This inspection is still unable to include all the places which should be inspected, as their number consisted in 1928 of 4,625, besides 59 theatres and cinemas in Cairo and 80 elsewhere. This Bureau still discovers, in the course of inspection in various parts of the country, establishments of the existence of which the Section has had no notice, and which

are being run without licences and which do not comply with the conditions stipulated by the law. The number of these places was 69 in 1928, against 25 in 1927.

The number of engineers should be increased by four: one for the zone of the Alexandria Governorate and the Gharbia and Behera provinces, with his office in Alexandria; one for the Canal, Suez and Damietta Governorates and the other provinces of Lower Egypt, with his office in Mansura; one for Cairo Governorate and the Giza, Beni-Suef and Fayum provinces, with his office in Cairo; and one for the other provinces of Upper Egypt, with his office in Assiut. The duties of these engineers will be to inspect new establishments and all those situated in these zones, while the other engineers of the Bureau will control the work of these engineers and supply them with technical advice, and thus render their work useful.

The control of the Technical Bureau was, until 1928, limited to the cinema films imported from abroad, and not those photographed in Egypt. As it has been noticed that some of these plays are subject to no control, and often contain views of a nature to injure the reputation of the country, from the point of view of character, morality, and customs, the Department of Public Security considered it necessary to cause a decision to be taken to make these films subject to control. In fact, the Ministry of Finance issued a decision on August 23, 1928, to the effect that the exportation of cinema films taken in Egypt should be made only with the permission of the Ministry of the Interior. It was likewise decided that films taken in Egypt should not be exhibited to the public in Egypt before the previous permission of the Ministry of the Interior had been obtained. A draft law has been prepared inflicting punishment on those who exhibit views without permission, and giving the local authorities the right of preventing the exhibition of these films and of confiscating them.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, May 31); s.s. Circassia for Bombay (Birkenhead, June 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahsud for Calcutta (Birkenhead, May 25); s.s. Matheran for Calcutta (Birkenhead, June 4).

Bibby Line.—S.s. Shropshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 29); s.s. Staffordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, June 12).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, June 1); s.s. Dumana for Bombay and Karachi (London, June 8).

Cunard Line.—S.s. Bactria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, and Gruz, if inducement offers (Liverpool June 8, and in Swansea June 11); s.s. Bantria for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, June 5).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 25); s.s. Dromore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 15).

P. and O. Line.—S.s. Nankin for Calcutta (London, June 7); s.s. Mantua for Bombay (London, June 7).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, June 1); s.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, June 8).

Ellerman and Papayanni Lines.—S.s. Lesbian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona, Venice, Trieste, Fiume, and Shushak (Liverpool May 25; Swansea May 30); s.s. Andalusian for Malta, Alexandria, Jaffa, and Haifa (Liverpool May 29, Glasgow May 30); s.s. Roumelia for Gibraltar, Malta, Alexandria, Jaffa, and Haifa (Liverpool, June 8); s.s. Gerano for Gibraltar, Malta, Algiers, Patras, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool June 27, Swansea* June 27); s.s. Maronian for Algiers, Malta, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool July 20, Swansea* July 20). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*ICASTALIA ...	June 4	**MASSILIA ...	July 23
*CIRCASSIA ...	June 21	**ELYSIA ...	Aug. 9

*First class passengers only. Specially low fares. †Calls Port Sudan.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA. 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

Motors and Motoring.

(By Our Motoring Correspondent)

Touring Cars.

Now that the touring season has opened in earnest, and everyone is thinking about visiting the places they intended to see last year and could not, it may be well to consider whether the average car is quite as convenient as it might be for the purpose. One rather wonders, for instance, why our big motor manufacturers, particularly makers of light cars, do not provide more adequate means of carrying a fair amount of luggage.

It is not sufficient to attach a luggage rack on which two or three suit cases can be strapped, to run the risk of damage by dust or rain. Such an attachment is usually more or less of a makeshift; often it is by no means strong enough for its purpose, and it must be admitted that one rarely sees a luggage carrier that adds to the appearance of the car. In very few does one find any really scientific means embodied in the appliance to ensure security for the packages entrusted to its care, and even the best designed might be described as far from beautiful accessories.

The suggestion that body-builders should pay much more attention to this matter is timely. Now that the art of the coach-builder has reached so high a stage of development he will surely be able to spare some time from his efforts, and such successful efforts, to ensure the comfort of the passenger and the driver, to give to the question of obtaining security for luggage. It should certainly be within his power to design a body which shall accommodate a reasonable amount of luggage, and which, further, will safeguard the luggage from dust and weather.

Body-work can now be constructed of such light but strong materials that a larger body can be used to-day and yet be of less weight than was possible a few years ago. There need, therefore, be nothing of a blatant or obtrusive character about the luggage-carrying part. A backward extension of the body, with doors opening outwards to the back of the car, is certainly within the realms of practical politics, and although it might not be so easy to design this so that access can be obtained from the interior of the car, even that should be possible, and would certainly lend itself to cleaner lines.

Granted that such a body extension would not detract from the graceful lines and the appearance of the car—and there seems no reason why it should—the fact that the luggage would be kept free from dust, road dirt, and wet, would be a good selling point to-day, when people are more desirous of seeing the country and of engaging in short or long tours than they once were.

This point was once raised at a gathering of motor engineers, and the view was expressed that a body extension such as is suggested might make for an out-of-balance condition which would be prejudicial to the steering, and might actually lead to skidding. This was negated by those possessing expert knowledge, and it was asserted, definitely, that the fact that there would be less dead-weight behind the axle would tend to increase steadiness, and would reduce any propensity to skid. There is certainly something in that argument, and, without labouring the subject, it may be said that there is a marked desire on the part of the motoring public for more adequate and better protected luggage accommodation, and that the makers who first give attention to this demand will find their efforts amply repaid.

Carriage of Spare Wheels.

What has been said regarding luggage carrying may be said with even greater force regarding the carrying of spare wheels in so prominent and unsightly a position. There is nothing particularly beautiful about a spare wheel, and one cannot but think that the practice of carrying this adjunct in so prominent a position originated in the dim and distant days when motorists dressed themselves in garments of distinctly Arctic cut, wore all manner of weird headdresses, and attached all kinds of trinkets to their cars in order to show the general public what a wonderful thing motoring was, and how they could afford to indulge in it.

There was a suspicion of self-glorification in carrying a spare wheel in those days; it was displayed more as evidence of the depth of the owner's purse than anything else. To-day all that has gone by; the only reason why one carries a spare wheel is because at some time one may need it. For exactly the same reason we carry a light jack and a few spanners, but we do not fix the jack on the running board or hang the spanners over the back axle. We carry them somewhere out of the way and out of sight, where they can be found without much trouble when they are wanted, and the same wise measures might well be adopted in the case of the spare wheel.

The spare wheel is not the easiest of things to stow away; it is of an awkward size and shape, takes up a certain amount of room, and must be carried so that nothing rubs against the rubber tread to chafe it through by vibration. Granted all that, there is still no reason why it should be carried on the running board or attached to the back of the car, in either of which positions it is exposed to wet, which has a chance of soaking into the space between the rim and the beaded edge, and of being baked by the sun, hardened by frost and wet, and fouled with dirt and dust. On the running board, too, it frequently obstructs the free ingress or egress of the passengers, and, further, it brings a strain on the wings which they are not really meant to bear. It would be easy to show, further, that to carry a spare wheel in that position sets up strains and stresses which in time cause looseness of parts and rattle, and when the spare is carried on the back of the car it brings even more strain on a part of the vehicle which is unfitted to bear it. In either situation it is usually strapped in place, and many a good cover has been practically ruined by the chafing of this form of fastener.

MOSSEL BAY—Messrs. E. Searle & Co.
CAPE TOWN—Thomson, Watson & Co.
HONG KONG—The Bank Line, Ltd.
BANGKOK—Siam Forest Co., Ltd.
SINGAPORE—Huttenbach Bros & Co.
MAURITIUS—Adam & Co.

LONDON—ANDREW WEIR & CO., 21, Bury Street, E.C.3

If we hold the spare wheel in position by means of a bolt through the hub, we certainly obviate any risk of injuring the rubber or the canvas, but we centre all the weight and strain at one point, and unless the body-work is specially strengthened to take this we once more have strain, vibration, and ultimate rattle, if not worse. It would be possible to suggest alternative positions in which to carry a spare wheel; to carry it flat in a kind of drawer beneath the chassis frame or under part of the body is an obvious suggestion to which there are some objections.

The matter should not be beyond the capabilities of the designer. Once get rid of the idea that the spare wheel is an ornament, show the designer that the car owner does not necessarily want to advertise the fact that he is wealthy enough to have five wheels on his car, and the thing is done. The designer will soon find a place where the spare wheel can be put away out of sight and beyond reach of damage.

COMPANY NOTES AND REPORTS.

ABOUKIR COMPANY.

The report of the Aboukir Company for the year ended March 31, 1929, states that sales of land amounted to £8,159. An area of land has reverted to the company from the purchasers at a cost of £11,047. The gross receipts from purchasers amounted to £19,247, as against £15,325, of which £14,643 went to reduce their instalments, as against £10,459. The profit amounted to £8,215, as against £5,905. The cotton crop yield was better than in the previous year, when the water shortage was more severe. The average yield per feddan was 1.92 kantars, as against 1.66 kantars in 1927. The price obtained was £6 3s. 1d. per kantar, as against £7 3s. 7d. The tenants were again unable to pay their rents in full. The amount passed to the credit of profit and loss was £26,025, as against £24,381 for 1927-28. The profit for the year, after making provision for income tax, was £16,225. It is proposed to pay a dividend of 5 per cent., free of tax, carrying forward £10,900.

BURMAH OIL.

The directors of the Burmah Oil Company have decided to propose a final dividend of 10 per cent., less tax at 2s. 6½d. in the £, making 20 per cent. for the year, the same as before. Fields expenditure has been charged direct to profit and loss, and after providing for depreciation on refineries, fields electrification, pipelines, tankers and tank installations of £381,735, and allowing for income tax and all charges, the profit for 1928 amounts to £1,479,626. The general reserve is to receive £200,000, insurance reserve £20,000, and fields expenditure equalisation reserve £15,000, leaving a balance of £151,084 to be carried forward.

NATIONAL BANK OF EGYPT.

Position at March 31, 1929, published in conformity with Article 8 of the Statutes:—Banking Department.—Liabilities: Share capital (300,000 fully-paid shares of £10 each), £2,925,000; reserve fund: statutory reserve, £1,462,500; special reserve, £1,340,625; current, deposit, and other accounts, £15,969,469; Egyptian Government, £17,775,409; Sudan Government, £241,898; Mixed Tribunals, £1,895,556; bankers' accounts, £376,938; cheques and bills payable, £229,255; sundry other accounts, £1,607,766—£43,824,416. Assets: Government securities and securities guaranteed by the Egyptian Government, £21,834,221; sundry securities, £896,899; advances on merchandise, £4,261,804; advances on securities, £4,515,113; advances otherwise secured, £1,518,571; sundry other advances, £879,435; bills of exchange, £3,986,894; local bills discounted, £649,664; buildings and furniture, £217,829; money at call and at short notice, £1,833,000; bankers' accounts, £342,926; sundry other accounts,

£984,561. Cash: Notes, £1,368,477; gold, £265,768; silver, nickel, etc., £269,254—£1,903,499—£43,824,416. Issue Department.—Notes issued, £28,100,000—£29,100,000. Gold, £3,339,570; *British Treasury Bills, £11,210,430—£14,550,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £1,500,000; British Treasury Bills and British War Loan, £13,050,000—£14,550,000—£29,100,000.

*By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Bridge over Canal Bahr Chebin.—The Ministry of Communications, Egyptian Government, invites tenders for the construction of a swing bridge over the Canal Bahr Chebin, near Ibkhass. July 23. (D.O.T.)

Mahogany.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of 6,000 cubic feet wood mahogany (Cuba or Honduras) in logs required for Government Workshops. July 15.

Bridge over Bagouriah Canal.—The Ministry of Communications, Egyptian Government, invites tenders for the construction of a bridge over the canal Bagouriah near to Kasr Nasr-el Dine. July 25. (D.O.T.)

Water Tower.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of a steel water tank with steel frame-work tower complete with necessary piping and fittings as well as an electric water level indicator. June 1. (D.O.T.)

Weighing Machines and Balances.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply of platform weighing machines, counterscales, and Beranger balances.

Tent Lining.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of calico cotton blue, tent lining for the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. July 1.

Drugs, Etc.—The Director of Stores, Ministry of Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of the drugs required for the schools during the year 1929-1930 (May 25), and painting and decorating materials required for the Trades Schools during the year 1929-1930 (June 17).

Water Mains.—The Ministry of the Interior invites tenders for the supply and installation of a system of water mains. The principal materials required are 15,350 metres of double wrapped steel piping, 127 sluice valves with flanged ends, 49 hydrants, 16 column and 9 drinking fountains. June 1. (D.O.T.)

Various.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for the supply of materials for water service; mild steel beams; complete cross members; timber; replace boilers for locomotives.

Water Mains.—The Ministry of the Interior invites tenders for the supply and installation of a system of water mains for the town of Kenh. The principal materials required are 5,630 metres of cast-iron pipes, together with a quantity of specials, valves, hydrants, and drinking fountains. June 15. (D.O.T.)

Breakwater and Jetty.—The Alexandria Municipality invites tenders for the construction of the Silsileh Branch of the Port-Est Breakwater and the Silsileh Jetty. October 29. (D.O.T.)

TURKEY.

Acetylene Flare Lights.—The Administration Generale des Chemins de fer et des Ports d'Etat of Turkey invites tenders for the supply and delivery of 150 acetylene flare lights. June 3. (D.O.T.)

Tin and Antimony.—The Administration des Chemins de fer et des Ports d'Etats invites tenders for the supply and delivery of 8 metric tons of tin and 500 kilos of antimony. June 13. (D.O.T.)

AGRICULTURAL BANK OF BULGARIA

Head Office

— SOFIA —

Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales, and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

MOTOR TRAFFIC IN ARABIA.

In Arabia, the largest peninsula in the world—almost five times the size of France, yet with a smaller population than New York City—there are less than 2,000 automotive units in operation at the present time (says the American Vice-Consul at Aden, Mr. Cloyce K. Huston, in a recent report). A recently completed census of the chief countries comprising Arabia—that is Hijaz, Najd, Yaman, Aden Protectorate, Asir, and Oman—places the number at 1,000, although in many cases carefully prepared estimates were used in lieu of exact figures. Yet the passenger and freight traffic in Arabia is relatively enormous. The continual wanderings of nomad tribes, pilgrimages to the Holy Cities, tribal raids and counter raids, the prolonged search for water and pasture—all these demand passenger accommodation.

The answer at present, of course, is the camel, the donkey, and the horse. Though automobiles are brought by the white man to such ports as Jidda and Aden, there they must stop for want of roads while the camel, "ship of the desert," journeys inland in every direction over vast waterless tracts of sand, up the sides of precipitous cliffs, along dry stream beds, and through narrow mountain passes. The camel makes his own trail; the automobile road requires labour, time, money and ingenuity.

Good Roads Required.

The greatest obstacle to the development of motor transportation in Arabia is the lack of roads. In the United States, as in Europe, the automobile was preceded by other two-wheeled and four-wheeled vehicles. But the wheel was not a common thing in Arabia; the wagon, cart, carriage, sled, and the bicycle were practically unknown. Hence, the motor vehicle has arrived in a country that is not only practically roadless but geographically hostile to wheeled traffic.

Coupled with the lack of roads in discouraging the motor vehicle is the highly important factor of a low purchasing power among the natives. There are, however, many rich Arabs, such as the various potentates, shaikhs, and other chieftains who, given roads, would gladly purchase automobiles to satisfy their desires. Roads, too, would bring the Arabs greater purchasing power, with the expansion of trade, the penetration of foreign interests, and the more thorough exploitation of natural resources.

Hijaz Camel Tracks.

More than half the cars in all Arabia are found in the Hijaz, plying between the Red Sea ports of Jidda and the Holy Cities of Mecca and Medina over a route 300 miles long, and also over the Qunfudah-Mecca route of 185 miles. Over these two routes there travel each year more than 100,000 Muslims on the pilgrimage to Mecca—from Java, Singapore, Egypt, Turkey, Syria, West Africa, India, the Philippines, and many other countries. As many as can afford the £15 or so make the round trip to the Holy Cities by automobile while the less pecunious plod along on camels.

Nothing has been done to make roads, properly speaking, out of these pilgrim routes, and they are as yet merely roads of convenience. Being desert and for the most part flat, this passage by car is achieved merely by following camel tracks, from which the drivers are obliged to make all sorts of detours to encompass inequalities, gullies, and sandy deserts or elevations. The possible roads of future development are purely problematical. Motor traffic has not penetrated beyond the points mentioned above, except for the present ruler, King Ibn Saud, who has dozens of motor cars; his convoys penetrate inland as far as Riyadh, the old Wahhabi capital in the heart of Arabia.

Aden ranks second in the use of the automobile. Here some 500 or 600 motor vehicles quicken the pace of traffic, venturing now and then a few miles up the beach when the tide is right and even inland for 30 miles to the village of Lahej. In addition, barely passable roads run inland to the north as far as Musemir, 64 miles, and to Dhala, 90 miles. Both these roads are used almost exclusively for military purposes by the British, the last mentioned having been completed recently. The present state of these outlying roads, together with tribal fights, air raids, border warfare, and general unrest has militated against motoring much beyond the limits of Aden proper; but improvements in all these conditions may reasonably be expected and should encourage more use of cars on the roads. The Aden Settlement operates 18 miles of road and the public works department 12 miles.

The Hadhramaut's Lack of Motor Roads.

During the past two or three years 100 or more automobiles have been shipped from Aden to Makalla, an important seaport in the Hadhramaut on the southern coast of Arabia. Within and about that port there are only a few miles of roads suitable for motor cars. But Makalla is a wealthy town, and many of the merchants and shaikhs, besides the Sultan, will spend of their rupees for a car to display before admiring people. There is also a beach road from Aden to Shelir, about 35 miles up the coast, whence a road is reported as being cleared northward to Tarim, 100 miles away on the upper edge of the habitable Hadhramaut. The completion of such a road should multiply the present demand for automobiles in that region.

In the more inaccessible portions of the Hadhramaut live well-to-do shaikhs with five or so miles of road at their disposal, but the lack of communicating roads over the rough country and through the narrow passes over the mountains will not permit the passage of four-wheeled vehicles from the coast. But they have their automobiles. Quite often in Aden there may be seen the curious spectacle of American automobiles being taken to pieces and packed in small boxes and the body work itself being cut into four or more pieces. A mechanic accompanies these body pieces by sailing craft or by small steamer, up to Makalla, where he sees them loaded on to the backs of camels for the difficult journey inland. Once arrived at their destination, the parts are assembled and the body work is riveted together.

Preliminary Road Survey in Yaman.

There being little room for action on roads, the 40 cars in the Yaman are confined chiefly to the Red Sea port of Hudaida and to Sanaa, the capital city of the Imam Yahya—160 miles apart. The first stretch of this road, 40 miles across the Tihama, is passable, but the remaining 120 miles to Sanaa is over difficult mountains from 9,000 to 10,000 feet above sea level. The construction of a road from Sanaa to Hudaida has been the subject of persistent rumours. Preliminary surveys have been made, but no actual work has yet been done. The construction of a motor road over this route would move forward the development of the country and its market for automobiles by a good many years.

And so Arabia—hot, desert, roadless, backward, satisfied—has so far been little touched by the automobile. But western contacts are increasing, foreign trade is developing, roads are being discussed, and foreign capital is entering the country. British aeroplanes drone over various frontiers, armoured cars assist in keeping border peace, rival shaikhs parade their motor cars before one another, parties motor up the beach for picnic outings and inland by precarious routes for shooting excursions.

The automobile is arriving and will inevitably force the planning and construction of travel routes over which these cars may operate. Meanwhile, the camel does the day's work, scorning all things new as it plods steadily over the trackless desert.

Near East Markets

INCREASED CYPRUS EXPORTS.

The report on Cyprus trade for the March quarter states that a decrease is recorded in the total value of imports as compared with that of the previous quarter, but a small improvement of about £1,000 is shown on the figures for the corresponding period of last year. The principal increases occur in motor cars, edible oils, timber, sacks, and cotton yarn and thread. Decreases are shown in cotton piece-goods, petrol and benzine, petroleum and paraffin, machinery, and unmanufactured tobacco and snuff.

Exports show an increase over both the previous quarter and the same period of last year, the principal ones being in asbestos, potatoes, raw cotton, and mules. Decreases are recorded in carobs, silk cocoons and raw or wound silk, raisins, and wool.

NEAR EAST MARKET REPORTS.

The May issue of the Monthly Review of Barclays Bank, Ltd., contains the following quarterly reports:—

Egypt.

At the beginning of the period under review the cotton market was steady, but during the last few weeks quotations have gradually developed a weaker tendency, owing to lack of demand, coupled with favourable advices of the newly planted crop. Exports have been maintained at a high level and arrivals are declining. The Government estimate of the crop would appear to have been approximately correct, as almost 7,500,000 kantars have come into sight. Upper Egyptian, up to Fully Good Fair to Good, has been in steady demand, as well as Sakellariadis below Fully Good Fair. All these grades have now become scarce, and only the better grades, for which little demand is apparent, are available in any quantity. Reports on the growing crop continue good, although the growth is from 15 to 20 days late, owing to cold weather at the time of planting.

Quotations for cotton seed have gradually declined throughout the quarter, and prices are at the lowest point of the season. Although the actual stock is not very heavy, large quantities of sowing seed are still in the interior, and these will shortly be forwarded for sale in Alexandria, as resowing is unimportant and a greater provision of seed than necessary has been made. A falling off in demand for cotton seed from Europe has also contributed to the listlessness of the market, which can barely absorb arrivals at falling prices. The market for cotton goods, although steady, was disappointing, as the native holidays failed to stimulate demand and stocks accumulated. Holders are endeavouring to dispose of their existing stocks, before placing fresh orders.

Sugar prices were steady at the beginning of the period under review, but fluctuated later, under the influence of the producing markets and of speculative interest. Demand has been satisfactory and supplies ample. Flour has been in good request for local requirements and for export, but heavy arrivals induced weakness. Stocks are large and the advent of the new crop in Egypt and Palestine makes the future course of quotations uncertain. The rice market has been somewhat uneven, with prices fluctuating in sympathy with quotations in Rangoon and the Sudan, but recently a reduction of stocks has led to greater steadiness.

The turnover in cabots has been poor, as the demand has been purely local, at declining prices. In the gunnies market, onion bags were in good request at the beginning of the quarter, but latterly the demand has fallen off and declining markets in Calcutta have led buyers to hesitate over placing new business. The onion market opened at high prices, but owing to a glut in the consuming centres, quotations fell heavily. Coffee has been irregular, with no outstanding feature. Cereals have been in small supply, but imports acted as a check to any sharp rise in prices and the market has been steady.

The Sudan.

Trade in the Sudan has been quiet. The Tokar cotton crop failed to realise expectations, owing to unfavourable weather and to attacks

of bollworm and locusts. Goods, which had been imported in large quantities in anticipation of better trade, were, in many cases, left in the warehouses and are only being sold gradually. The gum market opened at high prices, owing to small arrivals as a result of cold weather, and traders suffered losses on their early forward sales. A good demand has been maintained at steadily rising quotations. The coffee market has been satisfactory, and, as arrivals from Abyssinia were small, prices have been firmly held. Sesame has been steady.

The Gezira cotton crop is good and, although prices have fallen, they are still remunerative. The effect of the circulation of the money for this crop is beginning to be felt and traders are reporting better inquiries for goods.

Palestine.

The orange season finished at the end of March. Shipments were 288,242 cases less than last year, due to bad weather during the blossoming and picking periods, and the season has not been good, owing to the low prices realised for the fruit. The lack of cereals, as a result of last year's bad crop, led to an import of flour, prices for which have ruled steady during the quarter. An influx of tourists and visitors to the Fourth Palestine and Near East Exhibition and Fair at Tel-Aviv has led to an increase in trade.

NEWS FROM ALL SOURCES.

The traffic receipts of the Suez Canal from May 4 to 10 amounted to 19,510,000 francs.

The directors of the Aboukir Company recommend a dividend of 5 per cent., free of tax.

The traffic receipts of the South Indian Railway Company for the week ended April 20 amounted to Rs.12,79,403, making the total from April 1 Rs.36,57,048.

The death has taken place at his home in Onslow Square, S.W., of Sir George Gough Arbuthnot, at the age of 81. Sir George, who was educated at Eton, was formerly a partner in the firm of Arbuthnot and Company, bankers and merchants, of Madras.

A Cairo message states that according to official reports from the provinces, the Egyptian cotton crop has been seriously affected by the unusual rain and cold prevailing in the latter part of April, combined with the ravages of the cotton worm.

The directors of the Guardian Eastern Insurance Company propose, subject to audit, to recommend to the annual general meeting, to be held on June 3, that a dividend for 1928 be declared at the rate of 5 per cent. on each ordinary share, payable on June 29, subject to income tax.

The net revenue of the Oriental Telephone and Electric Company for 1928 was £89,551, against £72,119. The directors recommend a final dividend of 8 per cent. (free of tax) on the ordinary shares, transferring to general reserve £15,680, carrying forward £34,425, against £25,243 brought in.

For the quarter ended March 31 last the Hellenic Electric Railways report that 6,648,631 passengers were carried on the railways, an increase of 197,366, while 1,381,685 passengers were carried on the tramways, an increase of 183,370. The gross receipts of the railways were 18,845,334 drachmæ, an increase of 883,489 drachmæ, while those of the tramways were 1,302,731, an increase of 175,143 drachmæ.

Barclays Bank (Dominion, Colonial and Overseas) announce that they have received the following cable from their Cairo branch:—The Statistical Department of the Ministry of Finance announces that the total imports of Egypt for the month ended April 30 amounted to £4,925,033, against £4,590,505 for the corresponding month last year, and exports £5,306,502, against £5,060,554 for April, 1928. Cotton exports were £3,919,108, against £3,483,531.

A Bucharest report states that in important wheat-growing districts of the Lower Danube great damage has been caused to growing crops by frosts, so that many fields will have to be resown. Other districts have suffered less, as, for instance, in Banat and Moldavia. The prospects of this year's wheat crop seem to be already unfavourable, as the recent sudden and far too early hot weather is not propitious to spring wheat.

For the first two months of the current year Yugoslavia had an unfavourable balance of approximately 154 million dinars, compared with 344 millions for the same period of 1928. The improvement is due to the decrease in imports. In February the imports totalled 70,191 tons, of the value of 403,985,563 dinars, as against 85,303 tons, of the value of 621,659,706 dinars in February, 1928.

Company Meetings.

KASSALA COTTON COMPANY.

Full Area to be Planted This Year.

Sir Frederick Eckstein's Services to the Sudan.

The Hon. Arthur M. Asquith's Speech.

The sixth ordinary general meeting of the Kassala Cotton Company, Ltd., was held on May 16 at Winchester House, Old Broad Street, London, E.C. The Hon. Arthur M. Asquith, D.S.O. (the chairman), presided.

The Acting Secretary (Mr. J. F. Bourne, A.C.A.) having read the notice convening the meeting and the auditors' report, The Chairman said:—Gentlemen,—I presume that you will agree to take the balance-sheet and accounts as read. (Agreed).

Before dealing with these I am sure that you and the company's staff abroad and at home would like me to express our great gratification at the honour recently conferred by H.M. the King on Mr., now Sir, Frederick Eckstein. (Cheers.) His services to the inhabitants and Government of the Sudan have extended over a period of nearly 25 years, and amongst these services was the leading part which he took in the formation, and has since taken in the guidance, of this company. The construction of the Kassala Railway could not have been undertaken when it was but for the financial support of this company, and the irrigation works in the Gash Delta were designed and executed, and cotton-growing on the share system was organised there by this company. The Kassala Railway has since been extended to the Sennar Dam and the irrigation works on the Gash have again in this past season proved the soundness of the lines upon which your managing director, Mr. MacIntyre, designed them. Our company may therefore, I think, legitimately take to itself a share of pride and pleasure in the recognition bestowed upon Sir Frederick Eckstein for his outstanding services to the Sudan. (Cheers.)

I am told that some people, reading only abbreviated Press notices of companies' results, and seeing "Kassala Cotton Company, profit £13,098, as against £91,269 last year," have been perturbed by these figures. Those who have followed our fortunes will know that there is no cause for anxiety, and that everything is proceeding according to plan, or better. I pointed out last year that we could have no revenues from cotton in 1928 nor in 1929. Our revenues during those two financial years must be limited to interest receipts and the modest commission which we receive for marketing the Government's cotton produced in the Gash Delta. Our accounts for the year ending December, 1930, should show the proceeds of our share of the cotton to be planted this autumn. We came into the year 1928 with a balance in hand of £77,262, and there was left at the end of the year a balance in hand of £66,281, which is after charging £28,079 interest on debentures for the year. This balance of £66,281 should be enough to provide for debenture interest charges and all other outgoings in excess of revenue in the year 1929.

Operations in the New Area.

I visited our concession in the Gezira last December and I was much impressed by the magnitude of the task of the organisation, within two years, of an area of 46,000 acres of land so as to make it capable of being intensively cultivated in 30-acre holdings by perennial irrigation. This development work is dismissed in our report in two or three lines, and I feel that I ought to try to give you some idea of the local conditions and of the work involved, so that you may have some proper appreciation of the labours on the company's behalf of Mr. Fleming, our manager, whom I am glad to see at this meeting to-day, and of the engineers and others of his and the Sudan Plantations Syndicate's staff who have borne the heat and burden of this work.

Our headquarters at Wad Shair are nearly 30 kilometres from the Sudan Government railway. Here, early last year, Mr. Fleming and Mr. Telford, our engineer, installed themselves in grass huts on the treeless and featureless expanse of flat, brown earth. Rainfall in this part of the Gezira is scanty and uncertain, and the plain was honeycombed with banks made by the inhabitants to pond up and to make the most of such rain as falls. Even so, they have only managed in the past to raise a fair crop of grain one year in four or five. They bury their grain and subsist on it over the lean succeeding years. In the development of the area for irrigation, all these rain banks have had to be levelled, and the watering and feeding of men and bulls employed on this task is in itself a considerable problem.

Then there was the question of canalisation. By the end of May last year 126 kilometres length of minor canals had been excavated, chiefly by imported Egyptian labour and partly by machinery. In October, 200 Egyptian labourers were imported, and since then a further 586 kilometres length of minor canals has been dug. Meanwhile an extensive building programme has been carried out. Arrangements were made for an extension of the Sudan Plantations Syndicate's light railway to serve our area, and by this bricks and other building materials were transported 40 kilometres or more to their destination. By the end of next month—that is, before the coming rainy season—the building programme will be completed.

All our staff will be housed in solidly constructed brick bungalows, and the necessary stores, offices, and clerks' accommodation will have been provided. Add to this that 15,000 acres of land have been ploughed, ridged, and prepared for cotton by windless cultivators, and I am sure that you will agree with me that the preparation of this great area, most of it a year ahead of time, reflects the greatest credit on all those who have worked for it in the Sudan. (Cheers.)

That brings me to the most important and agreeable feature of our report. Last year we led you to hope for the planting this autumn of one block—that is, 5,000 acres of cotton. Mr. MacIntyre, in his speech at our meeting, added that, "If all goes well we hope also to get a part of the second block planted." Actually, bar accidents, we should have all three blocks, or some 15,400 acres, under cotton this autumn. (Cheers.) Allotment of the land to tenants has been made in collaboration with the authorities of the Sudan Government. This in itself is no small task, as it involves settling into their individual holdings some 1,500 families of native tenants. Their satisfaction at the establishment of a network of irrigation canals, with the security which it holds out to them of water and food for man and beast, is evidenced by our having had to turn away scores of applicants for tenancies.

Finally, I should like you to understand that for the present acceleration of our programme we are much beholden to the Sudan Government for the whole-hearted efforts of their Irrigation Department and contractors.

We are also deeply indebted to the Sudan Plantations Syndicate and their engineers, and not least to their chairman, Mr. MacIntyre. (Hear, hear.) Without this co-operation we could not possibly have done the work in the time, nor anything like so economically. No one who is not acquainted with the local conditions can appreciate the benefits that this company enjoys through having the Sudan Plantations Syndicate as its largest single shareholder. Apart from development work, I will give you two instances of the advantages which our company derives from this connexion. First, the four members of our British administrative staff who moved with the company from the Gash to the Gezira, and the six new members since recruited, were all attached for some months to experienced members of the Syndicate's staff to learn from them the methods of supervising cotton-growing by perennial irrigation, as practised in the Gezira. They have thus had opportunities of acquiring knowledge which otherwise they could only have acquired with long and probably costly experience. Secondly, we have opportunities of obtaining from the Syndicate Seed Farm selected pedigreed cotton seed for sowing the area, an advantage the importance of which it is difficult to exaggerate. On our side we are glad to think that the Syndicate has received one benefit at least from us. Mr. Alexander Telford, who served us so well in the execution of irrigation on the Gash and in the layout of the canals of our present area, having finished his work for us, has been appointed as chief civil engineer to the Sudan Plantations Syndicate. He carries with him our best wishes for the future.

I now beg to move: "That the report of the directors and statement of accounts to December 31, 1928, now laid before the meeting, be and are hereby received and adopted," and I will ask Sir William Himbury, who has recently returned from the Sudan, to second this motion. (Cheers.)

Statement by Sir William Himbury.

Sir William H. Himbury:—I should like to begin by saying how pleased we are in Manchester at the honour which was given by his Majesty to Sir Frederick Eckstein. (Cheers.) I have worked with and known Sir Frederick for about 25 years—very dark days, some of those, long before the Sudan plantations had reached the

great success it has to-day. Sir Frederick Eckstein "stuck it" all through. Many men, myself included, would have "chucked up" long before, but he held on, and as a consequence of his holding on you have in the Sudan to-day one of the most successful cotton fields in the world. (Cheers.) Had he given up, what would have happened? It would have been a very bad thing for the Sudan, a very bad thing for the Sudan Plantations Syndicate, and a bad thing for the Empire generally. Therefore I can assure you that I do not know of any honour which has been so well deserved as that which has recently been conferred upon Sir Frederick Eckstein.

As managing director of the British Cotton Growing Association, for my sins I have occasionally to visit various parts of the Empire—those parts where cotton growing is being undertaken. I was in the Sudan in February and March, and I can assure you that, if you go out to the Sudan and want to see anything of cotton growing, and you place yourself in the hands of Mr. MacIntyre and Mr. Fleming, they will see to it that you do see something of cotton growing.

As regards the Kassala Concession, I was taken by Mr. MacIntyre over the land, and, as far as I can see, the land compares most favourably with any land in the Gezira. I was immensely impressed with the amount of work that has been done there, and I should like here to give credit to the staff of the Irrigation Department in the Sudan and also to the company's staff for the wonderful work they have done. When you come to think of it, we were expecting this season to have 5,000 feddans planted with cotton, instead of which we are going to have over 15,000.

Finally, gentlemen, I am sure that the Kassala Company did a very good thing in moving from the Gash to the Gezira. You here will never know the amount of work which was thrown upon your chairman (Mr. Asquith), Sir Frederick Eckstein, and their colleagues in bringing about this exchange of concessions. (Cheers.) You are practically sure of your crop in the Gezira, which was not the case in the Gash. As regards the Sudan generally, and cotton growing in the Sudan, I have always been an optimist, and after what I have seen recently I have come back a more confirmed optimist than ever. (Cheers.) I have pleasure in seconding the motion.

The motion was carried unanimously.

Mr. Alexander MacIntyre (managing director) then moved the reelection of the Hon. A. M. Asquith, D.S.O., and Sir Frederick Eckstein, Bt., as directors of the company.

The Right Hon. the Lord Lugard, G.C.M.G., C.B., D.S.O., seconded the motion, which was unanimously adopted.

Messrs. Cooper Brothers and Co. were reappointed auditors of the company, and the proceedings then terminated.

EGYPTIAN MARKETS.

Terms of New Arrangement with Government.

Lt.-Col. A. St. John Cooke's Speech.

The ordinary general meeting of the Egyptian Markets, Ltd., was held on May 15 at Winchester House, Old Broad Street, E.C., Lieut.-Col. A. St. John Cooke, D.S.O. (chairman of the company), presiding.

The Secretary (Mr. F. R. Parker) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said:—I would like to preface my remarks on the report by reminding you that when we last met Egypt was in the throes of a political crisis, one of many through which that country has passed since 1918. You will remember that in July, 1928, a Royal Decree was promulgated dissolving Parliament, and suspending the Parliamentary régime for a period of at least three years, when the position is to be reconsidered. Meanwhile the country was to be run by a Council of Ministers who would legislate by decree, with the approval of the King. During the few months which have elapsed since this Royal Decree was issued, a very great deal has been done towards setting the Egyptian house in order, under the able direction of H.E. Mahomed Pasha Mahmoud, the Prime Minister, assisted by his colleagues on the Council of Ministers.

I would like to say that Egypt is, in my opinion and in that of many who know the great difficulties of administration in that country, most fortunate in her Prime Minister, who is daily proving himself more a practical statesman than a politician. He is a man of character who has no personal axe to grind, and he is giving of his best to bring back peaceful progress to his country. His energies are bent, with those of his colleagues, on getting those things done which have for so long been talked about, but pigeon-holed. Great works for the conservation of water to bring more land under cultivation, with their necessary drainage schemes,

improvements in transportation, hygiene, education, etc. The public works which are being seriously tackled will need some £26,000,000 to complete. Every branch of the Administration is being carried out.

The country is being firmly administered, thus enabling the Government to deal with the many pressing internal problems calling for attention and action, and as a result I am glad to say Egypt has, with the exception of a few ineffective efforts to create political unrest for personal ends (which have been dealt with by the Government with a firm hand), been entirely free from those regrettable incidents which were, during the past years, retarding, if not destroying, the general prosperity of the country. The statesmanship of the present Government is gradually restoring the confidence of the country in the innate good will of Great Britain towards the helpful furtherance of any project for the ultimate good of Egypt, the bulk of which population are its worthy peasantry.

Although, as I have previously stated on more than one occasion, it is the policy of your directors to keep clear of politics, we are more than very interested onlookers, as the success or otherwise of our business depends so largely upon the peaceful administration, progress, and prosperity of the country. The measures now being taken to further these ends, such as the increase of the supplies of irrigation water, bringing more land under cultivation, the modification or repeal of the Octroi duties (which are so harmful in a country which is all length and no breadth, by its accumulated taxes on movement), the equitable administration of taxation, etc., are of vital interest to us.

Before dealing with the results of our year's working, I would like to give you a short explanation of the new arrangement concluded with the Egyptian Government, which is referred to in paragraph 9 of the directors' report. In November, 1928, your managing director, Mr. F. J. Horne, proceeded to Egypt, where he spent many weeks in negotiations with the Government on the points at issue. The resultant arrangements arrived at are that the Government's percentage of participation is increased to 62 per cent. for 1928 and 63 per cent. for 1929 onwards. In consideration of this increased percentage the Government have:—(a) Authorised the stabilisation of the existing market tariffs for the whole of the remaining period of the concession, that is until June 1, 1938, and (b) have authorised an increase of £8,500 in the figure allowed for expenses before the Government's participation in the receipts become effective. In this connexion I must explain that the figure heretofore allowed for expenses stood to be automatically reduced from January 1, 1929, by £8,500 (viz., from £44,000 to £35,500), due to the redemption of the first 5 per cent. Debentures in June, 1928; the arrangement now made, which reinstates the figure of fixed annual expenses at £44,000, will therefore for the year 1929 and onwards result in a corresponding annual benefit to the company.

In addition to this the Government have agreed to use their best endeavours to transfer unauthorised markets now held on the roads in the vicinity of the villages, to the company's enclosures; and further, the Council of Ministers have authorised an increase in the tariff on sheep and goats by one millieme—that is to say, from 2 milliemmes to 3 milliemmes per animal. With regard to the unauthorised markets, active steps have already been taken by the Ministries of Finance and of the Interior by the issue of letters of instruction to the various Mudirihs concerned. Both these concessions will, it is anticipated, be of considerable value to the company.

The results from all sources of the year's working amounted to £54,211 14s. 9d., a negligible decrease of £404 13s. 11d. compared with 1927. The provision for the Government's share of profits, based on the terms of the new agreement with which I have already dealt, amounts to £28,584 9s. 7d., and after payment of the fixed charges, viz., debenture interest £1,183 6s. 8d., and sinking fund premium £2,598 16s. 8d., a balance of £30,043 8s. 1d. remains available for distribution.

Your directors recommend the payment of a final dividend on the ordinary shares of 5 per cent. and a bonus of 1 per cent., which with the interim dividend of 5 per cent. paid in November, 1928, will make a total distribution of 11 per cent. for the year, the same as last year, absorbing £19,217, and the payment on the deferred shares of a dividend of £8 14s. 10 3/4d. per share, absorbing £2,623 0s. 8d., leaving a balance of £14,203 7s. 5d. to be carried forward, as compared with £14,198 6s. brought into the accounts from the year 1927.

The resolution was carried unanimously.

The British Burmah Petroleum Company has declared an interim dividend at the rate of 2 1/4d. per 8s. share (free of tax), payable on June 29.

National Hellenic Industries has been registered as a private company with a nominal capital of £5,000 in 5s. shares, to carry on the business of shippers to and from Europe, Africa, Asia, and America, and in particular to and from the Republic of Greece. Power is taken to manufacture and deal in all articles suitable for wear, and cloth, linen, woollen, cotton, artificial silk, and other materials and fabrics. The directors are B. L. Constantaras, D. S. Papazoglou, and R. Siddall. There are to be two nominees of Lainiere Hellenic S.A., and two of the Hellenic Carpet Manufacturing Company, of whom the said B. L. Constantaras is to be one. The registered office is at 15, Devonshire Street, E.C.2.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 15:—

Egyptian Futures.

Sakel Contract.—Quiet and rather featureless markets have been experienced throughout the week; during the earlier days some minor advances were registered, but with both American values and Alexandria latterly showing easiness we have dropped back slightly below the level obtaining at the time of our last report. As we anticipated, the current position has closed up with both the later summer and new crop options; this is due to the restricted quantity of tenderable cotton now in stock here, and also to the fact that old dockets of White cotton and Sudans have either passed into trade channels or, in the case of the former variety, depreciated in basis to the extent of placing them outside the contract. Trade reports continue to give little encouragement, but in spite of this spinners are consistent if moderate buyers both on the spot here and for close shipment cotton; in fact, the demand is quite up to the average generally experienced at this period of the season. Very little news has come to hand from Egypt; chief interest there still centres on the May position. At the present time, the open position in our market is comparatively small; most of the old "long" holding has been liquidated during recent weeks, and whilst the technical position appears sound, there is not at the moment sufficient trade or speculative support to counteract the general dullness prevailing in most commodity markets.

Upper Contract.—An easy undertone has been in evidence in this market during the past week. The trade have been moderate buyers on the down scale, but support from this quarter has only been sufficient periodically to check the downward movement from becoming more precipitate. The Upper American straddle difference has shrunk to the narrowest of the season, July/July at to-night's closing being 162 points.

Egyptian Spot.

The comparative steadiness in the futures market has given more confidence to spinners of late, and in spite of the shadow cast by the approaching election, and the proximity of the broken period which occurs at Whitsuntide, quite a fair trade has again taken place. Sakel cotton particularly appears to have benefited, and all qualities have been in demand from time to time. The top grades have attracted an increased amount of attention, and Egypt has shown a disposition to meet buyers. A good business has taken place in Uppers, and here again the inquiry has not been confined to the usual range of 10 off to 10 on contracts (although probably most of the sales have been made at these prices), but an extension towards the better qualities, even to the very best, has been observed. The market on the whole has presented a somewhat heavy appearance. The fact that carrying premiums on the Liverpool board are gradually disappearing is evidently causing a certain amount of anxiety to holders of old stock, and there has been a general tendency to press cotton for sale. This has caused some irregularity in prices, and there can be little doubt that spinners who have taken the trouble to go through the market thoroughly have been well repaid. Upper cotton at 11½d. does not strike us as dear compared with past years, and in spite of the uncertainty which must still prevail regarding the size of the American crop, there is evidence that the opportunity to cover commitments for some months ahead, at current prices, has been taken advantage of in more than one quarter.

Maarad has been in fair request, chiefly for the top quality.

White cotton has attracted more interest this week at from 17d. to 17.50d., and a few small sales have been recorded.

Pilion has continued in fair request at around 13d.

Tokar Sakel.—A little more interest has been shown by the trade, and some small parcels for testing purposes have been sold this week.

C.i.f. business has continued to show a slow but steady improvement. Forwardings to mills last week were returned as 5,447 bales Egyptian and 2,463 bales Sudan. Estimated spot sales for the week, 2,200 bales Egyptian and 250 bales Sudan Sakel. Quotations of Sakel remain unchanged on the week. Uppers are 28 points and Pilion 30 points lower. F.G.F. Sakel to-day, 17.85d. F.G.F. Upper to-day, 11.47d. F.G.F. Pilion to-day, 12.40d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended May 8, state:—

Since our last report the futures market has been fairly active, with an undecided tendency. The week's summary of price movements is as follows:—Sakellaridis: May, 34.15 dollars, 0.20 dollars down; July, 34.47 dollars, 0.15 dollars down; November, 34.95 dollars, 0.27 dollars down; January, 35.23 dollars, 0.24 dollars down. Ashmouni: June, 21.72 dollars, 0.48 dollars down; August,

21.95 dollars, 0.43 dollars down; October, 22.23 dollars, 0.46 dollars down; December, 22.55 dollars, 0.26 dollars down; February, 22.95 dollars, 0.14 dollars down.

Sakel.—The week opened with an excited session, and May was carried to over 35 dollars. The new rise was once more the signal for the trade to withdraw from the market, and as New York was showing signs of weakness, a few speculative sales were sufficient to change completely the trend of the market and to cause a fall of about a dollar in a single session. At the lowest levels, the market showed some resistance, the more so as two supporting factors came to the rescue, namely, the raising of the short time restriction in the Bolton district and the news that long staple cotton was included in the free list in the draft of the proposed American tariff bill submitted to Congress. At the close to-day, the market was quiet, with a relatively firm tone.

The demand from the trade this week has been only very moderate, and unfortunately there are no definite signs of a prospective revival. The short time regulation has slightly improved the situation in Lancashire, but the stock of Sudan Sakel in Liverpool is so ample that, even if the improved position of the trade there should result in a larger demand, it is natural to expect that the Sudan Sakel will be the first to feel the benefit.

We give below the statistical position of Sakel in Egypt at the end of April: Stock Alexandria, 1,215,000 kantars (including 300,000 kantars held by the Government); stock up-country, about 75,000 kantars; total, 1,290,000 kantars. At the same date last year, the stock of Sakel in Egypt was about 1,400,000 kantars. We would add, for the purposes of comparison, that exports for the period May to August, last year, amounted to 830,000 kantars.

The Sakel Uppers straddle (July/June) this week stands at 1.275 points, against 1.242 points last week and 1.402 points at this time last year.

Uppers.—Practically all through this week this market has evinced signs of weakness, due to fixing of cotton newly arrived in Alexandria and to some speculative sales. The demand from abroad has been only moderate, in spite of the fact that the premiums of the near months of Uppers over those of New York have lost more than half a dollar. We give below the statistical position of

Notes of the Week.

The Afghan Tug-of-War.

On the principle that he who fights and runs away lives to fight another day, Afghanistan may not yet have seen the last of ex-King Amanullah, although he has lost no time in proclaiming that it has. Sixty years ago his grandfather was a refugee from the country, but ten years later returned to reassert himself and became Amir. Abdurrahman Khan, however, went no farther afield than Russian Turkestan, and he had retired in favour of an elder member of the royal family. Amanullah Khan proposes, apparently, to find a refuge among the fleshpots of Europe, and leaves on the throne at Kabul a rival who has no claim to royal blood, but may prove to be of the stuff of which new dynasties are successfully formed. It is difficult to understand the contradictions that have manifested themselves in Amanullah Khan's character. Impetuosity has been a ruling passion, for it was responsible equally for the first striking act of his reign—a declaration of war on India—and for the last, his incontinent flight from Afghanistan. In the suppression of tribal revolts against his authority he appeared to show fight and determination, and his policy of reform lacked nothing in verbal courage. Yet in a country of fighters his hurried withdrawal from Kabul must have earned for him wide contempt, which can only be enhanced by his final escape to India and Europe. Afghanistan, it may be expected, will now look within her own borders for a new ruler. For the moment the star of Habibullah, Amir of Kabul, is in the ascendant; he has eliminated the ex-King, and General Nadir Khan, whose name, after that of Amanullah Khan, promised to carry most weight among the Afghans, has had to acknowledge defeat. It is probable, however, that conditions are too chaotic for Amir Habibullah to lay serious claim at present to having established his authority over the country, and the throne of Kabul may yet pass to one whose name so far has not been familiar to every Afghan. So long as Afghanistan's fate is fought out strictly within her own borders the immediate course of events is not of serious concern to Great Britain. Allegations may still be made in certain quarters to the

effect that the British Government is responsible for the discomfiture of King Amanullah, but the theory is one to which the latter's own actions do not subscribe, and it is clearly in opposition to Great Britain's interests that there should be unrest of any kind in Afghanistan, still less the prospect of chaotic conditions for some time to come. Whatever ruler the Afghans accept can count on finding any friendliness and good will that he may entertain towards Great Britain reciprocated in full measure and beyond.

Italy and Yugoslavia.

In view of the opportunity afforded to the three States of the Little Entente last week in Belgrade to proclaim their solidarity on the subject of Minorities and to make arrangements for renewing the treaties between Czechoslovakia and Roumania and between Roumania and Yugoslavia, which expire on June 7, their recent meeting proved less perfunctory than usual. They were able to point to the conclusion of a common Arbitration Pact between them as an offset to their unbroken failure to reach any agreement in regard either to a joint policy towards Soviet Russia or to a treaty of alliance. A more practical achievement would have been the laying of the foundation for more satisfactory relations between Yugoslavia and Italy, but on this subject the Little Entente continues to proclaim its incompetence. As a reminder of its shortcomings in this respect, this year's meeting was followed by a debate in the Italian Chamber on foreign affairs, at which relations with Yugoslavia were freely discussed. Signor Mussolini's remarks were characterised by a studied chilliness that may well have been in subconscious reaction to the prominence with which it is sought to invest the Little Entente. The situation in regard to Yugoslavia, he declared, demanded attention, calm and self-command. Italy was quietly watching developments, and while not cherishing illusions, did not wish to lose hope that eventually a sincere policy of friendship towards her would be pursued by the ruling classes in Yugoslavia. As there have been mistakes on both sides, it is evident that a

rapprochement between the two countries is likely to be brought about sooner by the efforts of a third party than if it is left to the two Governments concerned. Hence the onus thrown on the other Powers of the Little Entente, if that body is to claim any practical *raison d'être*. An opportunity for an opening move has been lost in allowing the first tour of foreign waters undertaken by the Yugoslav navy to include visits to Greece, Malta and a French port in Africa, but to omit a visit to an Italian port.

The Dodecanese and Cyprus.

The coincidence of the Italian royal visit to the Dodecanese with the sixty-fifth anniversary of the return of the Ionian Islands to Greece has given the Greek Press occasion for moralising on the amount of injustice prevailing in the ordering of the world's affairs. Possibly the tendency to attribute the recovery of the Ionian Islands to the inherent justice of the Greek point of view rather than to the exceptional, though only correct, action of Great Britain is in the main responsible for the present disappointment. After all, there is no reason why justice and the fitness of things should restrict their sphere to matters of nationality. It might at least come within the bounds of probability that, if Greece had shown in the past, or were yet to show, alacrity in handing over to Bulgaria the port of Dedeagatch with a territorial corridor, and to Yugoslavia all that the latter wanted in regard to Salonika and the Ghevgeli Railway, the millenium would thereby be hastened, and both the Dodecanese and Cyprus would immediately afterwards become part of the Greek Republic. Every country, however, finds it much easier to appreciate the justice of having territory ceded to it than of having to cede its own territory to others. Consequently Italy, having conquered the Dodecanese in war from Turkey, sees no reason why she should hand it over to Greece, and Cyprus, having become a possession of potential importance in the future scheme of the British Empire, continues to elude the grasp of a handful of the Island's Greek lawyers, who share with Athenian politicians a belief in the divine right of demagogues to spoils of office. In the meantime, unfortunately, Great Britain's action in regard to Cyprus will come in for the greater measure of abuse, because no danger of personal inconvenience, as in the case of Italian rule in the Dodecanese, has, so far, attached to this pastime. The warm welcome accorded in the Islands to the King and Queen of Italy seems to have left nothing to be desired, and might be held to render almost superfluous Signor Mussolini's simultaneous emphasis on Italy's "undisputed possession" of the Dodecanese and his declaration that not an inch of its territory would be given up. Clearly, as Great Britain's retention of Cyprus is determined, by formal treaty, by the Italian occupation of Rhodes, the energies of the Greek lawyers in Cyprus should be concentrated on Italy, or, as a preliminary move, on persuading their "mother country," Greece, to inaugurate the millenium, or at least the reign of altruism, in the Eastern Mediterranean by meeting in their entirety the wishes of Yugoslavs and Bulgarians.

Roumanian Celebrations.

Roumania has lost nothing by having had to postpone the national celebrations in honour of the tenth anniversary of the Constitution of Greater Roumania. On December 1 last, the date fixed for the anniversary of the Union of Transylvania, Dr. Maniu's Government had been in office for only three weeks, and it was decided that there was not time to organise on an adequate scale the celebrations for which the previous Government did not dare to arrange, owing to the threatened abstention of the Transylvanians. To-day the unity of the country is an established fact, and all parties in the State—whether of the old Kingdom, Transylvania, Bessarabia, Bukovina or the Banat—with the exception of the dissident Magyars, were able to participate in the celebrations at Bucharest and at Alba Julia. The monster demonstrations at the latter town will have heartened the

Government to persevere in its task of placing the administration of the country on a sound and more efficient basis in the face of considerable difficulties, and from the message received from the British Secretary of State for Foreign Affairs it will gain the knowledge that its efforts to re-establish friendly economic relations abroad have already met with success.

The Turko-Syrian Frontier Dispute.

It is reported—and the report seems only too likely to be correct—that the last negotiations between the French Ambassador to Turkey and the Government of Angora on the subject of the Turco-Syrian frontier, with the details of which our readers will be almost wearisomely familiar, have broken down. How tired of this Turkish obstinacy the Syrians and the French must be! It appears to be certain that the Turks are using this question of the frontier in the Nisibin neighbourhood mainly as a bargaining counter for other things, such as concessions in the matter of railways now under French influence. But from an international point of view the Turks have, as we have frequently pointed out before, not a leg to stand on. If the statement is correct that Turkey intends to bring this frontier dispute to The Hague Court, one can only marvel at her crass stupidity. The reading of the Franco-Turkish agreement in regard to this frontier is plain, and its interpretation was confirmed by an international commission under the direction of a neutral, General Ernst. With what hopes of success, therefore, can Turkey take her dispute to the most enlightened Court in the world? The persistence of this particular dispute seems to be traceable chiefly to the Francophobia obtaining in Turkey—an explanation scarcely likely to commend itself to the Olympians of The Hague. It is profoundly to be hoped that France and Syria will stand by their rights, and not allow themselves to be browbeaten by Turkish ill-faith and stubbornness. There are times in the Middle East where concession is not only desirable but also a statesmanlike course, but this Turco-Syrian frontier is certainly not one of them.

Nature in Revolt.

Two of those supreme misfortunes with which Nature is wont occasionally to visit the Middle East happened more or less simultaneously; the earthquake in Northern Persia, and the flooding of the Euphrates in Iraq. Earthquakes are the unhappy lot of the inhabitants of Khorassan, with whom, however, no familiarity can rob the visitation of its horrors. At once the sympathy of other Persians goes out to the unfortunate sufferers, whose bad luck is always looked upon as a national calamity, and is promptly treated by the Teheran Majliss as such. In Iraq the flooding of the Euphrates (worse than that of the Tigris), though at first exaggerated, was a dreadful, though not unique, disaster. The melting of the snows in the Anatolian hills brought down such a flood of water as nothing, Iraqis are inclined to think, but a most extensive and expensive system of irrigation and protective works (costing, it has been estimated, something like £35,000,000) would control. As it is, both a large part of Syria, between Jarablus and Dair al Zor, and thousands of acres of Iraq have been completely submerged. The loss in human life and in ordinary livestock has not yet been calculated, but it must have been considerable. And yet this calamity will inevitably be followed by other similar calamities until such time as Iraq and Syria are so prosperous as to provide against them. The fact that the peoples of the two countries accept the misfortune with such philosophic stoicism should not, however, imply that very real sympathy is withheld from them. Inhabitants of countries more fortunately placed on the face of the earth may very well show compassion towards those who encounter Nature in her wilder or more uncontrollable moods, but the unfortunates should study the methods by which their

sympathisers have to some extent foreseen and thus overcome their own difficulties. A practical solution of this particular difficulty of flooding in Iraq is indicated in a very striking article which we print on another page.

Trouble in the Yaman.

No development, it appears, is to be recorded in Anglo-Yamani relations since last year, when, by means of combined action of the Royal Air Force at Aden and of the tribal troops of the Protectorate, all the Zaidi soldiers were ejected from the Protectorate, and the Treaties which Great Britain had with the various Arab (non-Zaidi) chieftains thus fulfilled. Sanaa, however, has had trouble in another direction, with the ever-turbulent Zaraniq, whose Shafei sympathies do not easily accommodate themselves to the Zaidi convictions of the Imam and his followers. Conflict is again reported between the Zaraniq, who centre upon Bait al Fakih, and the Zaidi troops, who are said to be commanded by the Imam Yahya's eldest son, Saif-al-Islam Ahmad. This warfare between the Zaidis and the Shafeis is, of course, purely a domestic affair, for the Yaman itself to resolve; but the sectarian differences in this independent Arab State should never be overlooked by the outside observer, who is sometimes inclined to imagine that the Imam Yahya rules with an iron will over an absolutely united State. But if the Imam has his difficulties, it must be recorded that all is not well within the Aden Protectorate. For it has just been reported that difficulties have arisen in the State of Shuqra, where a movement is stated to have been set on foot to depose the Fadli Sultan Abdullah bin Husain and to instal his brother, Fadthal bin Husain, in his place. The causes of the trouble are familiar: over-taxation, lack of protection, and omission to accord customary privileges to the shaikhs. At the moment there seems little reason to suppose that the matter will not speedily adjust itself, or that there will be much occasion for the British authorities to intervene. For it must not be forgotten that Great Britain in no sense rules the tribes of the Protectorate. In the past, it is true, they have been controlled through the practice of making "subsidies," a form of influencing perhaps too commonly indulged in by the Empire upon her outlying frontiers, but this, we understand, is largely diminishing, with the result that the real nature of the Shafei tribes of the Protectorate will be disclosed. It is often asserted that but for British gold these petty Princes of the Protectorate would have gone over long ago to the Imam, since one Muslim will always prefer the control of another Muslim, even of a different sect from his own, to that of a non-Muslim. This view, however, is completely contradicted by those who know best these Shafeis of the Protectorate.

INDIAN NOTES.

The Whitley Commission.

No part of the Viceroy's address at the opening of the last session of the Legislative Assembly aroused greater interest than his announcement of the appointment of a Royal Commission to explore all the various aspects of the labour problem. Neither the personnel of the Commission, other than the welcome choice of Mr. J. H. Whitley, the former Speaker, as Chairman, nor the terms of reference were then disclosed, but Lord Irwin assured the Assembly that it would be representative and that the scope of the inquiry should be made as wide as possible. The constitution of the Commission, which was announced last week, is set out on another page and shows that the Viceroy has been as good as his word. The terms of reference are comprehensive—the inclusion of the plantation industries is unexpected but it is not easy to see how they could very well have been omitted—and embrace the whole field of industrial relationships in India. The Indian States are, of course, excluded

from the Commission's purview but they will, no doubt, follow the investigation with keen interest and attention. The industrial development of British India has proceeded apace of recent years, but the new economic order has yet to build up an efficient and contented labour force. The experience of the past eighteen months has been an exceptionally unhappy one and, as the Viceroy reminded the Assembly in January, the situation has been regarded with growing anxiety by all who have the real interests of the country at heart. Its gravity lies not merely in the number of disputes and the unprecedented duration of some of them—the total number of working days lost in 1928 was greater than the aggregate of the previous quinquennium—but also in the success which has attended incitements to violence and the association of communal rioting. If the Commission can succeed in making constructive suggestions which will lead to the establishment of more harmonious relations its work may well be of material advantage not only to India, but to the whole industrial world. The personnel of the Commission, from the Chairman downwards, has certainly been admirably selected for the purpose in view. The inclusion of a representative of the trade union movement in this country who has exceptional qualifications for the work and has taken no active part in the political side, is particularly to be commended, for the conditions under which labour works in India are not, and cannot be, a matter of concern solely to that country. The selection of Mr. Srinivasa Sastri is also a good one, while that of Sir Alexander Murray is perhaps the best choice of all. No employer—Indian or European—is better acquainted with, or has made a more careful study of, the subject matter of the inquiry and none enjoys in a larger degree the confidence and respect of the commercial and industrial communities.

The Assembly Elections.

In the ordinary course of events the Legislative Assembly, which was elected in 1925, would be dissolved after the conclusion of the coming Simla Session in order to enable the new Assembly to meet early in the New Year. The announcement in the Gazette of India Extraordinary, the text of which is given elsewhere in this issue, that the Governor-General does not intend, as at present advised, to follow this course is not unexpected. Many members of the Central and of the provincial Legislatures have been advocating for several months past that their statutory terms should be extended and thereby the postponement of the general elections which are due to take

DEVELOPMENTS IN THE SUDAN.

The agreement recently concluded between the British and Egyptian Governments regarding the use of the Nile waters has a significance for the Sudan as well as for Egypt. The irrigation works to be carried out on the Upper Nile will be located in the former country, and in the case of one at least—the Gebel Aulia Dam—must have no slight influence on local conditions. It is estimated that the effect of the reservoir to be formed by the construction of that Dam will be to submerge at flood-time one-eighth of the White Nile Province, of which area a half will remain under water at all seasons. Of the two thousand square kilometres of land thus permanently lost only a quarter, however, has been cultivated, or may be regarded as cultivable under present conditions, whereas a much larger area, standing at a higher level, will be flooded for a certain period of the year and will thus be rendered available for crops when the waters are drawn off. The land at present cultivated is for the most part poor; the new lands will not only be intrinsically better, but will be improved by the annual flooding. If, therefore, it were a question of ground only, the formation of the reservoir at Gebel Aulia would be an unmixed blessing for the province concerned. There remains, however, the human element to be considered. All the villages of the White Nile Province will be flooded, and will, therefore, have to be moved. The operation is likely to prove less formidable, and less costly, than might be expected, for the reason that, apart from Government buildings and the houses of European traders, the villages comprise little more than straw huts. Yet the natives must be supposed to be as attached as others to their possessions and will be reconciled to the transfer only if they are satisfied that they stand to be gainers by the move. In this matter they will be guided by the degree of confidence that they are able to place in the Government's words and actions; and, fortunately, on this score there is no room for any anxiety. Not the least striking feature of the British administration of the Sudan is the peace and ordered contentment that it has produced among the native population, in contrast to the years of strife and harsh oppression that preceded the Anglo-Egyptian conquest of the country. For peace has brought progress, if not prosperity as well, in its train, and however difficult the ways of the Briton may be for the natives to understand, they have not been slow to realise that the invariable result is gain for them in one form or another.

Quite recently the Sudan has had to its credit a successful migration of a different order. Five years ago the Kassala Cotton Company started under seemingly

favourable auspices in Kassala Province. It secured a concession for forty years, which gave it as much of the land in that province as could be brought under irrigation by means of the control of the flood of the River Gash. The territory concerned was in the form of a delta sixty miles from south to north and varying in width from ten to twenty miles. The land was ideal for the growth of Sakellarides, and it was anticipated that from seventy thousand to a hundred thousand acres could be made available for cotton. The River Gash rises in Eritrea and flows into the Sudan at a distance of only sixteen miles from Kassala Town; it is subject to a very irregular flow not only at different seasons, but also from year to year, and for this reason it was not easy to make accurate calculations of the water supply to be obtained from it for irrigation purposes. A more disquieting development was the decision of the Italian Colonial Government in Eritrea, as soon as it heard of the concession, to make use itself of the Gash for cotton growing. There had been some talk of such a project in 1906, but as the subject had remained unbroached for sixteen years, it was, not unnaturally, regarded as no longer within the region of practical politics. The Italians, however, were now in earnest, and it became apparent that if, in addition to a more precarious water supply than had been estimated, a considerable portion of the river was to be abstracted on Italian territory, then the Kassala Concession had no chance of proving worth the money that had been paid for it, which included the sum of £300,000 advanced by the Company to the Sudan Government for the construction of the Kassala Railway. In these circumstances a fresh agreement was made between the Company and the Government, by which the former obtained in the place of the Kassala concession, which it was to surrender, an area of forty-six thousand acres in the Gezira, adjoining the land already cultivated by the Sudan Plantations Syndicate. To this latter area the Company has now transferred its activities, and it is of interest to note that conditions in the Sudan are such that no difficulty has been experienced either in the Kassala Province or in the Gezira in obtaining all the labour and plot-holders required for the irrigation and immediate cultivation of the land taken up by the Company.

There can be no better index of the satisfactory, not to say rapid, progress of the Sudan than the eagerness on the part of the native owners of the land to take up the thirty-acre plots which are now becoming available in increasing numbers in the Gezira. Apart from the stimulus to cotton production, there is the advantage accruing from the incentive given to settled tenancy on the part of the native. Cotton is now responsible for seventy per cent. of the total exports of the Sudan, for in addition to the Gezira product, considerable crops of American rain-grown cotton are obtained by native cultivation under Government guidance. At the same time the gradual extension of communications—rail and road—is safeguarding the country against regional scarcity by opening up fertile areas, hitherto inaccessible, where grain as well as rain-grown cotton can be produced. The past year has seen the completion of the last link in the railway connecting El Obeid, *via* Kosti, Sennar and Gedaref, with Kassala and the Port Sudan line, which, with the simultaneous extension of road transport, will help to reclaim an important tract of country for productive purposes. Provision for the permanent settlement of the land is also being made by the encouragement given to the construction of reservoirs for the storage of water for use in dry seasons. Thus unostentatiously, but none the less effectively, the great work of civilisation is being pressed on in the Sudan in a way that, sooner or later, must make itself felt in the world scheme.

*The Near and Middle East

From Our Own Correspondents.

Constantinople, May 14

National Industries.

As a corollary to the forthcoming increase in the Customs dues levied on imported goods—an increase which in many instances is so high that it will have the inevitable result of driving certain classes of foreign goods off this market entirely—a campaign initiated by Constantinople University students has been started in favour of the development and expansion of national industries. A meeting was held a few days ago at the National Club in Stamboul at which University professors, merchants, bankers and factory-owners, after expounding the theoretical and academic aspects of the question, delivered a number of patriotic speeches, as a result of which many members of the younger generation there present stood up and took an oath henceforth to limit their personal requirements strictly to whatever the country could itself produce.

The patriotic motives which have inspired so much enthusiasm among these young people is quite understandable from their point of view and, in a sense, is not unreasonable—but the economic problem with which Turkey is faced at present goes much deeper than these undergraduates suspect.

While native industries are to be fostered by a campaign of intensive propaganda, such staple articles of produce as wheat and timber—which Anatolia produces in great abundance in normal times—are being despatched daily from Haidar Pasha, the Constantinople terminus of the Anatolian railway, to Asia Minor—and the wheat and timber are being imported from abroad. Yet the Anatolian forests in the vicinity of the Black Sea Coast are of enormous size—but virgin and unexploited. The population of Constantinople, Smyrna, and several of the larger towns in the interior is living on bread made from imported wheat and flour.

Until some remedy has been found for this abnormal situation in respect of commodities of primary importance, the development and expansion of home-industries must necessarily remain more or less a matter of secondary consideration. Everything, in fact, must stand or fall by that infallible test, the state of the country's trade balance. That balance is still unfavourable, and is bound to remain so as long as wheat and flour have to be uninterruptedly imported by the shipload into a primarily agricultural country.

Foreign Business Establishments.

The fiscal authorities have again become active over that delicate and perplexing matter—the ratio of Turkish to other staff in foreign establishments, and by “Turkish,” Muslims exclusively must be understood. Turkish employees of Christian faith rank with foreigners in this matter of employment. Banks and Insurance Companies, according to the Turkish papers, would appear to

be the principal defaulters, the present state of the law requiring that thirty per cent. of the staff of all foreign establishments should be Muslim Turks.

The statistics published in this connexion by the Turkish papers are certainly illuminating. The thirteen foreign banks operating in Constantinople at the present time (they were eighteen not so long ago) would appear to be staffed as follows according to these indications:—

	Foreign staff.	Non-Turkish staff.	Muslim staff.
Italian banks (two) ...	138	58	38
French banks (three) ...	163	116	66
American bank (one) ...	24	30	14
Roumanian banks (two) ...	27	7	7
German banks (two) ...	121	87	82
Dutch bank (one) ...	49	37	22
British bank (one) ...	13	13	6
Soviet bank (one) ...	13	4	6
Total ...	548	352	241

As the proportion of Muslims employed in foreign banks therefore aggregates 27 per cent., and is not far short of the prescribed 30 per cent. the Turkish fiscal authorities are apparently directing their attention to individual establishments rather than to foreign institutions as a whole. When all is said and done, however, the question is to a very great extent one of aptitude and qualification, the truth being that “non-Turkish staff” are mostly old hands at their job, whereas untrained Muslim bank clerks are still more or less of a novelty, in this country at all events.

Halki Naval College.

In the presence of seven Generals, the Commandant of the Constantinople Gendarmerie and the Chief of Police, no fewer than 317 naval cadets at Halki College were promoted last week to the rank of midshipmen. These youngsters are for the most part smart, healthy-looking youths, and they keep themselves trim and tidy, unlike their predecessors of a quarter of a century ago. One is led to wonder, nevertheless, how and where all these budding young officers are destined to gain their sea legs. The Turkish fleet-in-being consists for the moment of no more than two obsolescent cruisers and a few destroyers, whose ships' complements are apparently up to full strength. The Yavouz, or ex-Goeben, is to be recommissioned some time this autumn, it is true, but even so 317 midshipmen as the result of one year's output of the Naval College will take much stowing away in odd corners in order to be disposed of.

It has been freely rumoured of late that, if the financial aspect of the problem can be solved, Turkey contemplates shortly placing an order for certain warships which will materially increase her striking power at sea. Possibly, therefore, the 300 and odd cadets recently passed out of the Naval College have been given a course of intensive training with an eye to the future.

Constantinople Municipal Loan.

After almost interminable negotiations, an agreement has at last been reached between the Bondholders of the

Constantinople Municipal loan, which was floated in London in 1909, and the Prefecture of the City of Constantinople—which agreement was yesterday ratified by the Municipal Council almost, but not quite unanimously.

Mr. Dickson, a member of the Board of Directors of the Anglo-International Bank, has been representing the interests of the British Bondholders during the whole length of these weary discussions which have been carried on in Constantinople. It is no more easy to apportion the merit for bringing this year-old controversy to a definite conclusion—unsatisfactory though that conclusion may be from the Bondholders' standpoint—than it is to discern between the degrees of patience by which both parties to the dispute have been imbued—patience on the part of the Prefecture in dragging on the negotiations until the Municipal Authorities received practically all that they had set out to obtain—patience on the part of the Bondholders in holding out against Municipal procrastination engineered by influential Mandarins until, with very considerable sacrifices, they arrived at a settlement which as shrewd-headed businessmen they realised to be infinitely preferable to litigation directed against official departments in this country.

The rate of interest has been reduced from 5 per cent. to $3\frac{1}{2}$ per cent., and the Bondholders have forgone their right to the payment of a very respectable number of overdue dividends which have been held in suspense since the outbreak of the Great War.

The matter having now been settled, recriminations would obviously be out of place. The fact, nevertheless, remains that, adverse rates of exchange notwithstanding, the revenue legally assigned to the Bondholders by the Prefecture of the City of Constantinople, with the guarantee of the Turkish Government, is higher to-day, in 1929, than it was in 1909, when the loan was underwritten on the London market. Why the Prefecture, failing bad faith, has defaulted, must remain a mystery in view of the fact that they are now endeavouring to raise money elsewhere.

THE HIJAZ.

Jidda, May 4.

The King's Arrival.

King Ibn Saoud reached Madina from Najd this morning, and is expected to arrive here *en route* for Mecca on the 6th and 7th. It is improbable that his stay here will be for more than an hour or two, and, as he will be in *Ihram* (the pilgrim garb), there will be no ceremonial reception. In all probability he will not be able to find time for a sojourn at Jidda until after the Pilgrimage.

Among those accompanying the King is Faisal al Duwish, who has apparently "resurrected!" This happened to him once before, as during the Wahhabi campaign in the Hijaz in 1925 he was on one occasion killed and buried, and some days after had the pleasure of conversing with an unknown and unknowing enemy on the subject of his own virtues! The present King was present at that interview, and seems to have enjoyed the fun.

Foreign Affairs.

The outstanding item in foreign affairs is the official announcement, made yesterday, of the conclusion of a Treaty of Friendship between Germany and the kingdom of Hijaz-Najd. Thus Germany joins the ranks of the Powers who have recognised the régime of King Ibn Saoud. The Treaty was signed on April 26 at Cairo by the German Minister there and Shaikh Hafidh Wahba on behalf of the Wahhabi King, and will be published when ratification has taken place. It appears to be a quite short document of four or five clauses.

Shaikh Fuad Hamza, Director of Foreign Affairs, arrived at Jidda two days ago on the way to meet the King at Rabigh. During his stay he received the new French Consul, M. Maigret, who, it is understood, will leave Jidda immediately after the Pilgrimage on a short visit to Syria and Paris for a discussion with the High Commissioner and the French Government. He will then

R. B. W. Homes,
General Manager,
HAIFA.

resume his post here, and it may be assumed that the Consulate will then be converted into a Consulate-General or perhaps even a Legation. Such an assumption presupposes the creation of a closer link between Syria and the Wahhabi State, for which the auspices seem to be very favourable at the moment.

It is understood that Mr. Bird, the British Consul, will be leaving England towards the end of May for India in connexion with the conference which will consider questions arising out of the organisation of the Indian pilgrimage.

The Pilgrimage.

The number of pilgrims in the country is now 63,827, which is rather more than 20,000 less than last year's figure at the corresponding date. In this connexion it is rather difficult to restrain a smile at the uproar recently created in England by the imposition of quarantine restrictions on visitors to France in connexion with the Tuscania small-pox epidemic. If the British Government has at last realised how very inconvenient, annoying and unnecessary such restrictions are, perhaps it will consider whether, in the event of an absence of any epidemic in the Hijaz during the pilgrim season, it is really necessary to subject all travellers from these parts to Egypt and the Sudan to the maximum possible inconvenience and discomfort merely in the interests of red tape. The great British public soon kicks when it is treated to a dose of the medicine which its representatives help to prescribe for less-favoured foreign parts, where the most extraordinary things happen in the blessed name of quarantine. To mention but two cases; last year an English lady, travelling from Egypt to join her husband at Jidda, was compelled to submit to inoculation against cholera at Suez on pain of not being allowed to proceed on her journey—imagine that happening in England and the excitement in Parliament! The second instance is that of an English visitor from Jidda to Cairo, who some days after his arrival received a printed statement whose signature by him and return to the Department concerned would, it was stated, be taken as sufficient proof that he was no longer a danger to the community; if he had been suffering from disease he would have probably signed and returned it to secure immunity from further official interest in him; but, being in the best of health, he ignored the missive and a month or so later an official of the Department concerned called to know whether he had ever received it. No one can object to quarantine reasonably administered in the interests of the whole community, but unintelligent administration of restrictive regulations is both a curse and a public danger. It would be interesting to know whether the authorities concerned ever seriously study the vital statistics of the Hijaz which are nowadays published with great regularity. The figures for the last two years or rather for the last two pilgrimage seasons (statistics for 19 months) may be of some general interest.

During this period neither cholera nor plague has been in evidence and the deaths classified as epidemic are for the most part small-pox, dysentery, typhoid, and other intestinal ailments, which in most countries of the East are endemic and are habitually not treated as dangerous to the health of the world unless they appear in an epidemic and virulent form. In the whole period deaths from these causes total 1,335, or just 70 a month or rather more than 2 a day, the incidence being actually 4 a day during 7 months which may be regarded as the actual Pilgrimage season, and correspondingly less in the less crowded months. Surely these figures do not seem to justify vexatious dealing with people emanating from the Hijaz. The highest small-pox mortality of a single month during the whole period is 53 (less than two a day) while in 50 weeks out of the 19 months the numbers fell to nil or only an occasional case or two. It is apparent

that the small-pox comes into the country with the pilgrims in spite of the precautions taken by the authorities.

All one asks is that, in the event of the Pilgrimage of any year being "clean," the quarantine authorities should be discouraged from applying the utmost rigour of the regulations. In the event of an epidemic there should simply be an embargo on the shipment of pilgrims from the Hijaz, but the shipping companies would probably kick like mules against any such a development. The last word has by no means been said yet on the subject of quarantine regulations, but the above figures may help people to think.

The total deaths from all causes during these 19 months (for the five towns of the Hijaz, including, of course, the pilgrims) in an average population of, say 200,000 souls were 12,619, or about 6 per cent. Of these deaths 9,784, or 78 per cent. of the whole took place in the seven months round about the two Pilgrimages included in this period, giving an incidence of 49 deaths per thousand. This leaves 2,835 deaths for the remaining 12 months under consideration, or 14 per thousand or, say, 28 per thousand if allowance is made for 100,000 pilgrims being away during the period. Thus the Pilgrimage almost doubles the mortality incidence of the country, which is not surprising when one considers the large proportion of C3 people who attend the Pilgrimage fully expecting and even hoping to leave their bones in the Holy Land. Otherwise there would seem to be nothing essentially wrong with the health conditions of the country, though perhaps we should not omit to give credit where credit is due, namely to the unremitting efforts of the King and his Medical Department to minimise the inevitable risks attendant on the large annual influx of pilgrims into the country. It may be of interest to record that, out of the total deaths above referred to, about half were men and the remaining half about equally divided between women and children, a proportion which reflects the average composition of the Pilgrimage.

May 7.

King Ibn Saoud at Jidda.

Jidda is gaily decorated and beflagged to-day in honour of the King, who arrived from Madina *via* Rabigh and Qadhima at 10.30 this morning. An enormous concourse of people await the arrival of the royal convoy at the marquees set up near the barracks outside the north wall of the town, and a royal salute of 101 guns was fired as the King alighted from his car, continuing during the reception by him of the people of Jidda. As the King is in *Ithram* there was no reception of the Consular corps of the European community, but the various consulates flew their flags in honour of the occasion. The King is leaving this afternoon for Mecca, and it is improbable that he will revisit Jidda until after the Pilgrimage, whose culminating date is May 18. The Amir Saoud, contrary to expectation, has not arrived with his father, who is accompanied by his third and fourth sons, Muhammad and Khalid, by various of his younger sons, and by his brother Muhammad.

Later.

It is said that the King will pay a flying visit to Jidda in a few days' time.

GREECE.

Athens, May 12.

Independence Centenary.

An elaborate programme for the celebration of the centenary of Greek Independence has been prepared. The guiding principle of the celebrations is to be the inception of works of permanent utility rather than an ephemeral display. Its general note is to be Hellenic rather than international. The most important event will be the erection on the Champ de Mars of a Heroon in the form of a

church. The names of founders will be engraved on a stone, set in a wall, which will be surrounded by statues of the heroes of the War of Independence and national benefactors. During the first year, two statues will be erected. Stone from Mt. Sinai is to be put into the church. The Champ de Mars itself will be converted into a park. Another feature will be the restoration in marble of the Odeon of Herodes Atticus, which will be used for concerts, Greek singing and Greek musical representations. In the provinces, local memorials will be erected. The erection of a national Theatre and Opera is also contemplated.

The Byzantine Museum, now housed in very cramped quarters behind the Academy, will be transferred to the Duchess of Placenza's house on the Kephissia road, and on the ground behind it two new museums will be erected: one to hold the collection of embroideries, etc., at present exhibited in the mosque by the Monasteraki station; the other to hold an exhibition of native industries of the present day. The mosque itself will become a museum of Muslim art in Greece.

In connexion with the celebrations, three publications are planned: (1) a metron of the Agonistai, or Register of the Combatants; (2) a Book of the Century, showing the progress of Greece during the last hundred years. There will be a history of various departments and a chapter dealing with the pre- and post-War refugees. The expenses of the production of this book, which will have 1,000 pages and many illustrations, have been guaranteed by an anonymous benefactor. (3) Finally, an album of the historic places and persons of the War of Independence will be produced and distributed in the schools.

In addition to a Panhellenic Fair (which will be held in Athens) and Panhellenic Games, there will be three Festivals: one a military review, another local dances and episodes of the War of Independence, and a third a revival of the Panathenaia, when the Greek flag will be carried instead of the *peplos*. The celebrations will be spread over two periods, one in April and one in October.

So much for the official programme; but over and above all this three Congresses will take place in Athens during the year: (1) the Byzantine Congress, (2) a Press Congress, (3) a Congress of Psychical Research.

Refugees' Accomplishment.

An extremely interesting review of the work of installation of the refugees accomplished in the last six years is given by Mr. A. Pallis in the *Messenger*. As a set-off against the enormous cost of the installation, the national wealth has benefited and will benefit in progressive measure by the constant increase of agricultural production. Between 1922 and 1927 the production of tobacco has been more than doubled; between 1922 and 1928 the production of cereals has increased from about 245,000 to 450,000 tons, and this in spite of successive calamities in the most productive regions.

Some casual remarks made by M. Venizelos to a friend (during his recent tour in the Peloponnese), on the subject of Greek doctors, were overheard and published by a reporter, and aroused a storm of indignation among the members of the medical profession. It required a personal explanation on M. Venizelos' part to allay it. Good may come out of the incident, however, if it draws attention to the fact that there are far too many doctors in Greece, and that quality rather than quantity should be aimed at. In Athens and Salonika there are plenty of good doctors and surgeons, who have had a foreign training in addition to taking the University course at home. But it must be confessed that the average standard is not very high. The new laboratories of the University, therefore, which are being erected, hold out a promise of better things. The question of trained nurses is also a difficult one, since Greek women have not the temperament suitable for making good nurses, or, perhaps one should say, those that have the right temperament do not become nurses. Those that do are, from all accounts, too easy-going and scatter-brained.

Protection of Animals.

The Society for the Protection of Animals makes good progress. The revolting dog-car and its grisly attendant armed with a club and a pair of pincers who used to parade the streets of Athens have vanished, and have been replaced by a handsome van with uniformed driver, while the dogs are collected by an official, also in uniform, by means of a net. The dog's refuge is also being built, and part of it, at any rate, will be opened shortly. The President of the Society is M. Rouphos, formerly Minister of Foreign Affairs, the Vice-President M. Philon, and the General Secretary M. Alexiou. M. Papanastassiou has also taken a great interest in it, and other prominent Athenians.

General News.

It is announced that some of the leading shipping lines, including the Yannoulatos Line, have amalgamated. If this means that the passenger accommodation, cleanliness and punctuality will be improved, it is welcome news. While the standard on some lines has certainly been raised of late, and better and faster boats serve places like Crete and Mytilene, as long as the comfort of the passengers and the seaworthiness of the ship are subordinate to the demands of cargo, no general improvement can be expected. In one respect, a signal advance has been made. Boats from abroad now come alongside at the Piræus. It is a pity that the porters are not better disciplined; one hears that they are allowed to swarm into the saloons and cabins as soon as the gangway is down. Is the tyranny of the boatman to be replaced by another? And why is it that the first impression a stranger gets of Greece is allowed to be so bad?

The damage to the currant vines was, by mistake, described in my last letter as due to hail. Actually it was due to frost.

Sofia, May 15.

National Celebrations.

Bulgaria has just celebrated simultaneously a millenary and a jubilee. First, the millenary of the death of Simeon the Great, whose reign marks the golden age of the Bulgarians' Middle Ages, owing to their military sway, extending from the frontiers of their Kingdom to the heart of Thessaly, of Albania, of Serbia, and of Roumania as they are to-day, and also to their cultural influence, as shown in a national literature instituted on the basis of emancipation from Byzantine Hellenism—a movement begun by the two great Bulgarian Saints, Cyril and Methodius, who during the reign of Boris I, the promoter of the Bulgarians' conversion to Christianity, invented the Bulgarian alphabet, afterwards adopted in all Slav countries. The jubilee was that of the reconstitution of the Bulgarian State signified in the first Constituent Assembly after the Turco-Russian War of Liberation in 1877-78.

This double jubilee, which should have been celebrated last year, but which was postponed to this owing to the earthquakes, was celebrated with great solemnity. The popular festivities began on May 12 at Preslav, the capital of the Bulgarian Kings after 893, on the ruins of Simeon's palace, and more particularly of the old royal basilica discovered quite recently under methodical investigation of Bulgarian archaeologists. The ceremony took place before an enormous gathering of Bulgarians from

all parts of the country, who had come to seek in the historic past inspiration for the future. There were more than 20,000 men massed on the plain and hills of Preslav, in the region of Shoumen, cradle of the first Bulgarian kingdom. The old Archbishop of Varna, Mgr. Simeon, said the Mass, assisted by numerous clergy in the old royal basilica, where in the presence of King Boris, of the heads of the Government and of many officials, he re-lighted the traditional holy fire of the Bulgarians, which runners started to carry in two sets of relay, traversing Northern and Southern Bulgaria, and stopping at all places renowned for their participation in the national rising of 1876 and in the War of Liberation, finally to deposit it at Sofia, in King Boris' Palace.

After this symbolic act of the Patriarch of Bulgarian priests, there was a review of troops, commanded by the Minister of War, General Bakardjieff. The King took the salute. Then came a monster banquet, at which King Boris made a great speech. In linking up the past with the present he retraced in eloquent terms the high civilising work accomplished by Simeon a thousand years ago, and spoke of the obligation which this same work imposed upon Bulgarians to persevere in the way lived by their ancestors and never to lose confidence in their destiny.

"Two events of peculiar importance emerge from the far horizon of our national history," said King Boris. "These are the conversion of the Bulgarians to Christianity at the time of Boris I, and the invention of Bulgarian characters in the time of Simeon. Ten centuries separate us from this epoch when, in the places holy to us, Simeon, worthy successor of his glorious father, undertook a work which was to shine brightly in the upward march of the Bulgarian nation's cultural awakening. The political and creative genius of Simeon and the noble patriotic activity of his companions illustrate this golden century.

"We are celebrating to-day the millenary of this brilliant epoch in the history of the first Bulgarian kingdom. A thousand years of the Bulgarian language and learning—these most precarious and lasting treasures, which bind us across the centuries to that time, and which, in times of peace, trouble, and disaster, of greatness or decadence, maintained the unity of our people, sustained its resolve and enabled it to preserve its true national physiognomy.

"In celebrating to-day this glorious past, we render pious homage to the memory of Simeon, and of his great predecessors and co-workers who gave birth to the Bulgarian civilisation. May we learn from the past, and, in avoiding its exaggerations, let us cultivate whatever this brilliant epoch, whose splendour is untarnished, created that is wise, healthy, and lasting. National ideas common to a whole people, a church, and independent characters—that is some measure of the activities of these Titans, our first apostles, who made the glory and the grandeur of Simeon's century.

"This legacy was for a time forgotten and abandoned—a fact which cost us dear. But it still exists. It survived our period of bondage and reappeared in all our national misfortunes. It has given the vital spark to the apostles of our renaissance and our liberation. The same force which is the basis of this secular legacy still throbs within us. The Bulgarian people, proud of its culture and of its thousand-year-old language, and having a profound faith in its national destiny, will continue in peace to prepare for a better future while playing its own increasing part in the enlargement of the civilisation of the whole world."

The President of the Council replied to this speech. He emphasised the most valuable result of the efforts of Simeon—which was nothing less than the creation of the Bulgarian nation, until his time split up into tribes which he succeeded in uniting both politically and territorially. Under the impulse of his father, Boris, Simeon instituted a Bulgarian State, united and civilised, which ranked among the most important of European States in the Middle Ages. M. Liaptcheff spoke also of the consider-

able progress made by the Bulgarians since their liberation from the Turkish yoke, and in this connexion he mentioned, in particular, ex-King Ferdinand, whose enlightened ways constituted powerfully to the development of contemporary Bulgaria. And then, in praising his son, King Boris, whose qualities he compared with those of Simeon the Great, he expressed, amid the prolonged acclamations of everyone present, the general wish of the nation that its Sovereign should marry as soon as possible and so assure the succession to the Throne and the continuity of the direction of the Bulgarian State.

The jubilee of the Bulgarian Constitution was celebrated by the Sobranie, which met in special session on May 14 to hear the speeches of its President, M. Tsankoff and of the Prime Minister, M. Liaptcheff, who both spoke in praise of the constitutional régime established by the Charter of 1879, proclaimed at Tirnovo, the second capital of Bulgaria in former days.

Moving scenes were witnessed in the journeys of the runners with the sacred fire from Preslav. The solemnities were prolonged on this occasion in the regions formerly under the heel of the Turks. The return of this fire to King Boris, to be kept burning in the Chapel of his Palace, took place on May 15. It was made a special occasion, in which the whole capital took part. In the morning an official "Te Deum" was sung in the Cathedral of St. Alexander Nevsky, erected in commemoration of the liberation of Bulgaria by Russia; and in the evening, a lantern procession was organised in honour of the Jubilee of the political renaissance of Bulgaria.

CYPRUS.

Nicosia, May 8.

The King's Message.

The King's message to his people is published in the *Cyprus Gazette* and reproduced in Greek papers.

Tobacco Prospects.

Interesting information is given in a supplement to the *Gazette* of April 26. Tobacco cultivation proceeds, and there are now six instructors, under a tobacco expert, in different localities. Although villagers are slow to profit from the advice given, more systematic efforts are being made to promote development, and it is hoped that the output this year will be considerably larger than that of last. The total quantity grown in 1928 was under 220 tons. The area under cultivation has reached only 3,140 dunums (about 1,000 acres) for the whole island; the largest yield being in the Famagusta district. The yield per acre of course differs according to the kind of tobacco grown. There has been some difficulty in obtaining some of the seeds required, owing to restrictions against exportation in the countries of origin. Clearly it is still far too early to draw conclusions as to the future value of tobacco to Cyprus.

Locust Destruction.

An annual anti-locust campaign is still necessary, and this year for the first time work has been placed in charge of the Government entomologist. The principal method is the purchase by weight of locusts caught in nets, while spraying of the young insects is carried out in places. The price paid varies from 8 piastres (about 10½d.) to 1s. 8d. the oke (2 4-5 lb.), according to the quantities brought in, as the season advances. The aim is to offer what is the equivalent of a fair day's wage. The pest has appeared so far, as in late years, chiefly towards the east of the island, in the Larnaca and Famagusta districts. There have not been invasions, however, from Palestine or Trans-Jordan, of which there had been some fear.

The Cyprus Museum.

The committee of the Cyprus Museum, under the presidency of the Acting Governor, is taking active steps to

increase the attractiveness of this now excellent collection. At recent meetings it has been decided to acquire by purchase lands at various sites, including those of a theatre at Soli, and of a royal palace at Vouni; and to arrange for the publication in European and American papers of essays and articles descriptive of the most interesting antiquities and late discoveries, which should help to make more widely known the many archaeological attractions of the island for tourists, who are now beginning to come in much larger numbers.

General News.

Preparations are being made in all the summer resorts for the approaching hot season, which is expected to be a very full one. New hotels have sprung up in various places.

The barley harvest is coming to a close, and has been a good one; that of wheat, which has been delayed by weather conditions, will also be good.

Greek athletes from Greece and Egypt have been arriving in order to compete with local clubs and have met with cordial receptions.

Cairo, May 18.

The Residency.

What was the most successful reception held of late years at the Residency, certainly since the days of Lord Kitchener, took place the other evening. There were over two thousand guests present, including not only the British community of the capital, but also leading British residents from Alexandria, the Cabinet, the Diplomatic

Corps, the clergy and prominent Egyptian notables and foreign residents. The High Commissioner, who still had his arm in a sling, owing to his recent riding accident, and Lady Lloyd received their guests in the ball-room, which was attractively decorated and presented an almost regal *coup d'oeil* with the way down the red carpet kept by men of the Royal Horse Artillery in gala uniform. The gardens, which had been illuminated and were at their best, had been thrown open for the occasion, and, as the high temperature of the past two days had somewhat abated, the evening out in the open proved to be most delightful. Two bands provided music, the 10th Hussars and the Gloucesters, while the programme of entertainment included dances by two Russians and singing by the choir of the South Wales Borderers, the latter of which was excellent and much applauded. At either end of the garden had been set up buffets provided with ample fare, and everyone voted hearty congratulations to the A.D.C.'s, Major O'Callaghan and Captain Kimmins, on whose shoulders fell the lion's share of the work entailed in organising an occasion like this.

English Schoolboys in Cairo.

A personally conducted party of an unusual character descended on Cairo last week, when forty-five English public schoolboys on their way back from Australia and New Zealand arrived here in motor cars from Suez. They spent a very enjoyable day, having tea at the Residency, visiting the Pyramids and the Museum and ending the evening at the Greyhound Racing, at which they were the special guests of the management. These boys belong to the Public Schools Empire Tour, advocated by Mr. Amery, and have made a tour of the world, starting out *via* the Panama last January, and now returning home *via* the Suez Canal. They have visited New Zealand and the principal cities of Australia, and have had a very successful education tour which, it is understood, will have its counterpart next year, when a similar party of Australian boys will visit the British Isles.

Prince Abdel Moneim.

Prince Abdel Moneim, the eldest son of the ex-Khedive Abbas Hilmy, to whom King Fuad recently granted a pension of £E1,200 per annum on the Civil List and sent the sum of £E1,000 to meet his immediate needs, paid a flying visit to Egypt last week. The Prince, who resides at Constantinople, was, it appears, in great distress, all his belongings and his clothes having recently been sold up to pay his creditors. He has for long been on bad terms with his father, and had always refused to have anything to do with King Fuad, his uncle, although the latter has retained him among the list of Princes of the dynasty who are officially recognised. Recently, however, wiser counsels prevailed with the young Prince, and he was persuaded to write a letter to his uncle asking him to assist him in his trouble. King Fuad at once responded as mentioned above, and the Prince wrote for permission to come to Egypt to pay his respects and to present his thanks in person. This he has now done, and he has returned to Stamboul.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are invited for ASSISTANT MASTERSHIPS for teaching Commercial Subjects and English in the Intermediate Schools of Commerce.

Candidates should be between 22 and 34 years of age and should have a Commercial University Degree (preferably in Honours) and some experience of teaching.

The initial salary offered is £E458 a year (about £461), for applicants with at least two years' previous experience, and £E405 (about £415) for applicants with less than two years' previous experience.

The appointments are on contract for five years, and renewable at the end of that time.

Full particulars and Form of Application may be obtained from The Director, Egyptian Education Office, 39, Victoria Street, London, S.W.1.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are invited for the following POSTS at the new Higher Schools of Fine Arts, Cairo, to be filled on January 1st, 1930.

1. Instructor in Engraving and Etching.
2. Instructor in Decorative Composition and Design.

The appointment in each case will be on contract for a period of three years, renewable, at a salary of £E600 a year (about £615). An allowance of one month's salary will be paid for travelling expenses on arrival in Egypt and also at the end of the contract for return expenses.

Candidates should address their applications to the Ministry of Education, Cairo, before October 1, 1929, and should forward, if possible, in addition to particulars of their qualifications and experience, photographic reproduction of examples of their work.

The Candidates appointed will be expected to take up their duties on January 1st, 1930.

Ophthalmia.

The inauguration by King Fuad of the Princess Fawzia Hospital marks an important step forward in the campaign against ophthalmic diseases in this country. It is just 25 years since the question of eye diseases was seriously taken in hand as a result of the munificence of the late Sir Ernest Cassel, when Ophthalmic Tent Hospitals to perambulate the districts and a special section at the Public Health Department were created. To-day there are no fewer than 29 permanent and 14 itinerant eye hospitals in the country, with a total number of 849 beds, with in addition some 30 ophthalmic wards in the Government primary and elementary schools.

The hospital just inaugurated, which is the largest and most up-to-date of its kind in the country, is the second

permanent eye hospital to be instituted in Cairo. The first was opened in 1926 at Giza, where an Ophthalmic Laboratory, the gift of the British Red Cross is situated, and the Government announces that a third similar hospital is about to be constructed in the Khalifa quarter, which is another of the thickly populated districts of the capital.

During 1928 just under three and a half million out-patients were treated in all the hospitals in the country, and over 171,000 operations were performed, figures which are eloquent of the need for such treatment, particularly when one bears in mind that the population of this country is in the neighbourhood of 14,500,000.

The English School.

The English School held its prize day last week, when, as usual, the High Commissioner attended and Lady Lloyd distributed the prizes. The progress made by this institution is really remarkable; particularly is the prominent part played by the pupils in sports against other scholastic teams satisfactory, showing that the proper spirit is being infused into them by their masters and mistresses. That the school is a necessity is indicated by its growing numbers, and it is comforting to see that the British community agrees with this view of the want it fills by the generous manner in which it contributes to its upkeep.

The British Communities.

Some two years ago the British community in Alexandria decided that there was a need for some special unofficial body to represent it, and formed what has come to be known as the Council of the British Community with the Chairman of the Chamber of Commerce as President. Now Port Said has followed suit, and at a meeting held the other day at the British Consulate it was decided to form a similar Council to represent the local British community, composed of nine members, with the senior non-official British resident as President and the British Consul for the time being as Chairman. Three of the members of the Council will represent the English section, including the Dominions, three the Maltese, and one member will represent the other sections of the Empire. Every British subject of twenty-one years registered at the Consulate will be entitled to one vote for the election of Councillors in his particular section and the functions of the Council have been laid down as being to decide on the various entertainments to be given by the community, to make arrangements for public or official functions in which the community is interested and to study all matters affecting the community generally. The first President is Mr. W. Broatch, Manager of the English Coaling Company, and the first Chairman, Mr. Hurst, the present British Consul.

NEWS IN BRIEF.

The Bulgarian Sobranie has ratified the Kellogg Pact.

The German-Turkish Arbitration Treaty was signed in Angora on May 17.

The new Greek Council of State met for the first time on May 17 under the presidency of M. Raktivan, a former Minister.

Ratifications of the extradition settlement and of the trade agreement between Yugoslavia and Albania were exchanged on May 17.

M. Michailovitch, Yugoslav Minister to Albania, and M. Taditch, Yugoslav Minister to Turkey, have both been retired on pension.

Seven hundred prisoners have been liberated from the prisons of Constantinople in virtue of the recent Turkish amnesty.

Mgr. Seipel, the former Austrian Chancellor, arrived at Constantinople at the end of last week on his way to Angora.

The Jam Sahib of Nawanagar (Prince Ranjitsinhji) has given a donation of 15,000 rupees (£1,125) to the King-Emperor's Thanksgiving Fund, which was inaugurated in India last week. The Jam Sahib left Bombay on May 18 for Europe.

Sir John Chancellor, High Commissioner for Palestine, recently opened the buildings of the English High School for Girls at Haifa, which is under the control of the Bishop in Jerusalem.

M. and Mme. Venizelos were present at an Old English Fair held in Athens on May 18 in the garden of the British Archaeological School for the benefit of the English Book Club.

The Greek Government has approved the appointment of Enis Bey as Turkish Minister to Athens and of M. Vutchivitch as Yugoslav Minister.

Don Fernando de Antón del Olmet, Marqués de Dosfuentes, the new Spanish Minister in Sofia, has presented his Letters of Credence to the King of the Bulgarians.

M. Alexander Zaimis, ten times Prime Minister of Greece and formerly High Commissioner for Crete, was elected President of the new Greek Senate on May 22 by 85 votes out of 94.

The Little Entente Conference, which opened in Belgrade on May 20, came to an end on May 22, and it was decided that the next meeting would be in Prague towards the end of September.

It was reported from Mecca last week that the Pilgrimage had ended very satisfactorily, that the health of the pilgrims had been good, and that no cases of infectious disease had been reported.

The small town of Shebin Karahissar, about 90 miles north-east of Sivass, suffered most severely during the earthquake on May 30. According to reports from Angora, more than 50 persons were killed and nearly 100 injured.

It was reported from Amman on May 24 that a party of Trans-Jordan raiders belonging to the Howaitat and Bani Sakhr tribes, who had combined, and were travelling south-east, had been overtaken by R.A.F. armoured cars near Bair (eighty miles in the desert), and dispersed without resistance. The responsible shaikhs were arrested. This action is taken as evidence of Great Britain's intention to maintain order along the frontier.

A new issue of air post stamps is promised from Egypt; and a special stamp issue is expected from Syria in the form of a commemorative imprint upon 25,000 sets in the current pictorial types on the occasion of an Industrial Exhibition to be held at Damascus next August.

The British Museum Trustees have decided to transfer the Sir Ronald Ross Archives, presented to the Museum last year by Lady Houston, to the Ross Institute at Putney. The archives relate to Sir Ronald Ross's discovery that the anopheles mosquito was the cause of malaria.

The municipal elections at Sofia are reported to have passed off quietly on May 18 with an exceptionally large poll. The Ministerial Coalition secured 17 seats, the Democrat-Liberal bloc secured 16 seats, the Socialist-Radical-Agrarian bloc one seat, and the Communists two seats.

The new Naval Mission to Greece, under the command of Captain G. H. D'Oyly Lyon, R.N., left England on May 24 to relieve the Mission under Captain C. E. Turle, R.N., which has been at Athens since March, 1927, and has now brought a highly successful two years of work to a close.

In a joint sitting in Athens on May 20 the Greek Senate and the Chamber elected 10 Senators for meritorious services to complete the establishment of the Upper House. Among these were M. Alexander Zaimis (10 times Prime Minister), M. Nicholas Triandaphyllakos (Prime Minister in September, 1922), M. Athanasios Eutaxias (Prime Minister in July and August, 1926), General Leonidas Paraskevopoulos (Prime Minister from June, 1925, to May, 1926), M. Athos Romanos (formerly Minister to France), and the first Greek Republican, M. George Philaretos.

A squadron belonging to the Navy of Yugoslavia is making a cruise in the Mediterranean, during which it visited Malta from May 22 to 29 and will visit it again from June 7 to 10. It includes the cruiser Dalmacija, of 2,600 tons, which was formerly the German Niobe, built in 1899; six ex-Austrian torpedo boats, Nos. 3, 4, 5, 6, 7, and 8; the depot-ship Hvar, another ex-Austrian vessel, launched in 1896 and rebuilt in 1927; and two new submarines, the Hrabri and Nebojsca, built by Armstrongs in 1927, and similar in design to the British later "L" class. The Yugoslav naval forces are under the command of Vice-Admiral D. Pritza.

The new Latinised alphabet, which by order of Mustapha Kemal Pasha has been introduced into Turkey, is used for the first time, according to *The Times*, in some provisional surcharges which have been applied recently to certain values of the current stamps in order to pave the way for the new general issue with modified inscriptions now being prepared to the order of the Ottoman Government. The new surcharges are in terms of Paradir and Kurustur instead of Paras and Grouch as formerly. The surcharges issued to date are:—20 Paradir on 1Gr. carmine, 2½ Kurustur on 5Gr. purple, and 6 Kur. in 10Gr. blue.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 9.

Western Civilisation.

It may seem strange that one should begin a letter from Calcutta with a word about Western civilisation; but the cables have this week brought us a summary of a speech by Mr. Baldwin about cinematograph films, their travesty of Western civilisation, and the danger that through them the Western races will lose their influence in the tropical dependencies of the Empire. That is certainly possible. I should like to say, however, that to my mind more would be lost by any repetition of such a spectacle as the West's eager reading of "Mother India"; any repetition of the failure of the leading men in public life in England to condemn the methods of the authoress of that book. What the tropical dependencies look to the West first and foremost for is justice. The last thing to make them think is that we are not just. It matters much less that we should show them that we are fond of stories of loose love and many pistol shots.

"Giving the Thing Away."

Mr. President Patel gave the ruling that, because the Meerut charges were *sub judice*, there could be no genuine debate on the Public Safety Bill. That followed from his interpretation of the rules of the House. What the public wanted to know was whether that was such a ruling as was to be expected from an impartial Speaker, or whether the President was allowing himself to be used as a tool by a party in the House. Now the Maharashtra Political Conference, with a childish inability to see how much it was to give the game away, has passed a resolution, congratulating the President "on his courageous stand in ruling out the Public Safety Bill," for all the world as if Mr. Patel was the leader of His Majesty's Opposition, and this time had done his duty fearless of consequences.

The Statutory Commission.

The former member of the Governor-General's Executive Council, whose views I reported a month ago or so, thought that the Statutory Commission and all its findings would just have to be ignored, and a new beginning made. The Government official whom I quoted later, when I asked him what he thought the Commission would recommend, answered: "What is there to recommend? What *can* they recommend?" My Indian fellow-traveller held that it must recommend that India be henceforth largely a self-governing unit. Now the Aga Khan is reported as having said that, unless the findings of the Commission are based on the principle of an association or federation of free Indian States, God help their authors; for they will simply be reaping more Dead Sea fruit. The *Pioneer's* London Correspondent reports a member of the Commission as having said to him that the opposition to the Commission in India was "really intense and very discouraging," and he goes on to say that the British Government will be asked to invite an Indian All-Parties' delegation to confer with the Joint Parliamentary Committee, as the Commis-

sion is of opinion "that no progress is possible until the Swarajists and other parties are prepared to co-operate." In view of such a general conflict of opinion, it does not seem worth one's while to report sundry items of news this week, as that the Madras Government are putting forward this view, the Madras Committee this other, the Bihar and Orissa Government this third view, and so on. Much, it is now seen, will depend on the result of your General Election.

Conspiracy and Rebellion.

Nothing is more difficult to withstand, however one may know that it must be withstood, than the conviction borne in upon one by much reading of political speeches at Conferences, and of the texts of the resolutions there passed, that the view is right that there is nothing that the Commission *can* recommend. At a time when the public mind is full of reports of house searches, arrests, a conspiracy to murder officials, the discovery of a bomb-making factory, and such like, the Maharashtra Political Conference thinks it seasonable to pass resolutions expressing, according to a summary that I have seen, "resentment at the Public Safety Ordinance, calling on taluks and districts to organise the peasantry, condemning the treatment of the Meerut prisoners, and appealing for contributions to the Conspiracy Case Defence Fund." It is, to my mind, as if they should say: "You want to know how unfit we are to have any political power conferred upon us? Well, just wait and you'll see."

The Bombay Riots.

The rioting in Bombay grew worse, until on Saturday night the curfew order was declared. The effect has been beneficial, and the city is now said to be settling down to normal. Not, however, until after the casualty list had mounted to 24 dead and 204 injured, and this in the very week in which the questionnaire of the Bombay Riots Inquiry Committee was issued to the public; that is, a questionnaire regarding an earlier but still recent outbreak of rioting in the city. It appears that the mill strike—the last rioting was, of course, an outcome of it—had a deeper origin than any misunderstanding about a committee of investigation of alleged cases of victimisation. There was a question regarding a group of 6,000 workers discharged by the Wadia mills.

India's Coal Industry.

Raja Reshee Case Law, presiding at the annual meeting of the Bengal National Chamber of Commerce, stated that the Indian coal industry was on the verge of collapse, and Mr. W. C. Bannerjee said that it was certainly an unnatural state of things which had made possible that coal from South Africa should be sold at a price cheaper than Bengal coal in the Bombay market. He also said that the trade was on the verge of collapse, and that many collieries had been compelled to shut down, involving thousands in ruin. That is a picture as black as coal itself. Things are probably not quite so bad.

Indian Fruit.

There is much talk in India about fruit. Indians from

different provinces will stand up, each for the mango of his province, while the English are trying to make up their minds whether you get better fruit in England or in India. There ought to be no doubt: India has the mango, but what else has she to compare with strawberries, raspberries, plums, gooseberries? Many have thought that much could be done by cultivation to make the comparison one not so unfavourable to India, and it is, accordingly, a matter of some general interest that the Madras Government propose to create a Nilgiri Circle, under a Deputy Director, and that in this circle special attention will be devoted to improving the cultivation of fruit.

Malaria.

The attention of any who have influence with the Government of India through the India Office or the War Office may be called to Colonel King's essay-review in "Science Progress" of Sir Ronald Ross's "Studies on Malaria." Colonel King was Sanitary Commissioner for the Government of Madras. He argues that the stamping out of malaria among the British troops in India is all a question of spending enough money on drainage, and that the Government spends as much in frequent movings of troops from malarial districts to the hills. Perhaps so.

THE WHITLEY COMMISSION.

The Viceroy announced on January 28, at the opening of the Legislative Assembly, that the King had approved the establishment of a Royal Commission under the Chairmanship of the Right Honourable J. H. Whitley to inquire into conditions of labour in India. His Majesty has now been pleased to approve that the Commission shall be constituted with the following terms of reference:

"To inquire into and report on the existing conditions of labour in industrial undertakings and plantations in British India, on the health, efficiency and standard of living of the workers, and on the relations between employers and employed, and to make recommendations." The Commission will consist of the following persons: The Right Honourable J. H. Whitley (Chairman); the Right Honourable V. S. Srinivasa Sastri; Sir Alexander R. Murray, C.B.E.; Sir Ibrahim Rahimtoola, K.C.S.I., C.I.E.; Sir Victor Sassoon, Bt., M.L.A.; Mr. N. M. Joshi, M.L.A.; Mr. A. G. Clow, C.I.E., I.C.S., Government of India, Department of Industries and Labour; Mr. G. D. Birla, M.L.A.; Mr. John Cliff; Diwan Chaman Lal, M.L.A.; Miss Beryl M. le Poer Power, Ministry of Labour; Mr. Kabeer-ud-Din Ahmed, M.L.A.

Mr. Shamaldhari Lal, I.C.S., Department of Industries and Labour, Government of India, and Mr. A. Dibdin, India Office, will act as Joint Secretaries to the Commission.

The origin of the Commission is well described in the following extract from the Viceroy's speech at the opening session of the Legislative Assembly:—

"The past year has been marked by a series of labour troubles, which we have all witnessed with deep concern. The tale of loss and suffering involved by them need not be retold here, and we are more immediately concerned to devise means by which such profitless disputes may be avoided.

"I have on more than one recent occasion appealed to labour to follow wiser counsels for the future, and to employers to prove their determination to leave their employees no justifiable ground for complaint. If both parties can combine to establish closer relations with each other and to develop the organisation for settlement of points of difference before they reach the stage of conflict, we may face the future with confidence and Government is anxious to do everything in their power to encourage and assist such efforts. In the Trade Disputes Bill, which is now before the Legislature, we have provided for the establishment of courts of inquiry and boards of conciliation which may be called into play if disputes get beyond the stage of mutual arrangement. The proposals

of Government in this connexion, and in the other parts of the Bill, which aim at the protection of the public in certain circumstances from the consequence of labour disputes, will shortly come before you and I trust that wisdom will guide your decisions in regard to them.

But these proposals will not in themselves reach the root of the matter. I have long felt that the best way to secure the advantage both of employers and employed is for Government to undertake a review of the conditions under which labour works, and to lend such help as it can in the removal of legitimate grievances. This question has for some time been under the earnest consideration of Government, and I am now able to say that His Majesty has approved the appointment of a Royal Commission during the course of the present year to undertake such an inquiry. Our intention is that the scope of the inquiry should be wide and that it should explore all aspects of the problem affecting the conditions under which industrial labourers work. The personnel of the Commission has not yet been settled, but we shall use every endeavour to ensure that it is representative. I am pleased, however, to be able to say that we have secured the services as Chairman of Mr. Whitley, lately Speaker of the House of Commons, who has been in intimate touch with labour problems in England, and is widely known for his association with the establishment of the Councils which bear his name.

"The announcement which I have just made will, I am confident, be generally welcomed. The conclusions of such a Commission will be of the greatest interest not only to India but to the whole industrial world. We may hope that they will provide us with a basis for future legislation, materially affecting India's industrial future, and it is essential therefore that the inquiry should be as thorough and the personnel as strong as it is possible for us to make it.

INDIAN NOTES.

(Continued from page 675)

place normally this year. Notices of motion to that effect have been given in more than one Council. The United Provinces Council, at the instance of one of the elected members, actually passed a resolution recommending that its life should be extended by one year. As the Viceroy points out, there are obvious disadvantages in holding elections for the Assembly, particularly, on the eve of the publication of the report of the Statutory Commission, while if the elections were held at the due dates now it would be necessary to hold fresh ones soon after the passing of the new Government of India Act. According to the latest advices the Commission's report, if the present time table is adhered to, will be ready for the consideration of the Cabinet towards the end of December. The findings of the Indian Central Committee will also be submitted at the same time and it is anticipated that both reports will be published early in January next. Meanwhile it will be noted that the Governor-General's intentions are provisional only and that the matter will be reconsidered "before the necessity arises of making a formal order for the extension of the life of the Assembly beyond its present term."

Colonel Arthur Fox Pullen, late Royal Artillery, whose sudden death from heart failure occurred on March 22, as a subaltern served in India and through the Burmese War of 1885. He was later attached to the Egyptian Army, being present at the Battle of Tokar and other engagements under Lord Kitchener. Leaving the Egyptian Army in 1895, he served as Adjutant at Shoeburyness, and, having been promoted Major in 1901, returned to India. Here he served with the Aden Hinterland Expedition in 1903, under General Maitland. He continued serving in India until 1911, when he was promoted to Lieutenant-Colonel, and became C.R.A., at Plymouth. From 1912 until the end of the War he was C.R.A. in Burma.

THE LEGISLATIVE ASSEMBLY AND THE ELECTIONS.

A *Gazette of India Extraordinary*, dated May 23, contains the following important announcement by the Governor-General in regard to the date of the forthcoming elections to the Legislative Assembly:—

"In the ordinary course of events I should have dissolved the Assembly about the end of September in order to allow of the elections being held in time to permit the new Assembly to meet in January, 1930. Having regard to the position of public affairs I do not propose, as at present advised, to take this action, and it is proper that I should indicate the reasons which have led me to this conclusion.

"At a time when political interest in India must necessarily be centred upon the future constitutional changes that must, in due course, be considered by Parliament, there are evident disadvantages in holding elections for the Assembly on the eve of the publication of the report of the Statutory Commission. Although it is possible that some, at least, of the reports of the Provincial Committees may have been published earlier, the publication of the report of the Statutory Commission and of the Indian Central Committees can hardly, so far as I can predict the course of events, be expected before the close of the present year or the beginning of next year, at a time, therefore, when the elections would normally be held.

"There will inevitably be speculations as to the possible recommendations of these bodies, and forecasts, most of which must necessarily be without foundation, will be widely published. The resulting uncertainty would not fail to be embarrassing to both candidates and electors, who would, in such circumstances, be called upon to discharge their respective responsibilities at this important juncture.

"The question then arises how far I should exercise the power to extend the life of the Assembly which is conferred upon me by the Government of India Act. I have received strong representations to the effect that the elections should be postponed until it would be possible to bring any constitutional changes into operation. I have considered this suggestion, but in view of the uncertainty of the time table subsequent to the conclusion of the present inquiry, I have thought it better to come to no final decision at present on the actual period of the extension, and I shall reconsider the matter before the necessity arises of making a formal order for the extension of the life of the Assembly beyond its normal term.

EAST INDIES COMMAND.

Rear-Admiral Eric J. A. Fullerton, C.B., D.S.O., M.A., has been appointed Commander-in-Chief, East Indies Station, to date October 18. He will succeed Vice-Admiral B. S. Thesiger, C.B., C.M.G.

Rear-Admiral Fullerton is at present Naval Secretary to the First Lord of the Admiralty, in which post he succeeded Rear-Admiral Frank Larken on April 1, 1927. He was promoted to flag rank in May, 1926, after being Commodore in command of the R.N. Barracks, Chatham. In the War he commanded the monitors *Severn*, *Humber*, and *Mersey* off the Belgian coast, being specially promoted to captain and noted in despatches for these services. He was again mentioned in despatches and awarded the D.S.O. for his gallant work in the operations resulting in

the destruction of the German cruiser *Konigsberg* in East Africa. During 1916-1918 he commanded the battleship *Orion* in the Grand Fleet, and was later in charge of the naval officers studying at Cambridge University. In 1921 he was Captain of the Fleet in H.M.S. *Queen Elizabeth*.

COMMERCE AND THE SIMON COMMISSION.

When the delegates from the Associated Chambers of Commerce of India and Ceylon gave oral evidence before the Statutory Commission towards the end of January last, the Chairman of the Commission suggested that they might draft a clause for the new Government of India Act which would provide reasonable safeguards against discriminatory legislation.

Two draft clauses have now been prepared with the assistance of counsel and of the legal advisers of the Bengal and Bombay Chambers of Commerce and the drafts have been forwarded to the Statutory Commission for their consideration.

The text of the Bombay draft of the clauses is as follows:—

The Indian Legislature has not the power to make any law intended or calculated to discriminate against any commercial, industrial, or agricultural interests established or to be established in British India by any person or association of persons, whether British subjects or not.

Nothing herein contained shall affect the power of the Indian Legislature to make any law of a discriminative nature against the subjects of any country, if any law has been passed by the Legislature of such country discriminating against British Indian subjects residing or carrying on business in that country, or the power to impose any duty or duties for the protection of any trade, commerce or industry, agricultural or otherwise in British India.

(1) When any question arises in any court in British India subordinate to a chartered High Court as to whether any law made by the Indian Legislature was within the power of the Legislature, such question shall be referred by such Court to the Chartered High Court of the Province in which such Court is situated.

(2) The Court making the reference shall stay the proceedings in the case until the question is decided by the High Court.

(3) The High Court, after hearing the parties if they appear and desire to be heard, shall decide the point so referred and shall transmit a copy of its judgment, under the signature of the Registrar, to the Court by which the reference was made; and such Court shall, on the receipt thereof, proceed to dispose of the case in conformity with the decision of the High Court.

(4) An appeal shall lie to the King in Council from the decision of the High Court.

(5) The High Court shall have the powers to make rules regulating the procedure on such reference and other matters relating thereto.

The Bengal draft reads as under:—

No law ordinance or other measure shall be made or sanctioned by the Indian Legislature or by any Provincial Legislature or by any Municipality or other Local Authority:

(a) Which discriminates or shall tend to or is calculated to discriminate as between the races or classes comprising his Imperial Majesty's subjects and which expressly or impliedly, excluding from amenability thereto others of such subjects, shall operate directly or indirectly to abrogate, restrict, detract from or adversely affect the status or rights of the members of any race creed, community or class or classes of persons either with regard to the personal liberties, property or contractual rights or otherwise howsoever as held and enjoyed by them at the date of the commencement of this Act in common with others of such subjects, or to interfere with the exercise by the members of any class or classes of any profession, calling or vocation or with the conduct by them of any trade, industry or business upon equal terms in all respects with others of such subjects—

(b) To levy any taxation, cesses, duties or other imposts of whatsoever nature or kind exclusively upon any persons as being the members of any race, creed or class—

Provided that nothing herein contained shall affect the right of the Indian Legislature to take any steps in the interests of public safety or to subsidise or assist any industry or undertaking in pursuance of any existing laws providing for special assistance at the expenses of the taxpayer or consumer generally nor prevent the imposition of such protective duties as may be imposed from time to time by the Government of India.

In any event, the aforesaid restrictions shall not apply to the case of subjects of such countries as have adopted or may hereafter adopt discriminating measures against subjects of India, whether ordinarily resident in those countries or not, or against the import of Indian goods.

An India Office communiqué states that the King has been pleased to approve the appointment of Sir Abdul Kerim Ghuznavi, Kt., to be a member of the Executive Council of the Governor of Bengal in the vacancy caused by the death of the late Nawab Bahadur Saiyid Nawab Ali Chaudhuri, C.I.E.

PERSONAL AND GENERAL

TO-DAY

May 30, 1929 (New Style).

May 17, 1929 (Old Style).

Dhulhijja 20, 1347 A.H., of the Muslim Calendar.

Iyar 20, 5689, of the Jewish Calendar.

Sir Edward Manville has returned to London from Roumania.

The Prince of Wales received the Maharaja of Rewa at St. James's Palace on May 24.

Sesostri Sidarouss Bey, Egyptian Chargé d'Affaires, returned to London on May 21 from the Isle of Wight.

Princess Marie Louise will receive the Sultan of Zanzibar at the afternoon reception which the Forum Club are holding on June 6.

Field-Marshal Viscount and Viscountess Allenby arrived at 24, Wetherby Gardens on May 21 from Amesbury, Wiltshire.

Admiral Sir Thomas Jackson and his daughter, Miss N. Jackson, returned last week to Woolley, Uplyme, Devon, from Egypt.

Sir Frederick Johnston and Miss L. Johnston arrived at Plymouth on May 23 from the British Residency, Bushire, Persian Gulf.

Sir John and Lady Stavridi, with their son and daughter, have returned to 33, Lennox Gardens from their stay at Athens and the Ægean Islands.

The Iraq Minister and Mme. Jaafar Pasha al-Askari gave a farewell diner for the Egyptian Chargé d'Affaires at the Hyde Park Hotel on May 25. Among the guests were the Greek Minister, A. M. Hamza Bey, A. F. Assal Bey, Mr. R. A. Radi, and Atta Beg Amin, Secretary of the Iraq Legation.

The Egyptian Chargé d'Affaires gave a luncheon at Claridges Hotel on May 27. His guests were: Violet Duchess of Rutland, Field-Marshal Viscount and Viscountess Allenby, the Hon. Mrs. Greville, Sir Hamar and Lady Greenwood, Baroness d'Erlanger, H. E. Mazloun Pasha, A. M. Hamza Bey, A. F. Assal Bey, Mr. and Mrs. R. A. Radi and Mr. A. K. Safwat.

The King has approved of the appointment of General Sir John Asser, K.C.B., K.C.M.G. K.C.V.O., as Aide-de-Camp-General to the King, in succession to General Sir Alexander Godley, G.C.B., K.C.M.G., Colonel of the Royal Ulster Rifles. Sir John Asser entered the Army in 1887 and saw most of his earlier service in Egypt and the Sudan. In the Nile campaign of 1897 he was mentioned in despatches, and the next year served as brigade major, being present at the battle of Atbara and Khartoum. He took part in the Nile expedition of 1899 and was in command of the operations in Southern Kordofan in the Sudan in 1910. He was Adjutant-General of the Egyptian Army from 1907 to 1914.

Administrative and financial sanction has been granted, states a Teheran message, for the early construction in Italy of six Persian gunboats of 200 tons each for service in the Persian Gulf.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.
Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan. Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

THE ID UL AZHA AT THE LONDON MOSQUE.

The Muslim Festival of Id ul Azha was celebrated at the London Mosque (63, Melrose Road, Southfields) on May 20. Muslims belonging to different nations and countries, such as India, Egypt, Albania, Armenia, Arabia, Abyssinia, and Great Britain, began to arrive at the Mosque some time before 11 a.m. to join in the Id prayers, which began at 11.30 a.m. and lasted for about an hour. A number of non-Muslim visitors, who wished to see the service in progress, were also present when the prayers were offered. Then followed the address delivered by the Imam (Moulvi Farzand Ali) in English, in which he explained the spiritual meaning which underlies the celebration of this Festival. After the close of the sermon, the Imam and the congregation united once more in offering in silence individual supplication to God, with hands uplifted—which was the concluding but no less impressive part of the ceremony. Each member of the whole band of the Faithful then proceeded to greet the others with joyful salutations of *Id Mubarak* ("Happy Id").

Shortly afterwards, luncheon, which consisted mainly of Indian dishes, was served under a marquee, pitched in the grounds of the Mosque.

At 4 p.m. a meeting was held, presided over by the Maharajadhiraja of Burdwan. Mr. Abdullah Yusuf Ali, ex-Principal of the Islamia College, Lahore, was the principal speaker. His subject was "The Holy Prophet's life as a source of inspiration for the world."

Mr. Yusuf Ali was succeeded by Mrs. Sirojini Naidu, who reminiscently telling the audience that she was once described by some of her friends as an honorary Muslim, said that the offering which she tendered on this day of Sacrifice was a tribute of heartfelt admiration and appreciation which since her earliest years she had felt for the Holy Founder of Islam.

The Chairman, in eulogising both the speeches, said that when Mr. Yusuf Ali was speaking he felt that the Prophet's blessing was descending on and helping him. He then expressed the hope that the Festival would have passed off peacefully in far-off India, his dear native land. For himself, he added that he always remembered with gratitude that the great Zimindari House, of which he was the Head, was established by the Mogul Emperors, and that partly on account of this and partly on account of his firm conviction that India's welfare was inextricably bound up with the promotion of good will and friendship between Hindus and Muslims, he never lost the opportunity, whenever he had the chance, of doing something that might be conducive to the development of a spirit of harmony and concord between the two communities.

Refreshments were served at the close of the meeting to all the guests and the gathering broke up at about 7 p.m.

A unique feature of the occasion was the participation in this Muslim Festival of a number of notable Hindu ladies and gentlemen. Among those who accepted the invitation or attended the meeting were: Sir Edward MacLagan, Dr. Leon, Miss Durham, Mrs. Theodore Pennell, Mr. P. K. Dutt, Mr. G. S. Dutt, Sir William Clark, Mrs. Paget, Miss Spalding, Major Goldsmith, Lord Leigh, Sir Wm. Simpson, Lady Polson, Shaikh Hafidh Wahba, Colonel Dixon-Spain, Archdeacon Potter, Mrs. Walter Reid, Colonel Applin, M.P., Mrs. Hasluck, Colonel and Miss Dantra, Mr. and Mrs. Mallick, Dr. Paranjpye, Miss Farquharson, Mr. Frank Birdwood, Sir Montagu de P. Webb, and Munshi Ishwar Saran.

The Turkish Grand National Assembly at Angora on May 20 passed the Budget, which balances at £T220,000,000 (£22,000,000). The principal items are £T69,000,000 for the Ministry of National Defence, £T33,000,000 for the Ministry of Public Works, £E32,000,000 for Public Debt, and £T15,000,000 for the Ministry of Finance. The Budget shows an increase of £T13,000,000 on the previous one.

THE WEEK AT HOME

London, Tuesday Morning.

The General Election.

No one, not even an anonymous journalist, should be so rash as to prophesy upon the result of the General Election, which takes place upon the day when these lines appear in print. There is no reliable index; there are too many absolutely incalculable factors.

But like any great boxing match—the chief participants are each of them certain that they are going to win. In effect, Mr. Baldwin says "We shall win"; Mr. Ramsay MacDonald, perhaps more poetical, says "We shall triumph"; and Mr. Lloyd George quite characteristically says "We shall conquer." But these verbs mean different things. Mr. Baldwin means that the Conservatives will beat the other two parties combined; Mr. MacDonald, that the Labour Party will be the biggest party in the next House; and Mr. Lloyd George, that the Liberals will have the balance of power.

As far as one can make out—and it is not very far—there has been a tendency during these last few days to think that we shall see a combination of the last two conditions. But the defect in this observation lies in the fact that it is in indiscernible, not in discernible tendencies that the real problem of the Election lies. In other words, it is upon that vast mass of voters who have given no hint of their political views that the issue probably depends.

Whatever happens, however, this election of 1929 will be notable for an almost complete absence—comparatively speaking—of rancour among the candidates. This change from previous elections is remarkable, and may conceivably set a useful precedent. In part it is due to the general flatness of political life, and to the inferiority of the type of the politician of to-day; but it is also due to the excellent restraint of men like Mr. Baldwin and Mr. Ramsay MacDonald, each of whom has nobly refrained from the introduction of personalities.

On How to Vote.

One of the notable features of this election is the number of, so to speak, freelance counsellors. We are being invited to disregard all party ties, and to vote for this or that candidate in accordance with whether or not he favours a particular set of proposals for railway reform, religious education, electoral or financial reform, and so on. To some extent these counsellors are merely exploiting a "stunt," but some of them are certainly sincere. What is more, their non-Party attitude is reflected in that

of a considerable section of the populace, and by no means the least thinking section of it.

What is even more remarkable, however—and in itself it is a condemnation of our party system—is the fewness of Independent candidates standing. The number of independently-minded people in the country is certainly large: but what choice have they? Generally speaking, they are forced to vote against this or that man, rather than for one. For the Independent candidate, owing to the existence of the Party Caucus and of the secret Party funds, stands but little chance against the subservient candidate with a huge organisation at the back of him.

Unfortunately, no analysis will be possible of how the non-party men or women actually do vote: their voices will be lost and submerged in the greater party streams rushing past. But no election will really mirror the attitude of the people until the existence of this large unaffiliated class is recognised and specifically catered for. The cry for the abolition of the Caucus and of the secret party funds is still an urgent one.

Packing Boots and Shoes.

Among the strident yet hollow voices of the politicians at this time, the still, small voice of the holiday-maker has just made itself heard. And he, if *The Times* is a true criterion, is worrying himself, not whether Conservative, Labour, or Liberal should be at the bottom of the pack, but whether boots and shoes should be there or not.

There are, it is said, "two schools of thought" on this matter. The more common (it is attributed to feminine influence) way is to dump the boots and shoes at once into the bottom of the trunk, and to leave the creases of the trousers to take care of themselves. The male way is, if no conveyance can be secured for the sole use of boots and shoes, to lay the trousers at the bottom—the only flat place—and subsequently to make room for boots wherever it can be found.

Obviously the male method is the correct one—for males. As for women and their trunks, they must, as with their votes, be left to look after themselves. After all, they have tyrannised over men so long in this matter of packing, that they may very well, now that man seems to have begun to revolt, be abandoned to their own devices in the matter of boxes, whether ballot or holiday.

The Humbling of Lancashire.

If one were to judge by ordinary conversation, the man-in-the-street is far more interested in who is going to win the Cricket Championship than the election. He was enormously elated last week at the defeat of Lancashire, the champions, who had not, I think, been beaten since 1927, at the hands of Sussex. Sussex always play sporting cricket, winning or losing, but Lancashire have always the cloud, halo, or whatever you like to call the beastly thing, of the Championship about them.

Somewhat or other I think that the Red Rose will be dethroned this year—it would be an excellent thing for the game if they were—but who are to be the new king-makers, unless it be Notts or Yorkshire, it is difficult at the moment to see. Middlesex might and Kent might; but I do not think that either will.

The undermentioned are among the officers who have been promoted to the rank of Lieutenant-Colonel, Royal Artillery:—Major and Brevet Lieutenant-Colonel G. M. Spencer-Smith (to command 2nd Brigade, R.H.A., Egypt), and Major J. I. D'Arcy (to command 15th Field Brigade, R.A., India).

Captain George Gregory, R.N.R., retired, who died at Epsom on May 23, at the age of 57, was in the Royal Naval transport service from August, 1914, to September, 1919, in the Dardanelles, Egypt, Syria, and Palestine. He was divisional naval transport officer, Syrian coast, with Allenby's Army, and was mentioned in dispatches four times. He also received the D.S.O. and the Order of the Nile and was created C.B.E. Captain Gregory commanded in the service of the Union-Castle line the Cairo and Heliopolis, of the Egyptian Mail Steamship Company, served in H.M.S. *Indefatigable*, and was Marine Superintendent of the Canadian Northern Steamship Company, at Avonmouth.

THE FLOODS IN IRAQ.

(From a Correspondent.)

The severe floods now reported from Iraq suggest, at a distance, some general reflections on the subject which may, perhaps, be of interest. Both the Tigris and Euphrates rise near each other in N.E. Turkey; the latter river drains a more extensive and loftier area than the former, and consequently high flood occurs in Iraq a month or six weeks later. There is some reason to think that in Babylonian times the floods were less destructive than at present, having become more sudden in consequence of the denudation of the forests which once covered large areas in Armenia (*vide* "A Pilgrimage to Nejd." Lady Anne Blunt, 1881 vol. ii, p. 275). It is in any case certain that for the present century the full energies of the existing population are normally required to preserve this footing, leaving little time or labour available to make new conquests, otherwise than by oil driven pumps. Midhat Pasha's energies were spent, largely in vain, in an effort to control the Euphrates' floods; for alternate periods of severe drought and cataclysmic floods have always been the rule for the last four centuries.

Sir William Wilcocks, as Adviser to the Turkish Government, recommended (*vide* his Report of 1911 on the Irrigation of Mesopotamia), that provision should be made for excessive floods on the Euphrates by using the Habbania depression, also known as Dibbis, near Ramadi, as an escape, and possibly in the future as a reservoir, from which surplus water would return in the low season to the river. He urged that this work should be undertaken first at a cost of some £400,000, the Hindia barrage being brought to completion according to his plans, therefore, at a cost of some £350,000. The site chosen was that selected for the same purpose by Alexander the Great, in the sixth century B.C., no doubt because the soil at this spot is harder and less porous than anywhere in the neighbourhood. The Turkish Government preferred to start with the barrage, which would give an immediate revenue return, but promised that the Habbania escape should be put in hand later. The barrage was completed in 1913, and it is reasonably probable that the Habbania escape would have been put in hand immediately afterwards but for the War. It has always been known that the Hindia barrage was not designed to withstand abnormal floods; it has always been a cause of great anxiety, and the British authorities were repeatedly urged in the years 1918-20 to provide the necessary funds for the construction of the Habbania escape, which, quite apart from its value as a protective work, would be remunerative if used as a reservoir, as it would provide a large volume of water for autumn crops when the Euphrates is at its lowest.

There is an unfortunate tendency in Iraq to regard abnormal floods as acts of God which cannot be foreseen. The reverse is the case; the floods are almost exclusively derived from melting snows. The amount of snowfall in Anatolia and at the head waters of the Tigris and Euphrates can be accurately ascertained and provision made accordingly in Iraq. Weather conditions in Anatolia are known to approximate very closely to those in the Caucasus and a little commonsense organisation applied to rain and snowfall records should make it possible to foresee, three or four months ahead, the probable dimensions of the spring floods. A very superficial study of available figures from consular records at Van and Tabriz shows that there is a close correspondence between rain and snowfall records and floods at Baghdad, and between rain and snowfall records at Kirmanshah and floods (or shortage of water) on the Diala.

The rate of melting is, of course, a factor, but it seems to vary little from year to year and local rainfall does not affect the figures appreciably. An organisation to provide

such records in time to be of use could be improvised in a few months and maintained at negligible cost.

On the general question of floods, from the days of Noah onwards, the following extract from an article by Sir Arnold T. Wilson in the *Geographical Journal* for March, 1925, is of sufficient interest to quote in full:—

Floods in the Mesopotamian delta are caused by any one or more of the following seven factors:

- (1) Spring tides, which rise $8\frac{1}{2}$ to 9 feet as against neap tides, which rise 4 to 5 feet as a minimum.
- (2) Continuous southerly gales (*qaus*) which bank up water as much as $2\frac{1}{2}$ feet: such winds are prevalent from October to May.
- (3) Abnormal snowfall in the highlands drained by the Euphrates and Tigris.
- (4) Abnormal snowfall in the highlands drained by the Karun.
- (5) Abnormal local rainfall, such as occurred in the early spring of 1924 in the Karun basin, luckily before the snows began to melt.
- (6) The simultaneous rise of the Euphrates, Tigris, and Karun. Generally speaking, the Karun rises to its maximum first, followed by the Tigris, and some six weeks later by the Euphrates.
- (7) A landslide in one or more of the narrow gorges through which the Little and Great Zab and the Khabur debouch on to the Mesopotamian plain would hold up and suddenly release, when it collapsed, an immense volume of water.* Such landslips are well known in the upper reaches of the Indus, and special precautions are taken to cope with them.

The first two factors mentioned frequently operate simultaneously and cause unusual but manageable floods. The great floods of 1896 were probably caused by the simultaneous operation of the first four factors, as we know that the Karun rose in that year at Ahwaz to a level which it has only twice exceeded (by 4 feet) in 1898 and 1924. The simultaneous occurrence of all seven factors, or even of the first six, is happily exceedingly rare, but it is bound to occur occasionally, even if only once in a few hundred or thousand years; the Biblical tradition of the Flood is probably a memory of some such disastrous coincidence of cycles. Arab histories contain numerous references to devastating floods in Iraq.† Loftus ("Travels and Researches," pp. 7-8) says that the river broke down the walls of Baghdad in 1831 and swept away 7,000 houses in one night.

* Dickson, Captain B., "Journeys in Kurdistan," *Geogr. Jour.*, 1910, vol. 35, p. 365.

† G. L'Estrange, "The Lands of the Eastern Caliphate."

Mr. E. H. Mulock, late Commercial Secretary to the Residency, Cairo, has been appointed Commercial Secretary to the British Legation, Budapest. He left Egypt on May 4, accompanied by Mrs. Mulock, to take up his new appointment.

In a Congregation of the Senate of Cambridge University on May 24 the degree of M.A. (*honoris causa*) [Grace 35 of May 11, 1929] was conferred on 'Abdu'l-Qadir Zafir Effendi (Lecturer in Turkish for the Foreign Service Students Committee).

The King and Queen of Italy on May 21 left Rhodes for Castellorosso (Castellorizo or Meis), off the Lycian coast of Anatolia, and the most easterly of the islands under the Italian Governor of the *Ægean*.

The King and Queen of Italy continued their tour through the islands of the Dodecanese on May 23 and 24. The Royal party landed in Cos, Leros, and Patmos, and inspected new public works and visited the places of historical and archaeological interest. The Royal yacht *Savoia* sailed the following day.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE FIRE AT MISSOLOGHI.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Five years ago Missolonghi celebrated the centenary of the death of Lord Byron in 1824. On those who had the good fortune to be present the ceremony made a profound impression. The solitary little town or village which was rebuilt after the tragedy of 1826, poor in resources and difficult of access behind its shallow lagoons, had made a memorable effort to be worthy of its historic renown. All the heart of Greece was beating in the assembly that had gathered to the precinct beyond the town, where, in bold relief against the rugged Ætolian mountains, the cenotaph and statue of Byron stand between the grave of Marco Botzaris and the funeral mound of the victims of the Exodus.

A few weeks ago the Mairie of Missolonghi was burned down, and in the fire were lost all the archives, relics, and pictures which commemorated the siege and the heroic defence of 1825-26. Among these were the portraits of Byron and of Captain Hastings, who received his death-wound near by at Ætoliko.

It has been suggested to us by a fellow-countryman in Greece, without the knowledge of the Mayor or of anyone on the spot, that it would be a graceful act if the friends of Greece and the admirers of Byron would replace the portrait of the poet, and, if possible, that of Hastings also, by copies. Of the former, at any rate, there are several in this country which would serve for the purpose. No people have been more constant in their friendship, or more grateful for the sympathy of the British nation in the past than those of the little country of five millions, which has recently made such sacrifices to receive and establish an additional population of a million and a half of refugees.

A very moderate sum will suffice, and we would like to see it made up of many small offerings from the largest possible number of contributors. Contributions may be sent either to the Rev. R. R. Fotheringham (Hon. Secretary, The Byron Society), Charing Vicarage, Ashford, Kent; or to Mr. N. Eumorfopoulos (Hon. Secretary, The Anglo-Hellenic League, 53, Chancery Lane, W.C. 2.) by whom they will be gratefully acknowledged.

The undersigned will associate two or three others with themselves in order to form a small Committee to put the scheme into execution as speedily as possible.—We are, etc.,

RENELL RODD.
President, The Byron Society.

VANDALISM IN GREECE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—There is imminent danger that the magnificent citadel of Chios, a Genoese work dating from about 1400, and later restored by the Venetians, about 1700, is about to be demolished in order to make a public park, and that in spite of the fact that it has been declared an archaeological monument in accordance with a Decree passed in 1924. Enough harm of this kind has already been done in Greece. Witness the fortifications of Chalkis, the disappearance of which is now bitterly regretted. On merely material grounds, it is a suicidal policy. The time is certainly coming when the Latin monuments of Greece will attract almost as many visitors as the classical, Mycenæan, or Byzantine. But it should not be necessary to appeal on such grounds to a people in whom local and civic

patriotism is so strong. Will not the numerous Chiotis living in England take steps to prevent Chios becoming what Chalkis has become and what Nauplia is in process of becoming—commonplace provincial towns?—I am, etc.,

“ENGLISHMAN LIVING IN GREECE.”

May 13.

THE “ORJUNA.”

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With reference to my letter appearing in your issue of May 9, and to your editorial note thereon, you do not seem quite to realise the point of my remarks. The Italian Government is in no sense responsible for the *Giornale d'Italia's* revelations. Italian newspapers are at liberty to publish at their risk what they please. Should, however, an Italian newspaper libel a foreign Power having officially friendly relations with Italy, the law makes the particular issue of that newspaper liable to confiscation and the reproduction of the libel elsewhere may be forbidden. The fact that the Italian Government took no action against the *Giornale d'Italia* is in these circumstances evidence that the statements made were known to be true; for if they were untrue, given the law, it would be clearly the Italian Government's duty to prevent bad blood engendered by a deliberate falsehood. If they were true, on the other hand, the bad blood engendered becomes merely the necessary disagreeable consequence of the liberty of the Press to publish facts which the Italian public are entitled to know. What other course, I should like to ask, could the Italian Government take, beyond private diplomatic action? Such revelations as those of the *Giornale d'Italia* may not be susceptible to absolute proof, but in certain circumstances it is possible to know things to be true without absolute proof. Clearly, therefore, if the truth were to come out, the only way for the Italian Government to proceed was not to interfere.—I am, etc.,

J. S. BARNES.

Hôtel Mont Fleuri, Lausanne. May 21.

The Bishop in Egypt and the Sudan wishes it to be known that he is at work in Egypt from the beginning of October till the middle of December, and again from the middle of March till the end of May. From Christmas to the middle of March he is in the Sudan, where also he spends any spare time remaining to him.

Admiral Sir Frederick Field, Commander-in-Chief, Mediterranean Fleet, gave a dance at Admiralty House, Malta, on May 23, in honour of Vice-Admiral Pritza, commanding the Yugoslav naval squadron which was visiting Malta, and all the Yugoslav officers, fifty of whom were entertained at dinner on board the Cyclops. The squadron was due to leave on May 28.

The Yugoslav Government has nominated the following delegates for the session of the Council of the League of Nations which meets in Madrid on June 10:—Dr. Kumanudi, Acting Minister for Foreign Affairs; M. Shumenkovitch, who is at present Minister in Berne; and M. Fotitch. They will visit Dr. Marinkovitch, the Minister for Foreign Affairs, on their way to Madrid.

The celebrations in honour of the tenth anniversary of the constitution of “Greater Roumania” began at Alba Julia on May 20. The Royal Family, including the boy King Michael and members of the Regency, were received by the Premier, M. Maniu, members of the Government, the Diplomatic Corps, and the Mayor, who presented the traditional offering of bread and salt. The crowds gave the Royal visitors a boisterous reception. A banquet was served at which all the members of Royal Family, members of the Government and the Diplomatic Corps were present. Another banquet was held in the open air in the great square in front of the Cathedral, where one hundred and twenty thousand persons were entertained.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Plevan, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Doupnitza, Gorna-Orehovitz, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratza. It has also 86 agencies.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Anglo-Egyptian Oilfields.

The consistent improvement in the position of the Anglo-Egyptian Oilfields in recent years has been very striking. For 1926 a dividend of 12½ per cent. was paid on the "B" shares, for 1927 the distribution was 17½ per cent., while for the past year there has again been an increase of 5 per cent., bringing the dividend to the very satisfactory rate of 22½ per cent. At last week's general meeting, a report of which will be found elsewhere in these columns, the Chairman, Sir Reginald Macleod, was naturally able to give a very satisfactory account of the year's working. The production for the twelve months was only 14,000 tons below the company's record production of 1918. The increase in output was chiefly attributable to the deeper level in the northern extension of the Hurghada field, while the yield of the older wells in the main field continued to be maintained. A hopeful indication during the year was that an exploration well east of the main field struck an oil horizon not previously known. The company has not been fortunate so far in exploration on outside areas. Sir Reginald Macleod was very guarded in his comments last year as to the outlook in the Farsan Islands, and events justified his caution, for information was shortly afterwards forthcoming which led to the view being taken that projects in that area no longer justified the expenditure of more capital. The company has now transferred its attention to Somaliland, and the Chairman expressed the hope that something definite will be known as to the chances in that area before the next meeting. Oil production during the current year has continued at about the same level as in 1928, and a total output of over 200,000 tons is anticipated. The only other feature of the meeting which calls for reference is the addition to the Board of directors of the Anglo-Persian Oil Company, a development resulting from the formation by the Anglo-Persian and Shell Companies of the Consolidated Petroleum Company for the purpose of marketing products in Near Eastern countries.

Egypt's Good Tourist Season.

Once again the tourist season has stood Egypt in good stead, and as a matter of fact the total number of visitors at 20,500 was in excess of the previous year's total. The figures for the past five seasons are worth quoting as they show a steady upward movement, thus indicating very plainly that despite the attractions held out to an ever-increasing extent by other holiday resorts the fascination of the Nile Valley is still supreme. For 1924-25 the figures were 13,600, for 1925-26 16,000, for 1926-27 18,300, for 1927-28 20,000, and for the past season, as I have already pointed out, 20,500. Now that a decade has passed since the Great War, and settled conditions are once again beginning to obtain throughout the world it is certain that Egypt can look forward confidently to welcoming each year a larger stream of visitors. This prospect will entail considerable developments in Egypt for the existing accommodation will not meet the requirements of many more than the present number of tourists, and it is interesting to note that plans are in train for the extension of hotel accommodation.

Syria as a Cotton Producer.

In countries which are essentially agricultural the question of development is always a problem, and it is not

surprising that the French authorities in Syria should be concentrating on the development of cotton growing, as experience elsewhere has shown that provided the local conditions are suitable for the crop—and that appears to be the case in Syria—cotton production is one of the most useful mediums for increasing the economic resources of a country. So far the results in Syria have not been too favourable, for a crop of 20,000 bales for the 1927-28 season was followed by one of only 5,700 bales for the past season, for which the drought and an invasion of locusts were the principal factors responsible. Such unfavourable conditions are not likely to recur frequently, and the efforts that are being made by the French will no doubt result in increasing production in future years. The cotton grown in Syria is of the American type, a fact which invests cotton growing in that region with special interest for us, for the development of the production of American cotton outside the United States is specially desirable. We have been successful enough in producing Sakellarides cotton, but the cotton position cannot be considered satisfactory until we are no longer dependent on America for our supplies of American cotton, and the production in Syria, even if it is never likely to be large, will contribute to the end that all countries using this type of cotton have in view.

Dear Money for India.

Last August the invitation for tenders for £6,000,000 six months India sterling bills resulted in applications for £9,845,000, and the money was obtained at a rate of £4 8s. 7.07d. per cent. per annum. But the Bank Rate was then 4½ per cent. as against the present 5½ per cent., and that fact which is a reflexion of the unfavourable development of the international monetary position in the meantime, together with the extreme uncertainty as to the outlook in the immediate future no doubt largely explains why the latest Indian borrowing should have proved so expensive. Tenders were invited for £6,000,000 nine months bills, and the applications this time only totalled £6,372,000, and the average rate per cent. per annum works out at £5 13s. 1.03d. which compares most unsatisfactorily with the previous rate. It

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

BOSTON: The Athens Bankers' Corporation, 15 Kneeland St.

is true that nine months bills are not favoured in financial circles, but while that may be responsible for the falling off in the applications it would not affect the rates of the tenders. It must be emphasised that this result is in no way a reflexion on India's credit. It is simply unfortunate for India that she had to approach the market at a most unfavourable moment.

Broadcasting in Roumania.

Nothing could seem to bring home more fully the march of progress in the Balkans than the adoption of the countries there one after the other of broadcasting. A station was opened at Belgrade two months ago, and in August one will be inaugurated in the capital of Roumania, and the same month will see the opening of a radio exhibition there, which it is hoped will do much to develop the pastime in that country. For some time past the demand for receiving sets in Roumania has been considerable, and the number of licences issued so far runs well into five figures. As in the case of so many other lines of trade, however, Great Britain has been very backward in taking advantage of the opening for receiving sets, and the market has so far been left to America, Germany, France and Switzerland.

COMMENTATOR.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

The Financial Position.

Sofia, May 7.

Though the Bulgarian money market is far from well organised and does not enable advantage to be taken of openings for development, there was a marked improvement during the past year. The lack of free capital has not ceased to make itself felt, but it must be recognised that in 1928 the supply of and demand for capital, concentrated in Bulgaria in credit institutions, and not on a Bourse, showed signs of development in the presence of more favourable conditions. The supply of unemployed resources, notably in the form of deposits, markedly increased. It is satisfactory to be able to state that Bulgarian savings contributed most of the resources which are concentrated in the various banks. Whereas in 1927 Bulgaria's savings were largely held in the popular banks and the few large banks, in 1928 the provincial banks and the rural co-operative credit societies also showed increased deposits. The increase of the deposits in the popular banks for the first half of 1928 was about 200 million leva; it was 530 million leva at the end of November in the Banque Agricole de Bulgarie, while the position of the private banks and of the Post Office savings bank was also favourable. This tendency shows the increasing importance of national savings for the home money market. While the larger banks of the country receive their resources chiefly from abroad and dispose of considerable capital, the other banks, owing to their dependence on national savings, have been in a less favourable position from the fact that until recently the savings of the people have not been entrusted to them, for one thing because

confidence was not yet re-established, and for another because the savings were largely employed in construction work. The foreign deposits in the large banks of the country increased in 1928 owing to more favourable conditions—at a reduced rate of interest. All these developments have resulted in reducing money rates. While in 1927 the banks paid from 9 to 12 per cent. on deposit according to the period, in 1928 the rate has varied between 7 and 10 per cent.

The private discount rate in 1927 was 12 to 14 and even 15 per cent.; in 1928 it fell to 11 to 13 per cent. at Sofia and to 12 to 14 per cent. in the provinces. Even more important is the tendency for the distribution of guaranteed or covered credit, which has enabled the banks to realise greater liquidity. This tendency was accentuated in the course of the past year. Compared with 1926 and 1927 the bills discounted by the banks showed a very considerable increase. It is necessary to record here the influence which has been exercised by the Banque Nationale de Bulgarie, which, by extending its discount operations, has facilitated the work of the banks in making their portfolios more liquid. It is thus that the total amount of investments by the Banque Nationale de Bulgarie has risen from an average of 800 million leva in 1927 to nearly 1,150 million leva in 1928. By the receipt at the bank of a considerable part of the recent Stabilisation Loan its rôle as regulator of credit in the country will be strengthened advantageously. The improvement of credit conditions in the course of 1928 and the prospects opened out by the new loan have enabled the institution to reduce the official discount rate from 10 to 9 per cent. It is hoped that this will influence still more favourably the Bulgarian money market.

The volume of the monetary circulation and of credits granted in 1928 has shown a strong improvement. The money market has been developed through the maintenance of the circulation of the currency at a much higher level than that of 1927. While the minimum circulation in 1927 was 3,224 million leva in January, and the maximum was 4,254 million leva in October, in 1928 the minimum was 3,494 million leva in February and the maximum was 4,744 leva in October. The totals for the circulation of credit are even more striking. The number of bills of exchange received at the clearing house during the first eleven months of 1927 amounted to 35,656 of the value of 9,359 million leva against 43,591 for an amount of 14,006 leva for the corresponding period of 1928.

The re-opening of the Sofia Bourse on September 15, 1928, was of great importance for the Bulgarian money market. Although its operations are restricted for the time being, it represents the organised market and through its medium disposable capital finds an opening in Government securities or in the shares of private companies. Finally the establishment of the Banque Hypothécaire de Bulgarie has greatly contributed to the regularisation of the cost of long term loans. The considerable resources which that bank receives from abroad has enabled it to fix the rate of interest on mortgage loans at 10½ per cent.

Although the process is slow, conditions on the Bulgarian money market have not ceased to improve and this tendency will be accentuated by the entry of foreign

AGRICULTURAL BANK OF BULGARIA

Head Office

— SOFIA —

Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

capital, although it will always remain dependent on credit conditions in the principal European centres and in America. The general fall in interest rates which is awaited will inflict a severe blow on usury which is much in evidence in villages. Also the increase of capital will not fail to exercise an important influence on the general economic conditions in the country.

THE FREE ZONE OF SALONIKA.

While the project for a Free Zone at Salonika was passed by the Greek Chamber of Deputies as long ago as November 17, 1914, developments since then resulted in its establishment being postponed until the autumn of 1925. It has therefore been functioning only for a little over three and a half years. The works of development carried out during that period, and the programme for future years, are described in the annual report which has recently been issued. It is pointed out that at the beginning there was no port and no mechanical installations. The various difficulties were overcome one after the other and to-day the Free Zone is able to meet the needs of international traffic. The number of metalled roads which intersect the zone is now sufficient, and the same is true of warehouses, the number of which was increased during the past year. Greece to-day, however, is only on the threshold of her development, and the present calls on the capacity of the Zone are no measure of the future, and it is natural therefore that in view of the efforts to exploit the resources of Macedonia—the success of which will naturally have a marked reaction on the trade of Salonika—the authorities of the Zone should be looking well ahead and should be making plans for commercial expansion.

Last year the Commissariat submitted its programme to the Government, and subsequently a delegation of the Zone were given an opportunity of expounding their views before the Cabinet. The proposals for the development of the port may be briefly summarised. The first part of the work, which is considered essential for the needs of the Zone during the next fifteen years, consists of the construction on the west side of the Zone of a quay of about 300-350 metres in length and a mole 300 metres long and 150 metres wide. By the execution of this section of the work—the extension of the present quay by 350 metres and the construction of the first mole—the total length of the quays will be 1,500 metres with the result that berths will be available for seven more vessels. Thus the berthing of all the ships entering the port will be assured, the work of discharging freight will be facilitated, and there will be a great saving in costs for the transit trade. Along the quay and on the jetty it is proposed to construct two series of warehouses with a total area of 15,000 square metres without including the various buildings which could be constructed behind the warehouses. Before the construction of the quay and jetty it would be necessary to carry out certain protective works. The Government, it is pointed out, has shown great interest in the development of the port, and no doubt is entertained that the construction programme will be approved, and that the work will begin in the near future. During the present year it is planned among other things to complete the work of paving the streets in the Zone, to construct a cold storage installation, and to instal a plant for the production of electric current for lighting and for the supply of power.

A few details may be given here of the trade of Salonika in 1928 as showing the importance which now attaches to the traffic through the Free Zone. The total import trade of Salonika last year (excluding the commerce of the Yugoslav Zone) amounted to 640,579 tons, of which 504,450 tons passed to the Free Zone. The exports totalled 79,707 tons, of which the Free Zone was responsible for 45,983 tons. These figures show the part the Zone has come to play in the trade of Salonika.

COTTON RESEARCH IN EGYPT.

The sixth report of the Cotton Research Board of the Egyptian Ministry of Agriculture, which has just been issued, covers the three years 1925 to 1927 and consequently consists largely of records of the work accomplished during that period. The subjects dealt with have a wide range, from the important experiments in seed selection to the effect of certain chemicals on the soils, and throw a most interesting light on developments in connexion with one of the most highly organised industries in the world. The question of seed selection is one of general interest. The later history of cotton growing in Egypt as in other cotton regions has been marked by constant endeavours to obtain ever better strains. At the moment some promising varieties are undergoing extensive trials, and it is at least possible that just as other varieties have disappeared, one day the place of Sakellarides may be taken by some other type, possibly by one which has not yet made its appearance. The report gives the following details of strains at present under review:

Uppers.

Ashmouni C (Malaki).—This was the first Uppers type propagated by the Ministry. Since 1920 very large quantities of seed have been sold. In 1927 there can have been very little commercial Uppers grown that was not a more or less impure descendant of the Ministry stock. The variety had no particular merit except a high yield, but was probably at least as good in quality as Uppers previously grown. It appears to have given the best quality lint in the middle of Egypt, e.g., the Fashn district, falling off both to the north and south of this.

Zagora B (Malaki).—This was first grown in bulk in 1925. In 1926 the decision was taken to substitute it for Ashmouni Malaki in the propagation scheme of the Ministry. Its yield results were the same or very slightly better, but it showed a marked superiority in quality, particularly at Giza. Again the best line appears to be produced at Fashn, the indications being that this type shows a falling off in quality further south similar to that of Ashmouni Malaki, but keeps its quality better coming north. These locality reactions of the different types and, if possible, the exact chances in hair-qualities causing them, will be studied more closely in future.

Giza 2.—It is the first of the selections propagated in bulk which originated from a pedigreed single plant. Grown in 1926 on an area of 10 feddans at Fashn, it showed such promise in the chequers that the whole seed was sown in 1927 on 170 feddans. From the 1927 chequer results it was decided that this type justified wholesale propagation. It was therefore named Ashmouni Geddidd (new) and will be substituted for Zagora Malaki in propagation as quickly as possible. Giza 2 has the exceptional merit not shown by any previously propagated strain of keeping its quality fairly uniformly over the main part of Upper Egypt, with a slight loss at Giza. Its wide-scale propagation should raise the standard of Uppers very distinctly.

Giza 3 is the first of a series of selections from Uppers, which, though constitutionally typical Uppers, as shown by such characters as their growth habit and immunity to fusarium wilt, yet mark a complete departure in staple character from all Uppers types previously grown. This improvement may be in either length or fineness, or both. Exactly what place in the cotton economy of Egypt these types are destined to fill cannot be predicted with certainty. They will be tested thoroughly in both Upper and Lower Egypt. Giza 3 has a halo length about mid-way between Zagora Malaki and Sakel Domains, and its staple has been generally judged by both graders and spinners to be superior to Pilon. Ten feddans of this

type were grown at Fashn in 1926. The chequer results of this year indicated a good yield at Giza but a loss of yield at Fashn. In 1927 therefore the available seed was divided up between several localities to avoid the risk of a heavy loss in any one locality, the type meanwhile being tried in the chequers in all localities in both Upper and Lower Egypt. Propagation plots were grown at Maragha, Fashn, Giza and Gemmeiza.

In the chequers of 1927 the best results for Giza 3 were obtained at Baragha, where it headed the yield list, even beating Giza 2. It appeared to do fairly well in all localities except at Fashn, where the yield was again relatively low. As a consequence of these results the whole of the seed will be sown in 1928 at Maragha on an area of about 500 acres. Since this type has been generally judged to be worth a premium of about one dollar over Uppers, it follows that in any district where the same yield can be obtained it will be the more profitable cotton. It also appears to have possibilities as a cotton to replace the present large areas of Pilion and Zagora grown in the Delta. Its lint has been commercially valued as worth 1 dollar "on" Uppers, Pilion being valued at present at $\frac{1}{2}$ dollar "on" and Delta Zagora at $\frac{1}{4}$ dollar "off."

Giza 7 is also a single-plant descendant and is a further expression of the line-improvement of Uppers, as it produces on an Uppers plant line which has a halo length of 36 millimetres; the grader accepts it as Sakel. This type is still in the trial stages, only about 2 feddans of it being grown in 1927. In the chequers of 1927 it gave a poor yield at Fashn, but a yield at Giza sufficiently good to make it the most profitable variety, valuing the line at 2 dollars off Sakel.

Fine Cottons.

The Delta cottons bred by the Ministry have all been tested out against Sakel Domains and, during the three years under review, none have proved sufficiently noteworthy to justify wide-scale propagation, although some, of the newer strains particularly, show promise for the future.

Sakel B and Sakel C.—Both these bulk selections, which at one time were thought to show promise, were discarded during the period under review, as they did not give any clear evidence of general superiority to Sakel Domains. Sakel C was last grown in 1925 and Sakel B in 1926.

Garofalou is the best of the larger bulks now in the hands of the Botanical Section; 14 feddans of it were grown at Sakha in 1927 and 140 feddans will be sown in 1928. Although shorter in staple than Sakel and Sakel 310, Garofalou has surpassed both these in its spinning results, which have been consistently excellent. It also gives a high seed-cotton yield, although this advantage is lost when the lint-yield per feddan is considered, owing to its very low G.O.T. With a lint yield

equal to Sakel 310, and a better spinning value, Garofalou justifies an extended trial.

Sakha 2.—Grown at Gemmeiza and Sakha on a total area of about 40 feddans in 1927, Sakha 2 has not shown any outstanding characters, but appears to have certain slight advantages over Domains Sakel which justify its continued propagation. The most important of these is that it appears to represent a stock very similar to that of Domains Sakel, but in a purer form, being without the "tail" of short-lint plants which the latter cotton consistently shows in halo graphs. It also has a slightly higher G.O.T. and appears to maintain its staple-length better than Domains Sakel in the south of the Delta.

Sakha 3 is one of the most interesting cottons grown by the Botanical Section. Although shorter in staple than Sakel and universally condemned by graders, it has in every case made a stronger yarn than any other types tested at 100's and 120's. The reasons for this exceedingly good yarn strength are not yet definitely known on account of difficulties in obtaining yarn samples. Owing to the low yield and G.O.T. of this cotton, and the fact that in spite of its spinning merits "ugliness" would make it practically impossible to place it on the market as a super-Sakel, this strain will not be grown in 1928. The seed will be stored for possible future use.

Sakha 4 has many points of interest. It is the longest linted strain of Sakel origin, it gave evidence of a high yield and G.O.T. in Observation Rows in 1927, and it appears to be highly resistant to fusarium wilt.

Sakha 11 is an entirely new type of cotton. It originated as a rogue plant, presumably a natural hybrid with Egyptian cotton, in a bulk grown at Giza from seed of St. Kitts Sea Island. The plant is early and strong-growing and apparently fruitful, while the lint is of a dark colour, almost as dark as the present brown Egyptians, and between Sakel and S.I. in length and fineness. This strain will receive an extended trial both in field and in spinning tests.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, May 31); s.s. Circassia for Bombay (Birkenhead, June 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahsud for Calcutta (Birkenhead, June 1); s.s. Anchoria for Calcutta (Birkenhead, June 11).

Bibby Line.—S.s. Staffordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, June 12).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, June 1); s.s. Dumana for Bombay and Karachi (London, June 8).

Cunard Line.—S.s. Bactria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, and Gruz, if inducement offers (Liverpool June 8, and in Swansea June 11); s.s. Bantia for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, June 5).

Johnston Line.—S.s. Dromore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 15); s.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 9).

P. and O. Line.—S.s. Nankin for Calcutta (London, June 7); s.s. Mantua for Bombay (London, June 7).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, June 1); s.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, June 8); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, June 15).

Ellerman and Papayanni Lines.—S.s. Maronian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 8); s.s. Oporto for Gibraltar*, Malta*, Algiers*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool June 27, Swansea* June 27); s.s. Mardinian for Gibraltar*, Algiers*, Malta, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool July 20, Swansea* July 20). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*CIRCASSIA ...	June 21	*ELYSIA ...	Aug. 9

*First class passengers only. Specially low fares. †Calls Port Sudan.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA. 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 28.

Inertia in the stock markets would in any case have been likely to prevail during the final stages of the General Election campaign. But the election as a market factor has been completely overshadowed by the disturbing developments which have taken place in the monetary situation. The decision of the Federal Reserve Advisory Council that Reserve Banks should be allowed to put up their individual discount rates when they deem it necessary is considered to increase the danger of the New York rate shortly going up to 6 per cent. If this actually occurs the London rate would, almost of necessity, be moved up to $6\frac{1}{2}$ per cent. With the sterling-dollar exchange so unfavourable to London as it is at present the Bank of England would really have no option in the matter. All eyes are therefore turned on America, and the weakness of the gilt-edged market is good evidence of the uneasiness generally entertained. If the New York rate is not raised, the London rate will probably not be raised either. But the latest developments show beyond all reasonable doubt that there is no chance whatever of a reduction in Bank rate this summer. For some weeks that prospect has been growing more likely. This week has made it practically certain.

Central Electricity Board Issue.

We have from time to time referred to the progress made in the national electrification scheme of the Central Electricity Board, and explained its importance to those concerned with both the supply of electric current and the manufacture of electrical equipment. The Board's activities are also important to the consumer, for it is hoped that the economies effected will greatly reduce the cost of supplying current. The schemes have progressed so far that two small portions of the "grid" are actually in operation, and that by the time these notes are printed subscriptions for the first loan the Board is to issue will have been received. This loan, however, is to be of only £3 millions, and is likely to be quickly over-subscribed, but, since the Board is empowered to borrow up to £33.5 millions, other and larger issues will have to be made in due course. The loan is to take the form of 4 per cent. stock issued at 83, at which price the flat yield is

£4 16s. 5d. per cent. It is redeemable between 1959 and 1989, the yield allowing for redemption at the earlier date being £5 2s. 6d. per cent., while if the loan is not repaid until 1989 the return will be £4 17s. 8d. per cent. A sinking fund to provide for repayment is also to be established. The security for the loan is a charge upon the assets and net revenue of the undertaking, and it is estimated that the Board's revenue will be ample to cover the charges of the loan. At present, therefore, the Board has not asked for the Government guarantee of its obligations to which it is entitled, but this additional security is available if it should be needed. Since it is not at present a Government guaranteed debt, the stock will not be an official trustee security, but it may be regarded as belonging to the same class.

French Railway Bonds.

There is a little group of French railway stocks quoted on the London Stock Exchange of which comparatively little is heard, but which has attractions for the investor. It is significant that the prices of these securities have been well maintained throughout the disturbed conditions of the stock markets since the rise in Bank rate. This group consist of issues of 6 per cent. sterling loans made by four outstanding French railway companies—Midi, Nord, Orleans, and Paris, Lyon and Meditteranee—shortly after the War. The remarkable recovery French industry has made from the damage caused by the War is well known, and it has, of course, benefited the French railways. These bonds are secured first by the receipts of the individual companies, secondly by the joint fund of all the large French railways, and thirdly, by an undertaking of the French Government to make up any deficiency and to bear itself the entire service of the loans when the companies' concessions have expired. Thus they are exceptionally well-secured investments, being, in effect, both railway securities and Government guaranteed bonds. Although the bonds all bear the fairly high rate of interest of 6 per cent., they are, with one exception, relatively long-dated securities. The P. L. and M. issue, which yields £5 17s. per cent., is redeemable at the company's option between 1929 and 1958. The other issues, however, which all return £5 19s. per cent., are not redeemable until 1950 in the case of the Nord, 1956 in the case of the Orleans, and 1960 in the case of the Midi.

Company Promotion.

The important part played by company promoters in the field of company finance gives considerable interest to the recently published autobiography of Mr. H. Osborne O'Hagan. Mr. O'Hagan in his fifty years' experience floated a great number of concerns in a wide range of industries, including cement, meat, breweries, tobacco, and tramways. It is clear that the most important qualifications for a company promoter are personal. The intricate legal and accounting questions involved can be left to reliable experts, but the question of when and how to launch a new issue is a very subtle matter which requires a special intuition, and, furthermore, underwriting of an issue is largely influenced by the reputation of the promoter. Mr. O'Hagan followed some very strict conceptions of his own which others may consider too conservative, and, indeed, keeping to the narrow path prevented him from profiting by means which would generally be considered quite legitimate. He believed in continuity of management of a proposed company—a point of view which lost him the opportunity of floating Harrods, for example, and he distrusted new concerns and preferred the re-floatation of established concerns—for which reason he turned down the Gramophone Co. Mr. O'Hagan also refused to allow directors to gamble in shares of companies they controlled. Commendable as are these stipulations, the examples given show that exceptions must be made and the investor must remember that he himself must be the main safeguard against subscribing to dubious issues. Nevertheless, with Mr. O'Hagan's guiding principle of floating no concern in which he would not invest himself there will be general agreement.

EGYPTIAN MARKET FOR GRAMOPHONE RECORDS.

Gramophone records imported into Egypt in 1928 were valued £49,840 as compared with £54,806 in 1927 and £46,149 in 1926 (says a recent American Consular report). Germany has the largest share of the trade, although its percentage declined from 63 per cent. in 1927 to less than 50 per cent. in 1928. Great Britain holds second place, its share increasing from 27 per cent. in 1927 to 40 per cent. in 1928. The United States in the third place provides only about 4 or 5 per cent. of the total imports. The policy of some of the largest American record manufacturers to handle their Egyptian business through London or Continental manufacturing plants or distributing depots and sales offices is, no doubt, responsible in a large measure for the low position of the United States in the official statistics.

Egyptian record shops report that nearly 40 per cent. of their sales are of Arabic songs, 30 per cent. American dance and novelty numbers, while about 25 per cent. are of operatic selections, mainly Italian. German manufacturers have specialized in the production of Arabic pieces and enjoy almost a monopoly in this very popular line. A limited number of Arabic records are manufactured in Egypt. The average record shop carries popular songs in at least 10 different languages, including Arabic, English, Turkish, Armenian, Hebrew, French, Italian, German, Russian, and Greek. American popular songs and ballads are generally liked among the Europeans, and are less favoured among the natives.

The factor of primary importance in making sales in Egypt is price. Popular music and dance records retail at 3s. 1d. to 4s. for the 10-inch size and at approximately 5s. for the 12-inch records. Prices for opera and classical selections are between 6s. and 7s., while records of the best-known artists often sell for as much as 16s. or £1.

Specialised music houses, which handle all types of musical instruments, gramophones, and records, and do the largest share of the business in this line, would be the most suitable field from which to select an agent or representative for the distribution of gramophone records in Egypt. It is often desirable to grant an exclusive agency as competition among a number of dealers may lower the price of the product. Advertising is important in effecting sales in this market, and practically all dealers obtain an allowance for advertising in proportion to the sales effected. Credit terms are usually from 60 to 90 days.

HEAVY INDUSTRIES FAIR.

Rapid Booking of Space for 1930.

Arrangements for the forthcoming Heavy Section of the British Industries Fair in Birmingham are even more advanced than at the corresponding stage of organisation for the last Fair, for which the whole of the stand accommodation was booked seven months before the opening. It was reported at a meeting of the Birmingham Fair Council on May 27 that more than 60 per cent. of the space has already been let, the requisite deposit of 25 per cent. having been paid in every instance. In this connexion it is interesting to note that, despite the immense growth of the 1929 Heavy Fair and the alacrity with which space was taken up by exhibitors, the first stand was only definitely booked a year ago last week.

The chief explanation of the present speeding-up is probably to be found in the fact that the period at which current exhibitors could exercise their option to retain the same sites was on this occasion limited to some ten weeks after the close of the last display. Approximately one-fifth of the firms have already taken advantage of the opportunity now offered to secure their stands for five consecutive years. This early reservation of the major portion of the space greatly facilitates a policy of grouping kindred interests which was put partly into operation last February and is to be considerably extended in 1930.

While it has been the practice, as far as possible, to group the respective industries in particular areas, the rapid growth of the heavy section in successive years, involving great building extensions at short notice, has often made it impossible to adhere to this plan, especially in the case of the later applications for space. The system of alignment recently introduced—by which all stands have frontage to straight avenues one-third of a mile long—was the first important step towards a new development of progressive grouping which will add to the convenience of trade buyers not only in bringing the leading industries more closely together but also in permitting allied trades to congregate in proximity to them. The new scheme, moreover, is so devised, taking into account the proposed building extensions for 1930 and future Fairs, that any industrial section can automatically expand to any dimensions, still retaining its unity of interest without disturbing the similar grouping of any other section.

Until September 30 exemption from Customs duties is granted in respect of all ploughs and plough parts imported to Yugoslavia.

According to official returns, the areas under cultivation in Yugoslavia for the main crops this year are as follows (in hectares), the figures for the previous year being given in parentheses:—Wheat, 2,030,841 (1,831,574); barley, 235,583 (217,471); rye, 195,481 (168,744); mixed crop, 30,033 (33,648); oats, 28,937 (19,390); flax, 7,138 (6,700); beet, 10,843 (7,110); poppy, 11,668 (9,154). The total area under cultivation in 1928-29 is 2,561,386 hectares, as against only 2,303,469 hectares in 1927-28—an increase of 252,524 hectares, or approximately 623,700 acres.

The Hon. Mervyn Herbert died on May 26 at the British Embassy, Rome, where he had been a guest for a fortnight. He was *en route* for England from Albania, and in the course of his stay in Rome suffered a serious relapse after malarial fever, which he had contracted in Albania. Mr. Herbert was the youngest son of the fourth Earl of Carnarvon, and was born in December, 1882. He was educated at Eton and Balliol College, Oxford, in 1907. He had served in Rome, Lisbon, Madrid, Cairo, and again in Madrid as First Secretary, and was employed in the Foreign Office from 1924 till 1926.

Engineering Topics

(By Our Engineering Correspondent)

Internal Combustion Engines.

The development and success of the various types of internal combustion engines operating on liquid fuels have been almost entirely governed by the price, available quantities, etc., of the fuels they were designed to employ. When the Diesel engine was first introduced, comparatively few fuels were available. Heavy paraffin and the heavier distillates were suitable, and this range was increased at a later date by including the better qualities of de-petrolised crude oils. The difficulties of transport and the large demands of the Admiralty for heavy oils some few years ago resulted in the adoption, in some places, of the heavier tar distillates as substitutes for other fuels, and these gave remarkably good results. Tar distillates and even raw tar have been employed with considerable success on the Continent for some time, and German engineers hold them in high esteem. In fact, a considerable portion of the tar oils used in this country during the War was burned with the pilot ignition jet which was invented by a German engineer and employed on the Continent before the War.

The suggestion has been made that raw tars, and tar oils, particularly those resulting from the low temperature distillation of coal, might again be used with advantage. The ignition difficulties with tar oils have been overcome by the employment of a number of devices other than the jet mentioned. This, it may be said, provides for the injection of a small charge of petroleum or shale oil into the cylinder prior to the main fuel charge. At one time there was a good deal of obstruction of the atomisers when tar oil was used, but this trouble has been overcome by improvements in atomiser design and by extra precautions in the treatment of the fuel. There is, it is true, an increased wear on the exhaust valves when tar oil is used, but this does not amount to a great deal, and all that is required is a little more attention.

Raw tars, when used as fuels for internal combustion engines, possess to a greater or less extent all the defects of tar oils, and, in addition, certain defects peculiar to themselves. According to one authority there is also much wider variation in the physical and chemical properties of the different tars than the usual limits of variation observed in the analysis of tar oils. This latter fact necessitates the continual and most detailed analysis of raw tar.

Raw tars generally possess spontaneous ignition temperatures about the same as, or slightly lower than, those of tar oils, and they present the same ignition problems. This difficulty has in many cases been overcome by adopting the pilot ignition system and using a petroleum oil for ignition purposes.

Some large Diesel engine installations on the Continent are said to be worked satisfactorily with raw tars, using a small pilot charge of the tar itself injected into the cylinder considerably in advance of the normal timing. The use of petroleum for starting purposes, which is a common practice when burning tar oils, presents greater difficulties when employing raw tars as fuels, as deposits are formed by the addition of petroleum to raw tar, and these are greater in quantity and more viscous than the deposits which are formed by tar oil and petroleum mixtures. These deposits interfere with the working of fuel-pump

valves. Specially chosen tars of low free carbon content do not so readily cause obstruction of the atomisers as do certain tar oils. It is, however, preferable to employ special atomising devices for use with raw tars. The deposits formed in atomisers when running on raw tar are probably caused by the accumulation of free carbon.

Foreign Building Materials.

Municipalities which specify or permit the use of foreign building materials are severely taken to task in one of our technical contemporaries, which says that our social system has advanced in such a way that much building and construction work is under the control of municipal authorities who deal in many ways with building materials and whose chief concern seems to be price and price alone. It is alleged that for that reason the use of foreign materials is in some instances deliberately fostered, and the suggestion is made that whilst the municipalities themselves do not benefit, the British manufacturer is "stabbed in the back." We do not know that any good purpose is ever served by over-stating a case; the arguments that can be used against the use of foreign materials are so many that one can pick and choose. Our critic continues by saying: "Municipalities should take a broad view covering the wide interests and responsibilities of their communities." With all deference to this writer, that is just what they do. As to whether the action they take after that view is or is not economically sound is a matter of opinion.

Importance of Good Lighting.

I have just been reading an account of the lighting of the Merchant Taylors' School, in Charterhouse Square, which has just been carried out by the illuminating department of the General Electric Company, Ltd., collaborating with Maxwell, Butcher and Co., Ltd. The medical profession believes in good lighting and considers that bad lighting is one of the most fertile causes of poor eyesight in the young. The scholastic profession knows, too, that teaching is rendered far easier under good lighting conditions. It is for this reason that no architect could hope, to-day, to get his plans adopted if due provision were not made therein for both efficient lighting by day and correct artificial lighting by night. Good lighting is just as necessary as anything else in a modern school. Ventilation, sanitation, heating, drainage, and lighting are all of about equal value, and further, every department of a school, such as lobbies, corridors, classrooms, masters' rooms, libraries, dormitories, and so forth must be properly lighted. At the Merchant Taylors' School good modern lighting is looked upon as something more than a necessity. It is regarded as being as important as any item in the school curriculum.

New Concrete Mixer.

Stothert and Pitt, engineers, Bath, have just sent out from their mixer department a leaflet dealing with a new Victoria concrete, etc., mixer which they have just placed on the market. This is an addition to the already wide

range of Victoria mixers, and the drum has been designed to take any 4; 2; 1 aggregate, using a 200-lb. bag of cement at a loading without spilling.

Flexible Pipe Joints.

Undoubtedly one of the most striking mechanical inventions of recent years, that of the late Lieutenant E. Tribe, in Great Britain, with the final collaboration of Dr. H. S. Hele-Shaw, Past President of the Institute of Mechanical Engineers, is the "Victaulic" flexible joint, which has a wide field of application.

The design is essentially a heavy ring of high-grade rubber composition bent over in the form of a flat inverted "U," contained in an outer metal housing, the pipes, cast-iron, steel, wrought iron, or any other material, including earthenware, being made with a small shoulder or rim at each end, as supplied by any pipe maker. The encircling metal housing is bolted round in such a manner that the lips of the rubber ring press down evenly all round the flat surface of the two shoulders or rims, and the greater the pressure the tighter becomes the joint without interfering with the flexibility, while the fixing only takes a minute or two.

The invention is now being used in many different countries of the world for all kinds of purposes, including water, brine, acid water, many other liquids and solutions, petrol, oil, benzine, town gas, natural gas, compressed air, and other applications, and will operate within the wide range of from vacuum up to 4,000 lb. per square inch pressure. Also the degree of flexibility allowed is such that, for example, a long pipe line bears some resemblance to a cable, being easily laid for miles over the roughest ground without difficulty. Thus the actual deviation from the straight of the 2 in. size averages one in 20, and for the 6 in. size one in 54, so that there is no need for direct alignment, important also for many industrial installations.

The Victaulic Company, Ltd., of London, have recently issued a new catalogue, which contains a large amount of information on the subject of pipe line joints, and it may be stated also that the metal housing for general application is being made of malleable cast-iron of 22-24 tons tensile and 6 per cent. minimum elongation, a ductile and shock-resisting material. As before, however, joints with forged steel housings are supplied in special cases, such as for high-pressure pipe lines, hydraulic work, and rising mains.

Some time ago the Victaulic Company, Ltd., gave an interesting demonstration of some new developments in connexion with this joint. There was shown, for example, a "wriggling" model composed of four short lengths of pipe connected by "Victaulic" joints driven on an eccentric by an electric motor attached to one end, each length of the pipe being mounted in a gimball. The arrangement operates equally well under vacuum or under pressure, and shows in striking fashion that the joint will "flex" continuously and still remain tight.

Of outstanding interest also is the "adjustable bend," that is a fitting consisting of two short "swan-neck" bends coupled with a "Victaulic" joint, so that by swivelling the bends any angle can be given at once from the straight up to 45 degrees in any plane, which can be increased still further by adding "Victaulic" setting pieces. Consequently any portion of the pipe line can be set at different angles by the inclusion of this adjustable bend, very valuable for use in confined spaces and for cases where rapid erection and dismantling is required.

There is permanently fitted up at the firm's showrooms

in London a most remarkable arrangement of pipes at all kinds of angles, permanently under pressure, including a demonstration piece which consists of a length of piping about 2 in. diameter hanging down loose in the air, closed at one end and attached to a main overhead by a "Victaulic" joint. This piece can be wriggled about by hand in all directions without the slightest leakage, although the whole arrangement, as already indicated, is under pressure, while important fields of application are ship-building, mining, and oil wells.

SUDAN GUM ARABIC POSITION.

Messrs. Boxall and Co., of Khartoum, report as follows under date April 30:—

Arrivals in Kordofan Station (including Tendelti) amounted during the month of April to 1,671 tons, as against 2,530 tons last year—a shortage of 859 tons or 34 per cent. This year's April arrivals are the lowest recorded for that month over the series of bumper crops we have had since 1923.

The shortage in Kordofan and Tendelti arrivals this season to date, as against last season, which was a record crop, totals about 4,060 tons. If to this is added the shortage in inferior Hashab, estimated at about 2,000 tons, the total shortage in Hashab gum as against last year would amount up to the end of April to about 6,000 tons.

The El Obeid market gradually rose until the 11th, when the total increase attained was 13s. per cwt. On the 13th, however, i.e., the following market day, prices fell to the extent of 4s. 6d., but were again on the upward move until the 25th, when the increase totalled 2s. 3d.; since then they have remained firm at that level. The total net increase during the month amounts, therefore, to 10s. 6d. per cwt. To the end of March exports of Hashab are down 1,100 tons. Bleached exports are about the same, whilst Talha is up 300 tons against the first three months of last year. The net difference on all qualities is about 800 tons down.

The situation entirely changed as regards possibilities of a large crop when with the beginning of April and normally hot weather the arrivals did not increase but even declined as against those of March. Many reasons have been suggested, amongst others the low prices of previous years discouraging collection, and camel transport being diverted from gum to the transport of cotton from the Nuba Mountains, etc.; but whilst these might have some effect, we are convinced it is due to the exceptional dampness of the climate. Gum being a reaction against drought, the excessive moisture in the atmosphere tends to keep the trees alive without compelling them to manufacture gum arabic to hold the moisture necessary to their existence. It is a fact that even in ordinary times the gum trees put forward their leaves and cease to produce gum before the actual arrival of the rains—this being due to their taking moisture from the atmosphere alone.

It is impossible to forecast the tendency of prices. Local prices have been for some time on a "war" basis and otherwise unprecedented. It is difficult to believe that certain exporters are not still short as against their contracts, and even when overseas buyers have risen to the equivalent of local rates that the buying is not largely speculative or against contracts undelivered.

There are 136 cinemas in Bulgaria, the total accommodation being 50,975. Of this number, 133 cinemas, with 49,475 seats, are open daily.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended April 30 amounted to £88,186, making the total from April 1 £25,223, an increase of £4,331 on the figures for the same month last year.

The board of directors of the Suez Canal Company has decided to recommend for the year a gross dividend of 644.57 francs, being 510 tax free on the capital shares of 632.7 francs, or 503.3 francs, tax free on the certificates of replacement (Jouissance shares), and of 585.64, tax free, on Founders' shares.

N. B. E. Nominees, Ltd., has been registered as a private company, with a capital of £100 in £1 shares, the objects being to act as nominees or agents for the National Bank of Egypt. The subscribers (each with one share) are: J. T. B. Pownall, Weyside Lodge, Weybridge, Surrey, bank manager; H. S. Posgate, Kinrara, Sidcup, Kent, bank official. The first directors are to be appointed by the subscribers.

Pneumatic tyres for the native rickshas of Japan are causing a rapid increase in the tyres used by that country, where the motor-car is not yet a popular feature of everyday life. "The Japanese would not part with their rickshas," said Sir George Beharrell, managing director of the Dunlop organisation, in an interview, "so we put pneumatic tyres on them. The streets in many cities are too narrow for motor traffic, but the recent earthquake remedied that to a great extent. Yokohama is now rising as a model city with broad avenues and amazing business activity."

Company Meeting.

ANGLO-EGYPTIAN OILFIELDS.

Another Successful Year.

Sir Reginald MacLeod's Speech.

The eighteenth ordinary general meeting of the Anglo-Egyptian Oilfields, Limited, was held on May 24 at Winchester House, Old Broad Street, London, E.C. Sir Reginald MacLeod, K.C.B. (the Chairman), presided.

The Secretary (Mr. W. A. Turner, F.C.I.S.) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said:—From the report you will have been pleased to see that we have again had another successful year and that your directors are able to recommend a dividend on the "B" shares at the rate of 22½ per cent. for the year 1928.

I would like first of all to deal with a few points in the accounts on which you may wish to have some fuller explanation. On the debit side of the profit and loss account you will have noticed that the various items dealing with the working expenses on the field and in the refinery show an increase over the corresponding figures for last year. These increased expenses are the natural result of the very much greater proportionate increase in the production obtained from Hurghada. Larger production demands additional handling on the field, the total transport charges increase, and finally the refinery is more fully employed. This fuller employment of the refinery on our own crude is reflected in the drop of £25,000 in the receipts for treating imported oil, as we have had very much less surplus capacity available for treating other companies' oil. I do not think any of us will cavil at any slight increase in working expenses which may be brought about by such a satisfactory increase in crude production.

Oil Proceeds.

On the credit side the main item is that of oil proceeds, and this amounts to the very satisfactory figure of £766,971 8s. 6d., an increase of almost £200,000 over the previous year. The greater proportion of this increase is due to the larger production. Part of it, however, is attributable to those alterations made at the refinery during the past year or two which have enabled us to widen the range of products manufactured from your crude. Prices for all petroleum products were even lower in 1928 than they were in 1927, which we had all regarded as a bad year, but as we market this wider range of products we are able to avoid to some extent the greater decline which naturally occurs in the prices for basic products. When I say "we market" I refer, of course, to our selling agents, the Shell Company of Egypt, who continue to merit our warmest thanks for their energetic and successful efforts on our behalf, and by their ever-valuable advice and suggestions as to the products which will earn for us the best remuneration both now and in the future. This big rise in the amount for oil proceeds has enabled us to carry down to the balance-sheet the very satisfactory amount of £424,266 4s. 5d. as balance of profit and loss for the year's working.

In the balance-sheet itself you will see on the assets side that our liquid cash resources amount to almost £714,000, which is only some £2,000 less than last year's figure, and that the net additions to capital total over £114,000. This is the largest addition to capital we have made for many years, and is represented mainly by the refinery additions to which I referred last year. The item "Investment in the Somaliland Petroleum Company, Limited," is a new one and is self-explanatory.

Exploration Work.

On the other side of the balance-sheet, the only item that requires comment, apart from the satisfactory amount of the year's profit, is the unfortunate figure of "Loss on the Red Sea Petroleum Company, £69,452 2s. 1d." When I addressed you last year I told you that we were intending to drill a further well on another of the Farsan Islands, but repeated my warning that we must regard prospecting in this area as "a long shot." Unhappily my warning proved to be only too true. Shortly after the meeting, and before any materials had been moved from the first well, the constant search for further information brought to light some facts of a regional character which showed that the unknown, albeit, slender, prospects of the area were no longer sufficiently promising to justify our sinking more capital in that country. We have thus again been baulked in our efforts to find further production against the day—which we hope and think is still far distant—on which the last well is drilled at Hurghada. But while we are deploring the loss of the £69,000, we must not forget that such an amount must be regarded as a comparatively small sum by those who engage in the extremely hazardous

business of oil prospecting. In many countries, including Egypt, very much larger sums have been lost in oil prospecting work, and notwithstanding the strides which have been made in the science of petroleum geology, it is quite certain that oil prospecting in the future will continue to be hazardous even under the best circumstances, and practically hopeless when engaged upon by those who are inexperienced. You will see that we have written the Farsan Islands loss off against the exploration reserve, which was formed in 1922 with the purpose of providing reserve funds for financing prospective work such as that undertaken by the Red Sea Petroleum Company.

To turn to our other search for new production—the expedition to Somaliland—there is as yet little information to give you. Owing to climatic conditions, the geologists could only start work in September, and so far they have only been able to submit two short preliminary reports on small portions of the concession area. These reports are practically only rapid reconnaissance reports and cannot be amplified until later when the expedition has been able to cover the whole area, and the geologists have a better view of the general geology of Somaliland. I hope that perhaps we may have something more definite before our next meeting, although I cannot promise it, as the area is not only very large, but is also comparatively unknown, and our people are more or less breaking new ground. You will not be surprised to hear that we owe a great debt of thanks to His Excellency the Governor, Sir Harold Kittermaster, and to the other Government officials who have been most kind in giving every assistance to our expedition. Without their great assistance the expedition would have been often in very dire straits.

The Hurghada Field.

Having heard about our progress outside Hurghada, you will now wish to learn something of the work there and at the refinery. The production last year was within 14,000 tons of our record production in 1918. The new deeper level in the northern extension of the field, about which I spoke last year, was the main contributor to the increased production, but I am glad to say that the production of the older wells on the main field continues to hold up in a remarkable manner. The northern extension maintains the rather involved character of the main field and we are still endeavouring to ascertain the extent of this new deeper level. Until we know more about its extent, it would be unwise to congratulate ourselves on having a new reserve producing area. During this current year one of our

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to
the Secretary

WESTMINSTER BANK
LIMITED
HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

exploration wells for the extension of the small structure to the east of the main field has struck an oil horizon not previously known, and while it shows signs of being only a very small producer, it is nevertheless welcome. You will have seen from the reports published weekly in the Press that the production for the present year continues at much the same level as last year, and while we may or may not attain last year's high production, I do not think I can be accused of undue optimism in anticipating a total production of over 200,000 tons in 1929.

The dehydrating plant and gas compression plant are continually being improved by small additions as new methods of operation are discovered either on the local plants or on similar plants on other fields with which the technical staff of the Shell Group are in touch. At the refinery a great deal of reconstruction work was carried out during the year and, as you will have seen from the report, the two new Trumble Plants about which I spoke last year have been completed. Your distillation plant at Suez is therefore of the most up-to-date and efficient type, and during this current year we are erecting a cracking plant. This will place us in an even more satisfactory position for meeting those comparatively sudden changes in the requirements of our various markets which cannot always be foreseen.

As you can well imagine, the year was a very full one for our managers on the field and at the refinery, and for their respective staffs, and I am sure you will wish to join me in recording our warm appreciation of their energy and efficiency which has contributed in a marked degree to the satisfactory results which we have been considering to-day.

The Directorate.

Before continuing, I should like to say a few words about the alteration on the Board which is referred to in the report. You will have learnt with regret that Sir Henri Deterding has resigned from the Board. His ability is known the world over, and it is not necessary for me to enlarge on the loss which any company would suffer from his resignation. However, I am very pleased to say that, although pressure of other business has compelled him to relinquish his directorship, he will still be in touch with our operations, and we hope for many years to come to benefit from his unrivalled advice and general counsel. In his place we have to welcome Mr. Heath Eves, who will be well known to you as one of the managing directors of the Anglo-Persian Oil Company. You will have read in the newspapers that shortly before the end of last year the Consolidated Petroleum Company was formed jointly by the Anglo-Persian and Shell Companies to market products in various Near Eastern countries. The Anglo-Persian are therefore very interested in the progress of your company, and it has been arranged that two of their directors should join your Board. You will no doubt join me in welcoming them and in congratulating ourselves on having at our disposal in future the benefit of their wide and valuable experience.

Mr. Alexander Mackay seconded the resolution, which was carried unanimously, and the dividend recommended was declared.

The auditors (Messrs. Turquand, Youngs and Co.) were reappointed.

At an extra-ordinary general meeting which was afterwards held the resolution submitted altering the articles of association was passed unanimously, and hearty vote of thanks to the chairman and directors concluded the proceedings.

COMPANY NOTES AND REPORTS.

OCEAN SALVAGE AND TOWAGE.

The report of the Ocean Salvage and Towage Company for the eighteen months ended December 31, 1928, states that the profit was £208. The continued depression in the Black Sea and the considerably reduced salvage award of £7,000 made by one of Lloyd's arbitrators were responsible for the small profit. All ships and plant have been maintained in first-class condition, and all repairs and upkeep charged against revenue. The Neptun Company of Stockholm has had a satisfactory year and the Gamecock Steam Towing Company is proving a profitable investment. The sum brought in was £1,391, and with the profit of £208, there is £1,600 to go forward, subject to depreciation and adjustment for taxation.

BURMAH OIL.

The report of the Burmah Oil Company for 1928 states that all fields expenditure has been charged direct to reserve and the profit for the year, after charging income tax, contribution to employees' provident fund, and £381,735 for depreciation, was £1,479,626, and the amount brought forward was £502,416. The insurance reserve receives £20,000, general reserve £200,000, and fields expenditure equalization reserve £150,000, while the preference dividends absorb

£261,875 and the interim dividend on the ordinary shares £599,541. The directors recommend a final dividend on the ordinary shares of 2s. per share, less tax at 2s. 6½d. in the £, making 20 per cent. for the year, leaving to be carried forward £151,084. The report states that the accounts of the new Burmah Shell Oil Storage and Distributing Company of India for 1928 are not yet completed, but the amount taken credit for is estimated on a conservative basis. Shortly after the last annual meeting, at which full reference was made to it, the rate war in the Indian kerosene market was brought to an end, and kerosene prices were advanced into general tone with the world parity, but the accounts for 1928 cover some six months of these rate-cutting conditions, against three months in the preceding year. Crude oil production from the Burma fields was maintained at the volume of throughput at which the refineries have been stabilised for some years. On the termination of the rate war outside testing operations were resumed, both in Burma and in India, and are now being vigorously prosecuted. Under the agreement with Messrs. Finlay, Fleming and Co., the managing agents, which terminated at December 31 last, certain of the directors participated in the commission received, being partners of the firm. It was because of this fact that the amount paid as directors' fees has been so low, and in view of the changed circumstances the directors propose to alter the articles of association and to fix the remuneration of the board at £10,000 per annum, and such further sum, if any, as shall from time to time be voted by the company in general meetings.

NEWS FROM ALL SOURCES.

The Roumanian State Railways have given an order for 10,000 kgs. of cotton for wicks to Adams and Co., of Manchester.

Lord Inchcape was re-elected President of the Shipping Federation on May 24. Mr. F. C. Allen was re-elected chairman of the Council, and Mr. John Denholm, vice-chairman.

A Greco-Persian Commercial Treaty has been signed based on the most-favoured-nation principle, and will remain in force for six months.

Mr. Francis Lawrence Bland, Mr. Lionel Burney Buxton, and Mr. Quintin Edward Gurney have been elected to the board of Barclays Bank Limited.

Roumania's production of petrol for the first quarter of this year reached 1,093,188 tons, against 963,273 tons for the same period last year, an increase of 13.6 per cent. The increase for the same period of 1928 was 20 per cent.

The timber exports of Yugoslavia in March amounted to 140 million dinars, out of a total value of exports of 503 millions. Building timber accounted for 104 million dinars, fuel for 9 millions, railway sleepers for 12 millions, and manufactures of wood for 9 millions.

Figures issued by the Roumanian Ministry of Finance relating to the country's exports in 1928 show the following main items of oil and agricultural output (in tons):—Motor oils, 206,938; petroleum residues, 720,911; refined petroleum, 688,692; benzine, 662,337; mineral oils, 62,234; wheat, 27,922; maize, 473,135; barley, 414,135; oxen (head of), 69,045; pigs (head of), 192,894.

The total oil production of the Roumanian oilfields during April was about 350,000 tons. The following are the figures of the leading companies:—Steaua Romana, 61,837 tons; Astra-Romana, 51,287 tons; Creditul Minier, 37,152 tons; Phoenix Oil, 34,034 tons; Sirius, 33,568 tons; Rom.-Americana, 33,315 tons; Concordia, 22,272 tons; I.R.D.P., 16,561 tons; Colombia, 15,805 tons; Petrolul Romanesc, 11,482 tons.

A "co-operative" convalescent home has been purchased for their employees by the directors of the Dunlop Company. Last year Fort Dunlop alone sent 217 cases to various convalescent homes and for some time past the hospital committee of the associated companies have considered the possibility of running their own convalescent home. Upon being approached with a view to contributing half the cost, the directors undertook to buy the necessary premises and a building at Rhos-on-Sea in North Wales has accordingly been purchased. The home, which will have 30 beds with accommodation for both sexes, is to be controlled by a committee of representatives of each of the associated companies in conjunction with the welfare department.

A recent Greek Decree provides that those kinds of machinery and accessories which have hitherto been admitted into Greece free of Customs duty and Municipal tax in virtue of Law 2948 of 1922 (i.e., on the ground that there is a shortage locally of such goods), are, for a period of three years from March 23, 1929, to be subject to 30 per cent. of the nominal duties. The total exemption is, however, to be continued in respect of machinery and accessories imported (a) by newly-established factories; (b) in order to extend the activities of existing factories, provided that the Industrial Council considers such extension desirable and destined to increase output considerably; and (c) by the Autonomous Current Organisation in the execution of its functions.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 22 :—

Egyptian Futures.

Sakel Contract.—Only a moderate amount of business has transpired in this market since we last wrote, and price movements recorded have closely followed the fluctuations witnessed in the Alexandrian and American contracts. Owing to the holidays, spinners have not shown much interest in "actual," but in spite of this near positions retain their strength, Mays still running level with July; tenders so far this month only total 200 bales. Writing under date of the 9th inst., the Alexandria Commercial Company analyse the statistical position in Egypt at the end of April as follows: stock Alexandria 1,215,000 kantars, with approximately a further 75,000 kantars held up-country, making a total of 1,290,000 kantars. Exports from May to August last year were 830,000 kantars. Whilst certain of the medium qualities may become rather scarce as the season advances, on the present consumption basis general supplies appear ample to meet all requirements, especially as a very good selection of Sudan Sakel is now available and will no doubt attract a good percentage of the fine demand during the next few months.

New crop reports contain some complaints of backwardness owing to unfavourable climatic conditions, and occasional cables have come to hand drawing attention to this. Their influence on the market, however, has been negligible. For the immediate future, we do not anticipate any material change in the level. At the same time, we must confess that any weakness in the American markets would probably find this contract very susceptible, as present conditions are not conducive to support from either trade or speculative sources.

Upper Contract.—Values in this contract have rallied slightly from last week's low level, but the undertone continues rather nervous. At present differences with the American contract, the Upper varieties appear reasonable, but fears of further liquidation of old straddles still check those who favour the "long" side from committing themselves to any extent. The trade demand has again been moderate and spinners have only been in the market when forced to cover their immediate requirements.

Egyptian Spot.

Only four business days have elapsed since our last report, and for various reasons trading has been very restricted, nor, we fear, can much improvement be looked for until next month, when the General Election and the Whitsun holidays will be over and done with. The small local inquiry has presented nothing in the way of fresh features, and the sales have averaged only just over two hundred bales a day. Prices on the whole have been steady.

Sakel has been in quiet request at from 100 to 200 on contracts. The better qualities have been neglected, but some attention has been paid to the low grades at from 11d. to 12d. with moderate results.

Uppers.—The customary inquiry for cotton at round about the contract price has been in evidence. Purchases, however, have been only of a hand-to-mouth character and holders have continued to press for sales. Prices remain irregular. The slight improvement noticed recently in the demand for the better cottons has not been maintained this week.

Pilion has been in moderate request for all qualities, but results have been most meagre.

White Growths.—A better demand has again been noticeable, but actual sales have been few, and for the most part have consisted of very small lots indeed.

Maarad, Nahda, etc.—These have been neglected.

Tokar Sakel.—Consumers have shown no interest in this cotton and stocks are accumulating. Occasionally, a spinner has bought a few pounds to test, but invariably the result has shown a lack of strength which, we fear, is characteristic of this year's crop, and nothing further has resulted.

C.i.f. business has been very dull. Forwardings to spinners last week were returned as 6,531 bales Egyptian and 1,563 bales Sudan. Estimated spot sales for the four days under review, 800 bales Egyptian and 300 bales Sudan. Quotations of Sakel are unchanged on the week. Upper and Pilion have hardened 15 points. F.G.F. Sakel to-day, 17.85d. F.G.F. Upper to-day, 11.62d. F.G.F. Pilion to-day, 12.55d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended May 16, state :—

Since our last report the futures market has been relatively quiet, with a rather weak tendency. The week's summary of price movements is as follows :—Sakellaridis: May, 33.84 dollars, 0.31 dollars down; July, 34.11 dollars, 0.36 dollars down; November, 34.50 dollars, 0.45 dollars down; January, 34.75 dollars, 0.48 dollars down. Ashmouni: June, 21.19 dollars, 0.53 dollars down; August, 21.55 dollars, 0.40 dollars down; October, 21.78 dollars, 0.45 dollars down; December, 22.16 dollars, 0.39 dollars down; February, 22.53 dollars, 0.42 dollars down.

Sakel.—After a weak beginning, the market gained steadily on some commercial buying and short covering, but following the previous

day's weakness in New York, heavy liquidating sales yesterday caused a loss of all the ground previously gained and even more, the tendency at the close to-day being rather weak. November new crop has now become the option most actively traded in, both for speculative operations and straddles. There is nothing special to report on the commercial side; the demand continues to be rather limited, and the stock of Sudan Sakel in Liverpool is accumulating steadily. Failing a substantial recovery in New York, prospects are for rather heavy markets in the near future. Against the second May tender, dockets for 7,000 kantars were issued, which brings the total tendered since the beginning of the month up to 71,000 kantars.

The Sakel/Uppers straddle (July/June) this week stands at 1,292 points, against 1,275 points last week and 1,396 points at this time last year.

Uppers.—This market has been more active than that for Sakel, but the continual hedging against new arrivals from up-country and some speculative sales induced by reports that the danger of a tax on Egyptian cotton imports into America is after all not yet over, have been depressing factors and have caused a further narrowing of the difference between Uppers and New York. The demand from the trade, while not attaining the extent of that during the winter months, has nevertheless been satisfactory. The considerable increase in the production of the Upper varieties has been wholly absorbed by the better demand from spinners with which they have been favoured, and the actual statistical position is as good as that at the corresponding time last year. This large expansion in the demand cannot but make for firmer prices.

The Ashmouni/American straddle (June/July) this week stands at 265 points, against 311 points last week and 733 points at this time last year.

The week's receipts amount to 74,437 kantars, against exports 162,858 kantars; the stock in Alexandria stands at 2,816,398 kantars. Spot.—Minet el Bassal has been somewhat more active this week and some improvement is to be noted in the demand from spinners, chiefly in Uppers. Sales for the week amount to about 13,750 bales, of which we estimate 4,750 bales Sakellaridis, 8,300 bales Ashmouni and Zagora, 600 bales Pilion, and 100 bales other varieties.

Sakellaridis.—A fair business has been done, chiefly in the medium and lower qualities, not much interest being shown in the high grades. Spot differences are unchanged for the grades above Fully

Good Fair, but inclined to go dearer for Fully Good Fair and the grades below, of which the supply of desirable cotton is very limited.

Ashmouni and Zagora.—These varieties have come into favour once again and a good business has been done, chiefly in cotton from Good Fair up to Fully Good Fair to Good, although there is more interest being shown in Good and better. With the exception of Fair, which is somewhat dearer, spot differences are unchanged.

Pillon.—A very fair business has been done at last week's spot differences.

Other Varieties.—A small business has been done in White, Nahda, and Maarad. Spot differences in White and Nahda are rather easier.

Crop, 1929.—Weather conditions have improved everywhere and the crop is making satisfactory progress.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Bridge over Canal Bahr Chebin.—The Ministry of Communications, Egyptian Government, invites tenders for the construction of a swing bridge over the Canal Bahr Chebin, near Ibkhass. July 23. (D.O.T.)

Mahogany.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of 6,000 cubic feet wood mahogany (Cuba or Honduras) in logs required for Government Workshops. July 15.

Bridge over Bagouriah Canal.—The Ministry of Communications, Egyptian Government, invites tenders for the construction of a bridge over the canal Bagouriah near to Kasr Nasr-el Dine. July 23. (D.O.T.)

Water Tower.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of a steel water tank with steel frame-work tower complete with necessary piping and fittings as well as an electric water level indicator. June 1. (D.O.T.)

Weighing Machines and Balances.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply of platform weighing machines, counterscales, and Beranger balances.

Tent Lining.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of calico cotton blue, tent lining for the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. July 1.

SYRIA.

Water Piping.—H.M. Consul-General at Beyrout (Mr. H. E. Satow, O.B.E.) reports that he has been approached by a local firm regarding their desire to receive quotations from British firms for the supply of 6,100 metres of water piping, 3,600 metres of 4 in. and 2,500 metres of 2 in. Alternative quotations are required for cast-iron flanged pipes for fixing with bolts and nuts and bitumen coated and lined pipes, screwed and socketed. (D.O.T.)

TURKEY.

Iron Pipes, Etc.—The Administration Générale des Chemins de fer et Ports d'Etat invites tenders for the supply of cast-iron pipes, specials, valves, etc. It is stated that the pipes required are to be vertically cast. June 8. (D.O.T.)

Notes of the Week.

The Situation in Afghanistan.

Reports from Afghanistan continue to outrun events. With the departure of King Amanullah the chief actors on the Afghan stage would inevitably require a short respite to take stock of the new situation. The demand for news, however, in India, if nowhere else, appears to be insatiable, and the attempt to record history from day to day resolves itself mainly into a contradiction of the news of the previous day. Thus General Nadir Khan is stated to have proclaimed himself King of Afghanistan one day, and on the next is reported to be contemplating flight from the country. The probability is that the weakest element in the situation has now been eliminated, and that the others will not throw up the sponge so lightly. The seemingly strong position of the Amir Habibullah may bring yet more adherents to his cause; but the reported explosion of a bomb during a review of troops in Kabul, if not wholly accidental, suggests that attempts other than on the field of battle will be made to decide the issue. In the meantime the Amir Habibullah should be able to consolidate his position in the north, while Nadir Khan in the south and the new Amir of Kandahar, Ali Ahmed Khan Jan, try to gain adherents from various tribes who have shown a marked preference for cutting themselves adrift from any central authority whatever.

Naval Rivalry in the Ægean.

It was inevitable that any order placed by Turkey for war vessels should be followed at once by a decision on the part of Greece to effect a corresponding increase in her own fleet. Before, however, the two countries are committed to serious rivalry in naval construction, it is to be hoped that they will bear in mind the heavy demands on their respective exchequers which remain unmet from year to year. Men-of-war become out-of-date and need to be replaced from time to time, and it should be possible for a country to order new vessels without incurring the charge of aiming at naval supremacy in any given area. To this end, however, a friendly understanding with its

neighbours is advisable, in order that its actions may not be misconstrued. The Turkish Government can be assured that in any race for new ships its financial resources are not likely to allow it to steal a march on Greece, who in the last resort could probably rely on private subscriptions for new units for her fleet. In the present instance Turkey has started the ball rolling by her urgent order to Italian yards, and when the vessels are delivered she will find herself relatively no stronger, compared with Greece, than she was before. In the meantime she has created suspicion where, perhaps, she did not wish to do so, and may have rendered more difficult of achievement the understanding with Greece that her rulers protest their anxiety to reach. The ground has recently been prepared for an agreement with Greece, and there is room for an additional arrangement by which each country provides for naval replacements, when necessary, without appearing in the guise of a would-be disturber of the peace.

Anglo-French Relations in the Middle East.

It is extraordinary how the old legend persists of British malevolence towards French enterprise in Syria. However well founded French suspicions of the British may have been in the first instance, the charge no longer has any virtue. On the contrary, indeed, it is the tendency of Arabs now to assert that, whereas in the early years after the War Great Britain played a hand quite distinct from that of France or of Italy in the East, in recent years she has allowed herself to be identified with French and Italian policy in the Muslim world fringing the Mediterranean. Thus, the Arabs go on, Great Britain raised no protest when Damascus was bombarded, nor did she resist, but rather encouraged, the Italian claim to the Senussis' city of Jarabub. And yet the suspicion of *perfidie Albion* appears to fill the minds of Frenchmen when they write upon Syria. The latest example is provided by a special writer in the Bordeaux paper, *La Petite Gironde*. In a very interesting examination of the situation in Syria, at the end of which the conclusion is reached

that the French ought not to renounce their mandate in Syria, but ought so to stimulate the economic prosperity of the country as to banish the various political spectres that are so constantly raised there, he suggests that England, for all her apparent good will towards France at the present time, would like nothing better than that France should renounce the mandate for Syria in her favour. As a matter of fact, England would like nothing worse. Those Englishmen who know best the Middle East, and who know in particular the incomparable difficulties in the administration of Syria, have never ceased congratulating themselves that the onus of the blame which almost inevitably arose out of European handling of the Syrian problem was not to fall upon their own shoulders. There is, however, good reason to believe that authoritative Frenchmen in Syria are very well aware of England's attitude towards Syria: if travelling journalists imbue themselves with the antiquated idea that Great Britain is but waiting for Syria to fall into her omnivorous mouth, it is certain that the senior French officials in Syria are better informed concerning the British appetite. Differences between French and British officials in the Middle East still exist, it is true, and perhaps the problem of the Mediterranean terminus of the projected pipe-line and railway from Iraq is the most important of them, but such differences are now openly professed, and suspicion of motive has, happily, little place.

The Sultan of Zanzibar.

It is a happy coincidence that, after welcoming last autumn the Sultan of Muscat and Oman, the British people should now have the opportunity of welcoming another ruling member of the Albu Saidi dynasty, namely, Sultan Sayyid Khalifa bin Harub of Zanzibar, who arrived in London last week. In the ordinary English mind, Zanzibar is associated with the clove industry and is apt to be treated merely as one of the more picturesque possessions of the British Empire. As a matter of fact, however, there is a wealth of history in the fortunes of Zanzibar, which includes the most fascinating subject of the relations between Southern Arabia and Eastern Africa. It will be remembered that Oman, whence, of course, the Albu Saidi dynasty derived, and which is cut off from the rest of the Arabian Peninsula by the great "Empty Quarter," *Rubu al Khali*, has developed on isothermal lines. To eastwards the Omanis went to India, particularly to Hyderabad; and westwards, to Zanzibar. How great an influence Sayyid bin Sultan, who joined together the dominions of Muscat and Oman and Zanzibar, exerted upon the Muslims of East Africa, is generally known; certainly Great Britain has reason to congratulate herself

that the Sultan who is her official guest now for a month was at the time of the Great War the acknowledged head of the Muslim faith on the East Coast of Africa. The British Empire is fortunate in that through the medium of so progressive and enlightened a ruler as His Highness Sayyid Khalifa bin Harub, Zanzibar has now become not only a prosperous island, but also one that is, in the spirit of toleration and enterprise that is displayed there, a model to many other places in the Empire.

INDIAN NOTES.

The Princes and the Butler Report.

It is announced that a fully representative meeting of the Indian Princes and Chiefs is to be held at Bombay on or about June 22 for the discussion of the report of the Indian States Committee. This meeting is the outcome of the appeal which, at the last session of the Chamber of Princes, the Chancellor made to the Viceroy to give the Princes an opportunity of expressing their views upon the report before the Government take action upon it. Lord Irwin readily complied with this request; and it is understood that, when they meet at Bombay, the Princes hope to come to a definite agreement regarding the Committee's recommendations. They will then communicate their views to the Viceroy before he leaves for England on June 29. Admittedly the recommendations of the Committee deal with questions of great complexity and difficulty; and it remains to be seen whether they will materially contribute to the solution of these questions. Elsewhere in this issue we discuss certain of the findings of the Committee with particular reference to the question of paramountcy.

A New Departure.

Ordinarily neither the appointments to the India Council nor the personnel of the Indian delegation at the Assembly of the League of Nations are such as to arouse particular interest, other than that always attaching to the bestowal of a much-coveted distinction. The official announcements which are reproduced on another page of this week's issue are, however, a notable exception. The appointment of Sir Muhammad Habibullah to be the head of the Indian delegation to the League Assembly this year is a new departure for which both houses of the Indian Legislature have long been pressing, and Sir Phiroze Sethna, who has been indefatigable in urging such a course year by year upon the Government of India is to be congratulated on reaping the reward of his pertinacity. Hitherto, while the delegation has been largely Indian in composition, the leadership has always been given to a British civilian. Sir Muhammad Habibullah, whose term of office as the Education member of the Governor-General's Executive Council expires next January, is particularly qualified to enjoy the new distinction. His work in connexion with the position of Indians in South Africa was of outstanding value. The offer of seats on the Council of India to Colonel Sir Umar Hayat Khan and Sir Basanta Kumar Mullick are also of more than usual interest. For the first time since Lord Morley secured the Royal Assent to the appointment of Indians to the Council in 1907 the Secretary of State will enjoy the advantage of the advice of an Indian who, in addition to his membership of Indian legislative bodies, has a distinguished military record, including a long and varied experience of active service. Sir Basanta Mullick, on the other hand, enjoys the distinction of being the first Indian member of the Indian Civil Service to join the Secretary of State's Council. Like many of his new colleagues, he proceeds to Whitehall *via* the Bench, having been a Judge of the Patna High Court since 1916.

The third and final stage of the recently introduced Turkish language reform was reached on June 1, when it became obligatory for law reports, acts of marriage, and balance-sheets to be printed in the new characters. Shorthand reports in Arabic are also now prohibited.

THURSDAY, JUNE 6, 1929.

BALKAN COMMEMORATIONS.

The past month has witnessed the commemoration of a series of anniversaries in the countries of South-Eastern Europe—in Roumania the tenth anniversary of the formation of Greater Roumania, in Bulgaria the millenary of the death of Tsar Simeon and the fiftieth anniversary of the liberation of Bulgaria from the Turkish yoke, and in Greece the sixty-fifth anniversary of the return by Great Britain of the Ionian Islands to the Greeks. The value of national celebrations lies in their ability to stir the imagination of the people, to strengthen their sense of solidarity and to act as an incentive to further effort in advancing the progress and prosperity of the country. At the same time, it is a poor occasion, if it contains no message for other peoples or affords them no opportunity for congratulating the celebrants. The essential spirit of a commemoration is that which prompts the calling together of "friends and neighbours" to share in the rejoicing. The celebration of the Diamond Jubilee of Queen Victoria would have been relatively uneventful, if it had not brought together delegates from every component part of the British Empire, as well as representatives of the nations to show honour to a worthy occupant of a foreign Throne. In the Balkans, where celebrations, like special issues of postage stamps, are indulged in more frequently than in countries less bountifully supplied with public holidays, it does not always happen that national occasions are commemorated with complete single-mindedness of purpose. There would seem, indeed, to be as much virtue in a celebration that is calculated to cause misgivings to "friends and neighbours" as in one which brings them all together in a common rejoicing and causes at least momentary oblivion of past differences. It would be difficult to find a more justifiable occasion for national rejoicings and for the congratulations of neighbours than the jubilee of the establishment of Bulgarian independence, particularly when the date synchronized with the thousandth anniversary of the death of the founder of Bulgaria's "Golden Age." The official programme, moreover, for the honouring of the dual landmark was characterized by such modesty of intention and homeliness that for once it seemed as if no exception could be taken to attempt to concentrate the national attention on the past to the exclusion of the present and future. Bulgaria's neighbours, however, thought otherwise. Some of their representatives in Sofia found that urgent business would take them away from the capital during the celebrations, and the inspired Press of their countries chose to regard the commemoration of the anniversary of Tsar Simeon as an instance of a Bulgarian tendency towards "imperialism," inasmuch as it served to lay stress on a period when Bulgarian territory stretched far beyond its present limits.

In commemorating the tenth anniversary of the foundation of Greater Roumania the Roumanian Government ran no risk of disturbing the harmony, such as it is, of South-Eastern Europe; but it was on more dubious ground, if it was concerned to promote a feeling of solidarity in Roumania itself. The Provinces whose adhesion to the Regat, or Old Kingdom, created Greater Roumania have had to wait ten years until under Dr. Maniu's Government they could assert what they regard as their due position in the new State. Consequently, while they entered wholeheartedly into the celebration at Alba Julia, the enthusiasm of those who had been more particularly identified with former régimes was likely to be in inverse ratio to the degree of emphasis laid on the part played in the national advancement by the new Provinces. It is true that the anniversary that was nominally being celebrated was the definite act which determined the union of Transylvania with Roumania, and that those who had been responsible for this step could rightly be held up to honour. Yet the occasion called for the careful avoidance of any particularist spirit, in order that the national unity should be stressed. To judge by the comments to which the Alba Julia commemoration has given rise in the country, it may be doubted whether this has helped to promote the cause of national unity as much as might have been expected. Some allowance must be made for political partisanship, but to the onlooker it would seem as if full advantage had not been taken of the opportunity to correct the impression that there must necessarily be a clash of interests between the component parts of Greater Roumania. The commemoration of the return of the Ionian Islands to Greece might have passed unnoticed outside Corfu, if it had not been used to point the moral, as it appears to certain of the Greeks, in regard to the occupation of the Dodecanese by Italy and of Cyprus by the British. Thus, an occasion which might legitimately have been utilised to recall the ties that have longed linked Greece with Great Britain was twisted to the prejudice of the latter, because it has not been found possible to hand over to the Greeks every spot in the Mediterranean or on its littoral where their trading instinct or straitened circumstances at home have led them to seek a more favoured place of domicile.

In the light of these several instances it would appear that indulgence in the celebration of anniversaries should be used sparingly in the Balkans, until such time as disadvantages have no chance of detracting from the advantages. Both as between nations and as between political parties there is a tendency to use these commemorations for special pleading. The habit of many Bulgarians never to allow their thoughts to stray far from their present disabilities tends to show them before the world as indefatigable propagandists, and, in spite of the splendid example set them by King Boris, to use the millenary celebrations as an occasion solely for national uplift, these were allowed to serve in some quarters as a text to substantiate the justice of Bulgaria's present day claims. Their reaction on neighbouring States was, accordingly, unfortunate, and thus a fresh stone has been thrown into the pond of Balkan relations to start once more ever-widening circles of recrimination. In Roumania the outward show of national harmony was not disturbed during the celebrations. There was no counter-part of the Transylvanian abstention from the coronation of King Ferdinand, and it was left to the evil genius of the party Press to see that the drum of discord was loudly beaten as soon as possible afterwards. It is strange that peoples who have continually before them striking object lessons of the value of neighbourly good will should be so ready to pick a quarrel. On the slightest provocation old stores of hatred and bitterness are drawn upon and launched in vicious attack. No voice is raised in favour of moderation, for even the Church can be as bitter as the political Press, as the recent trouble between the Œcumenical Patriarch and the new Albanian Autocephalous Church has shown.

*The Near and Middle East

From Our Own Correspondents.

Baghdad, May 15.

Parliament.

The new Cabinet includes several members of the Abdul Muhsin Administration, who remain in office. The changes are as follows :—

Prime Minister : Taufiq Suwaidi, formerly Minister of Education.

Interior : Abdul Aziz Qassab, formerly President of the Chamber of Deputies, *vice* Naji Beg Shaukat Pasha.

Defence : Amin Zakhi Beg, *vice* Nuri Pasha.

Education : Khalid Beg Sulaiman, *vice* Taufiq Suwaidi.

At a meeting of the Chamber of Deputies a letter from the Royal Court was read signifying the King's approval of the election of Sir Abdul Muhsin Beg as Saadun as President of the Chamber of Deputies, and of Jamil Pasha ar Rawi as Vice-President. The Chamber was then adjourned for a few days, in order that the new Cabinet might have time to draft its programme for submission to Parliament.

On May 6 the Prime Minister laid before the Chamber of Deputies a programme of modest but practical aims. After a *résumé* of the various stages through which the Treaty negotiations have passed, he referred to the difficulty of reaching a harmonious compromise over the Military and Financial Agreements, and summarised the points on which the British and Iraq Governments are still at variance. "It has been found by experience," he concluded, "that protracted negotiations cause the pre-occupation of various successive Governments for a long time without serving any useful purpose; they have prevented the concentration of energies upon the improvement of the internal affairs of the country. On the other hand, the adoption of a negative policy, and the long absence of a responsible Government, have caused immense loss. They might also have caused the loss of Iraq's acquired rights—a state of affairs which cannot be allowed to go on indefinitely. Therefore our Cabinet has decided to follow a practical and productive policy, to improve the standard of economy and of education, to exercise great efforts for the improvement of the political situation of the country, and to take advantage of every opportunity for the realisation of the nation's cherished aspirations."

The practical measures to which the new Government proposes to devote its attention in the near future are many and varied; the taking of a census of population, the reorganisation of the Army, several large irrigation projects, a solution of the housing problem, an improvement in education, are some of them. All it asks of Parliament at present is its support in confirming such rights as the country has already acquired.

A vote of confidence was passed by 56 to 16, but not until after some heated exchanges between the new Ministers and members of the Opposition. Several deputies wished to postpone the debate on the Cabinet's programme until the Chamber had had time in which to study it. One deputy requested a dissolution in order that a more representative Parliament should be secured; many considered that no internal progress of any sort was worth attempting until the present "anomalous position" of Iraq had been dealt with. Yasin Pasha, a former Premier, remarked that former Cabinets had one after another attempted to get the Treaties and Subsidiary Agreements altered, and had all failed because of the uncompromising attitude of Great Britain; he heartily pitied Taufiq Beg Suwaidi for having to take up the burden of office in circumstances more "anomalous" than ever.

King Faisal has conferred on the ex-Premier, Sir Abdul Muhsin Beg as Saadun, the order of Ar Aafidain, Class II.

The Floods.

The floods have this year assumed serious proportions, especially on the Euphrates. A danger of flood on the Tigris, which might have had serious consequences for Baghdad, was averted by a sudden fall in the level of the Greater Zab, which joins the Tigris below Mosul. A tremendous volume of water rushed down the river, but the bunds withstood the pressure well, and only a few small local overflows—one at the King's farm at Khir, another in the grounds of the Royal Hospital—were reported. Officials of other Departments, as well as those of Irrigation, were stationed on guard at weak points on the bund system, and considerable anxiety was felt on April 27, but since that date the danger of serious flood on the Tigris has abated.

On the Euphrates, on the other hand, the flood is the highest known for several decades, and in the days of inefficient control the river would have inundated vast areas long before it reached its present height. As it is, the Government is employing every means to maintain the bunds; but in spite of these efforts many acres of land are already under water. The level of the river at Dair as Zor on April 30 was six feet above last year's maximum reading, and by May 9 was still .9 above that figure. Thousands of men are being employed by the Government to strengthen the bunds against the tremendous pressure of water. By order of the irrigation authorities, a breaching section has been opened to admit some of the flood water to the Habbaniyah depression. The ferry at Fallujah had to be suspended—a serious matter for trans-desert motor traffic, which must now make a long détour to cross the Euphrates at the Hindiyah Barrage. The Government sarais at Haditha and Anah are flooded, and Ramadi town is completely surrounded by water. The worst region is that watered by the Yusifiyah canal, which has been breached by flood water from the Euphrates; a large area of ripe crops is devastated, and the village of Mahmudiyah is in great danger. In this district about 2,300 labourers are at work on the breaches, and more labour and materials have been promised by the Ministry of Interior. Cultivators and their womenfolk may be seen

waist-deep in the water, endeavouring to save some part of their harvest. Some two-thirds of the population of Mahmudiyah have abandoned their homes and sought refuge in Baghdad. No work goes on in the Government offices, every official being detailed for flood duty. No official estimate of the damage to crops has yet been published, but a *communiqué* from the Press Bureau on May 11 stated that no casualties had occurred. About four hundred families, with their flocks, were rescued by boats from a stretch of high ground near the river, to which they had clung in the assurance that it had never been reached by flood water. On the right bank of the Euphrates about 11,000 acres of cultivation are under water, and thousands of tent-dwellers have been forced to migrate.

A very slight fall in the river level at Ramadi was reported between May 11 and 14, but there were two new breaches in the left bank about 15 miles south of Fallujah.

Relations with Persia.

The recent great improvement in the relations of Iraq and Persia was consummated on the anniversary of the Shah's Coronation by the official recognition of Iraq by Persia. An Iraqi delegation, headed by the King's Private Secretary, Rustam Beg Haidar, was sent to Teheran with a message of good wishes, and was received by the Shah, who expressed great satisfaction at the visit. The delegates were the guests of the Shah during their stay in Teheran. The spirit of good will and co-operation now inaugurated should be of the greatest help to both Iraq and Persia in the solving of their joint problems, and is a matter for rejoicing to the friends of both countries.

The Rain.

The heavy rains which fell over Baghdad and Northern Iraq during the last week in April seem to have done more harm than good. After an exceptionally dry winter, the rain came at last when the wheat and barley were ready for harvesting, and caused considerable damage to the crops, especially in places where they were already cut. In some of the cotton districts also the rain was unwelcome, as it choked the land before germination had taken place. In its bearing on the locust problem, however, the rain has done most harm. The swarms of locusts from Najd, which arrived in the Baghdad region last year and perished for want of soft damp earth in which they lay their eggs, may this year develop into a serious menace to the farmers. Reports from Mosul announce the washing away of poison bait laid down for locusts over a large area.

The Dutch Flight.

During the first week in May there was a fatal accident to one of the three Dutch flying boats, which reached Baghdad after a one-day flight from Alexandria as the first stage on their journey to Batavia. It will be remembered that an agreement was recently made between Holland and Great Britain, enabling Dutch aviators to make use of R.A.F. aerodromes when flying to and from the Dutch East Indies. The airmen, nine in number, were the guests of the R.A.F. at Hinaidi for two nights. While testing his monoplane before leaving for Karachi, their next port of call, Lieutenant Everts collided with the telegraph wires when flying up the Tigris close to Maude Bridge. He at once descended on the water, but though the river was in full flood the strength of the stream was not enough to check the speed of the seaplane, which collided violently with the bridge. The pilot was killed, and the two non-commissioned officers in the cockpit were seriously injured. The Dutch airmen had caused much comment among the R.A.F. by the very low elevation at which they flew over Baghdad on arriving, and the machine which crashed was not more than 100 feet above the river at the time of the accident. Aeroplanes of the R.A.F. are not permitted to fly over the city at less than 3,000 feet.

The Royal Air Force giant monoplane which is attempt-

ing to break the world's long-distance record passed over Baghdad only 28½ hours after leaving Cranwell, in Lincolnshire. It was flying so high—10,000 feet was estimated—that the noise of its engine could barely be heard in the city, and very few people were aware of its passing.

THE HIJAZ.

Jidda, May 18.

The King's Movements.

King Ibn Saoud arrived at Jidda from Madina on May 7 and, after a reception of the local population, proceeded the same afternoon to Mecca. In the evening of the 10th he returned to Jidda for a sojourn of 48 hours only, returning to Mecca late on the afternoon of the 12th. The representatives of the various foreign Powers in diplomatic relations with the Government of the Dual Monarchy were accorded private audiences during the King's sojourn here, while other members of the foreign community, including the representatives of Powers not in diplomatic relations with the Government, also had the honour of being received by His Majesty so far as the short time at his disposal allowed. The Government of the German Republic is not yet represented here, but it is understood that a Consul and Vice-Consul will shortly be appointed, one of whom in turns will spend some time each year in the Yaman. The urgency of more suitable representation of the British Government does not decrease as time advances, but sufficient has already been said on that point in these letters, and it is to be hoped that no time will be lost after the formation of a new Government in England in attending to this matter. It is not yet known when the King will return to Jidda, but it will doubtless be early in June, as there are many matters requiring his personal attention both in respect of foreign affairs and in the field of local administration.

The Situation in Najd.

As was to be expected, the King was accompanied on his return to the Hijaz by many of those who took a part in the recent operations at Sibilla and elsewhere for the extirpation of seditious tendencies in various centres of *Ikhwan* activity. The seriousness of the King's purpose in these operations may be judged from the fact that the army concentrated by him for the sweep against the elements led by Faisal al Duwish numbered no fewer than 40,000 men, whose maintenance in the field for a period of four months or rather less cost a total sum of only £40,000, a large sum for the Arabian treasury, but insignificant if judged by the standards of other countries. Indeed in such operations the only expenditure incurred by the Government consists of the payment of £1 to each man enrolled. On that he is expected to keep himself in all necessities of life, and the King himself relates with pride that many of his troops went hungry, though not one of them ever came to him for another penny. The malcontents assembled by Faisal al Duwish numbered some 5,000 people, mainly from Artawiya and Ghatghat, who were encamped near some wells between Sibilla and Artawiya. The preliminary movements after the completion of the concentration in the Qasim lasted a month, during which Faisal al Duwish himself came to King Ibn Saoud's camp, and undertook to induce all his confederates to surrender at discretion. Returning to his

own camp he was prevailed upon by Sultan ibn Bijad to break faith, and once more he went into open opposition to his King. Negotiations, which King Ibn Saoud kept alive in the hope that the rebel elements would come to their senses, continued fruitlessly day after day; and finally the King gave the order to attack the rebel camp. The various detachments of the Najd army were by now so disposed as to surround the enemy, and the march converged from all sides towards the breastworks which the latter had thrown up round their position. The Najd troops advanced on foot disregarding the fire of the enemy until they were in charging distance. The actual battle scarcely lasted half an hour; the enemy was overwhelmed on all sides and then broke and fled. No quarter was given on the actual field of battle, but the victors were forbidden to pursue the fugitives, who streamed back to Artawiya with Faisal gravely wounded through the abdomen. Seven hundred and fifty of his men were left dead on the field, while the losses of the King's troops did not exceed 40 men killed.

The victory was complete, and it only remained to organise its consequences. He insisted on Faisal's surrendering in person, and was told he was too dangerously wounded to move; he still insisted, and the broken chieftain was carried out to meet him surrounded by the women of his family. A general pardon was proclaimed, but the leaders were made to surrender, some 25 of them now being lodged in the prison at Riyadh including Ibn Bijad; and the King paid a visit to Artawiya. His army was then divided into several sections under various members of the royal family, who marched through the parts of the country allotted to them for the purpose of making a military demonstration and of punishing various persons whose behaviour had not been satisfactory. It is reported that the important *Ikhwan* town of Ghatghat has been destroyed as a punishment for the part played in recent events by the Ataiba leader, Sultan ibn Bijad; and, if this is true, one of the earliest and most important of the *Ikhwan* colonies has ceased to exist after a meteoric career of less than twenty years.

Of greater relative importance, however, are the operations undertaken by Abdullah ibn Jiluwi against the Ajman sections which have recently been prominent in Kuwait territory; they appear to have been heavily dealt with and their leader, Dhaidan ibn Hithlain, is reported officially to have been killed. These operations should secure a long period of peace on the Iraq and Kuwait frontiers. It will be a long time before the more fanatical elements of the Najd population forget the weight of their King's hand; and long before then, it is to be hoped, arbitration will have removed the cause of their seditious murmurings against one who has led them out of the wilderness of anarchy.

The Pilgrimage.

Jidda is now practically empty, and the attention of the Hijaz is wholly concentrated on the culminating ceremony of the pilgrimage which takes place to-day at Arafat. The official return of pilgrims from overseas shows a larger number than at one time seemed probable, namely 89,438 as against 96,212 last year (the final return of last year was just over 100,000, and this year's figures will doubtless be a few thousand higher than the returns show at present). The total number of people standing on Arafat to-day will probably be about 150,000, including visitors from the Hijaz and the Arabian Peninsula.

So far the health conditions of the country, as reflected in the mortality statistics, have been exceedingly satisfactory; and only in two weeks of the present season has the number of deaths from all causes exceeded 250. The two weeks referred to produced respectively 240 and 470 deaths from all causes, 50 and 75, respectively, being due to maladies classed as epidemical. And to-day's climatic conditions suggest that there will not be a great crop of deaths from sunstroke and heat. At the present moment there are some 17 ships anchored in the roads, in readiness to carry away the pilgrims as soon as they

come down from Mecca. The first returning pilgrims are expected to arrive here about the 25th.

Among the pilgrims of note this year must be mentioned the Amir Shakib Arslan, the well-known Druse leader, who arrived a few days ago from Lausanne on a visit to the King.

Hajjis from Janan.

Another interesting group of visitors this year is the Amir Ali ibn Abdullah al Hamuda of Janan and his suite. It would seem that there is no love lost between the Janan, who are, of course, Wahhabis in religion, and the Oman Government—a story with a long history; but they contend that the British authorities in the Gulf are bringing pressure to bear in favour of the latter in spite of the appeals of the Janan to be left alone in enjoyment of an independence which they are quite capable, it would appear, of defending against encroachment by the Muscat authorities alone. The question certainly deserves careful study in the light of the history of the case, and there may be much to be said on both sides; but the Janan find it difficult to see what there is in favour of the bombardment of the fort at Sur by British war-vessels while the Amir was absent on the way to Mecca, after an agreement had been informally arrived at on the occasion of a previous visit of another sloop (British) in support of the Muscat yacht, that the controversy should be left over for settlement on the return of the Sultan of Muscat from Europe. It appears, however, to have been agreed after the demolition of the fort that the further discussion of the points at issue between the two parties should now be deferred till the arrival of the Janan Amir after the Pilgrimage. The natural allegiance of his tribe is inevitably with the King of the Wahhabis, and as the only practical British interest in those parts is that the peace be maintained, it would seem to be a favourable opportunity by securing this object in perpetuity by inviting the co-operation of the Wahhabi King. The history of the relations of the Muscat dynasty with the tribe of the interior does not suggest that peace can be secured by enforcing the unwilling allegiance of the one to the other.

Belgrade May 23.

The Meeting of the Little Entente.

After the repeated scares which have disturbed the Balkan outlook during the last few months it is pleasant to be able to report the very important steps towards peace and security made during the meeting of the Foreign Ministers of the Little Entente. The most striking result of the conference was the signing of a general tripartite Pact of Conciliation and Arbitration, modelled on Type A treaty recommended by the League of Nations. Besides its general importance as an instrument for eliminating the possibility of war between three countries whose interests touch at many points, the Pact is said to make more easy the future admission of new members of the Little Entente; inasmuch as all that will now be necessary is the acceptance of its provisions. The continued friendship and collaboration of the three States was further insured by the renewal of the Treaty of Alliance between Roumania and Yugoslavia and the addition of a clause which brings it into line with the Yugoslav-Czechoslovak Treaty of Alliance, by arranging for its automatic renewal every five years, unless it is speci-

cally denounced by either party a year before the end of a period.

In view of the close concern of all three of the Little Entente Powers in the question of Minorities and the interest aroused in the subject by its forthcoming discussion at the Madrid meeting of the League of Nations Council, this particular matter was expected to be very much to the fore during the conference. It is stated that a common attitude was decided upon, in keeping with the memorandum on the question already signed by Yugoslavia and other countries on the matter. I am informed that the Yugoslav attitude to the whole question is that so-called minority petitions must be genuine petitions from minorities, and not false complaints drawn up in enemy countries and put forward by enemy organisations, in order to give the Governments concerned as many difficulties as possible and to bring their name into disrepute in international circles. It is pointed out that not one single petition from minorities within Yugoslavia has been sent to the League of Nations for consideration, but during the last ten years many such petitions have been made by Bulgarian and other "enemy" organisations. It would seem that the only way out of the difficulty would be some sort of international inquiry; but this would probably be opposed by all parties.

While Czechoslovakia is hardly interested at all in the question of German reparations and Roumania not much more, Yugoslavia is affected by the precedents which will be set by the settlement of the questions of Habsburg estates in the Succession States and of the so-called "liberation" debts. It was stated at the end of the conference that the three allied States had agreed to support the Yugoslav claim for the complete fulfilment of all engagements to pay reparations. On the other hand, Czechoslovakia is very keenly interested in the question of the recognition of Russia and it is believed to have advocated joint recognition; but the interests of Roumania and Yugoslavia differ on this matter, and it is believed that the old policy of allowing each State liberty to pursue its own policy in regard to the Soviet Government has been maintained. With reference to this question Dr. Benesh is said to have stated that Czechoslovakia has the difficult problem of Germany to deal with, Yugoslavia that of Italy, and Roumania that of Russia, and none of them can expect the others to adopt an identical policy towards the particular big neighbour that each fears. But by the joint discussion of their problems they make a solution easier. The keynote of the speeches made at the close of the Conference by the three Ministers was that of pleasure at the extreme cordiality which marks these half-yearly meetings and satisfaction at the work accomplished.

A Recalcitrant Politician.

Belgrade was startled some days ago by the removal of M. Svetizar Pribitchevitch, ex-Minister and former leader of the Democrat-Peasant Coalition, to Brus, a village in the interior of Serbia near Krushevatz. It is said that this deportation is the result of the secret political activities of M. Pribitchevitch, who remains wholeheartedly and most courageously against the present régime and has been working steadily among his friends in Zagreb for the restoration of constitutional government. While rumours abound that Dr. Marinkovitch is engaged at Davos in drafting a new Constitution which shall replace the ill-fated Vidovdan Constitution, withdrawn on January 6, General Zhivkovitch is strongly opposed to the inauguration of this work at the present moment. In a recent statement he is reported to have said that the Government has its hands full, if it intends to carry through the programme of urgent and important national work which it has set itself, and that less important matters, such as that of the Constitution, should be left until the more important have been disposed of.

A British War Memorial.

The undying memory of Serbia for the help given her

during the War, and in the trying days which immediately succeeded it, was again demonstrated during the unveiling last week of a Memorial Cross to the British dead in the cemetery near the famous Tower of Skulls at Nish, built by the British War Graves Commission. The ceremony was attended by three members of the Cabinet and by ten thousand troops, and a great number of wreaths were placed at the foot of the Cross in the name of every sort of organisation. Sir Howard Kennard and the staff of the British Legation were present. Similar cemeteries have been created near Skoplye, where there are some sixty graves, and at Kraguyevatz, where some thirty British nurses and doctors are buried.

Mr. Bernard Shaw.

Despite his well-known aversion from giving interviews, Mr. Bernard Shaw, who has discovered the great charm of Dubrovnik and the Dalmatian Coast, and is spending the spring there, received the correspondent of the Belgrade *Politika* and gave him a statement on a great variety of subjects. On the subject of the General Election in England he said that he had a deep conviction that a candidate who endures to within fourteen days of an election may still be an honest man, but one who lasts out until the polling day can have no conscience at all and must be ready to say and do anything, in order to enter Parliament. While the House of Commons is a democratic assembly, the House of Lords is an assembly representing the sons of their fathers. With reference to the present régime in this country, Mr. Shaw is reported to have said that, as an old Socialist, he could say that before liberty there must be good laws and the assurance of their being respected. When people get liberty they sometimes forget that government is still necessary. Had it not been for the wisdom of King Alexander, the Yugoslavs might have had to call in the Austrian; again. And had Serbia, Croatia and Montenegro remained separate, he was sure there would have been found someone, he would not say whom, to swallow them up.

GREECE.

Athens, May 28.

American Excavation.

The final text of the law which authorises the excavation of the Ancient Agora by the American School of Classical Studies has now been made public. The area to be excavated is about 200,000 square metres in extent, and is situated to the north of the Acropolis, which forms its southern boundary. On the north it is limited by the line of the Piræus-Athens Electric Railway, on the east by the rising ground on which stands the Theseion, and on the west roughly by the line of Aeolus Street if continued in a straight line to the Acropolis past the Tower of the Winds. This will incidentally involve the disappearance of the famous "Shoe Lane." The period of excavation assigned is ten years, after which the site will be converted into a park. Work will begin in the eastern sector, i.e., the neighbourhood of the Theseion. The expenses of expropriation are borne by the American School, to whom, however, once expropriated, all buildings and material will belong. A special Commission will act on behalf of the Greek Government throughout.

Popular Markets.

An extremely interesting experiment was inaugurated recently under the auspices of the Government, i.e., popular markets. The object of these markets is to bring producer and consumer into direct contact with one another, and to do away with the middleman. The price of living in Athens has long been notoriously and unnecessarily high. In the case of imported goods of the first necessity this has been due to illicit profits on the part of large concerns at the Piræus, who "corner" the goods on arrival. In the case of local products it has

been, of course, due to the natural desire of the small shopkeeper to make as much profit as possible. So far, the experiment is proving a success and will be watched with great interest; it may even provide a model which others may copy with advantage. One suspects, however, that such is the commercial astuteness of the Greek, a way will be found to evade the control, and that the consumer will in the end be much where he was before. However, much credit is due to the Government and to the Minister of the Interior, M. Zavitsianos, for the attempt. If carefully controlled, it may succeed.

The Police Force.

It is with universal regret that the imminent departure of Sir Frederick Halliday is received. In circumstances of great difficulty he has built up and maintained an efficient Police Force, which is a credit to the country. He has the satisfaction of knowing that his Police have been placed on a sound footing, that the protracted dispute between them and the gendarmerie has been settled, and that personally he is beloved by Greeks and British alike.

Famous Trials.

The trial of the Koumbaioi brothers at Corfu is arousing a good deal of interest. They have already been condemned to two terms of imprisonment on various counts, sheep-killing and the like; at the moment they are being tried for the kidnapping of the two politicians, MM. Melas and Mylonas, last autumn. Interesting political disclosures which they were expected to make have not amounted to anything. After them comes the trial of the Rentzaioi brothers, which should provide a few thrills, as they are supposed to have been implicated in the famous Petra murders.

An English Country Fair.

An extremely successful Fête was held in the garden of the British School on May 18. It took the character of an English Country Fair with side-shows, coconut-shies, fortune-telling, and so forth. The lady helpers were dressed in old-fashioned village costumes. The fete was organised by Lady Hope-Simpson and others in aid of the British Book Club, an institution which exists primarily for the benefit of English governesses and nurses in Greece, but which has for some time been in financial straits. The fete proved a great success and no less than £325 was cleared. Lady Loraine had an ice-cream stall, and the fete was visited by M. and Madame Venizelos., both of whom contributed generously. The numerous helpers of the British Colony can congratulate themselves on the fruits of the hard work which the organisation of the fete involved.

An Office of "Tourism."

It is proposed to create an Office of "Tourism." During the discussion of the project in the Chamber, it was stated that the money brought into Greece by tourists annually amounts to 185 million drachmæ. As a first step towards the organisation of Tourism 4 million drachmæ will be voted to the new Office. If Tourism is to be taken seriously, one of the first needs is to improve the standard of "guides," at present deplorably low, though perhaps not lower than that of the ordinary tourist. However, a qualifying examination for guides does exist, but not as yet for tourists.

It is to be hoped that some of the money which is obtained from tourists will be handed over to the Archaeological Department for the improvement of local museums, the expenses of improving which are too often borne by foreign archaeologists who happen to be working in the neighbourhood. It is now expected of the foreign archaeologist that he should provide shelving, cases, and, in general, accommodation for his finds at his own expense. This is not as it should be. It is an elementary obligation of the State, if it grants permits to foreign archaeologists, to provide also facilities for the exhibition of the finds. The courtesy and helpfulness which are invariably extended to foreign archaeologists should be carried to their logical conclusion.

Cairo, May 25.

The Budget.

The note to the Council of Ministers prepared by the Finance Committee on the 1929-30 Budget is a far more optimistic document than any of its predecessors. And it has every reason for being so. Cotton prices, whatever some may say to the contrary, are quite good, and for once in the way the cultivator profited by the high level last summer, and sold his produce, instead of waiting, as is his wont, for "better things" and being forced to sell in the autumn and winter when interested parties have "beared" the market. The activity in the building industry, the nature of the new mortgage loans, and the fewer bankruptcies and administrative seizures are evidence of an improvement in the general condition, while the analysis of the Customs figures shows the increased purchasing power of the people. The only pessimistic note, if one may so call it, is in regard to the reserve and the need for an expansion of the fiscal resources at the disposal of the State. Very rightly extensive development works, for which there is a crying need, have been undertaken, and their cost indented to the reserve which has been built up by surpluses of previous years when it has not been possible to spend the money earmarked from revenue for these very undertakings. But there is little need to fear, as the Finance Committee does, that these undertakings, even if their total cost exceeds the high total at which the reserve stands to-day, will cause it to disappear. It has become an ingrained habit of those who frame Egyptian estimates always to budget for a lower revenue and a higher rate of expenditure than will actually be realised, and there is no reason to believe that this custom will suddenly be abandoned. In effect it is almost a foregone conclusion that the vast amounts inserted, for instance, in this year's Budget, will not be spent in the twelve months, and that one may confidently anticipate that the expected deficit will not be realised. The serious situation which is foreseen will not arise in the near future, particularly as the capital works will early on begin to give a remunerative return. While there is every need to conserve the resources of the country, and to see that every service is paid for by every section of the community benefiting therefrom, there is in fact no urgent need to create the new sources of revenue which the financial authorities in the Government contemplate, and for which they are seeking the consent of the Powers.

The Rupert Brooke Memorial.

The Fund for the erection of a memorial to Rupert Brooke on the island of Skyros where he lies buried has been opened at the National bank of Egypt in Cairo. Subscriptions should be made out in the name of the Bank, which will credit all such sums to the account of Mr. R. A. Furness, who was an intimate friend of the poet and has consented to act as Treasurer of the Fund. It is hoped to be able to arrange for subscriptions to be accepted in England and Mr. Paul Vanderborght, the Belgian poet, who is the Secretary of the Executive Committee as well as President of the Egyptian branch of "La Lanterne Sourde," which has organised this scheme, has written to Mr. John Galsworthy to enlist the assistance of the London Pen Club in this connexion. Incident-

ally, he has invited Mr. Galsworthy and Mr. John Drinkwater to come to Egypt next winter or spring to give some conferences under the auspices of "La Lanterne Sourde" prior to going to Skyros to be present at the inauguration of the memorial.

It is anticipated that there will be little difficulty in collecting the money necessary, and already several offers of assistance have been received. Lord Lloyd has subscribed £E20, while a Greek lady artist has presented a painting representing the island of Skyros for sale in aid of the Fund. The monument will be entrusted to a Greek sculptor, but it is intended to leave the grave of the poet as it is, far from any habitation, on a promontory, and to erect the memorial in the village of Skyros and leave its care to the villagers, who are simple folk and may be relied upon to look after it properly.

The Suez Port Affair.

The Mixed Court of Appeal has just given judgment in an affair which has been before the public for the past seven years and at one time gave rise to what was a public scandal. The facts were as follows. The Government gave a contract to the well-known Dutch firm of engineers, Bos, for some important works in Suez harbour. A disagreement arose between the parties in regard to the material to be extracted from the bed of the port covered by the contract. The dispute went to arbitration, and in February, 1921, an extra payment was made in this connexion to the contractors. In June, 1922, the Government cancelled the contract, and Messrs. Bos brought an action against it for £E714,000, of which £E180,000 was for balance of payment for work done and £E533,000 damages for cancellation of contract. The Government, on the other hand, claimed a sum of £E210,000, which it held to have been overpaid to the contractors, and a further sum of £E163,600 as indemnity.

In June, 1927, the Mixed Court of First Instance in Cairo decided that the Government was fully within its rights in cancelling the contract, but condemned it to pay Messrs. Bos a sum of £E139,000. Both parties appealed, and the Court of Appeal, confirming that the cancellation of the contract was not *ultra vires*, ordered the Government to pay to Messrs. Bos a sum of £E163,000 for work done and £E10,000 damages for

cancellation with interest from June, 1924. In addition it confirmed the judgment of the lower Court in all other details, except that it condemned the Government to the maximum costs in both instances.

Thus is ended an affair, which, in the opinion of many qualified to judge, should never have been allowed to give rise to the scandalous statements with which the Government accompanied its defence. The firm of Bos is to be congratulated on having had the tenacity to fight this case through to the end and on having vindicated its honour in such a striking manner.

Empire Day.

A welcome innovation was made this year in regard to the celebration of Empire day by the inclusion of Port Said in the official programme. The High Commissioner attended and addressed the usual Rally at the Sporting Club in Cairo, and, in the unavoidable absence through indisposition of Lady Lloyd, who was to have taken the salute on behalf of the High Commissioner, Mr. Heathcote Smith, Consul General in Alexandria, presided over and addressed the meeting which was simultaneously held at the Sporting Club in Alexandria. The next day the High Commissioner travelled to Port Said, where the celebration of Empire Day had been postponed twenty-four hours in order that he could be present. Lord Lloyd had a wonderful reception, and remained at Port Said until the following evening, being entertained to dinner in the evening at the Eastern Exchange Hotel by the British community, and visiting the various British institutions, including the War Cemetery, the British Hospital and the Maltese Club. At each of the Rallies the address was prefaced by a message of greeting from the Chairman and Council of the Royal Empire Society, which is responsible for the organization of the Empire Day Movement throughout the world, and it was announced that henceforward special prizes will be offered for the best essays on "Empire Day" written by the pupils of each of the British schools in Cairo and Alexandria.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are invited for ASSISTANT MASTERSHIPS for teaching Commercial Subjects and English in the Intermediate Schools of Commerce.

Candidates should be between 22 and 34 years of age and should have a Commercial University Degree (preferably in Honours) and some experience of teaching.

The initial salary offered is £E458 a year (about £461), for applicants with at least two years' previous experience, and £E405 (about £415) for applicants with less than two years' previous experience.

The appointments are on contract for five years, and renewable at the end of that time.

Full particulars and Form of Application may be obtained from The Director, Egyptian Education Office, 39, Victoria Street, London, S.W.1.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are invited for the following POSTS at the new Higher Schools of Fine Arts, Cairo, to be filled on January 1st, 1930.

1. Instructor in Engraving and Etching.
2. Instructor in Decorative Composition and Design.

The appointment in each case will be on contract for a period of three years, renewable, at a salary of £E600 a year (about £615). An allowance of one month's salary will be paid for travelling expenses on arrival in Egypt and also at the end of the contract for return expenses.

Candidates should address their applications to the Ministry of Education, Cairo, before October 1, 1929, and should forward, if possible, in addition to particulars of their qualifications and experience, photographic reproduction of examples of their work.

The Candidates appointed will be expected to take up their duties on January 1st, 1930.

Teheran, May 19.

The Khorassan Earthquake.

The newspapers here are filled with details of the appalling earthquake disaster in Khorassan. As far as it can be ascertained, 3,000 people have been killed, but the number is daily augmented by the deaths of the injured. The town of Shirvan and 30 villages have been completely destroyed.

A public subscription list has been opened, headed by a contribution of 20,000 tomans from the Shah. The foreign Embassies, Legations, and banks as well as private citizens, are noted as having given generously.

Active measures are being taken by the authorities to relieve distress. Twenty large tents, 100 khawars of wheat, money and medical stores have been sent to the unfortunate inhabitants, who are still terrified by slight daily shocks and incapable of helping themselves.

General News.

Commercial treaties have been signed between Belgium and Persia, France and Persia, and Czechoslovakia and Persia.

The expert jewellers from the Maison Boucheron of Paris have completed their estimate of the value of the

Crown Jewels. They have found about 6 kilogrammes of really good emeralds and 15 kilos. of pearls. All this is in addition to countless treasures such as rubies and emeralds in profusion.

It is now possible to travel on the 40 kilometres of railway from Ashrab to Bandar-i-Gaz, although it is not yet open to the general public.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 16.

A Student of Indian Politics.

Mr. Bepin Chandra Pal, the veteran Bengali politician, is a student of Indian politics, from whose weekly articles in the *Englishman* it is sometimes worth while to give an extract. Another student of Indian politics, one whose style would lead one to take him to be an Indian, is the writer from whom of late I have tried to glean intelligence about the political imbroglio. Is it as confused as it has appeared to me to be? This is his witness:—"The immediate danger, therefore, to the cause of progress in the land lies in the bewildering variety of voices with which the politically-minded *intelligentsia* speak. There is the communalist who frankly makes a bid for power based on the low passions of the multitude. The Congress itself speaks with uncertain voice, and its feet are entangled in the meshes of ill-considered policy. The large majority of progressives, afraid of the Congress left, and rather moonstruck by the serried hosts of inertia, are gathering themselves into small inchoate groups, thus seeking the nearest road to their extinction."

Honouring Intellect.

That is a shrewd enough opinion, if one expressed in language very different from the ordinary language of the shrewd. A shrewder opinion is expressed in the last part of the paragraph in the student's article that comes immediately before the paragraph that I have just quoted. "The writer of these lines," the student says, "has never attached any importance to the criticism based on the illiteracy of the electorate or the apparent lack of close touch between the electorate and those who by the mysteries of the ballot-box are chosen to represent them. The *intelligentsia*, for one thing, cannot have any interest opposed to the people among whom they live; and in a country like this, where divisions cut in a way inexplicable to the student of Western sociology, there is no likelihood of any dangerous class-conflict. Secondly, the traditions of the country would impel the average elector to put his faith in the *intelligentsia*; for nowhere in the world is intellect more honoured."

Class Conflict.

That is true, and it is deeply interesting—nowhere in the world, unless it be in China, is intellect more honoured than in India. It may be that it is rather learning than

intellect that is honoured: I myself should have put it so. What the student says of the honouring of intellect, to let it pass at that, is true, as I have said; but it is a strange opinion that the *intelligentsia* in India cannot have any interest opposed to the people among whom they live. Why not in India as easily as in other countries? There is no reason. It is everywhere in the world to the interest of one class that other classes should pay the bulk of the taxes, or even all of them. If in India there was a public opinion that made it impossible for the *intelligentsia* to promote its interests at the expense of the rest of the population, we should presumably not have the problem of the untouchables. The fact is that every class in India is out to make hay for itself while its sun shines, except that the sun of many classes, the untouchables, for instance, never does shine. If it ever should, it will not probably be thanks to those whom the student has in mind, when he speaks of the *intelligentsia*.

The President's Ruling.

A point made last week was at the expense of the Maharashtra Political Conference—one of the points, that is—and its "give-away" resolution on the subject of the President of the Assembly and his ruling in the matter of the Public Safety Bill. The President has been given something to read apparently not as flattering to himself as the resolution of the Conference, witness the following statement that he has now issued:—"It has been brought to my notice that the *Times of India* has given publicity to the fact that I have written a letter to the Governor-General, stating that, in view of His Excellency's reference . . . to my ruling about the Public Safety Bill, I shall be compelled to make a statement justifying my attitude when the Assembly meets. It is a fact that a communication has been addressed by me to the Governor-General, but the report that I have stated . . . that I shall be compelled to make a statement justifying my attitude . . . is altogether incorrect and misleading and calculated to prejudice the issue. I might add that in view of the delicate nature of the communication, I have decided not to release it for publication at this stage." The point at issue is whether the President has or has not shown himself incapable of the unswerving impartiality expected of a Speaker, and if, as many think he has, what encouragement to entrust large powers to Indian politicians one is to draw from the fact. Nothing could well be clearer than that.

The Bardoli Land Revenue Settlement.

The public in England specially interested in Indian affairs will not have forgotten that the cultivators of the Bardoli district, considering the enhancement of land revenue at the last settlement unjust, decided to perform *satyagraha*, and how the Government of Bombay had so far to admit that the cultivators had a *prima facie* case as to appoint two selected officials to probe the matter. The report of these two shows that the cultivators were thoroughly justified: it contains statements as strong even as the following:—"The data in the reports, apart from the rental and sale statistics, are obviously not sufficient to warrant either the general increases sanctioned

in the maximum rates or the much larger increases in the case of particular villages. The rental and sale statistics have been carefully compiled, are demonstrably incorrect in a large number of cases and, in general, must be regarded as completely unreliable." The Government of Bombay have accepted the specific recommendations of the two officers as to the maximum rates and grouping of villages. So for Bardoli all is well that has ended well. There may now, however, be protests from other *talukas*, regarding their land revenue settlements.

Bengal Labour Conference.

With the blessing of the Governor of the Province a Labour Conference is being held in Calcutta to discuss the question of setting up an Industrial Council with a view to promoting industrial peace. Mr. K. C. Roy Choudhary, ex-Labour member of the Bengal Legislative Council and Chairman of the Reception Committee, referring to the strikes in Bombay, said "Strikes in the textile industry of India are not only ruinous from every point of view, but are anti-national and anti-social; they will cripple the industry, and I do not care who back these, but they are doing the greatest disservice to the Indian nation and the poor wage-earners."

Darjeeling's Centenary.

Old residents of Bengal and Bihar will not learn unmoved that Darjeeling is now one hundred years old, and has been celebrating the event in various and suitable ways. Whether the sun shone all the time of the races, the flower show, and the rest of it, I have not learned. Darjeeling has a blanket of mist, cloud, and rain, and oftener than not wears it girt about his loins. Those who had the organising of the centenary celebrations would doubtless not be unmindful of the Clerk of the Weather. One hopes that there was no serious misunderstanding between them and him.

THE REPORT OF THE INDIAN STATES COMMITTEE.

As has been previously pointed out in THE NEAR EAST AND INDIA the Indian Princes have felt for a long time past that they are labouring under various disadvantages and disabilities. They hoped that a solution of these troubles would be found at the time when the introduction of the Reforms scheme was under discussion. But although the late Mr. Montagu and Lord Chelmsford admitted, with some reservations, that the proposals put forward by the Princes were reasonable, they made but few concessions. Experience of the working of the new scheme of Government in British India has since deepened the conviction of the Princes that their grievances ought to be investigated. In 1927 a representative group of Princes asked the Viceroy to appoint a special Committee to examine the relationship existing between themselves and the Paramount Power; and to suggest means for securing effective consultation and co-operation between British India and the States. It was in response to this request that the Butler Committee was appointed, the first article of its terms of reference requiring it to report upon the relationship between the Paramount Power and the States with particular reference to the rights and obligations arising from (a) treaties, engagements and sanads, and (b) usage, sufferance and other causes.

It is now for the Princes, when they meet this month at Bombay, to consider and to decide whether the report of the Committee is or is not satisfactory to them. At first sight it would certainly seem that most of the principal points for which they are striving have been conceded. For example one of their main arguments is that the relationship of the States to the Paramount Power is a relationship to the Crown and not to the Government of India. Further, that the treaties made with them are treaties made with the Crown; and that these treaties have continuing and binding force as between the States which made them and the Crown. This contention has been accepted in terms by the Committee.

The Princes also urged that each State is in separate and individual relationship with the Crown; and this point, likewise, the Committee have accepted: "The treaties were made," they say in their report, "with individual States, and although in certain matters of Imperial concern some sort of uniform procedure is necessary, cases affecting individual States should be considered with reference to those States individually, their treaty rights, their history and local circumstances and traditions and the general necessities of the case as bearing upon them." Another claim which the Princes put forward was that, without their own agreement the rights and obligations of the Paramount Power should not be assigned to persons who are not under its control, for example, to an Indian Government in British India responsible to an Indian Legislature. The Committee point out that this contingency has not arisen, but they direct attention to the really grave apprehension of the Princes in respect of it. And they record a strong opinion that, in view of the historical nature of the relationship between the Paramount Power and the Princes, the latter should not be transferred without their own agreement to a relationship with a new Government in British India responsible to an Indian Legislature.

A fourth point in respect of which the views of the Princes have prevailed with the Committee has reference to economic interests. The Committee express the opinion that it is only on the ground that interference with State sovereignty is for the economic good of India as a whole that the Paramount Power is justified in interposing its authority. It is not, they hold, justified in interposing its authority to secure economic results which are beneficial only or mainly to British India in a case in which the economic interests of British India and the States conflict.

As has been earlier stated, these findings suggest, at first sight, that the views of the Princes have prevailed, and that they have won their case. But a closer scrutiny of the Report is calculated to lead to a different conclusion. For it will be found on examination that the Committee have made various statements which appear to be entirely inconsistent with the above findings. It will not be surprising, therefore, if the Princes are dissatisfied with the report, and are disinclined to accept it as a satisfactory solution of their grievances.

The Standing Committee of the Chamber of Princes was advised by five eminent English Counsel whose opinion is reprinted as an appendix to the Report. According to this opinion the essence of the constitutional position is that the relationship existing between the Crown and each of the various States is one of mutual rights and obligations, and that it must be ascertained by the application of well recognised legal principles. To judge by the four findings which have been quoted above, it would appear that the Committee have impliedly accepted and endorsed this view. But on the other hand, the Report says, in a subsequent paragraph, that: "Paramountcy must remain paramount; it must fulfil its obligations, defining or adapting itself to the shifting necessities of the time and the progressive development of the States." This presumably means that the Paramount Power has an unlimited and indefinite discretion, in virtue of its paramountcy, to do whatsoever it may at any particular time deem to be right.

Then again the Committee agree, as is indicated above, that the treaties and engagements are still of continuing and binding force. But in an earlier paragraph they quote, presumably with approval, a statement by Professor Westlake that "in the Indian Constitution an acknowledged supreme will decides every question which arises." In other words, paramountcy has no limitation. Clearly, the treaties must be of binding force or not; and if they are binding paramountcy must be limited. So far the main findings of the Committee on the vexed question of paramountcy only have been considered. In a subsequent issue other aspects of this question will be discussed.

THE BOMBAY DINNER.

The annual reunion dinner of past and present European residents in the Bombay Presidency was held at the Hotel Cecil on May 31. Lieut-Col. the Rt. Hon. Sir Leslie Wilson, the late Governor of Bombay, presided.

The Chairman read messages of greetings from the Governor, Sir Frederick Sykes, the Byculia Club and the Bombay Club.

Proposing the toast of "The Presidency of Bombay," coupled with "Our Guests," the Chairman said that he was not expected to prophesy the recommendations of the Simon Commission, nor was it the time to say whether in his opinion democracy was or was not applicable to the Bombay Presidency.

He came home full of the best intentions to interest people in England in India, but he had to confess he found it extraordinarily difficult to retain the attention of anyone for any length of time on anything connected with the Presidency of Bombay. Matters might improve in that direction after the Election or when the Simon Commission had reported, but at present far more interest seemed to be taken in the question of whether one could buy cigarettes after a certain hour or not, or in what some politician did or did not say at some remote date.

He would beg the British public to do their best to give some of their attention, at any rate, to India and to Indian difficulties and not to be led by extremists, whether they be die-hards, whose only arguments were that India "was not the place that I knew it," or whether they be extremists, Communists, or anti-British agents, whose statements only served to give malicious satisfaction to the enemies of Britain.

Those who knew Bombay wanted one thing only, the happiness and contentment of the people among whom they had lived and so many of whom were their personal friends, and whether they were Indian or European or Muslim or Hindu, or whatever their creed or colour, they wanted to secure the happiness and prosperity of millions who were not able properly to speak for themselves. At the same time, they were not blind to the natural desire of the educated Indian to have a greater say in the management of the affairs of his own country.

On his return home he had been amazed and appalled at the lack of opportunity of those who came from the Presidency to get into real English social and family life, and particularly did that apply to the many students who came from India to our various colleges and institutions. Many of them were strangers to an entirely strange land and without acquaintance with the real family and social life of our country, so that many of them returned to India with very false, often dangerous, views inculcated into their minds by those who were neither friends of India nor of Great Britain.

There was nothing so dreadful as loneliness in London, and he hoped that when India House had been completed there would be fuller opportunities for those who came from India to appreciate the social life of this country. No better work could be done by the friends of the Presidency than to take an interest in the sons of men whose homes had been the homes of those from this country for many a long year.

He hoped the time was not far distant when the political and industrial outlook of Bombay would be such that for all time the clouds would be dispersed and the waters of the Indian Ocean would reflect a glow of prosperity irradiating the greatness, happiness and prosperity of the great Presidency. He coupled with that toast the name of Sir Basil Blackett, for whose services to the Presidency during his stay in India they all owed a deep debt of gratitude.

Sir Basil Blackett, responding, said that it was the duty of the Communications Company, of which he was Chairman, to bring the cables and wireless business together. Bombay was an active centre in the work and he would still be co-operating with old friends in Bombay in serving India with rapid communications. One of

their duties would be to try to break the record in the transmission of good news on June 5 direct from Epsom Grand Stand to Bombay.

It did not do to underrate or overrate the importance of Communist activities in India at the present day, but they were undoubtedly affecting the financial position there, as was the political malaise. Both were having an effect on the tendency for capital to go away from India, and perhaps most important of all at the present moment India was suffering from the activities of New York. A short time ago an eminent American was asked by a young lady how long the American speculation was going on, and he said: "It is going on until gentlemen prefer bonds." (Laughter.)

He trusted that the day when gentlemen would prefer bonds would quickly come, because none of them wanted to see any curtailment of the India Government's activities in promoting capital development in India, whether of railways or in the extension of hydro-electric work in which Bombay had been so much to the fore or in aid of important irrigation work. He trusted those difficulties would prove to be passing and that friends of Bombay would not be unduly disheartened or turned aside from their way in continuing the good work in helping towards the improvement of the condition of the masses of India which were so dependent upon the beneficent expenditure, whether out of Bombay's revenue or of capital provided year by year by the Government of India or the provincial Governments.

The health of the Chairman was proposed by Sir Henry Lawrence, and the proceedings terminated with a cordial vote of thanks to Mr. W. A. Haig Brown, the honorary secretary, who replied briefly.

The company numbered over 200, among others present being:—

Lord Lamington, Sir Fred Graham, Sir William Sheppard, Sir Arthur Hirtzel, Sir Henry Lawrence, General Sir Havelock Hudson, Sir Charles Armstrong, Sir Reginald Mant, Sir Malcolm Hogg, Sir Campbell Rhodes, Sir Maurice Hayward, Sir Walter Willson, Sir George Carmichael, Sir Thomas Strangman, Sir Robert Holland, Sir Thomas Birkett, Sir Robert Dunlop, Sir Clement Hindley, Sir Stanley Reed, Sir Louis Crump, Sir William Vincent, Sir Amberson Marten, Captain Sir Edward Headlam, Major-General Sir Reginald Ford, Hon. Julian Hawke, Sir John Heaton, Sir John Bowen, Sir James du Boulay, Sir Norman Macleod, Sir James Begbie, Sir Hugh Cocke, Sir Arthur Froom, Sir D'Arcy Lindsay, Sir Joseph Kay, Sir Robert McLean, Colonel R. Markham Carter, Major-General H. A. V. Cummins, Major R. L. Benson, Messrs. W. Stantiall, C. H. Kisch, H. T. Gorrie, F. Loch Trevor, S. J. Gillum, B. C. Reade, P. R. Cadell, A. K. Graham, A. M. Green, N. S. Glazebrook, W. A. Haig Brown (hon. secretary), H. P. Hebblethwaite, D. W. Wilson, J. B. Crichton, C. R. Nicoll, W. Ross Munro, G. Miller, L. Volkart, W. H. Brady, C. C. Fowler, G. E. M. Weir, F. C. Rimington, J. P. Orr, W. P. Pechey, E. G. Turner, R. E. Enthoven, G. A. Thomas, C. G. Forbes Adam, Lt.-Col. W. M. P. Wool, Lt.-Col. N. S. Coghill, Lt.-Col. A. R. C. Savile, Major-General C. C. Leveson-Gower, G. C. Richardson, J. Greig, C. N. Caroe, L. W. Hartley, J. R. Martin, Col. R. E. Pigott, H. C. M. Mitchell, Lt.-Col. J. C. Kunhardt, E. H. Curling, Lt.-Col. P. P. Kilkelly, Col. Ashton Street, Col. J. Crimmin, J. P. Chrystal, W. A. C. Bromham, F. A. H. East, and T. G. Russell.

THE COUNCIL OF INDIA.

The India Office announces that the Secretary of State for India has offered a seat on the Council of India to Colonel Nawab Malik Sir Umar Hayat Khan, Tiwana, K.C.I.E., C.B.E., M.V.O., in succession to the late Sir Muhammad Rafique; and to Sir Basanta Kumar Mullick in succession to Mr. Surendra Nath Mallik, C.I.E., who has resigned his seat from July 31 next.

INDIA AND THE LEAGUE OF NATIONS.

The following will represent India this year at the Assembly of the League of Nations. Delegates: Sir Muhammad Habibullah, K.C.I.E., Kt.; H.H. the Maharaja of Kapurthala, G.C.S.I., G.C.I.E., G.B.E.; Sir William Ewart Greaves. Substitute Delegates: Sir Chunilal V. Mehta, K.C.S.I.; Sir Geoffrey L. Corbett, K.B.E., C.I.E., I.C.S.; Syed Reza Ali, C.B.E.

THE SULTAN OF ZANZIBAR.

Sayyid Khalifa bin Harub, the Sultan of Zanzibar, arrived in London on May 31, accompanied by his son, Sayyid Abdullah (the Heir Apparent) and by Shaikh Saif bin Sulaiman. His Highness is staying at the Hyde Park Hotel. On June 1 he laid a wreath on the Cenotaph and another wreath on the Tomb of the Unknown Warrior. He has since visited the British Museum and the Zoo, Epsom (for the Derby and Oaks); and on June 8 he is visiting Croydon Aerodrome and Lord's. Later he will visit Oxford, Manchester, the Lakes, Glasgow, Edinburgh, Newcastle, York, Cambridge, Burnham-on-Crouch, and Portsmouth. His Highness will leave this country for Zanzibar on July 5.

The Turkish Grand National Assembly at Angora has passed the new Tariff Bill, the effect of which will be a big increase in the duties levied on the majority of goods imported into Turkey.

Rear-Admiral John L. Pearson, C.M.G., who has been promoted to flag rank, was Senior Naval Officer in the Persian Gulf from February, 1920, to February, 1922.

The Turkish and Greek Governments are reported to have accepted the proposals of the members of the neutral Mixed Commission for the entire settlement of the question of the exchange of populations.

During March, 1929, 452 immigrants entered Palestine, including 373 Jews; of these, 208 persons, including 148 Jews, had entered the country as travellers and were given permission to remain permanently; 236 persons left the country permanently, including 155 Jews, of whom 86 had settled in the country since June, 1920.

President Konduriotis on May 31 received Captain Turle, R.N., head of the outgoing British Naval Mission, who left Athens with the other members of the Mission the following day. The Minister of Marine, M. Argyropoulos, entertained the Mission at a farewell banquet, and thanked the officers for the zeal with which they had served Greece for the past two years.

According to a report from the Government Inspector at Kuchan, 3,253 persons were killed in the district of Khorassan, North-Western Persia, in the earthquake of May 2, and 1,121 injured. Eighty-eight villages were destroyed and 6,542 head of cattle killed. The Consort of the Shah has made a donation of £400 in aid of the sufferers.

BIRTHDAY HONOURS.

The following is a selected list from the Birthday Honours:—

EARL.

INCHCAPE, James Lyle, Viscount, G.C.S.I., G.C.M.G., K.C.I.E.
For public services.

VISCOUNT.

University.

L'ANGLAIS sans MAITRE

(METHODE MARLBOROUGH)

Ces livres se recommandent par leur contenu tellement pratique et utile
qu'on trouvera l'étude d'une langue étrangère beaucoup plus simple
qu'autrefois. Chaque volume se compose de vocabulaires systématiques,
de phrases utiles et de conversations, tout cela avec la prononciation figurée
d'après un système phonétique anglais, et arrangé de telle façon qu'on
pourra l'apprendre en un coup d'oeil, tandis qu'une grammaire simplifiée
prépare le chemin pour une étude plus avancée.

L'Anglais sans Maître. L'Inglese Imparato da Se.
Der Englische Dolmetscher. El Ingles para Cada Cual.

Coloured Wrapper, 2s. net each; Cloth, 3s. net each.

Samouchitel Angliskavo Yazyka. Zelfst Leb'-rer.

Coloured Wrapper, 1s. net each; Cloth, 1s. 6d. net each.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25.

London: E. MARLBOROUGH & CO., LTD., 51 & 52, OLD BAILEY, E.C.4

NEWS IN BRIEF.

As the result of a decision of the Constantinople Municipality to
decrease taxicab fares, all taxi-drivers went on strike at the
beginning of this week.

Deluges of rain have led to great floods in Northern Bulgaria. A
large amount of damage has been done, and two children are
reported drowned.

The Greek Chamber gave a first reading on May 30 to the Bill for
protecting the Republic from the Communist danger, in spite of the
opposition of a number of deputies, who held that the Bill interferes
unduly with freedom of opinion. The Government made the vote a
question of confidence.

M. Rist, technical adviser to the National Bank at Bucharest, in
his first quarterly report on the working of the programme of
stabilisation, states that the Government has fulfilled all the under-
takings in the programme, and has brought about the conversion of
the leu and assured the free circulation of capital.

PERSONAL AND GENERAL

TO-DAY

June 6, 1929 (New Style).

May 24, 1929 (Old Style).

Dhulhijja 27, 1347 A.H., of the Muslim Calendar.

Iyar 27, 5689, of the Jewish Calendar.

The Maharaja of Alwar, who arrived in London on May 29, is staying at the Hyde Park Hotel.

Sir Albert and Lady Stern returned to 14, South Street last week from Roumania.

The Aga Khan arrived in London on June 3 from Paris.

M. Georges Cattaui, second Secretary to the Egyptian Legation, left London last week for Berlin.

The Roumanian Minister left London this week for Madrid.

Mrs. J. M. Dreschfield, who has been spending the winter in Africa and India, has returned to 17, Carlyle Mansions, Cheyne Walk, Chelsea.

The title of Reader in Greek in the London University has been conferred on Miss Dorothy Tarrant, M.A. (Cambridge and London), in respect of the post held by her at Bedford College.

M. Dimitri Stancioff, ex-Bulgarian Minister to the Court of St. James, and Mme. and Mlle Stancioff left London last week for the Villa des Trois Sources, Varna, Bulgaria, their summer residence.

Viscount and Viscountess Inchcape returned to London from Glenapp on June 1. Lord Inchcape left for Paris the next day to attend the Suez Canal meeting, and returned to London on June 3.

Professor John Coatman, B.A. (Manchester), B.A. (Oxford), since 1926 Director of Public Information to the Government of India, has been appointed to the University Chair of Imperial Economic Relations tenable at the London School of Economics.

Colonel (temporary Brigadier) G. M. Lindsay, C.M.G., D.S.O., A.D.C., has been appointed Brigadier General Staff, Egypt, in succession to Colonel (temporary Brigadier) A. J. Turner, C.B., C.M.G., D.S.O. (October, 1929).

Mr. Robert Stokes will address the Near and Middle East Association, on June 12, at 8.30 p.m., on "Current Imperial Ideals and their Application to the Middle East." The meeting will take place, by kind permission of Lady (Edgar) Bonham-Carter, at 17, Radnor Place, W. Sir Henry Burt will preside.

The eleventh annual dinner of the Aden Field Force will be held at the Trocadero Restaurant on Saturday June 15. Major-General Sir James Stewart, K.C.B., K.C.M.G., will preside. Officers of the Royal Navy who served in the Red Sea Patrol are eligible to attend. Applications for tickets and further particulars to Colonel R. de Verdon Williams, 101, Barkston Gardens, S.W.5.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE. Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan. Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

Mr. Eldon Rutter will lecture to the Royal Asiatic Society (74, Grosvenor Street, W.1.) on June 11, at 4.30 p.m., upon "The Arabians." The lecture will be illustrated with lantern slides.

Sir Denison Ross will lecture to the Central Asian Society on June 12, at 5 p.m., upon "The New Middle East." The lecture, which will be preceded by the Report of the Council 1928-29, and by the election of officers and members of Council for the ensuing session, will be given at the Royal Society of Arts, Burlington House, Piccadilly, W.

A Reception was held under the auspices of the Central Synagogue, London, on June 5, at 8.30 p.m., at the Langham Hotel, Portland Place, W.1., in honour of the Rev. Michael Adler, D.S.O., B.A., who has just returned from a tour in Palestine. The Lord Chancellor, the Rt. Hon. Lord Hailsham, attended and addressed the gathering. Mr. Joseph H. Jacobs, Senior Warden of the Central Synagogue, presided, and was supported by Sir Meyer Spielman, Sir Robert Waley-Cohen, K.B.E., Mr. O. E. D'Avigdor Goldsmid, Mr. Simon Marks, Mr. A. Alvarez and Mr. Desmond Tuck.

A dinner was given at Claridge's on May 30, by Hassan Mazloun Pasha, Egyptian Postmaster-General and the members of the Egyptian Delegation to the President of the London Postal Congress and the members of the British Postal Delegation, as well as to the Director, Vice-Director, and Secretaries of the International Bureau. The guests were Brigadier-General F. H. Williamson and Mrs. Williamson, Mr. E. Garbanini, Mr. E. Rottner, Mrs. Harold Wynne, Mr. W. G. Gilbert, Mr. F. C. C. Twinn, Captain D. O. Lumley, Mr. E. Voutat, Mr. J. Fourès, Mr. E. R. Davies, and Mr. A. L. Williams.

Colonel the Hon. Charles John Coventry, C.B., second son of the Earl of Coventry, who died on June 2 at Earl's Croome, Worcester, was born in 1867. During the Great War he took part in the Dardanelles operations and in the campaign against the Turks in Egypt and Palestine, being captured at Katia in 1916.

According to a Cairo message the Coptic Patriarch of Alexandria, Mgr. Yoannes XIX., on June 1 consecrated in the Coptic Cathedral of Saint Mark Kommos (Priest) Sidaros, subhead of the Monastery of Deir Antonios, as Abouna (Archbishop) of Abyssinia under the name of Kyrillos, and four Abyssinian monks sent by the Abyssinian Government as Bishops in virtue of the recent agreement to that effect.

Where to stay in the East

THE WEEK AT HOME

London, Tuesday Morning.

"Labor Vincit."

Labor omnia vincit; sed cælum non ruit. In other words, the Labour Party is now the largest political party, but everything is still all right!

Readers must forgive me, but it has happened as last week I said I thought it would. Labour is at the head, but the Liberals hold the balance. What will happen now, no one knows. The general sentiment is that since Mr. Ramsay MacDonald has the largest following, he should become Prime Minister.

There is, however, an attempt being made to represent the Conservative-cum-Liberal vote as anti-Socialist, to pretend that the verdict of the country is, therefore, distinctly anti-Socialist, and to suggest that the highest duty of Mr. Baldwin and of Mr. Lloyd George is, by joint action, to prevent Mr. MacDonald from taking office. To me this seems a counsel of timidity, and, moreover, one lacking in conviction. Do those same people who advocate it forget that the last Conservative Administration was backed by fewer votes than those gained by the Labour and Liberal? Were they then assailed by doubts upon the iniquity of taking office with a minority vote? Is it so certain, too, that the Liberals are more anti-Socialist than they are anti-Tory?

One cannot think that the best Conservative minds will not realise—as they must already have realised in regard to the three-corner contests which formerly have worked in their favour—that what is sauce for the goose is sauce for the gander. I may be wrong, but I do not think that Mr. Baldwin is at all the kind of man who would so grudge the Socialists their victory as, by means of a temporary and, of necessity, supremely dull marriage with the Liberals, to deprive them of the fruits of it.

There is, moreover, another way of looking at it, even from the anti-Socialist point of view. The Labour Party has been steadily advancing ever since it was founded; its "day," though not fully arrived, is as certain as anything can be in British political life. Is it not wisdom, therefore, to allow it, in the peculiarly checking circumstances which are now presented, a good run of office? Unless this is done, there will, I think, be considerable resentment, and the quite needless creation of a revengeful spirit towards the older parties. Far better were it for Conservatives and Liberals to "lump" it, and be as the English Colonel was towards Wagner's music—"He didn't like the damn stuff, but he wasn't afraid of it."

To those who believe that there is a Providence which shapes our ends, it may seem that a superb opportunity has arisen for the Socialists to take office again on obviously conditional terms, and to gain first that practical touch with industrial and economic reality which their opponents assert has hitherto been lacking. They cannot in office nationalise as they would, when out of office, have nationalised; but they can in office see more exactly the advantages and disadvantages which the application of their theories would have on the national life and the practicability or impracticability of them. As I see it, a period of Labour administration is not only the deserved reward of the Socialists, but it will also be of considerable benefit to themselves and ultimately to the whole nation.

Surprise of the Election.

Everyone told us before the Election that the Liberals would create the greatest surprise. And everyone was

right. The Liberals did—but the wrong way round! To have increased one's strength by but a handful of men, however distinguished these may have been in the past, must be a terrible disappointment. The thousands of pounds that were spent in advertising! The millions of issues of Liberal newspapers that were printed! Democracy, we were told by these Liberals, was this time really awake; and the country would be swept clean by the "rising tide of Liberalism." The Welsh mountains were truly in travail; but a ridiculous mouse is not in it!

Yet, perhaps after all, this staggering blow to the Liberals, who, brave fellows that they were, stoutly denied, what everyone else told them, that they were virtually a corpse, has its lessons of comfort. It is good to know that advertisements, even though they occupy pages of the most expensive journals, do not necessarily turn votes; it is good to see that a Party with a Press is not necessarily superior to one without it; it is good to know that the emptying of political coffers can involve the filling of political coffins.

Certain Conservatives, of course, are very angry indeed with the Liberals, but for whose unwarrantable intervention, they say, at least fifty seats would have been saved from the Socialists. But since the Unionists are alternately fearfully angry and tearfully pleading with the Liberals, it is difficult to determine their real attitude. There are those who would sooner live in the desert than co-operate with Mr. Lloyd George, who is as Judas to them; but others take things more philosophically and tolerantly. Yet the future of Unionist-Liberal relations is as dark as, say, the future of Mr. Saklatvala, whose defeat at Battersea was the one Labour victory which was universally acclaimed.

As for the future of Liberalism, has it any in this country? Granted that there will always be a few doctrinaire intelligences which will inevitably disapprove of the methods of expediency of the Unionist and Labour parties, is it not probable that with the demission of Mr. Lloyd George and with the disappearance of the funds which he controls, the official Liberal party will vanish from the national political life? Whether in the remnant that is now in Parliament the majority is possessed more of anti-Socialist economic principles than of sentimentally progressive political principles, is not an easy question to answer. Personally, if I were a die-hard Conservative I should not bank overmuch upon a probable accession of strength from former Liberals.

Tennis and Stockings.

At the present moment every female lawn-tennis player appears to be agitated over whether stockings should be worn at the game or not. Several of the leading players have already discarded stockings, and it is at least possible that Wimbledon this year will be the scene of a bare-leg fashion.

Much has already been written for and against the bare-legged way—with the obvious moral that a mere man is best advised to keep out of the controversy.

This, however, at least may be said. The whole trend of dress in sport is towards greater freedom. Compare the dress of men on the cricket field and women on the tennis courts of, say, fifty or sixty years ago, with the present garments. The difference is astounding. It is at least possible, therefore, that men who now laugh at their forefathers for having played cricket in top-hats will have daughters who laugh at their mothers for having played tennis in stockings.

It may be—who knows?—that, as Senorita de Alvarez has suggested, both stockings and skirt will be banished from tennis, just as trousers may be abandoned by men in favour of "shorts."

But unquestionably the stocking covers up a multitude of sins or blemishes, and one can well imagine the distress that would be caused in certain quarters if Wimbledon decreed to the suburbs, and the suburbs to the country, that the most correct tennis attire lacked stockings!

ALTER EGO.

Book Reviews

AN ABYSSINIAN SUPERSTITION.

"THE BANDLET OF RIGHTEOUSNESS." *An Ethiopian Book of the Dead. Edited with an English translation by Sir E. A. Wallis Budge. With sixty seven plates. (London. Luzac and Co., 21s. net.)*

The Abyssinians were converted to Christianity about the middle of the fourth century; but there long survived—and perhaps still survives—in the form of "popular superstition" elements of religious beliefs traceable to their pagan days. Inevitably much of Abyssinia's pre-Christian beliefs came from its northern neighbour in Egypt; and one deeply ingrained belief was in the magic efficacy of the spells contained in the type of document, found in countless examples in Egyptian tombs, known as "The Book of the Dead." By such spells the dead person was ushered safely into a blissful immortality and saved from any torments in hell which he had earned in life.

Despite the Christian assurance of immortality popular Abyssinian superstition was never willing to let go that alternative assurance on which they had relied in their pagan past. This explains the present curious work, "The Bandlet of Righteousness," which in the guise of a Christian document presents in abbreviated form the essentials of the ancient Egyptian "Book of the Dead." "On these elements are superimposed ideas derived from the writings of the Christian Gnostics and from apocryphal Hebrew works" as these had filtered into Egypt from Greek or Syriac translations.

This "Bandlet of Righteousness" referred to in the title of the work was:

A strip of linen or parchment which was exactly as long as the person for whose benefit it was prepared was high, and on this were inscribed a series of eight magical compositions. . . . This Bandlet was wound round the body of the deceased on the day of burial and was believed to protect it from the attacks of devils, and enable him to pass through the earth without being stopped at any of the gates or doors, and ultimately to pass into heaven. The possession of this bandlet ensured for him acquittal in the judgment, and therefore escape from the awful River of Fire.

The document itself, which is quite short, contains a fusion of the cult of the Virgin Mary with a belief (common both in the East and the West) in the power inherent in the knowledge and the actual utterance of secret magical names. These names, it is asserted, were given by God himself through our Lord to the Virgin Mary. The short document gives many hundreds of them. Some are traceable to their Hebrew or Greek origin, but the source of most of them can only be guessed at. It may be worth noting that the most potent of all these magic names are (p. 79), *Demâhîl*, *Berasbâhîl*, *Akmâhîl*, each to be uttered three times.

Of special interest is the appearance of the famous palindrome, *Sator, Arepo, Tenet, Opera, Rotas*, with slight changes due to transliteration. The Abyssinians say that these five words are the names of the five (*sic!*) nails that were driven in the Cross.

THE DUTCH IN CEYLON.

"Some Documents Relating to the Rise and Fall of the Dutch Power in Ceylon, 1602-1670" Edited by P. E. Pieris. (Colombo: C. A. C. Press. London Agents. Luzac. 17s. 6d.)

Dr. Pieris, who has published several works on the history of Ceylon, now offers, as a supplement, a condensation of the series of translations of the relevant Dutch documents in the India Office. The book is thus something less than first-hand, for its rests, first, on the authority of those who selected the records for the India Office, and secondly, on the accuracy of the translations, which are known to be good but not perfect; but, subject to these reservations, it can be recommended as a useful and enlightening compilation. The story it tells is not particularly edifying, for both Dutch and Portuguese had by this time mastered the art of diplomacy as practised in Asia, and the three-handed game between them and the King of Candy was played strictly according to the rules. Perhaps we get a view which is less than fair to the Dutch,

for the documents disclose their secret motives as well as their public acts, while we see the King's acts but not his motives, and students would do well to bear in mind that, from the nature of the case, the story is incomplete. Ordinary readers would have been glad of a few explanatory notes. Dr. Pieris may justly argue that his public in Ceylon do not need to be told the meaning of such terms as *mudalijar*, *dissave* or *toupas*, but can he expect his readers to know what a *faux braie* is, or will they recognise the Indian ruler of Bijapur under the Portuguese disguise of "King Adelsia"? A few quaint locutions of the translators have survived, such as "valid soldiers" where "effectives" is intended, or "revindications," which is merely the Franco-Dutch for "claims."

NEW BALKAN STAMPS.

A new set of Bulgarian stamps, *The Times* reports, commemorates the dual celebration of the 50th anniversary of Bulgarian independence and the millenary of the Tsar Simeon. Portraits of Bulgarian patriots from St. Clement of Ochrida to K. Miladinoff form the subjects of eight out of the ten stamps in this series, the denominations of which range from 15 stotinki to 6 levas. St. Clement, who figures on the 10 stotinki purple, was Archbishop of Ochrida from 885-916 A.D. in the reign of Tsar Simeon, who is himself portrayed in the design of the 2 levas blue. He reigned from 893-927 A.D., his empire extending from the Adriatic to the Black Sea and from Thessaly to the Carpathians. On the 1 leva stamp, printed in red-brown is the monk Paisii inditing his chronicles of the early Tsars and Saint of Bulgaria (published in 1762) in his cell on Mount Athos, while the 15 stotinki sage-green present a vignette of the Monastery of Drenova, with the date 1876. Leaders in the struggle for Bulgarian independence whose likenesses appear upon the stamps of the new issue are Rakovski and Karaveloff. Tsar Alexander II. of Russia, the "Tsar Liberator," is portrayed upon the highest value—namely, 6 levas blue.

On the occasion of the celebration of the tenth anniversary of the founding of Greater Roumania a set of six commemorative postage stamps has been produced at Bucharest from designs by the artist Bessarab. The stamp of 1 leu shows the late King Ferdinand I. wearing the Roumanian crown surrounded by portrait vignettes of the famous Hospodars Stephen the Great (1458-1504), Michael the Brave (1593-1601), Constantin Brancovan, the "Golden Bey" (1694-1712), and Demeter Cantemir (1709-11). An allegory of Roumania and Transylvania represented by two girls in national costume, united by the Angel of Peace, appears on the 2 lei green. The 3 lei brown bears a portrait of Avram Iancu leaning against a cannon with a background of mountainous scenery. The equestrian statue of Michael the Brave at Bucharest is depicted *en silhouette* in the design of the 4 lei carmine; the 5 lei orange has a view of the castle of Bran in Transylvania, which was presented by the nation to Queen Marie of Roumania a few years ago; the stamp of the 10 lei blue has in the centre a medallion portrait of the late King Ferdinand surrounded by cheering crowds. The stamps are inscribed "Serbarile Unirei Ardealului" and are printed upon paper water-marked with a series of undulating lines.

HOW TO GET THE BEST OUT OF YOUR CAR

No. 5. Concerning Motoring and "BP"

Don't keep too long on top when ascending a steep hill. It pays to change gear early. If you are not using "BP" it will pay you to change right away.

Rubber washers should be used in the radiator cap in preference to leather, which tends to perish.

A falling-off in power can often be traced to a choked silencer. Run on "BP" and keep down the carbon.

Keep a supply of paraffin—preferably "BP" 'Royal Standard'—handy. It is the best cleanser for oily or greasy parts.

PUT THE BEST IN

"BP"

It pays to use "BP"

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Honours List.

The outstanding award in this week's Honours List is the earldom conferred on Lord Inchcape, the head of the P. and O. and its allied companies. Lord Inchcape has had a most distinguished career, in the course of which he has rendered much important public service in this country and in India, and this signal honour comes as a well-merited recognition of the efforts he has unceasingly made for the common welfare. Another particularly notable honour is the G.C.M.G. conferred on Sir John Cadman. Taken as a whole, the Honours List was more interesting and varied than has been the case for some years, but I regret that it is once more necessary to renew my criticism of the lack of recognition of the services rendered by commerce in the Near and Middle East. Half a dozen names or so readily spring to the mind of people who in one form or another have rendered unstinting service in the cause of British trade enterprise in that region, and how it comes about that their services always go unrecognised is one of those mysteries which are incapable of solution. An occasional award would do so much to encourage those who are helping to keep the flag flying, only too often in very difficult conditions.

Tea Growing in Abyssinia.

While a good deal of tea is consumed in Abyssinia the tea plant has not hitherto been cultivated in that country, though conditions are favourable for it. As a result of the enterprise of Mr. George Howland, of Kericho, in Kenya Colony, there is now every prospect that in a few years' time Abyssinia will be producing a fair quantity of tea. Mr. Howland went to Abyssinia in December taking with him eight cases of tea seed with the object of introducing the plant into the country and to establish small plantations in different regions. He found good tea land at the southern end of Jimma Province but did not plant any seed owing to the lack of inhabitants. In Kaffa Province he was more fortunate as he discovered suitable land from Bonga nearly all the way along the caravan road to Gore, and he is of opinion that there must be thousands of square miles of tea land in this province. He planted the bulk of the seed at Bonga, and established a tea nursery there. In Walega Province he also found land suitable for tea cultivation. Besides the tea seed planted at Bonga Mr. Howland gave away 16 small boxes of seed for sowing in places which he was not able to visit. The tea seed used was Doolia Manipuri, and came from Brooke Bond's estates in Assam. After his departure Mr. Howland received news that there were already five hundred young tea plants at Bonga, so that the first stage of the experiment may be said to have terminated satisfactorily, and it is probable that he has been the medium of giving a new and most profitable industry to the Abyssinians.

A Near East Economic Entente.

The question of an economic entente between Czechoslovakia, Roumania and Yugoslavia, which has long been on the tapis, is dealt with in a report by Mr. H. Kershaw, the British Commercial Secretary at Prague, whose references to it are given in another column. Of the three countries Czechoslovakia is predominantly industrial, while the other two countries are in the main dependent on agriculture, and, as Mr. Kershaw points out, such an arrangement is naturally of particular importance to the first country, as it will mean an increased outlet for manufactures. All these countries would stand to gain much from an economic entente, and it is known that opinion in Yugoslavia and Roumania is also favourable to it. The view is taken in these countries, however, that the time will not come for an entente until the problems of internal re-organisation have been solved. In both Yugoslavia and Roumania the question of reconstruction bristles with difficulties, and while both are now making satisfactory headway, some considerable time must elapse in the most favourable circumstances before internal developments are completed. In Roumania, for instance, the authorities are grappling with railway organisation and with the improvement of communications generally, and the programme in view will take a decade to complete. Yugoslavia also has the problem of communications to deal with, and this in her case too will be a lengthy process. It is, therefore improbable that until these programmes are much further advanced the question of an economic entente will become a question of practical politics.

Development of Cotton Production.

The report of the British Cotton Growing Association for 1928, extensive extracts from which are given elsewhere in these columns, covers a period in which the production of cotton in the Empire showed a falling off

BOSTON: The Athens Bankers' Corporation, 15 Kneeland St.

as compared with the previous year. Occasional setbacks such as this are inevitable in the case of this commodity, and the returns for the past season will once again show a pronounced upward movement. I have already referred in detail to developments in the Sudan, and the only part of the report to which I propose to refer is that dealing with the position in Iraq. It is satisfactory to know that the keenest interest is being taken in cotton in this country, and that the cultivation is already extending in many directions, and it is anticipated that provided conditions are favourable the 1929 crop will amount to 10,000 bales. That will not be much judged by the production in other regions, but when it is weighed against 5,200 bales for 1928 and 1,800 bales for 1927 it will be realised that it will constitute a very considerable advance.

Suez Canal Traffic.

The growth of the Suez Canal traffic in the last few years has been little short of remarkable. With the exception of 1926 there has been a consistent increase in the number of transits and in the tonnage of the vessels using the canal. The figures are worth giving. For 1924 the transits were 5,122, the net tonnage being 25,109,882. For 1925 the figures were 5,337 and 26,761,935, but in the following year there was a decline to 4,980 and 26,060,377. The upward movement was resumed in 1926 with 5,545 transits and a net tonnage of 28,962,048, while for the past year the figures were 6,084 and 31,905,902 respectively. Needless to say, British shipping is still easily first among the users of the canal. For the past year the figures for British shipping were 3,393 transits, the net tonnage being 18,124,074. Holland was second with 617 transits and a net tonnage of 3,329,628, while Germany, who has rapidly been improving her position in recent years was third with 611 transits and a net tonnage of 3,300,018. The P. and O. and British India group headed the shipping concerns using the canal last year with 3,213,000 tons, but it is interesting to note that the British Tanker Company which was second in the tonnage statistics with 2,583,000 was first in the number of transits with 508 against 483 for the P. and O. and British India group.

The New Turkish Tariff.

While precise details are not yet available with regard to the new Turkish tariff, which has just been passed by the Grand National Assembly at Angora, the particulars forthcoming are sufficient to show that it is quite as protectionist in character as was anticipated. There is to be an average increase of about 25 per cent. on nearly all imports, while, as was expected, the duties will be highest in the case of articles which are manufactured in Turkey. As the industries of Turkey are small at present the chief effect of the new tariff is likely to be a considerable increase in the cost of living in the country, a result which, it must be assumed, the Angora authorities have not taken into consideration. While the desire to promote home industries can provoke nothing but sympathy abroad it is obvious that years must elapse before Turkey is in a position to provide for herself the bare necessities of life in the way of clothing, etc. In the circumstances, it seems likely that she will have to pay a high price for her protectionist policy.

COMMENTATOR.

THE NEW ROUMANIAN MINING LAW.

The text is now available of the new Roumanian Mining Law, which modifies in important respects the Mining Law of 1924. The Law of 1924 was passed by the Liberal Government, who had three objects in view:—(1) the exploitation of the oil regions to the best advantage, (2) the development of the national economy by the strengthening and harmonising of the nation's productive powers, and (3) the protection of Roumania's interests in the international markets. As is well known, this Law did not produce the expected results. One need only cite in this connexion the discouragement of foreign capital, the result of which was that slow progress was made in the development of the proved oil areas of the country. It is significant that between June, 1924, and January 1, 1929, only 50 prospecting permits were granted. The reform of the Mining Law was one of the chief objects in the programme of the Maniu Administration, and no time has been lost in carrying out this project. The principal modifications which have been introduced are as follows:—(1) The rights of State ownership in the sub-soil are to be defined and the cadastral survey is to be reorganised. (2) There is to be an intensive development of mining activity with a view to assuring that the prospecting and exploration of the known fields shall be accompanied by the examination of the unexplored regions. The State will constitute a reserve of oil-bearing lands with a view to assuring the continuity of production and in order to delay indefinitely the process of exhaustion of sources of power. (3) Equal treatment for foreign and native capital. It is pointed out in this connexion that international economic relations require the free circulation of capital, which is the natural corollary of the free circulation of goods. Foreign companies are to have the right to select their chief officials without taking account of nationality. On the other hand, 75 per cent. of the technical, administrative, and clerical staff as well as the workers must be of Roumanian nationality. (4) Internal free trade and the protection of home industries. (5) The possession by the State of the pipe-lines.

The Mining Law of 1924 was divided into three parts:—

(1) The general principles for the exploitation of minerals, the fixing of a standard agreement between the mine and land owners, measure for the conservation and protection of mines and for the safety of the personnel, and the application of the Law.

(2) Special provisions for each group of substances according to their nature.

(3) Regulations regarding acquired rights.

The principal changes proposed may be summarised as follows:—

General Regulations.

(1) Exploration.—(a) Permission for exploration will be granted to individuals or companies after an examination of the technical and financial position. An exception is made in the case of oil, permission for the exploration for which will only be granted to companies.

(b) Land for exploration can only be granted in regions proclaimed explorable. In exceptional case permits for exploration can be extended beyond the maximum duration of six years.

(2) Concessions.—(a) Regions explored under exclusive permits and declared to be concessionable mineral properties will be divisible between the two parties; one part will belong to the explorer and the other will constitute the reserve to the State. (b) The explorer has the right to obtain a concession; he is, however, compelled to form a limited company to exploit the area within a year. If he does not form such a company the State has the right to dispose of the concession, reserving to the explorer the right of royalty and the right to compensation for expenses incurred.

(c) Companies of all kinds, Roumanian and foreign, who comply with the Roumanian laws can obtain concessions. (d) Concessions are granted by public tender.

(e) The payment of 15 per cent. of the net profits on

behalf of the workers is reduced to 5 per cent., and will be independent of the amounts paid according to the legislation in force. (f) When a concession is withdrawn the former concessionaire and his creditors have the right to compensation within the limit of the increased value acquired by the mine through investments of capital. (g) In place of the stipulation that producers of platinum should hand over to the State all the metal obtained, the State only retains the right to purchase the mineral at the ruling prices.

Areas of Concessions.

The area for coal mining has been enlarged from 100 to 200 hectares. For three points explored with a favourable result the explorer has the right to obtain a concession for an area of 200 hectares. The remainder, if the area of the concession is greater, forms the reserve of the concession. The duration of a concession is fixed at 50 years instead of from 30 to 50 years.

For petroleum the area of exploration is increased to 500 to 1,000 hectares instead of 100 to 400 hectares. This increase is necessary because it gives the explorer the prospect of selecting the most favourable points for examination. The conceded mining property, instead of being divided into areas or groups of areas, is divided into the area for the explorer and the reserve for the State. If the area declared as concessionable mining property is not greater than 200 hectares, half is granted to the explorer and the other half constitutes the reserve of the State. If it is greater, the explorer receives 25 per cent. of each 100 hectares over the 200 hectares, the rest belonging to the State.

The oil lands are divided into three categories :—

- (1) Proved or visible areas.
- (2) Probable areas.
- (3) Possible areas.

The lands of the first category constitute the reserve of the State. Those of the second category are situated near the existing prospecting, and pass into the first category as favourable results are obtained. The lands of the third category are areas situated at greater distances from prospecting; they are believed to be petroliferous, but they cannot be proved or visible until exploration work has been carried out. Exclusive permission for exploration can only be granted in respect of lands in the third category. Thus the continuity of oil production will be assured and its exhaustion delayed.

The areas reserved to the State are of two kinds :—

- (1) Reserves of duration.
- (2) Regional reserves.

Reserves of duration cannot be conceded except by a special law. But if they are threatened by the working of neighbouring areas they become regional reserves and can be conceded in the normal way. Explorable areas which are conceded from the State reserves will have an extent of 40 hectares and will be granted by public tender with the obligation to sink an exploration well in an unproved region indicated by the Ministry. If the well is sunk with favourable results the explorer has the right to an area of 30 hectares round the well.

Royalties will no longer be based on quarterly production, but on the production of the well on the following scale :—First thousand wagons, 12 per cent.; second, 15 per cent.; third, 17 per cent.; fourth, 19 per cent.; fifth, 21 per cent.; and so on until the royalty reaches 50 per cent., at which point it will remain fixed. This system will make the royalties proportionate to the production of each well, which will not inconvenience the concessionaires. The calculation is very simple and provides the possibility of a sure control.

The Credit Foncier D'Algerie et de Tunisie announces a gross dividend of 37.00 francs in respect of the year 1928, being the same as in the previous year. The net dividend payable per registered share is 33.95 francs, and bearer share 31.15 francs. As an interim dividend of 16.50 francs per share was paid in January, 1929, a final dividend of 17.45 francs per registered share and 14.65 francs per bearer share will be payable on July 1.

THE SITUATION IN YUGOSLAVIA.

An interesting survey of the position in Yugoslavia is given in the Monthly Review of the Anglo-International Bank, Ltd. We give the following extracts :—

The most important problem is the restoration of the country's financial and industrial prosperity. This will require not only a Herculean endeavour but also the additional fortuitism of a good harvest. Last year, owing to the drought, the maize crop failed, and for the first time for several years the country had a heavy deficit in its trade balance. The new Finance Minister has made a good start. For the first time probably since the inception of the new state an endeavour has been made to produce a properly balanced budget. He is doing his best to expedite the stabilisation of the dinar, without which there is little prospect of the country obtaining the foreign loan which it requires for its financial consolidation. More important still, he has succeeded in discounting with the Rothschild group of London banks the second and third instalments of the Swedish Match Loan. This will provide him with the necessary cash to settle with the numerous State creditors whose accounts have long been overdue and whose payment will increase the purchasing power of the home market. It may also be regarded as a mark of confidence on the part of the London banks, and should go far towards establishing the credit of the country abroad.

The future of Yugoslavia, however, depends upon a flourishing agriculture. One good harvest would do more to restore prosperity than the most thorough system of reform. This year the country has suffered from an exceptionally hard winter. It is too early yet to say what effect this may have on this year's crops, but it is earnestly to be hoped that the harvest will at any rate be above the average. The new administration is fully conscious of the need of assisting agricultural development. Hitherto the methods employed in agricultural production have been those of the Middle Ages, and owing to the exorbitant credit rates the peasants have not been in a position to improve their implements. In order to remedy this defect, the Government have introduced a reform which may have far-reaching effects. It has established a new Bank of Agriculture which has many of the advantages of a State institution and whose chief purpose will be to furnish cheap seasonal credits to the peasantry. The new bank will enjoy certain taxation privileges. The Government is supplying 40 per cent. of the capital and guarantees not only all deposits but also mortgage bonds issued by the new Bank. In addition, it guarantees a minimum dividend of 6 per cent.. These measures prove that the new administration is making serious efforts to put its house in order. Given a good harvest, these efforts should soon produce the desired results.

Naturally, there are many uncertain factors in the new situation. The Yugoslavs are a proud and spirited people who have never taken kindly to dictatorships, and among the disbanded politicians there are elements of discontent. On the other hand, the country has no wish to return to the political chaos of the period before the dictatorship. The King himself enjoys a wide popularity, and in all sections of his Kingdom there is a generous belief in his fairness and impartiality. Provided that he can continue to hold the balance equably between Serb and

Croat and at the same time press on with those financial and international reforms which are essential for the consolidation of the new Kingdom, there is no reason why the new régime should not be successful or why Yugoslavia with its vast undeveloped resources should not enjoy a greater prosperity than she has hitherto known.

CZECHOSLOVAKIA AND THE BALKANS.

An Economic Entente.

The question of establishing a working basis for what is termed an economic entente among the smaller Central European powers, i.e., Czechoslovakia, Roumania and Yugoslavia in the first place is constantly to the fore, and preliminary discussions on the subject have already taken place (says the British Commercial Secretary at Prague, Mr. H. Kershaw, O.B.E., in his report on the economic situation in Czechoslovakia as at March last). Such a scheme is obviously of greater concern to Czechoslovakia, as a highly developed manufacturing country than to any other partner. But the subject bristles with difficulties, the chief of which is conflicting agricultural demands; whilst of scarcely less importance is the logical necessity of including Poland, Austria and Hungary in any pact of this kind. Hence suggestions are also being constantly brought forward for the formation of a Zollverein designed to embrace all the countries referred to. There is no doubt about the benefit of any such international arrangements to Czechoslovakia. Any reduction or removal of neighbouring fiscal barriers would ease the flow of her manufactures into adjoining countries and immediately increase her foreign markets. But most of the other States, being essentially agricultural, are naturally reluctant to join any comprehensive scheme without compensatory advantages for their land products, and their attitude is likewise affected by a desire to occupy a larger place themselves in Europe's industrial system. The obstacles are consequently apparent and very real. Moreover, the agrarian parties in Czechoslovakia not unnaturally oppose the granting to border countries of any customs alleviations on agricultural produce which will tend to increase competition or depress home prices. The delay in concluding commercial treaties with such countries as Yugoslavia is principally due to the difficulty inherent in reconciling the conflicting requirements of a combined industrial and agricultural country on the one side and a predominantly agricultural country on the other. Nor are there as yet any convincing signs that Austria and Hungary are willing to be drawn into a Central European Zollverein—especially Hungary, as she is exhibiting keenness to compete in the ranks of manufacturing countries and to protect her industries. In spite of Czechoslovakia's interests in these tentative efforts to promote in central and south-east Europe an improved common understanding in the economic sphere, her own industries are established on too large a scale to permit

of her waiting upon events; hence the reason why so many Czechoslovak concerns are establishing or participating in works in neighbouring States. This country is a very robust member of the Central European confraternity, and success in maintaining her industrial supremacy will be commensurate with her ability to pursue a wise and practical policy of reciprocity with neighbouring States. In other words, having regard to the sharper competition which will probably have to be faced from the west Czechoslovakia may have to look more and more to the east for expanding markets.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date May 31:—

Currants.

The Whitsuntide holiday coming in mid-May caused a considerable curtailment of business. Stocks are light and the selection poor. This accounts to some extent for the lack of interest shown, which is practically limited to odd parcels of the finer grades of bold fruit. Another factor bearing on the situation is that the arrival of new Australian currants is engaging the attention of buyers. Little trade is taking place, but values are maintained. Sales comprise:—Pyrgos, 46s.; Amalias and Patras, 46s. 6d. to 47s. 6d.; Zante, 46s. to 47s.; Gulf, 48s. to 50s.; Vostizza, 49s. to 56s. up to 60s. for a few special lots. The arrivals were s.s. Bantria, Eastbury, and Oporto, with insignificant quantities. We close the month with a feeling of thankfulness that the disturbance created by the General Election is over, and that those whose time has been so much taken up with politics will be free to resume their normal occupations. Quotations:—Pyrgos, 46s.; Amalias and Patras, 46s. 6d. to 47s. 6d.; Gulf, 48s. to 50s.; Vostizza, 49s. to 58s.

Sultanas.

Smyrna.—The few remaining lots are being gradually cleared at advancing prices, sales of good quality at 43s. 6d. to 48s. showing a rise of several shillings. Latest reports are that the new crop is progressing satisfactorily, and offers at 39s. to 40s. c.i.f. good average are reported.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, June 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Anchoria for Calcutta (Birkenhead, June 11); s.s. Manaar for Calcutta (Birkenhead, June 22).

Bibby Line.—S.s. Staffordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, June 12).

British India Line.—S.s. Dumana for Bombay and Karachi (London, June 7); s.s. Mantola for Colombo, Madras, and Calcutta (London, June 15).

Cunard Line.—S.s. Bactria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Corfu, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, and Gruz if sufficient inducement (Liverpool June 8, Swansea June 11); s.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, and Gruz if sufficient inducement (Liverpool July 6, Swansea July 9); s.s. Brescia for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, July 27).

Johnston Line.—S.s. Dromore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 15); s.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 9).

P. and O. Line.—S.s. Nagoya for Calcutta (London, June 21); s.s. Kaisar-i-Hind for Bombay (London, June 21).

Prince Line.—S.s. Stuart Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Tripoli, Alexandretta, Mersina, and Cyprus (London, June 8); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, June 19); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, June 29).

Ellerman and Papayanni Lines.—S.s. Maronian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 8); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool June 22, Swansea June 27); s.s. Oporto for Gibraltar*, Malta*, Algiers*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool June 27, Swansea* June 27); s.s. Roumelian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 29); s.s. Mardinian for Gibraltar*, Algiers*, Malta, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool July 20, Swansea* July 29). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

Motors and Motoring.

(By Our Motoring Correspondent)

Road Accidents.

There has been a considerable increase of late in the number of road accidents, and critics have begun to shower blame, indiscriminately, on motor coach and other commercial vehicle drivers. Personally, I have had more than usual experience of the work of motor omnibus drivers, particularly in the West Country, where the roads are not unduly wide. Yet I can testify that only on one occasion, near Simon's Yat, have I seen any lack of consideration for other road users on the part of the drivers of coaches or omnibuses. These quiet, experienced drivers are all one could wish; they keep well in to their own side of the road, and seem to keep one eye on the mirror to see if anyone wants to pass. The younger drivers nearly all seem to have some grievance against other earth dwellers.

Inconsiderate Drivers.

What about inconsiderate car drivers? So many writers in the lay Press have referred to this so much of late that one has almost grown tired of the subject. But I would like to quote some remarks made by Mr. S. F. Edge apropos of a fuel shortage: "In any case, if we do experience a real shortage of fuel, some good may come to it, if it only serves to debar from the use of our roads some of the really dangerous drivers one meets." After saying that there is no getting away from the fact that there are to-day more dangerously inconsiderate road-users than ever there were previously from the cyclist who apparently has never been taught the elements of the unwritten rule of the road, to the drivers of lorries who go along on the central crown of the road with never a look or a thought for anybody who may be overtaking them, he continued:

"Reverting to dangerously inconsiderate drivers, how can we deal with them? They may be able to pass tests of mere ability to drive a car, although I have often had misgivings on this point latterly. But by emerging suddenly into main roads from thoroughfares of secondary importance, or taking corners on their wrong sides, they

constitute themselves a terrible menace to the safety of other road-users, and it seems to me that we shall never get our roads really safe to use until definite rules are laid down in a statute, those rules to be applied to all users of our roads, from walkers upwards.

"Until road manners are a matter of law, instead merely of usage and common observance by decent people, we shall never have our roads really safe to the degree which road-users are entitled to expect. I often think that if some of our motoring organisations would draw up and publish for criticism or discussion their ideal codes of road manners we might eventually get such a statute, and thus make the use of our roads safe for all. This they certainly are not at present, as one has only to do a very little motoring in any part of the country to learn."

Personally speaking, I am rather averse to making road-users courteous by Act of Parliament; I feel that as much and more can be done by example, precept, and moral suasion as by legislation, but at the same time I quite agree with Mr. Edge that the motoring organisations might draw up such a code as suggested. Of course, something of the kind may have been done. If so, I can only say that it seems to have come to the notice of very few drivers.

Traffic Regulation.

Not the least irritating of the many unsatisfactory conditions under which motorists have to drive their cars in this country, says the *Autocar*, is that nothing akin to a uniform, country-wide system of traffic warning and regulation exists. The law does not specify or set and limit the number of signals to be used by the traffic authorities on duty everywhere. In this, as in other matters, the driver is supposed to understand and act upon what is known as "the general custom," or, more specifically, the particular practice in vogue in a particular locality. He gets into quite undeserved trouble when he fails to guess correctly the meaning of the different traffic signals he receives.

By contrast the French Permanent Committee of Traffic has decided to install a uniform system of colour signals in the streets throughout the Republic where it is necessary to employ means for controlling motor vehicle drivers. A red signal will mean stop; a green one will inform drivers that they must go slowly, and a blue light will warn them that special regulations are in force in that particular district. The instructions will be designs and not inscriptions. That will have the incidental advantage that a driver who does not know the language will nevertheless be able to learn the meaning of the signals as quickly as a native, and every whit as accurately. But this does not go far enough. What is needed in this country is a uniform series of signals for the police or any other officials regulating traffic from time to time, a uniform series of road or traffic warning signs, a uniform system of marking the course drivers are to take at road junctions, and so on. Such a complete scheme should be universally applicable, should employ the minimum variety of signs and directions, and should be enforced in synchronism with a regulation to the effect that nothing except such signs or signals is to be recognised by drivers of road vehicles.

The Egyptian State Railways are to spend £300,000 on the electrification of the Cairo-Helwan line.

The Lancashire Cotton Corporation has appointed two new directors, Mr. J. Cecil Finlay and Colonel Alan C. Tod. Mr. Finlay is President of the Liverpool Cotton Association and a partner in the firm of Hibbert, Finlay, and Hood, cotton merchants and brokers, of Liverpool. Colonel Tod is head, at Liverpool, of Baring Brothers and Co., Ltd., bankers.

IRRIGATION AND HEALTH.

Importance of Protective Measures.

The effects of irrigation on human health are discussed in a report, issued by the Empire Marketing Board (*Schistosomiasis and Malaria in Relation to Irrigation*. J. F. C. Haslam, M.C., M.D., M.R.C.P.Ed., D.P.H., Director of Library Services, London School of Hygiene and Tropical Medicine; Assistant Director, Bureau of Hygiene and Tropical Diseases. E.M.B.17 Stationery Office 1s. 3d. net.) "This report, states Major Walter Elliot, Chairman of the Research Grants Committee of the Empire Marketing Board, in the Preface, "has been prepared by Dr. Haslam for the Irrigation Sub-Committee of the Committee of Civil Research and is intended rather as a convenient summary of practical lessons to be drawn from existing knowledge than as an original contribution to medical literature." Nearly one-third of the earth's surface receives less than ten inches of rain annually, and over this area irrigation is an essential pre-requisite for crop production. It is of particular importance within the Empire, large areas of which are almost entirely dependent on the working of vast irrigation schemes. In 1920 an estimate placed the proportion of land cultivated under irrigation in the world at 7 per cent., and since then thousands of square miles have been added to this total.

Unfortunately, however, this increase of fertility has brought several undesirable factors in its wake. Irrigation is followed by the spread of two serious diseases: schistosomiasis and malaria. The agents of these sicknesses pass certain stages of their life-histories in water, and they have increased and multiplied in the new areas made available for them by the conversion of arid desert into well-watered fields and convenient canals. Both schistosomiasis and malaria are caused by living parasites, and in both cases the parasite, while passing part of its history in man, requires a second or intermediate animal host to complete its development. While the diseases are quite distinct, neither can spread without the agency of water.

Schistosomiasis is caused by a worm, or fluke, which lives in the small veins; and its eggs, which are hard shelled, and (in the case of two varieties) spiked, are mainly responsible for the serious effects of the disease. There is evidence of the occurrence of schistosomiasis in mummies of the period 1250-1000 B.C. Griesinger wrote in 1854, that it was responsible for 25 per cent. of all deaths in Egypt; and, although investigators now think this estimate too high, Ibrahim, in 1927 stated that "it is undermining the constitution of the vast majority of the population, and, further, that "85 per cent. of the agricultural population and 54 per cent. of the proprietors and artisans are suffering from infection with *Schistosoma hæmatobium* . . . it can safely be said that all hands engaged in farming are infected." Agricultural workers are particularly liable to contract schistosomiasis because they are continually in contact with water, the medium through which infection takes place. When the eggs of the worm reach the water, they immediately hatch out into swimming embryos, which, if they are to survive, must find a suitable water snail to act as an intermediate host within about 24 hours. They develop in the body of the snail, and are presently discharged in great numbers into the water. They must then, within 48 hours, gain entry into man. The cercariæ, as they are called, can penetrate their human host by burrowing through any part of his skin which is immersed in the water, or through the mucous membrane of the mouth during drinking.

There are, therefore, three factors necessary for the spread of the disease: contamination of the water, presence of the snails, and frequent working in, or drinking of, untreated water. All three conditions are, to a large extent, inevitable. Dr. Haslam states in his report that "the circumstances being what they are, modern irriga-

tion can hardly fail to encourage and increase the spread of schistosomiasis. The greater the area irrigated, the more numerous the breeding grounds for snails, the greater the infective zone, and the greater the number of persons receiving and then passing on infection." It is, nevertheless, possible to check the spread of schistosomiasis to some extent by tackling the first two of these factors. Medical science has recently found a way to treat the disease and to reduce the passing of infection; and, although this entails a fairly lengthy quarantine period, it has already met with considerable success. At present, perhaps, the most hopeful way of keeping the disease in check is to destroy the snails without interfering with crop production. An effective method of attack is to dry up the small canals and drains at regular intervals by shutting off the water. This practice is harmless to most crops—in fact it may even be beneficial—and it kills large quantities of snails. Another possible method is to destroy the intermediary hosts by dissolving small quantities of chemicals such as copper sulphate in the water.

The importance of malaria in tropical and sub-tropical parts of the Empire needs no emphasis. As is well known, the intermediate host of the minute protozoa which cause the disease in man is the anopheles genus of mosquito. The female, which alone is capable of spreading infection, lays her eggs in water, and the larvæ, known as "wigglers" or "darters," are entirely aquatic. The provision of more water for agricultural purposes may mean the provision of more breeding grounds for anopheles mosquitoes. Various methods of reducing this danger are dealt with in the report; but Dr. Haslam points out that reduction of malaria is by no means the same thing as reduction of the numbers of anopheles. In some cases there has even been an increase in the numbers of anopheles and a decrease in malaria, a state of affairs known as "anophelism without malaria" which has recently attracted much attention, especially in France and Italy. In the latter country malaria has been checked by schemes of "bonification," which consist, essentially, in improving the land so as to enable the population to raise its standard of living and housing, and thus increase its resistance to malaria. The terrible toll levied by this disease in the past in tropical labour camps may have been due to the close association of large numbers of coolies possessing a low standard of living, and dwelling in crowded and unhealthy conditions, as much as the facilities provided by irrigation works for the breeding of anopheles.

Conditions vary in every country, and steps taken to prevent the spread of malaria in one area may prove ineffective in another, where the habits of anopheles or the resistance of the inhabitants are different. "The golden rule," Dr. Haslam concludes, "is that no irrigation scheme should be carried out in a malarious, or potentially malarious, country, without the most careful preliminary survey by, and continuous guidance of, an experienced malariologist."

A survey is being made on the Assam-Bengal Railway for a line from Jinardi to Aralia, 24 miles long.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended May 10 amounted to £E7,775, making the total from April 1 £E32,998.

The traffic receipts of the South Indian Railway Company for the week ended May 4 amounted to Rs.12,92,526, making the total from April 1 Rs.62,80,606.

The numbers are announced of 667 Four per Cent. Egyptian Government Irrigation Trust Certificates which have been drawn for redemption on July 1, 1929.

The Hellenic Electric Railways Company announce that the passengers carried in April numbered 2,885,133, making the total from January 1 to April 30 10,915,449, an increase of 533,454 on the corresponding four months of last year. The gross receipts for the four months were £73,183, an increase of £2,896.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 4.

The choice of a Thursday for Polling Day must be regarded as fortunate for the City since the full results appeared too late to effect last week's trading and the week-end provided an opportunity for their careful consideration. During the declarations on Friday dealers were unwilling to quote prices. A general easier tendency was apparent on the early announcement of Labour gains, but the markets were disposed to wait for the full results.

In the money market the effects of the Election results were less pronounced, but anxiety was felt at somewhat heavy sales of sterling which caused a fresh weakness in the New York Exchange. This is very regrettable, and investors should not yield to apprehensions but should calmly await developments. The wise policy of considering the intrinsic values of securities, regarding political factors as of secondary importance, should not be departed from. Similar conditions obtained, it may be recalled, in 1923 when Labour took office. The reaction in the Stock Markets proved temporary then, and there is no reason as yet to suppose, whatever has happened, that it will not do so again.

Tea Outlook.

Most tea companies showed reduced earnings for last year, and their troubles can be summed up in the word, over-production. Crops proved to be very heavy, and with an abundance of tea available market prices dropped so heavily that for growers the fall in price outweighed the advantage of having more tea for sale. The case of four companies of the Finlay group may be considered typical. Their reports which appeared a week ago showed that in each case crops were larger but prices fell by from 1½d. to 2½d. per lb., and profits and dividends were lower in all four cases. Whether the removal of the tea duties will do much to redress this state of affairs is uncertain. It is unlikely that consumption in this country will increase considerably as a result of a lower price, although even if people do not drink more tea there may be a small increase in consumption resulting from waste due to carelessness in handling a cheaper article. Foreign teas stand to gain more than British teas by the removal of the duty, since with the elimination of the preferential difference they are now 4d. per lb. cheaper and the British teas 3½d. cheaper, and this should give a fillip to Java teas since they are brought to a competitive level with Indian and Ceylon teas. The position, however, is, and will remain for some time, one of considerable uncertainty. With the abolition of the duties valuable statistics of stocks disappear also. The trade is endeavouring to continue the statistics which it is hoped will cover ninety per cent. of the stocks, but it is too early to say whether this laudable attempt will succeed. In the circumstances future figures and prognostications, based thereon should be treated with reserve.

Rhodesian Redivivus.

While politics, metal prices, and other adverse factors have combined to bring business in other mining shares on the Stock Exchange almost to a standstill, a fresh "boomlet" has this week developed in Northern Rho-

desian copper descriptions. In the main this may be attributed to a rich discovery on the part of one of the principal companies and to a highly optimistic speech by one of the leaders in Rhodesian Mining. The shares of the company in question—the Rhodesian Congo Borders—have, in fact, gone well over £9, a record figure compared with a highest of £2 2s. 6d. and a lowest of 16s. 3d. last year. The concern has disposed of part of its property to the N'Changa Copper Mines, but still holds an extensive area embodying great possibilities. There is reason to believe, however, that most of the recent buying has been on behalf of powerful interests desirous of obtaining control. Another share to display an even more sensational advance is the Southern Rhodesian Base Metals. In this case the fireworks are said to have been mainly due to technical market conditions arising out of option transactions. Attempts by professional operators to revive interest in this market have also contributed to all these movements, and the general opinion in well-informed circles has not changed from that which we have often expressed here. The area in question undoubtedly contains enormous possibilities, but market prices continue to discount the future heavily. For the investor who has no inside knowledge an interest in these concerns at the present time cannot but be extremely speculative.

Boots Advancing Profits.

For some time the annual accounts of Boots Pure Drug Company have revealed increasingly satisfactory results. The results of the financial year just ended show net profits at £750,200 a gain of six per cent. over the profits of 1927-8. The usual substantial allocations to the various reserve funds are maintained or increased and general reserve now stands at £900,000. Ordinary shareholders who received 24 per cent. in 1927, and 27½ per cent. in 1928 now receive 29 per cent. and since the bonus of 5 per cent., which this includes, is now paid tax free the full current distribution is really 30¼ per cent. Capital outlay during the year amounted to £107,300, mainly on new plant at the Beeston factory which continues to grow.

The increased trading of the company was mainly due to the extension of its retail shops, most of which are now on a profit earning basis. The severe winter and the epidemics earlier in the year, however unwelcome to other trades, were not unprofitable to a business of this nature. The retail business has extended not merely by the new shops which have been opened, but by the increase in the variety of goods sold by them. This extension of business, coupled with increased manufacturing resources, is enabling this firm to advance in face of all competition. The financial resources of the company and its technical organisation is also considerably strengthened by its important overseas connexion with similar business, notably in the United States. On the current dividend the Ordinary shares return £4 8s. per cent.

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms. The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfer on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — SOFIA — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all re-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

EMPIRE COTTON PRODUCTION IN 1928.

An interesting survey of developments in the various cotton growing regions in 1928 is given in the annual report of the British Cotton Growing Association. We give the following extracts:—

Despite another year of depression in the Lancashire cotton trade, when internal competition has been more severe than ever, it will be satisfactory to the shareholders to know that the production of cotton in many parts of the Empire has been maintained.

With the continued depression in the cotton trade of this country the demand for cotton of outside growths during the year ended July 31 last has been rather disappointing, in comparison with the previous season, and this has been especially noticeable in the case of East African. The sales amounted to 642,690 bales, as compared with 878,440 bales in 1927, made up as follows:—Brazilian, 67,500; Peruvian, 320,170; Sudan, 108,750; West Indian, 9,440; East African, 39,000; South African, 8,940; West African, 38,370; Australian, 1,650; East Indian, 39,950; China, 560; sundries, 8,360; total, 642,690 bales.

The total number of bales and the value of the cotton which has been dealt with by the Association during the last six years is as follows:—

Year.	Bales.	Value £.
1923	54,606 ...	1,588,480
1924	59,583 ...	1,922,097
1925	84,320 ...	2,502,967
1926	135,522 ...	3,368,740
1927	171,600 ...	5,012,084
1928	124,182 ...	4,160,049

During the period reviewed by this report the resources of the Association's Engineering Department have not been called upon for the design and erection of any large work of a new character, the principal demands being for baling materials, sundry stores, and parts for renewal purposes. Ample provision of additional ginning facilities in the fields of the Empire in which the Association is chiefly interested was made in the years 1924-1926, and the ginning and baling facilities in the various territories were so increased during the period stated by the erection of new ginneries, and by additions to existing plants, that it would appear that adequate provision has been made for some time ahead for dealing with any normal increase in the size of the crops grown in these areas. The new type of ginneries erected lately in Northern Nigeria and in the Punjab continue to give outputs and results which are highly satisfactory.

The value of buildings, machinery, stores, etc., supplied during the year to ginneries, planters, and others engaged in the cultivation of cotton amounted to £52,164, as compared with £58,909 in 1927, £143,108 in 1926, and £170,783 in 1925.

The commission earned during 1928 on sales of cotton and cotton seed, and on supplies of stores amounted to £20,968, which compares with £30,525 in 1927 and £19,179 in 1926. Bank and other interest, including interest on money advanced for financing cotton, etc., amounted to £10,072 11s. 10d., against £11,648 16s. 10d. in 1927. Receipts for dividends on shares in cotton growing companies were £6,988, against £8,147 in 1927. After providing for depreciation and for income tax, the accounts show a net profit for the year of £19,128 7s. 10d., which brings the excess of income over expenditure to £440,692 6s. 3d.

The following extracts are taken from reports dealing with progress in the various cotton-growing regions:—

India.

The total area under cotton on the Demonstration Farm of the B.C.G.A. (Punjab), Ltd., Khanewal, for the 1927-28 season, was 2,495 acres, and up to the end of September, 1927, the crop promised well, but afterwards it was adversely affected for some unknown reason which caused the leaves to redden. Some of the plants became completely withered, and a high percentage of the bolls opened

prematurely. Most of the seed in these bolls did not properly develop, and the staple was extremely weak, and the yield of cotton per acre was materially affected for the second year in succession. In the seasons 1919-20, 1921-22, and again in 1926-27 this apparent disease affected the cotton crop over the greater part of the Punjab, whereas in the 1927-28 season the affected crops were confined to a zone which traverses a part of the Lower Bari Doab Colony, in which is included the Khanewal Farm.

The heaviest yields of cotton on this farm were obtained from the short-stapled Indian variety "Mollisoni," which yielded 888 lb. of seed cotton per acre, as compared with 422 lb. for the 289F variety and 277 lb. for the 4F, the two latter varieties being Punjab-American selections. The yields are the lowest recorded on the farm since it was first operated in the 1921-22 season, and the farm receipts have been considerably reduced on account of this cotton "blight." On the other estates leased or managed by the B.C.G.A. (Punjab), Ltd., the Punjab-American varieties proved their superiority over the Indian types under the seasonal conditions which obtained in 1927-28.

In a large scale manurial experiment with sulphate of ammonia as a manure for cotton, when applied at the rate of 60 lb. per acre to the plants after they had attained a height of about 18 inches on ninety-three scattered "lines of 2½ acres each, it was found that the manure gave an average net profit of Rs.10/5/- per acre in spite of exceptionally low yields of all varieties in the 1927-28 season.

The customary sowing season for cotton on the Khanewal Farm extends from the fourth week in April to the first week in June. An analysis of yields of individual "squares" for the 1927-28 season shows that without exception the yields increased steadily with progressively late sown crops, and with all these cotton varieties the latest sown gave more than twice the yield of the earliest sown; these remarks apply in particular to the

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to
the Secretary

WESTMINSTER BANK
LIMITED
HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

past season's crops, and the behaviour of the crop in this connexion may be incidental to the "blight" with which the early sown crop was affected to a greater extent than the late sown crop. A close watch is being kept on the behaviour of the 1928-29 crop in this respect, as in the normal season it is possible that the early sown crop may yield better than the late sown.

Though the problem of adequate water supply has presented no serious difficulties during the year, it continues to demand the constant vigilance of the staff at Khanewal, and a proposal is under consideration to pay for the water supply on a volumetric basis, which will necessitate various modifications in the existing system of distribution.

In connexion with the other properties controlled by the Association, good progress has been made in clearing dense jungle at the pumping station at Shahpur, and it is expected that with reasonable luck regarding the water supply in the cold weather season a fair return may be expected before the expiry of the lease.

The practice of mixing the shorter Punjab-American variety 4F with Desi (Indian) types of cotton has increased appreciably during the year, and has now become a fairly common practice throughout the irrigated belt. There is a specific demand for these mixed types, more especially for export purposes to the Continent and Japan. The matter is receiving the earnest attention of the Indian Central Cotton Committee of the Government, and various proposals have been under consideration for making illegal the mixing of these types of cotton, but so far none of the proposals have been deemed to be practicable, and the solution of the problem appears to be more with the trade itself, especially the export section, than with legislation designed to control up-country dealers.

In general the year has been a record of progress, but the greatly diminished yields of cotton on all estates operated by the B.C.G.A. (Punjab) Limited, together with the very keen competition amongst ginning factory owners for the resulting diminished stock of cotton, have combined to affect adversely both the farming and factory operations of the company. It is important that the Government, through its technical experts, should ascertain the cause and the remedy of this recurrent "blight" to which the cotton crop is subject. The Khanewal Farm continues to serve its main function in propagating the best types of cotton and wheat for seed distribution amongst Zemindars in the Colony areas. The expert staff on the Demonstration Farm at Khanewal have been

engaged in investigating the primary cause of leaf shedding, premature opening of bolls, the comparatively poor quality of the cotton and low yields, and are definitely of the opinion that white fly is the primary cause, and inquiries are also being made by the Agricultural Department as to the most effective and economic measures to be adopted to control this pest.

India now produces over two million bales of stapled cotton, and this quantity is increasing annually, and the country is more than self-supporting in the matter of better quality cotton for mills and there is no need for the import of American or African cottons except for those mills which specialise in very high counts. The Committee are making a careful study of the financing and preparation of the crops, and maintain the closest watch over the working of the Cotton Transport Act and the Cotton Ginning and Pressing Factories Act, also the safeguarding of the crop from deterioration at the hands of unscrupulous merchants: they also safeguard the ryot a full price for his production and endeavour to supply the cotton market with good staple.

The Sudan.

For the 1928-29 season 131,351 feddans were planted with cotton in the Gezira, and the latest reports indicate that on the whole the crop is quite promising. Considerable progress has been made with the development work for the extension areas, and it is hoped to have the development canalisation and buildings for the whole concession area of 465,000 feddans completed by July 1929, and provided the Government are able to complete their part of the undertaking by supplying the necessary water for this area, 155,000 feddans should be under cotton cultivation during the 1929-30 season.

The transfer to the Sudan Government of the administration of cotton cultivation in the Kassala area has been effected. The crop in the Gash Delta for 1928 was an exceptionally good one, amounting to 65,568 kantars from approximately 25,000 feddans, which compares with 54,128 kantars from 26,100 feddans for the previous season, and the quality of the cotton was most highly appreciated by spinners and realised excellent prices. The reports for the 1928-29 crop are also most promising, and it is anticipated that the production will show a further increase.

The production of cotton in the Tokar area of the Red Sea Province for the 1927-28 season was 53,454 kantars, showing a substantial increase over the previous season's crop of 32,100 kantars, and the outlook for the 1928-29 crop is promising.

The total quantity of cotton produced during the year in the Sudan was equivalent to 126.115 bales of 400 lb. each, assuming 95 lb. of lint per kantar for Sakel, and 91 lb. for American, viz., 471,769 kantars of Sakel and 41,492 kantars of American grown under irrigation, in addition to 20,354 kantars of rain-grown American. There is every reason to believe that the setback which the industry received during the year is only temporary, and the Council have every confidence that cotton production will show considerable expansion in the Sudan in the next few years.

Iraq.

For the year under review there has been a notable and gratifying increase in production, the out-turn being 5,200 bales against 1,800 for 1927. Weather conditions on the whole were good and favourable to cotton. Ninety per cent. of the crop was grown on plantations irrigated by pumps, the results obtained by this system being superior to dependence on water in the flow canals. A large number of pumping engines are now in use, the majority being of British make, and many new installations are being put down.

Keen interest is being taken in all agricultural work, particularly in cotton, the cultivation of which is extending many directions. The main growing areas are

ADVERTISING IN

"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of *all* classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

Write for advertisement rates to:

The Manager, "The Near East and India," 170 Strand,
London, W.C.2

situated in and between the Tigris and the Diala Rivers, and satisfactory progress has also taken place in the Euphrates area around Hillah and Diwaniyah. Small supplies have reached the Association from as far afield as Kirkuk and Mosul. Most of the cotton is produced by peasant farmers on small plots, but many of the wealthier inhabitants own estates of considerable dimensions. H.M. King Faisal is an enthusiast for cotton, and sets an excellent example to his subjects; on one of his farms he had 400 acres in cotton. Some of the yields obtained are not surpassed by the best irrigated lands in Egypt, but such results are obtained only on those estates which have an ample supply of water, mechanical cultivation, and good management, but on the whole the return to the grower is satisfactory.

Important factors contributing to the progress made are:—

1. Stability of Government under the mandatory occupation affording the farmers that security necessary to enable them to pursue their occupations in peace.
2. The facilities created by the Association for the purchase of any cotton grown.
3. The control and distribution of seed being in the hands of a responsible body, in this case the Association.

The latter entails a great deal of organisation and supervision, and proof of the efficiency of the methods employed is the practical elimination of the Native cotton by the substitution of "Mesowhite," within a few years. The Agricultural Department of Iraq have by propagation and selection produced improved strains of "Mesowhite" showing a better lint percentage. The selections are now being multiplied and will be distributed in chosen areas during the coming season. In the Association's Ginnery at Baghdad, which is the only one in Iraq, the ginning and baling has been carried out expeditiously and the work has gone through without a hitch. Each successive year adds to the farmers' knowledge, and with improvement in methods and a consequent reduction in relative costs (provided locusts can be kept down and the weather conditions are favourable) a crop of 10,000 bales is confidently predicted for 1929.

Yugoslavia's exports of timber in March amounted to 140,000,000 dinars out of a total value of exports of 503,000,000 dinars.

The minimum paid-up capital of new insurance companies founded in Roumania has been fixed at 10,000,000 lei.

The net profits for 1928 of the Steaua Romana Company amounted to 66,000,000 lei, as compared with 33,000,000 lei for the previous year. This amount is being carried forward.

NEWS FROM ALL SOURCES.

M. Molloff, Bulgarian Minister of Finance, has left for Paris to attend the sitting of the League of Nations Finance Committee.

Negotiations are reported to be in progress between the Yugoslav Government and a Swedish concern with a view to leasing the Yugoslav telephone system.

The Ottoman Bank recommends a dividend of 5s. per share on the £5,000,000 paid-up £10 share capital. In Paris this dividend will be paid without deduction of taxes.

The l'Union Foncier d'Egypte announces that in accordance with a decision taken at the ordinary general meeting held in Alexandria, a dividend of 3s. per share will be payable on or after June 3 against presentation of Coupon No. 11 at the offices of the Banque Belge pour l'Etranger S.A., 4, Bishopsgate, E.C.2.

The report of the Anglo-American Nile and Tourist Company for the year ended March 31 states that the sum of £E4,621 has been spent on maintenance, and depreciation has been fixed at £E2,500 for the year. After providing for depreciation and maintenance, the profit was £E12,446. The directors proposed a 5 per cent. dividend, placing to reserve £E613. With the amount brought forward of £E48, the total available is £E5,017, which is absorbed by P.T.15½ supplementary dividend, against P.T.21½ last year.

March of 1929 has been the busiest for Greece as compared with the corresponding month of the last five years (says the current report of Hambros Bank, Ltd.). Exports are making a good showing, especially tobacco, wines, and oils. Imports, on the other hand, are appreciably reduced owing to the development of local industries, and the declining consumption due to a lower purchasing power of the public, and high burdens of local and national taxation, a continuously rising price level, scarcity of capital, and the elimination of easy profits under abnormal conditions. The balance of trade for the first three months of 1929 shows an improvement.

The attention of persons interested in trade with Turkey is drawn to the fact that imported goods cannot be retained in Customs depôts for more than one year, and travellers' effects cannot be retained therein for more than three months. Goods may, however, be retained in transit stores for three years. On the expiration of the permitted periods, proprietors lose all rights on the goods in question. Proprietors of goods which have remained in Customs depôts for a period approaching the statutory time limit should, therefore, consider the advisability of transferring them to transit stores, where they may remain for three years. The Commercial Secretary to the British Embassy at Constantinople reports that the Chambre Maritime des Compagnies de Navigation Etrangères at that port has been informed by the Director of the Constantinople Customs that shipping agencies may, on their own initiative, transfer from Customs depôts to transit stores goods which have remained unclaimed for almost the statutory period of a year.

The report of the Egyptian Delta Land and Investment Company for 1928 states that, though the completed sales of building plots at Meadi show an apparent decrease compared with sales completed during 1927, yet the demand was fully maintained, but owing to the number of plots, the sale of which had been agreed with buyers but not actually completed until after the date of closing the accounts, an apparent decrease is shown. On the other hand, the reserve of profit on land sales has increased by £E8,353, as against an increase of only £E2,451 of the preceding year. The reason for this is that the directors adhere strictly to the principle established since the formation of the company not to bring into the account any profit until after it has been actually encashed. Sales and inquiries since the end of 1928 indicate that progress continues to be maintained. The profit on the year amounts to £E18,530. The directors recommended a dividend of 1s. 3d. per share, against 1s., leaving £E12,021 to be carried forward, against £E13,798 brought in from 1927, when the net profit was £E17,557.

At a cost of a halfpenny a week Fort Dunlop workers can now recuperate after an illness by having a fortnight's holiday at the new Dunlop convalescent home, which was opened on June 2 at Rhos-on-Sea, near Colwyn Bay, by Lady Beharrell, wife of Sir George Beharrell, Dunlop managing director. The home has been presented to the workers by the directors of the company, and will be controlled by a committee consisting of one member from each of the Dunlop associated factories. Speaking at the opening lunch, Sir George Beharrell described the home as one of those socialistic movements with which everyone was in sympathy. "It is socialistic to this extent," said Sir George, "that it is not being provided by any one section. The directors are delighted that there should be such a home which can be run on really good lines without any irksome restrictions, and it is a great satisfaction to know that funds are available from the workers to bear their share of the cost of running the home." The building is divided into two sections—for men and women—and each holds about 20 beds. Wireless, gramophones, books, croquet lawns, and so forth have been provided by the workers of the different factories. Among those present at the opening ceremony was Lord Colwyn, who inspected the home with the party.

Company Meeting.

EASTERN TELEGRAPH COMPANY.

The Cables and Wireless Merger.

The 98th ordinary general meeting of the Eastern Telegraph Company, Ltd., was held on May 29 at the Cannon Street Hotel, London, E.C., Mr. J. C. Denison-Pender (the Chairman of the company) presiding.

The Secretary (Mr. Edward Wilshaw, F.C.I.S.) having read the auditors' report,

Mr. F. A. Johnston (a director) referred to the irreparable loss which they had suffered in the death of Sir John Denison-Pender (the late Chairman) and paid a warm tribute to his long and valuable services to the company.

The Chairman, in moving the adoption of the report, said:—The accounts submitted for your approval cover a period of only three months, namely, for the quarter ended March 31, 1928. The reason for this is that this is the date as from which the Report of The Imperial Wireless and Cable Conference recommends that Imperial and International Communications, Limited, should acquire the "communications assets" of your company, and of the Eastern Extension Australasia and China Telegraph Company, the Western Telegraph Company, and Marconi's Wireless Telegraph Company, and of their wholly owned subsidiaries, and should purchase the Pacific Cable Board's undertaking, including the West Indian undertaking now worked by them, also purchase the Imperial transatlantic cable, and the lease from the Government of the Beam Wireless Stations which were both operated by the State.

In view of the above facts, I do not propose to go through the figures in detail. I should, however, like to point out that after providing for all expenses, income tax, and debenture interest, and for the dividend on the preference stock, there remains a balance of profit of nearly £150,000, so that we have been able to maintain the dividend at the rate of 10 per cent. per annum, free of tax, which we have paid for many years past, and still leave a balance of £24,672 13s. 2d. This amount, together with the balance of £515,764 12s. 10d. brought forward from the preceding year, has been transferred to the general reserve fund, thus closing the company's revenue account as at March 31, 1928. The total reserves at the date of the accounts amounted to £3,730,242.

If the necessary percentage of stockholders and shareholders in the Cable and Wireless Companies agree to exchange their stock or shares for shares in the newly formed company—Cables and Wireless, Limited—this will be the last meeting of the Eastern Company under existing conditions. I am glad to think, however, that, having been in existence for fifty-seven years, its name will be preserved and that it will remain as a separate entity, although no longer operating a telegraph business, but remaining simply as a company holding reserve fund investments and investments in the new Imperial and International Communications Company.

When we met in July last it was stated that we had hoped to tell the stockholders something definite about the negotiations with the Government, and the merger with the Marconi Company, but that as the matter was still in the hands of the Government we were unable to give any further information beyond a statement appearing in the Press that the Imperial Wireless and Cable Conference had been able to arrive at unanimity in putting forward its recommendations. Shortly after that meeting the Conference issued its report, and you are now well aware of the terms.

It is well, however, to remind ourselves of the circumstances which led up to the appointment of that Conference. The invention of beam wireless, due to the fertile imagination and great scientific genius of Senatore Marconi and his confreres, had resulted in the establishment by the British Government of beam wireless communication in competition with our most remunerative fields of telegraphic correspondence, namely: India, South Africa, and Australia. As a result of this competition at lower rates, coupled with the knowledge that if we reduced our cable rates to the level of the wireless rates and so recovered the traffic previously lost to the beam, the Government would reduce its rates still further, we found ourselves, in view of the competition with the Government, in a situation which could not continue indefinitely, and faced with an economic position which called for firm and prompt action on the part of your directors.

As a result of representations made, an Imperial Wireless and Cable Conference was appointed, composed of representatives of Great Britain, Canada, the Commonwealth of Australia, New Zealand, the Union of South Africa, the Irish Free State, India, the Colonies and Protectorates. In the meantime the Boards of the Marconi Company and the Eastern Associated Companies had agreed upon terms for a merger of their respective interests, subject to the Imperial Conference coming to satisfactory conclusions.

It is now common knowledge that the Conference made a unanimous recommendation as to Empire communications, and also approved the tentative arrangement come to between the Eastern Associated Companies and the Marconi Company for the merging of interests. As a result of this momentous decision two companies have been formed: Cables and Wireless, Ltd., and Imperial and International Communications, Ltd. The former was designed to hold the ordinary stock and shares of the Cable Companies and preference and ordinary shares of the Marconi Company. The latter, Imperial and International Communications, Ltd., to acquire the communications assets of these companies, together with telegraphic services which were either owned or being operated by the Government. This latter company will therefore be world-wide in its ramifications and very comprehensive in its scope.

You have recently received from the Bank of England an offer on behalf of Cables and Wireless, Ltd., to exchange your existing holding of ordinary stock in this company for shares in the new Cables and Wireless, Ltd., an offer which your directors unanimously and unreservedly recommend you to accept.

The report and accounts were adopted and the resolutions in reference to the merger scheme approved.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Generating Set.—The Municipalities and Local Commissions Section, Ministry of the Interior, Cairo, invites tenders for the supply and erection at the Minia Power Station of one Diesel engine driven A.C. generating set of approximately 250 K.V.A. together with switch and control gear. July 15. (D.O.T.)

Chemical Manures, Sacks, Twine, Etc.—The Egyptian Ministry of Agriculture invites tenders for the supply of the following (in tons gross):—45,000 Chilean nitrate of soda, 16,500 nitrate of lime, 2,000 superphosphate of lime, 100 sulphate of potash, 100 cyanamide, 100 gypsum, and for 900 bales (500 each) of new bags for bagging nitrate of soda, 5,000 new bags for bagging superphosphate of lime, 750 bales (200 each) of new sacks for sacking cotton seed (tagawi), 2,200 tons net of blue twine, 1,100 tons net of black twine, 900 kilos net of pieces of tin for sealing, 20 steel sealers for sealing the pieces of tin. July 6. (D.O.T.)

Drugs, Etc.—The Director of Stores, Ministry of Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of the drugs required for the schools during the year 1929-1930 (May 25), and painting and decorating materials required for the Trades Schools during the year 1929-1930 June 17).

Various.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for the supply of materials for water service: mild steel beams; complete cross members; timber; replace boilers for locomotives.

Breakwater and Jetty.—The Alexandria Municipality invites tenders for the construction of the Silsileh Branch of the Port-Est Breakwater and the Silsileh Jetty. October 29. (D.O.T.)

General Stores.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka, Nazli, Cairo, invites tenders for the supply of general stores for the year 1929-1930. June 20.

INDIA.

Sluice Gates.—The Indian Stores Department, Simla, invites tenders for the supply of sluice gates (vertical, sliding, and radial types) for small branches, distributaries, and minors of the Lloyd Barrage for Canals Construction, Sind. July 16. (D.O.T.)

PERSIA.

Saws.—A Teheran firm desires to receive quotations for saws for cutting and shaping paving stones.

TURKEY.

Tin and Antimony.—The Administration des Chemins de fer et des Ports d'Etats invites tenders for the supply and delivery of 8 metric tons of tin and 500 kilos of antimony. June 13. (D.O.T.)

YUGOSLAVIA.

Bridge.—The Ministry of Public Works, Belgrade invites tenders for the construction of a bridge across the Sava river. July 15. (D.O.T.)

Gas Tubes.—H.M. Consul at Sarajevo (Mr. C. A. Greig) reports that a local firm are desirous of receiving quotations from British manufacturers for the supply of some 15 tons of butt welded (Stumpf geschweisst) black and galvanised gas tubes in sizes ranging from 1/4 in. to 2 in. (D.O.T.)

An iron tunnel is to be built under the River Hooghly, in Calcutta, to take power cables across the river.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 28:—

Egyptian Futures.

Sakel Contract.—A series of very weak sessions have been experienced in this market since our last report, and although values have rallied somewhat during to-day's session, the decline on the week amounts to 79 points for near and 72 to 73 points for new crop months. The chief cause of the downward movement has been furnished by the action of the Alexandria market, where prices have at times fallen away in a precipitate fashion; the total tenders during May at the other side amount to 90,000 kantars, and this appears to have thoroughly unsettled "bullish" sentiment, which has recently been on the wane. In addition to the depression action of the overseas market, the local contract has been subject to pressure, owing to the continued absence of support from both trade and speculative interests; thus, whilst there has been no heavy liquidation in evidence, scattered selling from various quarters has only been absorbed with perhaps an exaggerated effect on values. As a result of our market working down to its present level, the Sakel premium over the American market has closed to the narrowest of the season at the time of writing, July/July difference standing at about 640 points. Owing to the poor character of the trade demand, near positions have lost ground somewhat with the later summer and new crop deliveries; with spot differences as at present, any docket cotton appears reasonably cheap, and on this account we do not think any further widening is to be anticipated. Latest reports from Egypt regarding the new crop are to the effect that weather conditions have improved everywhere and satisfactory progress has recently been made. Whether the downward movement has yet carried prices to the level at which both spinners and manufacturers are prepared to enter more freely into commitments remains to be seen. The market certainly has had a fairly drastic shake-out since the beginning of the month, but we would be rather dubious of following reactions until more definite signs of a trade lead become apparent.

Upper Contract.—In spite of the apparent cheapness of the Upper varieties, this contract continues to meet with considerable pressure, and it is now evident that the open "long" and straddle accounts were much larger than generally anticipated. Liquidation from the above sources appears to be never ending, and during the week the market has been called upon to absorb more cotton than it could accommodate without a material effect on the level resulting. The Upper premium over the American market has closed into the lowest of the season, and, unless more trade support starts to develop, a further temporary narrowing may be witnessed. The future action of the market depends largely on crop conditions in American; any improvement in these would react quickly on the outlook.

Egyptian Spot.

Trading has been on quiet lines in this department, and sales of Egyptian cotton have averaged only 200 bales a day for the period under review. Owing to the weakness of futures and the general apathy prevailing at the moment, values have suffered a substantial decline. This is probably all to the good, as, once the Election is out of the way, current levels should prove distinctly attractive to buyers who, for the past ten days or so, have been keeping out of the market as far as possible. There have been no special features on which to comment in the daily inquiry.

Sakel has been in moderate request for practically all qualities up to about 250 on.

Uppers have shown some slight broadening in the demand, and the better grades have attracted rather more attention this week. Sellers have predominated, and irregularity in prices still prevails.

Pillion has been in quiet request for cotton at from pass to 50 on Upper contracts. Results have, however, been negligible up to date.

White, Maarad, Nahda, etc., have attracted very little attention this week.

Tokar Sakel.—Only an occasional inquiry has been met with, and we have heard of no actual business as yet.

C.i.f. business has remained very quiet. Forwardings to spinners last week were returned as 6,085 bales Egyptian and 1,180 bales Sudan. Estimated spot sales for the week, 1,000 bales Egyptian and 450 bales Sudan. Quotations of Sakel show a net decline on the week of 80 points; Uppers are 34, and Pillion 30 points lower. F.G.F. Sakel to-day, 17.05d. F.G.F. Upper to-day, 11.25d. F.G.F. Pillion to-day, 12.25d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended May 23, state:—

Since our last report the futures market has been only moderately active, and closed to-day with a distinctly heavy tendency. The week's summary of price movements is as follows:—Sakellaridis: July, 33.14 dollars, 0.97 dollars down; November, 33.82 dollars, 0.68 dollars down; January, 34.18 dollars, 0.57 dollars down. Ashmouni: June, 20.71 dollars, 0.48 dollars down; August, 21.08 dollars, 0.47 dollars down; October, 21.45 dollars, 0.33 dollars down; December,

21.92 dollars, 0.24 dollars down; February, 22.27 dollars, 0.26 dollars down.

Sakel.—After a series of more or less colourless sessions, prices to-day suffered a heavy setback, the direct cause of which was the decline in New York yesterday of about $\frac{1}{4}$ c.; the real explanation, however, must be sought in the generally discouraging state of affairs prevailing in the textile centres of the world, which is rendering more or less difficult the passing of existing stocks into consumption. With the demand from the trade diminishing from week to week and prices declining as they have recently, it is a matter for thought as to how long this accumulated stock can continue to be held. The prospects for the near future are not encouraging, but, of course, a substantial upward turn in the trend of American and a revival of demand would make a difference in the outlook.

The Sakel/Upper straddle (July/June) this week stands at 1,243 points, against 1,292 points last week and 1,447 points at this time last year.

Against the third May tender, dockets for 19,000 kantars were issued, bringing the total since the beginning of the month up to 90,000 kantars.

Uppers.—The movements of Sakel have been reflected by this market. After more or less dull sessions, prices declined sharply to-day on speculative selling. As has been the case during practically the whole of the season to date, the demand from the trade has remained comparatively active. Contrary to all expectations, the premium of Uppers over New York has declined a further half-dollar and now stands at only about 2 dollars, the lowest recorded since the beginning of the season.

The Ashmouni/American straddle (June/July) this week stands at 209 points, against 265 points last week and 716 points at this time last year.

The week's receipts amount to 17,962 kantars, against exports 90,294 kantars; the stock in Alexandria stands at 2,744,066 kantars.

Spot.—Demand has fallen away considerably and the past week has witnessed a series of very quiet markets at Minet el Bassal. Sales for the five days amount to about 7,900 bales, of which we estimate 1,800 bales Sakellaridis, 5,500 bales Ashmouni and Zagora, 450 bales Pillion, and 150 bales other varieties.

Sakellaridis.—A very mediocre business has been done, mainly in

the medium and lower grades. Spot differences are generally a little stiffer.

Ashmouni and Zagora.—Although not so good as last week, a fairly good business has been done in these varieties, covering all grades except the very best. With the exception of the grades below Good Fair, which are a trifle easier, spot differences are generally unchanged.

Pilion.—A fairly good business has been done. Spot differences are rather dearer. Good lots of desirable staple cotton are scarce and hard to buy.

Other Varieties.—In Nahda a small business has been done at last week's differences. A retail trade has been placed in White. Spot differences are very irregular but generally dearer. A few bales of Fouadi and Brown have changed hands.

Crop, 1929.—Weather conditions have been favourable and the crop is progressing normally everywhere. The supply of water is most satisfactory.

A Bucharest message states that M. Rist, the technical adviser of the National Bank, has issued his first quarterly report on the working of the programme of stabilisation. The report states that the Government has fulfilled all the undertakings in the programme, and has brought about the conversion of the leu and assured the free circulation of capital. The exchange market, the report goes on to say, has functioned normally and all holders of lei have been able to exchange them freely against foreign securities. Referring to the Budget, the report says that the bad harvest last year, coupled with the unfavourable weather this winter, have had an unfavourable effect with regard to the realisation of the revenue Budget estimates.

COAL PRODUCTION IN YUGOSLAVIA.

The coal production of Yugoslavia in 1928 was 5,051,830 tons, as compared with 4,744,936 tons in 1927. Imports of coal totalled 531,126 tons, of the value of 190,366,687 dinars, as against 449,206 tons in 1927 of the value of 165,289,000 dinars. In 1928 139,628 tons of coal were exported, of the value of 33,186,584 dinars, as compared with 118,489 tons in 1927 of the value of 27,999,802 dinars. Coal production has doubled in Yugoslavia since 1922.

Under the terms of the new law for the protection of the Yugoslav timber industry the Minister of Forests may, without submitting it to auction, sell timber from the State forests to such saw-mills as are run exclusively on domestic capital and possess an output capacity of 14,000 cubic metres.

The directors of the Albanian National Brewery announce that the Chairman and managing director are at present in Albania directing operations on behalf of the company. A report has been received from the Chairman stating that the work has started and is already in full swing, and that the contractors expect to anticipate the contract date of completion.

Notes of the Week.

The Skupshtina Murders.

The long-deferred trial of Punisha Rachitch, who in June of last year opened fire with a revolver in the Yugoslav Parliament, killing two of his fellow-deputies and wounding three others, one of whom, Stepan Raditch, died two months later, was concluded last week and resulted in a sentence of twenty years' imprisonment. Rachitch was exonerated from having committed his crime with premeditation, and was adjudged to have acted under the influence of a sudden impulse, caused by the taunts flung at him by one of the deputies whom he succeeded only in wounding. The Court emphasised the right of a citizen to defend his honour and severely censured both M. Pernar, one of the wounded deputies, for having insulted Rachitch, and the President of the Skupshtina for having failed to bring M. Pernar to book before Rachitch took the matter into his own hands. Counsel for the defence of Rachitch came to the help of the Court in regard to the difficulty of reconciling the size of the murderer's "bag" with his conception of his honour, which only one of his victims had assailed, by inveighing against the Croats as a people and by leaving it to the Court to endorse the contention that the killing of Croats can be no murder. If Rachitch had been content with one victim, it might have been difficult for a Balkan Bench to shut its eyes to the native temperament and to the cheapness in which life is held among primitive peoples; but the Belgrade Court will appear in Western eyes to have strained both logic and the meaning of words in allowing an "impulse" to discharge all the six chambers of a revolver.

Serbs and Croats.

It is, perhaps, a matter for regret that the Serbian judges who tried Rachitch did not act more fully up to the spirit of the Dictatorship by finding the prisoner not guilty and liberating him. They would, at least, have rendered signal service to the cause of decency in debate in the Yugoslav Parliament; for the most fiery of deputies would be encouraged to pick his words carefully, if it were

once laid down that in Yugoslavia a revolver is a legitimate and the only suitable reprimand for an unparliamentary expression. A further logical development would have been the appointment of Rachitch, an expert marksman, as permanent President of a restored Skupshtina, armed with a revolver instead of with merely a bell, which is so often inaudible in the course of a warm debate. With his nice appreciation of points of honour, to which the Belgrade Court has borne testimony, Rachitch could have been relied upon to silence offending deputies with unerring effect. As things are, the Court has encouraged the promiscuous use of revolvers in the Chamber, but has left as a matter for subsequent discussion the precise point at which the time-honoured exchange of personalities trespasses over the border line of honour. A more serious corollary of the verdict is that it would seem to have stultified entirely King Alexander's attempt to merge Serbs and Croats together in a united Yugoslavia. The passing of the death sentence on Rachitch would, no doubt, have added fuel to the wrath of the Serb military element which is already dissatisfied with the measures of army retrenchment introduced by the Dictatorship, and it may be that the latter preferred to run the risk of further exasperation of Croat feeling to throwing the Serbs back upon remedies which they have used before when out of sympathy with their rulers. It is to be feared, therefore, that the Rachitch trial has not furthered the cause of unity in Yugoslavia. Croat feeling on the subject may not be able to make itself known under existing conditions, but to differences of opinion regarding the organisation of the State will now have been added a radical divergence on the fundamental conception of justice.

Minorities.

The Committee of Three has submitted to the Council of the League of Nations, now in session in Madrid, its report on the protection of Minorities. Its recommendations would appear, from a preliminary discussion, to stand little chance of receiving the Council's unanimous support, and the subject may, therefore, have to be

adjourned until the next session. The object of the Committee's report was to establish a fair compromise between the procedure hitherto adopted, which had been exposed to the charge of neglecting the interests of Minorities that the League is pledged to safeguard, and a policy that could be challenged as an encroachment on the sovereign rights of a country containing a recognised minority community. It is evident, however, that the right of such a community to appeal to any Court outside its own country can be regarded as an encroachment upon the national sovereignty. The League of Nations itself is such an encroachment, and was rendered possible only by voluntary acceptance on the part of certain States and its being forced upon others. The opportunity for compelling members of the League to accept regulations of which they do not approve has passed, until the time when pressure can be brought to bear upon them. If, therefore, any modification of the present organisation for dealing with matters affecting minorities is dependent on a unanimous vote of the Council, it may be taken for granted that the existing procedure will remain in force. The ventilation of the subject by the Canadian and German members of the Council will have had the effect of attracting public attention to the unsatisfactory treatment still meted out to some minorities, and gradually there will be in the countries concerned an increasing dislike of the odium attaching to chronic misgovernment. It is, however, only fair to point out that in many cases the grievances of minorities are due in part to their own shortcomings, and in part to the inability of the States concerned to supply officials of the standard required for the exercise of administrative authority over aliens, as much as to a deliberately sinister policy inaugurated by the State. There are, happily, few cases as bad as the treatment of the inhabitants of the Dobruja by the Bratianu Government, and it is noticeable that its successors in office lost no time in repudiating the offending policy.

Egypt in England.

King Fuad is paying a series of official visits on the Continent, and in July will spend a few weeks in England on a private visit. His Majesty is accompanied by his Foreign Minister, Dr. Hafiz Bey Affi, and Mohamed Pasha Mahmoud, his Prime Minister, will have already arrived in this country in order to take the honorary degree of D.C.L., to be conferred upon him by Oxford

University on June 26. These visits, planned long ago, will be particularly *felices opportunitate*, if they furnish an occasion for an exchange of views between Mahmoud Pasha and the new British Government. Whether the Labour Party, when in opposition, had formulated any official attitude towards the present Government in Egypt we have no means of knowing; but there is reason to believe that certain prominent members of the Party were inclined to look askance at the existing régime in Egypt on the ground that the suspension of a Constitution must necessarily be wrong and an unforgivable offence. One result of this attitude was that agents of the Wafd in England appear to have entertained the hope that the advent to power of a Labour Government will strengthen the hands of the Wafd in its fight against the Liberal Constitutionalists now in office. In other words, Wafdists, whose premier slogan is "No British interference in Egypt" are eager to persuade a British Government to interfere in what is pre-eminently a domestic concern of the Egyptian people. It is to be hoped in the interest of good relations between Egypt and Great Britain that Mahmoud Pasha will have no difficulty in convincing the new British Government that all is not constitutional that masquerades under a Constitution, as was, indeed, to be learnt from Turkey's experience under the Committee of Union and Progress; and, further, that it is possible to be more sincerely devoted to the cause of constitutionalism, when suspending a Constitution, than when a travesty of that Constitution is enacted by the establishment, by force or terrorism, of a despotic oligarchy. The Egyptian Prime Minister has made it clear that he will welcome the first opportunity of restoring the Constitution in its integrity, when there is a reasonable chance that parliamentary government can operate in Egypt according to the strict meaning of the term, and not according to the parody that previously served the purpose of a small handful of extremists.

Stability in Greece.

The Greek Republic, founded five years ago, has had to wait until last week before taking its final constitutional shape. During this period it has experienced many vicissitudes, including the ten months' dictatorship of General Pangalos. With the election of a Senate, however, it may be regarded as having acquired the full measure of stability of which it is capable, and, thanks to the prestige and driving force of M. Venizelos, the republican system will now be subjected to a test as fair and complete as its most ardent supporters could desire. Admiral Condouriotis, appointed Provisional President of the Republic for the first time in April, 1924, has been duly elected President in joint session of the Senate and Chamber, and M. Venizelos has reconstructed his Government with a view to making it representative of both Houses of Parliament. If we except the provocative step that he has taken in appointing to his Ministry two men hopelessly identified with the execution of the Royalist Ministers in November, 1922, the veteran Prime Minister enters upon his sixth term of office under the best auspices. Although the protracted negotiations with Turkey have not yet been concluded, the outlook in regard to foreign affairs in general is satisfactory. There may be an attempt to urge Greece to play her part in promoting naval rivalry in the Aegean, and to this extent she runs the risk of finding herself committed to a programme of naval construction which she may regret; but, apart from this danger, her economic situation is such that she ought to be able to make a full recovery from the setback that she has experienced in the last few years. She has already begun a series of productive works which will help her to make fuller use of the substantial asset that she has recently acquired in her refugee population, and if party politics can continue to be subordinated to the real interests of the country, Greece stands to occupy a far more prominent place than she has been able to fill of late years in Balkan affairs.

The Extended Jewish Agency.

It was not to be thought that the representation of non-Zionist Jewry upon the Agency which co-operates with the Palestine Government in the establishment of a "National Home" in the Holy Land would be achieved without considerable difficulty, but some more definite idea of what such difficulties were likely to be was obtainable from the meeting in Berlin recently of the *Actions* Committee, when members of the Zionist Executive reported to the General Zionist Council. That the extended Agency plan will go through, that is to say, that the Weizmann-Marshall agreement will be ratified by the Zionist Congress at Zurich next month is everywhere taken for granted, but obviously Zionists, in the flush of their enthusiasm at the prospect of obtaining further American money in support of a "National Home" in Palestine, will have to be careful that they are not "selling the pass." For instance, as Colonel Kisch remarked at the meeting of the *Actions* Committee, the non-Zionists will not accept the provision that, should one of the parties in the extended Agency withdraw from the Council, the Zionist Organisation automatically assumes the responsibilities of the Agency. Again, the non-Zionists wish that the whole Executive of the Agency should be transferred to Palestine—a step which, in the eyes at any rate of European Zionists, would tend to reduce the Zionist movement to one merely for philanthropy in Palestine. It is patent, indeed, that, as we pointed out long ago, a sharp divergence in the views of European and American Jews upon this extended Agency is very possible. And since America will be providing most of the new money for Palestine, it seems, from the American-Jewish point of view, only right that the new views should be very fully and sympathetically considered. If, however, they go to impossible lengths in damaging the Zionist ideal, manifestly the scheme of the extended Agency will break down, and the Zionist Organisation once more assume its rôle of representative of the Jewish people.

INDIAN NOTES.

Irrigation in India.

A communication to *The Times* of June 6 states that at a recent tripartite conference of the Governments of India, Bombay, and the Punjab, it was decided that no further irrigation works should be undertaken on the Indus for some time, and that meanwhile the problem of combining the demands of the Punjab with the necessities of Sind should be examined by superintending engineers from the two Provinces concerned. What is not stated, however, is that this conclusion is merely a reaffirmation of a decision already arrived at by the Government of India, that the completion and immediate results of the Sukkur Barrage in Sind must be awaited before the Punjab is allowed to absorb more of the water. The renewed discussion of the subject is doubtless due to the continued pressure on the part of the Punjab, particularly on behalf of the Thale project. If we mistake not, this project, which is calculated to provide for the irrigation of 1,850,000 acres of land, was definitely relegated to the distant future by the Government of India some years ago. Various persons of high political importance in the Punjab are, however, believed to be interested in it, and the agitation for it is constantly renewed. The problem is a difficult one. On the one hand, the Punjabis who ask for the work can point to the millions of acres of water pouring uselessly to the sea in July and August. On the other, the Sindhis point out that the critical times are in April and in October, and that it would be equally reasonable to assert that a drought in England in June does not matter because there are floods in February. If it is recognised that the claims of Egypt on the Nile water must be met before the possibilities of the Sudan are exploited, the Sindhis think that their immemorial supply should not be tampered with. The people of Sind are inclined to fear that a distant and not overstrong Govern-

ment at Bombay cannot cope with a vigorous Punjab. Government entrenched at Simla; and that the story of the wolf and the lamb will be repeated, with the difference that the wolf, instead of merely disturbing the water, will remove it altogether from the inoffensive and powerless lamb. The recent decision may postpone, but will do little to remove, these fears.

Dyarchy in Bihar and Orissa.

In Bengal dyarchy has not been, nor does it give any prospect of being, even moderately successful. But in the neighbouring province of Bihar and Orissa—which not a very long time ago was a part of Bengal—the reformed system of government is officially claimed to be working satisfactorily. Indeed, the provincial Administration Report for 1927-28 expresses the opinion that "by its steady and continued progress in working the reformed constitution the province has furnished an example which might have been followed with advantage by other provinces." And the report goes on to say that if political education could be carried down to the electorate, and if there could be found a lasting solution of the problem of welding together those sections of the population that are now separated by religion, and by territorial and social distinctions, the future would be hopeful. These are big "ifs" and they become bigger when the communal situation in the province is considered. For it appears that during the year the relations between Hindus and Muhammadans were in a state of tension, particularly in one division—Tirhut—where the magistracy and the police were subjected to considerable strain and anxiety. The publication of the Nehru report did not, it is said, tend to improve the relations between educated Hindus and Muslims. And in addition to the communal troubles there was also a certain amount of labour unrest during the year; and there were financial difficulties. Nevertheless, it seems that in Bihar and Orissa dyarchy is proving itself to be a practical scheme of government. It has not failed, as it has failed in Bengal; and the Legislative Council is evidently not the unreasonable body that it is at Calcutta. On the contrary, it is said to have some appreciation of the difficulties which confront the Government; and it conducts its proceedings in a sane and moderate fashion.

With reference to the recent report in the Press of disaffection among the Kashghai tribes inhabiting a region bordering on the Persian Gulf, the Persian Legation in London is officially informed that the trouble arose in consequence of the Persian Government's desire to suppress the contraband in opium that has been carried on for some time past, and troops were dispatched to the district for that purpose, which the tribes in question resented. The Government troops, according to the Legation, have the situation well in hand and are in a position to bring the present state of unrest to a speedy end.

THURSDAY, JUNE 13, 1929.

POLITICS AND ECONOMICS IN THE EAST.

Almost everywhere in the East at the moment politics are apt to be regarded as infinitely more important than economics. No matter how European or American advisers, official or unofficial, urge to the contrary, the greater part of the attention of the nations, at any rate of the Middle East, continues to be devoted to politics. Material stability seems to certain Orientals as nothing compared with the vague but still very potent watchwords of political independence, sovereignty and the like. The time dissipated in political manœuvrings when the country cries out for economic development, is truly lamentable. In recent years this wasting tendency has been manifested in greater or less degree in lands such as Egypt, Turkey, Palestine, Syria, Trans-Jordan, Iraq, and even in Persia. It would, however, be disingenuous to deny that these Oriental politicians have some plausible ground to stand on when they pooh-pooh this Western advice of leaving politics alone for a while and of concentrating upon economics. For it is unquestionably true that in numerous instances in the past, the foreigner counselled the acceptance of foreign financial or commercial advice irrespective of the political development of the particular Eastern nation. The political control or influence which then surely followed Western financial influence is a fact which has bitten deep into the souls of Oriental patriots; they would, indeed, be untrue to their country's cause were they ever to forget it. Unless this side of the picture is seen and unless this aspect of the problem is fully realised, one of the main questions agitating the nations, actual or in embryo, of the Middle East, will never be adequately understood. In view of the legacy of anti-Nationalist obstacles which foreign financiers strewed about in the Middle East, it is certainly not to be wondered at that the would-be concessionaire, however honest and well-meaning a man the West may know him to be, is very often suspect in the eyes of the East. Yet there are signs not wanting that a middle course is practicable between "having a down" upon each and every foreign adviser or capitalist in an Oriental country and allowing that country to come under the complete domination of the foreign financier, and that the present tendency to exalt politics above all other considerations in the State is but a phase.

Few people, we imagine, will be found to contradict the assertion that the progress of the State, whether it be Egypt, Turkey, Palestine, Syria, Trans-Jordan, or Iraq, has been retarded by the pre-occupation in the political factor manifested therein. Are there not symptoms, indeed, that the peoples of these countries themselves are beginning to recognise this fact? In Egypt, Parliament is suspended in order that the real or material development of the country may be carried on. In Turkey, suspicion of the foreign financier, although quite naturally dying a lingering death, is surely doomed in face of economic facts. In Palestine, Trans-Jordan, and Syria, the voice of the politician has been

much less heard during recent months. And in Iraq, the new Cabinet of Taufiq Beg Suwaidi has come into office upon an almost purely practical programme. That these recent manifestations are in any way permanent we should be foolish to suggest: the politician who thinks of nothing but intrigue will not die out in Egypt and in the new States of Arabia until complete independence, absolute sovereignty, has been attained—and perhaps not even then. But the fact that, for a time at least, it has been agreed, directly or indirectly, to give politics a rest and to "get on with the job at hand," is certainly worth noting. From the point of view even of the politician, moreover, the only thing that can be said against this policy of practical development is the fact that it involves co-operation with the foreign Power in the country. Where the assistance of the foreigners is involved, there also, according to the opinion of the extremist, is to be found foreign inspiration. In other words, because a respite from politics suits the foreigner's book, it must have come about through the foreigner's malevolence. Such an argument, however, must appeal in decreasing degree to the intelligent minds of the East. There is an enormous difference—due, it should at once be admitted, very largely to the patriotic attitude of Orientals themselves—between the pre-War and the post-War foreign financier: unless this were so, co-operation between Middle Eastern States and Western capital would be undesirable. The development of any particular Eastern State to independence must always be the first consideration: where so many Orientals are apt to go wrong is in supposing that it must be the exclusive consideration, and that co-operation with the foreigner is necessarily a betrayal of the country's highest interests. But there is, as many able men in the East know, a very wide field in which the help of the foreigner may be obtained, without infringing in the slightest on the prospects or the nature of the national sovereignty. One of the happiest instances of willingness to work on the advice of, or in co-operation with, foreigners is provided by Persia. (In justice to Turkey, however, it should be remarked that Capitulations in Persia were different from Capitulations in Turkey). In Iraq, again, not only is there very efficient collaboration between Iraqi and British officials, but also an increasing determination on the part of Iraqis themselves to exploit the country's vast resources. And so on. It is gradually being realised, in short, that xenophobia is more often an indication of a country's weakness than of its strength.

Above all, it is to be remembered that economic prosperity always brings political prosperity. It is a world law that economic power precedes political power—an axiom of which sooner or later even the extremist politicians of the Middle East will become aware. Political sovereignty is, in fact, meaningless, and independence a sham, unless the country is financially stable and unless its economic resources are constantly productive. What, for instance, is now Afghanistan; or what the Yaman? The dispassionate observer cannot but be glad, therefore, when he sees the Middle Eastern countries, from Persia to Egypt, resolving so to perform the daily individual task as inevitably to redound, in due course, to the national glory. No seeds that are sown in hard work are wasted, but must of themselves, even if unconsciously, hasten the desired end of complete national sovereignty. But if present developments continue in happy mood, there is every reason to suppose that, with independence attained, a similar co-operation to that which now exists between East and West will be asked by the East and willingly given by the West. Whether it be said of Persian, or Arab, or Turk, or of Egyptian, Swift's sentence is as true to-day as when he wrote it: "Whoever could make two ears of corn, or two blades of grass, to grow upon a spot of ground where only one grew before, would deserve better of mankind, and do more essential service to his country, than the whole race of politicians put together." These immortal words should be affixed in every house, bazaar, sarai, or tent in the Middle East!

*The Near and Middle East

From Our Own Correspondents.

Constantinople, May 29.

The Foreign Exchanges.

The rate of the pound sterling, which at this season of the year usually shows a distinct tendency to weaken, has hardened so much of late that the Commissary of the Bourse has been instructed to inquire into the causes of the unusual occurrence, particularly with a view to establishing whether illicit speculators may or may not have been pulling wires and manipulating the market. Instead of fluctuating round about 950 piastres, which would be about a normal rate under present currency and seasonal conditions, the pound sterling has latterly exceeded 1,000 piastres.

It ought not to take the Commissary of the Bourse very long to arrive at the conclusion that speculation is scarcely a contributory factor in the present instance, the weakening of the Turkish lira being attributable entirely to the operation of that simple economic law, the ratio of supply and demand. Owing to adverse atmospheric conditions, for which the Government can in no sense be held responsible, the bulk of last year's Turkish cereal crop failed. Economic conditions up-country have ever since remained so critical that it has been necessary to increase rather than to diminish the imports of foreign wheat and flour.

In addition to this, however, the prospect of a very appreciable increase in the duty on foreign goods, which will take effect as from August next, has led importing houses of all nationalities to place abroad large orders for foreign goods which are being rushed into the country before the new tariff becomes operative. *Hinc illæ lacrimæ.* Foreign exchange in bulk is required to liquidate the cost of these abnormal imports, and, as there is a penury of exportable commodities, there is not enough foreign exchange to satisfy purchasers, and exchange, therefore, like all other merchandise, has gone up in price.

It is comforting for all classes of the community to reflect, in this connexion, that this year's bountiful rainfall may to a certain extent assist in redressing the unfavourable commercial balance some time next year.

Turkey's Relations with Foreign Powers.

As was to be expected, Tewfik Rushdi Bey, Foreign Minister, since his return from his recent European tour, has given the House an opportunity of listening to a Ministerial *exposé* on the state of Turkey's relations with foreign Powers. As on previous occasions, he insisted on Turkey's unswerving good faith, based on principles of equity and justice, but he made certain more or less veiled statements which connote very slow progress in the Greco-Turkish negotiations and no definite solution as yet over the Turco-Syrian dispute with France. With reference to the Disarmament Conference at Geneva, at which Tewfik Rushdi Bey had been present as the delegate of the Turkish Government, the views he had there ex-

pounded were that, although Turkey was animated by the most pacific intentions, no practical results would ever be likely to materialize, until such time as a basis of complete equality between the Powers had been admitted both in theory and practice by those responsible for the calling together of these Conferences.

His repeated interviews at Geneva with M. Litvinoff, the representative of their friends and neighbours across the border, had been conducted, he said, in an atmosphere of the greatest cordiality and sincerity. His visit to Berlin had been occasioned by the necessity of giving the finishing touches to the Turco-German Pact of Amity and Neutrality—which instrument would be shortly laid before the members of the House for ratification and Presidential sanction.

As to his journey to Rome, he was able to state that his sojourn in that noble city had been made the occasion for so remarkable a manifestation of Turco-Italian friendship that the foundations which were originally laid in Milan for the conclusion of a Pact of Friendship between Italy and Turkey had been immeasurably strengthened and broadened.

Restrictions on Employment of Foreigners.

The old days of the capitulatory régime, when the foreigner, without amassing a fortune, was at least enabled to make a living in the country, are forcibly brought back to one's mind by the legislative measures which now lie in draft form on the table of the House of Assembly, and which are likely to be passed with but little opposition within the next fortnight.

Whatever may be said in favour of legislation as a domestic policy which aims at the exclusion from the exercise of the liberal professions of all but the purely native elements—and, by native elements, Muslims alone must here be understood—when legislative measures are so framed as to descend to the level of excluding from employment and livelihood non-Muslim shoe-blacks, hall-porters in foreign hotels, professional footballers, coachmen, chauffeurs, bakers' apprentices *et tutti quanti*—the impartial observer is driven to the conclusion—a conclusion, unfortunately, from which there is no getting away—that, in the words of many Turks themselves, the foreigner, be he of high or low estate, had better pack up and "git."

An exception is to be made—it is not surprising to record—in favour of foreign Air Force pilots and mechanics and foreign technical experts in State Departments, including, it is to be presumed, foreign naval and military instructors. To all others a delay of six months is to be granted in which to relinquish their professions or occupations, as enumerated in the projected measure before Parliament, failing which legal proceedings are to be instituted against all delinquents.

The unbiased observer and well-wisher of this country cannot help feeling, in this matter, that the Turkish Legislature has overstepped the mark. The professional, mercantile and fiscal disabilities which are striking more and more at the root of foreign enterprise in this country—even though the laws of Turkey do not

single the foreigner out for special ostracism—are too intricate and subtle in character to permit of an extended description here. The call for the services of foreign specialists in many branches of the country's contemplated economic development and expansion is so crying—particularly in the application of prophylactic measures for the eradication of disease among the Anatolian peasants who form the backbone of the country—that a step in the other direction would have appeared a wise measure at this juncture in the process of building up a rejuvenated Turkey. Perchance the members of the Turkish National Assembly are doing what they consider entirely justified on ethnological grounds—but, in this particular instance, the chances are that they have been lacking in political acumen and foresight.

It is to be hoped, therefore, in the interests of Turkey herself, that certain economically impracticable provisions embodied in the draft law may eventually be defeated on a count of hands by the older and wiser heads in the Assembly.

CYPRUS.

Nicosia, May 29.

The King's Birthday.

On June 2 a service was held at St. Paul's Church at Nicosia, and in other towns; and *Te Deums* were sung in the Churches of other communities. On June 3 there was a parade of the detachment of the 1st Battalion the King's Regiment—the Cyprus Garrison—and the Military Police. Mr. Nicholson, Acting Governor, held a reception at Government House. The O.B.E. was conferred on Mr. A. P. Stone, Director of Public Works, Mr. B. T. Watts, Director of the Land Registry, and the Rev. Canon F. D. Newham, Director of Education.

Sir Ronald Storrs.

The latest news regarding the Governor's health gives hope that the Medical Board, to be held on May 27, will

be a favourable one, and, in that case, that Sir Ronald may be expected to return to Cyprus towards the end of June.

Union with Greece.

The Greek elected members of the Legislative Council have received a reply regarding their letter of March 30, stating that it has been communicated to the Secretary of State for the Colonies. The "national" movement, kept alive by the Press, continues to be actively supported by the Holy Synod. That body met again on May 25 to discuss the situation and steps to be taken for the organisation of the supporters. The Greek Members of Council will be shortly invited to a meeting in order to co-operate with the Synod, with a view to fresh action, which is now held to be urgent.

More Visitors to Cyprus.

On May 14 the s.s. *Ranshi* brought over 500 tourists, including many Americans, to Famagusta. About half of them proceeded to Nicosia, and visited the Ay Sophia Mosque, bazaars, and the Museum, where duplicates of antiques were bought for over £25. Others visited the ruins of Salamis, and other places of interest. It is expected that many more tourists will visit the island this year.

Motor Accidents.

The number of cars in use continues rapidly to increase. Accidents, in some cases with fatal results, have recently been far too frequent. It is generally felt that chauffeurs should be subjected to stricter tests than those now in force, and that further steps will have to be taken for public safety on the roads.

General News.

The measures taken to deal with locusts have proceeded satisfactorily. A movement is now being made by the Agricultural Department for the destruction of sparrows, which have increased to an astonishing extent, and are

said to cause serious damage. The Department now pays one piastre (over a penny) per head for those brought to various centres, in addition to the 3 piastres (4d.) per dozen which has been paid for eggs.

The approach of the elections in England is being watched with great interest. The Greek papers express the hope that Labour will be successful.

Belgrade, June 6.

The Skupshtina Murder Trial.

Speculation is rife in Belgrade as to the verdict which will be given in a few days' time in the trial now taking place in the Belgrade Court of First Instance of Punisha Rachitch, Toma Popovitch and Dragotin Yovanovitch for the murder of Jura Basaritchek, and Pavle and Stepan Raditch, and the attempted murder of MM. Grandji and Pernar. Not only Belgrade but also the whole world is following the trial with interest and awaiting the verdict and sentence as a test of the value of Yugoslav justice.

The case is one of extreme difficulty owing to the admixture of political and legal considerations arising. From a purely legal standpoint murder in the excitement of the minute without any motive of material acquisition is not punishable by death by the Serbian law in force at the moment of the crime. This makes the trial of Toma Popovitch and Dragotin Yovanovitch as accomplices in the deed of the greatest importance. If they are found guilty, premeditation is at once established and a death sentence would seem inevitable. But the defence has concentrated in trying to disprove the rather slight evidence of there having been an agreement on the matter beforehand. It is alleged also that Rachitch wounded M. Pernar in a moment of justifiable anger at his insult "You robbed the Begs," and after having been refused verbal satisfaction by an apology. The remaining shots, they say, were fired in self-defence. It is alleged that Basaritchek and Pavle Raditch rushed towards Punisha Rachitch when he fired at M. Pernar and that he shot them down to save his own life, while he shot at M. Grandji because he saw him put his hand into his pocket and feared that he was drawing a revolver. His second shot at M. Grandji missed its mark and quite accidentally grazed Stepan Raditch, who was lying on a bench half-hidden behind him. It is alleged that there was no intention to injure the Croat leader and also that medical evidence shows that his death was not a result of his wound, but of a disease from which he had suffered for many years. The tremendous mass of evidence before the

Court is very conflicting as to detail, and much of it consist merely of often highly exaggerated and purely political statements from party men on both sides. The only really impartial evidence seems to be that of a few of the servants and stenographers of the Skupshtina, and even they are alleged to be influenced by local feeling or party considerations whenever their evidence appears injurious to the defence. Listening to the statements of the various political leaders made to the Court immediately after the events, one cannot but be struck by the intensity of the bitter party and tribal feeling which dominated them all and by the lack of moderation in their language and charges. Some relics of this tribal bitterness have of course been resurrected at the trial, but the complete absence of all the private complainants (with the exception of Mme. Basaritchek, who appeared in Court yesterday for the first time and handed in a statement in which she said that she did not ask that the murderer of her husband should be punished but was only desirous that her children should be provided for) who, apart from this, are entirely unrepresented in the Court, has avoided otherwise inevitable scenes of violent party hatred.

Apart from the legal point of view, there is the political importance of this trial for the ultimate settlement of the internal problems of the Serb, Croat and Slovene State. If Punisha Ratchitch is sentenced to death there is no reason to believe it will have any serious effect on the attitude of any great number of Serbs to the S.H.S. State. It is rather surprising to find, from the talk in café and street, what a great number even of the old Serbs have changed in their attitude to the Skupshtina crimes and are of opinion that the most severe sentence should be passed. On the other hand, it is quite sure that a great mass of the Croatian people would be disgusted at what they would consider a gross miscarriage of justice, should Ratchitch get a less severe sentence than death, and this might undo much of the good work which has recently been accomplished in the direction of eliminating the differences between the various provinces of the Kingdom. The President of the Court has done what he could, while hearing the evidence, to cut out as far as possible the political, and to concentrate on the legal aspects of the case but even so in the circumstances political matters have been continually brought up by the prisoners and their thirty-three lawyers and in the statements of the Zagreb leaders read in the Court.

The bad effects of a censorship of the Press and its total inability to achieve its ends are constantly being brought into prominence here. To take one small case in point, the delays in allowing accredited foreign correspondents' dispatches on Pribitchevitch's banishment to leave the country, owing to a badly administered censorship, resulted in wildly exaggerated reports of the incident from Viennese correspondents being circulated through the world first. And no amount of denials will ever repair the damage done by a false statement which gets a start of several hours over a true one. In a country where verbal news has always tended to be of unusual importance, owing to the inability of many of the peasants to

read newspapers and to the pre-War suppression of the Press by home and foreign Governments, an internal censorship has merely the effect of strengthening this tendency more and more. The result is that the newspapers lose much of their influence and the people accept without reserve the mass of often wildly exaggerated rumours which flow steadily through the country, increasing in picturesque details and sensationalism as they go farther from their source. What is more, such rumours do not get to the ears of the very people who are most interested, but circulate most freely among those most ready to believe the worst, and, even if heard in official circles, this only leads to the publication of denials in the newspapers of rumours, which they had not been allowed to publish, which often does more to strengthen belief in the rumour than to crush it. While licence such as the violent articles urging the use of force and stirring up tribal hatred published freely in June last year should certainly be curbed, more good than harm would be done by giving the Yugoslav Press more freedom of expression.

The General Election in Great Britain.

The surprising results of the British elections were received in Yugoslavia with very mixed feeling. While many people are enthusiastic about Labour's success, in official circles some misgivings are felt as to the influence it will have on political relations throughout Europe and on the chances of securing a loan. Certain Zagreb newspapers suggest in editorial articles that the victory of Labour in England will lead to a strong revival of democracy throughout Europe and a reaction against dictatorships, especially those of a socially reactionary type such as that in Hungary. While many people believe that it will now be more difficult for countries which have not democratic institutions to obtain loans from England, others try to content themselves with the theory that there will be a flight of capital from England owing to fear of high taxation and that this will make it, on the contrary, easier for foreign countries to secure loans.

ROUMANIA.

Bucharest, June 5.

The National Celebration.

From May 10 until nearly the end of the month the whole Roumanian people lived in a state of patriotic exaltation. The Union Celebrations were held first at Bucharest and then at Alba Julia to commemorate the tenth anniversary of the birth of Greater Roumania and the return to the Mother Country of the provinces of Bessarabia, Bukovina and Transylvania after centuries of foreign domination. The festivities were preceded by a day of worship and of pious homage to the memory of the heroes who died for their country, and in thanksgiving for the realisation of the ancestral dream. Religious services were held throughout the country, at Bucharest before the tomb of the Unknown Soldier, and at Marasheshti, the Roumanian Verdun, on the field of battle itself, over the bones of the troops who fell at a moment of tragic triumph, when the Roumanian Army succeeded in barring the road to Odessa against the army of Field-Marshal Mackensen and thus saving the last remnant of Roumanian soil.

Then followed in Bucharest in rapid succession, official fêtes, military fêtes, academic fêtes and popular fêtes, when the people and the Royal Family were united in common rejoicing. For three days similar festivities were held at Alba Julia where the public enthusiasm was, perhaps, even greater than in the Capital, as Alba Julia is the ancient citadel of the Roumanians' resistance to their oppressors. Here Michael the Brave was crowned King of all the Roumanians three centuries before Ferdinand and the Loyal piously received the same Crown. Hundreds of thousands of people attended the celebrations (it is said there were four hundred thousand), the peasants streaming in from the high plateaux and vast

plains of Transylvania and from all the corners of the land to rejoice in their freedom and their union with their brethren and to manifest their attachment to their Sovereigns and their Government. Never before has so vast a crowd of peasants been united in Roumania for peaceful rejoicings, and the sight is said to have been most impressive, while the enthusiasm that reigned defies description. There were old soldiers from the War of Independence (1877-1878) and from the War of Deliverance (1916-1918); there were Boy Scouts saluting *à la roumaine*, cadets from the military schools, flags bright and new, tattered standards reminiscent of the great struggle, and troops of all arms defiled before the Prince Regent, who sat motionless on his white horse below the Tribune draped with purple velvet, on which stood the little King Michael, with his precociously grave smile to receive the affectionate acclamations of the crowd. Hearty ovations were accorded also to one who will always be remembered by Roumanians as "Our Queen," the persuasive counsellor of King Ferdinand, the devoted nurse of the wounded during the War and the kind and sympathetic friend of her people in joy and sorrow. The widowed Queen and her little grandchild seemed an expressive symbol of the New Roumania—the glory of yesterday and the promise of to-morrow. Hearty manifestations of loyalty and affection were given to the Princess Mother and all the Royal family and to the Regents, and the enthusiasm exceeded all bounds on the appearance of M. Julius Maniu, the President of the Council of Ministers, the most popular and beloved figure in Transylvania, to which province he has devoted his life, following the tradition of his family, which for six generations has championed the cause of the Roumanian minorities under Hungarian rule.

Two facts strikingly illustrate the importance of these celebrations from the national point of view. One is that 300 Roumanians from America came over at their own expense to take part in this patriotic commemoration, and the other is that by spontaneous agreement all political differences between parties were sunk for the moment, and all personal rancours, and the leaders of former parties, M. Vintila Bratiano, M. Duca, and General Averescu lent their support to the organisation of the ceremonies so as to maintain the spirit of Unity.

All who were present at these festivities state that they made a deep impression not easily forgotten.

Foreign Affairs.

A recent event of considerable importance is the ratification by Parliament of the Concordat with the Vatican, which was concluded by the late King Ferdinand and the late M. Ionel Bratianu.

M. Mironescu, Minister for Foreign Affairs, has given an illuminating and detailed account of the recent discussions with M. Benesh and Dr. Kumanoudi at the conference of the Little Entente at Belgrade. The solidarity of this little group of Powers may be regarded as the best guarantee of peace in that part of Europe which suffered most from the world War both politically and economically. Thanks to the peace policy of the Little Entente and of its neighbours Poland and Greece, there is no friction between them and the Great Powers. The Conference also broached the question of the Minorities, which is soon to be discussed by the Council of the League of Nations at Madrid. After long deliberations the Council of the Little Entente decided that their component States would not accept any modification of the Minorities clauses without the consent of those among them who possessed minorities. The same point of view was adopted by Poland and Greece, and these five States will, therefore, request the League of Nations to preserve the *status quo* in this regard.

The Optants Question also seems to be on a fair way to solution. The treaties of friendly alliance between the countries forming the Little Entente have been renewed for another five years, as well as the Arbitration and Conciliation Treaties, on the League of Nations model.

with the reservation that arbitration is not applicable to questions coming under the competence of legal tribunals, so that foreigners may not be favoured at the expense of natives of the country.

The Financial Adjustment.

The first quarterly report of M. Rist, Technical Counsellor to the National Bank, to the Governor, M. Burilleano, shows the excellent results obtained up to the present by the stabilisation of the leu, and, if the agricultural depression is overcome, conditions will, no doubt, continue to improve, with the aid of the financial measures adopted by the Government with a view to strengthening the situation. The State revenues encashed in April showed a considerable improvement, and, if a comparison be made with April 1928, the revenues this year show a surplus of 340 million lei. This is the more satisfactory, as the new economy programme of the Government has not yet been brought into force. As regards the harvest prospects, the prognostications up to the present are favourable.

Cairo, June 1.

King Fuad.

King Fuad left this week for Europe. He sailed by the *Sitmar* s.s. *Ausonia*, on which two suites and the entire upper deck had been reserved for him. As an epidemic of measles had broken out recently on board *Al Mahrussa*, it was deemed wiser for him not to travel by her yet. The Royal Yacht, as soon as it has been satisfactorily disinfected, will leave, it is understood, later for Europe with the Queen and the Royal children.

King Fuad, who is accompanied by Dr. Hafez Bey Affi, Minister for Foreign Affairs, and Ahmed Hassanein Bey, First Chamberlain, (the Grand Chamberlain, Said Zoufkar Pasha, having preceded the Royal party last week) is due in Berlin on June 10 on an official visit of three days. After that he will spend a further ten days visiting amongst other places Hamburg, Essen, Halle and Munich. He will then leave for Prague, to be the guest of the Czechoslovakian Government. After this he will pay a State visit to Berne. King Fuad will spend a few days in Paris and cross over to London about the middle of July, his intention being to spend three to four weeks *incognito* in England. He will subsequently undergo a cure, probably at Vichy, and pay a State visit to Madrid on his way back to Egypt, where he will arrive at the end of October or beginning of November.

Mohamed Pasha Mahmoud, the Premier, has advanced his departure for Europe and will leave on June 14 in order to be able to receive in person at Oxford the D.C.L. which that University has conferred on him. The Premier will spend some time in England, and will be in London during the King's visit. Dr. Hafez Bey Affi, it is understood, will return to Cairo on the conclusion of the King's State visit to Berne, and will rejoin His Majesty when he goes to Madrid. During Mohamed Pasha Mahmoud's absence the Council of Ministers will be presided over by the senior Minister, Gaafar Pasha Waly, but no interim Prime Minister will be appointed.

Alexandria Municipality.

Once again Alexandria is in the throes of a controversy over the Municipality. Whatever the rights or wrongs

may be in regard to the alleged irregularities in the Public Health Section of that Administration, one cannot help feeling amazed at the irresponsible manner in which what is to a very great extent a purely internal matter for handling by the responsible executive officer has been made the subject of public discussion by members of the Commission and of the Delegation. There has been a lack of restraint and of dignity in this instance, which is a singular commentary on the fitness of these councillors to hold such responsible positions; and the entire affair merely serves to confirm the statements long current that Municipal Councillors, by their persistent interference in the administration, and by their personal animosities, have been making the executive work more and more impossible. The time seems to have come when, far from revoking, as some of these Councillors want, Ziwar Pasha's amendment of the Ministerial *arrêté* creating the Delegation, a further reorganisation of that body should be made so that the power of the members should materially be restricted and the executive left free to carry out the decisions of the Council.

The Cantonal Courts.

I understand that the Ministry of Justice is at present studying two important projects referring to the Cantonal Courts and the Meglis Habis. The Cantonal Courts were instituted by the late Lord Kitchener when he was British Agent in order to give the people a simplified form of justice based on local usage and common sense without the expense attaching to litigation in the ordinary courts. The system has answered very well. But there is no doubt that, while the simplification of procedure has conferred a boon on the people in the outlying districts, the fact that the judges have no legal training, and are in fact merely notables chosen *ad hoc* to deal with the cases arising in their particular area, has created a not altogether satisfactory situation. The Minister proposes to do away with the voluntary system of appointing local notables as Judges of these Courts, and to replace them by legally trained men, selected from among the Substitutes of the Parquet, by preference from those who come from the provinces—for whom there will be created a new class of third-class judgeship after the style of "Juge Suppléant."

The other reform has to do with the question of minors and interdicted persons whose estates are at present administered by guardians appointed and supervised by the Meglis Hasby, the tribunal created for the purpose of dealing with cases of guardianship. The proposal is to bring into being something after the style of the Public Trusteeship in England, so as to ensure that the estates of these persons shall be administered by experienced hands and not left to the mercy of an institution such as the Meglis Hasby, which really exercises no control and cannot prevent the frequent abuse which goes on under the present system.

M. Pernar, one of the Croat Deputies who was wounded in the Skupstina on June 20, 1928, who is a lawyer in Zagreb, was arrested there on June 9 with four other lawyers at a meeting of the local Bar, because, according to *The Times*, before signing a telegram of greeting to King Alexander they had demanded in sharp and unsuitable form the insertion in it of an appeal for the restoration of the Constitution.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are invited for ASSISTANT MISTRESS-SHIPS for teaching English in Egyptian Government Secondary Schools.

Candidates should be between 25 and 34 years of age, and should have a University Degree (preferably in Honours), some experience of teaching, and a Diploma in teaching or the Higher Froebel Certificate.

The initial salary offered is £25 a month (about £307 a year) and the appointments will be on contract for a period of five years, and renewable at the end of that time.

Full particulars and Form of Application may be obtained from The Director, Egyptian Education Office, 39, Victoria Street, London, S.W.1.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 23.

The Intelligentsia.

Last week I quoted an Indian student of politics as having said that the *intelligentsia* in India could have no interest opposed to the interests of the people of the country generally. Mr. Srinivasa Iyengar, speaking two days before, upon a subject to which I shall come in a moment, referred to the Madras Presidency as one "where a very practical, astute, powerful, wealthy communal party exists." A party can show its wealth and its power in works of philanthropy and public utility, but one might ask the student how a party could earn the epithet "astute" except in furthering its own selfish interests. One might ask that question, and while waiting for the answer pass on to something else.

Congressmen's Acceptance of Office.

Mr. Iyengar, when he used those words that I have quoted, was explaining his views upon a question that has a good deal vexed Madras—whether Congressmen should be free in future to accept ministerial office. He spoke again on the subject, at a meeting this week of the Tamil Nadu Congress Committee, saying, "... my Gauhati speech as Congress President contains a fairly exhaustive enumeration of the objections to the acceptance of office as they appeared to me before the 'no-office' experiment was tried. . . . Unlike other friends, I believe in trying political experiments for a number of years, but I do not believe in sticking to them in the Provinces in which they have proved absolute failures. In this Province our experiment has proved a disastrous failure, and the party which was wholly defeated in 1926 has come back to greater power in the form of an anti-national and reactionary Ministry." The acceptance of office, for or against, is a question that is to be determined by the Provincial Congress Committee, not by the members of the Congress party in the Legislative Council. This change of policy in Madras, if it cannot yet be said to have gone very far, may be the prelude to a transformation of the political scene. In any country, a party prepared to accept office attracts valuable recruits by that attitude alone.

The Statutory Commission.

We have been favoured with some speculations from London as to the probable findings of the Statutory Commission. In one of them this occurs:—"One of the principal difficulties in the way of any *rapprochement* with Indian opinion is the solidarity of the Simon boycott. I hear, however, that negotiations are proceeding satisfactorily for the visit to England, later on, of an All-Parties' delegation. . . . The purpose of the visit will be for the delegation to confer with the new British Cabinet, but doubtless by the time the delegation arrives some means of contact will be devised whereby the members of the Simon Commission can be included in the conversations. This, in any event, is the line on which those pulling the strings are working." I have heard myself some word of such negotiations. Insistence on the members of the Statutory Commission being included in the conversations might prove the rock on which the negotiations would split.

Dropping the Commission.

In my letter of March 28 (THE NEAR EAST AND INDIA of April 18) I had a paragraph headed "Dropping the Statutory Commission." The Indian political leaders who have joined the boycott have determined, or so I have gathered, to refuse to meet Sir John Simon at any stage, *if he is to be an arbiter*. They would say in effect: "We will negotiate direct with the Prime Minister. We do not wish his mind to be influenced by any man's opinion as to what the conditions of present-day India are, and of our capacity to deal with those conditions. Sir John Simon will have been fed up by the officials with their view that we could never manage this, never manage that. So we want him kept out of the way. You cannot tell what an

untried man will do in an emergency, what he may then rise to. When India is made self-governing, it will be an emergency. You must wait and see what India may rise to in that emergency." That, I have gathered, is very much what is in the minds of prominent Indian politicians. They would consider their giving any undertaking to satisfy Sir John Simon and his colleagues as to the measure of self-government for which India is already ripe—they would consider that a "betraying of their country." That is the phrase I have heard used. I am afraid myself that there is nothing for it but to make the great experiment. It is no use saying that to give India too large a measure of self-government would lead to endless difficulties; it is no use saying that, that is, as an argument to persuade the Indian politicians; for they would simply reply that there have been endless difficulties in working a republican Government in Germany since 1918. So there have been: the fact is admitted by even the *New Statesman*.

Land Settlement.

It appears to be going to be as many must have thought, and as I said a week ago; for the publication of the special officers' report on the Bardoli resettlement has stirred the mud in many springs and wells. The newspapers of this week have been full of columns of news, with such headings as "200 Villages Protest," "Agitation Increasing," "A New Revenue Policy. Way to Stop No-Tax Campaigns." There has just been held a Revenue Members' Conference at Simla. It was time for it; for the revenue policy had not been reviewed as a whole since early in Lord Curzon's viceroyalty. Whether the Revenue Members' Conference did not take too many of the accepted rules as things to be taken for granted is open to question. They did so certainly in the view of Mr. K. M. Munshi, a man who figured prominently in the Bardoli controversy, and a statement of his in the *Pioneer* of yesterday is worth reading in full. In this view the Conference was "a tame affair."

THE INDIAN CENTRAL COMMITTEE.

The remaining five members of the Indian Central Committee, which is co-operating with the Statutory Commission, arrived at Victoria Station on June 7, and were given a cordial welcome by members of the Commission and on behalf of the present Government and the late Administration.

The members of the Central Committee are: Sir Sanharan Nair (the Chairman), Sir Hari Singh Gour, Sir Arthur Froom, Nawab Sir Zulfikkar Ali Khan, Raja Nawab Ali Khan, Rr. A. Suhrawardy, Rao Bahadur, M.C., Rajah; Mr. Kikabhai Premchand, and Sardar Bahadur S. S. Uderoi.

Sir Sanharan Nair, with Sir Hari Singh Gour and Sir Arthur Froom, had preceded the party to London, and was among those who received them.

The members of the Committee were received by Sir Arthur Hirtzel, Permanent Under-Secretary, India Office, Sir Louis Kershaw, Assistant Under-Secretary, and Sir John Simon. Mr. H. B. Usher, private secretary to Mr. Ramsay MacDonald, gave them a "most cordial welcome to London" on behalf of the Prime Minister and "his very best wishes for the success of the work they had come to do."

Special precautions were taken by the authorities to prevent any repetition of the scenes which occurred when Sir John Simon and his colleagues returned from India, and after an exchange of greetings the party left for the Savoy Hotel, where the Committee are staying for two months as the guests of the Government.

In a statement, the Chairman, Sir Sankaran Nair, said they looked forward to their work in this country, and he cherished the hope that they would be in a position to present a unanimous report.

Sir Zulfikar Ali Khan, a leader of the Punjab Muslims, added that they were glad to come to England, a land of liberty and advanced civilisation, to discharge further the

responsibilities placed upon them, and there was every reason to believe that the Statutory Commission and the Central Committee would find many points of agreement.

Among those present on the platform were: The Marquis of Reading, the Earl of Birkenhead, Sir Harcourt Butler, Sir Hugh Stephenson, Lord Inchcape, Lady Simon, Colonel Lane-Fox, M.P., Sir Leslie Wilson, Mr. V. Hartshorn, M.P., the Hon. E. Cadogan, M.P., Major C. R. Attlee, M.P., Colonel Stewart Patterson (representing the Secretary of State for India), Sir Campbell Rhodes, Nawab Sir Umar Hayat Khan, and other members of the Council of the Secretary of State for India.

THE CALCUTTA DINNER.

A notable exposition of his policy by Sir Basil Blackett, the guest of honour, was a feature of the proceedings at the twenty-second annual Calcutta Dinner which was held at the Hotel Cecil on June 4. Sir Hubert Carr, a former President of the European Association, presided over a large and representative gathering.

Proposing the toast of "The City of Calcutta," coupled with "Our Guests," the Chairman said that the great political changes of late years introduced throughout the country had not left Calcutta untouched, and certainly had not made life any easier, for the position of our own community had been gravely affected.

In spite of these changes Calcutta still remained the greatest centre of British industry and influence in India, and it was in this respect where the new political situation affected them so strongly. It made it essential that influential members of the community should take an active part in the Councils of the country.

Probably the greatest difficulty ahead arose from the manner in which political powers granted by Britain had already been invoked to discriminate against British interests on a purely racial basis, and, indeed, to propose measures practically amounting to confiscation of business interests which had been built up to the benefit of India as well as of Britain.

That was a difficulty they could not meet unaided, and he trusted the justice of position would be recognised by Parliament and conditions established in India as in England, where Briton and Indian could enjoy similar rights.

Sir Basil Blackett, formerly Finance Member of the Government of India, replied to the toast. In the course of his speech he said:

"This is in the main a gathering of merchant adventurers, and I want to retrieve my reputation as a practical man by saying something of financial and economic conditions in India. Most of you, I suppose, think of me, if you think of me at all, in connexion with India, as a rather cold-blooded Finance Member who tried to screw income-tax out of you and was singularly impervious to demands for the redress of the grievances of Bengal in the matter of the financial settlement under the reforms. No doubt you are right.

"Five or six years are a short period in the life of a nation, and I had to limit my objectives. Two of these objectives were the extinction of the provincial contributions without increase of taxation and the development of India's resources by the expenditure of capital, as far as possible Indian capital, on reproductive purposes. Nowhere more than in India is the Government more conscious of the vicious circle which makes it all but impossible, owing to the low taxable capacity of the population, to raise adequate funds for urgently needed beneficial services, and all but impossible to increase the taxable capacity without spending large sums on improving education, sanitation and production in India, especially agricultural production.

So far as it was possible, my aim was to meet the dilemma by spending all the money that I could raise on reproductive capital development, and by setting free the 10 crores of provincial contributions so that the Provinces might spend them on beneficial services.

"I was singularly fortunate in many ways. The way had been well and truly prepared by Sir Malcolm Hailey, who has never received the credit due to him for his work as Finance Member. It was he who persuaded the first Assembly to vote important increases in taxation which had been unduly postponed during and just after the War. On arrival I found the Retrenchment Committee under Lord Inchcape hard at work. I join with all present in congratulating Lord Inchcape on his latest honour.

"My first task was to co-operate with him and then to persuade the Government of India to accept in principle the whole of the recommendations of his Committee, thereby placing upon each Department the onus of persuading the Government of India that any particular recommendation should not or could not be carried into effect.

"This decision was naturally an unpleasant one for all my colleagues, and their support was a fine thing for which I shall never cease to be grateful. It was an unwelcome decision to me, too. It was, of course, vitally important at the time to reduce expenditure, and in so far as this meant elimination of waste it was all to the good. But in India to-day the greatest need is for wise and progressive expenditure in improving the social and economic condition of the masses. So far as revenue was concerned, almost the only contribution I was able to make to this need was the extinction of the provincial contributions.

"On the capital side of the account I was, I think, able to do more, and I was fortunate in being able to raise almost the whole of the new capital required inside India, besides refunding in India the large amount of debt maturing each year. India has, I believe, reached already the stage where her annual internal savings are sufficient to provide all the new capital she is capable of spending, and, given reasonable progress in banking machinery and in the habit of banking and investment, India should ere long have an annual surplus of new capital. The trade figures of recent years have been uniformly favourable.

"Unfortunately, at the moment causes, which I hope are temporary, are clouding this fair prospect. Political malaise, and especially the fear of Communist trouble, is keeping new British capital away from India, and to some extent capital, both British and Indian, is coming out of India. At the moment, too, India, in common with Europe, is feeling the pressure of high money rates in New York.

"In passing, I may observe that the failure of the American Federal Reserve system to deal adequately with the money situation there is further proof, if proof were needed, of the undesirability of admitting political influences into the management of central banking policy. One consequence of these temporarily unfavourable factors is to make it increasingly difficult for the Government of India to maintain in full vigour the policy of encouraging all possible capital expenditure for purposes which are clearly reproductive.

"I trust that the momentary difficulties will be surmounted quickly, and in so far as they are due to the timidity of British capital I would urge that, though methods of doing business in India are changing, the opportunities of the British merchant adventurer in India to use money profitably are not inferior to what they have been at any time in the past.

"I do not underrate the serious character both of the Communist trouble and of the threat of non-co-operation. But I feel confident that they will be met with wisdom and firmness from the authorities, and that firmness will evoke at once a willing response from the large majority of educated Indians, which, though unvoiced, is opposed to extremism in all forms. Here is a great opportunity for the British business man, provided he is willing to go forward in sympathetic co-operation with Indian owners of capital, who are more than ever appreciative of the experience and the probity of British business men in their midst.

"Capital expenditure alone cannot meet all the needs of India. The urgent need is still for additional revenue to spend on beneficial services. I cannot forecast what the report of the Simon Commission may be, but if constitutional development is to be in the direction of increasing provincial autonomy, one of the big problems will be to find increased revenues for provincial needs in those directions. Unless advance is to take the form, as some desire, of dealing on quite different lines with different provinces, such as the grant of Home Rule to one or more Provinces, it is essential for India's unity that the Central Government should have an effective voice in all-India questions, and it must have adequate financial resources to enable it to face any emergency.

"It seems to be worth considering whether this position cannot be secured by placing upon the Central Government, assisted by a body duly representative of the Provinces, the duty of raising revenue both for its own needs and also for the purposes of a central fund out of which money would be distributed to the Provinces. This would be the converse of the provincial contributions.

"The distribution would perhaps be on a population basis tempered by local needs. To prevent divorce of local responsibility for imposing taxes and responsibility for spending the proceeds, the Central Government would need to share responsibility very clearly with a body truly representing the Provinces. Possibly the same body or a parallel body might come into being representing the Indian States, and the Central Fund might be distributable not only to the Provinces, but also, subject to prior settlement of constitutional and financial relationships, to the Indian States.

"From the financial standpoint, the greatest of India's problems is the provision of adequate resources to be applied locally on improving the lot of India's masses, whether in the great cities or scattered in hundreds of thousands of villages throughout the sub-continent. I spoke earlier of Britain's Imperial mission of service in India. It is from here, among the masses of India, that the call to service comes. The financial line of approach leads in the same direction as all others—the cry for help of the Indian masses.

"The merchant adventurer who goes out to Calcutta comes at once face to face with problems of urban India, but may seem at first sight to be far removed from the Indian peasant. He soon finds that jute and tea and cotton piece-goods take him straight to the Indian peasant. For him, too, the call is the call of India's masses. In creating Calcutta the British merchant adventurer has acquired important and valuable rights, and he would be failing in his duty if he did not defend them.

"He has acquired responsibilities also. It is the merchant adventurers of to-day upon whom the future of India and of the British Empire depends. If they fail—but they will not fail—the soldier and the civilian will soon be superfluous. The business community of Calcutta realises its responsibilities and is playing its part in the Councils and in the Central Assembly and Council of State, though I could wish at times that it would devote greater attention to organising itself for this part of its task in India.

"It must never forget that besides being a great trading and manufacturing capital, Calcutta is the visible emblem of India's agricultural life and industry. I am glad to think that the era of pessimism—almost defeatism—is rapidly passing away. I have been much struck by the return of the spirit of adventure coupled with a resolute facing of the facts that I find among the younger men whom fate or their own choice is taking out to India to-day, in the Army, or in civil administration, or in business.

"As in the past, so to-day and to-morrow the life and happiness of India's millions depends more than upon any other factor, upon the spirit of adventure and of service radiating out from the merchant adventurers of Calcutta.

The toast of the Chairman was proposed by Mr. J.

Mackenzie and a vote of thanks to the Chairman of the Committee, Sir George Sutherland, and the Hon. Secretary and Hon. Treasurer, concluded the proceedings.

Among those present were:—Col. Green Armytage, E. C. Apostolides, Maharajahdiraj of Burdwan, Sir Harcourt Butler, C. H. Bompas, P. H. Browne, Sir John Bell, R. N. Band, Sir Archibald Birkmyre, Bt., C. E. Buckland, A. R. Barbour, H. T. Montague Bell, R. Bazley, J. S. Bruce, Maj. G. C. S. Black, F. W. Bowrey (hon. sec.), Sir William C. Currie, J. Bain Crichton, Sir John Cumming, F. G. Clarke, Adrian Caddy, M.D., F.R.C.S., Sir Thomas Catto, Bt., Henry A. Crouch, C.I.E., C. B. Chartres, Col. J. D. Crawford, J. M. Chisholm, A. C. Coubrough, L. T. Carmichael, M. J. Calvocoressi, William Clark, F. C. Danger, C.B.E., Walter Davies, M.B.E., J.P. (hon. treasurer), C. N. Douetil, A. W. Dods, Sir Stephen Demetriadi, Major Sholto Douglas, Sir James Donald, A. C. Daniel, W. A. Duncan, S. Eustace, Sir Edward Every, Bt., T. D. Edleston, Sir Arthur Froom, H. B. Fox, Dr. L. L. Fermor, C. Fitch, C.I.E., J. Goodman, M. M. S. Gubay, W. O. Grazebrook, R. Graham, Sir George Godfrey, Geo. P. Harris, R. W. Hutchison, Maj.-Gen. G. F. A. Harris, H. Harris, R. B. Hughes-Buller, H. M. Haywood, Major H. Hobbs, C. Ismay, J. A. Jones, Gavin Jones, Sir John Kerr, Cecil Kennedy, Cecil M. Knox, Jas. Keenan, Kenneth W. Leslie, R. O. Law, Harold Legat, Sir C. E. Low, Sir Darcy Lindsay, T. H. Laird, Colin Leslie, Sir Alexander Murray, J. Mackenzie, C. C. Munro, Melville Macfadyen, A. C. Matthews, Rt. Hon. Sir B. C. Mitter, S. N. Mullick, Vivian H. MacCaw, C. D. Matthews, W. H. Miles, A. R. Mellis, A. M. Mair, Sir Duncan Macpherson, T. McMorran, D. P. McKenzie, Major Norman McLeod, Sir Charles McLeod, Bt., Gen. Sir Henry McMahon, Arthur Moore, Chas. Nicoll, George N. Nairn, Capt. H. B. Norton, J. B. Norton, Lt.-Col. F. O'Kinealy, Sir Alfred Lockford, N. G. Park, George Pilcher, T. E. Pallant, P. Parrott, E. B. Pratt, W. E. Preston, J. M. Ryrie, W. Ross-Munro, James Robertson, E. J. W. Rawson, Sir Campbell Rhodes, Sir Benjamin Robertson, E. Richardson, C. A. Radice, Sir George Sutherland (Chairman of Committee), Sir Lancelot Sanderson, Rev. Canon R. Stuart, W. Ross Smith, K. A. Scott-Moncrieff, Col. W. Mackenzie Smith, J. A. Simpson, S. K. Scott, Sir Harry Stephen, Sir Hugh Stephenson, A. N. Stuart, G. S. Sturrock, Sir Henry Sitwell, Sir Thomas Smith, Lt.-Col. A. H. C. Sutherland, H. E. Skinner, Lord Sinha of Raipur, G. A. Theobald, C. W. A. Trevor, Ivor G. Tredaway, A. Topping, Major A. Newall Tuck, Chas. W. Tosh, Jas. Thomson, Ivor C. Thomas, Major H. B. Taylor, R. A. Towler, Sir Henry Wheeler, E. L. Watts, W. H. A. Webster, Dr. Cecil Webb-Johnson, Sir Walter Willson, H. G. Weber, J. E. Woolcott, H. B. Whitby, A. N. Wardley, A. N. Warrack, Major R. C. B. Williams, Col. Sir John Young, and A. O. Young.

THE SIND DINNER.

The Sind Dinner was held at the Café Monico on June 4. The chair was taken by Sir Henry Lawrence, and the guest of the evening was Sir Leslie Wilson, late Governor of Bombay. The Chairman, in his speech on the Province, expressed great confidence in the future of the Province and in the character of the Sindhi cultivator.

Sir Leslie Wilson, in replying to the toast of his health, referred to the movement for the separation of Sind from the Government of Bombay. He expressed his belief that the union of Sind with Bombay would continue, and that conjunction with the Punjab, however geographically suitable, would not take place, if only for the reason that the Punjab Government did not wish for its responsibilities to be increased by the absorption of Sind. He referred, however, to the intolerable burden placed upon the Commissioner in Sind by the visits not only of the Governor of Bombay, but of other distinguished persons, all of whom had to be entertained by the Commissioner as his personal guests.

Among those present were Field-Marshal Sir Claud Jacob, Sir James Begbie, Sir Francis Couchman, and Sir Hugh Cocke, and among previous Commissioners, Mr. A. D. Younghusband, and Mr. P. R. Cadell. The absence of the honorary secretary, Sir Charles Mules, and the domestic illness which necessitated it were deeply regretted.

INDIA OFFICE COMMUNIQUE.

The King has been pleased to approve the appointment of Mr. Justice Horace Owen Compton Beasley, a Puisne Judge of the High Court, Madras, to be Chief Justice of the High Court, Madras, in the vacancy caused by the death of the late Sir Murray Coutts-Trotter.

THE EARTHQUAKE IN KHORASAN.

(From a Correspondent.)

Meshed, May 25.

The Hon. S. H. Taqizadeh, Governor of the Province of Khorasan, and Amamullah Mirza, the Commander in Chief of the Army, have returned this week to report on the disastrous earthquakes that occurred recently near the Russian border. Nearly two hundred villages have been completely or partly destroyed.

The first shocks were felt here in Meshed about 7 p.m. on May 1. The woodwork in our firmly built house creaked, and after the shock was over the cook called us into the kitchen to hear the water splashing on the sides of the cistern underneath.

But in the district of Kifán the earth broke in numerous surface cracks, only two or three inches wide but often as much as 200 yards in length. The centre of the disturbance was in the village of Robat and for twenty miles around. Robat itself was utterly reduced to a mere pile of earth and beams. In that general district, extending about 60 miles east and west, and some 40 miles north and south, there were repeated earthquakes throughout a period of from ten to fifteen days. Kifán, a larger village, was less severely shaken, but the houses were built on terraces, one above another, and consequently, when they began falling they went down like ninepins. There were 330 people killed in Robat and 350 in Kifán. Both these villages were in a densely populated district, and the next morning refugees came in from other villages with news that hundreds more had been killed. All these people were in dire need, their villages destroyed, their food supplies covered by the debris, their animals killed, and many of them were themselves wounded or crippled. The cows had been brought in to the village stables, but some of the sheep, fortunately, had been left out on the hillsides. The majority of the people were eating their evening meal, but some had retired for the night, when the first severe shocks came. In some places streams of water were blocked and diverted, leaving whole villages without any water supply, while in other places these diverted water course flooded fields and ruined crops.

Relief forces were sent out promptly from Meshed by both the civil and military authorities and arrived on the scenes of the disaster in time to render immediate and effective assistance. The Shah of Persia gave the Governor of Khorasan full authority and timely financial backing. Happily there were Government granaries that could be drawn upon in the Kuchan region. The Governor and his party went part of the distance from Meshed quickly and easily in automobiles, but the extensive journeying that they did among the ruined villages was on horseback, and they had to carry their supplies of wheat and first aid materials on pack animals. In the villages the wounded and the hungry appealed to them for food and for doctors, and out on the roads they met wandering refugees. There was one little girl, about 12 years old, who had been one of a large family. They found her out in the open country, alone, and almost insane from fright and grief. Again they came upon three young mothers, each with a child less than two years old. They had left their village to work in a garden for the day, and when they returned, just about dark, they found what they had known as their home place to be only a heap of earth.

The villages were so inaccessible, and off the telegraph line, that it was three days before the authorities were informed of the extent of the disaster, and it was extremely difficult to get doctors to all the scattered groups of wounded in the many villages. One doctor had to serve 89 wounded in one afternoon. In Kifán itself there were 520 wounded assembled when the doctors arrived. Ten doctors and as many nurses came from the neighbouring Russian city of Askabad and rendered valuable assistance in Persia for about ten days.

But what was done by foreign agencies was little more than a slight expression of friendship and of human sympathy. The bulk of the relief was rendered by the Persians themselves, who, as quickly as possible, brought food and medical assistance to their own people. There have been large gifts of money and of wheat from the Persian Government, also from individuals, and an assessment has been made of from 3 to 5 per cent. on this month's salary of all Government officials in the province. Vigorous and most useful work has been done by Persian doctors from Meshed. Teheran also sent other doctors by aeroplane, so that at present there are about 20 doctors looking after the wounded in these stricken villages. They have so much to do, however, as to tax all their resources, for the present estimate is that there have been nearly 2,000 killed and another 2,000 wounded, while several thousand more have been left practically destitute.

THE SYRIAN PRESS.

[We publish herewith further extracts from the Syrian Press.—ED.]

Hijaz Railway.

Alif-Ba, the Damascus newspaper, quoting the Beyrout paper, *Al-Akhbar*, says in its issue of May 25:—

"According to the text of the treaty of Lausanne, which was signed on May 24, 1923, the Hijaz Railway was placed under the administration of a Muslim Board to act under the supervision of Great Britain and France, but there is still no traffic on the section of the line lying between Maan and Madina owing to the lack of capital for operating it.

"The Turkish mail which was delivered yesterday informs us that the Turkish Government has written to the Director of the Deutsche Orient Bank at Constantinople requesting him to pay over the sum of 720,000 gold pounds deposited with the Bank in the name of the Hijaz Railway, and that the Director has accordingly left for Angora in order to open the necessary negotiations with the Minister of Finance for the payment of this sum. In presence of this news we are entitled to ask whether the sum deposited with the Deutsche Orient Bank belongs in fact to Turkey or whether it is the property of the Hijaz Railway."

The Lebanon Republic.

We learn from *Al-Safa*, a Druze weekly, published at Kafr Matta, Abayh, Lebanon, that the following changes are being made in the Constitution of the Lebanon:—

1. The Presidential term is extended from three to six years. This change does not affect the presidential term of M. Charles Debbas, who has been re-elected.
2. The unconditional right of dismissing the Assembly of deputies by a decree communicated to the Council of Ministers is conferred upon the President of the Republic.
3. The President is empowered to name his Ministers, whom he may select, as he pleases, from deputies or non-deputies.

The Baccalaureate.

The Damascus newspaper, *Al-Shaab*, published the following article in its issue of May 28:—

"The Ministry has sent round a circular to the Government schools, as well as to those privately administered, warning the candidates who propose to enter for the forthcoming certificate (*baccalauréat*) examinations that no one can be accepted as a candidate who has not completed a six years' course.

"This circular has caused general surprise in educational circles, because the sixth year in the secondary schools was instituted only three years ago in pursuance of the *arrêté* which created the *baccalauréat*. How, it is asked, can the pupils who have followed this course of studies only for three years produce evidence that they have attended a six years' course? Does not the Ministry of Public Instruction understand that this circular is an incitement to the candidates to protest and an injury to their future careers, while at the same time it is inconsistent with the Ministry's earlier *arrêté*, which instituted the *baccalauréat* examination only three years ago? Is not this a very remarkable state of affairs?

"It is generally known, moreover, that the French *baccalauréat*, which is naturally a more difficult examination than the Syrian one, confers upon the holder of its certificate the right of admission to the Superior Schools of Engineering, Medicine, Law, and the like, on condition that the bearer can give satisfactory proof that he has followed a not more than two years' course in the *baccalauréat* subjects. This is also the case with the Lebanon *baccalauréat*. Such being the rule in France and in the Lebanon, should it not be the rule in Syria too? Has the Ministry forgotten its former circulars and the regulations which they enforce? The Ministry should be bound by its own circulars and act in accordance with them.

"Evidently the candidates can only be expected to conform with the Ministry's last *arrêté* after the lapse of the four years necessary to complete the six years' course demanded by the Ministry in its last circular. What can be the meaning of these conflicting instructions, unless it be that the Ministry wishes to incite the candidates to resistance and then make an example of them?"

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

KING IBN SAUD AND NAJD.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The Great War ended in a great quagmire, particularly in the Arabian Peninsula, owing to the advent of Western civilisation. This affected almost all except the heart of Arabia, ruled by the Desert Monarch, King Ibn Saud, who, moved at the devastation caused by the late Sharif in the Hijaz, conquered the country, and has since been ruling there according to the laws of the Prophet of the land (peace be on him). This event brought the Desert Monarch before the eyes of all. But those who envied his rapid progress, tried, and have continued to try, to sprinkle thorns in his path in different ways, so that King Ibn Saud may not breathe freely in his dominions.

The new military posts impulsively erected at the Iraq frontiers adjoining the Najd boundaries have been a bone of contention between the Iraq and Najd Governments since their erection. The very sight of these posts are to the Ikhwan as a red rag to a bull—a fact corroborated by several skirmishes that of late have occurred between the Iraqis and the Ikhwan which led to several conferences between the two Governments with no definite results.

Owing to the nature of these posts, King Ibn Saud has had great trouble with the Ikhwan, who seem determined to have these posts removed. The following incident will show how far King Ibn Saud had to suffer in keeping these Ikhwan in check.

King Ibn Saud, who is an emblem of patience and devoutness, persuaded the Ikhwan from the sporadic attacks in the regions of these posts, but they seemed refractory to his orders, which, according to the orthodox Muslim Law, they could not but obey, and for which act they had to suffer much, as described under.

The King held a big *Motamar* (conference) at Riyadh, to which, among others, the chief Shaikhs of the Ikhwan were also invited. All the Shaikhs attended the Conference personally, except Ibn Bijad, Shaikh of the Ataiyah; Faisal al Duwish, Shaikh of the Mutair, and Daidan Bin Hithlain, Shaikh of the Ajman, who sent deputies only. The farsighted King Ibn Saud at once scented hypocrisy in them, which was proved by an incident that occurred three months ago.

A mercantile caravan which, while returning from Syria to Najd, had stopped with the Shammar people *en route*, was attacked along with the Shammar by Sultan Ibn Bijad and his party, killing many and looting all the goods. When King Ibn Saud was apprized of this he sent for Ibn Bijad, who did not turn up, but Faisal al Duwish, of the Mutair, hurried up to the King and intervened, promising to go over to Ibn Bijad and endeavour to bring him to terms and have the wrongs redressed.

Faisal al Duwish, who when with the King was greatly honoured, and had lavished upon him valuable presents and proper honours, after leaving turned out an hypocrite and joined hands with Ibn Bijad against the King. When the King came to know of the rebellious intent of these hypocrites, he at once proceeded to the Qasim, and mobilized his civil subjects, and in a few days with a large army returned to punish the miscreants. With this civil army the King proceeded to their places and asked of them to present themselves for obeisance in the presence of the *Ulama* (the learned religious doctors) to be dealt with according to these learned doctors' verdict, as His Majesty was averse from bloodshed. As they turned a deaf ear to the Royal *firman*, their hypocrisy was confirmed, and so on March 31 the King besieged them and their followers, the Ikhwan, inflicting a decisive defeat on them in a few hours.

The battle was being keenly observed by the ill-wishers

of the King, since they expected utter ruin at the hands of the Ikhwan, as such persons have ever been thinking that without the Ikhwan King Ibn Saud was helpless. But the God-fearing King, a true follower of the Prophet, had the divine succour at hand. This secured him a decisive victory in a short time, and frustrated the aims of the ill wishers.

During the fight Faisal al Duwish was seriously wounded, Ibn Bijad fled, but ultimately was caught, and is now safely in prison at Riyadh. The King directed the son of Amir Abdulla Jaluwi against the Shaikh of the Ajman, who was defeated and killed.

By the grace of God now peace reigns all over Najd and its territories. May the Almighty grant King Ibn Saud long and healthy life to rule in peace. He is a true Muslim ruler, universally acknowledged as such save by those who reside in Pharaoh's land, who seem to bear a kind of hereditary disdain against the Ishmaelites whom His Majesty King Abdul Aziz Ibn Saud belongs.

I hope that time will dispel the ill from the land of the Pharaohs to join hands with the universal choice.—
I am, etc.,
"NAJD."

Bombay, May 10.

NON-ARAB TRIBES IN ARABIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In connexion with the visit to the Hijaz this year of the Amir Ali ibn Abdullah al Hamuda of Jalan, whose territory is contiguous to that of the Sultan of Muscat and Oman and was recently visited by Mr. Bertram Thomas in the course of his journey along the south coast of Arabia to Dhufar, I may record that certain members of the Amir's suite have thrown some interesting light on Mr. Thomas' theories of an aboriginal non-Semitic element among the tribes inhabiting the coast eastward of Dhufar. Their opinion does not perhaps count for much on the scientific points at issue, except in so far as it provides evidence of tradition; but their opinions certainly do not seem to bear out Mr. Thomas' view at all. They state categorically that the "non-Arab" tribes of Mr. Thomas are of Arab origin, deriving from Himyar and Qahtan, and that they belong like themselves (the Jalan) to the Bani Ghafir group as opposed to the Hinawi, to which belong the Wuhiba, their traditional enemies. They certainly classed the Mahra, the Kara and the Batahira, as well as the Hikman and Janaba, in the Ghafiri category. I am not certain whether they said the same of the Harasis, or included them with the Hinawi. Obviously information of this kind gleaned at Jidda somewhat hurriedly cannot be given too much weight, but it is of interest to record it; and it was particularly interesting to hear from these people more details about the language of the "non-Arab" tribes than Mr. Thomas has so far made public. They declare that the tribes mentioned by Mr. Thomas all understand Arabic, though their own special dialect (or language as the case may be) is not always intelligible to the Arabs around them. This is in keeping with similar phenomena elsewhere in Arabia, where the common language of Arabic is accompanied by tribal codes or dialects which are only understood locally and are not necessarily not Arabic in origin. Lack of time prevented any attempt at exhaustive examination of specimens of the language, but the first ten numerals of the Bathari and Karawi languages provide plenty of food for thought. As given to me they are as follows, and perhaps Mr. Thomas will be able to check their accuracy:—

Bathari.	Karawi	Bathari.	Karawi
1. Tād	Tad	6. Itit	Ishtit
2. Thuruh	Thurūh	7. Habā'it	Shab'iyat
3. Thāthit	Thathyit	8. Thamanyat	Thinit
4. Arba'āt	Arba'ūt	9. Sā'yat	Sa'yat
5. Khamūh	Khāūsh	10. 'Asharyit	'Ashirat

N.B.—Only long vowels marked.

The words for 20, 30 and so on, up to 100 are almost indistinguishable from the Arabic equivalents except in a very few cases (e.g. Thahlut for Thalāthin in Karawi), but this is natural enough as only the units would probably

call for dialectic (primitive) consideration. Unfortunately for Mr. Thomas' theories, the units in both languages bear an extraordinary resemblance to Arabic, as will be obvious to anyone with a knowledge of that language. Surely it is difficult to resist the view that we are in contact with the remnants of a Semitic tongue and race with doubtless recent human and linguistic importations from Africa and elsewhere. It may be of interest to note that the Amir's Secretary, a native of Dhufar, can trace his ancestry to an Abyssinian slave who entered the service of the then Amir of Jalán about a century ago, having come from Abyssinia.—I am, etc.,

Jidda, May 18.

H. ST. J. B. PHILBY.

PERSONAL AND GENERAL

TO-DAY

June 13, 1929 (New Style).

May 31, 1929 (Old Style).

Muharram 5, 1348 A.H., of the Muslim Calendar.

Sivan 5, 5689, of the Jewish Calendar.

The Aga Khan returned to the Ritz Hotel last week from Paris.

The Bulgarian Minister and Mme. Hadji-Mischeff returned to London on June 6 from abroad.

Sir John Maffey, Governor-General of the Sudan, arrived last week at 13, Elm Park Gardens, Chelsea.

Prince Halim Abbas-Ibrahim arrived at the end of last week at the Savoy Hotel.

The Maharaja of Rajpipla arrived for a few days' stay at the Savoy Hotel with his suite from old Windsor.

Sir Basil and Lady Peto left England on June 8 for a sea trip until June 24.

The Turkish Ambassador and Mme. Ferid Bey held a largely attended reception on June 4 at the Embassy.

Mr. and Mrs. Victor Trumper, of Port Said, have arrived in England on a three months' visit.

The Prince of Wales received Air Vice-Marshal Sir Geoffrey Salmond (Air Officer Commanding Royal Air Force, India), at St. James's Palace on June 6.

Sir Elliot and Lady Colvin arrived at 23, Barkston Gardens, S.W.5, on June 8 where they will remain until July 14.

The Roumanian Minister, accompanied by Mme. Titulesco, left London on June 4 for Madrid to attend the meeting of the Council of the League of Nations.

Sir Flinders and Lady Petrie will be At Home from three to seven o'clock on July 5 at University College, Gower Street.

The Prince of Wales received in audience at St. James's Palace on June 4 Hajec Sir Ismail Sait, a prominent Indian banker, who is on holiday in London.

Mohamed Pasha Mahmoud, Prime Minister of Egypt, leaves this week for England. On June 26 he will receive at Oxford the honorary degree of Doctor of Civil Law, which has been conferred upon him by the University.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.

Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan. Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

The Prince of Wales received the Sultan of Zanzibar at St. James's Palace on June 4 on behalf of the King.

Professor Rushbrook-Williams sailed from Marseilles in the P. and O. s.s. Naldera on June 7 on a short return visit to India at the request of the Maharaja of Patiala.

Mr. Leslie Urquhart, a member of the financial group formed in support of the Dead Sea Salts Concession, left England last week for the United States and Australia. He will be away until October.

Professor E. A. Gardner was on June 4 elected for a period of three years President of the Society for the Promotion of Hellenic Studies. Professor R. M. Dawkins was appointed Vice-President, and Professor D. S. Robertson, a Member of Council.

Mrs. Leslie and the Council of the Overseas Section of the Forum Club gave an "India" At Home on June 11, at 6, Grosvenor Place. Amongst those present were the Maharajadhiraja of Burdwan, General Sir Hastings and Lady Anderson, Lord and Lady Lawrence, Sir Louis and Lady Kershaw, Sir Bindon and Lady Blood, Brigadier-General and the Hon. Mrs. Warner, Sir Michael and Lady O'Dwyer, Mr. and Mrs. Wardlaw-Milne, Sir Francis and Lady Humphrys, Sir Claude and Lady Jacob, General Leslie, Sir George and Lady MacMunn, Sir Percy and Lady Cox, Col. and Mrs. Gibson, Sir Walter and Lady Willson, Major-General Sir Theodore Fraser, Sir Charles and Lady Bayley, Lord and Lady Meston, Sir Arthur and Lady Knapp, Lady Moore-Guggisberg, Miss Alice Williams and Miss Margaret Baxter.

A new air line from Marseilles to Beyrout, Syria, *via* Naples and Athens, was inaugurated on June 6.

At a special sitting on June 4 the Legislative Council of Trans-Jordan ratified the British-Trans-Jordanian Agreement by 15 votes to four.

Hussein Sirry Bey and Ahmed Ibrahim Eff. have been selected to represent Egypt at the Building and Concrete Foundations Congress to be held in Liège in July.

It is reported that the French archæologist, M. Darousse, was last week assassinated at Telh Abbiard, where he had been carrying out excavation work. M. Darousse had done a considerable amount of archæological investigation in Palestine, Syria, and other countries.

At a general meeting of the members of the Royal Institution held on June 3 the special thanks were returned to Mr. A. C. Ionides for his present of original spectrographs by the late Sir William Crookes of Athenian coins.

Where to stay in the East

THE WEEK AT HOME

London, Tuesday Morning.

The Labour Cabinet.

On the whole the Labour Government—it is not fair yet to call it a Socialist Administration—has been greeted very cordially. Mr. Baldwin, who took the action of immediate resignation which everyone who realised the essential sportiveness of his character expected of him, has already seen to it that there is, as far as his party is concerned, to be no captious or petty criticism of his successor. It is, in short, quite certain that Mr. Ramsay MacDonald will have a fair run.

At the same time, it must be admitted that the choice of personnel for the new Administration has caused surprise in all parties, including the Labour Party itself. Nothing, obviously, is to be done to offend the Liberals—unless it is to have “pinched” one of their best men, Mr. W. A. Jowitt, as Attorney-General! It is emphatically the “Right” wing of Labour which is represented in the Cabinet—virtually that wide domain, of which Mr. Lloyd George spoke some months ago, in which there is abundant opportunity for “progressives” of both Liberal and Labour party to unite.

To me, personally, the chief surprise is the omission to employ the services of Mr. John Wheatley, and so not only to secure the close adhesion of one of the most brilliant and sincere men in the Party, but also to temper the criticism of the “Left.” It used to be a maxim with Radicals to have “no enemies on the Left”; but perhaps Mr. MacDonald feels so strongly fortified on his Right as to be able to dispense with this maxim.

Some of the appointments strike one as quaint, but possibly that is only because one looks at a Labour Cabinet with a more critical eye than one looked at older Cabinets. Mr. Arthur Henderson, for instance, who when in the last Labour Government found it extremely difficult to make a decision at the Home Office, will either have to change this habit, or rely on the decisions of his Prime Minister, who, however sound he may be generally on foreign affairs, should not be called upon to do the job of even one and a half men. Even quainter seems the appointment of an essentially domestic man, Mr. Sidney Webb to be Colonial Secretary.

You cannot tell. Cabinet jobs are not in the least like other jobs, far often the complete lack of obvious qualifications has been the reason for giving a post to a man who subsequently proved himself a most successful Minister. Let that charity which was given as a matter of course to Unionist and Liberal Cabinets in the past be given as a matter of common decency to the Labour Cabinet also.

The New Attorney-General.

An enormous fuss has been caused—it has occupied a quite disproportionate space in the daily papers—over the going over of Mr. W. A. Jowitt to the Labour Party, to become Attorney-General. The more extreme Labour people are indignant that a Liberal should have been called upon; the Liberals are furious that one of the few remaining hairs on their head should thus have been rudely snatched out; and the Tories are mildly satirical at the poverty of Labour's legal representatives and at the sincerity of the Liberals.

Actually, there is very little in it. First of all should be considered the country: it is lucky to have so able a

man as Attorney-General. But to judge by the talk of some people, it would have been better to have a poor Attorney-General than that the quintessential honesty of a Liberal should be suspect! Next, it proves how false was the supposition that the votes cast for the Liberals were anti-Socialist votes—for the views which Mr. Jowitt has publicly expressed are entertained by nearly all Liberals—it is merely that the chance of promotion did not come to them. Mr. Jowitt's move is not a conversion, but simply a secession or desertion. And thirdly, the present political ground between Liberal and Labour being almost identical, who shall say that Mr. Jowitt erred in giving up an income of several thousands a year to become Attorney-General?

If a Tory had done this thing, of course, it might have been possible to chant, “Just for a riband to stick in his coat.” To the realist, however, who looks below mere Party labels, the secession of Mr. Jowitt will certainly cause no tears. Nor can one think that the jealous attitude of the extremist Socialists towards this ex-Liberal will last very long: political memories are very short, or forgiving—how else would you see your Buxtons, Trevelyan, and Wedgwood Benns in the Cabinet? As for the suggestion that Mr. Jowitt would have been defeated at Preston had he not stood as a Liberal, it is nonsense, for he was returned largely on the Socialist vote. One can remember, however, a certain prominent instance where a Liberal member went Conservative without offering to seek re-election!

Electoral Reform.

Of all the cranks who ever plagued this earth perhaps the arithmeticians are the most worrying. No sooner is this election over than the theorists—belonging mainly to the Liberal Party, but also contained in the Conservatives—wish to have another to see how their pet schemes of electoral reform would work. They are pointing out, with a fine show of reason, that whereas the Socialists polled only 8,314,891 votes, and obtained 288 seats, the Conservatives polled 8,530,321 votes, and obtained 37 seats fewer than the Socialists, and as for the unhappy Liberals, they polled 5,227,136 votes, to get only 58 seats!

Obviously, it is argued, this is not representation. But what is? That is the rub. It is very improbable that, under any system, the Government of the day would have a majority over everybody else. And yet the system which permits this seeming anomaly is called “representative Government”!

In any case, the theorists, who favour anything from proportional representation to the alternative vote, are disagreed on their nostrums. You might, if you adopted their schemes, get more theoretical justice, but there would certainly be grouching just the same. Progress in the matter of governance does not lie in tinkering with the electoral system, the injustices of which never strike you until you are actually struck by them. In other words, it is only when you yourself fail to be represented that you begin to flirt with the idea that by some mathematical manipulation your vote may count for more than it has done hitherto.

The Liberals are going to try hard to persuade the Government to pass an Electoral Reform Bill; but the Socialists, who happen for once to have done rather well out of the present system, may be content to observe that more pressing things must come first.

ALTER EGO.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

Lord Lloyd, High Commissioner in Egypt, left Alexandria on June 8 on a week's excursion into the Western Desert, during which it is proposed to visit the Oasis of Siwa.

The anniversary of Imam Husain's martyrdom at Karbala (Yaum-e-Ashura) will be celebrated under the auspices of the Western Islamic Association on June 17 (10th Muharram 1348 A.H.) at 4 p.m. at Caxton Hall, Westminster. Dr. Abdulla M. Suhrawardy will take the Chair. The gathering will consist of Muslims only.

Book Reviews

A CASE FOR THE ARABS.

"THE ARAB'S PLACE IN THE SUN." By Richard Coke. (London: Thornton Butterworth. 21s.)

The author of this book is a well-known student of the Arabs. As a working journalist in Baghdad he had abundant opportunity of seeing both the political strength and the weakness of the typical town Arab, but he has examined also the history of the Arab in other places than Iraq and at other times than the present. Readers will remember the considerable virtues of his two books on "The Heart of the Middle East," and "Baghdad: The City of Peace." Both of them were good, but this, despite the rather facile title, is better than either of them.

Briefly put, Mr. Coke's case is on the one side, that the Arabs deserve the most sympathetic treatment on account of their glorious past, and, on the other, that the duty and the interest of Great Britain, under whose direct or indirect ægis so many Arabs are numbered to-day, lie in the direction of the independence of Arabia. He divides his work, therefore, into two parts: the past world, and the modern world. With the first section we have little space to deal here. Suffice it to say that Mr. Coke tells the well-known story of the Arabs in a popular, lucid, and generally very reliable way. He by no means lets enthusiasm run away with him. He emphasises, indeed, the individualistic tendency which largely inhibited the bequeathing to modern times of such an organisation as, say, that of the Roman Empire. In spite of this, however, he makes a high claim for the Arab achievement:—

The Arabs did not only conquer; they persuaded the conquered peoples to copy them, and gradually to adopt their language, habits and ideas. Not only that, but they drove them so deep down that their successors have never been able to eradicate them. Where the Arab laid his hand—Syria, Mesopotamia, Egypt, North Africa, Morocco—there is his mark quite clearly seen to-day, in spite of the efforts of Persian, Turk, French, British and Spanish to remove it; only in the European countries which he conquered has been completely eliminated, and then only by a policy of conscienceless extermination. Perhaps, in spite of his crude habits and his obvious political failures, we must after all grant him to be about the most successful imperial coloniser that history affords. Rome, Greece, Babylon, Persia remain but as great memories; but Damascus, Mecca, Medina are not only living to-day much the same life that they have always lived, but reflect themselves in a thousand mirrors set throughout the middle seas. If true imperial power be deemed to rest in the permanent impression of one nation's ideals upon a vast multitude of its fellows, then of all imperialists the Arab should rest the most content.

With this very interesting conclusion there will probably be some difference of opinion; but it is rather to Mr. Coke's ideas about the present and the future that we would draw attention. In the section devoted to this he postulates at the outset that "modern Arab history is largely an account of the national revolt from the suzerainty of the Ottoman Turks, and its almost simultaneous subjugation by another, greater power—Great Britain." But if few Englishmen will be found to agree with this premise, it does not follow that Mr. Coke's conclusion is wrong. Let us see how he develops his argument.

He recognises fully the inevitability, because of India, of a close British connexion with Arabia: what he is at worthy pains to point out is, that that connexion should not involve control.

Now the real seeds of Arab nationalism were sown by the Wahhabis—a movement which more than a century ago largely diminished the chief obstacle of the Arabs towards any political unity—the tribal spirit. But those seeds fell on fertile ground far away from the deserts of the Peninsula, and before the War there were educated men in Syria, Egypt, Iraq, and so on, who were completely seized of the nationalistic spirit. The sentiments entertained by such men were not altered, but rather strengthened and widened by the Great War. At the Armistice Arab hopes naturally ran high. And yet, Mr. Coke says:—

The history of the ten years which has followed the Armistice is,

in the main, that of gradual disillusionment on both sides (that is, European and Arab), and the return of each to the pre-War position. The battle continues, roughly, between France and England and local Arab nationalistic groups, any two of which are likely to be allied at any time against the third. Turkey has gone, and an important new pawn—the Zionists of Palestine—has been introduced into the game; otherwise it continues as before.

One cannot help feeling that this is too gloomy a representation of the situation. One cannot quite accept the statement that Turkey has gone when Mustapha Kemal Pasha is the idol of so many Arab Nationalists (with implications that are obvious). And a pawn is of comparatively little account unless there is—what there is not in the Zionist movement in Palestine—a danger of its being crowned. It is unquestionably true, however, that the post-War experiments in Syria and in Palestine have produced, naturally, most unpleasant impressions upon Arabs as a whole. What is done, however, cannot be undone; and it is at least possible to hope that Arab fears of Jewish domination in Palestine are decreasing—if they have not already vanished—and that the various peoples of Syria will soon find a *modus vivendi* with the French. If these things come to pass, and if, as is generally expected, Iraq is admitted into the League of Nations in 1932, and if King Ibn Saoud survives in the Hijaz and Najd, the outlook for Arabia will be far from depressing.

In his last and probably most interesting chapter, Mr. Coke speaks of the possible lines of development in Arabia. There is the "Fundamentalist" way, of which the leader of the Wahhabis is the natural leader. Of this, Mr. Coke suggests that it would have a better chance of wide success were there in existence a second Abdul Wahhab to give Ibn Saoud's political work "a spiritual covering." As things are, it is, he thinks, along "less puritanical and less reactionary paths that the Arabs must advance." Then there is the opportunist method, which seeks to cultivate individual patriotisms (e.g., Egyptian, Iraqi) rather than a general Arab nationalism. And lastly, there is the policy, which Mr. Coke prefers, of making the future of the Arab lands shape itself on the basis of the Arab race, irrespective of religion.

This great dream of Arab unity has attracted many impressionable minds, and in putting forth its merits again, Mr. Coke does not forget to ask the question: Is it practical? It is a question that cannot be burked, for upon its answer must depend to a considerable extent the nature of British policy in the Middle East. A dogmatic answer is not within a reviewer's province, but this at least may be said: that if Great Britain could help to bring about so great a civilising movement as even an approximate political unity among the Arabs would involve, she would accomplish one of the most difficult and most worthy tasks in the world. In setting out his ideas upon this possibility Mr. Coke has done a most useful service to the British people.

ZIONISM.

We have received from the Zionist Organisation in London a pamphlet, by Mr. Israel Cohen, called "The Progress of Zionism" (price 3d.). Actually it is the chapter on Zionism contained in the second (revised and rewritten) edition of "Jewish Life in Modern Times." Mr. Cohen briefly traces the history of Zionism before the Great War, and of the successful efforts of Zionists during the War to obtain promises upon the future of the Jewish people in Palestine. He records the adoption of a "National Home" policy, the work of the *Halutzim* in Palestine, and the comprehensive achievement of Jews in the domains of agriculture, industry, education, culture, and so on. The Arabs of Palestine, he thinks, "have largely become reconciled to the idea of the Jewish National Home"—but "the Muslim leaders, who are concerned, above all, to maintain their own prestige, without regard to the interest of the country or to international obligations, revive their mischievous agitation from time to time." Mr. Cohen proceeds to echo the Zionist complaint that the Government of Palestine has been "ungenerous to the Jewish people, and finally explains that "the only prospect there is of increasing the resources available for the development of a Jewish Palestine is by extending the basis of Jewish support throughout the world." Hence the enlargement of the Jewish Agency.

This pamphlet is lucid, useful, and, on the whole, written with moderation. Mr. Cohen makes no attempt to conceal the dream, or vision, which animates even the most official of Zionists.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The British-French Discount Bank.

An interesting development of the activities of the Ottoman Bank last year was the formation of the British-French Discount Bank Ltd., for the development of British and French commerce with Greece. This bank has now been operating for a year, and the results of its activities so far have been very satisfactory. The bank's office in Athens has made steady progress in obtaining for itself a firm foothold there, and has attracted a considerable and growing clientèle. In order to take a still greater part in the movement of trade with Greece, the bank has just opened another branch in Piræus, which is well situated and specially organised for the transaction of merchandise operations of all kinds. This extension of the bank should be of considerable service to firms proposing to take advantage of the stable conditions now existing in Greece for the development of their relations with that country.

Anglo-Persian Dividend.

At the meeting of the Anglo-Persian Oil Company last November Sir John Cadman expressed the view that the results for the current period would not be unsatisfactory, and the preliminary statement issued this week shows that this anticipation has been fulfilled. This time the statement only covers nine months owing to the adoption of the calendar year instead of the fiscal year for the accounting period, and that of course prevents a comparison with last year's figures, but the proposed dividend will be the key to which shareholders will look to indicate the nature of the results for the past nine months, and the decision to raise it from $7\frac{1}{2}$ per cent. to the $12\frac{1}{2}$ per cent. at which it stood prior to last year sufficiently indicates the improvement in the company's position. The several reserve funds this time receive £600,000 against £800,000 last year, while £201,051 is allocated for extra depreciation as against £453,367, and the carry forward is £1,771,645 after the deduction of £513,434 on account of excess profits duty, so that allowing for this item in last year's figures the carry forward is slightly larger than before.

Bank Misr Developments.

I referred recently to the proposal to establish a subsidiary of the Bank Misr for Syria and the Lebanon which would also cover neighbouring countries. It now appears that it is intended to form two subsidiaries, one for the region in question and the other for Palestine. It is understood that the Syrian subsidiary will be called Bank Misr, Syria and Lebanon, and will have its headquarters at Beyrout and branches at Damascus, Aleppo, and Tripoli. On the other hand, the Palestine subsidiary is to be called the Egypt-Palestine Bank, and besides a head office at Haifa will have branches at Jerusalem, Jaffa, and Nablus. This banking development, particularly as regards Palestine, is an indication of the importance of Egypt's trade relations with that part of the Near East. Egypt is actually Palestine's most important outlet for some of that country's leading products, and there is every reason to suppose that in the future commercial

relations between these countries will become steadily more important.

Burmah Oil Company.

At the meeting of the Burmah Oil Company, a report of which will be found elsewhere in this issue, Sir John Cargill was able to give a most satisfactory review of developments during the past year. Only two days after the last meeting the kerosene rate war in India came to an end, and its termination and the arrangements with the Royal Dutch-Shell Group and the Anglo-Persian Oil Company, which have led to prices being re-established on the basis of world parity, have placed the company, in a very strong position. A feature of special interest during the year was the purchase by the company, in the exercise of its rights, of 1,000,000 shares in the Shell Transport and Trading Co., a purchase which through the co-operation of Sir Henri Deterding and Sir Robert Waley Cohen was carried out without recourse having to be made to the market. Sir John Cargill's remarks that there was every reason to think that this new investment would steadily appreciate in value will no doubt meet with general agreement in view of the outstanding position occupied by the Royal Dutch-Shell Group. In dealing with the company's investments Sir John Cargill referred to the large holding in the Anglo-Persian Oil Company, and said that at no time had there been more reason to congratulate the shareholders on it, a remark which is emphasised by the dividend declaration this week of the Anglo-Persian, reference to which is made in another note. The question of over-production in the oil industry, of which so much was heard in the past year, naturally came in for comment, and Sir John Cargill pointed out that the policy of the Burmah Oil Company is to secure such a volume of production as can be profitably marketed and to keep the tankage full. In this connexion he remarked that the company had for years stabilised its production on a basis which realised the existing situation, preferring the sound and saner policy of a long and steady life "to a meteoric outpouring of excessive production." On this stabilised basis, he added, the company had never had the situation in the fields so accurately gauged or equilibrium so well maintained as was the case to-day.

ECONOMIC CONDITIONS IN BULGARIA.

[The following notes are taken from the bulletin of the British Bulgarian Chamber of Commerce of Sofia, dated May 31.]

General Situation.

In consequence of very favourable weather conditions, a substantial part of the damaged winter sowings could be renewed apparently in time, and the general position with regard to cereals is believed to have thus improved.

Exports continue to be rather slow and limited in importance, owing chiefly to the unfavourable trend of prices for agricultural products abroad.

On the other hand, imports are still showing an increasing tendency. The annual report of the National Bank of Bulgaria explains this circumstance by the gradual setting in of normal conditions among the masses of the rural population. On the other hand, importers and merchants seem to have failed to appreciate correctly the real absorption capacity of the local market. Abundant and easily obtained credits have equally contributed to an accumulation of orders for foreign goods. The market must be watched more closely in this respect, especially in so far as textiles, industrial machinery, electrical materials, leather, and cotton yarns are concerned. British exporters would do well to have their credit information renewed at trustworthy sources before granting new credits or extending the maturities of bills falling due.

Important purchases of railway material and rolling stock are about to be concluded; £179,000 worth of rails and road material have been purchased from a French firm without adjudication. The transaction is to be confirmed by a special Law to be carried through Parliament in a few days.

The position of the Treasury continues to be satisfactory. Receipts are still coming in in excess of the estimates and of last year's figures.

No changes occurred in the general state of solvency. More especially the leather trade is experiencing bad times owing to falling prices and the overstocked condition of the market. Payments for leather goods sold to retailers had to be extended in many instances. A certain number of firms asked for a six months' moratorium.

There is to be observed on the part of foreign capitalists an increasing interest in mining undertakings. An important Franco-Belgian group is conducting extensive studies of local conditions in this respect.

Market for Agricultural Machinery.

The Ministry of Agriculture is exerting efforts through its regional agronomists and test stations to convince people that crops will yield considerably more if the soil is ploughed deep and tilled in a scientific way by the use of proper machinery. During the past few years private initiative has come to its assistance, and the results obtained have been satisfactory. While only a few years ago the tractor was unknown in the country, the farmers seeing the advantages it offered began buying it, chiefly on a co-operative instalment plan. The number of tractors imported, and practically all sold, in 1928, was about 700, at least 80 per cent. of which were of American make. The results reached show that the Bulgarian peasant, although conservative, no longer desires to cling to his primitive ways of working the soil, and is becoming gradually more and more interested in purchasing agricultural machinery. If he is not always able to do so, it is due to his poor financial condition. The needs of the country are estimated by experts at:—

	Required.	Available.
Ploughs	600,000	273,000
Harrows	500,000	21,000
Cultivators	500,000	2,500
Hoing machines	100,000	1,800
Crumbling machines	100,000	3,000
Farm rollers	200,000	3,500
Sowing machines	30,000	5,000
Grain re-cleaners	30,000	6,000
Reaping machines and mowers	30,000	6,700

which will cost about 3,800 million leva.

Bulgarian Tobacco Production.

Bulgaria's 1927 tobacco crop was under the average production; it amounts to about 15,000,000 kgs., which was ready for export by September last, and is now entirely sold. The 1928 crop, on account of the climatic conditions, although slightly larger than that of 1927, was of an excellent quality, and is selling at higher prices. Because of the sudden return of cold weather, in the second half of April, 1929, a part of the seedlings was frozen, and the expectations are that this year's crop will be small and of an inferior quality.

The export of tobacco in 1928 amounted to 22,904,717 kgs. The domestic consumption in 1927 aggregated 4,600,158 kgs. while in 1928 it was 5,037,481 kgs, consisting mostly of cigarettes—pipe smoking is unimportant, while cigars are imported. In 1928 55,604 kgs. of cigarettes were exported, 15,000 kgs. more than the exports in 1927.

Crisis in Egg Trade.

Eggs are one of the articles which have been held for many years an important place in Bulgaria's exports. However, since last year the exports of eggs have been decreasing owing largely to the export of live fowls. In order that exporters may still preserve a market for Bulgarian eggs and if possible increase the export of this article, the following measures have been recommended: 1. Eggs intended for export to be free from all taxes, duties, and imposts. 2. The export of fowls to be prohibited during the period of February 15 and May 30, for at least 4 years. 3. Warehouses for eggs intended for export to be opened only at Sofia, Plevén, Gorna Orehovitza, Shoumen, Rustchuk, Plovdiv and Nova Zagora.

Imports and Exports.

The trade balance during April closed with a deficiency of 81,633,285 leva, while during March the deficiency amounted to 91,000,000 leva. Imports during April totalled 39,609 tons for 784,462,888 leva, and the exports

EGYPTIAN GOVERNMENT.

THE ASWAN DAM

TENDERS are invited by the Ministry of Public Works of the Egyptian Government for the heightening of the Aswan Dam on the river Nile.

The contract documents, drawings and regulations for tendering may be inspected on and after June 11, 1929, at the offices of the Consulting Engineers, Sir M. MacDonald and Partners, 72, Victoria Street, London, or after June 18th at the Ministry of Public Works, Cairo.

Contractors desiring to tender may obtain copies of these documents from either of the above offices upon payment of twenty pounds Egyptian, and after making a deposit of five thousand Egyptian Pounds in cash.

On submission of tender a total deposit of two per cent. of the amount tendered must be made. The preliminary deposit of five thousand Egyptian Pounds mentioned above will be accepted as part thereof.

These deposits will be held as a guarantee of good faith on the part of the firms making them.

Only tenders from firms who have previously executed similar works will be considered.

The tenders must be submitted to His Excellency the Minister of Public Works, Cairo, before midday on September 14th, 1929.

A memorandum for persons tendering is now available and can be obtained from Sir M. MacDonald and Partners, 72, Victoria Street, London, S.W.1.

aggregated 27,882 tons for 702,829,603 leva, while in March there were imported 23,175 tons for 644,811,000 leva, the exports amounting to 17,920 tons for 553,440,000 leva.

Forthcoming Tenders.

The General Railway Administration is inviting tenders by June 17 for the supply of 2,000 tons of creosote for the impregnation of wooden slippers. The approximate amount of the order is 10,000,000 leva. A 1 per cent. caution is required, to be completed to 5 per cent. of the contract price on the signing of the contract.

Tenders are also invited by the same Administration for the supply of 50,000 kilograms of varnish, estimated to cost 2,000,000 leva. The adjudications are to be held on on July 11.

According to reliable information the following tenders will be invited in the near future by the General Railway Administration:—

1. Asbestos materials, both in slabs and twines; Talc, graphite, and other materials, such as Kantorite, Klin-gerite, Maurite, etc. The approximate amount of the order is 900,000 leva.

2. Soft copper wire for thickening and fastening, copper sheets, copper conduit pipes and copper connecting pipes, copper tie rods for steam boilers. The approximate amount of the order is 2,525,600 leva.

Miscellaneous.

Receipts of the State Treasury for April continued to be satisfactory. The difference with regard to previous statements is accounted for by the receipts from the railways and ports not being included in the regular receipts of the Government, commencing April 1, 1929. In April the regular receipts amounted to 531,246,000 leva, while in March they were 611,794,000.

The wholesale commodity index number (on the basis of 1914 equals 100) for April was 3,318, as compared with 3,290 for March, and 3,267 for February, and 3,074 for April, 1928. The general level of wholesale prices has thus risen by 0.9 per cent. as against March, and by 7.9 per cent. as compared with April, 1928. The increase in the cost of living is due to rising prices in the following groups of commodities: foodstuffs of vegetable origin (+3.7 per cent.) and building materials (+2.1 per cent.).

The quantity of notes in circulation during May shows a very slight increase over the preceding month. On April 23 the notes in circulation amounted to 4,188,359,000 leva, on April 30 to 4,365,639,000 leva, on May 7 to 4,337,859,000 leva and on May 15 to 4,156,441,000 leva.

The Bombay, Baroda, and Central India Railway Company propose, in addition to the half-year's guaranteed interest of £1 10s. per cent., a final dividend for the year ended March 31, 1929, of £1 10s. per cent., making £6 per cent., less tax, for the year.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Clothing, Etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing, sheets, napkins, blankets, materials by metres, and for sewing clothing required for the year 1929-30 (July 6), and for aluminium and enamelled goods, earthenware, glassware, knives, forks, spoons, shaving accessories, kitchen utensils, copperware, hardware, miscellaneous, etc., required for the year 1929-1930. July 9.

Fire Extinguishers.—The Chief Inspector, Direction General, Customs Administration, Alexandria, invites tenders for the supply of 150 fire extinguishers. June 24.

Electric Articles and Lamps.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply of electric articles and lamps required during 1929-1930. July 13.

Miscellaneous.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of pipes, cocks, wire, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo (July 22), metal brass, metal copper, metal bronze scrap, tin solder, zinc, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo (August 7); metal iron, cotton waste, white, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. August 12.

Water Meters.—The Egyptian Ministry of Public Works invites tenders for the supply of rotary and French water meters. July 13. (D.O.T.)

TURKEY.

Electrical Wire, Etc.—The Administration Générale des Chemins de fer et Ports d'Etat invites tenders for the supply of electrical wire and cables and general lighting accessories. July 4. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, June 19). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Manaar for Calcutta (Birkenhead, June 22); s.s. Manipur for Calcutta (Birkenhead, June 29).

Bibby Line.—S.s. Herefordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, June 26).

British India Line.—S.s. Domala for Bombay and Karachi (London, June 29); s.s. Mandala for Colombo, Madras, and Calcutta (London, June 29).

Cunard Line.—S.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, Corfu, and Gruz if sufficient inducement (Liverpool July 6, Swansea July 9); s.s. Brescia for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, July 27).

Johnston Line.—S.s. Dromore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 15); s.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 9).

P. and O. Line.—S.s. Nagoya for Calcutta (London, June 21); s.s. Kaisar-i-Hind for Bombay (London, June 21).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, June 10); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, June 29).

Ellerman and Papayanni Lines.—S.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool June 22, Swansea June 27); s.s. Serbino for Gibraltar*, Malta*, Algiers*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool July 20, Swansea* July 20); s.s. Roumelian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 29); s.s. Algerian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 10); s.s. Mardinian for Gibraltar*, Algiers*, Malta, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool July 20, Swansea* July 20). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

The Bengal-Nagpur Railway Company has declared an interim dividend of 15s. per cent. on the ordinary stock, payable July 1, which, together with the guaranteed interest of £1 15s. per cent., will make a total distribution of 2½ per cent. for the half-year, less tax.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*CIRCASSIA ...	June 21	*ELYSIA ...	Aug. 9
*MASSILIA ...	July 23	*CASTALIA ...	Sept 10

*First class passengers only. Specially low fares. †Calls Port Sudan

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA. 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.*(By Our Financial Expert.)**London, June 11.*

After a week-end devoted to a study of the new political situation the Stock Exchange markets opened on Monday with calm confidence. There was no disposition to sell and no sign of uneasiness. Although the volume of business remains small and professionals are adopting a cautious attitude, there has been a steady stream of money for investment in sound securities. This, perhaps, partly reflected the re-investment of the large Treasury disbursements in War Loan dividends. The week's business was somewhat interrupted by the counter-attraction of Epsom. The immediate outlook appears to be one of quiet stability, and it is fairly obvious that any considerable speculative movement will await a lead in the shape of striking political or economic developments. The Stock Exchange is, of course, notoriously Conservative, but it is willing to recognise in Mr. Snowden a Chancellor with a good record and outstanding ability; and it also realises that the numerical position in the House of Commons precludes financial or economic experiments of a risky or disturbing kind. So political excitement has ceased to act as a market factor, and eyes are turned again to Wall Street and the probabilities of the course of the money market.

London Property Companies.

The annual general meeting this week of the City of London Real Property Company, Ltd., reminds us of the merits of shares in London property companies for investors who desire the minimum of speculativeness consistent with a reasonable income. It has, of course, been argued that there is a certain danger in investment in property in view of possibilities of nationalisation of land, but the danger of confiscation without compensation is slight. Shares in these companies do not offer prospects of rapid capital appreciation, but they yield a steady income, and the value of property in the business quarters is much more likely steadily to appreciate than to decline. These virtues account for the fact that shares in property companies are not always easy to obtain, since they are mostly held as permanent investments, and they constitute one of the soundest classes of security

obtainable. On the ordinary shares of the City of London Company, the largest of these concerns, a return of £5 10s. per cent. is obtained, and 4 per cent. cumulative preference shares of the same company yield £5 6s. per cent. London County Freehold and Leasehold ordinary shares yield £6 13s. per cent. and the 6 per cent. debenture stock gives an income of £5 19s. per cent. Law Land ordinary shares are not often obtainable, but on the last dividend return £5 11s. per cent. This company's 4½ per cent. cumulative preference shares yield £5 10s. per cent.

The Outlook for Tin.

During the last two years the price of tin has touched very low levels, and in April of this year dropped even further to £196 per ton. Investors in tin shares have seen the prices of their shares decline in sympathy, and it cannot be said that the outlook for the immediate future is particularly hopeful. Unfortunately, statistical information available is not complete. The returns of the Anglo-Oriental Mining Corporation are, however, a very valuable addition to our knowledge on this subject, and these reflect the over-production of the last two years. In 1928 supply was estimated to exceed demand by 6,542 long tons, and in the first four months of 1929 the estimated excess was 2,263 long tons. These figures explain why the need for rationalisation in the tin industry is so frequently insisted upon. There are signs, according to the Anglo-Oriental figures, that consumption is steadily increasing, as would be expected with the increasing output of automobiles and tinplate in the U.S.A., while production shows a downward, though less decided, trend. The output of the less efficient mines also declines sharply when the price falls below £200 a ton. To much store should not be set on these trends, however, until the figures for the current four months are available. The average investor has comparatively little knowledge on which to judge the positions of individual companies, and so should give chief attention to the shares of the trust companies whose holdings are spread over several mines. Of these Tin Selection Trust ordinary return £13 per cent., and London Tin Syndicate ordinary yield £12 6s. per cent. If the plans for rationalisation are accepted by a sufficient proportion of those engaged in the industry, a considerable appreciation in these shares can be expected.

More Informative Balance-sheets.

Some of the sections of the Companies' Act, 1929, which is to come into force later in the year, concern only those professionally occupied with joint-stock company finance, but the provisions which require more information to be given in balance-sheets than had usually been the case hitherto are of interest also to the investor. One important change is that in future amounts due to subsidiary companies on the liabilities side will be shown as a separate item, while on the assets side loans to subsidiaries will have to be distinguished from investments in these concerns. It must also be stated how profits or losses of subsidiary enterprises have been dealt with. Another commendable provision is that goodwill must be shown as a separate item, and not, as is too often the case at present, included with other assets, such as properties. This will apply also to the value put upon patent rights. Moreover, in the case of all fixed assets the balance-sheets will have to show how the values stated have been arrived at. Except in the case of companies whose ordinary business is the lending of money, any sum lent to a director during the year must be shown as a separate item, even though it has been repaid before the date of the balance-sheet. These provisions are welcome because, as we have commented before, shareholders are, after all, the proprietors of their companies. The Act provides for the disclosure of many important points, but it is also to be hoped that the practice of giving full and frequent information on points which lie outside the balance-sheets will become much more general than it is.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

RANGOON, CALCUTTA, and COLOMBO
TO BEIRA, DELAGOA BAY, DURBAN, EAST LONDON

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms. The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfer on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Power of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — SOFIA — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

Engineering Topics

(By Our Engineering Correspondent)

Electrical Developments.

Engineers, a few years ago, used to speak of electricity as though it had a great future for road transport work, and fanciful pictures were drawn of mammoth electric vehicles hauling vast masses of commercial produce to the amazement and admiration of the world. Few have followed electrical development more closely than the writer, or have had greater opportunities for examining closely every step of that progress, and as he expressed the view, many years ago, that the electric vehicle would not become popular on our roads, he has not been surprised at the slow progress made. Indeed, it would seem that under existing conditions, the electric vehicle will never be able to compete with the present petrol-engined car, nor with the producer gas driven vehicle of the future. That is, until the dawn of that looked-for day when some central station will broadcast power, to be picked up, for driving purposes, by aërials on the electric car.

But although electricity seems to be badly handicapped by cost and other considerations as a prime mover, as an accessory the modern car certainly could not be without it. For ignition, and for lighting and starting, it is invaluable, and in all appliances designed to these ends an unusually high standard of satisfaction and reliability has been attained; further, the lines which govern design seem to be sound and generally accepted by all producers, so that we are now approaching a settled order of things in connexion with them. Personally the writer does not like belt drives for car dynamos, in spite of the fact that he is aware that there are some excellent belts on the market. The best of belts may slip or even break, however, and gear or other positive drive is far preferable. A certain school welcomed the abandonment of the belt-drive by a few firms as tending to improve the symmetry of the dynamo. Few motorists care whether the design of the dynamo is symmetrical or not; they are chiefly concerned with the way in which the accessory functions.

British-made dynamos, as a general thing, are designed on the best engineering lines. A visit recently paid to one of our finest factories turning out this class of product showed the immense amount of care taken in respect to every detail, and up to a recent date the only source of weakness seemed to be in connexion with the drive. Now that it is becoming general practice to adopt a positive drive, there will probably be little or no future trouble in that respect. If we generate electrical energy for lighting the car and for driving the starting motor we should make use of that power for ignition purposes. Dynamos, batteries, and coils are now so thoroughly well constructed and so reliable that it would seem that in due course the magneto will enter the category of those things we can do without.

The starting motor is another accessory which has developed on sound lines, and now rarely gives any trouble. Here, again, the soundest engineering practice has been followed, and the modern motor-car starting motor is as well made, in every respect, as though it were a gigantic generating set for a central station. The method of mounting has undergone considerable improvement within the past few years; the housings are well designed, and the practice is for every part to be so placed and protected as to be immune from mechanical injury.

Something yet, perhaps, remains to be done in connexion with a safety device for locking the starting mechanism in such a manner that unauthorised persons would be unable to start the car, and it might be as well to go rather further in that connexion in view of recent police interpretation of the law as regards parking.

But, generally speaking, there is no branch of car work in which greater advances have been made of late than in the electrical work, and whilst it would be difficult to say

in which direction of this work the greatest developments have taken place, it would probably be generally agreed that battery design has progressed at a very fast rate. There have been many improvements in the design and construction of battery plates, and these have a robustness which would have seemed impossible a few years ago, and the insulation used in battery and battery conductor work has steadily improved.

Sparking plugs, the last of our electrical accessories, seem to have reached finality, and it would be difficult to imagine any possible improvement to a plug which will operate faultlessly for some score of thousands of miles, at the highest possible engine speeds, and yet remains practically as good as new.

Concrete Pavements.

In a paper on this important subject, Mr. L. S. Trainor recently reviewed some of the latest developments in concrete work, but it would probably be agreed by most engineers that he might have paid more attention to the question of water-content in concrete work generally. In practice it has been found that high strength results more from a low percentage of mixing water than from any increase in the actual cement content. It seems that a proportion of one part cement, one and a half parts of sand, and two and three-quarter parts of aggregate, with a one and a half minute mixing time, has given excellent results, but I think it will be found that English engineers have achieved better results with a much smaller cement ratio, say 1 : 2½ : 3½, but with a very small water content. However, be that as it may, the results recorded by Mr. Trainor are fairly good, as for example, the obtaining of a strength of 2,984 lb. at the end of six days, by use of the mixture specified above. In one locality it was possible to open the street for traffic in three days, by using a mixture of the, certainly unusual, proportions of 1 : 1.43 : 2.5. In this, only five gallons of water were used per sack of cement and the mixing time was raised to two minutes per batch. Here we notice attention being paid to the value of a low water content, and no doubt the great strength of this mixture was largely due to that factor. Incidentally, the strength at the end of three days was 3,090 lb., at four days 3,470 lb., at seven days 4,000 lb. and at twenty-eight days 5,214 lb.

Prompt and proper curing, which brings about complete hydration of the cement in the concrete, exerts a profound influence on its life and durability. Curing has, until recently, consisted in supplying moisture to the exposed surface of the concrete by covering it with wet burlap or straw, and watering it frequently whilst setting. In city work any of these is more or less objectionable, and shortage of water in rural districts may cause the watering to be omitted or only partially carried out. Recently there has been offered, as a substitute for these methods, the spraying on to the freshly laid concrete a specially prepared asphaltic compound employing highly volatile solvents. This forms an impervious covering over the concrete and prevents evaporation of the water. It is said that concrete cured in this way is in no way inferior, and is under some conditions superior, to concrete cured in the ordinary way.

Sir John Cargill on the Outlook.

The twenty-seventh annual general meeting of the Burmah Oil Company, Limited, was held on June 7 in the Merchants' Hall, 30, George Square, Glasgow.

Sir John T. Cargill, Bt. (Chairman of the company), presided, and there was a large attendance of shareholders.

The Chairman said:—Ladies and gentlemen,—I have here the certificate that the notices calling this meeting were duly posted, and I presume that I may, with your kind permission, as usual, hold the notice as read. (Agreed.) I will ask the secretary to read the auditor's report.

The auditor's report having been read by Mr. F. G. Holdsworth (the secretary),

The Chairman, continuing, said:—Ladies and gentlemen,—The report and accounts having been in your hands for fully a week, may I hold them as read, as usual? (Agreed.)

While we held our meeting last year under the cloud of some nine months of rate-cutting conditions in the kerosene market of India, to which my speech fully referred, we closed it on a note of optimism and confidence from your managing director that we would win through to an even more secure position in that market than we had ever occupied in the past. Within some 48 hours of that confident prediction, the principal parties to the dispute met with Mr. Watson and composed their differences, and kerosene prices were shortly thereafter re-established on the basis of world parity. Between this settlement and the arrangements secured, both with the Royal Dutch-Shell Group and with the Anglo-Persian Oil Company, Ltd., through the formation of Burmah-Shell Oil Storage and Distributing Company of India, Ltd., the sequel anticipated with such assurance by your managing director has been completely realised.

It would serve no good purpose in the circumstances of this happy issue to stir up the dead ashes of the kerosene rate war by anything in the nature of a *post mortem*, and I do not, therefore, purpose saying more on the subject than to express our confidence that the settlement arrived at and agreed between authoritative and responsible representatives of the parties concerned will be lived up to by all in accordance with the best traditions of commercial conduct.

The Minority Report of the Tariff Board.

But before leaving the subject of the rate war itself I must in a word refer—and leave it at that—to the *démenti* we found it necessary to issue on certain accusations and innuendoes—directly against the smaller units of the indigenous petroleum industry of India, but directly against your company—contained mainly in the finding of the Minority Report of the Tariff Board on the appeal for protection against these rate-cutting conditions. These accusations were shown to be as unfounded as the innuendo that your company's kerosene price restriction policy was "eyewash," of which no competitor who has had to sell against and under its conditions has

ever required any convincing. And that in the sequel the conclusion of the Tariff Board that the appeal of these smaller companies for relief was, at the best, premature proved well founded, in no way alters the fact that but for that settlement these companies would undoubtedly have shortly been compelled to shut down their operations.

These remarks are a necessary prelude to consideration of the trading results for 1928 which are now before you. That they should be so satisfactory in the face of the inclusion in the period of some six months of intensified rate-cutting in your largest product market against less than three months of less acute conditions in 1927 is, I think you will all agree, not only subject for congratulation but, and more important, evidence of the inherent strength and soundness of the position created for your company by the conservative allocation of your profits of the past between dividends on the one hand and depreciations and reserves—not to mention "carry forward"—on the other.

Substantial "Carry Forward."

As you are aware, we have for some years now been building up a "carry forward" in excess of any normally anticipated requirements. But it is generally the unexpected that happens, and this wise provision has now enabled us, despite these difficult trading conditions, to maintain our policy of reserves and depreciations intact, to recommend a final dividend on the ordinary share capital of 10 per cent., less tax., making 20 per cent. less tax for the year, and still to carry forward the substantial amount of £151,084 7s.

It is true that conservation of resources while the rate war continued has resulted in merely a deferment of expenditure which, while helping 1928 results, must sooner or later require to be incurred, but, beyond this, the spur of low values has undoubtedly quickened appreciation of the possibilities of more economical and not less efficient methods of operation throughout the whole of your organisation, and the realisation of these has played an important part in the year's results.

Balance-sheet Figures.

If you will now turn to the profit and loss account you will see that the balance of profit, after charging depreciation, amounts to £1,558,973 10s. 6d., or some £344,339 less than in 1927. The addition of transfer fees and interest and dividends gives a figure of £2,121,320 18s. 4d., from which the normal deductions would have been the costs of income tax, directors', etc., fees, salaries, office rents and charges, subscriptions, and employees' provident fund, but in this year are added interest on the Five-and-a-Half per Cent. Secured Debenture stock, one-third of the cost of the Debenture issue, and the costs of formation of the relative company, the B.O.C. Anglo-Persian Share Trust, Limited, amounting together to some £61,000. To the balance of £1,479,626 2s. 5d. brought down there is added the "carry forward" from 1927 of £502,416 5s., giving the figure of £1,982,042 7s. 6d., out of which general reserve takes £200,000, fields expenditure equalisation reserve £150,000, and insurance reserve £20,000, leaving the £1,612,042 7s. 6d. carried to the balance-sheet. The preference and interim ordinary dividends for the year absorb £861,416 10s. 3d., and of the balance of £750,625 17s. 3d. the recommendation of a final dividend of 2s. per share, less tax, requires £599,541 10s. 3d., leaving £151,084 7s. to be carried forward.

You will have observed the considerable drop in the interest and dividend account. This is due in the main to two causes—namely, first, the gradual investment in our own business of moneys temporarily placed out on loan and deposit which I mentioned in my speech last year; and second, the reduced dividend received in the period from our holding of Anglo-Persian Oil Company, Ltd., ordinary shares. While in this account we have on the one hand taken no credit for accrued and declared dividend on our purchase of ordinary shares of the Shell Transport and Trading Company, Ltd., since it was not received in the period, we have on the other hand, as already mentioned, debited interest accrued in the period on the Five-and-a-Half per Cent. Debenture stock.

The Debenture Issue.

Turning to the balance-sheet, on the liability side we now find the £4,000,000 of Five-and-a-Half per Cent. Secured Debenture stock which was offered to you in the late autumn of last year. The offer fully explained the objects of this issue, as again briefly referred to in the report now before you, and that these objects and your board's proposals for securing them had your complete approval was emphatically shown by the somewhat embarrassing over-subscription which you tendered for the Debentures. Interest on these Debentures to December 31 last is a consequential addition to liabilities. General reserve now stands at £1,000,000, insurance reserve at £520,000, and fields expenditure equalisation reserve at £750,000 as a result of the allocations of £370,000 again made for the year to these reserve accounts. The increase of some £74,454 on fire and marine insurance account to £1,013,809 9s. 5d. represents the difference between premia internally charged for risks and claims on this account in the period. Sundry creditors and credit balances are down by some £1,030,208.

On the assets side sundry debtors and debit balances, on the other hand, are down by some £588,306; the refinery stock is up by some £50,193, representing additions less £174,136 8s. provided as before

ciation for the year; and the oil wells, etc., block remains at the very conservative figure of £350,000 at which we have restricted it for some years. Extended application of electrification to the Singu field is mainly responsible for the increase of some £60,739 on the fields electrification block account, which has been written down by £100,000 for the year; £20,000 has been written off the main pipe-line block account, which, including renewals for the year, now stands at some £307,704. The reduction in the tankers and tank installation block account of some £453,818 represents the depreciated book value of a portion of the assets sold to Burmah-Shell Oil Storage and Distributing Company of India, Ltd., which has been moved down to and is now included in the figure of £11,622,491 of investments, the cost of the Shell Transport and Trading Company, Ltd., shares accounting for the great bulk of the £4,789,907 increase in these. Then stocks of plant are down by some £527,871, and the stocks of products up by some £90,614. The £65,384 of Debenture stock issue expenses is the two-thirds residue of the total, and finally the reduction of some £219,039 in loans, deposits, and cash reflects the further utilisation in the business of moneys previously loaned out on the market.

Grounds for Satisfaction.

These, then, are the results for the year, and I am confident you will share the view of your board that in all the circumstances of the conditions ruling in the period we have reason for considerable satisfaction and confidence in the fact that we have been able to maintain the 1927 dividend and to continue the policy of strengthening the balance-sheet by the usual generous allocations to reserves and depreciations.

But, in the opinion of your board, supported in a most gratifying way by your response to the Debenture offer—to say nothing of outside public expressions of opinion—your balance-sheet has been still further strengthened by the broadening of the basis of your investments in the petroleum industry generally through the purchase, after exercising the accompanying rights, of 1,000,000 Ordinary shares of the Shell Transport and Trading Company, Ltd. The great position which the Royal Dutch-Shell Group occupies in the industry by reason of its interests in almost every producing and consuming country of the world is well known to you all, and we have every reason to anticipate that that position will be maintained and improved and that this new investment will steadily appreciate in value. Our contingent financing of its cost, possibly merely temporarily met therefore by these Debentures, reflects your board's view of the potential value of your holding of Anglo-Persian Oil Company, Ltd., Ordinary shares, and the board's scheme took the form it did for the reason, first, that the company's shareholders should have preference over the general public in the potential "plum" which a higher market value than £6 for the Anglo-Persian share might offer in the period of the exchange option, and, secondly, that there were, meantime at least, good reasons why your company should continue to retain the voting rights attached to these Anglo-Persian shares. The able chairman of that company periodically brings up to date the tale of its great achievements and makes clear how its enormous resources are being carefully and soundly extended and developed, and I do not, therefore, propose saying more here as to your investment in that company than that at no time have I or your other representatives on the Anglo-Persian board had better reason to congratulate you on it.

Strengthened Association with Royal Dutch-Shell Group.

The wider spreading of your investments in the industry generally, and this reason alone, determined the manner in which these transactions were put through. The direction itself presented no difficulty. Through fair and foul weather over a period of 23 years we have worked in the closest and most friendly way—and to the advantage of both—with our friends the Royal Dutch-Shell Group, and the conditions in the Indian kerosene market previously referred to had already brought this association there on to a permanent and corporate basis, so that this further, but for the first time direct, interest in the fortunes of that group was a natural step to take even apart from our opinion of the potential intrinsic value of the investment. The Royal Dutch-Shell Company and the Shell Company themselves welcomed this decision to strengthen our association with that Group, and we are especially indebted to Sir Henri Deterding and to Sir Robert Waley Cohen for their co-operation in enabling us to secure these shares without recourse having to be made to the market.

And here I would like to take this opportunity to express our sense of loss to the petroleum industry as a whole involved in the decision of Sir Robert Cohen to take a less active part in its administration. His fertile and constructive brain is well known to those who have been brought into close relations with him, and, while we have differed—and differed on occasions very strongly during an active association of almost a quarter of a century—these qualities and the quality of compromise have played a substantial part both in maintaining this long business co-operation and in at last establishing it on the more stable and fruitful foundations to which I have referred.

This investment in the Shell Company carries no right to representation by your company on its board, and that company's invitation to your managing director to a seat must be regarded as a tribute to him personally for the active part for years played by him in the cementing together of the interests of both companies—to the considerable advantage, as you are well aware, of your company. I am sure that you will all wish me to convey to Mr. Watson your heartiest congratulations on this signal mark by the directors of the "Shell" Company of their appreciation of the extremely fair and broadminded way in which he has carried on negotiations—often of very difficult and delicate nature—between the two companies over such a long period of years, and of their recognition of the outstanding position which he has created for himself in the oil world.

Stabilisation of Production.

Having now covered and explained these important and far-reaching changes in your balance-sheet, I would just briefly stroke the "t's" and dot the "i's" of the brief summary of the year's operations otherwise which the report gives you. There has been much talk in recent months of waste through over-production and the vital importance alike to consumers and to the industry of balancing production and consumption by stabilisation. Our production policy is to secure such volume as can be profitably marketed and to keep our tankage full. Just as with rationalisation, reflected in the arrangements we have had with the Royal Dutch-Shell and the smaller indigenous producers of India in connexion with marketing, so also then with the reasonable balancing of production and offtake your company have been pioneers. It is true that we have not had the compelling forces of enormous flash production from the Burma fields which in other fields has, at least to some extent, forced the hands of our companions in the industry, but we have at any rate recognised the general economic waste that was going on and have for years stabilised our production on a basis which has clearly recognised that situation, preferring, both from your point of view and from that of India itself, the sounder and saner policy of a long, steady, and regular life on our known resources to a meteoric outpouring of excessive production. And on this stabilised basis we have never had the situation in our fields so accurately gauged or equilibrium so well maintained as we have them to-day.

Electrification of the Singu field is being steadily extended, and the increasing demand for power both there and in the older Yenang-young field will shortly involve both increased generating and transmission capacity, which are now engaging our attention.

Outside Testing Activities Resumed.

The moratorium in outside testing operations was removed on the termination of the kerosene rate war and our suspended activities on these have been resumed. The drill alone can determine the justification of their expense, but they are geological possibilities which insurance considerations leave us no option but to probe.

Concentration and reconstruction of the Rangoon refineries are to all intents and purposes now completed and are yielding the advantages and economies anticipated. But there is no finality to technical advance, and scrapings and substitutions and/or additions will be resorted to whenever they point to compensating further advantages and/or economies.

"Chapter of Accidents" in Burma.

I regret to have to confirm the reports which have appeared in the Press of a chapter of accidents within our Burma organisation during the current year, quite unprecedented both in their number and in the deplorable loss and injury to life which they involved. In no case has the material damage or the interruption to steady operation been more than trifling, but I am sure you will wish to identify yourselves with your board in an expression of deep regret at the loss and injury to life, and of sympathy with the relatives of the

GLASGOW

killed and with the injured. In the case of the worst disaster—the fire on the route of the pipe-line—that the killed and injured were the victims of their own trespass and anxiety to make off with the leaking oil can in no way qualify this regret, of which your company promptly gave tangible expression. In the other cases also, no blame is attachable to our arrangements or organisation, but, as is our practice, compensation for the relatives of the killed and/or the injured has been arranged. We have been remarkably free from serious accident until now, and I sincerely trust that I shall not again have to bring any to your notice.

The amalgamation of your and the Royal Dutch-Shell Group's Indian marketing organisations under the name of Burmah-Shell Oil Storage and Distributing Company of India, Ltd., has placed a great burden on those entrusted with the necessary and considerable dovetailing of the two separate units, simultaneously with their continued day-to-day conduct of a great and expanding business, and that it has advanced so smoothly and so completely in the time and in the circumstances reflects the greatest credit on our friends in India.

Market Values.

As regards the market for our products in 1928, I have already referred to kerosene. When peace came and better prices were possible, world market values for the product did not, however, permit re-establishment of prices on the full pre-War level, and they were placed, and still remain, substantially below that. Petrol prices were unchanged in the period, but have since advanced this year to the extent of the addition made to the Excise duty specifically for that road development which India so badly requires. Both lubricating oil and jute batching oil values were on a lower level in the period, and, although wax values on average were not materially changed, our volumes of production and sale of this product, as of petrol, marked a considerable advance, and indigenous production of petrol still meets the steady and important increase in the demand in India and Burma for that product.

While under the existing relations of world production to world consumption I can see no prospect of improvement in product values, the maintenance at least of to-day's values should enable us to submit to you next June quite satisfactory results for 1929.

Provident fund balances, withdrawn some time ago from investment in the company and temporarily held by trustees, have now been entrusted to permanent trustees by the formation of a trust company, and new relative rules and regulations and the necessary trust deed have been respectively adopted and entered into.

Assam Oil Company.

Some of you may have seen the Press report of the annual meeting in London this week of the Assam Oil Company, Ltd., copies of which will be circulated to you along with the proceedings of this meeting. That company's 1928 results are painful, if eloquent, testimony to the actual damage and potential threat of the recent rate-cutting war to the very existence of the smaller indigenous producing companies of India, and, as I have already said, are perhaps sufficient commentary on the Tariff Board's conclusion and recommendation that their appeal for relief was, at the highest, premature. But this interest of yours, thanks for your financial backing, continues to develop according to plan, and, given even merely to-day's values for products, there should be a much improved position to report next year.

The sound and efficient technical and profit-earning position so painfully reached by the Tinplate Company of India, Ltd., has for the moment been checked by the spread to it of that epidemic of labour unrest—without apparent rhyme or reason—which is playing havoc with the whole industrial development of India, and one can merely stand and wait until reason and the individual desire for steady employment are once more allowed full and free play and not subordinated to the irresponsibilities of Communistic agitation.

Tribute to Staff and Labour.

Once again it is both my duty and my privilege to bring to your attention and to express the board's and I am sure your appreciation also of the very fine work done throughout the whole of our organisation and those of our associated companies by your and their staff and labour in Burma and in India, and by your staff in the home offices. It requires no great reading between the lines of my remarks to visualise the very difficult and hard-pressure conditions which have surrounded the operations of the year, and I can assure you from intimate knowledge of the position that these men have worked as a team and with the team spirit to secure the advancement not of personal but of corporate interests.

During the year the head of the home engineering department, Mr. John Gillespie, decided that the time had now arrived to take and enjoy a well-earned retirement. Directly and indirectly Mr.

Gillespie had been associated with the company since its earliest days, and played an important and valuable part in its development on the engineering side. He has taken with him into his retirement the best wishes of the whole company.

And I would here take this opportunity to bid farewell and God-speed to Mr. James Moore, who at his own desire, and to our great regret and loss, has decided that the time has arrived to give up his position as superintending engineer of the Rangoon refineries which he has filled with such credit to himself and advantage to the company for many years now. Mr. Moore has left monuments in the form of improved technique in the industry which will long endure, but he has left even more than this in the memory of work done as president in and for the Syriam Municipality and for its inhabitants—mainly directly or indirectly your employees—which must have a deeper and more lasting value.

Complete Management by the Board.

As mentioned in the report, the company took over on January 1 this year the complete management of its own affairs in India and Burma, which hitherto had been in the hands of its managing agents, Messrs. Finlay, Fleming and Co. You are, I think, all aware that for many years your board, with only one or two exceptions, was composed of partners in that firm, who as such participated in the commission earned by the agency. It has been for this reason that fees paid to your directors have all these years been out of line with those normally paid by companies of your standing. Now that the agency has gone the time has come to correct this position, and the necessary alterations in the articles will come up for your consideration at an extraordinary meeting which has been called to follow on the conclusion of our present proceedings.

I now beg to propose: "That the report of the directors and audited statement of accounts, including the balance-sheet and profit and loss account to December 31, 1928, presented to the meeting, be received, approved, and adopted," and I shall call on Mr. R. I. Watson, your managing director, to second this motion. After the motion has been seconded an opportunity will be given to shareholders to ask questions or make comments.

Mr. R. I. Watson: Ladies and gentlemen,—Before seconding the motion for the adoption of the accounts and the report, I would like just in a word to express my deep appreciation of the remarks made about me personally by our chairman and of the very kind way in which you have received them. Sir John's generosity in his tributes at these meetings of ours to the work done and the services rendered by the whole organisation are a constant stimulus to all of us to deserve them—(cheers)—and I would specially, therefore, like you to realise that any services that I may have rendered which appeared to be specially worthy of your approbation have been possible only because of the support and sympathy of the chairman and of the board, and of the loyal co-operation of the whole of the staff. Most especially I would like to refer to the able services which are being constantly rendered to you by Mr. Whigham, your assistant managing director. (Cheers.) To him, and to all the other chief officials of the company, whether on this side or in India, I especially owe a great debt of gratitude. I have now great pleasure in seconding the motion to adopt the report and accounts. (Cheers.)

The Chairman: Are there any questions, ladies and gentlemen, that you would like to put? There being none, I now beg formally to put to the meeting the resolution which I proposed, and which Mr. Watson has seconded.

The motion was then put to the meeting and declared carried unanimously.

Dividend Resolution.

The Chairman,—I have now pleasure in moving that the dividend on the ordinary shares recommended by the directors at the rate of 10 per cent. per annum (2s. a share), less tax, making, with the interim dividend paid in November last, 20 per cent., less tax, for the year, be adopted and that the same be hereby authorised to be paid on June 14 and that the balance of £151,048 7s. be carried forward. I would be glad if Mr. James Stark would kindly second that.

Mr. James Stark: I have much pleasure in seconding the motion that has just been made.

The Chairman: I am quite sure, ladies and gentlemen, you are all agreeable to that motion. (Cheers.) I would now ask Mr. Watson to move the next resolution.

Mr. R. I. Watson: I have much pleasure in moving the re-election of Sir John Cargill as a member of the board, and I would like to take this opportunity of congratulating Sir John on the great distinction which has been conferred upon him by the University of Glasgow. (Cheers.)

Mr. Alexander Morrison: I have much pleasure in seconding that motion.

The Chairman: May I take it, ladies and gentlemen, that you are agreeable? (Cheers.) Thank you very much. I now beg to propose the re-election of Mr. H. S. Ashton, who has been associated with the company for so many years as a director, and I would ask Mr. Paul to kindly second that.

Mr. W. J. Paul: I have much pleasure, Mr. Chairman, in seconding the motion.

The Chairman: Is that your pleasure, ladies and gentlemen? (Cheers.) I would also now move: "That Mr. R. A. Murray be re-elected a director of the company."

Mr. George Readman: I have much pleasure in seconding this motion.

The motion was also adopted.

STEAM & HYDRAULIC ENGINE PACKING MANUFACTURERS

FLAX, ASBESTOS AND COTTON,

Mr. Thomas Stark: I beg to propose the reappointment of Mr. James Herbert Wilson, C.A., as auditor for the current year.

Mr. A. S. M. Breigan: I have much pleasure in seconding that. The motion was adopted.

Extraordinary General Meeting.

The Chairman: That is all the business for the general meeting. We will now proceed to the extraordinary general meeting, and I shall just read the resolution of which you have had notice, and then ask Mr. T. F. Donald if he would kindly propose it. The resolution is to this effect, that the articles of association of this company be altered in the manner following:—(1) "That Article 91 be cancelled and the following article substituted therefor and hereafter be referred to as Article 91—namely, '91. The directors (other than the managing directors and assistant managing directors) shall be paid out of the funds of the company by way of remuneration for their services a sum of £10,000 in respect of the year 1929 and in respect of each subsequent year, and such further sum, if any, as shall from time to time be determined by the company in general meeting, such sums to be divided among the directors in such proportions as they may agree among themselves, and failing such agreement in equal proportions'; and (2) "That Article 121 be cancelled."

Mr. Donald: Ladies and gentlemen,—I do not think that many words from me are required to recommend to you this proposal of the directors. Those who were present at the meeting last year will remember how fully Sir John Cargill dealt with the question of the marketing side of the business, and the consequent forming of the Burmah Shell unit, to which he has referred to-day, and which, I understand, has been of great efficiency and a great source of strength to the company, but it involved the termination of the Calcutta agency, and it also involved at the end of 1928 withdrawing or cancelling the old-standing agency of Messrs. Finlay, Fleming and Co., in Burma. That is a matter, as the report tells us, which could only be dealt with if it was forced upon the board by a resolution of the company, but our chairman and those of his colleagues who are interested have voluntarily agreed to allow the agency to be wound up, and now everything is on a different footing. In a company of this kind, with a capital of about £11,000,000, which shows, even in not a very fat year like this, a profit at the credit of profit and loss of £2,200,000, and which distributes nearly £1,500,000 in dividends, I consider that the only unsatisfactory figure in the balance-sheet and accounts is "Directors' fees, £2,300." It is entirely inadequate to the services and the claims of the board upon the shareholders. I am not in a position to give you figures, but I am credibly informed that the actual sum which has been paid to our chairman during all his tenancy of the chair out of the funds of the company is really insignificant; in fact, I think we are very lucky that our chairman, instead of sticking to the ship as he has always done, has not "cut the painter." If he had gone into the City of London he could have got no end of seats on good companies and no doubt would have enjoyed fees such as, rumour says, are now drawn by certain ex-politicians who have left that game and gone in for a business career. I think, ladies and gentlemen, that £10,000, as mentioned, is not more than is due to our board, and I have therefore great pleasure in moving that we approve of this resolution as read. (Cheers.)

Mr. David Young: I beg to second the resolution so eloquently put forward by Mr. Donald.

The Chairman: Is there any amendment, ladies and gentlemen, to that? (Cheers.) There being none, I will now formally put the resolution to the meeting.

The resolution was put to the meeting and declared carried unanimously.

The Chairman: That is all the business, ladies and gentlemen, and I thank you for your presence here.

Vote of Thanks.

Mr. R. C. Greig: Ladies and gentlemen,—I have very much pleasure in asking you to accord to our chairman a very hearty vote of thanks. Owing to the very specially happy relationship which has existed now for many years between Sir John Cargill and the shareholders of the Burmah Oil Company, and owing to the very high position he now occupies in our esteem and affections, I think you will agree with me that a vote of thanks on this occasion is very far from being a mere formality. I do not think it is any exaggeration to say that the reason of the large attendances at these meetings is not because the shareholders come here hoping to hear they are going to get rich quickly. I think Sir John Cargill has removed all these hopes in the past. (Laughter.) But we come here because we are anxious to hear his speech, and we are also anxious to express our appreciation not only of his occupancy of the chair but also of the work which he and the board have done for us in the previous financial year. Last year, Sir John, you told us, without minimising the position, of the serious difficulties which had occurred in connexion with the kerosene war, and when you took such a serious view of the position I could not help remembering a remark made by you two or three years before. I admit it was made in one of Sir John's lighter moments. He said he had come to feel with regard to the shareholders of the Burmah Oil Company that he stood to them *in loco parentis*. I think when the kerosene war was at its height we can realise that his knowledge that the fortunes of this large family were going to be so seriously affected must have been a great strain upon him. We are very glad to hear from you, Sir John, this year that this strain has passed, due to the efforts of yourself and your board, and we can only say that we do feel that

we have every reason to be grateful to you for what you have done. In expressing to you, and offering you, our thanks, we join to it the hope that you will be long spared to preside over these meetings.

The vote was accorded with acclamation.

The Chairman's Reply.

The Chairman: Mr. Greig, ladies and gentlemen, I am really most grateful to you for the very hearty way in which you have endorsed the vote of thanks to me which has been proposed in such kindly terms by my old friend and old schoolmate Mr. Greig. (Cheers.) To-day is really a red-letter day for me in my long connexion with the Burmah Oil Company, because to-day I have just completed 25 years—a quarter of a century—as chairman of this great company. (Cheers.) I am sure you must all realise what a profound source of satisfaction it is to me, after having been associated with the company from its infancy, to see it to-day standing among the great oil companies of the world. As Mr. Greig has said, we have come through very trying times. You know that from my speech last year, and you know it from my speech this year. But thanks largely to your managing director for his extraordinarily able handling of a most difficult situation, and thanks to these much more complete and permanent arrangements which we have been able to make with our good friends the Royal Dutch-Shell, I unhesitatingly say to-day that we stand in a stronger position than we have ever done before. (Cheers.)

I have already referred to the great services that Mr. Watson has rendered to the company, and I do not wish to get into his bad graces by saying anything more, but I wish to endorse most heartily what he has said about your assistant managing director, Mr. Whigham. (Cheers.) I cannot imagine any stronger combination than Mr. Watson as managing director and Mr. Whigham as assistant managing director. (Cheers.) I assure you from a long and intimate knowledge of the work and capabilities of these two gentlemen that the management of your great company could not possibly be in more able and better hands. (Cheers.) I have just again to thank you most heartily for your very kind reception to-day and for the very kind things Mr. Greig has said. I can only say that I share with him the hope that I will be spared for a few more years, and if I am I shall certainly promise you in the future my best, as I have tried to give you it in the past. (Cheers.)

This concluded the proceedings.

SUEZ CANAL COMPANY.

Exceptionally Satisfactory Results.

The seventy-fifth annual general meeting of the Suez Canal Company was held in Paris on June 3.

The Marquis de Vogüé (the president), in submitting the report of the Directors, said that the results for 1928 had been exceptionally satisfactory. The increase in the traffic, as compared with the previous year, amounting to nearly 3,000,000 tons, had been actually exceeded only once, in 1919; thus, in spite of the reduction of 25 centimes which came into operation from April 1, 1928, the transit receipts were greater by 7 per cent. than those of 1927. That enabled them to raise the dividend again; they proposed to fix the gross dividend per capital share at 644.57 francs, an increase of 67.05 francs as compared with the previous year.

They were congratulating themselves last year on the stability of the French currency; on June 25, 1928, its legal stabilisation took place. That step, so necessary for the security of savings and for the development of sound financial or commercial operations, had in addition for the company an interesting consequence. It permitted, in fact, the eminently desirable changes in their accounts which the fluctuations of the franc had prevented them from effecting hitherto. As a result of these changes all the items of the accounts for the year figured for their real value in French francs, whereas up to the present some of them, and these the most important, appeared at their nominal value in gold francs, the difference being found in the credit or debit side in the heading entitled "result of the conversions of funds into French francs." If not disappearing wholly from their accounts, this heading would be restricted henceforward to recording the result of very slight fluctuations from parity of the exchange. If this year it still figured for an important amount it was because it had been credited with the over-estimation carried to their credit in pounds sterling, which were valued in the previous balance-sheet at 117 francs, on account of the uncertainty which still existed as to the rate of the stabilisation of the franc, and were now valued at the legal parity of 124.21 francs.

As regards the balance-sheet, they had been induced for the sake

of clearness to divide it into two parts: the first entitled "Capital Expenditure Account," recording, on the one hand, the expenditure incurred for the construction and improvement of the Canal, and on the other the resources earmarked for it; its interest was of a purely historical order; the items of which it was composed, which would not represent at the end of the concession any real value as assets or liabilities, not entering into the determination of the financial position of the company. That position resulted from a valuation, which constituted the second part of the balance-sheet, the various elements of which had all been converted into French francs. The estimate thus given to the value of material and buildings had been entered per contra to the credit of the sinking fund. On the other hand, the investments had been entered at cost price, while, as they knew, they had by appropriations from the profits of several successive years written them off to a large extent to provide for the depreciation which had taken place in the shares.

The re-valuation thus made of the various items of the assets and liabilities resulted in a credit balance of 100,930,151.51 francs. They proposed to utilise it to increase the statutory reserve, which would thus be brought to 141,448,949.08 francs. But it appeared to them indispensable, further, at the time when they proceeded to remodel the balance-sheet, to reconstitute integrally that statutory reserve by bringing it to its pre-War value; that was about 40 million francs, which were then gold francs. They proposed to bring it to-day to 200 million francs by appropriating the necessary amount, 58,551,050.92 francs, from the extraordinary reserve. That last sum was, however, much inferior to the total of the allocations which, by virtue of article 69 of the statutes, should have been made to the statutory reserve each year during the period that the extraordinary reserve had been constituted. On the other hand, they asked them to transfer 20 millions of the extraordinary reserve to the reserve for contingencies, which was not over large in regard to the risks which it was designed to cover. After those two allocations the extraordinary reserve would be reduced to 61,448,949.08 francs.

As had been explained, all the items in the accounts for the year were expressed in French francs; they would not then be surprised to see that the figures in the accounts were very different from those of previous years. Actually the expenditure remained on about the same level as in the previous year, while the receipts, having grown in conformity with the development of the traffic, showed an excess over 1927 of about 65,000,000 francs. They proposed to take advantage of the exceptionally favourable results of 1928 to make an important allocation to the reserve for development work; this allocation of 100 million francs represented a little more than the amount actually appropriated in each of the recent years for the improvement of the Canal. If the difference appeared large compared with the totals which figured under this heading in the accounts in previous years, it had to be borne in mind that the latter represented the nominal value in gold francs, the difference arising, as had been already explained, in the decrease in the account for the conversion of funds.

They asked also for a new allocation of 25,000,000 francs for the construction of houses in Egypt; the programme which they followed had not been completed and the balance of the reserves previously constituted had become insufficient. Finally, the allocation for amortisation remained as in previous years at 25,000,000 francs. After allowing for these amounts the surplus of receipts over expenses stood at 713,146,175.17 francs. Adding the balance brought forward from 1927, 3,152,147.30 francs, they could dispose of a total of 716,298,322.47 francs. It was proposed to fix the profits for division at 712,192,676.05 francs, and to carry forward the balance of 4,105,646.42 francs. The division of the distributable profit of 712,192,676.05 francs among those entitled to it would result in making the dividend 632.07 francs on each share. That dividend, increased by 12.50 francs interest for the capital shares, would represent a gross revenue of 644.57 francs and a net revenue of 563.06 francs for the registered shares and 510 francs for the bearer shares.

The maritime movement through the Canal in 1928 showed, by comparison with that for 1927 (which itself surpassed all previous records), an increase of 2,943,854 tons net, or over ten per cent. It amounted to 31,905,902 tons. The number of transits was 6,084, against 5,545 in 1927. The traffic in ballast stood at 2,956,481 tons,

and represented 9.3 per cent. of the total movement, as against 8.3 per cent. the previous year. In this traffic tankers figured for 70.5 per cent. The average size of vessels had slightly increased; it amounted to 7,249 tons gross, thus coming a few tons nearer to the 1926 total. The proportion of transits made by vessels of more than 10,000 tons gross increased from 10.6 to 11 per cent. The average stay of vessels in the Canal was 15 hours 9 minutes; that was only three minutes longer than the record established in 1927. An exceptionally interesting transit was that of the Singapore floating dock. This dock, which measured 260 metres in length, 52 metres in width, and 23 metres in height, was divided for the voyage into two sections, the one of 141 metres, the other of 119 metres, each drawn or conveyed by four tugs. Thanks to the preparations made, this very delicate operation was carried out without any incident in four days. The number of passengers carried in 1928 was 317,718, or 22,600 below the total for the previous year, in the course of which the events in China had increased the number of passengers of the military category. The division of the tonnage by nationalities placed, as always, the British flag in the first place with 56.8 per cent. of the traffic, against 57.1 per cent. for the previous year. Then came the Dutch flag, and then the German (the latter showing a marked increase of 536,235 tons); then followed the French, and Italian flags.

The movement of merchandise passing through the Canal amounted to 32,622,000 tons; it was more than three million tons greater than the record reached in 1927. In the north-south direction the increase was 880,000 tons; the European exports of manufactures were stimulated by the increased purchasing power in the countries situated beyond the Canal, resulting from the development of their trade in raw materials in 1927; metal work and machinery represented about half the increase of traffic in this direction. In the reverse direction the increase of the trade in merchandise reached the substantial total of 2,200,000 tons, and it was a remarkable fact that the increase was contributed to by nearly all the classes of products; the chief part, however, was played by oils, which rose from 3,429,000 tons to 4,450,000 tons. Among other products minerals and metals, sugar and mineral oils showed large increases; manganese ore, in particular, provided more than a million tons of the traffic of the Canal.

Since the commencement of the current year the progress of the maritime movement of the Canal had continued, though there had been a marked slowing down of the development. The tonnage of the first four months was 786,000 tons greater than the total for the corresponding months of 1928. The stimulus for European exports provided by the growing wealth of the countries east of Suez had made itself felt this year; British India had again in 1928 benefited by a favourable balance of accounts. On this side European industry, favoured by the general stabilisation of currencies, found itself in a position to meet the increased demand for manufactures. In Great Britain, thanks to the efforts which had been made in the industries, and in particular in the textile industry, to improve the conditions of production, the outlook appeared encouraging. As regarded the homeward movement, it did not appear that there would be considerable consignments of Indian wheat; on the other hand, the Australian crops would beyond doubt contribute to the traffic of the Canal more strongly than in 1928. The production of oleaginous products had been stimulated by high prices; so the crops of ground nuts and soya beans were better than those of the previous year. The forecasts were equally satisfactory for jute and sugar. Taken all round, the situation appeared favourable, and there was every reason to think that 1929 would not mark a setback from the extremely satisfactory results of which they had just rendered account.

Considerable damage is reported to have been done to the tobacco crops in Greece during the past winter by the severe frosts.

The traffic receipts of the South Indian Railway Company for the week ended May 11 amounted to Rs.12,55,892, making the total from April 1 Rs.75,36,498.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 5:—

Egyptian Futures.

Sakel Contract.—Very little alteration in values occurred during the sessions immediately following our last report, any reactionary tendency being checked by the then uncertain political outlook and lack of encouragement from either the Alexandrian or American markets. Approaching the week-end the tone improved appreciably, and more confident support from both trade and speculative sources became evident. During the interval we have firmed up materially, and whilst the top prices of the week have not been maintained, advances registered total 30 to 31 points for near, and 30 to 33 points for new crop positions. Whilst trade reports still indicate a moderate yarn demand, spinners have recently shown a good deal more interest in their various qualities; in addition, quite a fair amount of calling came into the market round 16.25d. for July. The idea that Sakels have now worked down to a reasonable basis appears to be gaining ground, and in our opinion this would be consolidated should the American markets stabilise round the temporary level. The relative cheapness of the contract in comparison with spot values has latterly been emphasised by the action of the current position during May; in spite of the fact that holders of stocks had no carrying, tenders only amounted to 300 bales. May ultimately went off the board at 15 points premium over July; the latter month at present is roughly 20 points below November, and under present conditions we would consider it advisable for those who have hedges or "calls" based on near cotton to transfer at least a portion to new crop deliveries. Reports from Alexandria have been received to the effect that the Government are going to auction their old stock and replace with purchases out of the present crop. We doubt if there will be keen competition to secure this cotton, as it must have lost appreciably in spinning value during its long storage in Egypt. Apart from this, there must be considerable doubt whether it would pass if tendered in either of the contract markets. The final crop estimate places this year's yield at 2,533,307 kantars, against the December total of 2,342,215 kantars. With markets now more independent of outside influences we are inclined to take a more favourable view, and will advise conservative purchases should any decided easing from the present level take place.

Upper Contract.—An improved undertone has been in evidence in this market throughout the past week, and sentiment has not been so uniformly "bearish" as hitherto. Encouraged by firmer American markets, spinners have bought more freely and cheap sellers are not so easy to find as they were a few weeks ago. The final Government estimate was substantially higher than their earlier figure, being 5,313,845 kantars, against 4,853,630 kantars; the increase was expected and had already been discounted as a market factor. For the immediate future, we would prefer to advise working on the long side, keeping commitments, however, to reasonable proportions.

Egyptian Spot.

Business has been of a rather disappointing character. Undoubtedly since the Election results were published and uncertainty became certainty, a healthier tone has been apparent, and in some quarters, as for example the American spot, this has been translated into actual business. Egyptian cotton, on the contrary, in spite of advancing prices, has moved off slowly, and there is as yet little real improvement to record in so far as the spot has been concerned. The sustained fall in prices which has only just come to an end has evidently shaken confidence, and buyers appear to be waiting for a more definite lead before committing themselves. Much depends on the immediate course of the American market, and if this continues to improve as it has been doing during the past two days, fresh buying will probably be attracted. The local inquiry has been, for the most part, small and restricted, and features of special interest have been lacking.

Sakel.—The most popular range of inquiry this week has been 150 to 200 on. Cotton of a desirable character is scarce at the price and results have been somewhat meagre. A fitful demand has been spread over the other qualities.

Uppers.—The inquiry has been of a more general character, but purchases have lacked weight. The most popular quality has again been cotton within 10 points either way of the contract. Top qualities have been neglected.

Pilon has been in moderate request for all qualities.

White.—A small and easily satisfied demand for cotton at round about 17½d. has been met with.

Maraad and Nahda.—These have both been in moderate request.

Tokar Sakel has again suffered from neglect.

Sudan Sakel.—An improved inquiry has been met with, but sales so far have been of only moderate dimensions.

C.i.f. business has been quiet. Forwardings to spinners last week were returned at 7,994 bales Egyptian and 1,254 bales Sudan. Estimated spot sales, 1,900 bales Egyptian and 550 bales Sudan. Quotations of Sakel have been advanced 20 points on the week. Uppers and Pilon are 25 points higher on balance. F.G.F. Sakel to-day, 17.25d. F.G.F. Upper to-day, 11.53d. F.G.F. Pilon to-day, 12.60d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended May 30, state:—

Since our last report the futures market has fluctuated irregularly, and the tendency at the close was undecided. The week's summary of price movements is as follows:—Sakellaridis: July, 30.70 dollars, 0.44 dollars down; November, 33.16 dollars, 0.66 dollars down; January, 33.55 dollars, 0.63 dollars down. Ashmouni: June, 20.40 dollars, 0.31 dollars down; August, 20.86 dollars, 0.22 dollars down; October, 21.38 dollars, 0.07 dollars down; December, 21.86 dollars, 0.06 dollars down; February, 22.22 dollars, 0.05 dollars down.

Sakel.—The depressing atmosphere to which we alluded in last week's report has persisted throughout the week under review, and prices have lost further ground. There have been one or two sharp upturns arising from covering operations for profit-taking, but these reactions were short-lived. Spinners have not changed their waiting policy, and the Continent alone has shown some interest.

The present level of prices is certainly reasonable, the more so in view of the fairly strong local statistical position, but a real reaction can only be brought about by shorts being convinced that ruling conditions have materially changed, and this is not to be expected with American showing continued weakness and spinners coming into the market for merely negligible quantities.

The Sakel/Uppers straddle (July/June) this week stands at 1,230 points, against 1,243 points last week and 1,509 points at this time last year.

Uppers.—This market has shown a little more firmness during the week than the Sakel market, but, at the same time, prices have again lost a few points. There have been some big lines of transfers from old into new crop, both by trade interests and for speculative account, and the tendency has been for a widening of the difference between the near and distant positions. The trade has also effected some purchases, the contracts being supplied by speculative sales and some fixing sales against spot cotton. Reports received from Upper Egypt more or less unanimously admit a fairly appreciable increase in the acreage planted with cotton this year, and this has

Crop, 1929.—Contrary to usual weather conditions at this time of the year, rain has occurred in some districts of the Delta, but it is not thought that the crop will suffer any damage in consequence. In Upper Egypt, favourable weather conditions have prevailed.

The area under the tobacco crop is more than double that of last year. Great interest is shown in its cultivation, and growers are working for Turkish cigarette leaf as well as Latakia tobacco. The weather conditions are favourable for Turkish leaf production.

Notes of the Week.

Birka and Boycott in Egypt.

One of the tasks that Mahmoud Pasha's Government has set itself, in carrying out a policy of concentration on Egypt's material, social and moral needs, is the filling in of the numerous birkas, or ponds, which act as breeding grounds for mosquitoes, or are in other ways insanitary areas in or near villages. At first sight the task seems an obvious one and not very difficult; but in a country of vast stretches of unbroken flatness it is evident that the problem of finding material for filling up the cavities is not an easy one. Consequently, even if the local inhabitants had been minded of their own initiative to rid themselves of these germ spots, the work might well prove beyond their capacity. One of the largest birkas in Egypt, which is situated in the province of Dakhalia, occupies an area of sixteen acres, and the filling in of it presented considerable difficulties, for the nearest hill was five miles away and to convey the earth this distance it was necessary to build a special light railway line. The starting of the work of filling in this birka was recently made the occasion of an appropriate ceremony, as, although some score or more of ponds had already been filled up, nothing on this scale had been attempted before, and special grants had had to be made by the Ministry of Finance and the Anti-Malaria Section of the Department of Public Health to defray the cost. While this good work is being carried out, the leaders of the Wafd are making their own contribution to the material progress of the country by urging Egyptians to boycott British goods. The suggestion is not likely to be adopted to any serious extent, but it is of interest as serving to mark the contrast between the unpractical Wafd and the present business Government now in power in Egypt. In spite of their year's sojourn in the political wilderness the Wafd leaders are still of opinion that the Egyptian fellaheen are more interested in political shibboleths than in the satisfying of their material wants. What precise purpose the proposed boycott is intended to serve does not appear to have been stated, but it must be supposed to have been designed with a view to

bringing Great Britain to her knees, and subsequently to the Wafd's way of thinking, rather than to conferring any particular benefit on the fellaheen. As a policy the boycott is notoriously the refuge of the politically destitute. The ignorant peasant may not know this, and it remains to be seen whether the Wafd's hold on him—exercised in the past largely through a subtle form of mild terrorism—is still strong enough to force him to do its bidding.

Hungary and the Little Entente.

Balkan diplomacy has still one thing to learn from the West—the virtue of occasionally turning the blind eye on inconvenient happenings. It may not have been tactful on the part of the Hungarian Prime Minister, at the unveiling of a memorial to Hungarian soldiers killed in the War, to refer to the restoration of Hungary's thousand-year-old frontiers as an ideal of the nation, but it was not an altogether unnatural remark to make on a national occasion, if only for the reason that a people who at the moment have not much to look forward to are apt to dwell on the past and may be allowed to derive what comfort they can from doing so. The holding of ideals, after all, is not a criminal offence, and it is only when concrete steps are taken to carry them into effect that exception can formally be taken to them. It was not, therefore, an exhibition of worldly or diplomatic wisdom on the part of the representatives of the Little Entente States to enter a formal protest against Count Bethlen's remarks, because only a very poor-spirited people, as the Magyars are not, would be incapable of giving an adequate Roland for their Oliver. To "report" Hungary to the League of Nations might even prove still more embarrassing to the Little Entente. The League exists to see that treaty obligations are kept, and is, therefore, more concerned with deeds than with words. When Hungary shows more definite signs of kicking over the traces, it will be time for the League to act. Until then, if it wishes to maintain its reputation for strict impartiality, the League can only exhort all States to observe the letter and the spirit of the Peace Treaties, and it might

use the occasion to remind the protesting countries that, if none had offended in this direction, the Council of the League of Nations would not have had to devote so much time to the subject of minorities. The existence of the Little Entente is by way of being derogatory to the League of Nations, for the former was called into being to do what the latter had already undertaken to do—to see that the Peace Treaties, including the Treaty of Trianon, were duly observed. The spectacle of three big men—the combined population of the Little Entente States numbers forty million—driven into leaguering themselves together by fear of a small boy—Hungary has nine million inhabitants—is not magnificent, and may well have the effect of encouraging the small boy occasionally to “make a long nose” at the timorous big men, as he knows that within the shelter of his League of Nations home he runs no risk in so doing. Until Roumania and Yugoslavia learn that their real interests are bound up with the Balkans, while those of Czechoslovakia lie in Central Europe, they will continually be led into attributing too much importance to Hungarian ebullitions of patriotic sentiment.

The British Prime Minister on Minorities.

In an article contributed to the *Sunday Times*, Mr. Ramsay MacDonald has made an outspoken statement on the subject of minorities, which may conceivably disturb the self-complacency of certain Minority States. He diagnoses the trouble as one of “liberty, justice and co-operative government;” there should, he writes, be no distinctions in the enjoyment of the rights of citizens; language and religious differences should be respected in law, administration and education; where races can be formed into provinces, self-administration should be granted. There may be at first abuses of the liberty accorded, but the cure for this is “patience in well-doing.” Mr. MacDonald is of opinion that Czechoslovakia is advancing on these lines, but he finds a very different state of affairs in Yugoslavia and Italy. “The Peace Treaties gave a large German and Slav population to Italy which, by every repressive power it can command, it is trying to Italianise.” If the subject is raised at the next meeting of the League of Nations, it would seem that the British delegation will be instructed to support a policy for “effective League supervision” for the observance of the obligations of States to minorities. “The technical difficulties of presenting petitions should be removed,” Mr. MacDonald states, “and the defence of the accused responsible States should be made public. A permanent Minorities Commission ought to be established similar to the Mandates Commission, and the diplomacy of hush should be banished from its work.” Since President Wilson laid down rules for a European millenium, no better counsels of perfection on this difficult problem have been enunciated. Whether it is altogether wise at this particular stage to strengthen the bonds between Italy and other Minority States by enabling the former to use her position to stiffen the passive resistance of the latter may be open to doubt. Hitherto Great Britain’s rôle in the Council of the League of Nations has been to point both minority communities and Minority States to better things, relying largely on the patience in well-doing that Mr. MacDonald himself commends. It would now seem as if this policy is to be abandoned in favour of more drastic measures for making people good by order. The Prime Minister’s outspoken declaration is calculated to confirm the tendency, already recorded, of a division of Europe into two camps on the subject of minorities; but whether this will have the effect of furthering his aim of “establishing peace in Europe” remains to be seen.

Consistency in Yugoslavia.

The absence of a spirit of give-and-take that has so often characterised Yugoslav policy in international affairs during the last decade is equally marked in the country’s domestic problems. In the article already quoted, Mr. Ramsay MacDonald attributes to the policy

of “Serbisation of the Croats” the situation in which “neither the one race [*sic*] nor the other will co-operate, and where the State seems to have been faced with the alternatives, both equally evil, of an endless parliamentary deadlock, or a dictatorship which no observer believes is to be a short one.” In spite of the promise held out by the Dictatorship of making the unity of the Kingdom its chief aim, the five months that have since elapsed do not appear to have brought it much nearer to this goal. Up and down the country there must be many people who, recognising the hopelessness of the parliamentary situation as it had been throughout the ten years of the new State’s existence, were prepared to welcome the effort to introduce a better spirit among Yugoslavs as a whole and are still anxious to give King Alexander’s drastic experiment a full and fair trial. On the other hand, among the Croats those who have made up their minds that nothing is to be gained by giving the Dictatorship a chance to prove itself contrive to be more in evidence in the public eye. It may be that a counterblast to the verdict in the trial of Punisha Rachitch was considered necessary, in view of the risk attaching to any attempt at public criticism. If this were the motive, the Croat lawyers who engineered a demonstration cannot be congratulated on their tactics. At a meeting in Zagreb convened to inaugurate a Chamber of Lawyers the President submitted a motion to send a telegram of homage to the Sovereign. A proposal that the telegram should also embody a request for the restoration of their rights to his Majesty’s subjects created the inevitable storm, in the course of which the police were summoned, and the four or five lawyers who had spoken in favour of the amendment were arrested. All except one has since been set at liberty, but it is stated that they will be charged under the Yugoslav Defence of the Realm Act for seeking to undermine the existing régime. It is difficult for the outside observer to gauge the inwardness of the Yugoslav situation, the more so in the face of a rigid censorship; but it would appear that, if the Croats have nothing more effective to oppose to the Dictatorship than a series of pinpricks, they would be better advised to see whether a period of cordial co-operation does not predispose the powers-that-be more favourably to the Croat point of view.

Egypt in England.

The invasion of Egypt by England has so long been a tradition in the annals of the travelling world, that we may welcome the signs of the turning of the tables in the summer invasion of England by Egypt that promises equally to become an established tradition. A powerful lead was given by the royal visit last year, and the gracefulness of the compliment that King Fuad is paying this country by returning next month on an unofficial visit will not be lost on the British people. Great Britain makes no attempt to vie with Continental States in attractions of a certain order that must always make a strong appeal to those who are bent solely on relaxation or indulgence; but she appreciates the increasing interest that so many foreigners are now taking in her, not so much from the point of view of a playground as from a desire to understand better the characteristics, institutions and surroundings of a people who have contrived to make a certain mark in the world. It is not without significance that one of the finest tributes paid to Great Britain should have come from the present Egyptian Prime Minister, who arrives in London as we go to press. Mahmoud Pasha has had the opportunity of studying the English educational system from the vantage point of an Oxford graduate, and the address that he delivered a few weeks ago to the boys at Victoria College, Alexandria, will long rank as a classic appreciation of English public school and University life. It is a happy coincidence that his University should have decided this year to confer upon him the Degree of Doctor of Civil Law. Among other Egyptians prominent in official life who are in this country at the present time are Ibrahim Fahmy

Bey, Minister for Public Works, and Mazloum Pasha, Director-General of Posts and Telegraphs. No less important for the promotion of good relations between Egypt and Great Britain is the steadily increasing number of young Egyptians who come to this country every year to continue their studies or to take up apprenticeships. Some of their number, it is true, find it difficult to lay aside the propensity for politics that was officially inculcated in them a few years ago, and seem to set more store on political propaganda than on education; but, however vocal this minority may be on occasions, it does not invalidate the soundness of the principle of sending as many Egyptians as possible to study in Great Britain—a principle that is receiving the practical encouragement of King Fuad and of the present Egyptian Government.

INDIAN NOTES.

India's Greatest Scourge.

"The malaria of Bengal may well be described as a great tragedy." This statement, which is made in the report for 1928 of the Ross Institute and Hospital for Tropical Diseases, is literally true. It is indeed a tragedy that the progress of this terrible scourge cannot be more effectively checked than has been found to be possible hitherto. According to the latest figures available to us malaria is responsible for something like half a million deaths in Bengal yearly. Unlike some other tropical diseases, notably cholera, it does not kill quickly. But if it is disastrous to the well-being and efficiency of the people. It enormously weakens their capacity for work, and renders them incapable of sustained exertion. Moreover, it so lowers the vitality of the mothers as to be undoubtedly one of the chief causes of the high rate of infant mortality, which is so noticeable in Bengal. As is stated in the Ross Institute Report, it is Western Bengal which suffers most. Burdwan, Nadia and Murshidabad are the districts where the ravages of the disease are generally most severe. For a long time past—as is also mentioned in the Report—there has been much debate and dissension as to the reasons why the disease should be so widespread in certain parts of the Presidency. It is maintained on the one hand that insufficient drainage is the real cause. On the other hand authorities such as Dr. Bentley, the Bengal Director of Public Health, take the view that it is in those districts where the natural flooding of the deltaic areas has been interfered with by railways, roads, canals, and so on, that the increase in intensity has been most marked. Where the land is flooded every year by the overflow of the rivers there is, they claim, much less malaria. Whichever of these opposing views may be correct, one thing is certain, and that is that no definite conclusion can be arrived at without further investigation. It would seem to us, therefore, that Sir Malcolm Watson, and Major Lockwood Stevens, who inquired into the subject in India last cold weather, on behalf of the Ross Institute, are entirely right in recommending the Government of Bengal to undertake an independent inquiry. For, notwithstanding all the efforts which the Government are making, the progress of the disease is not stayed. A more vigorous campaign needs to be launched; for what has been found to be possible in other parts of the world in the prevention of malaria ought not to be impossible in Bengal. A further aspect of the subject deserves to be noticed. The apathetic attitude of the people of India towards epidemic disease if often deplored, and not without reason. It is, therefore, very satisfactory to see that in the campaign against malaria the Government is supported and assisted by private effort and initiative. In about two thousand villages in Bengal Co-operative Anti-Malaria Societies, organised and maintained by the people, are taking an active part in the struggle. These Societies were warmly praised by Dr. Bentley in his evidence before the Royal Agricultural Commission. "In my opinion," he said, "a

very large proportion of the societies . . . have in the main achieved their aim, namely, the awakening of the Bengali villagers to the necessity and the possibility of improving the health of their villages by their own efforts." And, speaking in Calcutta last cold weather, Major Lockwood Stevens likewise commended the good work done by the societies, in which the Ross Institute was, he said, greatly interested.

The Delhi Outrage.

After a trial occupying several days, the conclusion of which was notable for the widely conflicting views of the three assessors, sentence of transportation for life was passed last week upon Bhagat Singh and Batukeshwara Dutt, the self-confessed revolutionaries who threw the bombs into the Legislative Assembly on April 8. On behalf of the prisoners it was contended that they had not meant to take life, that the bombs were not lethal, and that the intention was merely to "hoist a danger signal" and "to register a protest" against British rule. The change in tone and sentiment from the bloodthirsty heroics of the leaflets which the prisoners scattered at the moment of the outrage and the shouts of "long live the Revolution of the Proletariat," with which the judgment was greeted, is significant. In the face of the expert evidence to the effect that, but for the fact that the ingredients of the high-explosive used had been unskillfully mixed, many persons on the floor of the House must have been blown to pieces, it nonetheless proved of small avail and justice has been allowed to take its course. Meanwhile, the same day the trial commenced at Meerut of the 31 alleged Communists, who are charged with seditious conspiracy, and the flood of anonymous letters threatening police and other officials and magistrates with the fate of Superintendent Saunders, who was murdered last December, persists. Fortunately the firmness and prescience of the authorities have checked the movement, the widespread existence of which has been clearly proved, but while the leaders of the "non-violent" non-co-operation party specifically repudiate the terrorist organisation, we look in vain for any real appreciation on their part of the warning contained in the Viceroy's recent reference to the consequences of such a purely negative attitude.

On May 17 the King of Iraq opened the new out-patients' wing of the Royal Hospital in Baghdad in memory of General Sir Stanley Maude, which is called the Maude Memorial Wing. Sir Gilbert Clayton, High Commissioner, in asking the King to open the wing, said that less than a fortnight after General Maude's death in November, 1917, a subscription was opened for a fund to be devoted to the perpetuation of his name in Baghdad.

THE LEAGUE AND MINORITIES.

As was inevitable, the Council of the League of Nations in session in Madrid has had to be content with a compromise on the subject of the procedure to be adopted for the protection of minorities. The main trouble arises from the fact that, while the League from its very nature is unable to divest itself of responsibility in connexion with minorities, no provision was made in the Treaties in regard to the means by which the interests of the minorities should be safeguarded, and it is now impossible to secure the consent of the Governments concerned for any radical alteration in the methods adopted for such safeguarding. In carrying out its function of watching over the execution of treaty obligations, the League acts through its organ, the Council, which in turn can act only when one of its members takes the initiative on his own responsibility and invokes the Council's aid as guarantor on the ground that a treaty has been violated or is in danger of violation. So invidious did this task threaten to be for individual members in regard to matters affecting minorities that the Council, with a view to obviating the danger of a complete neglect of minority interests, evolved a special procedure by which petitions from minorities were submitted automatically to a preliminary examination by a Committee of Three appointed for each case. In carrying out their duties these Committees were fettered by no hard-and-fast rules, but were left to their own discretion, guided by the single-minded purpose of acting in the best interests of both parties concerned in a controversy in which right would probably never be wholly on one side. The obvious disadvantage of publicity in any attempt to secure concessions from a Government in favour of a minority labouring under a grievance may have led the Committees to invest their proceedings with excessive secrecy, and in particular the omission to impart to unsuccessful applicants any information regarding the fate of their petitions gave rise to the complaint that the interests of minorities were being neglected by the Council. With a view to meeting this charge the Canadian and German members on the Council raised the question at the March session, and a Committee of Three was appointed to report on the subject. Its report was submitted to the Council last week, but, as the members were not able to accept it unanimously, a Resolution was adopted embodying only certain of its recommendations.

By the terms of this Resolution a Committee appointed to consider a petition may consist of four members instead of two, in addition to the President. These Minorities Committees are required to consider the possibility of meeting in the intervals between sessions of the Council; they are to communicate the result of their investigations to other members of the Council in cases where they do not place the matter on the Council's agenda, and, if they can secure the consent of the Governments concerned, they are to publish the result of the examination of the questions submitted to them. It

is clear that these modest innovations do not meet the aims of those who are anxious to see minorities freed from the disabilities under which they frequently labour. They will help the Council to escape the reproach of ignoring petitions and being neglectful of the interests of minorities, but the obligation to obtain the consent of the Government concerned before the results of the Committees' examinations are published will defeat the purpose that publicity is intended to serve. The problem is not easy of solution, for the Council of the League of Nations is not in a position to dictate to Governments having jurisdiction over minorities how they shall treat those minorities. At the same time it has to avoid any action which would encourage a minority community to adopt a persistently intransigent attitude towards its own Government in reliance on the Council's support. The subject is one that in an imperfect world, and under the very imperfect conditions prevailing where minority groups have been called into existence by the Peace Settlement, is incapable of a satisfactory solution. The most that can be expected for the time being is that there will be a gradual diminution of occasions for friction between minorities and their Governments, as much as a result of improved standards of administration, as in virtue of the workings of a permanent economic contentment upon a transient political effervescence.

There can be little doubt that the more publicity that can be given to minority grievances, the better it will be for the interests of all concerned. Even a tabulated list of petitions received and considered by the Council or its Committees, without more precise information as to the nature of the complaints or the result of the investigations, will serve a useful purpose. No Government, it would be thought, would be anxious to head that list in point of numbers, and it is certain that a reputation for frivolous petitions on the part of a minority will not conduce to the peace and comfort of its individual members. In resenting all action on the part of the Council of the League in connexion with minorities the Governments concerned lay stress on their inalienable right of sovereignty, and point to the freedom of other States that are not liable to be called to account in connexion with purely domestic affairs. The contention ignores the position of "Minority" States. The Great War turned in part on the oppression of minorities, which had proved such a constant factor in disturbing the peace of the world. It was to obviate, as far as possible, this danger in the future, as Sir Austen Chamberlain has recently pointed out in an illuminating article in *The Times*, that the Greater Powers after the War found themselves obliged to insist upon the right to require from certain States, whose territorial integrity they would in the last resort have to protect, an undertaking that the minorities which perforce had to be incorporated in them should receive fair and equal treatment at the hands of the majority. Probably in no single instance where there have been minority complaints can the country concerned pretend to have lived up to the letter, still less to the spirit, of these treaty obligations. Even where there has not been a deliberate official policy of persecution, violation of rights and suppression, the same end has been reached through the acts of individual officials, at which the central Government has connived and of which it has not hesitated to reap what it has regarded as the advantages. Sympathy will be felt by all right-minded people with those members of the Council who are anxious to see something more done to enforce decency of treatment for minorities in countries claiming to be civilised and Christian; but there is no short cut to the goal, and it is necessary to avoid the danger of embittering relations between majorities and minorities in an attempt to make a backward people moral by force of international law.

*The Near and Middle East

From Our Own Correspondents.

Cairo, June 8.

The Residency.

The King's Birthday was celebrated as usual by a garden party at the Residency, which was attended by over nine hundred British residents and their families. June 3, like Empire Day, always proves most interesting, for it is only on those occasions that one realises how large the British community in Cairo is and what the British Empire really means nowadays. Earlier in the day the Prime Minister and his colleagues called to offer their congratulations.

The High Commissioner has left for a trip to the Western Desert, which will last some six days. His journey will include Mersa Matruh, Siwa, where he will receive the heads of the tribes and visit the ancient monuments, and Barrani, etc. So far nothing is known as to the date of his Excellency's departure for London, but it is not likely to be before the beginning of July. Lady Lloyd left on Wednesday by the Khedivial Line for Athens, where she will stay a short time with Sir Percy and Lady Lorraine.

[An article on Siwa appears on page 784.]

Birthday Honours.

Egypt and the Sudan do not figure very prominently in the latest list. A well-earned C.M.G. goes to Mr. Tatton-Brown, Director-General of Customs, who has done very valuable work both during and since the War and whose ability and ingenuity will be taxed to the utmost in the administration of the new Customs Tariff, when it is promulgated. Mr. J. D. Craig receives a C.B.E. for his services while in the Sudan Government, which he has now quitted; particularly did he bring himself to the fore during his tenure of office as Governor of Kordofan. Finally Mr. Hugh-Jones, Financial Secretary to the Financial Adviser, receives an O.B.E., which in the opinion of many qualified to judge is but a mild recognition of the work he has done, both in his official capacity and outside for the furtherance of British interests.

**Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.*

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are invited for ASSISTANT MISTRESS-SHIPS for teaching English in Egyptian Government Secondary Schools.

Candidates should be between 25 and 34 years of age, and should have a University Degree (preferably in Honours), some experience of teaching, and a Diploma in teaching or the Higher Froebel Certificate.

The initial salary offered is £E25 a month (about £307 a year) and the appointments will be on contract for a period of five years, and renewable at the end of that time.

Full particulars and Form of Application may be obtained from The Director, Egyptian Education Office, 39, Victoria Street, London, S.W.1.

Treaties of Arbitration and Conciliation.

The Council of Ministers has approved of the texts of the two draft treaties sent out by the United States Government, and the Egyptian Minister at Washington has been authorised to sign the originals when they are ready.

Egypt and the Elections.

The elections have been followed with the keenest interest out here, but the result does not seem to have caused much perturbation. At first it was wondered whether a Labour Government would mean a change in local policy; but only in Wafd circles does there appear to be any belief that there will be any attempt to interfere with the present régime. No sooner did the Wafd hear of the result than it held a hurried meeting and sent Mr. William Makram Ebeid post-haste to London to represent it there. It is reliably stated that he has been instructed to ask right away for the retirement of Lord Lloyd and his replacement by a representative more in sympathy with Wafd policy, and that the next move is to be a demand for immediate elections under the direction of Nahas Pasha and Company. The general opinion out here is, however, that matters are going along so satisfactorily, and all classes of the population are receiving such consideration in the schemes now being executed, that the Labour Government will be very disinclined to do anything that might interfere with that tranquillity and create for it any addition to the responsibilities which it will already have on its hands at home and in other parts of the world as soon as it takes office. The fact that the Bourse in Egypt has hardened since the result of the elections is an indication that no serious attention is being paid to what the Wafd is doing or saying and that there is no real fear with regard to the effect of a change of Government at home.

Victoria College.

In accordance with the public school traditions which inspire its administration, Victoria College holds an annual dinner for Old Victorians, and this year's event, which took place at San Stefano under the presidency of the headmaster, Mr. Reid, proved an even greater success than usual. There were nearly sixty present, including the Senior School staff, Sir Henry Barker, Chairman of the Council, the Consul-General, Mr. Heathcote-Smith, and the head boy, Heroui, who is going up to Brasenose this summer. Victoria College has indeed made wonderful strides under Mr. Reid, thanks to the ground-work done by his predecessor, Mr. Lias. It is producing just the type of youth that one would wish to see emerge from a British-run institution, and everyone will agree with Mr. Heathcote-Smith in his remark that the feelings of hope with which the College was regarded a few years ago had now become feelings of confidence.

The Mixed Court of Appeal.

During the last six months there has been a good deal of talk in regard to the necessity for creating an extra Chamber in the Mixed Court of Appeal, to enable that

**HAIFA—BEIRUT—DAMASCUS—BAGHDAD
—TEHERAN**

500 miles across the Desert in comfort.

Nairn Eastern Transport Co. Ltd.

Pullman Six-wheeler Service.

**Apply HEAD OFFICE—Avenue des Francais, BEYROUTH.
P.O. Box 262. Or All Principal Travel Agents.**

jurisdiction to deal with the arrears of work which exist at the beginning of every judicial year. The question of whether the new Chamber should be a five-counsellor one, like the rest, or merely one of three counsellors, was also raised and gave rise to a certain amount of controversial discussion in regard to the advisability of a departure from precedent in the matter of the size of Chambers. I understand that, with a view to providing immediate relief, it has been decided to create an extra European post in the Court of Appeal, which will for one thing avoid a Chamber's being paralysed, as not infrequently happens, owing to the indisposition of one of its members. It is understood that the vacancy will be filled by the promotion to the Higher Court of the present Swiss President of the Cairo Court of First Instance, and that his place will be taken by the Vice-President, a fellow-countryman of his.

GREECE.

Athens, June 9.

The President of the Republic.

On Thursday last Admiral Koundouriotis took the oath before the National Assembly, now composed of both Houses (Senate and Chamber), on the occasion of his re-election as President of the Republic. It was a moving scene, and both inside and outside the building the affection and esteem with which he is regarded were expressed by loud cheering and applause. It is no secret that the President would prefer to retire into private life, and it has been only a sense of duty that has compelled him to accept re-election.

The Reconstituted Ministry.

On the same day, in accordance with Parliamentary custom, the Government resigned. In the reconstituted Government M. Botsaris replaces M. Argyropoulos as Minister of Marine, the latter becoming Minister of Foreign Affairs; M. Chrestomanos, former Minister of Communications, has been replaced by M. Gonatas, and, at the urgent request of M. Venizelos, has accepted the post of sub-Minister of Health. The importance of this Department has been recognised by M. Venizelos, at whose suggestion it has been converted into a Ministry, of which he himself becomes the head. As a leading member of the medical profession, M. Chrestomanos should prove a valuable asset; it was always a matter of surprise that he should have remained Minister of Communications in the late Government. The work that lies before him is heavy. It is not known whether the recommendations of the foreign doctors are being put into effect. The epidemic of dengue last year and the recent appearance of typhoid in Salonika, traced to pollution of the drinking water supply, should arouse the public conscience. One hopes that energetic measures are being taken, but when one hears of public wards in the leading hospital still unprovided with mosquito-netting of any kind, and when, on a day like to-day, when a high wind is blowing the dust and dirt about the streets of Athens, not a single water-cart is visible, one wonders whether the gravity of the situation is fully realised. One of the most hopeful signs is the increased facilities for getting away from Athens, and the advantage which is taken of them to spend Sundays and holidays at some of the numerous *plages* that are springing up around the coast of Attica.

The Lot of Domestic Animals.

The new dogs' refuge was inaugurated on Tuesday last in the presence of M. and Mme. Venizelos, General Frantzes (representing the President of the Republic), the British Minister and Lady Loraine, the President of the Chamber, and a distinguished company of Greeks and foreigners. M. Rouphos, President of the Society for the Protection of Animals, traced the history of the Society from its inception about twenty years ago,

through its most flourishing period under the patronage of Queen Sophie, its almost complete extinction after the War, to its revival in 1925. As usual in matters of this kind, the Prime Minister and Mme. Venizelos have taken the lead in generous financial support, and the former is also using his influence to secure the appropriate legislation. In his admirable speech, M. Rouphos was able to show by numerous instances that kindness to animals was practised by the ancient Greeks, while the modern neglect (and even cruelty) indicated a falling-off from the standards of the past. If this idea can be got into the heads of the rising generation, the whole attitude of Greeks to animals will change, since kindness is an ingrained characteristic of the race. For that, however, one must depend on the schoolmasters. In this connexion a lantern lecture with slides illustrating ancient reliefs, etc., on which animals are represented would, if delivered in various schools throughout the country, do much good.

Toujours General Pangalos.

The ex-Dictator and his two Ministers, MM. Tantalides and Tavoulares, have again been committed to preventive detention. The long list of vague charges formulated against General Pangalos seems to have been abandoned in favour of one of manipulating the exchange. M. Tantalides is charged in addition with violating the law about responsibility of Ministers and with dishonesty; Mr. Tavoulares with irregularities in connexion with the Telephone Contract. His re-committal to prison, where he has been on and off for at least two years, drew a dignified letter from General Pangalos to the Prime Minister, who has since expressed his disapproval of the further detention. Now that there is a stable Government there can be no excuse for further delays; it is unfair to the accused and a reflexion on the efficiency of Greek justice.

Epirus Brigands.

The sentence passed on the Koumbaioi brothers, i.e., life-long imprisonment, has aroused indignation in Epirus, as it was confidently expected that they would be condemned to death. As they have yet to be tried on other counts, including three of murder, the indignation seems premature. The further trial will in any case be probably held in Athens.

The Rupert Brooke Memorial.

It is a right instinct that has prompted the Rupert Brooke Committee to select Skyros town for the site of the monument which they are proposing to erect. If monument there must be, to erect it at the tomb would be a mistake, since it would destroy the perfect harmony of tomb and setting. For the same reason it is to be hoped that a mistaken piety will not ordain that a motor-road be made to the tomb. This it should be possible to prevent, even though it is not possible to prevent American women from reading aloud their own poems there.

Smuggling in Greece.

From an interesting and exhaustive article which appeared recently in the *Eleftheron Vema*, it seems that, on a moderate estimate, the Treasury loses about three hundred million drachmæ owing to smuggling. It is obvious that a coast formation like that of Greece provides innumerable opportunities for smuggling, but the machinery for keeping it down has, so far, been quite inadequate. A proper coast-guard system is non-existent. The Government, however, now intends to take the matter seriously, and eight special patrol-boats have been ordered, a special branch of the Customs service is being organised for the coast, and a special police branch for the frontier. The principal smuggled objects are naturally monopoly goods, like tobacco, cigarettes, cigarette-papers, and spirits; secondly, sugar, tea, coffee, and silk. From the Dodecanese as a base, and especially the island of Kalymnos, these goods are unloaded on the lonely beaches of the islands of the Archipelago and of

mainland Greece. The Ionian islands are distributing centres for goods coming from Italy. Smuggling can never be eradicated in Greece, but much can be done to reduce the enormous losses which it occasions, losses which (the article says) would be sufficient to cover the expenses of the whole educational and agricultural programme of the present Government.

Sofia, June 4.

A Press Exhibition.

On the occasion of the *fêtes* held to celebrate the millenary of Tsar Simeon and the fiftieth anniversary of the liberation of Bulgaria from the Turkish yoke, the Sofia League of Journalists organised an interesting exhibition of Bulgarian newspapers, showing in a tangible form the development of the Press since its birth towards the middle of the last century. The Exhibition was held in the rooms of the League's Club and was a great success. It showed the Bulgarian people the modest, but very patriotic origins of their Press, which has been a powerful factor for progress in their renaissance and in their spiritual and political liberation.

A New Amnesty.

Somewhat unexpectedly, but at all events immediately after the return of King Boris from his foreign tour, the Government, at the instigation of the President of the Council, has decided to pass a vote in the *Sobranie* for a new political amnesty, which will complete those previously granted by the two Cabinets of the Democratic-Entente, and which will on this occasion affect a large number of Communists and Agrarians, condemned or emigrated, who have taken part in the organisation and execution of the armed struggle against the régime re-established by the anti-Agrarian and anti-Communist *coup d'état* of 1923. The amnesty will also affect the two leaders of the Radoslavoff-Tontcheff Liberal Cabinet, which decided on war against the Entente, and who were condemned together with their other colleagues by the High Court under the Stamboliski Government as the authors responsible for the national catastrophe. It is known that M. Radoslavoff, who refused to appear before the High Court, has lived in Berlin since 1918, where he is patiently waiting to be allowed to return to his native land. M. Tontcheff, on the other hand, did not leave Bulgaria, but was sent to prison, from which he was released three years ago by an act of grace on the part of the *Sobranie* with the approval of the King, without, however, recovering his political rights.

The initiative of this measure of clemency (from which the only persons excluded are certain Bulgarian Agrarian and Communist leaders, who from Belgrade and Moscow have continued to conspire against their country) is attributed to King Boris. This is said to be the result of the impressions which he received abroad and also in consequence of the recent political manifestations in Bulgaria which constituted a striking proof of the definite stability of order and peace throughout the country. It is evident that the Head of the State, who has no longer any

anxiety on public security, wisely wishes, by this new and broad amnesty, to bring about the definite calming of public opinion and to put an end to any further repercussions of the sad era of internal troubles.

A Bill to this effect has just been placed before the *Sobranie*.

Aerial Communications.

General Duval, director of the International Aviation Company, Cydna, who already holds the concession for aerial communications between Sofia, Belgrade and Constantinople, has just paid a visit to the capital in order to negotiate with the proper authorities with a view to establishing a Bucharest-Sofia-Salonika aerial line of communication. An agreement was soon reached, and the new line, which will begin to operate shortly, will considerably shorten the route between Roumania, Bulgaria, and Greece.

Greco-Bulgarian Pourparlers.

The negotiations between Greece and Bulgaria for the amicable settlement of claims presented by their respective nationals have been no further advanced at Athens than at Sofia. But at Sofia especially they have suffered a set-back which the Bulgarians attribute to a number of causes. In the first place they explain it by the cooling off in Greco-Bulgarian relations created by the almost unfriendly attitude adopted by the Greek Government on the subject of the demand for a partial postponement of Bulgarian reparations. Next they point to the absence of results from the conversations at Athens between M. Karapanos and M. Kiosseïvanoff, of which they were waiting to hear the conclusions before deciding in favour of one solution or another in the disputes dealt with by M. Bourroff and M. Dendramis. To these causes, which keep alive the deep-rooted mutual mistrust existing between these two people, a Bulgarian journal, the *Znamé*, a democratic party organ, has just added another very strange one, namely, the impossibility of the Ministers of Foreign Affairs and Finance, MM. Bourroff and Moloff, owing to their strained personal relations, to arrange a meeting in order to come to a decision regarding certain points in these negotiations, which, involving the responsibility of the Government, reflect on the competence of their two Departments.

The semi-official *Demokraticheski Sgovor* has opposed a formal contradiction of the *Znamé's* affirmations, but there would certainly appear to be some truth in them.

A Turco-Bulgarian Pact.

The *Sobranie* has just ratified practically unanimously a pact of neutrality, conciliation, judicial settlement and arbitration concluded between Bulgaria and Turkey, which, two days later, was also ratified by the League of Nations.

The vote in the *Sobranie* was preceded by a long discussion, at the conclusion of which M. Bourroff, Minister for Foreign Affairs, in a brilliant speech made this notable declaration, which well characterises the work accomplished. He said: "By this pact Turkey and Bulgaria are instrumental in the liquidating of a sad past and in setting solid foundations to a brilliant future in the development of their mutual relations. We are thus giving to the Turkish nation a new proof that, forgetting the past, or, if you wish, only borrowing from that past a feeling of mutual esteem, we have decided loyally to extend our hand to further the work of peace without animosity towards anyone, with no *arrière pensée* of causing harm to anyone, but also with the feeling of not being limited in the full exercise of our State sovereignty. It is in this spirit that the Treaty has been discussed; it is in this spirit that it was signed. The questions dealt with have been only those concerning sentiments of confidence and mutual collaboration. I trust that the Treaty will consolidate these sentiments, and I would here express my gratitude to the Turkish Government for the good will it has shown in the protracted negotiations preceding the conclusion of the Treaty."

THE HIJAZ.

Jidda, May 30.

The Pilgrimage.

The fifth Pilgrimage carried out under Wahhabi auspices has just been brought to a successful conclusion, and all who have taken part in it are loud in their praise of the arrangements made for their comfort and health. It is claimed that the death-roll on this occasion was far smaller than has ever been known before, and it is a matter for special satisfaction that no deaths were due to maladies classed as epidemic. The total number of overseas pilgrims is returned as 90,764 or about 10,000 less than last year; and estimates vary from 150,000 to 200,000 for the actual assemblage at Arafat for the culminating ceremony, which took place under somewhat curious climatic conditions. A vast cloud of locusts passed over the scene first and was followed by a dense sand-storm, which in turn gave way to a thunderstorm accompanied by a heavy shower of rain. The scenic effect created by a vast white-clad multitude in the plain of Arafat under such rapidly changing conditions may well be imagined and, fortunately, it was witnessed by an artist capable, and it is to be hoped desirous, of producing an epoch-making picture of the scene. The artist in question is a Frenchman, M. Dinet, who has long resided in and about the Sahara and has evidently been greatly impressed by his experiences in the Hijaz. There were, so far as is known, three other Europeans (a German and two Dutchmen) in this year's assembly at Arafat, all, of course, being Muslims.

In this year's Pilgrimage the total number of deaths (heat-stroke and old age being the chief causes) during the ceremony at Arafat and the three days of the *Id* at Muna was only 241, a rate of about three persons in every 2,000. King Ibn Saoud's medical service is to be congratulated on the very successful accomplishment of its by no means easy task. The pilgrims are now being shipped in their daily thousands on the return journey to their distant homes, while those who did not do so before the Pilgrimage are going in similar thousands by car and camel to Madina. The Pilgrimage of 1929 has continued and maintained the programme of progressive improvement laid down by the Wahhabis in 1926. We now look forward to next year.

General News.

There is little of general interest to report this week. The King is, of course, still at Mecca attending to the many affairs of state that demand his personal supervision and entertaining those of the pilgrims who have affairs to discuss with him. One of his guests, Amir Shakib Arslan, is unfortunately suffering from indisposition, and has gone to Taif for a period of recuperation. At Jidda the holidays were celebrated by a very successful regatta organised by the commander of H.M.S. Clematis, which was here on a brief visit; there was a race for the boats of the various vessels at anchor here awaiting the return of the pilgrims, which was won by Captain Whiteman of the s.s. Talodi of the Khedivial Line; and the second race was for the local Sanbaks, which made a gallant show with their huge lateen sails (can any of your readers tell us exactly what a lateen sail is?), the winner being a vessel lent to the Commander of the Clematis and flying the white ensign *pro hac vice*. This proved a very popular victory, and was witnessed

by a large company of Jidda notables, including the Governor, who had been invited on board the Clematis.

The Jidda cricket team has also been distinguishing itself in competition with various nautical combinations and won four out of five matches during the holidays. This was a satisfactory achievement in view of the fact that Jidda's best bowler had gone on leave, but the team was unexpectedly reinforced at a critical moment by the discovery of the cricketing talent of the French Vice-Consul, who proved a tower of strength whenever he could snatch time from his heavy pilgrim preoccupations to play. The French Consul, M. Maigret, who only arrived here at the end of April, has unfortunately succumbed to a bad attack of malaria, and is leaving Jidda almost at once to recuperate in a more salubrious climate; he expects, however, to return in October to resume his interrupted work and he will doubtless have much to tell his Government of his preliminary impressions of the Arab Government to which he is accredited. (Incidentally, by the omission of a complete line in my message of April 11, published in your issue of May 2, M. Maigret was wrongly represented as having formerly been French representative at Jidda, whereas his former post was at Baghdad.)

I understand that Mr. Bond, recently at Tangier, has been nominated to succeed Mr. Stonehewer Bird as Agent and Consul at Jidda, and will arrive shortly.

NEWS IN BRIEF.

A Bill providing for measures against Communist propaganda in Greece passed its first reading in the Greek Chamber on June 14.

The population of Palestine on March 31 was 557,649 Muslims, 149,554 Jews, 78,463 Christians, and 8,850 persons of other religions.

An Army Order states that a revised setting of the Egyptian National Anthem has now been published, and can be obtained from Messrs. Boosey and Co.

According to a message from Belgrade a Yugoslav cardinal will shortly be appointed, and negotiations to this end are already proceeding between the Government of Yugoslavia and the Vatican.

The French Government has awarded the decoration of Chevalier de la Legion d'Honneur to Fouad Bey Abaza, director of the Royal Agricultural Society of Egypt, who has done great service to the cause of agriculture in that country.

A child's toy, thousands of years old, representing monkeys in a chariot drawn by monkeys, has been discovered at Tel el-Almarna by the Egypt Exploration Society. A large number of tools, ornaments, weights, and other objects were also found.

The Mediterranean Fleet will leave Malta on June 26 for their summer cruise, which will comprise the usual visit to the Eastern Mediterranean Basin. The ships will make calls at many ports in the Aegean.

The death at the age of 120 of a Shaikh, who leaves behind him four wives and over 100 sons, daughters, and grandchildren, is reported in a Mosul newspaper. His youngest son, it is alleged, is only ten years old.

There has recently been heavy rain in the Yaman and the River Bana has been in flood in the Fadli Sultanate of Shukra, in the Aden Protectorate. Floods are also reported from the Abdali Sultanate of Lahej.

The Cromer Greek Prize—an annual prize (value £40) founded in the British Academy by the late Lord Cromer for an essay on a Greek subject—has been awarded to Mr. T. B. L. Webster, Lecturer at Christ Church, Oxford, for an essay on "Greek Sculpture of the Persian War Period."

By the end of last week subscriptions towards the memorial to Rupert Brooke in the isle of Syros had exceeded 25,000 drachmæ. Sir P. Loraine, the British Minister, accompanied his donation of 5,000 drachmæ with a letter, in which he said: "Something of the soul of ancient Athens was born in the spirit of Brooke, and some kindly fate decreed that near his spiritual home should come to its last rest his mortal clay."

As a result of orders received from Belgrade, M. Pernar and three of the lawyers who were arrested at Zagreb for having favoured the insertion of a political subject in a telegram of greeting to King Alexander, were released on June 11. The fifth lawyer arrested at the same time, M. Zanitch, a former Deputy, remained in prison. All five are to be brought for trial under the Defence of the Realm Act.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

CALCUTTA LETTER:*(From Our Own Correspondent.)**Calcutta, May 30.***Life of the Assembly.**

In the ordinary course of events the Viceroy would have dissolved the Legislative Assembly about the end of September, but, "having regard to the position of public affairs," His Excellency does not, as at present advised, propose to take that action. "There are evident disadvantages," says the *Gazette*, "in holding the elections for the Assembly on the eve of the publication of the report of the Statutory Commission. Although it is possible that some, at least, of the reports of the Provincial Committees may have been published earlier, publication of the report of the Statutory Commission and of the Indian Central Committee, and possibly of some of the Provincial Committees, can hardly be expected before the close of the present year or the beginning of next year." The Governor-General has decided at the same time to come to no final decision at present on the actual period of the extension of the life of the Assembly.

Better To Do Nothing.

I was once told by a Government official whose opinion was that he had struck a particularly bad "patch" of the Simla secretariat, that he proposed to send up no proposals for betterment or change of any kind until time should bring a new Secretary. It meant, he found, writing very many fewer letters, and a holiday from seeing his proposals turned down. If he should feel under a compelling necessity to write a letter suggesting that something should be done, well and good; but up to the moment of his taking me into his confidence he had felt no such necessity. The position was inglorious, but it was safe.

One cannot but think that the Viceroy, "having regard to the position of public affairs," would do well to take a leaf out of that man's book, and do nothing that he should not feel under a compelling necessity to do. In the present temper of the politicians, and in this country of unmeasured language, even this act of prolonging for no great length of time the life of an Assembly of no great value as a deliberative body—a body, too, that would be succeeded, were there to be a general election soon, by another body of no greater value—even that will be denounced as a tyrannical act. The language will not be quite as strong as if His Excellency had asked Pandits Motilal Nehru and Madan Mohan Malaviya to tiffin, and had cut both their throats with his fish-knife: it will not be so very much weaker.

Presenting Political Capital.

By deciding not to dissolve the Assembly in the ordinary course the Government have given their opponents that amount of political capital which is made by something to cry about; something, no matter what; and the argument given in the *Gazette* in defence of the decision is just as little telling, just as feeble, as well could be. In the autumn, it says in other words, there will be published many forecasts of what the findings of the Commission are going to be, and many of these forecasts will have little or no foundation. This would be an embarrassment to candidates and electors. So reads the *Gazette*; the fact is that, Indians being Indians, there would not be a candidate nor an elector whom the foundationless forecasts would embarrass in the very slightest degree. The Governor-General has been very badly advised, and there is apparently no one about him who can put an argument well for him. One is reminded of the saying of a man, the other day at a banquet of farewell to some Englishman leaving the Punjab for home. The saying was, "Send better men"—i.e., from England to India. One reads of Lord Palmerston and Lord Haldane having been offered the Viceroyalty of India, and of having declined the doubtful compliment. As good men as they, in the future, must not consider the compliment doubtful. India will fall all to pieces if better men are not sent.

Congressmen and Office.

The Tamil Nadu Political Conference, with its resolution in favour of the acceptance of office by Congressmen being treated as at least a thing to consider, whenever the likelihood arises of their being offered office, has had a very bad Press indeed. Immediately the news was known the Congressmen in Bengal met to disown sympathy with the policy. The next news was that Mr. Srinivasa Iyengar, the man most responsible for the resolution of the Tamil Nadu Conference, had placed himself in the position in which he must go back upon what he had done, or resign some Presidentship. The Presidentship concerned is, I think, that of the Independence League: when it is impossible to take a political body very seriously, it becomes difficult to remember what it calls itself. Let us say, then, that it was the Presidentship of the Independence League that Mr. Iyengar must resign: he has done so. The last news is that the All-India Congress Committee, in the intervals of its indignation over the Viceroy's last act, and between attempts to follow Mr. Gandhi's lead—I will return to that—has declared against such worship in the House of Rimmon as the acceptance of office would be in their eyes.

Mr. Gandhi's Lead.

Mr. Gandhi's lead is a strange thing. What would you think if Mr. Baldwin were to propose that the Yorkshire contingent of the Primrose League must amount to not less than this or that percentage of the population, and that at least half the towns and villages in Yorkshire must be represented; and so with Somersetshire, Sussex, Surrey, etc.? Well, Mr. Gandhi proposes the same thing for the Congress; the Bengal contingent must be at least, I think it was three per cent. of the population, representing at least fifty per cent. of the towns and villages, and so with Madras, Bombay, Bihar, etc. The All-India Congress Committee has settled that it shall be so. The Committee has also passed a self-denying ordinance.

IRAQ RAILWAYS.**BASRA-BAGHDAD-KHANAQIN-KIRKUK-BAIJI (FOR MOSUL)**

Branches to NASIRIYA and KERBALA.

Proceedings are to be taken against those officials or members who put Congress money in their own pockets. Not rigorously, one gathers; there is no talk of gaol for the miscreants. They are only to be deprived of membership, or may not rejoin until after an interval of two years. A man might well think that money was cheaply come by at the expense merely of temporary non-eligibility for the Indian National Congress. In fact, there are some who would not be members if you offered to pay them.

Miscellaneous.

It is reported that a majority of the Bombay Provincial Committee of the Statutory Commission shows in its report a majority against full autonomy for the Province, six of the members being against the transfer of law and order. Those six are also for a continuance of communal electorates, and against the separation of Sind from Bombay. The Bihar Government is still found saying a blessing over dyarchy. "By its steady and continued progress," says a Government review of the administration of the Province during 1927-1928, "in working the Reformed Constitution the Province has furnished an example which might have been followed with advantage by other Provinces." The All-India States' People's Conference has been in session, but as I have so far failed to ascertain what backing in the Indian States the promoters of this conference have, and consequently what importance to attach to its proceedings (I suspect the backing is very small), I will pass on. There is wonderful reading in the last Madras Government review of the irrigation of the Province, especially on the subject of the Cauvery-Mettur project, the revised estimate of the cost of which is Rs.737 lakhs. The next Indian delegation to the League of Nations is to be composed of Sir M. Habibullah, the Maharaja of Kapurthala and Sir Ewart Graves, and one comment that I have read is that no better selection could have been made within the Government's field of choice. It must be a terribly limited one. I should not call one of those three strong enough to bear such responsibility.

THE ASSAM DINNER.

More than 400 East India merchants and tea planters attended the annual Assam Dinner at the Connaught Rooms on June 4. The chair was taken by Mr. Richard K. Magor, a former Chairman of the Indian Tea Association London, who announced that the following message of loyal greeting had been sent to His Majesty the King-Emperor: "On the occasion of Your Majesty's birthday the Assam Tea Planters, at their annual dinner, respectfully offer their loyal and sincere best wishes to Your Most Gracious Majesty and earnestly pray for Your Majesty's complete recovery," to which the King's Private Secretary had replied: "The message of good wishes contained in your telegram was much appreciated by the King, whose sincere thanks I am commanded to convey to you and all who joined in these congratulations."

Proposing the toast of "Our Guests," coupled with the name of Sir John Kerr, the Chairman said that it was just 20 years since he first took a leading part at the annual Assam dinner. "It was then the custom," he proceeded, "to invite some prominent planter or a member of the Indian Civil Service who had served in Assam, to preside at the dinner and propose the toast of 'Assam and its Industries,' the Chairman of the Indian Tea Association acting as chief host and giving the toast of 'Our Guests.' In that capacity in 1909 I sponsored Sir Charles Bayley, whom we had hoped to see here to-night, but, unfortunately, he has at the last moment been prevented by ill-health. The following year I had the privilege of supporting Colonel Dugald Lumsden, a name that recalls to many of us happy memories of a charming personality, who has gone down to posterity as the founder and leader of 'Lumsden Horse,' a regiment that so gallantly

upheld the best traditions of the planting community in the South African War."

After intimating that he proposed to depart from precedent and leave tea alone, Mr. Magor indulged in some interesting reminiscences of the early days in the tea gardens. Coupling the toast with the name of Sir John Kerr, he said that the guests were unfortunately too numerous to mention all individually by name. "We have the leaders of our kindred associations in Southern India and Ceylon, and also of the Brokers and Buyers' Associations. Besides their President, who is our official guest, I am glad to see among the company other representatives of our friends the buyers, whose world-wide activities have been an important factor in the enormous expansion of our industry. We all read with great satisfaction the announcement that our guest, Sir Alexander Murray, is one of the Members of the Royal Commission appointed to inquire into labour conditions in India. His great experience at labour conferences will make him a most useful member of this Commission, and we are to be congratulated on having such an able representative to look after our interests.

"We also have a number of past rulers of the Province of Assam, among them our old friend Sir Bampfylde Fuller, who was Lieutenant-Governor in the early days, when political India first showed symptoms of the growing pains of expansion, which have since developed into 'dyarchy' and 'Dominion status' and suchlike questions. It was a trying period and we all admired the way Sir Bampfylde tackled his difficulties. He has, I understand, recently renewed his acquaintance with Assam, where I have no doubt he found that his memory is still held in high esteem. If the present Governor, Sir Laurie Hammond, had been able, like the Viceroy, to take home leave this year, and be with us to-night, he would have received a hearty welcome. I have known him since the first day he landed in India, I can readily understand his popularity throughout Assam, and under his able administration the province should make steady progress. Progress can sometimes be too rapid, and, as an old friend, I cannot resist chaffing Sir Laurie about his recent effort to accelerate the delivery of the Calcutta mails. Although the dwellers in Olympus at Shillong benefit considerably by this improvement, I understand the toilers in the plains are actually worse off than before, and wish that no change had been made, but I daresay this will be remedied.

"We are fortunate in entertaining to-night Sir John Kerr, who became Governor in 1922, and was re-appointed in August, 1925, when his term of office expired. He then put in another two years before retiring in 1927. Sir John Kerr has a thorough knowledge of the province which he administered during the last six years of his service in India, and you will, I know, bear me out when I say how pleased we are to welcome him to-night."

Sir John Kerr briefly responded and the health of the Chairman was proposed by Sir Walter Willson.

Among those present were:—

A. H. Abbott, L. G. Abbot, H. Aitken, R. Anderson, H. A. Antrobus, R. Baker, C. St. A. Begg, the Hon. S. J. Best, Commander J. Bird, F. H. Brown, G. L. Bryning, R. A. H. Caldicott, J. S. Cargill, S. Wright.

THE BURMA DINNER.

Lord Reading presided at the annual Burma Dinner at the Hotel Cecil on June 6. He was supported by no less than three former Governors of the Province—Sir Harvey Adamson, Sir Reginald Craddock and Sir Harcourt Butler. In proposing the toast of prosperity to the Province, the Chairman said that it would not be fitting for one in his position to express any definite opinion upon the matter at this stage but there were some considerations connected with the movement for separation from India to which he might properly draw attention.

The first requisite for the continuance of that prosperity of Burma, which had been built up so largely by British enterprise and capital, was the maintenance of security from external aggression. There might seem no present danger of that kind, but they had to remember that in the East they could not always be certain of a continuance of absence of trouble. The defence of the thousand miles of coast line of Burma necessitated some arrangement with India, and that meant at present with the British Government. A second essential for the maintenance of prosperity was the due protection of life and property. Unfortunately, murder was a far too common crime in Burma, and that was one reason for carefully weighing any question of which the maintenance of law and order formed a part. The development of Burma depended very much on the credit of the Government of India, and if there was to be separation, the effect upon the credit of the province must be well thought out.

There were other sides to the question. The remission of the provincial contributions to central revenues had benefited Burma, as her original contribution was Rs.64 lakhs, but it was argued that she did not benefit to the same extent as other provinces, and that in subsequent adjustments regard should be paid to the large contributions she made to central revenues in the form of Customs duties on her petrol and her rice. These were matters which ought not to be forgotten, and he was confident that all sides of the question would be thought out before a decision was reached. India was a very large purchaser of Burma rice, and each year some 350,000 Indians went there to help to harvest the rice crop or for other industrial purposes. These and other questions relating to the

issue of separation must have the most careful consideration in the recognition that there was a great economic future for Burma, having regard to her resources in mineral, forest, and other wealth, and to the happy-hearted character of her people.

Mr. T. F. R. McDonnell, barrister, of Rangoon, responding to the toast, said that while he had held many briefs, and hoped to hold many more, he did not hold one for separation. The British non-officials in Burma were not fanatics on the subject, but they did claim that there should be a careful scientific inquiry into the whole question, conducted by men who had no direct personal interests to consider.

The toast of "The Chairman" was proposed by Sir Harcourt Butler and the presence of Mr. J. T. O. Barnard gave point to the former Governor's appreciative reference to the support he had received from Lord Reading in connexion with the successful expedition to the Triangle, which resulted in the abolition of slavery in that part of the province.

The company, which numbered over 200, included:—Sir Harcourt Butler, Sir Reginald Craddock, Sir Harvey Adamson, Sir Cyril Butler, Sir A. J. Anderson, Mr. J. T. O. Barnard, Sir Stanley Bois, Major F. B. Bibby, Sir Louis Dane, Sir Edward Duckworth, Mr. J. W. Darwood, Sir Godfrey Fell, Mr. A. Fairweather, Sir Edgar Holberton, Mr. A. L. Howard, Sir D'Arcy Lindsay, Sir James MacKenna, Brigadier-General E. F. Nelson, Sir Adam Ritchie, Sir George Shaw, Colonel H. Des Vœux, Colonel Sir H. S. Turnbull, Mr. W. T. Howison, Mr. T. F. R. McDonnell, Dr. A. D. Spence, Colonel Welbourne, and Mr. George O. Stiven (hon. sec.).

Mr. Wedgwood Benn, Secretary of State for India, has appointed Mr. D. T. Monteath, O.B.E., to be his Principal Private Secretary, and Mr. M. J. Clauson to be his Assistant Private Secretary.

The Viceroy on June 14 prorogued both the Indian Council of State and the Legislative Assembly. It is probable that they will be summoned to meet again in September.

Eighty-six Indian Scouts, the first of a contingent of 255, arrived at Paddington on June 14 from Bombay to attend the Boy Scouts' World Jamboree at Birkenhead.

The Marquess of Reading will preside at a meeting of the East India Association at the Caxton Hall on Monday, June 24, at 4.30, when Sir Clement Hindley, late Commissioner for Indian Railways, will lecture on "Indian Railway Developments."

Sir T. Vijayaraghava Acharya, a member of the Indian Public Services Commission, has been appointed Vice-President of the Agricultural Research Council of India, formed in accordance with the recommendations of the Linlithgow Commission.

The Government of India has appointed Sir Fazali Hussain, at present Revenue Member in the Government of the Punjab, to act for Sir Mohamed Habibullah, Education Member in the Viceroy's Executive Council, for the period while the latter is absent at this year's session of the League of Nations in Geneva.

At a meeting of the Nagpur branch of the Indian Railwaymen's Union a resolution was passed recommending the executive of the union to allow the Nagpur branch to resort to direct action on June 22 if its demands should be refused. It was further resolved that that day should be observed as a "protest day" all over the system of the Great Indian Peninsula Railway, and that if this had no effect, direct action should be resorted to throughout the system.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE PRIME MINISTER AND MINORITIES.

To the Editor of THE NEAR EAST AND INDIA.

SIR,—If one were asked to express an opinion regarding the probable effect of the Labour victory upon the European political situation, the article of the Prime Minister in the *Sunday Times* of June 16 provides a means of giving an immediate answer. Without waiting for the Council of the League of Nations to recover from the shock of Sir Austen Chamberlain's absence from its deliberations, Mr. MacDonald has fired a shot which will be heard around the world.

For nearly five years the European public has been treated to diplomatic sedatives compounded by those whose interest it is to maintain the territorial *status quo* at any cost. Mr. MacDonald has put an end to this by the wholesome indiscretion of his statements, and for this we owe him heartfelt thanks. He has made it quite plain to Minority States and to certain Great Powers that their conduct toward national and religious minorities within their frontiers is a danger to European peace.

Unfortunately in his desire to be objective, the Prime Minister has defeated his own ends. His censure of France and Italy at the same time has robbed him of the possibility of securing either of these Powers to assist him in carrying out his worthy intentions. Had he tactfully concealed the persecution, by the Italian Government, of the Austrians in the Tirol and of the South-Slavs in Istria, Italy would have been only too willing to join with him in reprimanding the Serbs for their oppression of Croats, Magyars and Macedonians. In like manner, if no mention had been made of Alsace, the French would, no doubt, be ready to lend their aid in defence of minorities situated in States outside the French system of alliances. As matters now stand, Mr. MacDonald will have the hearty good wishes of Austria, Bulgaria, Croatia, and Hungary, together with the moral support of Germany, which at the present moment carries little weight in comparison with that of France or Italy in the counsels of the League.

No one disputes the fact that the Treaties of Peace were concluded upon what is now seen to be inadequate information. It is also regrettably true that emotional and other considerations were allowed to affect the judgment of those responsible for the territorial redistribution of Europe; but few are aware to what extent the principle of nationality was violated in South-Eastern Europe for the sake of securing to the victors some strategic or economic advantage.

The principal Allied Powers, conscious of the new problems they had created by faulty delimitation of frontiers, required of certain States who had profited by the Peace Treaties that they guarantee the freedom and the rights of minorities within their new boundaries. The Great Powers were relieved of the necessity of providing such guarantees upon the incredibly naive assumption that they could be trusted to deal justly with their newly-acquired citizens. The guarantees given by the Minority States were embodied in Treaties which are in every sense contracts, for which transfers of land, made, were the consideration.

Mr. MacDonald intimates, and a host of other observers state, that the minorities have not received the freedom and protection to which they are entitled. In the case of the Great Powers he can only express his regret that the powers given to the League, to observe the obligations of States to minorities, did not apply to States like Italy. As for the minorities nominally protected by Treaties, he suggests that the technical difficulties of presenting petitions should be removed and a permanent Minorities Commission established with the diplomacy of hush removed from its work.

In order not unduly to disturb the more sensitive of our present and former Allies, the Prime Minister observes that "no political genius can provide frontiers for European States which will follow with fidelity racial divisions." This is no doubt true; but it is not the whole truth. There are in several of the Successor States large minorities so placed geographically that they are contiguous to their former fatherlands. The topography on both sides of the frontier in the areas inhabited by these minorities presents no economic nor other natural obstacles to their return, and certainly the sentiment of the people themselves, if put to the test of a free plebiscite, would favour immediate transfer to their pre-War allegiance. No political genius is required for the revision of such frontiers, and until they are revised, no matter what protection is afforded to minorities by the League, the populations will be discontented, and their free kinsmen will fight for the return of what they justly regard as separated parts of their own national inheritance.

For those minorities so placed as to be entirely enclosed within, or intimately mixed with, large masses of citizens of the dominant race there remains the protection of the League, not for the minority as a juridical personality but for its individual members. In other words, the individual must be regarded as possessing certain inalienable rights, which in case of necessity must be defended for him against his own State. Such a condition would make the citizen a protégé of international law, and if the League of Nations is to have any real significance, action in this sense must be speedily taken.

In urging the rapid solution of minority problems Mr. MacDonald was no doubt influenced by other considerations than those of absolute justice. He, and all other observers, cannot fail to have remarked that Europe, instead of consolidating to resist the pressure from East and West, is actually dividing into two hostile camps; the one occupied by those Powers who wish to change the territorial clauses of the Peace Treaties, the other by those who desire to keep matters as they now are. Those in the first camp base their claims for revision upon the principle of self-determination, supported by ten years' bitter experience of failure to obtain justice by the international machinery provided. The Powers who stand for maintenance of the present conditions find their strongest argument in fear. They urge that rectification of frontiers could not be achieved by free negotiation between the parties concerned, and that any rectification by the direct or indirect action of the League of Nations would precipitate another war.

With all our trust in, and hope for, the betterment of international relations through the League, it must not be forgotten that the Peace Treaties form a juridical system arising out of the clash of greater and lesser forces. Whilst the harmony and preponderance of the one group of forces is maintained, the Treaties will remain substantially as they are. Tactful concessions in the direction of minor revision of frontiers, and effective protection of national minorities, if granted at once, even at the expense of coercing some of the Successor States, may relieve the growing tension and give a new orientation to some of the States now dissatisfied.

Another decade of indecisive bickering such as the one through which we have just passed will see a strong Central European *bloc* led by Germany using means more effective than protests to secure justice long denied.—I am, etc., C. D. BOOTH.

[Since this letter was written it has been stated that Mr. MacDonald's letter was written before he took office as Prime Minister.—ED.]

Reports received at Cairo at the beginning of this week indicated that the cotton pest is spreading, and large areas in Upper and Lower Egypt are stated to be affected.

The Dockers' Union has rejected the Greek Government's proposals for a settlement of the strike at the Piræus, and has decided to call a general strike of dockers all over Greece.

Book Reviews

UR OF THE CHALDEES.

"**THE SUMERIANS.**" By C. Leonard Woolley. Illustrated. (Oxford University Press. 6s.)

"**THE EXCAVATIONS AT UR AND THE HEBREW RECORDS.**" By C. Leonard Woolley (Arthur Davis Memorial Lecture). (London: George Allen and Unwin Ltd., 2s. Cloth, and 1s. Paper).

The advance of recent years in our knowledge of the early history of the peoples of the world and the rapid recession of the horizon which bounds our vision of the development of civilisation are very strikingly illustrated by these books. The very name of Sumerians was utterly unknown to the youth of all of us except of those who are still in their boyhood or their best years, and yet, here we have before us a popular history of this nation, based on documents, most of which have been unearthed quite recently. It is true that our data do not yet admit of more than a sketch, but the sketch has perfectly clear lines. Much will doubtless be done, and soon, to fill these in, but Mr. Woolley was wise in presenting us now with a summary of what is already known of this very remarkable nation to which, through the Hebrews, we owe so much of our own mental substance. We know not whence this people came. Its earliest known date at Ur is estimated to be about B.C. 3500, and what has been found belonging to that date points to a civilisation which must have taken centuries to attain its then pitch of excellence. About fifteen centuries later, the Sumerians had definitely become subjected to the Semitic races which had long disputed the sovereignty with them.

In the larger book Mr. Woolley succeeds in showing us what Sumerian civilisation was, both as regards the State and the people. That we owe this knowledge very largely to his own discoveries makes the book all the more interesting. It is quite impossible to summarise the contents of the volume in the space available. We can, however, very confidently recommend its study to our readers. After the first dazed feeling of a glimpse into a period four or five milleniums ago, the student finds that he has here been given a really vivid conception of the main facts of this very imposing civilisation, the secret of which has only now been dug out of the sands where it had slept so long, and one reader at least found a difficulty in putting the book down.

The smaller book is the text of a popular lecture bringing out the way in which Hebrew ideas derived from Sumeria and describing Ur as it existed in the time of Abraham. In its few pages it contains much valuable and interesting information.

C. S-W.

DIPLOMATIC BACK STAIRS.

"**THE UNION OF MOLDAVIA AND WALLACHIA, 1859.**" By W.C. East (Cambridge University Press, Price 7s. 6d.)

The unwary reader who had not looked at the sub-title of this entertaining book might hope that he was to be given the facts which led to the peoples of the two Danubian Principalities freeing themselves from the yoke of Turkey and laying the foundations of the present Roumania. But the author specially cautions us on the title-page that he is writing of "an episode in diplomatic history," and warns us in his preface that he has "not been specially concerned with the question as one of domestic or national history." As a matter of fact, that aspect of the question is not touched on at all. Mr. East shows us the two Principalities as the football of the Powers. And, as a football is merely a means to an end, so it was in this case. There was one particular exception, for Napoleon III. did consider the football's feelings to some extent. It was fortunate that this sympathy existed and that it prolonged the game until the football itself took command. But it is a sordid story and does credit to none of the sides. Mr. East, in giving us the history of the game, carries out his task with much skill and ability,

so that, as we have already said, his book is thoroughly entertaining and instructive. He has spared no pains to get at the documents necessary to elucidate the narrative, and has thrown a clear spot-light on the wires which control the puppet representatives at the Congress. He has, we almost think, said the last word on a dirty business, the happy ending to which was due to causes entirely unconnected with the diplomatists concerned in it. May we hope that we have been reading a history purely of the past, and that the future may be relied on not to present us with anything even dimly resembling it?

C. S-W.

MUSCAT AND ZANZIBAR.

A book that is of exceptional interest, in view of the present visit to England of the Sultan of Zanzibar, has just been published by Messrs. Alexander Ouseley (price 16s. net). It is entitled "Said bin Sultan," who linked together Muscat and Zanzibar in joint rule, and has been written by this eminent Arab ruler's grandson, Mr. Rudolph Said-Ruete. We hope shortly to publish an authoritative review of this timely book.

NEW GREEK CABINET.

M. Venizelos and the other members of his reconstructed Greek Cabinet, his sixth, were sworn in on June 7. The new Cabinet is as follows:—

M. Venizelos	...	...	Prime Minister.
M. Pericles Argyropoulos	...	...	Foreign Affairs.
M. George Maris	...	...	Finance.
Senator Gonatas	...	...	Communications.
M. K. Zavitzianos	...	...	Interior.
Senator Dingas	...	...	Justice.
M. Themistocles Sophoulis	...	...	War.
M. D. Botzaris	...	...	Marine.
Senator K. Spyrides	...	...	Agriculture.
M. Gondikas	...	...	Education.
M. P. Vourloumis	...	...	National Economy.
M. Emmanouelides	...	...	Public Welfare.
M. I. Kanaros	...	...	Governor-General of Macedonia.

UNDER-SECRETARIES OF STATE.

M. Papadatos	...	...	Prime Minister's Department.
M. Deliyannis	...	...	Finance.
Dr. Chrestomanos	...	...	Health.
M. B. Karapanagiotis	...	...	Communications.
M. Manettis	...	...	War.

M. Argyropoulos, who resumes the office which he held in the Kondylis Cabinet from August to November, 1926, has been directed to report on the new Turkish proposal, and is awaiting the return of the Greek Minister, M. Pappas, from Angora.

THE ARABIANS.

On June 11, Mr. Eldon Rutter, author of "The Holy Cities of Arabia," lectured to the Royal Asiatic Society upon "The Arabians." Lord Zetland, who was in the Chair, spoke of the lecturer's great achievement in living for a year in Mecca and Madina.

The lecturer defined his subject, the Arabians, as those living in the Arabian peninsula south of the 30th parallel of latitude, plus those of the Syrian Desert as far north as Palmyra, to include, that is, the triangle Palmyra, Petra and the Shatt-al-Arab.

Arabia, which was nearly as large as India, was inhabited as a whole by a single race of men. It contained no perennial river, though there were large watercourses—the most considerable of which were Wadi Armak, rising to the north of Madina and extending to the Persian Gulf near Kuwait, Wadi-l-Hamdh, rising near Taif and extending to the Red Sea near Wajh, and Wadi Hadhramaut, rising near Sanaa and reaching the Gulf of Aden about 600 miles up the southern coast from Shaikh Said.

Mr. Rutter then dealt with the geological formation of Arabia, giving a vivid picture of the arid world in which the Arabians lived. This people he divided into two classes: *Ahl al Hadhr*, the peasants and townsmen, and the *Badawin*, sometimes called *Ahl al Wabar*, people of the hair-cloth tents. The Arabian race was divided into two great families, the Bani Kahtan, in the Yaman and Hadhramaut, and the Bani Adnan, in the Hijaz and Najd. Broadly speaking, the tribes of the Kahtan were *hadhr*, or urban, and the tribes of Adnan were *Badu*. The Yaman and Hadhramaut tribes did not raid in peace time; the Hijaz and Najd tribes were constantly practising the *ghazu*, or raid.

Now, where as in the Yaman and Hadhramaut, the people lived in houses, the population tended to increase. Part of the population, therefore, was gradually pushed northward in Asir and Najran. Here they found themselves on a less fertile soil, and, their chief pursuit being no longer agriculture, they took to stock-raising. But, being pushed still further by the emigrating population behind them, they came to even more sterile ground, and had constantly to move from place to place to get enough pasture to keep their flocks alive. Gradually, in their inexorable pushing northwards, they came into contact with the great *Badawin* tribes. Finally, several hundred years after their leaving the Yaman, they became absorbed in the agricultural population of the border countries,

Syria and Mesopotamia. Originally peasants, then wandering shepherds, they at last became shepherds again. As examples of this movement, Mr. Rutter instanced the federation of tribes known as the Anaiza, now in the Syrian Desert, who 250 years ago inhabited Central and Eastern Najd, including the Qasim and Khaibar. To-day, King Ibn Saoud claimed to exact tribute from the Ruwalla and other Anaiza tribes on the ground that they were Najd tribes; and Ibn Shaalan, head of the Ruwalla, was himself a kinsman of the House of Saoud. The Adnan tribes, too, showed a slight tendency to move northward: a small section of the Harb had migrated from the Hijaz to Mount Lebanon.

Of the great Badawin tribes in the northern half of the Peninsula, the lecturer mentioned the Harb, the Anaiza, the Ataiba, and the Mutair. The tribes of the Badawin were enlarged families, tracing their descent from a common ancestor.

The most famous Arabian of to-day, however, King Ibn Saoud, was not the shaikh of a great Badawin tribe. The family of Saoud were descendants of one Mania, an elder in the town of Anaiza. Mr. Rutter thought it improbable that a true Badawin chief would have tried to induce Badawin to settle on the land—the interesting policy of Ibn Saoud. The Wahhabi King's great measure of success proved the truth of Professor Hogarth's observation that "Theocracy, not the pastoral patriarchy, is the durable and dominant form of Semitic government." For this great reform was started by insisting that Allah was the sole sovereign, and that the laws of the realm were the divine ordinances contained in the Quran. In Ibn Saoud was a *hadhari*, or peasant, who, by stating clearly that his system of rule was theocratic, was able to rise to overlordship of nearly the whole of the Badawin nation, and, in fact, was able to make many of them become peasants.

The Arabians cared nothing for physical comfort, and their chiefs lived as simply as the poorest among them. As an example of this, the lecturer told the well-known story of how the Caliph Omar went out, in the year 637 A.D., from Madina to meet the messenger of good tidings from Iraq, Omar being dressed in such old and patched clothes that the messenger did not recognise the Ruler of Arabia, Syria, Iraq, and Egypt.

The Badawin's daily life had altered little since the days of Muhammad. About 16 years ago, however, Ibn Saoud founded an agricultural colony at Artawiya, his motives being three-fold: first, to attach a body of fighting men to his service, secondly, to put a stop to the time-honoured practice of the inter-tribal raid, and thirdly, to bring prosperity to his country. The inducement he held out was—pointing the way to Paradise. Learned men were sent to Artawiya and other settlements subsequently founded to show the free sons of the desert that it was no shame to tie oneself to the soil and dig it. These learned men told the Badawin that, just as the armies of Kahid ibn al Wahid and Amr ibn al Aas were under disciplined control, so must the followers of Ibn Saoud be. And in time, by campaigns against Ibn ar-Rashid, of Hayil, and the Sharif Husain, they gained the conviction that their lives must be pleasing in the sight of Allah. Most people would wish Abdul Aziz success in his efforts to increase the agriculture of Arabia.

Mr. Rutter concluded his lecture with some lantern slides of Mecca and Madina.

Afterwards, Professor Margoliouth asked the lecturer whether he could confirm the statement made by Gervaise Courtellemont that manuscripts in Himyaric script were to be found in Mecca; but Mr. Rutter had seen no such works.

The eighth Annual Dinner of the Salonika Army and Black Sea Forces will be held on June 21, at the Hotel Cecil. Field-Marshal Sir George Milne, G.C.B., G.C.M.G., D.S.O., will preside. Fleet Orders state that officers of the Royal Navy who served in these theatres of war will be specially welcome at the dinner. Officers wishing to attend should apply to Major Elliot Bell, 10, John Street, Adelphi, W.C.2.

PERSONAL AND GENERAL

TO-DAY

June 20, 1929 (New Style).

June 7, 1929 (Old Style).

Muharram 12, 1348 A.H., of the Muslim Calendar.

Sivan 12, 5689, of the Jewish Calendar.

Sir Samuel and Lady Wilson will return to London on June 29 from East Africa.

Lady (Ian) Malcolm will return to London during the first week in July from Buenos Aires.

Lady Eckstein and Miss Herminie Eckstein have returned to 18, Park Lane from Ceylon and the Continent.

Lord and Lady Meston left 38, Parkside, Knightsbridge, on June 16 for Hurst, Cookham Dene.

The High Commissioner for India and Lady Chatterjee returned to London on June 17 from the Continent.

Major-General Sir Neill Malcolm will arrive at 67, Cadogan Gardens from North Borneo on June 22.

Prince Youssef Kemal of Egypt has arrived with his suite at the Hotel Victoria, where he will stay for about a fortnight.

H.M. King Fuad has conferred the Order of the Nile (third class) on Mr. Leo Weinthal, C.B.E., F.R.G.S., Managing Editor of the *African World*.

The George Macmillan studentship for 1929-30 of the British School of Archæology in Athens has been awarded to J. D. S. Pendlebury, sometime scholar of Pembroke College, Cambridge.

The Egyptian Prime Minister, Mohamed Mahmoud Pasha, left Alexandria on June 13 and arrived in London on June 18. He will receive the Degree of D.C.L. conferred on him by Oxford University on June 26.

Field-Marshal Lord and Lady Plumer will receive the guests at the Yorkshire Ball, which will be held at Grosvenor House on Thursday, July 4, in aid of the funds of the Society of Yorkshiremen in London.

King Fuad was received on June 12 by the Chief Burgomaster of Berlin at the Rathaus, where he signed the Golden Book of the city and received a presentation. His Majesty gave £1,000 to the before of Berlin before his departure.

The Crown Prince of Sweden has been elected by the Council of the Hellenic Society to a vacancy in the list of honorary members, in recognition of the services he has rendered to classical archæology.

The Sultan of Zanzibar, accompanied by his son, Seyyid Abdullah, and Shaikh Seif Bin Suleiman, and members of his Court, on June 14 visited Manchester, where he made a tour of the Ship Canal.

Under the auspices of the British Maha Bodhi Society a public lecture on "The Spirit of Buddhism" is to be given by Sir Hari Singh Gour, D.C.L., D. Litt., LL.D., M.L.A. (India), at the Essex Hall, Essex Street, Strand, London, on Thursday, June 27, at 8 p.m.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.

Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

Sesostris Sidarouss Bey gave a luncheon on June 12 at Claridge's. His guests were:—Ibrahim Fahmy Bey, Egyptian Minister for Public Works, Viscount Inchcape, Colonel and Mrs. H. Cooper, Mr. J. E. Binnie, Mr. H. E. Gruner, Sir Murdoch MacDonald, Mr. and Mrs. Alfred Bosson, Sir Percy Tottenham, Abdel Magid Omar Bey, Mr. Fouad Mawardi, A. M. Hamza Bey, the Egyptian Consul and Mme. Assal Bey, and Mr. R. A. Radi.

Lady (Edgar) Bonham-Carter was At Home at 17, Radnor Place on June 12 to members of the Near and Middle East Association. Mr. Robert Stokes gave an address on "Current Imperial Ideals and their Application in the Middle East." Sir Henry Burt presided, and among others present were Sesostris Sidarouss Bey, Lord and Lady Louth, Lord and Lady Strathspey and the Hon. Joan Grant, Read-Admiral Sir Harry and Lady Stileman, Major-General Sir John and Lady Moore, Lady Eckstein and Miss Eckstein, Sir Montague Barlow, Sir William Clark, Sir Henry Imbert-Terry, Sir James and Lady Berry, Sir William Willcocks, Lady Tighe, Sir Joseph Numan, the Hon. Mrs. Spencer Graves, the Rev. Chancellor Ponsonby, Captain and Mrs. E. N. Bennett, Major Arthur Bentinck, Colonel and Mrs. St. John Cooke, Mrs. L. Cobham, Dr. Ernest Griffin, Major Hamer, Mrs. Richard Seligman, Miss Harley Bacon, and Miss Wells Thorpe.

M. Henri Gregoire, former Dean of the Faculty of Letters at the Egyptian University, has been elected for a period of three years Dean of the Faculty of Letters at Brussels University.

The French Government has conferred the grade of officer of the Legion of Honour on Youssef Bey Risgalla, Assistant General Manager of the Egyptian State Railways Administration.

The Board of Trustees of the American University at Cairo have appointed Mr. Russell Galt, M.A., as Dean of the College of Arts and Sciences.

The French Geographical Society has conferred its Gold Medal on H.H. Prince Kamel ed-Din Hussein, in recognition of the scientific work accomplished by his Highness during his excursions in the Eastern Desert.

According to a Paris message Milan Djoritch, the Serbian "gentleman burglar," was sentenced on June 13 to ten years' solitary confinement and ten years' local banishment. Djoritch chose his victims from among the best-known people in society. Among them were Prince Murat and Mrs. Vanderbilt.

Diplomatic representatives of all States maintaining such relations with the Holy See attended the pontifical High Mass sung in honour of the reconciliation between the Quirinal and the Vatican on June 16 in Constantinople. Mgr. Angelo Rotta, Titular Archbishop of Thebes and Apostolic Delegate in Turkey, officiated.

SIWA.

BY PAUL S. McELROY.

[Our Cairo Correspondent announced in his letter in our issue last week that Lord Lloyd was paying a visit to Siwa.—Ed.]

Siwa—an oasis 200 miles directly west of Cairo and 200 south of the Mediterranean coast—is one of the few places to-day that has been unmolested by tourists. Before the War the two Muhammadan sects were so hostile that even few Muslims dared to venture. Even had the sects been hospitable, but few would have cared to take a seven-day camel trek merely for the love of trekking. Nowadays it is possible to make the desert journey by car from Cairo in three days; but even such a

A Primitive Village, living in a primitive way.

trip would appeal only to the adventurous and wealthy traveller, to one who could afford both time and money to prolong his otherwise hurried stay in Egypt. Now that Siwa has the unique distinction of being unaffected by tourists, it is for that very reason becoming popular. Before the War only twelve Europeans had visited the oasis. (It was my privilege to be among the first sixty Europeans to visit the place, and in the second American party).

It is strange that a spot so inaccessible should have been such an important centre in the past. It was ever a haven for weary traders who courageously came down from the Sudan across that hot and lonely desert. At one time Siwa was the seat of the oracle of Jupiter Ammon; Alexander the Great made a journey to consult the oracle, who affirmed that he was a direct descendant of Jupiter. Lysander, Napoleon, and other men of renown have either visited or sent expeditions to this famous place. Formerly tons of salt were sent to Persia for a religious ceremony, Siwa's salt being of the best quality then obtainable.

The oasis itself is a huge depression 70 feet below sea-level, about 35 miles long and 6 miles wide. The 5,000 inhabitants spend most of their spare time watching the date and the olive trees grow. Here in the midst of this Garden of Eden is a city without sidewalks, electric lights, automobiles, or street cars, not even a horse is to be seen; the houses have no glass windows, nor running water, no chairs. It is a primitive village living in a primitive way. Unlike any other town, the houses, built entirely of mud bricks supported by palm logs, are built one on top of the other to the dangerous height of 200 feet. A recent earthquake so damaged these decadent dwellings that the Government has had to condemn them, and the occupants of the Acropolis have been obliged to seek refuge elsewhere. Unfortunately the natives are wrecking the few remaining walls in order to salvage the palm log beams. In a short time only a crumbled mass of dried mud will be found to tell the story. We were there before much of the old town had been demolished; a few of the people still clung to the old homesteads, and one winds his way up among these "stacked up hovels"

through dark, narrow lanes. The doors to these abodes are about half the height of man, and are locked with a wooden stick; they can be opened only by fitting or matching each with a stick with corresponding pegs. Suspended on a protruding palm rafter above many of the doors hangs a talisman of some kind; one sees all sorts of curious things used to drive away evil spirits and misfortune: horns, skulls, feathers, bones, rags, and what not. In Siwa the rich do not build magnificent mansions; but rich and poor live in similar dwellings; in fact a stranger could not tell the home of the richest inhabitant from that of one of the poorest. They all live in mud-brick houses. It is, however, the privilege of the élite (i.e., the shaikhs—not the "movie" type) to daub some whitewash on their walls.

Siwa produces some of the finest dates found anywhere; each man has his little date and olive orchard fenced off with a wall made of mud and palm branches. The inhabitants devote most of their time to the arduous task of watching and waiting for the dates to grow. A few have the less pleasant task of pressing the dates and olives. The simplest way to press the dates is to tramp on them with bare feet; such a "gooey" mess does not look appetizing, but having eaten some pressed dates before seeing the process, I can vouch for the fact that the process does not affect the taste. The olive oil presses are likewise simple in construction and operation. One often sees a palm log press operated by partially and even totally blind men.

The two Muhammadan tribes each have their own date market as well as their own section of the town. The markets are similar and the prices the same in both. The date market is not a store with the goods nicely packed in boxes behind the counter, but consists rather of several acres where the dates and olives are spread out to dry. When dry they are piled up ready for sale. A customer is allowed to take as many as he can eat on the premises. Usually there is also another kind of market—the bazaar. Here about six merchants spread out their wares on the ground before them; the natives come daily and look over the stock, but seldom do they buy. These merchants have such things as razor blades (for which the residents probably have no razor), tin cups (and everyone in Siwa drinks from the water jar), buttons (no one wears buttons on his garments there), and stockings (and every one goes bare foot). Obviously these merchants do not have a quick turnover; I suppose the chief attraction for these articles lies in their novelty rather than their use. On

The Date Market is not a Store.

sale also are some beautiful baskets made by the Siwan women. Some of these are woven so firmly and tightly that they will hold water.

The amusement craze has not yet reached Siwa; the people are not yet reduced to that sad condition in which they must be entertained. On the other hand, they are in a state equally pathetic, because they cannot entertain themselves. Their idea of amusement is to squat on the ground and wait for bedtime to come, in order to get rested for the next day's irksome leisure. Despite the

apparent dullness of the place, the average visitor can have an enjoyable time swimming, exploring the desert, and playing games. A number of pools, about 20 yards in diameter, are to be found in the oasis. The water in all these springs is extremely clear, except on washing day. The water in one is actually lukewarm; another has an outflow of 1,200 gallons a minute. It is of interest to wander over the sand dunes immediately south of Siwa. These dunes stretch for 90 uncharted miles into the Sahara. Not until one tramps across those ever-changing hills of sand, is the charm of the desert fully appreciated.

During Bairam the Siwans have a great celebration. The hostile sects exchange greetings; the Sudanese dance; and the men gather early in the morning to pray. At this prayer service the shaikhs don their gayest attire; the lower class all wear a special white outfit. The children are adorned with all the family jewellery, the girls wearing a large silver necklace from which hangs a pendant of solid silver. These are called virginity rings and are worn by the girls before marriage; usually they are removed between the ages of 12-14. The little girls have very fancy coiffures. The hair is well oiled and braided; then the head is shaved, leaving tufts of hair scattered about the head. The women, though so heavily veiled that one could not possibly see their faces, are very shy. They will even run to the other side of the street to avoid being seen by men, especially strangers. One would infer that these people were extremely moral; as a matter of fact they are not immoral, they simply do not have any morals.

To the social worker, Siwa is virgin field. Much could be done to bring relief to these indolent, degenerate people; medical clinics, education, playgrounds might be introduced. But the big question is whether such a degenerate people are worthy of such an investment of time and money, when more promising fields are eager for help. Unquestionably the happiness of these people would be temporarily improved, if the children were taught how to play, how to read, how to write, if the adults were taught certain simple rules of health and sanitation, if the thought life were stimulated. But it seems as though one would have to keep everlastingly at it, for it is doubtful whether these people would ever reach a stage when they could stand on their own feet; they would probably never get beyond the parasitic stage. Hopeless as these people seem, it makes one wonder just where missions should draw the line.

To the geologist, Siwa is a fertile field. The oasis—a rare formation in itself—is filled with valuable and interesting peculiarities. Buttes expose strata after strata of various ages. Seldom are deposits so open for study. To the archæologist, Siwa is a new field. Evidences of man's existence can be traced here back to prehistoric time; from crude flint tools to the huge temple at Aghourmi can be found a series of man-made things. Temples long since deserted have been left unearthened and untouched for centuries. It is quite possible that valuable contributions will be made when these are first exhumed. Many Roman remains are also to be found about the oasis.

Siwa is, indeed, a fascinating place not only to the tourist, but also to the social worker, the geologist and the archæologist.

CHANGES IN PERSIA.

Sir Denison Ross lectured to the Central Asian Society on June 12 in the Room of the Royal Society, Burlington House, upon "Persia. After sketching the luxurious train journey from Baghdad to Khaniqin, and the subsequent bumpy motor-car journey over the passes to Teheran, the lecturer explained that the changes in Persia—which were changes rather in process than in actual achievement—could be divided mainly into material and cultural. The great ambition of the Shah—a unique man in an age which had produced half a dozen public

men of genius—was the establishment of law and order and the stimulation of a national spirit. King Riza Pahlavi's great accomplishment was the creation of the Army which, unlike Oriental armies of old, that paid themselves when fighting from the country on which they fought and in peace time were unpaid, was not only paid regularly but also was a highly efficient force. Security was complete in Persia.

Roads had been developed at an astonishing rate, and now aeroplane services were available in Persia to oust both the camel and the motor-car.

Sir Denison most interestingly showed how the possibilities of education in Persia were enormous, though the opportunities were few. One of the difficulties in Persia was that, though there was at the top of society a highly cultured aristocracy, there was no middle class. A huge gap existed between these cultured men and the peasants. Excellent results had been achieved—for the Persian intellect was very quick and ready—in the primary and secondary schools, but these were all too few. The young Persians who received an excellent training at the American and British educational institutions in Teheran and Ispahan respectively were, on leaving the college, rapidly snapped up for Government jobs. What was wanted, in addition to more primary and secondary schools, was the development of Persia in the direction of technical institutions which might fit the Persians to take a useful part in the material development of their country.

The adoption of a uniform dress, particularly of the *Pahlavi* hat, to spur on Persian patriotism, was most amusingly described by the lecturer. He explained that this step involved the disappearance of much that was picturesque in Persia; but Persia did not exist, any more than Turkey existed, for the delight of European lovers of the picturesque. It was interesting, however, to note that whereas Mustapha Kemal Pasha had abolished the fez on the ground that the Turk must on no account look like a Turk (that is, the old Ottoman Turk), Riza Pahlavi had insisted on a national costume in Persia in order that every Persian should look like a Persian! The motive in either country was, of course, the same: to stimulate the "Turkishness" and the "Persianness" of the peoples.

The Shah, who was the hardest working man in Persia, had about him some excellent collaborators, notably the Minister of the Court, Taimir Tash, and the Ministers for Finance and Justice, Prince Firooz and Davar Khan. Upon the lecturer, who had a personal interview with him, the Shah made the strongest impression. He was strong, but moderate. It was very noticeable that his reforming of the mujtahids was being attempted without giving affront to Islam.

Sir Percy Sykes, whose work in road construction in Southern Persia during the War had been favourably commented upon by the lecturer, explained the raiding habits of the Persian tribes as being due to the urgings of the Persian women, who, as *Now Ruz* came round, wished for new things to wear. They therefore incited their men folk to raid! When, however, punishment from outsiders was meted out to the men raiders, the womenfolk forbade them any more to raid! Sir Percy thought the uniform enforcement of the *Pahlavi* hat a mistake.

Major Fowle explained the significance of the development of communications in Persia. It meant, he said, that the central authority at Teheran had infinitely more control over the outlying tribes, and unquestionably the establishment of law and order was facilitated by the opening up of roads.

The Greek Chamber on June 15, having heard the report of the Parliamentary Commission, voted to impeach General Pangalos, the former Dictator, General Nieder, his Under-Secretary for War, M. Tantalides, his Minister of Finance, Major Tavoularis, his Minister of Communications, and M. Vogopoulos, on five counts before the Senate, which will hear the case in October.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Turkey for the Turks.

I am afraid the latest measure proposed by the Angora authorities will not be exactly pleasant reading for those who still believe in the possibility of free trade and who have the idea that nations as a whole can be brought into the same friendly relationship as the members of a family. In the past few years the Angora authorities have steadfastly pursued a policy of making business in and with Turkey as difficult as possible for foreigners; they have this year arranged for the introduction—at the earliest possible moment that their treaty engagements permit—of a tariff which imposes exaggerated duties on most foreign imports, and the effect of which, as I have already pointed out, must be, as the Turks are not in a position yet (if they ever will be) to supply themselves with the commodities they need, to raise the cost of living. They have now drawn up a measure restricting the professions which may be followed by aliens in Turkey, and a perusal of the prohibited callings makes one wonder what there is left for a foreigner to do in the country. The extraordinary comprehensiveness of the list will be gathered from the fact that it includes such vocations as interpreters and guides, editors of newspapers, pedlars, games professionals, boot blacks, dough-kneaders, and organisers of exhibitions. The last, if I may be allowed to say so, must surely be a superfluous inclusion, for in the existing conditions it would be plainly more futile than carrying coals to Newcastle for a foreigner to stage an exhibition. As an experiment the whole-hearted policy of Angora of Turkey for the Turks is decidedly interesting to watch. One can only speculate as to what will be the ultimate end.

Anglo-Persian Report.

The dividend announcement made it clear that in the nine months to December 31, the Anglo-Persian Oil Company had had a much more satisfactory experience than in the previous accounting period, and the report which has now been issued enables one to gauge the measure of the improvement which has taken place in the results. The net profit for the nine months was £2,832,958 as compared with £3,112,529 for the year ended March 31, 1928, so that making allowance for the three months which are lacking this time it will be evident that the profits for the period under review were considerably larger, though considerably below the figures for the year ended March 31, 1927. As I have already recorded, the reserves this time receive £600,000 as against £800,000, while the allocation for extra depreciation is £201,052 as compared with £453,367. The reserves, it may be pointed out, are steadily increasing, and now amount to the substantial sum of £6,108,129 as compared with £5,508,128 and £4,798,129 respectively in the two previous balance-sheets. The increase in the Ordinary

dividend calls for the payment this time of £1,678,125, and the carry forward shows an increase of £60,800 at £1,771,600 after the payment of £513,400 on account of excess profits duty.

The Haft Kel Field.

The details given in the report with regard to production are decidedly satisfactory. Production from the Masjid-i-Suleiman field, the company's chief source of supply, continued steadily to increase throughout the period, while the existence at Haft Kel of a large oil-bearing structure has now been definitely established by a number of flowing wells. At the general meeting last year Sir John Cadman expressed considerable hope as to the prospects in this area, and the news now forthcoming shows his expectations have been amply confirmed. It is announced that work is actively proceeding to develop this field. The report with regard to operations in Albania is unfortunately still of a disappointing character. Exploitation work has been continued, but it has not yielded any favourable results. Improvements in processes at the refineries have been introduced, resulting not only in better yield and quality of products but also in a saving of working costs. There are several matters of outstanding interest which are not touched on in the report, and these no doubt will receive attention at next week's general meeting when the Chairman's speech is likely to prove of even greater interest than usual.

A Promising Cyprus Industry.

As I have had occasion to note from time to time, substantial progress in the development of the industries of Cyprus has been made in many directions in recent years. A recent Supplement to the Cyprus Gazette gives interesting details of the development of one of the promising industries of the Island—potato growing. This industry, it is pointed out, only began to make headway in 1909, when a start was made with the substitution of imported seed for local varieties. Since that time potato growing has developed into an important industry and the export trade has tended steadily to increase. Originally Famagusta was the chief producing area, but the extension of the cultivation of the crop has resulted in large areas being devoted to potato growing in the districts of

BOSTON: The Athens Bankers' Corporation, 15 Kneeland St.

Limassol, Paphos, and Nicosia, and as the crop has now become very popular additional areas are being added yearly in all parts of the Island. Last year 11,017 acres were devoted to the crop, the figures for the various districts being 2,246 acres for Famagusta, 5,306 for Limassol, 1,286 for Nicosia, 1,621 for Paphos, 389 for Larnaca and 169 for Kyrenia. A few figures will serve to indicate the development of the export trade which is mainly with Greece, Egypt, Palestine, and Syria. For 1910 the exports totalled 14,893 cwt. of the value of £3,839; for 1928 the exports were 227,632 cwt. of the value of £91,664. Between the two years the figures have varied greatly, but the trend on the whole has been steadily upwards. It may be added that the total production last year amounted to 321,584 cwt., so that it will be seen that potato growing in Cyprus is essentially an export industry.

The New Indian Rupee Loan.

While the rupee loan of 1927 was a comparative failure, that of last year was a complete success, a result which was due to the more attractive terms offered. Thus investors had the choice of a long-dated and a short-dated security, the terms were more liberal, and finally Indian Treasury Bills were included in the means by which subscriptions could be made to the loan. In the new rupee loan, details of which were announced last week, the policy pursued in 1928 has been followed, while another innovation has been introduced in the shape of provision for a sinking fund. A sum equal to $1\frac{1}{2}$ per cent. of the amount of the loan outstanding at the close of the preceding financial year will be set aside by the Government of India during each financial year to form a fund which will be used whenever the market price of the loan falls below the issue price to purchase securities of the loan for cancellation. But, if the balance outstanding to the credit of the fund amounts, at the close of a financial year, to more than 5 per cent. of the outstanding amount of the loan, other Government securities, which are below their respective issue prices, will be purchased in the market from the surplus. The establishment of this sinking fund is described by Mr. Kikabhai Premchand, the senior partner of the well-known Bombay firm of financiers, Messrs. Premchand, Roychand and Sons, as the outstanding feature of the issue. In his opinion the new departure, by offering reasonable safeguards against capital depreciation, will inspire confidence in investors, and, of course, it need scarcely be pointed out that the effect of this departure will be felt in respect of all Indian Government securities.

COMMENTATOR.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for May was 68,940 tons.

The production of Hamilton's Concession (Roumania) for May was 6,380 tons.

'Artificial sunlight treatment has been provided for their employees by the Dunlop Company, who have opened an ultra-violet ray clinic at their works. The clinic is staffed by trained nurses and in addition to ultra-violet ray treatment being given for the healing of burns, cuts, and minor injuries, it is also available for employees who have been recommended by their doctors for such treatment. Cases of rheumatism, neuritis, eczema, and so forth, have been treated with notable success, and one case of an extensive burn was completely cured after consistent treatment for six months.

ROAD CONSTRUCTION IN GREECE.

The geographical features of Greece, as well as the geological formation, added to the economic conditions prevailing in the country, indicate the policy that Greece must follow with regard to communications. Greece consists of a peninsula deeply indented by bays and straits, with a narrow hinterland, and of a number of islands mostly of small size, the whole constituting a coastline about 3,000 kilometres in length. Consequently the problem of communications is naturally dependent on the sea for linking together the different ports and on roads that would facilitate communications with the hinterland and the ports. Railway transport, besides being very costly on account of the hilly nature of the country and the steep gradients that have to be overcome, is unremunerative for want of a compact hinterland and owing to the competition by steamer and motor transport. The situation is somewhat different in the northern districts, where, owing to their inland situation, the railway forms the basis of communication, with the motor as an auxiliary, to connect the districts on either side of the line and those between the railway stations. For these reasons the actual railway network consisting of 2,578 km., to which must be added 350 km. under construction, is quite sufficient. Such is not the case, however with the roads. There are parts of Epirus and Thrace where the proportion between the length of cart roads and their area is 1 km. to 30 to 40 sq miles. Under such conditions the development of agriculture is rendered impossible, since the transport of crops to market is rendered expensive and difficult, and it is also impossible to exploit the natural beauties and the archaeological sites of the country.

It would be out of the question, of course, to provide the means for a complete network of roads by the ordinary Budget; consequently other means had to be adopted, and the Government decided to contract specially for road making a loan of £6,000,000 which was subsequently included in the general loan for productive works. After the first portion of this loan was subscribed a sum of £1,300,000 was earmarked for road construction up to March 31, 1930, against which was set off the sum of £400,000 originally advanced by the concessionaire.

The actual construction of the works began only in March of this year, as surveys had first to be made, which were greatly delayed owing to the severe winter. At the present moment work is being carried out on seven roads, employing about 7,000 labourers, and within two months 20,000 workmen will be employed on at least 20 roads. Provided that funds are regularly forthcoming, it is estimated that with four or at the most five years the whole sum of £6,000,000 will be spent. It is evident that this sum will not suffice to complete the whole network of the roads, because estimating the cost to be about 2,000 per km. only 3,000 km. can be constructed out of a total of 10,000 km. of national roads which should be made. Of the roads in existence, only 4,000 km. are comparatively tolerable.

A special Act provides for the construction of provincial and communal roads by the institution of a special fund for district roads which is being supported by revenues from different sources. The work on these roads will also begin shortly, and it is hoped that under normal conditions within five years the communication network of Greece will not be inferior to other European systems.

The Bank of British West Africa proposes a final dividend to March 31, 1929, of $3\frac{1}{2}$ per cent., making 6 per cent. for the year, less tax, the same as for 1927-28.

The Rohikund and Kumaon Railway Company has declared an interim dividend for the half-year ended March 31, 1929, of 4 per cent., plus a bonus of 3 per cent., or 7 per cent. in all, on the ordinary stock, payable, less tax, at 2s. 3d. in the £, on July 29.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, June 4.

Unutilised Mineral Resources.

The Minister of Commerce has had the happy idea of arranging in connexion with the Millenary and Jubilee celebrations a mining exhibition with a view to making the Bulgarians themselves more familiar with the great riches of the sub-soil of their country. This exhibition, which was staged in the royal riding school, has keenly interested the public, who are generally very ignorant regarding the abundance of mineral deposits and of mineral waters in Bulgaria. They saw the great development of investigations regarding, and examinations of, the subsoil, and the extremely encouraging results which these researches have given up to the present, consisting in the discovery of extensive and valuable deposits of coal, copper, zinc, lead and other metals, as well as of mineral oils and notably petrol. The greatest part of these natural riches remains unexploited on account of the poverty of the country which lacks the capital necessary for the organisation of the rational exploitation of these deposits.

Tobacco Workers' Strike.

For some days about 25,000 workmen engaged in the preparation of tobacco have been on strike in the towns of Haskovo, Plovdiv, Stanimaka, and Doupnitsa. The strike first broke out at Haskovo, and then spread to the other regions owing to the attitude of the employers, the proprietors of the tobacco warehouses, who refused an increase in wages legitimately demanded by the strikers and have insisted on the unconditional resumption of work, undertaking to improve the wages a little according to the skill of each worker and the quality of the work done.

In view of the threatening proportions assumed by the conflict the Government has intervened directly by the despatch of a labour inspector for the purpose of intervening between the employers and the strikers and of obtaining a satisfactory settlement by the grant of adequate satisfaction to the workers. The strike has no political significance, and a Communist deputy, who endeavoured to exploit it at Haskovo for subversive ends, was disowned by the strikers themselves, who compelled him to leave the town immediately.

Orders for Railway Material.

It will be recalled that quite recently the Minister for Railways, M. Madjaroff, tendered his resignation to the President of the Council following a disagreement which arose between himself and the Minister of Finance, M. Moloff, in regard to the execution of the engagements undertaken by the Government in connexion with the Stabilisation Loan regarding the reorganisation of the railways and the manner of utilising the part of the loan reserved for their necessary improvement and in particular for orders for railway material. The disagreement as regards the re-organisation of the railways was quickly ended, and M. Madjaroff immediately withdrew his resignation. But there remained, as a result of his accusations and the explanations of the Government which followed, the conviction that there existed, as regards orders, engagements which bound in advance the liberty of action of the Bulgarian State. And that conviction has been strengthened after the public declaration made by the Commissioner of the League of Nations that it was not proposed to maintain, in the interest of the country, the forms invariably observed for the adjudication for large public supplies, and that for this action he had the necessary authority in virtue of the agreements made between the Finance Committee and the Bulgarian Government.

On April 25 an adjudication took place for the orders for passenger coaches and goods trucks for a total

amount of 125 million leva. The most advantageous offers were made by Italian and Czechoslovak firms, and it is to the last that the commission for the adjudication decided to entrust the orders in question. But it appears that representations were made from abroad, and the matter was referred to a technical commission which simply confirmed the conclusions of the first commission. For what reason is not known the findings of these commissions were rejected and a judicial commission was appointed which, presided over by the President of the Court of Cassation, declared there was a certain defect in the forms, not the basis, of the tenders of the firms concerned, and decided in favour of the almost total annulling of the adjudication except for a small part of of the orders regarding the provision of wagons for merchandise and in particular of wagons for the transport of poultry which were allotted to Czechoslovak firms.

This method of procedure has been interpreted in political circles as confirming the existence of an engagement to give all orders to French industry. And that interpretation, although flatly denied by the Government, has appeared to receive confirmation in the fact that, simultaneously with the annulling of the adjudication of April 25, the Minister of Railways introduced in the *Sobranie*—a practice inaugurated now for the first time—a Bill authorising the allocation to the *Comptoir Sidérurgique de France*, without any adjudication as the Bulgarian Law demands, an order for 120 million leva of rails, hitherto provided by Germany and Czechoslovakia. The affair has roused strong protests in the countries interested and heated discussions in Bulgarian parliamentary circles.

The Bulgarian Government is undertaking a series of borings in the districts of Varna, Tzirpan, Dalny Madretzy, Kazanlyk, and other parts of Bulgaria to ascertain whether oil deposits suitable for exploitation exist there.

**Export and Import**

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to
the Secretary

WESTMINSTER BANK
LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

BULGARIA.

Briquetting Factory.—The Administrative Council of State Coal Mines at Pernik, Sofia, invites tenders for the supply and erection of a complete briquetting factory with washing plant, for an output of 30 metric tons of briquettes per hour. August 30. (D.O.T.)

EGYPT.

Clothing, Etc.—The Department of Public Health invites tenders for the supply of clothing, sheets and blankets, etc., required during 1929-1930. The requirements cover a wide range of goods and materials, including sheets, gallabiya, shirts, mattresses, trousers, jackets, aprons, mattress cases, towels, veils, napkins, blankets, socks, drill, calico, linen, etc. July 6. (D.O.T.)

Timber, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of timber, August 6; mallets, wood and pins, wood, August 10; and paints, resin, tar coal, glue, glass or sand paper and liquid for polishing brass, etc., August 14, for the Department of Ordnance Services, Egyptian Army, Citadel, Cairo.

Clothing, Etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing, sheets, napkins, blankets, materials by metres, and for sewing clothing required for the year 1929-30 (July 6), and for aluminium and enamelled goods, earthenware, glassware, knives, forks, spoons, shaving accessories, kitchen utensils, copperware, hardware, miscellaneous, etc., required for the year 1929-1930. July 9.

Electric Articles and Lamps.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply of electric articles and lamps required during 1929-1930. July 13.

Miscellaneous.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of pipes, cocks, wire, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo (July 22), metal brass, metal copper, metal bronze scrap, tin solder, zinc, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo (August 7); metal iron, cotton waste, white, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. August 12.

Water Meters.—The Egyptian Ministry of Public Works invites tenders for the supply of rotary and French water meters. July 13. (D.O.T.)

PERSIA.

Saws.—A Teheran firm desires to receive quotations for saws for cutting and shaping paving stones.

TURKEY.

Electrical Wire, Etc.—The Administration Générale des Chemins de fer et Ports d'Etat invites tenders for the supply of electrical wire and cables and general lighting accessories. July 4. (D.O.T.)

SYRIA.

Plant for Production of Hollow-ware.—H.M. Consul at Aleppo (Mr. A. Monck-Mason) reports that a number of local men may possibly desire to purchase a small plant for the production of pudding pans and galvanised buckets. (D.O.T.)

YUGOSLAVIA.

Bridge.—The Ministry of Public Works, Belgrade invites tenders for the construction of a bridge across the Sava river. July 15. (D.O.T.)

Gas Tubes.—H.M. Consul at Sarajevo (Mr. C. A. Greig) reports that a local firm are desirous of receiving quotations from British manufacturers for the supply of some 15 tons of butt welded (Stumpf geschweisst) black and galvanised gas tubes in sizes ranging from $\frac{1}{4}$ in. to 2 in. (D.O.T.)

TYRED PEDESTRIANS.

A brisk trade in a new type of footwear is being created by the cobblers of Albania, Turkey, and parts of Persia. They are making shoes out of old Dunlop tyres by the simple process of cutting well-worn motor tyres into the required lengths, fashioning a toe and tongue, and lacing a thong of leather around the top to bind the whole together. The finished article resembles a Dutch sabot, and a traveller who has just made a tour of the Near East reports that in the bazaars the demand for the new shoes is great because they cost less and wear longer than sandals or the more modern boot.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, July 19). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Manaar for Calcutta (Birkenhead, June 22); s.s. Manipur for Calcutta (Birkenhead, June 29).

Bibby Line.—S.s. Herefordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, June 26).

British India Line.—S.s. Domala for Bombay and Karachi (London, June 29); s.s. Mandala for Colombo, Madras, and Calcutta (London, June 29).

Cunard Line.—S.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, Corfu, and Gruz if sufficient inducement (Liverpool July 6, Swansea July 9); s.s. Brescia for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, July 27).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 9).

P. and O. Line.—S.s. Padua for Calcutta (London, July 5); s.s. Macedonia for Bombay (London, July 5).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus (London, June 29); s.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 3).

Ellerman and Papayanni Lines.—S.s. Gerano for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool June 22, Swansea June 27); s.s. Serbino for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool June 26 (noon), Swansea* June 26); s.s. Roumelian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 29); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 10); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, July 11); s.s. Mardinian for Gibraltar*, Algiers*, Malta, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool July 20, Swansea* July 20).

*Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syra and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Mr. A. Harold Bibby has been elected to a seat on the general board of Martins Bank. Mr. Bibby is a partner in Messrs. Bibby Brothers and Co., steamship owners, of Liverpool.

The bulletin of the Roumanian Ministry of Agriculture and Domains states that young fruits have suffered from the frost to the extent of about 20 per cent., while in the case of apricots and peaches the damage exceeds this percentage.

The Bengal and North-Western Railway Company, after placing as usual £35,000 to the sinking fund, has declared an interim dividend for the half-year ended March 31, 1929, of 4 per cent., plus a bonus of 5 per cent., or 9 per cent. in all, on the ordinary stock.

The directors of Barclays Bank (Dominion, Colonial and Overseas) have declared interim dividends for the half-year ended March 31, 1929, at the rate of 4 per cent. per annum on the "A" and "B" shares, subject to tax at 3s. in the £, payable July 18.

The net profits of the Bank of British West Africa for the year ended March 31, 1929, amounted to £128,331, compared with £124,949. Including the £52,280 brought in, there is available £180,611, as against £174,280. It is proposed to bring the dividend up to 6 per cent., less tax, for the year, the same as for 1927-28, when it was raised by 1 per cent. A transfer of £25,000 is being made to contingency fund, and £30,000 is applied to writing down premises, leaving £53,611 to be carried forward.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 18.

After a promising opening on Monday Stock Exchange markets afterwards generally relapsed into dullness, although the renewed quietude was not coupled with any degree of weakness. The unsatisfactory position of the sterling-dollar exchange depressed the gilt-edged section; but it is thought that developments favouring the position of sterling are not unlikely in the near future, and monetary anxieties, which might have been aroused by the exchange position, are happily precluded by the notable strength of the Bank of England's position and its continued ability to increase its holdings of gold.

Though quiet, the week was not without satisfactory points of a substantial nature. The Reparations Report was well received by the best authorities with the exception of some criticism of the proposed structure of the International Bank, and was hailed as a bull point for European bonds. Home Rails too showed signs of improvement on the strength of Mr. Thomas's appointment as Minister in charge of unemployment matters.

The personnel of the new Government has, on the whole, met with approval. Study of the Parliamentary position creates confidence that no threat to stability is likely to come from Westminster for a long time; and views of the market outlook can now be framed without worrying about the possibilities of external disturbance.

Home Railway Dividend Prospects.

In less than two months time the British railway companies will be announcing their interim dividends and investors are wondering if increases will be possible. The traffic returns to date show several encouraging features, but it is difficult to divine from them the complete state of affairs. For the twenty three weeks just ended compared with the same period last year the total receipts show an increase for two companies, and a decline for the others. The Great Western receipts at £12,945,000 have increased by £155,000, L.N.E.R. receipts at £23,051,000 are £71,000 higher, while the receipts of

the L.M.S.R. at £30,630,000 are down by £530,000, and the Southern has received £175,000 less, at £9,243,000, than for the same period of last year. In each case the detailed figures show passenger receipts to have declined, and confirm the general impression that road travel continues to attract many people away from the railways. The most encouraging feature of the returns is the increase over last year in the receipts from coal and coke shown by every company. There is reason to believe that economies—although not so phenomenal as last year—should still be found, but the general impression from the total receipts and the fact that railway development may take place shortly is that increased distributions are not to be expected for some time. Nevertheless Home Rail stocks deserve more attention than they have had of late. Among junior stock Great Western ordinary yield £5 17s. per cent. and Northern Eastern preferred ordinary has a speculative attraction. Southern 5 per cent. preference yields £5 12s. per cent., while from L.M.S. 4 per cent. preference a return of £5 14s. per cent is obtained.

Oil Conservation.

Important references are made in the report of the Royal Dutch Petroleum Company to the movement for rationalisation in the oil industry. It is shown that although United States production fell from 128,017,000 metric tons in 1927 to 127,152,006 metric tons in 1928, reflecting efforts at restricting production, the total world output rose from 178,044,386 metric tons to 187,674,434. Moreover, the directors state, overproduction has become still more pronounced in the present year, due to more intensive exploitation of existing fields and more efficient treatment of the crude oil. Co-operative action to regulate production is, therefore, generally admitted to be desirable, not only in order to prevent undue competition in the industry, but in order to check the rapid exhaustion of the oil fields which otherwise appears certain. Although the leaders of the industry, such as the Royal Dutch Company, recognise the importance of co-operation, their efforts to secure it have by no means been successful. The conference of United States producers at Colorado Springs this week found it necessary to adjourn for further study of the problem owing to inability to secure agreement on a practical policy. Moreover, for a scheme of conservation to be permanently successful it would need support from producers in all the principal fields, and not merely in the States. In these circumstances, as we have said before, those disposed to invest in the oil industry would do well to give first consideration to the great companies embracing distribution as well as production.

Averaging.

When an investor has bought a security which afterwards declined in value he is naturally tempted by the idea of taking a risk, and buying more of that security so that the average price for the whole amount which he has then purchased will enable him to make a profit if the price should rise at all. The investor is partly influenced by the belief that either the securities in which he has dealt have a fair chance of returning to a price approximating to the first price paid, or that his original estimate, was correct and the shares will rise above the first price so, of course, he will make a bigger profit on the second and cheaper lot of shares. The real purpose of averaging, however, is not so much to make a profit as to prevent or minimise a loss. For that purpose the investor should consider why the shares have fallen in value after his first purchase. If the fall is due to a normal, if not always explicable, fluctuation in Stock Exchange quotations, or if it is due to a general trade depression, averaging is a wise plan and is to be recommended. If, however, prices fall because the company in question is in a bad way it is far better not to throw good money after bad by further investing in it, and it may even be wise to cut one's losses at once.

Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — SOFIA — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

Motors and Motoring.

(By Our Motoring Correspondent)

Light Car Bodies.

Much has been said of late regarding body design, and a difference of opinion seems to exist regarding the utilisation of chassis space. Once or twice I have felt called upon in discussion to deal with one or two points which in themselves have some connexion with the subject. One was the necessity for providing some reasonable facilities other than the usual grid for carrying luggage, whilst the other was the desirability of finding some place where a spare wheel could be carried without being a blemish on the fine body lines of the car.

With regard to the matter of baggage, my contention was that it is not sufficient to attach a light steel luggage rack on which two or three suit cases can be carried, where they run the risk of damage from dust, road dirt, and rain. What is really needed is a readily accessible "boot" with ample space in which luggage of all kinds, packed or unpacked, can be carried without risk of injury. Actually, in very few makes does one find that any really sound and carefully-thought-out means exists in the car design to ensure the security of personal luggage.

It is admitted that one of the marked characteristics of the human race is its conservatism. History does not tell us what first decided the distance that should exist between cart wheels, but that distance, once fixed, has had much to do with such apparently unrelated matters as the width of railway tracks and motor-car chassis design. The early railway coaches bore a strong resemblance to those of an earlier era; a host of instances where the force of an original idea has persisted and influenced later work will occur to everyone.

Which brings us to the question whether the modern motor vehicle is designed, so far as its body work is concerned, on the best possible lines, or whether it is not modelled on lines which have persisted not because of their peculiar excellence but because of the force of ideas. Personally, I regard present-day design as a compromise, a blend of the very good with the rather bad, and as something which will no doubt be improved in time, but not at an early date. I, and others of the old school, feel that development, though slow, is proceeding on fairly correct lines. Those others, would have it that we ought to alter, radically, body design, make a better use of chassis space, and put on the road, as a result, a vehicle resembling a conservatory built on the top of a hydrocephalous tortoise.

A critic of body design some time ago imagined a man visiting this earth from another planet and being shown a car. Instead of dropping dead this amazing visitor commences to criticise the design—it being a well-known fact that motor-car design is far more advanced on Venus or Mars than it is here—and points out to the intelligent earth man that the space allowed for the passenger is extremely small compared with the over-all length of the car. He criticises adversely the length and size of the bonnet, and notices, looking down on the body of the car, that nothing like the full width of the car is utilised.

In all this, to an extent, I am with him. I know a cycle car with an engine one could almost carry in one's pocket, with a fierce-looking bonnet, and I know of others whose shapely bonnet conceals an engine of almost unimaginable power. But I am all for Art in this matter; I like to see a balance in the design of a car. A certain definite relation between body and bonnet space seems to me to be indicated. I know of nothing of its kind more artistic than the lines of a high-grade British car, and I would suggest to this critic that if all that is wanted is passenger-carrying space, he and those who think with

him will do well to consider the advisability of buying a lorry!

To argue that passenger-carrying space is all that is required is, of course, perfectly ridiculous; one might as well argue that all one wants for dinner is plenty of bread and beef and beer. We have an artistic taste we seek to have gratified; we want our car to be of neat appearance, of good finish, with an air of more than a little distinction and a perfect artistic balance as regards both body-work and colour.

Technically, the argument for the big rectangular body, totally enclosed and resembling with its large windows a sort of Kew Garden model of an armoured car, is just about as weak as could be advanced. To say that the rear passengers are invariably placed over the back axle is very much like saying that the back of the car is behind the driver. To say that, when placed over the back axle of the car, they are being used as counterweights for the heavy engine and gear box is just to state the thing that is. Is there any reason why they should not be? I have studied the layout suggested for the chassis of a new type of car by a critic, but quite fail to see any marked advantage in any respect, unless it be that a disgruntled driver could have the pleasure of decanting his passengers and pulling up all the floorboards if he wanted to see if a sparking plug was functioning properly. The real truth of the whole matter is that there are a host of factors to be taken into consideration in this matter of car design. Take any one, or perhaps two or three of them, into account only, and one can design a body which will seem, so far as those factors are concerned, to be better than anything we have on the road at present. Take all the factors into account, and properly weigh them and balance them, and you will have a car designed very much on the lines of the cars we have to-day.

Licensing Methods.

The extraordinary variations which are made possible by the present chaotic methods adopted in the licensing of passenger vehicles demand the closest attention by the Government Department concerned, says the *Commercial Motor*, in the course of an article on the necessity of a revision of our licensing methods. The majority of motorists will readily agree with this, as there is no doubt that many vehicles are passed after a merely cursory examination, and often where the inspections are more thorough, they are carried out by non-technical individuals who cannot be considered as competent to judge whether this, that, or the other part of a vehicle is in a good or bad state of repair, or well-designed and made from suitable material.

The question of design, however, is not of such great importance where the vehicle is a standard product of a well-known maker, but there are many instances of vehicles which have been entirely re-modelled by someone or other, or which have even been built up of second-hand parts, without the knowledge of the makers of those parts, and without, possibly, any skilled supervision. We consider that particular attention should be paid to such vehicles by expert examiners before they are permitted to be used for passenger service. It is essential that the public should be safeguarded, and we feel so strongly on this matter that we suggest that converted vehicles already licensed should be closely reviewed and their licences revoked where they are deemed to be dangerous.

Statistics of motor vehicle registrations in Macedonia, as at December 31 last, give the total as 2,700, made up of 1,909 cars, 699 trucks, and 92 omnibuses.

RAILWAY CONSTRUCTION IN YUGOSLAVIA.

Although the large foreign loan for capital investment which is to be devoted to the building of railways has not yet been realised, nevertheless much has been done in the course of the last ten years for the improvement of railway communications in Yugoslavia (says an article in the *Belgrade Economic Review*). Now, too, there are in construction a whole series of new lines which will contribute much to better railway services.

Among the most important lines which have been built since the War must be mentioned that from Grachatz to Knin and the line Uzhitze-Vardishte. The former gave Dalmatia its first normal gauge connexion with the other parts of the country and other countries. By means of it our two largest maritime ports, Split and Shibenik, have obtained connexion with their hinterland. The Uzhitze-Vardishte line connected the narrow gauge lines of Serbia with those of Bosnia, and made them into one system. When, too, last year the narrow gauge line Belgrade-Obrenovach was put into use, the capital gained a new direct connexion with Bosnia and then with south Dalmatia.

Of those already finished must also be mentioned the double line Belgrade-Novska. This gives Belgrade and Zagreb much better connexion, and this was a crying need for the growing railway traffic. This year is contemplated, too, the construction of a double track on the line Zagreb-Zidani Most. Since there is already a double track from the Austrian frontier via Maribor and Zidani Most to Liubiana and the Italian frontier, this will give shortly a double line from Belgrade to Zagreb and thence to the frontiers of Italy and Austria. As these are the chief arteries of the railway system, this new line should be a great encouragement to economic life.

The most important of the lines now in construction is that from Kragujevatz to Kosovo Polje. Kragujevatz was connected before the War with the main line Belgrade-Nish-Skoplye-Salonika, and now in May next the sector Kragujevatz-Kraljevo will be opened, a stretch of 56 kilometres. At the end of this year the 80 kilometres extension from Kraljevo-Rashka will also be ready, and by the same time 63 kilometres from Rashka to Kosovska Mitrovitza—63 kilometres in length. As Kosovska Mitrovitza is already linked by a normal gauge line with Skoplye, this will mean a direct connexion Kragujevatz-Kosovska Mitrovitza-Skoplye. This will be to some extent a parallel line to the existing line Belgrade-Nish-Vranje-Skoplye, which was the only line connecting south and north Serbia, and passed far too near the Bulgarian frontier.

The new line Karagujevatz-Kraljevo-Kosovska Mitrovitza will have another special significance. It will form part of the great Adriatic railway, which will connect Belgrade with Cattaro. From Prishtina on the Kasavska-Mitrovitza-Skoplye line a railway is being laid down to Petch, a distance of 98 kilometres. Later on this will be extended to Montenegro, and thence via Podgoritza will emerge at the coast in the Bay of Cattaro.

Other important lines besides those in South Serbia are being built. First of all, there is that from Bitolj to Prilep, a distance of 44 kilometres. Work is also to begin very shortly on the route Prilep-Veles, 90 kilometres long. In this way we shall gain a direct connexion Skoplye-Bitolj. Hitherto the line for Bitolj has been via Ghevgeli-Salonika and Salonika-Florina. The abnormal state of affairs whereby the railway connexion with Bitolj went via Greek territory will be ended. From Bitolj, too, a line is to be built via Resan, Ohrid, and Struga on the Albanian frontier. Albania intends to extend that line via Elbasan to Dratz. This would form part of the large line to connect Dratz with Salonika and thence with Constantinople.

Of the smaller lines in construction which will soon be finished we must mention that from Krapina to Rogatec—14 kilometres in length. By means of this Zagreb gains a direct connexion with Maribor and thence with Austria. This will do away with the need of the connexion via Zidani Most. On the other hand, Bakar is being linked by railway with its port. The port of Shushak is no longer able to cope with all its traffic, and it is therefore more than necessary that part of the traffic should be diverted to the neighbouring port of Bakar.

The line of Prokuplje-Kurshumlije is being completed in Serbia. It is 30 kilometres long, and forms part of the great line which runs from Prahovo on the Danube via Nish to Prishtina. There it will link with the Adriatic line Belgrade-Cattaro, and thus give a direct connexion from the Danube to the Adriatic. This will form an outlet for the maritime export and import trade of Roumania. The large bridge between Belgrade and Panchevo is being built. It will be the largest bridge over the Danube, and will serve both railway and road traffic. This will be the first direct link between Banat and Serbia. By doing away with the funicular over the Ivan Range the Bosnian-Serbian narrow gauge lines will get much better connexion with the south Dalmatian ports. In addition to the construction of new lines, much is being done for the improvement of the existing, and purchase of, new rolling stock. For this purpose there is every prospect of the early conclusion of a loan of 100 million marks to be paid in bonds redeemable within ten years.

ADVERTISING IN "THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of *all* classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

London, W.C.2

A Greco-Russian commercial treaty was signed in Athens on June 11.

The Persian Parliament has ratified the commercial treaty recently concluded with Czechoslovakia.

The Hellenic and General Trust has declared an interim dividend of 3 per cent.

The traffic receipts of the South Indian Railway Company for the week ended May 18 amounted to Rs.12,88,376, making the total from April 1 Rs.88,24,874, as compared with Rs.87,59,085 for the corresponding period of the previous year.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended May 20 amounted to £E7,296, making the total from April 1 £E40,294, an increase of £E6,405 as compared with the same period of the previous year.

According to *Notiziario Ortofrutticolo*, the prospects for plums are somewhat unfavourable in the two principal producing regions of Yugoslavia, Serbia and Bosnia, which account for a third of the total production. The Serbian crop especially is expected to be scarce.

The Greco-Soviet Treaty of Commerce and Navigation was signed in Athens on June 11, according to which the head of the Soviet Commercial Delegation will rank as a Commercial Secretary, with a head office in Athens.

Near East Markets

CYPRUS TRADE IMPROVING.

The report on Cyprus trade in April states that there was a large increase in imports and exports, both over the quinquennial average and over April, 1928. Imports at £188,392 were £57,412 in excess of those of last year and £60,052 over the quinquennial average. The principal increases were in flour and petrol, and a decrease is shown in the value of motor cars imported.

Exports at £164,590 exceeded those of April last year by £48,923 and the quinquennial average by £71,766. The main feature of the month was the revival of trade in carobs, shipments being £20,540 in excess of April, 1928, and £22,658 in excess of the quinquennial average. Minerals and potatoes also show an increase.

The following are the values of imports and exports for the four months January to April, compared with the same period last year:—

Imports.		Exports.	
1929 ...	£619,915	1929 ...	£568,523
1928 ...	553,069	1928 ...	439,199

Increase £66,846 Increase £129,324

Shipping showed a decrease in the number of steamers, accounted for by reduced calls of the mail boat and the temporary cessation of the regular service between Cyprus and Greece by the s.s. Alkmini, but an increase of sailing vessels. Twenty-three steamers called at Larnaca, 22 at Limassol, and 20 at Famagusta, as against an average of 27, 28, and 21, respectively.

NEAR EAST MARKET REPORTS.

The June issue of the Monthly Review of Barclays Bank, Ltd., contains the following reports:—

Egypt.

As usual at this period of the year, the cotton market has been subject to important fluctuations, in sympathy with crop reports. The American cotton position has largely influenced the local market and the trend has been downward. Demand, especially for Uppers, has been continuous, and there has been a normal reduction of stocks, owing to good shipments. Ginning was completed in the interior on May 7 and arrivals have almost ceased. The crop has proved to be nearly 8,000,000 kantars, a figure somewhat higher than the original Government estimate, and the grade and staple of all varieties have shown a distinct improvement compared with the past few years. It would seem, therefore, that the measures taken by the Government to control seed distribution are bearing fruit and that the deterioration of Sakel has been checked. Cotton consumption is well maintained and demand is encountered on every decline in prices. With the exception of Tokar, the Sudan Sakel crop has been a good one, and this result has naturally had a depressing effect on Egyptian Sakels, the better grades of which have been slightly neglected for some months past.

The market for cotton seed has been very depressed and shows no signs of revival. Cotton seed oil appears to be out of favour, owing to large quantities of other vegetable oils, such as linseed, soya, etc., being available. The local consumption has fallen off considerably and is not likely to improve, as the olive crop along the Mediterranean coasts promises well. Stocks are not particularly heavy and prices are low.

The demand for cotton goods has been moderate, the native holidays again having failed to stimulate business. In the flour market heavy arrivals had a depressing effect, but the demand for local consumption and export has been generally satisfactory, although prices have ruled weak. At the moment, however, more firmness is noticeable. The demand for sugar has been normal and prices have fluctuated within narrow limits. The rice market has been steadier and both Egyptian and imported rice have been in demand; stocks are low. The Egyptian Government has authorised the cultivation of 200,000 feddans of rice, an area which is exactly double that of last year. Business in gunnies has been unusually quiet and prices have ruled weak, in sympathy with Calcutta. The cabots market has been very dull, the demand being purely local; prices have been weak. The onion market has been uninteresting and practically no fluctuations in quotations have occurred. Business in coffee has been difficult, and prices have declined.

The Sudan.

The general position of the sesame market is quiet and there has been no demand from Egypt. Large stocks still exist in the country

and present quotations are £E17 for white and £E16 for red, f.o.b. Port Sudan. The market for groundnuts continues stagnant, and there has been no change in the position since a month ago. Arrivals of gum remain somewhat small and prices show an advancing tendency, as the supply is not sufficient to meet the demand. The cotton crop has been fairly satisfactory and, up to the end of March, 405,384 kantars of the Gezira Sakel crop had been picked. The quality of the Tokar crop is disappointing, the third grade selling at about PT130 per kantar.

The import market has shown an improvement, but the demand is still small. Tea has been steady, and stocks of this commodity are dwindling. PT400 per kantar has been obtained for coffee.

Palestine.

The Fourth Palestine and Near East Exhibition and Fair recently held at Tel-Aviv stimulated trade generally, there being, in particular, a satisfactory demand for motor cars and motor engines. The rains, which fell during April, have allayed the fears of any damage to the crops, and although it is not yet possible to make any definite forecast, it is anticipated that the yields this year will be exceptionally good. Satisfactory reports are being received regarding the olive crop, which practically failed last year. Oranges have also been favoured by the mild weather and the blossoming of the new crop has been generally satisfactory. Increasing attention is being given to the cultivation of bananas. The wheat from this season's crop is expected to come into the market within a month, but the new barley has already made its appearance, and, as it is being used by the native cultivators for bread, prices of foreign imported wheat and flour have declined. Large stocks of Australian wheat and "Semoul" flour are available, and merchants are trying to clear their stocks at reduced prices before the new wheat is placed on the market. Business in flour is stagnant and prices show a downward tendency. Sugar continues to be depressed and trading has been restricted; consumers show very little inclination to operate and prices are tending downwards. The general tone of the rice market has been weak, with only a moderate demand, buyers anticipating a fall in price. Prices of Egyptian rice remain unchanged. The coffee market continues active and quotations are steady. The textile market in general remains very quiet, as dealers have restricted their purchases to immediate requirements and considerable concessions have been necessary to secure business.

The Palestine Budget Report for 1928, recently published, shows that expenditure amounted to £P3,381,993, against receipts of £P2,584,317, the excess of expenditure amounting to £P797,676, being covered by the surplus funds accumulated in the Treasury during previous years.

Bulgaria has ratified the 1914 loan agreement with the Disconto-Gesellschaft.

The traffic receipts of the Suez Canal from May 25 to 31 amounted to 19,610,000 francs.

Messrs. J. Henry Schroder and Co. announce that, in accordance with instructions received from the Roumanian Government, the following amendments have been made to the list of numbers of the Roumanian Government Four and a-Half per Cent. Gold Loan of 1913, comprising the schedules to the agreement of July 4, 1928:—Numbers to be deleted—23 bonds from Schedule 1, two bonds from Schedule 2, Part 1. Numbers to be added—Two bonds to Schedule 2, Part 1, 23 bonds to Schedule 2, Part 2.

SUDAN CHAMBER OF COMMERCE.

At the recent annual meeting of the Sudan Chamber of Commerce, Mr. Aziz Kfoury, Vice-President of the Chamber, who presided, made some interesting comments on the outlook for the Sudan. We give the following extracts from his speech.

It was with real regret that we had to record the departure of Mr. W. T. Bostock from the Sudan and in consequence his resignation from the Chamber. During the last five years Mr. Bostock was President of this Chamber and we can all testify to the fine work he did for us in that capacity.

The full Customs figures for the year 1928 are not yet in circulation but from the monthly report of the Central Economic Board for February we learn that the total value of trade through all Customs stations amounted to £E12,805,872 as compared with £E11,631,910 for 1927. This represents an increase of 10.09 per cent. but although this increase is satisfactory as regards the increased revenue to the Government on the greater volume of trade, I do not think the past year is looked on by the trader as one showing marked prosperity. Competition for business has been very keen and prices have been cut to such a fine point as hardly to allow sufficient profit to cover merchant expenses. This appears to apply both to the import and the export trade as although the gum exported was a record for quantity the selling prices abroad were such as to leave a bare profit and sometimes a loss to the exporter. It will be to the benefit of all traders when business in this country can be put on a sound trading basis.

During the year the Kassala Line to Makwar was completed and it is hoped that by the end of this year this line will be in full running order. This line will help to relieve the pressure on the Medani Line, and will, I believe, prove an asset to the country by enabling the Kassala and Fung Provinces to advance more rapidly.

You are aware that three years ago we put certain proposals before the Government which in the opinion of the Chamber would help to increase the turnover in trade. It would take up too much of your time to give you all the detail of these proposals and I do not think it is necessary as many of you have taken advantage of the opportunity given you to examine these proposals and also to read the minutes of our annual meetings with the Central Economic Board. The principal proposals were: The abolition of the sugar monopoly. The abolition of the surtaxes imposed by the Railways and Steamers during the War and especially those affecting articles used by natives of the country and handling and terminal charges. In the opinion of the Chamber, if these concessions were granted, the benefit would be passed on to the natives and would increase their purchasing power.

However, the Government regret that they cannot see their way to agree to these proposals. Regarding sugar, it is natural that to free trade the monopoly must be done away with, but for the present the revenue derived therefrom is necessary to the Government and the monopoly will therefore continue until the revenue from this source is not required by them. For the surtaxes in general the Government are of opinion that the benefit derived therefrom by the traders would be so small as not to affect the trade whereas it will deprive the Government of a good source of revenue. And for the articles in which the natives are primarily interested they do not think that the reductions will benefit the native to such an extent as will make any difference to the volume of trade. The fact that the statistics show constant progress in the imports and exports is considered to be proof that the country is progressing and that one must be content to wait until this progress is more marked by future results which will come from the Gezira development and the construction of the Kassala Line.

It has been put forward that the part of the natives in the Government enterprises is not fully reflected in the increase of trade. It is thought that this is due to (1)

During recent years the rains have been indifferent and a fair part of the native earnings has been expended on the purchase of dura. (2) That a large amount of the native earnings is hoarded by the Fallata. It is hoped that with good rains the situation will be much improved by good crops of dura, sesame and Ful Sudani.

There is no doubt that each year there is an increase in the value of imports and exports, but this increase is derived from Government and private enterprises and in these the native does not profit to a great extent. The real direct benefit that remains with us is from the yearly increase in population and the corresponding increase in the quantity of goods to meet this increase in population. Perhaps what I am going to say will explain better my idea. In the Sudan there are two parties, the one the Government and companies and private traders who look to the country for their revenues and their profit. The other, the country, its land, its industries, and its population must before everything else cover the expenses of Government and those of the private enterprises, and the balance, if there is any, is to improve their status and increase their wellbeing.

Now, the power of production of the country is such, as you know it now, and it can only be increased by the following: By interesting the native more and more in cultivation and encouraging those natives that at present do not do any work to take a share in the benefits derived from agricultural labour. And secondly by the increase in population which will increase the amount of labour available and will consequently increase the amount of imported goods necessary to the native. These things will not arrive in a day or two, and it is necessary to renounce any illusion of abnormal progress of the country and to be content with an increase slow and gradual.

COMPANY NOTES AND REPORTS.

ATTOCK OIL.

The report of the Attock Oil Company for 1928 states that the profit amounted to £198,872. There has been written off as depreciation on field, pipe line, and refinery plant, £120,000, leaving a balance of £78,872; add £63,472 brought in, making £142,345. The directors recommend a dividend for the year of 7½ per cent., absorbing £112,500, carrying forward £29,845. The production of crude oil for the year amounted to 306,288 barrels, against 266,360 barrels for 1927. The bulk of the production was obtained from 3,100 and 3,300 foot sands. In the latter part of the year deeper sands were proved at 3,600 and 3,800 feet, and three wells were drilled into these by December 31. These deeper wells, especially the latter, have proved satisfactory producers and further development of same has proceeded during 1929. Profits were adversely affected by rate cutting in kerosene prices in the Indian market during the first half of the year. During 1929 the production position has permitted the accumulation of satisfactory reserves of crude oil in tank storage. Sales of refined products are on a higher basis than in 1928.

NATIONAL BANK OF EGYPT.

Position at April 30, 1929, published in conformity with Article 8 of the Statutes:—Banking Department.—Liabilities: Share capital (300,000 fully paid shares of £10 each), £E2,925,000; reserve fund: statutory reserve, £E1,462,500; special reserve, £E1,340,625; current, deposit, and other accounts, £E14,864,288; Egyptian Government, £E17,868,732; Sudan Government, £E245,036; Mixed Tribunals, £E2,119,337; bankers' accounts, £E531,116; cheques and bills payable, £E231,873; sundry other accounts, £E1,594,794—£E43,183,301. Assets: Government securities and securities guaranteed by the Egyptian Government, £E22,234,421; sundry securities, £E904,367; advances on merchandise, £E3,486,224; advances on securities, £E4,339,242; advances otherwise secured, £E1,602,410; sundry other advances, £E1,326,185; bills of exchange, £E3,773,936; local bills discounted, £E679,479; buildings and furniture, £E219,973; money at call and at short notice, £E1,365,000; bankers' accounts, £E237,254; sundry other accounts, £E1,051,160. Cash: notes, £E1,387,623; gold, £E281,831; silver, nickel, etc., £E294,196—£E1,963,650—£E43,183,301. Issue Department.—Notes issued, £E28,200,000—£E28,200,000. Gold, £E3,339,570; *British Treasury Bills, £E10,760,000—£E14,100,000; securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,500,000; British Treasury Bills, and British War Loan, £E12,600,000—£E14,100,000—£E28,200,000.

*By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

EMPIRE COTTON GROWING CORPORATION.

An interesting account of developments in the various cotton-growing regions of the Empire in the past year is given in the report of the Administrative Council of the Empire Cotton Growing Corporation presented at the recent annual meeting of the Corporation. We give the following extracts:—

India.

The report of the Royal Commission on Agriculture in India contains many references to the work of the Indian Central Cotton Committee. It approves the efforts of the Committee to improve the marketing of cotton, to check abuses and malpractices, and to institute economic inquiries into the financing of production. The report also comments on the importance of the work accomplished by the committee in securing reliable statistics of the consumption and production of cotton in India.

It is five years since the Indian Central Cotton Committee was provided with funds of its own which enabled it to finance agricultural research on the one hand and, on the other hand, the technology of manufacture. The next quinquennium will see several research schemes reaching fruition. The Institute of Plant Industry at Indore, which derives part of its funds from the committee, is a central research institute for Indian cotton problems. Provision is also made for specific investigations by Provincial Departments of Agriculture. Technological research is under the direct control of the committee, and is carried out in the technological laboratory in Bombay.

India now produces over 2,000,000 bales of stapled cotton, and the quantity is increasing yearly. She is now more than self-supporting in the matter of better quality cotton for her mills, and there is no need for the import of American or African cottons except for those mills which specialise in very high counts. Professor J. A. Todd, in a recent review, says of India: "It is not merely that the crop as a whole has increased from a pre-War average of 4 or 5 million bales to something like 6,000,000 bales, but the proportion of the total, which is of something like American staple, has increased substantially." The technological reports issued by the Indian Central Cotton Committee on standard Indian cottons continue to contain particulars of the areas and estimated outturn of improved cotton introduced by the Departments of Agriculture. The increasing competition for these superior strains ensures that considerable quantities reach the mills in a state of purity.

The report for 1928 classifies the various standard Indian cottons into four classes. In Class 1 are cottons suitable for 30's and over. These cottons are, in Bombay—Dharwar I, Gadag I, Surat 1027 A.L.F.; in the Punjab—Punjab-American 285 F. and 289 F.; in the United Provinces—Cawnpore-American C.A.9; and in Madras—Coimbatore C.O.1 (Cambodia 295) and Nandyal 14.

Taken as a whole, the standard cottons of the 1927-28 season give much the same spinning test results as in previous seasons. The following figures show approximately the amounts of long and short stapled cotton grown in the year 1926-27 and 1927-28:—

	1926-27. Bales.	1927-28. Bales.
Long stapled ($\frac{3}{8}$ in. and over) ...	1,663,000	1,969,000
Short stapled ...	3,345,000	3,911,000

The Indian Central Cotton Committee, which had been pressing for some time for the lowering of the basis of the Empire Futures contract in the Liverpool Cotton Exchange, has now met with success. From July 1 the basis will, be "Low Middling" instead of "Strict Low Middling," and many Indian cottons will now be tenderable which were previously excluded.

The Government of India have accepted the Indian Central Cotton Committee's recommendation and have decided to compile and publish statistics of rail and river-borne raw cotton, showing both the exports from and

imports into each trade block and also the origin and destination of the exports and imports of cotton by trade blocks. The Royal Commission on Agriculture has strongly recommended the re-establishment of these statistics for all crops, including cotton, and has made several suggestions which, if accepted, will make them more valuable.

The third official forecast of the Indian cotton crop for 1928-29 gives an estimated area of 25,874,000 acres and an outturn of 5,204,000 bales. The final figures for the 1927-28 crop were 23,910,000 acres in area and an outturn of 5,593,000 bales. In Bombay the weather was, on the whole, favourable to the crop in spite of minor floods in some parts and scarcity of rain in other parts, but in the Punjab scarcity of rain in many districts and the ravages of insect pests caused much damage.

The Sudan.

It was foreshadowed in last year's report that the crop in the Gezira in 1927-28 would fall short of that of the previous year; it actually amounted to 83,643 bales of 400 lb., as compared with 112,000 in the previous year. This season, however, the Government estimate indicates a recovery to about 109,000 bales on a larger area, but with an estimated slightly higher yield per acre also. At Tokar and Kassala the 1927-28 crops amounted respectively to 12,695 bales and 15,572 bales, while the estimates this season for these two crops are approximately 15,000 and 13,000 bales.

In the rain-grown cotton area the 1927-28 crop showed only a slight increase on that of the previous year. This is largely attributable to the fact that in Mongalla and the Bahr el Ghazal long periods of drought intervened in the growing season. In the Nuba Mountains and in the Upper Nile the rains were better distributed. In the Sudd area police measures necessitated by the murder of a British officer interfered with agricultural progress in that district. The possibilities of the rainfall area for cotton production have now been fairly explored by the Agricultural Department, and the general policy is to concentrate at present on those areas which hold out the greatest promise under existing conditions, namely, the Nuba Mountains, Mongalla, the Bahr el Ghazal, and the Upper Nile. In all these areas, however, transport difficulties are prominent among the obstacles to rapid progress. In the Nuba Mountains camel transport has proved so effective that it has been relied on for the whole of this season's crop, thus releasing motor transport for use elsewhere. In this district also two small ginneries have been started to lessen the bulk carried from the growing centres to the main lines of transport, while four more are to be in operation this season in Mongalla Province where, owing to fly, animal transport is impossible, while motor transport is costly. In the Upper Nile, the opening of additional landing stages where the seed cotton can be loaded into steamers will facilitate transport and reduce production costs. The estimates for rain-grown cotton this season exceed the production figures of 1927-28 by 5,300 bales, an increase of 114 per cent.

The possibility of extending the area producing cotton in the Sudan will be considerably enhanced by the new railway which runs through Kassala from a point on the line joining Port Sudan to Atbara. This railway has now reached Sennar on the main line from Khartoum to El Obeid. The areas tapped by this railway are only sparsely inhabited at present, but formerly they carried a large population and yielded considerable crops of grain

JOHNSTON LINE

and other produce. The railway should attract new settlers, and as the country enjoys a better rainfall than the district to the north, it should once more attain considerable prosperity from the agricultural development which is anticipated. With a view to testing the possibilities of this district for cotton, the Corporation's plant-breeder contemplates laying out test plots there at the close of the present season's work.

The plant breeding station continued its work of selection and hybridisation; variety tests were also carried out with both Egyptian and American varieties, the latter both under irrigation and under rainfall conditions. A detailed account of the work is contained in the volume of reports from experiment stations published by the Corporation in February.

Two full meetings have been held of the London Supervisory Committee for the co-ordination of Agricultural Research in the Sudan, as well as meetings between the Sudan representatives and the three technical assessors appointed by the Sudan Government, as mentioned in last year's report. The reports from all branches in which research is being carried on were carefully reviewed by the committee. As has been previously reported, the Sudan Government, on the recommendation of the Supervisory Committee, have appointed a plant physiologist to work mainly on cotton. This has enabled the Government botanist to devote more of his time to plant pathology and especially to the study of Blackarm disease of cotton. A close connexion has now been shown to exist between the degree of virulence of the attack and the soil temperature at the time of planting, while, at temperatures below that at which infection is inhibited, humidity is a controlling factor. In a recent number of the *Empire Cotton Growing Review*, a paper by the Government botanist appeared, in which were described the habits of the parasite causing the disease, the requirements for its growth, and its location within the plant. Storage of seed and its exposure to dry heat are also discussed as methods of sterilisation. Work on this disease has also been carried out at Rothamsted by Mr. R. H. Stoughton, who has been investigating mainly the influence of temperature and humidity on the development of the disease in the form known as "Angular Leaf Spot."

Mechanical Transport.

The question of the provision of more and better communications in the cotton-growing countries of the Empire, and especially in Africa, is necessarily one of great importance to the Corporation. It was for this reason that in 1924 they appointed a small Committee of engineers to inquire into the relative efficiency of various forms of transport, and their suitability or adaptability to tropical conditions. Their last experiment has been carried out in conjunction with the Nigerian Government with a six-wheeled lorry fitted with a producer-gas unit using charcoal as fuel. The vehicle passed successfully through its preliminary trials in this country and has now been shipped to Nigeria; further reports on its performance there are awaited with interest. This will complete the direct participation by the Corporation in transport experiments, proposals described below having now been launched for carrying on the work on a far larger scale without further cost to the Corporation.

The results of the Corporation's investigations and of the trials carried out in Nigeria with different types of vehicles purchased by them were reported to the Colonial

Office Conference held in 1927, with a recommendation that the problem merited much wider and fuller investigation than it could receive at the hands of the Corporation. Members will consequently be especially gratified to learn that the Secretary of State for Dominion Affairs and for the Colonies has proposed that an Oversea Mechanical Transport Committee should be set up to comprise representatives of the Home Government, India, the Dominions and the Colonies, and of the Sudan should they consent to co-operate. It is intended that the cost of the necessary experimental work shall be shared equally by the Empire Marketing Board and by the Oversea Governments who take part in the work. Meanwhile the Secretary of State has appointed a small technical Directing Committee under the Chairmanship of Sir James Currie, which is already engaged in preparing a programme of work and supervising its execution. This Directing Committee, and subsequently the larger body when formed, will carry out a comprehensive investigation of the whole problem of mechanical transport overseas, and especially in the tropics and sub-tropics, and the result can hardly fail to be of the greatest value to the work of the Corporation. Viewed generally, this work may be regarded as two-fold; on the one hand it is directed towards a higher yield of cotton per acre—this aspect is the care of the agricultural and scientific specialists; on the other hand, an increased acreage is required, and in order to render this economically possible improved transport facilities are necessary to enable the produce to be carried to the existing railways. Should the investigations of the Oversea Mechanical Transport Committee lead to results which enable transport costs to be reduced and the price paid to the grower to be in consequence even slightly increased, the stimulus that will thus be provided to cotton-growing may furnish a considerably increased supply from many parts of Africa. For this reason the Corporation feel that they were right to put the transport question in the forefront of their programme of activities five years ago, and they regard their not inconsiderable expenditure on experimental work in this connexion to be fully justified, no less on account of the negative information these experiments supplied as to what types of vehicles were not suited to tropical conditions than by reason of the positive results obtained. They felt, however, that the scope of the work was greater than they should be called upon to undertake alone, and they look with confidence to the new body to amplify and extend the work initiated by the Corporation in its early days.

The production of crude oil of the British Burmah Petroleum Company for April was 36,559 barrels.

In the first four months of this year 407 insolvencies were registered in Yugoslavia, as against 371 for the corresponding period of 1928.

Roumania's revenue for April amounted to 2,639 million lei, as against 2,298 millions for the corresponding month of 1928. It is anticipated that the revenue yield will increase still further in the coming months.

The Eastern and Overseas Products, Ltd., announced an offer to be made on June 15 to the shareholders of the company, whose names were on the register of members on June 13, to subscribe for 300,000 new ordinary shares at the price of £1 2s. 6d. per share in the proportion of three new ordinary shares for every four ordinary or deferred shares held by them on June 13.

It is announced that Messrs. Joseph Travers and Sons, Ltd., of 119, Cannon Street, London, E.C.4, have merged the business of Messrs. Game and Son, Ltd., of 2 and 4, Eastcheap, London, E.C.3, into that of their old-established concern. The House of Travers, one of the oldest in the City of London, was founded in 1666, and it possesses a long and honourable record. Messrs. Game and Son, Ltd., a private company, was formed on January 1, 1887, by the late Mr. James Aylward Game, and at the commencement it was known as Game, Harrison, and Lerner. Subsequently the two partners, since deceased, went out of the business and Mr. J. A. Game continued to build up a successful trading concern with his son, Mr. Herbert A. Game, who, since his father's death early this year at the age of 85, has continued as Chairman of the company. The late Mr. J. A. Game, the founder of the company, commenced his business career with Messrs. Joseph Travers and Sons.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 12:—

Egyptian Futures.

Sakel Contract.—The undertone throughout the past week has inclined to the easy side, selling of new crops by one or two local houses being more than sufficient to fill the prevailing demand for contracts; thus values since we last wrote show declines of 35 points for near and 35 to 29 points for more distant positions. At the moment, speculators are showing little interest in the market, the recent decline having carried prices to a level which is evidently considered rather dangerous from a sale point of view until more definite news of new crop prospects can be obtained. On the other hand, the trade situation, which certainly is not improved by the possibility of a dispute on the wages question in the near future, is far from satisfactory, and this in itself is sufficient at the present juncture to prevent anything but very lukewarm "bullish" support materialising. The decline in the Alexandria market since we last wrote has not been commensurate with the movement at this side, so that the local November option has now reverted to a discount of 35 points; our market is carrying a fairly large call interest based on both July and November, so that any improvement from the trade side should result in the markets working to a closer difference.

The Alexandria General Produce Association crop report for May is as follows:—"Lower Egypt: Weather condition during May was favourable for cotton plants, although high temperatures that prevailed during first three weeks of the month were followed by a cool spell which retarded normal development. Condition of young plants was good, but development has been retarded from 10 to 15 days, according to district. Attacks of wilt have been reported from several Sakellaridis fields. Reports show that 10 to 20 per cent. of land has been re-sown; plants on re-sown land generally healthy; water irrigation has been adequate. Cutworm has caused certain amount of damage, but this no more extensive than previous years."

There appears little inducement to enter into commitments either way at the ruling level; should the market, however, fall away to the neighbourhood of 16d. for new crop positions, we would be inclined to advise moderate purchases.

Upper Contract.—A very quiet state of affairs has prevailed in this market during the past week; in the earlier trading some local speculative buying had a steady influence, but more recently Continental liquidation and unresponsive reports from Egypt have caused easiness. Trade support has again been disappointing, and despite the present attractive difference of the Upper varieties with outside growths, little fresh business is being attracted. Crop reports from the American staple districts will have to be carefully watched from now onwards, as these will exert a decided influence on this contract, especially should anything of an unfavourable character eventuate. The new crop summary of condition during May was generally favourable.

Egyptian Spot.

Progress has again been somewhat slow in this department, but on the whole some improvement in the offtake has occurred, both for Egyptian and Sudan cotton. Most of the business has been of a decidedly hand-to-mouth character, and it is obvious that in view of the general uncertainty prevailing spinners have cut down their requirements to a minimum. Although final details regarding the new mill merger are rapidly nearing completion, it has not yet become a *fait accompli*, and, until then, we can only expect present conditions to continue. Apart from this, there has now arisen a wages problem to be solved in Lancashire, and this naturally is adding difficulties to an already overburdened trade. Prices have eased further this week, and there is no guarantee that the bottom has yet been reached. The course of American values still remains the governing factor, and opinions on this point appear to be very mixed.

Sakel has been in moderate request for most qualities, and business has been purely retail.

Uppers have continued in good request, chiefly for cotton at from pass to 25 on July. There has been some inquiry for the better grades from the Continent.

Pilion has been in improved request, but inquiries have been confined principally to the lower qualities at from 12.00d. to 12.75d. Stocks are small and spinners have experienced difficulty in finding their cotton.

Maraad, White, and Nahda.—These have all been in slightly better demand, but buyers are slow to bid and results have been meagre.

Sudan Sakel.—A fair business has been done and the demand looks like improving further. Basis has remained firm.

Tokar Sakel has again suffered from neglect, but there have been some faint signs of an increased interest amongst spinners for this cotton.

Low and Inferior Cotton.—Business has again been very moderate.

C.i.f. business has been quiet on the whole, but during the last two days there has been slightly more doing. Forwardings to the trade last week were returned as 8,347 bales Egyptians and 1,587 bales Sudan Sakels. Estimated spot sales for the week under review, 2,100 bales Egyptians and 1,050 bales Sudan Sakels. Quotations

of Sakel show a net decline of 45 points. Uppers have been reduced 18 points, and Pilion 20 points. F.G.F. Sakel to-day, 16.80d. F.G.F. Upper to-day, 11.35d. F.G.F. Pilion to-day, 12.30d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended June 6, state:—

Since our last report the futures market has been less active and the tendency undecided. The following is a summary of the movements of prices during the week:—Sakellaridis: July, 30.08 dollars, 0.07 dollars down; November, 33.41 dollars, 0.37 dollars down; January, 33.81 dollars, 0.38 dollars down. Ashmouni: June, 20.93 dollars, 0.39 dollars up; August, 20.29 dollars, 0.24 dollars up; October, 21.65 dollars, 0.05 dollars up; December, 22.12 dollars, 0.07 dollars up; February, 22.45 dollars, 0.05 dollars down.

Sakle.—The week has been made up of a sequence of sessions characterised by fairly pronounced fluctuations but with not a great deal of actual business effected. The market has been in the hands of professionals, the course of prices being governed by their interpretation of the effect of events, local and international, of the last few days. Thus the results of the British elections caused some hesitation, the settlement of the question of reparations in Paris was greeted as a bullish factor, and finally the announcement published by the Egyptian Government as to the disposal of the old stock and its replacement by new purchases was considered as bearish.

Our opinion is that the market will continue on the heavy side and be rather inclined to follow the recessive movement; at the same time, it must not be overlooked that the levels at which we stand are really reasonable and may at any moment attract the attention of spinners, which, with the existing relatively strong statistical position, would speedily put an end to any decline. We give below the statistical position of Sakel in Egypt as at the end of May:—Stock, Alexandria, 1,098,000 kantars (including 300,000 kantars held by the Government); stock, up-country (about), 2,000

Spot.—This week we have had much quieter markets and have settled down to normal summer business. The total sales for the week only amount to about 9,600 bales, of which we estimate 3,050 bales Sakellaridis, 5,700 bales Ashmouni and Zagora, 850 bales Pilion, and 50 bales other varieties.

Upper Egypt.—The progress of the plant is normal, and weather conditions are of the best. Water is abundant. In early plantations, flowering has already commenced.

A Belgrade message states that the King of Yugoslavia has purchased 2,000,000 dinars of shares in the new State Mortgage Bank. The bank, which has a capital of 300,000,000 dinars (just over £1,000,000), has been established for the purpose of developing agriculture by granting long-term credits to farmers.

Notes of the Week.

The Egyptian Wafd and Great Britain.

Our Cairo Correspondent, in a letter that we publish on another page, draws attention to the period of peaceful development through which Egypt is at present passing, and points out that "trouble could, in fact, take place, only if the Wafd received encouragement in Labour circles in England." The warning is, perhaps, not altogether inopportune. The Wafd would have been less than human, if it had not resented its expulsion from power to make room for the Government of Mohamed Pasha Mahmoud with its policy of the elimination of politics and concentration on the material advancement of the country. Attempts to foment unrest having failed, the Wafdists tried to challenge the Government's measures, but with the same lack of success. As a last resort the leaders are understood to be bolstering up their cause with promises of the help that they are to receive from a Labour Government in Great Britain. In the pursuit of this will-o'-the-wisp a special campaign is to be launched in England during the next few weeks, in the hope of securing at least sufficient evidence of British sympathy on which to base an exhortation to Wafdists to hold on in their intransigence. Unless these false hopes are raised in the Wafd, there can be little doubt that Egyptian good sense will prevail, and that the people as a whole will cease to identify themselves with an organization that has served its purpose and shot its bolt. The Wafd, as it is proud of boasting, is not a political party with a programme; it is an autocratic body that has sought by dragooning ignorant peasants and marshalling half-baked students to make the administration of Egypt impossible, until Great Britain had been "brought to her knees." Egypt is now satisfied that she can quite well carry on and progress without this latter achievement. In any case the policy of friendly negotiation seems to be more capable of realization. The restoration of parliamentary government in Egypt awaits the development of political parties on democratic, not autocratic, lines, with definite programmes. Left severely to its own resources, the Wafd can, with advantage to Egypt, fade out of

existence and resign the field to political parties based on differences of opinion in regard to principles of government or social policy.

Self-Government or Trusteeship.

An interesting subject is raised by Mr. Robert Stokes in a Paper that we publish elsewhere in this issue. Briefly, he urges that the fetish of self-government should be eliminated in those countries of the Middle East which are in process of constitutional development in favour of British trusteeship. Self-government, he points out, means in practice for a backward country government by the educated few, and results, therefore, in the establishment of an oligarchy and not of a democracy. The Hilton Young Report on East Africa has recognised this danger; it points out that it may not be possible to apply representative parliamentary institutions, which are founded on the basis of a single homogeneous community, to States containing European and native communities side by side, and that in any case, even if such institutions should ultimately be adapted to African conditions, the natives would require a long period of preparation and experience before they would be qualified to take their place in them. When all due allowance has been made for the difference in cultural level in the peoples of the Middle East, Mr. Stokes would find in the present incompatibility of Jew and Arab in Palestine a justification for adapting the Hilton Young Report to that country as well, for the reason that self-government must mean an Arab State, if majority rule is to prevail, or a Jewish State, if violence is to be done to that principle, with the prospect of "perpetual trouble with its Arab neighbours." On this premise he would advocate a British trusteeship all round, to facilitate co-operation between all the States of the Middle East, to wit, Cyprus, Aden, Somaliland, and Socotra, in addition to Palestine, Trans-Jordan, and Iraq. There would be much to be said for the proposal, if it could come from the States concerned, as a guarantee that their *amour propre* would not be offended. In view, moreover, of certain well-known currents of opinion in

Iraq, the idea may not prove to be as far-fetched as it might appear at first sight. Palestine presents the real difficulty, as it is probable that Arab aspirations have already been pitched in a high key. It is well, however, that those who regard democracy and self-government as heaven-sent institutions for immediate application in every country should bear in mind the obvious truth of the dictum that in backward countries they mean inevitably government by the few in the interests of the few, to the general neglect of the real interests of the nation as a whole. In the case of India, where a substantial proportion of the population are labelled "untouchables," how could self-government in practice prove otherwise?

Frontier Incidents in the Balkans.

In spite of the Pirot Conference tension on the frontier between Yugoslavia and Bulgaria threatens to assume disquieting proportions. Things in the Balkans are not always as they are reported to be, and it is possible that the statements regarding recent frontier incidents may have to be modified in important particulars before they can be regarded as facts. There is, however, no doubt that the reports now in circulation in Bulgaria are believed in that country, and that actions are attributed to Yugoslav officials which call for explanations if they cannot be denied. Once again the trouble originates in an outrage. A train was derailed near Vranja by the explosion of a bomb; the Yugoslav authorities were, presumably, unable to discover the culprits, and proceeded to the wholesale arrest of Bulgarians domiciled on Yugoslav territory. The inevitable maltreatment, it may be inferred, followed; some of the wretched victims try to escape over the frontier and are shot; others armed with the necessary permits for travelling share the same fate. When such things happen in a constitutional country, the blame attaches to the whole nation—in this case, to the Serbs, who occupy that part of Yugoslavia next to Bulgaria. The characteristics of Serbian soldiers or gendarmerie are known, and excuses can be made for a Belgrade Government, which is politically too weak to maintain discipline or too incompetent to inculcate right conduct among the armed forces of the country. In the case of a dictatorship responsibility for a series of actions such as is attributed to Serbian soldiers and others along the Bulgarian frontier fastens ultimately—if the facts are as reported—on the Dictator. When the civilian population of the country can be brought to heel, as it has been, it would be idle to pretend that discipline cannot be maintained in the Army, and that frontier guards cannot, if the will exists, be prevented from behaving in a way that is a disgrace to a civilised country, if the events reported have actually occurred. The incidents recorded may conform with Balkan tradition; but it was hoped that King Alexander and his advisers had been able to put a stop to practices which, whether committed under provocation or not, are a reproach to any European Government. The Belgrade authorities have delayed to ratify the Pirot Agreement; their attitude towards the charges now brought by the Bulgarian Government will, therefore, be watched with close interest.

Greece and General Pangalos.

General Pangalos's Dictatorship came to an end in August, 1926. He remained in prison for the greater part of two years, and was released last July on M. Venizelos's accession to office. The inquiry into the acts of his Dictatorship has, however, pursued its desultory course, until, finally, a few weeks ago a Parliamentary Commission submitted its report to the Chamber. General Pangalos and four of his associates or subordinates are held to have been guilty of malpractices in relation to five acts of his Government—gambling in exchanges, an order for motor-lorries, the lease of a Casino at Eleusis, the supply of Russian corn and an agreement with a woollen company—and the Chamber has now resolved upon their impeachment before the Senate. Thus more than three

years after the Dictatorship General Pangalos is to be tried on the charge of using his official status as a means of making money, and this decision is taken at the same time as the incorporation in M. Venizelos's new Cabinet of two Ministers who were prominently identified with the execution of five Ministers in 1922. Not unnaturally the Royalist Party regards the appointments as a deliberate provocation on the Prime Minister's part, and their representatives have withdrawn from the Chamber. M. Venizelos has explained to the Royalist leaders that there can be no question of these men having forfeited their rights as citizens, and that, as they had been elected to Parliament, there was no reason why they should not be given Ministerial rank. It would be equally true to say that a man who had served a long sentence of imprisonment and thereby had made due atonement for his crime would still retain his rights of citizenship, but most Prime Ministers would avoid giving such a man a seat in the Cabinet. The question would seem to be one of expediency rather than of right, and there can be no doubt that the inclusion of M. Gonatas in the Government will give grave offence to many patriotic Greeks, and will appear to the outside world as a strange lapse on M. Venizelos's part. If the country's lurid past of recent years is to be consigned to oblivion, consistency would require that the acts of the Dictatorship should also be condoned; for if comparison has to be made between General Pangalos's delinquencies and the execution of "the Six" in 1922, there can be no doubt as to which did the greater injury to Greece.

An Albanian Minority of One.

Prolonged exile is having a bad effect on Bishop Fan Noli's nerves and his methods of controversy. Mr. Ramsay MacDonald's article in the *Sunday Times* on the subject of minorities has prompted the former Prime Minister of Albania to remind him, in a telegram which the Bishop has asked us to publish, that, when he is removing all the injustices of the Peace Settlement, there is also Albania that must not be overlooked. Not only are there a million Albanian peasants in Yugoslavia and Greece "who do not even enjoy the right to live and who are ruthlessly expropriated, expatriated, and exterminated," but, according to Monsignor Fan Noli, a similar fate threatens the Albanian peasants in Albania itself under, what he calls, "Ahmed Zogu's bloody feudal régime, which was brutally established by a Yugoslav invasion under the auspices of an English Conservative Government." If political feeling in Great Britain ran as high as it does in the Balkans and drew for its expression upon the same vocabulary, it would be a sound move on Bishop Fan Noli's part to inspire Mr. MacDonald with the desire to redress some of his predecessor's crimes. As things are in British political life, it is to be feared that the Bishop's irritation outruns his discretion and historical accuracy. The success of Ahmed Bey Zogu's invasion of Albania with a handful of followers from Yugoslavia has previously been attributed to the incompetence and unpopularity of Monsignor Fan Noli's own régime. It is common knowledge that the British representative in Albania from personal acquaintance with Ahmed Bey Zogu and Monsignor Fan Noli had decided that for the purposes of Albania the former was the better man; for the Bishop to base on this fact the insinuation that Ahmed Bey Zogu's return to Albania was effected "under the auspices of an English Conservative Government" suggests that tact and truthfulness have deserted him in exile almost as markedly as courage and capacity failed him when in office. As an independent State Albania has made her own bed and must lie on it. Great Britain may regret much that has happened in the country, but cannot interfere in Albanian domestic affairs at the prompting of a single individual, who did not seek British advice when he had the opportunity to benefit by it, and who prefers residence abroad to serving his own country within its frontiers.

A Franco-Turkish Agreement.

A month ago it was confidently announced that the protracted negotiations between France and Turkey had broken down, and that the Turkish Government intended to submit the dispute over her Syrian frontier to The Hague Tribunal. The report can have been little more than a *ballon d'essai*, as an understanding has now been reached between the two parties, and an agreement was signed in Angora on June 22. From the telegraphic summary it would appear that the Turks, in some respects at least, have gained their points: the Syrian frontier between Nisibin and Jeziret ibn Omar is to be rectified in favour of Turkey, while the interests of France are to be safeguarded; the transfer to Turkish administration of the Mersina-Adana Railway—a concession that the French had all along refused—is to be effected within a fortnight, the Turkish Government guaranteeing to settle all outstanding accounts with the French company which has hitherto been responsible for the railway. Another Article indicates the procedure to be followed in settling the question of the property of Turks in Syria and of Syrians in Turkey, a subject that is to be discussed further in September. The Agreement should pave the way for the establishment of a state of affairs on the Turko-Syrian frontier as satisfactory as that which has existed, happily, for some time on the Turko-Iraqi frontier.

Great Britain and the Hijaz.

A weak spot in the relations between Great Britain and King Ibn Saoud of the Hijaz and Najd, to which our Correspondent in Jiddah has repeatedly called attention, is about to be remedied. Hitherto there has been no permanent representative of King Ibn Saoud in London, and British interests in the Hijaz have been in the hands of an Agent and Consul at Jidda. It is now announced that the Hijaz will be represented by a special Envoy from Mecca, and that a British Diplomatic Representative will be appointed to the Hijaz. Unless the latter should be a Muslim, he will have to reside in Jidda, and his personal touch with the Hijaz Government will be restricted to such members of it as reside in or come to Jidda, except for the rare occasions when King Ibn Saoud himself pays a visit to the port.

INDIAN NOTES.**The Two Indics.**

In his capacity as a member of the Indian States People's Delegation, Mr. P. L. Chudgar has sent to us a copy of a letter which he has addressed to the members of the Cabinet, and to all the other Labour Members of Parliament. The letter is designed to be an introduction to a case which he is preparing, and in which he proposes to show that the Indian problem cannot be satisfactorily solved without an investigation by a Royal Commission of the problem of the Indian States from all points of view. He maintains that the Butler Committee hardly touched even the fringe of this problem, seeing that neither the people of the States, nor the people of British India were represented before it. He claims to speak "in the name of seventy millions of suppressed and oppressed people of the Indian States." He refers to "unbridled autocracy and arbitrary rule"; and he quotes with approval from a letter in which *The Times*, just seventy-six years ago, denounced the Indian Princes in unmeasured terms. Mr. Chudgar maintains that the records of the Political Department of the Government of India are full of evidence showing conclusively that the conditions in many of the States are as bad to-day as they were in 1853 when the article was written. If such evidence is indeed available it ought, we think, to have been produced. For obviously the venerable leader which Mr. Chudgar has dug up from the files of *The Times* proves nothing. But his letter is an indication of the unfavourable reception which the report of the Butler Com-

mittee seems to have met with in India. The attitude of the Princes will not be disclosed until these lines have appeared in print, but as is explained on another page of this issue, they can legitimately point to several inconsistencies, particularly in the case of the vexed question of paramountcy. The British-Indian politicians dislike it because it holds that the Princes' treaties are with the Crown, which means that an Indianised Government of India will not be able to coerce the States. And bodies such as the Indian States People's Delegation, which claim to represent the people of the States, object to it because it does not provide for the introduction of representative institutions. This is an unfortunate state of affairs, and we question whether Mr. Chudgar's remedy, a Royal Commission, would improve matters. But it certainly does seem to us, as we have said on more than one occasion, that it is a mistake to deal piecemeal with the question of revising the Indian Constitution. British India and the States are admittedly interdependent; and the Statutory Commission and the States Committee should, therefore, have worked side by side, and their findings should have been co-ordinated. For each of them to proceed separately and to issue separate findings must tend to make an exceedingly difficult problem even more complicated.

Mr. C. Leonard Woolley, the excavator of Ur, gave a lecture in Madrid on June 19 describing his discoveries. The Duke of Alba introduced Mr. Woolley, whose lecture aroused great interest.

Bulgarian patrol vessels are reported to have found on June 19 four sailing ships under the Russian flag abandoned close to the Bulgarian coast near Bourgas. The ships are supposed to have been used for the landing of Bolshevik agents.

Four people were killed and 20 were wounded in an election riot at Tripolis. As a result of the Lebanese general election, in which several governmental candidates were defeated, 16 of the old members of the Chamber have retained their seats and 14 new members have been returned.

The air mail service between Beyrout and Marseilles was last week reported to be working regularly. Agreements with other aerial services are expected to be reached soon, which will enable letters from Beyrout to be delivered in London within less than five days.

The Greek Chamber on June 19 adopted the second reading of the Bill for defence against Communism after a speech by Mr. Venizelos, who denied any intention to limit the liberty of thought, but he said that society would be stupid to remain passive while Communists, inspired from Moscow, organised violent agitation producing strikes to prevent industrial settlements and causing loss of life. The Bill passed the Chamber the next day.

THURSDAY, JUNE 27, 1929.

PROGRESS IN EGYPT.

A year ago, when Mohamed Pasha Mahmoud was appointed Prime Minister of Egypt, the Party to which he belonged was in a considerable minority in Parliament, and could lay no claim to any substantial backing in the country at large. The Wafdists appeared to be so strongly established as masters of the political situation that, however much they may have been piqued at the King's action in changing his Government, they had at the moment few misgivings in allowing a Liberal Constitutional to become the titular head of a Government which, they were confident, must remain almost as completely under Wafdist orders as any of its immediate predecessors. That Mahmoud Pasha should now be able to absent himself for many weeks from Egypt, with every reasonable prospect that the administration of the country will proceed as smoothly as when he is on the spot, is a tribute at once to his capacity as an administrator and to the underlying sound sense of the Egyptian people. In suspending Parliament he has, technically speaking, established a dictatorship; but rarely has a régime that outwardly rests on force been called upon to make less use of this means in consolidating its power. When Parliament was suspended the Wafd showed no lack of fight; but its discomfiture has been due more to its own inherent weaknesses than to the exercise of a heavy hand by the Government. Mahmoud Pasha has vetoed overt intrigue and attempts to disturb the public peace; but, unlike all other Dictators, he has respected freedom of speech, when it is not palpably directed to the fomenting of unrest. His own words on this subject are: "If we have been autocratic in regard to the Press, it has been to the end that virtue may prevail. No decent journal has suffered." The result has been that the Wafd has been thrown back on its own intellectual resources and has fared badly in the contest. The party that stood for "no truck" with Great Britain no sooner found itself shorn of political power in Egypt than it sent its representatives whining to England to complain of its own fellow-countrymen, many of whom had been original members of the Wafd. The policy in itself was not heroic; the tactics adopted were even less convincing. If any real case existed against the Government of Mahmoud Pasha, and if the Wafd were so anxious to establish a right for Great Britain to interfere in the internal affairs of Egypt, then a formal indictment of the existing régime might have been submitted and substantiated by argument. The representatives of the Wafd, however, were in no position to adopt any such straightforward course, and had to fall back on intrigue, in an attempt to bring political prejudices in England to bear on an Egyptian situation that could not be assailed by sound and fair reasoning.

In his twelve months of office Mahmoud Pasha has not only been making history in Egypt; he has also insured that the independence which is the country's goal shall rest on no mere shibboleths, but shall be based on solid

achievement and, consequently, the self-respect of the Egyptian people. The position occupied by a country in the world scheme depends not on its own estimate of itself, but on the estimate of it entertained by other countries. It is a profound mistake on the part of the Wafd's leaders to suppose that the world's opinion of Egyptians will be determined by the extent to which Great Britain's interest in Egypt is eliminated rather than by the measure of achievement of which as a nation they are capable. No worse disservice could have been rendered the country than that it should have stepped, under the constitutional conditions prevailing before June 1928, straight into the unrestricted independence that was the only goal known to the Wafd. Political divisions are the Egyptians' own concern; outside observers regard the country and nation as a whole, and it has to be borne in mind that Egypt was being judged by the Wafd's acts and standards. The Parliament of which it boasted may have outwardly conformed with constitutional practice, but it satisfied no other standard; for, in addition to the illiteracy of some of its members it did not represent that freedom of election which is the real basis of democracy. As for the political wisdom shown by the Wafd, there is no need to refer to the controversial measures for which it was responsible in the Legislature, as it has shown itself in its true colours in other ways. When the announcement of the Nile Waters Agreement between Egypt and Great Britain was made, the Wafd condemned the Agreement before it had any knowledge of its terms. It is one thing for an Opposition to issue a general warning that it does not consider itself bound by any measures that a Minority Government may take, and to reserve itself the right to revise those measures. The Wafd inveighed against a definite agreement before it knew the terms, thereby proving that it did not care whether the agreement was advantageous to Egypt or not, but was concerned only with the fact that it could not benefit the Wafd, which had not been responsible for it. Political unwisdom and the lack of patriotism could not be better illustrated.

To-day, as the result of twelve months of office, Mahmoud Pasha's Government has shown itself to be single-minded in the furthering of Egypt's interests. In the measures for which it has been responsible, after providing the necessary safeguards against political intrigue, there has been a complete absence of party spirit. The Prime Minister would seem to have imbibed with his English training the real democratic spirit which finds in service for the State the highest ideal of public life. He has summarized his programme under three principal aims; first, the improvement of the condition of the poorer landless fellaheen and the raising of the standard of life of the workers on the land by improving their living conditions; secondly, the promotion of agricultural prosperity, chiefly by means of the great irrigation projects, which, while increasing the area under cultivation and enabling the country to keep pace with the needs of a growing population, will also provide work for the unemployed; thirdly, "we are preparing for a renewal of parliamentary life devoid of many of the defects which we experienced in the past, particularly that of autocracy disguised as democracy." This year should see the opening of fifty hospitals in various parts of the land, and the completion of numerous workmen's dwellings; there will also be a further distribution of land to small cultivators. It is only necessary to compare this programme of achievement and sensible provision for the more urgent needs of the country with the legislation of the previous régime which, where it did not merely aim at provoking a quarrel with foreign Powers, so often remained a dead letter owing to the inefficiency of the administrative machinery. Little wonder, therefore, that the Egyptian people as a whole welcome a Government that exacts no political "forced labour," insures public security, leaves the individual citizen to attend to his own work, and is conscientiously striving to increase the well-being of all.

*The Near and Middle East

From Our Own Correspondents.

Cairo, June 15.

The Prime Minister.

The Prime Minister had a wonderful send-off when he sailed for Europe on Thursday on the *Sitmar s.s. Ausonia*. All the way from Cairo he was received with enthusiasm, and the large gathering on the quay which bade him farewell included a considerable proportion of notables come expressly from their villages for the purpose. Signs are daily becoming more evident that the people are realising what the present régime is doing for them and are tending more and more to rally round the Mohamed Mahmoud Cabinet. The Prime Minister can with truth claim, as he does in his various interviews, that his régime has vastly improved the atmosphere and has given an impetus to the life of the country. The record of the year that has elapsed since he took office and the parliamentary régime was suspended is one of which any Government could be proud, and Mohamed Mahmoud Pasha is entitled to the satisfaction which he expresses at being able to leave Egypt in such a peaceful and healthy frame of mind. He appears to be delighted at the honour conferred on him by his University. It is nine years since he visited Oxford—the last occasion was during the Milner-Zaghloul conversations in 1920—and when I saw him just before his departure he expressed his intense pleasure at the prospect of being able to renew acquaintance with his old haunts and his old English friends.

The Wafd and the Labour Government.

The decision of the Wafd to organise a boycott of British goods, while at the same time sending an emissary to London to enlist the sympathy and support of the new Government, is but another illustration of the curious mentality which has all along characterised those who have directed the destinies of the Wafd. The boycott is not being taken seriously here, nor is it likely to meet with any more success than previous similar and abortive efforts made by the same body. The reason why the Wafd has taken this action is that its emissaries have reported that they have received assurances from certain Labour quarters of support in their efforts to return to power, if the Wafd would only show some real activity in this country of a nature to attract attention in England.

So far the Wafd has failed to arouse any enthusiasm anywhere for the cause which it champions. Peace has reigned everywhere ever since its representatives, through their own action, lost office, and in view of the policy which the present Government is following the possibility of trouble is to-day more remote than ever. Trouble could, in fact, take place only if the Wafd received encouragement in Labour circles in England. There is a general feeling among not only the more enlightened Egyptians, but also the foreign communities,

who have been relieved from a nightmare by the substitution of the present for the Wafd régime and have been amongst the first to benefit from the feeling of confidence and the increased economic activity which have resulted from this change, that Mr. MacDonald would do a service to the cause of Anglo-Egyptian relations, if he were to make it publicly clear, as soon as possible, that the Wafd can expect no sympathy from responsible Labour so long as it persists in obstructive and provocative tactics.

Dr. Hafez Bey Afifi.

Much pleasure has been expressed everywhere at the news cabled from Berlin that, on the occasion of his visit to the German capital, King Fuad has conferred the Grand Cordon of the Nile on his Minister for Foreign Affairs. It has indeed been a matter for much surprise that, although the present Cabinet has been in existence just on a year, none of the promotions or decorations which members of previous Governments almost invariably received on taking office has been decreed, and it is hoped that the honour now conferred on Dr. Hafez Bey means that it has been decided to rectify this and so put an end to the rumours, encouraged by the Wafd, that this omission is due to the lack of favour with which the Palace regards the Mohamed Mahmoud Cabinet.

Alexandria Municipality.

The Government has appointed Mahmoud Kaissy Pasha, Under-Secretary of State to the Interior, to inquire into the alleged scandals in the Public Health Section of the Alexandria Municipality, and peace should now reign in that storm centre for the rest of the summer; for it is not expected that he will report until the Prime Minister returns in September. Meanwhile the Government has thrown a bombshell into the camp by ordering the dismissal of two of the councillors for infringing the Municipality *Règlement Intérieur*. It is understood that these two councillors took up cases on behalf of the people who had claims against the Municipality in their private capacity of lawyers, which is contrary not only to the terms of the *Règlement*, but also against all the ordinary canons of public life. The Government's action is welcome, if only as an indication that it intends to see that the dignity of this Municipality is maintained and that an end is put to the scandalous occurrences which have marked recent years as a result of the behaviour of certain of the members.

Egyptian Port Dues.

The Egyptian Government has just issued a decree fixing new Lighthouse fees. Henceforward ships entering Mediterranean ports will pay three millièmes per ton up to 800 Ottoman tons and 1½ millième per ton above that instead of 5 and 2½ millièmes respectively, while those entering Red Sea ports will pay six and three millièmes on the two categories, instead of double those rates. It is understood that a great deal of argument and persuasion had to be used before the Egyptian authorities would agree to a reduction, but that they were

compelled to give way when it was pointed out that the old rate was exceedingly remunerative and produced a good profit for the Egyptian Treasury, which is contrary to what is the practice in other countries.

Constantinople, June 12.

The Turkish Press on the British Elections.

The result of the elections in Great Britain and the return to office of the Labour Party have formed the subject of numerous leading articles in the Turkish Press, many of them written by Editors who are at the same time Members of Parliament. The commentaries and reflections of the pressmen are, on the whole, sensible and moderate. If there is any lesson to be drawn from the views of the Deputy-Editors, it is that their own parliamentary training has made very considerable progress during the last year or two.

Bearing in mind the fact that representative government in this country is run on a single-party system and that the Opposition Benches of Westminster have no counterpart in the National Assembly at Angora, these Turkish Editors have, nevertheless, been shrewd enough to draw three fundamental inferences from the results of the recent poll in Great Britain.

They recognise, in the first place, that, although Labour may once again have come into its own on the strength of a preponderancy of seats, the aggregate votes of the country—Conservative and Liberal combined—represent the distinctly anti-Socialist political views of the country as a whole. The conclusion is even arrived at that there may possibly be a defect in an electoral system which, whilst reflecting at the hustings the views of the bulk of the populace, nevertheless allows a minority party to triumph.

The second conclusion reached by the Turkish leader-

writers is that the life of the present Labour Cabinet will not be destined to run its prescribed constitutional course, unless Mr. MacDonald is shrewd enough, strong enough, and capable enough to steer the ship of State between those rocks and reefs which are bound to appear in the offing when, perhaps on a snap-vote, he may have to choose between the support of the Liberals and that of his Red extremists.

With regard to the foreign policy of Great Britain with a Socialist Minister in charge of the Foreign Office, the Turkish parliamentary leader-writers agree that, whatever faults or idiosyncracies the Labour Cabinet may be capable of committing in other directions, "*la politique étrangère de la Grande Bretagne reste et restera immuable même entre les mains des Socialistes.*"

It is interesting to report, in this connexion, that, notwithstanding an official denial by the British Embassy of any intimation that he is arriving in this city, preparations are being made for the entertainment at a Municipal banquet of Mr. Sidney Webb, former President of the Board of Trade in the last MacDonald Cabinet, who is reported by the local Press to be arriving in Constantinople within the next few days.

Visit of an Italian Seaplane Squadron.

Preceded by two supporting destroyers of the latest type, the arrival in Constantinople of a squadron of 34 Italian seaplanes within the last day or two has forged another link in the chain of the political "entente" which the statesmen of the two countries have been so busily engaged in welding for several months past. The squadron, commanded by General de Pinedo, with M. Balbo, Italian Under-Secretary of State for Aircraft, as the principal passenger, was given a hearty reception on alighting at the Buyukdere Seaplane Base by members of the Italian colony and serried ranks of Italian school-children. The Turkish Marine band welcomed the visitors with the Turkish and Italian national anthems, while a strong detachment of troops, which lined the quay-side, presented arms.

On disembarking, the Italian airmen were officially greeted on behalf of the Turkish Government by Muhied-dine Bey, Acting Governor of the city, Shukri Naili Pasha, G.O.C. 3rd Army Corps, Hakki Shinassi Pasha, Inspector of the Republican Party, and Remsi Bey, Commandant of the Turkish Air Force. The visitors were entertained to dinner at a banquet given the same evening at the Italian Embassy, to which a host of senior Turkish officers and officials had also been invited.

The squadron, escorted up to the mouth of the Black Sea by a flight of Turkish aeroplanes, has since left for Constanza and Odessa, whence it is expected to return within a day or two for another stay of 48 hours in Constantinople.

This visit and the social amenities which were the outcome of it emphasize the fact that the most serious efforts are being made by both countries to foster and develop Italo-Turkish official relations by every possible non-official method.

Greco-Turkish Negotiations.

It is much to be regretted that at a juncture when there appeared to be some prospect of a relatively early agreement between the Athens and Angora Cabinets over the numerous outstanding differences which so unhappily divide them, the newspapers of both countries should once again have launched forth into violent polemics over the question of naval armaments.

The reported order by the Turkish Government of a certain number of destroyers and other small craft has led the Greek papers to conclude that Turkey's naval plans must necessarily be directed against Greece, and that it is, therefore, incumbent on the Greek Admiralty to look to their own means of attack and defence, particularly with respect to capital ships. The Turkish papers respond by reminding their Greek colleagues that the *Yavuz* or *ex-Goeben* is to leave dockyard-hands for

recommissioning some time this autumn, and that the Greek Admiralty may, therefore, scarcely have the time to redress the balance of power as between the two navies.

Although no more, it is true, than ink-slinging on the part of Turkish and Greek pressmen, who, one supposes, must earn their living like other mortals, it is regrettable that public opinion on both sides should be unnecessarily inflamed by these redundant Press articles at a moment when the Greco-Turkish negotiations have once again reached a very critical stage.

Belgrade, June 20.

A Croat Anniversary.

To-day is the first anniversary of the Skupshtina murders, which ended an era of bitter party struggle and made possible, some say essential, the present régime. In the Cathedral of Zagreb and the Catholic Church of Belgrade and all parts of the country where there are Croats, Requiem Masses were said for the souls of Stepan and Pavle Raditch and Jura Basaritchek, who were fatally wounded during the Skupshtina shooting outrage. It was feared that there might be rioting in Zagreb, but owing to the strong preventive measures taken by the police, forbidding all demonstrations and restricting the newspapers to merely printing the portraits of the dead Croat leaders, the day passed quietly.

Fears of Communist Activity.

That there is considerable uneasiness in certain quarters is shown by the recent Communist hunts in Belgrade and Zagreb. No very important results seem to have been achieved; a few students have been banished to their village birthplaces, a few intellectuals are being held for trial, but the most important people arrested have been released for want of evidence. Among these was Krléz, the popular young dramatist, who was awarded the Demetrova Prize, the greatest literary honour that the Government can give, on the very day when he was lying in prison on a charge of Communist propaganda. His drama "The Glembay Family," for which the prize was awarded, was produced recently in the State Theatre in Belgrade and played repeatedly to crowded houses.

The Privileged Agrarian Bank.

In two days' time the subscription lists for shares in the Privileged Agrarian Bank will be closed. Already the issue has been considerably oversubscribed, but the shareholders' meeting can decide whether allotment shall be restricted or the share capital raised from 300,000,000 dinars to 1,000,000,000. King Alexander set an example to his people in subscribing for 4,000 shares. Municipalities and corporations throughout the country are responding to the call for money for this patriotic work, and banks and other financial institutions are subscribing for these Government guaranteed six per cent. Bonds, because they are utilisable for making all forms of deposits for State purposes. The object of the Bank is to free the peasants from the tremendous load of debt under which they are staggering, as a result of deflation, the purchase of land at inflated prices, and three consecutive bad harvests, and to enable them to purchase land, agricultural machinery and stock, to improve their land and apply artificial manures, and to get better seed and to live until the new harvest is available. Since the

well-being of the whole country depends on that of the peasants who form the mass of producers and of consumers—80 per cent. of the total population—it is to be hoped that the Bank will meet with speedy and complete success. It is understood that the French Orient Financial Company has decided to take up a considerable number of the shares and that lively interest in them is being shown by the rich and numerous Yugoslav emigrants in Canada, the United States and South America.

Yugoslavia and Hungary.

Considerable excitement was caused by the speech of Count Bethlen during the unveiling of the memorial to the Hungarian Unknown Warrior, when he is alleged to have stated that the ideal of the present Hungarian State was to restore the frontiers of the thousand-year-old Hungarian Empire. Since this would involve the transference of whole provinces now under Czechoslovak, Roumanian and Yugoslav rule, the Little Entente States were greatly perturbed and made strong protests through their representatives in Budapest. The Hungarian reply was not at all reassuring. The Hungarian Foreign Minister, M. Valko, claimed that this was a generally acknowledged aim of the Hungarian people, but that it merely implied a desire, by peaceful means, to modify the Peace Treaties. The Yugoslav Press was profoundly dissatisfied and claimed that such attempts to stir up chauvinist feeling should be brought to the notice of the Great Powers as a danger to the peace of Central Europe.

General News.

Professor Seton Watson, one of the greatest authorities on Yugoslav affairs, has been spending some days in Belgrade, examining the situation resulting from the changes of régime made on January 6. He has been received in audience by the King and has visited most of the members of the Cabinet. It will be interesting to hear his impressions on his return to England.

His Holiness the Patriarch Dimitri, head of the Serbian Orthodox Church, is very seriously ill. An operation was successfully performed a few days ago, but owing to his great age his recovery is very slow. The Holy Synod is permanently represented at the bedside and is prepared to take immediate action in case of an emergency.

It is reported from Brus, where M. Svetizar Pribitchevitch, leader of the late Peasant-Democrat Coalition, is living in banishment, that he is very dangerously ill. Petitions for his return to Belgrade, based on the statement of his own doctor that he can safely be moved and is in urgent need of the medical attention only available in Belgrade or Zagreb, have been made by his family, but the Government medical commission appears to hold the view that he cannot be moved with safety, and that it is better for him to stay where he is, until an operation for appendicitis has been performed.

CYPRUS.

Nicosia, June 12.

The Summer Season.

"Government Cottage," as the Governor's residence on Mt. Troodos is called, has been made ready, by order, for June 12; but uncertainty still prevails as to who will occupy it for most of the summer. Those of the Government offices which are so fortunate as to move up annually for the hot season are to proceed to Troodos on June 17.

Cypriots in Egypt.

According to information emanating from Egypt, it is understood that a reply has been received by the "Cypriot Brotherhood" at Alexandria to the last memorial submitted by them, stating that British nationality cannot be granted to Cypriots domiciled in Egypt, and that this question is to be considered as

CALCUTTA LETTER.*(From Our Own Correspondent.)**Calcutta, June 6.***The British General Election.**

There is a good deal of speculation, as is natural, as to the difference that may result in the course of Indian affairs from the advent of a Labour Government in Great Britain. There may be some difference; there may be so little as not to count. One might have preferred oneself that the new constitution for India should have been the handiwork of a strong Conservative Government. Those who want to go faster in changing things in India naturally think that the accession of a Labour Government should be a point in their favour. They may have forgotten that Mr. Ramsay MacDonald has more personal knowledge of India than Mr. Baldwin—he gathered it as a member of a Royal Commission before the Great War—and that personal knowledge of Indians tends to instil counsels of prudence in a man. Sir John Simon is probably more inclined now to the conservative view than when he accepted the chairmanship of the Commission. Mr. Ramsay MacDonald spoke with even more point than did Mr. Baldwin in favour of the Statutory Commission being formed solely of members of the British Houses of Parliament. That, he may think, commits him to abide by the findings of the Commission, however conservative their complexion. There is, of course, a left wing to the Labour Party, and presumably it will be stronger in the new Parliament than it was in the old. It is on the likelihood of the left wing's influencing the course of affairs in India that some here are banking.

Sir C. P. Ramaswamy Iyer's View.

One of the reported statements on the situation is by Sir C. P. Ramaswamy Iyer. "So far as India is concerned," runs part of his statement, "none of the three parties made it a live issue at the election. But it must not be ignored that some of our best friends are in the ranks of Labour, and that a definite pronouncement in favour of Dominion status has been made only by a section of the Labour Party. I am a great optimist, and I cannot agree with those who would minimise the emergence of the Labour Party to power. Is it too much to hope that Mr. MacDonald will utilise this unique opportunity for declaring and following an unfaltering programme of generous negotiations with India?" We shall see if it is too much. The Labour Government will not be a very strong one.

The Madras Committee.

The Madras Committee co-operating with the Statutory Commission is reported to be unanimous in advocating the grant of full autonomy in the Madras Presidency, and in advocating the introduction of responsible government in all the Departments of the Central Government except those of Defence, Foreign Relations, and the Indian States. They also demand, report says, a declaration to the effect that automatic achievement of Dominion status will be brought about within a stated period by the provision of adequate means for the Indianisation of the army and the other defence forces. Those are the Committee's main recommendations. There are others regarding a Second Chamber, separate electorates, and so on, all bearing a sufficiently practical air. One's general impression is that the Madras Presidency is riper for full autonomy than any other province in India. But when a Provincial Committee makes recommendations regarding the Central Government, the Indianisation of the defence forces, etc., it is no longer concerned only with its own province.

Boycotting the Legislatures.

The Congress has passed a resolution; it is its rejoinder to the Viceroy's decision not to dissolve the Legislative Assembly in the autumn. "That all Congress members of the Central Legislatures, or of any of the Provincial

Councils, excepting Bengal and Assam," says this resolution, "shall abstain from attending any meeting of the said Legislatures or Councils or any of the committees appointed by them or by the Government till such time as the All-Indian Congress Committee or the Working Committee decide otherwise." The Congress members of the Bengal and Assam Councils are to attend only one meeting, and that only for the purpose of registering their names; so the Congress boycott of those two Councils will in effect be the same as the boycott of the others.

Pandit Motilal Nehru's Statement.

Pandit Motilal Nehru is the author of a lengthy statement on the subject of this decision of the Congress to boycott the Assembly and the Councils. Not much of it is important, but this is:—"Any attempt to extend the lives of the present legislatures with a view to bringing before the country the recommendations of the Statutory Commission is obviously an open defiance of the country's resolve to have nothing to do with it 'at any stage and in any form.' The discussion which I was prevented from raising through no fault of mine was intended to obtain the verdict of the House on this point. The resolution passed by the Congress at its last session in Calcutta clearly shows that after December 31, 1929, it will have other things to concern itself with than Statutory Commissions and their recommendations." Those other things, to remind any who may have forgotten, are non-violent non-co-operation and civil disobedience. No ice, one would say, was ever cut by anything to which its authors could not give a less cumbrous name. The decision of the Congress has already lost the party one adherent in the Assembly, Mr. Rangaswami Iyengar. "I cannot but attend the Assembly," he has written to his leader. The Viceroy's decision not to dissolve the Assembly has been followed by the Governor of the United Provinces, who announces that he does not propose to dissolve the Provincial Council. That was expected. The Viceroy and Sir Malcolm Hailey, it is well known, work in consultation with each other.

The Indian States.

I formed an opinion about the manner in which the Butler Committee had done its work of investigating and reporting on the relations between the Indian States and the Crown and the Government of India, but I thought I would keep it to myself. Here is another man's opinion, one not unlike my own:—"After its perusal the insistent impression remains that there is a meaning in the cursory manner in which the various points are dealt with. Can it be that the authors of the Report recognised that even with their narrow terms of reference (which again they interpreted as narrowly as possible) they were faced by a problem too big to be solved in a day or a month or a year? And that while they must produce a report of some kind and make some apparent concessions to feelings, which were far stronger than they had ever gauged, until they made their progress through certain States in the spring of 1928, the contest was likely to be a long one and not to be settled by a knock-out blow in the first round. With the future of the Government of India now in the melting-pot, they possibly reflected too that policy, if not the future happiness of both Indian Provinces and Indian States, dictated that they should not commit the India Office unduly at the moment nor again unnecessarily prejudice the case of the States." That is to say in polite language, is it not, that the Butler Committee not

having done its work, it will have to be taken up later on by others, and this time done? That was the opinion that I had formed.

India's Thanksgiving Fund.

The Viceroy has now opened an All-Indian Fund "to commemorate the recovery of His Majesty the King-Emperor from a long and dangerous illness." The fund is to be used for the alleviation or prevention of sickness and disease in India. The Viceroy's suggestion as to the particular object to which the Thanksgiving Fund should be devoted, a suggestion not to be made until after taking the advice both of official and non-official persons throughout India, will be submitted for His Majesty's approval. Crores more than will ever be raised could be spent with profit on the prevention of disease. Plague, cholera, and small-pox have filled column after column in our newspapers this hot weather, and malaria is more with us than the poor even.

THE BENGAL COUNCIL AND THE SWARAJISTS.

(From a Correspondent.)

The new Bengal Legislative Council will evidently have plenty of work ready to hand when it comes into being. For it appears that no fewer than thirteen Bills—four official, that is to say, Government, measures and nine non-official—lapsed on the dissolution of the Council, and will need to be reintroduced if they are to be proceeded with. The Bengal (Rural Primary) Education Bill, to which reference has been made on more than one occasion in *THE NEAR EAST AND INDIA*, is unfortunately one of the thirteen. This is to be regretted, as the Bill is of real importance to the province, and it has already been under consideration for a long time. Of the non-official Bills which have lapsed the most interesting is probably the Bengal Industrial Development Bill, which was introduced early in February by one of the leading members of the Swaraj party.

The Government had previously framed a measure styled the Bengal State Aid to Industries Bill, the object of which was to enable State-aid to be given for the encouragement of cottage industries and other small scale industries. The help was to be afforded by loans, guarantees, the provision of a hire-purchase system, and so forth. The Minister in charge, when introducing the Bill, referred to a number of struggling industries which might, it was thought, be assisted by the State, and thus be saved from extinction.

The measure was a useful one, as the adoption of the scheme formulated in it was calculated to have a stimulating effect on a number of industries which are now languishing, such as silk, for example. But to the surprise of most people the Council rejected the Bill. And a few days later the non-official measure which has been already mentioned was introduced. It was designed "to provide for the initiation or development of industries in the Presidency with a view to improving the economic

condition of its people." To that end it proposed to empower the Local Government "to undertake directly, or render assistance in the initiation and improvement of, industries by conducting experiments for the purpose of gathering data and providing information or showing the way by example, and by making available financial and other assistance under suitable terms and conditions."

To this extent the Bill resembled the Government measure which was rejected. But it also went very much farther than was contemplated by the Government. For, by clause 5(a), the Government were to be empowered to start and to carry on pioneer industries "in order to ascertain their profitability." This provision naturally aroused opposition on the part of many industrialists in the province. For, by embarking on industrial enterprises in the manner proposed, the Government would be unable to avoid getting into competition with private enterprise. It would also run the risk of losing the taxpayers' money in the early and unprofitable stages of an industry. When introducing the Bill the mover proposed, in the usual course, that it should be referred to a Select Committee. But this time the Swarajists were defeated, an amendment that the Bill should be circulated for opinion being carried by a fairly large majority.

The net result is, of course, that nothing has been done, and that a long time must now elapse before any further steps can be taken. There seems to have been nothing really controversial about the Government Bill, which was defeated for political reasons rather than on its merits. It was brought forward during one of those intervals when Ministers have been in office in Bengal; and, as industry is a "transferred" subject, the defeat of the Bill naturally became a part of the general attack on dyarchy. Admittedly it was not a great Bill, but it might have done something to stimulate the smaller industries, and so to reduce unemployment, which is rife in the province.

The non-official Bill which has now lapsed was obviously controversial, providing as it did for what one of the speakers in Council termed "the spoon-feeding" of industry. It was not, therefore, unreasonable for the Council to decide to circulate the Bill for the views of those interested. The mistake was the rejection of the Government measure. The incident shows clearly how the welfare of the province is being sacrificed for mere political considerations.

The death occurred on June 19 of Mr. B. F. Madon, managing director of Tata and Co., and a prominent Bombay business man. He had recently been appointed a member of the Central Committee of the Government of India Banking Inquiry.

The Indian Civil Service garden party was held at the Hyde Park Hotel on June 14. Among those who accepted invitations to be present were Lord Meston, Sir Reginald Craddock, Sir John Kerr, Sir Robert Holland, Sir Walter Lawrence, Sir John Cumming, Sir James Donald, Sir Charles Stewart-Wilson, Sir Hugh Stephenson, Sir John Heaton, Sir Michael O'Dwyer, Sir Louis Crump, Sir Herbert Holmwood, Sir Richard Burn, Sir Patrick Fagan, Mr. C. A. Bird, Mr. Bathurst, Mr. C. E. Buckland, Mr. H. Warburton, Mr. A. W. Dentith, Mr. L. O. Clark, Mr. C. A. S. Persy, Lady (John) Campbell, Mr. Justice Ashwood, Mr. W. W. Smart, Mr. P. B. Haigh, Sir James Walker, and Mr. and Mrs. A. F. Fremantle.

18, OLD BROAD ST., LONDON, E.C.2

THE INDIAN PRINCES AND THE CROWN.

In a recent issue of *THE NEAR EAST AND INDIA* reference was made to the attitude of the Indian Princes towards the Report of the Indian States Committee. It was pointed out that, at first sight, the Report appeared to concede most of the principal points for which the Princes are contending, but that a closer scrutiny was calculated to lead to a different conclusion. For although the Committee have accepted four of the important points urged by the Princes, they have, at the same time, come to conclusions and made statements which are inconsistent with these findings. And it was explained that these inconsistencies centre around the difficult question of paramountcy. From the findings referred to it would appear that the Committee by implication accepted the view of the Princes, as expressed by their Counsel, that the relationship between the Crown and each of the various States is one of mutual rights and obligations, and that it must be ascertained by the application of well-recognised legal principles. But other statements in the Report suggest that the Committee hold the view that the Paramount Power has an unlimited and indefinite discretion, in virtue of its paramountcy, to do whatsoever it may at any particular time deem to be right. If, as is agreed by the Committee, the treaties and engagements have continuing and binding force, paramountcy must be limited. It is, however, laid down in the Report that paramountcy has no limitation.

As will be seen from the appendix to the Report, Counsel for the Princes came to the following seven main conclusions:—

“(1) In the analysis of the relationship between the States and the Crown legal principles must be enunciated and applied. (2) The Indian States to-day possess all original sovereign powers except in so far as any have been transferred to the Crown. (3) Such transfer has been effected by the consent of the States concerned, and in no other way. (4) The consent of a State to transfer sovereign rights to the Crown is individual to that State, and the actual agreement made by the State must be investigated to see what rights and obligations have been created. (5) Such agreement appears normally in a treaty or other formal engagement. An agreement to transfer sovereign powers is, however, capable in law of being made informally. In such case the onus is on the transferee, namely, the Crown, to prove the agreement. (6) The relationship of the Crown as Paramount Power and the State is one involving mutual rights and obligations. It rests upon agreement express or implied with each State, and is the same with regard to all the States. Paramountcy gives to the Crown definite rights, and imposes upon it definite duties in respect of certain matters and certain matters only, namely, those relating to foreign affairs and external and internal security. It does not confer upon the Crown any authority or discretion to do acts which are not necessary for the exercise of such rights, and the performance of such duties. Wherever paramountcy is mentioned we mean paramountcy in the above sense and no other. (7) The relationship is between the States on the one hand and the British Crown on the other. The rights and obligations of the British Crown are of such a nature that they cannot be assigned to or performed by persons who are not under its control.”

With the exception of the seventh these conclusions have apparently been rejected by the Committee. The relationship of the Paramount Power with the States is not, they say, merely a contractual relationship resting

on treaties made more than a century ago. “It is a living growing relationship shaped by circumstances and policy, resting, as Professor Westlake has said, on a mixture of history, theory and modern fact. The novel theory of a paramountcy agreement, limited as in the legal opinion, is unsupported by evidence and is thoroughly undermined by the long list of grievances placed before us which admit a paramountcy extending beyond the sphere of any such agreement, and in any case can only rest upon the doctrine, which the learned authors of the opinion rightly condemn, that the treaties must be read as a whole.” It is unlikely that this view will pass unchallenged. The Princes will surely answer that the list of grievances is a list of the encroachments which the Paramount Power has made upon their rights; and that it in no way admits a paramountcy extending as suggested by the Committee. Nor again are they likely to admit that the Paramountcy agreement postulates the treaties being read as a whole. They may be expected to hold that it is just an element which is common to each treaty.

It was also contended on behalf of the Princes that the Indian States were originally independent, each possessed of full sovereignty. This argument the Committee have declined to accept. It is not, they say, in accordance with historical fact that when the Indian States came into contact with the British Power they were independent, each possessed of full sovereignty, and of a status which a modern international lawyer would hold to be governed by the rules of international law. Here again it may be anticipated that the Princes will adhere to their view. They may be expected to contend that many of the States, at the time when they came into contact with the British, were in fact possessed of full sovereignty, and had international status; and that they had their own relations with European countries such as France, Holland, Denmark and Portugal.

What the Princes wanted when they asked for the appointment of a Committee was an authoritative and impartial investigation of the question of their real rights. What was uppermost in their minds was what they considered to be the disregard by the Government of the terms of their treaties. And they submitted to the Committee a considerable number of cases, extending over more than a century, in respect of which they have been, they maintain, adversely affected by the arbitrary action of the Paramount Power. Will they now consider that the Committee have authoritatively and impartially investigated the question? And will they be satisfied that what they conceive to be their rights will be secure in the future? It would seem to be most unlikely that they will be satisfied with either the investigation or the results of it. The findings which are in their favour are not necessarily binding on the Crown. But, on the other hand, the important and far-reaching statements which the Committee have made in support of the present theory of paramountcy may be utilised as a defence against any proposal for the modification of the existing system. This cannot be very encouraging to the Princes who in such circumstances will naturally feel that they are in pretty much the same position as they were in before the appointment of the Committee.

The *Jirgah* of Sunni and Shiah Orakzais from the Tirah and Sunni Afridi is still sitting at Peshawar, but no settlement has been reached, as the Sunnis refuse to give up Shiah land in their possession. Colonel Heale, Chief Commissioner of the North-West Frontier Province, is attending the *Jirgah*.

Sir Muhammad Rafiq, of Mount Park Road, Ealing, W., a Judge of the High Court of Allahabad, a member of the Council of India, lately Indian Delegate to the League of Nations Assembly, who died at Delhi on February 8, left estate in England of the gross value of £5,659, with net personality £5,636.

The Indian Council for Agricultural Research, which was formed on the recommendation of the Linlithgow Commission, was formally inaugurated on June 21 by Lord Irwin, the Viceroy. Sir Vijaraghava Achariar was appointed vice-chairman. A grant of two lakhs of rupees by the Nizam of Hyderabad was announced.

THE VISIT OF THE EGYPTIAN PRIME MINISTER.

Mahomed Pasha Mahmoud, Prime Minister of Egypt, arrived in London late at night on June 18. He had been met at Folkestone by Sesostri Sidarouss Bey and Hamza Bey, who travelled up with him, and at Victoria Station his arrival was awaited by Sir Robert Vansittart, Mr. J. Murray and Mr. W. H. Selby of the Foreign Office, the staff of the Egyptian Legation, representatives of the Egyptian community in London, his Private Secre-

Mohamed Pasha Mahmoud, D.C.L.

tary, Rahim Bey, who had arrived in England a week earlier, and others. During the past week his Excellency has found most of his time occupied at the Legation, where he is staying. On June 24 a dinner in his honour was given by His Majesty's Government, at the Carlton Hotel, and on the afternoon of June 25, he left for Oxford, where on the next day he had conferred upon him the degree of Doctor of Civil Law. Mahmoud Pasha expects to remain in England until the third week in July, when he will take a holiday before returning to Egypt.

HELLENIC STUDIES.

This week the Society for the Promotion of Hellenic Studies celebrated the fiftieth anniversary of its foundation. The Jubilee Meeting was held at the Stationers' Hall on June 21, and in the evening a dinner was given at the Criterion Restaurant. Of the original council of the Society four members, it is interesting to note, still survive—M. Gennadius, Professor A. H. Sayce, Professor Percy Gardner and Mr. George A. Macmillan. Mr. Arthur Hamilton Smith, President of the Society, presided at the afternoon meeting and at the dinner. At the former he passed in review the growth and changes in Hellenic study during the last fifty years. After messages of congratulation and addresses from kindred societies had been read, speeches were delivered by M. Caclamanos, Greek Minister in London, and by Professor Gilbert-Murray. At the dinner the toast of "The Prosperity of the Society" was proposed by Lord D'Abernon and supported by Sir James Frazer. Among the others present were:—

Professor Ferdinand Noack, Professor H. Goelzer, Sir Aurel Stein, Sir Frederic Kenyon, Professor Percy Gardner, Professor D'Arcy Thompson, Professor R. S. Conway, Professor A. Y. Campbell, Principal Emrys Evans, Professor J. Harrower, Professor Canon G. C. Richards, Professor Martin Nilsson, Dr. G. F. Hill, Professor Ernest Gardner, Sir Reginald Blomfield, Sir George Macdonald, Dr. A. B. Cook, Professor A. W. Pickard-Cambridge, the Very Rev. Professor G. Milligan, Professor E. W. Skeats, Mr. C. H. Hawes, Principal W. R. Halliday, Mr. John Penoyre, Dr. E. Norman Gardiner, Professor R. M. Dawkins, Dr. H. R. Hall, Mr. H. M. Last, Sir Cecil and Lady Harcourt Smith, Sir Thomas Heath, Professor P. N. Ure, Professor W. M. Edwards, Lady Hutchinson, Mr. S. Gaselee, Lady Kenyon, Sir John R. and Lady Brooke, Professor H. R. Fairclough, the Rev. Percival Stanley, Professor H. J. W. Tillyard, Mr. and Mrs. A. W. Gomme, Mr. and Mrs. A. J. B. Wace, Dr. R. O. Moon, Professor Baldwin Brown, the Rev. D. J. A. Nairn, Dame Emily Penrose, Sir Basil and Lady Blackett, Lady Frazer, the Rev. G. Henniker Gotley, and Professor J. F. Dobson.

CYPRIOTS AT STUDY.

On June 19 Sir Ronald Storrs, Governor of Cyprus, paid a visit to the Pulteney General Evening Institute, at the London County Council school in Peter Street, Wardour Street, where he addressed a class of Cypriots, mostly employed in hotels and restaurants, who study English at the Institute. After a tribute to the London County Council for its breadth of mind in providing classes of study for British subjects and others from overseas, Sir Ronald Storrs said that the educational facilities thus conferred on so many Cypriots would benefit them and the community very considerably. He recommended Cypriots to visit the British Museum, to examine the interesting collection of Cyprian antiquities there.

Dr. A. Zemenides expressed the gratitude of those connected with the School for the Governor's visit. He hoped that Sir Ronald Storrs would continue his efforts for raising the standard and improving the conditions of life of one of the most deserving classes in Cyprus, the teachers.

Mr. W. A. L. Lenègre, Principal of the Pulteney Institute, stated that when the class was started, Dr. A. Zemenides, formerly Professor of Education in the Teachers' Training College in Cyprus, who had made himself the Protector and Father Confessor of the Cypriot colony in London, went into the hotels, cafés and restaurants of West London and very quickly enrolled fifty students. He had found that his assistance to his compatriots was being limited by their lack of knowledge of the English language. Dr. Zemenides devoted himself to the interests of the students, looked after them when they were ill and helped most of them to obtain situations.

Sir Ronald Storrs in his reply made special mention of the teachers of Cyprus, and expressed his intention of doing all in his power, on his return, to improve their status and salaries.

Among those present were Lady Storrs, Lady Lloyd, Mr. Rupert Gunnis and Mr. J. B. Chapman of the L.C.C. Education Department.

THE LATE MR. KHALIL JEBARA.

We regret to have to record the death of Mr. Khalil Jebara, a well-known shipping merchant and a prominent member of the Syrian community of Manchester. Mr. Jebara belonged to an old Christian family of Damascus, but he was born in Beyrout, where his father had gone in 1860 to escape the religious persecutions of that year. At the age of 23 Mr. Jebara went to Manchester in 1887 and became a British subject in 1892. There he built up a flourishing business, and acquired a prominent position in the city's life. For many years he was Secretary of the Egypt and Levant Section of the Manchester Chamber of Commerce. Mr. Jebara was responsible during the War for the organisation of the Syrian Relief Fund, in connexion with which large sums of money were given to sufferers in the Middle East.

COLONEL A. C. YATE.

We regret to have to record the death of Colonel A. C. Yate, who died on June 12, at the age of 76, at his home at Beckbury Hall, Shifnal, Shropshire. Colonel Yate, a younger brother of Colonel Sir Charles Yate, had very considerable knowledge of Central Asia. He entered the Army in 1875, and, whether on service or on leave, he contrived to see much of that part of the world lying between the Caucasus and India. He took an especial interest in affairs in Persia, Central Asia, and Afghanistan. In later years he became actively interested in the order of St. John of Jerusalem and particularly in the island of Rhodes. From 1911 to 1918 he served on the Council of the Central Asian Society, for which, after 1918, he worked unceasingly as Honorary Secretary. Much of the success of that eminent Society is, in fact, due to the efforts of Colonel Yate during the five years after the War. Readers of THE NEAR EAST AND INDIA will doubtless remember the vivid and vigorous letters which used to appear in these columns over Colonel Yate's name.

The fourth Anglo-Egyptian Students' Conference will be held at Welwyn in July. Sir Thomas Arnold will preside, and among those who will read papers will be Mr. J. Spender, who will deal with the political situation, and Major Owen Tweedy, who will speak on the question of the Nile Waters from the economic standpoint.

Telegraphic communications between Shiraz and Ispahan, which were interrupted on June 12, were restored six days later. The Persian garrison of Zazerun is still intact, but isolated military lines of communication are blocked almost in every direction by the insurgent Kashgais, and the roads through the passes were last week reported to be damaged and the main bridges broken.

An expedition has been arranged by the Ludwig Blattner Picture Corporation for the purpose of filming tribal and natural life in the regions of the Albanian mountains. This expedition left England on June 19 under the leadership of Rosita Forbes (Mrs. Arthur McGrath), who will also direct the film. The picture will be entitled "The Song of the Mountains," and the sequences will be so arranged as to permit a story with an elementary plot, written by Mrs. McGrath, to be interwoven into the picture.

PERSONAL AND GENERAL

TO-DAY

June 27, 1929 (New Style).

June 14, 1929 (Old Style).

Muharram 19, 1348 A.H., of the Muslim Calendar.

Sivan 19, 5689, of the Jewish Calendar.

Lady Lloyd has arrived from Cairo at Russel's Hotel, 12a, Curzon Street, W.

Sir Samuel and Lady Wilson will arrive in London on June 29 from East Africa.

The Hon. Mrs. Spencer Boyle left Marseilles on June 21 in the P. and O. Malwa on her way to Port Said.

The Sultan of Zanzibar, who is visiting various parts of Great Britain, was in Edinburgh on June 21.

Prince Youssef Kemal of Egypt arrived last week at the Hotel Victoria, and is staying in London for about a fortnight.

Ex-King George of Greece, who arrived last week in London, visited the King and Queen at Windsor Castle on June 23.

Mr. and Mrs. Charles Mackintosh have returned from Cairo, and are staying at 13, Chapel Street, Belgrave Square, S.W.1.

Sir Henry Dobbs, late High Commissioner for Iraq, was in the chair at the Indian Political Service Dinner Club, which was held at the Trocadero Restaurant on June 19.

Mr. R. P. Skinner, United States Minister to Greece, and Mrs. Skinner, who arrived at Southampton on June 18 from New York, have been staying a few days in London before proceeding to Athens.

Viscount Inchcape, who was created an Earl in the Birthday Honours, takes the title of the Earl of Inchcape. His son, the Hon. Kenneth Mackay, will have the courtesy title of Viscount Glenapp.

H.M. King Fuad has conferred the Grand Cordon of the Order of the Nile on H.E. Hafiz Afifi Bey, Egyptian Minister for Foreign Affairs, in recognition of the services that he has recently rendered to Egypt.

The Sultan of Zanzibar will be the guest of His Majesty's Government at dinner at Lancaster House, St. James's on July 2. A reception was held yesterday in honour of the Sultan by the African Society at the Hotel Victoria.

Mahomed Pasha Mahmoud, Prime Minister of Egypt, was the guest of honour of His Majesty's Government at a dinner given at the Carlton Hotel on June 24. Mr. Arthur Henderson presided and among those present were: Mr. Philip Snowden, Captain Wedgwood Benn, Lord Thomson, Mr. Sidney Webb, Sesostri Sidarous Bey, Abdel Malek Hamza Bey, Mr. Tom Shaw, Mr. A. V. Alexander, Mr. Noel Baker, Hon. Cecil Campbell, Sir Austen Chamberlain, Sir Ronald Lindsay, Ibrahim Fahmy Bey, Kamel Abdel Rahim Bey, Sir Hugh Trenchard, Mr. J. Murray, Mr. C. M. Patrick, Mr. Radi Abou-Seif Radi and Mr. W. H. Selby.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE.
Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. I. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R., Deccan Fees £120 p.a. Reductions for sons of Clergy and Officers. Holidays can be arranged.

Sir John Chancellor, High Commissioner for Palestine and Trans-Jordan left Jerusalem on June 19 on leave. Before sailing for Europe on June 22, His Excellency spent a few days with Lord Lloyd at the Residency, Cairo. Sir John is returning to England *via* Geneva, where he will appear before the Permanent Mandates Commission on behalf of Palestine.

Lord Lloyd, High Commissioner for Egypt, who has been visiting Siwa and other centres in the Western Desert, left Cairo on June 21 for Beyrout, as the guest of M. Ponsot, French High Commissioner for Syria. Lord Lloyd subsequently visited Homs, Aleppo, and Damascus.

Queen Marie, Queen Dowager of Roumania, arrived last week in Belgrade with the Princess Ileana.

King Zogu, accompanied by members of the Albanian Government, left Tirana last week for Durazzo, where he will spend the summer months.

Lady Hailey, who is returning to Government House, Lahore, is embarking at Marseilles on the P. and O. s.s. Kaiser-i-Hind, which left Tilbury on June 21.

Sir Sidney Barton, His Majesty's Minister at the Court of the Empress and King Tafari of Abyssinia, arrived in Addis Ababa last week.

Mr. Rudolph Said-Ruete will read a Paper on "The Dynasty of the Al Bu Said in Arabia and East Africa," with lantern illustrations, at the Royal Society's Rooms, Burlington House, Piccadilly, W.1. on Monday, July 1, at 5 p.m. under the auspices of the Royal Asiatic Society in conjunction with the Central Asian Society. H.H. the Sultan of Zanzibar will be present.

The first Annual Dinner of the Sudan Dinner Club was held at the Hotel Victoria on June 25.

The President of the French Republic has conferred the grade of Commander of the Legion of Honour upon Judge Michael Hansson, President of the Mixed Court of Appeal in Egypt.

Admiral Koundouriotis, President of the Greek Republic, has conferred the Grand Cross of the Order of the Saviour on General Balbo, Italian Under-Secretary for Air, and the Grand Cross of the Order of the Phoenix on the famous airman, the Marquis de Pinedo.

The Council of Armstrong College, Newcastle-on-Tyne, on June 21 appointed Sir William Sinclair Marris, K.C.S.I., K.C.I.E., Member of the Council of India, and late Governor of the United Provinces, to be Principal of the College in succession to Sir Theodore Morison, K.C.S.I., K.C.I.E., C.B.E., who was appointed in 1919.

Where to stay in the East

*Write for particulars of attractive offer

Inland City of Nicosia.

OLYMPUS HOTEL : Port of Limassol.

(Opened all the year round.)

OLYMPUS HOTEL: On Mt. Olympus (Troodos)

(Summer resort; altitude 6,400 ft)

Offer excellent accommodation at reasonable tariffs.

These four prominent hotels are owned and operated by:

NAJEM HOURY & SONS, LIMASSOL, CYPRUS.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

CURRENT IMPERIAL IDEALS AND THEIR APPLICATIONS IN THE MIDDLE EAST.*

By ROBERT STOKES.

There are at present three great classes of Imperial ideals, and two of them are in obvious conflict. (1) The first class may be briefly dismissed. It comprises the ideals which are being applied in the Dominions and which centre round the conception of nationality. (2) The second comprises those ideals which centre round the principle of self-government for backward countries; and (3) The third comprises those which centre round the principle of the Dual Mandate, or trusteeship for backward countries.

Between the second and third of these classes, that is, between the principle of self-government and the principle of the Dual Mandate or trusteeship, there is a deep inconsistency, and one of the fundamental decisions which needs to be taken in relation to the Middle East is the choice of whichever of these two principles is to be the mainspring of our policy there.

It is worth devoting some time to this inconsistency, for it exemplifies what is probably the most momentous conflict of Imperial ideals since the controversies which culminated in the Durham Report and the grant of self-government to Canada. Briefly stated, the inconsistency lies in the fact that democratic self-government for a backward country means in practice government by the educated *few* among the natives, whereas the principle of the Dual Mandate involves a trusteeship by white officials, not on behalf merely of this educated *few*, but on behalf of the native population *as a whole*.

It is easy to see how the principle of self-government came to be so widely adopted in the Colonial world. It had worked well in the Dominions. The troubles of Ireland were believed by many to have been caused by the want of it. The demands for it put forward by the educated minorities of our Eastern dependencies were difficult to answer logically, and were reinforced by a natural respect for civilisations that had produced elaborate art and lofty speculations, and could claim an immemorial antiquity. Actually, however, the essential fact about a backward country is that the *bulk* of its population are backward—that is, illiterate, superstitious and ignorant. To apply the forms of democracy to such a country as, for example, British India, in which only some seven per cent. of the population can read sufficiently to understand, and take part in, an election, is to set up, not democracy, but oligarchy. It is to hand over the vast, helpless, illiterate bulk of the population to be exploited by their old oppressors, in particular by the priest and the moneylenders. Where, in addition, the backwardness of the country is due to fierce racial or religious animosities, this principle is liable to become a principle of anarchy as well as of tyranny.

Recognizing these facts, we have attempted to apply this principle in the East, gradually and with safeguards. In both India and Ceylon the attempt at constructing half-way houses has failed lamentably. Its general effect has been to give the legislatures power without responsibility, and to leave the officials with responsibility but without the powers that should go with it. The result has been disastrous in most spheres of government, and it seems clear that we must either go forward or back. We must either apply the principle of self-government fully or not at all. The authors of the Ceylon Report acknowledge this and recommend that the principle of self-government for a backward country be there carried to its logical conclusion by the grant to a new Ceylon legislature of complete responsibility and power over the internal affairs of Ceylon. There are illusory safeguards, in the form of universal suffrage and powers of intervention by the Governor, but his only advisers are to be his Ministers, the very people whom these powers

are designed to check! The universal suffrage would not protect the peasantry, for at least a generation, and might *then* be very dangerous. Meanwhile the plantation industries on which the prosperity of Ceylon is based would be endangered, the impartial justice and guarantees against differential taxation, which are so vital to the minority communities and above all to the depressed classes, would be jeopardised; and the general bulk of the population would be threatened with exploitation for the benefit of the literate oligarchy which it is proposed to set up.

This is not an alluring prospect for Ceylon, but its wider implications are far worse. The real importance of the Ceylon Report lies in this, that it is the logical culmination of a policy or principle, namely, the policy or principle of self-government for backward countries, which we have been tentatively pursuing over a great part of the East. It is not easy to see how we can give full self-government to Ceylon and not tread the same path in India. It seems to spell disaster. Yet the moral difficulties in the way of the opposite course, that is, the reimposition of some species of Crown Colony government in the East, are enormous. We should be held to have broken our promises, although in point of fact we never did promise to give responsible government to any Eastern country before the lowest classes of the natives had educated spokesmen capable of at least making their wishes articulate. It would be said that we were reversing a considered policy without giving it a fair trial. The root of the trouble is that the principle of self-government for backward countries, however mistaken, has at least the appearance of a great democratic ideal, and a fond democracy will not easily be persuaded to abandon it, unless some higher ideal is substituted for it. Here lies the importance of the latest developments of that other great Imperial principle, the Dual Mandate.

As originally applied in Africa by Lord Lugard, the principle of the Dual Mandate consisted of a double trusteeship. It may be stated as follows: It was the ideal of ruling and developing tropical Africa as a dual trust—first, as a trust on behalf of the moral and material development of the native inhabitants of Africa; and, secondly, as a trust on behalf of civilisation and humanity as a whole, the duty being to develop the vast economic resources of these territories for the benefit of the whole world. This principle has had numerous developments, three of which may be specially mentioned:—

1. The first is indirect rule. This is a system of government aiming at preserving all that is best in native life and organization, and at helping the native to build up, with British advice and under British supervision, a policy suited to his needs. The British adviser keeps in the background and exercises his power by checking or exhorting the native rulers. Where these are energetic, there is enthusiastic co-operation and usually rapid progress; for the native will readily accept from his chiefs novelties of which he would be suspicious, if they came direct from the white man. Where the ruler is slothful or otherwise unsatisfactory, the British official is there to check abuses, to ensure financial purity, and to achieve what progress is possible. The system is infinitely adaptable and is essentially a principle of evolution. It must not be confused with the rule of, say, the Princes of India, or the Sultans of Malaya. Such rulers are normally independent Princes in treaty relations with (in India) the Paramount Power. Our indirect rule among, say, the Emirs of the Fulani Empire in Northern Nigeria, is totally different in its nature. They are Princes whom we have conquered and afterwards reinstated, and who exercise, not complete sovereignty subject to limitations, but a delegated and conditional, partial sovereignty. This may be consistent with the maintenance of considerable state, and in point of fact the Emir of Sokoto, though now only *primus inter pares* among the Nigerian Emirs, styles himself "Commander of the Faithful," gathers about him some faint lingering

* Paper read before the Near and Middle East Association on June 12.

traditions of the great Caliphs, and, if we were to withdraw, would be the head of one of the more important Muhammadan States in the world. This distinction between indirect rule through Princes and advisory rule based on treaty relations with Sovereign Princes (in relation to whom we may or may not be a Paramount Power) is of increasing importance in the British Empire and its Mandates. To apply it in the Middle East (and to venture an opinion on an extremely debatable legal question) it would appear that we are at present employing the system of indirect rule in Trans-Jordan and Iraq (since in both we discharge Mandatory responsibilities amounting even in Iraq still, to an essential portion of sovereignty, although Iraq is not, technically, now a mandated area); but that in Iraq we are aiming at raising the ruler rapidly to the position of an independent sovereign, not subject to paramountcy.

2. The second development of the "Dual Policy" can, perhaps, best be described in the words of the East Africa Commission's Report of 1925, p.22, where the idea of a definite trusteeship for the immigrant communities is associated with the other two trusteeships in the duty of Government. After dwelling on the trusteeships for native welfare and economic development, the Report continues:—

Having said this, it should also be added that Government cannot restrict its conception of its duties to these two main considerations; it also has a duty to perform to those individuals and communities not of African race who by their courage and enterprise, and often at the instance and with the encouragement of Governments in the past, have made their homes, or at least the sphere of their life's work, in Africa. To be more precise, Government has equally a duty to perform to the Europeans and Asiatics engaged in work in Africa, be they settlers, merchants, civil servants, or missionaries. The ideal before Government is not merely that of holding the balance between a series of interests, native or non-native, but of serving the highest welfare of communities as a whole. In fact, the development of the community sense is one of its paramount tasks.

Returning to the question of native trusteeship, the same Report observes:—

This duty has been regarded in the past as the special function of the agents of the Imperial Government and of the missionaries. But such a limitation is neither possible nor desirable. Britain will not be judged at the bar of history by the work of these two alone, the trusteeship lies really upon the shoulders of every man and woman of European race in Africa. It is in very truth a white man's burden, and all Europeans in Africa must share in the work.

If this doctrine (which may be said to convert the Dual Mandate into a Triple Mandate, i.e., (1) for natives (2) for economic development and (3) for the immigrant communities) were to be applied in Palestine with, of course, the necessary modifications and qualifications for a far higher type of population, it would give us two clear principles. In the first place, it would establish definitely that, apart altogether from the Balfour Declaration and the terms of the Mandate, the Government owed, after its trusteeship for the existing inhabitants and for economic development, a further permanent trusteeship for the immigrant Jews. Secondly it would confer upon the immigrant Jews, being Europeans, a share in the general trusteeship for the moral and material welfare of the Arabs. It is at least arguable that the first of these principles would lay upon the Government the duty of giving rather more active help to Jewish immigrants than is given to-day; and that the second would involve a close supervision of the types of Jewish immigrant admitted. At present there is Jewish complaint of Governmental neglect, and at any rate privately, Arab complaint of some of the types of Jew admitted.

3. The third and by far the most important development of the "Dual Policy" is that contained in the Hilton Young Report on East Africa, issued this year. This Report is a State document of the very highest importance and one which cannot fail to have repercussions on the whole field of Colonial government. The far-reaching recommendations of the Commission directed to the gradual federation of vast territories in East Africa into a dependency that would ultimately be almost comparable in size with British India, are themselves of less importance than the "new orientation," to use Lord

Lugard's words, which the Report gives to the whole of British Colonial policy. The report attempts nothing less than a philosophy of Colonial Government, and the basis of it all is the conception of trusteeship for native populations *as a whole*. This brings it into violent conflict with the principle of self-government, which would hand over such populations to the tender mercies of the Western-educated native. But even apart from this, the whole tenour of the Hilton Young Report conflicts with the assumptions of the self-government school of thought, as expressed, for example, in the Ceylon Report. Here are three illustrative quotations taken, almost at random, from the Hilton Young Report:—

One of the great dangers arising out of the contact between modern European civilisation and the natives of Africa is lest the latter may, with their natural imitative faculties, acquire superficial intellectual attainments, without having had time to build up, by a long process of training, the habits of mind and character without which intellectual ingenuity is a dangerous possession.

In considering the general course to be followed, it appears to us that there are two dominant considerations. First, it is possible that African native society may never become adapted to representative institutions in the form in which they have developed in the British constitution, nor may it be possible to apply representative parliamentary institutions, which are founded on the basis of a single homogeneous community, to States containing European and native communities side by side. Secondly, it is certain that, even if such institutions may ultimately be adapted to African conditions, the natives require a long period of preparation and experience before they can be qualified to take their place in them. British representative institutions have been built up after centuries of evolution on a foundation of experience slowly gained in local government. So far as possible African society should be taken through a similar course of development so as to avoid the dangers of attempting a sudden transition from a primitive state to twentieth century conditions.

The British Government must retain responsibility both for the advancement of native interests and for holding the scales of justice even between the various racial communities; and if our view is accepted that, in order to discharge these responsibilities, the ultimate authority must be retained in the hands of the Imperial Government, questions relating to the composition of the electorate are no longer charged with the same far-reaching significance. For, in that case another, and in our view far stronger, bulwark is provided for the maintenance of British rule than is furnished by any safeguards that can be devised for maintaining the British character of a local electorate. And, on the other hand, the question, so far as the Indians are concerned, is no longer one of securing an adequate share in a local electorate which is the ultimate and sole repository of power, but merely one of being sufficiently represented to be able to make their views known and to contribute their experience to the Government of a territory in which the final decisions in racial issues are reserved to the Imperial Government.

The Hilton Young Report was produced in an atmosphere of great expectation. Many schemes had been mooted for the federation of all or part of East Africa on *white Dominion*, not Colonial, lines, into a vast new Dominion intended to be greater ultimately than South Africa in size and comparable even to Canada. In such a white Dominion the white settlers of Kenya might well have been the predominant partners. But this whole idea is rejected in the Report, principally on the ground that such settlers are an interested party in labour questions which affect almost all phases of native affairs. The report welcomes them to a generous share in the great trusteeships, but it denies them ultimate power, and still less would it give them the sole power. The report aims at the gradual unification of East Africa under a white official trusteeship executed, on the spot, primarily for the benefit of the native populations as a whole, uneducated as well as literate.

These principles are obviously capable of the widest application, and the cordiality with which they have been hailed by representatives of such different viewpoints as Lord Lugard, Lord Olivier, Archbishop Lord Davidson, and the Anti-Slavery and Aborigines Protection Society, suggests that they will be widely applied. Their application in India, Burma and Ceylon would involve, at the very least, the conferring on the Viceroy and Governors of a new status as trustees for the interests of the *bulk* of the native populations, would lay on them the duty of holding watching briefs for those interests in all legislatures,

and would give them wide powers of legislative interference and action.

Special caution is necessary in considering the application of these principles in the Middle East, for while (in addition to the difference in cultural level) in East Africa the difficulties of government are mainly in race, in the Middle East they, generally speaking, depend rather more on religion; but the analogy between the position of the white settlers in Kenya and the Jewish settlers in Palestine is obvious and should surely preclude all thought of a Jewish State or Jewish Dominion in Palestine. If the Kenya settlers, who are not disliked by the blacks, are unfitted to be the sole trustees of native welfare in East Africa because they are an interested party in labour questions, how much more are the Jewish settlers in Palestine unfitted for the sole trusteeship of Arab welfare, seeing that in addition to the same disability, they are disliked by the Arabs!

But before we can attempt to consider any broad application of the new Imperial ideals to the Middle East, there are certain outstanding facts and changes in the world which must be borne in mind.

1. The first and all-important change, which in a few years has altered the outlook on the whole future of the Middle East, is the development of air routes. The day may yet come when regular air routes will connect Europe and the Far East north of the Himalayas; or Africa and the Far East across the Indian Ocean, setting out from Mombasa or Dar-es-Salaam; but these things are of the more remote future. In any future with which we can reckon now the whole of the air traffic from Europe and Africa to Asia and the Pacific must cross the Middle East. It is this which gives Trans-Jordan its enormous potential importance. Thanks to it we can run air services over British Protected territory from the Mediterranean to the Persian Gulf. Thanks to the Air Services the Middle East should soon begin to regain some of that immense prosperity, as the great trade bridge of the world, of which it was robbed, first by the Turkish conquest and then by the Suez Canal. It seems clear also that the Air Age will bring to the Middle East an enormous tourist traffic. Baghdad, Babylon, Ur of the Chaldees—here are three storied names that spell romance to the most ignorant. Yet the greatest name of all has not been mentioned; and all these are now being brought within a few days of Europe, and of the expanding populations of several Dominions. There will be many to sigh at the still further "vulgarising" of the Holy Land by hordes of tourists, but it is inevitable, and possibly may not be without some spiritual as well as economic advantages. Another aspect of air development is that, broadly speaking, the air defences of Trans-Jordan, Iraq and India can be treated almost as one unit.

2. This air development is itself but one example of the enormous contraction of the world which modern communications have effected, but there is an aspect of this contraction which is often ignored. It has also drawn the Muhammadan world together as never before, and we, who are the greatest Muhammadan Power in the world, must remember the new unity of Islam. Were anything done, say, in Palestine, seriously to flout Muhammadan sentiment, it would have reactions from Nigeria to India.

3. The third change is more subtle and less generally realised, but it is extremely important. The old British way with dependencies was first to give them security, justice and sound finance, and then, while waiting for a generation to grow up unacquainted with the bad old ways, to give mild encouragement to any promising industry. In the new era colonial industries have to be scientifically developed and are in keen competition with similar industries in other colonies. Such development involves continuous scientific investigation, constant recourse to joint clearing-houses of scientific information, and scientists of a calibre unlikely to be attracted by the possibilities of a career in a single dependency. These things were the burden of the Ormsby-Gore reports on West Africa and Malaya of 1926 and 1928 respectively,

and of the Colonial Office Conference of 1927. They all point in one direction—towards the larger grouping and interconnexion, or at any rate co-operation including *local* co-operation, of dependencies and the joint undertaking of scientific tasks and of marketing. The 300,000 acres of forest in Palestine are a case in point. They are quite a valuable asset to the country, but what sort of a scientific staff could a forest industry of that size support?

4. The fourth fact is the enormous potential development of the Middle East, which only awaits the capital that will come with the tourists, and a slightly increased pressure of the world's population upon the means of subsistence. There is said to be abundant promise of fertility in the Jordan Valley, and with proper engineering there is no reason why Iraq should not in time become another Egypt in fertility, as it once was. Unfortunately, capital tends to fight shy of the A Class Mandates with their more or less definite envisagement of coming termination.

To sum up the general drift of these considerations, it would appear that the economic importance of the Near East is likely to increase considerably in the future, that it will be difficult for these dependencies to escape the tendency towards the closer local co-operation with their neighbours which is everywhere being forced on colonial dependencies, and that their future is liable to be enormously influenced by whether the political road which they tread is that of so-called self-government by the few, or that of trusteeship for all. This will probably depend to a large extent on which of these paths the Simon Commission suggest for India. If the Commission take the road of self-government, they may cause untold misery in India and elsewhere, and may set a deplorable example to such dependencies as those of the Middle East. In spite of much propaganda to the contrary, self-government in Palestine would almost certainly mean an Arab State, unless we were to commit the evil folly of breaking faith with the Arab world, first, because the great majority of the population are Arabs, and secondly because any other sort of self-governing State would have perpetual trouble with its Arab neighbours. The suggestion contained in such books as "The Seventh Dominion" by Colonel Josiah Wedgwood, that Great Britain should aim at the ultimate foundation of a Jewish Dominion in Palestine, is so palpably unfair that it seems difficult to believe that it could ever gain the sanction of the civilized world. Self-government, too, in this area, would make co-operation between the dependencies more difficult. If, on the other hand, the Simon Commission follow the way of trusteeship, its application to the Middle East should not be very difficult. My own view is that it would lead to something in the nature of closer local co-operation between Cyprus, Palestine, Trans-Jordan and perhaps, for a time, Iraq. If Aden, Somaliland and Socotra were included, it might lead to the development of the two last named half-forgotten corners of the Empire. Such a co-operation would not be inconsistent with the early inclusion of Iraq in the League of Nations and its separate sovereignty, provided a sufficient portion of its southern area remained under some form of British protection or lease to allow of our controlling the air route to India and Australia. Such a federation or close co-operation should stimulate pilgrimages to Palestine, which has sacred associations for all the Christian Churches, including the Orthodox Churches, and for all the sects of Muhammadans, as well as for the Jews. If ever there was a country which called out for government in the spirit of the East African Report, in the spirit of a trusteeship for its inhabitants and for the whole world, that country is Palestine. If ever there was a portion of the earth that needed firm, delicate, impartial handling, it is that cauldron of ancient feuds, of racial and religious animosities which we call the Middle East. Let us pray that those who decide its destiny may apply to it the greatest of our current Imperial ideals and that it may be ruled, not by a sham democracy, but by English officials in the spirit of a sacred trust.

PERSIA'S NEW SEAPORT.

Khor Musa and Bandar Shapur.

The note entitled "*Persia's New Seaport*," in the current number of the Central Asian Society's JOURNAL, by "Convoy Leader," does not deal with the ancient or modern history of this most interesting and potentially important harbour. The following brief recapitulation of salient facts on the subject, for which we are indebted to a Correspondent, is, therefore, of particular interest.

Early History.

The very full levels taken by Major W. R. Morton, R.E., of the P.W.D. India, in 1902-6 at the request of the Persian Government in connexion with the Karun Irrigation schemes indicate the probability that in very early times the Khor Musa was the mouth of the Karun, which must have reached it through the gap in the hills five miles east of Ahwaz and thence down the great depression now drained by the Malih stream. When, at a much later date, the Karun took to its present bed, it continued to enter the Khor Musa, turning S.E. at Marid, and passing the thriving town and fertile date groves of Qubban, now a salt swamp, until in 1766 it abandoned this bed and followed a boat channel which had been dug from near Mohammerah to Mârid (hence the term "Haffâr" or "excavated" for the reach from Khumbek above Mohammerah to Mârid).

At this period the Shatt-al-Arab had two mouths, one reaching the sea as at present at Fao, the other being the Bahmashir channel which was of about equal size and importance. The word Bahmashir is a corruption of Bahman Ardashir, a town anciently situated on the banks of one of the two mouths of the Shatt-al-Arab, and referred to by Hamza of Isfahan in 961 A.D.; Bushire and Reshire are similar corruptions respectively of the names Bokht Ardashir and Ram Ardashir, all three being founded by the King Ardashir Papakan.* For the current form Abu Shahr, a mixture of Persian and Arabic, there is no etymological justification at all.

The little port of Buzi near Fallahiyah on a branch of Khor Musa is so named not from an eponymous goat, but from the old Persian word buzi—a ship†.

Khor Musa was already a well-known anchorage when Nearchus arrived in B.C. 326. It is referred to by Pliny (vi. 26) in A.D. 23-79 as the port of Muza, and elsewhere as Mesene.‡ It is referred to in the travels of Nasir Khusrawi in the 13th century as the creek of Doraqistan, in which ships coming from India cast anchor.

Khor Musa was the scene of sanguinary fighting between British and Indian sailors and Arab pirates of the Chaab (K'ab) tribes in 1766 (see Saldanha p.201).

Recent History.

When Anglo-Russian relations were a subject of considerable anxiety at the beginning of the present century, the Russian Government having made no secret of their desire for a *débouché* in Persian territory at the head of the Gulf, the Khor Musa was reconnoitred at the suggestion of Lord Curzon, then Viceroy of India,§ under the orders of the Home Government, by Commanders Kemp and Somerville, R.N. The information contained in their reports was supplemented by a series of further reports by officers of the Royal Indian Marine and by Consular Officers at Bushire and Mohammerah. The Khannaq branch of the Dauraqistan creek to within a few miles of Qubban, and the Zangi tract which adjoins the northern bank of Khor Ma'shur, above the mouth of the Dauraq creek leading to Buzi, were all carefully mapped. For obvious reasons, the charts then made were not published at the time, but the 7th Edition of the Persian Gulf Pilot (1924) gives at page 231-2, under the incorrect spelling Hor Musa,|| a fairly full and accurate description of the channel and its surroundings, and states that the minimum depth on the bar is 2½ fathoms.

Naval inquiries definitely established that the Khor Musa bar carried 3 fathoms of low water springs, but

it was added that a complete survey might reveal a deeper channel than any then known; it was also remarked that successive surveys carried out over a period of nearly 20 years had indicated that the soundings in this region are little liable to variation, due no doubt to the fact that practically no silt is at any time deposited. Such silt as there is was, doubtless, originally brought down by the Bahmashir, which is shown, however, by successive surveys, to have been steadily shrinking for the past century. Within the bar the depth steadily increases and after passing Dairah there is no bottom at 9 fathoms, a condition which is maintained the whole way from this place to the head of the main creek where the channel is still 10 fathoms deep and not less than half a mile broad, and even greater depth is found in the Khor Abu Khadhayar.

The islands lying between the various creeks are a favourite resort of seagulls and other birds during the breeding season, their nests being quite unapproachable for the most part owing to the soft mud, and in the summer large quantities of salt are produced by evaporation.

One little ruined mud fort, on one of the smaller Khors, is known as the Kut, or fort, of Mister Zubaid el Farangi. Who he was, and what he did, history does not relate, but he deserves to be immortalized like the dead pilot whose tomb (Qabr-an-Nakhuda) was till recently the only landmark in the Khor.

When in 1909 the Persian Railway Syndicate obtained from the Persian Government an option to build a line northwards from the Persian Gulf, the terminus was specified as Mohammerah, or alternatively, Khor Musa, the potentialities of which had been fully explained to the authorities in Teheran, if, indeed, they were not already aware of them. But, in point of fact, at a much earlier date (in 1906) the possibilities of Khor Musa as a terminus of the Baghdad Railway had been raised by Lord Ellenborough in the House of Lords, the idea being that the disadvantages of Basrah and the political objections to Koweit as a terminus might be avoided by the German promoters, with benefit to Persia, by placing the terminus in Persian territory on the Khor Musa. This solution would have had, in certain eventualities, which have happily not materialized, the further advantage to Persia, in the event of the construction by Russia of a North-South railway, of avoiding the possibility of control of the port and terminus at Khor Musa by any one nation other than Persia. In June 1910 a further survey was made and the courses of the Khors Silaik Bahri, Silaik Barri and Kuwairin mapped on the 1 inch to 1 mile scale by a young officer of the Indian Army, who experienced all the miseries described by "Convoy Leader" in the article referred to, and nearly met his death in the process. The position of the island of Daira wa Bunnah (*Kataderbis* of Nearchus) was fixed by the navigator of H.M.S. Redbreast (Lieut. Spreckley, R.N.) in September 1910, his party narrowly escaping a watery grave by the rising tide. In 1924 an aerial survey of the mud flats between the Karun and the Khor Musa was made and the land connections ascertained.

Whilst every credit is due to the survey party of United States and other engineers in 1927, and still more to the Persian Government for boldly proceeding with the construction of the future Bandar Shapur, the debt that is owed to earlier workers in the same field should not be forgotten. To quote Horace:—

Vixere fortes ante Agamemnona
Multi: sed omnes illacrimabiles
Urgentur ignotique longa
Nocte, carent quia vate sacro.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Anglo-Persian Meeting.

With net profits half a million pounds in excess of those for the same proportion of the previous year—nine months—it is not to be wondered at that a note of hopefulness characterized the proceedings at the annual general meeting of the Anglo-Persian Oil Company. The Imperial Commissioner of the Persian Government, who acts as liaison officer between his Government and the Company, rightly described the Chairman's speech as encouraging, in view of the fact that the picture he had drawn was one of very general progress in all directions. The new field at Haft Kel now has six flowing wells, all brought in at relatively shallow depths, with an aggregate yield of 12,000 tons per day, one of the latest having given an initial 24 hour's output of 5,000 tons, the largest production from any well that the Company has yet drilled in Persia. Sir John Cadman's statement that the general progress in regard to the large drilling programme in Iraq is satisfactory, having regard to the special difficulties encountered, will be received with interest. Definite success, he added, had been achieved on the large Kirkuk structure, which would appear to be of great promise, and he was greatly impressed with the eventual possibilities. On the vexed question of production, Sir John again uttered a warning note. The world, he said, is one unit of consumption, and its oil resources belong to future ages as well as to ours. While satisfying our own needs, we ought not to forget that we are also trustees for posterity, and we are still not far beyond "the beginning of knowledge" in methods of utilizing petroleum efficiently.

A New Industry for Abyssinia.

I referred recently to the interesting experiment that is being made with regard to tea cultivation in Abyssinia. Elsewhere in this issue will be found a letter from Mr. George Howland, who gives further details regarding his experiment. It is obvious that the development of the industry cannot be left to the Abyssinians if it is to be the success that is hoped, and I should imagine that one or more of the Indian tea companies would have no objection to expanding in so promising a direction. One could wish that it were possible to grow the tea plant also in the Sudan, which could well do with such an excellent crop as tea. Unfortunately conditions in the two countries are different.

Developments in Turkey.

As was the case throughout a large part of the Near East last year, climatic conditions were unfavourable in Turkey, and the crop in Anatolia suffered severely. The effects were more pronounced in Turkey's case because, as Sir Herbert Lawrence pointed out in his speech at the meeting of the Ottoman Bank, a report of which will be found elsewhere in these columns, it followed a series of severe winters and rainless summers. Turkey was forced to import flour on a large scale to make good the deficiency of the wheat crop, while an important consequence was the further reduction of the purchasing power of the country population. Sir Herbert Lawrence paid a tribute to the progress accomplished by the Angora authorities in the realm of public finance, but he went on to point out that the railway policy of Turkey, however useful it may be from the national point of view, will mean a considerable increase in the country's foreign indebtedness because of the orders for material required for construc-

tion work. In the 1928-29 Budget this item figured for £129,000,000 as against £122,000,000 in the Budget for the previous year. Sir Herbert Lawrence also touched on the project for the establishment of a state bank, and said that nothing could be better for the prosperity of Turkey and the business interests in the country than an issuing house which would ensure a stable and elastic currency.

Cyprus Asbestos Company.

A very satisfactory report is forthcoming from the Cyprus Asbestos Company for 1928. The production of asbestos fibre amounted to 16,287 tons, as compared with 11,200 tons, and the net profit was £61,287, equivalent to £3.75 per ton of fibre, this representing an increased margin of profit as compared with 1927 of approximately £1 per ton. Production for the current year has been satisfactory, and it is anticipated that the total production for the year will show a substantial increase and that further reductions in working costs will be effected. It may be added that forward sales now amount to about £1,000,000.

The Problem of Oil Production.

The important question of over-production in the oil industry was dealt with by Lord Bearsted in his speech at the meeting of the "Shell" Transport and Trading Company, Ltd., which is reported elsewhere in these columns. He pointed out that the continued increase in the world's production of oil continues to be the outstanding fact to-day, though the rate of increase in 1928 of nine million tons was not on the same scale as in 1927, when it was 22½ million tons. A feature of production in 1928 was the rise in the output in Venezuela from nine million tons to 15½ million tons. Mexico, Lord Bearsted pointed out, was almost the only country to show a decrease, and, as he indicated, in considering these figures it is necessary to bear in mind the potential production of Iraq. In the current year the increase in production has been more marked, bringing the question of over-production to the front again. In this connexion, Lord Bearsted dealt with the question of the rationalisation of the oil trade, pointing out that rationalisation is the intelligent prevention of alternating periods of over-production and temporary scarcity.

COMMENTATOR.

BANK OF ATHENS

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 25.

The counter attractions of Ascot, and general lack of public interest have kept business on the Stock Exchange at a low level. Prices in New York have shown no inclination to recover and the outward shipment of gold had a slightly adverse effect upon the gilt-edged market which indirectly affected other sections. The uncertainty in regard to the monetary outlook is still acute, though there appears to be no cause for undue anxiety in the immediate future. The foreign bond market showed signs of activity, European bonds coming into demand as a result of the Reparations settlement and there was some inquiry for Brazilian, Chilean and Mexican bonds. Fairly satisfactory traffic figures helped Home Railway stocks, but general dullness pervaded the industrial section. The results of the South African Election produced lower prices for Kaffirs and there was a considerable decline in the activity in Rhodesians.

American Buying and Stock Prices.

Fears of American buying of British securities resulting in the control of British companies passing into American hands continue to be expressed, and the number of British companies which have taken steps to alter their Articles of Association to preclude this possibility grows. The Buenos Aires Great Southern Railway, for example, held a meeting for this purpose on Friday. American purchases, however, are not entirely or even mainly actuated by intentions of acquiring control but by a natural desire to take advantage of the fact that British industrial securities give much more generous incomes than American stocks of the same class. This, of course, results from the great volume of savings that has been pouring into American securities in the last few years. A recent analysis shows that the average yield on 50 representative American industrials was 3.52 per cent. compared with 4.29 per cent. at the beginning of 1926. On 178 similar British stocks the average return was 6.23 per cent. against 6.86 per cent. at the earlier date. The effect of American buying is seen, however, in the fact that on 14 stocks specially favoured by America the yield had declined from 5.63 per cent. at the end of 1926 to 4.02 per cent. These figures indicate the powerful effect of this buying movement here, but the margin between the American and British yields is still wide and a continuance of the purchases may reasonably be looked for until the margin is much narrower. Such buying would, of course, have an important effect on the prices of industrial securities in this country.

Bank Dividend Prospects.

With only a week to run to the half yearly balancing period it is possible to come to some conclusions as to the interim dividend prospects of shareholders in the British banks. On the whole the rise in the Bank rate from $4\frac{1}{2}$ per cent. to $5\frac{1}{2}$ per cent. in February will have favoured the banks. On the other hand their resources have contracted during the year to date and therefore their earning assets have been reduced. According to the

clearing banks figures for May, Call Loans, Discounts, Investments have all substantially declined since December last, the reductions totalling £83,000,000. Advances, however, reflecting the banks' desire to assist trade to the utmost, and perhaps also a change in the method of financing industry, have increased by £32,000,000. Acceptances, which increased considerably in 1928, have now fallen away. In view of these divergent influences the net result will probably be little change in the disclosed profits of the big British banks. In any case, so conservative are the dividend policies pursued that distributions are very unlikely to be affected. This conservative policy which has contributed to the building up of the strong financial positions of the banks, and which also ensures a stable income, is one of the reasons why bank shares are so attractive to the genuine investor. In general, however, they give somewhat moderate returns, but National Provincial Bank fully paid ordinary can be bought to yield a full £5 per cent., and Westminster £4 shares, £1 paid, return £5 1s. per cent.

Rand Dividend Features.

The now completed announcements of the Witwatersrand gold mining companies in respect of the half year ending June 30 embody only two features—one on the favourable, the other on the unfavourable side. The first consists in the declaration by that big amalgamation, the Crown Mines, of a dividend of $32\frac{1}{2}$ per cent. compared with 30 per cent. for the second, and 25 per cent. for the first half of 1928. No indication could have been obtained from the monthly returns of the ability of the company further to increase its dividend rate; in point of fact, the profits for the current six months—estimating the June amount at the average of the other five periods—fall short of those for the concluding half year of 1928. The explanation must be that the company has required less money for capital purposes, although here again no such contingency was foreshadowed by the annual report. The adverse feature in the batch of declarations consists in the announcement by the Sub Nigel company of only 20 per cent. as against 30 per cent. on the two preceding occasions. A circular issued in February last intimated that owing to the development position of the mine a lower value of ore has to be treated; but while the subsequent monthly profits have shown an almost progressive decrease it has scarcely been of such proportions as to suggest a one-third cut in the dividend.

As more than 100 people have been struck by lightning in Yugoslavia since June 1, the Government has warned the peasants not to take shelter under trees during thunderstorms.

The Turkish postal administration is issuing 200,000,000 new stamps, bearing the portrait of Mustapha Kemal, and printed in two colours.

Great damage has been done by floods and storms in the Ost Beskiden range of the Carpathians. Many country people were rescued through the upper windows of their houses, and a man was killed by lightning at Kosice.

Sir Hari Singh Gour's lecture, under the auspices of the British Maha Bodhi Society, on "The Spirit of Buddhism," which was fixed to take place at the Essex Hall, Essex Street, Strand, on June 27 at 8 p.m., will, instead, be held at The Small Essex Hall, Essex Street, Strand, on Monday, July 15, at 8 p.m.

LIVERPOOL

MANCHESTER

GLASGOW

GREEK FINANCES.

International Commission's Report.

A satisfactory survey of economic conditions in Greece is given in the report for 1928 of the International Financial Commission which has just been issued. The following details are taken from the report.

The gross yield of the revenues allocated to the loans placed under the control of the International Financial Commission amounted in 1928 to 4,063,836,240 drachmæ, as against 3,891,669,535 drachmæ in 1927, an increase of 172,166,705 drachmæ, or 4.4 per cent. This increase was due entirely to the advance in the receipts from the assigned Customs, which amounted to 172,172,880 drachmæ, or 10.4 per cent. This improvement must be attributed to the raising of the coefficients of the gold drachma applied in the course of 1927 to several articles of food and which only had their full effect in 1928. The receipts have not benefited in any way by an increase in the import trade, the total value of the merchandise imported showing a slight decrease as compared with 1927.

The sales of monopoly articles consumed in the country showed an increase amounting altogether to 11,157,495 drachmæ, resulting from a slight increase in consumption. Thus the receipts from salt have increased by 3.2 per cent., those from petrol by 3.5 per cent., those from matches by 2.4 per cent., those from playing cards by 7.7 per cent., and those from cigarette paper by 5.1 per cent. The increase recorded in the receipts from cigarette paper is due entirely to the delivery of special paper for the use of producers, which is sold at a higher price than ordinary paper. A marked increase in the sales of Naxos emery has resulted in an increase of 1,494,150 drachmæ, or 7.3 per cent., in the receipts, despite the reduction made in the price for the best qualities. The receipts from alcohol show an increase of 7,689,843 drachmæ, or 2.4 per cent., as a result of an increase in consumption.

The stamp receipts show a considerable increase, amounting to 28,533,537 drachmæ, or 9.7 per cent. But this increase does not constitute an index of the development of the actual demand, which, on the contrary, has decreased by 0.5 per cent. This apparent contradiction arises from the fact that the deliveries of the Commission to the State offices against payment do not coincide with the sales by these offices to the public. In 1927 the opposite phenomenon was recorded, the receipts of the Commission having decreased while the actual sales showed an increase. On the other hand, the receipts from tobacco show a considerable decrease, which counterbalances the increases of the receipts from the alcohol and stamp monopolies. It amounts to 48,881,201 drachmæ, or 3.8 per cent., as compared with the receipts of 1927, and reflects a decrease in consumption, but there are reasons for believing that this apparent decrease arises to some extent from the development of fraudulent consumption, which has been favoured by the introduction in 1927 of the régime of free consumption by producers by means of the purchase of special cigarette paper.

The total receipts of the revenues allocated to the Refugees Loan of 1924, taken separately, show a decrease of 8,798,541 drachmæ, or about 1 per cent. That decrease is the result of the fall in the tobacco receipts, which is relatively more pronounced in the new provinces than in the old. Outside the receipts of the allocated revenues the Commission has received from the Refugees Settlement Commission the following amounts:—53,000,000 drachmæ destined for the ordinary service of the Refugees Loan of 1924, which has been paid to the Greek Government with the surpluses of the allocated revenues, £15,151 14s. 7d., arising from the repayment of the debts of the refugees and destined for the extraordinary amortisation of the same loan.

The receipts subject to the *plus-values* on behalf of the Old Debt in gold have risen to 232,399,929 drachmæ, as against 200,293,830 drachmæ in 1927, an increase of 32,106,099 drachmæ, or 16 per cent. This increase is

almost entirely due to the rise in the stamp receipts, to which has been added the part accruing to the *plus-values* of the increases in the receipts from petrol, matches, and emery. The decrease in the tobacco receipts has not affected the *plus-values*, in view of the fact that the share of the *plus-values* in these receipts is subject to a guaranteed minimum, in force since the over-valuation of these duties in 1926, and which has been effectively applied both in 1927 and 1928. As has been explained in the reports for 1926 and 1927, the definite division of the *plus-values* of these two years has been suspended as a result of the difference which arose between the Greek Government and the Commission over the method of calculating the *plus-values*, a difference which has been submitted to arbitration. While awaiting the decision it was decided to distribute the amount of the *plus-values* which the Government did not consider as in dispute, that is 24 per cent. of the original interest in the form of interest and 8 per cent. of the original interest in the form of amortisation, over and above the minimum interest and amortisation.

The arbitral tribunal was constituted, according to Article 32 of the Control Law, by two arbitrators nominated by the two parties respectively. These two arbitrators not having reached an agreement, the Swiss President nominated a third arbitrator who gave his decision on November 15, 1928. The decision was that for the years not yet settled the conversion of the *plus values* allocated for the improvement of interest must be made in the future directly from drachmæ into gold francs. The compensation due to the holders for the improvement of interest as a result of the loss suffered by them from the depreciation of the drachma has been fixed at five million gold francs annually; that amount must be decreased by five hundred thousand gold francs over ten years for the restoration of interest to the Greek Government on past accounts. As regards the question of the receipts of the stamp duties it was decided that these receipts, less fifty million drachmæ, must be included in the *plus-values*. Following the decision the Commission has proceeded to the definite distribution of the *plus-values* for the years 1926 and 1927. That distribution has given for the raising of interest and the improvement of the amortisation of the old gold loans the following percentages calculated on the original interest.

	Plus-Values of 1926.		Plus-Values of 1927.	
	Interest.	Amortisation.	Interest.	Amortisation.
1st Group (Loans 1887, 1893) ...	54	14	54	10
2nd Group (Loans 1881, 1884, 1890) ...	54	12	54	12
3rd Group (Loan 1889) ...	56	12	54	12

The distribution of the sums corresponding to these percentages, deducting the amounts already paid, has been carried out for each loan at the due date immediately following the decision. The decision of the *plus-values* for 1928 has given 57 per cent. for the raising of interest for the 1887 loan, which, added to the conventional minimum of 43 per cent., brings the interest to be paid on this loan in 1927 to the parity of the original interest. The 1893 loan and the loans of the second group will receive 58 per cent., and the 1889 loan 56 per cent., which, added to the conventional minimum of 32 per cent., brings the interest to be distributed on these loans in 1929 to 90 per cent. and 88 per cent. of the original interest respectively. For the improvement of the amortisation the division gives 14 per cent. of the original interest to the first and second groups and 12 per cent. to the third, percentages which have to be added to the conventional minimum of 2 per cent.

The service of the debts subject to the contract of the Commission, including the administrative expenses of the Commission and the duties and expenditure of the Régie, required in 1928 the sum of 1,371,441,353 drachmæ of the assigned revenues. The corresponding amount for 1927 was 1,304,609,216 drachmæ so that there is an increase for 1928 of 66,832,137 drachmæ. The principal factors in this difference are as follows. On the one hand the Commission was relieved in 1928 of the service

of the debt of the Greek Government to the Refugee Settlement Commission, which was entirely discharged in 1927, and figured in the accounts of that year for 94,761,022 drachmæ. The amount required for the service of the Gold Debt for 1928 has been also decreased by an amount of 64,037,079 drachmæ, representing the difference between the amount retained by the Commission for the payment of the *plus-values* of 1926 and 1927 and that which was retained by the Commission—a difference which has been returned to the Greek Government. On the other hand the service of the new Stabilisation and Refugee Loan has called for an expenditure of about 180 million drachmæ. The amount brought forward in 1929 for the account of the *plus-values* has exceeded that of the previous year by about 28 millions. The service of the Athens Water Loan has required nearly six millions more and the expenses of the Régie 9 millions. The rates of purchase of the remittances of the Commission in foreign exchanges have been slightly higher than in 1927.

The balance of the receipts returned to the Greek Government stood at 2,745,394,886 drachmæ as against 2,587,060,318 drachmæ in 1927, an increase of 158,334,568 drachmæ. This increase corresponds to the difference between the increase in the receipts (including the payment in drachmæ of the Refugee Settlement Commission) and the smaller amounts required for the service Outside the service of the Debt carried out by means of the assigned revenues the Commission utilised for the extraordinary amortisation of the Refugee Loan an amount of £13,000 and 14,000 dollars out of the sums paid for the object by the Refugees Settlement Commission. The amount thus utilised in 1927 was £52,000 and 60,000 dollars.

By virtue of the Protocol signed at Geneva on September 15, 1927, ratified by a Decree-Law of the Greek Government of November 10, 1927, and by the Law No. 3,424 of December 7, 1927, the Stabilisation and Refugee Loan was issued in February, 1928, for an amount of £4,070,960 and 17,000,000 dollars. Its service was placed under the control of the International Financial Commission, and guaranteed by the surplus of the existing assigned revenues. The issue of this loan produced an effective sum, after the deduction of expenses, of £6,500,000. The Geneva Protocol anticipated a loan for an actual amount of £9,000,000, intended as to one third for the stabilisation of the drachmæ, one third for the repayment of certain obligations of the Government, and one-third for the continuation of the refugee settlement work. The balance of £2,500,000 will be provided by means of a loan of 12,167,000 dollars contracted with the United States Government, bearing interest of 4 per cent. and redeemable in twenty years. The service of this loan also will be guaranteed by the Commission on the surplus of the assigned revenues with the same status as that of the Stabilisation Loan. This loan had not been issued by the end of 1928.

By the provisions of the above-mentioned Geneva Pro-

TOCOL the Bank of Greece was established as the sole bank of issue on May 14, 1928. At the same time the legal stabilisation of the national exchange was carried out by fixing the gold drachma at a new figure which corresponds exactly to 375 drachmæ for the pound sterling.

The old laws and conventions regulating the various issues of paper money of the National Bank of Greece have been abrogated, and the whole amount of the notes in circulation has been transferred to the liabilities of the Bank of Greece. On the other hand the Bank of Greece was given assets in gold and bullion transferred from the National Bank, as well as the part of the Stabilisation and Refugee Loan intended for stabilisation, so as to constitute a sufficient covering to permit the Bank of Greece, acting in conformity with the provisions to this effect incorporated in its statutes, to safeguard the maintenance of the rate of the drachma at its new gold parity. The current debts of the Greek Government to the National Bank of Greece were also transferred to the Bank of Greece, and their amount was reduced by the payment of the above-mentioned part of the Stabilisation Loan. The Bank of Greece has the sole charge of transactions of State funds. It has also assumed all the banking services for the International Financial Commission which were previously carried out by the National Bank of Greece. Thus under the benevolent auspices of the League of Nations, a large part of the task with which the Greek Government was faced in the task of the financial recovery of the country has been satisfactorily accomplished.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, July 19). (For passenger sailings and dates see advertisement.)

Anchor Broeklebank Line.—S.s. Manipur for Calcutta (Birkenhead, June 29); s.s. Matheran for Calcutta (Birkenhead, July 9).

Bibby Line.—S.s. Lancashire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, July 10).

British India Line.—S.s. Domala for Bombay and Karachi (London, June 29); s.s. Mandala for Colombo, Madras, and Calcutta (London, June 29).

Cunard Line.—S.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, Corfu, and Gruz if sufficient inducement (Liverpool July 6, Swansea July 9); s.s. Brescia for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, July 27).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 9).

P. and O. Line.—S.s. Padua for Calcutta (London, July 5); s.s. Macedonia for Bombay (London, July 5).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus (London, June 29); s.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 3); s.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 13).

Ellerman and Papayanni Lines.—S.s. Roumelian for Malta, Alexandria, Jaffa, and Haifa* (Liverpool, June 29); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool July 10, Swansea July 6); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, July 11); s.s. Mardinian for Gibraltar*, Algiers*, Malta, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool July 20, Swansea* July 20); s.s. Oporto for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool July 20, Swansea July 25). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syra and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

The Albanian Government has created a State monopoly for the sale of oil and benzine.

An agreement having been reached between the masters and men, the Athens dockers' strike was settled last week.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*MASSILIA ...	July 23	*ICASTALIA ...	Sept. 10
*ELYSIA ...	Aug. 9	*ASSYRIA ...	Sept. 27

*First class passengers only. †Specially low fares. ‡Calls Port Sudan.
‡ First and Third class passengers.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA. 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

Engineering Topics

(By Our Engineering Correspondent)

Scientific Methods for the Small Boiler Plant.

That a neglected field for economy, especially in the smaller mills and factories, is the industrial steam generation plant can now be regarded as more or less generally realised. For example, one of the first considerations for efficient results is ample flue area and non-leaky brick-work, easily tested by means of a lighted taper or lamp, while it may be added a valuable material for patching holes and cracks is a heated mixture of equal parts of pitch and cement.

With regard to scale and corrosion in the boilers, if a water softening plant is not installed often quite good results can be obtained by adding a solution of sodium carbonate, a cheap material, to the boiler feed-water with every stroke of the feed pump, say something like 1 to 1½ lb. per 100 gallons of water evaporated.

All exhaust steam available should be utilised for heating the feed-water, and of course for a medium-sized plant, an efficient installation of feed water economisers is essential, since every 11 degrees F. rise in the water saves about 1 per cent. of the coal bill. Again, the boiler and steam pipes should be covered with efficient non-conductive material, such as 85 per cent. magnesia, slag wool, asbestos, or high-grade diatomite composition, particularly, for example, in many collieries and other mines, sawmills and wood-working establishments with long pipe ranges exposed to the open air, including all the flanges of the steam pipes and the boiler fronts down to the firing level.

Finally, a very important point is efficient draught, so as to burn the fuel at a high temperature, even in the case of low grade material such as lignite, peat sawdust, shavings, and general vegetable refuse material, with the maximum emission of radiant heat and without undue excess of air. In this connexion the "Turbine" forced draught steam jet furnace is available since it can be applied to any type of boiler in a simple manner merely by taking out the existing firebars and replacing them with the draught adjusted as required by operating a steam valve.

The amount of steam consumed by the nozzles does not exceed about 3 per cent., which is in practice little more than mechanical forced draught, and without of course all the complications of the latter, which in any case is not always a practical proposition for the smaller boiler plant. Also any quality of low grade fuel can be used including also coke breeze and high ash content coal, while blending of such material with better grades of coal is often a highly economical proposition and also prevents black smoke.

Using Exhaust Gases.

It is probable that the next development of the internal combustion engine will be along the lines of making use of the exhaust gases, which are now entirely wasted, together with the great amount of energy they contain. It must be remembered that even in the highest grade of aero engine the efficiency is comparatively low, and the waste of power is such that the impartial observer must be seriously perturbed.

This inefficiency has long been noted, and engineers have already done much to better matters. Going into the subject rather in detail, with a view to seeing how this waste occurs, and in what direction it might be minimised, it appears that if the total heat energy equivalent of the petrol be taken as 100, then we have 24 parts available as brake horse power, we have 28 dissipated in the water jacket, 4 wasted as engine friction, 4 lost by radiation, and no less than 40 carried off in the waste gases.

It would seem from this that the modern internal combustion engine is actually remarkably inefficient, and there are not wanting those engineers who hold strongly that the whole solution of the problem lies in gas turbines, and until these are developed to a stage when they can come into general commercial use, we shall have to continue to waste our power as at present.

Utilisation of Waste Heat.

With regard to the losses mentioned, it has been decided, and there seem no grounds on which to challenge the conclusions, that we cannot prevent the slight loss from radiation, that if we could it would not amount to much, and that, further, there seems no immediate likelihood of our being able to reduce the loss of heat in the cooling water. At the same time we may make a reservation to the effect that it should be possible to make some use of the heat wasted in that direction, although one is not prepared at the moment to say what that use should be.

A clearer idea of the waste referred to can be gathered if we express the heat value of the petrol in terms of horse-power. We have shown that out of every 100 heat units 24 are used as brake horse-power. From this it follows that to obtain one brake horse-power we have to use the equivalent of 4.17 h.p. in petrol and that for every useful brake horse-power given by the engine we waste 1.7 h.p. in the exhaust gases and 1.17 h.p. in keeping the cylinders cool.

Waste of Energy.

We may follow this further and instance, for example, an ordinary 15.9 h.p. car of average efficiency and in average condition. When the engine of this car is giving out 16 h.p. on the brake, the exhaust gases are carrying off nearly 27½ h.p. into the atmosphere and about 18 h.p. is being dissipated in keeping the cylinders cool. It would certainly seem, at first sight, as though economy could be effected here. At the same time it must be borne in mind that in attempting to obtain useful work from the energy wasted in the exhaust gases one would certainly run a risk of introducing back pressure to so

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from
RANGOON, CALCUTTA, and COLOMBO
To BEIRA, DELAGOA BAY, DURBAN, EAST LONDON
PORT ELIZABETH, MOSSEL BAY, and CAPE TOWN.

great an extent as to interfere with the proper running of the engine, whilst at the same time no radical innovation could be introduced into our methods of cooling unless it were clearly shown that they would not cause over-heating, valve distortion and a host of other troubles which would be more serious than the actual waste of energy.

CORRESPONDENCE.

TEA GROWING IN ABYSSINIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In view of your reference in THE NEAR EAST AND INDIA of June 6 to my experiment in introducing the tea plant into Abyssinia, I think you might be interested to have some further details on the subject.

The tea plant was not known to exist in Abyssinia, so I undertook to make a tour of inspection through various provinces and if advantageous opportunities presented themselves to plant tea seed. I also undertook to bear all expenses and to make a present to King Taffari of any tea which might grow as a result of this work.

In the early months of the year a tour of inspection over a thousand miles in length was made. It proved successful, for a large area, at least a 1,000,000 acres in extent of very fine tea growing country, was discovered. This has an altitude of from 5,000 to 7,000 feet, and is now covered by forest, the trees in which are mostly small. The rainfall is well distributed and is believed to exceed 100 inches a year. Part of this tea land is in the province of Kaffa, to the south west of Addis Ababa and part in the adjoining provinces of Walega. From the capital, Kaffa, is ten days' journey with porters or 20 days by mule caravan. The good tea land may also be reached through the Sudan via Gambella and is seven or eight days' journey from the border.

Small experimental plantings will result in a few tea bushes establishing themselves at different points on the 1,000 miles traversed, but one, larger than any other, made at Bonga in Kaffa gives every indication of the successful establishment of a small tea plantation. Several hundred young plants are now showing in the nurseries made there. These will be properly planted out and well looked after till they come to maturity. These anticipations are based on the facts that great interest was taken in the project by Dejesmatch Desta Damto, the King's son-in-law, who is Governor of Kaffa, and by the Italian Roman Catholic Mission at Bonga, who have undertaken the care of the growing plants.

King Taffari evinced great pleasure over his gift. His appreciation is in complete accord with his earnest desire and unremitting efforts to secure the prosperity and advancement of his people.

I am unable to take any further part in developing a tea-growing industry in Abyssinia. I hope, however, that some English company or individual will take advantage of my pioneering work and establish tea plantations in the country. This should prove not only a good investment, but of great value to the Abyssinians, for through working on the estates they would learn how to grow and manufacture tea.—I am, etc.,

GEORGE HOWLAND.

12, Heath Mansions, The Grove, Hampstead, N.W.3.
June 20.

The National Bank of Bulgaria celebrated on June 19 the fiftieth anniversary of its foundation. The occasion was marked by a special meeting in Sofia, which was attended by King Boris, the Prime Minister and other members of the Government, and leading representatives of finance and commerce in Bulgaria.

Soviet authorities in Odessa and elsewhere recently imposed vexatious restrictions upon Turkish merchants trading in the U.S.S.R., Turkish imports being subjected to a profit tax, which is contrary to the provisions of the Soviet-Turkish Commercial Convention. Turkish goods have also been confiscated by the Soviet authorities. It is expected, says *The Times*, that the Angora Government will make energetic representations in Moscow.

THE SMYRNA FRUIT MARKET.

Higher Prices Probable for Sultanas.

Messrs. C. J. Giraud and Co., of Smyrna, in a report dated June 10 state:—

The entire crop of sultanas has now been practically disposed of. Unsold stock remaining in this country is variously estimated at about 400 to 500 tons consisting of the remnants of the year's yield. Distribution has been approximately as follows: to the Continent 27,800 tons; U.K. 11,700 tons; Sundries 2,900 tons; local consumption and stock remaining 7,600 tons; total 50,000 tons.

During the past month demand has shown some activity mainly for U.K. account, and the tendency of prices has been upwards, gaining about 10 to 15 per cent. according to quality, over the March level of values. Attention is now concentrated on new crop prospects. We have had a very severe winter and the flowering of the vines has been retarded by some two or three weeks. Weather during the spring has been normal, and, on the appearance of the vines to-day, the coming yield is estimated as likely to attain about 55,000 tons as opposed to 50,000 last year. It is impossible to foresee, however, how the weather over the next two months may affect the yield and to what extent the present estimate of 55,000 tons may be reduced over that interval. A summary of the situation generally, the world over, is of interest just now.

Firstly, in regard to the stocks carried over from the preceding year, the situation, as we see it reflected by the figures below, is strong:—

	June 1928. Tons.	June 1929. Tons.
California	100,000	10/20,000
United Kingdom	15,000	11,000
Continent, Australia, Smyrna, Greece	Immaterial.	Immaterial.
Total	115,000	21/31,000

Thus, we are entering this season with a shortage of between 90,000 to 105,000 tons as compared with the carryover last year at the same date. Secondly, in regard to the prospects of the coming production, the forecasts to-day appear as under, as compared with the 1928 yields:

	1928. Tons.	1929. Tons.
California	260,000	200,000
Australia	15,000	40,000
Smyrna	50,000	55,000
Greece and Crete	12,000	12,000
	337,000	307,000

Thus there is a prospective shortage of about 30,000 tons in the estimated production for 1929 against 1928. Adding the shortage in carryover, 90/105,000 tons, to the prospective shortage in production, 30,000 tons, we thus arrive at a reduction of the world's total available supplies for 1929 of between 120,000 to 135,000 tons under last year's figures.

As far as it is possible to trace forward operations for September shipments of new crop, these have been on a relatively small scale. Smyrna shippers are quoting on the basis of about fls. 38 to fls. 40 for Extrissima Carabournu, September shipment. Buyers, doubtless under the influence of the course that the market followed last year, are acting with reserve. Taking into consideration, however, the general situation this season, present quotations may be regarded as low and the level of prices in the season will probably be considerably higher.

A Cairo message states that the State Railways will shortly invite tenders for the construction of a bridge across the Nile south of Edfina. The work will comprise the erection of piers and abutments and superstructures 300 metres in length, designed to carry a single track.

Company Meetings.

ANGLO-PERSIAN OIL COMPANY.

Increased Net Profits.

Promising Outlook.

The New B.P. Spirit.

Sir John Cadman's Address.

The twentieth ordinary general meeting of the Anglo-Persian Oil Company, Limited, was held on June 25, at Winchester House, Old Broad Street, London, E.C. Sir John Cadman, G.C.M.G. (Chairman of the Company) presided.

The Secretary (Mr. John Clark) read the notice convening the meeting and the report of the auditors.

The Chairman said:—I assume that the report and accounts may be taken as read?

Accounts.

The period under review is of nine months only, and a proper comparison of the figures can only be made by taking three-fourths of the figures for the preceding year. You will doubtless agree that my forecast of not unsatisfactory results for the nine months' trading has been amply fulfilled, since the net profits are approximately £500,000 in excess of those for the same proportion of the previous year. This result is all the more satisfactory when it is remembered that in our principal market, the United Kingdom, prices were still lower than during the previous year. We have provided £201,051 13s. 9d. for extra depreciation, and made allocations to amortisation, general and debenture stock redemption reserve funds, which in the aggregate are at the same rate as previously. The sum of £400,000 is placed to the general reserve fund, bringing this fund up to over 2½ million pounds. After these allocations, sufficient profit remains to permit of a dividend distribution to the ordinary shareholders at the rate of 12½ per cent. per annum for the nine months, which you will perhaps consider a gratifying increase on the 7½ per cent. paid for the previous twelve months. You will notice from the report that the sum of £513,434 12s. on account of excess profits duty has been deducted from the amount "carried forward." Within the last few days we have arrived at a final settlement with the Revenue authorities, involving the payment of a further £375,000 in full discharge of all liability.

In the balance-sheet the two principal changes are the disappearance of liability to the employees' provident pension and insurance fund and the increase by £1,125,000 of the 5 per cent. debenture stock, issued and outstanding. These two items are closely related, as the increase in the debenture stock was caused by the issue to the recently formed Anglo-Persian Provident Fund Trust, Ltd., of £1,250,000 of the 5 per cent. debenture stock; the issue price was 95½ per cent., and the discount, as you will see, is now written off. It is most satisfactory to note that, nevertheless, there has been an increase of £100,000 in our holding of cash and British Government securities.

From the next balance-sheet the 6½ per cent. five-year secured notes will disappear, as these were finally repaid last March.

Few changes appear in any other balance-sheet items. We have continued the policy of expansion and modernisation both in the parent company and in its associated and subsidiary companies, but the expenditure thus incurred has been more than covered by the ample depreciation provided.

Production:

PERSIA.

Production at Masjid-i-Suleiman during the nine months was 4,250,000 tons, which compares closely with my estimate. This field is in excellent condition, and continues to respond readily to the demands made upon it. I am glad to report great progress in the development of the new field at Haft Kel, to which I referred last November. Six flowing wells have now been brought in at a relatively shallow depth, their aggregate measured yield amounting to some 12,000 tons per day, and one of the latest wells having given an initial 24 hours' output of 5,000 tons. This is the largest production from any well we have yet drilled in Persia. All these wells have, of course, been closed; drilling is actively proceeding on

other locations, and the full extent of the structure, which promises to be of very important dimensions, is being actively studied. Enough had already been learnt in 1928 to justify the area being fully equipped as a producing field; subsequent experience has more than confirmed the optimism we then felt, and, early in 1930, the pipe line connecting it with the main delivery line from Masjid-i-Suleiman to Abadan should be completed.

In the Naft Khana field, which, it will be remembered, constitutes an oil-bearing structure partly in Persia, partly in Iraq, it has not been possible to extend operations since I last addressed you, but a scheme is under consideration for a co-ordinated development of the structure as a whole. The issues involved are, however, of a complicated character because of the duality of national interests in this oil zone. Drilling elsewhere in Persia has not yet yielded any noteworthy result, but work is continuing and geological surveys are being supplemented by geophysical research, particularly with the seismic method to which I referred last year.

IRAQ.

In Iraq, where the Iraq Petroleum Company (formerly the Turkish Petroleum Company), in which we have a considerable interest, is carrying out a large drilling programme, the general progress has been satisfactory—having regard to the special difficulties encountered; and definite success has been achieved on the large Kirkuk structure, which would appear to be of great promise.

It will be apparent to everybody that a vast amount of work, entailing great expenditure, is essential before Iraq can become a factor in world production, but, having recently visited the area of operations, I am greatly impressed with the eventual possibilities and with the vigour with which the work is being conducted.

ALBANIA AND ARGENTINE.

No further success has attended our drilling programme in Albania, and the prospects of discovering any considerable oil deposit are not promising. Production in our small field in the Argentine is still on the decline, but all the crude oil won has been refined and profitably marketed locally.

Refineries.

Improvement and modernisation of plant in conformity with the rapid advance in refining technique have continued throughout the period with still further substantial economies in operating costs. Our refining capacity has also been increased by the addition of a large crude oil distillation unit at Abadan, capable of distilling in one continuous operation 3,500 tons of crude oil per day. Moreover, two similar units are now in course of construction there. In order to meet the steadily growing disparity in the rates at which the demands of the market for petrol, as compared with fuel-oil, continue to increase, we have decided to extend our cracking equipment, particularly at Abadan, where a very large unit will be installed.

In general, we may well be proud of the high degree of technical efficiency and economic operation attained in our refineries to-day—a standard, I think, not surpassed elsewhere in any part of the world. (Applause.)

EGYPTIAN GOVERNMENT.

THE ASWAN DAM

TENDERS are invited by the Ministry of Public Works of the Egyptian Government for the modifications and additions to the sluice and lock gates in connexion with the heightening of the Aswan Dam on the River Nile.

The preliminary specification, drawings and regulations for tendering may be inspected on and after June 26th, 1929, at the offices of the Consulting Engineers, Sir Murdoch MacDonald and Partners, 72, Victoria Street, London, or after July 4th at the Ministry of Public Works, Cairo.

Contractors desiring to tender may obtain copies of these documents from either of the above offices upon payment of twenty Egyptian pounds.

Only tenders from firms who have previously executed similar works will be considered.

The tenders must be submitted to His Excellency the Minister of Public Works, Cairo, before mid-day on September 14th, 1929.

Shale Oil.

While we have again received no dividend on our holding of ordinary shares in Scottish Oils, Ltd., the Scottish shale industry presents a picture in which there are some encouraging features. Certain shale products have either shown falls in value or have remained at unattractively low prices. Just over a year ago notable help came to the industry by the exemption from the incidence of the petrol tax of motor-spirit produced from indigenous materials. At the time this measure was passed it was pointed out that one of its incidental objects was the resuscitation and stimulation of the shale industry, and there is no doubt that the help which was given has done much to restore confidence and security to a large number of workers in this long-established enterprise. Additional plant for increasing the yield of motor-spirit is now under construction.

Shipping.

The programme of tanker construction, to which successive references have been made ever since 1926, has been completed and all the vessels concerned are now in service. The tanker fleet numbers 85 vessels of various sizes with a dead-weight tonnage totalling 755,838; and it has satisfactorily fulfilled its programme of employment. The dredging of the Rooka Channel, to which I made special reference last year, has continued to make good progress. For the efficiency of the fleet as a whole, and particularly of our marine personnel, I have nothing but praise, and I should like here to make special allusion to an occurrence which afforded remarkable testimony to the fact that our officers and men are animated by a spirit worthy of the best traditions of the sea.

Last December, fire broke out on the 10,000 tons motor vessel British Courage whilst in the Mediterranean carrying a cargo of crude oil—with, I deeply regret to say, fatal results to two members of the crew. The total loss of the ship was averted by the gallantry of the Master, Captain Himsley, his officers, and crew. At one time they were driven to the ship's boats by the flames. The boats stood by, however, in a rough sea, and two hours later advantage was taken of an opportunity to re-board the vessel. This the Master did with 16 volunteers. After some hours of desperate struggle the flames were overcome and the ship saved. Ultimately the vessel was taken in tow by two of our tankers—the British Hope and British Officer—and brought safely into port.

Ladies and gentlemen, I have made the story brief, but you will realise that it is one adding lustre to the annals of the merchant marine. (Applause.)

Distribution.

Sales continued to increase satisfactorily both at home and abroad, and distribution costs have appreciably fallen. Prices, however, though better on the Continent and elsewhere, did not rise in the home markets above the level prevailing throughout most of the preceding year. It was not until two months after the expiry of the period under review that the belated rise in prices of motor-spirit and kerosene actually took place.

As you may already be aware we have considerably enlarged our interests in the "Olex" Company, through which we distribute our products in Germany.

In India the marketing of Persian products represents an increased offtake to the company. As you will remember, an arrangement was reached through the good offices of the Burmah Oil Company, and affords a happy illustration of the mutual benefit derivable from our close association with that company.

At the last meeting I referred to agreements reached between the Asiatic Petroleum Company and this company, culminating in the formation of the Consolidated Petroleum Company—for distribution in Egypt, East and South Africa, and certain other Eastern markets, all of which are most favourably situated for drawing supplies from Persia. These came into effect on January 1 of this year and from his policy of collaboration we look for much future benefit.

I would like to draw very special attention to the constant endeavours to enhance the quality of our B.P. Spirit, and particularly to the most recent development. The new and valuable constituents which have been introduced into our B.P. Spirit, now available in all parts of this country, are derived from our own crude oil, and the resultant product represents a high-grade spirit of the very first order. Our new B.P. Spirit, which replaces the old B.P., is the outcome of a great deal of scientific work applied to industrial demand. You are, I think, aware that, nowadays, such has been the trend of development in the internal-combustion engine that nothing but a fuel of very highly specialised characteristics can hope to meet and satisfy its requirements. Our new B.P. Spirit has been evolved with the fullest recognition of all that is demanded by the latest types of motor-engines. I am convinced that all it needs is a fair trial by the motoring public at large. To that end shareholders can help in more than one way. They can at once acquaint themselves with the qualities of this spirit in actual performance,

and thereafter I am sure they will want to make known its merits far and wide.

Visit to Persia.

Early this year I made a tour through the various centres of our operations in Persia, and subsequently visited Teheran. I found the field, pipe-line, and refineries all working steadily according to plan and programme and operated by a keen and competent staff, and a most efficient management. We owe a great deal to our staff in Persia, which I am glad to acknowledge in the presence of the resident director, Mr. Jacks, who happens to be with us to-day.

I was particularly impressed with the possibilities of the new area at Haft Kel. Its great oil potentialities, its admirable situation and the relative ease with which it can be developed, all render it a most valuable asset for the future. Whilst in the South I took the opportunity of paying a visit to the new Persian port of Bandar Shapur, on the Khor Musa, a deep-water inlet of the Persian Gulf about 115 miles by water from Abadan. This port, of which the sea approach is navigable by deep-draught ocean-going vessels, is to be the southern terminus of the trans-Persian railway now under construction and promises to play a very important part in the future commercial development of Persia.

Following on my visit to the South, I proceeded to Teheran, where I had the honour of several audiences of His Imperial Majesty the Shah—which clearly showed the very great interest His Majesty takes in the progress and welfare of the company. Many important questions bearing on problems associated with the company's plans for the future were discussed with His Majesty's Ministers. These discussions were attended with frankness and good will, and I am very hopeful that they will eventually result in the settlement of a number of outstanding questions and a closer consolidation of our mutual interests.

Amongst the many subjects discussed was that of railway organisation, so far as it concerns the linking up of Khor Musa with districts in which we now, or may subsequently, operate. As I indicated last year, it is our intention to make such maximum use of the railway as is consistent with the technical needs and economic well-being of the company; and what applies to the railway equally applies to Khor Musa and the new port at Bandar Shapur. Following on these Teheran discussions, we are now considering the most suitable manner in which we can begin to take advantage of the new facilities.

I turn with satisfaction to what must be a matter for congratulation amongst all who, like ourselves, are vitally interested in the welfare and stability of the Middle East, namely, the political *rapprochement* which has recently taken place between Persia and Iraq. It will, I am persuaded, do good in many directions, and should certainly conduce to the harmonious settlement of a number of commercial and industrial questions in which this company is greatly interested.

General Considerations.

Last November I ventured upon a number of general propositions regarding the principles which ought to influence future programmes for control and distribution of the world's oil resources. I do not think that in any responsible quarter there is real disagreement—at any rate in theory—with the views I then expressed. So far as practice is concerned, the period which has elapsed since last I addressed you is, of course, much too short to yield results comparable with the magnitude of the problems. Nevertheless, real progress continues week by week and month by month in disseminating a clearer view of the point to which multiplication of selling facilities can properly be carried in the interests of the consumer, and beyond which further provision constitutes waste and not development.

As to regulation of production, the oilfield of Persia continues to afford an example to the world, an example whose perfection would not have been possible but for the unity of interest which exists as between Persia and this company. If for the present it remains a somewhat isolated example, and if, as I have pointed out, the conditions attending it do not exist elsewhere, it none the less exemplifies many principles which I think are steadily finding favour in other centres where the potential production is largely in excess of the actual. Last December I visited the United States in order to accept the invitation extended to me by the American Petroleum Institute—whose members I ventured to address on this subject. The message I then sought to deliver was sympathetically received, and I would again acknowledge the sanity and good sense with which, as it seems to me, the needs of the world in the matter of regulation of production have been apprehended by the most responsible figures in the petroleum industry, as well as the persistence with which, notwithstanding the many conflicting interests involved, a fair and permanent solution is being sought. As shareholders in this company you will be gratified to learn that I do not think the Anglo-Persian Company has ever stood higher in the counsels of the industry at large, nor have its aims and methods of development been more generally understood and appreciated than is the case to-day.

The principles for which the company stands in relation to world-production and regulation of world-supplies have been enunciated by me on more than one occasion and from several very different platforms. They are so important, however, that I think they will bear brief recapitulation. The world is one unit of consumption; its oil resources belong to future ages as well as to ours. Whilst satisfying our own needs, let us not forget we are also trustees for posterity. In methods of utilising petroleum efficiently we are still not far beyond the beginning of knowledge. Let us expend wisely, dis-

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

tribute wisely, and conserve wisely. To continue to raise crude petroleum from underground storage to tankage on the surface, regardless alike of current needs and future claims, is not to "produce" in any beneficent sense—rather it is the negation of all the scientific principles that govern true production.

Staff.

It is again my pleasant duty to refer, in terms of unqualified appreciation, to the services rendered to the company by all branches of the staff. We are admirably served at home and abroad, on land and sea, and I see no demand which the future may make on us to which our personnel would not rapidly and adequately respond.

Prospects.

Having completed my survey of the work of the period and referred to some general consideration of great importance both to this company and to the entire industry, there now falls upon me the customary duty of remarking upon the company's immediate outlook. At the last general meeting I expressed the belief that, provided prices should prove to have touched low water mark, the year 1929 might inaugurate an era of steadily expanding profits. Nearly one-half of the year has now gone, and I can safely say that on the basis of existing selling values and operating costs, the results, unless something totally unforeseen occurs, should show a substantial increase, and that, before the close of the year, it should be possible for the Board to declare an interim dividend. (Applause.)

After a shareholder had called attention to the inconvenience of the Anglo-Persian Oil Company and the Shell Company holding their meetings simultaneously on the same day, and Sir John Cadman having promised that this would be rectified in future years, H.E. Mirza Eissa Khan Fayz, Imperial Commissioner of the Persian Government, said that at those meetings he was always pleased to have an opportunity of associating the Imperial Persian Government with the shareholders of the company in welcoming the Chairman's speech. That duty became a pleasure when the report made was so encouraging as it had been that day. Whilst all were deeply interested in the records of past achievements—none more so than the Government and nation which he represented—they usually awaited with considerable anxiety the Chairman's forecast of future developments. Seven months ago the history of the immediate past was one calling for much patience, though affording some reason for hopefulness in the future. That day the note of hopefulness was far more pronounced. The picture which the Chairman had drawn was one of very general progress in all directions.

Sir John did well to emphasise the unity of interest between the company and the Persian nation, a unity which he himself had done so much to maintain. In connexion with his visit to Teheran he would just say how admirable from every point of view was the Chairman's practice of never allowing more than eighteen months, or at most two years, to elapse without re-visiting the scene of the company's productive operations. Nowadays, in Persia, the Chairman was not only a highly respected and always welcome visitor; but he had so often been seen there that he himself might be regarded as the living embodiment of the fact that the company—one of the foremost industrial organisations in the whole world—was Persian as well as British.

The resolution was carried unanimously.

OTTOMAN BANK.

Conditions in Turkey.

Unfavourable Climatic Conditions.

The annual general meeting of the Ottoman Bank was held on June 25 at Winchester House, Old Broad Street, London, E.C. General the Hon. Sir Herbert A. Lawrence, G.C.B., presided.

The Secretary (Mr. W. P. Snepppard) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and Gentlemen,—I have been informed that this meeting is properly constituted and I presume that it is your pleasure that the report and balance-sheet circulated among you should be taken as read.

Before referring to business matters I have to report with the deepest regret the loss which we have sustained since our last meeting by the death in September last of the Baron de Neuffize. He was the oldest member of the General Committee, to which he was appointed in 1896, and since 1919 he had been Chairman of the Paris Committee. For a period of more than thirty years M. de Neuffize gave to our establishment, for which he had a particular regard, the benefit of his wide experience and of his well-known expert knowledge. His personal qualities contributed no less in inspiring our affection and respect. I have no doubt that you will share the very deep regret at the loss of such a colleague.

The past year was not favourable to the economic development of Turkey. As in all countries which are essentially agricultural, the weather is a factor of the utmost importance. Since the exceptional campaign of 1925, a series of severe winters and rainless summers has not ceased to counter the effects of the considerable

extension of land under cultivation. The drought has never been so prolonged nor the yield so meagre as in 1928.

The wheat crop, in particular, suffered so seriously that the importation of foreign flour on a large scale is inevitable. Even in the regions of Konia and Afion-Karahissar—considered the granary of Anatolia—the scarcity of supplies would have ended in real disaster save for the energetic intervention of the public authorities.

Livestock did not escape the ravages of the cold, and last year in the Eastern vilayets the rate of mortality reached twenty-five per cent; the results have yet to be shown in the mohair and woollen markets, the importance of which is known to you.

It is pleasing to note the slow but continuous recovery of silk culture in the region of Broussa, and the stability in the production of cotton in the Adana district. In certain respects the fresh and considerable decrease in the production of tobacco may be regarded as advantageous. It facilitates the liquidation of old stocks and tends to relieve the post-War crisis, which the Direction of the Monopoly is also meeting by a limitation of the cultivated area and by a better selection of seed.

The unfavourable results of the agricultural campaign reduced still further the weak purchasing powers of the country population, who are the real consumers of imported articles.

In normal times piece-goods are the chief import. These in particular remained a heavy market, although the trade, at great sacrifices, succeeded in reducing the excessive stocks resulting from too generous credits in the past. The mistakes made have been costly, and bankruptcies in Stamboul, which in 1927 numbered twenty-eight, rose to seventy-two for the year 1928. It is certainly to the credit of our management that we have not been directly affected by that situation.

Nevertheless, the quality of discountable bills is becoming poorer, and the average length of credits longer, while requests for renewal are certainly more frequent. These are evidence of an unhealthy situation which cannot fail indirectly to weigh on the operations of our branches, obliging them to display an ever-increased caution in the employment of our funds.

The Customs statistics reflect the seriousness of the situation and its influence on foreign exchanges. For several years past the total of imports and exports shows a constant decrease. From 434 million Turkish pounds in 1925 it fell to 421 million in 1926 and to 370 million in 1927. In so far as a smaller capital was required to finance the autumn export season, the business stagnation had the advantage of avoiding a return of the critical monetary stringency of October, 1927. Although the cash position of the banks was more elastic, the necessary result has been a smaller yield in interest.

As we mentioned last year, our establishment was entrusted by the Government with the task of exchanging the old Turkish currency notes for the new issue. As a result of our arrangements and the special precautions taken, we were able to carry out this operation without any mobilisation of the circulation of the country.

Financial Reforms in Turkey.

In the order of public finance I am glad to record the progress accomplished since the installation of the new regime, in the establishment of the Budget and the organisation of the Treasury. For the year 1928-29 the Budget has been balanced without new fiscal charges, at 207 million Turkish pounds. On the other hand the Treasury benefited by the non-utilisation of the amounts set aside for the service of the exterior debt and by a fresh issue of metallic currency authorised to the extent of 5 million Turkish pounds.

We are happy to state that the resumption of the service of the Ottoman Loans on a gold basis is to-day an accomplished fact. The agreement signed in Paris on June 13, 1928, having been ratified by Parliament and approved by the bondholders, came into force on the 15th of May. Two coupons have already been paid out of old provisions, and from the beginning of this month the budgetary execution of the plan comes into force. Our bank took part in the negotiations which paved the way for this equitable settlement as well as in the actual operations which its application necessitates. By the terms of the new contract it has also been charged with receiving the Customs revenues given in guarantee, and the distribution of the annuities due to the bondholders.

The railway policy of Turkey, however useful from a national point of view, constitutes an addition to their foreign indebtedness by reason of the important orders for material which are required for new constructions. These in 1928-9 absorbed 29 million Turkish pounds for the Budget credits as against 22 million in 1927-28.

In addition to an extensive railway programme, the Government, having decided to nationalise the exploitation of the Anatolian Railway, the Mersin-Adana Railway, and the Port of Haider Pasha, concluded a convention towards the end of 1923 for the

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Smyra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Rates of Freight, Insurance and other information apply to:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 86, Cross Street, Manchester, and FURNESS, WITBY & CO., Ltd., Royal Liver Building, Liverpool.

re-purchase of these lines. In the same order of policy the National Assembly has quite recently approved agreements made with the Smyrna-Cassaba, the Smyrna-Aidin, and the Oriental Railways, in order to re-adapt the exploitation of these lines to the new economic conditions.

In reviewing other events of interest since our last meeting, I must not fail to refer to two capital reforms for the modernisation of Turkey: the adoption of international numerals and the obligatory use of the Latin alphabet.

Also it is of importance that the Turkish Government, using the faculty left to it by our Conventions of 1924-25, has expressed the intention of founding a State Bank and gave us, in November last, formal notice of such intention. Nothing could be better for the prosperity of Turkey, and interests engaged therein, than an issuing bank, framed—so as to assure both a stable and an elastic currency—upon lines which take into account the post-War experiences of other countries, and inspiring confidence in the great financial centres.

Egypt and the Middle East.

The year in Egypt has been tranquil and prosperous. The present Government has embarked on a long programme of public works, at an estimated cost of 30 million Egyptian pounds.

The cotton crop for the year 1927-28 amounted to 6 million kantars. It is thought that for 1928-29 it will be more than 7½ million kantars. Cotton exports for 1928 were valued at 45 million Egyptian pounds against 39 million Egyptian pounds for the preceding year.

In Palestine the general financial situation has been somewhat easier throughout 1928. Fewer bills have been protested, though there have been numerous small failures. On the whole the depression which began in 1925 as a result of the land speculation in 1923 and 1924 shows signs of passing. Reports on the 1929 agricultural situation are favourable. Rains have been abundant and record grain and orange crops are anticipated.

Conditions in Cyprus during the year were disappointing from an agricultural point of view, the cereal yield being fifty per cent. below that of 1927.

The Agricultural Bank of Cyprus, Ltd., which was formed by us in 1925, has made further progress, and the number of co-operative credit societies increased during the year from 96 to 270. In order to provide the further funds required, our London office arranged an issue of £200,000 five per cent. Agricultural Bank Bonds, which were placed on the London market in January last. With the authority of the Colonial Office the interest on these bonds is guaranteed by the Cyprus Government.

In Iraq agricultural development continues as steadily and rapidly as the best interests of the country require. In 1928, however, owing to adverse weather conditions, the value of the date crop was below the average figure, and agricultural produce generally did not reach the exceptionally high yield of the preceding year. The acreage under cotton was considerably larger than in any previous year.

The Turkish Petroleum Company have continued their drilling programme with results which are believed to fulfil the best expectations. The Government follows an active policy in the matter of irrigation, and productive works in the form of barrage and regulators, within the resources of the Budget, are in progress.

The inauguration by His Majesty the Shah of a railway line linking up the north and south of Persia was an event of moment in the economic development of the country. The construction has been started both from the north and from the south; on the Caspian Sea from the Port of Pehlevi and on the Persian Gulf from Khor Musa.

The Persian Government are, further, undertaking the building of a barrage near Ahwaz on the Karum River, which, when completed, will be capable of irrigating a vast and fertile area.

The Russian trade competition in Persia weakened somewhat by the end of 1928, and this has led to a noticeable movement of trade between Persia and Iraq.

In spite of a certain slackening in the activity of the Levant countries under the French Mandate, the Banque de Syrie et du Grand Liban, which occupies the first place in their economic machinery, was able to increase its dividend from ten per cent. to eleven per cent. These States have agreed to the same terms as Turkey for their part in the Ottoman Debt, and our filiale undertakes for the Syrian Debt the same duties as those entrusted to the Ottoman Bank for the Turkish part.

Developments in the Balkans.

In Athens the bank which we created last year under the title

of the British-French Discount Bank Limited has made an encouraging start. It has just opened a new office at Piraeus, and we have good hopes that it will not be long before the support which it enjoys both in Paris and London, will assure for it an honourable rank among the foreign banks working in Greece.

Macedonia has not yet recovered from a stagnation of long duration, and this state of affairs is reflected in the results of our branches of Salonika and Kavalla.

Concerning Yugoslavia, it became clear during the year 1928 that the Banque Franco-Serbe, in which your establishment was interested, should be re-organised with a view to writing off certain bad debts arising from the far-reaching economic crisis. It was also felt desirable to have a preponderant interest in the bank instead of the former plurality of interests. With the help of the Banque de Paris et de Pays Bas and of the Societe Financiere d'Orient our Paris office took this task in hand, and so obtained a unity of direction and management which augurs well for the future.

Exports from Roumania for 1927 exceeded imports, but the indifferent harvest and the state of the oil industry were reflected in trade generally. Currency continued scarce and banking business, including that of the Bank of Roumania, Ltd., in which we are interested, suffered a shrinkage.

Turning to the London and Paris offices, there has been a considerable development in the acceptances of the bank, thanks to our international relations and the favourable tendency of the discount market in Paris. As you will have remarked in the figures of the balance-sheet, these acceptances now appear on both sides as a separate item.

I should also draw your attention to our participation in the placing of loans recently issued on the great financial markets by various States in Eastern Europe desirous of reorganising their currency, with the support and under the direction of the principal issuing houses. Amongst such operations I may mention the Bulgarian Seven-and-a-half per Cent. Stabilisation Loan, the London portion of which, in conjunction with our friends Messrs. J. H. Schroder and Co. and Stern Bros., we successfully floated during the year.

Our Manchester branch continued to suffer from the depression which has paralysed for so many years the business of Lancashire. At Marseilles and Tunis our business has developed in normal fashion, and in order to complete our Mediterranean chain of branches, we have opened an office at Nice, where there is an Eastern clientele to whom our establishment was already well known.

Having reviewed as usual the different regions of the Near East to which our activities extend, I now come to the analysis of our general results.

The accounts which we are submitting for your approval have been drawn up with our traditional prudence. Those elements on the credit and debit sides which the exigencies of our business compel us to maintain in other currencies than those of the balance-sheet, have been converted into pounds sterling at the rates ruling on December 31, 1928. Doubtful debts have been amortised and our holding in bills has been conservatively valued.

As drawn up the accounts for 1928 show an available balance of £239,004, approximately the same as last year. With the carry forward of £24,244, the sum at our disposal amounts to £263,248. Faithful to the policy which was inaugurated in 1926 and followed since with your approval, we propose to divide this sum into two practically equal parts, one for distribution to the shareholders, the other for a further strengthening of our provisions for eventualities.

If you agree once more to follow our recommendations, we propose the distribution of a dividend of five shillings per share, which in Paris will be paid free of tax. This dividend will be payable from July 2 next in Constantinople, London, and Paris. From the remaining amount of £138,248 a sum of £115,000 will be placed to provision for eventualities, and the balance of £23,248 will be carried forward.

In order to fill the vacancies left in your General Committee by the deaths of our regretted colleagues, the Baron de Neufville, M. Georges Heine, and Mr. M. S. Spencer-Smith, we have nominated Messrs. Jacques de Neufville, René Bechmann, and A. A. Jamieson, who, like their predecessors, belong to banking houses with whom we have traditional relations. You will be asked to ratify these elections. As Chairman of the Paris Committee, the Baron de Neufville has been succeeded by M. Raoul Mallet, who has been a member of the General Committee since 1902.

Finally, I desire to mention our staff of all grades, who have continued to give loyal and devoted service to the bank and deserve our thanks; with which, I am sure, you will wish to associate yourselves.

Now, ladies and gentlemen, I beg to move:—"That the report and accounts now read be received and adopted; that the dividend for the year ended December 31, 1928, be fixed at the rate of 5s. per share, and that this dividend be payable in Constantinople, London, and Paris on July 2, 1929."

The resolution was seconded by M. Mallet and was carried unanimously.

The Chairman then moved: "That Messrs. Jacques de Neufville, René Bechmann, and Archibald G. A. Jamieson be and they are hereby elected members of the General Committee." The resolution was seconded by Sir John Hewett and was unanimously approved.

The Chairman also moved the re-election as members of the General Committee of Messrs. Charles de Cerjat, Horace Finaly, E. W. H. Barry, and Lord Hillingdon, which was unanimously approved.

The meeting ended with a cordial vote of thanks to the Chairman, which he briefly acknowledged.

"SHELL" TRANSPORT AND TRADING COMPANY.

Continued Progress.

Problem of World Production.

The annual general meeting of the "Shell" Transport and Trading Company, Limited, was held on June 25 at the Cannon Street Hotel, London, E.C.4. Viscount Bearsted, M.C. (the Chairman), presided.

The Secretary (Mr. E. A. Smith-Rewse) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—Before dealing with the general situation during the past year or the position as we find it to-day, I should like to say a few words on the report and balance-sheet which are before you.

Generally speaking, there are no striking changes with the exception that, as you see, the capital of the company has been increased during the year by the issue of 333,333 ordinary shares of £1 each. These were issued to the Burmah Oil Company in pursuance of an arrangement to which I will refer later. The premium on these shares amounted to £1,354,165 6s. 3d., and this amount has been credited to the reserve account, bringing it up to the figure of £6,354,165 6s. 3d.

The balance to the credit of the profit and loss account is £84,000 more than in the previous year, which is sufficient to enable your directors to pay the same dividend of 25 per cent. free of tax on the increased capital. I think we can all congratulate ourselves on this result.

On the asset side there is a small decrease in the property account, which calls for no comment, and an increase in the balance of dividends declared, which is accounted for by the fact that some investments in which your company had an interest, including the Anglo-Egyptian Oilfields and the V.O.C. Holding Company, were enabled to increase their dividend. You will further note that our investments in Government securities have risen from £2,748,000 to £6,627,000, while our cash has decreased from £2,522,000 to £132,000. If, however, you take the sum of our cash and gilt-edged investments, you will see that on balance our realisable resources have increased by the proceeds of the shares issued to the Burmah Oil Company. In other words, our cash position has been bettered during the year by nearly £1,700,000, and the earning capacity of our investments in other securities has remained unimpaired, and even improved. As usual, your directors are able to assure you that depreciation has been fully covered in the accounts of all the companies in which you are interested.

Changes in Directorate.

You will find in the report reference to changes in the directorate, and I should like to tell you shortly what these signify. Mr. Frederick Godber has been with our group for many years and has been closely connected with the Shell Union Company in America, and his return to the London office will be of the greatest assistance to us in view of his intimate knowledge of conditions on the other side. Mr. Kessler, apart from his historic association with our group, seeing that his father was one of the founders and first managing director of the Royal Dutch Company, brings to our assistance a long connexion with, and a ripe knowledge of, the oil industry. Mr. Robert Watson is a managing director of the Burmah Oil Company, and we hope that his association with us will lead to that increased co-operation which mutual knowledge, and I trust appreciation, must bring.

It is with great regret that your directors have received the resignation of Dr. Josef Erb, who has been for so long connected with the geological activities of our group. I am happy, however, to tell you that Dr. Erb, although no longer participating in the active management, will continue to give us his advice and remains as a director of the Royal Dutch Company.

Finally, I would refer to the fact that Sir Robert Waley Cohen, who has rendered such yeoman service to the company for many years—I believe twenty-three—has also indicated that he desires to take life less strenuously. He is therefore retiring from the position of managing director of the Anglo-Saxon Petroleum Company, but is remaining on that board as well as on the board of this company, and will continue to give us his advice and assistance, which I am quite sure will prove as valuable as they have for so many years past.

I began my survey last year by calling your attention to the enormous increase in the world's production, and the main outstanding fact to-day is the same tendency. At the same time the rate of increase has not been on the same high scale as in 1927, when it was 22½ million tons, whereas during 1928 it was only 9 million tons. During 1928 the United States of America's total production actually dropped below that of 1927. But I would not have you think that this is due to natural causes, but rather to that voluntary restriction to which I called your attention last year. The most striking figure in this year's increase is that of Venezuela, which has risen from 9 million tons to 15½ millions. Mexico, on the other hand, continues to decline, being almost the only oil producing country which shows a decrease. In considering these comparative figures, one must not forget the potential production of Iraq, where the explorations of the Turkish Petroleum Company have given decided indications of great possibilities, although there can be no question of such production reaching the market until a decision is taken as to the location of the pipe-line to the seaboard.

So far I have only dealt with the 1928 figures, but, coming to a more up-to-date survey, the increase is more imminent and more marked. The average daily production of the United States for the first three months of the current year has shown an increase of 200,000 barrels. This brings the problem of over-production once more to the front.

There have been many conferences with a view to handling the situation, not only in the interests of the producer, but also in the interests of the consumer. The first step has been taken by the formation of an American Export Association, and I take this opportunity of emphasising the fact that this Export Association is not to be regarded as an instrument for raising prices, but as the first step towards the active rationalisation of the oil trade. I would go a little further and endeavour to define what I actually mean by rationalisation. I take it to be generally admitted that it is to the best interest of the consumer, the producer, and the distributor that there shall be stability of supply and stability of price, subject only to such minor variations in world conditions of freight, exchange, and finance as may naturally occur and which are not directly influenced or influenced by the oil trade. But over-production must inevitably tend to instability. It means that at times there will be a glut of oil and low prices, which will restrict development of new fields. This will be succeeded by a period of higher prices during the temporary scarcity pending the bringing in of the arrested development, and such alternations will continue. To my mind, rationalisation is the intelligent prevention of such alternating periods.

In view of what I have just said, you will not be surprised to hear that during 1928 the market for petroleum products was a very variable one, and on the whole prices were lower than in 1927. As I have told you on many occasions, our only resort against low prices has been increased business, and you will be interested to hear that this policy has again proved successful, since our production rose from 17 million tons in 1927 to 22 millions in 1928.

There is one other feature of last year to which I should like to make brief reference: the closer co-operation between the Burmah Oil Company, the Anglo-Persian Oil Company, and ourselves, which has resulted in the formation of a joint selling association in the British-Indian market and also in a similar organisation covering part of Asia and the East Coast of Africa. Moreover, the Burmah Oil Company have now become holders of one million shares in your company.

New Uses for Petroleum Products.

The rise in production has been met by a steady increase in consumption, which has been fostered by new uses that are continually being found for petroleum products. We find more and more that the spread of the use of liquid fuel for central heating is becoming part of our modern building equipment. In the same way the use of oil products for road manufacture is continually increasing, as well as the use of asphalt for industrial purposes. In this connexion we have extended our business by a combination with the Flintkote Company, of Boston, which has a long history in the asphalt business. We have also, in conjunction with the Royal Dutch Blast Furnaces and Steel Works, taken steps to erect a factory in Holland for the manufacture of fertilisers, and we believe that this will be but the first step in our extension in a new direction.

I should now like to touch upon the increase in the price of petrol which took place on March 1 of this year. It is to be regretted that the full explanation of the rise, as furnished by ourselves and the other companies concerned, was not given the same degree of publicity as was given to the vast amount of prejudiced and uninformed criticism at the time of the announcement of the change. This is not the time or place to discuss the causes of that rise in detail, but I do want to emphasise that prior to March 1, with the exception of a rise of one penny per gallon in February, 1926, petrol had fallen uninterruptedly for over five years; and, after allowance is made for the fourpence per gallon tax now included in the price, it is one of the few commodities now selling below its pre-War price. I am not taking into account that the present day standard quality of "Shell" (both petrol and lubricating oils) has been successively kept in line with all requirements of the modern high compression engine.

I would make one other comment on this subject. It has been suggested that we have changed our views and our standpoint in the matter of Russian oil, but I would expressly deny that this is the case and would reiterate that when an agreement was about to be entered into with the Russian producers for the purchase of certain quantities of oil f.o.b. we stipulated as a condition that part of the purchase price should be reserved as compensation for the former owners of oilfields in Russia. The Soviet Government objected to this condition on the grounds of principle, and to meet their wish to disguise any lack of principle on their part we agreed that the purchase price should be subject to a rebate which, as was known to the Soviet Government's representatives from the beginning of the negotiations, would be reserved for these former owners. I can only express the hope that other purchasers of Soviet products will take the same line.

I would again direct your thanks to the staffs of all the companies of our group, who as usual have given to the fullest their loyal and devoted co-operation.

Before putting the motion to the meeting, I want to assure you that whether rationalisation comes or not, this company and its associates have never been in better condition, and that you can look forward to the future with the utmost confidence.

The motion was carried unanimously, and after the conclusion of the usual formal business the meeting terminated.

THE IMPERIAL BANK OF PERSIA.

(Incorporated by Royal Charter, 1889.)

CAPITAL (fully paid) - £650,000 | RESERVE - - - £570,000
Reserve Liability of Shareholders, £1,000,000.

Branches in Persia:— Chief Office in Persia—TEHERAN.

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases drafts, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms. The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfer on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — SOFIA — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives. The Bank transacts every description of banking operations.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 19:—

Egyptian Futures.

Sakel Contract.—We have experienced a dull and rather featureless week in this market; trading throughout has only been on moderate lines, and, with little support forthcoming from either trade or speculative sources, moderate declines in values have taken place during the majority of sessions. The general opinion here appears to be that in the neighbourhood of 16d. Sakel values are not unreasonable. During the past few days spinners have shown more interest in the market, but from all accounts the yarn demand does not give them much encouragement. Incidentally, the wages question is overshadowing the whole position, and until this is settled all sections of the trade will probably be working on very narrow lines. Movements in the Alexandria market have coincided fairly closely with the prevailing tendency here and in the American departments; statistically, the position appears sound, and, judging from reports, most of the old "Bull" accounts have now been liquidated. Any definite trading either way appears to hinge on new crop prospects.

As mentioned previously, market operations here during the week have been rather featureless; a little short selling of new crops by Continental interests has been in evidence, near positions are inclined to tighten up, and we would not be surprised to witness July gradually hardening in comparison with the later months, especially as the same operators, who held the May position, appear to be interested in the month in question. Values on the week show declines of 40 to 38 points for near and 42 to 41 points for new crop positions.

Upper Contract.—Rather more interest has been shown in this contract during the past week; during the earlier days a firmer tone was in evidence, and some slight advances were registered. More latterly, some liquidation of near positions has caused prices to react, and we close to-night with declines of 12 to 10 points for near and 10 to 6 points for more distant positions.

Egyptian Spot.

There has been practically no change in spot conditions since last week. The inquiry has been of a somewhat irregular character, and although the sales of Egyptian cotton proper show a slight increase over those of the previous week, this has been more than balanced by the decrease in the sales of Sudan. It is unfortunate that the reduction in wages issue has been raised at the present time, for, with the Sakel contract below 16d., a considerable amount of new business might have been attracted. As it is, the demand for Sakel has actually showed signs of decreasing instead of the opposite, as might have been expected. Sakel prices have given way further and show a drop of some forty points on the week, and, if present conditions continue, we see no reason why they should not decline further.

Uppers have met with the customary steady offtake, but the inquiry has rarely extended beyond 10 points either side of the July contract. The demand for the better grades has been disappointing.

Pilion.—Quite a brisk inquiry has been in evidence for this cotton. The lower qualities, at from 11.75d. to 12½d., have been frequently in request, but this cotton appears to be practically non-existent in our market. Other, and more expensive qualities, up to about 13½d., have also been in favour, with better results.

Maraad, White, and Nahda.—These have been in moderate request only, but a little business has been done here and there at easier rates.

Sudan Sakel.—The inquiry has shown a marked improvement during the last day or two. The basis has remained firm.

Tokar Sakel.—A revival in the demand is still awaited.

Low and Inferior Cotton.—There has been slightly more doing in these qualities.

C.i.f. business has been very quiet on the surface. Forwardings to the trade last week were returned as 7,692 bales Egyptian and 1,312 bales Sudan. Estimated spot sales for the week, 2,500 bales Egyptian and 250 bales Sudan Sakel. Quotations of Sakel show a net decline of 40 points. Those of Upper are 9, and those of Pilion are 6 points lower on the week. F.G.F. Sakel to-day, 16.40d. F.G.F. Upper to-day, 11.26d. F.G.F. Pilion to-day, 12.25d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended June 13, state:—

Since our last report the market has been rather inactive, with fluctuations confined to a narrow range. The week's summary of price movements is as follows:—**Sakellaridis:** July, 33.05 dollars, 0.03 dollars down; November, 33.45 dollars, 0.04 dollars down; January, 33.84 dollars, 0.03 dollars up; March, 34.20 dollars. **Ashmouni:** June, 20.90 dollars, 0.03 dollars down; August, 21.13 dollars, 0.16 dollars down; October, 21.61 dollars, 0.04 dollars down; December, 22.08 dollars, 0.04 dollars down; February, 22.43 dollars, 0.02 dollars down.

Sakel.—Extreme dullness has been the rule during the week and the market has, generally speaking, presented a rather heavy appearance. The intentions of the Government as to the disposal of its old stock and replacement by new purchases are still undefined. Operators are showing some hesitation in undertaking engagements one way or the other, as there is no doubt that under present circumstances any definite decision taken by the Government either to buy or sell would have a marked effect on the market. If the Government does offer its cotton without replacing it simultaneously a decline may be expected, as the demand from the trade is at present negligible, and the sale of the cotton could only be effected by heavy sacrifices in price. On the other hand, if the Government intervenes as a buyer, prices would probably sharply respond owing to the relative scarcity of tenderable cotton. The above considerations lead us to expect that the future course of prices will be principally governed by whatever action the Government takes.

The Sakel/Uppers straddle (July/June) this week stands at 1,215 points, against 1,215 points last week and 1,405 points at this time last year.

Uppers.—The steady tone of this market has continued to be in evidence, although the amount of business transacted has been rather moderate and trade buying has easily absorbed the few speculative sales. The fact that no dockets were delivered against the second June tender naturally created a very favourable impression, and the consequence was a shrinking of the difference between old and new crop deliveries. We expect the market to continue firm although following more or less closely the fluctuations of New York.

The Ashmouni/American straddle (June/July) this week stands at 234 points, against 235 points last week and 597 points at this time last year.

Against the second June tender, no dockets were issued; the total for the month to date consequently remains at 1,750 kantars.

The week's receipts amount to 4,304 kantars, against exports 122,792 kantars; the stock in Alexandria stands at 2,383,549 kantars.

Spot.—We have had a quiet week at Minet-el-Bassal, with the greater portion of business in Upper qualities. The total sales for the week amount to about 7,200 bales, of which we estimate 2,300 bales Sakellaridis, 3,800 bales Ashmouni and Zagora, 130 bales Pilion, 130 bales White, and 70 bales Nahda.

Sakellaridis.—Has been very neglected. The only business done has been for the lower grades, with a little buying of Fully Good Fair to Good. Spot differences remain much the same.

Ashmouni and Zagora.—These varieties have been in good demand and the premiums for Fully Good Fair and above have hardened considerably during this week owing to the difference between June and August, several sellers refusing to sell on June contracts. The inquiry has been confined to Fully Good Fair and Good about.

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928.

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Pleven, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Doupnitza, Gorna-Orehovitz, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratza. It has also 86 agencies.

Pillion.—There has been a steady demand for good staple Pillion lots and premiums have increased compared with last week!

White.—Has been in fair demand and any nice staple lots have been readily taken up at fair premiums.

Other Varieties.—Here the only demand has been for Nahda, in which there has been a small turnover at premiums more or less unchanged.

Crop, 1929.—Lower Egypt.—The development of the plant is progressing normally thanks to weather conditions which become more and more favourable. Reports of attack by the leaf worm are more frequent, but there is little or no ill effect owing to the active measures taken to prevent a spread of this pest.

Upper Egypt.—News received this week is very satisfactory.

The traffic receipts of the South Indian Railway Company for the week ended May 25 amounted to Rs.13,69,837, making the total from April 1 Rs.1,01,94,711, as against Rs.1,00,95,942 at the corresponding period last year.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended May 31 amounted to £E8,138, making the total from April 1 £E48,432, as compared with £E41,094 for the corresponding period of the previous twelve months.

The Turkish law promulgating the new Customs tariff was promulgated on June 1. The Board of Trade understand that no changes in the present tariff will become operative until three months from the date of publication in the official gazette, and it is to be assumed that the new tariff will not come into force before the beginning of September next at the earliest.

SMALL SUDAN GUM ARABIC CROP.

Messrs. Boxall and Co., of Khartoum, report as follows under date May 31:—

Arrivals in Kordofan Stations and Tendelti amounted during May to 940 tons (including rain-damaged gum, which has started to make its appearance on the markets earlier than usual), as against 1,363 tons last year—a shortage of 423 tons or 31 per cent. Such small arrivals for this time of the year have been unprecedented since 1923, during which season commenced the series of crops averaging 20,000 tons. May's arrivals this year, compared with those of the previous month, show a decrease of 13 per cent. Any hope that the crop of 1929 would be late and large, like that of 1926, is dissipated by the arrivals of May being only 940 tons, against 2,607 tons for May, 1926.

The shortage in Kordofan and Tendelti this season to date, as against last season, totals about 4,500 tons. If to this is added the shortage in inferior Hashab, estimated at about 2,000 tons, the total shortage in Hashab gum as against last year would amount up to the end of May to about 6,500 tons.

The month's prices have been characterised by big fluctuations. The El Obeid market closed on the first day of the month with an increase of 1s. 9d. per cwt. on the price of April 30. Prices continued to increase gradually up to the 5th, the total rise equalling 9s. 9d., after which prices declined to the 13th, the total fall amounting to 5s. 9d. The following day the market again took an upward turn, and prices constantly increased to the end of the month, the total rise being equivalent to 12s. per cwt. The net increase during the month amounts, therefore, to 16s. per cwt.

Talha.—The total increase in price during the month amounted to 7s. 6d. per cwt. Goods were scarce and dealers showed a disposition not to sell and at each new sale to demand higher prices.
