The Amnesty voted by the Sobranye at the request of M. Liaptcheff's Cabinet has already begun to bear fruit. Applied generally throughout the country, it led to the liberation a few days ago of a large number of political prisoners under sentence or who were about to be convicted; and above all it has accelerated the return of Agrarian and Communist refugees from Yugoslavia, where they helped to supplement the following of the former Ministers now in exile, Oboff, Nedelko, Athanassoff and Costa Thodoroff and possibly to bring about attacks on the Bulgarian frontier. Thus the work of pacification and conciliation undertaken by the new Government as the central point of its political programme has made a good start. In proof of this may be cited the course of deliberations of the Executive Council of the Agrarian Party and the elections both municipal and communal that have been taking place.

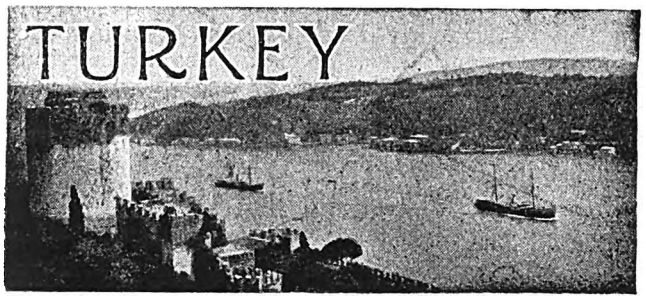
The Agrarian Conference.

On February 7, with the permission of the Government, the Executive Council of the Agrarian Party met at Sofia to examine the situation created by the Ministerial changes and by the measures taken or announced by M. Liaptcheff's Cabinet. Its deliberations lasted for three days and concluded with the adoption of a long resolution in which the Agrarian Party declared itself ready to collaborate in the realisation of the programme of reconciliation, which is also its own programme. At the same time it urged, as the surest means of obtaining the complete pacification of the country that everyone desired, the formation of a Coalition Cabinet with or even without the participation of the Agrarians. The resolution also disavowed any collaboration whatsoever with the Communists, who, on the admission of all the members of the Conference, had entered the Party to stultify its work and to place it at the service of the Moscow Soviet. A point to note is that those who took part in the debate refused to treat the new President of the Council, M. Liaptcheff, in the same way as they had treated his predecessor, Dr. Tsankoff, and insisted that they could and ought to have confidence in him for the satisfactory application of his policy of reconciliation, which is the policy demanded in the interests of the country. This is the first time that an Agrarian Conference has heard such words since the *coup d'état* of June 9, 1923. It is also noteworthy that those present at the Conference repudiated all connexion with conspirators abroad, who claim to be the representatives of the Bulgarian Agrarian Party. The Party declares *urbi et orbi* that it recognises no representation abroad and that its actual statutes prevent it from having any such representation. Consequently MM. Oboff, Thodoroff and Athanassoff, abandoned by their partisans in exile, who are returning in groups to Bulgaria, can only work for their own hand in Belgrade and Prague.

The Elections.

Local Government elections took place on February 14 in the towns and on February 21 in the villages. The first thing to note in regard to them is that they passed off quietly and in perfect order, by no means an insignificant point after the sad and sanguinary events through which the country has passed during the last few years. At the same time the complete liberty of propaganda introduced by the Government allowed all parties legally constituted to take an active part in these elections, which, ordinarily deprived of political significance, came this time, in view of the actual circumstances, to acquire a very considerable political importance as a manifestation of the state of mind of the electorate after the fall of the Tsankoff Cabinet. In fact there have re-appeared throughout the country Agrarian lists—the Communist Party, officially dissolved in virtue of a certain law, could not present lists of its own—which have received a large number of votes as well as securing many seats on the municipal and communal councils. This participation proves that the country dissociates itself resolutely from conspiracy and subversive activity in order to bring back its struggles solely within the political sphere, an indispensable condition for the realisation of the work of appeasement.

The reappearance of the Agrarians, who have obtained a good many Communist votes at the elections, is certain to bring about a fresh division of the political forces in the country, the more so as the Opposition have been considerably strengthened as a result of the polling and the Government did not obtain the success on which it had counted. As a result the latter will be compelled in many centres to look for support from the other bourgeois parties if it is to carry with it the Communal and Municipal Councils. On the other hand a certain *rapprochement* is noticeable between these parties and the Agrarians in view of the parliamentary elections of which there is a prospect in the coming autumn, as the Sobranye can hardly last much longer, owing to the results on February 14 and 21, which while being on the whole favourable to the Government, seem to indicate the necessity of a fresh general appeal to the electorate.



The Epilogue of the Frontier Incident.

It is in this atmosphere of domestic reconciliation that the period fixed by the League of Nations for the payment by Greece of the indemnity due to Bulgaria in connexion with the recent frontier incident came to an end on February 14. On the eve of this date the Greek Government requested the Bulgarian Government to agree to divide this indemnity of 30 million leva into two equal parts of which the first would be paid now and the second on March 1. The Bulgarian Government, anxious to efface in the most complete manner possible all recollection of this unhappy incident, readily granted the request asked for by the Greek Government. A sum of 15 million leva was immediately placed at the disposal of the National Bank of Bulgaria for the Government's account.

Similar overtures of a conciliatory nature have also taken place with Bulgaria's other neighbours, and it can be said that in this respect also the Liaptcheff Ministry has introduced a new element of *rapprochement* and cordiality in accordance with the Locarno spirit.

Constantinople, February 23.

Turkey and Syria.

Angora has, during the last week, been the scene of feverish activities in drawing up and in concluding international accords. An atmosphere of complete satisfaction pervades the air as a result of the signing of the Franco-Turkish agreement on the Turko-Syrian frontier, and M. Henri de Jouvenel is the hero of the hour. Even though M. de Jouvenel declared, before the conclusion of the Accord, that the strengthening of Franco-Turkish relations would not only have no detrimental effects on any other nation, but would, on the contrary, facilitate future Anglo-Turkish relations, certain non-Turkish circles here persist in contending that there is more in this annexe to the Franklin-Bouillon Treaty than meets the eye. Several local newspapers, renowned for their obstinate anti-British policy, have lost no time in starting to pat themselves on the back because they consider that France has snapped her finger in Great Britain's face and demonstrated her complete indifference to any hopes of support which Great Britain might have fostered concerning her future policy in the Near East.

Almost simultaneously with the conclusion of the Franco-Turkish agreement very significant reports are forthcoming from Syria to the effect that chiefs of tribes hitherto hostile to the French have begun to make their peace with the French High Commissioner there. The advantages derived from the Turko-Syrian frontier agreement are, therefore, not as one-sided as was at first supposed.

Turkey and the United States.

Another agreement signed during the last few days, which has doubtless been expedited as a result of the Turkish decision to increase the customs tariff on goods imported from countries with whom commercial treaties have not yet been concluded, is the provisional commercial convention with the United States. Several other nations are busy negotiating commercial agreements, but pending conclusion thereof their imports into Turkey will certainly suffer because of the increased duties.

Greece and Turkey.

Much talking is at present being done at Angora concerning the Tewfik Rushdi Bey-Exindaris Agreement, but nothing material is yet recordable. For some time Greece and Turkey have evidently been deriving a certain amount of mutual satisfaction in devoting themselves to spasmodic outbursts, accusing each other of following a dilatory and evasive policy *vis-à-vis* this unratified Accord. Such a procedure seems to have become somewhat tiring, and M. Pappas on his arrival offered a variation by attributing the non-ratification to the neutral members of the Mixed Commission for the Exchange of Populations which, in turn, provoked a stern *démenti* from the individuals in question. Up to the present, therefore, no progress has been made, and the reason for the replacement of M. Politis by M. Pappas remains, for the Turks, inexplicable. Saradjoglou Shukri Bey, the President of the Turkish Delegation on the Mixed Commission, has been summoned to the capital, and the latest telegrams report that contact has been established. It is to be sincerely hoped that some serious decision will soon be arrived at, as the well-being of thousands of people is dependent on the result of these negotiations—which fact has slipped the memory of certain of the negotiators.

Sugar Monopoly.

It is perhaps too soon to pronounce on the success of the sugar and paraffin oil monopoly which came into force some few days ago, but, to judge from the actual situation, something serious has gone wrong somewhere. It is at present almost impossible to obtain sugar, as dealers are afraid to sell at a loss, and until big stocks are forthcoming stores cannot be replenished. The monopoly has had an immediate effect on articles in stock containing sugar, which are now being sold at much reduced prices. The prices of certain kinds of biscuits imported from England have dropped as much as 8d. a pound. This fact gives some idea of the margin of profit shopkeepers previously allowed themselves. It would be difficult to name any other commodity which so seriously affects the inhabitants of Turkey as a whole, whose "sweet tooth" is amply demonstrated by the innumerable sweet dishes which constitute so great a part of the ordinary individual's daily menu. In a very short time—if everything goes well—Turkey will possess a quite important sugar refinery, as all the necessary machinery has now arrived for the factory to be established at Outchak.

AN ARCHÆOLOGICAL CONGRESS.

An Archæological Congress dealing with the antiquities of many of the Bible cities is to be held from April 2 to 23 in Beyrout, Damascus, and Jerusalem. The Congress will be under the patronage of the British High Commissioner in Palestine, and the High Commissioner of the French Republic in Syria, and during its progress visits will be paid to the chief excavations and historical sites including Byblos, Sidon, Baalbek, Palmyra, Tiberias Beisan, Megiddo, Jerusalem, Jerash, and, if possible, Petra. The Congress will be divided into the three sections of Prehistory and Ethnography, Historic Antiquity, and Middle Ages and Modern Times.

Details as regards cost of membership and special facilities can be obtained on application to Professor John Garstang, Professor of Archæology at the University of Liverpool.

MINORITIES IN ROUMANIA.

Through the kind invitation of the Regius Professor of Divinity, Dr. H. L. Goudge, Dr. V. G. Ispir, Professor of Bucharest University, recently delivered three lectures in the Chapter House of Christ Church.

Professor Goudge introduced Dr. Ispir as a former pupil of the late Dr. W. Sanday.

Dr. Ispir, in returning thanks, remarked how honoured he was to have received an invitation from so eminent a scholar as Prof. Goudge, well known in Roumania and highly esteemed by Roumanian students in Oxford. He also expressed his thanks to England for help in realising the national unity of his country.

Dr. Ispir then gave a general outline of his subject, "The Religious Situation in Roumania To-day."

After 1918, he said, Roumania became a new country through the reunion of her provinces. This reunion created an entirely new situation by bringing into Roumania many nations and beliefs.

Statistics of the different religions showed:

	In the whole of Roumania.		In Transylvania only.
1 Orthodox	70.5 p.c.	12,000,000	 1,750,000
2 United	7.7 p.c.	1.300 000	..... 1,250.0 0
3 Rom. Cath.	7.3 p.c.	1,250,000	..... 980.000
4 Jews	5.3 p.c.	900.0 0	..... 200 000
5 Ref. Calv.	4.1 p.c.	700 000	..... 689.000
6 Evang. Luth.	2.1 p.c.	370 000	..... 22',000
7 Unitarians	0.4 p.c.	75.000	 74,000
8 Moslems	1.4 p.c.	250,000	..... —

And of nationalities:

	And of Nationalities.	
1 Roumanians	74.4 p.c.	The entire population of Roumania is 17,000,000
2 Hungarians	8.4 p.c	
3 Germans	4.3 p.c.	
4 Jews	5.0 p.c.	
5 Russians (Ukrainians)	3.3 p.c.	
6 Bulgarians	1.5 p.c.	
7 Turks	1.0 p.c.	
8 Other nationalities	2.1 p.c.	

From these tables one could gather that the large majority of the population of Roumania had one language and religion.

Now what was the attitude of the Roumanian State towards religion? In France and Czecho-Slovakia, for instance, the State took no interest in the Church whatever; there was a complete separation of State and Church (State non-confessional). In old Russia and Austria-Hungary the State recognised and supported one and only one religion (confessional State). Roumania was an *interconfessional* State: that is, she understood that religion was the social factor of the moralisation of society: hence the State's interest in religion.

Art. 22 of the Roumanian Constitution said: "The freedom of conscience is absolute; the State guarantees for each cult equal liberty and protection as far as it does not touch the public order, morality and State's security."

What was the attitude of the Orthodox Roumanian Church towards the minority Churches?

It was tolerant, liberal and generous.

Dr. Ispir's second lecture, on "The Roumanian Orthodox Church," showed that Christianity in Roumania began in the second century, when Roman colonists crossed the Danube and settled in Dacia.

Proof of this could be found in such words of Latin origin as:—*Dumnezeu* (Dominus Deus), *cruce* (crux), *pagan* (paganus), *creshtin* (cristianus), and so on.

From the fourth to the thirteenth century the period in the history of the Roumanian people was a dark one, owing to the invasion of barbaric hordes. At the end of the thirteenth century the two principalities of Muntenia and Moldova were founded, and a "Mitropolit" or Archbishop installed in each principality. Both Greek and Slavonic influences were felt, but the Church still kept its national character. The Archbishops were the great scholars and national leaders of their time, whilst the Church was identified with the nation. The Roumanians fought against the Turks, not as one nation against another, but as Christians against pagans. So Western Christianity was left in peace. Even the Pope recognised this in his letter to Stephan the Great, King of Moldova.

Among the Archbishops were great personalities, such as Varlaam, Dositheiu, Antim, Josiph, Petru Movila, Ardreiu Shaguna, and so on. The Bible was translated into Roumanian, and Literature and Science received a great impetus. The catechism of Petru Movila, recognised in the Synod of Jassy, 1642, was the standard one even to-day, not only for the Roumanian Church, but for the Eastern Church as a whole. Andreiu Shaguna (19th cent.) was the organiser of the Orthodox Church of Transylvania, and it was he who foresaw the organisation of the Roumanian Orthodox Church in the Great Roumania of to-day, for after the War his statute was adopted by all the provinces and the old kingdom. Shaguna's principle, together with modern thought, formed the present organisation of the Roumanian Church—an organisation which Dr. Ispir declared to be very much like that of the Anglican Church.

With regard to Missionary work, Dr. Ispir said that it ought to be done, not among Christian communities, but among the heathen. The Missionary work of the Roumanian Orthodox Church was to defend the Church only—not to make proselytes.

The third lecture dealt mainly with the new situation of different religious communities, created by the new law for the churches.

The main principle of this law was the recognition of the autonomy of different religious bodies, and the help given them for the realisation of the moral ideal.

The Orthodox, Roman Catholic, Reformed Calvinists, Evangelical Lutherans, United, Jews and Moslems were recognised cults, whilst others with less than 50,000 believers were considered as religious associations, free certainly, but dependent on their own resources. The children followed the religion of their parents—in mixed marriages the religion of their father—but anyone was free to change his religion after the age of eighteen. The United Church of Transylvania had the same rite as the Orthodox Eastern Church, but it recognised the supremacy of the Pope.

THE BRITISH SCHOOL OF ARCHÆOLOGY AT ATHENS.

(From Our Athens Correspondent.)

George Finlay, the celebrated Philhellene and historian of Greece, came to Greece in 1824 and lived there continuously till 1875, when he died in Athens. His life in Greece reached back, therefore, to the War of Independence, covering part of those stirring times as well as of the long period of re-construction which followed. The gift of his unique library and collection of antiquities to the British School at Athens, by his nephew, William Cooke, the possession of much of Lord Byron's and Hastings' correspondence, and of Finlay's own papers and note-books, link up the history of the School with a date far anterior to its actual foundation in 1885, and one may in a sense regard Finlay as one of its founders. Everything Greek claimed his interest. He was an ardent student of the classical period, and though his peculiar province was the history of Greece in Byzantine and Frankish times, he was probably the first person to draw attention to the claims of its prehistoric age. At the same time he was deeply interested in contemporary history, and took a personal share in the making of modern Greece.

A short *résumé* of the activities of the British School at Athens since its foundation will perhaps be of interest to readers of THE NEAR EAST AND INDIA, and at the same time draw attention to the pressing need of financial support, if those activities are to continue.

As has been already stated, the School was opened in 1885. During the first ten years after its institution, which had been made possible only through the interest shown by the Prince of Wales, afterwards King Edward VII., Mr. Gladstone, Lord Salisbury, Sir Richard Jebb and other distinguished men, the School passed through a period of financial stress, but under its first two Directors, Mr. C. Penrose, the eminent architect, and Mr. Ernest Gardner, these difficulties were gradually overcome. It was not, however, till 1895 that, largely owing to the efforts of Sir Edwin Egerton, then British Minister at Athens, a Government grant was obtained, and the School finances placed upon a solid footing. In the interval much good work had already been done in both the classical and the Byzantine field. The site of Megalopolis had been excavated and published, and those studies of the famous Monastery of St. Luke in Phocis undertaken, which ultimately bore fruit in a valuable monograph. The Director's house had also been built, and the library, now one of the best in Athens, had begun to take shape.

In 1895 Mr. (afterwards Sir) Cecil Smith became Director, and soon had collected funds for the building of a hostel for students. A year later the first number of the *Annual* appeared, which has since become one of the foremost archæological periodicals.

In 1897 important excavation of the prehistoric town of Phylakopi in Melos was begun by Mr. Hogarth, who had succeeded Mr. Cecil Smith as Director, and two years later that of the Dictaean Cave. At the same time, Sir Arthur Evans, an Associate of the School, assisted by former students, began his brilliant discoveries at Knossos.

Excavations at Palaiokastro in East Crete followed during the seasons 1901-3, and at Cyzicus in Asia Minor under Mr. F. W. Hasluck.

The first meeting of the International Archæological Congress took place in Athens in 1904, when the opening of the new Penrose Memorial Library by the Crown Prince of Greece formed part of the programme. In 1906, during the Directorship of Mr. Bosanquet, King Edward VII. and Queen Alexandra visited the School.

In the same year, the excavation of Sparta, which the School has again taken up since the War, was begun, and the most important discoveries at the site of the Sanctuary of Artemis Orthia at once followed. Our knowledge of the Early Iron Age in Greece has been entirely revolutionised by these discoveries. The excavations continued until 1909, under Mr. Dawkins, who had succeeded Mr. Bosanquet as Director.

Work in the prehistoric field, which has always been a special feature of the activities of the British School, was continued during this period by the exploration of prehistoric sites in North Greece by students of the School. The results were eventually published by Messrs. Wace and Thompson in their monumental work, "Prehistoric Thessaly," by far the most important contribution to the study of that age in Greece.

Owing to their special knowledge of the country and the language, members of the School were able to do extremely valuable work in both services during the War. The death in 1915 of Mr. F. W. Hasluck, Assistant Director since 1906 was a great loss to the School and to learning in general, as he had already established a European reputation in the province of mediæval and archæology and history. Another brilliant archæologist, Mr. Guy Dickins, who was killed in 1916, was a student of the School.

Since the War, the activities of the School have been devoted to two of the most famous sites in Greece—Mycenae and Sparta. The results of the excavation at Mycenae, which were conducted by the Director, Mr. Wace, have since been published in the Annual. The work at Sparta is now being carried on by the present Director, Mr. A. M. Woodward, who has already made most important finds, including a fine specimen of archaic Greek sculpture. At the same time, the tradition of the School in prehistoric research is being continued by yearly excavations in Macedonia, a region hitherto almost entirely unexplored. Work in the field of mediæval and modern history is represented by an Associate of the School, who resides in Athens, Mr. William Miller, perhaps the greatest living authority on Balkan history.

It will be seen from this brief review, which touches upon only a small number of its activities, that the British School at Athens continues to maintain the tradition of British Scholarship and research in Greece initiated by Finlay one hundred years ago. It would be invidious to make a selection among the names of all the distinguished scholars who have since been connected with the School, either as Associates or students, but enough has been said to show that it holds a unique position in the Near East, and deserves generous support from all who are concerned to uphold British prestige in this part of the world. At the present time its financial position is almost desperate.

Subscribers of £2 annually or more, and donors of £20 and upwards receive the Annual free of charge. Subscribers of £1 annually, and donors of £10 receive the Annual at a reduced rate of £1. Subscriptions should be sent to the Hon. Treasurer, V. W. Yorke, Esq., Farringdon Works, Shoe Lane, E.C.4.

During last year 33,801 Jews entered Palestine as immigrants, and 2,141 Jews emigrated from Palestine, making the net increase of the Jewish population by immigration 31,660.

THE PERSIA SOCIETY.

President : Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor Street, W.1.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

TOWARDS YUGOSLAV CONSOLIDATION.

The Plamenatz Affair.

(From Our Liubliana Correspondent.)

February 25.

Throughout the last few weeks all Montenegro has been greatly excited about what is referred to in the Press as the Yovan Plamenatz affair.

M. Yovan Plamenatz is not only an important political personage in the recent past of Yugoslavia, and of Montenegro in particular; he stands for a special chapter, and an important one, in the new era of Serbs, Croats, and Slovenes.

At one time his name was well known all over Europe. He attracted considerable attention in certain quarters of British political public opinion. For M. Yovan Plamenatz was the representative abroad of the Kingdom of Montenegro, even after Montenegro herself had become an integral part of Yugoslavia, and her *de facto* Government was the Serb-Croat-Slovene Cabinet in Belgrade. Round M. Plamenatz rallied all Montenegrin *émigrés* who did not desire the union of their country under the Karageorgevitch dynasty with the rest of the Serbian, Croatian, and Slovene lands, but wanted Montenegro to carry on as an independent State under King Nicolas and his descendants of the house of Petrovitch. The Montenegrin separatists, who later on took to calling themselves Federalists also, kept up an active propaganda throughout Europe, striving to win various European Powers for their cause, and to induce them to bring pressure to bear upon the Yugoslav Government in Belgrade and compel the latter to re-establish Montenegro as an independent State once more. In quarters where it was considered desirable that Yugoslavia should not be too strong, these Separatists found a measure of support. Gaeta, in Southern Italy, became the gathering place for bands of men prepared to re-enter Montenegro in secret, there to engage in armed resistance to the authorities of the State of Serbs, Croats, and Slovenes. And the soul of all this enterprise was M. Plamenatz, who had been for many years Prime Minister of the Montenegrin Government.

For some time foreign public opinion was incorrectly informed on the proportion of the Montenegrin population which sided with M. Plamenatz and his subversive activity. Gradually, however, it was realised abroad that the Separatist element represented only an inconsiderable minority in Montenegro, unimportant by comparison with the great majority which desired political union with Serbia and the rest of the Yugoslav lands. At the elections for the Constituent Assembly—which several British officers, incidentally, had the opportunity of observing at close quarters—the Separatists had no success whatever. Upon the death of King Nicolas, when Italy concluded her agreement with Yugoslavia, undertaking incidentally to abstain from all support of subversive action in Montenegro, the Plamenatz "Government" had to go into liquidation. That fraction of the Montenegrin population which would have been persuaded to carry on the cause of separatism was too small to succeed unaided. The Montenegrin Question—in so far as it can at any time have been said to exist—was solved. Even the sons of King Nicolas made friends with Belgrade.

The Belgrade Government went still further. For a twelvemonth past one has observed in those in charge of the country's affairs a growing desire to come to terms with all hitherto disruptive—centrifugal, one might call them—forces, such as are, so to speak, necessary evils in a young and newly-constituted State. M. Stefan Raditch, but lately the protagonist of Croatian separatism, has mended his way, and has even become a member of the Yugoslav Cabinet. Some of the *Makedonstvujushtzi* are returning from Bulgaria to Yugoslavia; and now M. Plamenatz himself has been pardoned and given permission to come back. It is hard to say which party was more eager for reconcilation, or which stands to gain the more thereby; but, as a matter of fact, both are satisfied. The Belgrade Government appointed M. Plamenatz Minister in Prague, and then at once pensioned him; it was a tactful method of providing him with the wherewithal for his new *locus standi*.

The conciliation of M. Plamenatz represents the epilogue and liquidation of the Montenegrin separatist movement. True, this epilogue was not strictly necessary, because even without it Montenegrin disruptive activity would have died a natural death; but there is something to be said for it. History teaches that in the consolidation of a State after great upheavals there has always come a phase when the victorious powers within the State have sought to conciliate their erstwhile and vanquished opponents and draw them over to their side. Yugoslavia is now entering this phase of successfully accomplished consolidation, and herefrom springs the inclination to come to terms with M. Plamenatz.

Nevertheless, this step has caused considerable complications. All Montenegro has been much perturbed. Meetings have been called, at which the populace with one voice expressed its disapproval of the terms accorded to M. Plamenatz. Resolutions are being passed, endorsing this disapproval and criticising his "pensioning," and he is being attacked on many counts. This indignation against M. Plamenatz, which is not confined to the adherents of any one party in Montenegro, ought to teach a valuable lesson; for its shows clearly how little ground the separatist movement actually gained among the population in Montenegro, and that the union of Montenegro with Serbia was indeed in accordance with the will and desire of the people as a whole.

But the complication does not end here. At this moment a large number of persons are being tried at Cettinye, who were at one time led astray by the agents of this self-came M. Plamenatz to the point of offering armed resistance to the Yugoslav authorities and committing various other crimes of a serious nature. So now one has the paradoxical case that the chief instigator is pardoned and finally provided for, whereas his accomplices, who acted merely according to his orders, are up for trial before the court at Cettinye. This glaring discrepancy in the matter of treatment is what strikes the populace so unfavourably, and something will have to be done to reconcile the Government's policy with the popular sense of justice.

Taken all round, however, the Yovan Plamenatz affair is important mainly in so far as it shows how rapidly the inner political life of Yugoslavia is moving towards consolidation, and how quickly all opposing tendencies are being assimilated by the sense of State unity.

Book Reviews and Notes.

MOGUL INDIA.

"JAHANGIR'S INDIA." By W. H. Moreland. (Cambridge: Heffers. 8s. 6d.)

This book is a translation of a report submitted to the Dutch East India Company by Francis Pelsaert, the company's factor at Agra, in 1626. It is primarily a commercial report which, as it contained a great deal of exclusive information regarding the Company's trade with India and the competition of its English rivals, was at the time doubtless treated as confidential. But, besides detailed dissertations on commercial matters—particularly indigo, on which Pelsaert was an expert, and spices, in which the Dutch Company claimed a monopoly—the report contains a number of interesting pictures of the India of Jahangir's time, made by one who was not only a successful merchant but a remarkably acute observer.

Pelsaert arrived in Agra in January 1621, in the sixteenth year of Jahangir's reign: and left India at the end of 1627, apparently immediately after the death of Jahangir and the accession of Shah Jahan. The picture that he draws, of India as he saw it, is a depressing one. Jahangir, he says, "is to be regarded as King of the plains and the open roads only: he rules not more than half of the dominions that he claims, since there are nearly as many rebels as subjects." In the tracts where the Emperor's writ ran, the conditions were deplorable. "The land would give a plentiful, or even an extraordinary yield, if the peasants were not so cruelly and pitilessly oppressed: the inhabitants of villages unable to pay the full amount of the revenue must see their wives and children sold, and themselves often take refuge with Rajas who are in rebellion, so that the fields lie empty and unsown, and grow into wildernesses." In another passage, Pelsaert speaks of "the utter subjection and poverty of the common people—poverty so great and miserable that their life can only be described as stark want and the dwelling place of bitter woe." As to the brand of justice dispensed by the Courts, Pelsaert writes "One must indeed be sorry for the man who has to come to judgment before these godless un-judges. Their eyes are bleared with greed, their mouths gape like wolves for covetousness, and their bellies hunger for the bread of the poor. Everyone stands with hands open to receive, for no mercy or compassion can be had except on payment of cash. This evil is, indeed, a universal plague: from the least to the greatest, right up to the King himself, everyone is infected with insatiable greed."

It is not an uncommon thing to see, in Indian publications of the present day, the golden age of the Mogul Empire contrasted with the state of India under the British Raj, to the great disadvantage of the latter. To such perversions of history this record, by a detached observer on the spot, should prove a useful corrective: though, no doubt, in the eyes of the fervid Hindu, the people were amply compensated, for any disabilities under which they may have laboured in the mass, by the recorded fact that "the slaughter of oxen and cows is strictly forbidden by the King on pain of death." It is interesting to note by the way, that a gold currency problem existed in India 300 years ago—"There are gold coins, named mohur, equivalent to fourteen rupees" (apparently weight for weight of gold to silver—approximately a "1s. 5d." rupee) "but very little trade is done with them, as the great men hoard them and search for them for their treasuries."

Altogether a valuable and stimulating book, containing important lessons for those interested not only in the commerce and politics of Jahangir's India, but in those of the present day.

EGYPT.

"A WAYFARER IN EGYPT." By Annie A. Quibell. (London: Methuen and Co., Ltd. 7s. 6d. net.)

A visit to any country one has not yet seen is an adventure. But, like most adventures, it requires some preparation to get the best out of it. And so an intelligent person about to start on such an expedition wants to get some preliminary idea of what he can best see while his time and perhaps limited purse last out. He also wants to get hold of sufficient primary facts as to history, art, and seasons and as to the people he is to be among. As most of us know, it is generally easier to wish for an easy way of acquiring such knowledge than to satisfy so laudable an appetite. The guide-book's arid pages blossom all right when one is "there," but they are worse than useless till then. And few of us have time or inclination to read up a whole bibliography of text-books. So the world of travellers should be grateful to publishers who have stepped in to fill this gap, as Messrs. Methuen have done in their "Wayfarer" series; handy, cheap, illustrated, and written by experts for Mr. Everyman.

Certainly Mrs. Quibell's work fills the bill most efficiently. As an excavator of ancient tombs and temples, as a student of mediaeval history and monuments, she deals with these matters, briefly but sufficiently, in chapters which are pleasant to read. She is also thoroughly at home with the Egyptians of Upper and Lower Egypt and with the Bedouin, and gives us the *entrée* into their homes and thoughts, so that Egypt is presented to us as something more than an archæological museum.

While we have tried to indicate how useful this book can be to the numerous tourists who often leave the English winter behind for the sunny clime of the Nile Valley, we should not like to give the idea that it has no other value. Many of us must confine our travels to the armchair. Well, for such this book will serve most excellently.

C. S-W.

A CATHEDRAL FOR EGYPT.

The High Commissioner for Egypt spoke last Friday in Cairo in support of an invitation to the Britsh community in Egypt to consider the erection of a cathedral building for the diocese as a memorial of the men and women who sacrificed their lives in Egypt during the Great War. A sum of £30,000 is required for this purpose. At present Egypt is a diocese without a Cathedral or central place of worship, the Bishop and the Archdeacon have no permanent residences, and there are no official buildings for the administrative business of the diocese. An appeal committee has been formed, and the architect, Mr. Adam Scott (a brother of Sir Giles Scott, the architect of Liverpool Cathedral), will visit Egypt in March to consult the building committee.

A considerable number of destitute Georgian children have been fed, educated, and clothed through the medium of the funds subscribed since last May to the Georgia Committee. Further help is urgently needed, and subscriptions may be sent to the hon. treasurer of the Georgia Committee, Mr. A. S. Taylor, of Lloyds Bank, Rosslyn Hill, N.W.3.

That Book you Want!

THE WEEK AT HOME.

London, Tuesday Morning.

The League Council.

To the exclusion of almost every other subject, the question of Germany's entrance into the League of Nations Council has been holding the attention of the politically-minded in Great Britain. Shall that entry be unconditional or shall it not—that is the problem which is agitating alike the Cabinet, the Houses of Parliament, and the country. It is being stated that there exists a "unanimous" demand on the part of the British that Germany shall walk freely and unaccompanied into the League, and much imprecation is being cast down upon those who suggest that the entrance either of Poland or of Spain might fitly synchronise with that of Germany. On the real state of English feeling I confess I have no knowledge; it seems to me, however, to be deeply divided.

There are those—obvious enough in Parliament and in the Press—who looked upon Locarno with the vague and not very penetrating eyes of the idealist. They assumed from that Pact that Germany was to enter the League Council, and that, therefore, all European disputes were henceforth to be settled peacefully. These people therefore regard what they imagine to be the later demand for the admittance into the League of a "balancing Power" as Machiavellian in the extreme and as absolutely destructive of the wider, humaner spirit that was born, or rather consecrated, at Locarno.

Against these are the realists of Europe, that unaging class of men who see in the Germanic tradition the chief danger to Europe, the men whom no reputed change of spirit will ever convince that the Teuton is not a peril to the Latin and to the Slav. This is, admittedly, putting the position very crudely, for those who wish to hedge round the entry of Germany have a certain kind of legal justification, pointing out that since Poland signed equally with Germany at Locarno, she equally deserves admittance.

On the whole, however, it appears that the majority of British opinion is rather with the Scandinavian countries in support of the German thesis than with the sentiments prevailing in France and in Italy towards this problem. A large number of genuine statesmen here—one excludes, of course, those tinged with the "pacifist" colour—counsel the admittance first of Germany and, later, discussion on the question of the Council's enlargement. This is so typically an English compromise that it will probably gain the day, to the pleasure of nobody!

As far as the impartial observer can see, the whole problem revolves round two points:—(1) the precise significance of the promises publicly and secretly made at Locarno; and (2) the ability of Europe to trust the post-War Germany. Upon the first it is impossible for the outsider to say anything, for he knows nothing of the inner conversations between the British, French, and Italian representatives. Upon the second one can only ask this question: "If German intentions are completely honourable in respect of the Peace Treaties, why should the Berlin Government be perturbed by the possible inclusion of that resurrected country to whose disappearance in the past it so notoriously contributed?"

The Civil Service Sports Grant.

As I hinted last week the Government only went wrong over the Civil Service Sports Grant to do right later. This proposal to allocate moneys for sport and the subsequent withdrawal were, in colloquial language, the merest "eye-wash." In the Civil Service itself, in fact, this strange official whim is attributed rather to the Government's desire to take the attention of the public off more serious matters than to any belated sense of generosity. There is a certain kudos to be gained by doing the right thing negatively.

The Unity of Labour.

It was, I think, in those slack days after the War that that small body of the crankiest doctrinaires, who never had in all their bones the slightest spark of national sentiment, nor stood for anything of which an Englishman could be proud—the I.L.P.—it was in that strange time that this baleful band assumed an unmerited prominence. Shrilly and persistently it shrieked its pacifist call, until at last triumph appeared to come to it during the Labour régime, for which it supplied so much. Recently, however, it seems to have been declining in importance, if not in numbers, and now is only to the fore by the publicity which is encountered by those of the Labour Party who refuse to drink its milk neat.

No one will suppose that I hold any brief for Mr. Ben Spoor (who possibly is better known to the British community of Egypt than of Great Britain), but one must congratulate him on his verbose release from the impossible clutches of the I.L.P. A great whoop of excitement went up in the Press last week when the letters that had passed between him and the I.L.P. were published. We love these things, and read them with the same breathless sense of doing our national duty as we did those that passed between Sir Alfred Mond and some equally obscure party organisation. Theoretically, of course, the I.L.P. were wholly right in dismissing Mr. Spoor from its ranks. The trouble about these political divorces is that the amenities of the situation are so scantily observed, time not even being given for the ranker to salute before falling out.

Labour's Adviser.

What a remarkable compromise the Labour Party really is was made manifest recently by the appointment of Mr. Charles Roden Buxton to be Political Adviser to the Parliamentary Labour Party. The task of this new official (to his position exception can hardly be taken, since it is unpaid) is, briefly, to prepare a card-index of all the members of the Party. He will draw up an elaborate scheme to organise back-bench members for the service of the party in questions and debate; he will "assist the members in their research work" (surely this can only mean their search for office?); and he will "co-operate in the preparation of Bills." The conception seems to be, not so much a furtherance of opportunities for the Labour Front Benches, but a "gingering-up" of the back benches.

It is not difficult to picture a party thus organised on the latest business-lines, and, in theory at any rate, incredibly efficient. But what of the human element?

Supposing the Political Adviser advised the adoption of a policy disapproved of, say, by Mr. Ramsay MacDonald or by Mr. Wheatley? The scheme should, however, at any rate provide the Labour leader with the knowledge of who in his party are enemies and who are his friends. Whether accurate knowledge on this subject is wholly desirable is another matter.

The Air Estimates.

Considerable discussion is taking place over the Air Policy which Sir Samuel Hoare is steadfastly carrying out. It had been recognised on all but the pacifist side that our air defences were inadequate, and of the fifty-two squadrons that are to be formed, twenty-five are now in existence, and three more will be added this year. In consideration of the Locarno Treaty, however, the programme of construction is to be slowed down a little; but one wonders whether the French Air Minister has been similarly affected by this (so-called) prevailing spirit. Our own Air Minister has come in for much criticism, both in detail and on general grounds. It has been asserted, for instance, that the ground personnel of the Royal Air Force is in ridiculous proportion to the number of actual flying men; and that the programme of the Air service, which, according to this argument, is to be increasingly the most important service, should have been maintained at the expense of economies on the other services. In the House, however, the Air Minister was fairly convincing in defence of his policy.

Crisis in Engineering.

In the engineering industry employers and employed have been arguing, or bargaining, for nearly two years; and now, it seems, it is all to have been useless. Unless some settlement is made, all members of the seven great engineering shops are to be locked out on March 13. It is a pretty pass to have reached after all these negotiations: but there is yet hope. For one thing the tone of the Unions is not combatant; and for another there are apparently many employers who prefer a rise in wages to a stoppage of the industry. But at the moment there is an unauthorised strike in London, and the Employers' Federation is threatening an immediate lock-out unless this is brought to an end.

As far as one can see, however, the issue between the masters and the men is not on the question of an unauthorised strike, but on whether the men shall be allowed to attempt to secure a rise in wages by local, as opposed to national negotiations. It appears, therefore, to the outsider that the employers consider this preservation of the principle of national as distinct from local negotiations is so vital that the whole industry may be brought to a standstill for its sake.

It is curious to reflect that both the masters and the men in the mining industry are in this respect exactly opposed to those of the engineering industry. The miners want those national negotiations of which the engineers wish to rid themselves. If the coal-owners are justified in insisting upon district settlements, what of the engineering employers' case that there should be no district settlements? I should have thought that the mining industry was much more of a unity than is the engineering industry. Some parts of the engineering industry obviously can enjoy a boom while others are in the depths of a slump. One can hardly think that the public in general will think more of the engineering employers if they do declare a lock-out for the sake of this problematical principle.

International Rugby.

The big Rugger games last Saturday had results in exact accordance with the wishes of the majority of Englishmen. English luck at Twickenham held good against France, and at Murrayfield the Irish against the Scots were just able to demonstrate the completeness of their return to pre-War form. There is hardly any follower of the game (except, of course, Welshmen) who does not now wish them the Triple Crown.

Art Exhibitions.

There is at the moment an uncommon abundance of interesting art exhibitions. At the New Chenil Galleries, at Chelsea, for instance, the Society of Present Day Artists is holding its first exhibition, and a quite stimulating show it is. The great names in London art are not to be seen, but there is work of the class of Cundell, A. R. Thomson, Ethelbert White, Philippe Forbes-Robertson, Colin Gill, William Lamb, and so on, which will certainly intrigue the student of art for an hour or two.

For those who like something more *récherché*, there is an exhibition at the Leicester Galleries, Leicester Square, of works by Albert Rutherston and Thomas Lowinsky. The former is, of course, very well known for his decorative work. Designs for books, panels, painted fans—all these will delight the dilettante. In addition, there are one or two masterly landscape oil paintings, the tones of which are a musical refreshment. Mr. Lowinsky's art is less known, but he has an equal definiteness and individuality. His ideas are original, but technically he harks rather back to the older masters, such as the pre-Raphaelites, rather than goes searching after strange models. One is impresed especially by his probing into ultimate subjects, such as "The End of the World," "The Birth of Venus," and "The Tower of Babel"; and that he will one day achieve something of real importance seems most probable.

One hears it sometimes said that Robert Bevan, who died last year, will be reckoned by posterity as a greater artist than Sargent. That, however, is not very obvious in the Memorial Exhibition of his works which has been arranged at the Goupil Gallery, Regent Street. Without questioning Bevan's sincerity, one may doubt whether his formulary passion, or his tendency to rely rather on mathematically arrived at convention than on artistic reality, was not, for all his subtle mastery of form and of colour, his undoing. On me, at any rate, his studies of horses and peasants and landscapes produced a feeling, at first of admiration, but finally of monotony.

Monotony, however, is the last word that could be applied to the works of three young artists of the Slade, Stephen Bone, Rodney Burn and Robin Guthrie, which are to be seen in another room of the Goupil Gallery. All three have a delightful sense of refinement combined with individual freedom, and the promise that is held out, for instance, by Mr. Bone's oil paintings of Iona and by the nude drawings of Mr. Burn, is very considerable.

PERSONAL AND GENERAL.

TO-DAY

March 4, 1926 (New Style).
February 19, 1926 (Old Style).
Shaaban 19, 1344 A.H., of the Moslem Calendar.
Adar 18, 5686, of the Jewish Calendar.

Sir Ian Malcolm has returned to 57, Onslow Square, from the Suez Canal.

Sir Edwin and Lady Emily Lutyens have returned to 13, Mansfield Street from India.

The Marquess and Marchioness of Linlithgow are leaving Egypt for home towards the end of March.

Mr. George Terrell sailed in the s.s. Manipore for Egypt last Monday, and will return soon after Easter.

Lord and Lady Rayleigh left 69, Cadogan Square, last Monday, for Constantinople and the Balkan States.

Lord and Lady Donington and the Hon. Irene Hastings will return to London at the end of March from Egypt.

Lord Woolavington, who left England for Egypt at the end of January, is not expected back until towards the end of April.

Sir Howard D'Egville reached London last Saturday after a visit to India to inaugurate a branch of the Empire Parliamentary Association in the Indian Legislature.

Sir Hamar Greenwood, K.C., M.P., and Lady Greenwood, who have arrived in Cairo from Nice, will return to 13, Chester Terrace, Regent's Park, early this month.

The will of Colonel Leslie Gwatkin Williams, C.M.G., D.S.O., I.A. (retired), (47), of Gloucester Road Kensington, S.W. (net personalty £21,414), has been proved at £22,297.

Princess Helen of Serbia entertained at luncheon at Claridge's Hotel last Sunday Dr. Milan Stoyadinovitch, Minister of Finance of Yugoslavia, and Mme. Stoyadinovitch.

General Sir George Milne, upon his appointment as Chief of the Imperial General Staff, had the honour of being received by the King at Buckingham Palace on February 22.

Lady (Austen) Chamberlain has been staying at the Residency, Cairo, as the guest of the High Commissioner and Lady Lloyd. She was entertained at luncheon last Friday by the Prime Minister, Ahmed Ziwar Pasha, at the Mohamed Aly Club.

Major and Mrs. Court Treatt, who recently completed the journey from Cape to Cairo by motor-car, will be the guests of honour at the monthly luncheon of the Over-Seas League at the Criterion Restaurant to-morrow (Friday). The Hon. Sir Arthur Stanley will preside.

Sir Rajendranath Mukerjee, Sir Purshottamdas Thakurdas, Sir Maneckji Dadabhoy, and Professor J. C. Coyajee, the Indian members of the Royal Commission on Indian Currency and Finance, which began sittings in London last Monday, arrived at Victoria Station on February 27.

The Secretary of State for India in Council has granted leave of absence for four months from June 10, or such subsequent date as he may avail himself of it, to Lord Lytton, Governor of Bengal.

The King has been pleased to approve the appointment of Sir Hugh Lansdown Stephenson to act as Governor of Bengal during Lord Lytton's absence.

It is understood that arrangements have been made for the King of Egypt to visit his Majesty the King in London in June.

M. de Jouvenel, returning from Angora, has arrived at Beyrout, and has once more resumed his duties as French High Commissioner in Syria.

The Roumanian Minister to Washington and Princess Bibesco left Washington last Friday, and will embark in New York on March 6 for Europe.

M. Roufos, the Foreign Minister, left Greece last week for Geneva, as head of the Greek mission for the League of Nations Conference to be held on March 8.

Dr. Stoyadinovitch, Yugoslav Minister of Finance, and Mme. Stoyadinovitch, left London yesterday, accompanied by M. Stoshovitch, for Paris *en route* to Belgrade.

The Persian Chargé d'Affaires in London, Prince Nadir Mirza Arasteh, will be At Home from four till seven p.m., on Monday, March 15, at 47, Bramham Gardens, in honour of the birthday of the Shah.

Major-General Sir Cecil and Lady Lowther left Marseilles last Thursday, in the P. and O. steamer Ranchi for Port Said. Sir Arthur Yapp, who is travelling to Yokohama, via Bombay and Rangoon, was a passenger in the same vessel.

THE ARAB HORSE SOCIETY.

The London Show of the National Pony Society, in conjunction with the Arab Horse Society, will be held at the Royal Agricultural Hall on March 5 and 6.

INDIAN TAXATION INQUIRY.

That the recommendations of the Indian Taxation Inquiry Committee should be unanimous is a remarkable and pleasing fact: for, whereas the President and one of the members were Englishmen, the other four members were Indians. It is unfortunately only too true that, among the Indian members of a "mixed" Commision, there is almost invariably to be found at least one who conceives it his duty to submit a personal report: usually —as in the case of the dissentient from the Report of the Bombay Reclamation Committee—an excursus into extremist politics, couched in flamboyant language and only occasionally confining itself to the actual subject at issue. The unanimity of the Taxation Committee is a sign, and a very encouraging one, of the improved state of affairs that is now daily becoming more obvious in India.

Some of the Committee's proposals had already been accepted, prior to the appearance of their Report: for instance, the abolition of the cotton excise duty, and the restriction of opium cultivation together with the abandonment of the opium auctions. Perhaps the most remarkable evidence of their real unanimity is that they refused to recommend prohibition of drink, and expressed the opinion that the action already taken in that direction had resulted in an increase of crime. They did, however, recommend an increase in the duty on imported liquor, and on imported tobacco—possibly as a means of balancing, not only financially but politically, their proposals in the matter of opium. That their opposition to the cotton excise was arrived at on its merits—was particular, not general—is shown by the fact that they recommended the imposition of excise duties on country-made liquor and tobacco. They recommended a reduction in the customs duties on "conventional necessities," especially sugar, "with a view to affording relief to the poorest classes." Here, perhaps, it is not easy to follow them; for it is admitted that India, given improved methods of cultivation and manufacture, could produce all the sugar that she consumes, and one of the objects specially cherished by the agricultural experts is to enable her to do so; while, in fact, the poorest classes do, as it is, confine their purchases of sugar almost entirely to the home-grown article. They recommended the removal of the export duty on hides, the original imposition of which was made under the mistaken notion that India very largely controlled this particular traffic: an idea that has proved to be wrong, since the result of the duty has been that the control of prices has passed, probably permanently, away from India. Perhaps for a similar reason, in spite of India's apparently impregnable monopoly, they did not recommend an increase in the export duty on jute: and they rejected a suggestion for an export duty on raw cotton, declaring that "the proper way to protect the Indian cotton-mill industry is to increase the import duty on manufactured cotton goods." They also rejected a proposal to increase the export duty on rice, but recommended "an extension" of export duties on lac, oilseeds, and manures, and of the taxes on entertainments and betting. Among their other recommendations are a reform in the basis of the land settlement, an alteration of the super-tax on Companies and its extension to incomes of Rs. 30,000 instead of 50,000, as at present, an increase of probate duties and of the licence fee for fire-arms, the taxation of patent medicines, "a cautious experiment in selected areas for the imposition of fees for the registration of marriages": and the reduction of the import duty on motor cars. One of the Indian members favoured the imposition of a succession duty, and desired that immediate inquiry should be made into "the vested interests created by the permanent settlement in Bengal." These ideas did not commend themselves to the rest of the Committee, and were apparently not pressed by the member concerned; since he did not think it necessary to embody them in a "minority report."

There are many points of very real importance in these recommendations. The Committee's remarks on cotton goods, for instance, are likely to cause uneasiness in Lancashire. It does not, of course, follow that their suggestion will be accepted: or that, if it were, acceptance would not be combined with a move towards Imperial preference. It is undeniable that Indian opinion is opposed to anything of the sort, at present; but the friendlier atmosphere, that is already becoming apparent and seems to be gaining ground, may not improbably bring about an alteration of feeling in this respect. Even at present, indeed, it is not at all unlikely that a limited form of preference, in respect of cotton goods where Lancashire is in competition with Japan but not with India, would command general approval. The suggestion to place an export duty on raw cotton is certainly aimed at Japan; but it would obviously be a very dangerous method of increasing the cost of Japanese production. In the matter of a reduction in the import tax on motor cars, the reason given for the recommendation is rather a curious one: it amounts to a suggestion to rob the Central Government in order to pay the Provincial Governments. In the motor car industry, entirely non-existent in India, there is no question of protection; but several Provincial Governments—notably that of the United Provinces—have placed a tax upon motor cars in the interest of the upkeep of roads; which, particularly in that Province, are notoriously in a deplorable condition. It is felt that the payment of a double tax is unfair on motorists; that either the high import duty—30 per cent.—should go to the Provinces who have to keep up the roads, or that motorists should pay a smaller part of the existing duty to the Central Government, and a larger part, in the form of local taxes, to the Provincial Governments. The suggestion will be generally accepted—except possibly by the Central Government with whom, after all, the decision rests—as fair and opportune. The proposal to increase the entertainment tax will certainly be strongly opposed by the interests affected: they have already protested that the existing tax is more than they can bear. As for patent medicines, the imposition of a duty should be generally acceptable, except to the quacks who produce them and the newspapers who advertise them: since an increase in cost may leave less to spend on advertisement. There is little exaggeration in saying that 75 per cent. of the ad-

Digitized by Google

vertisements to be found in Indian vernacular newspapers consist of indigenous patent medicines—generally of the aphrodisiac variety; nor do even the most respectable newspapers eschew them altogether. There is, in particular, a well-advertised nostrum of this sort, the price of which leads its proprietor to describe it as intended "for princes and rich men only," which holds a place even in some of the most important Anglo-Indian newspapers. An increase in the licence fees for fire-arms, and most emphatically in those for pistols and revolvers, would hurt nobody except people who deserve to be hurt: and is already, as many think, long overdue. As to the "cautious experiment" of fees for the registration of marriages, it may confidently be expected that this proposal will be still-born. One of the widely circulated lies about the Rowlatt Act bore a strong family resemblance to this: and any Government that attempted to introduce anything of the sort in India would be gratuitously looking for trouble. The "permanent settlement" in Bengal, and in parts of the neighbouring Provinces, has long been a very thorny question: any attempt to disturb it would arouse fierce antagonism among the great landlords, even though, as is certainly true in most cases, they have put themselves out of court in a matter in which they refuse to see that the honouring of any undertaking, except that of the Government, is involved. When Lord Cornwallis made the permanent settlement, over a hundred years ago, the result of his action was to confirm, in actual possession of large estates, a number of persons who had, up till then, really been only the revenue-farmers of those estates: and the settlement was made on the implied understanding that not only would Government not enhance the revenue payable to themselves, but that the landowners would, at the same time, refrain from enhancing the rents they were obtaining from their tenants. The latter part of this "gentleman's agreement" has been persistently departed from, ever since: over and over again the landlords have raised their rents, so that their income from the land has increased enormously, while that of Government remains exactly what it was. This is certainly an evil that cries aloud for a remedy; but it is not any the easier, for that reason, to find a practicable one.

CURRENT TOPICS.

Currency Commission.

The Indian members of the Indian Currency Commission arrived in England by the last mail, and the Commission is now again assembling to take evidence in this country. One of the latest pronouncements on the gold standard question arrived a mail before them, in the shape of the "Annual Market Review" for 1925, compiled by a leading Indian bullion firm in Bombay, the head of which gave evidence before the Commission in India. The Review refers to the hoarding of the precious metals in India, which has gone on for centuries and shows no sign of being satisfied—on the contrary, it tends to increase—as an argument against the possibility of the introduction of a gold standard. If, says the Review, coined gold is to be freely given in exchange for notes or silver—which it looks upon as a necessary concomitant of the introduction of a gold standard—"it seems inevitable that the possessors of these token currencies will hasten to convert them into the most stable measure of value that they know—gold." But, as the Review remarks, it has always been possible to purchase gold bullion with paper money; its point is that, in the nature of things, such transactions necessarily tended to be large, and the introduction of gold coins will now allow them to be undertaken by the "small man."

It is, however, pertinent to point out that the adherents of the idea of the gold standard assert that the main reason for the Indian habit of hoarding gold is that the silver rupee is, at present, not "a store of value"; but that, once the silver rupee became a definite fraction of a gold mohur—or sovereign—it would automatically become so: the mere fact that a gold coin could always be obtained in exchange for a fixed number of rupees would be the most powerful incentive to avoid asking for one, unless the holder of silver happened to have a temporary need for one or more gold coins for some special purpose. This is, in fact, what was the general position before the War: the Treasuries freely exchanged sovereigns at the rate of fifteen rupees apiece, and their transactions were not by any means always in one direction only—they were frequently in both. The appetite for gold grew with the disappearance of gold coins from circulation, which was in itself a direct incentive to hoarding. It is true, and it is admitted by the supporters of a gold standard, that some little time is likely to elapse before the Indian "man in the street" realises that he can get gold for silver whenever he wants it: and that, during the initial period, there is likely to be a severe strain on the gold reserve; but several suggestions were put forward for avoiding a "raid" at the outset, and it was confidently believed that the period of transition to complete confidence would not be a long one. It was, of course, with the intention of confirming the holder of silver in his recognition of the fact that, with the introduction of an effective gold standard, his silver rupees had become an equally stable "store of value," that the suggestion was made that, at first, silver should remain legal tender, if not to an unlimited, at any rate to a very great, extent: and that the ultimate limit should not be brought below 100 or 150 rupees. The lesser sum would cover the transactions of the ordinary "man in the street" in all but very exceptional cases.

It is generally believed that the Currency Commission intend to proceed to the United States before they finally submit their report; which, by the way, it is said that they hope to do by the end of April. If they do go to the States, the most plausible deduction will be that the object of their journey is to inquire to what extent it will be possible to count on American assistance in the provision of backing for a gold standard in India: ergo, if so, it may be argued that they are seriously considering that proposal. If, on the other hand, they do not go, it may equally be argued that they have decided to reject it; so that the protagonists in "the battle of the standards" will watch eagerly for an announcement of their future movements, and will draw their own conclusions from it.

A Centre Party.

The initial attempt, started by Bepin Chandra Pal in Bengal a few months ago, to start an Indian "Centre Party," ended in failure; but it appears that a second attempt is now in progress. Its author is Mr. Jinnah, the leader of the Independent Party; who hopes to attract the "left wing" of the Liberals and the "right wing" of the Swarajists to form a new National Party which will become what is one of the most crying needs of Indian politics—a Constitutional Opposition. The Swarajists

LONDON CITY MISSION.

AYAHS' AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and to introduce them (if disengaged) to families about to travel to the East.

claim to constitute the official Opposition, but they cannot call themselves a constitutional one, since their declared objects are indiscriminate obstruction and the refusal of supplies, leading up to the form of revolution that is disguised under the term "mass civil disobedience." If Mr. Jinnah can retain the allegiance of the existing members of his Party and can, in addition, attract to it the Swarajist "rebels"—the believers in "responsive co-operation"—he will certainly have made a good beginning.

The main trouble about the starting of a new political party is to be found in the matter of leadership: and this is complicated, in India, by the communal division between Hindus and Mohammedans. There is increasing evidence of the alarm felt by Mohammedans at the prospect of a "Swaraj" which would be preponderatingly Hindu: and Mr. Jinnah, himself a Mohammedan, is perhaps in a better position, than any other Indian leader, to serve as a centre for a rally of Moslem legislators. But any attempt to form a separate Mohammedan party would immediately alienate all Hindus, of whatever political colour; so that, in his plans for a Centre Party, Mr. Jinnah will have to be careful to avoid any appearance of making it a sectarian one. If any Mohammedan in India could expect to attract Hindus to a party led by himself, it would perhaps be Mr. Jinnah; who, though a Moslem, is not by any means a fanatical one. If there were no other evidence of this, it would be found in his marriage with the very charming Parsee lady who is his wife—a departure that caused considerable heart-searching among his co-religionists, and violent opposition among hers.

But it cannot be expected that, in attracting Mohammedan legislators, Mr. Jinnah will avoid estranging the apostles of extreme and aggressive Hinduism: two of whom—Pandit Malaviya and Mr. Rangachariar—have, indeed, announced their resignation from the Independents, with the intention of working for the establishment of a sort of "Centre Party" of their own. If this move should, as seems not at all improbable, result in the formation of two Centre Parties—a Mohammedan one under Mr. Jinnah and a Hindu one under Pandit Malaviya—the prospects of a Constitutional Opposition will not be improved but very distinctly worsened. The apparent position is only another example of the depth and width of communal division that unfortunately exists in India, and that has been growing in intensity since the final failure of Mr. Gandhi's make-believe of Hindu-Moslem unity. Both sides express the urgent desire that it should cease; but each side demands cessation on its own terms.

The Swarajists.

There have lately been quite a number of indications of the dawning of political sanity among the Swarajists: so that it ought not to cause serious disappointment if, in the course of their convalescence, they suffer an occassional relapse. Such a relapse has just occurred in the Legislative Assembly; where, after complacently accepting the congratulations of the Railway Member on their intelligence in approving, last year, the separation of the railway budget from the general budget, they proceeded to throw out the railway budget altogether. The unreality of the position was well brought out by the Home Member when he warned the Swarajists of the mischief that must arise from habituating the House to voting in a manner contrary to that in which it wanted Government to act: and this particular exhibition of irresponsibility will have no practical effect, for the grant will be restored, in due course. A matter of more practical interest is the indication, as shown by the voting, of the probable chances of the new Centre Party—or Parties—now believed to be in embryo. The whole of the Independent Party broke away from its leader Mr. Jinnah (who abstained from voting), and went into the opposition lobby with the Swarajists; while the two important Hindu leaders, who had previously resigned their membership of the Independent Party with the declared intention of starting a new Nationalist Party of their own—Pandit Malaviya and Mr. Rangachariar—voted in different lobbies.

Meanwhile, the small band of Swarajists in the Council of State found occasion for a familiar "gesture" on a resolution moved by Mr. Sethna for the immediate appointment of a Royal Commission to formulate a scheme for the establishment of responsible self-government. This resolution, which appears to have been put forward by the mover in a moderate and shrewdly argued speech, was rejected without a division: the Swarajist members would have none of it, for the demand for a Royal Commission proceeds on the basis of recognition of the preamble to the Government of India Act, which lays down that the method and time of an advance are for the decision of the British Parliament, and the Swarajists deny this, maintaining that these are nobody's business but that of India herself. The net result of the debate is declared to be "a call to constitutionalists throughout India to complete, at the autumn general election for the Assembly, the victory over extremism" already foreshadowed by many noticeable signs. Mr. Sethna declared that extremism was visibly failing, and that an immediate announcement of the early appointment of a Royal Commission would cut the remaining ground from under its feet. The Home Member pertinently observed that what is required is not mere declarations that extremism is failing, but a course of conduct by the Constitutionalists that will lead the constituencies along the constitutional path. If this advice is effectively followed, the result of the impending general election should show India's feet at last firmly planted on a clear course. It is now the Constitutionalists' honour: let them cease shouting "Fore," and drive off.

The Indore Case.

The announcement that the Maharaja Holkar has offered to abdicate in favour of his son, and that the offer has been accepted by the Government of India, marks the end of the remarkable drama that first became public property when, thirteen months ago, the protector of the dancing girl, who had transferred her allegiance from the Maharaja of Indore, was murdered in broad daylight in Bombay in the course of an attempt at her abduction by a number of servants of the Indore State. Since the announcement that the Government of India had decided to appoint a commission of inquiry, the Maharaja has been considering his position, with the assistance of a number of distinguished Indian lawyers: and "bulletins" have been issued periodically from Indore, declaring that the Maharaja had been advised to face the inquiry, to meet which he had a perfectly good case. At the same time, some stress was locally laid on the "humiliation of an inquiry by an outside Commission": and it may be surmised that the Maharaja's final decision will be explained, by his apologists, as a forced acceptance of the only practicable means of avoiding such a humiliation. In an Indian State, it is the reverse of easy to find out what public opinion really is: such opinion as has been vocal in Indore discribes the Bombay tragedy as "the unauthorised conduct of bad characters who sought to curry favour with His Highness." It was, of course, generally known in Indore that the return of Mumtaz Begum was very near to the Maharaja's heart: and public opinion outside the State is, in the main, divided between two views. The first, that the "raid" was organised under the direct orders of the Maharaja: the second, that it was carried out as a result of some unguardedly expressed wish, on the lines of "will no one rid me of this pestilent priest?"

The official statement says that, in consequence of the Maharaja's abdication, "no further inquiry will now be made into his alleged connexion with the Bombay murder case." This indicates pretty clearly the official view on the point at issue; but it is doubtful whether it will satisfy the insistent demand for an inquiry, which has been freely voiced even in rather unexpected quarters. The *Bombay Chronicle*, for instance, approved of the Viceroy's decision to institute an inquiry, and said that "there would be justifiable apprehension in the public mind if, by any failure to investigate the allegations, the impression was left that highly placed persons,, secure in their individual safety based on princely prestige and protective treaties, could

Digitized by Google

engineer conspiracies in British India for the kidnapping of recalcitrant favourites and involving the murder of innocent citizens." The paper adds that the acceptance of any proposal for avoiding full investigation would be a miscarriage of justice and would amount to compounding of the crime. The Maharaja's abdication will be generally accepted as amounting to an admission of guilt; but will not, perhaps, be equally generally accepted as a satisfactory alternative to a full inquiry.

To those who try and make it part of their duty to interest the British public in Indian affairs, it is rather disheartening to note the nature of the items of Indian news that do appeal to it—and, by implication, the nature of the much greater number of much more important items that do not. The only serious competitor, at the moment, to the Indore case is the coronation of the new Maharaja of Kashmir; and the only reason for the interest aroused in the latter lies in the glorified reappearance of "Mr. A."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 11.

A Straw.

"It is understood that Mr. N. N. Sircar, barrister of the Calcutta High Court, will be nominated a member of the Legislative Assembly from Bengal." This announcement, tucked away in a corner of the *Statesman* this morning, is probably the most significant news item of the political week. The career of Mr. Sircar, who is still a comparatively young man, has been curiously parallel to that of Lord Sinha, except that, until recently, he has taken no public part in political life. His attitude towards politicians of all races has been one of quiet and amused cynicism; this has not prevented him from doing very sound work in the background, and he has always displayed a flair for reality. A few months since, his name was mentioned as a possible Mayor of Calcutta in succession to Mr. C. R. Das; now he is to go to the Legislative Assembly. His success at the bar has been remarkable, and his income is probably as large as any in the history of the English bar in India; a fine lawyer with an infinite capacity for hard work, he has an uncanny sixth sense which continually lands him on the winning side in Court. His entry into the Assembly may only be the first step to higher things; but, apart from the personal side, it has a particular significance to the student of affairs.

A Life on the Ocean Wave?

The Silent Service has again justified its adjective; while the Skeen Committee has been sitting in the limelight to consider the Indianisation of the Army, a complete scheme has been formulated by a Departmental Committee for an Indian Navy to take the place of the Royal Indian Marine, and the Viceroy's announcement of this to the Council of State was reported on Wednesday morning with double headlines in the Press. There has been little enthusiasm over it, and club opinion is sceptical; it should be remembered, however, that it is only a few years ago that all the river-craft of any size were captained by Europeans, and that now there is practically not a single one left; and the competence of the Indian *serang* has been proverbial. A Navy, even of only a dozen ships, is another matter: and, caste prejudices against the "black water" apart, it is difficult to imagine a service spirit, or a ship spirit, being distilled out of a mixture of educated Hindu officers and inevitably Mohammedan seamen. Possibly the Rajput princely families may find naval life congenial; but "Rajput" and "snottie" do not seem to go together. A similar proposal was made in Bengal in 1921, and the Government announced that not a single candidate had come forward for training as a naval or mercantile officer.

The Amrita Bazar Patrika.

The Naval announcement has been widely commented upon in the Indian Press: and *Forward*, after its usual twenty-four hours' pause for thinking, gives a doubtful blessing to the proposal in two columns of cautious comment. One sentence sufficiently indicates its tone: "tall talks do not make a thing what it is not." The *Amrita Bazar Patrika* must be seen to be believed; this is its heading in regard to the Viceroy's announcement:—

INDIAN NAVY.

Viceroy's Announcement in Council of State.

A BLACK POLITICAL MOTIVE?

A typical example of the mentality of the Indian extremist.

Horse Sense.

The European Association held their annual meeting on Tuesday: and, in addition to the usual speeches, advantage was taken of the presence in the city of Sir Charles McLeod to induce him to express his views upon the situation. He made a strong appeal to the Indian politician to do at least as much as the European community has done to make the Reforms a success. Many of his hearers must have been struck by the addition of yet another to the paradoxes of India; the Montford Reforms, designed to transfer the power of Government to the Indian from the European, being opposed on every hand by the former and supported and urged forward by the very people who have never believed in them, and who stand to lose most by their succees. Sir Hubert Carr, who can look back on four years of most successful work as President, was able to point to a considerable increase in membership and in the usefulness of the Association; and Mr. John Langford James, his successor, takes over a very different organisation from that which existed when the Reform Scheme was passed. One thing "sticks out a mile"; the Association stands for horse sense in a land of mare's nests, and its views should carry considerable weight with the 1929 Commission.

Politics.

The non-official members of the Council of State have resolved to form themselves into a party, and the name suggested by themselves is "the Popular Party." Telegrams from South Africa this morning indicate the possibility that a compromise in regard to the Asiatic Bill is not altogether out of the question. Further references to the proposed Agricultural Commission are being made in the Council of State, and the practical importance of this inquiry is being generally recognised, in spite of the fact that the extremist Press insist on seeing in it a highly involved political move; meanwhile a recent report has drawn attention to the fact that one of the leading Indian Princes has established his own Research Agricultural Institute and the late Imperial Botanist, Mr. Howard, is doing valuable work there. Babu Bepin Chandra Pal's weekly article has a bearing upon this, and he devotes his two columns to the desirability of village reconstruction. The last point of political interest is the announcement of the Viceroy in the Council of State that opium auctions are to be discontinued, and gradually Government connexion with the drug will be stopped altogether; thus dies one of the richest branches of the old pagoda tree.

Labour on Tea Estates.

Everyone concerned with the tea industry in any capacity will be interested in the speech of Mr. C. Bateman, the Chairman of the Dooars Planters' Association, at the annual meeting at Jalpaiguri. A large portion of the speech was devoted to labour in the gardens: and Mr. Bateman voiced the general opinion when he said that the question of obtaining an adequate supply of tea garden coolies is one of the most serious problems with which the tea industry has to contend. He was able to report

Digitized by Google

that an improvement in living conditions, and the maintenance of a high standard of fair and just treatment to labour forces, were assisting recruiting efforts, with the result that the situation generally was somewhat better. He made an appeal for special consideration in the treatment of coolies, and he pointed out the necessity of planters ceasing to entice labour from each other's estates. He outlined the possibility of a Research Institute, working as a branch of the Tropical School of Medicine in Calcutta, being established in the Dooars: and he concluded by drawing attention to the improvement in education facilities in the gardens. The speech sounds a more cheerful note than has been heard in this direction for some years past.

Health Week.

We are in the middle of "Health Week" and are being urged to attend the Health Exhibition and to live healthy lives. The advertisements point out that one half of the people in Bengal under ten years of age die every year, and urge us to put an end to this state of affairs. The country is already overcrowded, but no one has advertised what is to happen when the population has been doubled. Possibly this may account for the fact that Health Week is not called "Baby Week" as it was called last year, when folk were asking what was to happen to the weaklings that are kept alive, by the efforts of the newly established clinics, to grow up to inevitable poverty, squalor and further irresponsible race-multiplication. Meantime, Mrs. John Mackenzie has run a successful Poster Exhibition and Cabaret, for the benefit of the fund, in Hall and Anderson's new buildings at the corner of Park Street. It was a good send-off for what is promised to be a new Harrods of the East.

Getting Nearer.

Possibly the flight of Mr. Cobham from Cairo to the Cape, which is nearly completed, has led some members of the Air Force in India to say that Karachi to Croydon might be an interesting journey. In any event, Flight Lieutenant Oliver, who has a machine of his own and who has flown some 2500 miles in India in it accompanied by his wife, is making preparations to start from Karachi on a private flight to England. This brings the possibility of "Home in a Week" distinctly nearer to practical politics.

Men and Things.

Viscount Inchcape has left us, Lord Lee has departed, the Bishops have finished conferring and the gaiters are gone. Mr. J. S. Spender, lately of the *Westminster Gazette*, is still here, and he gave a most interesting address on Turkey at the Rotarians' Lunch; the impression he left was of a new autocracy in Asia Minor, seeking to cut itself completely away from the West but likely to go into the melting pot again as soon as Kemal Pasha disappears. Five Judges are to retire from the High Court this year; an interesting situation, when the emoluments are insufficient to tempt a successful barrister. The annual meeting of the Kalimpong Homes took place in Calcutta, and the evergreen Dr. Graham was able to report all well. The Corporation has been discussing its Budget, which shows an improvement in the outlook for municipal finance; a discussion also took place on a proposed improvement of lighting in a new main road, necessitated by the enormous increase in buses; it produced a typical example of Swaraj mentality when the party insisted that the lighting of "back lanes" should be improved before that of main roads. Incidentally, road repairs are accentuating traffic jams, and motor buses are more common than taxis; since a few worn-out ones side-slipped on their way back to garage and were completely smashed up, no new insurances can be effected !

The Trivial Round.

The Spring races have commenced; here a meeting extends over a series of Saturdays, and the first day was all too healthy a one for the bookmakers, as hardly a single favourite got home. The first Reception after the period of mourning has been held at Government House, when some 700 guests made a brilliant show at the preliminary investiture. It is said that even the remainder of the furniture and candelabra, which were left after the first spoliation for Delhi, are now to be removed to the city of tombs; how is it possible for such things to happen? The weekly paperchase had to be postponed, owing to an unusual north-wester that swept the town on Thursday evening last and flooded the streets. Military Boxing Championships will fill the Empire for the next two nights, the Pantomime having given its last farewell performances. Salisbury and his Quaints have gone on to Rangoon after a record season with "No, No, Nanette." The fourth Symphony Concert is down for next Sunday, when the first performance in India of *L'apresmidi d'un faune* will take place; and on Tuesday there will be a choral festival in the Cathedral, where Archdeacon Godber has revived, after a lapse of 28 years, this gathering of some 250 choristers; it should be inspiring. The weather is still kind.

Markets.

The jute market, after opening dull, has developed a rather firmer tone, although only a small business has been transacted owing to the difficulty of obtaining good quality jute; both gunnies and heavy goods were depressed at the outset; but, on renewed rumours of short time, prices advanced rapidly, and the market closed steady with rates round about the highest of the week. Piece-goods remain much the same, with prices firm and expected to advance in the event of the maintenance of the present demand. In the tea market, the feature has been the issue of the official figures giving the amount of stocks in London on January 31 of this year; these, compared with those on the same date last year, reveal a decrease of about twenty million pounds. This has been reflected in the prices obtained both here and in London. In the latter city, the market is very strong, rates for all descriptions having advanced considerably; and here, in spite of the "end of crop" teas which are now being offered, higher prices all round have been paid, especially in the case of dusts.

In the share market, jutes continued their downward trend; but later, as a result of a steadier market for the manufactured article, a rally set in and regained for the market a slightly firmer tone. Both coal and other shares have been dull with sellers in preponderance. Teas show little change from last week; but there has been a fair amount of demand considering that there is little to attract business at this time of the year, in view of the end of the season's crop at present being offered at the recent sales here. Rubber shares have shown signs of improvement, and there was a good demand for scrip on offer at attractive prices. The commodity market is reported as slightly better; and, if this is maintained, a further appreciation may be looked for.

In Government securities, the long dated issues have been in keen demand; and, but for the scarcity of sellers, the volume of business put through would have been considerably bigger; the market generally has been steady, a remark which applies also to investment stocks generally.

Money has been in less demand, and rates are easier. The Exchange market opened dull; but later a weaker undertone for the forward positions developed, owing to a report from Bombay of a good inquiry for remittance on bullion account.

BOMBAY LETTER.

(From Our Own Correspondent.)

A resident of India may be pardoned for some ignorance of the precise objects of some members of the British Labour Party; but he assumes that the backbone of the Opposition in Parliament consists of those who are striving for the improvement of the conditions of life of the work-

Digitized by Google

ing classes. Both the leaders of the Trades Unions, who have themselves risen from the ranks and are the recognsed advocates of their fellow workmen, and those who are frankly Socialist and Communist, are in opposition to the existing order of things because they consider that it is time to re-adjust the existing distribution of wealth. And it is probable that only few people in England to-day can conceive any other function of internal politics than the discussion of the relations between capital and labour.

Consequently it is not difficult to understand the amazement and disappointment of a Labour M.P., who recently visited India, at finding the Indian Opposition wholly unconcerned with the problems of the working classes, except in so far as a strike affords an opportunity for attacking the Government. The Indian Opposition exists to oppose the Government: and, whether its members conscientiously believe that they could govern better themselves, or are consciously playing the harmless game of twisting the lion's tail, they hardly even pretend to represent anything but their own insignificant class of educated pleaders, or to take any interest whatever in labour matters. Any constructive policy in the interests of the working classes is not only beyond their powers: it is entirely outside their imagination.

The desire to acquire a greater share in the government of their own country is entirely natural and laudable: and it is quite comprehensible that this desire should have the sympathy of those Englishmen whose political creed aims at the self-determination of all nationalities, so long as they are unaware that the millions of India cannot possibly be represented or governed by the few thousands who have constituted themselves the Opposition to the Government.

But it is difficult to see what claims this Opposition has on the sympathy of the Labour Party, which works in the interests first of the British workman and secondly of the labouring classes throughout the world. Their present tendency towards flirtation with the Indian Opposition may or may not help British Labour: it certainly will not in any way benefit the Indian working classes who, having no representation of their own, can only look for protection first to the British Government of India, and secondly to their own employers. The present régime in India is admitttedly not the best possible régime in the best of all possible worlds; but it is quite certainly doing more every day to grapple with the infinite problems of Indian labour, both by direct Government intervention and by its support and encouragement of the efforts of unofficial employers of labour: and it may safely be assumed that the Government of India, by Indians through Indians and for Indians, would be likely to have extremely reactionary tendencies in its attitude towards Labour: so that the interference of the British Labour Party, in the internal politics of India, cannot be considered likely to be fruitful of results.

There is nothing much wrong with the distribution of wealth in India, if only the people could be taught how to spend it.

The Legislative Assembly.

The recent debate on the imprisonment of political offenders in Bengal seems to have passed off with an amount of good humour that would have been impossible a very few years ago: and only one member indulged in the passionate and irrelevant oratory that was to be expected on such an occasion. The personality of Sir Alexander Muddiman was no doubt very greatly the cause of the general adoption of a give-and-take attitude: and his reply, that the Legislative Assembly of a few years ago was not competent to be consulted on a question of this kind, appears to have been accepted as the mere statement of an obvious fact.

The debate as reported is a most cheering indication that the Assembly is beginning to realise that it is its duty to assist and not to obstruct the Government of the country: and most cheering of all is the fact that all the members seem to have shown some sense of humour and some sense of proportion.

THE INDIAN MAIL.

Congress Humour.

A Session of the All India National Congress is not an occasion on which one would expect to meet with intentional humour, but the recent session at Cawnpore seems to have provided several instances of it: and it is an encouraging sign that the audience appear to have taken it in good part, even though it was directed against themselves. One of the Bengali speakers, for instance, likened the attitude of the non-co-operators to that of an offended husband who decided to punish his wife by refusing to speak to her, or even to look at her. When she brought him his early tea, he turned his face to the wall in silence, and put out his hand to take it: and so on, throughout the day. This, he declared, was exactly what the Swarajists were doing. As members of the Legislatures, they accepted from the Government their travelling and daily allowances, their comfortable quarters at Simla and Delhi, their places on Committees that brought them additional allowances when the Legislatures were not sitting, even profitable posts like the Presidency of the Assembly and of the Provincial Councils, and the salaries attached to them; but all the time, they steadfastly refused to look at the Government. As for the apostles of "responsive co-operation," who began as non-co-operators, continued as members of the Legislatures pledged to uncompromising obstruction, went on to practise discriminating obstruction, and were on the high road to abandoning obstruction altogether by entering Ministries and consenting to work the "Satanic" constitution, the same speaker said that they reminded him of the devout religious mendicant who decided to renounce the world, and retired to a forest retreat with a begging bowl and a loin cloth as his sole earthly possessions. However, he found that some mice had nibbled at his loin cloth during the night, so he imported a pair of cats to abate the nuisance: next, he found it necessary to get a cow, to provide milk for the cats: and, later, to build a stable for the cow. Then the cats began to multiply, and he had to import more cows, and a staff of servants to look after them: with the result that more stables for the cows, and a range of huts for the servants, had to be built. And so it went on—more and more cats, more and more cows, more and more servants, more and more stables, more and more quarters: leading up to a regular army of retainers, to protect his accumulated possessions, until his forest retreat became a regular palace; though the owner always excused himself for the possession of so much wealth and so much pomp, by declaring that they were merely accessories necessary for the protection of his loin cloth, which he still continued to wear even in the midst of his luxurious surroundings.

Trade Returns for December.

The returns of India's sea-borne trade for December 1925 continue to show what they have shown for so many months past—a decrease in imports and an increase in exports—compared with those of the preceding month. The value of the imports of private merchandise fell from 1873 lakhs in November to 1611 lakhs in December, while that of exports rose from 2963 to 3076 lakhs. Net imports of treasure show a further fall, from 459 to 379 lakhs: and the visible balance of trade in favour of India rose from 729 to 1191 lakhs. For the nine months ending December 1925, the total favourable balance was 7689 lakhs, compared with only 3626 lakhs in the corresponding period of the preceding year.

Imports fell under all the main heads, particularly in manufactured articles, where the fall was from 1381 to 1197 lakhs. The piece-goods figures given in the mail papers are incomplete; but they show that the imports of grey goods fell in quantity from 53 to 51 million yards, and of coloured goods from 28 to 22 million yards. The detailed figures of export of raw cotton are also not given, but they appear to have shown an increase in quantity and a decrease in value. The export of raw jute amounted to 73,800 tons, valued at 481 lakhs.

Digitized by Google

The share of the United Kingdom fell in both imports and exports, compared with that of the previous month; from 51 to 48, and from 30 to 24 per cent. respectively. The shares of Japan and the United States both showed a large increase in the case of exports, the figures for November being 6 and 3, and for December 13 and 12 per cent. Imports from Germany rose from 5 to 6 per cent., while exports fell from 5 to 4 per cent. Imports from Japan rose from 8 to 9 per cent., and imports from the United States fell from 8 to 7 per cent.

Indian Exiles.

The mail brings a detailed report of the discussion in the Legislative Assembly on the demand for "facilities for the return of Indian exiles." The Home Member pointed out that the desired "facility" was a guarantee of immunity from prosecution. He said that, among the number of Indian fugitives from justice there were one or two who, if they came back, would undoubtedly be tried for their lives: there was nothing to prevent the rest from returning except their own guilty consciences. A Swarajist member asked whether the Home Member could put names to the one or two people specially referred to; to which the reply was "I can, but I'm not going to." "One or two" is a rather elastic term: and those on the border line may perhaps be thinking that peradventure five—or even possibly ten—shall be found there; but the limitation may give heart of grace to those who—if any Indian revolutionary could bring himself to imagine such a thing—realise that they only come in the "also ran" category. Those really in the betting are, of course, perfectly well known to their champions in India, as well as to themselves. Two or three years ago, one of these wrote personally to a C.I.D. official in India, asking for a safe conduct, on the ground that, though he had admittedly consorted with criminals, he had himself done nothing criminal: and that he had seen the error of his (companions') ways, and desired to return to India, there to work constitutionally for the good of the Motherland. The reply was that, if he had done nothing criminal, there would be no reason why he should not return without a safe conduct: and that his return, on those terms, would be welcomed. It is perhaps unnecessary to add, that the correspondence thereupon ceased.

The Agricultural Commission.

The appointment of a Royal Commission on Indian agriculture has had a "bad press" from the extremist newspapers, which professed to find in it the culmination of the Government's attempt to "draw a red herring across the path to Swaraj." To judge from comments in some of the Anglo-Indian papers, it may shortly be expected to receive a bad press from moderate journals also. The *Statesman* sees, in procedure by the "cumbrous method of a Royal Commission," an intention on the part of the Government of India to resume the administration of Agriculture. It says that the reformed Provincial Governments "have conspicuously failed to grapple with the problem": and that the Commission will assuredly find it necessary to recommend "the re-transfer of the vital interests of Indian agriculture to the Imperial Government." Such a recommendation, it proceeds, will put the Swaraj Party in a dilemma: if it rejects it, it will write itself down as an enemy to agricultural betterment: if it accepts it, it will find itself driven along the road by which the Government of India wishes it to travel. It will not only be the Swaraj Party that will find itself in a dilemma. That Party has, after all, consistently declined to admit that the Reforms have given any real power to Indians; so that the resumption of a transferred subject should be of no interest to it. But the Moderates, who admit the value of the Reforms as an initial instalment of much wider powers, the delegation of which they desire to be hastened, will look with disfavour on the withdrawal of a subject over which they are already in process of obtaining control. Government, and the Reforms, have none too many friends as it is: if the *Statesman's* forecast is correct, it would seem that they are in danger of losing a good proportion of those that they have.

INDIAN EXCHANGE.

London, March 1.

The temporary weakness in Rupee Exchange to which we alluded last week was of short duration. In both Indian markets, led by Calcutta, the fall was speedily taken advantage of by exporters, and rates have again been pushed up to the level at which they have been maintained for the past three months. The T.T. rate in Calcutta and Bombay was quoted 1s. 6⅛d. at the beginning of the week, but the tendency was decidedly firm, and quotations quickly moved to 5-32nds. with 1s. 6 3-16d. done in both markets to quite a fair extent for ready delivery. The cause of this firmness was apparently due to more activity in shipping circles and to a very much better demand for money. In both markets the pressure for funds has been more pronounced during the past week than at any time since the beginning of the year. Although, we understand, merchants placed a small amount of three months credits at 1s. 6⅜d., the rate rapidly disappeared, and the bulk of the business done has been at 1s. 6 13-32d. Forward rates have shown little movement, and are called 1s. 6⅛d. for this month, 3-32nds. for April, and 1s. 6 1-32d. for the monsoon months, with no buyers except at 1-32nd higher.

It is reported that there is a good inquiry by Indian importers for the monsoon months at 1s. 6 1-16d.

In the London market, a feeling of uncertainty has prevailed. Remitters were able to do business in the earlier part of the period under review at 1s. 6 5-32d. T.T., but latterly no better than 3-16ths has been obtainable, until to-day, when, we hear, that a small amount has been done at 1s. 6 5-32d. with more buyers than sellers at the rate.

The particulars of the Budget for 1926-27 were announced in India to-day. It is based on a Rupee exchange of 1s. 6d. There is no remission of taxation, and a new Rupee Loan is announced for 22 crores of rupees.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

The Motor in Egypt.

Several times recently I have had occasion to draw attention to the promising markets for motors that are to be found in the Near East. I have just been reading a most illuminating American report on the position in Egypt. The imports of cars last year showed an increase of about 70 per cent. on the figures for 1924, and it is estimated that the imports for the current quarter will total about 2,000 cars and chassis. As in so many other foreign markets, America holds the lead in Egypt, and her proportion of this total is put at 1,200. The rapid development of roads in Egypt, and the pending inauguration of new bus services in various directions holds out the prospect of a great increase in imports, and I should like to feel that there is some hope that British manufacturers will obtain a reasonable share of the trade that is going. There is absolutely no reason why they should not, given that they display the requisite initiative.

A Jerusalem Contract.

In these columns on February 11, I announced that Sir John Jackson Ltd., had obtained a contract for the supply of certain services to Jerusalem. It was uncertain whether the news meant that an arrangement had been made with M. Mavromatis or that the firm were simply going to carry out the scheme prepared by the Palestine Government for an emergency water supply from a well at Ain Sahle. I am now informed by the firm that the contract in question is that for an urgent water supply for Jerusalem undertaken for the Palestine authorities and that further development might take place in the near future.

A Satisfactory Fair.

As I anticipated, this year's British Industries Fair, in comparison with its predecessors, has been a very marked success, which indicates very pointedly that world trade is again, at long last, on the upgrade. An official estimate puts the value of the business done at about £5,000,000, which is good enough when one takes into consideration the prevailing conditions, and, of course, this total, large as it is, cannot be taken to represent by any means the full results of the Fair. It is interesting to note that the buyers, home and foreign combined, were four times the number of those who attended last year, and in all 60 countries were represented, among them being Roumania, Turkey, and Persia. While all sections at the White City were able to report good business, one or two firms had exceptionally good results to show. Thus a firm of piano manufacturers received orders for 1,000 pianos, while a firm of clothiers who were exhibiting for the first time obtained orders for practically every foreign market. This year's success has assured the permanence of the Fair, and it is possible to look forward to increasingly good results as trade conditions improve.

Coal Exports and Oil Imports.

A very interesting lecture was given recently by Mr. J. H. Walesby to the City of London Tradesmen Club on the causes of bad trade and some suggested remedies. Mr. Walesby pointed out that in 1913 British exports amounted in value to £525,253,595, while for 1925 the total was £773,086,410, giving an excess of imports over exports without allowing for re-exports of approximately 25 per cent. in 1913 and 52½ per cent. in 1925. For the difference that exists between the two years Mr. Walesby said that he thought coal exports and oil imports accounted for a great deal. In 1913 coal exports amounted to £50,727,252 or 10 per cent. of the exports, while for 1925 the total was £50,477,211 or 7 per cent. of the exports, these figures excluding bunkers for foreign ships which he estimates totalled about £11,000,000 in 1913 and about £22,000,000 in 1925. On the other hand oil imports, including lamp oils, rose from £8,382,863 in 1913 to £34,527,607 in 1925. As Mr. Walesby justly remarks coal is the root of most of our trouble, and as he points out the high price of coal adds very considerably to the cost of living for the simple reason that the majority of transport is still carried on by coal and the cost of coal enters very largely into the price of food. In this connexion, he cited Indian wheat as an instance. A ton of wheat from India is sold at about £14 13s. per ton load, and of this at least 10s. of the price represents coal, whereas in 1913 this factor stood at about 4s.

The Exchange Factor in Trade.

Since the War business men have been prone to put a great deal of the blame for their failure to make headway in European markets on the adverse exchanges. Mr. Walesby, dealing with this question, admitted that the exchange factor has an appreciable effect, but in his view the effect is nothing like so great as is suggested. "Exchange effects on imports," he stated, "is immediate, but gradual on exports on account of the credit given. Granted that wages and cost of living are lower, it must not be forgotten that France, Germany, and Italy, our most formidable rivals, must purchase their raw materials in the open markets of the world, and all business men know this is done on credit, and the best terms are to those with the best credits. We get some pull in that direction, whilst on the other side we have America with her vast amount of money able to export largely owing to the flotation of loans."

Barclay's Overseas Development.

It was officially announced this week that the formalities in connexion with the amalgamation of the Anglo-Egyptian Bank and the National Bank of South Africa with the Colonial Bank, under the title of Barclays Bank (Dominion, Colonial, and Overseas) has now been completed. It will be recalled that the Colonial Bank, which was incorporated by Royal Charter in 1836, obtained authority by Act of Parliament last autumn preparatory to these changes. The name of the bank was changed in September last to Barclays Bank (Dominion, Colonial and Overseas). The amalgamation of the business of the Anglo-Egyptian Bank with this bank was completed in November, and the further amalgamation of the business of the National Bank of South Africa has just been carried through. Of the authorised capital of the combined bank, £10,000,000, £4,975,500 has been paid up, while the reserve fund stands at £1,000,000. In addition to this reserve fund there is the uncalled liability of £2,000,000 in respect of the 500,000 "B" shares of £5 each, £1 paid, held by Barclays Bank, and by virtue of which holding that bank has a controlling interest. The Chairman of the Bank is Mr. Frederick Craufurd Goodenough (Chairman of Barclays Bank Limited), and the Deputy-Chairman is Sir Herbert Hambling, Bart., who holds a similar position in Barclays Bank Limited.

COMMENTATOR.

BULGARIAN TOBACCO DEAL.

(From Our Own Correspondent.)

Sofia, February 22.

As a result of the crisis which has supervened for some time past in the tobacco trade, owing to over-production throughout the world, fears were beginning to be entertained that Bulgarian tobacco, which is in strong competition with Greek and Turkish tobacco, freed from all the export taxes existing in Bulgaria, would undergo a severe check in its development and in any case a marked drop in prices. These fears, which were particularly lively in connexion with the tobacco grown by co-operative societies, have just been dissipated. These societies, in two groups connected the one with the Free Union of Co-operatives and the other associated with the Agricultural Bank, have concluded contracts, the former with a group of Belgian banks, the latter with a company associated with the Commercial Bank of Milan, for the sale over a long period of their tobacco which they undertake to deliver exclusively to these houses on the strength of advances respectively of 200 million and 275 million leva. This arrangement has been welcomed with much satisfaction in financial and economic circles, as it is regarded as a means of overcoming a really serious crisis.

The Agricultural Bank of Egypt recommends a dividend of 10s. per share on the Ordinary shares and £55 per share on the Deferred shares.

The traffic receipts of the Suez Canal from February 20 to 26, amounted to 4,310,000 francs, against 3,580,000 francs for the corresponding period last year.

SUDAN COTTON PROGRESS.

The following extracts are taken from the report of the Central Economic Board of the Sudan Government dated January 20:—

Rain and Flood Grown Cotton.

Kassala Province.—The Agricultural Inspector carried out a tour and estimates the probable yield at 18,100 kantars. Gash Delta.—The cotton is reported satisfactory, especially in the Maguada area.

Bahr El Ghazal.—In the Central District, blackarm has affected the first picking. Smut has also appeared and damaged the bolls severely, while those that have survived have been soiled by a variety of weevils. The experimental area has not suffered so badly as native cotton. But the superiority of later sowings is very marked. It remains to be seen whether they will remain immune from the prevalent pests. Sudan and Egyptian boll worm have appeared, more particularly in areas where old cotton had been allowed to grow, but there is no pink boll worm.

Upper Nile Province.—The Inspector of Agriculture inspected the Akobo District and was greatly impressed with the possibilities there. The Anuaks are excellent cultivators and were pleased with the immediate cash payment. One lot had yielded to date about 5 kantars to the feddan. No pests were found.

Mongalla Province.—Estimated crops in kantars:—Moru 540, Mongalla 27, Latuka 63, Rejaf 1,016, Yei 940, Opari 940, and Kajo Kaji 825. In Latuka results will not be as good as last year. The Sakellaridis cotton being grown experimentally in the irrigated area at Logoforok is suffering from boll worm. Yei reports indicate that generally the crop is good, but that with the exception of the Mundu tribe, the best cultivators in the District, there is little enthusiasm shown.

Pumping Stations.

Berber Province.—Kitiab.—1,626 kantars have been received into store during the month, making the total to the end of December 3,428 kantars. This represents a yield of 1.4 kantars per feddan for the month and 3.1 kantars per feddan for the season. Last year's final figures were 2,450 kantars and 2.9 kantars per feddan. This is a record total yield for the station and in all probability the record yield per feddan (i.e., 3.74 kantars per feddan in 1923-1924) will be exceeded this season. The cotton coming in is still a good sample and very free from pests. The bulk of the cotton has now been picked in Gabrab and Kitiab. Elsewhere the cotton still carries a lot of bolls. Mileilab.—The cotton is looking well, but is slow in opening. Picking has begun on the Karu.

Dongola Province.—Gureir.—212 kantars of pump cotton and 130 kantars of sagia cotton were weighed into store at the end of the month. This compares very favourably with last year, when only 116 kantars of pump cotton had been received at the same date. The cotton is looking quite well, and gives every promise of giving a good yield. Picking from the northern end of the scheme has only just commenced. Nuri.—Cotton looks quite well, though blackarm and Egyptian boll worm have done some damage. 1,307 kantars of pump cotton have been received to the end of the month. At this time last year only 385 kantars had been received.

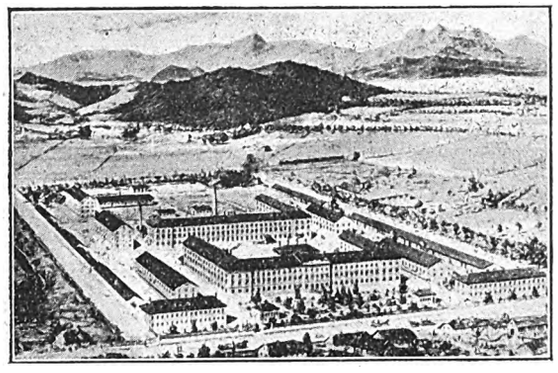
YUGOSLAVIA'S DEBT SETTLEMENTS.

Dr. Milan Stoyadinovitch, Yugoslav Minister of Finance, arrived in London last Friday in connexion with the settlement of Yugoslavia's War Debt to Great Britain. Dr. Stoyadinovitch, who has held the Portfolio of Finance for three years, is identified with the financial policy which has led so successfully to the stabilisation of the dinar, the steady increase in the economic development of Yugoslavia, and the very marked improvement in the country's credit abroad. A stage has thus been reached when the question of Yugoslavia's War indebtedness could be approached with some chance of settlement, and when, as has been recognised in both official and unofficial circles, the further economic progress of the country turned in large measure on a satisfactory settlement of that indebtedness. Steps were taken to deal first with the Yugoslav debt to the United States, amounting in some 64 million dollars, and to this end a delegation headed by Dr. Stoyadinovitch left Belgrade last January.



The negotiations in Washington have not yet been concluded. After the first exchange of views between the two parties, it was left to the Yugoslav Delegation to put forward a scheme that would commend itself to the United States Government. At this point, however, the American War Debt Funding Commission found itself involved in work connected with the Tax Reduction Bill before Congress. At the same time the question of the scheme for the settlement of the Italian War Debt became acute in the Senate, where, as is known, it has met with strenuous opposition. In these circumstances the War Debt Funding Commission was, not unnaturally, unwilling to proceed too far with negotiations with other Governments. Its discussions, however, with the Yugoslav Delegation have been continued and may be said to be making satisfactory headway. It is hoped that they will be brought to a satisfactory conclusion as soon as the Italian settlement is out of the way.

As it is essential that the Minister of Finance should be present in the Skupshtina at some time during the discussion of the Budget, which passed its first reading a few days ago, Dr. Stoyadinovitch had to return to Belgrade. With a view to preparing the way for a settlement of Yugoslavia's War Debt to Great Britain, he arranged to stay a few days in London. He saw the Chancellor of the Exchequer and, it is understood, expressed to him the desire of the Yugoslav Government to regulate at the earliest possible moment the question of its War debts. Negotiations for a settlement will, therefore, be undertaken in the near future. In view of the fact that the Yugoslav Minister to London was a member of the Delegation that went to Washington, the Belgrade Government will be anxious to have the American negotiations concluded first.

By settling its indebtedness to Great Britain, amounting to £32,000,000, and to the United States, 64,00,000 dollars, Yugoslavia will have regulated some four-fifths of its total foreign debt, and the road will be open for new credit operations, with a view to giving further impetus to the economic development of the country and to enable Yugoslavia to occupy the position to which its resources and the industry of its people bespeak for it. This policy of losing no time in the settling of the War indebtedness has been a prominent item in Dr. Stoyadinovitch's financial programme, and the successful conclusion of the negotiations will be a fitting crown to the efforts that he has been making during the last three years in a single-minded endeavour to complete the financial rehabilitation of Yugoslavia. Nowhere is the fulfilment of his programme being watched with closer interest than in London, where it is recognised that the settlement of the War debt owing to Great Britain cannot fail to give considerable impetus to the investment of British capital in Yugoslavia.

State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes

State Tobacco Factory in Liubliana.

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration, — BELGRADE —

FOREIGN CAPITAL IN YUGOSLAVIA.

The Legal Position.*

1.—The Import of Foreign Capital.

The introduction of foreign capital into Yugoslavia may be effected in three different ways.

(a) The exchange policy of the Kingdom is laid down in laws and regulations of the Ministry of Finance, known as "Regulations concerning Trade in Bills of Exchange and Foreign Currencies." The free import of currencies in unlimited amounts is permitted. Trade in bills of exchange within the country is a privilege allowed to banks which fulfil the conditions laid down by the regulations, subject to the consent of the Minister of Finance. At the present moment there are about 200 banks in the country, which, together with the National Bank, possess this privilege, on payment of a tax which may amount to 50,000 dinars per year, and which is fixed at 1 per cent. of the paid-up capital. Bills imported cannot be realised on the Bourses of the country except through the medium of authorised banks. The law makes it a condition for the import of bills that they should be intended for the purchase of dinars (Yugoslav currency), so that the bills can be paid out in the country only in dinars. Thus, cheques drawn on a Yugoslav bank in foreign money are always paid out in Yugoslav currency at the exchange rate.

(b) The terms of a decision of the Ministry of Finance allow authorised banks to receive orders for the sale of foreign money on the bourses of the country. If a foreign bank requires dinars, it can send an order for the same to Yugoslav banks, which will sell on its behalf, say, one million francs. The home bank in question undertakes the sale of this amount in the form of a cheque drawn on the bank which gives the order, and the counter value is placed to the credit of the drawee, who may use it as he desires.

(c) The third method of importing foreign capital into Yugoslavia consists of a combination of the first and the second. Foreign banks possessing dinars as a result of the sale of bills, may sell the dinars which are placed to their credit. But this sale is not authorised in the form of a cheque drawn in dinars. It may only be carried out in the form of a letter of credit or written instruction, i.e., by means of debit and credit in accordance with orders for payment. Thus, if a French importer requires one million dinars, his Paris bank may not hand him over a cheque made out in dinars, drawn on a Belgrade bank, but only a letter of credit or an order for payment on the Belgrade bank. In accordance with the order, the Belgrade bank must credit the French importer with one million dinars, and debit the Paris bank which made the order with that amount. These restrictions arise from the prohibition to home banks of opening credits in dinars for foreign houses. If the drawing of cheques in dinars were permitted, these restrictions would be eluded. Home banks are only authorised to open post-credits to the amount of the credit they themselves hold with foreign correspondents.

In general imports of foreign capital can only be effected by the introduction of bills into the country and the purchase of free dinars provided by the sale of bills which are placed to the credit of owners of the bills sold. By free dinars are understood all sums in home currency which are at the disposal of foreign creditors, either for sale on the home exchanges for the purchase of bills, or to be placed at the credit of persons to whom they may be sold abroad.

Home banks are also prohibited from opening credits in dinars on the basis of bills in foreign currencies. The stock of free dinars is mainly supplied by import trade. In buying bills the importer deposits dinars, which are placed to credit abroad.

By free dinars are also understood the amounts re-

* Article by Dr. D. Mishitch in "The Economic and Financial Review" of Belgrade.

Digitized by Google

ceived from the payment of coupons and dividends on home securities to foreign holders. In order that foreign capital invested in home securities may be returned in the case of the sale of the securities on the home Bourses, it must be proved that the purchase of these securities was made with money which can be considered as free dinars.

The amount of free dinars as credits to foreign accounts at Belgrade and Zagreb was 800,000,000 dinars on October 1, 1925. The amount remains at about this figure. They may be used for securing currency, an operation by which exporters are obliged to export a fixed amount of goods within a period of three months, and to hand over within the same term the amount of bills which represents the value of the goods exported. The obligation is handed over to the banks which deal with free dinars, thus ensuring that the bills will be offered at the Stock Exchange within the required period. The aim of this proceeding is to allow the authorities exact control of the amount of bills which will be offered at the Exchange from export trade.

2.—Export of Foreign Capital.

For foreign capital imported into a country, question of free export is a very vital one. If any difficulties are encountered in exporting, it is not wise to invest capital in a country or even to deposit it there in the form of current and deposit accounts. In this country export of foreign capital is subject to restriction. To justify this, a small digression is permissible. The official exchange policy has for its aim to make impossible the movement of foreign capital intended purely for speculation purposes. With the present monetary system and depreciated currencies, it is easy for speculation to be carried on and to bring about serious fluctuations in the exchange rate in countries with already weakened money. These exchange fluctuations are bad for business, and affect the whole commercial world. Such a state of things is inevitable, if the authorities are unable to control the entry and exit of foreign capital. Movement of capital, which is often unexpected, immediately affects the exchange, and is reflected in considerable fluctuations. As a means of protecting the Yugoslav exchange and of preventing sudden fluctuations, the Government has devised a very simple means of watching the entry and exit of foreign capital. The regulations for business in bills and currencies obliges the authorised banks to offer always to the National Bank one-third of the bills and currencies, which they intend to sell on the Stock Exchange. The other two-thirds must be sold on the same day at the Bourse. Thus through the medium of the National Bank, the authorities are able to get an exact account of the amount of bills which should be offered at the Bourse. On the other hand, the regulation lays down that importers purchasing bills for their payments abroad must hand over to authorised banks a guarantee within a period of six months. The Ministry of Finance controls the list of importers and exporters, which is regularly supplied to it by the banks. In this way it can also get a certain idea of the amount of the offers and demands on the Stock Exchange. By its custom of optional purchase of one-third of the bills for sale, the National Bank has accumulated for the account of the Ministry of Finance a large stock of bills, so that it dominates the Stock Exchange, and to a certain extent is able to protect Yugoslav currency from large fluctuations due to speculations. We must emphasise here that it is not the object of the National Bank to maintain a fictitious rate for the Yugoslav currency, but only to obviate any too great variation, in the interests of the country. Several times the National Bank has intervened to lower the rate in the case of a too sudden rise.

The private banks, in contrast with the National Bank, being obliged to sell immediately the two-thirds of their bills, cannot accumulate a stock sufficiently large to have much effect on the market, if they wish to speculate. Moreover, a legal regulation forbids home banks to hold stocks of foreign bills.

The official exchange policy, therefore, has three chief aims:—

1. To permit control over the extry and exit of foreign capital.

2. To encourage the accumulation of a large stock of bills at the National Bank.

3. To protect the Yugoslav Exchange against sharp variations from speculations.

This explanation was necessary in order to make clear the necessity of imposing restrictions on the export of foreign capital. Let us put it more exactly. A bill cannot be exported unless it has been previously imported. In order that its entry may be legal, the bill in question must be sold on a home Bourse to two-thirds of its value, the remaining third being reserved for the National Bank. The presentation of the third to the National Bank is all that is necessary, and if the Bank refuses it, it may be freely sold. Bills which have been realised in the country in the manner we have described may be exported without any difficulty, and their export is quite free. In general, bills bought in the country for free dinars may be freely exported, since all free demands represent the value of the bills sold in the manner prescribed by the regulation, i.e., one-third to the National Bank and two-thirds on the Stock Exchange. In other words, the regulation prohibits the export of foreign capital which has not been realised in the manner legally provided, because it is supposed that the secret import of such foreign capital would encourage speculation. In conclusion, we may say that the official exchange policy guarantees the export of foreign capital which has been brought into the country for use in commerce and industry.

3.—Taxation on Income from Foreign Capital.

No difference is made in taxation on the interest derived from Yugoslav or foreign capital. As the direct taxation system has not yet been unified in Yugoslavia, the incidence varies in the different provinces. Thus, in Croatia taxes on an income of 12,000 dinars would amount to 2,032 dinars, whereas in Serbia they would be 4,730 dinars; on an income of 20,000 dinars the respective taxes would be 3,250 and 10,234 dinars.

Taxation on the yield from capital placed in banks in the form of deposit or current accounts is particularly heavy. Very extensive privileges are given to foreign capital invested in industrial undertakings by article 70 of the Budgetary Twelfths for April, May, June, July, 1925. These concessions are still in force and offer special advantages. Article 70 stipulates among other things the following:—

The Minister of Finance, with the consent of the Ministerial Council, is authorised to exempt from all taxes and dues, in the same way as State bonds, the bonds of industrial enterprises issued on foreign loans, either directly, or through the medium of the State Mortgage Bank, and intended exclusively for the needs of industrial enterprises with at least 10,000,000 dinars of paid up capital, or of groups of enterprises which altogether have that amount of capital. If these bonds are guaranteed by special pledge, they shall be exempted also from taxes imposed in guarantees on moveable and immoveable property, and also from the tax on these mortgages."

These privileges are given only until the end of 1930, but will remain in force until the redemption of bonds issued during that period. Similiarly, the Minister of Finance is authorised to exempt from payment of taxes and dues, all transactions with regard to loans made abroad by local administrative bodies (municipalities, departments, districts, provinces) for public works of national utility and general interest, in so far as the work in question is within the sphere of the administrative bodies.

For the payment of capital and interest, the Government is authorised to grant the creditors of industrial bonds or of administrative bodies the same legal rights as are granted to the State Mortgage Bank.

Digitized by Google

The last item is of particular importance, because it guarantees to the creditors privileges which were hitherto reserved solely for the State Mortgage Bank. One of the most important of these privileges is that procedure is simplified in cases where the debtor cannot meet his obligations. Creditors are also reserved certain privileges which are not enjoyed by debtors under the ordinary common law.

Considering that fiscal charges in general in Yugoslavia are very high, these privilgees explain the interest displayed by foreign finance in our industries. Offers have been made of loans to some of the large towns in the country.

THE NEW BUDGET.

The Minister of Finance, Dr. Stoyadinovitch, prepared, before his departure for America, a Memorandum dealing with the Budgetary proposals for 1926-27, which has been communicated to Parliament. The Memorandum shows that the Minister has been able to reduce the Budget as originally drafted from 17,228,370,557 dinars to 12,900,000,000, a saving of 4,328,370,577 dinars. A feature of the statement is the evidence that it affords of the unprofitable nature of State property. At first glance there would seem to be a ten per cent. return or a total revenue of 465.5 millions. But, when all expenditures on communications, posts and telegrams, State domains, agricultural estates, State financial institutions, State printing works, and factories are reckoned, State management is proved to be unprofitable.

The Budget total for 1926-27 is actually in excess of that for 1924-25, which, reckoning both regular and extraordinary credits, amounted to 11,766,500,000 dinars; but in the current year the Southern Railways are included for the first time. The Budget high-water mark was reached in 1925-26 when, with the charge for the Southern Railways included, the total was 110 million dinars in excess of the 1926-27 Budget of 12,900 million. It is hoped, therefore, that 1926-27 sees a beginning of a series of reduced Budgets.

The 1924-25 budgetary year saw actual revenues amounting to 11,900 million dinars, while those estimated for 1926-27 amount to 1,709 million more. From State property alone an increase of 1,018 million dinars is expected, not only, because the Southern Railways are included, but because the railway system is extended. It is estimated that direct taxation together with dues will give an increase of 292 million dinars, inasmuch as the Disabled Tax has been doubled by the twelfths of April to July 1925, and the purveyance dues introduced at the same time will give full results in 1926-27. The Minister also hopes that the tax on business turnover will give an increase. Indirect taxation should amount to 291 million more than in 1924-25 and monopolies to 73 million dinars more.

The total fiscal impositions for 1926-27 amount to 8,058 million dinars, without counting State property. This works out at 620 dinars per inhabitant.

The fiscal impositions of local government bodies in 1925 amounted to about 2,300,000,000 dinars. This is more than the State charged in taxes and dues in 1924-25. The dues are not equal in their incidence and constitute in many cases a heavy charge on the towns. The local bodies levy taxes to the amount of 175 dinars per inhabitant annually. Consequently in the budgetary year 1926-27 contributions to the State and to local government bodies will amount to 795 dinars per head of the total population of the Kingdom.

In conclusion Dr. Stoyadinovitch states that the Government and Parliament are paying close attention to State finances, but that there is no reason for pessimism. Wise saving and careful division of credits are being introduced throughout.

Budgetary Reductions.

The Financial Committee has completed its preliminary survey of the Budget for 1926-27 and the general debate in the Skupshtina has begun. The reductions recommended by the Committee amount to 620 million dinars, thus bringing the total expenditure to 12,280 million dinars as compared with the original figure of 12,900 million dinars. Under the system of "Budgetary Twelfths" the total expenditure authorised for 1925-26 amounted to 12,321 millions, but in view of the fact that expenditure on the Southern Railways amounting to nearly 800 million dinars is included in the Budget for the first time, and as other new credits are included in the same Budget which were not included in the old, the expenditure for 1926-27 is less by a few hundred million dinars than that of the previous year.

The revenue from State property (Ministry of Posts and Telegraphs, State Domains, banks and State printing works and factories) amount for 1926-27 to 4,481 million dinars, while all other State fiscal revenues amount to 8,059 million dinars. A comparison of this fiscal revenue with that of the last Budget, in which it figured to the amount of 8,900 million dinars, shows that the Minister of Finance has reduced the burden of direct and indirect taxation by 800 million dinars.

The reductions made by the Financial Parliamentary Committee affect the Ministry of Communications to the extent of 131 million dinars, that of Forest and Mines by 49 millions, the Army and Navy and the Interior by over 33 millions each.

THE MONOPOLY ADMINISTRATION.

The Yugoslav Monopoly Administration reports considerable increase in its revenue for the first eight months of the financial year, which runs from April 1 to March 31. Receipts for the month of November amounted to 230,793,159 dinars as compared with 203,316,674 dinars in November, 1924, and a Budget estimate of 192,966,667 dinars. The total revenue for the eight months, April-November, was 1,709,878,417 dinars as compared with 1,612,216,206 for the same period in 1924. The larger part of this revenue is received from the Tobacco Monopoly, which contributed in November 142,455,119 dinars (and 1,112,265,316 dinars in eight months), salt coming second with 39,558,252 dinars (262,505,831 dinars in eight months). The other monopolv articles are kerosene, 23,202,120 dinars: matches, 12,848,645 dinars: cigarette paper, 12,189,432 dinars during November. Sundry receipts made up the balance, 539,591 dinars.

The statement of revenue and expenditure issued by the Administration for the period ending November 30, 1925, was as follows:—

REVENUE.	Dinars.
Monopolies (November) ...	230 793,159
,, (Apr.-Oct.) ...	1.479 085,258
Customs (November) ...	165 707,211
,, (Apr.-Oct.) ...	1,104,105,195

	3,766,627,374

RAILWAY CONSTRUCTION.

Budget Credits.

For the completion of the railway lines already in process of construction the Budget for 1926-27 provides a credit of 89 million dinars, out of the 188 million which are required for their completion. Of this sum 68 million dinars are allowed for the building of new lines, as follows:—Kraguyevatz-Kralyevo, 11 million; Krapina-Rogatetz, 6 million; Uvatz-Priboi, 6 million; Prokuplye-Prishtina, 14 million; Aleksinatz-Soko Banya, 6 million; Bakar-Kralyevitza, 10 million; Trebinye-Bileche-Nikshitch, 17 million, and for the Salonika zone 2½ million dinars.

The Yugoslav Government has received on account of reparations 582 kilometres of rails which are being substituted for the old ones, but 770 kilometres more are still required to complete the necessary replacing of worn lines.

Tunnel Through the Ivan Mountains.

Work was begun on February 15 on the long-deferred onstruction of a tunnel through the Ivan Mountains on the railway line from Sarayevo to Dubrovnik (Ragusa). The tunnel will be 3,800 metres in length, the longest in the Balkans, and will involve an expenditure of two hundred million dinars. The construction will be carried out by the State and will take altogether about three and a half years. In spite of the considerable cost of the tunnel it is anticipated that few undertakings of this character will have proved so immediately remunerative or so profitable in the long run.

When the Austrians, in the days of their occupation, built the railway line from Sarayevo to Mostar and Dubrovnik, the steep gradient of the Ivan Mountains caused them to construct a funicular railway. In those days the building of a tunnel would not have paid, and the less so since Vienna and Budapest already had an outlet to the sea at Trieste and Fiume, which were especially privileged. Under present-day conditions the maintenance of this 28 kilometre stretch of funicular line over the mountains costs the State 18 million dinars more than the same length of ordinary railway. Moreover, the funicular goods trains travel at a maximum rate of 8 kilometres per hour, with a maximum tonnage of 225 gross tons, and require three locomotives. Goods trains on an ordinary line, however, will be able to travel at 25 kilometres per hour, and carry 400 tons with one locomotive. The tunnel, therefore, holds out the prospect of an increased revenue for the line of 40 million dinars annually as a result of the increase of traffic. Thus in five years the tunnel would repay its entire cost, and the 40 million dinars annually would then remain as clear profit. Finally there is the advantage of faster communications, for the journey from Belgrade to Dubrovnik (when the Belgrade-Obrenovatz line is ready) will be reduced from 40 hours, as it is at present, to 27 to 28 hours. In various ways, therefore, the tunnel through the Ivan Mountains is likely to bring inestimable advantages to both industry and commerce in Bosnia and Serbia. Moreover it will furnish one more useful line for national defence purposes, while the connexion of the capital with the sea by faster trains and a shorter route should lead to a considerable increase in tourist traffic in Yugoslavia.

Under the heading "Cash" a gold dinar is reckoned as a dinar, an English pound as 25 dinars, a dollar as 5 dinars, an Italian lira as one dinar, a Swiss or French franc as a dinar, a coined silver dinar as one dinar, etc.

Discount rate: 6 per cent. Loan on securities: 8 per cent.

WAR REPARATION BONDS.

The printing of War Reparation Bonds of large amounts has begun. These will be for the nominal value of 5, 10, and 100 thousand dinars. The substitution of the present bonds for the new ones is not obligatory, merely optional, and will begin at the beginning of March. Exchange can only be effected by persons holding bonds of consecutive numbers, i.e., 5 consecutive numbers for a 5,000 dinar bond, and 10 for a new 10,000 dinar bond.

NEWS IN BRIEF.

The Soviet and Persian Mixed Commission has signed an agreement for the joint use of the rivers and waters between Russia and Persia.

After a discussion which has lasted three weeks, the Yugoslav Budget has passed its first reading in the Chamber by 162 votes to 71.

A Petrie Medal is to be awarded by the University of London once in every three years for distinguished work in archæology, preferably to a British subject.

The proclamation of the seven-year-old son of the new Shah of Persia as Valiahd (heir to the Throne) with the title of "Shahpur Muhammad Riza" was of a purely religious nature, says *The Times* Teheran correspondent.

A message received in Athens from Zagreb reports the the arrest there of M. Spiridion Skiadha, the Corfu representative of the Greek Agricultural Co-operative Union, who absconded recently after having, it is alleged, embezzled £100,000.

It is announced that as a consequence of the negative reply of the Hellenic delegation to the Yugoslav proposals regarding the organisation of the Yugoslav free zone at Salonika the Yugoslav delegation, after twenty days' negotiations, has returned to Belgrade from Salonika.

Pavlovitch Weltman, the Societ Oriental specialist, and other Communists left Moscow to attend a "congress of scientists interested in the culture of the Turkoman peoples," which opened last Thursdav at Baku and to which the Bolshevists attach some political importance.

Lord Scarbrough, the Sub Prior, and a number of other members of the Order of the Hospital of St. John of Jerusalem in England, will visit Malta on March 25 and 26, when a Chapter-General will be held in the Governor's Palace at which several recentlv appointed local members will be invested.

According to delayed advices received by mail, a severe earthquake occurred recently on the island of Cos, in the Dodecanese, completely destroying the village of Antimachia. Of a total of 600 houses and three large churches of the village only five houses and one church remain standing and intact. Two persons were killed and sixtv injured. The damage is estimated at 20,000,000 drachmæ.

ITEMS FROM CONSTANTINOPLE.

(From a Correspondent.)

The general stores of the "Au Bon Marché," situate in the Grande Rue de Pera, which have been in existence for over sixty years, and are a branch of the well-known establishment of the same name of which Messrs. Bortoli Frères are the proprietors, are about to liquidate and close down.

Italian contractors are busy building an aerodrome in the meadow (Tchair) of Buyukdere, where legend states that Godfroi de Bouillon encamped in the times of the Crusaders. The meadow in question is a beautiful spot, and many times have sports, gymkhanas, and cricket matches been held there, and will be well remembered by all those who took part, especially the members of the British, French, Italian, German, Austrian, and Russian diplomatic bodies, and of the Stationnaires (gunboats in attendance on the Ambassadors). Buyukdere, it may be mentioned *en passant*, is one of the principal summer resorts in the upper Bosphorus to which many of the Europeans and others go during the summer from May to October, the climate being much cooler than in Constantinople and suburbs.

A motor bus service will be shortly running between the City and the upper Bosphorus (Buyukdere), while the tramway contemplates extending its service as far as Buyukdere in the near future; as a matter of fact, they have commenced widening the roads for this purpose.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated February 27, state:—

Currants. A period of comparative steadiness has prevailed since the issue of our last report, and the general tone of the market may be described as hopeful. In the early part of the month some improvement was secured in sympathy with the betterment of the Greek exchange, the advance amounting to 1s to 2s. per cwt. Unfortunately the response from the trade was insufficient to permit of the rise being maintained to its full extent. Apart from some activity in Vostizza, in which interest chiefly centred, the volume of business transacted was disappointing. Transactions were as follows, Vostizzas figuring prominently in the list of sales effected:—Vostizza 40s. to 42s., better grades 43s. to 48s., with a few special lots up to 52s., and small fruit 38s. to 42s.; Gulf 35s. to 36s.; Zante 32s. 6d. to 33s., cleaned varieties; Amalias 31s. 6d. to 32s. 6d.; Patras 33s. to 34s. Quotations:—Pyrgos and Amalias, 31s. to 32s. 6d.; Zante, 32s. 6d. to 34s.; Gulf and Panariti, 34s. to 38s.; Vostizza, 39s. to 48. Arrivals during the month were Assyrian and Cypria with 400 tons.

Sultanas.—Smyrna have been exceedingly slow of sale, and although the lack of demand has resulted in a slightly sagging tendency throughout the month, values remain steady. The c.i.f. sales referred to in our last issue, on the basis of 66s. landed terms, evidently satisfied requirements, as the arrival of Mardinian and Cypria with further supplies excited no interest. Some late arrivals of oil dressed qualities 62s. 6d. to 66s. were placed, otherwise very little movement has taken place. A few parcels of fine natural fruit also changed hands at 74s. to 80s.

Greeks have been selling slowly at 67s. to 70s., fine at 7s. to 85s.

Figs.—With the exception of a movement of about 9,000 bags for export, these are neglected, quotations being as follows:—Genuine, 44s., 45s.; Boxes Naturals, 45s., 50s.

GREEK REFUGEE LOAN.

It is announced by Hambros Bank that the revenues for the 12 months ended December 31, 1925, assigned to the service of the Greek Government Seven per Cent. Refugee Loan, 1924, are as follows:—

	1925. Drachmæ.	1924. Drachmæ.
New revenues*	702,868,000 ...	541,397,112
Old revenues	1,778,373,087 ...	1,428,681,881 and £19,482
Do. surplus*	†950,900,000 ...	735,810,000
Average approximate exchange—drachmæ per £1	315 ...	248.17
Annual service of loan at above exchange requires	290,587,600 ...	228,936,825

* The loan has a first charge upon these revenues and surplus.
† Approximate.

GREEK MARKET FOR MOTORS.

Passenger cars and lorries imported into Greece during October (says an American report) numbered 83. Of the October imports the United States supplied 50; France 23 and Italy 6. The slackening in imports resulted from the six-months embargo proclaimed August 3, although this was not wholly effective until the end of the year provided proof was given that shipments were made against *bona fide* orders placed prior to August 3. It is estimated that December imports will exceed those of the first two months of the quarter.

The outlook for the first quarter of 1926 is not good, as the future of foreign motor sales depends entirely on the embargo situation.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Liverpool, March 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (London, March 6).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, March 10).

British India Line.—S.s. Dumana for Bombay and Karachi (London, March 12); s.s. Morvada for Colombo, Madras, and Calcutta (London, March 13).

Cunard Line.—S.s. Tyria for Gibraltar, Algiers, Malta, and Patras (Liverpool, March 2).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 6); s.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 10).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, March 5); s.s. Nellore for Cololmbo, Madras, and Calcutta (Liverpool March 20).

Prince Line.—S.s. Scottish Prince for Malta, Alexandria, Famagusta, Jaffa, Haifa, and Beyrout (London, March 12).

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT
Indian Government Vouchers accepted.

Passenger sailing dates:—

*OLYMPIA, Mar. 4. *MASSILIA, Mar. 30.
*BRITANNIA, Mar. 16 *ELYSIA, April 13.

*First class passengers only. Specially low fares.

SPECIAL NOTICE.

New T.S.S. CALIFORNIA, 17,000 tons, carrying 1st, 2nd and 3rd class passengers, sails from Liverpool October 26, Marseilles November 1. All 1st and 2nd class staterooms are fitted with punkah louvres and with fans. This vessel has exceptionally fine 3rd class accommodation.

Motors and Motoring.

By G. B. B.

Many motorists have been reading, perhaps, more between the lines of the recent remarks of the Chancellor of the Exchequer than was intended to be read. "Hope springs eternal," as everyone knows, and most private owners have been hoping almost against hope for some time past that the horsepower tax will be superseded by the petrol tax which was in force some time ago. The usual superficial articles are appearing in the Press to prove that a petrol tax is the only fair method for obtaining revenue from motorists, the truth of the matter being that very few realise that the horse power tax has been, in effect, the means of saving the British motor industry from falling into a very low place in the world's motor trade. The immediate result of the horsepower tax was a demand for cars with engines of low nominal horsepower. The horsepower is calculated on a basis which does not take into account the number of revolutions made per minute, and the demand speedily developed so as to cause those cars to be sought for which had an engine of low nominal power but which were capable of "turning over" at a high rate and so giving out a high actual horsepower. It is that development which has resulted in the British light car being the finest in the world, and it in itself was the direct result of that horsepower tax which so many of our motor critics said would bring ruin to the industry.

The Motor Tractor.

Somewhat unostentatiously, but nevertheless very firmly the small petrol-driven tractor has obtained a foothold as a road vehicle; not, of course, for direct transport, but as a tractor for hauling heavily laden lorries. For some time past I have been noticing the use that is being made of tractors for hauling lorries laden with paper rolls for newspaper work, and it is certainly a remarkable sight to see these pigmies of the road hauling with ease laden drays that formerly took all the powers of a big and heavy steam tractor to pull along. The motor tractor has an unladen weight of under two tons and is perhaps one of the most easily managed vehicles imaginable. For hauling purposes, one of these little machines will do as much work as a steam tractor of much greater size, and I am wondering who was the individual who first thought of taking a tractor from the farm, fitting it with road wheels, and putting it to haulage work. Anyway, the field he, whoever he may have been, opened up is one of vast extent, and I for one, am certain that British manufacturers will take early advantage of the opportunities that this sphere of a tractor's utility will afford. For overseas work, particularly in our great Indian Empire, tractors would be specially suited. Their first cost is not high, their running costs are low, and they are so sturdily built that they are not likely to breakdown, no matter how severe a task they are given. There is, of course, a corollary to all this; if there is a market for tractors it follows that there must also be a market for trailers and obviously those who make a speciality of trailer work will design and produce different models for different purposes. There is a wide and almost limitless market in India for both tractors and trailers, and it would be a thousand pities were the American and Continental maker to be allowed to be first in the field.

A Large Undertaking.

I have just visited the new Citröen works at Slough, where the "Citron," as the British motor public delight to call the speedy and sturdy little car, is to be turned out. The new works cover an area of rather over half a million square feet, and I suppose it will be the biggest affair of its type in the country. Some thousand of hands will ultimately be employed here, and it goes without saying that the works are to be fitted with the very latest types of machinery. Altogether, the new Citröen works should be one of the show places of the motor industry.

The Traffic Situation.

This is perhaps hardly the place in which to mention the strong opposition that is being shown to the proposed new arrangement, to be set in operation in London, whereby a number of private omnibuses are to be taken off certain roads in order to compel people either to walk or use the trams. The matter is too local, it may be said, for us to deal with, but I am not sure that the matter should be looked at in that way. It seems to me that a certain principle is at stake and it also seems to me that it is necessary to urge our traffic rulers to pause before they make themselves too ridiculous. Surely the days have gone by when mandarins thought they could save dying concerns by prohibiting competition? The trams are doomed, anyway; they do not pay, they are nearly worn out and they cannot compete on any basis with the motor bus. The competition of the petrol vehicle is far too strong and severe; the efficiency of the motor bus is throwing a vivid light on the inefficiency of the electric tram. And the powers to be think they can put everything right if they just move back the clock and take away the competition. Why on earth should the British public be compelled to ride in draughty, rattling, groaning contraptions, some of them driven by unskilled persons who pile their passengers in heaps whenever they stop owing to their ignorance of the proper use of a brake, and be forced to risk their lives every time they mount or dismount? Why should we be told that although we would prefer to ride in motor buses we must not, but must help to make the trams pay? It is simply surprising how meekly people nowadays accept the rulings of those in authority. Possibly it is done to see how foolish people can make themselves. And yet I do not know. The world did not rock with laughter when the mandarins tried to relieve the pedestrian congestion of the streets by prohibiting straphanging in buses and trams.

INDIAN AFRICAN SERVICE

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended February 15 state:—

Since our last report the futures market has been very quiet, price fluctuations being negligible. The week's summary of price movements is as follows:—Sakellaridis: March, 0.57 dollars down; May, 0.48 dollars down; July, 0.60 dollars down; November, 0.70 dollars down. Ashmouni: February, 0.37 dollars up; April, 0.20 dollars up; June, 0.03 dollars down; August 0.10 dollars down: October, 0.30 dollars down.

We have had a week of quiet sessions, with both exporters and professionals showing only slight interest in the market. The demand from abroad has been very limited, especially for Sakel. Spinners were beginning to show some interest in Ashmouni at about 24 dollars for April and things were looking brighter when, unfortunately there were rumours of Government intervention also in the Ashmouni market. Up to the present these rumours have not been confirmed, and it is to be hoped that the Government will not extend its operations in this direction.

It may be true that Government intervention in the Sakel market has stabilised prices, but it is equally true that this intervention has reduced the trade demand to the absolute minimum. Stocks at Alexandria are mounting up and unless there is a revival in the demand for Sakel in the near future—which we do not think very likely—we shall commence next season with a heavy carryover. Government intervention in the Ashmouni market would produce a similar, if not worse, state of things also for that variety.

We are informed that, in addition to the Gezira Sakel crop of about 325,000 kantars, the Sudan Plantations Syndicate is also about to ship to Liverpool the Kassala crop of about 25,000 kantars, making a total of some 350,000 kantars for spinners to draw on for their requirements during the coming months.

At the second February tender 1,500 kantar dockets were issued. The Government has bought during the week about 3,300 bales Sakel, from Fully Good Fair to Fully Good Fair Good, for which from 35 to 36½ dollars has been paid. The total Government purchases to date amount to about 25,500 bales. The week's receipts amount to 200,725 kantars, against exports 173,286 kantars; the stock stands at 2,255,574 kantars.

Spot: Minet el Bassal has been quiet this week, there is no improvement in the demand and business has been on a very moderate scale. Sales amount to about 14,000 bales of which we estimate 7,000 bales Sakellaridis, 6,100 bales Uppers, 400 bales Zagora, 300 bales Brown and Pilion and 200 bales White. Government purchases for the week have been about 3,300 bales Sakel.

Sakellaridis: has met with only a mediocre inquiry covering all styles. A certain amount of Extra cotton continues to be absorbed at high parities but, generally speaking, spinners have shown very little interest in this growth. Spot differences are at about last week's parities.

Ashmouni and Zagora: have met with a moderate demand and all grades have been dealt in. Spot differences are generally a little dearer than last week.

Brown and Pilion: Brown has been in retail request and spot differences have hardened a little. In Pilion a moderate business has been done at about last week's spot differences.

White: has met with a fair demand. Spot differences are unchanged.

Crop 1926: Preparation of land has already commenced in several districts under very favourable weather conditions. Though it is yet too early to express an opinion on the probable acreage which will be put under cotton, and on the proportions of the different varieties which will be planted, nevertheless it can be said that, in all probability, the law restricting the acreage will not be very strictly observed, whilst, judging from the demand for sowing seed, we think it probable that there will be some increase in Pilion and Zagora in the Delta at the expense of Sakel.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended February 27 states:—

There is little change to report from the conditions prevailing during the past few weeks. Apart from the continued purchases for India it cannot be said that any overseas outlets present features calling for special mention. The feeling of hopefulness referred to last week is fairly well maintained, mainly owing to buyers placing orders further ahead than for some time past, thus indicating more confidence in the stability of existing prices.

Yarn.—Spinners of American yarns report little or no improvement in their position and, in view of the poor offtake, it is very doubtful whether production during the past week has all been sold. Egyptian spinners, on the other hand, report a steady business owing to the relatively better demand for yarns from which light-weight and fine quality cloths are manufactured. Quotations for all Egyptian yarns are firm.

Cloth.—The Indian demand referred to particularly last week has been slightly less active, but in certain classes of goods some satisfactory contracts have been placed. Bookings for delivery some months ahead certainly indicate the belief in a healthier state of trade for this particular market.

News received regarding the Shanghai auctions has not been so satisfactory as was anticipated. The quantities sold give cause for little complaint, but the prices realised are not as good as were hoped for. The Levant and Egypt are practically marking time, the quantity of goods already in these market awaiting consumption being said to be heavy and to give rise to some feeling of uneasiness. South America has seldom been mentioned during the past week, but Colonial demand keeps steady and Home trade is about equal to the average for this time of the year.

Raw Cotton.—Although there is not much change to report from the conditions mentioned last week, prices are somewhat less firm owing to a reported desire on the part of holders in the States to see a reduction in the quantities they have on hand.

The receipts at the United States ports so far this season are 8,014,000 bales as against 7,954,000 bales at the same period last year. Business in Egyptian qualities has been limited in extent, due in part to the uncertainty felt regarding the Egyptian Government's tactics and the knowledge that the official support which prices are receiving may at any time be withdrawn. The past week has been what may best be described as a "buyers'" market. This season's receipts of cotton at Alexandria so far amount to 6,428,364 kantars against 6,600,617 kantars at this time last year. Closing quotations yesterday were as follows:—American Middling, 10.33: Egyptian Fully Good Fair, 17.30.

Company Meetings.

BRITISH TRADE CORPORATION.

Activities in Yugoslavia.

Lord Faringdon's Speech.

The ninth ordinary general meeting of the British Trade Corporation was held on February 24 at the Institute of Chartered Accountants, Moorgate Place, E.C.

Lord Faringdon, C.H. (the Governor), presided.

The Secretary (Mr. G. de B. Brounlie, A.C.A.), having read the notice convening the meeting, and the auditors report.

The Chairman said:—Gentlemen,—In presenting to the proprietors the accounts for the past year I would draw attention to the liquid position of the Corporation. Our total liabilities, as will be seen by the accounts in your hands, on current, deposit, and other accounts, amount to £783,365, while our liquid assets, consisting of cash in hand and at bankers £150,815, money at call and short notice £315,000, and Government securities taken at market value £401,775; total, £867,590; which is practically 110 per cent. of the before-mentioned liabilities.

Our investments stand at £279,758, or practically the same figure as a year since. Many of these are quoted securities and, at the figure at which they appear, should be worth fully the value placed upon them. Our stake in the Levant Company's capital has been disposed of. Bills discounted, loans, advances, and sundry debtors stand at £560,825, or £211,242 less than last year. The decrease is partly accounted for by provision that has been made for bad and doubtful debts and by the disappearance of advances made to the National Bank of Turkey. We believe that we have now written down all items on a conservative basis.

Our acceptances amount to £1,553,697, or £328,432 more than at the corresponding period of last year. The increase reflects some improvement in the general business of the country. The increase would have been greater had we not had regard to the special linking up of our acceptances with British trade. As far as possible proposals that come before us are examined from this point of view. The next item on the balance-sheet, viz., premises—London and branches—remains at last year's figure. We are, however, creating a reserve fund which will grow year by year to meet leases as they mature.

National Bank of Turkey.

At our meeting a year since I referred to the difficulties we were experiencing in connexion with banking transactions in Turkey. During 1925 the National Bank of Turkey curtailed their operations, ceased to enter into new transactions, requested their regular customers to withdraw their balances and deposits, and generally limited work to the liquidation of their position. To meet the obligations of the National Bank of Turkey it became necessary either to make a call upon the shares we held, or make advances against our liability for calls, and we decided upon the latter course. Consequently our stake in the concern was greater than the sum represented in past balance-sheets as the cost of our shareholding. We have now parted with all our interests in the bank and the liability attaching to the shares has passed to the purchaser. We had in reserve the necessary sums to enable this sale to be effected without trenching upon our other resources and, although we may regret the disappearance from our balance-sheet of our reserve fund, I believe that the document is sounder in consequence of what we have done.

Profits.

Our profits for the year, after meeting current expenses, amount to £77,112 14s. 5d., and I had at one time hoped that we should have been in a position to propose to you to-day the payment of a dividend upon our ordinary shares. We have, however, found that there was still some dead wood to be cut away, and therefore it has been essential to write off, out of the profits I have just mentioned, £40,000—for contingencies. I hope that we may now consider that we have touched rock bottom. We have disposed of many interests acquired in the early days of the Corporation, all of which at one time promised to stimulate British trade and give favourable results. The losses in connexion with many of these concerns have been heavy, but they are most of them finally disposed of, and those that remain are written down to figures so that they should cause no further trouble.

After deducting the £40,000 I have just referred to from our year's profits and adding £21,192 brought forward from last year, we have a credit to our profit and loss account of £58,304 17s. 9d., which we suggest should be applied as to £30,000 in the payment of the cumulative dividend of 6 per cent. upon our "A" shares and the balance of £28,304 17s. 9d. carried forward, subject to income tax.

Having during the past few years liquidated the position that was the result of the immediate post-War inflation, we are looking forward for fields where we can utilise our energies, and we naturally turn to the two centres where we have branches.

As regards the Danzig Branch, the year under review has been one of consolidation and preparation rather than of development. The disappointing nature of the crops in Poland in 1924 was bound to react unfavourably on the prosperity of this transit port, while openings for safe business became still further restricted as a result of the banking, commercial, and currency crisis which ensued. The branch nevertheless again had the opportunity of contributing to the smooth working of important group credits granted to Polish agricultural interests, and it is to be expected that an increasing volume of useful activity will follow the return to more normal conditions in this important international centre. After all, the imports and exports handled at Danzig have in the past been considerable, and though temperamental trouble between Pole and German has hitherto undoubtedly hampered business, we anticipate that, as time goes on, common sense will prevail, to the common advantage of all concerned.

Yugoslavia's Progress.

With regard to our branch at Belgrade, it is satisfactory to be able to call attention to the undoubted progress made by Yugoslavia during 1925. The Budget shows a surplus, a favourable commercial balance has been established, inflation has ceased, and the dinar has been virtually stabilised. It is true that these results have only been attained at the cost of considerable self-sacrifice and hardship, and that some grumbling has, almost inevitably, been heard; it is true also that the echoes of regrettable internal misunderstandings are from time to time given perhaps undue prominence in the Press. But, taken as a whole, the country can be congratulated on having made unexpectedly rapid progress since the Armistice, and more especially during the last two or three years. Steps are at the moment being taken in Paris, Washington and London for the settlement of war and relief debts due by Yugoslavia, thus paving the way for the introduction of much-needed foreign capital into the country. Such capital is required for the improvement of communications and other reproductive purposes, and we are justified in hoping that our Belgrade branch, founded six years ago to serve as a connecting link between the London and Yugoslav markets, will in the future have increasing opportunities for facilitating such business.

In pursuance of our policy of working in Yugoslavia in co-operation, rather than in competition, with local banks, the sub-agency

of the Corporation at Zagreb was closed in July last.

There are indications in many quarters that trade is showing signs of recovery. It is stated that there is an improvement in the freight market and a reduction in the idle tonnage laid up. More furnaces have been blown in in the iron districts and a real advance is shown in the boot and kindred trades.

We naturally ask ourselves whether finance is doing everything possible to assist a return to prosperity.

The Government, through the Trades Facility Committee, are giving material assistance by making it possible to raise money upon easy terms for capital expenditure by various undertakings. The Export Credits Department of the Department of Overseas Trade are giving guarantees that have enabled British merchants to accept foreign orders that, without that assistance, would have gone by the board, and a study of the accounts of the great joint stock banks affords abundant proof that they are lending very freely to their customers to enable them to fulfil engagements of various descriptions and no doubt to launch out in new directions.

If trade does not improve it is apparently not for want of enterprise on the part of bankers and financial houses. Capital and labour are recognising that they are one and indivisible, and in the growth of this conviction rests the future of our country's prosperity. (Hear, hear.)

We hope that our improved financial position will enable us to furnish material assistance in the all-round improvements in trade that I trust we are not too sanguine in anticipating.

The Governor concluded by moving the adoption of the report and accounts. Sir Harry Goschen, K.B.E., seconded the resolution, which was carried unanimously.

The dividend recommended was declared, the retiring directors were re-elected, and the auditors were reappointed. The proceedings then terminated.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

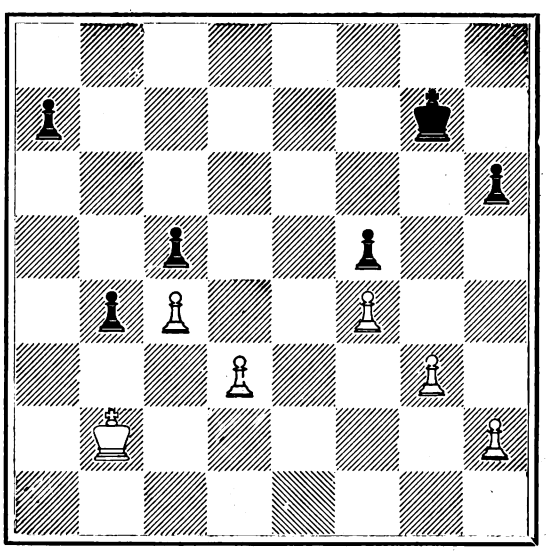
London, March 2.

The Stock Exchange has passed through another very unsatisfactory and depressing week, which, however, ends with conditions rather better than a day or two ago. The dead-weight pressing down and constraining activity is provided by the rubber and oil share sections—particularly the latter. The big decline in rubber share prices has shaken out an army of weak holders, and the same is true of the oil section, where in addition the spectacular "ramp" in British Controlled has caused several failures in the last few weeks and produced an effect spreading far beyond the confines of this particular market section. We have indeed been witnessing an object lesson of the way in which troubles in one market depress others. Whether or not these troubles have yet worked themselves out is not quite certain. But there are two things that may usefully be said about the present situation. The first is that genuine holders who bought good rubber or oil shares at far higher prices than those ruling now should not be unduly alarmed. The liquidations which have forced share prices down so far have not affected the intrinsic value of properties or plantations. Prices may not recover to the levels reached in the speculative bout of last autumn; but many good shares have obviously been driven down to levels at which they are cheap and at which they will not permanently remain. On the other hand a further degree of patience may be required. Forced liquidation may not yet be over. Also we are just approaching the really crucial period of the year when anxiety about the coal dispute and the Budget (not to mention the serious League of Nations' crisis) may be expected to induce caution and occasional waves of pessimism. Patience is the motto to-day for the general investor who holds shares of a good class.

The Home Railway Reports.

The disappointment caused by the dividend reductions of three of the four great British railways, and by the large amounts withdrawn from reserves in order to pay the lower dividends, has been modified to some slight extent by the publication of the annual reports. Until the appearance of the latter we had only the figures of gross traffic receipts to go upon and were in the dark as to what economies in expenditure had been made. The full accounts show that while gross receipts were very much lower, except in the case of the Southern, expenditure was also considerably lower. The gross receipts of the Southern were £423,000 higher, but the expenditure rose by only £258,000. The result is that the net income of the four lines, including miscellaneous net receipts, has fallen by less than £2½ millions against a decline for 1924 of over £4 millions. While some comfort may be derived from this, the position is far from satisfactory. The North Eastern figures make a very poor showing. Net income falls short of the amount required to pay prior charges and dividends on guaranteed and preference stocks by some £1¾ millions, and although £4 millions have been withdrawn from the Government Compensation account and transferred to net income, the balance carried forward has been reduced by £150,000.

The Balance Sheets.



The four companies have together withdrawn £6,626,000 from reserves this year, as against £5,100,000 twelve months ago, and £1,150,000 at the end of 1923. Even so they still have general reserve funds of £21¼ millions, depreciation funds totalling £70 millions and total reserves, including insurance and staff superannuation and other funds, of £133½ millions, while the book value of Government securities held amounts to no less than £73½ millions, and there is cash to the extent of £20½ millions. The balance sheets, in fact, show a fairly strong position and the outlook for 1926, granted a satisfactory solution to the coal problem, is brighter, and traffic for the current year already shows a small increase. Yields in the neighbourhood of 8 per cent. are obtainable on the ordinary stocks at present prices, with the exception of North Eastern deferred. The fall in the price of this stock which has occurred since the reduced dividend was announced last week, has been relatively small and the yield at present is less than 5½ per cent., an unattractive figure in face of the published accounts.

Directors' Remuneration.

The somewhat heated discussion which occurred at the recent annual meeting of a well-known rubber plantation company regarding the remuneration of the directors has brought into the limelight a question of vital importance to all investors. The success of any business depends to a very considerable extent upon the efforts of those responsible for its administration. Where the management has succeeded in placing its undertaking on a prosperous footing some financial recognition from the shareholders is not unreasonable. But there are many points to be considered. In the specific case mentioned above it was proposed to increase the directors' fixed rate of remuneration. This suggestion aroused some opposition on the part of a number of the shareholders, and we must confess to a certain amount of sympathy with the critics of the scheme. When a company is doing well, the shareholders can express their appreciation of the efforts of the board by voting a special temporary bonus. This bonus would be payable out of past profits. But, when they adopt the course of raising the directors' fixed remuneration, such addition must be regarded as permanent, and at once places an extra annual burden on future profits. Especially is this penalising of results of subsequent years to be deprecated in the case of rubber companies. The rubber industry is particularly subject to alternating cycles of prosperity and depression and nobody can tell what will happen from one year to another. It is, therefore, obviously unwise to increase permanent expenditure just because things are going well. The object can be equally well served by granting the directors a special sum each year in relation to the profits actually earned.

A NEAR AND MIDDLE EAST REGISTER.

In connexion with the luncheon recently given by former residents in Constantinople in honour of Sir Harry Eyres, attention has been called to the absence of any organisation to enable those closely associated with the Near or the Middle East who happen to be in England to be communicated with when occasion arises. The suggestion has, therefore, been made that THE NEAR EAST AND INDIA should invite residents of the Near and Middle East on their return to England, either for permanent residence or on a visit, to send their names and addresses to this Office.

THE NEAR EAST AND INDIA is happy to fall in with this proposal.

When it is desired that the return to England should be announced, this can be done; but the main purpose of the list of names and addresses will be to facilitate communication with those who thus register their addresses, if at any time a reunion is considered desirable as on the occasion of the retirement of Sir Harry Eyres from the Diplomatic Service.

It is hoped that residents in the Near and Middle East and those who wish to keep up their ties with that part of the world will send in their names and addresses to this Office, and will make a point of inviting others known to them to do the same.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Pacts and Panics.

There has been much fluttering of the political dovecots of Europe during the last fortnight. In the world of nature it is the season for mating, and in the political sphere the same tendency appears to be at work. After much erratic flight and circling about, how will the birds pair off? The question is exercising many European chancelleries, for the possible combinations are numerous. Will Italy and Yugoslavia, for instance, set up a joint household in the Balkans, or rebuffed in one direction, will Signor Mussolini fly off with General Pangalos preparatory to nest-building in Asia Minor? Is France a rival to be chased away or cold-shouldered; or will she be invited to bring her Czecho-Slovakian and Polish mates of last year and settle together in one big tree in a position of vantage in Central Europe? We shall see. All this spring movement is, perhaps, inevitable; but it may be doubted whether it is as healthy a sign in the political world as it is in Nature. The promptings come from without not from within; they are essentially artificial and panicky, the fear of the German bogey. It took Germany forty years of hard and systematic preparation to challenge Europe before and even then she had to enlist the services of the Austro-Hungarian Empire, Turkey and Bulgaria. If she intends to make a fresh bid for world hegemony on the same lines, it will take her still longer this time. Her next challenge, however, if it comes, is more likely to be on different lines; and the countries which concentrate all their energies and intellects on military matters and military pacts will be taken as much at a disadvantage as they were in 1914. Germany's weapons of the future if she is to accomplish anything, will be of the economic, moral and intellectual type. Nothing will suit her better —always supposing that her programme is still to be one of aggression—than that her rivals or enemies should waste their substance on armaments that will never be used, should weaken themselves by piling up political discontent within their borders, and should keep their minds off their own business by trying to mind that of others.

A Suicidal Policy.

To those who want to see the Balkan States firmly established on the threshold of a new and happier era it is a matter for regret to find any one of their number still

Digitized by Google

lending itself to political groupings that must involve it in the troubles or distractions of Central and Western Europe. As has been repeatedly insisted upon in these pages, if the Balkan countries can agree among themselves, no conceivable aggression from without for many years to come can cause them any anxiety. The advantage of a Balkan Confederation, moreover, is that it commits none of its members to responsibilities outside its own immediate interests. It may be that France and Italy will see eye to eye in all things, and any minor State that attaches itself to one of them will be welcomed as a younger brother by the other. But if France and Italy should have their disagreements the friction between them is likely to involve the smaller States that follow in their wake. According to one interpretation, France and Italy are rivals for the favours of Yugoslavia, and M. Nintchitch is supposed, after having heard in Rome what Signor Mussolini has to offer him, to have gone to Paris to give M. Briand an opportunity for bargaining against Italy. We are far from accrediting this rôle to the Yugoslav Minister for Foreign Affairs; but it is certain that it does not contribute to the maintenance of peace in Europe, if France and Italy are encouraged to believe that, either together or in opposition to one another, they may aspire to a leadership on the Continent which will seek to justify itself by frequent rattlings of the sword in the scabbard. Signor Mussolini, who has not forgotten the success of Corfu, would welcome an opportunity of repeating it in the Brenner Pass. France, on the other hand, is being warned that acceptance of the "Locarno spirit" entails the surrender of all aspirations to "lead" Europe and is urged to recover her liberty of action, before it is too late. All this intrigue and enervating panic are merely leading Europe back to where it was before 1914, with this added disadvantage, that in the place of a single unit, Austria-Hungary, whose support, once given, remained static, there are to-day four or more minor States whose support can be made the subject of intrigue or bargaining. If minor States lend themselves to this policy, they must be prepared to see the League of Nations go by the board, as its existence is altogether incompatible with the scheme of rival camps in Europe.

At the Parting of the Ways.

It is to be hoped that the tour of Yugoslavia's Foreign Minister will not stultify the good work that is being done by her Minister of Finance. There is no surer way of undermining a country's credit abroad at the present time than to encourage the belief that it is prepared to indulge in political entanglements of which the full bearing cannot be gauged. A careful financial policy, entailing no small sacrifices for the nation has brought Yugoslavia to the stage when her Government can take up the question of meeting War indebtedness with some confidence that a settlement will at once be followed by the loans of which the country stands in urgent need. As far as London is concerned, the purse strings that are waiting untied for Yugoslavia's benefit will inevitably be fastened more securely, if it is found that she is committed to ride on Signor Mussolini's shoulders across the Brenner or to create a diversion for France's benefit in some other direction. For many years to come, dictators or no dictators, frontiers will not be changed by military violence, whether Austria comes within the German economic orbit or remains outside. Yugoslavia, therefore, can afford to leave Central European politics to take care of themselves, and is placed in the happy position of being able to devote the whole of her attention to her own economic development and to securing the mutual good will and wholehearted co-operation of all the different communities that make up the Triune Kingdom.

General Pangalos and his Opponents.

The banishment of Opposition leaders to islands in the Ægean Sea and the attempt of General Plastiras, who had been sent into exile abroad, to effect a return to Greece, suggests that General Pangalos has his hands fairly full in retaining his mastery of the home situation. The outward indifference of the Greek people as a whole to the political arrangements made in their name by those who take up the reins of Government facilitates *coups d'état*, as it means that a comparatively small body, if determined enough and successful, can hope to effect a change of régime with some chance of a fairly long lease of power. General Pangalos, however, has yet to be caught napping. He struck first, when he arrested a dozen leaders of the Opposition a short time ago, and now he has been saved some embarrassment by the arrest by the Yugoslav authorities of General Plastiras on his way into Greece. The report of the speech alleged to have been delivered by M. Papanastasiou shortly before his removal from Athens explains General Pangalos's action, even if it cannot justify it by the canons of constitutional government. The friends of Greece would like to see her spared all this unrest, and would prefer to have nothing happen to delay the return of a constitutional régime, when expression can be given to the people's will by ordinary parliamentary elections

Turkish Pinpricks.

The Turkish Republic has set itself a perfectly legitimate and laudable task—the building up of a modern State, in which the Turks will be masters in their own house and will be able to conduct the country's affairs according to Western standards. Unfortunately, the Angora Government seems anxious to build new Turkey in a single day, and shows itself quite incapable of long-sighted views. In no sphere was there more reason to hasten slowly than in regard to education. The large number of foreign schools throughout the country and the obvious predilection of the people for these schools over Turkish schools may well have been a source of bitterness to the authorities, and it was quite easy to draw up an admirable scheme of education on paper, as has been done. To carry it into effect is another matter, if only because teachers cannot be made overnight. Ignoring this difficulty, the Turks have made war on the foreign schools, and the last victim is the English High School for Girls in Constantinople. After gradually increasing the hours in the school curriculum to be devoted to teaching Turkish, the authorities ordered the school to instal a certain Turk as master. It is stated that the man arrived at the school in an intoxicated condition and was refused admission. The school has consequently been closed. Yet another pinprick administered at the same time is the delivery to the Ionian Bank of an ultimatum to the effect that unless it immediately engaged a sufficient number of Moslem Turks, at the salaries fixed by the Turkish authorities, to bring

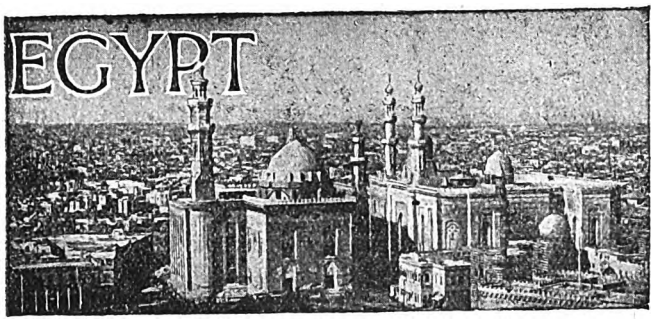
CYPRUS: AN OBLIGATION.

In the scheme of the British Empire, with responsibilities involving four hundred million people, it is inevitable that the affairs of the island of Cyprus, with a population of just one-third of a million, should not bulk very largely. Yet Cyprus deserves more attention than it receives, if only for the fact that in the presence of a permanently unfriendly section of the inhabitants the British stewardship cannot be content to take itself for granted, but must always be ready to justify its existence. The situation in Cyprus reproduces conditions that are familiar enough in other spheres more directly in the political limelight. During the twenty-five centuries of the positive history of the island its Greek-speaking inhabitants have owed allegiance to many countries and rulers, but never to Greece, unless the Cypriot support given to Alexander of Macedon, while Cyprus was nominally a vassal of Persia, entitled them to this distinction. For three hundred years, from 1570 to 1878, the island was under Turkish rule; in the latter year it passed under British occupation. To-day, nearly fifty years later, it is unnecessary to examine in detail the reasons for this transfer; they were sound enough at the time, and Cyprus stood only to gain by the change. Great Britain received the island "to be occupied and administered" by her, with no other pertinent stipulation than that she would evacuate it in the event of Turkey's receiving back from Russia the Armenian territories that she had shortly before detached from the Ottoman Empire. The Convention of 1878 remained in force until November 5, 1914, when Great Britain annexed the island. Since that date the offer of the island to Greece in return for services to be rendered in connexion with the War, at a time when most considerations were sacrificed to the single necessity of the Allies' ultimate victory, and the subsequent apotheosis of self-determination as the sole ingredient of the Millenium have given considerable impetus to the agitation on the island for union with Greece. The reply of the British Government has been clear and emphatic, and it has finally refused to discuss the subject any more.



Of the total population of Cyprus, much less than a quarter live in the six District Capitals and in seven or eight villages with upwards of two thousand inhabitants. Thus the great majority of the people are employed on the land, and in common with agriculturists the world over are far more concerned with their own immediate wants than with political matters. The agitation for union with Greece originated with and is kept alive by townsfolk, who have organised the movement with sufficient skill to invest it with the appearance of monopolising the thoughts of the whole Greek-speaking population. For the men who feed the agitation union with Greece implies elimination of all British authority, complete dissociation from the rule of Athens, and control of the island's affairs in their own hands. These are from their point of view very natural aims. Approached from another angle, their advantage to the island appears problematical. Probably no country stands in greater need at the present moment than Cyprus of enlightened, progressive government, able to command the highest scientific and technical knowledge. A measure of the appreciation of this fact by the lawyers and other townsmen who are responsible for the agitation for union with Greece is provided by their indifference to all that the British occupation has achieved for the island and to the far greater achievements that will yet have to be recorded before Cyprus can claim to be on a level with the progress of the age. Against the contention that a people is entitled nowadays to rule itself by second-rate or third-rate standards rather than submit to the first-rate standards of an alien rule can be effectually urged the special circumstances of Cyprus, where a Turkish community of one-fifth of the total population holds Great Britain to the obligations of her original trusteeship. The Cypriots as a whole are a backward and thriftless people; the fault may not be theirs, but the fact remains. With their scanty numbers, the island can be redeemed from poverty only by the steady extension of scientific methods of agriculture and by the watchful provision in a variety of different directions of a progressive Government.

It is in the quantity and not in the quality of its achievements that the British Administration has fallen short of what might legitimately have been expected of it. The combating of malaria, the encouragement of agriculture and industry, afforestation, irrigation, the inculcation of thrift, the construction of roads—in a word, the hall-mark of good government has been there; yet the sum total of its effect is shown to have been inadequate. The reason is that Cyprus has been left severely to her own resources. British officials have brought with them to the island the requisite knowledge, but with the slender means at their disposal they have not been able to achieve all that was to be expected after fifty years of British rule. This is the position that the British Government of to-day ought to face squarely. If there are reasons which—as is the case—compel us to remain or render it advisable that we should remain in the island, the obligations of our trusteeship must be more resolutely undertaken. The difficulties in the way are evident. With such an exiguous population few works of importance can be carried out with any hope of financial success. Efforts to provide reservoirs for irrigation have failed in part, because in ordinary seasons the people prefer to make shift with what moisture they can get without paying for it, only to find that in years of serious drought there is not enough water to go round. Experience now shows that other methods than the construction of reservoirs must be adopted. Neither the Athens Government nor a handful of Cypriot lawyers and ecclesiastics could have done for the Greek and Turkish peasants a tithe of what has been done for them in the teaching of new agricultural methods, in the introduction of new crops, in the improvement of livestock. It is significant that the new educational system so stoutly opposed two years ago by the agitators is now recognised to have been an unqualified benefit to the people. Cyprus, however, has pressing needs that she cannot cope with, unless the British Government comes to her help in some practical way. The grave handicap of the indebtedness of the peasants to usurers must be removed by more rapid means than one or even two agricultural banks can provide. Much more must be done before the water problem can be said to have been properly solved. The anomaly of the "Tribute" or "Share of the Turkish Debt Charge" is only possible, because a much occupied Government has failed to give the question its undivided attention. The island's requirements in their totality will never bulk largely in any scheme that can be submitted to the British Treasury; but to continue to neglect them is to put a premium on further agitation that is actively prejudicial to wider British interests than merely those in Cyprus.

The Near and Middle East*

From Our Own Correspondents.

Cairo, February 27.

The High Commissioner.

The High Commissioner is making a rapid recovery and is attending again to business in his office, but it will naturally be some little while before he will be completely fit again. In the circumstances he has had to forgo the visit to Alexandria this week-end. At the Mixed Courts Jubilee celebrations to-day he was represented by Mr. Neville Henderson, who read his speech, but the other engagements—mainly with the British Community, which he was to meet for the first time—have had to be postponed. They will probably be fixed for some time during next month.

The Anti-British Outrages Trial.

As foreshadowed in my letter of a fortnight ago, the political anti-British outrages trial has been put forward, and has now been fixed for March 16 before a Court presided over by Judge Kershaw, who was one of the judges in the trial of the men convicted of the murder of the Sirdar. It is somewhat unfortunate that the fast of Ramadan starts on the day before the trial as that interferes with the length of the daily sittings. To avoid this it would, however, have been necessary to wait until the middle of April. This would, so to speak, have prolonged the agony too much, and in spite of the inconvenience it is undoubtedly better to have the trial at the early date now fixed.

King Fuad in London.

The news was sprung on us this week that King Fuad had been invited to London by King George. It is stated in Palace circles that the visit will take place in June, but obviously everything must depend on the development which the political situation may undergo as the result of the elections.

The Coming Elections.

There is a distinct lull in the political situation and the Opposition are now engaged in arranging amongst themselves the selection of candidates at the forthcoming elections. Zaghloul Pasha, in reply to a question at the recent Congress stated that candidates, who would have the support of the Tripartite Opposition, would be selected from amongst the most capable, irrespective of party, and it will be interesting to see exactly how the list pans out.

In Government circles it is stated that by shortening the periods for the formalities the elections can be completed by May 17, which would permit of Parliament's being opened on May 27. But if, as appears likely owing to the *entente* between the three elements of the Opposition, there are very few three-cornered fights, it is quite possible that there will be no need for ballots, in which case even Parliament could be opened at least a week earlier.

Waters from Makwar.

Much satisfaction has been caused amongst the rice-growers of the Northern Delta by the news that the quantity of water stored at Makwar in excess of the requirements of the Gezira—about four hundred million cubic metres—will be made available for Egypt during the coming summer. This means that the usual restrictions on rice-cultivation owing to summer shortage may possibly not be imposed.

It has been known for some time that the quantity of water provided for the 300,000 feddans under cultivation in the Gezira was far in excess of what was required. The original estimate on which the limitation of 300,000 feddans had been arrived at, had been based on water-duty far higher than has been shown by practice to be necessary, and the authorities affirm that without taking one drop more water from the Blue Nile than was originally earmarked for the Gezira, fully 50 per cent. more land could be put under cultivation.

The action of the Sudan authorities in agreeing to this surplus being placed at the disposal of Egypt this year reveals a spirit of generosity and conciliation which it is hoped will not be without its effect on those in Egypt who will have to arrange the details of the water settlement which will have to be made in the near future between the two countries.

Students' Garb.

An incident affording an instructive illustration of the influence of Turkish ideas has just been satisfactorily closed at Dar El Ulum, one of the training colleges for Ulema attached to Al Azhar. Moved no doubt by the latest actions of Mustapha Kemal, whose exploits have for some time been the subject of much admiration among the younger generation in Egypt, the students, who according to regulations have to wear the *Kuftan* and *Emma*, appeared one morning in European dress and *Tarbush*. They were ordered to return home and change into traditional garb. They refused; whereupon the Minister of Education issued orders that no student should be admitted to the school unless attired in the regulation dress, and a number who presented themselves in European clothes were refused admission.

The strike continued, and the Minister of Education gave orders that any student who did not immediately resume his studies in the regulation garb would be expelled. A few days later the students returned to the school, and as they appeared in *Kuftan* and *Emma* they were at once admitted. But when the masters entered the classrooms they found to their surprise all the students garbed in European clothes and *Tarbush*, which they had concealed under their *Kuftans*. The incident not unnaturally created considerable amusement, but the authorities refused to be influenced by what they rightly considered to be a deliberate flouting of authority, and they repeated their warning. At one moment it looked as if the whole

school would have to be expelled. Happily wiser councils prevailed, and on Wednesday the students submitted and all is once again well at Dar El Ulum.

ROUMANIA.

Bucharest, February 20.

Roumania and Hungary.

The Roumanian comments on the conference of the Petite Entente at Temesvar still show a profound distrust of Hungary, and some disappointment at Great Britain's apparent support of the Horthy régime. While admitting the distinguished statesmanship of the Czech Minister, Dr. Benesh, a leading article in the *Argus* points out that his ideal of a purely peaceful and democratic *entente* between the small nations of the Near East is difficult of realisation, and that the only means of securing peace in these regions is by means of a strong political union of the small States with sufficient prestige to replace the former Austro-Hungarian Empire for political purposes.

As regards the Hungarian paper money frauds, the opinion is commonly expressed here that its international importance is being greatly exaggerated by the Press in the neighbouring States and especially in Roumania where everything Hungarian is *ipso facto* suspect, not indeed (it is stated) without reason. There is much wisdom, it is being said, in the principle: "Do to the other fellow what you think he is going to do to you, and do it first."

The Communal Elections.

Popular attention has been devoted during the last week almost entirely to the municipal elections, which took place throughout the country on Friday, February 19. These elections were of a purely political character, each political party putting up its own list of candidates. In communes where only one list was presented, the candidates on this list were considered elected. In this way the Liberals won in 14 villages and 4,300 communes out of a total of 8,750. In most of the more important towns, however, the United Opposition won by large majorities. In Bucharest the Government was beaten by an opposition majority of 16 votes to 7, in Galatz 7 to 2, in Braila 3 to 1, in Jassy 6 to 2, and by 9 to 2 in Temesvar, the capital of the Banat, 5 to 1 in Chisnau, the capital of Bessarabia, and 4 to 1 in Cernauti, the capital of Bukovina. These results give an indication of the probable results of the parliamentary elections in a month's time. The country is seemingly tired of the Liberal Government, but would it have been any less tired of any other Government, which imposed heavy taxes with a view to balancing its budget and pulling the country through hard times?

It is, however, a curious fact that most of the Liberal successes were scored in Transylvania, which ought to be the stronghold of the United Opposition—another double example of the truth of the old adage that a prophet is not appreciated in his own country. Of course accusations of coercion and foul play were, as usual, brought against the Government officials in the annexed provinces, but while some cases of bullying may have taken place these can hardly have had very significant effects on the total results.

The Mayor of Bucharest.

The new Mayor of Bucharest is M. Gherghian, who held the post for a short time a few years ago. It is rather a thankless task at present, because a great many improvements are required; such as more abundant water supply and better lighting and paving of the streets, whilst there is no money available for this purpose and any increase of taxation for this purpose would raise an outcry from the citizens already groaning under the weight of the State taxes.

Dr. Costinescu, who has been mayor for four years has certainly succeeded in making a noticeable improvement in the general aspect and organisation of the city and the city works. No doubt his successor, who is also considered a very good man, will carry on his work with equal enthusiasm.

Several attempts have been made to procure foreign loans for the Bucharest Municipality, but so far without success. The money is wanted mainly for new electric power stations, but there are still various reasons why foreign financiers are chary of risking capital in this country.

CYPRUS.

Nicosia, February 23.

A Land of Promise.

When Sir Garnet Wolseley, the first High Commissioner, said that Cyprus would become the "garden of the East," he little thought how his prediction would be echoed through the years to come. Several succeeding High Commissioners have repeated the phrase, and it has been constantly quoted, sarcastically *bien entendu*, by Greek Cypriots in speeches, newspaper articles, and so on. So far from becoming an earthly paradise under the Government, say the grumblers, as they were led to expect, the island is little better than when it was under Turkish rule. The truth is that if anyone who knew Cyprus in the early years of the British occupation were to visit it now, he would be astounded at the transformation. It is quite true that progress has been in many directions very slow. But when statements are made which imply that life is hardly worth living in the island as it is, they reveal, to say the least of it, a considerable amount of ingratitude. The present year should be marked by development in several industries, and by improvements under the Public Works Department.

The Tithe Problem.

The promise of the Governor that the question of the abolition of tithe on cereals would be carefully considered has been fulfilled, and it is hoped that the agricultural classes will soon be relieved of a burden which is out of date. As to the new taxation which is to meet the loss of revenue from this time-honoured and important source, more must be said in future notes. This and the question of the amount which will have to be raised to provide for repayment of a loan for harbour improvements, are the chief subjects of discussion at present. It is believed that £100,000, or more, will be derived from taxes at present in contemplation.

Ex-King Hussein.

The late King of the Hejaz, who has hitherto, since settling in Cyprus, been living in an hotel at Nicosia, is about to move into a house which was occupied by the late Chief Justice, Mr. Stanley Fisher, and a house adjoining it. His health remains good.

NEAR AND MIDDLE EAST ASSOCIATION.

A meeting of the Near and Middle East Association was held at 14, Hans Crescent, S.W.1, on March 3, to discuss "The Outlook in Bulgaria." Major-General Lord Edward Gleichen was in the Chair, and the numerous assembly included:—The Swedish Minister and Baroness Palmstierna, the Persian Chargé d'Affaires, members of the German and Turkish Embassies and of the Austrian, Albanian, Bulgarian, Egyptian, Hungarian and Polish Legations; Prince and Princess Soumabatoff, the Viscountess Dunedin, Lady Edward Gleichen, the Hon. Lady White-Thomson, the Dowager Lady Boyle and Lady Boyle, Sir Harry and Lary Lamb, Sir William O. Clark, Sir John Foster Fraser, Lady Hewett, the Rt. Hon. Noel Buxton, M.P., Monsieur and Madame Stancioff, Prebendary Gough, Archdeacon Potter, the Rev. Chancellor Ponsonby, Mrs. R. A. Workman, Mrs. James Conchie, Mrs. Wesley Watson, Mr and Mrs. Leland Buxton, Mrs. Scott Nelson, Mr. and Mrs. Walter Reid, and Mrs. Roy Devereux.

The principal speakers were Lady Muir, Sir Edward Boyle, and Mr. H. D. Watson, who read a paper written by Miss Eglantyne Webb on her return from Bulgaria.

In the course of her interesting address, Lady Muir said:—

"With regard to the refugee problem in Bulgaria, it is to be hoped that the Council of the League will give it some attention this month, during the next session. Comparatively little has been heard in Europe of the refugee question in Bulgaria, as it has been, to quote a British author 'overshadowed by Greece's larger disaster.' An attempt to describe it in detail has recently been made by the Bulgarian Red Cross, which has published a pamphlet called, "The Refugee Question in Bulgaria," over the signatures of the Archbishop of Sofia, and Sotir Veltcheff, President of the Junior Red Cross. The figures given in the Report have been controlled as far as possible, but one can safely affirm that they have been under-stated rather than exaggerated, and that the number of refugees in Bulgaria has increased during the last few months, since the publication of the Document. The last stream of refugees has brought into Bulgaria no less than 200,000 exiles from Thrace and Macedonia, 20,000 from Dobruja, 40,000 from Asia Minor, 10,000 from Western Bulgaria. This flood of emigrants is due to the effects of the Balkan Wars, the Great War and the Greco-Turkish War; the annexation by Bulgaria's neighbours of territory inhabited by Bulgarian populations; the complete disregard of the new rulers of these territories, for the right of minorities; the good treatment granted to refugees within the frontiers of Bulgaria. Besides this large number of Bulgarian refugees there are 30,000 Russian emigrants of which 2,418 are invalids from the Great War, 3,000 children, and the remainder Russians able to work; 20,000 Armenian emigrants; Jews; a considerable number of Greeks driven out of Turkey; and Turkish families from Roumanian Dobruja.

"At the beginning of 1924, a systematic attempt was made by the Bulgarian Government to deal with the refugee problem so as to relieve towns and villages already overcrowded. A definite plan of land settlement was introduced, and from January 1924 to March 1925, about 30,000 people, representing about 7,000 families were officially registered and allocated. Employment has been given to the Russians on the roads, in the cities, in factories and even in Government offices. All the children are being sent to day schools. There are Armenian colonies in all the big towns under the protection of the Government. The Greek refugees have been settled around the cities of Burgas and Sozopol, and the Turks in the district of Choumen.

"Sofia is swollen beyond recognition by her supply of exiles; the population of Philippopolis has almost doubled; the villages are full; these are the bare facts. The Bulgarian people and Government, in spite of the intolerable financial burdens under which they are staggering have done their utmost to help the refugees. The State granted a Loan for the refugees in 1924, thanks to which some houses were built and direct aid given, but the situation was not appreciably relieved. The State is doing all it can for the latest refugees arriving from Greece; they are held in quarantine at the receiving points on the boundary, before being allocated by competent authorities to the Bulgarian towns and villages that can still receive them, and take advantage of their trade and profession. The refugees then travel on the Bulgarian railways free of charge; goods free also; wood and coal are distributed to them; medical aid given when necessary. The country superintendents and the Mayors of the cities and villages are required to find dwellings for the refugees assigned to their areas; committees collect money, food and clothing and distribute them among the refugees. But it must be remembered that Bulgaria is a poor country; and, moreover, burdened by Treaty obligations which she is fulfilling. The help so far given is totally inadequate to meet the needs of the refugees, in spite of the efforts of the various Societies that are working hard to relieve distress, these being the British Save the Children Fund, the Bulgarian Red Cross, the American Red Cross; and there have been Government grants and Bank Loans. Practical help should be given to Bulgaria on an international footing, as in the case of Greece. The fact that Bulgaria has not cried out for help and has less social influence than Greece abroad, has led Europe and America to believe that her refugee problem is not worthy of attention. It is not so, and the situation could be dealt with easily, by means of a Loan to be raised under the direction of the League of Nations. As an eminent friend of Bulgaria remarked some time ago, neither Britain nor Europe is asked to make a present of money to Bulgaria, but a refugee loan of two millions sterling on the lines of the Greek Loan would not only be a sound investment for subscribers; but would constitute a material contribution to the peace and prosperity of the Balkan Peninsula.

"A nation as sorely tried as Bulgaria has been, encircled by relentless enemies armed to the teeth, herself deprived of any means of defence, impoverished by the payment of reparations, submerged by destitute refugees, cannot fail to provide good soil for Bolshevism. The innumerable exiles, whom she so charitably harbours, can only be an element of unrest and danger to the State if they continue to live in misery; but a loan of two million pounds sterling would enable Bulgaria to make useful and healthy citizens of the refugees. The first thing is to provide for their immediate needs, but ultimately to make them self-

supporting. The Loan should be established on the lines of a sound business proposition; by which, for instance, arrangements could be made for foreign firms to send agricultural implements to Bulgaria on credit against a guarantee; and an adequate housing scheme be carried out. The refugees in Bulgaria are all eager to work, but they need organisation and funds. The question of this humanitarian loan is, I believe, to be raised at Geneva very soon; it is to be hoped that it will meet with generous support. Meanwhile, the private Societies I have mentioned before are doing their best; as usual Great Britain has taken the lead by sending out ministering angels to 'Save our Children.' We are going to hear the report of one of them now. The Bulgarian Relief Societies have been hard at work with their soup kitchens; they are trying to collect the necessary funds now to organise milk kitchens for the purpose of providing milk for infants. A friend of mine who is at the head of a Relief Committee has appealed to me lately for help, telling me that 35,000 infants under two years of age died in Bulgaria during 1924, practically of starvation. I may perhaps be allowed to read a few lines of this friend's letter written from Sofia, three weeks ago: 'I want you to do something for our poor babies. A certain Mlle. Freund, a Swiss, who happened to pass through Bulgaria last year, saw in what bad conditions the babies are in Bulgaria, half starved, for the poor mothers have not got the means to buy milk for them as it costs 12 lev. a lb. She was able to get from Switzerland one of those big machines, "cuisines de lait," which can sterilize 1,200 bottles an hour; but money is need to get the thing started. I have collected 110,000 leva: Mlle. Freund got 250 Swiss francs, but more funds are required. I want to provide as many infants as possible with sterilized milk, the only thing to save their little lives. Do get your friends in England to help. . . .' and so forth. I have managed to collect a sum that I have sent out to this capable woman, but any more contributions, even the smallest, would be gratefully accepted. A few British shillings can help to keep a Bulgarian or Russian baby going for several months, for as you know £1 sterling is worth 680 Bulgarian leva.

"Outside private gifts, the friends of Bulgaria can render invaluable assistance by working for the International Loan to be granted to Bulgaria for her refugees as soon as possible. The State is confronted by appalling needs; the misery of some camps is such that it increases the death rate in Bulgaria by hundreds. The situation is rendered still worse owing to the general economic crisis in Bulgaria just now. On account of the flood of refugees the land has to feed thousands more inhabitants than the same area used to support before. The State officials numbering about 80,000 get such small salaries that they and their families live in real distress. The State is in truth taking bread from the mouth of its Civil Servants in order to meet its heavy War obligations. The added burden of the upkeep of the refugees may well cause the cup of misery to overflow. Some of the refugees are helpless orphans requiring yet more care and trouble. There is no question of inviting the refugees to return to the territories annexed by Bulgaria's neighbours as long as these countries continue to disregard the most elementary prescriptions of the treaties regarding the Right of Minorities. The Roumanian Government alone respects the rights of Bulgarian Minorities, allowing them to retain their schools and churches. Therefore the only possible solution is to promote the Loan, for no one acquainted with the actual state of the country can doubt that some help must come from abroad as the over-burdened Bulgaria has exhausted all her own inadequate resources."

In Miss Webb's paper was outlined the work of the Save the Children Fund in settling the refugees in Bulgaria. The successful experiment in the building of the small village of Atlovo—due entirely to British charity—was described. From the nature and history of that work two conclusions, she urged, could be drawn: first, that Bulgaria must have a loan, and secondly, that there was still an urgent call to charity. Upon the question of a loan Miss Webb wrote: "To give sufficient land for the refugees, the Bulgarian Government must spend money on reclaiming it; to enable them to build houses it must spend money on quarrying stone and cutting timber. These things cannot be done without money: and the fact of the money's being repayable does not create it: the Bulgarian Government cannot give money which it does not possess. The S.C.F. is now considering an extension of Atlovo on a cheaper basis, but there can only be a possibility of diminishing the Government expenditure, not of eliminating it. Even to diminish the expenditure too much would be inadvisable, because it would place a fatal handicap on the colonists and thereby render their labour less remunerative at a later date to the State. There comes a point, indeed, when the less money is spent the more difficult it is to get it back. But however much the cash expenditure is restricted, some such expenditure must always be made. Either, therefore, Bulgaria must be given a loan or the refugees must continue to starve—there is no third way out."

FUND FOR BULGARIAN REFUGEES.

Lady Muir (*née* Nadejda Stancioff) has started a private fund to bring assistance more especially to the infant children of refugees in Bulgaria. This special collection will be devoted: (1) To the purchase in Switzerland of a "Cuisine de Lait," or machine that can sterilise 1,200 bottles of milk per hour; and (2) the starting of a new branch for the distribution of this milk to young destitute mothers, in the poorest districts.

The statistics have just established that 35,000 babies under two years of age died in Bulgaria during the year 1924. Lady Muir will undertake to forward any contribution to this fund to Bulgaria, to Mme. Karakascheff, wife of the Director of the State Railways, who will personally supervise the distribution of gifts. In the meantime contributions should be sent to Lady Muir, Whilton Lodge, Long Buckley, Northants. The fund has started as follows:—

Sir A. K. Muir, Bt.	£25	0	0

The British Minister in Bucharest and Lady Dering gave a fancy dress ball last Thursday at the British Legation for members of Roumanian society and the Diplomatic Corps. Sir Herbert and Lady Dering are leaving Roumania about the middle of next month.

Madame Labrino, the morganatic first wife of Prince Carol of Roumania, is bringing an action against him in the Civil Court of the Seine for 10,000,000 f. damages (£76,000 at present rates) for the cancellation of their marriage by the Supreme Court of Roumania, and as a fund for the maintenance and education of their son Mircea. Madame Lambrino is now living at Neuilly.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

"GOD SAVE THE KING."

BY MIRZA FIROOZ KHAN.

Tabriz, February.

For the last three weeks Tabriz has been enjoying the best holidays within living memory, even counting her days of unequal struggle for Constitution and liberty. We have now one of the best streets, known as *Khiaban Pehlevi*. This long avenue was built last winter at a time of intense cold, when dozens of working men died of pneumonia. The avenue extends from the east end, or the Teheran Gate, of the city to its extreme west end, although a third of the avenue at the western end is not half done yet. Scores of houses and shops have been pulled down and destroyed in constructing this long, wide and straight avenue, including the beautiful Verdun Hotel with its spacious rooms (the property of a Russian subject of the old régime), which was opposite the large building and garden of the American School for girls. Here the avenue stops short. Baladieh, or the City Council, intended to pull that building down, too, but the intention could not be realised, because the Star Spangled Banner was hoisted on top of the School building. This caused no little displeasure and disappointment to those who were in charge of the building of this first street of Tabriz. The hoisting of the Stars and Stripes on the school building caused a mild form of protest, too, from the local authority, who said: "We are not at war with America, why should the American flag be hoisted on the school building? We are trying to build a street, and Americans should assist us in reforming and reconstructing our old city!"

The American point of view was that their missionary school building could not be destroyed and the ground appropriated by City Council without compensation. The authorities at first argued that, since they are doing a "good work," the school ground should be made a present to this avenue, but later on they proved willing to pay the sum of 200,000 krs. The Americans, however, were insisting on a larger sum, in addition to a vacant lot, or garden, in a good situation in the city, upon which they could erect a new school building. At last, Mr. Murphy, the American Chargé d'Affaires, came down from Teheran to Tabriz, inspected the whole thing and decided that the City Authorities should pay 600,000 krs., whereby the missionaries could buy a vacant lot anywhere they liked and could erect a new school building. But the local authorities were not in a position to pay that sum. The school building is therefore standing and the main street of our city is waiting for the final fate of its remaining third!

This new avenue is very wide, with side-walks on each side. The width of the central portion is such, that (to put it in an Oriental way) six carriages can be driven side-by-side. As our people are not used to such divisions of a single street, one may see crowds of people promenading on the central, or main, portion of the street, while scores of carriages are running east and west on both sidewalks! The people have no idea of even "right" and "left." It is amusing to see how those, who ought to keep to the right, keep to the left and collide with those coming from the opposite direction! Police, located at convenient points, have to remind them constantly "Keep to the right, keep to the right!"

No effort is being spared to keep this avenue clean and in good condition. Carts bring sand, earth and gravel all day long, and the Cossacks *à la Russe* fill the hollow places and smooth down the little "hills."

Employees of the City Council, armed with a spade and broom, carefully pick up the dung of the animals, which is dumped into large boxes, and carried away to dumping grounds. These boxes of the City Council are placed at certain convenient corners where, besides the filth of the streets, even the dirt and filth of the cleanly housewife is also thrown, including, occasionally, a dead cat, a dead dog or a few mice!

The form of the central part of the avenue is *Kharpoosht;* it is like the "back of a donkey"; that is, it is higher in the middle, sliding down gradually towards the edges on each side, the rain or snow water running outwards, towards the ditches, which extend along the whole length of the street between the sidewalks and the main portion. Young trees, willow and *nalband*, are planted on each side of the street, and they are expected in a few years time to give shade and shelter to passers-by. This *Kharpoosht* form of the street is copied from the Russians who used to build roads and streets in by-gone days. And this is a contrast to the other streets of Tabriz, which are mainly higher up on the sides, sliding down, from each side, to the middle of the street, where the bed of a small brook is formed to carry away the water of the rain and snow. As it is hard to walk on a street like a hill-side without sometimes dislocating one's ankle-joint, the people usually walk in the middle of the street, which is, comparatively speaking, smoother than the sides. And this habit, indulged in for years, is being continued now on this new avenue, and, I presume, it will take years before our ancient people learn to walk on the sidewalks and "keep to the right," if, at the same time, the ugly "cabbies" are told to keep away from the side-walks, or go to jail!

It is in this grand avenue that Tabriz is having her gala days. In honour of the new Shah-in-Shah over a dozen triumphal arches have been, and are being, built by the various departments of the City and the State—these departments are Finance, Royal Property, City Council, House of Justice, Post and Telegraph (combined), Toojjar (Board of Trade), the Russian Road Committee—and a special arch by the Commander of the Army, which is to remain for all the time in commemoration of this grand and happy event. These arches are made up of a wooden frame work, and the usual rugs, mirrors, and so on, and are only temporary, to be pulled down in fact, in a month's time. That of the Commander of the Army, however—not half finished yet—is being built of lime and sand, and will stand there as long as it can endure the wear and tear of time. A special arch has been erected by the dervishes. It is a typical and the most beautiful of all. It is made entirely of skins—skins of bear, tiger, lion, antelope, fox, goat, sheep, deer and so on, the skins being, so to speak, the coat-of-arms of this poor sect of Persian people and a symbol that they care not for silk and worldly riches, except that which is absolutely necessary to keep them from cold and the rays of hot summer sun.

Among the arches, that built by the Russian Road Committee, under the direction of Engineer Trestinsky, is the most remarkable. It is a tall arch but slender, and is made mostly of iron rails. The central arch is wide, on each side being a smaller one. Instead of priceless rugs, this arch is covered by simple Manchester linen, painted in the form of blue bricks. On the top, and on the western side, to the right, is a railroad engine pumping in full steam; on the left is a lake, and on the lake is a steamer furrowing the green waves and turning them to soap-suds. On the Eastern side of the arch is, on each flank, a fine and a ten toman paper money, while in the centre silver coin is being poured out of a large bag. High up and above all is the likeness of the new Shah with the Crown of Persia above his head. The Persian flag, red, white and green, floating on top of the arch!

On both sides of the arches, except the Russian arch, a long and narrow stripe of white linen extends from side to side, and on this strip of linen are printed in black and bold letters the following inscriptions:—"Long Live Riza Pehlevi and his descendants," "May His Majesty Long Reign Over His Subjects," "Most Glorious, Most Powerful Shah-in-Shah of Iran," "God Save the King."

This inscription is to be seen also in every room of

THE PERSIA SOCIETY.

each Government Department. Free music and promenades in the street continued until midnight, one entire sidewalk being appropriated and occupied by ladies. Each night free tea was served (to those who cared to take a seat), by each department of State in turn in the arch built at the expense of that same department! The crowd was very orderly indeed. Flags and bunting were in abundant evidence, even the "cabby" having a small flag on either side of his seat and one or two smaller ones tied to the long mane of his carefully groomed horses. And speeches! Speeches, full of gunpowder and shotgun caps! Each speaker reiterated the same theme:—to burn and destroy the Kajar Dynasty, root and branch! One cannot help mentioning here the common Persian proverb: "When the ox has fallen, many are those who will unsheath their knives!"

(Continued from page 288.)

its percentage of Moslem Turk employees to fifty, the Bank will be closed.

The Enigma of Angora.

It is to be hoped that in dealing with Turkey Great Britain will not lose her capacity to adjust her mentality to that of other people. As a recent instance of this happy knack may be cited the action of a British Commissioner in the Chinese Customs Service, who had to deal with local authorities who had possessed themselves of Customs property. They did not budge when the Commissioner had his lunch brought to the battleground of wits, but they capitulated when in the evening his bed arrived. Clearly, the British Ambassador cannot take his furniture with him when calling on Mustapha Kemal Pasha, but an apology might be sent to the President for the failure of the English High School for Girls in Constantinople to recognise that intoxication, which has proved such a valuable administrative asset to Turkey, must necessarily be a qualification for a Turkish teacher. At the same time it might be pointed out that this particular Turkish ex-officer, who must have realised that he knows more when drunk than when sober, deserved, for his zeal in the Government's service, to be promoted to the President's entourage. The communication might conclude with the suggestion that, as the grant of special holidays was a source of considerable satisfaction to teachers and pupils, the School should be punished for its errors by being condemned to open again. The whole problem in regard to Turkey, we are reluctantly forced to admit, turns on the locality of the British Embassy. The Turks as a people are capable of better things: but until, gently but firmly, the Government can be brought to realise day by day that it is behaving as a child, and a cantankerous one at that, when claiming to be a grown man, there promises to be little improvement in Turkish official methods. To this end the British Ambassador must be in the same town as the Turkish Government. The incident of a drunken Turk arriving as a master at a British school for girls ought not to have to be the subject for written diplomatic representations; but that it should have arisen is sufficient reason for making sure that it will be the last of these stupid pinpricks practised by the Turkish authorities, who are inviting the world to believe from their methods of administration either that they will never grow up or that they are never sober.

Sir Ronald Lindsay, the British Ambassador in Constantinople left for Angora last Saturday, and is coming to London shortly. He has been invited in order to give his views on Eastern affairs.

According to a Reuter Baghdad message, a car belonging to the Trans-Desert Motor Convoy *en route* to Baghdad from Syria came into collision on March 2 with another car travelling in the opposite direction, twenty-five miles from Baghdad. A Polish passenger sustained injuries which it is feared may prove fatal. An American missionary named Casselman had an arm broken, and the other passenger and the driver were badly shaken.

CORRESPONDENCE

OPIUM IN PERSIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—As the question of opium in Persia has recently been much in evidence, might I be permitted to draw attention to one or two points? Most of the opium is grown in the province of Fars, where the landowners frequently speculate on the chances of a good market in China. During 1923-24 this was notably so, the amount under cultivation being so great that the wheat crop fell below normal, causing a shortage and consequent scarcity of bread, and necessitating the importation of wheat from an adjoining province at much expense. No effort has yet been made by the American Financial Administration to deal with this problem, probably because it is such a valuable item of revenue. It is very interesting to see how the Persians protect themselves. All noxious drugs, such as cocaine, morphia and its derivatives, are strictly forbidden to be imported other than for medical purposes, by a law passed during Seyed Zia's brief tenure of the Premiership: yet Persia exports freely the crude material. The following are the Customs figures for the past three years for the Southern Customs, and they speak for themselves:—

Year	Batmans opium.	Duty paid thereon.	Total Southern Customs.
1301 (1922)	101 637	Tomans 203,374	Tomans 3,139,111
1302 (1923)	146,281	„ 212,502	„ 3,336,748
1303 (1924)	165,737	„ 313,474	„ 4,196,395
	(A batman = approx 6½lbs.)	(A toman = approx 5/-)	

—I am, etc.,
"NARCOTIC."

Teheran, February 22.

PILGRIMAGE TO HOLY LAND.

Over one hundred ladies and gentlemen connected with the Order of St. John of Jerusalem left last week for a pilgrimage to the Holy Land, and to various other places specially associated with the history of their Order. The Earl of Cromer, his Majesty's Lord Chamberlain, whose wife and daughter are among the pilgrims, was present to see the party off, and Colonel Sir Edward Ward, who is a Knight of the Grace of the Order. The party propose to visit Jaffa, Jerusalem, Haifa, Larnaca, Rhodes, Budram, Patmos, and Malta, and are due back in London at the end of March. In the absence of the Duke of Connaught (Grand Prior), the Earl of Scarborough, Sub-Prior of the Order, is in command of the pilgrims.

King George and Queen Elizabeth of Greece arrived in Belgrade last Sunday on a visit to the Yugoslav Court.

The Air Ministry regrets to announce that as a result of an accident at Karachi, India, to a Bristol Fighter of the Aircraft Depot, Karachi, on March 5, Flying Officer Camille Percy Maurice Benjamin Caillard, the pilot of the aircraft, was killed and No. 111,099 L.A. C. Andrew Barron was seriously injured and died shortly afterwards.

The death occurred on February 28 of Mr. Herbert C. W. Grimshaw, Judge of the Supreme Court of Cyprus. He was a son of the late T. W. Grimshaw, C.B., Registrar-General for Ireland, and was born in 1874. Mr. Grimshaw held at different times important posts on the Gold Coast and Ashanti, as well as in Cyprus.

Prince Bibesco, the Roumanian Minister, sailed last Sunday on board the liner France, on his return to Roumania after representing his country in Washington for five years. The departure of Princess Bibesco, who is a daughter of the Earl and Countess of Oxford, has been postponed owing to the illness of their child.

Book Reviews and Notes.

AN ENGLISHWOMAN IN PALESTINE.

"PALESTINE AND PAMELA." By E. Buckmaster. (Cambridge: W. Heffer and Sons. 5s. net.)

The reviewer, intent on "Palestine," is somewhat repelled by the title. "Pamela," whether a mythical personage or not, makes no real contribution to the interest of the book and none at all to Palestine. Having said this, however, we have said practically all there is to say of criticism. This is a charming book, delightfully written. It shows at every turn both a real and sincere preparation for the tour, by studying books old and new which can help one to appreciate Palestine, and a shrewd yet lively grasp of present conditions there as the writer observes them. Lady Buckmaster's interest and sympathy are mainly with the Jews and with Zionist aspirations and achievements. She deals in detail with these (chapters vii, viii, and elsewhere), but finds little to say about the Arab point of view beyond an occasional allusion to the fact that such exists. This misunderstanding is natural, for while the Arabs will always show courtesy to every visitor to Palestine, they will never go farther if they suspect the visitor to have prejudiced the situation through friendliness with their political opponents. Thus it is that so few appreciate the intensity of the Arab feeling, for the Arabs in such circumstances refuse discussion, thereby putting themselves out of court. Lady Buckmaster is puzzled by a Moslem wedding-dance which she witnessed. No clue to its meaning will be found in Westermarck's "Marriage Customs in Morocco," to which she was referred. Dancing has always been an expression of emotion, religious or social, amongst Easterns, even before the day when David danced before the Lord and aroused Michal's bitter contempt. On page 85 she quotes the opinion of "a Frenchman from Syria" upon the position of Arab women. "No Arab man thinks that women have souls; but the women are not unhappy. They lead very luxurious lives, doing little and spending most of their time reclining on couches. They consider all work beneath them, and only fit for slaves." In this reviewer's experience, every educated Arab man has been amused to think that English people should really believe that they think women have no souls; and as far as work and influence go, the Palestinian Moslem woman manages her home and her men folk as thoroughly as does her Western sister. It is, however, mercifully true that "Women in Palestine have no vote for any legislative measure; Arab women, who are greatly in the majority, having no political education nor aspiration" (page 102). There are quite enough fingers in the political pie in Palestine as it is. The chapter on Bethlehem gives an amusing and suggestive account of a Franciscan monk who acted as cicerone; his remarks upon Greek Churchmen and the Greek Church should be plentifully salted, however.

The book will give pleasure to many. It runs on in easy, simple style, yet gives plenty of accurate information in an extremely palatable form. The introduction gives a bird's eye view of Palestinian history which is vivid and comprehensive without a touch of heaviness. A quaint map of antique design and three illustrations embellish the book, of which, being published by Messrs. Heffer, it is almost superfluous to say that the outside is as good as the inside.

E. M. E. B.

A GLOBE TROTTER'S IMPRESSIONS.

"INDIAN DREAM LANDS." By Margaret Mordecai. (London: Putnam. 15s. net.)

Mrs. Mordecai, who is American, set out for the East determined to be thrilled and uplifted by what she saw. This book is a record of how completely she succeeded. She starts with certain strong prejudices, among others a dislike of Bhuddism, on account of its being a philosophy instead of a religion—for the religions of the East she expressses great enthusiasm. Another prejudice is her feeling that the British rule in India is not as sympathetic and understanding as she thinks it might be. Her prejudices at the end of her tour are exactly as they were at the beginning.

Mrs. Mordecai and her husband visit all the places which are visited by the usual globe trotter in India, Burma and Ceylon, and she does not suffer from that dread of being obvious which is a characteristic of most modern records of travel. This book is, in fact, very much like the letters written to friends and relations by the traveller who is anxious to give vent to her impressions and to feel that her intimates shall share her experiences as far as possible. They are not usually put before a wider audience. This traveller, however, is enthusiastic and observant, and is so entirely satisfied herself as to the importance of her reactions and opinions that she carries the reader along with her, except where the note of patronage becomes too exasperating. Several chapters of the book—which is an attractive-looking volume—are devoted to the history of the Great Moghuls. "Will it be superfluous to refer to their history?" writes the author. "When one is confronted with the errors into which even British Viceroys have fallen, through ignorance of Indian History, it would seem that a few words on the subject would not be in vain."

At Kandy Mrs. Mordecai watches English girls and young men playing, tennis and makes this comment: "They were all in white and therefore appeared to much more advantage than in the hideous costumes they wear in England." One is mystified. Perhaps on the whole Mrs. Mordecai's preconceived ideas are even stronger than her powers of observation.

THE BAKHTIARI TRIBES.

Under the combined ægis of the Central Asian, the Persia, and the Royal Asiatic Societies, Sir Arnold Wilson lectured last Thursday to an over-crowded audience in the theatre of the Royal Society of Arts, upon "The Bakhtiari Tribes." Sir Hugh Barnes, who presided, drew attention to the desirability of the occasional (and manifestly popular) uniting on the part of the three societies which had organised this meeting.

The lecturer first dwelt upon the virility of the Bakhtiari tribes, and upon their value, both as fighting men and as administrators, to the Government of Teheran. Their origin was much disputed, and there were abundant legends upon their derivation. He himself believed that they were a mixture of refugees—Kurds, Turks, and Arabs. In any case they were an extraordinarily fine set of men, whose power of endurance was as remarkable as their lovableness. Sir Arnold recalled, incidentally, the unfavourable opinion of the Persian as a fighting man which had been spread abroad by Hajji Baba: it was, he said, totally and consistently contradicted by every British military officer who had dealings with the Persians. Even Shakespeare knew the value of the Persian ("Fetch me a man, half Persian, half English"), and, as the Anglo-Persian Oil Company well knew, the co-operation of Persian and English could indeed work wonders. The Bakhtiari tribes consisted of 50,000 families (250,000 souls) who annually had to migrate northwards from the plain through which the Karun runs to the plateau and its summer grass. Often enough this migration was, owing to the snow-covered passes, extremely formidable.

Turning to the archæology of Persia, Sir Arnold said that very much remained to be done in this field. The Persian Government was now aware of its possessions in this respect, and had recently founded an archæological department for the study of the past. Certain relics of Achæmenian and Sassanian times were in a fine state of preservation; for instance, not only were there arched bridges over rivers, but the masonry of such bridges was a wonder even to the engineers of to-day. Quite possibly, indeed, the arched bridge was a Persian invention. Abundant and good roads had been built in the south of Persia, and, in fact, such a state of civilisation and accomplishment existed in the pre-Moslem era of Persia as was hardly guessed.

Of the folk-lore of the Bakhtiari Sir Arnold said little but to remark on the similarity of some of their customs (e.g., the stick dance) with those of ancient Greece. He described the Persian carpets of this part as, of all Eastern products, second only to the porcelain of China. The folk there carried the pattern of the carpets in their heads from generation to generation, and the dyes that they obtained from the mountain plants could not be equalled by any chemical means.

After the lecture a film entitled "Grass" was shown for the first time in England. It depicted the migration northwards of the Bakhtiari (accompanied by three Americans, Mrs. Harrison and Messrs. Cooper and Shoesdack), from their crossing on goat-skins of the Karun river, up the perilous mountain passes, to the plateau in the north. Some of the views were magnificent, and, as the Chairman subsequently remarked, the film should make a fortune when it is exhibited in America.

Mr. Edmund Candler, of Ichas Mendy, Hendaye, Basses-Pyrénées, France, formerly of Ashtead, Surrey, lately Correspondent of *The Times* in India and the East and during the War, and later Official "Eye-Witness" of the War in Mesopotamia, and for a time director of publicity to the Punjab Government, author of numerous novels and stories of travel, who died on January 4, aged 51, left estate of the gross value of £1,174, with net personalty £353.

THE WEEK AT HOME.

London, Tuesday Morning.

The Budget Outlook.

The critics have been hard after Mr. Churchill, who recently said that he had every expectation that his budgeted surplus of £1,000,000 would be reached. They appear to be furious with him for putting into a separate category some little sum of £17,000,000 for the Coal Subsidy—a sum which means in effect that the National Debt will be reduced by £33,000,000 instead of the £50,000,000 provided in the Sinking Fund.

Otherwise, however, the figures at present available do bear out the optimistic forecast of the Chancellor of the Exchequer. Revenue has recently been coming in at the rate of £25,000,000 a week, and if this average is continued, the surplus will be considerably larger than anticipated.

It is remarkable to notice how prolific income-tax is being. At first it was thought that the reductions made by the Exchequer in this respect would cost it about £27,000,000, but so far the net loss is only just over half that amount. Let us hope that the reductions may endure.

The Foreign Secretary and His Party.

During the discussions in the House last week over the question of what should be the Foreign Secretary's policy on the constitution of the League's Council, some remarkable things occurred. First, was the wholesale switching round of the Conservative Party from what can be defined as a pro-German attitude (an attitude, that is, adopted by the man whose chief object in all this question is to avoid giving offence to Germany). Next was an admirably tempered speech by the Prime Minister, who stood solidly on ground mid-way between that prematurely chosen by a section on his Party and that indicated in an extra-Parliamentary speech by Sir Austen Chamberlain. And thirdly was a speech by Sir Alfred Mond which, in passing strangeness, faithfully represented (as I believe) a great section of opinion of which the Government had specifically avoided representation and which the Opposition somewhat naturally avoided. I refer to the feelings engendered by the War, to the fact that Germany is still chiefly remembered by the people of this country as the cause of and our chief opponent in the greatest war in history, and to the fact that those who fought with us are not wholly undeserving of any consideration merely on that account.

One gathered from the proceedings and the wobblings of last week that our young politicians, as well as many older ones, are still very shaky on the question of foreign policy.

London's Traffic Centres.

The gyratory system for the regulation of traffic which has been adopted, it is said with gratifying results, at Parliament Square, is to be extended to two other notorious places of congestion, Trafalgar Square and Hyde Park Corner. At Trafalgar Square, where forty places of traffic intersection are said to exist, both the vehicle driver and the pedestrian have under the present system to be incredibly alert and patient; and if these forty places be reduced by the new regulations to five a very great and long overdue boon will have been effected. Similarly with Hyde Park Corner, where twenty points of traffic intersection exist. Here it is said by the optimists that the gyratory system will substitute only one point.

In all these traffic improvements, however, one aspect seems to have been overlooked: the plight of the pedestrian. The problem of which particular spots the pedestrian should be allowed on this sacred traffic ground has become almost as acute as it is in some Oriental cities.

The Chelsea Arts Ball.

Chelsea this year went to Egypt as the source of one of the gayest balls that have been seen for years. The processions and pageants representing the wedding of Isis and Osiris, a Nile boat, and so on were really impressive, and the scenery arranged by Mr. Frank Brangwyn and Mr. A. Blunt was, as might have been expected, most admirable.

In all the show I heard only one note—and that a sharp one—of criticism. That concerned the semi-nude figures of men. These, dressed either as slaves or as boatmen or simply in Turkish bath towels, were apt enough for the pageants; but they also partook in the general dancing. The box that my party occupied happened to be next to one containing some of these offensive sights; but of course there were many things to do besides looking at them. Some of the fancy dresses, for instance, were most ingenious, the handsomest being the Venetian and Spanish eighteenth-century costumes.

The Art of C. W. R. Nevinson.

There is hardly a critic, however amateur or professional, who will fail to be stimulated by the water-colours and oils which Mr. C. W. R. Nevinson is now exhibiting at the Leicester Gallery, Leicester Square. This artist, whose reputation, derived mainly from his pictures of the War, is already considerable, shows here an alertness both in imagination and in technique that is most fascinating. His individuality is stronger, deeper, and more versatile than ever. Not only does he again excel in those bare structures of ferro-concrete buildings in process of construction; not only are his portraits beautifully moulded and firm; not only are his water-colour landscapes once more of tonal loveliness; but he has successfully forged into new modes. For me, at any rate, there is nothing in this show more exquisite than the bold and dark-hued "Willows" and "Manor House," in which sweet music and poetry exquisitely and profoundly agree.

It is interesting to observe that he shares his father's notable passion for English landscape. Such scenes as those of Amberley Downs or a ploughland in winter, or, most memorable of all, of a Welsh estuary at low tide, are full of a rich and satisfying Englishness. His cataracts, however, do not haunt me.

The Covered 'Bus.

That dreaded monster, the covered omnibus, of whose approach to London streets I wrote some time ago, is now upon us, and last week between Victoria and Liverpool Street a few trial trips were made. Within a week, however, there will be fifty of these hooded eyesores, and shortly two hundred of them will be driving their utilitarian and monopolising way through the town.

It was with delicious irony that the L.G.O.C. chose an outburst of the loveliest weather that we have had this year to perpetrate this dark deed. One looked aghast at the poor souls who, when all the world outside was calling through the clear air, chose to install themselves under a travelling roof, to be hedged in, too, by sliding windows. Why the L.G.O.C. imagined such contraptions were wanted passes comprehension, because everyone knows that what the Londoners loathe is a draught in travelling, and that what they do like (when they can get it) is a draught of upper air. Their daily "brazen prison" is sufficient cell to most of them for them not to miss the open skies when they have the chance. However, Progress is inevitable. . . . .

The Cup Ties.

To those who are aware of the practice in professional football of "transferring" a player from one team to another for such-and-such a sum of money, it might seem that local patriotism might, in view of the constantly changing personnel, have little chance of existence. They would be very wrong, however, as might have been proved to them if they had visited London last Saturday and found it full of boisterous but cheery Manchester folk.

Some of these "fans" will follow the team of their choice—even that does not always depend on locality—for miles and miles. It is probable, for example, that many Londoners will see the remaining Cup Ties, although there is now no "London" team left in the competition. Truly the psychological ways of democracy are hard to understand.

Spring.

Spring this year has come in with a rush, very beautiful if perhaps premature. The daffodils and crocuses are a glory in the parks and gardens, and to see the prunus and the blackthorn is to make the heart leap up. Of course these rathe joys will have to be paid for later on, but for the present it's hey-ding-a-ding-a-ding with the world.

ALTER EGO.

Tenders are to be called for by the Greek Admiralty for the construction of either two or four 1,500-ton destroyers, and the length of credit to be given by the builders will be a factor in the award of the contract.

Abdel Adiz Pasha Fahmy has resigned the presidency of the Egyptian Liberal Party, owing to the state of his health, which has always been delicate. Adly Pasha, Sarwat Pasha, and Mohamed Mahmud Pasha are mentioned as candidates for the vacancy.

PERSONAL AND GENERAL.

TO-DAY

March 11, 1916 (New Style).
February 26, 1926 (Old Style).
Shaaban 26, 1344 A.H., of the Moslem Calendar.
Adar 25, 5686, of the Jewish Calendar.

Lady Newnes left London last Thursday for Palestine.

Sir Robert Horne, K.C., M.P., has returned to 59, Pall Mall, from Egypt.

Lord and Lady Talbot de Malahide arrived at the South Kensington Hotel last Thursday from Egypt.

The Bulgarian Minister left London last Friday for Geneva, and expects to return within the next few days.

Viscount Galway, with other members of the Order of St. John of Jerusalem, has left London for Jerusalem and Malta.

The Indian Empire Club will hold dances on May 1, May 15, May 29, June 12, and June 26 at the Hyde Park Hotel.

Sir Gould May left London last Thursday by the P. and O. special train to join the Macedonia at Marseilles for Port Said.

Lord and Lady Donington and the Hon. Irene Hastings are returning to town from Egypt at the end of this month.

Sir Warden Chilcott, M.P., with Sir William Bull, M.P., Sir Edward Worthington, Colonel Wyndham, and Major Barber, arrived last week in London from India in the steamship Ranpura.

Sir Percival Marling, V.C., and Lady Marling, who have been staying with Field-Marshal Lord Plumer at Government House, Jerusalem, have returned to Stanley Park, Glos.

Lord Irwin, Viceroy-designate of Indian, and Lady Irwin were recipients last Saturday at Harrogate of eighteen pieces of silver-gilt plate, one for each year of association with the Ripon Division. The gift was subscribed for by Lord Irwin's former constituents.

Sir Philip Hartog, C.I.E., has consented to accept the position of president of the "Friends of the Hebrew University of Jerusalem," a new society whose object is to enlist the support of all people in Great Britain who can advance the interests of the Hebrew University.

Viscount and Viscountess Inchcape, who went to India and back in the new P. and O. steamer Ranpura to study the accommodation and arrangements on board, have arrived at Marseilles, and are spending a little time on the Riviera before returning home towards the end of this month.

The first of the course of Saturday popular lectures on recent excavations was started last Saturday afternoon at the British Museum. Miss Claire Gaudet is tracing the evolution of architecture from the earliest remains as shown by the excavations in Mesopotamia still in progress. The same characteristics of the Sumerian culture are to be found in places as widely apart as Mesopotamia and the Indus Valley.

Under the auspices of the University of London (Department of Archæology), a public lecture on "Greek Colonies on the Thracian Coast" will be given on March 12 by Professor V. Parvan, of the University of Bucharest. The lecture, which will be delivered in University College and will begin at 5.30 p.m., is to be presided over by the Vice-Chancellor, Professor E. A. Gardner.

Dr. Reginald Alleyne Nicholson, Litt.D., of Trinity College, has been elected to the Sir Thomas Adams Professorship in Arabic at Cambridge University. He has for some years been University lecturer in Persian.

The following appointments in the Consular Service are notified in the *London Gazette*:—

Major Robert Ernest Cheesman, O.B.E., Consul for North-West Ethiopia.

Mr. Norman Rickaby Varian, Consul at Syra.

Mr. Henry Charles Dick, M.B.E., Consul for Slovakia and the Ruthene Territory.

Mr. John Robert Massey Fell, Cousul for Transylvania and Roumanian Banat, Crisiana and Maramures.

THE BUDGET.

When the Inchcape Committee presented their report in March 1923, they drew attention to the fact that the Budget of 1922-23, as finally passed, revealed tht fifth successive deficit, bringing their total up to 100 crores of rupees: and this in spite of the fact that new taxation amounting to 42 crores had been imposed during the past two years. There were, it is true, special causes to account for this: monsoon failures in 1918 and 1920 and the Afghan War in 1919, while 1921 was a year of specially severe trade depression; but the Committee wrote, "If India is to remain solvent, steps must be taken to balance her budget." They added that the true position was even worse than it appeared; since the Central Government received annually a sum of 983 lakhs from the Provinces, and it was necessary that this contribution should be progressively reduced, with the ultimate aim of abolishing it altogether.

It is only necessary to glance at the report of the Budget for 1925-26 to see how greatly the position has altered in three years. In the first of the three, the budget was balanced by an increase in the salt tax, which was withdrawn in the following year: and a windfall, from credits accruing from the sale of enemy ships, produced a substantial surplus. The financial year 1924-25 ended with a surplus of 325 lakhs of rupees, and 1925-26 also ends with a surplus, of 130 lakhs. The estimate for 1926-27 allows for an expected surplus of 305 lakhs. Since the imposition of the increased salt tax, and its subsequent withdrawal, no extra taxation has been imposed: on the contrary, the cotton excise duty has been abolished, the Provincial contributions reduced to not much more than half of their original total, and the gradual extinction of the opium revenue, amounting at present to two crores of rupees, is foreshadowed. This very remarkable transformation is due to a variety of causes, not the least of which is the arrival of Sir Basil Blackett in January 1923, and his subsequent expert handling of the complicated financial problems of India. Another is the report of the Inchcape Committee, which brought so forcibly to notice the imperative need for retrenchment in view of the fact that the great increases in taxation, carried through in the two years 1921-23, had practically closed that avenue to an improvement of India's finances: and the whole-hearted manner in which the Government of India, once convinced of the absolute necessity for general economy, set themselves to work for it. Last, and most important of all, is the weather. It is a truism that every Indian budget is "a gamble with rain"; and India has been blessed with five good monsoons running. The progress of last year's monsoon gave rise, at one time, to a good deal of anxiety: and 1925 was not, in this respect, so unqualified a success as the four preceding years: but, on the whole, India's luck held. As time goes on and the great irrigation schemes, now in progress, come to fruition, the gamble will tend towards elimination—a result that will also be assisted by a vigorous railway programme, of the inception of which—now long overdue—signs are not wanting. The War gave a tremendous set-back to Indian railways: and, for several years after its conclusion, what money could be spared was necessarily expended on making good the deterioration caused by it: it is only during the last two years that any new mileage has been opened, and this amounts to less than 800 miles. That India, with nearly half the extent, and more than twice the population, of the United States, should own little more than one-seventh of the length of railway line existing in the latter, shows what a vast amount of lee-way she has yet to make up in this respect. India's irrigation system is the best in the world, but is still capable of enormous extension. Her financial stability depends upon the weather, upon forces that no Government can foresee or control; but it is none the less incumbent on every Government to take all possible steps to perfect its insurance against these forces: and the insurance of the Government of India lies in canals and railways. In the former, it is fully doing its part; but the same cannot be said as regards the latter. The Viceroy has, on more than one occasion lately, referred to the separation of the railway budget from the general budget as one of the most conspicuous financial achievements of his Government. It is to be hoped that those who are now responsible for railway development in India will take full advantage of their new powers: and that the Government of India will make it is business to see that they do so.

In introducing the Budget, Sir Basil Blackett spoke of the continued expansion of India's sea-borne trade, of the improvement in her credit and of the increasing amount of the savings of her people as disclosed by the sale of Post Office cash certificates and deposits in the banks; but he also referred to the tendency to lock up, by hoarding of the precious metals, the surplus earned by the excess of exports over imports. Government, he said, were doing their best, by the spread of education and the encouragement of private enterprise and initiative, to combat what has been described as "India's uneconomic tradition, which does not recognise the production and accumulation of wealth as being among man's legitimate aims"—a tradition which, in the words of an Indian commentator, "has not made the Indian less materialistic than the European, but has made him a worse materialist." If India could be induced to use her potential capital for productive purposes, in a greater measure than she now does, not only would an immense impetus be given to her commercial and industrial development, but new and attractive fields would be opened for the employment of her educated young men. A sound political structure can only be built on a firm financial foundation: and, if "young India" can only be brought to realise this fact, a great step will have been made towards the true Indianisation that all her friends have at heart.

CURRENT TOPICS.

"Patience, Courage and Good Will."

The keynote of Lord Irwin's speech at the Royal Colonial Institute luncheon on March 4 was the need for educating the British public to take an interest in Indian questions that really matter, so as to enable them to arrive at correct conclusions; coupled with the duty, imposed on those who have to give effect to them, of exercising the three qualities on which he laid stress—"patience, courage and good will." In regard to India, it is easy to arouse public interest in incidents that do not matter, that lend themselves to sensational headlines, particularly when they are of a personal character. The general attitude towards questions of a more solid kind was aptly summed up by Lord Irwin as that of "You mind your own business and I'll mind mine"—often, as he remarked, made use of by people who have no business of their own to mind. The conduct of Imperial politics they are content to leave to those whose business it is to carry it on: so long as this is done successfully, no interest is aroused and no credit given—it is only when there is a failure that the taxpayer begins to sit up and take notice. As Lord Irwin said, the British part in the solution of India's problems demands interest and knowledge. He might have reversed the order of the two words; for, as he also remarked, men are often interested in matters of which they are ignorant. It is this class of onlooker that is the most prone to intervene, when matters seem to have gone wrong: what is needed is the inculcation of knowledge, as the first step to intelligent interest. It is this brand of interest that is prepared to make allowances for both sides: and to realise the truth of Lord Irwin's dictum that "the obstinacy of any problem is the measure of the extent to which it impinges upon the deeper feelings of the people whom it affects." Lord Fitzalan voiced the feeling of the large company present at the luncheon, no less than that of the great majority of those who were not, when he said that the choice for the Viceroyalty of India had fallen on the right man. It is not enough that the British people should be content to acquiesce, and to leave it at that: it is their manifest duty to try to obtain acquaintance with the facts of a complicated situation, and so qualify themselves to do their part in its solution, as we all know that Lord Irwin will do his, with patience, courage, and good will.

Races and Religions in the Punjab.

The paper under the above title, read by Sir Michael O'Dwyer before the Indian Section of the Royal Society of Arts on February 19, was full of information of a kind that only reaches the ordinary man from real experts like the lecturer. The Punjab is generally looked on, by those unacquainted with the true facts, as predominantly the Mohammedan Province in India; whereas, in fact, it is not so, since the percentage of Mohammedans in Bengal is slightly larger than in the Punjab, where it is only 51: and forty years ago, it was no more than 47. The Hindus form about 35 per cent., and the Sikhs—originally, of course, merely a reforming sect of Hindus—12 per cent.: the remainder being mostly Christians who, during the period mentioned, have increased from 4,000 to 315,000 chiefly by conversion of low-caste Hindus and out-castes. Among the nine million Hindus in the Punjab, there are still two million "untouchables." Sir Michael explained that what may be called the "ruling races" of the Punjab came in with the Aryan invasion of 4,000 years ago, and were profoundly affected by the successive waves of Mohammedan invasion which took place between the seventh and eighteenth centuries of our era. The two most important races—properly speaking, divisions of the same race—are the Jats and the Rajputs: of the former, about 46 per cent. are Mohammedans, about 33 per cent. Sikhs, and about 21 per cent. Hindus: of the latter, two-thirds are Mohammedans and about a quarter are Hindus, Rajput Sikhs being comparatively few in number. These facts give a good example of the difficulty that confronts the reformer who looks forward to the breaking up of the great Provinces of India into subordinate "Sub-provinces," constituted on racial, religious and linguistic grounds, as the ultimate solution of the problem of Indian self-government.

Moreover, the religions tend to assimilate, even if to a very small degree. The child of Sikh parents does not himself become a Sikh until he is baptised—as an adult—into that religion: and it seems certain that the only thing that prevented the Sikhs from becoming practically entirely merged with the Hindus was the existence of Sikh regiments in the Indian Army. It used to be the practice, in Sikh families with several sons, that one or two enlisted and were then baptised into Sikhism: the other sons remaining Hindus. The War gave a great stimulus to the Sikh religion: and the recent Sikh revival—which, though it led to the very troublesome, and indeed dangerous, Akali disturbances, began as a perfectly honest and praiseworthy religious reforming movement—has had an even greater effect, and one that has apparently come to stay. The lecturer quoted the dictum of Sir Denzil Ibbetson that, forty years ago, in those parts of the Punjab where the prevailing tone and feeling of the countryside are Hindu, the rural Mussulman is often a Hindu with a difference; where the tone and feeling are Islamic, the Hindu is almost as the Mussulman. That generalisation is less true to-day, for there has, within recent years, been a strong religious revival in Islam, Hinduism and Sikhism: but it is still the fact that a large proportion of Mohammedans in India, to quote a well-known Moslem writer, suffer from a double caste system—their own sectarianism and the caste system of the Hindus; while it is still largely true that many Mohammedan tribes, especially in the South-East of the Punjab, keep the feasts of both religions and the fasts of neither. The Mohammedan Rajput, in particular, does not recognise widow-remarriage, and clings to many Hindu social customs that are repudiated by orthodox Moslems.

One quotation that occurred in the paper struck a chord of memory in the writer of these notes. Quoting Stoddard, the lecturer said that the original Aryan invaders despised the small dark aborigines "as monkeys." The Pathan, in particular, has the largest contempt for "down-country" Indians: and the writer, a good many years ago, took his Pathan orderly with him on a shooting expedition in the Central Provinces. During the first day's tramp through the jungle, on the way to the shooting ground, the writer overtook his orderly standing by the road side, in deep contemplation of a troop of langurs—the great black-faced grey monkey that does not occur on the Frontier—sitting about on the ground. The orderly asked, "What are those?"; and to the answer, "Monkeys," replied—"Ah, is that so? I thought they might be the people of this country."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 18.

"Principles of Civilised Governments."

It would hardly be an exaggeration to call the normal attitude of the Indian Extremist a permanent snarl at everybody; he insists on shouting that nobdy loves him. *Forward* this week snaps at the English Independent

INDIAN CONDIMENTS.

Labour Party for saying that the Indian Naval Proposals are not designed to benefit India but are simply another aspect of exploitation; India is not governed "according to principles of civilised Governments" says *Forward*. Too true; the tone of the Extremist Press would be out of place in any civilised community. It would be easy to make quotations regularly which show that the Extremist has yet to begin to understand what constitute the amenities of public life, but no useful purpose would be served by so doing; so long as the papers which he enthusiastically supports preach day in and day out that every opponent, official or otherwise of their views is a liar or a shameless exploiter of the down-trodden poor, that every official is a man whose policy of life is solely governed by devilish cunning and a desire for money before everything, nobody is likely to misunderstand the present position of the Indian politician on the ladder of progress.

Retrogression?

The Bengal Legislative Council to-day considered a motion proposed by a Swarajist member, that the Calcutta Improvement Trust should have its Board enlarged and the majority of its members elected from the ranks of the Calcutta Corporation. The Trust was formed solely owing to the failure of the Corporation to keep up to the essential programme of new street works, which resulted in Calcutta becoming one of the most unhealthy and congested cities in the world; no one who is familiar with the tenacity with which land is held in the East, and the conditions which accompany so-called democratic Government, was surprised when a popularly elected body found it impossible to carry out works which involve the dispossession of landholders and the displacement of occupiers. The Trust, a small but eminently independent body of public men, has been a great success in spite of the interference due to the War, and it is difficult to believe that Government is contemplating acceptance of the motion. Strong protests in the European Press and colourless, but singularly complacent, articles in the extremist papers, equally suggest that there is truth in the rumour that Government is prepared to give way on this matter; if it should do so, it will be difficult to suppress the feeling that is growing, that the days of strong men are past and that Government is becoming the tail that has almost ceased trying to wag the dog.

The Traffic Nightmare.

Traffic conditions in the City to-day are worse than ever before, and congestion is rendered even worse by the distinct falling away in the sense of duty which should actuate the various authorities responsible for the condition of the streets. The ordinary problems of a civilised city are complicated here by the persistence of the bullock cart and rickshaw, which bring additional variety to the speeds of the vehicles using the roads; drivers have neither any traffic instinct nor a sense of pace, and the mixture is becoming daily worse by the increase in the number of motor buses, of which there are hundreds of privately-owned specimens running in every direction, in addition to those of the Tramway Company. They all concentrate around Dalhousie Square, which is the civic centre, and they are just discovering the necessity of competing with each other in getting past refuges so as to arrive first at street corners. The thing is becoming a nightmare; the buses are of every shape and size, their capacity varying from eight to thirty-four passengers; they are of every colour and every one has a name. "Baby" in cream competes with "Orange William" in yellow, and the "Red Rose" tries to jockey the blue Afghan Motor Service off the road. The best named is probably the "Poor Motor Bus Service;" but the poorest of all is the poor pedestrian who contributes the raw material for a daily increasing number of accidents. Rotarians on Tuesday approved the idea of Special Traffic constables, but it is difficult to see of what use these will be so long as nobody takes any notice of the constables who are now on duty.

Indians in South Africa.

Everybody concerned is to be congratulated on the decision of the Union Government to refer the Asiatic Bill to a Select Committee for further consideration before it is passed. Whatever may be the outcome, there is no concealing the fact that the problem raised has far more than local importance: and, if the Union Government are unable to meet the views of the Government of India, it would seem highly desirable that the question should be finally determined by the Imperial Conference, in vew of the importance of the issues involved to the Empire.

Jute and Johnston.

The full text of Messrs. Johnston and Sime's Report upon the jute industry in Bengal has been published this week, and it is interesting to see how dangerous a little knowledge may be. It is simply untrue to assert that any British company owns the filthy bustees to which reference is made in this Report; a careful inquiry has confirmed this, and the dramatic contrast, between the coolie lines owned by the mills and the hovels which are the property of the Indians adjoining, is in itself a complete answer to the whole of this section of the Report, and a justification of the presence of the British merchant in India. The other principal point is that the jute operative earns at the lowest, approximately six times what he can earn on his own land. For the remainder, and particularly in regard to the allegation that the jute industry has piled up wealth to an illegitimate extent during the War, the *Statesman* rightly observes that this is a matter to which the Jute Association should devote its attention, and it should take every care that judgment is not entered against it by default.

The Proposed Navy.

Comments on the proposed Indian Navy are as varied as the points of view of the authorities affected. The *Amrita Bazar Patrika* has decided to give the proposal a lukewarm support, which it qualifies, however, by saying that the prevailing feeling is that the object of the whole scheme "is to add to the shackles of India." *Forward* says the same thing in another way and, of course, with its usual mud-throwing at everybody whose skin happens to be white. The European Press on the whole is inclined to bless the scheme, although some doubts are expressed as to the practicability of it. In the Clubs and the markets, however, they will have none of it: and it is universally agreed that the quotation, chalked up by one of the bright young things on the Stock Exchange for Indian Naval Debentures, pertinently sums up the situation; it certainly indicated that the stock was unsaleable.

Politics.

The political atmosphere does not alter. Mrs. Besant threatens that, if the Dominion Home Rule Bill is not passed by the House of Commons, she will lead a strike against the payment of taxes; there is no need for her to add to the number of empty boasts she has made to convince people that she is as irresponsible as the forces she seeks to captain. Sir Abdul Rahim has come into the limelight again with another statement on the Hindu-Moslem problem, in connexion with the proposal to reform the Government of the North West Frontier Provinces; he does not retract anything he has said. The Bengal Council has resumed its sittings this week, and the most noticeable feature has been a typical display of discourtesy to the Chair from the notorious Mr. A. C. Banerjee; he is a shining light amongst the trimmers, and his defiance of an Indian speaker is eloquent. The Corporation a year ago appointed a Retrenchment Officer, whose report is expected in a couple of months; in the meantime the Establishment Committee suggest that the salary list should be increased by some £16,000 a year; no one was surprised when the proposal was turned down. The Legislative Assembly has agreed to grant for another year a bounty upon railway wagons and underframes; this does not satisfy local manufacturers, and certainly does not justify the starting of new works or the investment of capital in these enterprises; but ardent protectionists accept it as an instalment of a permanent measure.

The Trivial Round.

The cricket season is dying, but the last big match of the season Calcutta v. Ballygunge, has produced some tall scoring. Hockey now comes into its own and practice games are in full swing. The Spring Meeting continued on Saturday and again provided wins for a crop of outsiders; the bookmakers are smiling, and with reason. The paperchase had again to be postponed this week owing to heavy rain; the adjourned run took place on Tuesday when, for the first time for some months, a lady—Mrs. Faulkner—won; the course was much too long, and the Committee would be well advised to recognise that they should cater for the small man, rather than for the merchant who can afford to pay anything for a blood horse. The Command Boxing Tournaments were a great success from the point of view of the participants, but the spectators were comparatively few; they seem to prefer dud shows which are better advertised. Four hundred Americans have been passing through, taking a holiday from a number of things, including Prohibition. The fourth Symphony Concert eventuated on Sunday, and the Orchestra showed another step forward, giving a brilliant performance of Beethoven Symphony No. 2; they were uncertain about Debussey. The Choral Festival produced a fine and inspiring service, in spite of the poor quality of one or two of the items rendered. Lastly, spring is approaching. Weddings are more numerous than ever.

Markets.

Apart from a small business in low grade jute, the jute market has been almost at a standstill; the close is easier with sellers anxious to clear. Both hessians and heavy goods opened steady on the possibility of short working, and prices tended upwards; but, with no confirmation of the rumour forthcoming, buyers retired and prices slipped away again. An improvement in the piece-goods market has been long awaited and it is therefore pleasant to note the better tendency during the past week; the demand has been consistent and up-country dealers have been participating. Prices are still on the low side, but in one or two cases higher rates have been quoted. The tea market continues on its upward trend; London reports prices hard and advancing, and it is expected that rates will be higher at the sale here to-morrow; this will in all probability be the last sale until the new crop commences to arrive, in May or June next.

On the Stock Exchange, jute shares, encouraged by the continuing rumours of extended short time, have recovered from the lowest; even if some agreement is arrived at, it is not expected that there will be an immediate rush to buy the shares, in view of the present unsatisfactory condition of the market for the manufactured goods. Both coals and cottons have met with little or no demand and the tone has been dull, with sellers predominating. Tea shares have been the feature of the week; the inquiry is broadening and a number of the less known issues have been in request, with a resultant capital appreciation in share prices. Operators have no doubt now realised the satisfactory state of the industry and, with tea rates both here and in London on the advance, share prices are being talked higher still.

At the opening, rubber shares reflected the upward movement in the price of the raw material, and, in spite of a reaction in the latter, have since maintained this higher level. The interest displayed in this market has been spasmodic of late and, until the price of rubber becomes settled, the tone in the share market is bound to be irregular. Government Securities have been steady with slightly less inquiry.

Money has been tighter during the week, with the result that the rate for Ready and Near T.T. is very steady; on the other hand, owing to a good inquiry for remittance on piece-goods account, rates for positions forward of March have fallen slightly.

There has been a better demand for short accommodation, and money rates are 4½ to 4⅞ per cent. for call and short notice.

BOMBAY LETTER.

(From Our Own Correspondent.)

Martial Races.

At one of the sittings of the Indian Sandhurst Committee a conversation took place, on the subject of Indian commissions, which ran something like this.

Mr. Jinnah: "Do you belong to one of the martial races?"

Witness: "What do you mean by the martial races?"

Mr. Jinnah: "Well, I hardly know myself."

The witness, a Burman, replied to a subsequent question by saying that every Burman was a fighting man: a very right and proper answer, as was proved in the years following the annexation. But the point is, can we help Mr. Jinnah to find any possible definition of a martial race?

Well, there has been some correspondence lately in the *Times of India* on the subject of gentlemen farmers: and it does not seem to me untrue to say that, speaking broadly, a race of gentlemen farmers is a race which is qualified to hold the King's commission.

The connexion between the Land and the Army is traditional all over Europe, and indeed in India as well: for it must be admitted by everyone but the most ardent supporters of democracy and the admirers of our eloquent pleaders, that the natural leaders of men in India come from the land-owning classes who predominate in Northern India from Rajputana in the West to Burma in the East.

In England, and generally speaking throughout Europe, the land-owning classes are continually being replenished by the passionate land hunger of our race, which drives the most apparently unsuitable stock brokers and speculators to establish themselves as country gentlemen: and it is their lavish expenditure on the land that has done so much for the breed of cattle and for the cause of high farming.

In the great cities of India, among the successful men of business many of whom boast of their descent from Rajput ancestors, there is no tendency at all in this direction: and that, though the opportunities are so very much greater. In Europe, the land is almost everywhere already farmed to its highest capacity. In India, at any rate on the Western side, there are, within a few miles of the greatest centres of population, huge areas of uncultivated land, which only needs expenditure to make it blossom like a rose.

At Ganeshkind, three miles from Poona, the Governor of Bombay has, as his Poona residence, an English country house, modified to suit the requirements of the Governor of an Indian Province, with a large park and a farmery where an attempt is made to maintain a cattle stud book of the rather spasmodic kind that is inevitable considering that there is a complete change of personnel every five years. But there has not been the slightest effort to follow this example, of a comfortable country house life, on the part of those who have not only ample means but also the most important stake and interest in the country. Even those who are passionately devoted to racing and take a quite genuine interest in their horses, are content to live in the cities, and do not seem to have the least idea that their pleasure and enthusiasm could be enhanced in any way by the possession and supervision of their own farms.

Everyone must realise that cattle breeding is one of the most important factors in the prosperity of India: and that any man who could claim, at the end of his life, that he had added two pounds to the average weight of the cattle of India would be the greatest benefactor the country has ever had. And yet no attempt whatever has been made in this direction by the enormously wealthy merchants of Western India, who seem prepared to do nothing except, as happened four or five years ago, to bring resolutions before the Legislative Council, suggesting that the Government should devote large sums to the improvement of the breed of cattle by departmental stud

Digitized by Google

farms. Verily, if the Indian is a severe critic of the Government under which he lives, he has a robust faith in its capacity to undertake duties not always associated with Government: and it is not so very long ago that an infuriated backer, annoyed at the way in which his horse was placed by the judge of the Turf Club, wrote to the paper to suggest that the judging of the races should be controlled by the Government.

The town-bred population of the great cities of India, merchants and lawyers of every grade, are admirable people in their way; but they have established a rigorous caste of money making for themselves, and they have not the least intention of forsaking it in order to answer the call of the land: and, whatever Mr. Jinnah or others may give as the definition of a martial race, it seems pretty clear that a class, which no pleasure can induce to leave its ledgers, is not likely to provide good officers for the Army, however anxious it may be in principle to claim its right to fruits still out of reach.

Mr. Horniman.

Mr. Horniman's welcome back to Bombay was not altogether a sucess. His few remaining personal friends have still sufficient powers of organisation to be able to collect a few hundred students, to whom he made his usual speech; but India is a land of short memories and, when Gandhi is so nearly forgotten, it is not likely that Horniman will succeed in creating any great enthusiasm. His future movements in India may well prove interesting.

Finance.

Bombay generally seems to be doing rather better of late, and the outlook of the mills has improved considerably, though the change is too late to help those whose finances have been crippled by the events of the last two years. Still, with cheap cotton and the rupee/yen exchange improving from Bombay's point of view, prospects all round are brighter than they have been for some time past.

"WELFARE AND PROSPERITY."

By Janus.

When I saw that THE NEAR EAST AND INDIA had expressed a rather pessimistic opinion regarding the utility of the Royal Commission on Indian agriculture, I canvassed a few of my friends who know something about the subject, and I found that pessimism was the prevailing note, though the reasons for pessimism differed widely. In fact my experience reminded me of an apologue which I read many years ago, about a pariah dog which had been driven out of his proper street, and now, mangy, lame and bleeding, was seeking a refuge in an unfriendly quarter. Everyone was abusing him heartily, and pelting him with filth, brickbats and epithets, when a voice in the background said softly, "But his teeth are whiter than pearls." It is in this spirit that I want to approach the subject. Let us look this pariah of a Commission in the mouth, and see whether any pearls are there. I grant at once that, if it follows the obvious course, and immerses itself, as all India expects it to do, in technological and administrative details, the outcome is likely to be a costly fiasco. It could easily potter about for five years or so, and then produce a monumental report, to be pigeon-holed reverently by the next Viceroy but one: it could with equal ease content itself with preparing terms of reference for thirty or forty new committees to investigate different branches of the subject in detail; and it could go off the rails in a variety of other ways which it is not worth while to enumerate. On the other hand, it seems to me to have an opportunity of going straight to the heart of the question, of breaking new ground, and of giving all India the lead for which it is waiting. Which course will be chosen depends on the personnel of the Commission, and primarily, I suppose, on the Chairman: the names are not yet announced, and until the Commission has been constituted and has got to work, I at least shall hope that it will take the opportunity which is offered to it by the reference.

The main task of the Commission is specified in the general and over-riding clause, to "promote the welfare and prosperity of the rural population": and it can succeed only if it holds fast to this purpose, subordinating to it all the cries of all the "interests," all the griefs of specialists and administrators, all the fads of politicians, and comes face to face with the peasantry, and the problem of welfare and prosperity. It is generally admitted that the peasants cannot get their feet on the ladder of prosperity without assistance: the practical recognition of that fact constitutes Curzon's great claim to the gratitude of India. But no administration can carry the peasants up the ladder as if they were so many bricks; they must take an active part in the movement, and success depends on the interaction of two factors, the Offer and the Response. Now the outcome of the twenty years work done since Curzon's time is that the Offer has been made. The various Departments have shown that prosperity is possible, if the peasants will do their share, but up to the present time the Response has been disappointing. The Offer has not been entirely ignored, and the results already achieved show that rural life could be transformed if the peasants played their part; but they show also that the Offer is far ahead of the Response. The task of the Commission, as I see it, is thus primarily to find out why the Response has been inadequate, and to devise means for turning it into a Demand. This question has scarcely been discussed seriously in India, and even the realisation that it is the great question of the time would be a tremendous step forward. At present the politicians regard the peasant partly as a tool and partly as a nuisance. Until that attitude is altered, India will do no real good in the world: and I believe the Commission can do more than any other single agency to bring the actual position home to the people, and through the people to the politicians. Whether it will do so depends, as I have said, on factors which are still unknown, but under its reference the duty of doing so is beyond dispute.

Even then if the Commission should not succeed all at once in turning an inadequate Response into an imperative Demand, it will, in my opinion, amply justify its appointment, if it sets Indians thinking, and offers them a basis for thought in hard facts instead of vague theories. The scanty literature on the subject is in truth mainly theoretical. Some writers hold that, if the Response is inadequate, the reason is that the Indian peasant is built that way; while others contend that it is all due to the infernal climate. The basis of fact on which these theories rest is, however, very slight. The doctrine underlying the first is simply that of original sin, which nobody takes very seriously nowadays: and for practical purposes the theory is ruled out by the fact that there is a Response, though an inadequate one. As for the climate, it is surely rather strange that an identical result should follow from opposite causes. Compare Bengal and the Punjab, or, if those regions are too remote, compare Bundelkhand with Malwa, about two hundred miles away. Bundelkhand is scorched all summer, Malwa is never scorched at all, yet in mentality there is very little difference between the peasants of the two regions. A third theory, which differs from the foregoing ones in having a broad basis of ascertained fact, is that the peasants' mentality is the result of an indefinite number of centuries of systematic repression, when all productive effort was penalised, and every sign of prosperity was a signal for fresh extortion. Subject Danes or Dutchmen to the régime actually experienced by India, and probably they will not be very different from Indians at the end of the experiment. The position then is that the peasants as a whole are under the influence of what in the jargon of the moment are called inhibitions, absolutely justified by the facts of the past, but, as so often happens, sur-

Digitized by Google

viving after their usefulness has passed away. The seeds of productive energy are in the soil, but the young shoots cannot force their way through the crust on the surface. The causes which produced the crust have ceased to operate, and it is slowly disintegrating of itself; but, in order to get an early and bounteous harvest, it should be broken up once for all. To show how to break it up is the Commission's real job.

I am not going to attempt to take the job from its members, and in fact I have no cut-and-dried solution to offer; if I had, I should have tackled the job before now. It is allowable, however, to point out in general terms the line of attack which offers the best prospect of success. Anyone who is familiar with the literature of the peasant will recognise that the reference to the Commission is in its essence an official paraphrase of the gospel which Plunkett preached in Ireland a quarter of a century ago, with its threefold slogan, "Better farming, better business, better living." Peasants everywhere are very much alike, and the applicability of that gospel to India was widely recognised at the time when it was preached. Curzon set going the machinery required to secure better farming and better business, when he constituted the Agricultural and Co-operation Departments: it remains for the Commission to inaugurate the movement for better living, without which Curzon's work can never come to its full fruition. I use the word "inaugurate" advisedly; for the broadening and deepening of village life must be a gradual process, not to be effected by a stroke of the pen, or by a sudden shower of gold, but following on steady, hard work carried out under the stimulus of vision and imagination. If the Commission can give that process a fair start, its work will not be wasted.

THE INDIAN MAIL.

The Indian States.

It is only after diligent search in the mail papers received from India last week that one is able to discover exactly what it was that the Gaekwar said at the State banquet given to the Viceroy on the occasion of his visit to Baroda. On such occasions it is the—sometimes rather irritating—practice of the leading Anglo-Indian newspapers to report the Viceroy's remarks fully, but to leave the reader to guess at the purport of those of his host. The Gaekwar's actual words appear to have been, "In the new era the Indian States now claim a place in the sun, and they hope that their ancient rights and dignities will be fully revived. For my own State, it is only natural for me to hope that its original sovereignty will be restored." He proceeded to explain that what he was particularly referring to in regard to his own State was that, over a hundred years ago, the British Government took over from the ruler of Baroda the collection of tribute, originally paid to him in his capacity as agent for his overlord the Peshwa, from a number of tributary States in Kathiawar: and his suggestion appeared to be that he should now be restored to the position of collecting it himself. As the original system of collection consisted in the dispatch of an armed expedition which, if the tribute was not immediately forthcoming—as it seldom was—proceeded to exact it by summary methods, it is not to be supposed that the Gaekwar proposed to revert to that system; but only that he desired that the tribute should be paid to him direct, instead of through the British Government as an intermediary.

But his general reference to the eventual position of the Indian States under the Reforms seems to mean something a good deal more than this. Their "ancient rights and privileges," *vis-à-vis* the Government of India, are fully protected by treaty; so that one must suppose that the suggested revival refers to the state of affairs existing before the conclusion of treaties with the British. If so, it would seem that the rulers of the Indian States envisage the coming of the United States of India, of which not only the various Provinces of British India, but the Indian States also, shall form "sovereign States," under the unfettered governance of their several rulers and free from all interference—in particular, from that of Political Agents—other than the General Federal control of the Central Government. One of the suggestions put forward for the future governance of India is its division into a number, smaller than that at present existing, of great Provinces, and the sub-division of each of these into a number of sub-Provinces, with the ultimate idea of entrusting the latter to Indian Lieutenant-Governors, each of whom should be assisted by an English adviser. This suggestion aimed at assimilating the government of the sub-Provinces with that of the Indian States ruled by Indian princes with the assistance of their political Residents; but it would seem that some, at least, of the Indian Princes view the problem from a different angle—the assimilation of completely autonomous Indian States to completely autonomous British Indian Provinces.

The Privy Council.

The cables from India announcing the rejection, by the Legislative Assembly, of the proposal to pay a salary of £4,000 a year to the Indian members of the Judicial Committee of the Privy Council, made this appear to be nothing more than an arbitrary refusal of a Government proposal, carried out as an ordinary item in the Swarajist programme of obstruction. The mail papers, however, put a different complexion on the matter, shortsighted and foolish as the rejection may have been. The proposal was stigmatised as "a device for stabilising a system of appeal that is wholly anomalous and harassing in the administration of justice"; as one that took it for granted that the practice of lodging appeals in a Court six thousand miles away is worthy of indefinite continuance, and that presumed the institution of a Supreme Court of Judicature in India to be a matter that can wait.

In the course of the debate, one of the opponents of the measure said that the British Empire could not last for ever, and, in the nature of things, must eventually share the fate of the Empires that have preceded it; so that an improvement in the prospects of the two Indian members of the Judicial Committee of the Privy Council could at best only be temporary and was therefore undesirable. This reminds one of the attitude of a certain Indian Municipality which, about twenty years ago, turned down a proposal for the establishment of a tramway on the ground that "if the Russians come, municipal enterprises will be confiscated without compensation, and the capital will be lost." The plea of the Home Member, that the British Government had agreed to pay half the cost of the proposed salaries, fell upon deaf ears: a commentator in the *Bombay Chronicle* dismisses this "higgling plea" for acceptance of the "niggardly bargaining of the Home Government" on the ground of the high fees required for the formalities of appeal, and the fact that "the tribute from India for the briefing of counsel represents an enormous sum" which cannot be less than £100,000 a year, and forms a substantial source of revenue to Britain in the shape of income tax.

One might suppose from this argument, that, if the Home Government were prepared to pay the whole of the proposed salaries, the resolution would have commanded agreement; but this does not appear to be the case. Among the many things that "the country" demands, it would seem that abolition of the "antiquated incongruity" of an Imperial Court of Appeal is one: India not only insists on the establishment of a Supreme Court of her own, but that its findings should be final and not subject to revision by any British authority whatever, not even that of the King-Emperor himself as voiced by the Privy Council.

Military Economies.

The statement by the Commander-in-Chief, during the debate on the Indian Budget in the Legislative Assembly, shows the remarkable advance that has been made during the last three years in the direction of military retrench-

Digitized by Google

ment. When the Inchcape Committee presented their report, just three years ago, they found the normal miltary expenditure for the financial year 1922-23 to be over 71⅓ crores of rupees. The expenditure in 1925-26 is 56¼ crores: and the budget estimate for the coming year foreshadows a further reduction of 1½ crores—a total deduction that amounts, at the present rate of exchange, to £12⅓ millions. The reduction in the strength of the Army is no less striking. British cavalry regiments have been reduced from nine to five, British infantry battalions from 52 to 45, horse artillery batteries from eleven to four, Indian cavalry regiments from 39 to 21, Indian infantry battalions from 126 to 106. Of the last named, six are at present serving outside India: and, as soon as their services are no longer required by the Imperial Government, there will be further reductions to correspond, so that the ultimate total will be 100.

INDIAN COMMERCIAL NOTES.

So much has been said already on the subject of the Indian budget that there is no need to describe it in detail. It is a great triumph to Sir Basil Blackett to have re-established a balanced budget as the natural order of things after the heritage of deficits aggregating 100 crores in five years' time, which his predecessors had bequeathed to him. He has had luck on his side, of course, in a series of good monsoons, which have increased India's exports and thus strengthened the rupee to an extent which secures a 12½ per cent. saving in the rupee expenditure on home charges. But the good luck would not have sufficed of itself without the good management which took full advantage of it.

For the moment, the rupee is not looking its best. This is apparently due to heavy imports of bullion and heavy orders placed for Manchester goods; indeed, India is the one bright spot just now in Lancashire's trade position. There is no doubt that twelve months of comparative steadiness in the exchange market have done much to revive confidence in India, which has expressed itself in these orders. But there is more behind it than this. Last year, the Calcutta marwaris decided to restrict their purchases of Manchester goods, as local stocks showed signs of increasing. These stocks have now been gradually liquidated, and the dealers feel that the time has come to replace them.

It is unfortunate that, just as this confidence was beginning to show itself, the price of American cotton has given way still further. Lancashire spinners are now working just over 30 hours a week, and this is having its effect on the demand for American cotton; hence the weakness which now characterises the market. It is having its effect, too, on Indian cotton prices, which are quoted at a margin of roughly 130 points off Middling American. Lancashire spinners' purchases of Indian cotton are now well over 100,000 bales for the half season, which is considerably in advance of their purchases during the corresponding period of 1925.

The jute position in India is gradually emerging from obscurity. It is a curious coincidence that the quantity of jute already marketed in Calcutta corresponds roughly to the Government forecast of 7,850,000 bales. There must be a certain amount still in hand, but none of it of good quality. On the other hand, mill stocks of the finished goods are fairly high and their price is low in comparison with that of the raw material. There is some talk of mills closing down, or even of further reductions in the existing short time of four days a week.

The British Industries Fair is now over. In the Fancy-ware Section Indian exhibitors have, on the whole, done pretty well. Brassware was in chief demand, and extensive orders have been booked, not only with United Kingdom buyers but also with America and the Continent.

INDIAN EXCHANGE.

London, March 8.

Rupee Exchange has been an uncertain market since we wrote last, but the falling tendency which brought the T.T. rate down to 1s. 6 3-32d. last Wednesday was promptly arrested. It is very doubtful whether any fixtures at this low level were made in Calcutta or Bombay, but a firmer feeling has since been manifest with business done at 1s. 6 5-32d. It was reported that Banks were anxious sellers at 1s. 6⅛d., without attracting business, and remitters have been able to obtain 1s. 6 5-32d. for ready and near requirements.

In the last return of the Imperial Bank of India, the trade demand has increased considerably and money is still wanted for the movements of produce. In both Calcutta and Bombay, money is in good demand; and the market is bare of spare funds with few lenders.

Three months bills have not been placed any lower than 1s. 6⅜d. for delivery up to the end of this month, and on some days this rate was not available, and Banks now quote no better than 1s. 6 13-32d. Forward rates show no change from last week's quotations, and we learn that there has been a fair inquiry on the Bombay side for May T.T. at 1s. 6 1-16d. and November at 1-32nd higher, but so far, we understand, without much business resulting. Rates for distant T.T. are called, March 1s. 6⅛d., April 1s. 6 3-32d., May 1s. 6 1-16d., and June to September 1s. 6 1-32d.

In the London market, quotations have remained very steady at rather above Indian market level. Remitters have been able to obtain a small amount at 1s. 6 9-64d. T.T., but the bulk of the business during the week has been put through at 1s. 6 5-32d. and remitters find there is very little offering at that. At the close there are buyers at this figure, but few sellers.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

The Budget.

The Budget which will shortly be upon us is scarcely the object of the same general interest this time that it was last year, and for the very good reason that it is realised that there is not the slightest possibility of any further remission of taxation. The path of economy is hard, and their best friends would scarcely deny that so far the Government have not been too conspicuously successful in reducing expenditure. The coal subsidy has unfortunately upset the year's finances, and has made the need for economy all the more urgent, but to be perfectly just to the Government the further curtailment of expenditure promises to be no easy matter. Still in one way or another it must be reduced, for if business is to have no relief from taxation this time it is unthinkable that trade can long continue to bear the present weight of taxation; and if the coming April is to be inclement there will be a general hope that the succeeding one will prove more acceptable to the weary taxpayer.

New Egyptian Company.

The improvement in the conditions in Egypt is reflected in the very satisfactory report of the New Egyptian Company for 1925. The net profits amounted to £93,982 as compared with £66,345, and it is proposed to pay a dividend of 23½ per cent. as against 16 2-3 per cent. There was a decline in the revenue from the company's estates from £15,036 to £11,805 owing to land sales effected during the year chiefly in the cotton growing area. The sales of land aggregated 663 feddans as against 488 feddans, and in Upper Egypt the average price for about 53 feddans sold was £115 8s. 9d. per feddan as against £107 9s. 4d. while in Lower Egypt the average price for 610 feddans was £127 2s. 1d. per feddan as against £114 1s. 11d.

British Trade with Roumania.

The satisfactory fact that despite the obstacle presented to trade by the adverse Roumanian exchange British commerce with Roumania increased in value in 1925 from £2,800,000 to £3,100,000 was emphasised by Sir Herbert Dering the British Minister at Bucharest at the annual banquet of the British Chamber of Commerce there. As he pointed out this is a clear indication of what might result when conditions improve. As I have frequently had occasion to emphasise the rate of the leu is no indication at all of Roumania's position, and as the output of oil goes on increasing it becomes more and more absurd that the exchange should stand at so unfavourable a figure. Unfortunately the question of transport is still a great handicap to the country's development. From the details given on another page it will be seen that Roumania has large amounts of cereals available for export, but the railways cannot at present give adequate facilities for transport, and even if they could it is thought that there would be difficulty this year in disposing of the grain on foreign markets. Broadly speaking, however, the position in Roumania is improving, and the fact that in the adverse conditions British trade is on the upgrade will, it may be hoped, encourage traders to enter this extremely promising market.

The Egyptian Market.

In his speech at the meeting of the British Chamber of Commerce of Egypt, Mr. H. E. Barker, the President, dealt with the Egyptian trade position. He pointed out that for the eleven months ended November the exports and re-exports amounted to £E2,565,000 less than for the same period of 1924, the total being £E53,640,000. On the other hand, the imports totalled £52,938,000, an increase of £E7,251,000 on the previous year's figures. Great Britain's share of the export trade was £23,127,000, a decline of £E3,700,000 on the figures for 1924, and of the import trade £E13,427,000 or £700,000 more than in 1924. In percentages the share of the United Kingdom worked out at 25.3 as regards imports and 44 as regards exports, these figures comparing with 27.6 and 48.6 respectively for the same period of 1924, 32.6 and 48.6 for 1923, and 34 and 47.3 for 1922. In other words, there has been a steady decline in the British proportion of the import trade, and Mr. Barker pointed out that at no time in the past forty years has the United Kingdom's share of Egypt's trade been as small as during the period in question. "The falling off in British purchases in Egypt looks serious enough," he said, "but practically the whole of it is accounted for in reduced dealing in cotton, which may right itself as the season advances, the crop being a large one and shipments so far smaller than usual. I cannot, I am sorry to say, find any reason to hope that we are going to pick up in the import trade. There is no reluctance here to buy British goods, which everyone admits are as good as ever they were, but unfortuntely they are dearer than they should be. In the main I suppose the British workman is to blame, and I hope that sooner or later he will realise what he is heading for and before it is too late make up his mind to break away from the tyranny of his unions and do an honest day's work for

a good day's pay. At the same time the manufacturer cannot be entirely exonerated from sharing in the causes, which have produced this diminution in his business. He takes too little interest in this market, ignores its possibilties and is not sufficiently enterprising to ascertain how he might adapt himself to its requirements."

Rubber Vagaries.

During the past week the price of rubber has taken a course less discouraging to shareholders than for a good many weeks past, and as a consequence of the rise shares have been moving to higher levels. But because a check has been given to the downward movement for the moment it would be foolish to look for an immediate return to the conditions which obtained last November. The position is very different from what it was then, and there are too many uncertain factors in the offing, such as the labour outlook here, to make it possible to have any overwhelming confidence as to the course of events in the near future. On the asset side there is the fact that while American buying is still lacking, it has been absent so long that before many weeks have gone it is certain that purchases will have to be made to meet requirements. But the strength of the share market depends on the dividends, and the declarations of the next few months will not only mean the maintenance of prices, but that they will reach levels considerably above those at which they now stand. If the outlook as regards the raw commodity is uncertain at the moment, it is obviously much more so as regards next year. There seems to be general agreement that 1927 will see a definite shortage of rubber, and if that proves to be the case—and at this juncture I am not prepared to commit myself to a definite opinion on the matter—then obviously rubber at 5s. or 6s. or more is distinctly probable. For the time being, however, we must wait and see.

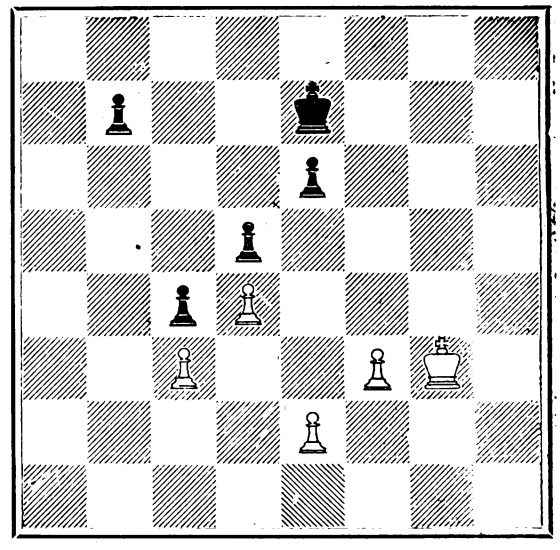
ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, February 20.

Export of Cereals.



For the first nine months of 1925 Roumania had an adverse trade balance of approximately two milliard lei. This may be largely attributed to the unusual stagnation of the grin export trade due, on the one hand, to the low prices obtainable on the European markets, and on the other hand to the high export taxes. At the present time there is said to be a quantity of 200,000 waggons of cereals available for export about half of which is probably maize. This represents a value of about 12 milliard lei. The harvest of 1925 was a good average one except in certain districts where the crops either failed almost entirely or suffered very severely from drought, as in Bessarabia and parts of Moldavia, so that good trade was expected and a rise in the value of the leu was predicted on all sides. According to a table in the *Argus*, the available surplus for export of the principal cereals was as follows: wheat 60,466 waggons, rye 3,333 waggons barley 28,804 waggons and maize 139,696 waggons. Of this surplus only 40,000 waggons have as yet been exported and, without taking into consideration the inadequate railway transport in Roumania, it is a problem how this large quantity of grain could be disposed of on the foreign markets before the next harvest.

Railways in Transylvania.

The privately owned railways are all being run by the Roumanian State Railway Administration C.F.R., though they have never been purchased from their Hungarian owners. A fortnight ago, however, an agreement was concluded with 17 companies for the purchase by the C.F.R. of 1,440 kilometres of privately owned lines, payment to be made in Roumanian State Bonds at 5 per cent. redeemable in 50 years, one hundred Hungarian crowns to be reckoned as equal to the Swiss franc.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended February 25, state:—

Since our last report the futures market has been quiet and the tendency rather weak. The week's summary of price movements is as follows:—Sakellaridis: March, 32.65 dollars, 0.70 dollars down; May, 32.20 dollars, 0.75 dollars down; July, 32.10 dollars, 0.45 dollars down; November, 32 dollars, 0.38 dollars down. Ashmouni: April, 23.55 dollars, 0.70 dollars down; June, 23.82 dollars, 0.53 dollars down; August, 23.85 dollars, 0.45 dollars down; October, 24 dollars, 0.35 dollars down.

The commencement of the week was marked by very dull markets, although the tendency was distinctly bearish. Prices declined and the market opened to-day with March Sakel at 31.55 dollars and April Ashmouni at 23 dollars against closing prices last Thursday of 33.35 dollars and 24.25 dollars respectively; however, although the market opened so weak, a certain nervous tension was noticeable and a considerable amount of buying soon developed, which changed the aspect of the market and somewhat improved prices. Towards 11 o'clock the Government *communiqué* was posted up—the translation of which is given below—as a result of which prices went up with a run; the *communiqué* announced that the Government, while continuing to buy on the spot market, has decided to intervene also in the Futures market by buying 50,000 kantars of any Sakel cotton which may have been received on dockets against March contracts and passed in appeal.

Rumour is persistent that the Government is about to intervene also in the Ashmouni market. The demand from abroad has been negligible for Sakel and poor for Ashmouni, and the prospects of a revival of the trade demand will become more and more remote each day as long as prices are artificially maintained by the Government intervention in the market.

Alexandria stocks show a further increase this week, and now stand at 2,316,000 kantars against 1,614,000 kantars at the corresponding date last year. Stocks in the Interior are estimated at about 1,600,000 kantars against 745,000 kantars at this time last year, which gives a total stock in Egypt of about 3,916,000 kantars against last year's figure of 2,359,000 kantars. Statistically, the position is undoubtedly far from good and indications are for an aggravation of the position.

The Government is too involved now to attempt to withdraw from the market, whilst, on the other hand, conditions in the textile centres are, generally speaking, so unfavourable that buyers are daily becoming less and less disposed to pay the prices which the Government wishes to enforce on them.

The Liverpool Egyptian market has been very poor, and as the stocks there will shortly be increased by the 350,000 kantars of the Sudan Sakel crop, we do not look for any improvement in that market in the near future.

At the third February tender, 3,250 kantars dockets were issued. The Government has bought during the week about 3,900 bales of Sakellaridis from Fully Good Fair to Good, for which they have paid from 34 dollars to 36 dollars. Government purchases to date total about 29,850 bales. The week's receipts amount to 197,196 kantars against exports 136,508 kantars; the stock stands at 2,316,262 kantars.

Spot: We have had a week of poor markets at Minet el Bassal and the demand from abroad has fallen away considerably. Sales amount to about 11,400 bales, of which we estimate 5,900 bales Sakellaridis, 4,600 bales Uppers, 300 bales Zagora, 400 bales Brown and Pilion, and 200 bales White. Government purchases amount to about 3,900 bales of Sakellaridis from Fully Good Fair up to Good.

Sakellaridis: A very moderate business has been done though all styles have been dealt in. Spot differences are generally without much change. Owing to the Government's purchases it has become difficult to either offer or buy desirable styles of cotton Fully Good Fair and F.G.F./Good at a reasonable basis.

Ashmouni and Zagora: Have met with a considerably reduced inquiry and, although all grades have been dealt in, only a moderate turnover has resulted. With the exception of Good Fair and Fully Good, which are a little firmer, spot differences are generally without much change.

Brown and Pilion: Brown has met with a very small demand, but Pilion has been in slightly improved request. Spot differences for both varieties are without change.

White: A fair business has been done at about last week's spot differences.

Translation of Government *communiqué* mentioned above.—The Government has decided to buy up to 50,000 kantars of any Sakel cotton which may have been received against March contracts and passed in appeal. Such cotton will be purchased on the basis of 65 per cent. over spot American New York Fully Good Fair. While for the time being limiting its purchases to 50,000 kantars, the Government will, if subsequently considered necessary, increase the quantity.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended March 6 states:—

The better feeling mentioned in our recent reports has not been maintained during the past few days owing to the instability of raw cotton prices and the dearth of orders from overseas markets. Business generally has been on

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

Digitized by Google

a smaller scale and considerable disappointment is felt by many manufacturers that the better demand based on lower prices has not been maintained.

Yarn.—Apart from a certain amount of business in Egyptian qualities, for which there has been a fair inquiry, there is little to report. The American section is still very depressed, and it is realised that the results which had been hoped for from short time working have not materialised. The position of some mills handling American cotton exclusively is becoming increasingly difficult. On the other hand, it is known that certain mills working on the particular type of yarn used for Indian fabrics are well booked up, and in some cases are not strictly adhering to the Federation's short time scheme.

Cloth.—Business done during the past week has been mainly confined to certain types of light fabrics for which there has recently been an exceptionally good demand from India. Sales of grey shirtings and heavy cloths for that market have not been negligible but cannot be regarded as altogether satisfactory. Orders from China have been small following the rather unsatisfactory prices realised at the recent auctions in Shanghai. Orders for Egypt and the Levant have been quite insignificant and Continental business has been negligible. A fair number of transactions have been booked for Colonial and South American account and the Home trade shows little change from the conditions reported last week.

Raw Cotton.—A "buyers'" market has again prevailed during the past few days, and although a slight recovery in quotations has taken place towards the end of the week, the tone at the close of yesterday's business was pessimistic. Closing quotations yesterday were as follows:—American Middling, 9.95; Egyptian Fully Good Fair, 16.50.

Cigarette tobacco exported from Persia has been exempted from payment of export duty.

The production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Company for February amounted to 46,553 barrels.

The Roumanian Ministry of Finance have issued revised statistics of the revenue collected during 1925, in which it is stated that the railway revenues amounted to 8,267,456,545 lei.

It is reported that an important concession for the mining of mica in the Harrar district of Abyssinia has been secured by an American organisation, and it is expected that operations will begin at an early date.

The traffic receipts of the South Indian Railway Company for the week ended February 6 amounted to Rs.9,10,335, making the total from April 1 Rs.4,42,23,027. For the corresponding periods of the previous twelve months the totals were Rs.9,90,384 and Rs.4,19,34,257.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.
(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Conduits.—The Superintendent of Stores, Saptia, Cairo, invites tenders for the supply of 7,190 conduits earthenware salt glazed, of different sizes. April 6.

Equipment.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of equipment, clothing and tents required for the period of one year from April 1, 1926, to March 31, 1927. April 1.

Clothing, Equipment, Etc.—Tenders are invited by the Department of Public Health of the Egyptian Ministry of the Interior for the supply of clothing, equipment, etc., required for the Central Stores, Cairo, for the twelve months ending March 31, 1927. The schedules of stores cover a very wide range and the attached statemen, giving a summary of the more important items, is intended only as an indication of the nature of the business offering and should not be read as an exhaustive list of the requirements. April 15. (D.O.T.)

Clothing, equipment, etc., required.—Soft goods.—Aprons, ward, orderlies', 2,425; aprons, linen, operation, 1,556; drawers, calico, with girdles, 9,375; jackets, calico, for men, 3,079; shirts, calico, women's, 3,627; shirts, calico, men's, 6,046; cases, slip, pillow, 3,046; towels, white, hospital, 1,089; caps, cotton, 10,920; veils, 3,400; blankets, woollen and wool-cotton, 5,343. Hardware, etc.—Bedsteads (various), 649; spoons, soup, metal, 3,139; locks, pad, iron, 1,095; pannikins, aluminium, 2,104; mugs, drinking, ½ litre, 1,420; warmers, foot, zinc, 1,612; brushes and brooms (various), 10,291. Boots, Shoes and Leather Goods.—Shoes, orderlies', 1,304 pairs; slippers, ward, 6,169 pairs. Oils, Paints, etc.—Denatured alcohol, 90 deg., 31,534 kilos; soap, hard, washing, 61,521 kilos; soda, washing, 12,694 kilos. Glassware.—Chimneys, lamp, 1,717; glasses, water, ½ pint, 1,467. Miscellaneous.—Matches, packets of 10 boxes, 5,275 packets.

Police Stores.—The Director of Police Stores, Ministry of the Interior, Cairo, invites tenders for the supply of stores required for the year 1926-27. The schedules of goods required consist for the most part of small quantities of miscellaneous items of equipment, including arms, accountrements, and ordnance stores, harness and saddlery, horse clothing, farriers' and saddlers' tools and requisites, fire appliance fittings and fire fighting accessories, barrack and office furniture, bicycles, etc. April 6. (D.O.T.)

Various Stores.—The Director of Stores, Frontiers Administration, Arsenal, Alexandria, invites tenders for the supply of consumable and permanent stores such as marine articles, office furnitures, saddlery, tools, oils, paints, ropes, leather, soap and motor car tyres and tubes, etc. March 23.

TURKEY.

Stationary Stone Crushers and Portable Steam Engines.—Tenders are invited by the Anatolian Railway Administration for the supply of five stationary stone crushers, five portable steam engines. March 24. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Massilia for Bombay (Liverpool, March 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maihar for Port Said, Colombo, Madras, and Calcutta (London, March 20).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, March 24).

British India Line.—S.s. Dumana for Bombay and Karachi (London, March 12); s.s. Morvada for Colombo, Madras, and Calcutta (London, March 13).

Cunard Line.—S.s. Cypria for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, Trieste (also Corfu and Gruz if inducement) (Liverpool, March 18, Swansea, March 23); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza (also Oran, Algiers and Volo if inducement) (Swansea, March 30, Glasgow, April 1, and Liverpool, April 3).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 10); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 1).

P. and O. Line.—S.s. Ranpura for Bombay (London, March 19); s.s. Nellore for Colombo, Madras, and Calcutta (Liverpool, March 20).

Prince Line.—S.s. Scottish Prince for Malta, Alexandria, Famagusta, Jaffa, Haifa, and Beyrout (London, March 12).

Motors and Motoring.

By G. B. B.

Messrs. Rolls-Royce, Ltd., send me a photograph of the 40-50 h.p. car, of their make, which is owned by the Amir of Afghanistan. The chassis of this handsome production is fitted with a British built saloon limousine painted in light grey, and upholstered in grey mottled leather. The interior woodwork is polished teak and the fittings are of nickel and ivory. This is only one of a veritable fleet of Rolls-Royce cars in use in that part of the world.

Useless Weight.

There are really very few users of commercial motor vehicles who take fully into consideration the question of weight when ordering a new lorry, van or tractor and trailer. A chassis manufacturer will always state clearly the maximum weight of the body allowed for in the design of the vehicle with a given load, and he will also give the exact weight of the standard body he is prepared to supply with a chassis. Cheaper body construction, almost without exception, involves the use of poorer material and cheaper labour, and in the net result the body is necessarily heavier. All of which reflections have been forced upon me by the *Commercial Motor*, which has been dealing with this question of weight. If, says the journal, we take the life of a vehicle at the figure usually accepted for acountancy purposes, viz., 15,000 miles, it is obvious that the moving throughout that period of an extra 5 cwt. will amount to the wasteful transport of 37,500 ton miles, and on a low basis of one shilling per ton mile, the owner of the vehicle will be a definite loser, in the course of the life of the vehicle to the extent of £1,875, which seems a very high handicap for such a small saving in first cost. It is curious that it is not apparent to everyone that a quarter of a ton of weight cannot be moved for nothing. It is, truly an instance of the operation of the policy of penny wise and pound foolish.

The manufacturer of commercial motors is always being encouraged to reduce the weight of chassis to the lowest point by the employment of the most suitable materials and by constant improvement of design. There is no economy, however, if, after the weight of the chassis has been brought to the minimum consistent with efficiency and safety, unnecessarily heavy body work is fitted.

Improving Garages.

Finding no proper garage near at hand and not caring to share space in a shed indiscriminately allotted to strangers, quite a number of folks are paying more than they really want to for private lock-up, writes a colleague of mine under the pseudonym of "Focus." I might comment by saying that any sum I have to pay, no matter for what, is more than I want to, but apart from the flippancy there is much in what he says, when he continues: "They do not rent them for the sake of privacy, and a share in a converted shed would suit their pockets much better." "On my suggestion," the writer continues, "the owner of such a shed is dividing it longitudinally into four spaces, using lengths of gas barrel fixed on short uprights about 2 ft. high. Each tenant is allotted his own particular space, and the last to return at night will never find himself crowded out by the careless disposition of his co-tenants' cars. Further, the clumsy driver who is bound sooner or later to scrape the paint of his car will do so on the dividing rail, instead of on the wings of his neighbour's property."

The "Little Wonder."

This is the nickname which is gradually becoming used in place of the more correct title, "Austin Seven," which either in light van or pleasure car form is rapidly becoming known all over the motoring world as a wonderful production. I hear of a firm who recently took delivery of an Austin Seven for door to door collection and the delivery of light parcels. The firm say that the total costs for the Austen van, including driver's wages, repairs and garage, petrol, depreciation, insurance, etc., averages only 2s. 2d. per working hour as against 3s. 6d. per working hour for the two horse-drawn vans it has replaced. It is estimated that it will run about 20,000 miles per annum, at a cost of about one penny per mile.

Trams and Buses.

The indignation which has been aroused by the proposition of the authorities to refuse to allow certain of the independent buses to ply along the Uxbridge Road, in order to compel people to use the trams shows no sign of subsiding; on the contrary it is increasing every day.

This, curiously, comes at a time when trams are being superseded in so many places by omnibuses or railless cars It seems to most people little short of extraordinary that in London the whole idea seems to be to "save the trams." It is generally known that the trams which are to be "saved," those that run along the Uxbridge Road, are owned by the combine which run the omnibuses and owns the tube railways that are fed by these buses and trams? The ordering of so many of the independent buses off the Uxbridge Road will confer a practical traffic monopoly on the combine.

A Road Fund Fallacy.

I do not for one moment imagine that we have heard the last of the proposed Road Fund raid. There are those who believe that the Chancellor realising the tempest of indignation raised by his propoals will drop the matter. Personally I do not think this to be very likely. Recently, in two newspapers, says the *Motor*, the notes by the political correspondents have contained the view that it would be as reasonable for persons interested in the liquor trade to suggest that the whole of the revenue derived from taxing beer and spirits should be devoted to the building of new public houses as for motorists to insist on motor taxation revenue being spent on the roads. Such a parallel can be dismissed as utterly foolish. It requires the wildest stretch of imagination to visualise public houses as national assets which good highways undoubtedly are. The provision of beer houses, not being a work of national importance—indeed being very much to the contrary—it

is impossible to conceive any government giving a pledge to the liquor trade or to beer drinkers in any degree similar to that given to motorists in respect of the essential national work of road construction and maintenance; work paid for in a great measure out of money provided by motorists and work moreover, which benefits the whole community. When it can be shown that a pledge was given to the liquor trade to build more public houses and that this is a work of national importance like that of road building it will be time to use the argument.

The Permanent Mandates Commission of the League has concluded its examination in Rome of the French Government's report on the administration in Syria, and a Sub-Commission is drafting a report to the League Council.

The Bank of British West Africa has opened a branch at Aba (Nigeria).

The Greek Government on March 1 paid to the Bulgarian Government the second half of the indemnity of £45,000 adjudged by the League Council for damage during the Greek incursion at Petritch.

Mr. Ezepos Garabed Benlian, of New Street, Bishopsgate, E.C., and of the Butler Avenue, Harrow-on-the-Hill, Middlesex, Oriental carpet importer, who died on August 26, left estate of the gross value of £45,345, with net personalty £7,444. He left £200 to the Ousoumasiratz Society of Cæsarea, towards the maintenance of a school for poor children; £200 to the Union Generale Armenienne Society in Egypt towards the maintenance of a school; and £100 to the Armenian Hospital, Constantinople.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 9.

The Stock Exchange has again passed an uninteresting and quiet week. The recent wave of liquidation seems to have spent its force, and business in all sections has fallen to a very low ebb. Prices of high-class investment stocks, however, remain tolerably steady, and apart from stocks immediately influenced, the severe slump in the New York Stock Exchange, which has been on a record scale, has been almost without effect in Throgmorton Street. British Government stocks have remained quietly steady despite the slight change which has come over the monetary situation and which postpones the probability of a lowering in Bank Rate for at least a week or two. In the foreign section Mexicans and Brazillians have been adversely influenced by developments in New York, and foreign rails have lacked support. Home rails, which are now marked ex dividend, have, on the other hand, been inclined to improve on the better showing made by the traffic returns. Iron and steel and engineering shares have been depressed by the crisis in the engineering industry, but elsewhere in the industrial section there has been little movement of interest. Oil shares have fluctuated irregularly. Both here and in the rubber market actual business remains on a small scale and the smallest order has an effect on prices out of proportion to its real significance. Rubber share prices have followed the fluctuations in the price of the raw material, which has been moving rather erratically. Well posted observers, however, are of opinion that the position in the market for the commodity is now much healthier and that the price of the raw material will soon become much more stable in the neighbourhood of 2s. 6d. per lb., and the share market has benefited in consequence.

The Tax Outlook.

Though not comparable in effect with the coal trade dispute, the danger of the re-imposition of taxation in the coming Budget has been a vague fear that has tended towards the restriction of business. Fortunately it is possible to say that the outlook in this respect is definitely brighter. Mr. Churchill has stated confidently that—leaving the coal subsidy payment of £18 millions to be met by temporary borrowing—the current Budget may be expected to yield a surplus of £1 million, as estimated: and his confidence is supported by the latest revenue figures, which are far better than seemed likely a few weeks ago. As regards next year, a forecast is difficult until the Civil Service Estimates are produced. The Estimates for the Fighting Services, however, show economies amounting to over £4 millions, and an Economy Bill is to be introduced into the House of Commons next week. Meanwhile, Mr. Churchill tells us, in the speech just mentioned, that, provided the country backs his measures of economy and no great industrial upheaval takes place, he will be able to get through next year without resorting to unsound finance and without re-imposing the taxation which he lifted a year ago. From all this it may now be reasonably deducted that next month's Budget will not include anything so unpopular as an increase in income-tax or super-tax. It is too early yet to say whether the Treasury is prepared to experiment with any new taxes—e.g., the betting tax—which would be less onerous to the community. But in any case the most serious apprehensions of the great body of tax-payers are steadily fading away. Thus, unless some unforeseen contingency occurs, one of the predicted unpleasantnesses of 1926 will be avoided: and if only the labour clouds will roll by, the Stock Exchange will soon reap some little compensation for the very dull and depressing times which the current year has so far brought forth.

Prosperous Shops.

It is now possible to obtain some idea of the results of the big stores during the past twelve months. Judging by the figures which have already appeared, the general experience has been a satisfactory one. First of all, we had Selfridge's annual statement, which showed a rise in net profits of from £343,448 to £444,709. Then came Harrods, which showed net profits totalling £688,751 in comparison with £630,189 in the preceding period. Whiteley's did not do so well in earning net profits of £187,050 against £221,650 for 1924-25. The latest additions to the list are Barkers, the old-established Sunderland firm of Blackett and Son (which this year celebrates its centenary), and Thomas Wallis and Co. All these last mentioned concerns show higher profits than a years ago. Some of the companies, such as Barkers and Selfridge's, can boast of very fine records. At the same time, investors should, in the interests of common prudence, ask themselves how long it will be before the peak of prosperity is likely to be reached. The pertinence of this question probably accounts for the relatively high yields shown on some of these shares. For instance, Barkers ordinary return approximately £6 8s. per cent., Whiteley's ordinary about £7 2s. per cent., Wallis' ordinary about £6 3s. per cent., and D. H. Evans' ordinary £6 19s. per cent. The preference shares of some of these undertakings are quoted at relatively substantially higher prices than are the ordinary issues. Whatever may be the lot of ordinary shareholders in future years, on the basis of past results, preference interests is, generally speaking, fairly well covered.

The first artesian well in Palestine has been successfully bored to a depth of 266 feet at a point near Jeida, between Narazeth and Haifa, 246 feet above sea level.

Copra has been added to the list of goods which are free from Customs duty on importation into Palestine.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company of Bucharest for February was 27,630 tons.

The Consolidated Brake and Engineering Co., Ltd., London, have received a contract for the supply of vacuum brake spares to the Egyptian State Railways, Telegraphs and Telephones.

BRITISH INDUSTRIES FAIR.

Exhibitors' Comments.

The Department of Overseas Trade has already received a large number of letters of congratulation from exhibitors at the London section of the British Industries Fair, which was organised by the Department. One exhibitor in the Fancy Goods section writes that "the results of the Fair are already far beyond our expectations and we are working seven days a week to cope with our orders. In addition to opening up new accounts in the United Kingdom our orders include new business with Australia, New Zealand, Holland, Denmark, Canada and the United States." One exhibiting firm in the Foodstuffs section informs the Department that it has been necessary to take on an additional 100 workmen to cope with the orders actually taken at the Fair. Several exhibitors in the China and Earthenware section took more than twice as many orders as were taken at the 1924 Fair.

A high proportion of actual business transacted at the Fair was done with Overseas buyers and a large number of exhibitors have informed the Department that they have opened new accounts with buyers from over ten different countries. The general concensus of opinion is that the results of the Fair have been far in excess of expectations, and it is particularly interesting to learn from one firm exhibiting in the Clothing section—an entirely new section—that they have been more than surprised at the orders booked, which practically cover the world. New accounts with this firm have been opened with buyers from Bombay, Calcutta, Persia, South Africa, Warsaw, Bucharest, Budapest, Colombo, New York, Philadelphia, Shanghai, Cologne, Zurich, Sweden, etc.

It is, of course, impossible to give any real estimate of the actual business done at the London section of the Fair, but there is no doubt that both as regards the volume of business done and the number of business inquiries, the Fair was the most successful held since the War, if not the most successful since the inception of the Fair in 1915.

During the period of the Fair—February 15 to 26—the London section of the Fair was visited by 81,131 people, of which 57,308 represented visits made by home and overseas buyers, and it is estimated that of this number approximately 9 per cent. or 5,157 visits were made by Overseas buyers. During the last London Fair, held in 1924, 25,363 visits were made by home and overseas buyers, and of this number approximately 2,177 visits were made by overseas buyers.

Fifty-three different countries sent buyers to the London Fair, the largest number coming from Holland, Canada, United States, Australia and Germany. In addition to these countries, buyers attended from Denmark, Switzerland, Spain, Greece, Belgium, Norway, Sweden, Italy, Hungary, France, Roumania, Austria, Iceland, Czecho-Slovakia, Latvia, Portugal, Finland, Russia, Turkey, Yugoslavia, Poland, Bulgaria, South Africa, India, British West Indies, New Zealand, Malay States, Irish Free State, Gold Coast, East Africa, Egypt, Gibraltar, China, Siam, Japan, Philippines, Persia, Syria, Argentine, Peru, Brazil, Venezuela, Colombia, Mexico, Cuba, Chili, and Ecuador.

Representatives of the various sections on the Exhibitors' Advisory Committee of the Fair, representing the exhibitors at the London section, already anticipate that larger numbers of exhibitors will participate next year.

At a meeting of shareholders in the Sudan Plantations Syndicate, held last week, the resolutions altering the articles of association and providing for the capitalisation of £750,000 of the amount standing to the credit of the share premium account were duly passed.

COMPANY NOTES AND REPORTS.

IMPERIAL BANK OF INDIA.

The report for the half-year ended December 31 states that large purchases of sterling by Government from the Exchange Banks, coupled with a poor demand for trade purposes, resulted in the money market being well supplied with funds throughout the half-year. The Bank Rate stood at 4 per cent. until September 24 when, on trade conditions improving somewhat, it was raised to 5 per cent., and was further raised to 6 per cent. on December 3, when the demand for cotton finance began to make itself felt. The average rate for the half-year was 4.701.

The net profits of the bank for the half-year amounted to Rs.38,25,044-8-8, which, with Rs.21,97,874-8-2 brought forward from the half-year ended June 30, 1925, made a total of Rs. 60,22,919-0-10. This sum the Governors of the Bank disposed of as follows:—(1) In payment of a dividend to the shareholders at the rate of 16 per cent. per annum free of income-tax, Rs. 45,00,000; (2) transferred to reserve fund, Rs.5,00,000; (3) carried forward to the profit and loss account of the current half-year, Rs.10,22,910 10p.; total, Rs.60,22,919 10p. Since the publication of the report for the half-year ended June 30 1925, fifteen new branches have been opened, viz., Bhagalpur, Darbhanga, Chapra, Asansol, Jharia, Jhansi, Howrah, Aligarh, Gojra, Raichur, Sitapur, Jalna, Ambala Cantt, Raisina (Delhi) and Shillong. This completes the Bank's undertaking to Government to open 100 branches within five years of the inception of the Bank.

AFRICAN AND EASTERN.

The African and Eastern Trade Corporation, Ltd., announce the payment on April 24 of an interim dividend of 4 per cent. on the old ordinary shares for the year ended December 31, 1925, less income-tax. The new ordinary shares issued in October, 1925, will not participate.

TEA COMPANIES.

The Sephinjuri Bheel Tea Company has declared an interim dividend, less tax, of 10 per cent. in respect of the six months ending May 31 1926.

The New Dimbula Company has declared an interim dividend of 15 per cent., less tax, for the season 1925-26.

The outturn of the Uvakellie Tea Company of Ceylon for 1925 amounted to 253,635 lbs. of tea, against an estimate of 300,000 lbs. The profits amounted to Rs. 49,824, plus Rs. 176 brought in. Dividend of 20 per cent. declared, carrying forward Rs. 2,000. The estimate for the new season provides for 275,000 lbs.

The tea outturn of the Templestowe Estate Company of Ceylon for 1925 amounted to 228,268 lbs. against an estimate of 265,000. The profit amounted to Rs. 60,883, plus the balance of Rs. 4,419 brought in. Final dividend of 20 per cent. (making 30 per cent.).

MINES.

The Nundydroog Mines has declared a balance dividend for 1925 of 6d. per share payable April 13. Tax will be deducted at rate of 2s. 0½d. in the £ (including relief in respect of Dominion tax).

The Balaghat Gold Mines has declared a balance dividend for 1925 of 6d. per share on both Preference and Ordinary shares, payable April 9.

Company Meetings.

SOUTHERN PUNJAB RAILWAY.

The ordinary general meeting of the Southern Punjab Railway Company, Limited, was held on March 3 at the company's offices, 36, New Broad Street, E.C. Mr. James M. Rendel (deputy-chairman) presided.

The Secretary (Mr. E. J. Shepherd) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said:—From the brief summary of the earnings as given in paragraph 6 of the report you will observe that, as compared with last year, there is a falling off of about Rs.12 lakhs in the main line and Rs.1¼ lakhs in the Ludhiana extension, against which there has been a slight increase of Rs.¾ lakh in the Jullundur Doab Railway. The figures are set out in detail in Statement VI. The interesting fact is that for the first half of the year, viz., the half-year ended March 31, 1925, the earnings were slightly better than those for the corresponding previous half-year, and that the whole of the deficiency occurred in the second or September half-year. In explanation of this, our Agent reports that, although the internal trade of the country continued to be good, the prices of grain were not favourable for export.

It is well to remember, however, in making any comparison with the gross earnings for the year to September 30, 1924, that that was a record year. Even with the rather substantial drop which has occurred, the year under review still stands second, and I am glad to be able to say that, chiefly owing to a better rate of exchange at which remittances were made to this country, and to the fact that Corporation Profits Tax has at last finally disappeared, the revenue for the year available for distribution is equal to that of last year. The directors, therefore, have decided to recommend a distribution equal to that of last year, viz., a final dividend of £7 per cent., with a bonus of £2 per cent., making, with the interim dividend of £5 per cent., £14 per cent. for the year, and to increase the amount to be carried forward by £26,166 12s. 3d.

With regard to this decision, I should like to say that while we are not apprehensive of our ability, in normal circumstances, and in the absence of any extraordinary or unforeseen contingencies, to continue this rate of distribution in the future, we have felt it prudent to maintain a policy of caution, and not to divide up to the hilt.

We know that there is to be a reduction of passenger fares in April, and there is no certainty that goods rates will not sooner or later follow suit. Moreover, fluctuations in the rate of exchange have always to be reckoned with. Latterly, the rate has been on the upward grade, but a move in the opposite direction might have a substantial effect on our net revenue. Looking to contingencies of this kind, we desire to be in as strong a position as possible. At the same time we feel that, in view of the existing disparity between the interim and final dividends, it would probably meet the wishes and convenience of stockholders if the payments for the year could be more evenly distributed. If, therefore, in September next we should increase the interim dividend, this must not be taken as a promise that the total distribution of the year will be increased or even maintained. Our object will be merely to reduce the existing inequality between the interim and the final payment, by making, at the expense of the final dividend, a larger interim payment on account, and our action must not be interpreted in any other way. We wish this to be very clearly understood in order that there may be no ultimate disappointment.

In view of recent events, you may perhaps expect me to say something as to the possibility of the company's lines being purchased by the Secretary of State at the end of 1929, when he is entitled, as you are aware, to buy the company out if he wishes to do so. I fear, however, that I am not in a position to throw much light on the subject. The option, of course, lies solely with the Secretary of State, and while he must give twelve months' notice if he intends to exercise it, he is not bound to give more, nor is there any reason to suppose that he will do so. You will see, therefore, it is hardly possible that any definite statement can be made until the end of the year 1928, or near it.

In the meantime, I may remind you that the price he will have to pay depends on the average earnings of each section of the company's lines for the five years preceding the date of purchase, i.e. (if he purchases in 1929), the years 1925, 1926, 1927, 1928, and 1929. This price will be subject to two limitations. It will not be less than the total capital expenditure nor more than that expenditure with a premium of 20 per cent. added. As we have only just completed the first of these five critical years, it is of course impossible to predict what the average earnings for the five years will be, but unless anything unforeseen and extraordinary occurs, it may, I think, be taken that the premium on the expenditure on the main line and on the Ludhiana Extension is secure. The capital expenditure on these two lines together amounts at the present moment to £2,477,000, and is still slowly increasing, so that the premium in respect of this expenditure may be estimated in round figures at £500,000. This premium, together with the whole of the accumulated and undistributed profits, will belong to the ordinary stockholders.

With regard to the other two lines, the Sutlej Valley Railway and Jullundur Doab Railway, the board are watching the earnings with great interest. At the moment they are not sufficient to warrant the expectation that any premium will be earned. I may add, however, that when the Sutlej Valley Railway was dismantled, it was certain that the development of traffic would be seriously retarded and that consequently the purchase price might be considerably affected. The board therefore reserved the right to raise the question of premium, or perhaps I might say of compensation for loss of premium, if in their judgment it should appear to have been in any way affected by the removal of the line, and they protected themselves in the same way when they consented to a partial re-alignment.

The report and accounts were unanimously adopted; the retiring directors were re-elected; the auditors were reappointed; and the meeting terminated with votes of thanks to the chairman, directors, and staff.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Geneva Meeting.

Whatever may be the upshot of the Geneva meeting, as far as the League of Nations is concerned, it is evident that advantage has been taken of the opportunity afforded to the representatives of the Balkan States to discuss matters of joint interest among themselves, and that there is a general desire for agreement. What form these agreements are likely to take is not yet established. The political currents appear to be running in several directions. The most important, perhaps, is the Italo-Yugoslav *rapprochement*. At present the two countries are linked by a Treaty of Friendship, following upon the settlement of the Fiume question. It is possible that a common desire to prevent the union of Austria with Germany might prompt the present Italian and Yugoslav Governments to conclude a more definitely military alliance with this end in view. During his stay in Rome the Yugoslav Foreign Minister is reported to have engaged in preliminary negotiations, on the basis that Yugoslavia will refrain from the construction of any harbour on the Adriatic coast likely to compete with Fiume, and that Italy will support Yugoslavia in her desire to obtain a satisfactory settlement of the Salonika Free Zone question. It is in the interests of Europe that any chance of friction between Italy and Yugoslavia should be removed. The drawing together of the two countries, however, suggests something more than a mere desire for peace on Italy's part. A friendly Yugoslavia is useful to her for commercial purposes, for she aspires to take the lead in the economic development of the Balkans. Apart from the general advantage of friendly relations with Italy, it is not easy to see what special advantages Yugoslavia hopes to gain. The League is sufficient protection for her from any potential Austro-German menace; moreover, settlement of the Salonika question which has to be forced upon Greece is not calculated to prove as useful as one arrived at by mutual consent between the two parties, unless indeed the map in that part of Macedonia is to be redrawn.

Minorities in Roumania.

In view of the fact that Roumania's reputation stands high in regard to her treatment of the Bulgarian minority in the Dobruja, it is not easy at first to understand why the Government should allow any bad marks to be scored against it in Transylvania. An explanation may possibly be found in the characters of the minorities themselves. In the Dobruja the Roumanian subject of Bulgarian origin has probably remained true to his national tradition of minding his own business and getting on with his work. In Transylvania, on the other hand, the ex-Magyar citizen will have been brought up to believe himself the superior of his neighbours and is not at pains to hide his opinion. When this attitude obtrudes itself upon the subordinate official, no doubt on the look-out for it, there is bound to be trouble. Further, there will be a tendency, from the Bucharest Government downwards, to hold the Magyar minority suspect of subversive designs. In all these circumstances anyone acquainted with conditions in South-Eastern Europe will be prepared to credit reports of friction, without considering it necessary to make too much of them. The question is to the fore again as a result of the issue of a report by the Anglo-American Commission that visited Transylvania in 1924, and in consequence of the efforts of the Baptist community in Roumania to secure inclusion in the list of confessions "recognised" by the State.

Prayer by Permit.

Although the new Constitution of Roumania provides that the liberty of conscience is absolute, and the State guarantees to all religions equal liberty and protection,

Digitized by Google

so long as their exercise does not run contrary to public order, good morals and the laws of the State, religions are somewhat invidiously divided into two classes, recognised and unrecognised; to the former category belonging those with more than two hundred thousand adherents. The latter category count in the eyes of the law merely as "associations," and are subject to the laws and police regulations concerning societies in general and public meetings. The practical upshot of this seemingly unnecessary distinction is that, in any given town or village, if things in the locality are not running smoothly or a new broom arrives to fill an official post, the Baptists or some other world-wide religious body may have to obtain a permit to hold a service, or in the middle of a prayer-meeting may receive a visit from a gendarme to see whether the permit is in order. Now to the Bucharest Government, no doubt, a permit seems a simple two-minute affair, about which no good citizen ought to make a fuss. In reality, of course, the obtaining of a permit in any Balkan State entails a degree of humiliation and degradation that either contributes more to retard the moral, intellectual and material progress of the peoples than five centuries of Turkish rule, or else breeds communists long before the permit is obtained. The spirit that the obtaining of a permit engenders has certainly nothing in common with the atmosphere that should envelop a religious meeting, and it is difficult to realise why the Roumanian State should not exempt all recognisable religions from vexatious restrictions. The risk that some subversive society would seek to masquerade under the cloak of religion would be small; the gain in the improvement of the national temper might be incalculable.

Italy in the Balkans.

A second current in the political sea of the Balkans is the prospect of a settlement of the questions outstanding between Yugoslavia and Greece. Italy, it will be readily understood, will be anxious for the sake of her commercial interests in the Balkan Peninsula that Yugoslavia and Greece should be at peace with one another, and for this reason Signor Mussolini's immediate concern may be for nothing more than to bring the two countries to an agreement, having satisfied himself that Yugoslavia is in agreement with him in wishing to see the union between Austria and Germany prevented. Greece is naturally anxious to be freed from the Salonika difficulty, and would probably regard it as a good bargain to have the menace which she feels is hanging over her removed by Italy's good offices at the price, say, of an Italian loan for the purchase of Italian goods. Such an arrangement, however, would seem to be incompatible with any Italian promise to Yugoslavia that Italy's influence will be used for the settlement of the Salonika question in Yugoslavia's favour. The position, therefore, in all probability, is that in Rome and Geneva further soundings have been taken with a view to bringing the good ship Balkan Federation into harbour, and that the results of these soundings will first be submitted to the various navigating committees before a forward movement takes place. It is of interest to notice that M. Stefan Raditch has pronounced a blessing on the Italo-Yugoslav *rapprochement*. Croatia and Slovenia as a whole are not disposed to go quite as far as the Serbs in accepting Italy's claims to direct the affairs of the Balkans; it is, therefore, of importance to bespeak Croat-Slovenian approval of the negotiations.

Constitution-Making in Greece.

General Pangalos is preparing for Greece's return to "normal political conditions." Where precisely these political conditions will be normal he does not state; but the Greeks will hardly find them so under a Constitution which is to resemble to a great extent that of the United States. The more extreme Republicans will, at least, have their fears allayed as to a pending restoration of the Monarchy, for the Presidency of the Republic is to be invested with far greater power than the ordinary Monarch has, and General Pangalos is a candidate for the post. The Chamber and the Senate are to become purely legislative bodies, that are to "work during six months a year for the preparation of laws, thus economising time and money and avoiding the errors of the past." There is something thorough in General Pangalos's methods, for in explaining his intentions, he adds, "I have taken all measure to prevent a reawakening of party feeling, which has been silenced." The candidature of members of the former Royal Family or of M. Venzielos is forbidden; but any of the expelled politicians who cares to stand against General Pangalos for the Presidency will obtain leave to quit the island where he will otherwise be detained over the elections. It will be of interest to see whether this act of grace produces fourteen or more candidates for the post of President, who is to be elected by plebiscite.

An Electoral Innovation.

In the last fortnight of the life of the present Roumanian Parliament the Government has submitted a new electoral law, which has certainly the merit of novelty. It is proposed in the draft measure that any party securing one-third of the total votes polled in the country should take sixty-five per cent. of the seats, and leave the balance to be divided proportionally among the other parties. If a party secures two-thirds of the votes, it shall be given ninety per cent. of the seats. The idea is apparently to secure the stability of the Government in a country where political parties or groups are numerous, and to prevent the trying experience through which France is now passing in an attempt to secure a majority for the Government of the day. The Opposition has stoutly challenged the proposal, but seems to be opposed not so much to the actual principle, as to the mathematics of it. Thus the Government is said to have expressed its readiness to concede forty per cent. as the share entitling the successful party to 65 per cent. of the seats; but the Opposition according to one report will hold out for a percentage of fifty-one.

BIRTHDAY OF REZA SHAH PAHLAVI.

A reception was held at the Persian Legation on March 15 by the Chargé d'Affaires, Prince Nadir Mirza Arasteh, in honour of the anniversary of the birthday of H.I.M. Reza Shah Pahlavi. Throughout the afternoon there was a large attendance, which included the members of the Diplomatic Corps and representatives of the Government. In the morning Major-General Sir John Hanbury-Williams, Marshall of the Diplomatic Corps, called upon Prince Arasteh to request him to convey to H.I.M. Reza Shah Pahlavi the greetings of King George on the occasion of the Shah's birthday. This message was telegraphed during the day to Teheran. Among others present were Sir William and Lady Joynson-Hicks, Sir Charles Greenway, Sir Arnold Wilson, Sir Alfred and Lady Mond, Sir Hugh and Lady Barnes, Sir Harry and Lady Foster, Sir Atul Chatterjee, Mrs. Stanley Baldwin, Mrs. Amery, Mr. Ernest Barry, Sir Edward and Lady Boyle, Dowager Lady Boyle, Lt.-Colonel F. P. Cockerell, Captain and Mrs. C. K. Greenway, Mr. G. Keeling, Major H. E. Spencer, and many others.

A FUND FOR BULGARIAN REFUGEES.

A "Cuisine de Lait" has arrived in Sofia, the gift of the Internationale de Secours Aux Enfants" to the "Union de Secours Aux Enfants en Bulgarie," and has been installed at the "Jasli," the intention being to distribute milk to babies and mothers in the poorest districts.

Lady Muir's private fund will be devoted to the starting of this branch, and the purchase of milk for sterilisation (see last week's issue). The total contributions had reached £52 1s. 6d. on March 5. Since: Kenneth Ledward, Esq., £1; Mrs. Hancock, 10s.; Mrs. James Mitchell, £3; Total, March 14, £56 11s. 6d.

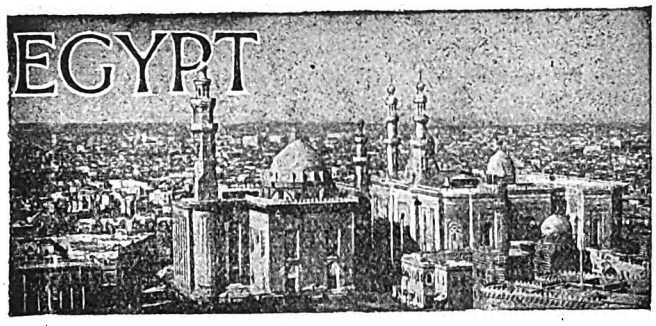
FRANCE AND THE LEAGUE.

There is nothing wrong with the League of Nations either in regard to the conception or as far as its constitution is concerned. The trouble, of course, is with some of the States that are members of it. Locarno was merely an adaptation of the idea underlying the League, and from the moment when the Pact was signed, France has schemed hard to stultify it, thereby showing that she can neither appreciate the spirit that lies behind the League idea, nor would she approve of that spirit, if she could understand it. Hence the trouble in Geneva, which for the past week has been a seething cauldron of intrigue, self-seeking and all uncharitableness. At Locarno it was decided that Germany should be invited to enter the League of Nations. Once admitted to the League, she would naturally become a permanent member of the Council—a position tacitly reserved for Great Powers. Solely with the object of putting a spoke in Germany's wheel, after she had made a pretence of giving her the right hand of friendship, France proceeded to go behind the Locarno spirit and intrigued to obtain a permanent place on the Council for her *protégé*, Poland, as a make-weight to the admission of Germany. The device used by M. Briand to cloak the dishonesty of this move for the British Government's benefit, it is reported, was to represent that, as the Eastern question in which Poland was involved was still unsettled, it was invidious for France to have to stand up alone for her ally against Germany, and that the difficulty could be overcome, if Germany and Poland could settle their differences and learn to work together, in the Council. No harm would have been done, if the matter had been left at that stage, until the League met and all the pros and cons could be debated in public. That, however, was, apparently, not France's intention, for intrigue had already been set on foot with a view to committing the Members of the League beforehand to support of the French view. When, therefore, the delegates arrived at Geneva, they were already floundering hopelessly in the maelstrom of national rivalries, which may have done credit to French diplomacy, but was a disgrace to the nations and the very antithesis of the purpose that the League was meant to serve.



The essence of the League of Nations was that it was a gathering of States who wished to record their condemnation of the methods and policy of Imperial Germany and to create a community of interest among nations capable of behaving correctly one to another, that would be proof against the machinations and ambitions of any evilly disposed State. When the time came for Germany to qualify for admission, she was to be admitted to a body that commanded her instinctive respect. The action of France has degraded the League to the level of a French Chamber, and, if Germany has not turned over a new leaf since 1914, it will have convinced her of the futility of attempting to do so. When curs are scrapping in the street, it takes a dog of breeding to hold itself aloof. If post-War Germany has acquired what Imperial Germany could never hope to possess, a national miracle will have been accomplished. In the circumstances it must be a debatable question whether the continued existence of the League of Nations will promote or endanger peace. Each successive meeting will tend to accentuate the difference between those nations who know how to behave and those who do not. The existence of the former body will be a continued incentive to the latter to strengthen their following. Without a League of Nations France might not feel called upon to intrigue with Brazil and other South American republics for their interference in the affairs of Europe, and the absence of meetings among the nations might allow the passions so successfully aroused for the present Geneva conference time to die out.

The League, we doubt not, will continue, and the work of leavening it with honourable motives, fair play and disinterestedness must be undertaken by those who believe that the world can yet be made better than it was before 1914. Not the least part of France's folly is that she encourages Germany to suppose that there is a desire on Great Britain's part, which it may be worth trying to stimulate, to take sides with the Germans against the rest of Europe. No such desire exists; on the contrary, it is distasteful to British opinion to find that an ally who stood shoulder to shoulder with the British in that terrible ordeal of the War should at the end of it deliberately pick up Germany's mantle of chronic troubler of the world's peaceful progress, when it was hoped not only that Germany had discarded it, but also that it had been lost for ever in the history of the nations. France, however, has picked it up, and is looking round the world for support in her action of donning it. The excuse given is that her danger remains the same, and she complains that Great Britain, thanks to her insular position, is prevented from appreciating this fact. The answer to this charge is that an elaborate machinery was devised to eliminate the danger, and it would have been completely effective, if France had allowed herself to make it so. She has never been willing to do this; but from the first has played selfishly for her own hand, going behind the back of the League of Nations in her alliances with Poland and Czecho-Slovakia. The upshot of this policy has been revealed so unmistakably at Geneva this last week, that it is to be hoped that smaller States will be warned in time and will not lend themselves to setting back the hands of the clock for France's sake. We do not ignore the nightmare of fear that the presence of a potentially strong Germany creates for them; but their choice is between belonging on the one hand to a League which offers them ninety-five, if not a hundred, per cent. security against any possible danger, and on the other hand being a member of a group which deliberately incurs risk and can never hope to achieve more than a fifty per cent. efficiency to meet it. When a minor Power finds time to look at the position in this light, there can be little doubt as to its decision, if it is still free to act according to its own interest. For this reason the trouble at Geneva may prove a blessing in disguise; for if such bad blood can be raised, as a result of France's action, over an academic point such as a permanent seat on the Council, it is certain that over any real controversy Europe will be plunged again in war, if a sufficient number of States can be found to link their destinies with France.

The Near and Middle East*

From Our Own Correspondents.

Cairo, March 6.

The Anglican Cathedral.

The appeal for funds for the Cathedral Church, which is to take the place of All Saints', received a most promising send-off on Tuesday last, when the High Commissioner addressed a very representative gathering of the Anglican community at the Residency.

Lord Lloyd pointed out that Cairo was not only the capital of Egypt, but also the capital of the diocese. All Saints', which had owed its origin to a visit paid by the late King Edward to Cairo, had been built as long ago as the early 'sixties, before there was an idea of an Occupation and still longer before the Bishopric of Egypt was created. No one could say to-day what the permanent Anglican community in Egypt would be in the future, but the numbers at present in the country were still large enough to justify the proposal now before them. We must be true to the traditions which had prompted our construction of churches throughout India and which had animated those who had erected All Saints' at a time when the Anglican community in Egypt was very much smaller than it was to-day. We must remember that we were living in a country where what we did mattered, where other Churches had their great shrines and where we, who had done so much and had been so much in this land, had no Cathedral Church for our Bishop and no central rallying place for our creed. Since the old All Saints' had had to be demolished, owing to the dangerous condition of its foundations and its site had become unsuitable owing to the busy locality with its noisy streets that had grown up round it, the opportunity presented by the necessity for the building of a new Church, should be taken to erect an edifice, which would be an outward and visible expression to the world of what our religion meant to us and not only a shrine for the memorials, with which half a century of worship had surrounded the old fabric, but a memorial Church to the many thousands from all over the Empire who in this area had laid down their lives for the ideals which our Church represented.

The High Commissioner's address was convincing and there seems little doubt that the appeal which he so eloquently supported will receive the response it deserves. The total cost of the new Cathedral is estimated at £E113,000. Of this £E83,000 has been received from subscriptions and the sale of the old site, and the appeal is now made for the balance of £E30,000 which is needed before the scheme can be put into execution.

The Mixed Courts' Jubilee.

The Jubilee of the Mixed Courts was celebrated last Saturday with fitting ceremony at Alexandria. The speakers at the morning celebration all spoke of the success which had attended the working of these International Courts during the fifty years of their existence, success all the more remarkable in consideration of the heterogeneous composition and the conflicting national interests of the various judges. The experience of the Mixed Courts only serves to show how possible it is for representatives of the nations of the world to work together in close harmony, and should, as a local English writer points out, put courage into the hearts of those who sometimes despair of any successful future for the League of Nations.

A Public Spirited Journalist.

One has so often criticised the people of this country for their lack of public spirit and moral courage that it is only fair that when an exception to this rule presents itself one should draw attention to it. Such an exception is the case of Amine Bey El Rafei, Editor-Proprietor of *Al Akhbar*. A member of the Nationalist party and always a bold writer, this journalist has stood out amongst his contemporaries for an independence of policy that, considering all the circumstances of the Egyptian political situation, has been nothing short of remarkable.

Some little time ago mutual interests brought about an amalgamation of the Nationalist organ *El Lewa El Masri* with *Al Akhbar* with Amine Bey El Rafei as editor-in-chief. Amine Bey has throughout been a supporter of the theory that the dissolution in March 1925 was illegal and that the Deputies still enjoyed their mandate, and it was to a great extent thanks to his energy that the memorable meeting was held on November 21 last.

At the recent Congress he strongly opposed the proposal to participate in the elections on the grounds that the old Chamber was still, technically speaking, in existence. And failing to carry his point at the meeting he continued to combat the decision in the columns of his paper.

This did not suit the Nationalist Party, who adhered to the decision taken at the Congress. Called upon to drop his opposition and to bow to the policy of the party, Amine Bey categorically refused. The Nationalist party then decided to sever their connection with *Al Akhbar* and to publish their own organ separately. This deprived him of Nationalist financial support of which he was in need, but Amine Bey preferred suspending publication of his paper to surrendering on a point which he considered to be of vital national interest, and for the time being *Al Akhbar* has ceased to appear. A finer example of self-sacrifice and public spirit for patriotic motives could not well be found in any other country.

Industrial and Agricultural Exhibition.

The Industrial and Agricultural Exhibition now being held here is a distinct advance on the last one, held in 1913. The progress made by the local industries in leather work, furniture-making, silk and woollen manufactures,

is most remarkable, and the agricultural exhibits, particularly of animals, are excellent. A number of the British firms working in the country have exhibits, the most striking being those in the engineering section where the more important are the Associated British Manufacturers Limited, whose very fine display has gained for them one of the gold medals; Messrs Allen Alderson and Co., Ltd., Messrs. Thomas Cook and Son, Ltd., The Eastern Automobiles Supplies and Transport Company; The Anglo-Persian Oil Company; Messrs Thornycroft, The Egyptian Engineering Stores; Messrs. Mosseri Curiel and Co.

For some amazing reason, the local and the European Press were not invited to the opening ceremony while the representatives of some of the leading British papers were not handed their tickets until three days after the opening. In the circumstances, therefore, it can be understood why no references to the inauguration appeared in the British Press and why such notices, as now are published, merely mention the British exhibits.

ROUMANIA.

Bucharest, March 10.

The Political Situation.

The political situation on the eve of the general elections appears to contain elements of trouble, and it has not been improved by the Bill for electoral reform which was placed on the table of the Chamber of Deputies last week by the Parliamentary Committee charged with giving it its final form.

The main aim of this Bill is evidently to secure a strong majority for any Government elected. The procedure suggested is the following. The total votes for the whole country are counted, and whichever party has secured a majority of the votes, is considered the majority party. Any party securing one third of the votes, if no other party has so many, is entitled to 65 per cent of the seats in Parliament and any party securing two-thirds of the votes is entitled to 90 per cent. of the seats in Parliament. Thus the opposition is bound to be a weak one whatever happens. In view of the voting methods adopted in the rural communes, it is anticipated that the Government Party, especially if that be the Liberal Party, will be in a strong position to have itself re-elected. The feeling caused in the Opposition by the introduction of this measure has been so violent and has led to such scenes in the Chamber that during the sitting yesterday the Chamber was surrounded by a force of 600 soldiers.

It is expected that the next few weeks will bring interesting developments. In the meantime the health of M. Ion Bratiau, the Prime Minister, is causing considerable anxiety to his friends.

University Anti-Semitism.

The anti-Jewish agitations of the University students still continue and have taken the form of some noisy demonstrations, and a general strike and boycott of the lectures on the part of the agitators. Patrols of soldiers now guard the University and other public educational buildings, causing considerable irritation to the general public.

PERSIA.

Teheran, February 22.

The Soviet and North Persia.

The outstanding item of interest and the absorbing topic of conversation since the beginning of the month has been the embargo which the Soviet Government has placed on the import of all Persian goods with the exception of cotton, an action which has practically paralysed trade in North Persia and created an exceedingly grave economic situation. Trade with this country is a monopoly of Soviet State trading organisations, and this action, which is stated by the Russians to have been taken solely in the economic interests of their country and is due to no unfriendly motive towards Persia, is nevertheless popularly believed here to be in the nature of bringing pressure to bear on the Persian Government and forcing their hand with regard to the passing by the Mejliss of the Bill, submitted by the Cabinet, regarding the important Caspian Sea fisheries, the concession for which, in conjunction with the Persian Government, the Russians are very anxious to secure.

The Bill, which provides for the working of the fisheries (the concession for which, granted some years before the War to Lianosoff, it is maintained by some, has not since been definitely cancelled) by the Persian and Russian Governments, in equal proportions, the latter paying an annual sum on account of royalties and a share in the net profits, would entail the immigration of large numbers of Bolshevist workmen and others, at the various ports on the Caspian Sea, who would presumably, in the natural course of events, carry on intensive Red propaganda on Persian soil. This is one of the principal objections to the Bill, another being the fact that the amount of the necessary capital is not laid down but left to be decided on later, and the Persians fear that the Soviet may make this such a high figure as to make their contribution of a similar amount impossible.

The Bill was submitted to the Mejliss for discussion shortly before it dissolved, but was sent back to the Ministry of Public Works without a vote being taken. It was again brought before the House as an urgent measure on the last day of its session, but the Deputies' opposition, which had been stiffened by the Russians' action in prohibiting Persian imports, was maintained, and after the requisite number of members to form a quorum had been hastily got together (it was a religious holiday, so most of them were absent) the matter was debated and talked out till closing time, and was therefore referred to the next term of the Mejliss.

The Government have, of course, been receiving numbers of telegrams from merchants all over the country protesting against the Russians' action, and representations have been made to the Russian Ambassador, who assured the Prime Minister that he was doing all he could to minimise the naturally serious effect on Persian trade of the embargo, which he said would be removed as soon as the economic interests of his country permitted it.

The evening of the day on which the Mejliss was dissolved, the Cabinet tendered their resignation to the Shah, feeling that they had lost the confidence of the people, but H.M. refused to accept it, and instructed the Premier to carry on.

The Late Meiliss.

Before its dissolution the fifth Mejliss, whose labours are praised in the local Press as having accomplished more than any of its predecessors, passed several important Bills, among them the Railway Bill, which I outlined in a previous letter; the five years' Concession to the Junkers

Company for an aerial service linking up Persia with the existing air routes via Enzeli (now called Pahlavi) and Baku; Bushire on the Persian Gulf, and Khanikin on the Mesopotamian frontier. The Company undertakes to carry the Government mails on each of these lines once a week, so that the times at present taken by the mails to and from Europe and India should be considerably lessened. Another Bill passed was one abolishing all road tolls and taxes throughout the country, which came into force on the 17th inst. This should tend to lower the cost of transport. The Military Conscription Bill was also passed, and this will, it is understood, apply to all men of 21 years old, of which half are to be drawn by lot from 12 centres, which should add some 24,000 men to the strength of the standing Army.

A Royal Decree was published a few days ago, addressed to the Prime Minister, urging dispatch in the elections for the next Mejliss, and warning all Government officials, under pain of severe penalties, not to interfere with them in any way, as they must be carried out with complete freedom. Those Bills which it is intended to lay before the next Assembly must be drawn up at once so as to be ready to be submitted as soon as it meets; especially the Budget for the coming year, in which due provision must be made for the expansion of the Army by compulsory military service; public hygiene; the introduction and promotion of sports and games; economic development; the construction and maintenance of roads with a view to improving the present means of transport; improvement in trade and agriculture; the spread of education, and the important question of judicial reform. An interesting feature in the above Decree is the new Shah's allusion to the encouragement of games, which is a healthy sign, and sports, which ten years ago were practically unknown, now form part of the national life of the youth of Persia. A striking instance of the new sporting spirit which is springing up in the country was furnished a short time ago during a football match between a British and a Persian team. The British, who had been awarded a penalty kick but who doubted the correctness of the referee's decision and did not wish to benefit by it, intentionally missed the shot at goal. Shortly afterwards a penalty kick was given to the Persians, who showed their appreciation of their opponents' sporting action by following suit and deliberately kicking the ball behind instead of shooting at goal.

The Capital's Food Supply.

Owing to the recent heavy snowfalls which have periodically blocked the mountain passes and closed the roads, thus interrupting communications with the Capital, supplies of wheat and foodstuffs purchased in India and Russia, which are being rushed up in motor lorries from the Mesopotamian frontier and the Caspian, have been delayed, and the bread question is becoming somewhat serious and the quality of the bread rapidly deteriorating. The Alimentation Service is, however, devoting all its energies towards securing the food supply of the town, and it is hoped that the situation will therefore never become acute, and that with the better weather which appears to be setting in, supplies will continue to arrive regularly and will suffice to tide the population over the difficult time until the next harvest, which in consequence of plentiful falls of rain and snow should be well up to the average this year. The Administrator-General of the Finances, in his twelfth quarterly report recently published, lays particular stress on the serious shortage of foodstuffs consequent on last year's scanty harvest, and mentions that the Alimentation Service have taken steps to bring in 202,000 kharvars (about 57,000 tons) to supply the total shortage of 190,000 kharvars, and leave a small balance in hand, until the next crops are available. Owing to the bad weather and the fact that all motor transport has been commandeered by the Alimentation Service, to which the Government has subordinated all other public services, the mails, both local and foreign, have been considerably delayed and held up, and during the last month or more only one lot of post has reached Teheran from Europe, three weeks' mails being then delivered at the same time. A good idea of the delays which took place may be gathered by the fact that one mail from Kazvin took nine days to reach Teheran—a distance of some 90 miles!

General News.

The date of the Coronation has been fixed for April 25, and four days will be devoted to the festivities, which will be on a fairly grand scale, judging by the fact that Parliament recently voted a sum of nearly £25,000 in this connexion.

Presumably in view of the approaching visit here of the three delegates of the League of Nations to study the question of opium cultivation in Persia, an "Anti-Opium Society" has been formed with Mirza Morteza Khan Bayat, the Minister of Finance, as Chairman.

M. Bonzon, who has been French Minister here for the past two years, left a week ago, having been appointed to the Residency in Tunis.

JEWS AND MOSLEMS.

Count Léon Ostrorog delivered an address on "Jews and Moslems" to the Anglo-Palestinian Club at Jew's College, Guildford Street, W.C.1., last Sunday. Sir Wyndham Deedes, C.M.G., D.S.O., presided.

Count Ostrorog regarded Jews and Moslems as close cousins, and made a strong appeal to Jews to take up the study of Moslem history and literature for the better understanding of Islam. Hatred was ever the outcome of ignorance, but knowledge brought in its train love and friendship. A true Orientalist had never been known to hate the Moslems, neither had there ever existed a Hebrew scholar who was an anti-Semite. The speaker was convinced that once the Moslems came to realise that Jews were taking an interest in their history and laws, they would reciprocate by studying the history of the Jews, and the knowledge thus gained on both sides would help to clear away any misunderstandings or bad feelings which might have existed in the past.

THE MOSUL FRONTIER.

Last week at the Æolian Hall, Mr. H. I. Lloyd lectured to the Royal Geographical Society upon "The Geography of the Mosul Frontier," Dr. D. G. Hogarth, the President, being in the Chair. The lecturer began by explaining in detail the nature of the Mosul vilayet, defining the progress from the Arab lowlands in the West up to the steppe and finally to the mountainous Kurdish and Assyrian country in the north—this latter country extending on the Persian side down, in the Suleimani district, to within sixty miles of Mosul itself. He laid stress on what it would have meant to Southern Iraq had the Turkish claim to the retrocession of the entire northern vilayet been allowed. On the West, proceeded the lecturer, the boundary of Iraq with French mandated Syria was not finally drawn, there being only working arrangements (as opposed to treaty fixations) in regard to the administration of the Jebel Sinjar and of Albu Kemal; but the French had been very accommodating, and there was little trouble to fear on that border. Turning to the north, Mr. Lloyd explained fully the nature of the Brussels or Branting Line which the League of Nations had recently fixed as the boundary between Iraq and Turkey. That line, he claimed, while not an unfair and workable one in some respects, had certain disadvantages as compared with the line claimed by Sir Percy Cox at Constantinople and later by the British Government at Geneva. For one thing, the mountains which, by the British line, would have separated Turkey from Iraq, were so formidable that not only an invasion but also tribal raiding across them was an impossibility; for another, the Brussels Line divided tribes into two, thus creating administrative difficulties; and thirdly, the present boundary left out of Iraq the country of the Nestorian Assyrians, the Hakkiari tract. But since the Brussels Line had been accepted it was now imperative, contended Mr. Lloyd, that better maps of it should be prepared. Some of the British maps (on which the Turks always relied) were good, but still they contained numerous errors. For instance, villages which had been awarded to Iraq, such as Nervek and Nazur, were on the map north of the Brussels Line, whereas actually they were south of it. On this latter point General Laidoner, the Esthonian nominee of the League, had laid special emphasis. In conclusion the lecturer, after noting the characteristics of the nomad Kurds and of the Yezidis, asserted that the Mosul vilayet was an integral part of Iraq.

Numerous slides were shown to illustrate the nature of the northern frontier, particularly fine ones being exhibited of Zakho and of the Rowanduz gorge.

In the subsequent discussion, Sir Percy Cox lamented the apparent indifference on the part of Christendom towards the fate of the Assyrians, for the inclusion of whose country within Iraq the British Government had fought so hard but in vain. Sir Percy also paid a tribute to the devoted band of Englishmen (of whom the lecturer was one) who, after the War was over, sacrificed their prospects in the work of building up the young Iraq State.

Sir Arnold Wilson thought it a mistake to devote too much attention to the strategic side of the northern frontier, for it was obvious that an attack, if any attack unhappily came, would come from the north-west, that is, via Syria. Upon the nomad Kurds he remarked that the suggestion that they were a dying race because they had their winter and summer resorts in two States was one that he could not accept. It might mean that they would have to pay taxes to two States, but there was a sporting chance of their not having to pay any at all!

After Major Bovill and Squadron-Leader Grahame had spoken, the President reminded his audience that all this land of Kurdistan which had been under examination was once Assyria, and he asserted that the overthrow of Assyria had come, not from the north-west or west, but from the north. In congratulating the lecturer on his avoidance of contentious politics, he further suggested—*pace* Mr. Lloyd's quotations—that Lord Percy was a far better guide to Kurdistan than was Sir Mark Sykes.

PICTURES OF THE ADRIATIC.

Venice may be the pride of the Adriatic, but that it is not its only glory is to be seen in the exhibition of water-colours that Mr. Walter Tyndale is now showing at the Gallery of the Fine Art Society, New Bond Street. As is natural, the artist here devotes most of his pictures to the Guidecca, but it is pleasing to see that he has adventured into the too little known Eastern Adriatic. Thus he paints the Market at Split, the castle at Sibenik, and typical views of Cattaro and of Ragusa.

Mr. Tyndale's representations are pleasing enough in their lightsome joy, but they fail to excite the connoisseur who looks for difference in, say, the Italian and the Yugoslav parts of the coat. On the whole, the water-colourist is best when the human note is absent, as in "The Fosse at Cattaro" or in "The Ruins of Salona." But the exhibition is worth a visit by anyone who knows the quaint and abiding loveliness of this part of the world.

The month of Ramadan (the fasting month) commenced on March 15, and Eed Festival will be celebrated on April 14.

THE PLAMENATZ AFFAIR.

To the Editor of THE NEAR EAST AND INDIA.

Sir, I should be glad if you would give me the opportunity of making a few remarks in reference to the communication of your Liubliana Correspondent on the "Plamenatz affair," and as I know M. Plamenatz personally and intimately and have been an eye-witness of his operations during recent years, I hope you will permit me to endeavour to criticise certain statements contained in the article in question.

Your Correspondent affirms that Yovan Plamenatz was "the representative abroad of the King of Montenegro even after Montenegro herself had become an integral part of Yugoslavia." I should like to point out that Montenegro was never, and is not legally even at this time, a part of Yugoslavia. When the League of Nations was last solicited to decide this matter, a formal Note dated November 25, 1920, No. 20-65-6, leaves the question open in the following official statement:—

> "The question of the actual existence of an independent State of Montenegro has never been settled. At the Peace Conference in 1919 Montenegro was entered in the list of States which should take part in the negotiations, but no one was recognised as qualified to represent her.
>
> "M. Plamenatz, who signed the attached letter, represented the King of Montenegro. (This latter is an exile.) A Montenegrin Assembly called together in 1918 proclaimed his downfall and the Union with Yugoslavia. It is true it is alleged that the validity of this decision and even of the Mandate of the Assembly under Serbian pressure and surrounded by Serbian bayonets, is contested. It is true that opposition was manifested against the pure and simple annexation of Montenegro to the Yugoslav State. But it is impossible to measure the strength and appreciate the sincerity of the opinion expressed on all sides, and in the eyes of the Yugoslavs, Montenegro has become to-day an integral part of the Serb-Croat-Slovene Kingdom.
>
> "Without prejudging this question, it appears prudent not to admit Montenegro into the League, etc."

This question, therefore, in spite of the demand of Montenegro addressed to the League of Nations during their last session of 1925, is left, from the purely legal and international point of view, an open question. If it has not been revived actively within recent months, it may well be, that at a time like this, when peace and quiet are so much to be desired, a reiteration and revelation of the mass of criminal proceedings used during the War against the smallest of our Allies (Montenegro) would serve no useful purpose, and would only add to the existing difficulties still prevailing in these Balkan countries, which everyone desires rather to assuage than to excite. But it does not follow that there is not every reason to believe that the Montenegrin wound is still affecting the body of Centralist Yugoslavia, and one of the proofs of this lies in the fact that the Yugoslav Government, still thinking of the situation, does all in its power to bribe Yovan Plamenatz to desert the cause to which he was to all appearances devoted.

If Montenegro legally forms an integral part of Yugoslavia, Belgrade would have no anxiety to trouble about Yovan Plamenatz, who is not a man of any high intellectual value. He has clearly been won over by the Belgrade Government, in order to impress foreign countries with the elimination of one of King Nicolas' former Ministers.

The Montenegrin *emigrés* who are to be found in all countries (and their numbers are important) represent the intellectual *élite* which upheld Plamenatz until the moment when his designs became frankly treacherous. Since then he has been despised by the intellectuals, and finally is despised by all his fellow-countrymen. He has bowed to the Serbian Government, and accepted the proposal of Belgrade.

The demonstrations which took place in Montenegro recently against the nomination of Plamenatz as Minister at Prague are not, as your Liubliana Correspondent would seem to think, a protestation against an old Yugoslav enemy, but rather the expression of the anger of the Montenegrin people against a Montenegrin who has sold himself unworthily in face of a people who have for so many years placed their faith in his activities abroad, but who by this action has given satisfaction to their enemies at Belgrade, helping them to make it appear to the world that Montenegro was no longer dissatisfied or in revolt.

With regard to the sentence that even "the sons of King Nicolas have made friends with Belgrade," there are only two sons, the younger of whom is a young man of weak character, who has accepted a Generalship in the Serbian Army and certain pecuniary advantages, the only excuse for which conduct lies in the fact that all the personal and private property of the Royal Family of Montenegro has been annexed by Serbia, and the members of the Royal Family left destitute to their enemies, but why does not your Liubliana Correspondent point out the interesting fact that this young Prince of Montenegro who has been made a General in the Serbian Army, is the Prince who according to the Serbian statements against Montenegro was supposed to have entered into secret negotiations with the common enemy, Austria, during the War? This was a charge also made against King Nicolas, together with other charges equally untrue, yet this self-same Prince is now a General in the Serbian Army!

Furthermore, why does this gentleman forget to inform your readers that after the recent visit of King Alexander of Serbia to Montenegro, the people, as a protest, entirely refused to accept the decorations the King conferred upon them? (See the *Hrvat* of November 29, 1925, No. 1258.)

In conclusion, I should like to paraphrase the last paragraph of your Correspondent's article in this way:—Taken all round, however, the Yovan Plamenatz affair is mainly important as showing how fragile is the inner political life of Yugoslavia under the present highly centralised method of government, and how far it is from consolidation, when opposing tendencies must be met by obvious corruption, in the hope that they may give to the public an impression of State unity.—I am, etc.,

ALEX. DEVINE.

Northwood Park, Winchester, March 13.

[Our correspondent is one of many people in Great Britain who on sentimental grounds would like to see Montenegro as a separate State in a Yugoslav Federation. Events, however, have gone contrary to their warm-hearted aspiration, and to-day Montenegro is an integral part of the Kingdom of the Serbs, Croats, and Slovenes. In these circumstances foreign championship of the Montenegrin cause has to decide between two courses of action: (1) making the best of what has happened and encouraging the Montenegrins, by pooling their contribution to the upbuilding of the Yugoslav State, to work within the State for a degree of local autonomy that will satisfy their national *amour propre:* and (2) remaining a Die-Hard to the end of the chapter, and dubbing every Montenegrin who may adopt the first course a traitor to the cause. Mr. Devine, in our opinion, makes a mistake in plumping for the second course, if only for the fact that the Balkan peoples have never needed a stimulus for their hatreds, but have woefully lacked preachers of the gospel of peace, good will and common sense. No one, however, not even in Serbia, challenges the sincerity and disinterestedness of Mr. Devine's championship, and we could wish that arrangements could be made for him, in the company, say of two others, to pay a visit to Montenegro to satisfy himself how things really are in that province. ED.]

THE PROBLEM OF AFGHANISTAN.

A paper was read to the Central Asian Society on March 11, at 74, Grosvenor Street, on "The Problem of Afghanistan," General Thompson acting as lecturer, and General Sir Edmund Barrow being in the Chair. The writer of the paper emphasised the fact that the Russian menace to British India, which was such a feature of nineteenth century history, had been laid to rest in 1885, when the Tsarist troops halted at the borders of Afghanistan. After the Russian revolution of 1917, however, and the subsequent designs upon the breaking up of British imperial power in the East, the Soviet Government was casting eager eyes upon the integrity of of Afghanistan. It had, in spite of the fact that the tribes of Central Asia would have risen against it had they received any sort of outside help, founded the Republics of Turkmenistan, Usbegistan, and Tajikstan, and was now, both by direct propaganda and by the use of the influential weapon of commercial penetration, exerting the power obtained from the knowledge of the security of these newly founded States to get the brothers of the Turkomans, the Usbegs, and the Tajiks within the borders of Afghanistan to desert the Ameer and to come over to their side. Already they were building a railway to Tarmez, and their agents were hard at work in the interior of Afghanistan. In the south-west, on the Persian side, they might easily take Herat: in fact, it was quite possible that the Ameer might wake up one morning and find himself deprived of his northern and western provinces. In these circumstances it was essential that this propaganda should be countered. Afghanistan was now awake to newer things, and it was desirable that in the obtaining of the culture that was inevitably to be hers, Great Britain and not Russia should be the teacher.

In the subsequent discussion, Major Lewis, who had spent six months as Military Attaché at Kabul, remarked that although he was not an alarmist, the Communist propaganda was something to be very much feared. An advance by the Russians right up to the range of the Hindu Kush in Afghanistan was not an impossibility. For the 1885 boundary with Russia was the worst one conceivable, resting as it did on a river and on a desert, and moreover, dividing tribe from tribe. Should the Russians decide to advance to the mountains (but fifty miles from Kabul, of which thirty were easy to traverse) it was extremely doubtful whether the Ameer, who had trouble enough recently in suppressing the Khost rebellion, would be able to check them. There were two things that should be done by the British to clarify the situation: (1) Help the Ameer, who, if ignorant, was ambitious and anxious for the development of his country, in the matter of communications—especially in road making, upon which he was very keen; and (2) Set our own house in order in British India, by civilising the frontier with Afghanistan. The Khyber Railway was a beginning, but very much more remained to be done.

General Sir Raleigh Egerton spoke of the patriotism of the Afghan. The Turkoman, the Usbeg, and the Tajik within Afghanistan, of whose desertion to the Soviet there had been talk, was proud of the fact that he was called an Afghan, and would not lightly renounce this appellation. From the military point of view there was not a great deal to fear, on behalf of India, from Russia, and as for the commercial penetration, was not Great Britain pursuing that policy all over the world? The propaganda was another matter. In this connexion it was important to note that Russia was following two different policies—the policy of the U.S.S.R. and the policy of the Third International. These policies frequently clashed. The stimulation of the self-determination of small peoples (which Wilsonian doctrine had been the curse of the world) was proceeding side by side with an attempt to sap the power of the British in India as an imperial force. (If the Bolshevists wished to attack the capitalists in India, they would have to attack, not the British, but the Indian).

Major Routh, who was in Kabul as recently as last November, stated that communications with Afghanistan were being steadily laid, and developments in this connexion might be expected in the not too distant future; and he laid emphasis upon the present prestige of the British in Afghanistan, which was largely due to the personality of the Minister of Kabul, Sir Francis Humphreys. In this respect, Britain was a long way ahead of all other Europeans.

Colonel Stokes affirmed his belief that no amount of commercial penetration on our part, nor the making of communications on behalf of Afghanistan, could compensate for the disastrous policy which this country appeared to be pursuing towards the Mohammedan countries of the Middle East, Turkey, Persia, and Afghanistan. In these lands alone lay an effective barrier to the hereditary enemy of Russia. Instead of cultivating their friendship, the Foreign Office seemed to be deliberately flouting them, and he instanced the stationing of the British Ambassador at Constantinople instead of Angora. Were the amenities of Kabul any greater than those of Angora? The complaint that had been made about the Russo-Afghan border had been exactly repeated in the northern border of Iraq, and Turkey was still convinced, because the Kurds had been thus divided into halves, that Great Britain had yet designs upon the integrity of her country.

General Sir George MacMunn remarked on the fact that Britain was now in a much better position to help Afghanistan that she had ever been. He contrasted the time when we were by treaty responsible for the protection of Afghan frontiers with the present, when we were not. Years ago there was not in India a single motor lorry: now there are thousands of cars, workshops, and so on. There was only one way of countering Communist propaganda, and that was by counter propaganda. But of any positive policy of extending our influence in this part of the world there was no probability: we were just sitting tight and hoping for the best. There was no money for the purpose that had been suggested by Major Lewis.

In conclusion, Sir Edmund Barrow, expressed his disbelief in the existence of any great danger to Afghanistan from Russia.

THE WEEK AT HOME.

London, Tuesday Morning.

The Samuel Coal Report.

The long-heralded report of the Coal Commission has at last been published, and the general public is now endeavouring to make up its mind what chances really exist of its recommendations being accepted. For the Samuel document is, in nearly all its essentials, a Liberal document, as indeed might have been expected from a body of Liberal men. Happily, however, the Government of the day is not so stubbornly Conservative to refuse to consider the Samuel proposals, even if they do bear a striking likeness to the proposals of the Liberal Coal and Power scheme. The Prime Minister, in fact, has at once given a very good lead on the kind of attitude that should be observed towards these proposals: he lost no time in getting together masters and men, and it was at least encouraging to hear it said at that meeting by Mr. Herbert Smith, the miners' representative, that "between the three of us we may make a good job of it."

In the Report itself there appears to be nothing of a startling nature. From the point of view of the Government the tart comments upon the question of the prolongation of the subsidy to the coal industry may seem a little unintelligent. But with the general argument that the industry must be made to stand on its own feet, to whatever degree this involves State organisation and control, there can be little disagreement; although it all depends on the extent of such State supervision. The Samuel Report disapproves of the costly scheme of Tawney nationalisation, which was, it will be remembered, hastily suggested before the Commission by this Oxford don; its approval of nationalisation of any part of the industry is in fact cautiously worded. It does recommend the acquisition of mineral rights to afford the free development of our national resources; and it does approve the scheme whereby the miners might have a fuller partnership in the coal industry. A not unfair summary of the recommendations is that the masters should for a time forgo profits and the men for a time should forgo their present level of wages.

Its Reception.

By its very nature the Samuel Report could hardly arouse enthusiasm in the country, and certainly it has failed to do this. It is fundamentally what is called a "fair" document; that is, it discounts something of what is claimed for either side. Perhaps its most notable example of impartiality is to be found in its rejection of the suggestion that there has been "ca canny" among the miners. This upholding of the miners' name should at least do something to ensure the considered appreciation of the Report.

But there is in truth very little that will urge the country to go on in the coal industry by the methods that have served it in the past. There is no big imaginative scheme which might transform the industry—merely the diligent comparing and pruning down of the various ideas that were put before the Commission. All through one has the feeling that the Commissioners must above all justify the capitalist organisation which presumably was a cause of the present *impasse*. But the subject is not one for discussion except by the expert.

Britain and the Continent.

Sir Austen Chamberlain has been having a very bad Press in England during his absence at Geneva. With a few exceptions British journals appear to have been acting under orders that whatever else be said, whether it is to the detriment of England or not, one thing must not be done—an offending of Germany. It was curious to notice *The Times* among this motley throng, although that journal did have the grace or good sense to publish a strong letter last week pointing out that if there was one Power whose obstinacy threatened to wreck the League, it was the uncompromising Germany.

For myself, I confess that I can find no trace of that unanimity that is said to exist on the subject of Great Britain's standing firm by Germany's extremest demands. Among the noisy pacifists of our time there is, of course, infinite abuse of the Foreign Secretary's conduct at Geneva, but in more patriotic circles I find a good deal of sympathy with Sir Austen. It may be that the Foreign Secretary was wrong in making so much of Locarno (of which, as readers may remember, I wrote at the time that the real spirit underlying it was more like Fred Karno), but to suppose that he should deliberately range himself alongside our former enemies and a Power which by its very geographical position is bound to vote in accordance with German wishes, and against the whole of the older civilised world, was, to my mind at any rate, rather naïve and monstrously unfair.

In Great Britain there is in all matters appertaining to foreign politics and to the League very considerable haziness. In Great Britain consequently there is much more regret being shown at the diminishing of the League's prestige which has been manifested in the last few days. Among the better informed there is not very great fear that the League may be approaching its end: rather is anxiety expressed on the score that such a face-saving compromise may be effected that Great Britain will have earned the gratitude of no one but the sullen enmity of many. That, however, seems to be our perennial fate on the Continent.

Two-seater Taxicabs.

The Home Secretary has now consented to license two-seater taxicabs, and next week, it is said, they will be plying the London streets. The taxi-drivers of four-seaters are furious about the innovation. It is pointed out that many of the existing drivers have had to buy their cabs on the hire-purchase system for about £1,000, and the new man, who has to pay about £200 for a two-seater, will thus ruin many hundreds of the present owner-drivers. The two-seaters are to be driven at the rate of ninepence a mile, or a reduction of 25 per cent. on the obtaining system.

The crux of the matter seems to lie in the question whether or not the introduction of the two-seater will cause a revolution in the habits of the normal citizen. The poorer Londoner, unlike his brothers in Paris or New York, is not at present a cab user, but if the rates are brought down he might well become so. It is the theory of the four-seater owners that the ordinary

Londoner will never become a taxi user, that the taxi is and always will be for the "swell."

There is considerable controversy over the matter. For the Home Secretary's decision was given in the nature of an ultimatum: if the present owners did not reduce their fares in the way he had suggested, he would introduce the new vehicles. Naturally it will take some time before a sufficient number of the two-seaters can be brought on the streets to render some conciliatory steps on the part of the four-seaters inevitable, but it is the opinion of the Home Office, apparently, that but a small number of the more convenient cabs will very soon have the desired effect on the present monopolists.

A New Covent Garden?

Plans have been elaborated for the construction of a new Covent Garden Market, on the side of the Foundlings Hospital. The Beecham Trust, which, it will be recalled, bought the reformed Market from the Duke of Bedford, proposes to make a new market occupying twice the area of the present one and having a storage capacity four times as large. There are, if the scheme is realised, to be 150 shops as against the present 50, and the whole building, including the internal roads, is to be under one roof.

Whether all this grandiose plan will be fully worked out it is too early yet to say. There appears to be considerable opposition to it, and the chief concern to the public—the reduction of the prices in its fruits and vegetables—does not seem to have been discussed. One would think that a new convenient market instead of a smelly obsolete one would effect great economies, but one has seen no mention of the possibility of this.

The Notoriety of Cambridge.

Quite apart from the beautiful looks of its crew on the Thames, Cambridge University seems to be coming into unusual notoriety these days. The other day a celebrated scientist gave the unintelligent Press a good week's copy, and his case is not, I believe, finally settled yet. Now comes another and perhaps more worthy case. Mr. Shane Leslie, who is known for many things, but possibly best for his very readable book "The End of a Chapter," recently wrote a novel entitled "The Cantab." I have not read it, but apparently it contained certain passages that may or may not have been true enough of King's men of his day, but which were not in any case suited to the more tender tastes of modern times. Both the asceticism and the amatoriness therein displayed seem to have upset the robuster consciences of our time, and, indeed, Mr. Leslie has been so impressed by the justice of the criticisms that his book has provoked, that he has publicly apologised to the Roman Catholic Bishop who was its chief detractor and has withdrawn the novel from circulation. It is not every Cambridge man, one perceives, who is so foolish as to persist in his folly in face of superior criticism.

International Rugby.

The prophets were badly at sea on Saturday, for Wales had collected a fifteen which could and did beat Ireland on its merits. At this revival of Welsh Rugby most Englishmen appear to be surprised, but it is so genuine that already there are those who talk of the supremacy of the Principality next season. One is disappointed that Ireland could not keep up the high game which she had previously displayed against Scotland and England, but there can be no question that on Saturday she was beaten by a superior side. The problem now remains: can Scotland beat England at Twickenham next Saturday? If the great record is pulled down, Scotland will tie with Ireland for this year's championship, but if, as is more probable, England's luck holds, Ireland will be the champions of 1926.

The Modern Girl.

From silly time to silly time controversies arise among us on the subject of the modern girl, about whom, seemingly, there are only two opinions. Either she is degenerate, frivolous and unsexed, or else she is easily the compeer of anything that has been recorded in the past. There is, if one were to judge by what one reads, no middle view. Dr. Russell, for instance, has just said, at the Institute of Hygiene, that the modern girl is in effect a shocker. According to him, she keeps herself alive only by means of drugs and alcohol: she is a restless lover of pleasure, has a horror of boredom, and, in short, burns the candle at both end.

This abuse, on whatever observation it be founded, is, of course, just the kind of material on which our Press, ever eager in the defence of social liberty, loves to seize. It has poured undiluted scorn on the worthy Doctor, asserting that the modern girl, keen on games, dancing, prominence, independence, and the rest of it, is ineffably better, healthier and generally more desirable than her predecessors, who were either frumps or hypocrites or mere ornaments.

Into this eternal argument I am not yet such a fool as to rush. In one respect, however, possibly unheard of in these latter days, there can be little doubt that the modern girl is streets behind her mother. I refer to her manners. Look, for instance, at the conduct of the young girl in restaurants. Who has not seen her take out her vanity case and make up her face even in the course of a meal? And this often occurs—the power puff is flourished over the food of her next-door neighbour. I am told that, too, there are ladies' clubs in which a communal lipstick is the thing. *Mon Dieu!* as a famous Duke remarked when he was told that the bourgeois had to use their own table napkins more than once.

Alter Ego.

ASSYRIAN RELIEF FUND.

The Lady Surma, who sailed in the Aquitania on March 10 for New York in order to place the needs of the Assyrian Relief Fund before the American and Canadian peoples, was entertained the previous day by a committee of the Fund at a farewell luncheon in Whitehall Place. Bishop Gore took the Chair, and among those present were Mar Shimun, the Assyrian Patriarch, Dr. Scott Lidgett, Dr. Kennedy, Canon Douglas, the Rev. H. Buxton, Mr. Watson, Treasurer of the Save the Children Fund, the Rev. M. G. Haigh, the Rev. R. M. French, and the Rev. W. R. Corbould.

Shereef Ali Haidar Pasha arrived in Beyrout on March 11 from Constantinople. He is proceeding to Mecca via Cairo as soon as he recovers from an attack of influenza.

BOOK REVIEW.

MINORITIES IN TRANSYLVANIA.

"THE RELIGIOUS MINORITIES IN TRANSYLVANIA." Compiled by Louis C. Cornish, in Collaboration with the Commission. (London: Grant Richards, Ltd. 5s. net.)

In 1924 the American Committee on the Rights of Religious Minorities decided to send into Transylvania a Commission, to which the British affiliated Churches sent a delegate. This Commission arrived at Bucharest on June 20, and, after seeing various members of the Roumanian Government, proceeded to investigate conditions in Transylvania "on their own," in other words "they declined to be accompanied by Roumanian officials or interpreters." The results of these investigations were embodied in a memorandum submitted to the Roumanian Government, and this document with the Government's reply, which takes up each point *seriatim*, is published in this book. It cannot be said that either the memorandum or the official reply is particularly convincing. The Commission has compiled an elaborate record of alleged abuses, providing chapter and verse, where possible, of incidents which individually are for the most part rather petty, whatever impression their cumulative effect may produce, and the Government has replied with a denial, an explanation or a quibble. A single example may not fairly summarise the whole volume, but it illustrates the methods of the Commission, which seems to have used magnifying glasses rather than field glasses. Here is an example taken at random: "*Allegation by Commission.*—It is alleged that at Zalau, District of Salaj, the teacher of Roumanian language in the Reformed School was discharged by order of an Inspector on the ground of his Hungarian origin. *Reply of Government.*—At Zalau, Mr. Solymos is not authorised to give Roumanian lessons, not because he is a Hungarian, but because he does not sufficiently know it." In regard to the complaint that schools of the Reformed Church have been closed by Government order, the Government's reply regarding one school is as follows:—"Here there is a State school in the Maghiar language. The reformed religion priest is an irredentist, he opened a reformed church school in very bad conditions, in a room without air or light. In the School reigns a hostile spirit towards the State, there was a map in which even places in the old kingdom were marked as Maghiarised. The Priest excited his countrymen against the State school, telling them that only in the church school they can turn out decent men." The Commission, however, has the last word in the book: "To state that a Confessional School has been closed because of improper housing does not at all answer the question why the Government confiscated the excellent building and equipment belonging to the Confessional School and then turned the school out to seek such quarters as in its poverty it could secure, thus creating the conditions which it claims led to the closing of the school."

The Commission and the Committee that sent it meant well, no doubt; but everyone who knows anything about the history of South-Eastern Europe will realise that the way the Commission carried out its work was not likely to effect the purpose behind the investigation.

EFFICIENCY AND COMFORT ASSURED

NEWS IN BRIEF.

A Jewish Ladies' Country Club has been opened in Baghdad.

The Yugoslav Chamber has voted the Army and Navy Budget.

The Roumanian Government has decided that the legal term of the present Parliament expires on March 27.

The steamship Asia arrived at Corfu on March 9 with the members of the Order of St. John of Jerusalem on pilgrimage. The weather was perfect. The pilgrims made excursions to the Achilleion and elsewhere.

The Indian deputation which was sent to Hejaz to inquire into complaints against Ibn Saoud's administration arrived in Cairo last week. The deputation, after a local investigation of the objects and arrangements of the coming Caliphate Congress in Cairo, will return to India.

According to a message from Constantinople the Turkish Government is sending a special mission to Peking in order to establish political and commercial relations with China.

Lady Wilson, wife of Sir Leslie Wilson, Governor of Bombay, who has been seriously ill with dysentery for the past few weeks, left Bombay last Saturday for England. She is accompanied by the Governor as far as Aden. Sir Leslie Wilson will return to Bombay on March 26.

It is stated from Cairo that King Fuad is embarking in the yacht Mahroussa on May 28 or May 29 for Trieste *en route* to London. He will be the guest of the British Government. King Fuad will afterwards visit Paris, Rome, and Carlsbad, where he will take a cure of several weeks. He will be absent altogether about four months. King Fuad will not be accompanied by any Egyptian Cabinet Minister.

The Sofia Tribunal on March 9 passed sentence in the trial of the leaders of a revolutionary organisation which has its headquarters abroad. Death sentences were pronounced on, amongst others, Kosta Todoroff, Oboff, Nedelko, Athanassoff, Gheorgei Dimitroff, Christo Stoyanoff, Yaneff, Passin and Kolaroff. All the condemned men were excluded from the recent amnesty law, and are condemned *in contumaciam*, as they are living abroad. M. Zanko Bakaloff, the former Minister, was acquitted.

The Council of the League of Nations at Geneva last Thursday adopted two seperate resolutions introduced by Sweden. (1) Accepting the new Iraq Treaty laid down by the League of Nations last December; and (2) making the Brussels Line definite between Turkey and Iraq.

The Council left certain subsidiary questions, such as the future of the Kurds, Christians, and so on, to the general supervision of the Permanent Mandates Commission.

Mr. E. Hilton Young, M.P. (Chairman of the Royal Commission on Indian Currency and Finance), gave a luncheon at the House of Commons last Thursday for his colleagues to meet the Viceroy-designate, Lord Irwin. There were also present:—Mrs. Hilton Young, Sir Rajendranath and Lady Mookerjee, Sir Alexander and Lady Murray, Sir Maneckji and Lady Dadabhoy, Sir Reginald and Lady Mant, Professor Covajee and Mrs. Coyajee, Mr. and Mrs. W. E. Preston, Sir Norcot Warren, Sir Purshotamdas Thakurdas, Sir Henry Strakosch, Mr. G. H. Baxter, Mr. A. Ayangar, and Mr. G. E. Franey.

PERSONAL AND GENERAL.

TO-DAY

March 18, 1926 (New Style).
March 5, 1926 (Old Style).
Ramadan 4, 1344 A.H., of the Moslem Calendar.
Nisan 3, 5686, of the Jewish Calendar.

Prince and Princess Nicholas, of Greece, recently arrived at Cannes.

The Hon. Mrs. A. M. Meade is going for two months to Persia.

Lord and Lady Plunket will return shortly to 38, Upper Brook Street, from Egypt.

Sir Chartres Biron has returned to 28, Montpelier Square from Egypt.

Dr. Weizmann sailed last Sunday with his family from Marseilles for Palestine.

The Marquis and Marchioness of Linlithgow will return on March 22 to 29, Chesham Place from Egypt.

Sir T. Hall Caine embarked last Friday at Marseilles in the P. and O. s.s. Kaisar-i-Hind for Port Said.

Sir Robert and Lady Dunlop are returning to England in the steamship Rajputana, which left Bombay on Feb. 27.

The Rev. R. J. Campbell has returned to Brighton after his visit to Egypt and the Holy Land, much improved in health.

Colonel the Hon. Edward and Mrs. Wyndham left London last week for Egypt and will be away until the end of April.

The Right Hon. Sir Herbert Samuel and Lady Samuel left London last week for North Italy. Later Lady Samuel will visit Palestine.

Sir John Stavridi has returned to 33, Lennox Gardens, from Greece. Lady Stavridi is expected to return next week.

The Hon. Mrs. Harold Nicolson has arrived at Teheran and joined the Hon. Harold Nicolson, who is Counsellor of the British Legation there.

Lieutenant-General Sir John Shea, Adjutant-General of the Army in India, accompanied by Lady Shea and Miss Shea, sailed last Saturday from Bombay for England.

Lady Wellesley, who has been on a visit to Mrs. Colin Forbes-Adam in India, is a passenger in the P. and O. s.s. Rajputana, which is due to arrive at Tilbury this week from Bombay.

At the Congregation held at Cambridge University last Friday, Professor R. A. Nicholson was appointed a member of the Board of Electors to the Regius Professorship of Hebrew in the room of the late Professor Browne.

Sir Arthur Smith Woodward left England last Friday, accompanied by Lady Woodward, for a prolonged visit to Beyrout, Syria, where he will study and classify the collection of fossil fish in the local museum.

On the occasion of the Anniversary of the Birthday of King Fuad (March 26, 1868—Julhijja 2, 1284), Sesostris Sidarous Bey, Egyptian Chargé d'Affaires, is holding a reception on Friday, March 26, at Claridge's Hotel, from 4 to 6.30 p.m.

Mr. Haig Gudenian gave a violin recital last Thursday evening during a reception given by the Executive Committee of the Forum Club at 6-7, Grosvenor Place, W. The Roumanian Minister was among those who attended the reception.

Among the passengers in the P. and O. steamship Rawalpindi, which sailed for England last Saturday from Bombay, were Sir Archibald and Lady Birkmyre, Sir Gordon and Lady Fraser, Sir Ewart Greaves, Sir Malcolm and Lady Hogg, Sir John Maffey, Lady (Hugh) Stephenson, Sir Hugh Walmsley, and Sir Trevredyn Wynne.

A lecture on "Commercial Developments in Egypt" was given last Monday at the City of London College, White Street, Moorfields, E.C., by Mustapha El Sadek Bey, Consul for Egypt. Next Monday (March 22) at 5.30, a similar lecture on Turkey will be given by Nadji Bey, Commercial Attaché for Turkey. The lecture will be open to the public.

THE CHAMBER OF COMMERCE DINNER.

The farewell dinner to Lord Irwin, given last Thursday by the East Indian Section of the London Chamber of Commerce, was perhaps the most important in all the long series of entertainments to which the Viceroy-designate has been subjected. It stressed the vital fact, which is apt to be obscured in the turmoil of politics, that only on the sure foundation of sound finance and commercial prosperity rests the power of a country to advance, politically, materially, morally and spiritually. In a striking speech Sir Stephen Demetriadi, the President, dwelt on the paramount importance of India to British commerce: the sea-borne trade of India, he said, amounts to a quarter of the whole of that of Great Britain, who supplies her with more than half of her imports, to the annual value of nearly a hundred millions sterling, and receives from her a quarter of her exports. He spoke of the great industrial wealth that the enterprise and genius of British merchants had created in India, and of the vast extension that would surely follow from education—particularly in the matter of improvement of agriculture, the surest way of bringing greater prosperity to the peasant and a general amelioration of the material conditions of India's mighty population. For the solution of the many problems that beset those whose task it is to govern India, Britain must look, rather than to politics, to such an amelioration, of which modern agricultural methods are the key, and to the development of good commercial relationships, with the growth of the spirit of give and take that they entail. As to politics, he said that the golden rule is to encourage the free expression of opinion and to recognise the right to organise a common opinion into a common movement. Thanks to the essential sanity of humanity, no movement—unless artificially fostered by suppression—can succeed except it has worthy ends, and certainly not unless it is well organised: a condition that pre-supposes orderly minds, able to think clearly and to act promptly, of the type that a wisely governed State finds, or makes room for, in its own service. In India, we are witnessing the disintegration of non-co-operation—the unworthy and harmful appendage of a great movement: and the steady progress of the best political minds of India towards a helpful and progressive co-operation.

Lord Irwin spoke of the position that confronted Lord Reading five years ago: of the unpropitious atmosphere in which the Reforms had been launched, of political unrest finding malign and sinister expression in crime, of discouragement among British recruits for India, of the grave strain to which India's financial and economic resources had been subjected: and contrasted it with the much more hopeful state of affairs in which he was starting on his own great adventure. The two outstanding problems, education and agriculture, react upon each other, and here Government could do a great deal to help: in trade, direct action by Government was seldom advisable: it was very difficult to do good, but very easy to do great harm. The peace and good order offered by British rule were not only the best security for the progress and liberty of the peoples of India, but were no less the indispensable foundation of the commerce on which depended the livelihood of thousands of British workmen. The unity of British and Indian interests claimed from both the best service in their power: and the worst possible of all services was pessimism—the one unforgivable sin in which he warned not only his immediate audience, but the much wider public who will read his words, to have no part and to offer no encouragement. It was, perhaps, specially in relation to this that he entered a plea—the personal application of which to himself he admitted—for fair treatment to those in great positions such as that of a Viceroy: as they have to shoulder the blame when things go wrong, let them at least receive the credit when things go better.

Lord Irwin is assuredly no pessimist himself. It will be his unenviable fate to make a great number of speeches during the next five years, with a critical public, both English and Indian, ever on the watch to read into his words something more or less than they actually express. Some recent Viceroys have been eloquent and accomplished speakers, notably Lord Curzon and Lord Reading: but eloquence in public speaking is not a gift that carries a speaker so far, in India, as in some other countries of the world. What an Indian audience specially admires is sincerity—the expression of honest and transparent singleness of purpose, of kindly sympathy, breadth of vision, strength of conviction, of sober optimism that sees things as they are and is determined to make the best of them. All these qualities India will find, in full measure, in Lord Irwin: and to that great company of Britons who have given to India the best years of their lives—gladly acknowledging how richly they have been repaid—it is a matter of good omen that now, when it is perhaps of more immediate necessity, than it ever has been before, that England should give her very best men to India, an example has been set, in the highest place, that will give encouragement to every individual in the rank and file, both present and to come. There was one other incident of the dinner that was, perhaps, the most striking of all. When the President mentioned that the idea had been originally put forward by Sir Michael O'Dwyer, his name was received with an ovation that, in one's experience of similar occasions, was unique—with applause lasting for several minutes, much more hearty and spontaneous than any that had preceded it. One could not help finding, in this demonstration, something more than an expression of admiration for a popular and very distinguished servant of the Crown: one felt that it was intended to mark the feeling that an outstanding personality had been "let down" by the Government that he served so brilliantly and so faithfully—and, no less, the conviction that, in Lord Irwin, the servants of the Government of India have found a man who will not let them down.

CURRENT TOPICS.

"India To-Day."

The most striking thing about the Independent Labour Party's "Report on the Conditions in India" is that it has plagiarised the title of the latest missionary film on India; but, whereas the Christian missionaries confine their propaganda to the presentment of facts, the I.L.P. missionaries are bound by no such limitation. The greater part of the "Report" deals with theories of the usual more or less impracticable order: its "recommendations" include the immediate abdication of all British control of India, on familiar lines—that is to say, with only the sketchiest suggestion of what should replace it; but apparently with a limitation. The Report declares that the Indian Civil Service is, at present, "recruited largely from classes in sympathy with British capitalism"; from which it is perhaps, fair to infer that the I.L.P. would not object to the continuance of British recruiting for the I.C.S. provided that it was confined to "proletarian" sources of supply. We are told that it is the duty of the International Labour movement to help forward the organisation of the Indian workers, both political and industrial: that the All-India Trades Union Congress—a body which, as the I.L.P. are probably not aware, consists at present of a few self-elected "Labour leaders" without either influence or following—should be encouraged to affiliate to the International Federation: and that the Internationals might well consider the establishment of a Labour training college for the East, with its centre in India. This opens up an alluring vista of simultaneous examinations for the Indian Civil Service, to be conducted in England and India with the candidates strictly limited to those who have passed through Labour training colleges. It is possible that India might have something to say in the matter.

One of the "demands" put forward is that the British Government should agree to a Convention, appointed by the Legislative Assembly, to submit a scheme of self-government "for immediate adoption." This Convention should include adequate representation of the Indian workers and peasants, who, as the Report remarks, are not represented by the present members of the Legislatures. This being so, Education Acts must be immediately put into effect in order to enable the workers and peasants to form their own party. Apparently, therefore, not only the introduction of the Acts, but their effect as well, will be immediate: the immediately educated workers and peasants will thus be able to form an immediate party to be included in the immediate Convention and in the immediate self-government that will be set up by it. The unforgivable sin in the matter of India, as Lord Irwin said at the Chamber of Commerce dinner the other night, is pessimism. No one can accuse the Independent Labour Party of pessimism: before their cheery, if quite irresponsible, optimism, the faith that removes mountains fades into insignificance.

The "Walking Out" Policy.

The procedure adopted by the Swarajist members of the Legislative Assembly would hardly have deserved much attention, had it not been for the remarkable performance of Mr. Patel, the President of the Assembly. At the last annual session of the All-India National Congress, that body handed itself over, lock stock and barrel, to the Swarajists, so that the Congress Committee is now only the Committee of the Swaraj Party under another name. At the last meeting of the Congress Committee, held at Delhi during the first week in March, the Swaraj Party "obtained formal permission"—from themselves—to withdraw from the Legislatures: and, at that meeting, it was proposed that Mr. Patel should resign the Presidency of the Assembly; but the proposal was ultimately withdrawn. The reason for its withdrawal was, perhaps, a feeling that Mr. Patel could be more useful to the Swaraj Party—of which he was and is a member—if he remained where he was: and it may reasonably be presumed that Mr. Patel's action, after the departure from the House of the members whom he described as "the representatives of the people," was intended to give effect to that idea. As he appears now to have realised, not perhaps the error, but the impolicy of his methods, it will be charitable to say as little as possible about them; but it cannot be denied that his action has administered the gravest possible shock to the prospects of parliamentary evolution in India.

The other non-official members of the Assembly were naturally very indignant at hearing themselves not only denied recognition as "representatives of the people" but also branded with the familiar stigma of sycophancy, regularly levelled at anyone who attempts in any way to co-operate with Government, in Mr. Patel's statement that the House, lacking the Swaraj Party, would merely exist in order to register the decrees of the Executive Government. To them Mr. Patel, on reflection, made a half-hearted apology. To the Government he made no apology at all. When summarily adjourning the Assembly on March 8, he "advised the Government only to bring forward con-contentious business, lest he should adjourn the House *sine die* or refuse to put their motions, both such courses being within his power, and it being the duty of the Chair to see that the machinery under the Act was not abused to the prejudice of the people." In his "explanation," next day, he said "he felt that he should not have mentioned his powers or have said anything that might be construed as a threat to Government, but should have awaited developments before deciding on his course of action." In other words, he acknowledged that he had been foolish to expose his cards before playing his hand: but, at the same time, he expected Government to remember that, though he had picked up his hand again, those particular cards were still there.

The action of the Swaraj Party has a familiar ring about it. One remembers how Pooh-Bah accepted all the offices of State, "and the salaries attached to them"; and how he spoke of circumstances when it might be his duty "to hand himself over into his own custody as Commissioner of Police." Pundit Motilal Nehru, in his capacity as leader of the Swaraj Party in the Assembly, explained that his action was taken in obedience to his own "mandate" expressed through the All-India National Congress: and it is explained that he and his followers will remain in Delhi, will not resign their seats, and will continue to draw the allowances to which their membership of the House entitles them. The Swarajists found themselves on the horns of a dilemma: they must either throw out the budget, and with it the abolition of the cotton excise duty and of the opium traffic, or they must publicly admit the failure of their policy of obstruction. They have adopted their present course solely as an electioneering move, with their eyes on the general election of next November. Unable to escape from the dilemma in any reasonable way, Pandit Motilal Nehru takes refuge in futile imbecilities such as the announcement of the intention of his party to try and "devise those sanctions which alone can compel any Government to grant the demands of its people," coupled with a hint about "secret societies like those which troubled Bengal." It is, of course, true that the average Indian constituency is capable of anything: and they may even be found capable of returning Swarajist members who rely upon so preposterous a platform as this. But, even if they do, the final result is sure: and one may heartily agree with Sir Alexander Muddiman's prophecy—that those who had abstained from the first Assembly, and had entered the second with a policy of destruction but had stayed in it for two and a half years and were now making an empty gesture in a dying Parliament, would—those of them who succeeded in getting back—remain to serve their full time in the third.

The National Congress.

Mr. Jinnah, the leader of the Independent Party, put forward, in the Legislative Assembly on March 11, a demand for expediting the Statutory Inquiry into the working of the Reforms. His speech contained a number of interesting passages. In one of these, he expressly repudiated the nationalist amendment to the Government

Digitized by Google

resolution on the future of the reformed constitution, which he himself had assisted to pass last September—that amendment which Pandit Motilal Nehru, the Swarajist leader, had described as the absolute minimum of national demands, to which he had assented in response to Independent representations, though the Swaraj Party, if left to themselves, would have gone a good deal further. In another, Mr. Jinnah announced his acceptance of the preamble of the Government of India Act, which lays down that the time and method of progress shall be decided by the British Parliament—a decision that the Nationalists have, so far, resolutely refused to accept. In a third, he claimed that the co-operation demanded by the Secretary of State and the Viceroy is now being fully given "except by the Indian National Congress, which represents only itself, and numbers only 7,000 persons out of a population of 320 millions." Mr. Jinnah is credited with the desire to start a "Centre Party" in the Assembly, which shall combine moderate politicians of all shades of political opinion: and his speech may be taken as a public announcement of the platform that he proposes that it should adopt.

His remarks about the National Congress, apart from the fact that they indicate a definite break not only with it but with the Swarajists who control it, are particularly illuminating. It is only a little more than four years ago that, at the annual session of the Congress held at Ahmedabad in December 1921, a proposal was put forward for the immediate declaration of an independent United States of India, with the Congress as its national Parliament, on the model of the Sinn Fein "parallel Government" in Ireland. Mr. Gandhi, who was then about to launch his seven-day ultimatum at the Viceroy, opposed the resolution: the Congress, which had hailed the speech of its introducer with the greatest enthusiasm and, in the opinion of competent observers, would undoubtedly have passed it by an overwhelming majority if the voting had taken place before Mr. Gandhi's intervention, consented to accept the latter's direction: and the resolution was lost. But, even so, the National Congress remained the informal national parliament, and easily held its own against what was then beginning to be recognised as the growing counter-attraction of the Councils. The last four years have brought about a transformation that is full of promise for the future of India: to-day the Councils hold the field: as their power has grown that of the Congress has waned: until to-day it is nothing but a Swarajist Rump that is obliged to suffer the last indignity of hearing itself described, and quite accurately described, by the leading Nationalist politician of India outside the Swaraj Party, as representing approximately .00022 of the population of India. Four short years ago Mr .Gandhi and the National Congress were at the height of their power and claimed not only the readiness, but the power, to join battle with the Government of India on equal terms. To-day Mr. Gandhi is but the shadow of a name; and the National Congress is not even so much as that.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 25.

A Scene in the Council.

The Bengal Legislative Council indulged in a real "scene" a week ago, when five Extremist members defied the Chair and were suspended; the President, who takes the place of the Speaker in this country, is an Indian elected by the Council, and the inglorious five included Mr. J. M. Sen Gupta, the wearer of the "triple crown," being leader of the Swaraj Party and Mayor of Calcutta, and Mr. A. C. Banerjee again. The demonstration arose out of the decision of the President to admit an amendment which would have put the Swarajists on the prongs of a dilemma in regard to Mohammedan claims; and, as the whole of the Extremist Party left the Council in the wake of the disorderlies, there is little doubt that the demonstration was prearranged as a convenient way out of an awkward situation. The incident has been strongly commented upon by every section of the Press, except *Forward*, which is owned and run by the official Swaraj Party. One or two of the other Extremist organs have had the courage to condemn the participants wholeheartedly; but this did not prevent the setting down of a Resolution, backed by the five members who were suspended, to remove the President from his office for a breach of his power. The various inspired articles in the Press indicate that strenuous efforts had been made to induce the hotheads to think again; but nothing resulted, and the motion was debated at yesterday's meeting of the Council.

The Sorry Sequel.

Forward, on the eve of the debate, produced a rambling attack upon the Governor for having, as it said, interfered with a settlement under which the President would have apologised, after which similar apologies from the offenders would have followed; but the debate opened with a complete denial of the whole story by the President. Then followed a most sorry exhibition: and any doubt that might have remained as to Mr. Sen Gupta's unfitness to lead a party, much less a people, was removed when he proceeded to try to justify his behaviour. Fortunately for the good sense of the Independents, they voted against the motion, which was defeated by 72 votes to 57, the worst beating the Swarajists have had in Bengal in a straight division. Bengal schoolboys are very sensitive, and they would probably resent the suggestion that the whole display is schoolboyish to the last degree; not in the British sense, however, for it is impossible to imagine a collection of youths at Home so undisciplined and unbirched as to be completely insensible of their own folly. Responsible self-government seems a contradiction in terms in Bengal.

The New Parties and the Old Religions.

There are open signs that the Swaraj Party is not only losing strength as a Party, but is disintegrating in its elements. The bomb thrown by Sir Abdur Rahim certainly appears to have been what he afterwards claimed it to be, merely a clearing up of the facts as they existed "under the blanket"; the Mohammedan Party has been growing in strength and influence in all parts of the country, and there is undoubtedly an increase in the enthusiasm that greets the idea of Moslem unity; possibly the secular character of the new Turkish movement, and its separation from the Khilafat, have made Indian Moslems realise that the religious structure, which has been so great a power in Turkish politics in the past, will have to be reorganised in the light of a new state of affairs. The effect, in India at least, has been to strengthen the resentment against the Societies which have been attempting, for some years past, to convert Moslems to Hinduism. The natural organisation of communal life in India is completely bound up with religion: and there is little doubt that, if parliamentary institutions upon the Western model are to be continued here, in the ultimate organisation of Parties there will be a sharp cleavage between the Moslems and the various branches of Hindus.

"The Hollowness of the Swaraj Cry."

Babu Bepin Chandra Pal occupies a commanding position in political India, and is the acknowledged leader among the Indians who hold strong nationalist views. His weekly articles in the *Englishman* are more than straws which indicate the direction of the wind. The following note, headed as above, has particular significance at the present moment:—

"We are forced to recognise the hollowness of the cry for Swarai, at least on these outskirts of the Indian Empire. The Hindus of the North-West Frontier Pro-

Digitized by Google

vince, for instance, are dead opposed to the introduction of any manner of popular government in their Province. They desire the continuance of the present British autocracy, or the British bureaucracy, over them. Just as the Mohammedan minority in some other parts of the country do not desire Swaraj, or, in any case, did not desire it a few years ago, even so the Hindu minority are dead opposed to the introduction of any manner of popular administration among them. This shows that we have still to seize the fundamentals of modern democracy. The Hindus, where they are in a minority, do not want it lest it should hurt their particularistic communal or, more often indeed, their private and personal interests, which they have secured through their superior education and economic status. The Mohammedans do not desire Swaraj where they are in a hopeless minority. Among the Hindus, where caste feeling still dominates our social life, the Brahmins do not desire provincial autonomy because they fear that this will make the non-Brahmins the masters of the administrative machinery: and, where the so-called lower castes are in a very weak position, socially, educationally, and consequently economically, they too do not desire this thing which we call Swaraj, because of the same fear that the transference of political power to the educated minority, composed largely of the so-called higher castes, would make their lot worse than what it now is."

Assam Budget.

The Assam Budget has been introduced into the Legislative Council: and the Governor was able to refer with satisfaction to the continued improvement in the financial position of the Province, the estimates for next year showing a comparatively small deficit of nine lakhs only. The Governor referred in glowing terms to the work of Sir William Reid, who has recently retired, and he also commented upon the recent resolution in favour of the transfer of Sylhet to Bengal. He pointed out to his Council that they were undertaking a comprehensive and expensive educational programme, and that it would be impossible to carry this out if Sylhet was transferred. Knowing the great importance which is attached by Indians to the increase of educational facilities, it is easy to understand His Excellency's speech made a strong impression in favour of facing facts, rather than voting idly, at the order of Party wirepullers, without understanding in the least the inevitable consequences.

Indian Church Measure.

The Bishop of Calcutta met the European Association this week and endeavoured to justify the Indian Church Measure, which its framers appear to intend should secure for the Church of England in India a large measure of autonomy. The Bishop endeavoured to throw the responsibility for bringing forward the scheme upon a number of Synods; but he did not succeed in dispelling the prevalent idea that he is personally responsible for the reception and thrusting forward of the measure. Those who have resided or travelled in the East know the uneasiness that exists in the lay mind on many aspects of missionary enterprise: and there is no doubt that there is more than a little of the missionary spirit in many of those who wield power in the present ecclesiastical establishment. The Bishop was closely questioned: and it cannot be denied that he failed to remove the uneasiness, if not dislike, with which the measure is regarded by practically the whole of the British lay community.

Politics.

It is a pleasant sign of greater sanity, as well as an indication of the break-up of the Swaraj Party into its natural elements, that a Bill for the abolition of "Bengal Regulation Three"—the law that gives power to intern—has been rejected in the Legislative Assembly. In the Council of State a Resolution in favour of setting up the 1929 Commission at once, in order that a further instalment of self-government should be given, was also negatived: and, in this case, without being put to the vote. The Government spokesman was able to convince the House, without much difficulty, that there was certainly an insufficient display of good will towards the present Reforms to justify any further inquiry at the present time. The South African Government has done wisely in agreeing to consider the case of its Indian colonists before proceeding further with racial legislation. The Bengal Budget has been introduced, and the removal of what *Forward* calls the "iniquitous Meston contribution" has given universal satisfaction; the general financial outlook is distinctly satisfactory, and even extremist papers can find little to say against the Budget. A resolution has been passed by the Council to make physical training compulsory for all students in Bengal between the ages of twelve and eighteen; 63 per cent. of rejections on account of complete unfitness sounds very much like a C3 nation.

Men and Things.

It is announced that His Excellency the Governor is proceeding on leave for four months from June 10, and that Sir Hugh Stephenson will act during his absence. Sir Hugh is the Home Member in the present Government, and is a civilian with a distinguished record; it is understood that he is retiring next year, and his acting appointment will bring him universal congratulations. The first separate Railway Budget has been introduced into the Assembly, and it clearly indicates the wisdom of the separation of railway finances; the satisfactory results of the past year warrant cheaper fares and a reduction in coal freights; the electrification of the suburban railways of Calcutta, and the extension of the terminus from Sealdah to the centre of the city, are considered as practicable and likely to be undertaken in the near future. The Skeen Commission on Army Training continues its weary sittings, and it is now hearing the educational experts. The Governor, in attending the University Convocation, toyed with the idea of an increase in vernacular instruction not only in the schools but in the colleges.

The Trivial Round.

His Excellency gave a large garden party on Tuesday, at which everybody was present. Cricket is dying hard and the Calcutta team put up a brilliant score on Sunday last against the Mohammedans, Reggie Lagden, whose knee is troubling him again, hitting ten sixes and four fours in a lightning 87. The Spring Meeting was continued on Saturday and produced some close finishes, with things going rather in favour of the backers for a change. The principal tennis events at the moment are concerned with the competition between the Mills, which is now in full swing. The last paperchase has been won by the evergreen "Timothy George" Evers on "Freeman"; it has been a good season, and the last chase was run under almost perfect conditions. Hockey has commenced, and Calcutta, with Hosie as back, ought to have a good season. There is a distinct feeling of the approach of the hot weather as the passenger lists get longer and the Clubs less crowded; the fans have begun.

Markets.

Pending the decision on the question of further short time, the jute market has been inactive except for a small business in low grade jute. It has now been decided that the present agreement shall remain in force, and prices have sagged in consequence; similar remarks may be made in respect of the hessian market. In piece-goods, prices remained at round about previous levels, but demand has fallen off; this is expected to be only temporary and to be due to the holiday at the end of the week. The last tea sale here made a very satisfactory showing, and the rates were higher all round; reports from London, however, indicate a rather irregular and easier market; but the opinion here is that the slight reaction is ur-

From East to West

INDIAN CARPETS at WARINGS

AGRA — AMRITZAR — JEYPORE — KASHMIR

OUR Great Exhibition of Indian Carpets is now proceeding in the famous Rotunda.

For the magnificence of display, infinite variety of Indian designs and colourings, wide range of sizes and especially in the values offered, this Exhibition is without parallel.

Only by expert knowledge of the markets and our commanding position in the Carpet World is such a wonderful display made possible.

Specimen Sizes and Prices:—

5-ft. 1-in. x 5-ft. 1-in.	£1	18	6	10-ft. 4-in. x 7-ft. 2-in.	£5	15	0	13-ft. 8-in. x 12-ft. 5-in.	£13	2	6
8-ft. 2-in. x 5-ft. 2-in.	£3	4	6	10-ft. 5-in. x 9-ft. 1-in.	£7	7	0	14-ft. 10-in. x 10-ft. 1-in.	£11	11	0
8-ft. 10-in. x 6-ft. 2-in.	£4	5	0	10-ft. 7-in. x 9-ft. 2-in.	£7	10	0	15-ft. 1-in. x 12-ft. 3-in.	£14	5	0
9-ft. 0-in. x 6-ft. 3-in.	£4	7	6	11-ft. 0-in. x 8-ft. 3-in.	£7	0	0	15-ft. 3-in. x 10-ft. 2-in.	£12	2	6
9-ft. 11-in. x 7-ft. 2-in.	£5	11	6	11-ft. 1-in. x 11-ft. 0-in.	£9	10	0	14-ft. 11-in. x 9-ft. 0-in.	£10	10	0
10-ft. 0-in. x 8-ft 3-in.	£6	7	6	11-ft. 3-in. x 8-ft. 3-in.	£7	5	0	15-ft. 10-in. x 12-ft. 1-in.	£14	14	0
10-ft. 2-in. x 10-ft. 4-in.	£8	1	6	12-ft. 9-in. x 10-ft. 3-in.	£10	5	0	16-ft 5-in. x 12-ft. 7-in.	£16	0	0
10-ft. 3-in. x 9-ft. 3-in.	£7	7	0	12-ft. 11-in. x 9-ft. 3-in.	£9	5	0	17-ft. 11-in. x 12-ft. 2-in.	£16	16	0

A WIDE RANGE of FINE INDIAN and ANTIQUE CARPETS

In addition there are genuine antique carpets of Indian origin now practically non-existent outside museums or private collections.
Waring & Gillow however, have an exhibition of some fine specimens of the weavings of Agra, Amritzar, Jeypore and Kashmir, which will undoubtedly be of interest to those who admire the Indian weaving art at its best.

WARING & GILLOW LTD

164-182 OXFORD ST., LONDON, W.1.

Also at Manchester, Liverpool and Lancaster.

SUITABLE SIZES and COLOURS

The sizes of the carpets offered will practically meet every requirement.

The colourings will be in soft shades of rose, drab, biscuit and blue, suitable for drawing-rooms, reception rooms, bedrooms, etc., and in heavier tones of colours in red, blue and camel, suitable for dining-rooms, libraries, morning rooms, studies, etc.

Google

justified and not due to any change in the position of the market, for this at present looks considerably healthy; in consequence the set-back is likely to be only short-lived.

Calcutta's trade during January shows a considerable improvement over the figures for the preceding month in imports, the value rising from 599 to 841 lakhs; on the other hand, exports declined from 1,541 to 1,269 lakhs. A comparison of the figures for the corresponding period last year indicates a decrease in imports and exports by 57 and 89 lakhs respectively. It is interesting to note that cotton goods have made a refreshing recovery after the dull conditions in the previous months, and that they headed the list of principal imports.

In the stock markets the feature has been the strength of tea shares; but, apart from this, most departments have been dull with prices tending downwards. Jute shares have declined on the news of no further reduction in short time; but, as an exception, the more speculative issues have remained practically unchanged. Business in coal shares has been dull, and cottons have been almost neglected. The demand for tea shares has strengthened considerably, and there can be no doubt that the investing public have at last realised the satisfactory position in which the industry now finds itself. Rubbers opened rather better but, on the fall in the price of the commodity, any rises were lost and the market closes idle.

In the miscellaneous market, sound debentures continue to be inquired for, and Government securities have firmed up after a slight relapse at the beginning of the week.

Money has been tighter, and rates are now 4¾ per cent. for call and short notice. Exchange fell to 1s. 6⅛d., but recovered to 1s. 6 5-32d. at the close.

BOMBAY LETTER.

(From Our Own Correspondent.)

The Cotton Position.

The *The Times of India* is now publishing the active propaganda of the Mill Owners' Association on the subject of the Bombay cotton mill position, and I see that the *Financial Times* is also receiving letters from a correspondent at Delhi to much the same effect. Neither of these correspondents differ in any way from the views expressed in my letters except that, no doubt with a wider knowledge of the facts, they lay a great deal of stress on Japan's breaches of the Washington convention with regard to labour. I have not said much about this point, partly from ignorance, and partly because I doubt very much if an attack on the labour conditions of another country is likely to do us any good. The charge that another country is able to undercut us by intensive labour is not a very serious one, to my mind: if conditions there are in the least degree intolerable, they will presumably right themselves in the long run: and there are already signs that labour in the Japanese-owned mills in China, at any rate, is proving rebellious against the conditions imposed upon it. But, in an age when overwork is not the curse of the world, it seems to me to be better to find other ways of explaining the unfairness of Japanese competition: and that explanation has been to hand in the movements of exchange. Now that exchange is moving the other way, and the cotton excise has been finally removed by Sir Basil Blackett's Budget speech, I think we can reasonably hope that Japanese competition will not be so acute and that the Japanese will, in future, have only those advantages which (if indeed they exist), can be considered legitimate—their superior organisation and their superior labour. Personally, I consider that both these advantages can very easily be over-estimated, and I see no reason why Bombay should not in future hold its own against Japan. Now that we have finally got rid of our excise—which, as I have already pointed out, was a heavier burden than it looked, because the import duty was naturally only charged on that part of the Japanese output shipped to India—we have a very reasonable amount of protection in our favour: and, if the present measure is not sufficient, it is not easy to see what percentage would satisfy the mill-owners. Bombay ought to do very well henceforward, and it is to be hoped that there will be rather less inclination to abuse Japan in future.

Imperial Preference is, of course, a different thing altogether: and, if it is possible to introduce any legislation of that kind, it is to be hoped that we shall not be deterred by any threats of reprisals. Japan buys from India only what she requires, and she will not be able to do any harm to India by the imposition of import duties on the raw material that she needs.

Back Bay Development.

The chief cause of the trouble in connexion with the breakdown of the reclamation of the Back Bay area seems to me to be the extraordinary reticence of the officials concerned. They have consistently refused to allow any criticism of their methods, and they have consistently maintained an attitude of optimism until the facts were finally dragged to light.

The scheme has suffered throughout from an absurd degree of optimism over the ultimate results. Somebody is of course very much to blame for accepting the off-hand estimates of the engineers as to the capacity of the dredgers which were to fill in the area by suction. The engineers, however, appear to have made their estimate without reservation of any kind, and it is difficult for any layman to go against them, except on the general theory, known to such of us as have experimented with suction dredging on a small scale, that one can be pretty safe in doubling the estimated expenditure and halving the estimated output.

But where all the responsible people went wrong was in their estimate of returns: and they apparently calculated the value of an addition of 1,400 acres to the area of Bombay on the basis of the price paid for a few hundred square yards in the centre of the city. Almost everyone was alike in their estimates. Mr. Cowasji Jehangir, an exceedingly level-headed Minister, in a speech in Council, valued a certain area in Bombay at the "ridiculously low price of Rs. 500 per square yard." That is about £180,000 per acre. Sir Chimanlal Setalvad, a leading barrister and at that time Minister in charge, estimated in Council the profits of Back Bay as anything between thirty and fifty crores: and, though it must have been obvious that the total purchasing power of Bombay would not, in ordinary times, be sufficient to pay for the land even at a very much lower valuation than that, discussion of a reasonable kind was rendered impossible by the action of the opposition quite as much as of the Government.

So now Bombay is disappointed to find that the cost will be considerably higher and that the selling price will be very much lower than was anticipated: and, as in the case of the Back Bay Company sixty years ago, the failure to fulfil wildly extravagant promises has led to wildly extravagant talk. But the Back Bay Company, in spite of its failure, has left Bombay, enriched by Queen's Road and the Kennedy Sea Face, a different and a better place: and, of the present scheme, it is only fair to say that the addition of 1,400 acres to its area is worth a great deal of money.

Bombay is placed at the tip of a long narrow island not much more than two miles in width: and Bombay's expansion is limited to that narrow segment of a circle, whereas that of most cities of the world extends over the whole circumference, or at the worst (in the case of seaboard towns) over a full semi-circle: the area of the city is uncomfortably cramped at any time and, in periods of great prosperity like 1864 and 1920, it becomes dangerously inadequate.

If it were possible to regard Bombay as one great commercial concern, the Directors would, in 1920, have been amply justified in setting aside three million or five million out of their profits to provide for the amenities of their people by the reclamation of this area in Back Bay. That is impossible for a democratic Government: and a serious and almost unprecedented slump has overtaken the enterprise so completely that it now seems impossible that it

Digitized by Google

will be completed until, in due course, another wave of prosperity comes over Bombay. But it will be a very great pity if the failure, to secure fantastic estimates of profits, blasts for ever a far-sighted attempt to provide Bombay, even at considerable cost, with what will ultimately be a very necessary outlet for expansion.

LONDON CHAMBER OF COMMERCE FAREWELL DINNER TO LORD IRWIN.

The East India Section of the London Chamber of Commerce gave a farewell dinner to Lord Irwin, the Viceroy Designate of India, at the New Princes on March 11. The toast was proposed by Sir Stephen Demetriadi, the Chairman of the East India Section, who presided. His speech, and that of Lord Irwin in reply, are noticed elsewhere in this issue. Lord Southwark proposed the health of the Chairman, who replied: and Sir Michael O'Dwyer also spoke, in response to insistent calls by the company, reinforced, as Sir Michael said, by the command of one who could not be disobeyed—the Toastmaster.

Among the large an ddistinguished company present, 250 in number, the following were included:—

Lords Ampthill, Colwyn, Ebury, Erleigh, Hardinge, Meston, Olivier, St. John, Southwark: Sir Laming Worthington-Evans, Sir Philip Cunliffe-Lister: Sir Montague Barlow, Mr. Edward Shortt, Mr. Hilton Young: Major J. J. Astor, Mr. K. Mackay: Sir Percy Bates, Sir John Cargill, Sir Henry Cautley, Sir Charles Forbes-Leith, Sir A. Kay Muir, Sir John Power, Sir Felix Schuster, Sir Robert Williams, Sir Charles Yate: Sir John Hewett, Sir Charles Bayley, Sir Reginald Craddock, Sir Louis Dane, Sir Michael O'Dwyer, Sir William Vincent: Sir George Barnes, Sir Sydney Chapman, Sir Alexander Cobbe, Sir Arthur Hirtzel, Sir Cameron Shute, Sir William Clark, Sir Hamilton Grant, Sir Louis Kershaw, Sir Benjamin Robertson, Sir John Davidson, Sir William Beynon, Sir Henry Burt, Sir Atul Chatterjee, Sir Maneckji Dadabhoy, Sir Robert Holland, Sir Arthur Knapp, Sir Reginald Mant, Sir Rajendranath Mookerjee, Sir James Walker, Sir Norcot Warren, Sir John Maffey, Sir Henry Strakosch: Mr. R. L. Barclay, Sir Burton Chadwick, Mr. J. M. Dick, Mr. A. D. Jackson, Sir William Clare Lees, Mr. C. J. Longcroft, Mr. Stanley Machin, Sir Halford Mackinder, Mr. T. McMorran, Sir James Martin, Mr. Dudley Myers, Sir Leonard Rogers, Sir Denison Ross, Sir Owen Seaman, Colonel J. J. Shute, Major-General J. B. Smith, Sir Edwin Stockton, Major-General H. C. Sutton, Mr. H. L. Symonds, Rear-Admiral E. A. Taylor, Sir Purshotamdas Thakurdas, Sir Montagu Turner: Mr. F. Anderson, Mr. H. M. Cleminson, Mr. R. B. Dunwoody, Mr. Harry Harmsworth, Mr. P. M. Hill, Mr. A. de V. Leigh, Mr. J. C. Nicholson, Mr. R. A. Patterson, Mr. R. C. Burton Rowe: Mr. A. Ayangar, Mr. G. H. Baxter, Mr. H. A. F. Lindsay, Sir Alexander Murray, Mr. W. E. Preston, Mr. S. F. Stewart: Sir Thomas Birkett, Sir Frank Carter, Sir Geoffrey Clarke, Sir Cecil Graham, Sir Robert Highet, Sir Edward Iliffe, Sir Cecil Kaye, Sir Daniel Keymer, Sir Duncan MacPherson, Sir Alfred Pickford, Sir Adam Ritchie, Sir Sydney Sitwell: Mr. A. E. Jacob, Mr. G. Pilcher, Lt.-Col. K. P. Vaughan-Morgan, Mr. W. W. Grantham: Major-General T. A. Cubitt, Mr. F. H. Brown, Mr. Ronald Campbell, Mr. H. D. Craik, Mr. M. M. S. Gubbay, Major C. O. Harvey, Lt.-Col. C. E. Luard, Col. C. F. T. Murray, Lt.-Col. F. O'Kinealy, Col. St. Leger, Mr. F. A. M. Vincent: Brigadier-General H. Bateman-Champain, Mr. W. T. Coulton, Mr. W. A. Duncan, Mr. R. Langford James ,Mr. James Mackenzie, Mr. N. M. Muzumdar, Mr. J. F. Sale, Mr. N. C. Sen, Mr. L. T. Shamdasani, Mr. J. A. Swan.

THE INDIAN MAIL.

An Indian Reporter.

The great Anglo-Indian newspapers necessarily depend largely, for their subsidiary items of news, upon Indian correspondents; whose reports are sometimes couched in language which, when textually reproduced, makes entertaining reading. A recent issue of the *Times of India* contains a gem of this kind. The report of a case, in which an aboriginal had been charged with beating his stepmother to death on the ground that she was a witch, ended as follows: "Though a primitive community, the Mavchi Bhils are a timid, well-behaved people. They attribute all their misfortunes to witches, are beef-eaters and drunkards and in consequence are said to be remarkably truthful."

INDIAN EXCHANGE.

London, March 15.

The steadier aspect of the Rupee exchange which showed itself last week has given way slightly in both Calcutta and Bombay markets, and quotations have been marked down from 1s. 6⅛d. T.T. to 1s. 6 3-32d. There has been no inquiry, however, and mercantile houses have been able to satisfy most of their requirements at 1s. 6⅛d. for near delivery. At the close it is doubtful whether this rate is available, but importers appear to have been able to obtain all they require.

Less business is reported in shipping circles, and the moderate amount of bills offered have been settled at 1s. 6⅜d. three months' sight for delivery to the end of this month. It has not been possible to obtain a finer rate before April delivery.

Forward quotations are a shade easier, and the monsoon months are now quoted at 1s. 6 1-32d. with no buyers under 1s. 6 1-16d.

We learn that money remains stringent, and pressure has been felt on both sides of India. It can scarcely be ascribed to any extra activity in exports from these markets, and is said to be due chiefly to heavy drawings by Burma to finance rice shipments.

In the London market remitters have been able to obtain T.T. at 1s. 6⅛d., and a fair amount of business has been transacted at this level for delivery within a fortnight. Mid-April quotation is 1s. 6 3-32d. but with next to no business passing.

At the close to-day we learn that the market is quite steady at 1s. 6⅛d., but the outlook for future delivery is inclined to be easier.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

For freight and particulars, apply to:—

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

A New Feature.

I desire to call the special attention of our readers to a new feature which has recently been introduced to these columns, "The Week's Finance." It is designed to meet the special needs of overseas readers who desire to keep in touch with the trend of affairs on the Stock Exchange, but who are prevented by their situation from taking advantage of sudden opportunities for investment. What they require is guidance on broad lines, and those who follow this feature will find from time to time indications of various classes of shares which merit attention, but which are unlikely to move rapidly, and are thus suitable for dealings by those at a distance. But "The Week's Finance" should prove no less useful to home readers who look for safety in their investments rather than the chance of snatching a quick profit in a transaction of a speculative nature. As a companion to the feature selections of prices of representative stocks and shares are now given, and I would take this opportunity of pointing out to our readers that any quotation which is not at present in the list will be included on request.

British Trade with Egypt.

I referred last week to Mr. Barker's speech at the annual meeting of the British Chamber of Commerce of Egypt in which he commented on the poor showing made by British trade in 1925. It may be recalled that for the eleven months ended November 30 the British share of Egypt's imports amounted to 25.3 per cent., or the lowest figure for 40 years. During 1925 imports of machinery into Egypt showed a marked increase. The value of the imports other than machinery for transport purposes was £E1,758,000, an increase of 40 per cent. on the figures for the corresponding period of 1924. In this group of exports the British share showed only a slight decline on the previous year at 42.28 per cent. as against 43.37 per cent. There has been a great development in the use of tractors in Egypt, the imports of which, Mr. Barker pointed out, numbered 41 in 1923, 341 in 1924, and 716 in 1925. The United Kingdom's share of these totals is very significant. We supplied one tractor in 1923, seven in 1924, and not a single machine in 1925. There has also been a great increase in the imports of motor vehicles and chassis, the total for the first eleven months of the last three years being 1,340, 2,498, and 4,570 the values being £E263,000, £E401,000, and £E682,000. In this trade Great Britain's share has remained fairly steady at about 6 per cent. Of course it ought to be much greater, as in the case of other branches of imports, and it would be if British traders would take adequate pains to cultivate the market. At a time when this country needs all the outlets it can obtain it is most regrettable that the trade in a market so important as Egypt should be allowed to pass into the hands of our rivals. One can only hope that the realisation of the position will induce our traders to put forth strenuous efforts to recover the lost ground

Electricity for Palestine.

The signature by Lord Plumer, the High Commissioner, of the amended concession for the supply of electricity in Palestine granted to Mr. Rutenberg, brings to a close the long negotiations over the scheme, and opens out for the Mandated Territory great prospects of industrial development within the next few years. The original agreement was made in 1921, and the present concession which is granted to the Palestine Electric Corporation embodies changes introduced as a result of negotiations which have been in progress since that period between the Government and Mr. Rutenberg. The concession, which, to be operative, has to be confirmed by a Government ordinance, is for seventy years, for the utilisation of the waters of the Jordan and the Yarmuk and their affluents for the supply and distribution of electricity in Palestine and Transjordania, the erection of a power house, and the utlisation of Lake Tiberias for storage. It is provided that work is to be started within a year and is to be finshed within five years.

The Present Position.

Such in brief are the terms of the concession. Actually no small progress has already been made locally with the development of electricity pending a settlement in regard to the concession which will enable the greater scheme to be undertaken, and at Jaffa, Haifa, and Tiberias stand-by power houses have been erected, and it is interesting to note that the Jaffa Electric Company paid 6 per cent. on its ordinary capital for last year. The Palestine Electric Corporation has a capital of £1,000,000, and I understand that there is very little likelihood of any public issue being made in the near future to finance the work, as all the capital required can be obtained privately. It is intended now to commence the first stage of the scheme by the construction of two power houses on the Jordan, and then by degrees other parts of the scheme will be undertaken. It has been stated that large orders for machinery have already been placed in this country, but actually no steps have so far been taken in this direction. The company, it may be pointed out, is constantly placing orders for machinery, but as regards the new requirements under the concession it is intended, I understand, shortly to issue an invitation for tenders.

NEW TURKISH POSTAGE STAMPS.

By the courtesy of Messrs. Bradbury, Wilkinson and Company, of New Malden, Surrey, we are able to publish reproductions of the new issue of Turkish stamps that has been engraved and printed by the firm on behalf of the Turkish Government. This is the first issue of stamps under the republican régime, and not the least interesting feature about it is that the words "Turk Postalari" appear in Latin characters. The designs for the stamps were drawn by Ali Sami Bey, Director of the Evkaf Museum, Constantinople, who a few months ago held an exhibition

of his pictures at the McRae Gallery, Kensington. The stamps are printed direct from steel plates in one colour, with the exception of those with the portrait of Mustapha Kemal Pasha, which are printed in two colours. It will be noted that the word "piastre" has been abandoned in favour of "grouch."

The stamps of the four highest values, 200, 100, 50 and 25 grouch, bear the portrait of the President, and are respectively in brown, olive green, carmine and dark green; the picture of the Sakaria railway cutting is printed in brick (3 grouch), slate (2½ grouch), and light green (2 grouch); the Fortress of Angora in orange, dark blue, terracotta and violet, 15, 10, 6, and 5 grouch respectively; Boscourt and the wolf in light red, yellow and grey, 1 grouch, 20 and 10 paras respectively; the train passing over the Kizil Irmak bridge in light violet, purple, green, red and yellow, 5, 3, 2, and 1 grouch and 20 paras respectively.

COMMERCIAL DEVELOPMENTS IN EGYPT.

At the City of London College on March 15 an address was given by Mustapha el Sadek Bey, Consul for Egypt, on "Commercial Developments in Egypt." Sesostris Sidarous Bey, Chargé d'Affaires at the Egyptian Legation, presided. We give below the first part of the address.

The present structure of Egypt is essentially modern and it does not take one long to trace its original foundation. Before 1800 almost everything of importance in the commerce or industry of the country did not exist. The Nile works which are the course of irrigation for agriculture in Egypt were not there. Nor was the cotton, which is the corner stone of Egyptian economy and Government revenue, to be heard of in Egypt. Egypt at that time possessed only the great stream of the river running between two deserts and receiving its waters from then unknown sources. The inhabitants of the country did not number more than two millions owing to internal quarrels, disintegration and poverty, the provinces being divided among feudal beys who farmed the land. It was entirely due to Mohamed Aly that the foundation for development was laid down. Having perceived the importance of cotton growing, he introduced it for cultivation in Egypt and endeavoured to provide the necessary conditions needed for the plant. He introduced the present system of irrigation by canal, substituting it for the traditional régime of basin irrigation which dates back to the time of the Pharaohs. For this purpose he supplied lower Egypt with a network of canals, and in the meantime he constructed the great barrage 12 miles north of Cairo to regulate the level of the water. He was not content with making Egypt a prosperous agricultural country, but endeavoured to make it an industrial one as well. And so he pursued a policy somewhat similar to that of Colbert in the time of Louis XIV. and of Lord Burleigh in the reign of Queen Elizabeth. This mercantile policy of Mohamed Aly was directed to making Egypt self-supporting, and so involved the introduction of divers industries useful in peace and necessary for war. He administered State factories covering a large range of industries, and trades like iron, cotton, wool, shipbuilding, gun-making, etc. The success of his policy could be observed at the beginning of the reign of Ismail Pasha, when normal conditions began to establish themselves. The population rose from two millions to 6½ millions in 1870, and the volume of trade rose fivefold. In 1870 cotton to the amount of 1,350,000 kantars was exported.

It was left to the Khedive Ismail to continue the work of development on a large scale. His energy and zeal knew no bounds, and it was probably his super-keenness which handicapped his ultimate success. His policy was directed to developing Egypt in every direction—commerce, industry, education. Communications were established in his reign by canals, roads, and railways. The factories created by Mohamed Aly, but closed by those who came after him, were either re-opened or amply replaced by others. He took great care to send large numbers of students to Europe to receive their education. The great reforms which Ismail carried out probably cost him too much and it was the misfortune of Egypt that the price of cotton, on which the ruler depended for his budget as well as for the payment of the debts, dropped heavily as a result of the American Civil War. The unforeseen fall in the demand for cotton, the price of which was beginning to regulate individual and government budgets, turned the scales unfavourably against the financial policy of the zealous reformer. I do not propose either to comment on or criticise the financial policy of the Khedive Ismail, but I think it is very fair to say that those who came after

Digitized by Google

him must recognise the great debt which they owe him for the radical changes favourable to progress which he initiated in the country. To illustrate the progress effected we need only indicate the figures at which the exports and imports of the country, as well as the figures of the Egyptian Budget, stood in the last year of his reign. In 1879 the population increased to about 7½ millions, exports and imports rose to about £22 millions, and the output of cotton jumped to 3¼ million kantars. The Budget stood at about £10 millions, of which about 50 per cent. went to the service of public debt.

A great change of policy took place after 1880 and particularly so after 1882. The financial shortcomings during the reign of Ismail were too much exaggerated by those who became responsible for the management of the country, and a policy of strict reaction was accordingly followed up to 1904. In this period, i.e., from 1882-1904, the greatest part of the receipts of the State was applied either to the payment of dividends on loans, to the relieving of taxes, or to the needs of the Government Departments. Whatever surplus was left was almost all assigned to works of irrigation. The policy of the Government was directed entirely to the question of increasing the cultivation of cotton. In 1904 the output of cotton increased to 6½ million kantars of the total value of £20 millions, averaging 4.3 kantars to the feddan. The land put under cultivation as the result of these schemes was increased to 5½ million feddans out of 7½ million capable of cultivation. The population rose from 6-8 millions to 8-10 millions. The commerce of the country increased to £20 millions for imports and as much for exports, and of the exports cotton figured at £17 millions.

The recent commercial policy of Egypt should be preferably traced from after 1904 when the Government began to increase its hold over finances and therefore to be able to carry out an independent policy. This period was marked by a continuous increase in the power of public opinion and consequently in the participation of the people in the modelling of the State's policy. The Government as well as the people of the country began to feel that the policy pursued with the effect of making Egypt solely dependent on cotton was not a very safe one. Various successive crises intensified this feeling and created a serious tendency to reconsider the existing policy.

Thus in 1907, as well as in 1914 at the outbreak of the European War, owing to the failure of demand the landowners as well as the entire country, including the Government, were very bady hit. The country is solely a one-crop country and lacks any industrial product to balance any possible shortage of the cotton crop, consequently the world price of cotton is a vital matter. Probably in the whole world nobody watches with more anxiety the fluctuations of the cotton prices than the Egyptian peasant, the Egyptian merchant, and the Egyptian official, because the welfare of all these is bound up with the price prevailing in the market. If the price rises it means that the individual Egyptian can consume and therefore import more. In case of a reverse of prices, or a failure of a crop, everybody is disappointed. If the failure is a serious one, the results become far-reaching.

It is because of this very serious defect in the commercial situation of the country that at present many schemes are put forward to alleviate the dangers involved. Thus firstly many people believe that it will be far more advisable that the Government should direct some of its efforts at present concentrated on cotton to assisting other agricultural products which possess a home and a foreign market. In this connexion I can only draw attention to the fact that tobacco was grown with advantage to the Egyptian Treasury up to 1800, when it was prohibited by the Government so that the Treasury would be able to impose duties upon foreign tobacco imported by Egypt and thus get larger and more easily collected receipts. The most important question for the Treasury is not the facility of collecting taxes, but whether the tobacco grown in Egypt is of sufficiently good quality for the manufacture of cigarettes for export.

On the other hand, some believe that the best way out of the difficulty is that the Government should make a determined attempt to encourage the home-spinning and weaving of a part of the cotton produced. Those who believe in a cotton manufacturing Egypt advance many arguments, of which I will enumerate the most important without criticism or comment. Briefly, they say that in the long run even with some material sacrifice at the start the difficulties involved in the manufacture of home-grown cotton will be more than counterbalanced by the cost of the double process of the transport of cotton to Lancashire and back to Egypt in the form of piece-goods. They also say that if India, Japan, and other countries with less favourable conditions could compete in the manufacture of cotton, Egypt can surely follow their examples and try to make at least an experiment in this direction. They further state that labour in Egypt, whether skilled or unskilled, is available and relatively cheap, and, equally important, it has proved in the various existing crafts to be easily adaptable to the factory work.

At present there is a large number of cotton ginning factories entirely carried on by Egyptian hands and to a large extent by Egyptian capital, and it is argued that if cotton can be ginned and pressed it can presumably with the introduction of machinery go through further processes of manufacture. They add to these arguments that the question of fuel is not a difficult one to overcome, because if cheap power cannot be produced in Egypt, the cost of coal is not prohibitive.

The situation of Egypt with regard to markets is probably more favourable than other countries at present manufacturing cotton goods. Most of the neighbours of Egypt in all directions consume the same quality of material used by the Egyptians, and in case Egypt enters the field of cotton manufacturers it will secure a ready market for the surplus of its product. Again, the climate of Egypt in the neighbourhood of Alexandria—judging by the experience and success of the spinning factory in Alexandria, which employs 1,400 hands and contains 40,000 spindles—is sufficiently damp to guarantee the success of the operation.

Those who hold these opinions do not propose to consume all the crop in Egypt but rather to employ as much of it as does not contain the specially fine quality which stands at a premium in the world market of cotton especially in Lancashire.

(To be Concluded.)

Tenders are to be invited by the Greek Admirality for either two or four 1,500 ton destroyers.

The members of the Order of St. John of Jerusalem who are making a pilgrimage to the Holy Land arrived in Jerusalem last Sunday after a stormy landing at Jaffa.

The Bengal Dooars Railway Company has declared an interim dividend of 4 per cent. on the Ordinary stock on account of the year ending March 31, 1926, payable less tax at 2s. in the £, on April 23.

COMPANY NOTES AND REPORTS.

MERCANTILE BANK OF INDIA.

The net profits of the Mercantile Bank of India for 1925 amounted to £257,633 and £158,222 was brought forward. The allocation to the reserve fund is £50,000, the same as before, £15,000 is added to the officers' pension fund as last year, and £20,000 against £10,000 is written off freehold banking premises. The dividend for the year is unaltered at 16 per cent., and the balance to be carried forward is £162,885.

TEA AND RUBBER COMPANIES.

The profits of the Nahalma Tea Estate Company for 1925 amounted to £10,898, and £335 was brought forward. The total dividend for the year on both the preference and Ordinary shares is 30 per cent. as compared with 7½ per cent. on the Preference and 4 per cent. on the ordinary, £3,000 is added to reserve, and £433 is carried forward.

The report of the Ceylon Consolidated Estates for the year ended October 31, states that the profit was £24,825, as against £2,197. Including interest, etc., and £1,137 brought in, and after meeting Debenture interest, depreciation, etc., there is available £16,279. A final dividend of one halfpenny per share is proposed, making 1½d. per share, tax free, being equivalent to £7 18s. gross. A crop of 222,677 lb of rubber was harvested, the exportable quota being restricted to 201,795 lbs. The average price realised was 2s. 4.29d. per lb., the "all-in" cost being 8.81d. per lb. The stock at October 31 was 57,936 lbs., consisting of 27,124 lbs. smoked sheet and 30,812 lbs. scrap. The standard crop of estates for the current season is 335,253 lbs. A contract has been made to sell 60 tons standard quality smoked sheet during 1926, delivered Colombo, at 2s. 9⅞d. per lb., being 40 per cent. of the standard crop.

The Commercial Secretary to H.M. Legation at Sofia reports that, according to the Bulgarian Press, the Bulgarian Customs duties on a large number of goods will be increased by amounts varying from 10 to 30 per cent. It is understood that the increase of the duties will be applied particularly to luxury goods, woollen cloths, yarns, decorative trimmings, etc., The Ministry of Finance is preparing a Bill providing for the alterations in question.

The newspaper *Vradyni* announces that Mr. J. Rockefeller, junior, has given 4,000,000 dollars to the American Archæological School in Athens for the important excavations which are to begin next month near the Acropolis for the discovery of the ancient Agora, where great art treasures are expected to be found. These excavations will be carried out under the patronage of an influential American Committee, presided over by Mr. Capps, the former American Minister at Athens, and now principal of one of the largest American Universities.

NEW BANK LINE MOTOR VESSEL.

The m.v. Oakbank, 5,200 gross tons, built by Harland and Wolffe, Ltd., Govan, for the Bank Line Ltd. (Andrew Weir and Co.), was delivered on March 11. The new vessel has been built to Lloyds highest class, and is 434 feet by 53 feet 9 inches, by 37 feet. Accommodation of a very high standard is provided for the captain, officers, engineers and crew, and a large insulated provision store is fitted on the upper deck.

The Oakbank is propelled by a pair of Harland B. and W. motors similar to the machinery which has been running so satisfactorily in the large number of sister vessels delivered to the Bank Line during the past few years.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Massilia for Bombay (Liverpool, March 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maihar for Port Said, Colombo, Madras, and Calcutta (London, March 20).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo and Rangoon (Birkenhead, March 24).

British India Line.—S.s. Malda for Colombo, Madras, and Calcutta (London, March 27); s.s. Gharinda for Bombay and Karachi (London, April 10).

Cunard Line.—S.s. Cypria for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, Trieste (also Corfu and Gruz if inducement) (Swansea, March 23); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza (also Oran, Algiers and Volo if inducement) (Swansea, March 30, Glasgow, April 1, and Liverpool, April 3).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 10); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 1).

P. and O. Line.—S.s. Ranpura for Bombay (London, March 19); s.s. Nellore for Colombo, Madras, and Calcutta (Liverpool, March 20).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.
(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Disinfectants.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of liquid disinfectants (white cyllin and izal) required from May 1, 1926, to March 31, 1927. April 15.

Various Goods.—The Frontier Districts Administration invites tenders for a large variety of goods, mostly in small quantities. The principal requirements consist of oils, paints, leathers, soap, canvas, sacks, and miscellaneous items of general hardware. March 23. (D.O.T.)

An ordinance has been published abolishing all duties on goods exported from Palestine, with the exception of the duties on tobacco and antiquities.

It is understood that the Egyptian Government is considering a proposal to purchase two steamers from the Australian Government to form the nucleus of a Government-owned merchant marine.

The directors of Harrisons and Crossfield, have declared the usual interim dividends of 10 per cent. (actual) in respect of the year ending June 30, 1926, on the deferred ordinary shares and management shares, less tax at 3s. 8d. in the £. Warrants will be posted April 6 to shareholders registered at that date, and warrants for the quarter's dividend on the preference shares will be posted March 31.

Motors and Motoring.

By G. B. B.

There is a growing impression that, this year, there will be no interference, on the part of the Chancellor of the Exchequer, with the Road Fund monies, and the more optimistic incline to the view that there will also be no alteration in licence duties, no change in the horse-power tax, and no reversion to the petrol duty. All or any of which impressions may be correct. But what there seems a tendency to forget is that money is to be obtained from some source or other to meet the terribly high cost of governing this country and the Road Fund millions are very tempting. We want more and better roads, on that point everyone is agreed. The Chancellor's view is that we do not need any more just at present; that we have as many roads as we need, and those we have, in his opinion, are as good as we have any right to expect. The editor of one of the leading technical journals, and one which is devoted to road construction and civil engineer's work generally, tells me that with modern traffic our older roads are literally going to pieces, and our new roads are showing that better and still better methods of construction must be adopted. Any halt in our ordered scheme of road repair, unless accompanied by a corresponding halt in road traffic, which is impossible, would mean that in a few weeks our highways would deteriorate so greatly that drastic and expensive methods of reconstruction would have to be adopted. The Road Fund money is by no means in excess of the legitimate needs it was designed to meet.

Car Colours.

More than usual interest appears to be taken in car colours, and many of the old-established makers are beginning to wonder whether some alteration in the colour scheme of their products would not add to their attractiveness and increase sales. Car colours, so far as this country is concerned, have largely depended upon the individual taste of some one high up in the executive. If he said "pink" or "chocolate" pink or chocolate it was, and no one could or even wished to gainsay him.

It appears that our friend the psychologist has been putting in some of his finer work, and has discovered that many buyers select cars simply for their finish and colour. As a child will eat a pink blancmange and refuse a white; will eat a red jelly and loath a precisely similar concoction which is of a yellow colour, so car buyers are attracted by certain colours and repelled by others. I can assure the new school of thought that they are quite correct so far as India and the Far and Middle East are concerned. Whether they are as correct in this country remains to be seen. Possibly an old and matured Western civilisation is superior to such things, and possibly it is not. I have heard of Midland trippers crowding into a red charabanc and leaving one of a dull, Service grey severely alone.

It is is also quite true as regards the United States. Whether it be the result of the Great War they claim to have won, or whether it is due to some other reason, the fact remains that the American ideas about colour have undergone a radical change. As an American writer put it, recently, it is folly to say that the American manufacturer has not awakened to the new value of colour on his cars. He added: "It is to the mass-production man in particular, that colour is beginning to speak and he is becoming more and more willing to listen." Several makers, I understand, are now contemplating making radical changes in the colour scheme on their leading model, and before long we shall find some marked changes in this respect.

Now I would submit that there is more, far more, in this than our British makers have yet been disposed to consider, especially as regards the overseas markets. If we want our export trade to keep the lead, we must give our overseas customers the coloured cars they want. If we do not we shall find the Americans obtaining a lead, a lead which, once obtained, it will be difficult to overtake. Hitherto we have exported cars finished in those same colours which we found to appeal, or which we suppose appeal to British buyers, regardless altogether as to whether those same colours or finishes will appeal to the Greek, Turk, Bulgar, Hindu, Chinese or Japanese eye. There is plenty of room for improvement in this respect, plenty of room for investigation and study, and I would suggest that as a commencement, motor manufacturers should get into touch with the Department of Overseas Trade and ask that body to instruct their commercial attaches and other officials to report as to the colours which they find appeal most to buyers in their districts.

Commercial Vehicle Services.

It is a fact that heavy commercial vehicles can only be operated economically between points at which they can take on a full load. Consequently, between such centres heavy-duty roads are a necessity, and their construction is certain to be justified by the resultant traffic. We find that in the United States, a country which is just awakening to the paramount necessity for improving existing, and constructing new highways, it is rarely necessary to prohibit operation of the heavy lorries over by-roads because there is rarely any occasion for heavy vehicles to use such roads. Economic law accomplishes the restrictions of the traffic to the heavy duty roads, and leaves very little need for any regulation by statutory laws. The "Power Wagon" has gone into this question fairly closely and the conclusions at which it has arrived may be quoted here, for the information of those who in this country are studying road conditions. They are as follows:—"(1) there would be a demand for improved roads whether trucks were operated over them or not: (2) as a general rule motor car traffic is at least 10 times as great as truck traffic; (3) the roads required for the accommodation of motor-car traffic would be adequate for the transport of freight in 1-ton trucks; (4) the use of larger units makes for more economical operation; (5) the

heavy trucks do not destroy roads that are built to accommodate them; and (6) if the construction of the roads is properly related to the character of the traffic, the operation of the heavier truck units produces savings which more than offset the greater cost of the roads."

The Legal Speed.

For some reason or other many motorists are under the impression that the 20 m.p.h. speed limit is no longer in operation. It seems to me that a good deal of risk is being run in connexion with this question of road speed, and it seems necessary, therefore, to emphasise the fact that no car, no matter in what part of the country it may be, nor what the road conditions, may legally travel at a greater speed than 20 miles per hour. It may be as well also to say that the excessive speeds of some of our light cars on public highways are causing a good deal of apprehension in the minds of the authorities. The number of "non-stop car" accidents is doing nothing to allay these apprehensions, and unless motorists take matters into their own hands and do all in their power to persuade the more hot-headed of their fellows that high speed does not show how clever a driver may be but on the contrary demonstrates that he is a foolish, vain-glorious kind of road-hog, more stringent legislation will follow and follow quickly. From what I have heard and seen, I am confident that unless this insensate craze for road speed is curbed, this coming season will see the re-setting of hundreds of police-traps all over the country and the mulcting of offending motorists in heavy damages by common sense and altogether unsympathetic benches of magistrates. Let us all remember the golden rule: "Drive carefully, drive considerately and behave on the road to others as you would wish them to behave to you."

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended March 4, state:—

Since our last report the futures market has been quite active, but the tendency has been very weak, especially for Sakel. The week's summary of price movements is as follows:—Sakellaridis: March, 30.80 dollars, 1.85 dollars down; May, 30.10 dollars, 2.10 dollars down; July, 29.52 dollars, 2.58 dollars down; November, 29.55 dollars, 2.45 dollars down. Ashmouni: April, 22.30 dollars, 1.25 dollars down; June, 22.47 dollars, 1.35 dollars down; August, 22.50 dollars, 1.35 dollars down; October, 22.45 dollars, 1.55 dollars down.

The direct cause of this week's decline is the weakness of New York, where the March option, which at the beginning of the week under review stood at 19.83 cents. closed yesterday at 19.11 cents, 72 points down on the week.

The drop in New York, however, is not the only reason, nor even the principal one, for the heavy decline which prices have registered this week; for some weeks past Egyptian cottons have been very neglected by the trade, firstly, because competing cottons are obtainable on a much cheaper basis, and secondly because yarns are at present rather slow of sale and the prospects of improved demand in the near future poor. The result of the poor offtake is an accumulation of stocks, both in Alexandria and in the Interior, and it is only natural to expect some anxiety to sell on the part of holders as the season advances.

It is now clear that the Government intervention has had no beneficial effect; on the contrary it is, to a certain extent, responsible for the present accumulation of stocks in that, by artificially sustaining prices, it has diverted to other markets a large part of the demand which would naturally have come to this market if prices had been allowed to come into line with the prices of competing growths. Rumours have again been circulating regarding Government intervention also in the Ashmouni market, but happily no such decision has yet been taken.

The last two days have seen rather more activity at Minet el Bassal and it seems that the decline has reawakened a certain amount of interest in some quarters. Orders have not been of any great size and have been chiefly for Ashmouni. The Liverpool Egyptian Sakel market continues to be very dull, and on more than one occassion during the past week has been at parity with our market, a state of affairs which has not been seen for a long time. At the first March tender, 750 kantars dockets were issued. Tendering against contracts is not a tempting proposition with the existing big premium of Fully Good Fair on the spot.

The Government has bought during the week about 3,000 bales of Sakel, grades from Fully Good Fair to Good for which they have paid from 33 to 35 dollars. Total Government purchases to date amount to about 32,900 bales. The week's receipts amount to 156,572 krs. against exports 135,522 krs.; the stock stands at 2,337,312 krs.

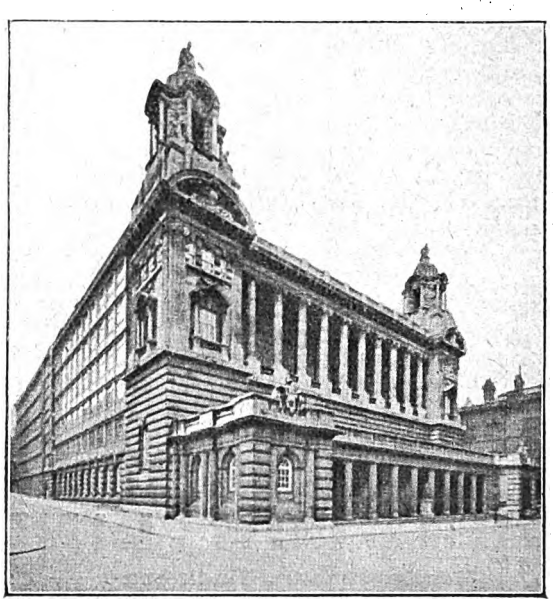
Spot: We have had another week of poor markets at Minet el Bassal and sales amount to about 11,300 bales, of which we estimate 4,800 bales Sakellaridis, 5,600 bales Uppers, 550 bales Zagora, 50 bales Brown, 150 bales Pilion and 150 bales White. Government purchases amount to about 3,000 bales of Sakel between Fully Good Fair and Good.

Sakellaridis: Has been in poor request although all styles have been dealt in. Spot differences are without much change from last week.

Ashmouni and Zagora: have met with a somewhat improved demand and a larger turnover. All styles have changed hands, but the medium qualities have received most attention from buyers. Spot differences are without change from last week.

Brown and Pilion: A retail business has been done in Brown and Pilion has only been in moderate favour with spinners. Spot differences are unchanged for both varieties.

White: continues in very fair demand at last week's differences.



Crop 1926: Land preparation and sowing are being carried out under favourable conditions; a few days of rain has only slightly retarded progress. At the moment crop operations may be said to be some days ahead of last year. Nile gauges are still below normal.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended March 13 states:—

A quiet week has been experienced and conditions continue to be unsatisfactory. Those sections which save recently enjoyed an active demand have again received a fair volume of inquiry but other sections report a stagnant state of affairs and acute competition for any business which may be on offer.

Yarn.—The market was taken by surprise in the early part of the week by a recommendation of the Federation of Master Cotton Spinners that mills spinning American cotton should increase their working hours from 30½ to 35 per week. The recommendation, however, can hardly be based on the state of the industry. It is probably a recognition of the fact that the 30½ limit was not being loyally observed in many quarters. It is thought that the requisite 80 per cent. majority in favour of the recommendation will be obtained. Demand for yarns made from either American or Egyptian cotton remains poor. Shipments of yarn last month amounted to 15,652,100 lb.

THE LIVERPOOL COTTON EXCHANGE.

as compared with 16,791,100 lb. in January and 15,977,900 lbs. in February, 1925.

Cloth.—It is difficult to find any good feature in this section. Only for India is there any activity and it is confined to light fabrics. Little fresh business transpires for China, and reports from Turkey, Iraq and Egypt are very discouraging. Shipments of cloth last month amounted to 366,409,600 sq. yards as compared with 356,096,000 sq. yards in January and 422,264,00 sq. yards in February, 1925.

Raw Cotton.—Exceedingly dull markets have again prevailed and there is no item of interest to record. Closing quotations yesterday were as follows:—American Middling, 9.90; Egyptian Fully Good Fair, 16.05.

BULGARIAN 1907 LOAN.

Messrs. Stern Brothers announce that they have received the following advice from the Banque de Paris et des Pays-Bas, Paris:—"The Convention of June 23, 1925, provided for the exchange of coupon sheets of the Bulgarian Four and a Half per Cent. 1907 Loan, and the holders are now invited to deposit the talons of their bonds at the offices of the establishments charged with the service of the loan. The coupons February and August, 1926, must be attached to the talons. The holders must sign a declaration of nationality, for which they will have to produce documentary proof, and holders may also be requested to furnish proof of how they acquired their bonds. The delivery of the new coupon sheets will take place on and after March 1, 1926, and the payment of coupon due February 1, 1926, will be made against the coupon of the same date detached from the new coupon sheets as and when they are delivered to the holders." Messrs. Stern Brothers, 6, Angel Court, E.C.2., are now prepared to receive talons.

The National Bank of Egypt proposes a final dividend of 13 per cent. (£1 6s. per share), making 17 per cent. for 1925, and in addition, a bonus of 10s. per share.

It is reported that a Bill has been submitted to the Turkish National Assembly for the creation of a monopoly for the manufacture, importation, and sale of all alcoholic beverages. Existing distilleries and breweries will be granted three months to wind up their affairs and dispose of their plant.

The output of the Dacia Romano Petroleum Company for February amounted to 706 tons. The fall in production is due to the cleaning of Moreni well No. 10, which has been in constant production since July last. Swabbing operations are still in progress at wells Nos. 9 and 11. Seven wells are producing, 11 are in drilling and two are being fitted up.

CHESS.

By "CARO-KANN."

PROBLEM No. 38.
Black to play. What result?

Solution to Problem No. 37:—1 . . . . P—Kt4; 2, K—B2, K—Q3; 3, P—K4, K—B3; 4, K—K3, P—Kt5; 5, PxP, K—Kt4; 6, PxP, PxP; 7, P—B4, KxP; 8, P—B5, P—B6; 9, K—Q3, K—Kt6; 10, P—B6, P—B7; 11, P—B7, P—B8 (=Q); 12, P—B8 (=Q), Q—Q (ch.); 13, K—K3, Q—K (ch.) and draws.

This is the University chess week in London, when the combined University teams with the assistance of a few past members play a series of matches with the London clubs. The principal fixture of the series is the match against the City of London Chess Club, which invariably turns out a very strong team to meet the visitors. The University match takes place to-morrow, and should be more than ordinarily interesting, for this is the fiftieth match of the series, and Oxford needs one more win to draw level with her rival University. It is an amazing change from the position when I first went up, when Cambridge had, I believe, 21 wins and Oxford only had 13; but since then, as I pointed out recently, Cambridge has only won twice—in 1910 and 1919—these being the only successes since 1904. Both Universities seem this time to have stronger teams than have been seen since the War, and on a comparison of the results of matches played it would appear that Oxford has the better team. But that is nothing to go by in trying to estimate the result of the match, when as often as not the stronger team goes down. In every University contest nerves play a great part, but this seems to be particularly the case in chess, and I have seen the most astonishing errors made in this match. One I remember vividly was an oversight which lost a Queen at about the ninth move, and on more than one occasion I have seen a mate in two missed. The history of the match is really the story of missed chances. On this occasion of the fiftieth match it may be recalled that the first match of the series was witnessed by no fewer than 500 spectators, and so great was the crush that simultaneous displays by masters were arranged in adjacent rooms to relieve the press round the players. It seems almost unbelievable to-day, when twenty or thirty visitors would be regarded as quite a crowd. Indeed, I do not remember seeing as many.

A more interesting match from the standard of the chess is that which takes place the day after the University match, between Oxford Past and Cambridge Past. Cambridge has never lost this match, and from the list of players before me it seems very evident that there is no possible chance of their doing so this time. At the top boards Cambridge will this time probably have the assistance of M. H. E. Atkins, Mr. W. H. Gunston, and Mr. C. E. C. Tattersall.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 16.

The Coal Commission's Report is, of course, the big event of the week. Upon whether we are to have industrial peace or industrial war depends the course of affairs for the rest of the year in the investment world, as elsewhere. The Report is so large a document and covers so much ground that the City is not prepared to pronounce upon it off-hand. It does not—it could not be expect to—find a soft and easy way out of the impasse; and many of its proposals are obviously unpalatable to one party or the other. But the immediate question is whether the Report provides a basis of discussion out of which mineowners, miners, and the Government can evolve an agreed policy that will save the country from the disastrous industrial upheaval, which is due to take place in May, if mineowners and miners cannot agree! On the whole, the first impression is that if the Government is prepared to adopt the Report and act upon it, courageously—with minor concessions perhaps to placate both sides—an atmosphere of public opinion would be created so hostile to the idea of a national strike that the Miners' Federation would feel bound to play for peace. But in any case, anxious weeks lie ahead, and so long as the coal cloud hangs over us no revival of activity in the general markets can be expected. Optimists, who assume that industrial peace will prevail, look forward to a great revival in the early summer. Certainly a peaceful coal settlement, if it can be achieved, would give rise to a wave of confidence and relief; and this new influence would set to work in markets which, after the long and heavy liquidations of the past month or two, are in a very favourable position to respond.

The Markets.

In addition to uncertainty as to the Coal Report and its outcome the Stock Exchange has had several other more or less unfavourable factors with which to contend. The fall of the French Cabinet at the end of last week and the slump of the franc were disturbing elements in the foreign market, while the difficulties which preceded the meeting of the Council of the League of Nations at Geneva were an additional factor making for depression. Nearer home the deadlock in the engineering dispute cast a cloud over the industrial markets, especially the iron and steel and engineering sections. Nevertheless the gilt-edged market has remained fairly firm, although prospects of a reduction in the Bank Rate before next month have largely disappeared. Elsewhere, however, movements in prices have been irregular and as might be expected business has again been on a restricted scale. Indeed, such a state of affairs must be expected to continue until the situation becomes less obscure.

Southern Railway Capital.

It is not often that points raised by shareholders at a general meeting are dealt with so speedily as in the case of the Southern Railway. At the meeting on February 25, some of the holders of the Ordinary "B" stock, which is entitled to a dividend only after 3½ per cent. has been paid on the Deferred Ordinary and Ordinary "A" stock, complained that they had received no dividend, in spite of the fact that the Company was in a much better position than the three other great British railway companies, and suggested that they might have received a distribution of half per cent. The stockholders have now received a circular setting forth a proposed re-organisation of the capital which meets the points raised by giving the "B" stockholders the chance of receiving dividends sooner than they could otherwise expect. It is proposed to give "A" and "B" stockholders an opportunity to exchange their holdings for deferred ordinary stock at the rate of £95 nominal of the deferred for every £100 nominal of the "A" and at the rate of £25 nominal of the deferred for every £100 nominal of the "B." If the present rate of 3½ per cent. on the deferred stock is maintained the "A" stockholders would suffer a loss in dividend of 3s. 6d. per cent., but that loss would be more than recovered if a further ¼ per cent. were paid on the deferred, while they would participate in anything over 3½ per cent to which they are now limited The scheme has much to recommend it, and will probably be accepted and become operative as from January 1, last As we have pointed out before, the Southern is in the fortunate position of being less susceptible to trade fluctuations than the other lines, and its accounts for 1925 show a relatively strong position. At its present price the deferred stock yields about 8 per cent.

On Income Debentures.

A point of considerable interest to all investors has been raised in connexion with the reorganisation of the Gas, Water and General Investment Trust. It concerns the position of Debenture holders. Most of our readers know quite well that the mortgage debenture was incepted as an instrument which would allow the borrower to obtain the use of money at the lowest possible rate. In return for this the borrower was given the best security which could be offered. To him was assigned valuable property which could be realised if his interest was not forthcoming or if there were clear evidence that the assets forming security for the lender were being jeopardised.

In the case of the Trust mentioned above a certain proportion of the loan capital has constituted an income charge. We should imagine that the holders of the stock in question will readily acquiesce to the Directors' proposal to make it a fixed charge. A Debenture stock charged on income is, we believe, something of a novelty in this country. And perhaps it is as well. To make a Debenture holder dependent for his interest upon profits earned is almost equivalent to making him a Preference shareholder, with the exception that the return he receives upon his money is lower than that received by the Preference shareholder.

NEWS FROM ALL SOURCES.

A new building for the Egyptian Customs is to be erected at Port Said.

The P. and O. Company is contemplating a direct service between London and Basrah as a result of the rapid development of the cotton-growing industry in Iraq.

The Eastern Bank recommends a final dividend of 5s. a share, less tax at 3s. 7.884d. in the £, after allowing for relief in respect of Indian taxation, placing £20,000 to reserve, £10,000 to premises account, and carrying forward £37,902.

According to statistics issued by the Secretary, Sugar Bureau, Pusa, the output of sugar direct from can factories in India, during 1924-25, totalled 33,745 tons, as compared with 38,312 tons during the preceding campaign. The area under cane was also smaller by 388,000 acres.

The British Overseas Bank, Ltd., announce that funds for the payment of the coupon due April 1, 1926, on the bonds of the Roumanian 4 per Cent. Consolidation Loan, 1922, have been duly lodged with them by the Roumanian Government.

Greece has provisionally decided to prolong until the end of May the old Customs tariff as applied to imports from England and France. The new tariff will not be applied before the conclusion of the new treaties with England and France.

SUDAN

A PERFECT WINTER RESORT.

KHARTOUM, a modern town at 1,200 feet above sea-level, enjoys an ideal winter climate, constant sunshine tempered by invigorating breezes. The Grand Hotel is under the management of the Sudan Government Railways and Steamers.

OMDURMAN, the wonderful African Metropolis, lies near by, stretching for seven miles along the shores of the Nile.

BIG GAME SHOOTING.

The Sudan is one of the most easily accessible countries in which Big Game abounds, and its large territory offers a most varied choice of shooting grounds.

A Street in Omdurman

Express Steamer and Dining and Sleeping Car Services between Cairo and Khartoum.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Triangular Negotiations.

Italy, France and Yugoslavia still have their own peoples and others guessing as to what will be the ultimate upshot of the discussions which have taken place between the Yugoslav Foreign Minister and the Italian and French Prime Ministers. It will be recalled that the Pact of January, 1924, between Italy and Yugoslavia constituted a marked rebuff to France, as it followed hard on the refusal of Yugoslavia to agree to a Franco-Yugoslav alliance on the lines of the French alliance with Czecho-Slovakia. Public opinion in Yugoslavia, however, soon found opportunity to let France understand that, however closely the country might be drawn to Italy, it had no intention of sacrificing its good relations with France. On the present occasion, therefore, it may be taken for granted that the Yugoslav Government, while eager to see its policy of an understanding with Italy carried out to its logical conclusions, will try to carry France with it as far as possible. Signor Mussolini, however, will not willingly lend himself to being played off against France, and if M. Nintchitch should have succeeded in evolving a formula that both France and Italy can accept, it is certain to be of a mild character. The ground for a more detailed understanding regarding the Balkan Peninsula will then be left clear for Italy and Yugoslavia to build upon as they think fit. Some idea of the difficulty which the Yugoslav Government experiences in carrying public opinion the whole way with it in its understanding with Italy may be formed from the fact that yet another frontier incident has been reported, this time between frontier guards on the main Trieste-Liubliana-Belgrade railway. Unfortunately each incident of this kind is used as a text for the allegation that Croat and Slovenian interests are liable to be sacrificed to Serbian needs in Macedonia.

Roumania's Electoral Reform.

In the absence of M. Ion Bratianu, the Prime Minister, whose health is still unsatisfactory, the Roumanian Minister for Agriculture has formally announced to the Chamber of Deputies that Parliament will be dissolved on March 27. His subsequent remarks, as well as the speech of M. Vintila Bratianu, Finance Minister, who followed him, conveyed the impression that the Government was prepared to see one or more parties of the Opposition step into its shoes. M. Vintila Bratianu indeed pointed out that there was no Ministerial crisis pending, but an Opposition crisis, and he affected regret that the next Government would of necessity be so weak that it must soon go out of power, to make way for another Liberal Government. From present indications it is hardly likely that the Opposition will have composed their differences in time to be able to offer King Ferdinand a new Government on Saturday. The purpose which in the view of its opponents lay behind the Bratianu Cabinet's novel electoral proposal, of throwing a bomb in the Opposition camp, would seem to have been so far achieved, that at the beginning of the week there was no clear indication as to the form that the measure would finally take. The upshot of negotiations between the Government and some of the Opposition parties promised to be a compromise which would give fifty per cent. of the seats to the party polling forty per cent. of the votes, and in addition a percentage under certain conditions of the remaining half of the seats.

The New Greece.

On Easter Sunday Greece will be called upon to elect her first President under General Pangalos's new Constitution, which is to confer larger powers on the Head of the Republic than even those possessed by the President of the United States. Admiral Condouriotis, the present Provisional President, who appears to have filled with dignity an office which must have had its embarrassments

Digitized by Google

during the last eight or nine months, has resigned. He could not, even if he had wished to, become a candidate for the revised version of the Greek Presidency, as an age limit of over forty-five and under sixty-five years has been set by the Prime Minister. As both Admiral Condouriotis and M. Zaimis, the only two "elder statesmen" in whose political impartiality Greece may be said to place confidence, are *hors de concours* as a result of this ruling, General Pangalos will probably find himself obliged to step into the breach. He had announced himself as a candidate for the Presidency a few days ago when informing the country for the first time of the plans in store for it regarding a new Constitution; but in a later communication he has stated that he has not yet decided to offer himself. In the end, no doubt, after hesitations that would do credit to Mrs. 'Awkins, General Pangalos will allow his title to be changed to that of President. It is the least that he can do for an expectant and grateful country. The Republic is passing through a period of economic stress, and the last thing that it can want at this moment is that the fires of party strife should burst out again. General Pangalos has for the present damped them down, and one of the objects of the new Constitution seems to be to provide the President with additional fire-extinguishers.

Angora and Education.

Although the reopening of the English High School for Girls in Constantinople has not yet been reported, it appears that the Turkish Government has modified its attitude. The Headmistress is not to be prosecuted for acting in the only way that any self-respecting woman, Turkish or British, could act, and substitutes are to be found for the particular masters whom the Turkish authorities sought to force upon the school. Even this solution suggests a tragic lack of knowledge of Angora in regard to the rudiments of educational policy. It is the duty of a State through its Ministry of Education to see that an adequate standard of education in schools is maintained. To this end it conducts examinations through inspectors, and where schools fail to come up to the required standard, they can be dealt with in any prescribed manner. It is, however, not the duty of the State to impose individual teachers on private schools, nor, one would imagine, would it occur to any Ministry of Education outside Angora to attempt to do this. No one fails to appreciate the Turkish desire to see the Turkish language hold its own in its own country, and the decision to use the Latin script will be very widely endorsed as a wise and practical move in this direction. But it is folly to imagine that the business and social organisation of a country can suddenly be switched on to a new language, and it is equally foolish to think that Turkey will derive any practical good from making the attempt. If it is the opinion of the Angora Government that the Turkish Republic can last for only a year or two, and if for this reason it is anxious to lay foundations with the utmost possible speed, regardless of their soundness, there may be some justification for this feverish haste with which the authorities are acting. Any thinking Turk, however, who is not beholden to Angora, will note this excessive anxiety and lack of confidence in themselves shown by Turkey's rulers, and will be tempted to imagine that, if the safety of the Republic is in danger of being undermined by a girls' school in Pera, it can be only a matter of time before the present régime will totter over from inherent weakness.

The Turk in Business.

Again, the desire to see the businesses of Turkey largely in Turkish hands is a natural and praiseworthy one from the point of view of the Turkish authorities: but no one in touch with the realities of life would imagine that the type of business man of whom Turkey is in need is going to be evolved by foisting unfledged youths into foreign businesses, in which they can count upon drawing their salaries regardless of their efficiency or their readiness to work. A horse may be led to the water, but it cannot be made to drink. The Turks thus pitchforked into foreign offices will learn nothing that will help them to build up sound businesses of their own for the advancement of Turkey. In nine-nine cases out of a hundred the incentive to learn will be wanting in the Turk, and the incentive to teach in the employer. Here too, the method adopted to reach the goal in view is crude, hopelessly crude, and suggests that, just as the Ministry of Education knows little about the practical side of education, so the authority responsible for the order for the compulsory employment of Turks in foreign offices knows nothing about business. To add to the pathos of the whole thing, the Angora Government is so ignorant of world affairs in general that it cannot understand that Great Britain's offers of friendliness are sincere, and that her interest in seeing the Republic a success and taking its rightful place among the nations is as great as Turkey's own interest.

The French in Syria.

Not the least of France's difficulties in Syria is the fissiparous tendency of the population. The last division of the mandated territory, in December, 1924, provided for three main units—the Greater Lebanon, the State of Syria, comprising the provinces of Damascus and Aleppo, and the State of the Alawiyin in the Jebel Ansariyeh. M. de Jouvenel's effort to hold elections in the last two sections with a view to adjusting Franco-Syrian relations did not meet with success outside the districts of Antioch and Alexandretta. The latter district has been officially included in the State of Aleppo, but from the outset its special position has been recognised, and in the Franklin-Bouillon Agreement of October, 1921, it was provided that a special administrative régime should be established in the district of Alexandretta as a concession to the strong Turkish sentiment of the town. Accordingly Alexandretta has remained a unit apart, and in the reorganisation of December, 1924, retained its special position. A representative Council of the district, acting as a Constituent Assembly, has now proclaimed the independence of Alexandretta as a separate State, and has requested M. de Jouvenel to appoint his delegate in the town as the first President. If the new order in Syria is to be modelled on the lines of "Go as you please, provided that the Mandate holds good," this move on the part of Alexandretta will presumably suit France's policy. When in the past the district exploited its pro-Turkish sentiments, it has been more with the object of putting a spoke in the French wheel than from any desire to come again under Turkish jurisdiction.

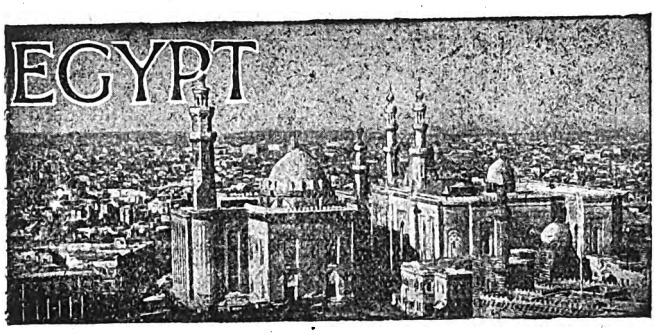
ITALY AND THE BALKANS.

The report that the recent conversations in Rome between Signor Mussolini and M. Nintchitch, Foreign Minister of Yugoslavia, have led to the conclusion of a further treaty between the two countries which could have the effect only of enlarging Yugoslavia's military commitment in Central Europe, has not only been officially denied, but is now also generally discredited. No actual document has yet been signed; but the ground for an amplification of the agreements in force between the two countries was explored, and it may be expected that a more formal character will ultimately be given to the new understanding, in spite of the fact that the urgency is held not to be so great now that Germany has not yet been admitted to the League. In this connexion it is of interest to review the relations between Italy and Yugoslavia during the last few years, with a view to forming a clearer idea of the way in which, under the existing Governments in the two countries, these relations may ultimately develop. Neither the Treaty of Rapallo, which was signed on November 12, 1920, nor the Treaty signed in Rome on October 23, 1922, which was intended to implement the Rapallo Treaty, settled the vexed question of Fiume; and it was not until January 27, 1924, that a final settlement was reached, which transferred the greater part of the Free State of Fiume, created at Rapallo, to Italy, while according satisfactory economic facilities to Yugoslavia in the section of the port which passed under Italian sovereignty. The more important part, however, of the settlement of January 1924, was the general "Pact of Friendship and Cordial Co-operation" concluded between the two countries at the same time, which, in Signor Mussolini's words, fitted the local agreement into the framework of a wider agreement of a political character, and thus gave it a chance, which its predecessors never had, of being fruitful of practical results. Even so, it was found necessary to make many outstanding questions the subject of further prolonged negotiation, and yet another Agreement, signed at Nettuno on July 21, 1925, dealt with matters concerning Fiume and Zara, which experience had shown called for formal regulation. The significance, however, of the Pact of January 1924 was clearly brought out by the attitude of the two Governments towards incidents involving their nationals. In the course of the last two years more than half a dozen such incidents have occurred—anti-Italian demonstrations in Yugoslavia, frontier skirmishes, the Italian attack on the offices of a Slovene newspaper at Trieste and so forth—which with less correct relations between the two Governments might have brought the countries to the verge of war, but which have been disposed of without difficulty.



In the Rapallo Treaty Italy and Yugoslavia agreed to prevent the restoration of the Hapsburg Dynasty in Austria or Hungary and to exchange information in regard to hostile action taken against either party in either of those two countries. By the Pact of January 1924 a further step was taken; Italy and Yugoslavia agreed to afford each other support and cordial co-operation in order to maintain the position established by the three Treaties of Trianon, St. Germain and Neuilly; they undertook to maintain neutrality in the event of the other's being attacked, without provocation, by a third party, and they pledged themselves to come to an agreement as to the common measures to be taken for safeguarding their common interests in the event of their agreeing that those common interests were or might be menaced. In spite of the wideness of the scope of this latter instrument, it is conceivable that Yugoslavia, at least, might consider that the danger of a union between Austria and Germany did not come wholly within its four corners. The Treaty of Versailles provides that the union of Austria and Germany shall not take place without the unanimous consent of the Council of the League of Nations. An arrangement with Italy, therefore, might interpose a double barrier against such an eventuality, providing for a permanent veto as far as the Council was concerned, and for military co-operation in the event of the League's authority being flouted. Italy, on the other hand, Signor Mussolini in particular, has for some time past been laying stress on the necessity for a forward economic policy, and it is evident that her needs in this direction are not lost sight of, however vigorously the political side of Italian "imperialism" may assert itself. Any agreement, therefore, which tends to bring Yugoslavia, *a fortiori* the Balkans as a whole, into an essentially Italian orbit is likely to have special attractions for Rome. It was noticeable that the change which came over the Italian attitude towards the negotiations that ended in the Locarno Pact coincided with the discovery by the Italian Press that the League Powers were not all irrevocably absorbed in what was termed the Franco-British orbit, and that there seemed to be a chance of Italy's becoming "a centre of attraction." To this end we may suppose Italian policy is now being directed, and the placing of Italo-Yugoslav relations on a broader basis may be regarded as one of the first-fruits.

Signor Mussolini has only himself to blame, if his rattling of the Italian sword attracts more attention in Europe than his moving of pawns on the economic chessboard. He will certainly be entitled to considerable credit, if he succeeds in playing the rôle of the "honest broker" in the establishment of a Balkan Pact. No one is in a more favourable position for the part. He has already gained a hold on Yugoslavia, and has found Greece anxious to reciprocate any friendly overtures; he has a claim on Bulgaria's gratitude and has shown in Albania that Italy can press for economic advantages without interfering in the political affairs of the country. Only with the Roumanians are differences of opinion much in evidence, as a result of Roumania's failure to settle her Italian indebtedness. Signor Mussolini, however, could without difficulty bespeak Roumanian good will, if he cared to make it easier for Italy's Roumanian debtors to meet their obligations. Every country in the Balkan Peninsula is theoretically in favour of a Pact, provided that its own terms are fulfilled. The main difficulty in the way is that Greece is called upon to make concessions to Yugoslavia and to Bulgaria. Here, too, however, Signor Mussolini has it in his power to prepare the way for agreement; for the return of the Islands of the Dodecanese to Greece would go a long way towards gilding any pill that she may have to swallow in Macedonia. There is, moreover, the unknown factor of Italy's theories regarding Asia Minor. Mustapha Kemal Pasha cannot be surprised if his attitude towards all foreign Powers has encouraged the belief in Italy that his republic is riding for a fall; and if Asia Minor or any part of it were thrown into the melting pot, it is certain that Italy would not let slip any opportunity that offered for easing the problem presented by her rapidly increasing population. However far in the future these surmisings project themselves, they will offer a further inducement to General Pangalos to inquire more closely as to whether concessions in Northern Greece may not be more than compensated in other directions. A Balkan Pact that enabled the Peninsula not only to be at peace with itself, but also to speak in the councils of Europe as a single unit representing over forty million people might be made such a factor for peace in the world that it may well commend itself to Signor Mussolini as an achievement second only to Fascism.

The Near and Middle East*

From Our Own Correspondents.

Cairo, March 13.

Official Banquets.

The series started with a dinner at the Residency to the Cabinet and the Palace officials. This was followed on Wednesday evening by a banquet of 129 covers at the Continental-Savoy Hotel, given by Ziwar Pasha in honour of the High Commissioner. Last night Aziz Pasha Izzet, the Egyptian Minister in London, entertained Lord and Lady Lloyd at the Semiramis Hotel, at which covers were laid for 140; and this evening Lord Lloyd is the guest of honour at the Turf Club at a dinner given by the British Chamber of Commerce in Egypt.

The Mixed Tribunals.

In the reference to the Jubilee of the Mixed Tribunals last week I omitted one very interesting fact that emerged from the various speeches made at the ceremony in the Appeal Court. This is that the idea of the creation of these International Tribunals originated with Ismail Pasha and Nubar Pasha, i.e., with Egypt, and not with the European Powers, as has hitherto been the accepted view. This should do away once and for all with the complaint that has during the past few years been so often heard amongst Egyptians, particularly members of the Extremist wing, that the Mixed Tribunals constitute a fetter placed by Europe on Egypt's liberty.

The Alexandria Municipality.

The Alexandria Municipality is once again in trouble. Ever since it was first formed it has never run satisfactorily, to a great extent owing to the cosmopolitan atmosphere, with its intrigues and conflicting interests, amid which it has had to work. For the greater part of its career it has had a European Director-General, but although some of the holders of that post have been able men, they have never succeeded in overcoming the obstacles which for one reason or another were always placed in their way.

When the Wafd régime came in with its ideas of nationalisation an Egyptian was appointed, but he proved most unsatisfactory, and about a year ago the post of Director-General was abolished and the duties were merged with those of the Governor of Alexandria. Still matters did not improve, and about two months ago such a scandalous condition of things had come into existence as a result, on the one hand, of the persistent interference of the Municipal Councillors in the administration, and on the other, of the confusing Organic Laws and Statutes on which that Administration was based and of which the Wafd régime had made full use for its own ends, that the Government felt compelled to exercise its prerogative, and, suspending the Municipal Commission, appointed a temporary commission to act on the condition that new elections will be held within six months. This raised a certain amount of stir, but the Extremist element, finding that they had adequate representation thereon, did not press their opposition.

This effort to adjust the situation did not, however, have the desired result: in fact, it aggravated the situation. Both members of the temporary commission and Governor were far too busy to give their attention to the affairs of the Municipality, and the confusion that had preceded the Government's action became more confounded.

In consultation with the leading members of the temporary commission the Government decided to second one of its most able experts, Mr. E. Gascoigne Hogg, Controller-General of the Budget, to assist, as a whole-time man, the temporary commission and the Governor in the administration of the Municipality, and at the same time to make a detailed study of the conditions existing there. But as an example of the confused ideas prevailing even the members of the temporary commission, the very men with whom the Government had arranged for the delegation of this high official submitted to the temporary commission, while Mr. Hogg was on his way to Alexandria, a proposal for the appointment of an Englishman to the sub-Directorship of the Municipality.

A more tactless action could not have been conceived. The situation had already been rendered delicate enough by the delegation of Mr. Hogg, and this proposal to appoint an Englishman at this juncture to a senior post in the Administration was jumped at by the Egyptian members of the temporary commission as an opportunity to embarrass the Ziwar Cabinet, and they promptly resigned Thus when Mr. Hogg, by arrangement with the temporary commission, arrived in Alexandria he found that although that commission still had a legal quorum it had lost its indigenous element—which was not calculated to make his task any easier.

Very active efforts are being made to restore an Egyptian element to the temporary commission, but so far without result. All that has happened now merely serves to confirm the impression that as a working unit Alexandria Municipality has been a hopeless failure, and, unless the various communities pull themselves together within the next few months, it is quite possible that they will lose the privilege which they have now enjoyed for over thirty years.

Sofia, March 16.

Statement by the Minister of Finance.

The outstanding feature of the last fortnight is the 1926-27 Budget, which the Sobranye is in process of discussing and the debate on which was preceded by a lucid statement by the Minister of Finance on the economic and financial situation of the country. In this statement M. Molloff discussed the scheme of the Budget in which he has introduced several very interesting innovations. First of all there is no ambiguity about the Budget, for the Minister has pushed economies to the utmost limit, in order to avoid the necessity of meeting the deficit by further recourse to the National Bank, as all his predecessors have done, thus increasing to a considerable extent the State's indebtedness to the Bank, which now reaches almost the sum of 5 milliards of leva. The total of the estimated receipts marks the extreme limit of the fiscal capacity of the people, and the expenditure cannot be developed to the point required by the real needs of the country; consequently the Government has found itself obliged to suspend all the big public works undertaken by its predecessors. The Minister asks, by means of a special stipulation in the Budget Law, for the authorisation of the Sobranye to enforce further economies in the course of the Budget year by means of a reorganisation of the Public Services, from which he anticipates a reduction in the neighbourhood of 150,000,000 leva. This measure recalls very closely the plenary powers voted by the French Chamber in 1924 to M. Poincaré's Cabinet. A third and more important innovation is the inclusion in the Budget of a sum of 150,000,000 leva as the beginning of the amortisation of the floating debt with a view to the financial rehabilitation of the country, which will begin by the liberation of the National Bank's resources to allow it to take a more active part in national production. To this end the Minister has announced the approaching establishment of a State bank for industry and later on a Land Bank.

The actual financial situation is deplorable enough, for the National Bank can hardly maintain the value of the currency, which is only kept at its present level by means of the strict limitations of the fiducary circulation, the commercial balance last year having been adverse. To meet the difficulty of payments abroad resulting from this state of affairs the Government foreshadows the introduction of a special policy with a view to encouraging exports and restricting imports. It has already elaborated a radical modification of the Customs tariff, and the necessary Bill, which is about to be submitted to the Sobranye, will impose prohibitive duties on the importation of articles which are not of first necessity, and will abolish existing export duties on Bulgarian products.

The Government, conscious of the difficulties of the situation, is resorting to heroic measures which the Opposition will not lose the opportunity of criticising in the Sobranye, while suggesting that Bulgaria ought to have recourse to another course not less heroic, that is, to demand a reduction, or at least an adjournment, of the payment of Reparations, which are such a heavy burden on it.

The Political Outlook.

The economic situation necessarily has its influence on the political situation. It is generally supposed that the chief mission of the Liaptcheff Government is to conclude a big loan for the economic relief of Bulgaria and that, if it does not succeed in this task, it will have lost much of its *raison d'être*. Certain parties of the Opposition, taking note of this state of affairs, are anxious to profit by it, by bringing about a change of Government. This appears to be the policy on the one hand of the Radicals, who are a small political party, and on the other hand of the Liberals, who now constitute the party enjoying the favour of the Communists. The Radicals have taken the initiative with the formation of a block with a Leftward trend, comprising Radicals, Democrats, Draghieff Agrarians and Socialists. The Draghieff Agrarians, while losing more and more of their influence in the Agrarian party in favour of the centre led by the ex-Ministers, MM. Tomoff and Tourlakoff, have not shown much enthusiasm for the idea of a coalition against the Liaptcheff Government, and they have stipulated in any case for the participation of the Democrats. So far, however, the latter have refused point-blank their adherence to the scheme, as they consider an anti-Government block entirely premature. At the same time the Socialist party has experienced on this question of its participation in the political struggles of the country a dangerous scission which has reduced it to impotence. For these reasons, then, the Radical attempt may be regarded as having completely failed.

The Liberal scheme, with a tendency to the Right, had the same aim in view, that is to say, the constitution of an anti-Government coalition, but with the help of the Agrarians of the centre. The Agrarian leaders have been sounded on this point, under the conviction that such a group would receive the support of all the elements of the extreme Left, embittered against the régime established after the *coup d'état* of June 9, 1923. Here too, however, the Agrarians have refused to lend themselves to the manœuvre, for they prefer, evidently, an entente with the Democrats, who thus find themselves the centre of all political combinations. The Democrats, as a matter of fact, are not altogether opposed to the idea of a collaboration with the Government Party of the Democratic Entente now that one of their old leaders finds himself at the head of the Government. It is not improbable in these conditions that an understanding will shortly be reached between the Democrats and the Democratic Entente which would not be unfavourably regarded by the Agrarians themselves. This agreement, indeed, might even lead to the formation of a Government block which would enable the Cabinet to hold elections in the near future, and would assure the stability of the political situation for some considerable time to come.

Jerusalem, March 12.

The Moslem Supreme Council.

The single interest at the moment of the Arabs of Palestine is the future of the "Moslem Supreme Council." This Council was set up four years ago as a body, independent of Government, to administer all those religious, educational, institutional and philanthropic affairs which come under the heading of Moslem "wakf" foundations. It seems that in the statutes of this body, as originally drafted and approved by the Government, there was left some uncertainty as to the procedure for re-election of Members of the Council when, after four years, their term of office should expire. This, some months ago, was hastily put in order under the influence of those in office; but the amendment was effected, so it seems, by an insufficient number of the controlling Board which has power to amend the original statutes. The amendment was such as to facilitate the re-election of those in power, and met with considerable opposition at the time from other members of the controlling Board who wished to put forward rival candidates for the five seats in the Supreme Council.

The Council's term of office expired early this year. The elections were held and resulted slightly in favour of the supporters of the previous office-holders. The opposing party alleged many irregularities in the elections, urged the invalidity of the recent amendment, and also pointed out differences between the Arabic and English official versions of the statutes. The opposition party appealed to the Courts, which declared the elections void. The two sides each summoned large gatherings of Moslem notables from among their partisans, the one side insisting on a revision of the "Moslem Supreme Council" statutes, and the other side protesting vigorously against what it called the Government interference with purely Moslem affairs and with the single, elective, representative body which the Arabs of Palestine possessed. Each sent its series of resolutions to the High Commissioner. The Government has since suggested temporary compromises which have proved acceptable to neither party. The entire Arab Press, Christian and Moslem, is plunging into the controversy on one side or the other. The Christian papers justify their taking part on the grounds that the dispute has produced in the Arabs an utter indifference to the real Arab National Movement, which has become moribund in consequence; therefore they, the Christian Arab Press, must aid in the solution of the dispute. They point out the pettiness of the whole matter, and how it turns solely on the rival ambitions of a few families to keep or get within their control four or five comparatively well paid posts.

Jews and the Gendarmerie.

The Jews remain vociferously indignant at the projected exclusion of members of their community from the reorganised Palestine Gendarmerie. The protests appear to be having some effect, and it would seem that the reorganisation scheme is being recast. There may be difficulties in the actual running of a mixed military unit comprising Arabs, Circassians and Jews; but it was a tactless move bound to be misunderstood and misinterpreted, to exclude by name a significant section of the Palestine population.

Quality of Arab Intransigence.

The following extract from the local Arab paper *El Jezira* illustrates present feelings in the Palestinian Arab world: "In the past year the Arab National Movement has hung fire; or, rather, it has gone backwards in consequence of party and personal quarrels. There is now no body of men to take thought for the present and future of the country. The Government's policy against the Arabs has not changed: it continues to levy new taxes regardless of the present financial crisis; the hopes which the Arabs placed in the appointment of Lord Plumer in place of Sir Herbert Samuel have gradually been disappointed. Instead of the Arabs relying on themselves and fighting against the Jewish National Home by positive and creative methods, they have begun to sell their lands (willingly or unwillingly) to the Jews. Certain of the most prominent of the Arab nationalists have even opened land agencies to facilitate this selling to the Jews. These have brought about a grievous split in the national movement."

IRAQ.

Baghdad, March 10.

Trade in Iraq.

The annual report of the British Chamber of Commerce, Baghdad, records a period of trade depression which deepened during 1925, chiefly owing to unpropitious climatic conditions and the depredations of locusts in the northern areas. The uncertainty caused by the long-deferred settlement of the Mosul question had an adverse effect on trade, and the merchants are still influenced by fear of possible measures of retaliation on the part of Turkey. Partly through the restrictions imposed by the Persian Government, the transit trade to Western Persia has also suffered considerably, but great efforts are being made to secure for Iraq this trade, for which it still offers the best and cheapest route. The report praises the work of the British advisory staff, and expresses the hope that the economy which is at present the chief slogan in Iraq Government circles will not be carried to the point of hindering the due development of the country.

Welcome news has lately been received of the abolition

by the Persian Mejliss of all road tolls. This measure is an effort to encourage motor and other transport; a vehicle licence tax and a tax on imports and exports will be imposed instead of the tolls. The change is likely to discourage Russian trade from the north, but will benefit Iraq by enabling goods from Baghdad to enter Persian markets unhandicapped by the heavy duty on transport exacted by the road tolls.

The Trans-Desert Route.

The Nairn Transport Company announces that after March 16 its convoys will run weekly by the Rutba-Palmyra-Homs-Tripoli route. The journey is expected to take about 30 hours running time—six hours longer than the old direct route to Damascus, but considerably less than the difficult Amman road, which the convoys have been following since the troubles in Syria diverted the trans-desert traffic.

Mr. Norman Nairn, who has lately been in Baghdad, has ordered from America a six-wheel Pullman coach, 110 horse-power, with which he means to experiment on the desert route. The car will carry fourteen first-class passengers, and two drivers, each passenger having an armchair 24 inches wide. Its maximum speed is fifty miles per hour, though the average in use will probably not be more than 25. The car, which is luxuriously equipped and has a lavatory, is 30 feet long, and will carry 1¼ tons of luggage on its roof. It has been exhaustively tested in America, and the Company is very hopeful of its proving successful in bad weather in the Syrian desert. The cost of the car is £3,500.

General News.

The rains this year have been exceptionally heavy, and for once the Iraqi cultivator has got as much as he wants, if not too much. Part of the wheat and barley crops are reported to be water-logged, but may yet be saved by a change in the weather.

As was anticipated by the medical authorities after the exceptionally mild winter of 1925, an epidemic of plague has occurred in Baghdad. So far the disease has only occurred in Baghdad East, and it is hoped that the epidemic is well in hand. Inoculation is being energetically carried out.

In pursuance of the Iraq Government's policy of conducting the administration of Kurdistan in Kurdish through Kurdish officials, the Ministry of Education is now opening a bureau for the translation of laws and educational books into Kurdish. The repair of roads and improvement of communications with Kurdistan is being undertaken by the Ministry of Communications and Works.

Sir Henry Dobbs is expected back in Baghdad about March 31.

Fifteen special aeroplanes, Vickers-Napier Victoria machines, are being equipped for use in Iraq as troop-carriers. Each is to carry 25 fully-equipped soldiers, and is to be fitted with wireless, water-tanks, and medical stores.

The appearance of "Four Centuries of Modern Iraq," by Mr. S. H. Longrigg (Administrative Inspector, Baghdad Liwa), has been greeted with much interest by the British and official community here. The problems of Iraq to-day are very much what they were in the days of Ottoman rule, and the light shed on them by this first succinct account of her recent history is a very valuable one.

CYPRUS.

Nicosia, March 2.

Agitation for Union.

The Colonial Secretary has communicated to Greek members of the Legislative Council the reply of the Secretary of State for the Colonies to the memorial which, in spite of numerous replies to similar petitions, they have presumed to submit for union with Greece, and for wider measures for self-government. They are informed (1) that the question of union is, as they well know, closed and cannot be re-opened, and that the Colonial Minister observes with regret that they appear to forget that Cyprus is now a British Colony and that they regard so lightly the spirit of the oath of loyalty to H.M. the King, which was taken by each of them at the opening of the Legislative Council on November 6, 1925. (2) That while he is always disposed to consider with sympathy the desire of the inhabitants for wider participation in the administration, he does not consider that Cyprus has yet reached such a degree of development as to justify the granting of wider Constitutional powers. It may be hoped that the present rebuke may bring home a lesson which all previous replies have failed to enforce.

The Abolition of Tithes.

There is much rejoicing on the part of the agricultural classes in view of the abolition of the tithe system in respect of cereals. Farmers will, in future, be able to remove their grain from the threshing floors without waiting for the tithe superintendents and their satellites, the *memours*. Thrifty villagers will now have opportunities for shaking off the burden of their debts, and may cease to pay from 12 to 20 per cent., or more, for loans, to money-lenders and merchants, besides being obliged to sell their produce for much less than its market value. This does not imply that time will not be required to effect any great change in the habits of a people who are, as a rule, improvident, or that further legislation will not be required to bring about really better times for the impoverished agriculturists of Cyprus, whether in the cereal and carob growing plains, or in the vine cultivating hill villages. Some satisfactory solution of the problem of agricultural banks will also have to be arrived at. The change now being introduced will bring some hardship for many of the host of temporary officials who have been employed under the tithing system—*koldjis*, *memours*, weighers and measurers, store-keepers, and others. For many of them probably employment may be found by the Government, in the tax-collecting and other departments. But for a considerable number there may be trouble and difficulty.

General News.

The agricultural outlook in general is promising, and weather has continued to be favourable.

The Nicosia race meeting will take place on March 6.

NEAR AND MIDDLE EAST ASSOCIATION.

"The Mosul Question and the Future Relations between Europe and Asia" is the subject which is to be discussed at the next meeting of the New and Middle East Association, which is to take place, by kind permission of Mrs. Charles Hancock, on March 26, 8.30 p.m., at 125, Queen's Gate, S.W.7. Captain E. N. Bennett will preside, a paper by Captain Edward Walker, recently returned from Angora, will be read by Mrs. L. Cobham, and other speakers include Sir Graham Bower and Col. J. Coghill Somerville.

The Egyptian political murders trial which was to have begun on March 16, was postponed for a week, as the President of the Court, Judge Kershaw, was ill with bronchitis.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor Street, W.1.

THE ARCHÆOLOGIST IN THE FIELD.

By William Ransted Berry.

The popular conception of an archæologist is a doddering old man in blue spectacles with a yard-long beard.

Like many other popular conceptions, this is a mistake. If one could make a flying inspection of the various archæological excavations in Egypt, Northern Africa, Greece, or Asia Minor, one would find on the spot in nearly every case energetic young men in shorts or riding breeches who would talk to you about Rugby football or Minoan clay figurines with equal enthusiasm.

Another mistaken idea is that the field archæologist, armed with a pick and a shovel and couple of dry biscuits, wanders off into some desert place, and there proceeds with monumental patience to dig up acres of ground until he happens to find something.

As a matter of fact, the archæologist himself never digs—unless it is a question of freeing from the earth with his own hands and a knife some particularly precious and fragile "find." He is busy, on the contrary, and usually behind-hand, with such humdrum occupations as note-taking, measuring, photographing, in the intervals he is able to snatch from the task of superintending a crew of native labourers. Nor is the scene of his activities ever chosen haphazard. Some indication there must be either on the surface or in the configuration of the ground to suggest what is hidden below. The upper portions of two huge marble columns rising from the centre of a wheat field indicated the site, forty feet below, of the great Temple of Artemis at Sardis in Asia Minor; before now the finding of a single potsherd has led to the discovery of a buried city or the tomb of a once-powerful King.

The archæologist in the field cannot be a dreary pedant immersed only in the dry bones of his subject. To be successful he must have boundless energy, imagination, the gift of inspiring zeal in others, and lastly, but by no means least, the ability to handle men. Digging expeditions have been wrecked, archæologists murdered, because of the lack of a little human understanding—a little diplomacy.

All knowledge is of value to the digging archæologist. One might even go so far as to say that a smattering of engineering, draughtsmanship, carpentry, mining, chemistry, accounting, languages, geology, mineralogy, biology, medicine and surgery, even a vague notion of the principles of obstetrics in an emergency, is of greater assistance in the field than all the years which may have been spent in the study of books and the contents of museums. It is not intended to infer that an intensive understanding of the science of archæology is unnecessary; it is, of course, the foundation of any archæologist's equipment. But it is suggested that such an understanding is brought into full play only when the results of the day's work come to be examined and classified, or when the season's campaign is over and the arduous work of cataloguing, reconstruction, scholarly speculation, begins.

On one occasion in Turkey a rising on the part of the Mohammedan workmen against their foreman, a Christian from the islands, synchronised with the destruction in a great wind of the wooden shack in which the excavators lived. It is scarcely necessary to point out that no information to be found between the covers of archæological text books was of any help in preventing a general massacre or in rebuilding the expedition's house before nightfall.

Again, it may become suddenly necessary to shift a marble block weighing many tons in order to release a workman pinned beneath it; the man himself will require surgical attention. The walls or roof of a tomb hollowed out inside a hill will show signs of falling in; they must be shored up, and in no inexpert fashion if the lives of the men at work within the tomb-chamber are to be safeguarded. Less vital questions, but questions of major importance, archæologically, constantly crop up. What acids and in what proportion to use in cleaning some corroded bit of delicate metal work or jewellery; how to account for the presence of an unexpected mineral in a particular locality; why the original occupiers of the site under investigation elected to build their city where they did rather than across the river where at first glance the conformation of the terrain would appear to be much more favourable. The answers to questions such as these are not to be found in the Classics nor in British Museum catalogues.

Digging is full of romance; it could not well be otherwise where men unearth on the spot the history, art, even the domestic details of peoples more remote than the average mind can easily comprehend. Here comes to light in a temple excavation a long and intricate legal document, a mortgage; Greek lettering exquisitely cut upon the marble wall. There a pick dislodges one of several great boulders sealing the entrance to a Lydian tomb; the first man in stands in the presence of dead who were laid away hundreds of years before the rude hordes of Cyrus brought low the city above their heads. The bodies are dust now, but round about still stand the vases and the toilet articles once used in life, and mixed with the particules of bone on the earthen couches lie rings where once the hands were folded upon breasts, or golden chaplets where the heads reposed. In Egypt where, due to the preservative qualities of the dry atmosphere, the passage of a thousand years is but as yesterday in so far as decay or even tarnish are concerned, such a tomb scene is even more impressive. But perhaps not. Perhaps the very perfection of the preservation robs the contents of the Egyptian tomb of that romantic assurance of antiquity which is best imparted by a little corrosion, a few remaining flakes of colour, sometimes a mere film of vestments which vanishes at a breath.

Digging can be affecting, too. In the course of clearing what is left of the Temple of Artemis at Sardis it became evident that when in the course of time the temple fell into the hands of the Romans and eventually was abandoned as the precepts of Christianity ousted the old pagan gods, it began to be used as a quarry to furnish building material for Roman structures. Everywhere masses of marble chips were found showing how the great blocks of the temple walls and the column drums and quite possibly the gigantic statue of the goddess herself had been ruthlessly destroyed to furnish lime for Roman brick-work. Fortunately, in the interests of archæology, this vandalism was brought to a sudden end by an earthquake whch split in two the nearby acropolis hill in such a fashion that what remained of the temple was buried to a depth of forty feet under an avalanche of earth and rubble. As modern excavators laboured to bring the temple once more to light they came upon an enormous marble block tilted against the first course of one of the temple walls. One end of the block rested upon the ground, and under it, pinned down by it really, lay the fragments of a human skeleton, the ribs smashed to powder under the weight of that great stone. Among the bones were found a few trifling copper coins in the remains of a small sack of coarse leather such as a poor slave might have about him. It was not difficult to picture the tragedy which had been enacted there more than eighteen hundred years before. The gang of slaves sweating under the fierce Asiatic sun to lever that huge block from the wall beneath a rain of blows from the

Roman overseer's whip; one man leaps down to adjust a roller or perhaps to ply his crowbar more conveniently from below; unexpectedly the block slips, plunges down; there is a yell of warning, but it comes too late; the man is crushed to the ground under half a ton of solid marble.

He is only a slave, so let him lie. The shrewd whip whistles through the air and the gang moves on to the next block.

Another incident, less moving, might be reconstructed from a "find" made in the *dromos*, or entrance-passage of a hillside tomb on the same site. A hoard of gold staters, the first coins struck by Crœsus and perhaps the first coins ever struck, was discovered hidden away in a cranny of the *dromos* wall. How came it there? The coins could have no connexion with the dead within the tomb, for the tomb-chamber had not been rifled and it was, besides, a century or more older than the coins. Nor was it likely that a relative of the deceased, however eccentric, had made the shades of his ancestors a surreptitious offering of a sum worthy in those days of a king's ransom. Then it was remembered that the coins roughly agreed in date with a recorded sack and burning of the city by a hostile army. What more likely, then, than a flight from his threatened house of some panic-stricken merchant, a miser maybe, clutching to his breast as he ran the golden savings of a lifetime? By a miracle he escapes slaughter in the streets and makes his way out of the city through one of a hundred breaches in the city wall. But everywhere, even here in the suburbs, swarm the enemy; plundering, firing, killing. Where can he hope to find a hiding-place, not so much for himself as for that gold he carries which is more precious to him than life itself? His eye lights upon a remote ravine the flanks of which are lined with a long array of elaborate tomb entrances. If only he can reach it! He will be safe there among the dead, temporarily; the enemy are too intent upon the living. By good luck he gets there unobserved. He dodges into the first entrance that promises concealment. There he lies panting and shivering hour after hour, listening to the sounds of distant fighting, the screams, and the crash of falling roofs. The sun sets and darkness falls. He prepares to flee once more, hoping to win to the mountains before morning. But what are those sounds close by? An accidental ring of metal gainst stone and exclamations in a foreign tongue! A party of the enemy searching for fugitives, or bent on tomb robbing! In frantic haste he stuffs the bag containing his gold staters into the cranny he had previously noticed in the wall beside him. He cowers down and holds his breath. Nearer they come, and nearer. Suddenly they enter where he is and one stumbles against his prostrate body. He is up in an instant, struggling in the hands of barbarous black-bearded Persians. The ravine echoes to his sheep-like bleatings. But it is quickly over. His body rolls down the hillside, streaming blood from a dozen spear thrusts —and his gold settles down in that dark cranny not to reflect the sun again until it is disturbed by the pick of a peaceful Turkish workman after twenty centuries and more.

Important single "finds" are exceptions and not the rule during a season's digging. For one day when a hoard of gold is found, or a statue, or a fine inscription, there are many days when the combined efforts of as many as three hundred labourers produce nothing more interesting than ever-growing piles of potsherds, indeterminable bits of bronze, fragments of worked stone or marble of small individual importance. On the other hand, it is upon the little things, the mass of insignificant detail accumulated bit by bit in the day's round, and not upon the sensational discovery which, more often than not, is a purely lucky strike, that the prosperous issue of the campaign depends. It may well be that the sum of countless small indications may eventually point to some new fact or to the refutation of some established theory which would be of greater importance, archæologically speaking, than the discovery of a second Venus de Milo.

Disappointments are many and sometimes hard to bear. Particularly is this true in tomb digging, when, after weeks of heavy toil on the part of the workmen and a corresponding decrease in the all too slender expedition funds, the chamber proves to be empty, thanks to the attentions of early robbers. To refer once more to Sardis, the expedition leaders there had high hopes of finding, beneath the basis upon which the colossal statue of Artemis had stood within the temple, votive offerings in gold and silver such as were found in a precisely similar postion at Ephesus not far away. A few silver coins, it is true, were found in the crevices between the foundation blocks, chance "finds" doubtless lodged there by chance, but no votive offerings of any description were brought to light even though every stone in the basis was moved and a shaft sunk to the actual hard-pan.

Not least among the rewards which fall to the lot of the archæologist in the field is his increased knowledge of countries and the manners of men. He penetrates into districts unknown to the casual visitor; he learns to know strange peoples, to speak their languages and, if he have in him that human sympathy and understanding without which no leader can perform his duty towards those under him, he is privileged to share lives and confidences of which the memory will remain fresh with him long after the catalogued records of his work are thick with dust.

THE DESIGN OF A SARACENIC HOUSE.

The Société Internationale de Philologie assembled at its house in Taviton Street, W.C., on March 5, to hear a lecture by Mahomed Abdul-Haleem Bey (Architect to the Egyptian Government) on "The Design of the Saracenic House." The Egyptian Chargé d'Affaires (Sesostris Sidourous Bey) was to have presided, but was prevented by illness from attending. In his absence the chair was taken by Dr. Henri Léon, Secretary to the Society. Among others present were the Comtesse de Tamascire (Bosnia), the Comtesse de Wundt (Belgium), and Lord Strathbolgi.

In the course of a most interesting address the lecturer described in detail the house of a well to do man in Cairo, built in Mameluke times around an immense open courtyard, and with no ground floor windows looking on to the street. Whether inside the house or outside the windows were of lattice allowing anyone inside a room to see without, while obscuring the view of those outside who might wish to look within. The lattice work was richly ornamental. The windows were usually bay windows with with a raised seat inside. One use of this seat was to place thereon porous water vessels, in order that the breeze coming through the lattice work might blow over the vessels and the water they contained be cooled by evaporation. The rooms of the house would be lofty, its roof flat. It might have as many as five storeys. The breeze from the north, dreaded here was eagerly sought in Egypt, and the principal rooms of the house were usually placed where that breeze would be most felt—on the south side of the courtyard. Among these on an upper floor would be the *qa'a*, the principal reception room of the ladies. This was a long room, the middle square of which was on a lower level than the two ends, and was lighted from above by a lantern or cupola. Its bay windows overlooked courtyard and street. It was invariably the handsomest room of the house, decorated with a coloured marble dado, and with coloured glazed tiles on the walls. There was a beautiful mosaic fountain in the middle of this room. On the south side of the courtyard also was generally placed, raised some ten feet above the ground level the *mak'ad*, a gallery, furnished and used as a lounge, entirely open to the air for the men, or latticed for the use of the women. The rooms on the ground floor mostly belonged to the men of the household: there were offices, stables, stores, rooms for men servants, kitchen and bakehouse. On this floor was the *mandara* or general men's saloon; attached to it on a lower level,

Digitized by Google

but with no partition between, was a vestibule where the guests left their shoes. In this vestibule was often a small fountain. In large houses there would be more than one *mandara*. In the centre of the courtyard would usually be a well getting its water by infiltration from the Nile, this well shaded by one or two large trees, and in a corner was the *takhtabosh*, a marble paved recess, furnished, and used as a reception room by the men in summer. Then as now public baths were in use but every such house as was being described would have its own bath rooms, with supplies of hot and cold water, and adjoining rooms for repose before and after the bath. The street door was handsomely decorated, and had a seat outside for tradesmen and others and another seat inside for the doorkeeper.

Lantern slides illustrating many beautiful Eastern interiors and architectural features, such as ornamental ceilings, were shown subsequently.

THE WEEK AT HOME.

London, Tuesday Morning.

Britain and the League.

Writing before the Parliamentary debate on the question of the recent failure of the Geneva meeting to obtain the admission of Germany into the League, one is rather at a loss to describe the judgment of the country upon the conduct therein of the Foreign Secretary. It is being said by all sorts of journals that the public generally is disgusted with the feebleness of Sir Austen, and that if only he had stood up with Sweden for the unconditional entry of Germany, Europe would be now a much more united and happy family. From sheets such as these one gains the impression that the only countries to behave in exemplary fashion at Geneva were Sweden and Germany.

But even these commentators, who see evil in everything done by countries other than Sweden and Germany, are at a loss to understand the intransigence of Brazil in standing out against the advice of the Great Powers. All of them in their turn have been casting about to find the real cause of Brazil's constancy. The *Daily News* expounded to the world the theory that Brazil has been able to flout the sentiments of the civilised section of Christendom only because it has behind it the sinister hand of the Vatican: in other words, that the consistent aim of the Vatican has been to wreck the League. On a no more probable basis *The Times* has been suggesting America as the influence behind Brazil. It is curious how the assumption persists that there is rightly no *amour propre* but that which belongs to the Great Powers.

As a matter of fact, the claims of Brazil to a permanent seat on the League Council have been recognised by no less an admirer of the League than Mr. Ramsay MacDonald, and there are many in this country who see in Brazil's claim no anomaly whatever. American representation on the League is already rather thin, and the fear of a "Latin bloc" on the League is a verbal nightmare rather than a real dread.

The only really obvious effect upon British opinion of this Geneva *débâcle* has been the strengthening of the old conviction that it is Britain's place to limit her Continental commitments as much as possible—in fact, to abolish them. Sir Alfred Mond has lately been giving expression to what I am afraid is a somewhat ignorant view that in the ordering of European politics Great Britain should have no part at all. According to the supporters of this view, Britain should always remain, in politics as she is in geography, an island. To do so, however, would be to commit precisely the same irritating mistake as America has made: to withdraw from duties and at the same time to expect privileges. Britain must ever and increasingly be a Continental Power. Nor is it necessary that her Imperial interests should, as the Little Englanders contend, be harmed by such a Continental preoccupation.

America and Ourselves.

British opinion has in the last few days again enjoyed one of those periodical reminders of the gap that divides sentiment in these islands from that prevailing in the New Continent. On the one hand, the public here has read with a certain amazement of the claim made by Senator Borah for yet more money from Great Britain, as if "the country which won the War," had not already made enough out of it; and on the other, it has read the conclusions of the American Ambassador, Mr. Houghton, that Europe has learned nothing from the War. "In these circumstances is it not just about time that America were told the truth; that is, that she is a nation foreign to all those who fought from an early date in the War; that she is the Power which more than anyone else is responsible for the creation of the League of Nations, whose responsibilities she is in no case able to share, but in whose privileges she is the first to participate; that she alone of all those who were engaged in the War was in a better position at the end than at the beginning of it: and that it is just conceivable that those who knew something of the problems of Europe before she was born may yet possess a little information that is apparently lacking to the otherwise omniscient Government of Washington? Frankly, this patronising attitude of the United States towards the embarrassments of Europe has become intolerable.

What does this condemnation by the American Ambassador of Britain and of Europe really amount to? He says that national animosities still exist in Europe, when no one but an absurdly idealist American could have supposed for a moment that they did not. The truth is that Americans know even less than the notoriously ignorant British of Continental affairs, and that when Mr. Houghton asserts that British official opinion is still far behind the real opinion of this country, it merely means that British statesmen in contact with realities and not with dreams know more in general than the people of this country, and in particular more than the people of his country. One may at least hope that the old legend of the "Anglo-Saxon" ties between this country and that of the United States may by this event be brought nearer its inevitable death.

It is possible that these two men by no means represent American opinion, in which case these strictures will be quite beyond the mark. As a matter of fact, I believe that there is far more sympathy in America with France in her enormous problems in Europe than is commonly supposed here. It is so easy in London to assume that the fears of millions of intelligent Frenchmen are without the slightest foundation, and that anyone else who happens to live even farther away from the scene of wars would make an equal assumption.

Cash on Delivery.

Those who have lived abroad for long will not be amazed at the tardily made adoption, by the Government, of the system known as Cash on Delivery. But in this country it has been difficult for people to realise that the Post Office exists only secondarily for the purpose of carrying our letters. In reality this Government Department is become a maid of all work, and its many activities are to be increased by the adoption of the C.O.D. system. In future goods can be ordered to any address and paid for through the postman. This move, which is the result of the recommendations of the Linlithgow Committee on Agriculture, implies not only an extra convenience to the purchaser but also a decrease in the cost of consignments. It should considerably lessen the number of the worst pests of modern society—the middlemen—although it is obvious that in the application of the system certain hardships are to be endured by the small retailer.

To play into the hands of the larger concerns, however, is the tendency of the age, but that is a lesser evil than the continued existence of the monstrous number of middlemen.

The Twickenham Record.

Of all records in sport that which concerned the invincibility of England at Twickenham was probably the least inviolable; in any case it is now gone. Last Saturday Scotland were there to take advantage of the ineffable weakness of the English threes and full-back, whose monotonous missing of their opportunities not even the gallant efforts of the forwards could retrieve. In spite of the general opinion I cannot bring myself to believe that Scotland were not lucky to win, for England undoubtedly had the better of the game. Her forwards almost always got the ball, and at scrum half she completely dominated—if a man on the losing side can be said to dominate anything—the game. A. T. Young was to my mind the best back on the field. Behind the English scrum at any rate there was no one like him. In the Scots side Drysdale at full back, and Waddell and Smith were tremendous barriers to the unenterprising English attackers. But what the English forwards, who had their *vis-à-vis* beaten to a worthy degree, thought of the outcome of their unceasing efforts, had better be left to the imagination.

It was not a great game to watch, but the enthusiasm of the huge company (subsequent extrication from which was a most violent form of exercise) was a thrill in itself.

Scotland by this victory now ties with Ireland for championship honours—honours which, if England does not soon find some young threes and a full back to replace the failures of Saturday, will be a long time coming South.

Theatres.

The invasion of the American play steadily continues, so much so that Shaftesbury Avenue is now known as New York Avenue. In that thoroughfare no fewer than six of the seven theatres which it contains are exhibiting American productions. Some of them, however, are quite visitable, and their success is not undeserved. But it is amazing that more English things are not launched.

One has only to think of the quite remarkable triumph of the Eden Philpotts play at the Court, "The Farmer's Wife," to see that a genuinely English play can last as well as anything that may be imposed from the New World. This rustic play has been given nearly a thousand times.

At the same time it is easy to imagine that Americans may be complaining of the number of English actors in the United States. For it is not only the skilled manual labourer whom the enterprising American is anxious to import. New York is said to be offering extraordinarily attractive terms to young English actors. It is, of course, all a question of finance.

ALTER EGO.

UNIVERSITY OF JERUSALEM.

A society called "The Friends of the Hebrew University of Jerusalem" has been formed in London, with Sir Philip Hartog as its first president. The committee which have been appointed are Dr. A. H. Levy (chairman), Dr. J. Burnford, Dr. M. D. Eder, Dr. W. M. Feldman, Dr. Haring, Dr. J. Snowman, Dr. Redcliffe, N. Salaman, Dr. A. G. Levy, Dr. H. A. Kisch, Dr. Muriel Landau, and Dr. M. Sourasky as Secretary.

Sir Philip Hartog emphasises the great importance of the research work conducted in the Biochemical and Microbiological Institutes, both for the advancement of science in general and for the sanitary and economic development of Palestine and the other countries of the Near East in particular.

Sir Ronald Lindsay, the British Ambassador in Turkey, arrived in London last week and is in consultation with the Foreign Office. Among the subjects to be discussed are the present position of the Mosul question, and also such incidents as the recent closing of the British girls' school at Pera.

A SCHOLAR ARTIST.

To very few of the younger generation were the artistic merits known of Carlile H. H. Macartney, the father of the distinguished correspondent of *The Times* in Constantinople. Mr. Macartney was, of course, well known to students of the East for his learning as an Arabist—the collation of poems of Dhu-'R-Rummah which he published six years ago through the Cambridge University Press is justly cherished by Oriental scholars. At the exhibition which is now being held at the Gieves and Arlington Galleries, Old Bond Street, however, the late Mr. Macartney shows himself as having been something very much more than an amateur with the brush. That he was an amateur is, of course, true, but, as the Poet Laureate said when he declared the exhibition open, Mr. Macartney's whole life's work was a relaxation; and certainly he used his considerable gifts to most unprofessional and beautiful ends.

This artist, who died in 1924 at the age of 82, worked, naturally, within the conventional limits of landscape, but within those limits he wrought exceedingly well. His oils, upon which he concentrated until his eyesight gave out, are masterly. There is no finnicky faithfulness in these paintings, whether they be portraits, or of landscape in England or Ireland or France or Italy. Natural loveliness in many guises he seized and held. If one must choose, one's vote would go to those absolutely just representations of Yorkshire landscape.

It is with his water-colours, however, that we are here most concerned. In this medium he drew many scenes of Egypt (where, indeed, it was at the age of 60 that he first began to study Arabic). He has some almost exquisite sketches of the Nile and of Egyptian temples—not the rigid, false reproductions of blue water and lazy dahabiyehs and the rest of it to which one has unfortunately become accustomed, but vital attempts to represent the slow, eternal mystery of the land. Particularly worthy of attention are some studies of ilex groves at Luxor.

Like Doughty and many another Arabic scholar, Macartney did not indulge the Western art of self-advertisement. It is fortunate, therefore, that we of this time should know of his work so soon after his death.

Sir Owen and Lady Cox and their daughter, who have been spending some weeks in Egypt, have left on their way to Australia.

Book Reviews and Notes.

THE PROBLEM OF SYRIA.

SYRIA." By Leonard Stein. (London: Ernest Benn, Ltd. 3s. 6d. net)

It is characteristic of the British that, although it was mainly they who conquered Syria from the Turk, and although this now French mandated territory abuts on three British mandated States, no attempt should yet have been made in the English language to explain the problem which has with intermittent sharpness beset the French between the fall of the Arab kingdom of Damascus and the rising last year of the Druses. In French, not to mention Italian, an abundance of literature is to be found, ranging from reasoned expositions such as "D'Angora à Lausanne," by Comte R. Gontaut-Biron and L. le Révérend (which, curiously enough, Mr. Stein does not mention in his bibliography) to sensational novels. It is highly fitting then, that there should be in English some book which should attempt to set in perspective France's main problem in the Middle East. And in the sense that any work which endeavoured to fill such a gap would be welcomed, Mr. Stein's book is most opportune.

It is to be regretted, however, that Mr. Stein, in his dispassionate survey of the history of the French mandate in Syria, has imposed such limits upon himself, both of space and of treatment, that the total result on the reader of his ninety short pages may be one rather of whetted bewilderment than of a clear-cut idea of French policy and practice. Certainly he will gain a conception of the unusual difficulties which present themselves, both in the differences of race and of religion that are to be found in Syria, to the mandatories; he will be enabled to see how the French could justify themselves in the dividing of the country into four, and later into three States; and he would also realise how heterogeneity may of itself mean insecurity. Syria, however, although it contains peculiar problems, cannot be judged *per se*, but in its relation, on the one hand to Palestine, Transjordan, and Iraq, and on the other to Turkey. But such a setting appears unfortunately to be outside the barriers which Mr. Stein raised. One would have liked to see more made, for example, of the increasing growth of hatred or suspicion on the part of the French towards Transjordan after the attempt on the life of General Gouraud, of the strenuous efforts made by General Weygand for the joint development of Syria and Palestine (incidentally, we do not remember the point being made by Mr. Stein of the effect upon Syria of the creation of a Zionist National Home south of it), of the possibility of Syria's being freed of a currency that is tied to the franc, or of the existence of such an intractable leader as Dr. Shahbender or of so convincible a one as Ramadan esh-Shallash.

This able Zionist expositor, however, expressly disclaims any exhaustive survey or individual comment, so that our own observations may appear irrelevant. For Mr. Stein has, as we have already hinted written a sober, cautious, and badly-needed summary of what is one of the most pressing and most fascinating of all the problems of the Middle East.

VEDIC ECONOMICS.

"INDO-ARYAN POLITY." By Praphullrchandra Basu. (London: P. S. King & Son. 7s. 6d. net).

Mr. Basu attempts in this book to reconstruct the economic conditions of the Aryan settlers in India at the period which produced the Rig Veda, and it may fairly be said that the result is interesting and stimulating. The method followed is the only one possible in the circumstances: passages scattered through the hymns are brought together according to the subject, and from them the writer draws his conclusions regarding each topic in its turn. He is commendably cautious, and keeps theorising within due limits, so that the reader is disposed to regard his work favourably. Only members of the very select band of Vedic specialists could pronounce confidently on the value of the book, and the probability is that their opinions would differ, for on page after page we find them at variance regarding the meaning of words and phases, which would be most enlightening if one could only interpret them with any confidence; but to one critic at least it seems that the book can fairly be recommended as a summary of the very little which is known regarding the period dealt with in its pages.

GREEK COLONIES ON THE THRACIAN COAST.

On March 12, Professor V. Parvan, of the University of Bucharest, delivered an address at University College, London, W.C., entitled "Greek Colonies on the Thracian Coast." The Professor has conducted archæological investigations along this coast—especially that part of it which is included in Roumania—and he gave his audience the benefit of his own important discoveries. He said the pottery, bronzes and other work which had been found enabled us to place the beginnings of these colonies on the western and northern shores of the Black Sea about the seventh century B.C. In the interior, in Hungary, the evidence of Greek penetration came about a century later. The colonies he was speaking of were not usually found on the coast itself but on islands. Such was the case with Apollonia, Istria and Odessus. Their civilisation was not an inferior one; whether considered from the industrial or artistic point of view it was of the same standard as that of the Greek settlements to the south. There were, however, evidences of these colonies being much affected by the Thracians amongst whom they were settled. Thus at Odessus the greatest festival of the year was not in honour of Greek divinities, but of a local god. For centuries these colonies had to maintain themselves against hordes of Scythians who come round the north shores of the Black Sea; afterwards came Alexander. Among the discoveries were a black statue of Athene, pottery including Samian and other vases, and the pedestal of a statue. This last had been found in the ruined tower of a city wall: the statue itself was gone, but an inscription on the pedestal showed that the statue had been of Apollo.

Lantern slides illustrated the lecture. These showed among other things city walls made of great blocks of stone. On one of these blocks, thirteen feet in length, was an inscription of the time of Hadrian. The illustrations of Istria included the excavation of an enormous building which the lecturer believed to be the baths of the city. The ruined walls of the tepidarium were from sixteen to twenty feet high.

Sir Norman MacLeod, Chief Justice of the Bombay High Court, is resigning his appointment as from June 6 next.

Lady Archer, wife of the Governor-General of the Sudan, arrived recently in Cairo from Khartoum on a visit to her sister, Mrs. Colvin.

Nisan 10, 5686, of the Jewish Calendar.

Lady Stavridi will return early in April to 33, Lennox Gardens, from Greece.

Sir Archibald and Lady Weigall have arrived at the Hotel Washington, Curzon Street.

Sir Herbert and Lady Vernon will return at Easter to 109, Lancaster Gate, from Egypt.

Lady Edward Gleichen left London last Friday for Rome, and will be away for three weeks.

The Emir Zaid of the Hejaz arrived last week at the Hyde Park Hotel for a stay of a few days.

Lord Henry Bentinck left London last Friday for Gibraltar in the P. and O. s.s. Ranpura.

The Marquis and Marchioness of Linlithgow have returned to 29, Chesham Place, from Egypt.

M. Kimon Collas has been appointed Consul-General of Greece in London and has taken up his duties.

The Hon. Alastair and Lady Sibyl Fraser have returned from India to Moniack Castle, Inverness-shire.

Sir Gilbert Clayton, who has returned to London from Arabia, is suffering from malaria, and is in a nursing home.

Lady Gerald Wellesley returned to 66, Mount Street on March 17 from India, where she has been on a visit to Mrs. Colin Forbes-Adam.

Sir William Ramsay, D.C.L., is spending a few days with Dr. Frew at 64, West Cromwell Road, before leaving to continue his work at Asia Minor.

Major R. B. Godden (upon his appointment as His Majesty's Military Attaché at Bucharest) had the honour of being received by the King last Saturday morning.

Lieutenant-Colonel J. N. Horlick, M.P., and Mrs. Horlick, and their niece, the Hon. Mrs. Humphrey Legge, returned to London from Egypt on March 14.

Simeon's Trustees have presented Bishop C. Hope Gill, lately Bishop of Travancore and Cochin, to the vicarage of Gerrards Cross, which the Rev. J. M. Glubb is about to resign.

The Right Hon. Sir Ronald Lindsay (His Majesty's Ambassador Extraordinary and Plenipotentiary at Constantinople) had an audience of the King at Buckingham Palace last Friday morning.

By command of The King, the Lord Somers (Lord in Waiting) was present at Victoria Railway Station last Thursday upon the departure of the Lord Irwin (Viceroy and Governor-General Designate of India).

Mr. Geoffrey George Knox, formerly in the Consular Service in the Near East, and since 1922 First Secretary at the Embassy in Berlin, is to reside in Angora as representative of the British Embassy in Constantinople.

Madame Yovanovitch, wife of the Yugoslav Consul-General, gave a St. Patrick's Day luncheon party at the Hyde Park Hotel on March 17. Her guests included Lady Doverdale, Lady Burke, Mrs. Lionel Harris, Miss McKay, and Miss Constable.

Mr. H. Charles Woods gave a luncheon party on March 17 at the Carlton Hotel, at which the guests included, among others, Lord Shaw of Dunfermline, Sir Charles Greenway, Sir Geoffrey Butler, Mr. R. Vaughan Williams, and Mr. R. D. Blumenfeld.

His Majesty the King has been pleased to approve the award of an Air Force Cross to Mr. A. J. Cobham in recognition of the valuable and distinguished service he has rendered to aviation by his recent London-Cape Town-London flight and previous flights, such as (1) London-Rangoon-London; (2) London-Egypt-Palestine-Syria-London; (3) London-Tangier-London; and (4) London-North Africa-Italy-London.

INDIA

THE GATEWAY OF INDIA: BOMBAY.

THE VICTORIA MEMORIAL: CALCUTTA.

LORD IRWIN'S MESSAGE.

Lord Irwin's farewell message to The Near East and India is the complement to the statement that he gave to the Press on the occasion of his departure from Victoria Station last Thursday. He then spoke of "the place which the great Indian Empire holds in the hearts and in the imagination of each and all of the citizens of this country." Lord Irwin's encouraging message to ourselves amounts to a blessing on our efforts to win, for the great Indian Empire, a similar place in their heads and in their intelligence. The difficulty confronting the artist who, in England, attempts to "set in their proper perspective before a continuous background the rather disjointed items of Indian news which reach us from day to day through the medium of the daily Press," is not so much that of enabling people to see the wood instead of the trees, but of persuading them that there is a wood to see. The average reader of the English daily Press has his imagination, and perhaps sometimes his heart also, stirred by the flamboyant appearance of some monarch of the forest—the barbaric wealth displayed by one Indian ruler, the primitive passions attributed to another, the strange contradictions offered by a national leader who is a trappist saint one day and a blatant demagogue the next, by a politician who preaches open rebellion and non-violence in the same sentence; but he seldom catches sight of the background—that vast aggregation of humanity which has neither part nor lot, and only the minutest personal interest, in the vagaries of prince or saint or politician. For the English "man in the street" his Indian counterpart—the "man in the mud hut"—scarcely exists at all: his ideas about the population of India seldom extend beyond Rajas, tigers, elephants and snakes. It is certain that there are "few things more worth the doing" than the attempt to persuade the British voter to realise not only his power, but what it means: and, having done so, to use it wisely and well.

The British Labour Party have put, in the forefront of their Indian programme, the immediate grant of full self-government and the improvement of the conditions of industrial labour. Important as is the latter, it is well to remember that the total number of persons employed in Indian industries is not much more than a million—about .3 per cent. of the population. Also that the real conditions of the Indian working man are entirely different from what they seem to the uninstructed British trade unionist. The state of affairs that, when viewed from a distance—and generally in a totally false perspective—appears deplorable, wears an entirely different aspect when examined on the spot, not only with sympathy but with understanding. As to the former, no one can fail to recognise the generous impulse that denies the right of any one nation to dominate any other against its will, and that pins its faith to self-determination and freedom. But the will of the Indian peoples is inarticulate, and is most emphatically not represented by the handful of educated politicians who claim to voice it: and, before we set ourselves to give effect to it, let us make certain what it really is. In the present state of communal tension, abdication of British control would inevitably lead to the fiercest kind of civil war—in which, incidentally, the Indian politician would immediately and finally disappear: and it would be the most heinous of all possible moral crimes to connive at the relapse of a fifth of the human race into that anarchy from which the British connexion has rescued and preserved it.

India presents many political problems to the student: but, to the "man in the street," it really presents only one. When we speak of the welfare of India, we ought not to mean the welfare of the infinitesimal minority that is vocal, but of the vast mass of people who are not. If the new scheme of representative Government had evolved a political class really representative of the people, we could feel some confidence that, in giving effect to the demands of the politicians, we should be fulfilling the aspirations of the masses. But, so far, it has done nothing of the kind: and, before it can do so, education will have to be carried enormously further in India than it is, at present, possible even to plan. Education is expensive, and the difficulty of providing the necessary money and the necessary facilities is patent enough even in our own rich country where fifteen out of every twenty people live in towns. India is a poor country, with a population more than six times that of the British Isles, and nineteen out of every twenty of its inhabitants live in communities that aggregate less than five thousand souls. As things are, the revenue of India has reached its limit. To provide the money needed for education, fresh streams of wealth must be found: and there is one, and only one, source from which they can proceed—that of improved agriculture. To this question the Government of India is giving most serious attention: but the recent appointment of a Royal Commission, whose report is rendered to Parliament and not to the Government of India, has brought the British voter on to the stage and has placed on him the responsibility, through his elected representatives in Parliament, of taking his part in the solution of a problem of transcendant importance to India, to the British Empire, and to the world at large. In this lies the answer to those who ask why it should be thought necessary to adopt so "cumbrous a procedure" in order to inquire into facts already well known and to recommend procedure already fully devised. Lord Irwin goes to India with a special mandate to deal with three great questions—Constitutional, Educational and Agricultural. The first is the most spectacular, but its solution depends on that of the second: the second is the most obvious, but it, in turn, depends on the third, which is the most important of the three. In bidding him God-speed we express the confident hope that he will return with those three honours emblazoned on his colours—and Agriculture first.

Lord Irwin.

Lady Irwin.

Message

from the

Rt. Hon. Lord Irwin, P.C., G.C.S.I., G.C.I.E.

VICEROY AND GOVERNOR-GENERAL OF INDIA.

I gladly comply with the request to write a few farewell lines to "THE NEAR EAST AND INDIA" on the eve of my departure to India.

One of the principal objects of the Paper is, I understand, to keep opinion at home informed on the important Indian questions of the day. During the last few weeks I have been myself studying these questions and, as one coming comparatively new to them, I have been struck with the great scope there is here at home for explaining and setting in their proper perspective, before a continuous background, the rather disjointed items of Indian news, which reach us from day to day through the medium of the daily press. I can imagine few things more worth the doing from the point of view of binding the various parts of our great Empire together, and I, therefore, wish the "THE NEAR EAST AND INDIA" all success in the valuable task which it is undertaking.

Irwin

Digitized by Google

CURRENT TOPICS.

Lord Irwin's Departure.

A large and representative company assembled at Victoria Station on March 18 to wish Godspeed to Lord and Lady Irwin. It included the Prime Minister and the Archbishop of Canterbury, and a number of Mr. Wood's colleagues in the Cabinet as well as a strong contingent of those who will shortly be Lord Irwin's colleagues at the India Office. The King sent a representative, in the person of Lord Somers, and the Begum of Bhopal sent a magnificent bouquet by the hand of her son. Friends and relations were there in force, including the venerable Lord Halifax: and there was more than a sprinkling of the general public. Among the more distinguished members of the assembly there were doubtless some who envied Lord Irwin the five years to follow: among the less distinguished, there must have been many who, while they did not envy him, envied some of those who accompanied him—in particular, three "lucky young dogs," Peter, Richard and Musti. The two former are understood to have travelled by "long sea": the last—a beautiful elkhound—had the honour of going overland, and was very much in the picture at Victoria.

A Reincarnation.

The many friends of Lieutenant-General Sir T. E. Scott, K.C.B., who handed over his appointment as Resident at Aden about a year ago, will note with surprise the widely published cable, emanating from Reuter's correspondent at Delhi, in which it is stated that Lord Irwin is expected to arrive in Aden on March 28, where he will be received by "the Resident, Lieutenant-Colonel T. E. Scott, C.B., with all the honours and distinctions due to the Viceroy of India." The cable goes on to say that Lord Irwin is expected to reach Bombay on April 1—a date which, if it had referred to Aden, might perhaps have explained the rejuvenation and reinstatement of "Tommy" Scott. Failing that interpretation, one can only suppose that the correspondent—as one has seen him do in his garden at Simla—sometimes nods in Delhi also.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 4.

The Prosperity Budget.

The Budget of the Government of India which was introduced last week by Sir Basil Blackett affords good reason for India being, as he said, "the envy of all other nations." There is a revenue excess of over 3 crores of rupees and no fresh taxation, and as a result the provincial contributions have been reduced all round. The Cotton Excise Duty has gone for good. In the coming year non-productive expenditure is to show a reduction and interest charges are to come down by a crore. Such a Budget is an effective reply to extremist criticism of the present system of government in this country: the Finance Minister alluded to the steady daily advance in finance and administration towards the desired goal of constitutional self-government, and there is every reason for congratulation in the intelligent and progressive Provinces; but in Bengal something akin to bitterness is felt when it is remembered that the present satisfactory position has been reached in the teeth of violent opposition, venomous criticism, and blind obstruction by the men who unfortunately are able to say that they have been elected by the people.

The Graceless Swarajist.

After the hiding that they received in the Council last week, it might have been expected that the Extremists would have tactfully dropped the subject of their attack upon the President; they have proved on the contrary that they have yet to discover the elements of decency in their political behaviour. *Forward* has continued its attacks on the President and there is now an unseemly wrangle going on between this official organ of the Swarajists and the *Bengali*, the mouthpiece of the Moderates; neither has yet openly said "liar" to the other, but both speak of the lies which the other publishes. It is a sorry business and both parties would be well advised to drop it.

"The Racial Conflict."

Bepin Chandra Pal's article this week is based upon what he finds on his visit to Lahore, where he sees developments which are of considerable interest to everybody concerned with India. The attitude of all the fighting races, he says, has been profoundly affected by their experience in the War, when they not only fought with and against white troops, but were the recipients of much hero worship while they were on leave, behind the lines and in England; this is a comparatively innocuous expression to describe certain aspects of the matter which were bound to lead to complications. However, in his opinion, the demand for political advance on this side of India is a real one that can be justified on every ground. It is interesting to note his statement that the "racial conflict" in the North West is not a duel of Hindus and Mohammedans, but is a triangular fight between Hindus, Sikhs and Mohammedans: he says the lines of cleavage are stronger than ever, and each party looks to the British Raj to maintain its rights in a spirit of equity. The political and social atmosphere described by him is as far from Bengal as London is from Moscow.

The Mandalay Martyrs.

Forward went berserk last week with a harrowing account of the sufferings of the political martyrs in Mandalay Jail who have gone on hunger strike; excited by this account of their self-imposed sufferings, the Calcutta Corporation spent a meeting in condemning the Government, and the matter was also raised in the Legislative Assembly. A *hartal* was called for Saturday and large numbers of the shops in the north of Calcutta were shut: there was a demonstration in the evening and speaker after speaker gave expression "to the feelings of indignation which were burning in him and of the sense of grief that overpowered him"; and Mr. J. M. Sen Gupta called for a fast throughout Sunday. Why? Government now issue a statement describing the hardships of these political prisoners; their cash allowances for food and clothing equal about £9 a month, which is fully double what is spent by an ordinary member of the professional classes on such things. In addition, they have been provided with tennis courts and free rackets and balls; with badminton, chess, ping-pong, a plunge bath, electric fans and books and newspapers, all free of charge; further, they were allowed in error last year nearly £40 with which to celebrate their Christmas, and they have gone on hunger strike because they have not been granted a similar amount for the celebration of two minor religious festivals. It is small wonder that two of the All-India Extremist members have written begging them to cease this self-immolation!

Politics.

In accordance with their pledges, the Swarajists are to walk out of the Legislative Assembly on Monday next: and this is to be followed by similar processions from the other Legislative bodies. It is yet to be seen whether the threat will materialise. Signs are not wanting that endeavours are being made to avoid the necessity of carrying it into force, and it will not be surprising if on some pretence or other the idea is abandoned. Meantime the strength of the Swarajists, as a party, is obviously declining in every direction, and there are open claimants to portions of the Triple Crown which now wobbles on the head of Mr. Sen Gupta. He has, of course, been at a disadvantage in having to carry on a completely negative policy, but he has failed even to do nothing successfully, and it is obvious that he is of a very different calibre from Mr. C. R. Das whom he succeeded; he has neither the capacity nor the inspiration of his predecessor, and his sincerity is now being called in question. The announcement of the intention of the Government of India to

Digitized by Google

appoint a Commission to inquire into the connexion of the Maharaja of Indore with the Bawla murder in Bombay last year has been followed by the Maharaja's abdication; it is probably the most satisfactory way out of an unfortunate situation, as the Government states that the inquiry will not be proceeded with; the incident serves to remind our Pagetts of certain differences between East and West. The Government of Bengal have announced, in the Budget discussion, that the Amusement tax is to be taken off theatres; the kinema industry is up in arms because they have not been similarly blessed.

Markets.

Dullness continues to pervade the jute market and with the exception of small purchases of low grade jute by the mills, business has been almost at a standstill. Sellers are anxious to deal at lower prices, but buyers are holding off. Hessians and heavy goods reflect the uncertain state of the jute market generally, and prices have registered a further drop. The piece-goods market has not yet fully recovered after the holiday at the end of last week, but prices have been steady; the position is now regarded with rather more confidence, and better business is expected shortly. In the Tea market, firm prices continue to be bid in London; but, with the last sale held here last week, there is nothing to report.

Again this week, the tea share market alone has attracted any material interest; business in almost all other sections has been small and, with perhaps the exception of investment stocks, prices have tended in a downward direction. Jutes continue on the decline, which is natural, considering the loss which the present price of the manufactured article entails for all the mills except those holding really cheap jute; in the circumstances it is surprising that the shares have not slumped to a greater degree. Coals and cottons remain out of favour, and the volume of business has been negligible. Teas, as mentioned, provided the one bright spot; these shares have been making a steady advance for some time, but recently prices have risen very rapidly, and it is probable that a slight reaction may set in as a consequence; this was evident at the close, when prices were inclined to drop from the highest owing to profit-taking. With the present healthy position of the industry and the good reports for the new season, the market for tea shares should be watched with a view to picking up shares which have not participated fully in the recent advance. Rubber shares continue to follow the path of the raw commodity which, after falling away further at the beginning of the week, closes the turn better; as a result the shares have come in for more attention.

Investment stocks have made a good showing, and a number of increases are reported; especially worthy of note in this respect are the Imperial Bank fully-paid shares. Government securities tend easier. There have been very few bills showing this week and, with less stringency in the money market, the rate for ready T.T. has fallen to 1s. 6 3-32d.

INDIA OFFICE COMMUNIQUE.

The Government of India have for some time past had under consideration representations from Her Highness, The Begum of Bhopal, in regard to Her Highness' desire that her only surviving son should be recognised as her heir to the exclusion of the sons of her elder deceased sons. Those representations have necessitated prolonged and exhaustive researches into history and precedents, as the result of which Her Highness has now been informed by His Excellency the Viceroy, through the Secretary of State for India, who is in full concurrence with the decision, that the Government of India are prepared to recognise her only surviving son, Nawabzada Haji Muhammad Hamidulla Khan, C.S.I., C.V.O., as heir apparent to the *masnad* of Bhopal. In making this communication to Her Highness, it has been explained that the decision is based on certain rulings of the Government of India in a number of analogous cases of succession in Muhammadan States which occurred during the nineteenth century and on the view that, in the absence of any local custom to the contrary, the rule then followed is applicable to the succession in Bhopal in the present circumstances.

EDUCATION IN INDIA.

(By a former Examiner of Calcutta University.)

With the coming into force of the Reforms scheme in India—involving, as those schemes do, the employment of Indians in responsible positions to a far greater extent than hitherto—the question of education becomes one of the utmost importance: and we may well ask how far the existing educational methods are fitting the young men of India to take their place under the new conditions of expansion and greater responsibility that are dawning upon the country. There is still, of course, a vast amount of illiteracy in India; but it is nevertheless true that, among the upper and middle classes, there is a desire for education and the acquisition of knowledge which is unsurpassed by any nation in the world.

Strictly speaking, India should be regarded not as one nation but as a collection of races and tribes, each with their different customs, religious beliefs and caste prejudices; but the one thing they all agree upon is the desirability of obtaining a good education. Whether this desire springs from an innate love of knowledge for its own sake; whether it is a legacy bequeathed from the "Golden Age" of India's history when the learning and erudition of her people were known all over the world: or whether the present eager desire for Western education arises merely from the belief that the acquiring of this is an "open sesame" to obtaining lucrative employment without lowering of social status—in other words, "a gentlemanly job"—these are questions upon which opinions differ and that need not be discussed here. Certain it is, however, that the fact of having been "educated," even although unsuccessful in examinations, is frequently used as a lever in attempting to obtain employment of this character: and advertisements from young Indians requiring positions, who proudly advertise the fact that they are "failed B.A.'s," daily appear in long columns in the newspapers.

For the purpose of this article we can dismiss the education that is given in the primary and secondary schools—many of the latter in particular doing excellent work—and confine ourselves to considering the nature of the education provided by the Universities, and the effect that this produces upon the students. "Going to the University" does not make a man a gentleman in India, any more than it does in England: though many in both countries seem to be of that opinion: and the acquisition of a degree does not necessarily ensure that its holder is qualified for any "soft jobs" that may be going. The idea of being "a gentleman," with many in India, is simply to qualify for what are known as the "liberal" professions—Government service, the law, medicine, etc.—anything else being regarded as "no class" socially, and therefore to be avoided as one avoids the plague. The consequence is that these professions are very much overcrowded and hundreds are living upon the edge of starvation who, if they had condescended to take up other work, such as technical employment for example, would to-day be enjoying good incomes. The average young Indian to-day with a B.A. degree prefers to take a position as a "babu" at 40 or 50 rupees a month because it is "a gentlemanly job," rather than become a mechanic: although he could earn three or four times the money in this latter position. The supply of clerks far exceeds the demand, very many—if not the majority—of these having been students at the University.

The curriculum of the leading Universities of India, such as Bombay and Calcutta, compares not unfavourably with that of English Universities: and the standard set

Digitized by Google

at examinations is a fairly high one. The numbers who succeed in passing these and obtaining the much-coveted degree is, however, small when compared with the large number of students who sit for matriculation. This is due, in large measure, not to the incompetence of the lecturers and professors, but to the lack of a sound educational foundation which should have been laid in the schools: and to the difficulty presented to Eastern mentality in obtaining a Western outlook upon subjects deemed necessary by Western experts in education. One of the features of the University of Calcutta and one that, upon the ground of expenditure, has aroused a very great deal of criticism, is the Post-graduate courses provided by that body, where students who have obtained degrees can specialise in certain subjects. Very much useful research and other work has undoubtedly been accomplished by these courses; but it is open to question whether the money spent upon them could not—in the present condition of education in India at any rate—have been spent to better advantage. The object of a modern University is not only to impart education in what are known as the "liberal" professions, but also to train and equip men to take their place in the many-sided general and practical life of the community.

India has ceased to be merely a scholastic and contemplative nation, whatever it may have been in the past: she is moving rapidly—rapidly, that is to say, for the East—towards becoming an industrial one, although about 70 per cent. of her population is still engaged in agricultural pursuits: and with this movement there are being created plenty of opportunities for properly trained men in most of the industries. Engineers, mechanics, electricians, etc., are much in demand and this demand will increase. In the great industrial firms, Indians occupy at present only inferior positions as a rule, the superior posts being given either to Englishmen or Anglo-Indians. Heads of great concerns, whether English or Indian, naturally want the best men procurable: and these should be found, for every department of industry and agriculture, at the Universities—men possessed not only of book learning, but of practical knowledge of the particular branch of industry they have taken up.

At present, there exists a strong prejudice against employing in commerce or industry any man, even if he possesses a B.A. or M.A. degree, who has no practical knowledge of the work required. If the Reforms scheme, to which India is now committed, becomes effective, technical training for the different professions will become a vital necessity: and nowhere could this better be given than at the Universities. Attempts have already been made, on a small scale, to introduce this training into some of the Universities, e.g., Calcutta; but prejudice dies a lingering death, and the efforts have not met with the success deserved. This is an age of specialists, we are told sometimes—rather would I call it an age of trained men: and India, no less than other countries, needs men properly trained and who take an interest in their work not because it is a "gentlemanly job," not even because it is a job where the pay is good; but because it is one, the successful performance of which will strengthen the industrial position of the country in the markets of the world. This is true patriotism, but patriotism to which few in India have yet attained.

The same applies to a commercial as to an industrial career. British concerns in India would be quite prepared to throw open even the higher positions in their offices to properly trained Indians who had proved their efficiency: but as a rule at present they look for such men in vain. Efforts have been made to provide a commercial education and training in such institutions as, for example, the Bengal Government Commercial Institute; but whereas "the hangers-on" at the University can be numbered by hundreds, those interested in commercial training can be counted only in tens. The Indian is interested in learning and in the acquisition of knowledge: but these are of a speculative rather than of a practical character.

The task before the educational authorities in India to-day is, while not neglecting the arts and philosophy, first to emphasise more and more the nobility of technical knowledge, and secondly to provide means whereby such knowledge can be obtained efficiently. India, if she is going to be worthy of the trust committed to her and carry out the Reforms successfully, needs not students and dreamers, not idealists and theorists, to whose idle dreams not a little of the political unrest can be traced, but practical, trained, and efficient mechanics, industrialists and agriculturists, as well as fully-qualified clerks, if she is going not only to retain her present commercial position but also to expand and develop, as she ought to expand and develop, her great resources of potential wealth as yet untouched. The amount spent upon education in India is considerably over £2¼ millions a year: and, if only a tithe of this could be ear-marked for technical education, and if leaders of education could dissipate some of the prejudice and antagonism to such education that now exist, the country would speedily become a far more important factor in the markets not only of the Empire but of the world. Fortunately the various Governments, and many of the seventy-four existing Universities, fully recognise this fact, and are making plans accordingly. The success or failure of these plans depends upon the young men of India to-day, who are face to face with the most glorious opportunity in the modern history of the country.

THE END OF THE BAWLA CASE.

(By Our Bombay Correspondent.)

The abdication of H.H. the Maharaja Holkar of Indore presumably marks the end of this *cause célèbre*, in which there are several points which may not be quite clear to English readers. Mumtaz Begum, who claimed to be 22 at the time of the trial but who certainly looked older, was the descendent of a long line of women who had been favourites of Indian Princes great or small. Her grandmother was in the harem of a great Rajput Chief, and she herself was introduced into the Indore harem by her mother at what was, to English ideas, a very youthful age. There she could expect to live what is, no doubt, the life of many hundreds of women of her own class all over India.

But Mumtaz was an exceptional woman and, for one reason or another, she made up her mind, after a good many years, to escape from Indore. An opportunity eventually offered and, after various wanderings, she arrived in Bombay. There, apparently by the help of certain taxi-drivers who described themselves in court as her uncles but were quite certainly no relation of hers, she obtained an introduction to Mr. Abdul Bawla, a young and wealthy Mohammedan, who set her up in considerable luxury.

Bawla was a young man of considerable promise, who used to express strongly Nationalist views on the Municipal Council. It was generally believed that he had adopted those views in order to secure a safe seat for himself (a practice perhaps not wholly unknown among pushing young parliamentarians in England), and most people thought that he had a very good chance of eventually settling down into a serious and responsible politician.

It must be noticed that neither His Highness nor Mr. Bawla offended against their own moral code in any way by taking a woman of this class into their establishment. But Mumtaz had seriously broken the discipline of the harem; some of the personal entourage of His Highness determined to bring her back to Indore, and Bawla was warned that, if he did not surrender her, the consequences might be serious.

Why no effort was made to attack the pair at Lanowli, a hundred miles from Bombay, when they were staying there a few days before the final episode, is not clear. The opportunity, was, however, missed: the pursuers followed them to Bombay and, after a furious chase round

Digitized by Google

the city, they opened fire on Bawla's motor just opposite the Bishop's residence on Malabar Hill.

This extremely bold manœuvre was as nearly as possible a complete success. The few bystanders were taken entirely by surprise, and no interference was attempted until a car drove up containing four British officers, who had happened to miss the right turning on their way back from the Golf Club. They most gallantly attacked the armed assailants and, though badly hurt, succeeded in saving the life of Mumtaz and in collaring one of the gang. The bandits' car then drove off and was never traced again: a fact which shows how very near the party came to achieving complete success.

The car might possibly have been stopped on the Ghaut roads; but it got away with too long a start, at an awkward hour of the evening, to make that possible: and, once in the Deccan, all trace of it naturally disappeared. However, with one of the gang caught red-handed, there was not much difficulty in discovering the others: and the complete party was put up for trial in May.

All the leading barristers of India were employed for the defence. There was not much to be said about the complicity in the plot of all but two of the accused (who were ultimately acquitted) but the defence concentrated on an effort to mitigate the offence by putting the blame on either Bawla or Mumtaz: and it was sought to prove alternatively (a) that the gang was trying to rescue Mumtaz from the clutches of Bawla, and to restore her to Indore at her own request, (b) that Mumtaz had stolen large quantities of jewellery from Indore, which it was legitimate to recover by violence.

The first line of defence was obviously an ingenious one: and Mumtaz was subjected to four days of cross-examination to induce her to admit that she had been free to leave Indore at any time and had not only been content to stay there, but had refused to avail herself of an offer of police protection on one occasion in Bombay. Mumtaz, however, remained entirely unshaken throughout the cross-examination, and merely replied that her apparent liberty of action was always subject to the most careful surveillance—an obvious fact that was accepted by judge and jury. This defence having broken down, the second line was not pressed very hard; as, at the best, it involved the claim, on the part of the victims of the theft, to take the law into their own hands. The story of the jewels was never very satisfactorily cleared up: Mumtaz' own account was, that she had taken with her certain jewels about equal in value to those she had brought into Indore from her grandmother's inheritance: and no doubt all the transactions, involving her own property, her personal gifts, and the common stock of the harem, were throughout in a hopeless state of chaos.

The trial ended, after four weeks, in the acquittal of two of the accused, death sentences for three, and transportation for life of four: and, six months afterwards, these sentences were confirmed on appeal, by the Privy Council.

On the one hand, the long legal formalities provided an impressive spectacle of British justice moving to its inexorable end: on the other, it is doubtful whether a shorter shrift for bandits of this kind would not be more effective. There is, in India as well as in England, a sympathy for the victims of the Law which is quite out of place when applied to desperadoes who, like Italian bandits of the Middle Ages, neither gave nor expected quarter; but the whole system of judicial executions is so overlaid with mawkish sentiment all over the world, that it seems to have become a natural state of affairs for public sympathy to be extended to the culprits rather than to the victims: and, until the spectacular element can be eliminated out of the sentence of death, it is likely to remain so.

The bandits have suffered for participating in an armed raid from one of the Native States of India into one of the headquarters of the British Government: an action which would be a *casus belli* between two States of equal standing anywhere in the world. The abdication of His Highness, as representative of his State, therefore follows almost as a matter of course: and it is unnecessary to attempt any guess at the degree to which he was personally responsible for the episode.

THE INDIAN MAIL.

Trade Returns for January.

The returns of India's sea-borne trade for January show a notable and very encouraging increase in imports, which rose in value from December's total of 1616 lakhs to 2250 lakhs. There is a marked improvement under all the major heads.: the value of the imports of food, drink and tobacco rose by 62 lakhs, of raw materials by 65 lakhs, and of manufactured articles by 498 lakhs. Much the most important, and much the most encouraging, item among the latter was that of piece-goods, which showed an increase in quantity of nearly 70 million yards and in value of something over 200 lakhs. As was the case last month, the piece-goods figures given in the mail papers are incomplete—an irritating fact that prevents a full comparison, though the main position is clear. The value of India's exports also rose, from 3076 to 3460 lakhs: in this case, manufactured goods show a fall, and food, drink and tobacco remain practically unchanged, while the exports of raw materials and produce rose by approximately 440 lakhs; so that it is not only the general position that is encouraging, but the detailed position also.

The share of Great Britain in imports—as was to be expected in the circumstances—rose markedly, from 48 to 52 per cent.; those of Japan, the United States and Germany remaining much as they were in December—9, 8 and 5 as against 9, 7 and 6. In exports, however, there is a very different tale to tell—the share of Great Britain, which, in the previous month, had fallen from 30 to 24 per cent., has now again fallen to 18 per cent., and is actually less than that of Japan, who claims 19 per cent. Here also, the shares of the United States and Germany have undergone little alteration—they are 11 and 5, against 12 and 6 in December.

Net imports of treasure rose from 379 to 405 lakhs: and the visible balance of trade in favour of India was 893 lakhs, making a total favourable balance, in the ten months ending with January, of 8576 lakhs. The export of raw jute amounted to 65,000 tons, valued at 421 lakhs: of gunny cloth, 102 million yards valued at 245 lakhs, and of gunny bags 26 million, valued at 173 lakhs. Detailed figures of the export of raw cotton are again not given in the mail papers: but it appears that the general position, noted last month, still obtains, with approximately the same production at approximately the same price.

"Funds."

The great Shaukat Ali is at present touring in Burma, with the declared object of "collecting funds to give practical shape to a new educational and constructive programme for 1926, framed in accordance with a resolution passed at the Cawnpore session of the Khilafat Conference." He said that he proposed to devote the next three months to the good work, and that five lakhs of rupees were required before they could begin on their programme He cannot, therefore, be accused of starting to build without first counting the cost: and, if he waits until he has collected the sum stated, it is certain that his start will be considerably delayed. In the meantime, he will probably be able to carry on, in the manner suggested, by a passage in the comments of the *Times of India* on the passing of the "Bad Livelihood" Bill in the Legislative Assembly; when Government carried its point largely through the assistance of the Mohammedan members, whose religion does not, as does the Hindu religion, impel them to look upon a beggar as necessarily a worthy and venerable man. The passage in question is "In Islam the beggar has no religious sanction, though certain Sufi saints earned a livelihood from the generosity of the faithful, as various far from saintly Mohammedan politicians have done in our time."

INDIAN COMMERCIAL NOTES.

We have now got details of India's trade during the calendar year 1925, and can sum up her commercial position during the past three years.

Imports of merchandise, which were valued at 226 crores in 1923 and rose to 243 crores in 1924, are back to 226 crores in 1925. Imports of food-stuffs, of which the principal item is sugar, remained pretty stationary throughout the three years, at an average of 33 crores each year. Imports of raw materials increased from 18 crores in 1923 to nearly 21 crores in 1924, but fell back to 20 crores in 1925. The chief fluctuation has been in the imports of manufactured goods, which rose from 172 crores in 1923 to 184 crores in 1924, but reverted to 169 crores in 1925. It must not be supposed, however, that this falling off in total values shows a reduction in the volume of the trade. When one remembers that wholesale prices in India stood at a level of 177 (i.e., 77 per cent. over price levels of July 1914) and had actually fallen to below 160 in the middle of 1925, finishing the year at 163 for December, one realises the extent to which prices have dropped. The two extremes are 180 recorded for August 1924 and 157 recorded for June and again for August 1925.

Moreover, India's heaviest imports consist of just those classes of goods in which reductions of price have been most noticeable. Thus in 1924 she imported cotton yarns and manufactures of a total value of 79 crores of rupees, as against 69 crores for 1925. There was, it is true, a reduction in the imports of cotton twist and yarn from 54 million lb. in 1924 to 49 in 1925; and of cotton piece-goods from 1685 to 1615 million yards. These reductions of volume are not comparable to the decrease of price; and the difficulty of buying on a falling market must also be borne in mind. Imports of machinery actually increased in value from just below 16 to just over 16 crores of rupees during the two years. Imports of iron and steel goods have fallen off from 20 to 16 crores.

On the export side, there was a reduction in the value of food-stuffs exported from India from 100 crores in 1924 to 88 in 1925, due partly to a shortage of Indian wheat and partly to reduced prices for tea.

Exports of raw materials increased from 167 crores in 1923 and 186 crores in 1924 to 215 crores in 1925. The hides and skins trade improved last year, but the chief increases are under raw cotton and raw jute; the former from 3¼ to over 4 million bales, and the latter from 677,000 to nearly 693,000 tons.

Jute goods also account for an increase in the exports of manufactured goods from 72 crores in 1923 and less than 79 crores in 1924, to over 89 crores in 1925. There is little doubt that in the industrial position India is strongest in textiles; and that she has taken full advantage of the opportunities afforded by the War to extend her output of both jute and cotton goods.

INDIAN EXCHANGE.

London, March 22.

Rupee Exchange has taken a tumble since the date of our last remarks, and for the first time since early June 1925, it has fallen below 1s. 6d.

The weakness appears to have been more acute in Bombay, where some strength was naturally expected owing to a continuation of exports of raw cotton. The season this year, however, has been dragging more than usual, and this is ascribed to the warehouse accommodation with which the new cotton green has been equipped. It is said that sellers are now less anxious to part with their stocks before the rains since convenient storage facilities have been provided.

Other factors conspiring to hold up exports in the interior include the extension of banking facilities which the cultivators have taken advantage of to some extent, in pledging their crops to the Imperial Bank. This assistance enables the producer to delay realising and produce is therefore being held up for better prices.

The T.T. rate in Calcutta and Bombay touched 1s. 5 31-32d., but a slight reaction then set in and closed steadier at 1s. 6d. for ready and near, with no buyers under 1s. 6 1-32d.

Mercantile bills have been very scarce, and it was possible at the end of the week to place bills for delivery within a month, at 1s. 6¼d. three months sight. So far as our information goes this low rate failed to attract shippers and we understand that very few bills have been settled. The rate to-day is steady at 1s. 6 9-32d.

Forward exchange wavered last week, but has now become steadier. Rates for T.T. are called 1s. 6d. to the end of April and 1s. 5 15-16d. for the monsoon months, with a trifling inquiry at 1-32d. higher, which has been done and is still offering for some deliveries.

The last statement issued by the Imperial Bank of India indicates that the trade demand has slackened considerably, although money continues in fair demand.

In the London Market, a feeling of uncertainty has been prevalent, and quotations have been nominal. So far as we can ascertain no business was transacted under 1s. 6d. for near delivery, but even money was obtainable by remitters to a moderate extent, and the closing rate may be called 1s. 6 1-32d. T.T. The outlook at the moment is steady but further ease is not unlikely.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and or AHWAZ by the chief liners sailing from the U K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

For freight and particulars, apply to:—

LYNCH BROS., LTD.,
MANAGING AGENTS,

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Salonika Fair.

Attention is drawn by the Greek Minister in London to the international fair which is to be held at Salonika from May 15 to 31. The fair is organised by the Salonika Chamber of Commerce and Industry and the Salonika Trade Federation, and is held under the auspices of the Greek Government, and it is specially desired to enlist the interest of British manufacturers, in particular agricultural machinery makers, building material suppliers, and makers of domestic articles. Besides these commodities the exhibits will include textiles, motor cars, and electrical apparatus. It is pointed out that the fair will offer British manufacturers exceptional prospects of introducing and increasing the sale of their products in the great region served by Salonika, in which nearly a million refugees from Salonika have already been established. Great efforts are being made to exploit fully the rich Macedonian soil and render this region the most important agricultural and trade centre in the Balkans. It may be pointed out in this connexion that the work of draining the Vardar Valley by an Anglo-American combine has already been started.

Indian Bank Results.

The reports of the National Bank of India and the Chartered Bank of India, Australia and China, which are now available, show that the Eastern banks have not been unduly affected by the adverse conditions experienced during the past year. The National Bank of India shows net profits of £536,105 as against £535,925, maintaining its dividend at 20 per cent. and increasing the carry forward from £199,655 to £224,980. The Chartered Bank of India, which has had to contend with the unfavourable position in China, shows net profits of £756,135 as against £770,717. The dividend is maintained at 20% per cent., and the carry forward is about the same at £209,278. The balance sheets of both banks show evidence of a most satisfactory expansion of business, the deposits in both cases being considerably higher.

Egypt's Economic Future.

This week we give the concluding portion of the very interesting lecture given by Mustapha el Sadek Bey, Consul for Egypt, on "Commercial Developments in Egypt." It will have been noted that the lecturer emphasised the shortcomings of dependence on one crop, and it is not surprising in view of the extent to which cotton growing is now being developed outside Egypt, that increasing attention should be given in that country to the possibility of economic development in other directions. It may be some time before the production of Sakellarides in the Sudan has reached such a level as would seriously affect prices, but it is perfectly evident that in the long run developments in the Sudan and elsewhere must mean that only in very exceptional times will Egypt be able to reckon on a return for her cotton at all comparable to that which she has been receiving in recent years. Sesostris Sidarouss Bey, Egyptian Chargé d'Affaires, who presided at the lecture, said that he thought that Egypt was passing the stage of almost complete dependence on the crop, and that she would find it necessary to enter the world of industry. In what directions this may be practicable on a sufficiently large scale must remain to be seen. Egypt has everything in her favour as regards cotton growing, but the same cannot be said with regard to the development of industrial undertakings.

A Successful Tourist Season.

If the outlook for one of the two factors on which Egypt has depended for her prosperity seems somewhat clouded at the moment, the position is the reverse with regard to the other—the tourist season. Good as last season was, the figures so far available suggest that it will easily be surpassed by that now drawing to a close, and it is evident that, so far from suffering from the attractions of other tourist resorts, Egypt is more than maintaining her place as the premier holiday resort.

The Next British Fair.

I pointed out recently that the success of this year's British Industries Fair made its continuance assured, and we now have an official announcement that the Fair will be held at about the same time next year, and that the Government will again give a grant for publicity purposes. It is interesting to note that preparations for the Fair will be commenced earlier than on any previous occasion, and so, provided trade conditions continue to improve, it may be expected that there will be a great increase in the number of exhibitors, who are realising how valuable the Fair is as a medium for the development of business, and that the attendance of buyers will be a record.

Smyrna Fruit.

On another page will be found an interesting report of Messrs. C. J. Giraud on the Smyrna dried fruit trade. From the figures given it will be seen that since 1923 there has been a steady decline in the imports of sultanas from Smyrna by the United Kingdom, the figures having dropped from 18,500 net tons in 1923 to 11,900 in 1924, and to 6,380 in 1925. In 1924 the Continent took 8,200 net tons more than in the previous year, but 1925 saw a very sharp drop in this trade, while the United Kingdom imports of Smyrna sultanas have thus declined, imports of Australian and Californian raisins have tended to increase. The figures for Australia were 9,358 tons for 1923, 18,832 tons in 1924, and 17,732 tons in 1925, while the figures for California were 9,964 tons in 1924 and 18,443 tons in 1925.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, March 8.

Reduction of Export Taxes.

For the last three years, 1922-24, Roumania has been able to record a favourable balance of trade, exports amounting to 14, 24 and 28 milliards of lei respectively, as compared with imports of 12, 19 and 26 milliards in the same years. For the first nine months of 1925, however, there is an adverse balance of over two milliard lei, the exports amounting to 20,307 million lei as compared with imports of 22,327 million lei. It is possible that there is some relation between this adverse balance and the decision to effect considerable reductions in the export taxes. Some weeks ago those on various cereals had been reduced, and now by a law promulgated on March 5 the export taxes on maize (from 20,000 to 10,000 lei per waggon of ten metric tons), petroleum products, timber of all kinds, and many other goods have also been reduced. The reduction in the case of petroleum products is opportune, as there has been a rapid increase in the output.

Although it may be too short a period since the export taxes on cereals were reduced for the full effect to be felt, it is noticeable that weekly shipping reports still record complete stagnation in the export trade, some vessels having waited at Galatz for over a week in a vain attempt to obtain cargo. With the passing of winter, however, and with the additional reductions in export taxes there should be an early improvement in this state of affairs.

Railway Transport.

At the same time it is to be feared that any sudden expansion of the export trade will run the risk of being checked by inadequate transport facilities. The subject has engaged the attention of successive Governments since the Armistice; but it is evident that without a substantial loan from abroad there can be no real solution of the difficulty, although conditions have certainly improved during the last three years. Yet the fact that there were fewer locomotives and trucks in service in 1925 than there were in 1924 indicates the seriousness of the position, although it must be added that the number of passenger and goods trains run in the year showed a slight increase. In order to meet the complaints of the oil companies, whose rate of production, as already stated, is increasing rapidly, it was necessary to increase the number of oil trains, of which nine now run daily. A shortage of rolling stock is not the only difficulty for the railway system is hampered by the fact that out of a total length of lines of 7,000 miles, only 160 miles represent double track. The strain put upon some of the long stretches of single track on the main lines to Western Europe can be imagined. To remedy this state of affairs a foreign loan is essential; but so far Roumania has not succeeded in obtaining one. Some years ago, when success in this direction seemed assured, the negotiations are supposed to have broken down on the question of control. The foreign interests concerned stipulated that they must be satisfied in regard to the expenditure of all the money loaned. The then Government resented this suggestion of outside interference, and Roumania had to make shift with such money as she could raise herself. Yet there should be no reluctance on the part of any officials to satisfy the most exacting scrutiny that every leu allocated to the railways is spent on the railways. This year the State Railways have been accorded financial autonomy, and it is hoped that difficulties in the way of a foreign loan will have thus been cleared away.

TURKISH LEATHER INDUSTRY.

Turkey has only lately begun to develop its vast resources for the manufacture of leather (says an American Consular report). Primitive methods of animal husbandry and adverse economic conditions in the interior of the country have been responsible for the depletion of the country's herds to about 50 per cent. of the pre-War total. Efforts have been made toward the improvement of conditions and of stock, but funds for the purpose are scarce. It is probable that production of hides and skins for some time will continue to be considerably less than the potential capacity of the country.

The larger part of Turkey's pre-War production of hides and skins went to France, the United States, and Austria. About 80 per cent. of the production of light skins are exported, but very few of the hides find a market abroad, because they are only about half the weight of hides produced in other countries. Improper nourishment of the cattle and faulty treatment in the process of preparation result in an inferior quality of hides.

It is claimed that Turkish tanneries do not use sufficient care in the preparation of skins. The cleaning and tanning methods do not prevent early decomposition, and rapid superficial currying does not produce soft and pliable leather. Many of the tanneries in Constantinople are equipped with French machinery for the rapid tanning of skins. Some imported hides are used, especially for the production of heavy sole leather. The principal products are sole and rough-tanned calf leather and goat and sheep skins; quantities of the latter are exported to the United States, where they are converted into polished and coloured leather. The production of morocco and shagreen leather, which was formerly an important manufacture, has greatly declined, so that Turkey now has to resort to importation. Other leathers made from ox, cow, and buffalo hides are unable to compete with those produced in other countries; in quality the Turkish product compares with that made in Madagascar and Morocco.

Dr. Chaim Weizmann will preside at the official opening by Lady (Herbert) Samuel of the Jewish Girls' Agricultural School in Nahalal on April 8.

A Bill establishing a Government monopoly over the importation and production of all alcoholic beverages in Turkey was voted at Angora on Saturday.

COMMERCIAL DEVELOPMENTS IN EGYPT.

(Continued from page 339.)

A third opinion is to encourage as far as possible local industries which will not entail a complete change in the economic structure of the country.

The Government in 1916 appointed a Commission to examine the situation and make suggestions as to the possibility of establishing new industries or aiding already existing ones. The findings of this Commission are very interesting and deserve attention by those who desire to study the commercial and industrial position in Egypt. The report is divided into four principal parts, the first being an historical review, while the second examines the various aspects concerning the development of commerce in Egypt. It reviews the general situation of the external commerce, the foreign markets which deal with Egypt, the factors of commercial development, commercial legislation in operation, commercial credit facilities, the increase of industrial and agricultural products, the means of transport, commercial training, the importance of commercial associations, the importance of publicity as well as the organisation of commerce required for the import and export trade. The third part deals with the question of industries in Egypt and probably that is the more interesting part of the report. It examines the industrial situation of Egypt and recommends the necessity for introducing new industrial resources. It answers the question "Can Egypt be made an industrial state?" and suggests some of the means which could be utilised in attaining this objective.

The Commission, which was composed of many European and Egyptian experts, unanimously recommended, after careful examination, that Egypt could with advantage encourage the manufacture of wrapping paper, fine pottery and porcelain, glass, ready-made clothing, candle making, starch, chemical manures, cards made of sesal, carpets and rugs, and also advocated a few other industries. Most of the products concerned, which are imported from Mediterranean countries and account for a large part of Egyptian imports, were, during the War, made in Egypt and some of the industries have survived.

Can Egypt be in a practical way an industrial country? Capital is available in Egypt as evidenced by the increasing deposits in the banks. Labour also is available, and that is shown by the progressive increase in population without a corresponding increase in the cultivable land. The important factor which up to 1918 was considered to be lacking—efficiency to undertake industrial enterprise—finds an answer in the formation and success in the last six or seven years of several purely Egyptian industrial, financial and commercial concerns. In the last few years, apart from the success of many local commercial and industrial enterprises several large financial and industrial concerns have been formed and have overcome the initial stage which is generally the most difficult.

Sesostris Sidarouss Bey, Egyptian Chargé d'Affaires, who presided, said that the most outstanding issue in Egypt's economic life was the question of cotton. Sadek Bey had given it the emphasis which its importance deserved. Regarding the desire to see Egypt partially converted into a cotton industrial state, he thought it would not be long before the question was the subject of practical discussion by the responsible authorities in Egypt.

So far Egypt had been satisfied with almost complete dependence on the crop. He thought Egypt was passing that stage and that she would soon find it necessary for her existence to enter the world of industry. Cotton nowadays was by far the most important source of revenue, but they were not sure that Egypt could continue to depend for her financial and national existence on this uncertain source. They were no doubt following the course of events which the cotton product was passing through, and they would realise that sooner or later many other countries would supply large quantities of that staple product.

The question which would ultimately decide whether Egypt should confine her activity to the production of cotton was the price which would rule in the market for that crop. The tendencies seemed to indicate that there would be in the in the near future many competitors to Egypt in the production of the special quality of cotton which Egypt was at present producing with advantage, and in that event circumstances would impel her to find something else on which to depend. Whether Egypt would be able to compete as an industrial country would be seen in the future. Sadek Bey had give some useful data which made them hopeful regarding the result.

EGYPTIAN MARKET FOR AGRICULTURAL MACHINERY.

The Egyptian market for types of agricultural implements of cultivation such as harrows, planters, drills, seeders, sprayers, dusters, hand hoes, and rakes is negligible (says an American Consular report), since most of these operations can be carried on through the crude implements locally available, or by means of cheap agricultural labour. The small steel horse ploughs so common in other markets are unknown in Egypt. Similarly, harvesting machinery, such as mowers, hayrakes, harvesters, and threshers, are very little used. Egypt imported in 1923, 14 threshing machines, valued at £E4,099, in 1924 the total had shrunk to 8 valued at but £E2,653, but in the first nine months of 1925, 12 threshing machines were brought in, valued at £E3,435. The United Kingdom and Germany share the Egyptian threshing machine market, the British machines being larger and much more expensive than those offered by Germany.

Egypt, naturally, is a market for seed separators of various types and especially for cotton gins, since cotton is the principal agricultural crop of the country. There is also a limited importation of corn shellers and other seed-separating machines of small inexpensive types, most of which come from the United Kingdom.

Egypt's greatest agricultural production being cotton, the country consequently represents a potential market for all types of agricultural machinery and implements used in cotton cultivation which can be offered at attractive prices and according to interesting terms. There is also an important production of wheat, corn, rice, sugar cane, and other such crops. Heavy fodder crops represent another large field of agricultural production, while there are smaller crops of onions and vegetables of various sorts. Fruit growing, according to modern orchard practice, is practically unknown.

COMPANY NOTES AND REPORTS.

EASTERN BANK.

The report of the Eastern Bank, Ltd., for the year ending December 31 last states that the net profits, after providing for contingencies and including the balance brought forward, amount to £157,902 12s. 8d. An interim dividend at the rate of 4s. a share was paid in October, absorbing £40,000, and the directors now recommend a final dividend of 5s. a share, less income tax at 3s. 7.884d. in the £ (after allowing for relief in respect of Indian taxation). They propose to add £20,000 to the reserve fund, which will then stand at £380,000, and to write £10,000 off premises account, leaving a balance of £37,902 12s. 8d. to be carried forward to the next account. A branch has been opened at Kirkuk, Iraq.

CHARTERED BANK OF INDIA.

The report of the Chartered Bank of India, Australia and China for the year ended December 31 last, states that the net profit, after providing for all bad and doubtful debts, was £966,778 4s. 6d. inclusive of £210,623 11s. 8d. brought forward from the previous year. The interim dividend at the rate of fourteen per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £756,778 4s. 6d., and the directors propose to pay a final dividend at the rate of fourteen per cent. per annum together with a bonus of six shillings and threepence per share, making twenty-and-a-quarter per cent. per annum for the whole year, free of income tax; to add £25,000 to the officers' superannuation fund; to write off premises account £125,000 and to carry forward the balance of £209,278 4s. 6d.

NATIONAL BANK OF INDIA.

The report of the National Bank of India for the year ended December 31 last, states that the net profits for the year, after providing for all bad and doubtful debts, amount to £536,104 13s. 4d., and adding £224,980 4s. 9d. brought forward, the available total is £761,084 18s. 1d. An ad interim dividend at the rate of 20 per cent. per annum, free of income tax, was paid on September 16 last, amounting to £200,000. The directors now recommend a further dividend at the same rate, and an addition of £50,000 to the reserve fund, raising it to £2,850,000. They propose to write £30,000 off house property account and to add £40,000 to the officers' pension fund, leaving a balance of £241,084 18s. 1d. to be carrried forward.

According to the Vienna *Tagblatt*, Prince Cyril of Bulgaria, brother of King Boris, has decided to take up his residence permanently in Vienna, and has just acquired a palace in the centre of the city for £36,000.

Shipping Intelligence.

A TURKISH EXHIBITION SHIP.

A Turkish exhibition ship will shortly visit the United Kingdom. This vessel, which has undergone alterations to suit her task, is named Kara Denig, and has Constantinople as her port of registry, and is a single-screw ship of 5,000 tons.

It is stated that the list of goods which are to be exhibited in the ship affords a good example of the possibilities of Turkish trade. The list includes such textiles as cotton, wool, mohair and silk, a score of minerals, a number of medicinal plants and drugs, dried vegetables, fruits and cereals, a number of jams and preserves, many of which are new to English buyers; fish, perfumes, tinned goods, and a long miscellaneous list, which ranges from carpets to hides, antiques, straw matting, and woodwork of native manufacture.

It is anticipated that the ship will leave Constantinople in mid-spring and after calling at all the ports of the Black Sea, will pass through the Dardanelles to Smyrna, Trieste, Naples, and Marseilles. The ship will afterwards come to Liverpool.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Massilia for Bombay (Liverpool, March 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mandasor for Port Said, Colombo, Madras, and Calcutta (London, April 1).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, April 7).

British India Line.—S.s. Malda for Colombo, Madras, and Calcutta (London, March 27); s.s. Gharinda for Bombay and Karachi (London, April 10).

Cunard Line.—S.s. Brescia for Gibraltar, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza (also Oran and Algiers if inducement) (Swansea April 3, Glasgow April 3, and Liverpool April 3); s.s. Pavia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, Trieste (also Corfu, Gruz, and Ancona if inducement) (Liverpool April 15, Swansea April 20).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 10); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 1).

P. and O. Line.—S.s. Rajputana for Bombay (London, April 1); s.s. Nankin for Colombo, Madras, and Calcutta (Liverpool, April 17).

Prince Line.—S.s. Merchant Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, and Mersina (London, April 1).

TYRE EQUIPMENT FOR NEW AIR LINERS.

The largest tyres ever made are being produced at Fort Dunlop for the new giant air liners. Each of them is seven feet and a half in diameter and close upon two cwt. in weight. The tube weighs about thirty-eight pounds, compared with the pound and three-quarters of a light car tube. The tyres are of the wired type and their bead wires will stand a breaking load of eighteen tons on each bead. The wheels, with hubs twenty inches long, weigh almost five cwt. apiece.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

TURKEY.

Non-ferrous Metals. Tenders are being invited by the Anatolian Railway Administration for the supply of zinc, lead, antimony, and other metals. Tenders are due at Constantinople, in the case of some metals by April 17, and in the case of other metals by April 20. (D.O.T.)

EGYPT.

Conduits.—The Superintendent of Stores, Saptia, Cairo, invites tenders for the supply of 7,190 conduits earthenware salt glazed, of different sizes. April 6.

Motors and Motoring.

By G. B. B.

There is still some difference of opinion as to the advisability of equipping heavy duty vehicles with front wheel brakes, and the London traffic authorities appear to see eye to eye with those who regard front wheel braking as possessing elements of danger. Of course the brakes are efficient enough; no one doubts that. The only question is as to how they would answer in dense traffic on, perhaps, greasy roads, and the official view seems to be that there would be a good deal of risk about it all. In London, which has always led the rest of the country in omnibus design, front wheel brakes on public carriages, as cabs and omnibuses, chars-a-bancs, etc., are not regarded with favour by the Public Carriage Department of New Scotland Yard. The Commissioner of the Metropolitan Police says that this matter has recently received his careful consideration as licensing authority, and after consultation with his technical advisers he has decided that the present time is not opportune for the introduction of front wheel brakes upon licensed public carriages.

The Reasons.

There are not a few motorists who regard this decision as evidence that the authorities are not up to date, but I can assure any of my readers who may hold that opinion that they are mistaken. It is easy, as the *Motor* agreed recently, to follow the line of thought adopted by the police and to appreciate the reasons which have guided them in their decision. The chief advantage which is offered by well-adjusted front wheel brakes is the ability to pull up quickly. To meet the additional stresses imposed by their application, it is necessary that the front axle, the springs, and even the bus body must be stiffened up. It is also necessary that a competent staff be engaged upon the adjustment of the brakes, and it is doubtful if the operator, with one or two vehicles, buses, or cars as the case may be, is to be relied upon to carry out this important task with intelligence and efficiency. Incorrectly adjusted front wheel brakes would undoubtedly be a source of danger. The average cab driver in the Metropolis, or in any other large city for that matter, drives fairly fast because it pays him to do so, and one feels that it were not wise to give him the capacity for driving even faster and for pulling up suddenly regardless of the traffic in his wake. The London bus is not called upon to pull up any more quickly than it does, for its general speed is not so high as that of the private car. Sudden and rapid checking of speed on the part of a bus would, therefore, be dangerous to following traffic.

British Cars.

I would like to congratulate the Association of British Motor Manufacturers, Ltd., on their full page advertisement in *The Times* British Motor Number. It is evidence of an enterprise which I thought was practically lacking in the industry. I am glad to feel that at last organised British motor manufacturers have decided to tell people something about the good points of the British cars. Of course, in this advertisement they are, and rightly, urging British people to buy British productions.

May I suggest that, now the Association has broken the ice, another step into the waters of publicity would be of even great benefit? Advertisements placed in the proper journals and drawn up with the object of telling the overseas buyer all about British cars would bring astonishing results. I do not know whether Argentine, Chilean or Brazilian buyers know anything about British cars. Indian, Turkish, Roumanian, Greek, Chinese and Japanese buyers do not, simply because no one has ever told them.

Overseas Trade.

I do not exaggerate the importance of this matter; it is such that *The Times* asked the Rt. Hon. L. S. Amery, M.P., Secretary of State for Dominion Affairs and for the Colonies, to deal with it. Mr. Amery said:—"At a time when we are faced with the need of wider markets for our manufactures, it is not out of place to look around us to see what markets offer opportunities for our exports. If there is one class of manufacture in which, *par excellence*, the output can be rapidly and continuously increased it is the motor car. And, as usual, it is within the Empire itself that the greatest scope for increased sales of United Kingdom goods is to be found." Mr. Amery might have coupled with the Empire those Eastern peoples who are on such friendly terms with us, and who are ready to buy what we have to offer provided we tell them what they should buy. Mr. Amery continues—and the critical will note that what he says in *The Times* is exactly what I have been saying for so long in THE NEAR EAST AND INDIA. He says:—"We do not do enough to make known the merits of our manufactures; we should do more than we have yet attempted to make known that cars made in the United Kingdom, as compared with cars competing with them in the markets of the world, possess greater durability and cost less to run both as regards the consumption of petrol and of lubricants, and that they are perfectly capable of 'standing up to' conditions however hard."

Road Conditions.

I was with Col. Sir Arthur Holbrook, M.P. for Basingstoke, the other night, when the rear light question was discussed at some length. Unlike myself, Sir Arthur is—or was—a firm believer in the old-fashioned notion that cyclists could secure their own safety by carrying red lights, and he was evidently surprised by the determined way in which the opposition refused to accept that view. He was surprised to find that cyclists have no objection to carrying red lights, reflectors, or other warning devices as an act of road courtesy and as a means to ensure individual safety. "So long," they say, and rightly, "as it is optional as to whether red reflectors should be carried, so long will the carrying of

them ensure safety. The moment the carrying of anything of the kind is made compulsory, that safety disappears and a real danger takes its place; the danger of a lamp being extinguished or of a reflector glass falling out." This was an entirely new view to Sir Arthur and the other motorists present, and he was evidently impressed with the soundness of the reasoning. At present the cyclist without a rear warning device hugs the side of the road; he will naturally ride more towards the centre when he feels he is securely guarded by some kind of red light. If by any chance that rear warning ceases to be effective—a chance that is always open to occur—his position would be one of extreme peril, especially as the motorist will be looking out for red lights rather than for unlighted or unguarded cyclists. And the effect will be twofold. Night driving will be a nerve-straining business for motorists themselves, as they will never know at what moment they may find in their way some unsuspecting cyclist whose rear lamp has gone out or whose rear reflector is out of action. As it happened, after the discussion I had a 50-mile drive to London in pitch darkness, and could realise for myself how dangerous such a drive would be were red lights compulsory and the fear of overtaking, in the middle of the road, some unlighted cyclist, present. Sir Arthur gave the anti-rear light people some good advice in urging that they should lay their views properly before the Minister of Transport. He felt that their objection was one which had not yet been properly considered, and I give this tip to my cyclist friends for them to act upon without delay.

FOREIGN DECORATIONS.

The King has given the following gentlemen authority to wear decorations conferred on them by the King of Egypt, in recognition of valuable services:

ORDER OF THE NILE.

Insignia of Grand Cordon. John Hope Percival, Judicial Adviser, Egyptian Ministry of Justice, Cairo.

Insignia of the Third Class.—Mr. Percy Harry East, formerly Resident Engineer, Blue Nile Section, Sudan Irrigation Service.

Insignia of the Fourth Class.—Mr. George Wilfred Bennett, M.B.E., Director of the Administration, European Department, Ministry of the Interior, Cairo; Mr. Arnold Edmund Bousfield, Director of Works, Egyptian Ministry of Public Works; Mr. Francis Millward Edwards, Inspector Egyptian Ministry of Finance, Damanhur, Egypt; Mr. Ernest Griffiths-Jones, Chief Chemist, Public Health Laboratories, Egyptian Ministry of Public Health; Mr. William Francis Henn, Assistant Commandant, Cairo City Police; Mr. Louis Francis McCullum, Chemist in the Egyptian Chemical Department, Cairo.

ORDER OF ISMAIL.

Insignia of the Third Class.—Mr. Arthur Burton Buckley, O.B.E., Egyptian Ministry of Public Works, Cairo; Mr. William Hannah McLean, of the Alexandria Municipality; Mr. Vivian Lee Osborne Sheppard, Surveyor-General of Egypt, Cairo; Mr. Frederic Hathaway Teall, Commandant of the Suez Canal Police, Port Said.

The Viceroy and Lady Reading left Delhi last week on a visit to the North-West Frontier.

The British and Egyptian Commissioners have unanimously signed the Nile Waters Report.

Sir Leslie Wilson is proceeding to England in the Rawalpindi with Lady Wilson, who is seriously ill.

Lord and Lady Plunket, who recently arrived in Cairo, are making a few weeks' stay in Egypt.

The King has approved the appointment of Sir Henry Stavelev Lawrence to act as Governor of Bombay during Sir Leslie Wilson's absence.

THE SMYRNA DRIED FRUIT TRADE.

Messrs. C. J. Giraud and Co., report as follows under date March 1:—

Sultanas.—The arrivals since the opening of the season are estimated at 24,970 tons and the sales to date are put at 23,875 tons. Closing prices, Smyrna, per cwt. c.i.f. London-Liverpool: type 12, unobtainable; type 13, 54s. type 14, 56s.; type 15, 58s.; type 16, 62s.; type 17, 66s.

The statistical distribution of sultanas since the opening of the season to the present date has been as follows (in net tons):—To the United Kingdom 6,380, North Continent 12,680, South Continent 3,050, United States 260, South America 90, New Zealand 55, Egypt 290, Russia, Black Sea, Constantinople, local consumption, etc., estimated at 3,000, estimated stocks still available for export 3,000, total 28,805.

The trade movement of raisins in the United Kingdom since 1923 as reflected by the Board of Trade returns, is instructive. We give below the quantities imported into the United Kingdom from various countries of production for the past three years (in tons):—

	1923	1924	1925
Smyrna ...	20,569	13,351	5,625
Australia ...	9,358	18,832	17,732
California ...	9,964	8,975	18,443

Business in January showed some activity, but the demand commenced to flag during February. About 3,200 tons were, however, taken up for export during the two months, and, in view of the reduction in supplies, holders both on the market here and in the interior appear to show no anxiety about their remaining stocks and at present refuse to lower prices to the parity of foreign consuming markets.

Inferior grades such as types 12 and 13 are practically exhausted. Fine outstanding qualities are also bordering on exhaustion. A small business is at present doing week by week, but indications point to some improved demand for spring requirements. Little doubt exists that the small stocks existing will be absorbed, either for export or for local consumption, before the new crop is available. We do not anticipate any carry-over on this side into next season.

The statistical distribution of figs since the opening of the season to the present date has been as follows (in tons): to the United Kingdom 5,575, Continent 3,712, U.S.A. and Canada 8,807, Australia and New Zealand 481, Egypt 395, Russia, Black Sea, Constantinople 655, total 19,625.

The above figures representing the distribution of the 1925 crop of sultanas and figs have been ascertained from the manifest figures given by the various steamship companies. The fig crop on the above showing amounted to over 19,000 tons, but it should be taken into account that in this figure is included a substantial quantity of Hordas which were mixed into the bulks of Naturals owing to the shortage in supplies of figs in relation to demand. In normal seasons all Hordas are shipped as such for distillery and coffee adulteration to the Continent.

The comparative shipments of sultanas and figs over the past three years are approximately as under (in net tons):

SULTANAS.

	1925	1924	1923
United Kingdom ...	6,380	11,900	18,500
Continent	15,730	29,300	18,100

FIGS.

	1925	1924	1923
United Kingdom	5,575	11,400	10,700
U.S.A. and Canada ...	8,807	9,900	8,500
Continent	3,712	2,200	3,100

The Palestine and Transjordan Forces will, as from April 1, be united under the supreme command of the Palestine High Commissioner.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended March 11, state:—

Since our last report, the futures market has been quiet and the tendency rather weak. The week's summary of price movements is as follows:—Sakellaridis: March, 30.55 dollars, 0.25 dollars down; May, 29.18 dollars, 0.92 dollars down; July, 28.35 dollars, 1.17 dollars down; November, 28.40 dollars, 1.15 dollars down. Ashmouni: April, 21.10 dollars, 1.20 dollars down; June, 21.45 dollars, 1.02 dollars down; August, 21.50 dollars, 1,— dollars down; October, 21.77 dollars, 0.68 dollars down.

There is very little fresh to report on the situation. The demand from abroad continues to be poor for Sakellaridis and only fair for Ashmouni, and reports from the consuming centres are not indicative of any improvement in the near future. Of the business concluded Ashmouni has had the larger share for the simple reason that the prices of this variety compare favourably with competing growths, and, consequently, whenever spinners using this class of cotton have been in the market their choice has generally fallen on Ashmouni as the cheapest staple for their requirements.

The intervention of the Government has absolutely disorganised the Sakel market, and spinners now only purchase Sakel when they cannot obtain from outside growths the yarn they require; the declared intention of the Government to maintain an artificial level of prices has annoyed spinners, and all reports indicate that the consumption of Sakel will be reduced to the absolute minimum. With the present heavy stocks and the very poor off-take, the near positions should logically stand at a discount and the reversal of this order of things is abnormal and a direct result of the Government purchases. The Government has bought during the week about 3,000 bales of Sakellaridis, grades Fully Good Fair up to Good for which they have paid from 33 to 34½ dollars. The total Government purchases to date amount to about 35,500 bales.

The statistical position is very heavy. Stocks in Egypt amount to about 3,690,000 kantars divided as follows:

			Same date 1925
Alexandra	2.320.000	...	1 443.000
Lower-Egypt			
Factories	400 000		
Villages	600.000		
Upper-Egypt			597.000
Factories	22.0000		
Villages	150 000		
	3.690 000	...	2.040.000

Naturally the figures given as factory stocks and more particularly those given as stocks held in the villages must only be taken as approximate, despite all the care we have taken to get them as accurate as possible. These figures indicate a crop slightly larger than 8,000,000 kantars. As a result of this accumulation of stocks, we look for a continuation of rather dull markets until such time as the demand from abroad shall improve and ease the position. Prices may seem reasonable but this of itself is not sufficient to cause a rise. The week's receipts amount to 117,758 kantars against 136,115 kantars; the stock stands at 2,318,955 kantars.

Spot: There are as yet no signs of a revival of interest in our cottons and we have had another dull week at Minet el Bassal. Sales amount to about 9,900 bales of which we estimate 3.500 bales Sakellaridis, 5,800 bales Uppers, 300 bales Zagora, 200 bales Pilion and 100 bales White. There is still a moderate amount of business in Uppers but spinners' interest in Sakel has diminished still further. Government purchases amount to about 3,000 bales Sakel from Fully Good Fair up to Good.

Sakellaridis: is neglected and a very meagre turnover has resulted though all styles have been dealt in. Spot differences are generally cheaper than last week.

Ashmouni and Zagora: have been in fairly good demand and a fair business has been done in all styles. Spot differences are without much change though the top grades are a little easier to buy.

Brown and Pilion: Brown is neglected and no business is reported. Pilion has met with moderate demand. Spot differences are unchanged for Brown, but for Pilion they are slightly easier in the top grades and dearer for the medium qualities.

White: A moderate business has been done. Spot differences have eased a little from last week.

Crop 1926: Climatic conditions have been very unfavourable during the last few days, and this has somewhat hindered the field work.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended March 20, states:—

Conditions in most sections of the cotton trade continue to be unsatisfactory. Though inquiries come to hand the prices offered rarely result in the booking of business, and opinions regarding the near future cannot be described as other than pessimistic.

Yarn.—Buyers of both American and Egyptian varieties show little disposition to place orders and irregularity in quotations causes an unsettled feeling to prevail. No decision was arrived at at the meeting of the Short Time Committee of the American Spinning section last Monday regarding the proposed increase in the working hours from 30½ to 35 per week. Quotations for most types of yarn remain about the same as those of a week ago, but needy sellers can usually be found without much difficulty and business transacted at lower levels than those nominally prevailing.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

Digitized by Google

Cloth.—Not much change can be reported from the conditions mentioned last week. Indian demand has slackened off, though in certain light fabrics some fair-sized orders have been placed. The news regarding the recent auctions in Shanghai is a little better, and a certain amount of trade has been done for that market, particularly in white goods and special lines. Buyers for Egypt and the Near East generally have been slightly more in evidence, but most other overseas markets have bought only very restricted quantities. The Home trade has been without interest.

Raw Cotton.—Transactions have been unimportant. Imports have been on a reduced scale and it is hoped that the consequent reduction in stocks may induce a firmer tendency. Closing quotations yesterday were as follows: American Middling 10.08; Egyptian Fully Good Fair 15.60.

FOREIGN LANGUAGE COURSES.

Arrangements have been made for courses of study in foreign languages for Army officers, commencing on October 1 next. These comprise a six months' course in Chinese, and five months' courses in Turkish and Arabic, at the School of Oriental Studies, Finsbury Circus, E.C., and five months' courses in Bulgarian, Modern Greek, and Czech at King's College, Strand, W.C. The object of the courses is to enable officers to master the rudiments of a language before proceeding abroad for the purpose of further study. The Army order which makes this announcement states that the situation as regards the number of officers studying foreign languages still remains unsatisfactory. To be eligible to attend a course an officer must hold a permanent commission in the Regular Army and his previous record, educational and military, must be such as to justify expenditure on further education.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 23.

It is not to be wondered at that business on the Stock Exchange shows no tendency to expand, for events both at home and abroad have been of the kind that damp enthusiasm. The failure of all efforts to secure unanimity at Geneva on the question of the admission of Germany to the League of Nations, and the postponement of the matter until September, although it has had little effect on the Stock Markets beyond a slight marking down of Brazilian bonds, is a definite set-back to European progress and has caused much disappointment in city circles. Although more localised, the collapse of the Belgian franc, which came as something of a surprise, has been a depressing influence. The sharp rise in the Brussels Exchange rate to over 120 to the £, after stability for over five months at about 107, was due to a serious hitch in the negotiations with British and American banking interests for the granting of a long term loan in connexion with the Belgian Government's proposals for the stabilisation of the currency. It is still hoped that the difficulties will be overcome and that the loan will be obtained.

At home, uncertainty as to the outcome of the Coal Commission's report and the labour troubles in the engineering trade have affected home railways and certain sections of the industrial market. A feature of the investment markets has been the poor response to the two issues of new capital under the Trade Facilities Act, the underwriters of which had to take up about 80 per cent. in each case. The publication of all the Service Estimates and the Chancellor's speech in the debate on the new Economy Bill have disclosed most of the secrets of the Budget earlier than usual. The failure to achieve any real reduction in the expenditure of the spending departments has created a bad impression in financial circles, and the hollowness of the "economies" achieved by the much-heralded Economy Bill, which are mostly obtained by reducing the Government's contributions under the health and unemployment insurance schemes, are regarded as a poor effort at a time when genuine retrenchment is a matter of the utmost urgency.

The Electricity Bill and Investors.

The Electricity Bill is so complicated and long that even those investors who have had an opportunity of studying it are probably at a loss to see how it will affect shares in electric supply and electric equipment manufacturing concerns. Generally speaking, investors may assume that the Bill proposes to carry out the main features of the scheme recommended by the Weir Committee. It sets up a Central Electricity Board, whose chief duty is to supply power to existing undertakings, which will be encouraged to close their generating plants and buy their supplies from new large and efficient stations to be erected and controlled by the Board. Extensive inter-connexions will be carried out. The Board is to supply electricity at a price yielding no profit to itself. It appears that well-established supply companies have nothing to fear, and when the full scheme operates the basis of their security will be at least as sound as at present. For the moment the Bill should have no effect, for the setting up of the proposed machinery will obviously be a very lengthy business, and the scheme will come into operation very slowly and gradually over a course of years. Manufacturers of electrical supply companies' equipment, and especially cable makers, may be justified in taking a more immediate interest in the Bill. Eventually it means big orders in prospect: and as far as the cable-makers are concerned they are already hard at work preparing to supply a demand which is very imminent. For existing concerns may be expected to enter upon plans for connexions before the cumbersome procedure under the new Bill gets under way. Altogether experts, who have been giving the closest study to the Government's proposals, find in it nothing which holders of sound electricity shares need regard with anything but complacency.

The Rise in Tin.

Once again the price of tin has soared to a very high level, having at one time last week exceeded £300 per ton. This is by no means a record, for almost exactly six years ago the metal was selling at £418 10s. per ton. The reason for the present strength of the market is the fact that while the world consumption of tin has grown by 20 per cent., there has only been an expansion in production of 12 per cent. The result is that stocks have been substantially depleted and at the world's average rate of consumption they are now less than two months' supply.

As was to be expected, the strength of the metal market was reflected in buoyancy in tin shares. It is possible that the upward movement may be continued for some little time to come. But whether any further substantial rise in share values would be justified is quite a different matter. Most of the Eastern alluvial undertakings can produce tin round about £120 per ton. This, coupled with the fact that tin has remained at a very remunerative level for some months past (the average last year was £260), has naturally prompted the ordering of additional dredges and the opening up of many new properties. It is true that it usually takes about twelve months from the time of ordering a dredge to when it actually commences to operate. But, none the less, holders of tin shares, and those who are thinking of going into the market, should bear in mind the possibility of equilibrium being established between production and consumption in the not far distant future. Moreover, there is the question as to whether the present rate of consumption will be maintained. On the whole, therefore, a purchase of tin shares at present levels can only be regarded as a pure gamble, and those who cannot afford to take the risk should, we are inclined to think, consider the investment of their money in less meteoric sections of the Stock Exchange.

CHESS.

By "CARO-KANN."

Solution to Problem No. 38:—1 . . . . K—K3; 2, K—B3, K—Q2; 3, K—Kt4, K—B3; 4, P—R4, K—K2; 5, K—Kt5, K—Kt2 and draws.

As I suggested was probable the result of the University match was once again a surprise. Oxford had done the better in the trial matches and were generally regarded as having the stronger team, but they were beaten by 4½ to 2½, and so Cambridge now have a lead of two in the series of matches.

The match between past members of the two Universities which took place the following day was notable for the first appearance of the British champion, Mr. H. E. Atkins, in this annual event. On paper Cambridge appeared to have much the stronger team, but while they won four games out of the top five boards the result of the match was actually very close—8½ to 6½—and depended on the adjudication of three unfinished games. As showing the relative advantage of the move it may be pointed out that Cambridge did not lose a game with White, but only won two with Black.

It is reported that the municipality of Zagreb has placed an order with the Skoda Works for a steam boiler, to cost 1,000,000 dinars, with a capacity of 700 cubic metres, for use at the municipal electric power station, and, in addition to this, has ordered conjointly at the Skoda and Siemens works turbines costing 5,600,000 dinars, with a total power of 10,000 kilowatts. These turbines are also for the Zagreb power station.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

President or Prime Minister?

The number of striking achievements that General Pangalos, the Greek Dictator, has to his credit continues to increase. His latest is that the various Greek political parties should have agreed to sink their animosities in combining to support a single candidate for the Presidency. It may be that the bond between them is a keen desire to rid themselves of General Pangalos; but in the meantime he has stipulated that there is to be no question of politics, and, after wholly unsuccessful efforts to kick against the pricks, they have fallen into line. An attempt was made to impose conditions on the Prime Minister in connexion wth the Presidential elections, such as the removal of martial law, the re-establishment of the liberty of the Press and the immediate return of the deported leaders. General Pangalos's reply was to the effect that he had said and would repeat that the elections would be absolutely free. By that he meant that the people would have complete liberty to elect the candidate they liked; but he imagined that that was not the liberty that the "malcontents" wanted. With that the protesting politicians had to be content, and they have acted on General Pangalos's hint by not nominating one of the deported leaders (the names of M. Kaphandaris, and M. Papanastassiou, as well as the dissentient Admiral Hadjikyriakos were mentioned), but M. Constantine Demerdjis, who was Minister of Marine in 1917. It now remains to be seen whether General Pangalos himself is to stand for the Presidency, or whether he makes up his mind, while strengthening the powers of the President, that a Prime Minister, if sufficiently determined, will still be able to have his own way in Greece.

The Outskirts of a Dictatorship.

In the intervals of Constitution-making General Pangalos has found time to enforce his views as to what is a seemly length for ladies' skirts, he has founded a Greek Academy, and with the help of M. Roufos has set an example of statesmanship to the Balkan Peninsula. Casualties in the newspaper Press are frequent, but the country continues to enjoy its respite from politics, and the presidential election on Easter Sunday promises to be as blameless as a Masonic function. The foundation of the Greek Academy, on the lines of the French Academy, will always remain a landmark of the Dictatorship. There are to be sixty Academicians, grouped in three sections, Positive Sciences, Letters and Fine Arts, Moral and Political Sciences, who will form an Areopagus for the advancement of knowledge of all kinds in Greece. It would be well if this body could make itself responsible for the compilation of official statistics and information, which has suffered in the past from frequent changes of Government and the instability of the Civil Service. General Pangalos's régime will also be associated with the big undertakings now in progress for the supply of water and electricity to Athens and for the draining of the Vardar marshes. In the face of these concrete achievements the mysterious moves of a General Plastiras, who is credited with a design to return from exile in order to displace General Pangalos, are not likely to be followed with any sympathy abroad, whatever reception may be in store for them at home. Much may be happening which clashes with the strict letter of constitutionalism, but it would be difficult to show that Greece is worse off than she would have been if an unbridled rein had been given to politics. Not even General Pangalos can suppose that the present régime will continue indefinitely; but it is not an unworthy goal for a Dictator to set himself, to bring about a state of affairs in which the interests of the people and the country as a whole shall not be subordinated to the interests of politicians in the capital.

Change of Government in Roumania.

The Roumanian Parliament has outlived its constitutional span of life and was dissolved on March 27. On the same day M. Ion Bratianu tendered to King Ferdinand the resignation of the Cabinet, which was accepted, the outgoing Prime Minister being charged with the conduct of affairs until a new Ministry can be formed. The Bratianu Government can take credit to itself for having remained in power for a longer period than any of its predecessors for many years back, even though its long retention of office has served to increase its unpopularity. No Ministry, however, holding office during the last four years in Roumania could hope to be popular, for the very nature of its task—the lifting of the country out of the slough of post-War conditions—entailed unpleasant sacrifices all round. The Liberal Government approached the problem with courage and conviction, and much of its work will last, to the advantage of Roumania. A charge freely levelled against it is that it examined most questions too closely from the narrow point of view of partisan politicians; certainly its last measure—the new Electoral Law—which has been passed by Parliament suggests a curious interpretation of the real relationship between politicians and the electorate. The fact that the Bill was the subject of compromise with certain parties of the Opposition suggests that the Liberals were not alone in holding that a party's interests should take precedence over the expressed views of the electorate. It would have been better, no doubt, for the country if the Liberal Government, which has hitherto drawn its support mainly from the old Kingdom, could have contrived to make itself more representative of Transylvania. If it is succeeded in office by the Nationalist Party, it will call for all the statesmanship of M. Maniu to prevent his Government from making the pendulum swing too far over the other side, to correct the alleged bias of the Bratianu Ministry.

Yugoslavia's Foreign Policy.

The debate on Friday in the Skupshtina on Yugoslavia's foreign policy, in connexion with M. Nintchitch's recent tour, took a much more practical turn than the report which the Foreign Minister had previously rendered to the Chamber. Not the least interesting feature was the plea put forward by M. Trumbitch for a more British orientation for Yugoslav foreign policy. He drew attention to the link that now existed between the two countries in the fact that Yugoslavia was now a maritime State and, as such, required to create new maritime connexions. His statement that a British orientation would not run counter to French interests showed that he realised what a revolutionary suggestion he would be regarded as making in an Assembly which has its attention directed mainly to its Continental neighbours. M. Trumbitch might have added—a fuller report of his speech may prove that he did—that an orientation for Yugoslavia's foreign policy which by no manner of means could be regarded as other than a peaceful orientation could hardly fail to impress favourably the market to which the country is bound to look for any considerable loan. The omission of the Foreign Minister to visit London before proceeding to Geneva can be accounted for in many ways, and there is no need to lay stress on the point in view of the fact that a Yugoslav Mission is shortly expected to initiate negotiations for the settlement of the War debt; but it is all to the good that M. Trumbitch has couched a lance in favour of a policy which, if adopted, may save Yugoslavia many difficulties in the future.

BIRTHDAY OF KING FUAD.

In celebration of the birthday of King Fuad, Sesostris Sidarouss Bey, Egyptian Chargé d'Affaires, held a reception at Claridge's Hotel in the afternoon of March 26, followed in the evening by a dinner. At the reception, which was attended by a very large gathering, there were present in addition to the member of the Diplomatic Corps, the Marquess and Marchioness of Winchester, Lord and Lady Jellicoe, Catherine Countess of Westmorland, the Earl of Meath, Count Bernstorff, Lord and Lady Bertie, Lord and Lady Arthur Browne, Lord and Lady Strathspey and the Hon. John Grant, Baron Jules Guillaume, the Dowager Lady Raglan, Lord Teynham, Grace Lady Napier and Ettrick. The Hon. Donough and Mrs. O'Brien, General Sir George and Lady Milne and Miss Milne, Sir Felix and Lady Helen Cassel, the Dowager Lady Boyle, Sir Edward and Lady Boyle, Lady Alexander, Lady King-Hall, Brigadier-General Sir William and Lady Horwood, Lieutenant-General Sir William and Lady Pitcairn Campbell, Mr. John and Lady Alice Mahon, Sir William Hale-White, Lady Beecham, Sir Denison Ross, Sir Cooper Perry, Sir Fortescue Flannery, Sir Rennell and Lady Rodd, Sir Charles and Lady Walpole, Sir George and Lady Harvey, Lady Guggisberg, Sir Holburt and Lady Waring, Dame Alice Godman and many others. The guests at dinner were: The Italian Ambassador and the Marchesa della Torretta, the French Ambassador, the German Ambassador, the Belgian Ambassador, the Brazilian Ambassador, the Czecho-Slovak Minister and Madame Masaryk, the Hungarian Minister and Baroness Rubido-Zichy, the Greek Minister, the Persian Chargé d'Affaires, the Spanish Chargé d'Affaires, the Hon. Mervyn and Mrs. Herbert, Sir Henry and Lady McMahon, Major-General Sir John and Lady Hanbury-Williams, Sir William Brunyate, Sir Cecil and Lady Hurst, Lady Scott Moncrieff, Sir Malcolm McIlwraith, Sir Maurice Amos, the Norwegian Commercial Counsellor and Mrs. Fürst Smith, Faid Sabit Bey, Mrs. El Sadak Bey, Mr. J. B. Monck, Mr. Nigel Ronald, and Abdul Rahman Fikry Bey.

A Bulgarian football team visited Belgrade and played matches on March 20 and 21. The visit is the first of the kind since the War. A Yugoslav team visited Sofia recently.

A Teheran message states that by permission of the Shah the former Prime Minister, Vossugh-ed-Dowleh, has returned to that city, which he left in 1920 after the rejection by the Meiliss of the Anglo-Persian Agreement. He has since been living in exile in Europe.

In July a large Mohammedan mosque will be opened in Paris in the Rue du Puits-l'Ermite. The Sultan of Morocco himself, Mulai Yusef, has promised to inaugurate it, and many other important figures in the Mohammedan world will also attend the ceremony.

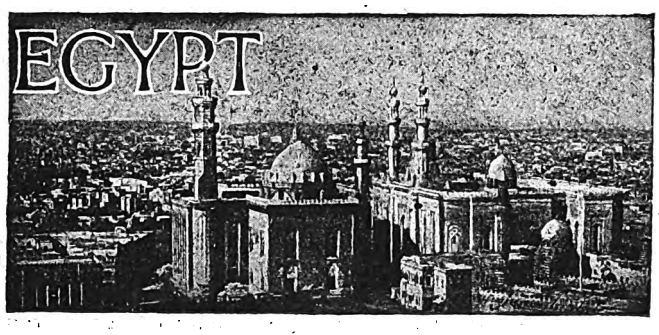
TOWARDS A BALKAN PACT.

Now that the Geneva meeting of the nations is over and the representatives of the various Governments are back again in their respective capitals it is easier to appraise the conversations in which Ministers of the Balkan States took part. Even before M. Nintchitch, Yugoslavia's Foreign Minister, had delivered his speech last week to the Skupshtina, it had become clear that far too much had been read in some quarters into his discussions with Signor Mussolini and M. Briand. The Yugoslav Government is well advised to keep in close touch with Italy and France, and to do all in its power to make its relations with those two countries as cordial as possible. What was to be feared, from the point of view of Yugoslavia's more vital interests, was an attempt to transmute the coinage of friendly relationship, which will carry her all over the world, into a localised currency, that must be either Italian or French, which will restrict her movements to a comparatively small sphere. Whether the reports regarding the Rome conversations were coloured by aspirations in certain Yugoslav circles, or were merely the product of lively imaginations which cannot bring themselves to believe in the long continuance of European peace, is not yet clear. Certainly, since leaving Paris, M. Nintchitch has said nothing to confirm those reports. Rather has he gone out of his way to pour cold water on any optimistic views that these reports had created in his own country regarding what had been actually achieved on his tour. His speech to the Skupshtina on March 25 was confined entirely to generalities. He painted a bright picture of international friendliness radiating in ever-widening circles from the spot where the Yugoslav pebble has projected itself upon the surface of the European millpond; and if his hearers had not been led to expect more concrete achievements, they would have had ample reason to be well satisfied with the account that the Foreign Minister was able to render of his stewardship. Some of the speakers who followed M. Nintchitch, however, complained of the emptiness of his speech, and there may be a danger that the Yugoslav Government, anxious to meet any popular desire that may appear to exist for close co-operation with this or that country, will be encouraged to succumb to the overtures of Italy or France for a hard-and-fast military alliance.



A week or more ago there seemed to be grounds for supposing that Signor Mussolini, in order to meet Italy's need for more markets, was anxious to play the part of pacificator in the Balkan Peninsula, so that the various States could settle down to a period of economic development from which Italy must benefit. The mere prospect caused France to renew her efforts to bring Yugoslavia more definitely within her own orbit, and an attempt seems to have been made to revive the negotiations for an agreement on the lines of the treaty between Czecho-Slovakia and France, which were abruptly terminated when Yugoslavia made her pact with Italy in January 1924. A hint on this subject in the *Temps* has led to hopes in Paris that a treaty between France and Yugoslavia will shortly be concluded, and to disarm Italian opposition the possibility of Italy's participation is suggested. How the proposal will strike Signor Mussolini remains to be seen. The Yugoslav Government, moreover, must be its own judge as to whether the advantages offered are worth the trouble and difficulty, which even at this stage have made themselves felt, of explaining away Italy in Paris and France in Rome. Certain it is that the more commitments any of the Balkan States enters into in connexion with the affairs of Central Europe, the more its hands will be tied in playing a leading part in a Balkan federation.

In last week's issue of THE NEAR EAST AND INDIA it was pointed out that the main difficulty in the way of a Balkan pact is that Greece is called upon to make concessions both to Yugoslavia and to Bulgaria. Since those words were written M. Roufos, Greece's Foreign Minister, has made a very notable contribution to a real settlement of the Balkan Problem in making known the readiness of the Greek Government to go a long way towards meeting both Yugoslav and Bulgarian claims. Greece is still opposed to the idea of surrendering a "corridor" to either country; but she hopes that a zone under the full control of the State to which it is ceded together with wide economic and transport privileges will satisfy both Yugoslavs and Bulgarians. Suiting the action to the word, the Greek Government has offered a Free Zone in Salonika to Bulgaria. The latter would prefer the zone to be at some other point on the Ægean coast, in particular at Kavalla; but it has recognised the spirit in which the offer was made, and has asked that Greece should as a first step in the introduction of a new era permit the construction of the line required to connect the Bulgarian railway system southwards from Sofia with the Salonika-Adrianople line at Demirhissar. In this connexion it is permissible to express the hope that the Bulgarian Government will not make the mistake of setting its demands too high. With the two countries agreed as to the necessity of friendly co-operation, it is much better that Bulgaria should realise the advantage to be gained by a speedy acceptance of what is offered her, with a view to securing logical extensions later on, instead of running the risk, by too much bargaining, of causing the Greeks to withdraw their offer in disgust. These offers of the Greek Government, it has to be recognised, are an entirely new feature in Balkan history. They suggest that with the appointment of M. Roufos to a Cabinet post a new element has entered into Greek politics, and that, so long as his policy holds the field, we may expect from Greece a broader outlook on international affairs in the place of the narrow-minded suspicion and hatred which have characterised Balkan politics for the last fifty years. From this starting-point the way leading to a Balkan Pact should be comparatively smooth, even if it prove to be long. There is the risk that the habit of bargaining will give the new spirit to which all the States pay lip-homage time to evaporate, and to avoid this we could still wish that someone outside the Peninsula would, with the consent of all the parties, assume the rôle of honest broker, and, now that the countries have allowed themselves to come so near together, see to it that they do not drift apart again.

The Near and Middle East*

From Our Own Correspondents.

Cairo, March 20.

Egypt and British Trade.

The British Chamber of Commerce entertained the High Commissioner to dinner at the Turf Club on Saturday last. The Chairman, Mr. Harry Marker, and various Alexandria members came up to Cairo specially for the occasion, and among the other guests were Mr. Mulock, Commercial Secretary at the Residency, and Mr. Lomas, H.B.M.'s Consul in Cairo. The proceedings were of a private nature; no report, therefore, of the speeches is available for publication. But from conversations one has been able to have with members who were present it is evident that Lord Lloyd once again struck the right note and said things which inspire the commercial community with a strong feeling of confidence in the future.

During the past few months a great and noticeable change for the better has come over the relations existing between the British commercial community and H.B.M.'s Representative in Egypt. It was not the fault of the able gentleman who fills the post of Commercial Secretary, that up to last autumn it was useless for the commercial community to look to the Residency for support or encouragement. There still overshadowed everything the tradition set up under the Baring régime, due no doubt to our own somewhat irregular position in the country, that British merchants must receive no official assistance from H.B.M.'s representatives in Egypt for fear that Great Britain might be accused of trying to take commercial advantage of her position. And only those who have any knowledge of the manner in which since Ismailian days foreign competition has been carried on in this country, can realise what an unfair handicap this meant for British trade.

Passed are the days when the British manufacturer had often to stand helplessly by while he saw his foreign rival obtain contracts solely as a result of the pressure brought by that rival's Consular Representative; gone, it is to be hoped for ever, is the day when it had become a by-word that in Egypt it was better to be anything but an Englishman. The term *Civis Britannicus sum* is now beginning once again to mean what it did a half-century ago, and this is entirely due to Lord Lloyd, who since his arrival here has clearly shown that he has no sympathy with the past official policy towards British commerce, and whose presence at last Saturday's dinner and his more recent actions are an earnest of his determination to protect British interests, commercial as well as political, and give his whole-hearted support and encouragement to the British trader when he requires it, and above all when he deserves it.

A Link with Pre-occupation Days.

There remain to-day in Egypt very few human links with the early Occupation, still fewer with pre-Occupation days. One of the few remaining, and at the same time one of the most distinguished and most respected, of those links is Mr. A. H. Hooker, who is the oldest British resident in Cairo, where he first took up his abode forty-nine years ago, and who is leaving the country for good on the 25th inst. Last Monday he and Mrs. Hooker were entertained at a farewell tea at Shepheard's Hotel by their oldest friends, who seized the occasion to testify to their affection and esteem by presenting him with a silver salver suitably inscribed and an illuminated vellum scroll bearing the names of the subscribers. At the same time a handsome silver carriage clock was presented to Mrs. Hooker.

The presentation was made by Mr. Nevill Henderson in a felicitously worded speech, wherein he sketched the varied and very useful career which Mr. Hooker had followed since first he entered the public service in 1878 as chemist to the Customs, until more recently he became one of the founders of the British Union. The salver very fittingly had engraved on it a facsimile of the autograph letter which Lord Cromer addressed to Mr. Hooker when in 1899 he quitted the Egyptian Service, and in which he expressed his high appreciation of his excellent work in the rehabilitation of Egypt.

Mr. Hooker has always taken a prominent and active part in the public life of the British Community, and throughout his career has shown the striking characteristics that have given the Briton the high place he has acquired in the eyes of the world. We shall all miss him in our private meetings and in our public councils and none more than your Correspondent who, for nearly half the period covered by Mr. Hooker's career, has repeatedly benefited, like many of his fellow-residents, by the ripe experience, versatile knowledge and sound advice of this veteran stalwart of the British Community in Egypt.

ROUMANIA.

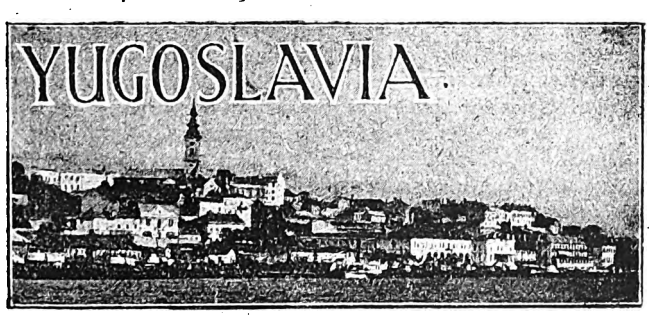
Bucharest, March 20.

Rupture in Opposition.

The political situation is once more complicated by the reported rupture between the National Party and the Peasants' Party, which for months now have been carrying on negotiations with a view to uniting their forces in order to present a formidable opposition to the Liberals. Before the Communal elections they did succeed in coming to some kind of agreement, but apparently the large majority of votes against the Government on that occasion, especially in the important towns and commercial centres, has fired each of the Opposition parties

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

Digitized by Google



with the ambition to come into power independently of its somewhat half-hearted ally. Now a definite rupture is reported, and each party separately has appealed to the Crown, it appears, for support. It is anticipated that M. Maniu, of the Nationalist Party, will be invited to form the next Government. Under the present conditions the Opposition consists of so many small parties that the result of the coming elections becomes very doubtful indeed. This session ends on March 27, having been prolonged for a few days in spite of the protests of the Opposition, which became so stormy as to necessitate the calling out of troops to surround the Parliament House, and protect the Government in case of a free fight ensuing. Their intervention, happily, was not required.

More Students' Troubles.

Troops still patrol the streets in front of the Bucharest University, however, which has been closed, as well as that of Jassy, owing once more, partly at least, to anti-Jewish agitations. The students have other grievances, it appears, and have formulated them in a memorandum to the educational authorities which is said to contain claims well deserving of favourable consideration, as well as certain naïve arguments in support of their demand that the percentage of Jews in the Universities should be reduced. It is strange that they do not realise how great a compliment they are paying to the Jewish students in evincing so great a dread of competition from them. Besides, the Jews pay their taxes and conform to the laws of the country like other citizens, so why should they be ousted from the educational institutions of the State?

Lawyers' Strike.

Another remarkable "strike" has taken place this week, that of the Bar; the lawyers all over the country having combined to protest against the provisions of a recent law passed with a view to expediting legal procedure in the Courts, and also against a Bill about to be introduced which makes lawyers responsible for the omissions of their clients to have their documents duly stamped. On the face of it such a regulation may seem unjust, but possibly there are hidden reasons. This strike of the lawyers has caused general consternation as it brings all legal business to a complete standstill.

Liubliana, March 24.

M. Pashitch's Eightieth Birthday.

M. Nikola Pashitch, the veteran President of the Council of the Kingdom of Serbs, Croats, and Slovenes, recently completed his eightieth year. He was born on December 19, 1845. His political friends and admirers decided, however, to celebrate his eightieth birthday in a befitting manner, not on the actual date, but later on, in the following spring of this year. Few statesmen have reached so advanced an age and yet been so hale and hearty and still so capable of maintaining their grasp of the situation as M. Pashitch. Not many political personages are so bitterly assailed by their opponents, and at the same time so fervently admired by their adherents as he. It is by no means easy as yet to arrive at an unbiased picture of this notable Serbian statesman, who thirty-five years ago for the first time became chief of his country's Government, at that time, of course, still in little pre-War Serbia, and has been for the last twenty years practically continuously at the head of the Belgrade Cabinets.

To-day M. Nikola Pashitch is renowned as the most unruffled of politicians, whom nothing can startle out of his cold-blooded phlegma. This shows plainly enough even in his face, in the features of which you will seek in vain for traces of those passions and enthusiasms which are supposed to be a distinctive characteristic of the politicians of the temperamental South. Just such a one was M. Pashitch in the days of his youth, as the Serbian world of politics well knows. Yet to-day it is quite difficult to realise that he is indeed the man who in his student days at the Zürich Polytechnic listened eagerly to the notable Russian revolutionary Bakunin; the man who, upon his return to his native Serbia, started a career of impassioned political propaganda in company with Svetozar Markovitch, the first Serbian Socialist politician. The ideas which M. Pashitch and his friends tried to introduce in Serbia were those of agrarian socialism and social revolution. They were at odds with the Crown, the bureaucracy, the standing Army. The party they organised on the basis of these ideas was the Radical Party, and its watchword rings to this day in the name of the party's leading paper—*Samouprava*—i.e., "Self-administration."

Under M. Pashitch's lead the party soon won over the greater part of the nation, but at the same time before long lost its socialist character. Its leaders nevertheless remained Radical and revolutionary even in practice. When the régime of the highly unpopular King Milan Obrenovitch refused to let them form a ministry, although they had been returned with a majority at the elections, they organised an armed rebellion in Eastern Serbia. The revolt was soon quelled; some of the leaders paid with their lives for the forcible attempt to realise their principle of the sovereignty of the people, and some saved themselves by flight abroad—among these was M. Pashitch—and were condemned to death by default. Subsequently pardoned, M. Pashitch returned to Serbia, where he still repeatedly found himself in sharp conflict with the reactionary régime of King Obrenovitch, who refused to recognise the principles of parliamentary government and the sovereignty of the people.

The violent death of the last of the Obrenovitches in 1903 in Serbia meant the definite victory of parliamentary government in that country. From that time onward the Radical Party has been at the helm almost without interruption. It eventually split up into an Old and a Young Radical Party; but the Old Radicals under M. Pashitch were victorious, and he remained throughout the leading political personality in Serbia. This position he maintained also during the Great War, when the old small Kingdom of Serbia expanded into the present Kingdom of Serbs, Croats, and Slovenes with twelve million inhabitants.

The historical merit of the Radical Party is that, for the first time in the nation's political history, it roused the

agrarian populace to a consciousness of political rights and power. Up to that time, political life in Serbia had been limited to a thin layer of town-dwellers and the professional class. For this reason the Radical Party to this day finds the bulk of its partisans in the peasant class. After the Union in 1918 the Party expanded beyond the borders of the old kingdom, and at last year's elections secured 142 deputies' mandates out of a total of 315 in the Skupshtina. Now, as formerly, M. Pashitch is the undisputed leader of the party, and all attempts to curtail his authority have failed. When Stoyan Protitch tried to go his own way as regards tactics, apart from M. Pashitch, the electorate deserted him and remained faithful to the older man.

Signal victories have attended the national cause during the time that M. Pashitch has virtually been in sole charge of Serbian politics. First came the liberation of Old Serbia and Macedonia; then the victory over Bulgaria; finally, after the martyrdom and vicissitudes of the World War, the realisation of the national Serbian and Yugoslav programme. Those are successes such as fall only to very few. How much of the credit for them is due to M. Pashitch's own efforts and initiative, how much to the exceptional chances and opportunities brought about by the War, and how much to his ability to make the best of these—those are questions which posterity will be better qualified to answer than we at this present time. But that M. Pashitch brought about the victory of the principles of the sovereignty of the people and government by parliament in the internal politics of this country, that is already an historic fact. And for this reason alone, if for no other, Nikola Pashitch will remain one of the most outstanding figures in Serbian and Yugoslav history.

The Study of English in Slovenia.

The Fourth Ordinary General Meeting of the Yugoslav Society for the Study of English, Liubliana, took place on March 17. Since its foundation in 1922, the Society has been working away loyally and unostentatiously at the carrying out of its programme "to establish and foster friendly relations with the Anglo-Saxon world of culture," and "to acquaint the Anglo-Saxon world with our intellectual and economic aims and institutions." The small but representative library which has been gradually collected, the papers and periodicals at the disposal of members and students bear witness to the generosity of British and American friends and well-wishers, Editors, public institutions, private friends of members. Inquiries may be addressed to the Society's Secretaries, Miss F. Copeland, Gosposvetska cesta 5, and Zdenko Svigelye, Esq., Dalmatinova ulica 11, Liubliana, Yugoslavia.

At the University of Liubliana, the study of English has made great progress since fresh interest was aroused in it last year by the generosity of Viscountess Dunedin and Lord Strathclyde, in giving prizes for English examination papers, the first prizes so far offered for English studies at the young University of Liubliana.

The Society of Friends of the English Language, Maribor, had its Fourth Ordinary General Meeting on March 14. The Society has done much to promote the study of English in Maribor, which is an important industrial town in Styria.

BOOK REVIEWS.

TEARS AND LAUGHTER.

"INDIAN AFTER-DINNER STORIES." By A. S. P. Ayyar. (Taraporevala Bombay. Rs. 4).

The author of this collection of stories is a young Indian civilian of Madras. He explains that his primary object in compiling it is "to provide some healthy laughter and at the same time to shake some of our deep-rooted prejudices by exhibiting them in their comic aspect." The book contains 120 stories, the first 33 of which are "old Indian stories, though they have not the currency that they should have." The remaining 87 stories are of the author's "own creation." Most of the "old stories" have to do with mythical personages and famous sages and devotees; some of which, so far from being comic, inculcate a serious moral. For instance, there is a story of a devotee who sat outside the house of a daughter of Lilith: his lips repeated prayers while his attention was centred on the iniquity of the lady and of her numerous visitors. The girl noticed the holy man at her door and was so impressed by the sight that, though she did not alter her mode of life, she became greatly ashamed of it. In course of time, both died: when, to his surprise, the devotee found himself in hell and saw the girl in heaven. He demanded the reason: and was told that, though his body was engaged in worshipping God, his mind was less worthily employed: and that the position of the girl was the reverse—"while her body was given up to vice, her mind was engaged in holy contemplation." To the Indian, no doubt, the moral of this story will be obvious. To the Englishman it seems like an extension, in an unexpected direction, of Napoleon's dictum that the moral is to the material as three to one. Among the "old stories" that rely for their effect on pure humour, it is impossible to refrain from from quoting one in extenso. It is called "A Neck-out." "A beggar persisted in remaining at a house begging for alms in spite of orders to clear out and showers of abuse. At last, the owner of the house got irritated and literally necked the beggar out. As the house-owner disengaged his hand from the neck of the beggar, his hand necessarily had to make a swing which ordinarily passes also for the mute sign, "Come." The beggar came back and asked, "Did you call me back, Sir?" As Charlie's Aunt (from Brazil) said, that's where the laugh comes in.

The author's own contributions are not all humorous, either: some of them may be described as didactic. How, for instance, a Madrasi clerk, attracted by higher wages to Singapore, went there and fell into bad courses: and how a Madrasi coolie, enticed by the prospects of an Assam tea plantation, went there only to die in poverty and exile. Another story, of the author's "own creation"—sc. invention—relates how the great Emperor Asoka offered a prize of a pair of gold bangles for competition among his five Viceroys: and, when addressing the winner, said: "Mere sending of gold is not doing the duty of a Viceroy, nor is the decrease of expenditure or the increase of revenue or the crushing of the spirit of a people. The real gold he can send me is in the shape of more schools, more rest-houses, more temples, more monasteries, more hos-

pitals, more enlightenment among the people entrusted to his charge, and greater dissemination of the knowledge of the Law of Piety among them." This exposition of the duties of the ideal Viceroy has, it is to be feared, appeared too late for Lord Reading; but those of us who are lucky may yet live to see, five years hence, the name of the gifted author heading an appeal for a popular subscription with the object of presenting Lord Irwin with a pair of gold bangles.

TAVERNIER IN INDIA.

"TRAVELS IN INDIA." By J-B. Tavernier. Translated by V. Ball. Second edition, edited by W. Crooke. (Oxford University Press. 18s. net, or on India paper, 21s. net.)

This latest addition to Mr. Milford's welcome series of classics of Indian history introduces us to the most popular of the seventeenth century travellers, the "gentleman-trader" in art-work and precious stones who visited India at intervals between 1640 and 1666. We are given Dr. Ball's excellent translation, with adequate and scholarly footnotes, and about thirty pages of new introductory matter which will be most valuable to the serious student, but which seem to us to fall just a little short of perfection in that they do not supply the general reader with a concise answer to the main problem presented by the book. Tavernier is essentially readable, and the question is how far he can be trusted. At one time he was written off as an ordinary liar, but that view is now obsolete: he ranks as an important but by no means infallible authority, and the reader wants to know where his statements can be accepted, and when caution is necessary. This question is fairly stated in Dr. Crooke's introduction, but the answer given is rather vague; most valuable materials bearing on it are brought together in Mr. Rose's additional notes, written, we gather, after Dr. Crooke's death, but the threads spun in these notes are not woven into a piece; and the effect of the whole may be to leave the general reader with a confused suspicion, rather than a definite guide towards the truth. The general result of the excellent scholarship contained in the book may perhaps be stated as follows. As an authority on concrete facts, Tavernier ranks definitely below writers like Sir Thomas Roe, and also below the contemporary commercial records, so that anyone who wants to build on a particular fact stated by him will be well advised to seek for confirmation from other sources, and must be prepared to find that his fact evaporates in the process. On the other hand, Tavernier was a keen if superficial observer, and a reader who wants to know what India looked like in the middle of the seventeenth century will find no better guide than the eupeptic, resourceful, Frenchman, who flitted over the country in the pursuit of his business, taking things as he found them, congratulating himself when he won, bearing his losses on the whole philosophically, and for the most part enjoying himself tolerably well. The edition before us is admirably got up, and with its aid the reader will make the journey in modern comfort.

INDIAN CONSTITUTIONAL HISTORY.

"OUTLINES OF INDIAN CONSTITUTIONAL HISTORY (BRITISH PERIOD)." By W. J. A. Archbold (London: P. S. King and Son, 18s. net).

This book attempts, to quote the "jacket," to trace in broad outline the constitutional development of British India from the foundation of the East India Company to the Montague-Chelmsford reform scheme; but we cannot accept this label as a complete decription. More than half the book consists of reprints of official papers and lengthy extracts from previous writers, so that it partakes largely of the nature of a source-book, and thus presses on the reader masses of unimportant details, in which the broad outlines promised is submerged. The text proper suffers from the same defect, but it is marred also by omissions of some important matters, particularly in the earlier chapters. The growth of a European polity in the East is presented as a purely English affair, and we look in vain for any recognition of the fact that the institutions which actually emerged were a synthesis embodying Mogul, Portuguese, and Dutch elements as well as importations from England. The statement on page 41 that the French held Madras from 1746 to 1848 will surprise most readers, but it is clearly a misprint, and as such it does not stand alone.

SOUTH SLAV BELIEFS.

An interesting lecture on "Some South Slav Beliefs and Festivals" was given by Mrs. Huxley Roller before the Folk Lore Society on March 17, at University College, W.C.1. The material was obtained during prolonged tours through Bosnia and Herzegovina and along the Dalmatian coast which Mrs. Huxley Roller made at various times between 1907 and 1911, at a time, that is, before the War had brought the peasants into close contact with modern ideas, and indicated a patriarchal form of Society in which the father rules a household, including among its members the married sons and their wives, the women holding a quite inferior position, waiting on the men but never feeding with them.

Love charms play an important part in a girl's life, and the lecturer gave several examples. A love-sick maiden, for instance, will gather the earth from the footsteps of her beloved and plant in it *everlasting* flowers, which she carefully tends, so that as they grow so may the love of the youth. Many funeral customs and family festivals and dances were described, particular attention being paid to the great feast of St. John at Yaitze, annually attended by a great concourse of people from far and near, at which those "possessed" are delivered of their devils by the Franciscan monks. The pilgrims march in continuous procession through the church, touching the sacred image of the Saint or having their kerchiefs rubbed against it. The scene in the surrounding meadows afterwards can best be described in Mrs. Huxley Roller's own words: "Calls and cries of sellers and buyers mingled with the hoarse monotony of songs and the rhythmic shuffle of the many juggling feet of the Kolo dancers gathered about the meadows in ever circling ebb and flow. With fast-linked hands they moved, forging a chain that rose and fell with the cosmic breath of the spirit . . . sparkling and glowing with the changeful light of the torches held aloft by a group of youths—the pressing throng of onlookers uttering strange cries and sharp hisses of encouragement the while . . . . a short up and down motion combined with a long back and forward undulation alternate figures moving back and forth, at the same time ever progressing onwards in a circular sweep. At intervals, still clasping hands, they turned and faced one another in couples with a curious twist of the shoulders, a sort of *chassé*, still keeping up the long sideway progressing step with its wonderful shuffling, muffled beat."

The lecture was interspersed with delightful descriptions of the scenery and the costumes, a number of beautiful examples of the latter being afterwards exhibited.

Miss Mabel Durham afterwards described many of her personal experiences in the district.

THE QUESTION OF THE CALIPHATE.

To the Editor of The Near East and India.

Sir,—More than two years have elapsed since the Turks abolished the Caliphate; yet the much-discussed Caliphate Conference has not yet met. The latest news is to the effect that this conference is to meet in Mecca after this year's Pilgrimage. As this date approaches, Moslems everywhere—except perhaps in Turkey—are considering the gravity of the task to be accomplished by the Conference to be convoked for the first time in the history of Islam. In almost all social gatherings the topic of conversation is that of the fate of the Caliphate. Who is best qualified to occupy this highest office of Islam? Among the outstanding candidates cited are King Fuad of Egypt (specially so after the latter's gift of a splendid car to Sultan Ibn Saoud), the Sheikh of the Senussi, the Ameer of Afghanistan, and last but not least, the present King of the Hejaz and Sultan of Nejd, the Emir Abdul-Aziz Ibn Saoud. In the issue of February 4, of The Near East and India, in fact, we even read of a meeting held in Cawnpore, India, in which Sultan Ibn Saoud ranked as an almost triumphant candidate. But in reality is there such a dangerous question of who shall become the Caliph? Ought the Moslem world to trouble itself with such a risky and difficult question while in reality it is non-existent? Islam has a Caliph: and this Caliph is Abdul Mejid Khan of Turkey.

For over four centuries the Caliphate was in the hands of the Ottoman Dynasty, of which Abdul Mejid is the direct descendant; and the Moslem world has come to recognise this as an accepted fact. How the Ottomans got the Caliphate, need not be discussed here. The history in this connexion is known to almost all intelligent Moslems. What I wish to show is that the father of Abdul Mejid, Sultan Abdul Aziz Khan and his uncles, Abdul-Hamid, Mehmed V, and Mehmed VI, were all legitimate Caliphs, in whose names the Khutba was read in almost all parts of the world inhabited by Moslems. Abdul Mejid, before he was proclaimed Caliph, was in reality the legal heir presumptive, so that when the National Assembly at Angora abolished the Sultanate and elected Abdul Mejid as Caliph only, it did not elect him in the true sense of the word, but merely agreed upon a person who by legal right was on the way to the throne.

Soon after his accession, Abdul Mejid began to receive deputations from the different parts of the Moslem world whose mission was to congratulate the New Caliph on his accession and to inform him of their recognition of him. There was an Indian, a Balkan, an Arab, an Egyptian and even a Chinese deputation. Thus *ipso facto* the recognition of Abdul Mejid as the legal Commander of the Faithful by the Moslem world was almost unanimous. The non-Turk Moslems went even so far as to interfere in affairs concerning the honour and the sovereignty of the Caliph, and as a proof of this one has only to point to the famous letter of the Aga Khan and Ameer Ali, in which both of these eminent leaders of Islam criticised the Turkish Government for having shown disrespect to the person of the Caliph. This letter meant to show to the Turks that Abdul Mejid, though personally a Turk, was not the Caliph of the Turks only, but of the whole Moslem world, compared with which Turkey falls into insignificance.

Furthermore, when the fugitive Sultan and Caliph Mehmed VI (Wahiduddin) heard of the Moslem deputations sent to Abdul Mejid for the latter's recognition, he yielded to the inevitable, and officially and publicly renounced his rights as Caliph and acknowledged Abdul Mejid as his legal successor. In this way, Abdul Mejid continued to function as Caliph in Constantinople for about one year. Then suddenly and without any reason whatsoever, the Assembly at Angora abolished the Caliphate and expelled not only the Caliph but the whole Imperial family as well. Now the Turks did not depose the Caliph to replace him by another, but they actually abrogated the whole office, declaring that they had laicized its government. Turkey henceforth has nothing to do with the Caliphate and with the Quran. In others words, Turkey—at least the present Kemalist Turkey—can no more be counted as a Moslem State; and in regard to the Caliphate she is just as much an outsider as is, say, Poland or Switzerland. Hence the abrogation of the Caliphate in Turkey does not mean in the slightest that Abdul Mejid ceases to be the Caliph of the Moslems. It merely created the problem of the transferring of his seat.

Finally, Abdul Mejid has never yet renounced his rights to the Caliphate, and has committed no grave mistake nor any treason to irritate the Moslems abroad and to bring about his deposition.

Yet although there is no Caliphate question, that does not mean that the conference ought not to take place. As has already been mentioned, the abrogation of the Caliphate by Turkey creates the question of the Caliph's future residence. Where is the Caliph to have his Court? This is the most important of all problems such a conference has to settle. Constantinople is out of the question for the present. As to the other famous Moslem cities which once were the seat of the Caliphate, such as Damascus, Baghdad and Cairo, they are, all of them, more or less under foreign influence and hence incompatible with the idea of "Free from all influence." Mecca, then, seems to be the only possibility. It sounds indeed a paradox that Mecca has never been the abode of the Caliphate. In reality this sacred city of Islam is for a number of reasons the most suitable place of this highest office of Islam. The Caliph is the most venerated person of the Moslems, and it is only logical that such a person should reside in the most sacred of the cities of the Mohammedan Faith. Moreover, as long as Mecca is the place where Moslems from all parts of the world convoke for the yearly pilgrimage, people visiting the Holy Places would at the same time come in closer contact with the Caliph and get to know him better, and in this way feel the bond of unity between them and their chief.

Politically also, Mecca is a seasonable place and this for two main reasons: In the first place it is the most Moslem of all Moslem cities, and any outside attack would arouse the fury of the whole Moslem world and might perhaps bring about a *Jehad* in the original sense of the word. Hence the Caliph in Mecca is sure of his security and at the same time far away from any effective foreign influence. Secondly, a non-partisan Turkish Caliph shorn of all political power as is Abdul Mejid, would best keep the balance of power between the neighbouring Arab Emirs and would best devote himself completely to the tasks and duties of a Caliph without arousing the suspicion, jealousy, and finally hatred of the local rulers. An Arab Caliph with secular powers in Mecca, on the other hand,

is apt some day or other to acquire greater political influence, strive for further expansion, and thus culminate in an inevitable conflict with the jealous neighbours.

In conclusion, I should like to say that the Moslem world became acquainted with Abdul Mejid and that no disagreements and conflicts arose during the first year he spent in Constantinople. An Abbaside Caliph held court in Cairo at a time when the Mamelukes were the most formidable monarchs of the Near East; why cannot an Ottoman Caliph reside in Mecca under the hospitality of such a generous and upright prince as is Sultan Ibn Saoud?—I am, etc.,

EKREM OF TOPOULI.

Minet-El-Husn, Beit-El-Kadi, Beyrout, March 6.

[With a problem that is the Moslems' peculiar concern, it is no part of our duties to tamper. What the various Mohammedan representatives do in regard to the Caliphate at the conference, which is to be held in the middle of May at Cairo under the auspices of Al Azhar University, is no business of ours. It is of interest, however, to note the reports that Sultan Ibn Saoud will not allow his name to be put forward as a candidate, and that Shereef Ali Haidar Pasha, who was appointed by the Turks Shereef of Mecca when ex-King Hussein revolted, and who later was regarded as a possible King of Iraq and still later as an Emir of Mecca, is now on his way from Turkey to confer with the Wahhabi conqueror.—ED.]

A MEMORIAL EXHIBITION.

The memorial exhibition of the paintings and drawings of Brian Hatton, a young artist who was killed in action against the Turks on Easter Sunday, 1916, which has been arranged at Walker's Galleries, New Bond Street, is a comprehensive one, containing works in oil, water-colour, pastel, chalk, pencil, charcoal, and so on. Hatton was something of a youthful genius in drawing, as is proved by the abundant testimony of such an artist as Watts and the numerous examples of his early work. Particularly delightful are his studies of horses in motion. During his adolescence, however, he appeared to stereotype his methods; certainly his later works do not bear the freshness of his immature things. But a few of these later ones are quite charming, such as four Egyptian water-colours and the studies of Egyptian heads, "Natives of Quft." Hatton seemed to find unusual stimulation in the East, so that he might, had be been spared, have fulfilled the promise which his early years so splendidly held.

The Commission of the League of Nations which is to investigate the cultivation of opium in Persia has arrived in Teheran.

THE WEEK AT HOME.

London, Tuesday Morning.

The Government and Europe.

Sir Austen Chamberlain and Mr. Baldwin—in other words, the British Government—have justified themselves to the Houses of Parliament, and, I think, to the British people. Before the debate last week over the recent events at Geneva, there were at least two distinct classes of thought in this country. It was held in some places that Sir Austen had utterly failed in doing the duty of Britain, which was *at all costs* to get Germany into the League, and in other, that Sir Austen, by precisely doing this, might let England and the rest of Europe down. Happily, however the Foreign Secretary has done neither, and the explanation of his line of conduct was convincing. He hit hard both those who have abused him and those who suspected him. To the first he said unanswerably that their idea of making friends of our enemies was to make enemies of our friends. This is a phrase which is particularly gratifying to those who took part in the War, and who are not ashamed of having done so. To those, however, who misunderstood radically the present psychology of Europe it may be rather irritating. And to the second he said such things of Spain and of Poland as will set him in the estimable light of not being merely a politician who merely recognises the rights of "Powers" because they are great.

In a sense, therefore, there is justice in the Foreign Secretary's much derided dictum that British prestige stands high in Europe. This recent affair at Geneva has done no harm to the British Government, and to Europe it seems that a great deal of good has been done. Primarily it has clearly shown two things which the journalists, if not the people of the countries involved, had hitherto obscured: (1) that practically all the members of the League still think in terms of the balance of Powers, and are by no means disposed to trust their future security to the League alone—this is in itself a tremendous clarification of American imposed misty ideas; and (2) that Germany wishes to enter the League mainly to have returned to her part of what she lost in the War (rectification of the Polish frontier, and unification with Austria). It is something, at any rate, to have been made freshly aware of these things; and there seems little reason to distrust the future of England *vis-à-vis* the rest of Europe while Mr. Baldwin and the Foreign Secretary remain at the helm.

War Debts.

In more than one quarter recently there have been signs of growing antagonism to the pretensions of America to dictate the financial policies of European countries. Last week this feeling manifested itself even in the House of Commons, positively in the person of Mr. Philip Snowden and negatively in the person of Mr. Winston Churchill. It was remarked in the debate upon our War Debts that the British debt to the United States amounts to £100,000 a day for three generations, and this vivid reminder of what the nation is getting who came last into the War seems to have bitten deep into our people. Great Britain is commonly and perhaps not unmeritably supposed to have infinite ability in mating her ethics to her morals; but what is to be said of a country which, disdaining even a penny of German reparations, yet by a roundabout way secures through the medium of ourselves the first 60 per cent. of these reparations?

It has been calculated that when our debts are coming in from France and Italy we shall be receiving between 33 and 34 millions, while we should be paying America 38 millions. Mr. Churchill suggested, rather jocularly, that the difference might be made good by Russia. In any case, the outlook is not too comforting. But the presumption is that our generosity is at least double-edged, that is, what we lose on the swings of our internal taxes we make up on the roundabouts of our international exchange. This, however, is rather the financier's than the people's view.

The City Churches.

It is amazing how persistent the campaign has been on behalf of the destruction of certain City Churches. The controversy has been long and acrimonious, and now appears to be in its last phase. It is finally being claimed in favour of London's citizens that these Churches (many of them Wren's), are national possessions which no mere ecclesiastical authority can take away. In other words, Parliament has to decide whether the Union of Benefices and Disposal of Churches Measure is or is not *ultra vires*.

It is really a dispute between past and present history, for that is what the question of distributing churches in accordance with the varying population amounts to. This desire to destroy forsaken things is going to be difficult to repress. But the whole study is a fascinating one. One thinks of Mosul and Nineveh, and of St. Albans and Verulam, and of many another couple of towns. . . .

Freedom on Travel.

The recent decision of the tube authorities that smoking should be allowed in lifts met with considerable theoretical approval, although it is doubtful whether the number of men has much increased who deem a crowded square compartment the fittest place in which to smoke. Another still more recent, decision, however, has much to commend it practically: I mean the permission given by the L.N.E.R. to smoke in their waiting rooms. Now waiting rooms are seldom crowded, are seldom used but for some considerable period, and are seldom anything but the dreariest and least cheerful institutions in the land. To remove the ban on smoking was, therefore, not only wise but thoughtful.

It is being said that it was owing to the disregard of existing regulations by ladies in the ladies' waiting rooms that the Company decided to allow the obedient male equal rights with the disobedient female.

Cambridge's Year.

All's right with the world this year for the Cambridge man. The right people have won everything, Rugger, Hockey, Sports, and now the Boat Race. (Not even in Soccer could Oxford despoil those *quos dei amant*). It is all very cheering, and those are unfortunate who are apt to consider the importance of such trivial things as War debts and foreign relations and unemployment which in any case never right themselves.

I did not see the Boat Race and rely, therefore, on the braver evidence of those who did. Opinion seems to differ on whether Oxford would not have won had not their "Fresher" at 5 crocked. In any case it was extraordinarily bad luck for the rest of the Dark Blues, to whose inevitable gallantry (how much better is the shorter word for this!) abundant testimony is being paid.

But the year is to Cambridge: even in those strange, remote rivalries which concerned such roofed affairs as billiards and Chess, dark Fate, has, I am told, overtaken the unavailing hosts of Oxford. Let us hope this kindly shade looks over Cambridge's cause at Lord's.

Racing.

Flat racing began brilliantly last week, from the point of view alike of the meteorologist and of the bookmaker. The Lincolnshire Handicap proved a terrible disappointment to most punters, who never dreamed that the "Aggercan's" horse could be beaten by an outsider. Nor did the man in the street (in such affairs one is oneself always the man in the street) gain much consolation two days later from the Grand National, in which none of the favourites got round first. Champagne has consequently been flowing down bookmakers' throats, while the band of punters which at the beginning of last week had been so full of hope has perforce gone dry. "It's all a chequer-board"; for, indeed "Who knows? Who knows?"

Cricket.

The preliminary barrage of the Australians has started, in the form of articles, written by eminent Australian cricketers, in the Home Press. All of the writers appear not to doubt the superiority of the Colonial cricketers, and no doubt they genuinely believe what they say. It is just as well, however, to remember that there is no such thing as a world-judge in cricket: each man is considerably influenced by the games in which he has actually taken part. In any case there are plenty of judges who are ready to assert that England's chances in the coming Tests are at least equal, and it is at least not the ordinary man who will be dismayed by the prophecies, kindly and sportingly made though they be, of men like Noble and Clem Hill, that Australia will keep the Ashes. If she does, there is only one thing to be said: She thoroughly deserves to.

Alter Ego.

Nisan 17, 5686, of the Jewish Calendar.

The Hon. John and Mrs. Dewar have left Kenya for India and the Far East.

Mr. H. I. Lloyd, Administrative Inspector at Mosul, returned last week to Iraq.

Sir Valentine Chirol, who has been spending the winter at Corfu, has returned to London.

King Fuad has conferred the Order of the Nile, Third Class, on Mr. Howard Carter.

Cora, Countess of Strafford, returned last Friday to 30, Grosvenor Square from Egypt.

Prince Mohammed Kajar of Persia arrived last week at the Carlton Hotel from Paris.

Lieutenant-Colonel and Mrs. Edgar Brassey have been among the recent visitors to Cairo.

Viscount and Viscountess Tamworth have returned to their residence in Kensington from India.

The former King and Queen of Greece and Princess Helen of Roumania have gone to Bucharest.

Lord and Lady Rayleigh, who have been on a visit to Constantinople, have returned to 69, Cadogan Square.

Sir Hamar Greenwood, Bt., K.C., M.P., and Lady Greenwood have returned to 13, Chester Terrace, from Egypt.

Lord and Lady Forteviot, who have been on a visit to India, sailed from Bombay last Saturday for home in the steamship Ranchi.

The Hon. Irwin Laughlin, United States Minister to Greece, and Mrs. Laughlin left Southampton last Saturday in the Mauretania for New York.

The King and Queen of Roumania, accompanied by Prince Nicholas, were present at a dinner party at the British Legation in Bucharest last Saturday.

Princess Antoine Bibesco, who returned from New York last Friday in the Aquitania, spent the week-end with the Earl and Countess of Oxford at The Wharf, Sutton Courtney.

The birthday of the Shah of Persia, the first of the new dynasty, was celebrated on March 15 in Teheran with the customary honours. The city was decorated and there was a general holiday.

The Greek Minister in London received the Greek Colony at 51, Upper Brook Street last Sunday from 4 to 6.30 p.m., on the occasion of the 105th anniversary of the Independence of Greece. A Te Deum was celebrated in the morning in the Greek Orthodox Church of St. Sophia, Moscow Road, Bayswater.

Sir Leslie and Lady Wilson, accompanied by Major Tressider and Captain T. Piggot, arrived at Marseilles in the Rawalpindi from Bombay last Friday, and are continuing the journey to London by sea. Lady Wilson is still seriously ill, and will proceed to a nursing home in London on her arrival.

A marriage has been arranged between Sir Edgar Bonham Carter, K.C.M.G., C.I.E., of 5, Hyde Park Square, and Charlotte Helen, daughter of the late Colonel Lewis Ogilvy, C.B., 60th Rifles, and Mrs. Lewis Ogilvy, of 22, Wilton Street, S.W.

Colonel the Hon. Edward and Mrs. Wyndham, who recently arrived in Cairo, have been the guests at the Residency of the High Commissioner for Egypt and Lady Lloyd.

Prince Lanza di Scalea, the Italian Colonial Minister, who arrived at Port Bardia recently, paid an official visit to Jarabub and the territory recently ceded to Italy by Egypt. At Jarabub he was welcomed by the commanding officer of the Italian garrison and by the keeper of the holy places.

M. George Aaron Bénédite, curator of the Egyptian section of the Louvre, died suddenly on March 23 at Luxor. His published works include a scholarly catalogue of the Cairo Museum, a book (in English) on "Cairo and its Environs," and various monographs in special fields of Egyptology and archæological remains from the folk-lore and historical standpoint.

The Presidential Board of the Hebrew University of Jerusalem announces that the following have been nominated to the Board of Governors, and have accepted the appointment: Chief Rabbi Professor Dr. H. P. Chajes, Vienna; Professor Dr. S. Freud, Vienna; Professor J. Hadamard, Paris; Chief Rabbi Dr. J. H. Hertz, London; and Sir Herbert Samuel, London.

The Government of Indian announces that Mr. A. Redger, O.B.E., President of the Forest Research Institute and College at Dehra Dun, is to succeed Sir Peter Clutterbuck, C.I.E., O.B.E., as Inspector-General of Forests when the latter this week goes on leave preparatory to retirement, and will combine his new duties with the Presidential duties already in his charge.

THE VICTORIA MEMORIAL: CALCUTTA.

INDIGENOUS BANKING.

In the course of an address delivered, some months ago, to the students of Delhi University, Sir Basil Blackett, the Indian Finance Member, spoke of the great advance in the prosperity of India that would accrue from the education of the Indian "hoarder" by persuading him to make an economic use of his capital. At the last annual dinner of the British Overseas Banks Association, Mr. A. M. Samuel referred to the same matter—he said "the difficulty is to know how to make the masses of India realise that the proper place of gold and silver is not round the ankles of their womenfolk, but in the coffers of the great banking institutions. It is extremely difficult to explain to uninformed people how it comes about that £50 millions' worth of gold, lying apparently dormant in the vaults of a bank, can be used as a credit basis on which to raise a vast superstructure of industry and trade, while the same amount of precious metal, when distributed among the population in the form of ornaments or in small hoards, is to all intents and purposes useless. If the inhabitants of India could be induced to keep their money in the banks, a brighter day would immediately dawn for our Eastern Empire." It is true that the same speaker in the course of an address delivered, a few days later, to a commercial instead of a banking audience—the Newcastle Chamber of Commerce—used the same fact, of the great importation of the precious metals into India, to a different purpose; when he said that "the Indian cultivator was waiting until the prices of our goods suited his views, and then he would come into the market with gold in his hands." But this does not really affect the previous argument, even if it goes some way to weakening the view that "precious metal in small hoards is to all intents and purposes useless"; for, after all, the small hoard, if it were banked in the meanwhile, would be larger when the time came to make use of it.

Mr. Samuel, in his speech to the Bankers, put his finger on the spot: the difficulty is to know how to explain sound economic theories to uninformed people. The Indian cultivator who hoards the precious metals, either by burying them or by having them made into ornaments for his womenfolk or his children, does so because he feels the need for having a "store of value" which he can at any moment turn into cash: and those who would try to follow Mr. Samuel's advice, and persuade the cultivator to put his savings into "the coffers of the great banking institutions," are faced with the initial difficulty of proving to him that to do so would be to his own advantage, while still leaving him in the position of being able to realise at a moment's notice. If the cultivator lends his money to "the great banking institutions" of India, it is long odds that he will find himself an actual loser by the transaction, and will be faced with unforseen difficulties when he wants to draw it out. A recent issue of *Commerce* (Calcutta) draws pointed attention to these probabilities, in an article approving of the suggestion (made by the Hon'ble Mr. Sethna at the annual meeting of the Central Bank) for the appointment of a Commission to investigate the various questions affecting the growth and development of indigenous banking: a suggestion that had already been put forward, in strong and emphatic terms, by the External Capital Committee. The paper points out that "an efficient and thriving banking service is the desideratum of economic progress, which in its turn is a *sine qua non* of political progress": and roundly charges the Government of India with pursuing a policy that prevents the realisation of any such aim. Two of the actions of Government are specially pilloried—the issue of postal cash certificates and the methods of the expansion of the Imperial Bank. Of these two, the former affects the banks much more than it affects the "small hoarder" whose main desire is to keep his money at immediate call; for, though it is perfectly true that he can obtain cash for his certificate when he wants to, yet the high interest—6 per cent. compound, free of tax—makes him loth to part with it and causes him to look on it as an investment rather than a floating deposit. Government has, in fact, already recognised that the rate is now too high, and is casting about for a method of reducing it without, at the same time, destroying public confidence or checking the tendency to economic saving—no easy task. As to the Imperial Bank, a number of its recently opened branches are situated at small centres where indigenous banks already exist. The Imperial Bank has at its back, without interest, the Government Treasury balances which average 20 crores of rupees: and it has, as well, large current deposits, also without interest, which it receives owing to the public credit that it enjoys by virtue of its official position which, in addition, relieves it from the fear of a run. But, while the Imperial Bank pays no interest on current deposits, the average indigenous bank is obliged to do so, and does, in fact, pay from 2 to 2½ per cent. interest on such deposits; so that, when it comes to the lending of money, the indigenous bank must necessarily lend, if fully secured, at a considerably higher rate of interest than the Imperial Bank, or else accept risks, in the matter of security, that the Imperial Bank would not consider. To quote *Commerce*, a soaring deposit rate (such as that of the postal certificates) and a sinking loan-rate (such as that which the Imperial Bank can afford to offer) render banking unprofitable: and it declares that, by selecting for its new branches places where the existing banks are of the indigenous variety, it enters into what amounts to a rate-cutting war with them, whose only probable result will be to squeeze them altogether out of existence.

Mr. Sethna's argument is, that the high-rate borrowing of Government, and the low-rate lending of the Imperial Bank, combine to prevent the development of indigenous banks in small business centres—the very places where they are most needed, and where they have to face a situation that makes their existence almost impossible: and his solution is, that the work of the Imperial Bank should be confined to that of "a banker's bank" which should not be allowed to compete with indigenous banking. It is true that the great crash of some years ago, in the Punjab, shook the credit of Indian banking to its foundations; but public confidence has been largely restored—a result to which the failure of so great a European banking

Digitized by Google

concern as the Alliance Bank of Simla certainly did something to contribute—and the prospects of Indian banking are now considerably brighter. But if, as is suggested, the expansion of the Imperial Bank leads to conditions that not only militate against new enterprises but also gravely jeopardise those already in existence, the chance of persuading "the small hoarder" to entrust his savings to a bank is greatly lessened. Not only does the Imperial Bank allow no interest on current deposits, but—as do all other banks in India—it makes a charge for keeping an account: and, as one can testify from one's own experience, its "official" position hedges it round with all sorts of irritating rules and restrictions—in particular, it works very short hours and is closed for ordinary business on every conceivable occasion. Some years ago, in Simla, the writer was at pains to calculate the number of hours for which the local branch of the Imperial Bank was open during the year: he does not remember the exact figures but, to the best of his recollection, they worked out at something less than twelve hours a week: and he certainly arrived at the conclusion that the Bank, however attractive to the large depositor, offered no attraction whatever to the small. It is quite certain that the Indian "small hoarder," if he could be induced to examine the matter at all, would arrive at the same conclusion: and it is equally certain that, if he is ever to be persuaded to bank his money instead of hoarding it, he will not turn to a "great banking institution," but to the smaller indigenous bank; whose officials he is likely to be personally acquainted with, where he can get a reasonable return on a small floating account, and whose doors he can be reasonably sure of finding open when he comes to draw his money. Government is, quite properly, doing what it can to popularise agricultural co-operative banks; but that is not enough. If means can be found to improve not only the security but also the prospects of indigenous banks, a definite step will have been taken in the campaign to induce the "small hoarder" to substitute economic for uneconomic investment, and towards the great results that success in that campaign would produce.

CURRENT TOPICS.

Cash on Delivery.

Sir Geoffrey Clarke's letter to *The Times* of March 24 mentions certain drawbacks to the success of the C.O.D. system in India, where it is known as the "Value Payable" post. The optimistic young Indian, who orders and then finds that he is unable to pay: the vernacular newspaper trying to rope in new subscribers: the bogus firm whose stock in trade consists of an attractive catalogue and who fills orders not as principal, but by cheap purchase from some local shop: the frankly dishonest trader, on whose operations, as Sir Geoffrey Clarke says, the C.O.D. system places a premium: all these, except perhaps the second, are likely to find their counterparts in England. There is also another form of ramp, once often countenanced by otherwise perfectly respectable firms in India, which Sir Geoffrey did not mention—the despatch, by value payable post, of some article other than the one ordered, "to prevent disappointment." The writer remembers a case in which one of the most prominent European firms of cash traders in India received an order from a lady for several yards of specially wide tape, needed for a special purpose: and sent, value payable, the required amount of tape of ordinary width, as they were out of stock of the other, "to prevent disappointment." The feelings of the recipient when, after paying the postman, she came to open the parcel, were many and varied: though they did not, at any rate for the moment, include disappointment. One remembers another case, in which a man ordered some shoes for his daughter. When the parcel arrived, value payable, it struck him as unexpectedly large; so he opened it before paying, and found that the firm, being short of the required size, had sent (again, to "prevent disappointment") a pair of shoes several sizes larger. He thereupon returned the parcel to the postman, who professed his inability to accept it once it had been opened. The customer, who happened to be a fairly important civilian official, insisted on returning it: with the result that a long and acrimonious correspondence ensued, the Post Office insisting that the official must pay the declared value and accept the parcel, the official insisting that the post office, by making this demand, were conniving at an attempt to obtain money by means of a trick. The correspondence went as far as the Lieutenant Governor, who was called upon to order the official to pay and to censure him for his refusal to do so in the first instance; but he declined to do either, and this finally spiked the postal gun, for the official persisted in his contumacy: and the correspondence ceased. This is the sort of case to which Sir Geoffrey Clarke refers when he writes that, when people buy articles which they have not seen, they are apt to hold the collecting agency partly responsible.

Sir Geoffrey also mentions that "a stringent rule had to be adopted making it a criminal offence to send an article C.O.D. post except in consequence of a *bona fide* order." Many years ago, in India, the writer received, from a well-known European firm, a bill for articles supplied to an unknown person of the same surname. He wrote and repudiated liability: with the only result that, a short time later, the bill was sent in again. This time he ignored it: and, still later, he received a letter from the firm stating that they had despatched the bill to him value payable, in order to "adjust this trifling amount." When the value payable cover was delivered, he wrote in bold letters on the outside "This article is not sent in response to a *bona fide* order, but is an attempt to obtain payment of a bill that I do not owe." He never heard any more about it; but hoped that the authorities had taken action on the "criminal offence" disclosed; though, no doubt, they never did.

It seems that, in England, it is the retail tradesmen who are objecting to the C.O.D. system. In India, any objection comes from the customers who find themselves stuck with "a pig in a poke-"—a state of affairs that will doubtless also obtain sometimes in England. But, on the whole, the system is very convenient and very popular in India and, at any rate in the case of the better-class European shopper, is seldom abused. The "prevention of disappointment" trick gave so much offence, which was so freely voiced, that the great European firms found it politic to drop it: and the gibe of the writer, well known in India under the pseudonym of John Brown, is no longer applicable—"they are wide-awake and you are laid-low."

Indian Timbers.

A very interesting survey of the timber exhibit in the Indian Pavilion of the Wembley Exhibition, by Professor Troup, of the Oxford School of Forestry, forms an appendix to the Report of the Commissioner for India. In the course of his survey, Professor Troup speaks with special appreciation of the Indian and Burmese timbers mentioned below:

Laurel wood: panels of exquisite grain and colour: doors that were a striking representation of strength combined with beauty and dignity.

Gurjun: flooring: panelling: furniture of the simple and rather severe style usually associated with English oak—its use a discovery likely to be heard of further, as it is cheaper than oak.

Padauk: an ornamental wood of the highest class, of a rich red colour, exquisite grain and beautiful finish: used for interior decoration of Pullman cars, for bank and officer counters, and for a staircase in which it maintained its colour and appearance perfectly and the stairs, ascended by thousands of visitors, show no signs of wear.

Silver grey wood: staircase—the same remarks as on the staircase of *padauk:* panelling—revealed as one of the finest carving woods in the world.

Pyinma: very effective for panelling.

Rosewood, coralwood and *Indian satinee:* richly

Digitized by Google

coloured woods used most effectively for interior decoration in ornate style.

Professor Troup records the opinion that, at Wembley, Indian timbers received the best and biggest advertisement that they have ever had: and that, if future trade is well developed on proper lines, the money, time and trouble expended on the exhibit must inevitably recoup itself many times over. He was impressed with the number of superlatives in the English language, when he listened to the remarks of visitors about woods previously unknown to them, but whose names are now household words. Though it is a well-known fact that new timbers are looked upon, by users and by the trade, with the greatest suspicion, Indian timbers have come definitely to stay: and a number of cables have been received, from American and Continental visitors, asking for quotations for Indian timbers that they had seen at the Exhibition.

He mentions, as a remarkable fact, that, though several large timber firms have been at work in the forests of India and Burma for many decades, they have failed to develop a market in Europe for any but a few well-established kinds of wood, in spite of ample opportunities: and adds that, now that the excellent qualities of so many new kinds have been so convincingly demonstrated, "one of the gravest risks to the future development of trade in these timbers will be the anxiety of inexpert traders to exploit them regardless of proper selection and treatment, with the sole object of immediate gain. So long as the development of this trade is in the hands of competent persons, there is little reason to doubt that the future export trade in Indian timbers, hitherto little known or unknown in the European market, will expand out of all belief. Indeed, the chief limiting factor would seem to be the possibility that regular supplies will not be forthcoming in sufficient quantity: a matter which may call for further organisation on the spot."

There can be no doubt that this warning is both necessary and timely. It is evident that there is a great future before the trade in Indian timbers, if it can be kept in the hands of reputable and responsible firms who can be relied upon to look to quality as well as quantity. Such practices as the "mixing" of cotton, the admixture of dirt with grain, and false grading of coal, have frequently handicapped the trade of honest Indian exporters in the past: and, if this promising new trade is to be successful, it is most necessary that every precaution should be taken to prevent its abuse by the unscrupulous.

An Indian Restaurant.

Sir Atul Chatterjee, the High Commissioner for India, presided at the inaugural luncheon of the Veerasawmy Indian Restaurant, 99, Regent Street, on March 15. He was supported by an influential company that included a number of distinguished Anglo-Indians—well then, Indo-Britons: you know what I mean, any way—among whom were Sir John Hewett, Sir George Barnes, Sir Henry Burt and Sir Louis and Lady Kershaw.

Sir Atul Chatterjee referred to the magnitude of the trade between Great Britain and India, and entered a special plea for the consumption of Indian food-stuffs in preference to articles produced outside the Empire. India, he said, had nothing to complain of in the matter of British consumption of Indian tea, spices and vegetable oils: but he instanced rice, coffee, tobacco, jam, pickles, curry powder and chutney as articles of Indian production that are not as popular in England as they should be, and exhorted his hearers to do their best to popularise them. By way of driving home the remaks of the High Commissioner, the Manager, Mr. Edward Palmer (already well known as the Manager of the Indian Restaurant at the Wembley Exhibition) had provided a meal that included a number of the articles mentioned: which, at any rate to the Indo-Britons present, derived added attraction from the fact that they appeared on the menu under their familiar Hindustani names.

An Indian product mentioned in the menu, but not mentioned by Sir Atul Chatterjee, is fruit. Opinions differ, of course; but one believes that most Englishmen who have lived in India will agree with that of the writer, that there are at least three Indian fruits deserving a very high place among those of the world—the mango, the lichi and the small yellow banana that is sometimes called the "lady's finger." One cannot help thinking that, if a regular trade could be developed in these fruits and some others—as, for instance, the juicy thin-skinned "Nagpur" orange—they would find a ready market in England. It would appear that some of them do already command a market of sorts; for the writer has quite lately seen mangoes exposed for sale in the Haymarket, and lichis in Piccadilly. To the ordinary fruit eater, however, the prices asked for both must have been prohibitive: to the instructed observer lately from India, the appearance of both was equally so. The mangoes were apparently of the common "country" variety which has been unkindly described as resembling "the inside of a cricket ball soaked in turpentine," and the majority of them were at least partially rotten; while the lichis looked dry and shrivelled. Anyone who should expend a quite unnecessary amount of money on fruits of this description would be justified in concluding that, if this is the best that India can do in the way of fruit, her best is a remarkably poor one. But the fact remains that quite a number of Indian fruits are absolutely first-class: and one feels sure that anyone who would arrange for their supply in large quantities, in prime condition and at popular prices, would make an uncommonly good thing out of it himself, and would introduce his customers to a number of others. After the excellent start that his establishment received on March 15, who could be better qualified to do this than the energetic manager of the Veerasawmy Indian Restaurant? One can at least be sure that his large and influential clientele would enthusiastically support such a venture, at any rate in the matter of the disposal of the fruits of it.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, March 5.

The Bombay Budget.

The Bombay Budget, which was introduced on February 22, and which was admirably summarised by the *Times of India* on the following day, is at first sight a most depressing document. A deficiency of 60 lakhs in a total of about 15 crores is not in any way encouraging: and it is exceedingly disconcerting to find that expenditure has risen from Rs 13.11 crores in the year 1922-23 to Rs 15.21 crores in the new year, 1926-27: while the revenue has remained almost stationary in the neighbourhood of 14 crores.

On the other hand the Government of Bombay, acting like conservative business men with a due regard to the future, used the profitable years to pile up its reserves: and since 1922 the Famine Fund has been raised from nothing to Rs 1.94 crore, and the balance in hand from Rs. 1.93 crore to Rs 3.51 crores: and this year's budget allows not only for the usual allocation to the Famine Fund but for a considerable sinking fund to pay for the Back Bay losses. So that it may be considered that things might be very much worse than they are: and that the Government of Bombay, in demanding fresh taxation in the form of additional stamp duties for the transfer of property, is taking a vigorous step to make itself exceedingly safe. The revenues of the Bombay Government are drastically limited by the Government of India, and there is not very much room for their expansion; but it may still be assumed that they are, to some fairly considerable extent, affected by the general prosperity of the Presidency, and a budget which falls a good deal short of balancing itself in present conditions may well be within the mark in more normal times. On the whole, it seems to

Digitized by Google

me that the finances of the Presidency have been managed for the last five years in a most business-like spirit. Reserves have been accumulated in good times, and steps are being taken in bad times to avoid undue encroachment on them.

In his speech Sir Henry Lawrence, the Finance Member, referred to the contribution of Bombay to the funds of the Government of India: and he produced the figures of the Income Tax to prove that, in addition to the assessment under the Meston award, Bombay has, in the past five years, contributed four and a half times as much per head as the rest of India. This is no doubt to some extent set off by the greater burden of Land Revenue in other provinces which have a greater agricultural than industrial population; but the fact that Bombay has to make this large contribution, in addition to its large payments of Income Tax, is a grievance which comes only second to that of the now abolished Cotton Excise. In his speech Sir Henry said that the position of Bombay under the Meston award seemed to have been accepted with fatalistic indifference by the citizens of Bombay, who are content to leave the struggle to be carried on by the Government. I must admit that I personally take this rather hard: because I feel that, in my own humble way, I have attempted both in season and out of season to express my views on this subject rather vigorously. But Sir Henry was no doubt referring to the far more important members of the Opposition, who are prepared to spend a full day in the Council debating the installation of a telephone in a Collector's Bungalow (cost Rs 100) at the expense of time which ought to have been spent on far more serious matters.

Back Bay.

Back Bay has naturally been much to the fore in all sorts of arguments: but I am glad to see how very closely His Excellency's view, as expressed in his opening speech, agrees with mine written a fortnight ago. He said: "The time will undoubtedly come, to a city of the size and importance of Bombay, when the reclaimed land will be urgently required." That is precisely what I intended to say in my last letter.

American Tourists.

We have with us a very large influx of Americans who are exceedingly in evidence, especially at the race course. I have never had the privilege of attending an American race meeting, but they must be very odd places if everyone behaves like our visitors: and one thing is certain—in view of our visitors' attitude towards private property, I shall certainly never waste good money on having a box of my own in an American grand stand.

Sir Mahomedbhai Hajibhai.

Sir Mahomedbhai Hajibhai, who died suddenly last week, was a very fine example of a successful man of business. He was a genial but very taciturn old gentleman who minded his own business and had a good natured smile for anyone who made a fool of himself. I am entirely ignorant of his political views, and I should not think that he had any; but in essentials he was a thorough-going Conservative, who made the most of the life he lived and had a horror of any change. He served as Sheriff in 1918 and was knighted last year. His presence will be very much missed by a large number of friends who regarded his solid personality with respect and affection.

Lady Wilson.

We are all very sorry to learn that the state of Lady Wilson's health has made it necessary for her to go home at short notice. The Governor accompanies her as far as Aden where he will, of course, have to turn back. It is earnestly hoped that, on his return, he will bring with him a favourable report of Lady Wilson's progress towards convalescence.

CALCUTTA LETTER

(From Our Own Correspondent.)

[Our usual Calcutta letter appears to have missed the mail this week. We print below a part of the previous week's letter which was crowded out of our last issue.—Ed.]

Men and Things.

The Holi Festival has come and gone: its terrors are added to by the discovery of new and even more vivid colours which can be squirted on to each other's clothes by the up-country coolies who are mostly concerned in its celebration. Lord Lee has been telegraphing his regrets at India's naval aberration; he has said what everyone is thinking. The Surma Valley Light Horse have had a most successful camp, which as usual finished up with a gymkhana meeting; the popularity of these gatherings shows no signs of falling away. Martiniere has had its Prize Day, when the President, Sir Ewart Greaves, referred gratefully to the munificence of Sir Paul Chater to his old school. The Rotarians have had their Annual Dinner, and Sir Hugh Stephenson as their principal guest congratulated them on the sincerity and success of their endeavours. Everyone concerned with the Law is glad to read that Sir George Rankin will probably succeed Sir Lancelot Sanderson as Chief Justice: a most fitting appointment. Sir Basil Blackett has enhanced his high reputation by his successful budgets since he came to India; Calcutta has nothing but good to say of his latest. Flight-Lieutenant John Oliver has started on his journey to England, and is meeting with the usual mishaps which seem at present inseparable from this type of venture. Two Calcutta men of different generations have died suddenly after operations, Col. Grice at Mentone and Mr. James Lennox, of Duncan Bros., here; both popular and genial men with hosts of friends. Universal sympathy is felt for their families.

The Trivial Round.

The Spring Meeting continued last Saturday and produced the closest racing of the season; three races were won by short heads, and in two of these the first four horses were within half a length; in another there was a dead heat; the handicapper was probably more pleased than most of the backers. Cricket finished last Sunday when the two leading clubs entertained Indian guests; Calcutta met Mohan Bagan, neither being at full strength, and a pleasant match gave Calcutta a substantial victory to wind up the season. Hockey is in full swing, and it is interesting to note that the Mohammedan Club, which was only promoted to the First Division last year, has won all its matches up to date. An interesting forecast in regard to broadcasting has been published, and the suggestion is made that, if relay stations are erected to carry European programmes to Australia, India will probably

LONDON CITY MISSION.

AYAHS AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and to introduce them (if disengaged) to families about to travel to the East.

For Terms and Conditions apply to the

benefit *en route;* it will have to be something good to induce folk to "listen in" from 2 to 6 a.m. Rain has been falling everywhere, not only benefiting tea and agriculture generally, but improving our lawns and making things a little cooler.

THE BOMBAY DEVELOPMENT SCHEME.

(By Lieut.-General Sir George MacMunn, K.C.B., K.C.S.I., D.S.O.)

The Report of the Advisory Committee on the Bombay Reclamation Scheme, commonly known as the Back Bay Scheme, is specially remarkable for the typically Oriental suggestion that counsel's opinion should be taken as to the culpability of Sir George Buchanan, the port expert, who was the consulting engineer. Sir George Buchanan, whose serious illness prevented his visiting Bombay this winter, somewhat naturally expressed his surprise at this, explaining that no reference had been made to him and that he was not aware of what has now transpired: and pointed out that the execution of his scheme is in the hands of the Government Engineers.

It will be some time yet before the rights and wrongs of the story are fully known; but, in any case, the whole story of Bombay and its needs is an Imperial one. The present state of affairs began when Sir George Lloyd, as he then was, the new Governor of the Bombay Presidency, set himself down some six years ago to co-ordinate and vitalise the long-discussed and various schemes for the expansion of Bombay City and its suburbs, the need for which was every year growing more and more insistent. In his opinion it was essential to grapple with the problem on the broadest lines, looking far into the future. The astounding post-War boom in Bombay, with the feverish demand for fresh commercial and residential sites, made the question still more urgent.

This Queen of Ports and Cities, which came to us as the dowry of Charles II.'s wife in 1661, is an island ten miles long by at most three miles broad. Nor is it adjacent to the mainland, for another island—that of Salsette—intervenes, and road and rail must cross arms of the sea on their long journey to the heart of India. The shores of this island are low-lying and marshy and, in some parts of its elongated ten miles, the width of dry land is not more than a mile and a half. If you stretch out your left hand to the south, palm to the right, you will get an exact representation of Bombay Island, the finger points representing the promontary of Colaba and the thumb that of Malabar Hill, the suburb of the rich Indian merchants. To the left from the back of the hand lies the magnificent harbour and port of Bombay, the docks area being against the wrist. On the right of the thumb lies the Indian Ocean, and the curve between thumb and forefinger exactly represents the Back Bay, over which the present discussion has arisen. On this elongated sea-girt strip has grown up this city of palaces, this medley of mills and merchants, troops and officials, and all the surroundings of the premier port of a land of 320 million inhabitants. Such palaces and such slums are hardly to be found elsewhere in the world, and the mill area and the eastern part of the city are congestion run riot, with the hot steamy atmosphere of Bombay to guide the health statistics and the death rate. Sir George Lloyd determined to "get a move on," leading those who would follow and shoving those who would hang back. A vast co-ordinated scheme was duly legislated for, depending however for its financial success on the site values of reclaimed and levelled land, some of which was earmarked for badly needed residential expansion, some for mill population, some for commercial premises on various parts of the island. Unfortunately the boom was followed by a slump in land values which has seriously jeopardised the immediate financial success of much of what was in progress. The Back Bay Reclamation Scheme, though a co-ordinated part of the whole, is in itself a separate proposition that, since 1865, has been frequently discussed as allowing for the expansion of the most valuable portion of the city which is entirely confined by the long neck of mill area that lies north of it. Modern engineering methods have made its reclamation much easier. The actual scheme consists of reclaiming 1,145 acres of land in Back Bay along the inside of the forefinger, and round at the back of the finger-point around the thin needle of rock which forms Colaba Point, the major portion being in Back Bay. The work in outline consists of making a sea wall around the area to be filled, and of pumping into it the silt and mud from Bombay Harbour by means of suction dredgers. This is a simple operation if the conditions are favourable and if the commanding factor of sufficient accessible silt and soil is present. It is this point that is the crux of the present crisis; it being alleged that only 25 per cent. of the estimated soil can be pumped in each year, thus lengthening the process and its cost enormously. Sir George Buchanan has challenged all these figures so far as his knowledge goes, and hints that behind the report are other factors.

Lord Lloyd had no love for Empire-wreckers and seditionists, or for the party in Bombay who would wreck the whole of India's prosperity in their sour hostility to the British from whom came their wealth. It is known that he is an object of dislike in some Indian quarters, and that there are those who would, out of spite, gladly see his schemes go agley. The financial difficulties that have arisen are therefore falling on fertile ground. But the real difficulty, the huge post-War cost of any large works which, in India as elsewhere, has paralysed development schemes, is a hard one to overcome.

The Army is much interested. The troops who form the obligatory garrison of Bombay, a British Infantry battalion, an Indian battalion and some coast artillery, have either been cooped up in Colaba or have been living in congested malarious buildings of great antiquity, on super-valuable sites. The reclamation scheme was to give them parade grounds, new barracks and offices out in healthy Colaba which would be enlarged by two hundred acres, and would be paid for by the value of the ground they would vacate. This part of the scheme will, it is hoped, be proceeded with.

INDIAN STATE SOCIALISM.

(By Our Bombay Correspondent.)

Having recently admitted my ignorance of the policy of the Labour Party, I must now confess that I do not know what modern Socialists demand of the State. When I was young, I was urged from the pulpit to become a Christian Socialist, whose creed seemed to be that to patronise the deserving poor was likely to win reward in this world and the next: my more earnest contemporaries were Fabians, and collected statistics of every kind on the chance that they might come in useful somehow: and I read many exciting fictions about the Nihilists, whose prospects in both worlds were stated to be precisely the reverse of those of the Christian Socialists: but who, being presumably the direct ancestors of the Bolshevists, have at least come to their own here below.

But I have a vague sort of idea, and it is confirmed by present negotiations in the coal trade, that one of the objects of modern Socialists is the nationalisation of land, minerals and forests: and it has always struck me as rather curious that nobody has pointed out that, to this extent at any rate, India is the most socialistic country in the world.

The State is the absolute owner of all the land, and all the rights that go with it. Under the Permanent Settlement of Bengal, it is true that much of that Province is leased in perpetuity to large landowners: but elsewhere the land belongs absolutely to the State, which collects the annual rents on a fixed basis, but allowing

Digitized by Google

remission when crops fail. The system is carried very nearly to the extent of taking a fixed percentage of the annual crops, and this is so far recognised that agricultural income is absolutely exempt from Income Tax. Even tea plantations were so exempt till a few years ago, when it was agreed that one quarter of the profits, being derived from the factories, was to be considered liable to taxation.

It follows that the forests—which are administered by the Forest Department with a ruthless eye to the ultimate prosperity of the country, but in a way that considerably annoys the existing population—and the minerals go with the land as the exclusive property of the State, only to be worked under licence and on payment of royalty: and lastly salt, the most important commodity in the country apart from agricultural produce, is an absolute State monopoly. So that in India we have, whether the Socialists like it or not, a complete example of State control of the essentials of life, administered by a body of men who for brains, character and integrity (and I am of course not referring only to the Indian Civil Service strictly so called) are never likely to be equalled by any other bureaucracy.

But State socialism, or democracy, or whatever it may be called, has its drawbacks: and one of them is the mistrust of capital and the glorification of the man of straw. In England it is generally understood that when, for example, a municipality calls for tenders for 10,000 tons of steel rails, only the tenders of responsible steel works will be considered. In similar circumstances in India, it is almost certain that the contract will go to the lowest tenderer, irrespective of his ability to deliver the goods. It is open to anyone to underquote the manufacturers: and, if he is lucky, the contractor will contrive to spin out the time of delivery until he has been able to buy the stuff in a falling market. If the market should rise, the sucessful tenderer hangs on for as long as he can, until he has to confess his complete inability either to supply the goods or to pay compensation in any form whatever: and the purchaser, after a serious loss of valuable time, has at last to pay an enhanced price to the manufacturer in order to get the goods required.

This system, though no doubt more prevalent in the past, has led to very considerable losses to the Government through one department or another in very recent times, and will always do so whenever a market is rising. But the loss to the State, though probably a single failure more than outweighs the total gains of several years, is as nothing compared with the general dislocation of trade caused thereby. The Government Departments are, by their present policy of accepting the lowest tender, encouraging irresponsible speculators to bear important markets which are quite sufficiently controlled by the legitimate competition of their heads: and, with every desire to cultivate the strictest principles of economy throughout the spending departments of the Government, one cannot admit that this policy in any way benefits the revenues, let alone the industries, of the country.

CORRESPONDENCE.

THE INDIAN CIVIL SERVICE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I see that, in an Editorial Note, you have made the suggestion that my remarks on the present prospects of the Civil Service represent a rather sordid point of view, and you very rightly consider that the duty of administering India ought to (and would) attract young Britons of the right class, irrespective of financial considerations. With most of this I of course agree, but my point is that, in present conditions, the normal man of fifteen years' service, with a wife and family, is very far from having that freedom from personal worries that seems, to most of us, an almost essential condition of succesful administration in the East. It is, I think, a matter of history that, when private trade was forbidden to the servants of the Company and the scale of salaries was laid down, this point had the fullest consideration of the authorities; and the rate of pay was deliberately fixed so high as to leave them under no necessity of worrying at all about their private affairs. There does not seem to me to be anything particularly sordid about it when a married man has to consider his family's prospects, and I am afraid it is an undoubted fact that a good many valuable Indian careers have been cut short recently, simply because of the impossibility of making both ends meet on present incomes.

I consider that an Indian career has to-day more attractions than ever, except on the financial ground: and, as I said in my letter, the question of the future value of money is so obscure and difficult all over the world, that I do not think that this factor need weigh too much with the present generation of University men. But it seems to me quite evident that the men, who have fifteen to twenty-five years' service to-day, have not, by a very long way, obtained that freedom from financial worries which they had every reason to expect when they joined the service.—I am, etc.,

YOUR BOMBAY CORRESPONDENT.

Bombay, March 13.

THE INDIAN MAIL.

Mr. Horniman.

The mail brings confirmation of the announcement, already cabled, that Mr. Horniman has resigned the editorship of the *Bombay Chronicle*, which he had only taken up two months before. It appears that, on resuming his interrupted editorship, he had stipulated that he should be appointed a member of the Board of Directors, and that the initiative in all matters regarding the appointment, dismissal or suspension of the editorial staff should rest with him. The Board declined to accept these conditions: and, as Mr. Horniman refused to forgo them, they asked for his resignation, which was immediately submitted. One of the existing members of the Board, who upheld Mr. Horniman's contention, has also resigned: and the editor whom Mr. Horniman succeeded has provisionally resumed the editorship, while expressing a hope that a settlement will be arrived at that will lead to Mr. Horniman's return to the editorial chair. In a published interview, Mr. Horniman has explained that, though he was not a Director during his former term as editor, before his deportation, yet the circumstances are now different: he was, he thought, of all journalists in India, the one with the longest and most varied experience in the conduct of newspapers both on the editorial and managerial side: he had made great sacrifices in the past because he wanted to see the *Bombay Chronicle* firmly established as the leading Nationalist organ in India, and he thought he had succeeded in that object: he would be prepared to make further personal sacrifices if he thought this would be in the interests of the paper, but he was sure that it was not. In other words, Mr. Horniman thought himself strong enough to dictate terms to the Directors: and has suffered the fate of "to-day's most indispensables."

At the same time, the Directors are certainly running a risk. This is not the first time that Mr. Horniman has announced his resignation: he did so once during his previous editorship, and stated his intention of starting a new Bombay daily of his own—a threat that led to his reinstatement. He proposes to adopt the same course this time: and, if the Board proves obdurate, will doubtless do so. In the interview mentioned, he said that, before he left England, he had been approached from more than one quarter to start a new paper or to take over the editorship of others already established; but that he had no intention of leaving Bombay whose people, he believes, have confidence in him, so that he would be "betraying their trust" if he did not resume journalistic

Digitized by Google

activity in Bombay. If he can get the very moderate amount of financial backing that is required to start an Anglo-vernacular journal in India, there is no reason why his new paper should not become a formidable rival to the *Bombay Chronicle*: and, if it proves to be really in opposition to that paper as it has been conducted by several of its more recent editors before Mr. Horniman's return, so much the better.

But Mr. Horniman, when he spoke of the different circumstances now obtaining, perhaps forgot other implications of the phrase. Indian memories are proverbially short: and it is possible that he may find that his journalistic reputation in Bombay is not so secure a foundation, as he appears to consider it, on which to build what are evidently rather exorbitant demands. If the Board of Directors remain obdurate, it will probably be because they are banking on that: and are expecting Mr. Horniman to return on their terms, and not on his own.

Piece-goods Prices.

The great rise in the price of imported cloth, compared with the much smaller rise in the value of exported raw materials, has been for some time past a theme of writers on the progress of the trade between Lancashire and India. The recently issued Review of India's trade for 1924-25 gives figures that bring the facts into bold relief. The total yardage of piece-goods imported from the United Kingdom in 1913-14 was, in round figures, 3160 million, whereas in 1924-25 it was 1800 million; yet the declared value in the former year was 5841 lakhs of rupees and, in the latter, 6942 lakhs. This means that the quantity of Lancashire piece-goods that, in 1913-14, could be purchased in India for 100 rupees, cost 204⅓ rupees in 1924-25. Nor is this all; for, in the former year, the exchange value of the rupee was 1s. 4d. and, in the latter, it averaged 1s. 6d.—if anything, rather above that figure; so that, where the Lancashire trader obtained £6 13s. 4d. in 1913-14, he is now obtaining £15 6s. 7d. It is reckoned that the Indian cultivator is now getting about 34 per cent. more (in rupees) for his produce than he was before the War; which means that, where he could afford to spend 100 rupees in 1913-14, he could afford 134 rupees now: that is to say, Lancashire can now expect to get £10 1s. out of him in payment for what cost him £6 13s. 4d. before the War: or, in other words, the economic price of Lancashire piece-goods in India is, at present, 52½ per cent. too high. The detailed figures show that the rupee prices of grey and bleached goods have almost exactly doubled since 1913-14, while that of coloured goods is 2⅓ times what it was then. Taking into account the increased value of the cultivator's produce and the rise in the exchange value of the rupee, it appears that the economic prices of a yard of grey, bleached and coloured cloth are respectively 4 annas, 4 annas 5 pies, and 5 annas 2 pies; while the actual present prices are 5 annas 5 pies, 5 annas 11 pies and 7 annas 10 pies. In 1913-14 they were 2 annas 8 pies, 2 annas 11 pies and 3 annas 5 pies.

Archæology.

The news that the Government of India's proposal, to set aside 50 lakhs of rupees as an endowment to the Archæological Department, has been rejected by the Legislative Assembly, will cause a good deal of regret though mainly on sentimental grounds. From a material point of view it will be generally welcomed, for much the same reasons as the decision of the Home Government to drop the Civil Services' sports ground scheme. The wonderful work and the striking results achieved by Sir John Marshall and his Department are fully recognised: and it is a matter of general regret that their adequate continuance should be hampered by sordid considerations of finance. But, as things are in India, it is felt that, when there is any money to spare, it should go to objects of more immediate importance than archæological research; though this is not to say that the latter has not a great and real importance of its own. The most pressing financial needs of India have to do, for the moment, with subjects like agriculture and education, and the eventual extinction of the Provincial contributions to the central budget: and it is to subjects of this nature that any available money must be diverted when possible. The proposal, in fact, bears a strong family resemblance to the British sports ground scheme—that of an eminently right thing undertaken at a demonstrably wrong time.

INDIAN EXCHANGE.

London, March 29.

The easier tendency which was recorded last week, although followed by a temporary reaction, had again asserted itself, and rates in India have gone back to 1s. 5 31-32d. for T.T. in both Calcutta and Bombay. Remitters were able, however, to fill their modest requirements for cash and near delivery at 1s. 6d., and this rate is said to be still available to a small extent.

Quotations for mercantile bills have likewise been affected, and exporters have availed themselves of the weakness to settle a moderate amount at 1s. 6 1/4d., three months sight. Business, however, seems to be far from brisk, and the last return of the Imperial Bank shows that the trade demand has diminished by Rs. 120 lakhs.

Forward exchange is quoted at 1s. 5 31-32d. T.T. to the middle of April; 1s. 5 15-16d., May to September; and 1s. 5 31-32d. October to November. All these rates are being offered, but there are no buyers except at 1-32nd higher.

In the London market there has been very little doing. Business has been done at 1s. 6 1-32d., T.T., and later at 1-64th lower. Remitters have not been able to get much at anything better than this, although the outlook indicates that business at even money is not far away.

The market appears to be quiet but steady at present, but it is dependent on Indian advices entirely.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Conditions in Egypt.

An interesting review of conditions in Egypt was given by Sir Bertram Hornsby at the meeting of the National Bank of Egypt. The outstanding feature in the present economic situation is, of course, the record cotton crop which is put at over 8,000,000 kantars. It has coincided with an exceptional American crop, and the result, as Sir Bertram Hornsby pointed out, has been that the pressure to sell as compared with the demand has been such that there has been a marked drop in prices. The Egyptian Government has endeavoured to keep up the price of Sakellaridis by extensive purchases, but so far without success. As Sir Bertram Hornsby said, however the existing situation does not mean that production has overtaken demand in a permanent manner. Actually what has happened has been that production has gone ahead while the trade depression has left the demand at a low ebb. As I have often had occasion to emphasise, at a time of normal demand the world would readily absorb all the cotton that is available, and, taking the long view, it is not at all a bad thing that production should for the moment have outpaced demand, for that means that there will be less risk of the trade revival being checked by unduly high prices. It may be noted that Sir Bertram Hornsby emphasises the fundamental soundness of Egypt's economic position despite the set-back to cotton.

The Sudan's Trade in 1925.

The figures are now available for the trade of the Sudan in 1925. The value of the total trade was £E9,404,871 as compared with £E8,987,327 for 1924, an increase of 4.65 per cent. This advance is less than was anticipated, but it must be remembered that the great schemes for the development of cotton growing had not begun to make their influence felt on the trade statistics last year. In the current year it is reasonable to anticipate a much more pronounced trade expansion. The value of the imports in 1925 was £E5,118,979 as against £E5,202,942, the total being made up of Government imports £E1,609,317, a decrease of £E210,093, and public imports £E3,509,662 an increase of £E126,930. Government imports decreased mainly on account of the completion of the Makwar Dam and the Kassala Railway. The value of the exports was £E3,788,619, an increase of £E258,335, while re-exports and transit trade both showed increases, the former being £E94,304 up at £E 271,462 and the latter £E148,788 up at £E225,811. The value of the exports of cotton was £E175,793 in advance of the figure for the previous year, but the quantity exported was less.

Advertising in the Balkans.

Judging by what a correspondent tells me with regard to a recent fair in the Balkans the countries there have very little to learn from the West with regard to the art of advertising. Two rival wine and spirit firms were exhibiting at this fair. One drew attention to its products by means of a huge pavilion in the shape of a green bottle. The other firm sealed the door of its pavilion with a huge poster bearing the words "the liqueurs of the firm of ——— need no advertisement."

Position in Iraq.

At the meeting of the Eastern Bank Mr. J. S. Haskell dealt with the general situation in Iraq, and pointed out that during 1925 conditions continued unsatisfactory. While the country was affected by the general trade depression, it also had its own difficulties to face, such as the failure of the harvests and the restrictions imposed by the Persian Government, which severely hampered the transit trade. The country imported more textiles from Lancashire than in the previous year, but stocks accumulated owing to the restriction of the transit trade, and the fall in cotton involved heavy losses for traders. The sugar business was also unfavourably affected by developments in Persia. It is satisfactory to know that the new year has opened more hopefully. Up to the present the rainfall is up to the average, while Mr. Haskell stated that negotiations will probably take place in the near future with the Persian Government tending to the modifications of the transit regulations.

Yugoslav Finances.

The steady improvement in Yugoslavia's economic position in the last few years stands out in clearer relief owing to the relative failure of her neighbours to recover from the effects of the War. Yugoslavia is indeed entitled to the highest praise for the determined efforts she has made towards reconstruction, and her success in this direction stands out by itself in the economic record of the Balkan countries since 1918. During the debate on the Budget the Minister of Finance, M. Stoyadinovitch, was able to give illuminating figures showing how the revenues have been improving since 1923. He pointed out that the receipts from direct taxation had risen since that year from 1,183,000,000 dinars to 1,898,000,000 dinars the Customs receipts had increased from 1,432,000,000 dinars to 1,812,000,000 dinars, stamps and other fees had risen from 832,000,000 dinars to 1,190,000,000 dinars, while the revenue from the State monopolies had increased from 2,008,000,000 dinars to 2,466,000,000 dinars. This year's Budget amounts to 12,504,000,000, and the Finance Minister was able to state that it was certain that the Budget would balance. Progress is being made in regard to the settlement of Yugoslavia's war debts. The negotiations with America are in progress, and M. Stoyadinovitch stated that negotiations for the funding of the debt to Great Britain are to be begun very shortly.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 30.

Idleness in the Stock Exchange has become more pronounced than ever during the past week and with the near approach of the Easter holidays public interest has been almost non-existent. The gilt-edged market, though very quiet indeed, has remained fairly firm, but in other sections prices have been inclined to droop, and a little liquidation in the rubber and oil departments in anticipation of the carry over has had a slightly depressing effect. Business, however, as we have said, is almost at a standstill and is hardly likely to increase in volume until after Easter and until some of the uncertainties which cloud the economic and industrial outlook have been dispelled.

The Belgian franc, after its recent spectacular upward movement has been relatively steady, but the French franc has developed fresh weakness, and has risen to well over 140 to the £. It would appear that French industrialists, who had been awaiting developments at Geneva and holding back from purchasing raw materials abroad pending the result of the League of Nations' meeting, have come to the conclusion that no improvement in the franc can be hoped for at present, and have therefore resumed their buying of raw materials from foreign countries.

American Investors and Europe.

The effect of the Geneva failure and of Ambassador Houghton's amazingly gloomy report to his Government, on the state of Europe are likely, it is feared, to make American capital very shy for a time of crossing the Atlantic in search of investment. In the past few years the American investing public have been learning in increasing degree the habit of investing overseas. All American observers agree that Locarno greatly stimulated in America ideas favourable to investing in Europe. Now the Geneva failure has given a severe set-back to the movement—temporary, one hopes, but still severe. This prospect is serious at the present juncture. Shortage of capital is a common complaint all over the Continent of Europe. If the stream of American capital, that was beginning to flow so readily, is cut off, the progress of European economic reconstruction must of necessity be hindered. Further, should American financial policy trend towards isolation, Europe will come knocking at the door of London's new capital market with greater and greater insistence. This development may easily affect substantially the course of money rates, and, therefore, the trend of affairs in the investment markets. This is one reason why London is watching very carefully and very anxiously for the repercussions of the Geneva failure in America.

Defaulting States.

Both the Stock Exchange and the investing public owe a debt of gratitude to the Council of Foreign Bondholders for the very efficient manner in which it looks after their interests year after year. The latest annual report of the Council issued last week, shows that its activities were well continued during 1925. The efforts made on behalf of bondholders are exemplified by the action taken in regard to Roumania. Apparently, at the end of 1925 Roumania was endeavouring to obtain a loan in the United States, and the Council, in conjunction with the Association Nationale of Paris, took steps to draw attention in America to the attitude of the Roumanian Government in failing to adhere to the arrangement accepted by all the other Succession States. With regard to Bulgaria, an agreement was secured after many delays and protracted negotiations and the terms have been duly adhered to. In Ecuador a revolution interfered with the service of the Salt Bonds, and a reduction in the payments was agreed to on certain conditions. The total gross receipts from Greece during 1924 applicable to the service of the old Gold Loans showed a satisfactory increase.

The remainder of the report makes more depressing reading. Whereas the service of the external debt of Colombia has been punctually effected, the Argentine Province of Corrientes remains in total default. Suits have been brought in the Supreme Court of Argentina against the Province by the Banco Frances, the trustee of the External Loan of 1910, and by the Association Nationale of Paris, representing the French holders, the defence to the former action being that the trustees had failed to carry out their obligations under the trust deed. No decision has yet been delivered in either case. The Council have again appealed to the Argentine National Government, to take such steps as may be in their power to put pressure on the provincial government to respect their obligations to their foreign creditors. Remittances by the Egyptian Government on account of the service of the Tribute loans remained in suspense during the past year. In the case of the Four per cent. Guaranteed Loan of 1855, however, payments to bondholders have been maintained in accordance with the guarantees.

Mexico and Russia.

No Mexican payments were made during 1925 under the settlement made with the Committee of International Bankers in 1922 although in August, 1925, the Government of Mexico was recognised by this country and an agreement was entered into regarding the settlement of British claims against Mexico. The Russian Soviet Government still refuses to settle the problem of its repudiated public debt, while little has been done to restore to its rightful owners property which has been seized and confiscated. The Turkish Government continues to appropriate the revenues assigned to the bondholders under the Decree of Mouharrem and the other loan contracts. The Council, therefore, still has a great deal of work to do. But in any case, if its future efforts to effect international debt settlements are as successful as most of its past attempts have been, it will justify its continued existence.

NEW ANGLO-PERSIAN SUBSIDIARIES.

The Anglo-Persian Oil Company has formed two new subsidiary undertakings, one to operate in Ceylon and one in Egypt. The former is the Anglo-Persian Oil Company (Ceylon) which has been registered as a private company, with a capital of £100,000 in £1 shares. The Treasury has the right to nominate two directors. The latter is entitled the Anglo-Persian Oil Company (Egypt), and its objects are to acquire any existing oil, coal or fuel installations and carry on the business of refiners and transporters of petroleum and other mineral oils. The capital is £100,000 in £1 shares. The Treasury has the right to appoint two directors.

The directors of the Cunard Company, Ltd., have decided to recommend a dividend on the ordinary shares for 1925 at the rate of 5 per cent. per annum, payable less income-tax.

Monthly Supplement of "The Near East and India" : No. 15.

THE NATIONAL BANK OF YUGOSLAVIA.

The annual general meeting of the National Bank of the Kingdom of the Serbs, Croats and Slovenes was held on March 7. In its report the Executive states that during 1925 the State incurred no debts with the Bank, nor did it make any loans abroad either itself or through subsidiary institutions, with the single exception of the Monopoly Administration. The municipalities also have made no loans abroad. The repayment of the State debt to the Bank is connected with the question of the dinar, and is consequently a question for the Government to solve. The State's finances have been steadily improving. As State treasurer, the Bank received in 1925 over 4 milliard dinars, and paid out 3 milliard at home and one milliard abroad on the State's behalf. The rise in the value of the dinar at the end of July and the beginning of August, 1925, was speculative. This is proved by the fact that to the end of 1925 the Bank had to sell 400 million dinars' worth of bills, in order to stabilise the rate of the dinar.

The report contains the resolution of the Executive passed on August 27, 1925, to the following effect:—

"At its sessions in the morning and afternoon of August 27, 1925, after consideration of the fact that, until that date bills had been purchased on behalf of and at the order of the Ministry of Finance to the amount of 1,200,000,000 dinars, and that bills are still being purchased, in order on the one hand to create a sufficient stock of bills to protect the dinar, and on the other hand to moderate its tendency to a sudden rise and to bring about the necessary period of stabilisation for the export season, the Executive Committee found that for the better protection and strengthening of the national currency it is necessary:—

(1) To continue at need and in agreement with the Minister of Finance the present transactions in bills, in order by means of their purchase and sale and by intervention to prevent exaggerated and dangerous fluctuations in the value of the dinar on the money market, and to achieve a temporary stabilisation of the dinar's value, since this policy has hitherto proved fruitful and advantageous in all branches of economic life and has given a covering for stabilisation in every kind of industry;

(2) That in no case must the dinar be allowed to rise or fall suddenly under the influence of speculation or monetary circumstances, but must rather be influenced against any such sudden rise or fall;

(3) That, in order that sanction may be obtained for the gradual strengthening of the dinar and its temporary stabilisation, the Minister of Finance must be asked that permanent principles for the future work on the dinar may be fixed by decision of the Ministerial Council, and later by law, so that they may not be changed unnecessarily."

Since July, 1921, when the Bank made an agreement with the Minister of Finance to buy up one-third of the export bills in order to create the stock of bills necessary for State payments abroad and at home, transactions in bills have increased enormously.

In 1921 the National Bank purchased bills to the value of 274 million dinars, paid out 245 million, and transferred to the 1922 account 28 million dinars' worth of foreign bils.

In 1922 it purchased 632 million, paid 617 million, and transferred to the next year's account 14½ million.

Further, in 1922, at the order of the Minister of Finance, there were sold from the State's cash (from the Blair loan and Austro-Hungarian gold) for commercial payments abroad 12,168,996 dollars and 24,500,000 gold dinars. This sale, says the report, enabled the constant deficit of the means of payment abroad, both State and private, to be decreased to such an extent that in the following year the National Bank was able not to sell all the bills purchased for the State in the year, but to begin to form a larger reserve to be transferred from year to year, a reserve which has constantly grown.

In 1923 the Bank bought 1821 million dinars' worth of bills, paid out 1,108 at the Bourse, sold at the order of the Minister of Finance 496, and transferred to the next year's account 216 million dinars' worth of foreign bills.

In 1924, purchases amounted to 2,727 million dinars. payments for the State to 1,386 million, sales at the Bourse to 1,109 million, while 231 million dinars' worth were carried over to 1925.

In 1925 purchases of bills were made to the value of 3,434 million dinars, and of these 1,586 were paid, 1,510 sold at the Bourse, and 337 million carried over to 1926.

On January 1, 1926, the total reserve of bills was 828 million dinars, or 75,686,116.74 Swiss francs. This

Digitized by Google

stock is sufficient at any time to preserve the dinar from too great or too rapid fluctuations. At one time, in August, 1925, the Bank held bills to the amount of 1,200,000,000 dinars.

The aim of this policy is the stabilisation of the dinar. The purchases are not made with any reserve notes not included in the circulation. On the contrary, all are included in the circulation. The balance of payment is still constantly passive and will need a long time before it becomes active. The money market was characterised in 1925 by the large amounts of money available. Many banks made little use of the discount at the National Bank, and in addition held there large amounts on their current accounts. This is the consequence of the increase in savings deposits, and of the liquidation of earlier loans and of a part of the mortgage loans. A large amount of money was withdrawn from business in bills on account of the stabilisation. The fall of prices meant, too, that export business did not need the same amount of money as in former seasons.

In spite of this there was no capital obtainable for long term loans and industry. Banks undertook business very reluctantly, having learnt what it means to be without liquid funds.

During 1925, 220 million dinars' worth of new credits were granted. At the end of the year the amount of credits was 1,323 million dinars. In June, 374 million dinars of seasonal credit was allowed to exporters. Loans of 5,000 dinars each to small industries gave a total of 13,400,000. Bills discounted throughout the year amounted to 5,895,293,358 dinars, or 1,052,675,859 less than the holders of credit might have used.

The National Bank made the rule last year that each holder of credit must discount 20 per cent. of his bills at the National Bank, entailing greater liquidity of the portfolio bills of this and other banks. This demand meant that wholesalers had to seek bills from their clients to cover their current accounts. This, in the opinion of the Executive, was of great advantage to the wholesalers, since they were covered, for a part at least, of the current accounts which they had opened with such difficulty.

During the year 1925, it was decided to print and put into circulation notes of a greater value than 1,000 dinars.

ECONOMIC NOTES AND NEWS.

The Postal Savings Bank.

1925 was the second year of the extended and reorganised work of the Postal Savings Bank of Yugoslavia, which is developing rapidly both as an institution for savings and for cheque payments ,and as a credit bank. Payment by other means than by ready money was formerly very little known in Yugoslavia, and in this direction the Savings Bank has been doing extremely successful pioneer work. This success is evident from the growth of the number of cheque accounts:—1919, 3,546; 1920, 5,079; 1921, 7,040; 1922, 8,294; 1923, 9,985; 1924, 11,306; 1925, 12,459. Most of the cheque accounts are held by commercial firms (5,308), industrial enterprises (1,779), and banks (1,201). After these come societies, newspapers, State institutions, co-operatives and insurance companies.

The following table indicates the course of the Bank's operations during recent years (in dinars):—

	Cheques.	Deposits on Cheque Accounts.	Total Business.
1919	—	19,187,327	—
1920	2663,168,476	50,986,466	—
1921	7,976,574,515	200,744,436	—
1922	17,266,598,010	226,347,891	—
1923	26,399,620,916	242,439,536	63,153,056,072
1924	31,691,558,843	296,241,358	113,468,740,962
1925	36,977,943,748	348,196,021	131,932,697,702

The cash in hand on December 31, 1925, was 124,453,282 dinars. This year deposit accounts will be opened with a larger maximum than before and will certainly increase the Savings Bank's business. During 1925 a large quantity of State bonds was held (13,279,848 on December 31), and these were a useful factor in influencing the dinar rate. The net profit in 1925 was 33,659,712 dinars.

Area Under Cultivation in 1925.

The following table shows the areas sown with the chief crops in 1923, 1924, and 1925, and the gradual increase of the total cultivated surface.

	1923	1924	1925
	Hectares.		
Wheat ...	1,555,016	1,789,115	1,778,642
Maize ...	1,801,578	2,002,918	2,114,268
Oats ...	575,362	353,654	401,698
Rye ...	187,107	212,329	199,153
Barley	360,599	378,104	357,730
	4,279,662	4,733,120	4,791,592

Bridging the Danube at Belgrade.

A bridge over the Danube to connect Belgrade and Panchevo is badly needed to bring the rich province of Banat into touch with the Kingdom south of the river. Banat has a large corn export of anything up to 800,000 tons in good seasons, but when river traffic is stopped during the winter there is no means of communication, except by an extremely roundabout railway route, and a provisional bridge in the north, at Senta near the Hungarian frontier. The necessity of the bridge is agreed upon, but the time and means for carrying out the scheme have still to be settled. The Government will not be able to finance it out of the regular Budget.

The bridge planned will be a seven-span iron construction for a double railway line, 1,140 metres in length, and with 8,800 tons of ironwork. The scheme will also require the building of 4,500 metres of flood bridges between the river and Panchevo.

Corn and Flour.

The stormy events on the New York Bourse and the statistics reports according to which the corn reserves considerably exceed the estimates, brought about slackness in the corn market, which in the last few days has caused a falling off in wheat prices by quite 8 cents per bushel. An estimate has been made of the corn harvest last year by a British statistician, who calculates the wheat stocks as half a million tons more than were quoted in the report of the Grain, Seed and Oil Reporters. This means that at the end of the season unused stocks of wheat remain over. Together with this comes the fact that the state of the crops is in the main satisfactory. As regards autumn sowings, the report of the International Agricultural Institute at Rome gives the amounts in the northern countries as corresponding to those of last year.

All this has meant less corn business on all European bourses, inasmuch as there is a fear that the fall in world prices may continue.

Wheat prices on Yugoslav markets are low. In America the price fell from 170 to 157½. In Yugoslavia, Bachka wheat fetches 275 dinars, and Serbian 265 to 266 dinars. Speculators are reluctant to do business at the moment. Several loads of Shabatz wheat lie unsold at Braila, the lack of demand resulting partly from the money crisis in Middle Europe. There are no large buyers of a thousand trucks at a time, and business is merely from day to day, at most for a week in advance.

Several barge loads of Yugoslav goods unsold at Braila have been reloaded for Rotterdam, where, however, only the cost price will be realised.

Advance sales concluded earlier are now being carried out at a loss. Here Vienna and Budapest are chiefly interested. In May the price was 83 Czech crowns or 140 dinars, whereas now Vienna is offering 123-4 dinars. America and the Argentine, where the factories are full, are pulling down prices.

Last year's harvest gave a surplus of 40,000 trucks of wheat for export, of which about one-fourth has been sold so far. Vienna also has a large waiting stock of 100 trucks.

Prospects for the new harvest are good. Some transactions have been concluded in this country at 200 dinars, and in America for new wheat in September at 130 cents.

Digitized by Google

There is a fair amount of spoilt maize here. The Belgrade Bourse will resolve that buyers of 4 per cent. spoilt maize must accept without compensation. The spoiling was due to bad and changeable weather. The price of maize is 115 dinars, immediate delivery; 120 dinars for April and May.

Of the 80,000-100,000 trucks for export from last year's harvest, more than 20,000 trucks have been exported. Export was specially poor in January and February of this year. In those months last year 8,000 and 10,000 trucks respectively were exported.

Lower Freights for River Traffic.

The River Shipping Management announces new transport freights within the Yugoslav frontiers. Freights for goods in bales are reduced by 20 per cent. from March 20, and those for wood in fully loaded barges by 10 per cent. from March 1.

Lombarding of War Reparation Bonds at the National Bank.

The Yugoslav National Bank has decided to grant loans on security of the 2½ per cent. War Reparation bonds, as on other State securities. The bonds, of a nominal value of 1,000 dinars, will be accepted at the rate of 200 dinars, i.e., one-fifth, as compared with a Bourse rate of about 300 dinars. The amount of the initial credit for these Lombard credits is 20 million dinars. No individual, however, will be allowed to lombard more than 50 bonds, a regulation which opens the credit to 2,000 persons. The interest rate is 8 per cent.

State Receipts and Expenses in October, 1925.

The official figures give State expenses in October, 1925, as 952,813,662 dinars and receipts as 1,111,087,209 dinars. The surplus receipts for the month, therefore, amounted to 158,273,547 dinars. For the first seven months of the budgetary years 1925-6, from April 1 to October 31, 1925, the total amount of State expenditure was 5,950,211,338 dinars, and receipts 6,527,965,308, a surplus of 577,753,969 dinars. In all classes of taxation, direct and indirect, there are large surplus receipts, but there are certain deficits from the State forests and mines.

River Traffic.

The following vessels were received by the S.H.S. Kingdom as War booty under the Peace Treaty:—(a) 21 passenger boats of 7,375 h.p., (b) 66 tugs of 33,972 h.p., and (c) 538 barges with a carrying capacity of 362,801 tons.

Most of this shipping was handed over for exploitation to the Shipping Syndicate, which at present has the following vessels:—(a) 21 passenger boats of 7,375 h.p., (b) 5 tugs of 24,253 h.p., and (c) 513 barges of 326,219 tons cargo capacity.

In these are included the boats given to the Syndicate as temporary reparations. These were:—(a) 4 passenger vessels of 2,470 h.p., (b) 3 tugs of 2,130 h.p., and (c) 30 barges of 20,040 tons cargo capacity.

Of its own property the Syndicate has 8 ships and 38 barges.

The value of the State shipping material in use by the Syndicate, landing barges, bridges, and a moveable workshop, was estimated in 1923 at 30,000,000 gold dinars. Repairs are also being carried on in Germany as reparations to a value of 5,719,442 gold marks or 78,642,327 dinars. Ten of the 29 boats under repair have been received and are in use.

The State shipping is at present being exploited by the Shipping Syndicate, consisting of the State and the Serbian Shipping Co., and working on an agreement made between the two parties in 1921.

The net profit of the undertaking is divided between the State and the Company in the proportion of 82½ per cent. and 17½ per cent. respectively. The capital of the company consists of 3,000,000 dinars, divided into 30,000 shares held thus:—6,512 by private individuals; 8,939 by the State Lottery; and 1,061 by the company's pensioners. The rest are held by municipalities, churches, etc. Thus only 21.7 per cent. are in private hands.

Index of Wholesale Prices.

The following are the latest index prices:—

Period	Agric. Prod.	Stock Prod.	Fruit Prod.	Build Mater.	Groceries.	Indus. Prod.	Total Index compared with 1913
Dec. 1925	1478	1895	1477	1774	1356	1862	1640
Aver. 1925	1861	1882	1633	2022	1462	1969	1804
Jan. 1926	1490	1615	1533	1751	1363	1828	1596
Feb. 1926	1377	1548	1538	1751	1366	1758	1556

The total index for February fell as compared with January by 40 points or 2.6 per cent., in spite of the fact that the dinar was weak throughout the month. Agricultural products fell by 113 points or 7 per cent., and stock-raising products by 67 points or 4 per cent. The fruit, building material and grocery groups showed little change. In industrial products there was a fall of 65 points or 3½ per cent., as a result of poor import.

The dinar moved during the month between 9.18 and 9.13 Swiss francs. Export, like import trade, was doing little business owing to the depression on the world markets.

Registration of Business Firms in Serbia.

The statistics of the numbers of firms registered at the Belgrade Chamber of Commerce from 1918 until 1925 give an interesting picture of the commercial progress of Serbia.

Year	Villages	P.c.	Small towns and towns	P.c.	Belgrade	P.c.	Total
1919	152	5.5	1398	53	1078	41.5	2628
1920	203	7	1734	60.5	929	32.5	2866
1921	313	13.5	1452	64	505	22.5	2270
1922	456	14.5	2099	65.5	635	20	3190

1925	1022	24	2526	59.3	711	16.7	4259
Grand Total	3347		12583		5462		21392

YUGOSLAV EXPORTS IN 1925.

Yugoslavia's exports, according to the Customs statistics, showed the following totals in 1924 and 1925:—

	Tons	Gold dinars (Swiss francs)
December, 1924	406,836	71,132,616
December, 1925	354,739	61,339,606
1924/whole year	3,915,700	671,271,951
1925 ,, ,,	4,398,466	783,349,517
Increase in 1925	482,766	112,077,566
	or 12.33 per cent.	16.69 per cent.

The chief exports throughout the year were:—

Article	Unit	Amount	Value in Gold Gold dinars (Swiss frs.)
Maize ...	Tons	1,011,273	180,638,094
Wood: a/for building ...	,,	1,051,225	98,305,864
b for fuel ...	,,	304,559	6,739,675
Eggs	,,	27 225	53,507,427
Corn: a/wheat ...	,,	169,958	44,065,344
b/other ...	,,	35,754	7,115,472
Live cattle ...	Head	111,352	36,625,430
Meat: a/fresh	Tons	16 718	27,532,077
b/meat products...	,,	1.274	4,050,099
Hops ...	,,	3,159	21,417,140
Crude copper	,,	7,880	20,012,584

State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes

State Tobacco Factory in Liubliana

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration, — BELGRADE —

Eggs.—To Switzerland 22,798,125; Austria 12,660,196; Germany 11,534,389.

Corn (wheat).—Down the Danube and via Braila 25,295,380; Austria 5,308,346; Greece 3,175,536. *Other cereals*, Austria 2,294,965; Greece 2,268,355; Italy 1,318,186.

Live Cattle.—Italy 13,870,061; Austria 13,489,330; Greece 5,544,183.

Meat (fresh).—Austria 16,015,259; Italy 4,925,630; Germany 3,384,169. *Meat products.*—Italy 1,568,540; Austria 1,545,734; Greece 241,350.

Hops. — Czecho-Slovakia 10,299,563; Germany 7,763,593; Austria 1,729,297.

Crude Copper.—Germany 10,731,926; France 6,037,512; United States 3,148,637.

Wheat Flour.—Austria 8,542,734; Czecho-Slovakia 6,067,181; Bulgaria 1,041,862.

Prunes.—Germany 6,192,164; Italy 2,912,620; Czecho-Slovakia 2,319,556.

The amount of the chief exports from Yugoslavia and their percentage of the total exports for the last three years were as follows:—

Article	1925 Million gold dinars	%	1924 Million gold dinars	%	1923 Million gold dinars	%
Maize	180.6	23.08	41.2	6.13	19.8	4.15
Wood for building...	98.3	12.56	114 0	16.99	76.4	15.98
Eggs	53.5	6.84	43.5	6.48	31.5	6.60
Wheat	44.1	5.63	48.1	7.17	22.6	4.74
Live cattle ...	36.6	4.68	52.4	7.81	50.2	10.51
Fresh meat ...	27.5	3.52	31.8	4.75	26.6	5.56
Hops	21.4	2.74	6.4	0.96	7.0	1.47
Crude copper ...	20.0	2,56	24.3	3.63	10.2	2.14
Wheat flour ...	17.4	2.23	24.1	3 60	13.8	2.90
Prunes	16.8	2.14	12.6	1.88	20 4	4.28
Live pigs	10.8	1.39	19 1	2.84	26.6	5.57
Live horses ...	10.7	1.37	16.3	2 43	12.3	2.58
All other	245.6	31.25	237.4	35.33	160.5	33.62
	783.2	100 %	671.2	100 %	477.9	100 %

The chief countries of destination for these exports in 1925 were:—

Country	Tons	Gold dinars	Per cent.
Italy	1,747,764	197,657,729	25.26
Down Danube via Braila and Roumania ...	538,783	106,673,522	13.63
Austria	468,919	145,119,552	18.55
Czecho-Slovakia ...	309,348	73,316,262	9.37
Greece	303,050	57,861,688	7.40
Germany	93,974	55,962,223	7.15
Hungary	361,500	40,264,843	5.15
Switzerland	46,378	32,059,973	4,10
France	71,845	15,864,372	2.00
Poland	4,550	8,603,114	1.10
All other countries ...	451,995	46,966,239	6.29

Although exceeding in tonnage and gold value those of 1924, last year's exports were less than had been expected, and that they did in fact exceed those of 1924 is due to the large export during the first half of the year, and especially to the great export of maize from the 1924 crop. During the second six months exports suffered from stagnation as a result of the fall in prices of agricultural products on the world markets. The abolition of Customs duties on December 1 and the improvement of prices at the end of the year did not improve the state of export, because navigation on the Danube stopped early owing to ice.

COAL PRODUCTION.

The production of coal in State and private mines in Yugoslavia in 1913, and in the years 1919 to 1924, was as follows:—

Year	Serbia	Bosnia	Croatia	Slovenia	Dalmatia	Pecuj
1913	311 365	80?,000	250,000	1,471,067		700,000
1919	108,519	674,930	251,293	1,153,388		310,767
1920	341,950	820,669	387,390	1,193,874		473,950
1921	420,830	923 259	358,818	1,271,069	83,826	343,768
1922	568,367	1,073,899	438,260	1,551,324	94,854	
1923	741,182	1,169,320	402,088	1,696,934	102,521	
1924	688,565	1,118,949	549,183	1,879,855	129,147	

In addition to the above amounts about 100 trucks of coal daily are supplied by Bulgaria from the mines of Pecuj and Pernik as reparation payments.

THE MONOPOLY ADMINISTRATION.

For the first nine months of the fiscal year (April to March) the Yugoslav Monopoly Administration shows receipts amounting to 1,938,928,279 dinars, as compared with 1,822,710,761 dinars for the period April 1 to December 31, and an estimated revenue of 1,736,700,000. To the total the Tobacco Monopoly contributes 1,298,358,824 dinars, or 67 per cent.; salt, 300,306,674 dinars; kerosene 116,485,471 dinars; matches 109,321,608; cigarette paper 108,673,152 dinars.

The statement of revenue and expenditure issued by the Monopoly Administration for the nine months ending December 31, 1925, was as follows:—

REVENUE.	Dinars.
Monopolies (December) ...	229,049,862
,, (Apr.-Nov.) ...	1,709,878,417
Customs (December) ...	122,751,901
,, (Apr.-Nov.) ...	1,269,812,405
Stamps & Duties (December)	97,904,284
(Apr.-Nov.)	786,936,551

Blair Loan 1 22	47,478,453
5% Montenegrin Loan (1909)	2,561,439
Administration Expenses ...	589 454,784
Current a/c Min. of Finance)	3,469,906,566
Sundry a/cs. & Cash in Hand	27,625,239
	4,216,333,420

THE ZAGREB SPRING FAIR.

The Zagreb Spring Fair (which opened on March 21) is devoted entirely to motor vehicles, electric machinery, radio apparatus, wines and spirits, and—posters. Motoring, for sport or utility, has made great strides latterly in Yugoslavia, although the roads are by no means all that could be desired, at least in some districts. There are good highroads in Slovenia, and some excellent roads, built originally for military purposes, in Dalmatia; and doubtless this does not exhaust the list.

Two years ago radio sets and accessories were exhibited for the first time at the Zagreb Samples Fair. Last Sunday whole pavilions contained nothing else.

The inclusion of posters in this Fair added an interesting feature. In spite of the international nature of advertising, there was a distinctly national character about the groups of Austrian, Italian, Hungarian, French, German, Dutch, Scandinavian and British posters. The last-named attracted special attention. There was a large and well-assorted selection of them, from the plainly printed concert poster to the expressionist experiments displayed in London Underground stations and elsewhere. Apart from their original purpose at home, they were out here a gallery of British landscapes, striking in appearance in spite of rather subdued colouring, which distinguished them among the more garish rival exhibits.

An agreement has been concluded between the Roumanian Government and the seventeen private railway companies in Roumania for the State purchase of the latter's lines.

The Air Ministry announces that as the result of an accident at Abu-Sueir, Egypt, to a D.H.9.A of No. 4 Flying Training School, Abu-Sueir, on March 26, Pilot Officer Ivor Randolph Sweeting was killed and No. 317,455 Sergeant Rupert Horrocks, the pilot of the aircraft, was seriously injured, and died shortly afterwards.

Cotton and Cotton Goods

EMPIRE COTTON GROWING CORPORATION.

A meeting of the Administrative Council of the Corporation was held in London on March 18. In the unavoidable absence of the President, Lord Derby, the Chair was taken by Mr. R. H. Jackson.

The Chairman reported the appointment, by the Bombay Chamber of Commerce, of Mr. H. P. M. Rae as their representative on the Administrative Council in succession to Mr. O. Marshall.

The Director gave an account of the activities of the Corporation during the past 4½ months. He referred to the visit that Mr. Jackson, the Chairman of the Executive Committee, and he himself had paid to the Sudan, to be present at the inauguration of the Makwar Dam, and emphasised the prosperity that had been brought to the natives of the country owing to cotton growing under irrigation in the Gezira and in the Kassala Province. He referred also to the great possibilities of rain-grown cotton in the Southern Sudan.

In concluding the proceedings, the Chairman testified to the very great debt that both Lancashire and the Sudan were under to Mr. F. Eckstein, and to the ability and efficiency displayed under his guidance by the Sudan Plantations Syndicate.

The report of the executive committee, submitted at the meeting, states:—Owing to the recent absence of the chairman and of the director in the Sudan for the inauguration of the Makwar Dam, it was found advisable to postpone the meeting of Council, which is usually held in January. In addition, the Vice-Chairman, Mr. Foster, sailed on February 6 for a visit to Colombia and Peru at the invitation of the Governments of those countries, where he will investigate and report on cotton-growing possibilities jointly with Mr. A. S. Pearse, at the request of the International Federation of Master Cotton Spinners.

It may be said that progress in all areas of the Corporation's operations is being made, and it may confidently be hoped that it only requires more favourable climatic conditions than those which existed last season in most of the cotton-growing parts of the Empire to ensure satisfactory increases in the production of Empire-grown cotton.

A matter of far-reaching importance is the announcement that legislation will be introduced early during the present Session of Parliament to give effect to the decision of the Cabinet to recommend the issue of loans not exceeding £10,000,000, under an Imperial guarantee, to be devoted to transport improvement and development in Eastern Africa. It is also satisfactory to note that a percentage of the money raised by these loans will be devoted to the furtherance of scientific research and education.

Stress need not here be laid on the far-reaching importance of the completion of the Makwar Dam, seeing that the Corporation have done all that was in their power to ensure that this project was carried through. As mentioned above, Mr. Jackson and the Director were present at the inauguration ceremony, as guests of the Sudan Government.

poration as Plant Breeder to the Sudan Government, has now been working at the Experimental Farm at Shambat since the beginning of September last, whilst Dr. E. M. Crowther is engaged upon a tour of five months' duration in the Sudan, where he is collaborating with the Government Chemist in work upon the soil problems of the Gezira.

The Secretary of the Corporation also left for the Sudan on January 13, in order to familiarise himself with local conditions and problems, and to confer generally with the Department of Agriculture and the Corporation's staff in the territory.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended March 18, state:—

Since our last report the futures market has been very active but the tendency has been extremely weak, especially for Sakel. The week's summary of price movements is as follows:—Sakellaridis: March, 29.50 dollars, 1.05 dollars down; May, 28.20 dollars, 0.98 dollars down; July, 27.48 dollars, 0.87 dollars down; November, 27.88 dollars, 0.52 dollars down. Ashmouni: April, 20.85 dollars, 0.25 dollars down; June, 21.35 dollars, 0.20 dollars down; August, 21.35 dollars, 0.15 dollars down; October, 21.80 dollars, 0.03 up.

The continued lack of demand from abroad is chiefly responsible for the recent decline; this persistent absence of demand has resulted in the accumulation of a very heavy stock, and, with the season already so far advanced, holders are daily becoming more and more anxious. Export figures for the period from September 1 to date show a decrease of 740,000 kantars in comparison with the figures for the corresponding period last year, and this, with a crop larger by about 800,000 kantars and a heavier carry-over at the end of last season, means a supply in Egypt at the present moment of about 1,650,000 kantars more than at the same date a year ago.

The decline in prices does not seem, at the moment, to be stimulating the demand from abroad, and the chances for an early reduction of the present heavy stocks seem rather remote. In addition to the deviation to outside growths of a good part of the normal demand as a result of Government intervention in the Sakel market, the exceptionally good cotton crops of practically all the other cotton producing countries have coincided with less favourable conditions in the textile trade, all of which factors have contributed their depressing influence on prices. Spinners during the past week have again shown little interest, and the demand for Sakel is still very poor; Ashmouni, on the other hand, has come in for considerable inquiry, but even so the amount of actual business put through has been only moderate. At the Second March tender, 16,750 kantars dockets were issued.

The Government has bought during the week about 3,500 bales of Sakel grading from Fully Good Fair up to Good, for which they have paid from 32½ dollars to 34½ dollars. Total Government purchases to date amount to about 38,000 bales, i.e., about two-thirds of the 500,000 kantars which they announced it was their intention to buy.

We hold to the opinion expressed in our last report, that although prices may appear reasonable, the only thing which can lift the market from its present depressed condition is the improvement of the statistical position by a sustained demand from spinners. Closing out of bear positions in order to secure profits may bring reactions, but such reactions can only be of a temporary character. The week's receipts amount to 76,928 kantars against exports 110,306 kantars; the stock stands at 2,285,577 kantars.

Spot: The Minet el Bassal market has continued quiet though, thanks to a somewhat increased interest by spinners in Uppers, it has shown some small improvement from last week. Sales amount to about 10,000 bales for the five business days, of which we estimate 4,300 bales Sakellaridis, 5,000 bales Uppers, 450 bales Zagora, 250 bales Pilion and a few odd bales of Brown and White. The Government have bought during the week about 3,500 bales of Sakellaridis from Fully Good Fair up to Good.

Sakellaridis: The demand continues very moderate but all styles have changed hands. Spot differences are generally slightly dearer with the exception of Fully Good, which is rather easier.

Ashmouni and Zagora: Have met with a fairly good inquiry and all styles have been dealt in, although the medium qualities have attracted most attention. Spot differences are without much change for Fully Good Fair and below, but for the better qualities they are distinctly cheaper.

Brown and Pilion: Brown has been in retail request and only a few bales have been done, but Pilion has met with a fair demand. Spot differences for Brown are easier all round, especially for Fully Good Fair and below, whilst for Pilion they are a little cheaper with the exception of Good, which has hardened somewhat.

White: Only a few bales have been done at about last week's spot differences.

Crop, 1926: Bad weather continued in the Delta during the first days of this week and germination in the plantations of the South and Central Delta has consequently suffered and is only fair. Field work and sowing in the North Delta has also been retarded by rain. As a result of the recent inclement weather, considerable resowing will be necessary. Prospects for the water supply during the summer months have not changed and are not by any means as good as could be desired.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Liverpool, April 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Verentia for Port Said, Colombo, Madras, and Calcutta (London, April 17).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, April 7).

British India Line.—S.s. Warfield for Colombo, Madras, and Calcutta (London, April 10); s.s. Gharinda for Bombay and Karachi (London, April 10).

Cunard Line.—S.s. Brescia for Gibraltar, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza (also Oran and Algiers if inducement) (Swansea April 3, Glasgow April 3, and Liverpool April 3); s.s. Pavia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, Trieste (also Corfu, Gruz, and Ancona if inducement) (Liverpool April 15, Swansea April 20).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 10); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 1).

P. and O. Line.—S.s. Rawalpindi for Bombay, London, April 16); s.s. Nankin for Colombo, Madras, and Calcutta (Liverpool, April 17).

Prince Line.—S.s. Italian Prince for Syrian Coast and Cyprus (Manchester, April 15).

Motors and Motoring.

By G. B. B.

I see that a correspondent of a contemporary prophesied that the Chancellor will leave unaltered the tax on private cars and on light commercial vehicles, will leave petrol alone, but will impose swinging taxation on heavy motor lorries, holding that it is they who do practically all the harm that is done to the roads. It is extremely unlikely that the Chancellor will do anything so foolish. I do not think even he could face the storm of indignation that would burst around his head. As a matter of fact, heavy lorries do no more harm to a road, in comparison to their weight, than does any other vehicle. The worst enemy the road has is the person who has just learned to drive a second-hand light car, and who starts at a rush and stops on the brakes every time. I can point to many a suburban road which is being literally dragged to pieces by drivers, and if anyone is curious on the subject he need only go to any road in the suburbs which has a left-hand bend, blind for preference. He will find the left-hand side of the road just before the bend torn into pot-holes, whilst the right-hand side will be perfect. Just past the bend he will find the left-hand side almost perfect, but the right-hand side torn to rags. No explanation will be needed by most of my readers, but for the benefit of the few I may say the reason is that the modern bad driver comes up to the bend, on the left-hand side, with a rush, crams on his brakes, and slides round generally with a bit of a skid. He usually has his clutch out, and is unable to find where his feet should go for a moment or two past the bend, and so we have the reasons for, first, the torn-up road, and, secondly, the unworn space. I see it is calculated that from now on 4,000 new motorists a week will be coming on the roads; drivers absolutely ignorant of driving, for the chief part. I see that one or two of the powers that be are wondering what they can do with the untrained driver, recognising, as they do, that he is a positive danger.

The solution is very simple. With every licence application the applicant should be required to state whether he has driven a car previously, and he should be asked to obtain the signatures of two gentlemen, who are acquainted with that fact, to a statement to that effect. If the applicant has not previously driven a car, he should be required to display definitely dimensioned plates in front and at the rear of the car, bearing the word "Novice" in bold letters, and he should be required, under penalties, to keep this plate on his car until he could prove, by a sealed speedometer, that he had driven the car, say 5,000 miles. It may be said that there would be ways and means of evading such a requirement, but no gentleman would desire to evade it.

Brooklands and the R.A.C.

I see that the somewhat difficult and certainly trying job of organising and controlling the parking arrangements at the chief meetings at Brooklands has been given to the Royal Automobile Club. It has not been too easy, hitherto, to park one's car at this resort, but the R.A.C. can be depended upon to show us exactly how the thing should be done. Easter Monday is the first day of the new control, and R.A.C. guides will be present in, I understand, quite imposing numbers.

Passengers on Lorries.

Every lorry owner does his best to prevent his drivers from taking passengers surreptitiously, but a large number of drivers seem determined to do as they please. I see a technical paper has just asked its readers to warn their drivers that many cases of smallpox spreading from district to district have been found to be due to drivers of lorries giving lifts to tramps and vagrants who may, and often do, carry the germs of all kinds of diseases in their clothing. A further point that should be stressed is the risk of accident. I see that a recent bad smash was due to the fact that the driver could not control his lorry because he had three men on the seat with him. Because of this his movements were so hampered that when a car ahead of him drew up to a standstill he was unable to get his foot to the footbrake, and so smashed into the rear of the standing car. The practice of overcrowding the driver's seat is becoming by far too common, and positive orders should be given to stop it. At any moment an emergency may arise which will require quick thought and speedy action by the driver, and the presence of unauthorised people in front will simply mean that he will be hampered, to some extent at least, in the use of his pedals and levers.

A "New Phantom."

I have just received from Mr. Claude Johnson a photograph of the first 40-50 h.p. "New Phantom" Rolls-Royce in Australia. The photograph was taken near the Man-o'-War steps, and a portion of North Sydney can be seen in the background across the harbour.

The bodywork has been built to the owner's requirements by Messrs. Jackson, Jones and Collins, of Sydney. The hood is of a type very popular in Australia now, being permanently fixed in position, and not intended to be let down, though it is made of the same material as those which do let down. The lining of the hood is toned to suit the upholstery of the car, and the outside material is black leather.

Brake Tests.

A number of tests were recently carried out in connexion with the brakes fitted to heavy motor lorries and also with those fitted in heavy private cars. It was found that the average motor lorry foot brake was capable of stopping the lorry from a speed of 20 miles per hour in 85 feet, whilst the average foot brake on a private car will bring it to a standstill from 20 miles per hour in 45 feet. To see what could be done, better brakes were fitted to the lorries and it was then found possible to stop them, with full load, as quickly as the private cars could be stopped. From this it would seem that the brakes of some motor lorries might be improved with advantage.

Company Meetings.

EASTERN BANK.

Difficult Trade Conditions.

Mr. J. S. Haskell's Speech.

The sixteenth annual general meeting of the Eastern Bank, Limited, was held on March 24 at the office of the Bank, 2 and 3, Crosby Square, E.C. Mr. J. S. Haskell (the chairman) presided.

The Secretary (Mr. R. Carter) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—The balance at profit and loss account enables us again to recommend the payment of a final dividend of 5s. a share, less tax, which, with the interim of 4s. already paid, will make 9 per cent. for the year, to add £20,000 to the reserve and £10,000 to building account, leaving £37,902 12s. 8d. to be carried forward, against £35,400 4s. 1d. brought in, an increase of £2,502 8s. 7d.

During the year under review trade conditions have proved most difficult, more particularly in the countries in which we are principally interested. Although India has continued to export largely owing to a fairly good monsoon, the imports of goods and merchandise have been most disappointing, resulting in a serious falling off as compared with the previous year. Cotton and woollen goods alone show a decline of as much as £7,000,000, and there is a decrease of £2,500,000 in metals and £1,250,000 in sugar. The total drop, including other commodities, amounts in all to about £13,000,000.

The heavy fall in cotton and consequent cheapening of the cost of the manufactured goods should have stimulated a good demand, but it has not helped the situation. The Indian mills themselves have had a bad year, and the stoppage owing to a strike over an extended period and consequent reduction in production has also had no better effect.

Japanese shipments, however, disclose a considerable increase, and this has no doubt affected the local manufacture. It is rather difficult to explain this slackening of demand. The high prices as compared with pre-War prices may be an important factor, and the steady drop in the raw material all through the year must have also kept buyers out of the market. Now that cotton has reached a fair price and stocks everywhere of the manufactured article may be said to be depleted, it is reasonable to hope that in the current year, particularly if India is again favoured with beneficial rains, we may see a steady revival in trade not only in Manchester goods but in other commodities as well.

Exports from India.

As regards exports of goods and merchandise from India, the total during the year amounted to £305,000,000, with imports £169,000,000, leaving £136,000,000 in favour of India. Towards counterbalancing this India has taken £46,000,000 in gold and £15,000,000 in silver. Purchases of sterling by the Government of India amounted for the 11 months from April to the end of February to no less than £46,317,000, being nearly £15,000,000 above the Treasury requirements for the whole year. A large sum in sterling has been accumulated here, and in order to pay for these extra remittances more currency notes were issued in India, the total at present being Rs.191 crores, against Rs.180 crores in January of last year, thus creating an inflation of currency which had the effect of making the money market very easy. The highest rate of the Imperial Bank of India during the busy season has been 6 per cent., as compared with 7 per cent. last year and 9 per cent. previously, while during the slack periods funds were unlendable, the day-to-day rate in the market having been as low as ½ per cent.

Pending the report of the Royal Commission on Indian currency, the rupee has been practically fixed by the Indian Government at 1s. 6 3-16d. They have been buyers whenever the rate showed any tendency to go higher; consequently for considerable periods there has scarcely been any variation in the rate. I alluded in my address last year to the way in which these purchases are effected, and I now venture to hope that the Royal Commission in their recommendations will lay down regulations as to the manner in which these purchases of sterling should be made. A notification of a fixed date with the amount to be purchased and the minimum rate is urgently called for, and on each occasion details of the resulting purchases might be published, as was the case when Council Bills were sold in London.

My remarks with regard to trade and exchange clearly demonstrate what a tremendous period we have been passing through, and the results shown in the accounts will, I think, under the circumstances, be a source of satisfaction to you, as it is to your directors. These results have only been possible by the loyal co-operation of Mr. Sutton and the managers and staffs at the head office and abroad, and it gives me great pleasure to record the appreciation of the board for the manner in which one and all have carried out their duties. We have been unfortunate during the year in losing the services of Mr. David Andrew, the manager of the bank at Calcutta, who died suddenly in Bombay whilst on a tour of inspection, and was thus cut off in the prime of life, to the great regret of the board, who had a very high opinion of his ability.

Situation in Iraq.

In Iraq conditions continued unsatisfactory throughout the year. Apart from the influence of the general depression all over the world, that country had its own troubles to contend with, among which were the failure of the harvests through the shortage of rain, also the restrictions imposed by the Persian Government, which severely hampered the transit trade. As regards textiles, which are one of the principal imports, actually a greater quantity was taken from Lancashire than in the previous year, due to lower prices; but owing to the disabilities of the transit trade stocks accumulated, and with the continued drop in cotton merchants and traders were faced with serious depreciation and suffered heavy losses. The sugar business, which is next in importance, was considerably disorganised by the proposed introduction of a monopoly by the Persian Government and the imposition of a surtax on imported sugar, which resulted in a severe set-back to the trade. Russia also proved a formidable competitor for the first time for many years. By some means, before notification of the monopoly, large quantities of sugar were exported from that country to North Persia, while Russia also possessed an unfair advantage in the form of a preferential duty owing to the application to Russian goods of the Persian Customs Tariff of 1902, which is more favourable than the 1920 tariff, which applies to other countries, and to which Russia is not a party.

I am glad to say, however, that the new year has opened more hopefully. The rainfall so far is up to the average, while negotiations with the Persian Government tending to the modification of the transit regulations will probably take place in the near future.

Politically the outstanding event is the settlement of the long-drawn-out Mosul dispute by the award of the League of Nations, and it is hoped that the negotiations with Turkey will lead to peaceful relations between Turkey and Iraq in the future. In spite, however, of the stagnation of trade and the political uncertainty, Iraq has not been at a standstill. The country has made considerable progress towards financial and constitutional stability; its budget is balanced and will show a good surplus this year. It is pleasing to note from all accounts that there is a growing recognition of its prospects and possibilities, which, with the help of British capital and enterprise, can be developed to the advantage both of Great Britain and the new Arab State.

You will have noticed in the report that a branch of the bank has been opened in Kirkuk. We do not anticipate much in the way of business in that district in the near future, but we as Government bankers considered it necessary to establish this branch. I may add that we have closed the branch at Hillah, as there was no longer any need for it.

The Outlook.

Turning to the balance-sheet, the total compared with the previous year shows a small reduction, something like £300,000, distributed among the various items in the accounts, and which call for no special comment; but they show that in spite of the slackness of trade and the keen competition and other adverse factors to which I have referred we have been holding our own, and there has been no set-back anywhere. So we may look forward with confidence to the time when the tide turns, as turn it must, and the trade revival sets in.

I now beg to move: "That the report and accounts, as presented, be adopted, and that a final dividend of 5s. a share, less income tax at 3s. 7.884d. in the pound, after allowing for relief in respect of Indian taxation, be paid on March 29 to the members who are on the register on that date out of the net profits of the bank for the year ended December 31, 1925."

Sir James Leigh-Wood, K.B.E., C.B., C.M.G., deputy chairman, seconded the motion, which was carried unanimously.

Sir James Leigh-Wood then moved: "That Mr. J. S. Haskell and Sir Percy Wilson Newson, Bt., the retiring directors, be re-elected directors of the bank."

Mr. G. Bromley-Martin seconded the motion, and it was unanimously passed.

The auditors (Messrs. Turquand, Youngs and Co. and Messrs Lowe, Bingham, and Matthews) were reappointed.

Colonel Westropp moved a cordial vote of thanks to the chairman, directors, and the staff. He said he was sure they had all listened to the very able and interesting address which the chairman had given them with the utmost pleasure. They all realised how much the bank was interested in the prosperity of Iraq, as it was the

chief British bank operating in that country. Now that the political horizon had cleared by reason of the fact of the mandate having been definitely settled, he thought they could all look forward to a considerable increase in the prosperity of that country through the development of its trade and industries. If these developments took place they might reasonably expect that this bank would derive considerable profit. The profits of the bank for the last four years seemed to have been very stable and, in fact, had shown a slight increase. They had received a substantial dividend, and additions had be made to the reserves. He thought for these results, considering the difficult times they had been passing through, they had every reason to be very grateful to the board. The chairman had testified to the loyalty, devotion, and zeal of the staff. In his view many of the staff worked under very trying climatic conditions, and he knew that they appreciated a vote of thanks given by the shareholders at the general meeting of the bank. He would particularly ask the chairman to convey to the staff in the East the shareholders' appreciation of their good work. (Cheers.)

The motion was duly seconded and unanimously approved.

The Chairman briefly replied to the compliment, and the proceedings then terminated.

NATIONAL BANK OF EGYPT.

A Prosperous Year.

The twenty-sixth annual general meeting of the shareholders of the National Bank of Egypt was held on March 25, at the head office of the bank, in Cairo. Sir Bertram Hornsby, C.B.E. (the Governor), presided.

The Governor said:—Gentlemen,—The balance-sheet and profit and loss account which we have the honour of submitting to you on this occasion are of more than usual interest. In the first place you will notice that the annotation which for several years past has appeared at the foot of the balance-sheet, regarding the amounts standing to our credit with banks in Germany and Austria, has now disappeared. As is probably known to most of you, the legal proceedings which we were obliged to take before the Mixed Arbitral Tribunals in London have all been brought to a successful conclusion. The last and most important case was decided in June last; we failed to obtain a judgment against the bank which was our debtor, but on the other hand, we were awarded compensation against the German Government, the amount of which not only covered the capital of our claim but also left us with a substantial balance, which we have carried, as you will have noticed, to the profit and loss account.

The net profit for the year 1925, amounting to £997,886, is £61,535 greater than in the preceding year. Expenses are £25,052 less, so that with the £154,967 encashed over and above the capital of our German claim, we have £241,554 more to dispose of.

Your directors propose that the balance over capital of the German encashment should be distributed as a special bonus and not in the form of dividend, in order to mark clearly the exceptional character of this distribution. Moreover, in this way we shall avoid the appearance of making a reduction in our dividend next year, when we shall have to depend on our normal profits alone. We propose, then, the payment of this special bonus of 10s. a share, and the declaration of a dividend of 17 per cent., placing £125,000 to the special reserve and increasing the carry forward by £11,103. The statutory and special reserves, will then amount to £2,550,000.

I must explain that, before arriving at the figure of profit, we have made a special transfer of £100,000 to buildings account. We are faced in this current year with the necessity of making a considerable addition to our head office building, and we have also other building schemes in view at several of our branches. The cost of these buildings will be charged against buildings account, and as this is an account we do not wish to see greatly increased, we have taken this opportunity of providing in future, out of profits, for the expenditure in view.

The year 1925 was, on the whole, a prosperous one for bankers, and we have had our share of that prosperity, with the result that we are able to recommend an increase of 2 per cent. in our dividend, which has remained stationary at 15 per cent. during the last five years. The policy of your board in the matter of dividends is, whilst endeavouring to give satisfaction to the legitimate aspirations of the shareholders, to proceed on cautious lines. We must bear in mind the heavy responsibility which the bank carries as the bankers of the Egyptian Government and as the sole Bank of Issue of the country, a responsibility which imposes the necessity of placing prudence in the forefront of our considerations.

Compared with the figures for 1924, most of the headings of our balance-sheet show little change, with the exception of the Government account and the public deposits. The former has increased considerably, whilst the latter are about £2,000,000 less than a year ago. This decrease in public deposits is in no way due to a falling off in our business—the number of our customers shows, on the contrary, a steady progression. On the assets side there is an increase in our holding of Government securities, corresponding roughly with the net increase of deposits.

The movement of the Note Issue has presented an abnormal feature in that the amount of £E41,900,000 outstanding on January 1, 1925, proved to be the maximum of the year. From this time up to the middle of August there was the usual seasonal decline to a minimum of £E28,700,000. The needs of the cotton crop caused an ascending movement, which, however, stopped on October 5 at the figure of £E38,400,000. In ordinary circumstances the rise should have continued up to a later period of the season, but owing to the fall in the price of cotton and the extreme slowness with which the crop is being marketed, the demand for currency has been considerably less than usual.

The following figures show the maximum and minimum points of the last five years:—

1921	£E39,900,000 ...	£E30,400,000
1922	37,300,000 ...	26,300,000
1923	38,700,000 ...	24,000,000
1924	42,400,000 ...	26,900,000
1925	41,900,000 ...	28,700,000

The cotton crop for the season 1925-26 is estimated to produce over 8,000,000 kantars, which is higher than it has ever been. The American crop is also exceptionally large. Consequently the pressure to sell as compared with the demand has been such that there has been a marked drop in prices. Sakellaridis cotton at the commencement of the season was quoted at about 50 dollars per kantar, whereas to-day it is down to 30 dollars, and this in spite of considerable purchases on the open market by the Egyptian Government. It is not in the least to be considered that production has overtaken demand in any permanent manner: allowing for bad seasons and for the increase in the world population, the position may at any time be reversed.

The financial and economic situation of the country, despite the present set-back to cotton and the resulting depression in the import trade, remains fundamentally sound.

From the trade statistics of the last six years, which are here given, it will be seen, leaving out of consideration the two abnormal seasons of 1919-20 and 1920-21, that there has been a substantial balance of exports over imports. At the present moment trade is depressed and the figures for the current year may not make such a good showing, but the reserve of wealth accumulated by the country during the last few years has enabled it to face a period of depression which we may hope is only temporary:—

Imports and Exports.

Sept. 1 to Aug. 31.	Imports.	Exports (including re-exports).
1919-1920	£E87,577,985 ...	£E113,461,806
1920-1921	71,725,677 ...	37,690,260
1921-1922	46,006,529 ...	50,185,140
1922-1923	44,453,116 ...	53,561,788
1923-1924	47,440,590 ...	64,109,696
1924-1925	56,257,511 ...	67,952,808

The settlement of some part of the favourable balance continues to be affected by the purchase from abroad of Egyptian securities. This movement, however, is on a smaller scale than it has been, first because sellers are scarcer, and also because there is a tendency in countries with depreciated currency not only to keep these securities but also to buy back at higher prices their previous sales. Recent decisions of the Courts on the question of the rate of exchange at which certain securities expressed in francs should be paid in Egypt have had for effect an appreciable addition to the wealth of the country.

During the past year the state of trade in the Sudan has on the

} Directors,

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the above Balance Sheet with the books in London and the certified Returns from the Branches. We have obtained all the information and explanations we have required. In our opinion such Balance Sheet is full and fair, containing the particulars required by the Regulations of the Company, and is properly drawn up so as to exhibit a true and correct view of the state of the Com. any s affairs according to the best of our information and the explanations given to us and as shown by the books of the Company.

whole been satisfactory. The completion of the Sennar Dam, which was officially inaugurated last January, will, no doubt, result in the continuous development of the country. In the South interesting experiments are being made in the cultivation of rain-grown cotton of the American variety, and the results seem to promise well for the future when improved transport is available.

At Port Sudan, considerable extensions of the quay space are being made in order to accommodate the increasing number of vessels using this port.

The following are the figures of the imports and exports of the Sudan during the last five years:—

	Imports	Exports.
1921	£E5,806,070 ...	£E2,318,533
1922	4,252,890 ...	2,298,770
1923	4,669,004 ...	2,758,425
1924	5,474,910 ...	3,830,171
1925	5,437,727 ...	4,168,364

During the year we elected Sir John Davidson to our board, as a member of the London Committee, and we ask you to-day to confirm this nomination. The directors retiring by rotation are Sir Frederick Rowlatt, H.E. V. Harari Pacha, Colonel the Hon. Sidney Peel, and Mr. E. W. P. Foster, who offer themselves for re-election for a further period of five years.

In conclusion, we wish to thank the Sub-Governors, the Managers, and the Staff for their services during the year.

NATIONAL BANK OF INDIA.

Improvement in Indian Trade Conditions.

Sir Charles McLeod's Speech.

The ordinary general meeting of the National Bank of India, Ltd., was held at the Wesleyan Hall, Bishopsgate, London, E.C., on March 30, Sir Charles C. McLeod, Bart. (the Chairman) presiding.

The general manager (Mr. Nicoll) having read the notice convening the meeting,

The Chairman said: Ladies and Gentlemen,—I presume you will allow us as usual to take the report of the Directors and the accounts to December 31, 1925, as read. (Agreed.)

Before I proceed with the ordinary business to-day, I would like to say how much we all regret the death of our colleague Sir Marshall Reid, briefly referred to at our last annual meeting. Shortly thereafter we were all shocked to receive the news of Mr. Nimmo's death at Nairobi. He had visited most of our branches in East Africa and was shortly returning home, when he developed enteric, to which he succumbed. We greatly deplore the loss of these two members of our Board. We have appointed the Hon. E. Julian Hawke and our general manager, Mr. Charles Nicoll, to fill the vacancies, and you will be asked to confirm thesese appointments to-day. Mr. J. N. Stuart is abroad but is expected back shortly.

We are glad again to be able to place before you results which fully maintain the satisfactory position disclosed in the previous year's balance-sheet, in practically every particular; the year's profits of £536,104 being slightly in excess of those of the previous year and making with the amount of £224,980 brought in a total of £761,084 to be dealt with. This total is £26,104 more than was available a year ago, the difference being accounted for by the increased amount brought forward. As in previous years all bad and doubtful debts have been fully provided for.

As you will see from the report in your hands, we propose to place £50,000 to reserve, bringing that account up to the satisfactory figure of £2,850,000 against our paid up capital of £2,000,000, to write down premises account £30,000, and to place to credit of the officers' pension fund £40,000. A further dividend at the rate of 20 per cent., free of income tax, is proposed, which together with the interim of like amount absorbs £400,000, leaving a balance of £241,084 to be carried forward, or £16,104 more than a year ago.

Balance-sheet.

I do not know that the various items comprising the balance-sheet call for any special comment. The remarkable liquidity of our position will be apparent to you and also that, with the exception of acceptances, all last year's figures have been maintained or increased.

Our ratio of cash to deposits (over 16 per cent.) is a satisfactory one, and when to our cash £5,454,526 you add our securities £13,983,007, and bills of exchange £6,768,060, you get a total of £26,205,593 against deposits of £33,168,283, a very liquid position you will admit, but one which still leaves us, as I pointed out to you a year ago, more dependent upon investment in Government securities for employment of our large surplus funds than we would like to be, the financing of Indian trade being our legitimate sphere.

Our securities are all gilt edged and short dated. They stand in our books at or under market value and, being readily realisable, enable us at any time to finance a larger amount of ordinary trade business should the hopes we all entertain in this respect materialise.

On the whole, trade conditions in India are slowly improving, and in the meantime we have fully maintained our position. It is satisfactory to be able to record an increase of over £600,000 in our current and fixed deposit accounts, and the total of the balance-sheet figures at £40,729,000 which is some £400,000 more than a year ago. You will observe that we have again converted our rupee assets and liabilities at 1s. 4d. per rupee.

Now with regard to Indian imports of gold and silver to which reference is usually made at these annual meetings, the following are the gold figures for the calendar year 1925, taking exchange at 1s. 6d.—

Gold imported in 1925	£43,552,950
Gold exported in 1925	349,448
Making net imports	£43,203,502

These figures are considerably in excess of the record total of 1924 and are more than 50 per cent. of the world's production for 1925. The highest price of the year was 87s. 9d. and the lowest 84s. 10½d. per ounce fine.

Since the restoration of the gold standard in this country which was announced by the Government on the occasion of the Budget Speech on April 28 last, the price of gold has been almost stationary at 84s. 11½d. per ounce fine, which is practically the equivalent of 77s. 10½d. per ounce standard at which the Bank of England is now under legal obligation to sell the metal.

The silver figures are—

Silver imported in 1925	£16,340,015
Silver exported in 1925	1,186,300
Making net imports	£15,153,715

which also exceed the silver imports of the previous year.

The highest quotation was 33 7-16d. per standard ounce and the lowest 31 1-16d. The difference between the highest and lowest prices has against narrowed, and was only 2⅜d. and we have to go back to 1909 to find such steadiness in price and such narrow fluctuations. This steadiness is possibly to some extent due to the improvement in the American exchange consequent on the return to the gold standard in this country in April last.

The Indian Government has not found it necessary to buy silver

COMPANY MEETING NOTICES.

THE AGRICULTURAL BANK OF EGYPT.

Notice is hereby given that the TWENTY-THIRD ORDINARY GENERAL MEETING of the Agricultural Bank of Egypt will be held at the Head Office of the Bank in Cairo, on Thursday, the 15th April, 1926, at 4 o'clock p.m. for the purpose, among other things, of:—

Receiving the Directors' Report.
Receiving the Auditors' Report.
Approving the Accounts for the period ended 31st January, 1926.
Declaration of Dividends.
Election of Directors.
Election of Auditors and fixing their remuneration.
And the transaction of the general business of the Ordinary General Meeting.

Every Shareholder holding a minimum of Five Shares has the right to attend the General Meeting, provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the Shares in London is the 1st April, 1926), when Cards of Admission and Proxy Forms will be handed to them at one of the following places:—

In Egypt—At the National Bank of Egypt, Cairo.
At the National Bank of Egypt, Alexandria.
In London—At the National Bank of Egypt, 6 and 7, King William Street, E.C.4.

B. HORNSBY, President.

Cairo, 17th March, 1926.

Digitized by Google

for coinage purposes, the amount of rupees held by the Currency Department being increased from 8,076 lakhs on December 31, 1924, to 8,333 lakhs on December 31, 1925.

The figures of the export and import trade of India for the past year are not unsatisfactory. Exports of merchandise were valued at Rs.407 crores against Rs.383 crores in 1924, whilst imports for 1925 stand at Rs.226 crores as compared with Rs.238 crores for the previous year. Imports of gold amounted to Rs.61 crores and silver to Rs.20 crores. These figures leave an apparent balance of trade in favour of India of Rs.100 crores which has been reduced to a net figure of Rs.43 crores by purchase of sterling by the Indian Government to the extent of Rs.57 crores. This net balance of trade in favour of India has presumably been met to a large extent by "invisible imports" such as remittances by industrial and planting companies of profits earned in India, freight on shipping, private remittances, etc.

The Indian Exchange.

Rates of exchange throughout the year were maintained in the neighbourhood of 1s. 6d. To meet the requirements of trade the Government of India have been free buyers of sterling at 1s. 6 3-16d. and have thereby checked any upward movement in exchange which might have resulted from the large favourable balance of trade. These purchases of sterling and consequent issue of currency have kept the money market well supplied with funds, with the result that rates of interest have been kept at a much more moderate level than in previous years, and in consequence profitable employment for our funds in India has been rendered somewhat difficult. However, the lower value of money has no doubt been to the benefit of the commercial community generally. As you know, a Royal Commission on Indian Exchange and Currency is now sitting, and it is to be hoped that it will be able to put forward recommendations for the satisfactory stabilisation of Indian exchange without introducing any measures likely to disturb Indian trade or the trade of the world generally.

As regards Indian industries—tea planting companies in which so much British capital is invested are giving satisfactory returns to their shareholders and future prospects appear to be good. India is not largely interested in rubber growing, but in South India those companies which a year or two ago were working at little or no profit are now finding a profitable market for their production and yielding handsome returns to their shareholders.

In Bengal the prospects of the very important jute manufacturing industry, which hitherto has been very prosperous, are somewhat uncertain, due to scarcity of raw material, in consequence of which prices stand at an unhealthy level. Crops of recent years have been barely sufficient to meet the increased requirements of the world for jute goods. It is to be hoped that the Government of Bengal are giving this important question their serious attention and that they will make every effort to encourage the increased cultivation necessary to keep this most important industry on a sound footing for the future.

On the Bombay side the cotton mill industry has been under a cloud, and most of the companies have been working at a loss or without profit. This unsatisfactory state of affairs has been largely attributed to competition from Japanese mills which are underselling the Bombay mills in the Indian market. No doubt a depreciated exchange has enabled the Japanese manufacturers to compete in India, but surely with the raw material at their door and the whole of India as a market for their production, Bombay mills should be able to hold their own. During their period of prosperity some of them were too lavish in distribution of profits, and sufficient financial provision was not made for the adverse times which come to most industries. With economical and intelligent management there is no reason why Bombay mills should not return to prosperity.

As you are aware, Lord Reading's term of office expires this month. He leaves India in a more settled state than he found it five years ago. His successor, Lord Irwin, is now on his way to India to take his place. He carries our best wishes with him. His great interest and his ripe knowledge in education and agriculture will be of immense advantage to India.

It may interest you to know that I have just returned from a short visit to India, where I had an opportunity of conferring with our managers in Calcutta and Bombay, to, I hope, our mutual advantage.

In East Africa conditions have been fair. In some parts rainfall has been short, but generally the country is producing more and the extension of transport facilities there should stimulate increased cultivation and production.

In conclusion, I desire again to place on record on behalf of myself and my colleagues on the Board, our keen appreciation of the good work of our managers and staff, to whose zeal and care we owe our present satisfactory position.

I beg to propose:—"That the report of the Directors and statement of accounts for the year ended December 31, 1925, be received and adopted, and that a dividend for the six months to December 31, 1925, at the rate of 20 per cent. per annum be paid on the shares of the company registered at this date, the same to be payable, free of income tax, on and after March 31, 1925." After this resolution has been seconded by Mr. Miller, and before I put it to the meeting an opportunity will be given to anyone who wishes to make any remarks or to ask any questions.

Mr. Robert Miller seconded the resolution and it was carried unanimously.

The appointment of the Hon. E. Julian Hawke and Mr. C. Nicoll as directors was confirmed and they were re-elected, and Mr. J. N. Stuart and Mr. Robert Miller were re-elected directors.

The auditors, Messrs. Cooper Brothers and Co. and Messrs. W. A. Browne and Co., were reappointed.

Mr. J. Irwin Davis: Mr. Chairman and gentlemen,—I have much please in proposing: "That a vote of thanks be given to the chairman and directors for the care and prudence exercised in conducting the affairs of this Bank during the past year, and also to the general manager and staff for their valuable services." It affords us very great pleasure to congratulate Sir Charles McLeod and his co-directors on the extremely satisfactory report which they have been able to present for the past year. We thank Sir Charles for his able speech, and are very pleased that his first year in office as chairman has been signalised by such splendid results.

Looking back on the unbroken record of prosperity for many years past, we have almost come to expect such results as a matter of course. Indeed, if they turned out otherwise, I am afraid some of us might think that the Empire was going to the dogs. There are people who imagine such things, but I am sure they are not shareholders in the National Bank of India. Thanks to our directors we are all optimists. During the last nine of ten years we have received a dividend of 20 per cent., and in the same time the reserve fund has more than doubled. I think the directors may congratulate themselves on such a record.

One of the chief assets of the Bank is the good will of the staff, a good will which requires no writing down. It is an asset we are all very proud of. (Hear, hear.) We have long been familiar with the splendid spirit of loyalty, devotion and zeal which has always permeated the staff of the Bank, and nothing gives us greater pleasure than this opportunity of expressing to the general manager, managers and staff at home and abroad our unabated appreciation and thanks for their splendid services.

I note with pleasure that the sum of £40,000 has again been allocated to the officers' pension fund, and I can assure the directors that anything they may do in order to foster the happiness and contentment of every officer of the Bank will always receive our hearty support. (Applause). I am sure that the resolution which I have the privilege of proposing will meet with a warm welcome not only from the shareholders but from the customers of the Bank.

Mr. Frederick Tomkinson seconded the vote, and it was unanimously accorded.

The Chairman briefly acknowledged the compliment on behalf of the directors and the staff, and the proceedings terminated with a vote of thanks to the Chairman for presiding.

CHANGE IN NAIRN TRANSPORT ROUTE.

The Nairn Transport Company announce that, having been guaranteed full security by the French Military Authorities, they have changed their overland mail itinerary as from March 18 and until further notice. Convoys now leave Beyrout for Baghdad at 4 p.m. on Thursday afternoons and proceed via Tripoli-Homs-Palmyra, reaching Baghdad on Saturday afternoons. The time table is as follows:—

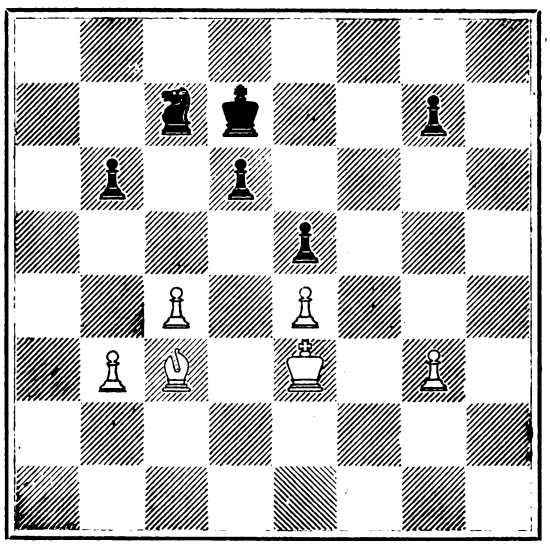
Leave Beyrout	Thursdays	4 p.m.
Arrive Tripoli	„	7 p.m.
Leave „	Fridays	6 a.m.
Arrive Homs	„	10 a.m.
Leave „	„	10 a.m.
Arrive Palmyra	„	3 p.m.
Leave „	„	3 p.m.
Arrive Rutbah Wells	„	11 p.m.
Leave „ „	„	12 p.m.
Arrive Ramadi	Saturdays	10 a.m.
Leave „	„	10.15 a.m.
Arrive Baghdad	„	2 p.m.

Cars will meet the train from Egypt arriving at Haifa Station at 9.30 a.m. on Thursday mornings, and passengers travelling by that route will be accommodated on the cars for the journey from Haifa to Beyrout. These cars run in conjunction with the departure of the convoys from Beyrout, and there is an extra charge of £1 for the journey Haifa-Beyrout. The company will provide hotel accommodation for the night spent at Tripoli and all food for the remainder of the journey to Baghdad. Meals or hotel accommodation at Beyrout are not provided by the company. The rates for this route will be the same as at present in operation, i.e. Beyrout to Baghdad £36. Free baggage allowance is 75 lb. per passenger. Excess baggage is charged at the rate of 1s. per lb. A discount of 10 per cent. will be allowed on the fare to bona-fide Army officers and Government Officials, but no discount is allowed on the excess baggage charges.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended March 27 states:—

There has been no development of either interest or importance during the past week. Raw cotton remains very steady in price, but there seems to be a feeling that the possibility of a further fall is not out of the question and to this more than any other factor is attributed the present inactive state of the market.



Yarn.—A discouraging state of affairs prevails, particularly in the American section. Demand remains small and prices are weak. The result of the ballot on the question of extending mill hours will be announced next week, and it is thought that it will result in the necessary majority being obtained in favour of 35 hours. There is considerable comment regarding the taking of this step at a time when trade seems to be very poor. Egyptian spinnings have not met with any particular demand but the total consumption appears to bear a larger relationship to the production than in the American section.

Cloth.—A quiet week has been experienced and manufacturers have met with little support. The Indian inquiry for dhooties and other light fabrics has dwindled considerably and transactions in other classes of goods have been of unimportant dimensions. Little transpires for China, and none of the smaller outlets has attempted anything worthy of note.

Raw Cotton.—Business in Liverpool continues to run on quiet lines. Spot demand is only moderate. Interest is now developing in the prospects for the next season's American crops and at the present time these are reported to be favourable. Closing quotations yesterday were as follows:—American Middling, 10.16. Egyptian Fully Good Fair, 15.60.

CHESS.

By "CARO-KANN."

PROBLEM No. 39.

White to play. What result?

The following game was played at the fourth board in the match between the past members of Oxford and Cambridge, and was one of the two wins scored for Cambridge with the Black pieces. 1, P—K4, P—QB3 (1); 2, P—Q4, P—Q4; 3, Kt—QB3, PxP; 4, KtxP, Kt—B3; 5, Kt—Kt3 (2), P—K4 (3); 6, PxP (4), QxQ; 7, KxQ, Kt—Kt5; 8, K—K (5), KtxKP (6); 9, P—KB4 (?), Kt—Kt5; 10, P—KR3, Kt—B3; 11, Kt—B3, B—QB4; 12, B—Q3, QKt—Q2; 13, Kt—B5, O—O; 14, P—KKt4, R—K (ch); 15, K—B, Kt—Kt3; 16, Kt—Kt3, Kt (Kt3)—Q4; 17, B—Q2 (7), Kt—K5 (ch); 18, BxKt, RxB; 19, K—Kt2, Kt—Q4; 20, Kt—Q2, B—Q2; 21, Kt—K5, KtxP (ch); 22, KtxKt, RxKt; 23, KR—R, RxR; 24, RxR; QR—K; 25, RxR, BxR; 26, K—B3, B—Q5; 27, P—B3, B—B3; 28, B—B5, P—KKt3; 29, B—B2, K—B; 30, Kt—Kt2, K—K2; 31, P—KR4, K—Q3; 32, B—Kt3, P—Kt4; 33, P—Kt5, B—Kt2; 34, Kt—B4, P—QR4; 35, Kt—K2, P—QB4; 36, B—B2, P—B4; 37, Kt—Kt3, B—B3 (ch); 38, K—B2, K—K4; 39, Kt—K2, B—B; 40, K—Kt3, B—Q3 (8); 41, K—B2, P—QB5; 42, Kt—Q4 (9), B—B4; 43, K—K3, B—K5; 44, B—Q, P—B5 (ch); 45, K—Q2, BxKt; 46 PxB (ch), KxP; 47, B—Kt4, B—Q4; 48, B—Q7, P—Kt5; 49, K—K2, P—QB6; 50, P—Kt3, P—B6 (ch); 51, resigns.

(1) It is a tradition that Oxonians are very familiar with the regular openings. Hence the adoption of the Caro-Kann Defence.

(2) This is not to be recommended. 5, KtxKt, KPx Kt; 6, QB—B4 and White has a fair game, though I prefer Black even in that case.

(3) The obvious rejoinder.

(4) P—QB3 was the move.

(5) And here I prefer Kt—R3.

(6) The alternative to the immediate recapture of the Pawn was B—QB4.

(7) Here P—Kt5 might have been tried. There would have followed 17 . . . . Kt—K6 (ch); 18, BxKt, RxB; 19, K—Kt2, Kt—Q4; 20, Kt—K2, B—Q2; 21, P—B5, QR—K, and while Black has undoubtedly the better game there are defensive possibilities.

(8) This was not a good move, and would have led to a serious loss of time if White had played 41, Kt—Q4, but apart from the loss of time involved White would have been unable to obtain any advantage thereby.

(9) A mistake which loses another Pawn.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The New Roumanian Government.

In the exercise of his constitutional duties King Ferdinand of Roumania has called upon General Averescu, leader of the People's Party, to form the new Government, which will be responsible for holding the general election. Of the 368 seats in the Assembly of Deputies that has now been dissolved 258 were held by the National Liberals, who have just laid down the reins of government, 34 by the Tsaranists or Peasants' Party, 35 by the Nationalists under M. Maniu and Professor Jorga, whose National Popular Party contributed four seats to the joint Party, and only 13 seats by General Averescu's People's Party. As far back as January 1925 M. Maniu endeavoured to persuade all the Opposition parties to come together with a view to forming an effective alternative to the National Liberals. Only the National Popular Party acted upon his suggestion; General Averescu was stated to have regarded himself even at that time as M. Bratianu's successor, and the Nationalists, with strong Conservative leanings, could not hit upon any policy that commended itself to the ultra-Democratic Peasant Party. A working agreement among the three was evolved for the purpose of opposing the Government at the recent communal elections; but insuperable difficulties presented themselves when the parties discussed combined action with a view to forming a Coalition Ministry. The Nationalists and Tsaranists also failed until the eleventh hour to agree upon the distribution of portfolios in a joint Government formed from only the two parties. Negotiations to this end were in progress when the Bratianu Ministry resigned. The King first urged the three Opposition Parties to form a single Ministry; then when this was found to be impossible of attainment, he asked the three leaders to submit separate lists of Ministers. It was only at this stage that the Nationalists and Tsaranists composed their differences and were able to submit a Coalition Ministry. King Ferdinand, however, passed them by, and entrusted the Government to General Averescu.

Election Making.

The reasons that prompted King Ferdinand's action have not yet been stated. It may be that he found it difficult, in the absence of a combined Opposition Cabinet, to ignore the recommendation of the outgoing Premier. He may even have been influenced by the fact that General Averescu was able to point to three or four Transylvanians in his proposed list of Ministers, whose defection would suggest that there was no striking unanimity of opinion in that province and seemed to open up a prospect of splitting up the parties on other than racial or regional lines. The result of the experiment will be awaited with interest. In the course of the next few weeks General Averescu will make his appeal to the country, and his chief pre-occupation will be to increase his following of twelve in order to make a better showing in the new Parliament. If he has no chance of securing a majority himself, even under the new Electoral Law, he may prefer to see the Liberals fare better than the Nationalists and Tsaranists, as he can hope for no mercy from the latter parties. It would seem as if there would have to be a great change over in the opinions of the electorate to confound the wiseacres who have prophesied that General Averescu will make his appeal to the country, and his or an adequate programme, will early in the history of the new Parliament declare his inability to continue in office, leaving the King no alternative to summoning the Liberals back to power. The coming elections are likely to be hotly contested. One clause of the new Electoral Law deprives of representation in the Assembly any party that does not poll two per cent. of the total number of votes cast. At least half a dozen Parliamentary groups stand to be affected by this clause, among them the

Digitized by Google

Minorities in Transylvania and other parts of the Kingdom. Already they are discussing among themselves whether, to avoid the fate in store for them, they had not better link up with one of the other parties.

The Pre-occupation of Islam.

The stand taken by the authorities of the Al Azhar University in Cairo against the adoption of European dress by the students has been followed by a formal *fetwa* issued by the Grand Mufti and the Rector against modern headgear. The wearing of hats, it is declared, is against the Moslem religion, which forbids the faithful to imitate infidels, and moreover, it is calculated to contribute to the disappearance of national traditions and distinctive characteristics of Egyptian personality. The rebuke to Turkey is obvious, and it will be of interest to see whether any attempt will be made at or after the promised conference regarding the Caliphate to carry the controversy farther. Between the two extremes—no change and compulsory change—Western sympathy will incline to the former, which at least can command some recognisable form of sanction; behind the compulsory change lies at best a personal whim of the moment, which, for all that it can tell, may be confusing non-essential externals with deep-seated inherent characteristics. In the opinion of the Angora Government the Turk will have a better chance of becoming a good Westerner, if he put on a local parody of a Western hat than if he continues to wear the fez. At the same time they make it as difficult as possible for the Turk to study at first-hand the essentials of all that makes the West what it is by excluding its representatives from Turkey. The authorities of Islam in Egypt hold that there are in every nation, certainly in the Egyptian, qualities and traditions worthy of being cultivated, and that, if the Egyptians have nothing in them worth building a nation upon, the wearing of a Western hat will not give it them. Time will show whether Wisdom has taken up her abode in Cairo or in Angora, or is permanently domiciled in the West, where in regard to headgear, she is known as "please yourself."

Yugoslav Cabinet Crisis.

The Coalition Government in Yugoslavia formed by the Radicals under M. Pashitch and the Raditchists has been in existence since last July, but it was only in November that M. Stefan Raditch himself entered the Government. These last five months have been so full of incident as a result of M. Raditch's activities and eloquence that the news of the break-up of the coalition is hardly a matter for surprise. On the other hand, the cause of the breach between the two parties will seem strange to most foreign observers. On March 30 the Skupshtina was formally adjourned on the motion of the Government until May 5, but the same evening M. Raditch appears to have informed M. Pashitch that, unless the Chamber were called together on April 8, he and the other Croat members of the Ministry would resign. M. Pashitch refused to accede to this request and has now tendered the resignation of the whole Cabinet. As when he threw in his lot with the Radicals, to the unmeasured abuse of whom he had devoted several years of his life, M. Raditch once again will have the rest of his fellow-countrymen guessing his motives. His party of sixty-four can by joining hands with the whole of the Opposition parties who command 109 seats in the Skupshtina place the 142 Radicals of M. Pashitch in a minority. Yet his record in office is not likely to commend him as a ministerial colleague to any party leader, and in view of the possibility of the Davidovitch Democrats throwing in their lot with the Radicals, it would be unwise to take it for granted that M. Raditch has yet defeated such a veteran parliamentary tactician as M. Pashitch. The cynical will, no doubt, reflect that nine months ago opposition to M. Pashitch meant for M. Raditch an indefinite term in prison; this time he can be in opposition without that embarrassing disability. The one explanation that does not appear possible is that the disagreement is staged merely to enable the two leaders to reconstruct the Ministry.

The Greek Presidential Election.

The eleventh hour withdrawal of the candidature of M. Demertzis, the nominee for the Presidency of the political parties, left General Pangalos as the sole candidate. The reason for this sudden development has to be sought in the Government's decision to hold the election in two parts, the first instalment in one-third of the constituencies on April 4 and the second a week later. Inability on the part of the prefects of nine provinces to make the necessary preparations by last Sunday was the reason given for the postponement of the polling in these particular divisions. To the Opposition electoral wisdom appears to have suggested that this method of sounding a third of the electorate so as to be able to make sure that the remaining two-thirds made no mistake was unduly loading the dice against them, and they have decided not to give General Pangalos the satisfaction of beating their candidate. In the circumstances it might be regarded as unfortunate that General Pangalos stepped down from his Dictator's pedestal in order to make election speeches; but Athens has benefited in having secured the abolition of the regulations for long skirts and short hours of amusement. In this the candidate dictated to the Dictator.

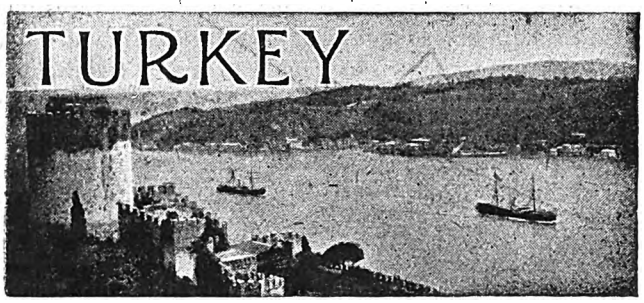
THURSDAY, APRIL 8, 1926.

THE MANDATE FOR SYRIA.

"The mandate is a provisional system designed to enable populations which, politically speaking, are still minors, to educate themselves so as to arrive one day at full self-government. This presupposes that the mandatory Power will gradually create native organisations in the mandated territory such as may, if they carry out their duties in a proper manner, render the intervention of the Mandatory unnecessary. It appears from this that there should not be any intervention on the part of the organs of the mandatory Power in the internal affairs of the native governments."

Such was the description given last February by M. de Caix, the French Representative, to the Permanent Mandates Commission in extraordinary session at Rome, of the conception which the French Government holds of its mission in Syria. To some observers, especially to Arabophils, this description will bring a cynical, mirthless smile; to less partial men, considerable puzzlement: and to the most impartial, as represented by the international Permanent Mandates Commission, a quite certain hope. It is, of course, not open to doubt that the spirit of the Syrian mandate as defined by M. de Caix has in the past been flagrantly violated by the Mandatories—for even before the rising last year of the Druses the administration of a new-fangled polity which was neither the familiar colony, nor a dominion, nor a protectorate was uncertainly performed by the constantly changing French governors; but equally it is not open to doubt that the intention exists on the part of M. de Jouvenel, the present High Commissioner for Syria, to observe both the letter and the spirit of the clauses pertaining to the administration of Class "A" Mandates. In this respect it must certainly be put to the credit of the Permanent Mandates Commission that it has set to the rest of the world a fine example of perspicacious impartiality. In the Report which the Commission has forwarded to the Council of the League of Nations, all the pros and cons, so far as they were made available by the somewhat reticent mandatory Power and the only too effusive "native" organisations, are nicely weighed, and the Commission's account is, if a trifle academic, probably as good as in the circumstances could have been made.



As was fitting, the Commission kept to its task of supervision and co-operation. On this head it throws a side shaft: "As it is anxious not to make the task of France in Syria and the Lebanon impossible of performance, it does not in the present instance recommend the Council to set up a commission of inquiry independent of the mandatory Power." Doubtless, recollection of the furore created, for instance, by the King-Crane Mission to Syria, and of the Teleki Boundary Commission to the Mosul vilayet, induced the Commissioners at Rome to this wise recommendation. What might have been the effect of such a mission of inquiry can be gauged by the chagrin and indignation of the Syrians that it has not been sent out. The Report contains, however, several strictures on the French, both of a general and of a particular kind. It deplores, for example, the constant and bewildering changes in territorial organisation that the Mandatories have made; it deprecates the subjecting of the Syrian pound to the fluctuations of the French monetary unit; it speaks of "the abuses of authority which appear to have characterised the last part of Captain Carbillet's administration"; and of that *mangeur. des prêtres*, General Sarrail, it says, with excellent restraint, that his recall was "perhaps too long deferred." But in emphasising the lack of continuity of French policy, the Commission does recognise the tremendous difficulties of the French. It points out that the opposition of a section of the Syrian upper classes to any sort of mandate has never relented; that the majority of the Syrians, dependent on these upper classes, were "insufficiently prepared to play an effective part in the working of a modern State"—the apathy and inefficiency of the native organisations are, indeed, more than once insisted upon; and that in a population of only two and a half millions there were no fewer than eighteen religious creeds more or less mutually antagonistic. And finally, having explained that but for the vast sacrifices on the part of the French, Syrians would probably have long since fallen under a foreign yoke ("from which their unaided efforts would never have sufficed to free them"), it pays a most handsome tribute to the upright intentions of M. de Jouvenel, expressing the hope that the Syrians, by desisting from sterile bloodshed and strife, will collaborate with the Mandatory, thus hastening the day of complete emancipation.

It would be foolishly optimistic, however, to suppose that the discontented warriors in Syria will follow the Commission's advice. Present evidence, in fact, points in the other direction. The calm consideration by the Mandates Commission of the demands and charges of the various Syrian Nationalist organisations seems temporarily to have infuriated the opponents of the French, with the result that the heavy stroke which has been prepared by General Gamelin, but which it was hoped by the High Commissioner to avoid using, seems more than ever likely to descend upon these unfortunate people. As things are now, there can be no peace; and if the Syrians and Druses must suffer such punishment as was meted out to the Iraqis in 1920 before they gain their longed-for independence, we may and do regret the necessity, but see no other way. It seems improbable that the future path of the Syrians can be very smooth; their own serious divisions are but few of them of French manufacture, and it is not only due to the different methods of the British mandatory that the races inhabiting Iraq and Palestine are more content than they. A constitutional façade may be, and indeed is being, built by M. de Jouvenel for the delight of the Syrians and for the *beaux yeux* of the League, but the creation of a national spirit, or of such a "nationality" as is being aimed at in Iraq and Palestine, is not a matter of form, nor is it made easier by the immemorial particularisms and separatisms of the various people of Syria. To those who know the real nature of elections in the East it would appear probable that the salvation and ultimate unification of Syria and the Lebanon will be brought about rather by economic than by political means. For the present, however, there exists but one problem: pacification.

The Near and Middle East*

From Our Own Correspondents.

Constantinople, March 31.

The High School for Girls.

The question regarding the English High School for Girls has not yet been definitely settled. Miss Thomas, the Headmistress of the school, was yesterday acquitted by the Turkish Tribunal in Constantinople of the charge of disobeying Government orders as, in view of the fact that the school authorities have now agreed, in principle, to the Turkish demand that the Professor already nominated should be accepted, no case of ignoring Government instructions exists. While this acceptance would appear to point to a climb-down on the part of the British Authorities, it must be understood that such an undertaking was given only on the understanding that the unwelcome Professor would, in reality, be substituted by some other whose qualifications were considered by the School to be more satisfactory. Whether the school actually recommences work or not still rests with the Turks, as in the event of their not fulfilling their side of the bargain the school authorities will doubtless prefer closing to submitting to such unheard-of exactions.

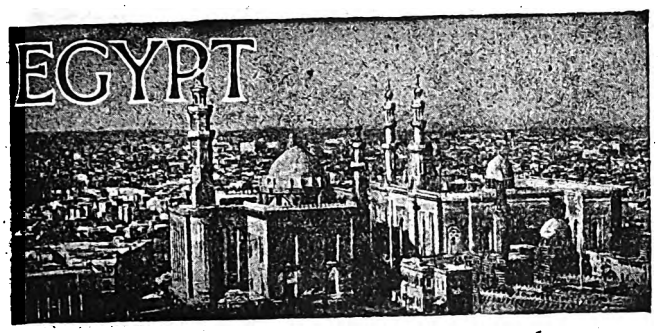
All foreign schools will, in the near future, run up against another Government order concerning instruction which constitutes a further contravention of the Lausanne Treaty, insomuch as their interior organisations will be interfered with. In future Turkish is to be taught by classes arranged so that all scholars with the same amount of knowledge of the language will assemble together. This will entail that girls of, say, eighteen years of age who have no knowledge whatsoever of Turkish will probably be classed with children of eleven and twelve of like accomplishments as regards this language, while small girls already somewhat versed in Turkish will, on the other hand, be moved into classes of seniors. Failure to pass in Turkish is, under these order, sufficient to disqualify a collective examination, no matter how well or how many other subjects the scholar passes. In these circumstances one is constrained to conclude that "foreign schools" as ordinarily understood simply do not exist in Turkey.

More Kurdish Trouble.

During the last ten day another insurrection towards the Mosul frontier has been occupying the serious attention of the Turkish Army stationed in that district, and while all reports describe the incident as one of no importance, telegrams from Angora have not yet gone as far as stating that the rising has been definitely suppressed. No details of interest are available beyond the report that certain tribes have succeeded in penetrating the Turkish outpost lines and have advanced from Nisibin to Midiat. It is alleged that the chiefs of these tribes, Hadjo and Chakib, who are the instigators of the movement, have directed operations from within the Mosul boundary and are, therefore, immune from Turkish punishment. This incident, which is doubtless more serious than is allowed to be made known, has again brought home to the Government the fact that there still remains much to be accomplished before peace and tranquillity can be considered as being assured, and their latest intention, in order to control more effectively these rebel elements, is to transplant the lot from frontier districts to places such as Konia and Angora where they will be continuously under official surveillance. The above rising is as usual attributed to the meddling finger of Great Britain.

Turkish Floating Exhibition.

The Kara Deniz, which is to be used for the Turkish floating exhibition, is now on the point of departure. The finishing touches are being given, and in a very few days she will start on her voyage of advertisement to which much hope for future orders is attached. She has just returned from Smyrna, where she went at the request of Ismet Pasha, who inspected her and found her satisfactory. Arrangements have been made to entertain lavishly at the numerous ports she is to visit, and extensive preparations have been made to cater for all the nationalities of Europe. Merchants exhibiting are being accompanied by complete assistants, and catalogues in various languages are already being distributed by the offices of the Turkish Chamber of Commerce established abroad. The Ministry of Commerce has also decided, at the instigation of the Turkish Chamber of Commerce in Constantinople, to open a permanent exhibition of Turkish products at the office of the Turkish Commercial Attaché in Liverpool.



Earthquakes.

Something of a record in earthquakes has been established recently in Turkey. Twelve earthquakes, most of them violent, extending over the last fifteen days, have been felt in different parts of Anatolia. About fifty lives are reported to have been lost and much damage to buildings has been done. Adana has been one of the chief sufferers, and this town, whilst a metre and a half under water, was the scene of four successive earthquakes. A recent report made by the captain of an Italian steamer states that when passing through the Black Sea a volcano was noticed on a small island near Samsoun.

Cairo, March 27.

The Political Murders Trial.

The unexpected development in the political murders trial caused by the withdrawal of one of the Egyptian judges on the eve of the case coming before the Assize Court is causing much commotion among the Counsel for the defence. It is now an open secret that, in view of his being a member of the Bench before whom the case was to come, some of the actions of the judge in question had assumed the character of indiscretions, and it is obvious that in order to prevent any reflection on the members of the Court of Appeal generally this Judge decided to withdraw.

Counsel for the defence are clamouring for an explanation of the reason for his action, and are threatening a general strike of the Native Bar in the event of such explanation not being forthcoming. The barristers in question, who include two members of the Wafd Cabinet, may possibly have their own reasons for adopting this extraordinary attitude, but, in view of what is known, their attitude would appear neither to be in the interests of their clients nor to enhance their reputation as politicians or lawyers.

New Oriental Secretary.

While the retirement of Mr. R. A. Furness from the Oriental Secretaryship has been received with widespread regret by his large circle of friends, Egyptians as well as British, the appointment of Mr. W. A. Smart, Consul at Damascus, as his successor has given such satisfaction to those who have watched his career.

Mr. Smart has served with distinction in many centres in the Near East, and in none to greater effect than in Damascus, where the capable part he played during the recent troubles evoked the unstinted admiration and deep gratitude of his colleagues and the Christian communities. His loss to Damascus will, I am certain, be Egypt's gain. Incidentally it is interesting to note that, the Oriental Secretaryship in Cairo becomes once more a Consular post.

Official Visit to Mt. Sinai.

Ziwar Pasha's visit to Mount Sinai has aroused much local interest particularly, as the whole journey from Cairo and back took under a week. Hitherto the custom has been for those who have wanted to visit this historic spot and picturesque monastery to take ship to Tor and and then proceed by camel up the Wadi Islah and across the Rahaba, a journey of at least six "shids," to Gebel Mussa returning the same way. Ziwar Pasha, however, went by launch to Abu Zeneina, where a British Company is working the manganese mines, a journey of seven hours —and, stopping the night, went by car next day via the Wadi Ferrane to Gebel Mussa which he reached in nine hours. The road was not at all bad, and the whole party seemed thoroughly to have enjoyed the trip. The fact that it has now been proved possible to reach Gebel Mussa by car in one day from Suez—but for the rains the party would have motored direct from El Shatt opposite to Suez —instead of three days on camel-back from Tor, is likely to make the trip a more popular one than it has been in the past.

Hat Versus Tarbush.

The *fetwa* of the highest Moslem religious doctors in Egypt castigating those who wear a hat instead of a *Tarbush* or *Emma* as imitators of the infidel contrary to Koranic doctrine and condemning the marriage of Moslem women with non-Moslems and the equality of man and woman in the matter of succession, is an amazing document. Its tone is frankly fanatical, and the whole document indicates that, far from progressing, Al Azhar has retrograded in its attitude towards the affairs of the world since the day when the great Mohamed Abdou presided over its destinies. There is, however, some reason to believe that this decision has been taken with an eye to the coming Caliphate Congress in Cairo, and that Al Azhar has in this respect not been altogether free from interested influence from without.

The Nile Commission.

Mr. Macgregor and Abdel Hamid Pasha Suliman are to be congratulated on having succeeded in reconciling the points of view of the two Governments they represented, so as to be able jointly to sign the report which as members of the Nile Commission appointed in January 1925 they presented on Thursday to the Egyptian Prime Minister. From what has transpired the arrangement they propose seems to be eminently fair to both countries, and it is to be hoped that we have now heard the last of an unfortunate controversy, which unnecessarily embittered relations between Great Britain and Egypt, and has merely resulted in prejudicing the very interests which those who were responsible for the outcry in Egypt professed to be defending.

The King has approved the appointment of Maharaja Kashav Prasad Singh to be a Member of the Executive Council of the Governor of Bihar and Orissa, in succession to Mr. Sachchidanada Sinha, whose term of office will expire in June.

An additional £4,000 for the grant in aid of the League of Nations, and an extra £1,500 for travelling and incidental expenses, account for the advance of £5,500 in the League of Nations Estimates, which totals £78,000 The Empire Marketing Fund, which will be administered by the Secretary of State for Dominion Affairs, assisted by a committee, has been allocated £500,000.

WHEN STAMBOUL SHIVERS.

By "Selim."

Tumbling along on the Black Sea wind come the heavy snow-clouds, emptying themselves as they pass over the city to disappear beyond the gloomy rim of the Marmora. All day long grey flakes sift out of a grey sky, whitening as they reach the earth. When the dreariness of late afternoon begins to thicken, a vague spell distils over the patient city. Under that influence it seems a place where time has ceased to perform its kindly offices of destruction, burial and rebirth. No one can die, nothing changes; only the slow minutes freeze into white flakes which settle for ever on roof, branch and bowed shoulder.

Even upon the weather-beaten summit of that pagan monument, the Burnt Column, a new hoariness rests. The stained shaft grasped in its rusty fetters is somehow

The Mosque of Sultan Ahmed.

a haunting reminder of that brown demoniac who, bursting the chains of civilisation, wandered with shrieks of inner torment among the tombs by gentle Chinnereth.

Here a six-year-old Methusaleh goes whimpering by, his hand grasped in a claw that emerges fortuitously from a bundle of rags, the cocoon of some withered female. There the men pass, bowed and slow, many with their heads bound round with shawls, weary faces peering out from cavernous obscurity upon a weary world. An extreme swarthiness has fastened on everyone, as though we are all shadows of the night wandering forth unattended in that grey light. Only the little fires that dance in the streets where some brazier is being kindled seem truly alive. Here and there the snaky branches of spreading grape-vines canopy the streets and put forth growing clusters of icicles, a clearer and more slender fruit than that which sucked sweetness from the warm September suns. And so at last one comes on the sudden glories of the Hippodrome, of Aya Sophia and the Mosque of Sultan Ahmed.

It is perhaps a quarter of a mile to where the warm ochre bulk of Aya Sophia, that noble ship anchored on a hilltop to the glory of God, thrusts upwards against the settling gloom. Much nearer, a partial slide of snow from the dome of Kaiser Wilhelm's stiff memorial has softened its harsh lines with a happy suggestion of ruin. The gaping throat of the green Serpent Column is deftly stopped with a tuft of cotton, while the Colossus seems raggeder than ever with all its broken masonry accentuated with lines of white. Only on the tawny skin of the royal Egyptian obelisk have the sharp feet of the snow crystals found no hold. These random details are photographed on the mind and as rapidly forgotten when once the eye begins to resolve the great central miracle, the Mosque of Sultan Ahmed.

It seems more an architect's dream, rising out of the mists of sleep, than an actual edifice. In the foreground two snowy hedges of the Hippodrome form such a screen as would have been the despair of the cunning chisellers of old, those lovers of intricate white beauty who devoted lifetimes to converting marble and alabaster into lace. Beyond the hedges rises the ashen stonework of the mosque enclosure, broken by fifty windows, heavily barred. All along this black crisscross of iron the soft snow has crept, tranforming it into the daintiest imaginable chequer of black and white, beside which even the mosque's reading stands of pierced walnut and mother of pearl would appear coarse. The misty heads of vast, silvery plane trees overtop this wall and veil the stark, slender beauties of the great building beyond. Lost are the square walls and massive roofs of that immense structure. Only the upper parapets, blossoming into countless little powdered cupolas, are visible. Around these runs a snow-encrusted balustrade that seems a necklet of carved ivory. Now the mosque surges clear of all things earth-rooted, mounting, cupola upon swelling cupola, until caught into the embrace of marble half domes that lose themselves at last. as with a cry of triumph and fulfilment, into the snowy curve of the great, fire-tipped dome itself. Up and up rushes that glad cry in six slender minarets, touched now to unearthly delicacy by the shining band of white that descends, as true as starlight, from the golden point of each.

The lightness of the structure takes one's breath. It is not a building of this world. One looks to see the glorious bubble break loose from its moorings and float upwards, careening gently as it goes, towards the crescent moon whose orange ghost is moving feebly among the frozen clouds.

Presently all down the Hippodrome night lamps like marigolds flower suddenly. Slowly the sharp outlines of the mosque fade and blur. Stinging crystals charge down the North wind, and a piebald crow flaps dismally between the huddled spires of Aya Sophia. "Kar, kar, kar,"* he prophesies to the shivering world as he is swept off into the gloom.

* Snow.

BALAAM'S ASS.

By "Selim."

They were crossing the Galata Bridge near Stamboul. The mouse-like donkey, at his best jigglety trot, was attempting to out-distance his driver, a youth of quadrumanous tendencies, who instead of pricking the ass forward with a goad or thumping him with a stout cudgel, in accord with the local Marquis of Queensbury rules, was inspiring progress by means of kicks. It was difficult work. The boy had to run several steps, take a ridiculous hop while launching his disengaged foot in the direction of the donkey's disappearing North Polar region, then recover his balance and overtake his charge once more. His soft shot probably hurt the beast very little, and anyone who knows the Turkish donkey will understand the unregenerate longing to feel the tough, furry hide yield under the impact of an exasperated toe.

Upon this tranquil, bucolic scene descends the Turkish Republic in the guise of a gendarme riding up from behind on the lowest step of a red tram which, as it happens, is just slowing to a stop.

"Here, you, keep your feet to yourself!" shouts the gendarme as he draws abreast.

The youth turns open-mouthed at this interference with his personal liberty, realises that the gendarme has shot his bolt, for the car is now dropping behind, and answers boldly: "What else can I do? I have to make this infidel donkey-son-of-an-ass move, haven't I?" With this he runs on after his property, while the gendarme is left behind on the step of a stationary tram.

Boy and donkey have gone perhaps another fifty yards when the red tram overtakes them again and a grey figure leaps catlike on to the shoulders of the astonished youth, whirls him about and commences to abuse him in good round Anatolian. In this land an angry gendarme leaves little of a distinctly unpleasant nature unsaid. But the terrified young man scarcely hears him, being himself too completely engrossed with spouting tears, prayers and promises. Meanwhile the little grey donkey, taking advantage of the diversion, lays back his ears and races down the slope of the bridge until caught by a small boy harbouring visions of backsheesh.

Quickly the gendarme has a growing audience attending his vigorous Band of Mercy address. His victim writhes and pleads. That twin stream of humanity which sweeps all day to and fro across the bridge begins to rush into a whirlpool about the ring. Traffic is almost suspended. But now the oration rises to its final crescendo, and soon after there bursts out of the crowd a reformed and penitential donkey boy.

Even when he has reached the end of the bridge, with not a gendarme in sight, the youth still carries his cudgel harmlessly under his left arm, his feet occupy themselves with locomotion only, while his right hand affectionately pats the furry rump. "Come along, darling; step lively, my soul," he keeps repeating softly.

But nothing in his past experience has prepared the unfortunate ass for this. As they disappear into the crowd at the bridge-head his lean, grey, bobbing visage is hollow with apprehensive alarm.

A Parliamentary Paper (No. 27—V., price 1s. 3d. net) gives details of the Estimates for Class V., Foreign and Colonial Services, for the financial year ending March 31, 1927, the total of which is £7,588,827, showing a net decrease of £297,013.

THE WEEK AT HOME.

London, Tuesday Morning.

A Perfect Eastertide.

For those who wish to know by exactly how much this Easter was better than its predecessors there are the meteorologist's statistics sensationally splashed out in the newspapers; for those who cherished the sun and the warmth and the stillness of the time there is, in sufficing abundance, the memory of it all. It was indeed a perfect Eastertide, of such geniality and promise as profoundly to turn one's thoughts backward and then forward. The butterflies and lady-birds and bees clamoured in their homage to the sun.

To those who had gone a-travelling, at any rate in trains, it was perhaps too hot; but an increasing number of people will flock abroad for Easter, no matter what the weather.

Here, everyone enjoyed the time to the full. The children where they could thronged to the fields and parks, the fathers to dutiful but pleasant work in the garden, and the wives to proud contemplating of the unwonted spectacle. There was, for those who had nothing to do, a touch of dreaminess about the sun-laden atmosphere, as if time stood still and one would hold indefinitely the lavishly complete present. Little consideration was given to the days that must elapse before real summer is on us.

The Gardener's Paradise.

It is true, however, that this Easter, though it was perfect climatically, started less beautifully than some, owing to the early date of it. For the cherry, "loveliest of trees" was not at first arrived in its glory, and until its white had been so splendidly worn Summer could not really be said to be on her way. Between Good Friday and Easter Monday, however, its boughs increasingly hung with white.

But the ordinary man knows well enough what, in the mundane sense, Good Friday means, for if Easter Monday is to be given up entirely to the holiday spirit of extravagance, Good Friday is spent in gardening. Little gardens in the suburbs were fairly throbbing with activity. The plants that chiefly seem to have been bought were creeping jenny, marigolds, calceolarias, carnations, and gladioli. But they are optimists who have planted them—and planting was work, because the ground was very hard—for it is almost certain that we shall have many more frosts.

However, everyone must learn by experience. And it is surely one of the Englishman's most lovable characteristics that he devotes so much care and pride to his garden. It is a spectacle for the Immortals to behold the prosaic, individualistic specimens of our race become for the nonce one with his primroses and daffodils aid newly-rolled grass.

The Negotiations on Coal.

To turn from these subjects to the negotiations on the coal industry is like an outrage upon Nature, a deliberate turning against the light. But, as the Premier recently said, in one of those occasional speeches for which he has justly become famous, the full man is the man who can stand square to all four winds that blow, so that one may rightly turn to a consideration of the black pits and their problems with the scent of the primrose still in one's nostrils.

At the moment the negotiations are in an extremely

Digitized by Google

critical stage, for it looks as though the question may be narrowed down to the mere reduction of wages—a proposal which in its bare form the Miners' Federation would of course resist.

However, it is good to find that the mine-owners, in their report to the miners and the Government, have quite considerably improved their tone and attitude. The crux of their report is wages. In this respect the mine-owners accept the procedure laid down by the Commission (fixing of new district minima in place of the present national minimum percentage by district authorities subject to confirmation by the national body). This the miners regard as a retrogressive step, and it has been hinted that they will resist the proposal at their conference to-morrow. But it remains to be seen both whether the reductions which the mine-owners had in view are identical with those foreshadowed by the Commission, and whether such reconstruction as was planned to accompany reduction would not in effect neutralise the thing so feared of the miners.

The Electricity Bill.

From the detached point of view the chief interest to be derived from the Electricity Bill is the nature of the compromise which has been secured in so typically a British way between individualism and nationalisation in the production of one of life's modern necessities. It was the plaint of some Conservatives that this was the first step towards nationalisation, and of some Labour members that there was not enough of nationalisation in it. In these circumstances, of course, the Bill got comfortably home.

But not without a certain unusual excitement. For the Rothermere Press had been very outspoken upon the motives which prompted certain Conservatives to oppose the Bill. It was suggested by the *Daily Mail* and by the *Evening News* that the band of Die-Hards led by Colonel Gretton were opposing the Bill unworthily. These men were quick to take umbrage, some of them, according to *The Times*, even bearing witness "that they did not know what an electricity share looked like." The Editor of the *Daily Mail* was duly arraigned, a report was duly issued, and the matter is now duly forgotten.

But what the public, in its slow stubborn way, thinks about it all, one does not know. It hears so often about the amalgamation of Trade Union interests, and so little about the association of capitalist interests, that it was almost sorry to see the veil tantalisingly raised and then so discreetly dropped. The general impression appears to be that the *Daily Mail's* charge or imputation would have been better ignored.

National Finance.

There does not appear to be much consolation to be derived from the results of the past financial year, which ended with a deficit of some fourteen millions. This deficit is, of course, due to the unforeseeable Coal Subsidy, and it may be that the Chancellor of the Exchequer, whose estimates have actually been exceeded by eleven millions, is congratulating himself when the nation as a whole is rather gloomy about things. Certainly abuse cannot well be called down upon Mr. Churchill's head, for the fact that we are not yet finished with the Coal Subsidy is a dismal reminder that our financial happiness depends far less upon the Government of the day than upon the industrial situation.

On the whole the general opinion seems to be that trade is gradually but surely getting better, but there is no one, so far as I know, who is not rather haunted by the possibility of serious trade upheavals. In these circumstances it is being said that Mr. Churchill must next year allow for contingencies: assuredly he will have had warning. This probably implies the impossibility of further reducing the income tax; but that cannot be helped.

What new taxes the Chancellor will introduce on April 26 is the subject of very eager speculation. It is being taken for granted now that there will be some sort of a raid on the Road Fund, that the possibility of a Betting Tax being introduced is not so remote as it once was, that there will be certain luxury taxes, and that several more safeguarding duties will be imposed. It is at any rate fairly patent that expenditure cannot be very much further reduced, and the only thing to do is to increase the revenue.

Spring Art Shows.

It is characteristic of some London galleries that in their larger exhibitions you can infallibly depend on their quality. One of these is the Goupil, in Regent Street, the Spring Exhibition of which is really delightful. Most of the pictures are by living British artists, distinguished both *in esse* and *in posse*, but there is just a sufficient sprinkling of French work to make the whole show lightsome and varied. And what quality there is here! Wilson Steer, Francis Dodd, James Pryde (very pregnant and resourceful), D. S. MacColl (a marvel of economy), John, Orpen, Gill, and so on, among the water-colourists; and in the oils one not only notices but remembers Sickert, Greaves (especally), Carrière and Monet. Quite emphatically this is a show to which visits in abundance are good.

How very different is the annual exhibition of the Painters in Water-Colours at the Royal Institute in Piccadilly! Here, if you profess to find distinction, you are fortunate or generous indeed. The "official" kind of work, in which landscape is always pretty, and girls are always young, and flowers are never drooping, has a

most depressing effect. One stops almost overwhelmed in gratitude before the all too few works of such men as Gerald Ackermann, Orpen, John Reid, Terrick Williams, and Ranken.

If you wish to know what may be accomplished by one of the more breathless of the more advanced school of British painting, you can go to see some paintings by Mr. R. Ihlee which are being exhibited at the New Chenil Galleries, Chelsea. This artist appears to hold such a definite creed, as not only induces him to live among the primitive people in France and Spain but also binds him severely round with ferocious formulæ. His capability is considerable, but his courage even greater. By means of sledge-hammer blows (he started life as an engineer) he does convey a certain effect with his studies of Southern landscape. And his drawing, in such works as "Ouled Nail," can be undeniably fascinating. But the main derivative from this terrific brightness and strength is monotony.

The Pirate Buses.

There is considerable jubilation in the breasts of those independently-minded people who have espoused the cause of the Pirate bus against the Combine, the L.G.O.C. Recently the Ministry of Transport preremptorily ordered off certain roads a number of these rivals to the Trust; but, to the credit of the spirit of the British people, the matter has not ended there. For most of these banished buses refused to obey the Ministry's rulings, and have continued on their way. The jubilation arises from the fact that so far no action has been taken against them. This inaction is being generally attributed to the recognition by the Government that popular opinion is all on the side of the smaller concerns.

Personally, my sympathy is entirely with the Pirates. To me it appears perfectly iniquitous that a bus should be turned off the roads merely because it may not have been paid for in full (for that is the plight of many of these small, struggling owners). I have talked to many of the employees of either side, and it is safe to say that, generally speaking, little enmity exists between the men of the rival concerns. But the L.G.O.C. employees appear to think that money (by which they mean their own employers) is bound to win in the long run, and that, even if, as has already been done in certain instances, the "General" has to buy up all the small companies. That issue, however, rests finally with the public which uses the buses. A petition which bore over a hundred signatures was sent recently to the Minister of Transport pleading for the retention of the independent buses; but it was ignored. This sort of treatment of the public will not be endured indefinitely.

Alter Ego.

FORCES IN PALESTINE AND TRANSJORDAN.

It is officially announced that in view of the change which has taken place in the situation in Palestine and Trans-Jordan within the last five years, it has been decided on the recommendation of the High Commissioner for Palestine, to reorganise the military and police forces in those territories on a more economical basis.

The principle has been adopted that a clear distinction as regards functions and organisation must be made between the forces to be employed on normal police duties and those whose functions are military.

The following are the forces hitherto employed by the Palestine and Trans-Jordan Governments:—

(*a*) The Palestine Police Force.

(*b*) The Palestine Gendarmerie, divided into two sections—viz., a dismounted British section and a mounted Palestinian section; and

(*c*) The Arab Legion in Trans-Jordan.

Under the reorganisation both sections of the Palestine gendarmerie are being disbanded, but five officers and some 200 men of the British section, and two officers and some 250 other ranks of the Palestinian section, will be re-engaged for service with the Palestine Police Force, the establishment of the force being increased accordingly. The Arab Legion is also being disbanded, and a police force is being created in Trans-Jordan, the personnel of which will be recruited from suitable members of the Legion. The remainder of the Palestinian section of the gendarmerie will form the nucleus of a military force to be called the Trans-Jordan Frontier Force, which it is proposed to raise mainly for service in Trans-Jordan. The establishment will be completed by the enlistment of surplus personnel of the Arab Legion. The force will be officered by serving British regular officers seconded from the Army or Royal Air Force. British staff sergeants and sergeants required to complete establishment will be attached from the regular army.

Statements to the effect that Jews are to be excluded are inaccurate. A certain number of Jewish gendarmes, now serving in the Palestinian section of the gendarmerie, have already been selected for enrolment in the new force. As, however, the Frontier Force is primarily intended for service in Trans-Jordan, the number of Jews in its ranks will not be great. The remaining Jewish personnel in the gendarmerie have been offered transfer to the enlarged Palestine Police Force.

The British cavalry regiment recently stationed in Palestine has been withdrawn and will not be replaced.

The general effect of the reorganisation will be to reduce the total strength of the Forces in Palestine and Trans-Jordan. No vacancies will be created for British personnel, with the possible exception of a few regular army officers, warrant officers, or non-commissioned officers.

The Greek Government's decree prohibiting the wearing of skirts shorter than fourteen inches from the ground has been cancelled.

THE VICTORIA MEMORIAL: CALCUTTA.

LORD READING.

Lord Reading, who handed over his great office on Saturday after a tenure covering five particularly strenuous years, has left India to the accompaniment of a chorus of praise. To realise its justification, one need only repeat Lord Reading's own catalogue of the results that have been achieved during his period of office: "Peace reigns in our borders, internal disturbances have been set at rest, law and order have been vindicated and established, the financial situation has been stabilised, conditions have been created which give a fair prospect for trade and commerce in the development of India's resources, and the anxieties of the Indian Moslem population have been allayed." One has only to compare this state of things with that which obtained when Lord Reading took over from his predecessor, to recognise that, in calling attention to it, he is entitled to do so with satisfaction and pride. The last words in his farewell address to the Houses of the Legislature, which included the catalogue set out above, were that he would wish to be remembered "as one who did his best to serve India." There is a well-known American story of a dance hall in the Wild West where prominently displayed placards made an appeal to its patrons:—"Do not shoot at the pianist. He is doing his best." Without the least desire to shoot at Lord Reading, it is permissible, if only in justice to his predecessor, to suggest that, like all really successful leaders of men, he has been able to command not only outstanding ability but also abnormal good fortune. First and foremost, he has enjoyed five successive good monsoons—an almost unprecedented sequence. Secondly, the two outstanding menaces that confronted him on his arrival in India—the Khilafat and Non-co-operation agitations—were both destroyed by circumstances in the production of which the Government of India had no hand. It has been argued that the Khilafat agitation lost its power with the publication of the Government of India despatch on the revision of the Treaty of Sèvres—that publication which brought about the resignation of Mr. Montagu. So far from this being the case, its effect was exactly the opposite; the agitators saw in the despatch nothing except a tribute to the success of their methods of agitation, which had driven the Government of India to go to these lengths in order to try and placate them. The sole destructive agent was the Turkish Republic and its abolition of the Khilafat. As for the Non-co-operation movement, the real destructive agent was the tragic massacre of 23 Indian policemen at Chauri Chaura. For Mr. Gandhi, non-violence was something more than the means to the end of revolution: it was an end in itself. Not so to his followers. Their end was revolution, be the means what they might. They were prepared to try Mr. Gandhi's treatment; but they quite clearly realised that it was only a preliminary one, that must in time give way to one much more drastic. When the inevitable happened, they hailed it with gladness, fully expecting that Mr. Gandhi would, in fact, though of course not in words, do so too; and it is undeniable that they had some grounds for this belief. But Mr. Gandhi disappointed them: after a week spent in conversations and discussions, he definitely refused to treat Chauri Chaura as an incident, and called upon his followers to down tools. Of the imposing edifice of Non-co-operation Mr. Gandhi was the sole architect: and, when he ceased to work on it, it immediately developed cracks that showed the defective materials from which it had been constructed, and in a remarkably short time the structure fell to pieces.

But, though the Non-co-operation movement is dead, killed by the hand of its creator and most of its effects are now shown to have been temporary and to have died with it, there is one of them that is very much alive—the acute communal dissension that forms perhaps the most disturbing legacy that Lord Reading has left to his successor. At the inception of his campaign, Mr. Gandhi quite clearly recognised that the one great necessity for its success was Hindu-Moslem unity: and that a united India must be the prelude to a self-governing India. As the easiest means of bridging the great gulf that divides Hindu from Mohammedan in India, he placed the "righting of the Khilafat wrong" in the forefront of his programme. By so doing, he alarmed his Hindu following: and their alarm was fully justified by the outbreak of the Moplah rebellion, which was directly traceable to the Khilafat propaganda patronised by Mr. Gandhi. In the course of that rebellion, the fanatical Moplahs treated their inoffensive Hindu neighbours with unspeakable atrocity: and the flame that was then lit in Malabar has spread throughout India until even those extremist politicians, who were most fervid in their pretence of the achievement of Hindu-Moslem unity, are forced to admit that division is wider and deeper than ever. And, in addition, there is one other effect that remains, though we must wait until the general election of November before it will be possible to say to what extent it has come to stay—the refusal of the Swaraj Party to work the Reforms. The Swaraj Party was born of the Non-co-operation movement, though Mr. Gandhi did all he could to prevent its birth; but, strongly though it dissents from Mr. Gandhi's tactics, its difference with the Government is fundamental. In the course of his farewell speech, Lord Reading said that his observations on the necessity for co-operation, as a prelude to any further advance in the Reforms, had been constantly misunderstood: "in particular, I desire to emphasise that I have never required the complete or abject surrender of any political party or section." This is where the fundamental difference arises. Lord Reading and Lord Birkenhead demand co-operation in working the existing constitution before there can be any question of extending or altering it. The Swarajists say that the existing constitution is all wrong: if, they say, we consent to co-operate in working it, we thereby assist to create the illusion that it is workable; so that, when an advance takes place, it will naturally take place along lines that we detest. It is all very well for you to say that, if we help you to make a success of what we have got, we may, in 1929, get something entirely different, but we are determined to show that that is the only possibility, and to that we will bend our whole energies. It cannot, therefore, truly be said that Lord

Digitized by Google

Reading's observations have been misunderstood—they have been understood only too well, but it is not only that the prospect held out by them is not attractive to the Swarajists: it is repellent. Nor is it fair to say that political surrender has never been desired: if it is not surrender to consent to try to work a machine that the worker believes to be producing material deliberately intended to destroy his prospects, it is certainly abdication to do so.

It is permissible to suppose that no Viceroy has ever entered on his duties with such serious personal handicaps as Lord Reading: and that he has so strikingly made good, as attested by the general sorrow manifested at his departure, is a great testimony to his charm, no less than to his ability. Lord Reading differed from all previous Viceroys in that he was a self-made man, with no aristocratic traditions behind him, who could neither shoot nor ride, and who belonged to a race that, from time immemorial, has been looked upon in India with a toleration that is generally mixed with contempt. In this latter particular it may be pretty confidently prophesied that the experiment will not be repeated. Added to this, he was a professional lawyer: not merely a titular one, as some of his predecessors have been, but one who has made an extraordinary success of his third choice of a profession—the existence of the two previous ones, not only well-known but on several occasions voiced by indiscreet orators, being by no means a point in his favour either. The life training of a successful advocate teaches him to "speak to his brief"—to put forward a slightly biased representation of facts with the object of persuading the judge to come to a conclusion favourable to the client who has retained him. It is not the best training for a man who has to come to important decisions himself: not even when it has been crowned by a great position on the Bench; for, when a judge is faced with a really knotty point, he can always "reserve judgment"—sometimes, one suspects, in order to consult a "ghost" in the background, who will be able to make up his mind for him. Lord Reading had the reputation, throughout his term of office, of habitually finding a difficulty in making up his mind. It is, of course, quite possible that this was undeserved, and that his fondness for granting extensions to high officials whose fitness for their posts was none too marked, and for taking the line of least resistance by habitually selecting the existing second-in-command to officiate or succeed, was really due to a failing not uncommon among supremely clever men—the conviction that his subordinates were all fools, and that it did not much matter which particular fool got the job. Among the outstanding acts of Lord Reading's Viceroyalty were two momentous decisions: the arrest of Mr. Gandhi and the introduction of the Bengal Ordinance. Though it is permissible to believe that the former was unnecessary—that the firework had already burned out before it was dropped into the bucket of water—nevertheless it was a momentous decision; but it was generally believed, at the time, that it was practically forced upon Lord Reading by what amounted to an ultimatum presented by a number of his most influential Lieutenants. As to the Bengal Ordinance, it has recently been stated that, directly Lord Lytton asked for it, Lord Reading at once agreed; but that is certainly not the case—it was only after prolonged hesitation that he at last brought himself to agree to a proceeding that was utterly repugnant to his legal mind. The same was the case in the matter of the introduction of martial law in Malabar—the rebellion was allowed to smoulder for months before the local authorities were armed with the powers that enabled them to suppress it. His decision to interview Mr. Gandhi is believed to have been his own; but it cannot be pretended that this was a success; for, though Lord Reading won an apparent victory by the extortion of a very half-hearted public apology from the Ali Brothers, which they took an early opportunity of repudiating, the honours of the encounter remained with Mr. Gandhi. It was doubtless also by his own decision that his first public act was to visit the Jalianwala Bagh at Amritsar: a visit which he followed up by a speech in which he was at some pains to convey the impression that, in his opinion, true justice had been rather at a discount in India, and that one of the main objects that he had set before himself was an improvement in this respect. From the Viceroy this was, perhaps, hardly judicious, though doubtless in keeping with the character of an eminent lawyer-judge. And, in one of his earliest public speeches, he made another remark that was perhaps injudicious—he referred to the fact that he himself belonged to what, for many centuries, had been a persecuted race. The fact that he, very naturally, at first surrounded his person with a number of individuals of his own race caused a certain amount of unfavourable, not to say indefensible, comment among Englishmen: and the fact that, as the representative of the King, he thought it his duty frequently to attend the services of the Established Church and to follow, with apparent devotion, the ritual of a creed of which his own is the blankest and most destructive negation, was often quoted, with uncomprehending astonishment, by Indians. As Viceroy, perhaps Lord Reading's greatest personal asset was his face, when in repose—a magnificent face, with intellect and power in every line; though, when he smiled, it immediately became the face of an Oriental. His next greatest was probably his remarkable personal charm: and it is unlikely that any of his numerous visitors—for he seldom denied himself to anyone, particularly any Indian, who had the least claim to the honour of an interview—can have failed to be subjugated by it at once. In almost every personal point except the last, Lord Irwin is the antithesis of Lord Reading; but the difference is, in practically every one, to Lord Irwin's advantage. In one of the last speeches that Lord Irwin made before he left England, he referred to the natural diffidence that every modest man must feel when he succeeds a great administrator: but let him not be discouraged at the prospect. Lord Reading achieved outstanding success in spite of starting with a number of very obvious handicaps: and that he should have done so is perhaps the most remarkable achievement in a most remarkable career. Lord Irwin, who starts with so many obvious advantages, can hardly expect to do better; but all those who have the honour of his acquaintance, and the vastly greater number who only know him by reputation, are fully confident that he will do as well.

CURRENT TOPICS.

Indians in South Africa.

It is announced that Mr. Jinnah's motion recommending an appeal to the King to disallow, in the last resort, the anti-Indian legislation contemplated by the Union of South Africa, was withdrawn on the promise of the Home Member to lay before Lord Irwin, at an early date after his arrival, the suggestion that, if the result of the action of the Union Parliament should realise the fears of Indian legislators, a special Session of the Legislative Assembly should be called to consider the question. One cannot but sympathise with the new Viceroy, at being called on, immediately after his arrival in India, to make a pronouncement on this thorny question; for, in the state of vocal Indian feeling on the matter, it is more than likely that his attitude on it will have a great effect on his chances of initial popularity as Viceroy.

The South African question is one that Indian politicians have made their own: and it is probably quite impracticable to try and make them realise that the question is an Imperial one, not really an Indian one at all. The Union does not object to the presence of Indians because they are Indians, but because they represent a specially

troublesome obstacle to the realisation of the desire for a "white South Africa," which shall be in a position to solve the already sufficiently disturbing problem of its large African population without the intervention of a third party the existence of which complicates it in what the governing race considers to be a wholly undesirable manner. To the Indian politician the matter is one of sentiment, and of sentiment only: to the white man in South Africa, it is one by which he believes his very existence to be threatened. When the Union spokesmen speak of Indians as an alien element in the population of South Africa, Indian politicians are roused to fury; but there is no getting away from the facts. Indian politicians make great play with the proposition that any citizen of the British Empire ought to be free to go where he likes, and to settle where he pleases, in any part of it; but it is permissible to suggest that the word "citizen" is often misapplied. In the Roman Empire, while all its inhabitants were Roman subjects, Roman citizenship was a special and much-prized distinction. So it is in the case of the British Empire: every individual of any of the nations that go to make up the British Commonwealth of Nations is a British subject, but not necessarily a British citizen.

The status of Indians in South Africa is too useful a subject to the Indian politician to be discussed without a certain amount of intemperate and foolish language: nor is one surprised to find that there are even Englishmen who can bring themselves to believe that the whole matter resolves itself into an insult, not only to India but to Asia. One such individual has lately been writing to the South African Press, with copies to the Indian Press as well, solemnly asserting that Japan and China are feeling the "humiliation" of the proposed Union legislation to such an extent that, if it is passed, the three countries are likely to "unite in common defence" with the probable result of a "great explosion." As the same writer also asserts that Indian feeling is so stirred in the matter that, if nothing is done to relieve it, "an outbreak of excitement among the masses will follow," one need not be unduly disturbed by his gloomy prophecies; for, if there is one thing more certain than another, it is that "the masses" are completely indifferent to the matter, which does not affect them in the smallest degree. But it is really disheartening to find a leading Anglo-Indian newspaper of Calcutta writing that "it is useless to bury the fact that Indian sentiment will be outraged so long as Indian immigrants are shut out of any part of the Empire of which they rightly claim to be citizens. If the Empire is to be a reality, the locking of the gates against any one of the many races that go to its making can neither be defended nor tolerated." Apart from the fact, apparently unknown to the writer of that article but perfectly well known to everyone else, that the question at issue is not the admission or rejection of Indian immigrants into South Africa, but the treatment of the Indians already there, many of whom are South African born, and know no other home-land, one has only to look dispassionately at the statement to realise its frank absurdity. If, for instance, the Union Government proposed to encourage mass immigration of Kafirs or Hottentots into India, Indian opinion would quite rightly object most strenuously. The misuse of the word "citizen" has already been referred to; but, when sentiments of this sort are ventilated even in responsible quarters, it becomes evident how warily Lord Irwin will have to walk in order to placate the Indian politician and, at the same time, avoid doing a very dangerous disservice to the Empire.

Presents.

The presentation to Lady Reading, on behalf of the women of all important communities in India, of a farewell address and a string of pearls, is a graceful expression of the thanks of Indian women to one who has done so much to further their welfare. At the same time, one cannot help wishing that the presentation had been confined to an address: and that, if it was felt necessary that it should be accompanied by a gift, this should have been something of sentimental rather than of intrinsic value.

There is every reason to suppose that this particular gift was spontaneous: and, as such, it is to be welcomed. There are, among European ladies in India, always a certain number of female counterparts of Gilead P. Beck's Hiram Turtle—who "ambitioned greatness": and one of the easiest methods of achieving what passes in India for social eminence is to "figure around," as Hiram Turtle did, with a list inviting subscriptions for a presentation. One remembers, a good many years ago, how a particularly pushing member of this sisterhood got up a farewell subscription for a great lady who was leaving India: and, when enough money had been promised, it was decided that the presentation should take the form of a pearl necklace. Two strings of pearls were obtained for approval: and the prospective recipient was invited to choose between them. Somewhat naturally her choice fell on the more expensive of the two: and it was then found that there was not enough money to pay for it. A whip was therefore sent round, asking the subscribers to increase their subscriptions by ten per cent., in the expectation that a fair proportion of them would decline to do so. However, practically all of them agreed, with the result that there was a small surplus: and, when the pearls were finally presented, they were accompanied by a cheque for 500 rupees "for the upkeep of the necklace"!

Towards the end of the War, a pair of the great of the Indian earth celebrated their silver wedding: and one of the before-mentioned sisterhood got up a subscription for the occasion. This was "semi-officially" circulated through the Government offices and, in the course of its travels, reached that of the writer. He "semi-officially" inquired whether the intended beneficiaries had been consulted: whether it was proposed that the money collected should be used for some War charity or for the purchase of a personal gift: and, in the latter case, whether the persons immediately concerned had signified their willingness to accept it. All these questions—after being at first treated as merely frivolous—were eventually answered in the affirmative; whereupon the writer declined to contribute himself, and advised the other members of his office not to do so: an example that was followed by some other "conchies" in some of the other Government offices. However, enough money was subscribed to allow of the presentation of a rather remarkable gift: nothing less than a solid silver water jug and wash-hand basin. When the writer heard what had been selected, he was, for the first time, inclined to repent of his contumacy; for he felt that perhaps, if it had not been for his refusal and that of the others who followed his lead, enough money might have been collected to allow of the completion of the set.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 18.

Viceregal Changes.

Within a few days the new Viceroy, Lord Irwin, will arrive at Bombay and Lord Reading is taking his official farewells. The Council of State, in a dignified debate, eulogised his work and that of Lady Reading in no uncertain terms; from now onwards there will be a series of those functions which are not the least of the tasks that a Viceroy has to face when he elects to come to India. Meanwhile, the "send-offs" that the Viceroy Designate has been receiving in London, and the speeches thereat, have been read with close interest by all parties in India; during his reign the 1929 Commission will sit, and everyone is glad that a typical Englishman will be at the head of affairs when this takes place.

The Pundit and the Professor.

A pleasing feature of the "walk-out" gesture in the Legislative Assembly was the obvious good feeling and camaraderie which was displayed by all parties in the House towards each other, there being nothing to choose

Digitized by Google

in this respect between the wildest extremist and the stickiest "diehard." In this connexion it is pleasant to see a letter published from Pundit Motilal Nehru, which gives a complete denial to certain deductions in an article in the *Century Magazine* by Professor Ross, who stated that the Pundit's political attitude originated in his being blackballed for the Allahabad Club. The Pundit says this is not true, and sets out the facts, one of which is that he was never put up for the Club. He lays considerable emphasis upon the fact that the personal relationships between Indians and Europeans, official and non-official, are increasingly friendly with the growth of a clearer understanding of each other's point of view.

The New Market under Swaraj.

The Corporation have been investigating the reasons for the diminution in the revenue of the New Market, which has now become too pronounced to be ignored. All European traders who are concerned with the sale of luxury goods have had to weather a period of depression during the last few years, and this no doubt explains in part the reason for diminished receipts; but beyond this there are other and obvious reasons. The whole tone of the shopkeeprs in the New Market has been seriously affected by the political agitation of the last few years, and particularly by the ridiculous hartals that have been organised by feather-headed politicians and which do good to no one, least of all to the shopkeepers. Many of these have yet to learn that politics and trade cannot be mixed, and they will have to mend their manners before they can mend their trade. Apart from this the Swaraj Corporation has, largely by its objection to making up its mind about anything, let down the standards of cleanliness and street order in the city, and the New Market, in common with the rest, is now far dirtier, less cared for, and more infested by beggars than ever before. Corporation and shopkeepers must come down to earth; they have lost many of their customers: and, unless they clean up the market and alter their tone to the community which is their principal support, they will never see them again.

Politics.

Sir Abdur Rahim has been protesting strongly against the proposal to adopt Bengali as the medium of instruction in the secondary schools, as he holds that, from the point of view of the Moslems, such a step is retrogressive. He is strongly supported by a number of prominent Moslem leaders, but the reply of the Congress Press is that Sir Abdur hates the proposal because Bengali is the mother tongue of the Hindus; it is easy to understand and to sympathise with the views of both parties. The Assam Council has passed a Bill to enable the water hyacinth problem to be tackled; this pest, which is rapidly choking up the rivers and *khals* in Eastern Bengal and Assam, is to be fought by Government on organised lines; it is only by action of this kind that any effective progress can be made. The Supertax Bill, which has been the subject of the strongest opposition from commercial interests, has been passed by the Assembly with slight modifications; it includes an attempt to raise the supertax receipts from non-residents in India. The Indian political Press has been throwing bouquets after Mr. E. H. Keays, the late Additional Chief Presidency Magistrate; says the *Amrita Bazar Patrika:* "He was the lotus on the cowdung of Police Judiciary."

The Port of Calcutta.

An article appeared in the Press last week-end suggesting that the events in China were responsible for the considerable diminution in the number of ships coming to Calcutta; the situation in China is serious enough and in the circles which trade with the Far East there is an acute depression; but the Chairman of the Port Commissioners has issued a denial that the overseas trade is materially affected by this at the moment. The playfulness of Indian rivers is well known and it is thought, and some experts hold, that some day the Hoogly may take it into its head to turn to the left and leave Calcutta high and dry; a bore ran up unexpectedly during the week and caused a number of casualties, including wrecking two pontoons. The Bidhyadhari, too, has been coming in for a share of attention, and in connexion with the Corporation estimates, provision has been made for its temporary dredging in order to keep the drainage outfall open; one of the Swaraj leaders insisted that the internal drainage of the city was more important than the external!

Wisdom of the East.

A taxi driver recently ran amok with his taxi in the Indian quarter of the town; a Traffic Sergeant attempted to stop his erratic and rapid progress, but this only produced further efforts and he had to be chased for a mile before he was caught in a jam, when he and his passengers were all found to be drunk. An Indian magistrate fined him fifty rupees and his action was adversely commented upon in the Press. A leading Indian paper has devoted a column to defending the magistrate; it points out that there is no such thing in law as a drunken motorist, but only a drunken man; even then the law allows him to be drunk if he can take care of himself in the street. In the present instance the driver, admittedly drunk, was proved to have driven over a mile through a crowded portion of the city at a high rate of speed, and he had hit nobody; therefore he was a singularly capble motorist and equally a competent drunkard, and a nominal fine was correct and showed distinct legal acumen.

Markets.

The jute market has again failed to evoke any interest: and, although sellers are keen to dispose of their stocks, buyers have not been forthcoming and the minimum of business has resulted. Hessians have not reproduced the slight improvement of last week, and the market is very depressed, as there appears to be no end to the present selling pressure. Piece-goods continue to evade the anticipated improvement and, with demand almost negligible, prices have dropped further. The tea market in London has maintained a firm tone, and the opinion here is that prices are likely to go stronger. According to reports received from the tea gardens, the new crop has made a good start, but it is early yet to predict; one vital factor is the question of labour; and, with a probable shortness in this direction, there seems at present little likelihood of a real bumper crop.

Apart from a fillip in rubber shares, the stocks markets report makes uninteresting and somewhat gloomy reading this week. Jute shares show no signs of resisting their downward tendency and, unless some bright turn in the position of the jute market reveals itself very shortly, there is little knowing where the decline will finish. There is small doubt that, at the present price of the manufactured article, many Companies are actually working at a loss, and the fortunate mills which had arranged forward contracts can alone be expected to make good showings for the current half-year. The reports are beginning to come to hand, and their tone is undoubtedly responsible for the increasing precipitation in share prices. Except for a fair demand for one or two specialities, coal shares were neglected, with sellers in preponderance; cottons attracted little attention and prices, where changed, tended easier. The tea share market has steadied after the slight reaction on profit taking, and the undertone is firm: the Companies' reports, a number of which have already been received, are disappointing; but it must be pointed out that the time covered by the reports does not in most cases include more than a very small portion, if any, of the period of the recent higher level of prices. Rubber shares have come in for a strong inquiry and sellers have been hard to find; it is evident that shares will follow the course of the commodity and, with the price of the latter showing more signs of steadying down, the shares are likely to go better. Government Stocks continued firm at slightly below previous levels, but later developed a harder tendency, in which the 5 per cent. 1945-55 Loan and 3½ per cent. paper provided the chief features.

Money has been in less demand, and short notice and one month's deposits are quoted at 5 per cent. Exchange is quiet with the rate for ready T.T. down to 1s. 6 1-16d.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, March 12.

The Budget.

The debate on the Bombay Budget is once again characterised by a fierce attention to trivial details, and a complete disregard of matters of principle. About five years ago, at a time when the Budget included really important questions like the Development Scheme, the best part of a whole day was spent in discussing the sanction for Rs. 2,000 for the unpleasant but sanitary and necessary purpose of clearing the Yarrowda jail of bugs: the discussion came to an abrupt end when the fact was disclosed that the money had been spent nearly a year before, but the valuable time had been wasted.

There is some prospect of things improving, and debates are now not quite so trivial as they were; but the private member is still encouraged to win his spurs by attacking such a detail as the installation of a telephone at a Collector's house: and, though the general policy of the Forest Department may possibly be open to criticism, it does not appear how it can be useful to oppose minor items of expenditure that are absolutely essential to its execution.

In my last letter I said that the Government of Bombay had presented a thoroughly business-like Budget: and that is most certainly the case as regards its general effect. I am afraid however that I have never been in the least able to understand its form of presentation. For all I know, it is the usual—perhaps even the necessary—form of all Government Budgets; but it seems to me a little unfortunate that, to people who spend most of their lives studying accounts, balance-sheets and estimates of future expenditure, a Government Budget should not only be meaningless, but should apparently deliberately lay the stress on the wrong points. And it is particularly unfortunate that, not for the first time, the stress should have been laid on what is known as the Governor's personal expenditure: which, as it involves the upkeep of three Government residences, and *inter alia* of His Excellency's Bodyguard, is a very misleading expression. Ten or fifteen years ago, there was a considerable attack made on the travelling expenses of Lord Willingdon; which certainly did, in that year, seem to reach a rather monstrous total. But nobody has ever suggested for a moment that any Governor of recent times has spent an anna beyond what was reasonably necessary for his position: and it seems unfortunate that the present method of book-keeping, which may be necessitated by the Acts that control the Governors' official salaries, should throw a strong, and very far from accurate, light on their expenditure.

Without pretending to know more about Government finance than those whose business it has been to study it for many years, it does seem to me that the form of our Budget has become stereotyped and obscure: and I think that, if any Finance Minister would recast his Budget on simpler lines, it would be more lucid in itself and would have the effect of helping the Council to divert its attention from petty details to general principles. Whether that is always exactly what a Finance Minister wants, is another matter.

The Stock Exchange Again.

Mr. Joseph Baptista, Chairman of the Municipality, who is always humorous and generally sensible both in speeches and letters, has an amusing letter in *The Times of India*. Apparently the present reading of the famous Rule 26, which provides for the fixing of an arbitrary rate for the protection of anyone who has been unfortunate enough to sell bear to an inconvenient extent, has the effect of boycotting a member who does not fully accept the position. The only English broker, having apparently bought from a firm which proposed neither to tender nor made good its default in any way, wrote to the President asking if this was correct: and Mr. Baptista quotes the President's reply as follows:—"Yes please. We must help our fellow brokers. If they have nothing more to pay, what can we do?"

Charity no doubt covereth a multitude of sins; but, if brokers are to be helped to default, it is about time, if the Bombay Stock Exchange wishes to keep any reputation whatever, for justice to step in. As a matter of fact, however, the small legitimate business is quite reasonably well done; and the comparatively small number of genuine cash transactions are conducted well and smoothly, if it is remembered that, as few companies have a capital of more than £200,000, of which probably at least fifty per cent. is in the hands of permanent holders, it is not always easy to find a buyer, or a seller, when wanted: and anyone who genuinely wants to buy a large parcel has to wait some time to pick up his requirements. But 95 per cent. of the bargains done on the Bombay Stock Exchange are purely speculative: and there is not the slightest intention, on the part of either side, that shares should actually change hands. Whether, in these circumstances, it is worth while worrying at all about the state of affairs, seems a very doubtful question. The speculative side of the Stock Exchange is run by professional speculators under their own rules, and an amateur enters it at his own peril. Still, some of the views of the people who are responsible for it are not only amusing, but throw a very unfortunate side-light on the mentality of the Indian in a position of responsibility.

Japan.

The argument between the Bombay and Japanese millowners still continues, and seems likely to drag on almost interminably. But, with exchange moving in the contrary direction from last year, the protection of the existing duty is rather more than fully effective: and one cannot help feeling that it is time for the mills to see whether it is not sufficient to keep the wolf from the door.

The Rupee.

As at this time last year, the rupee has become a bit weak, and 1s. 6d. is now a shade doubtful. From our point of view in Bombay, the balance of trade has been considerably affected by the fall in American cotton, which has reduced the value, though not the bulk, of our shipments. This is no doubt counteracted by other commodities elsewhere, and there was plenty of margin last year. But another big American cotton crop, coupled with even a moderate shortage in India, would affect the value of our cotton exports so seriously as to have quite an appreciable effect on India's total balance of trade.

THE CALCUTTA RIOTS.

(Special Cables From Our Own Correspondent.)

Calcutta, April 2.

The riots which broke out this afternoon were entirely Hindu-Moslem and Communal in character. A Hindu procession with music while passing a Mohammedan mosque in the crowded central section of the native city was attacked by Moslems who were under the influence of the excitement that usually obtains during the sacred month of Ramzan. Police from Headquarters arrived quickly and obtained control over the main disturbance but meantime rioting spread in several directions. Hitherto four persons are believed to have been killed and about a hundred injured, including the Deputy Commissioner of Police whose injuries were slight. After a lull in the rioting, trouble increased again in the back streets and the situation was becoming dangerous until got under control by pickets of armed police posted in considerable numbers.

April 3.

The situation is completely under control at the moment, though there are sinister possibilities with two days' holidays still to come. Friday night was disturbed by gradually increasing rioting and fighting, and during Saturday morning much petty damage was done and there were a number of cases of arson. Finally troops were called

Digitized by Google

out and strongly posted in the native city. In spite of the fact that the troops were defied and heavily stoned, there was no firing. Armoured cars paraded the streets and the auxiliary troops were kept standing by in case of need: the Calcutta Scottish marched through the city headed by their pipe band. The police worked superlatively well in the face of continued insults and aggressive provocation. The Government is at Darjeeling, and the main responsibility for handling the situation fell on Mr. Armstrong the acting Commissioner of Police, and Mr. Bartley the Deputy Commissioner, who are entitled to the fullest credit for their success in meeting the crisis. The trouble being exclusively communal, the European portion of the city was entirely unaffected although its Northern part was practically in a state of siege. So far as is officially known the casualties up to the present are about twenty killed and two hundred seriously injured. I have made a tour through the entire area and find that, though much excitement still prevails and sporadic outbreaks continue, the presence of the troops is restoring confidence.

April 4.

After a comparatively quiet morning, outbreaks began again and increased until midday, when the situation again became menacing. Police and troops are indefatigable in trying to avoid taking extreme measures. There have been many attacks on mosques and temples and a good deal of incendiarism. Eventually the situation eased, with the Hindus in the ascendant—last night the ascendancy had been with the Moslems. Troops remain on picket duty throughout the northern part of the city and suburbs. The European quarter has been quite unaffected, but for signs of slight excitement among domestic servants. The armoured cars and auxiliary troops are still standing by, but the situation to-night is certainly easier, and official confidence is growing. The mills and factories on the Hoogly and in the outer areas are not affected and there has been no movement from them towards the city. The northern part of Indian Calcutta is almost paralysed, but everyone is hoping for an improvement after to-morrow's holiday. The casualties have been increased during the day, but reliable figures are not obtainable.

April 5.

After a comparatively quiet night the situation greatly improved to-day, and there has been very little disturbance along the main routes in the native city. The troops picketting the city were reinforced to-day by a detachment of Gurkhas from the Eastern Frontier Rifles, who, in company with the troops of the garrison, the auxiliary forces and the police, successfully isolated the centre of the disturbance and strongly held all outlets from it. This action was conspicuously successful and the remainder of the city soon began to assume its normal aspect, with people freely walking about and some shops opening even in the disturbed area; where, however, there is much evidence of the occurrence of looting and burning. Though excitement prevailed in the mill and outer areas, no movements from these were reported, and the day passed quietly until about five o'clock this afternoon when a dangerous situation suddenly arose at Babu Ghat and, for the first time, it became necessary to resort to firing. A few shots quelled the outbreak and dispersed the rioters. This was the only instance of extreme action throughout the disturbances, and everyone, except the Swarajist newspaper *Forward*, is loud in praise of the troops and police, who have shown phenomenal restraint. Indians are asking for white troops and auxiliaries to guard the mosques and temples, in view of religious complications among the Indian police. Apart from the disturbed area, the whole of the Indian City is resuming its normal aspect except for the presence of pickets at the principal street corners: and the inhabitants are moving about freely. The European section of Calcutta remains completely unaffected, and the trouble has now been definitely isolated in and round the Burra Bazar area.

SIR KRISHNA GUPTA.

The death of Sir Krishna Gupta removes one who, though for many years past he has played no conspicuous part in Indian politics, has nevertheless left a mark on Indian progress that deserves to be commemorated. He was one of the first high caste Hindus to brave the terrors of social ostracism by crossing "the black water" in order to study for the Indian Civil Service examination, which he passed just 55 years ago: and he was one of the two first Indians to be appointed to the Council of the Secretary of State. The years that have intervened since 1907 have, perhaps, somewhat dimmed the glory of what Lord Morley described as "a shining day worth living for"; since the practical importance of the Council of India seems, in these days, to be limited to the fact that it is a convenient Aunt Sally for Indian Nationalist politicians to have a shy at: and the only people to whom the individuality of its members is a matter of interest are those who may hope to succeed on the occurrence of a vacancy. In a materialistic world, the opportunities of practising *otium cum dignitate* on a sufficiently liberal salary tend more and more to disappear: and, to the latter-day Indian politician, who cherishes no hope of being able to join their number, the personnel of the Secretary of State's Council is a matter of complete indifference, and the inclusion of Indian members in it almost equally so. But at the time that the appointment was made, it was a great departure from established precedent: and Sir Krishna Gupta's connexion with it deserves to be remembered. To the present generation of Englishmen in India, his memory will be specially cherished for his sound work in the matter of India's sea fisheries, the poor results of which were in no way his fault: and for his outstanding activities in social reform, particularly in the matter of female education. His courage in cutting himself adrift from the restrictions of caste in order to join the reforming sect of the Brahmo Samaj was an index to his personality: that of an honest and sincere servant of India, whose loss will be greatly mourned by all who have, as he had, her best interests at heart.

INDIA OFFICE COMMUNIQUE.

It was announced on January 20 that the King had approved the constitution of a Royal Commission on Agriculture in India. The terms of reference were published at the same time. His Majesty has now been pleased to approve that the Commission should be composed of the following:—The Most Hon. The Marquess of Linlithgow (Chairman), Hubert Calvert, C.I.E., I.C.S., Nogendranath Gangulee, Professor of Agriculture and Rural Economy, Calcutta University: L. K. Hyder, Ph.D., Professor of Economics, Aligarh University; Balkrishna Sitaram Kamat; Sir Henry Staveley Lawrence, K.C.S.I., I.C.S., Acting Governor of Bombay; Sir James MacKenna, C.I.E., I.C.S.; Sir Thomas Middleton, K.B.E., C.B.; Raja Srikrishna Chandra Gajapati Narayana Deo Garu, Raja of Parlakimedi; Rai Bahadur Sir Ganga Ram, C.I.E., M.V.O.

INDIAN COMMERCIAL NOTES.

Interest for the moment in India concentrates on three staple commodities—cotton, jute and tea.

It is unfortunate that late rains have spoilt the colour of the Broach crop. The Agricultural Departments have revised their estimate of the new crop, and raised it by half a million bales, from 5,569,000 to 6,051,000. Exports from India during the season—from September 1 1925 to January 31, 1926—are fairly high at over one million bales, as contrasted with 900,000 bales during the corresponding period of the previous season.

The spurt in orders for Manchester goods from Calcutta has waned again. For this there are three reasons. In the first place, it was, in its origin, merely a desire on the part of dealers to replenish stocks which had been allowed to go to narrow margins. Secondly, with bumper crops in America and Egypt, and quite a respectable crop in India, prices which have been sagging steadily for some weeks past may possibly drop still further, and no one dare buy on a falling market. Thirdly, exchange is uncertain, both with Japan on the one hand and with London on the other. For the moment, Manchester has benefited by the fact that the yen is slowly rising again. It had fallen as low as 107 in January 1925, and rose to 117 by January 1926, since when it has risen still further to over 130. It will be remembered that the pre-war rate was 153.

The jute position is still difficult and uncertain. Considering how short has been the last crop, the price is now comparatively low in the neighbourhood of £47. New crop business is being done at still lower rates, but this is purely speculative. In any case, the recent high prices prevailing for jute have been sufficient to encourage sowings on an extensive scale. So far, weather conditions have been favourable, and they will be eagerly watched in order that some estimate may be formed of their influence on the maturing crop, and with it the future probable course of prices.

So far as London is concerned, most interest is being taken for the moment in tea. For the period July 1 1925 to January 31 1926, exports of tea amounted to 275 million lbs., as contrasted with 295 million during the corresponding period of the previous year. Consumption in the United Kingdom is on as large a scale as before, if not larger, and a feature of interest is the advance in re-exports from the United Kingdom markets. These amounted to 41 million lbs. during the calendar year 1924, and advanced to 49½ million during the calendar year 1925. Consumption has also increased materially in the United States of America.

THE INDIAN MAIL.

Passports.

The reply to a question put in the Bombay Legislative Council regarding Mr. Horniman's passport affords further proof, if any were needed, of the futility of the existing passport system. It was stated that Mr. Horniman, who had previously been refused a passport for India, was granted one "to travel to France and Italy for reasons of health." On the assumption that the London Passport Office was not intentionally conniving at Mr. Horniman's return to India, their action in refusing him a passport thither, but granting him one to the Continent, was trustful to the verge of childishness; for, once on the Continent, anyone can get a passport to any destination that he pleases—in the case of India, if not direct, then to Goa or Pondicherry, after which the rest is, in practice if not in theory, as simple as possible. In fact, a formal passport for France is not now really needed at all; for anyone can buy a week-end ticket for France, which includes a temporary passport, at a railway station, without any formalities. The present system is quite gratuitously irritating to inoffensive travellers; though, if this is an advantage, it certainly has no other; and the "prohibited" traveller never finds the slightest difficulty in defeating it.

INDIAN EXCHANGE.

London, April 3.

Rupee Exchange has been a falling market since the date of our last report, and there does not appear to be any strength in the quotations received from Calcutta or Bombay.

When we wrote last week, a T.T. rate of 1s. 6d. was available to a small extent; but since then it has slipped away to 1s. 5 27-32d. and, so far as we can gather, there is very little business being done at this level. Stagnation appears to prevail in exporting circles, and there is nothing on that side of the book to give any stimulus to exchange.

Commercial bills, which were quoted at 1s. 6¼d. three months' sight, have fallen away to 1s. 6⅛d., although the Bombay quotation has been maintained at a sixteenth above this figure.

Further evidence of the shrinkage in business is shown in last week's statement of the Imperial Bank, which indicates that trade demand for funds is 70 lakhs of rupees down.

Forward rates have shown a corresponding decline, and quotations for T.T. are 1s. 5 13-16d. May to September, and 1s. 5 27-32d. October and November.

In this market, operators have been working very cautiously, and business has been on a very small scale.

Remitters have followed the market gradually, and were able to obtain 1s. 5 29-32d. before the holidays. We hear of nothing better than this, and the market closes a shade steadier, although very uncertain.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

The Diala Difficulty.

The difficulty that has arisen in connexion with the Diala Cotton Plantations' property in Iraq is most untor tunate for all parties concerned. In spite of the Chairman's grave words at the extraordinary general meeting held last week, when Sir Edward Manville submitted a very lucid statement to the shareholders, I should like to think that the position is yet capable of being smoothed out more or less satisfactorily. There can be little doubt that in the preliminary negotiations a little too much was taken for granted on both sides. The Iraq Government appears to have committed itself cheerfully to promising water that might not be available, and the company's advisers accepted the promise as a guarantee that it would be available. Considerable sympathy will be felt for the company which in such circumstances is told to "try the Tigris," and it will presumably be part of the duties of those responsible to bring home to the authorities in Baghdad that commitments are more sacrosanct than that. It would create a very bad impression and might seriously inconvenience Iraq in the future, if a charge of indifference towards a definite undertaking could be brought against the Government. There is still much to be cleared up in connexion with the difficulty, and the general wish will be that the Iraq Government will see the company through on its first experimental area, and that very careful investigations will be carried out before the second programme is drawn up. The full report of the meeting, which appears on another page, is worth studying.

The Indian Market.

At the meeting of the Chartered Bank of India, Australia, and China Sir Montagu Turner reviewed in detail conditions in the Eastern markets in 1925. The year, he pointed out, was not altogether a happy one for merchants engaged in business with Eastern ports with the exception of those interested in tea, rubber, and tin. Fluctuations in the price of raw materials, in particular cotton, wool, and jute, made it extremely difficult to forecast the position of markets a few months ahead with any accuracy. As a result the Indian market has had to carry stocks of manufactured goods which could be replaced at an appreciably lower level. The situation in India, Sir Montagu Turner was able to add, however, "has been rectified and from the latest reports on this side we learn that satisfactory orders have been place in Manchester for certain classes of goods for Indian consumption." He went on to refer to India's financial position, and said that the very satisfactory picture of progress and prosperity as described by Sir Basil Blackett in his Budget statement at Delhi is remarkable. "It is true," he added, "that India has been blessed with some very favourable monsoons in the past three or four years. Crops have been good and the people have prospered. But, even allowing for good seasonal conditions, the fact remains that India is possessed of great recuperative financial powers and that her very sound position to-day is a matter of envy amongst other less fortunate nations in the world. We need have no fear of the soundness of India at heart, though her people have high political aspirations."

An Important Contract.

Details are now available of the contract obtained by a British firm in open competition for the supply of pumping machinery for use in connexion with the main drainage of Cairo. The machinery is to be installed in the new Amiria Station at Cairo, and will consist of three main pumping units each of 550 horse power and one smaller unit of 330 h.p. The pumps, of centrifugal type, will be driven through bevel gears by Diesel engines. The contract also includes the supply of three 30 k.m. electric generating sets, automatic measuring apparatus and fuel storage and distribution systems. The contract, it may be stated, represents a sum of £53,000.

The Budget.

The end of the financial year leaves the position much as expected. There is a small surplus of three million pounds odd—or rather there would have been but for the coal subsidy which weighs the balance down heavily on the wrong side. But leaving the subsidy out of the question, it cannot be maintained by any stretch of imagination that the position is satisfactory. An analysis of the items on the revenue account shows that the surplus is accidental, and that had it not been for unexpected windfalls the balance would have been decidedly on the wrong side. This year the position is not likely to be so favourable, though the income tax will probably yield improved results in consequence of the recovery of the rubber industry, and it will be interesting to see how the Chancellor of the Exchequer deals with the position in his estimates. The one need that stands out pre-eminently is economy, for an £800,000,000 Budget is more than this country can stand at the present time. Unfortunately the obstacles in the way of economy are most serious, and while time itself will solve the problem, the fact that a good many decades hence the items in regard to which no economy is possible will have disappeared is small consolation at the present juncture when what is urgently required for a commercial revival is immediate relief from the burden of taxation.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 6.

Members of the Stock Exchange separated for the Easter holidays in anything but cheerful mood, for idleness has been the order of the day, and the account, although it revealed a shortage in supplies of many shares, including some of the more speculative descriptions, was on a very attenuated scale, and a mere shadow of the enormous settlements which had to be arranged towards the end of last year. The general expectation is that real revival in business is not likely to occur until after the Budget. The feature of the foreign exchange market has been the further depreciation in the French franc to new high records, and the Belgian franc has been inclined to move in sympathy. Close observers of the financial and economic position of France, while admitting that in view of the heavy Treasury Bill maturities of May, further inflation and a further decline of the franc is very probable, do not appear to contemplate a spectacular debacle such as has been seen in the case of some other European currencies. The rise from 75 to 144 francs to the £ has taken some 20 months.

The Future of Savings Certificates.

Something like £330 millions of the first series of Saving Certificates (issued between 1916 and 1922) mature between the present year 1926 and 1932, and a very large body of holders will anxiously await the Government's decision of policy with regard to conversion offers at the dates of maturity. A special Committee appointed to advise on this problem has recently reported in the sense that holders should be given the option of continuing all their certificates till 1932, interest accruing at the rate of 1d. per month, and thereafter of converting them into Savings Bonds, or, in the case of larger individual holdings, into 4½ per cent. Conversion Loan (1940-44). The aim of the Committee is twofold, namely to frame a scheme as favourable as possible to the Exchequer and at the same time to avoid doing anything that would discourage the Savings movement. The happy medium is not too easy to hit upon. Holders of Savings Certificates have sometimes been described as the "spoilt children" of the Treasury, because of the attractive terms of their investment, and they must not expect too much generosity from the State. But on the other hand, although in the present state of National finances the Treasury cannot afford to give away anything unnecessarily, the Savings movement should be recognised as a national asset, and anything which can reasonably be done to encourage its successful continuance should be done. The Committee seems to have had in view the idea of attracting the small investor to long-dated investment, but the practicability of such a policy is perhaps somewhat dubious.

The Future of the Investment Trust Company.

At the present time the Investment Trust is attracting much attention both here and in America. Stocks of investment trust companies are difficult to obtain owing to the demand from the most conservative type of investor, and in well informed quarters it is thought that prices will go still higher owing to the growing tendency for these concerns to realise profits from investments and reinvest in other securities. There is, however, a fly in the ointment. The Inland Revenue authorities are concerning themselves with the question as to when an investment trust company ceases to be a bona fide investment concern and becomes a mere financial company buying and selling securities to reserve against possible depreciation in the future, while the financial company distributes such profits by way of dividends. Thus the trust is able to escape payment of income tax on such accretions of money. But the Inland Revenue authorities are on the alert. Naturally directors of trust companies must be allowed to sell securities as they like, especially if they fear depreciation in value. They would fail in their duties as directors if they did not. But how often? That is the problem. It should be remembered that a trust company is more concerned with maintaining a level dividend on its stock than in maintaining its capital intact. It does not suggest that it should make a profit on its capital. But the financial company makes profit in any way that it can, and careful observers notice that investment trusts are following in its footsteps. It has been suggested that the reason why some trust companies do not publish a list of their investments is because they do not wish to show the Inland Revenue authorities how often they change their investments. But this may be only said in malice by envious directors of other undertakings, who have watched the trust company rise to prosperity—a prosperity which mature opinion thinks will continue.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Liverpool, April 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Verentia for Port Said, Colombo, Madras, and Calcutta (London, April 17).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, April 21).

British India Line.—S.s. Warfield for Colombo, Madras, and Calcutta (London, April 10); s.s. Gharinda for Bombay and Karachi (London, April 10).

Cunard Line.—S.s. Pavia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, Trieste (also Corfu, Gruz, and Ancona if inducement) (Liverpool April 15, Swansea April 20).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 10); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 1).

P. and O. Line.—S.s. Rawalpindi for Bombay, London, April 16); s.s. Nankin for Colombo, Madras, and Calcutta (Liverpool, April 17).

Prince Line.—S.s. Italian Prince for Syrian Coast and Cyprus (Manchester, April 15).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

INDIA.

Oil engine driven generating sets, switchboard and two pumping sets.—The Indian Stores Department, Simla, is inviting tenders for the supply and erection of the following plant:—Section 1.—Three 5 K.W. oil engine driven generator sets. Section 2.—One switchboard for the starting and control of the above sets mounted on marble panels. Section 3.—Two pumping sets, each comprising one triplex ram pump. May 14. (D.O.T.)

Company Meetings.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.

Trade Conditions in the East.

Sir Montagu Turner on India's Progress.

The seventy-second ordinary general meeting of the shareholders of the Chartered Bank of India, Australia, and China was held on March 31 at the bank's premises, 38, Bishopsgate, E.C. Sir Montagu Cornish Turner, the chairman, presided.

The Chief Manager (Mr. W. E. Preston) having read the notice convening the meeting and the report of the auditors, the Chairman said:—

Gentlemen,—I move that the directors' report, balance-sheet, and profit and loss account be taken as read.

In the remarks I am now about to make I shall endeavour very briefly to place before you the conditions of trade as we found it in the Eastern markets covered by the operations of this bank. Taking it all round, the year 1925 was not altogether a happy one for merchants engaged in general business with Eastern ports. Exception must, of course, be made in the case of those interested in tea, rubber, and tin, commodities which have commanded high prices and active markets, but for general traders times have been difficult. In other words, there have been a few bright spots on the horizon and some rather black; and what applies to merchant traders generally must apply with equal force to exchange banks, whose welfare is so absolutely bound up with the prosperity or otherwise of their constituents.

Fluctuations in Prices.

Fluctuations in the price of raw materials, affecting, as a consequence, the price of manufactured goods—I refer especially to raw cotton, wool, and jute—have made it difficult to work and extremely difficult to forecast with any accuracy the position of markets a few months ahead. Raw cotton has dropped from 13.80d. per lb. (American middlings) to a little under 10d. per lb., the pre-War level in 1914 being under 7d. per lb. Wool during 1925 dropped from 3s. 2d. per lb. to 2s. per lb. Jute soared up from £45 per ton to £63 15s., and now ranges about £47, with some uncertainty as to the future price level, and with great uncertainty as to the quality of the article offered. At the moment best quality jute is scarce, while jute of inferior grade is fairly plentiful. Owing to this fluctuation in price, some markets, especially in India and China, have had to carry stocks of manufactured cotton and woollen goods which were replaceable at an appreciably lower level, and this has led to trouble. But in India, at any rate, the position has been rectified, and from the latest reports on this side we learn that satisfactory orders have been placed on Manchester for certain classes of goods for Indian consumption.

LONDON—ANDREW WEIR & CO., 21, Bury Street, E.C.3.

In India and Ceylon the tea industry was never in a sounder position.

While exports of oilseeds, especially ground-nuts, have been on a fairly good scale, exports of wheat have been disappointing, and we find India importing Australian wheat to meet local needs. Increased local consumption, and in some cases short crops, owing to drought, appreciably affected the quantity of wheat available for export. Apart from this the selling of crops on the part of the grower is no longer restricted to the season. Owing to increased banking facilities up-country, the producer can obtain advances on his stocks and hold up supplies until the price suits him. The position differs entirely from pre-War days.

India's Progress.

The very satisfactory picture of progress and prosperity in India's financial position, as described by Sir Basil Blackett in his recent Budget statement in Delhi, is remarkable, and is a very striking answer to pessimistic views expressed from time to time as to the condition of affairs in India and of her future, in view of political changes, and of her decreasing value to the markets of Great Britain. It is true that India has been blessed with some very favourable monsoons in the past three or four years. Crops have been good and the people have prospered. But, even allowing for good seasonal conditions, the fact remains that India is possessed of great recuperative financial powers and that her very sound position to-day is a matter of envy amongst other less fortunate nations of the world. We need have no fear of the soundness of India at heart, though her people have high political aspirations.

The Currency Commission.

The Report of the Currency Commission appointed in August last to examine and report on the Indian exchange and currency system and practice and to consider whether any modifications were desirable in the interest of India, is awaited with considerable interest. It is useless to make any forecast as to the findings of that Commission. But, whatever the result, we shall have the satisfaction of knowing that, in spite of criticism, the composition of the Committee and the personality of the Committee met with signal approval in Indian financial circles after the strength of the Commission had been severely tested. (Cheers.)

At the request of the Secretary of State for India, Mr. W. E. Preston, our chief general manager, was granted the necessary leave by the board of directors to take part in the Currency Commission, and has, as a member of that Commission, visited India, and, we are glad to say, has returned none the worse for his trip to the East. (Cheers.)

India's Trade.

In connexion with Indian trade, the year 1925 will be specially marked as the year in which the Excise duty on cotton goods was suspended, at the instance of the Viceroy, and subsequently entirely removed, and a long-established and well-founded grievance on the part of the millowners in India has been swept away. There can be no doubt that the time for removing this Excise was well overdue, though the cost to the Exchequer was 71 lakhs rupees for the financial year now ended. I regret to say that the Indian mills are still suffering badly from their exceedingly keen competition with Japan, where the system of long working hours still prevails and is a severe handicap to the Indian mills.

The Straits Settlements and F.M.S. have benefited considerably by the boom in rubber and the constant demand for tin. For 1925 the value of exports of rubber from British Malaya exceeded £80,000,000, as compared with £30,000,000 in the previous year. Tin exports for the same period (1925) were valued at £20,000,000.

The rubber industry seems to be now established on a firm foundation, and if prices can be maintained at a moderate level, fair and reasonable to the consumers and producers alike, the future of the rubber industry is apparently thoroughly well assured, and perhaps the time is not distant when all restriction as regards output may safely be abolished.

The Situation in China.

We now come to China, the particular spot which has caused great anxiety both to banks and traders alike. The position in that unfortunate country and the conditions of trade have been most deplorable for some considerable time, but the serious trouble began with the riots in Shanghai in May last. Strikes and boycotting caused a complete collapse of business in Shanghai for a couple of months, and, following on this, civil war, suspended for a while, burst out with increased intensity. The railways have been entirely occupied by the military. Transit of goods, whether from coast ports to the interior, or from inland to the coast, has been almost impossible, and the unfortunate Chinese in inland towns and villages have suffered indescribably. Every form of lawlessness has been rampant, and civil government ceased to operate. The situation in North China is still very confused, but, on the whole, is now more satisfactory. Unfortunately, the trouble spread in an almost aggravated form to South China, the British Colony of Hong-kong and the ports of Canton, Wuchow and Swatow being chiefly affected.

DIRECTORS' REPORT.

(Presented at the Seventy-second Ordinary General Meeting, 31st March, 1926.)

The Directors have now to submit to the Shareholders the Balance-Sheet and Profit and Loss Account of the Bank for the year ended 31st December last.

These show a net profit, after providing for all bad and doubtful debts, of £966,778 4s. 6d. inclusive of £210.623 11s. 8d. brought forward from the previous year. The Interim Dividend at the rate of Fourteen per cent. per annum paid in September last absorbed £210.000. The amount now available is therefore £756,778 4s. 6d., and the Directors propose to pay a Final Dividend at the rate of Fourteen per cent. per annum together with a Bonus of Six shillings and threepence per share, making Twenty-and-a-quarter per cent. per annum for the whole year, free of Income Tax; to add £25,000 to the Officers' Superannuation Fund; to write off Premises Account £125.000 and to carry forward the balance of £209,278 4s. 6d.

The Directors have to aonounce with regret the retirement of their esteemed colleagues, Mr. Thomas Cuthbertson and the Rt. Hon. Lord George Hamilton, G.C.S.I., who since the date of their election in 1907 and 1908 respectively, have rendered valued service to the Bank as members of the Board; and also have to record their sense of the great loss the Bank has sustained by the death of the Rt. Hon. Sir John Newell Jordan, G.C.M.G., G.C.I.E., K.C.B., who was elected a Director in 1920.

Mr. Edward Fairbairn Mackay, late of Messrs. Butterfield and Swire, China; Mr. Jasper Bertram Young, of Messrs. Edward Boustead and Co., London, and Messrs. Boustead and Co., Ltd., Straits Settlements and Federated Malay States; and Mr. Archibald Rose, C.I.E., of the British-American Tobacco Co., Ltd., have been elected Directors, and the Shareholders are now invited to confirm their election.

Mr. Lewis Alexander Wallace, Mr. Archibald Auldjo Jamieson, and Mr. Jasper Bertram Young, the Directors who now retire by rotation, present themselves for re-election.

The Auditors, Mr. David Charles Wilson, F.C.A., and Mr Henry Croughton Knight Stileman, F.C.A., again tender their services.

The Dividend and Bonus will be payable on and after Wednesday, the 7th April.

By Order of the Court, ARTHUR SCOTT, W. H. SHINER } Secretaries.

Naturally the situation which has now developed gives cause for much anxiety, and what it means to Great Britain the trade figures reveal at a glance. For instance:—

In the year 1919 imports from Great Britain into China	*Hk.Tls.64,292,000
Exports	Hk.Tls.57,186,000
Giving a total of	Hk.Tls.121,478,000 or say £20,246,000

(* Haikwan tael is the Customs tael.)

These figures for a period steadily increased, and the highest point for imports from Great Britain was reached in 1921, when these totalled the very considerable sum of Hk.Tls.149,935,000; and although the exports of that year only totalled Hk.Tls.30,913,000, the gross total of Tls.180,848,000 represents a very considerable sum, as, taking the Hk.Tl. at 3s. 4d., the sterling equivalent is:—

Imports	£24,989,000
Exports	5,152,000

Since 1921 imports of British goods have decreased, and exports to Great Britain have been more or less maintained, anyway up to 1924, the latest figures available, which are:—

Imports	Hk.Tls.126,011,000
Exports	Hk.Tls. 50,250,000 say £29,376,000

For 1925 we are afraid that the figures will make a poor showing compared with the preceding years. We can only hope that our relations with the great country of China will gradually return to normal, as it is obvious that, our trading interests being so vast, it is almost a life-or-death matter for many of our great industries, such as those of Lancashire, that we should regain our position.

Our interest in China trade, though, is not confined to Great Britain alone, as British India also figures very largely—in fact is second to Great Britain itself. For instance:—

In 1919 imports from British India totalled	Hk.Tls.26,980,000
Exports	Hk.Tls. 9,600,000
Giving a total of	Hk.Tls.36,580,000 or £6,000,000

Exports to India remained more or less steady until 1923, when they increased by some Tls.3,000,000; but imports from India steadily increased from 1919 until, in 1923, they reached the large figure of Hk.Tls.55,241,000.

The year 1924, however, shows a falling off, as imports from British India are down to Hk.Tls.38,827,000; but at the same time exports to British India were well maintained. Raw cotton, I may mention, occupies the principal place in China's imports from India.

If we look for the reason for the decline in imports from Great Britain into China during the last year for which figures are available—that is, up to the end of 1924—there is more than one cause; but I regret to say that Japanese competition has cut very seriously into our trade, and it affords one food for thought to consider the merits or demerits of such matters as international eight-hour day agreements when a vigorous competitor like Japan is not in the fold.

The Hong-kong Boycott.

As regards South China, especially Hong-kong, the serious boycott maintained against that important British colony, which boycott has its headquarters in Canton, is a very disturbing factor and seriously menaces our trade, which has practically been at a standstill in South China for many months now. As an instance of this I may mention that for the period July to December of last year the number of British steamers that were able to use the Treaty port of Swatow owing to the boycott was only 88, whereas in the previous year, 1924, over a corresponding period, some 680 British vessels entered that port.

The shipping position at Canton is equally bad, as during July to December of last year no British steamers at all were entered, whereas for the same period in 1924, excluding river steamers, 209 were entered, representing a gross tonnage of approximately 500,000 tons.

The conditions which have ruled in Hong-kong for the major part of the year must have militated considerably against the successful working of firms and companies.

It is not surprising that the sufferers by this unmerited adversity are inclined to think that the apparently supine conduct of the British authorities has encouraged the Cantonese strikers to persist in their outrageous conduct. At the same time, it must be remembered that Great Britain has not a free and untrammelled hand. It is almost impossible for her to act on her own in the matter of a display of force or by threats, and, unless the combined foreign nations bring pressure to bear on the authorities responsible for civil government in Canton, it would, I believe, be hopeless to attempt single-handed action on the part of Great Britain. But the position is most serious, and it behoves the British Government to lose no opportunity of coming to the help of the British merchants and effecting by some means a very necessary improvement in the condition of affairs in South China. That the Bolshevist influence is at work both in North and South China is undoubted. In the South, especially, money has been freely supplied by the Bolshevists, and this apparently has been found by utilising the proceeds of Russian goods sold in China.

Conditions in Japan.

The trading and economic conditions of Japan, which were affected very severely by the earthquake of 1923, are rapidly returning to normal. This recovery is evidenced by the recent improvement of the yen exchange rate—from 1s. 7¼d. in January, 1925, to 1s. 10 11-32d. in March, 1926.

The adverse foreign trade balance has decreased considerably, the figures being 534,480,000 yen, 646,157,000 yen, and 267,066,000 yen in the years 1923, 1924, and 1925 respectively. Imports of raw cotton in 1925 showed a large increase in value, being 800,000,000 yen, as against 450,000,000 yen in 1924. On the other hand, exports of raw silk, chiefly to America, totalled 625,000,000 yen, as against 454,000,000 in 1924.

The money market has also improved in Japan, enabling borrowers to issue loans at longer terms and cheaper rates of interest.

These improvements are mainly due to the Government's retrenchment policy and the thrifty and industrious efforts of the people.

It is officially stated that the policy of the Japanese Government is to return to the gold standard as soon as trading and economic conditions allow, but it is, moreover, emphasised that any temporary improvement of the yen exchange will not influence the Government to take any hasty step in this direction.

The Board of Directors.

From the report you will notice that changes have occurred in the constitution of the board of directors. By the untimely and very sudden death of Sir John Jordan the bank lost a very useful and distinguished colleague. But for the nation Sir John's passing away at a most critical period in the history of China was nothing less than an irreparable disaster. Sir John loved China, and was beloved by the Chinese, and, had he been spared, had his health permitted a visit to China, I believe the position, at one time acute, would have been immeasurably improved.

It is also with real regret that we have to report the resignation of Mr. Thomas Cuthbertson and the Right Hon. Lord George Hamilton, both of whom have done excellent service for the bank. Lord George Hamilton has won for himself a name and reputation of which any man might be proud, both in the serveice of the State, in the field of politics, and in the wider field of commerce in the City of London, where his genial disposition and unfailing courtesy have won him many friends.

The vacancies on the court of directors have been filled, as reported, by the election of Mr. E. F. Mackay, Mr. Archibald Rose, and Mr. Jasper B. Young, and you will be asked to confirm their elections in due course.

The shareholders will be interested to learn that branches of the bank have been now opened at Tsingtao, in North China, and at Peshawar, in India, and in both instances there is every expectation of satisfactory business being attained.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

Dividend and Bonus.

Now, as regards the report and statement of accounts, the directors are recommending payment of the usual dividend and bonus, which represents a return of 20¾ per cent., free of income-tax. The sum of £25,000 is set apart for the officers' superannuation fund and £125,000 for reduction of the premises account, which now stands at the figure of £1,025,720. In view of the fact that we are now building new premises at Penang and Ipoh, and we shall probably have to start building new bank premises at Yokohama, the directors consider that the premises acccount should be substantially reduced while we are in a position to do this without affecting the usual return made to shareholders.

The reserve fund, which now stands at £4,000,000, as compared with the capital of £3,000,000, the directors consider is sufficiently large at the moment. But this does not mean that the policy of the bank, which has for many years past been that of building up reserves and adding to the great financial strength of the bank, will be appreciably altered. The wisdom of this safe and prudent policy is reflected in the market price of the shares to-day.

Balance-sheet Figures.

A comparison of our balance-sheets of 1924 and 1925 shows that our total figures have increased by approximately £16,000,000, and this is due principally to the items under the heading of current and other accounts on the one hand and holdings of bills of exchange on the other, which indicate that larger business is passing through this bank.

Without being unduly optimistic, I am pleased to be able to say that there are indications at certain points which lead me to hope that trade conditions will be more favourable during the coming year than in 1925.

In conclusion, I desire on behalf of the board to tender our sincere thanks to the members of the staff both at home and abroad for their excellent work, devotion to the interests of the bank, and their unfailing loyalty. (Cheers.)

Our thanks are specially due to Mr. Bruce and his colleagues at head office for the manner in which they have carried on the work at head office during the absence of Mr. Preston. (Cheers.)

I now move:—"That the report now presented, together with the balance-sheet and profit and loss account, be approved and adopted."

Mr. Lewis A. Wallace seconded the resolution, and it was carried unanimously.

The Chairman then moved:—"That a dividend at the rate of 14 per cent. per annum for the half-year ended December 31 last, together with a bonus of 6s. 3d. per share, free of income-tax, be now declared, payable on and after the 7th proximo."

The resolution was seconded by Mr. William Foot Mitchell, M.P., and unanimously approved.

The election of Mr. Edward Fairbairn Mackay, Mr. Archibald Rose, C.I.E., and Mr. Jasper Bertram Young as directors was confirmed; the retiring directors—Mr. Lewis Alexander Wallace, Mr. Archibald Auldjo Jamieson, and Mr. Jasper Bertram Young—were re-elected; and the auditors—Mr. D. C. Wilson, F.C.A., and Mr. H. C. K. Stileman, F.C.A.—were reappointed.

Presentation Portrait of the Chairman.

Mr. Lewis A. Wallace.—As an old shareholder in the Chartered Bank—I may almost say an hereditary shareholder— in view of the steadily increasing prosperity of the bank during the 22 years of Sir Montagu Turner's chairmanship, I propose to my co-shareholders that we ask him to sit for his portrait. Since he became chairman 22 years ago the dividend has increased from 10 per cent. to over 20 per cent., and the shares have also been doubled in value, the reserves, too, have been increased from £800,000 to £4,000,000. The premises we were compelled to build in London and in various parts of the East stand in our books at a very safe value. The chairman's attention to the interests of the bank I have had ample opportunity of judging, as we joined the board on the same day—many years ago now. I feel sure I only voice the wishes of my fellow-shareholders in proposing that the chairman be asked to sit for his portrait, to which proposal I feel sure I shall have no difficulty in finding a seconder. (Cheers.)

Mr. Bernard R. Glover seconded the proposition, which was cordially approved.

A hearty vote of thanks to the chairman and directors, as well as to the staff of the bank, concluded the proceedings.

DIALA COTTON PLANTATIONS.

The Question of the Water Supply.

A Serious Position.

Iraq Government's Attitude.

An extraordinary general meeting of Diala Cotton Plantations, Limited, was held on March 31 at River Plate House, Finsbury Circus, E.C., for the purpose of hearing a statement by the directors of the present position of the company, and of considering the course to be adopted. Sir Edward Manville, M.Inst.E.E., the chairman of the company, presided.

The Secretary (Mr. William S. Gregg, F.S.A.A.) having read the notice convening the meeting, the Chairman said:—

Ladies and Gentlemen,—We are met to consider a very difficult situation which has arisen, as between this company and the Government of Iraq, in relation to the water supply which that Government has guaranteed to us under the terms of its concession. Minor difficulties have arisen with which it is unnecessary for me to deal, as they are, in the opinion of your directors, capable of satisfactory adjustment. You will appreciate, however, that in a country such as Iraq, where the rainfall is altogether insufficient for the cultivation of crops, it is essential that a company such as ours should be assured of sufficient water for the irrigation of its cotton. As the result of oral and written communications which have taken place between your company and the Government of Iraq, I regret to say that it now seems doubtful whether we can rely upon the Government for such a water supply, notwithstanding its obligations to us under the concession.

Preliminaries to the Concession.

Before dealing with this question in greater detail, I would remind you that the original concession under which your company derives its title to the 36,000 acres of land and other rights referred to in the prospectus, and a supply of water not less than a stipulated minimum, was originally granted to a certain Dr. Asfar, and others, with the object of its being assigned to a company known as Eastern Irrigations, Limited. That concession included other land and rights on the Diala River, and also in the Euphrates Zone. It was negotiated with the Government of Iraq, with the technical assistance of Sir Thomas Ward, C.I.E., M.V.O., formerly Inspector-General of Irrigation in India, who is now your company's chief consultant.

The lands comprised in the concession were selected by the advisers of the Iraq Government, after exhaustive tests in cotton growing, as the most suitable for immediate development, and Sir Thomas Ward considered the selection a very good one.

As a condition of giving its consent to the assignment of the concession to Eastern Irrigations, Limited, and the assignment by that company to your company of its portion of the concession, the Government of Iraq stipulated that it should be satisfied as to your company's financial position.

With a view to obtaining such consent, Dr. Asfar submitted to the Government of Iraq, so long ago as January, 1925 (five months before the formation of your company), a financial programme giving particulars of the intended capitalisation of your company, and of its proposed operations on the Diala. He also interviewed the High Commissioner, Sir Henry Dobbs, at Baghdad, on January 8, 1925, and left him a copy of the programme presented to the Government. Dr. Asfar found that the Government would not give its approval to the scheme without the approval of the High Commissioner being obtained, and the High Commissioner referred the matter to the Colonial Office for advice as to the financial status of the companies.

The Colonial Office and the Company's Status.

The Colonial Office was approached, interviews took place, and a draft of the prospectus was supplied to it as long ago as February, 1925. A copy of the prospectus so supplied was sent by the Colonial Office to the Government of Iraq. Not only was the prospectus scrutinised by the Colonial Office on behalf of the Iraq Government, but they required and were furnished with copies of the draft memorandum and articles of your company, and a copy of the memorandum and articles of Eastern Irrigations, Limited, and detailed information in relation to both companies.

Various points were raised by the Colonial Office as to the respective rights of the Government and the companies under the concession, and were answered, but no question was ever raised concerning the water supply.

On April 17, 1925, a letter was written by the Colonial Office to Eastern Irrigations, Limited, dealing with certain points discussed at a conference which has taken place at the Colonial Office on the 8th of that month. This letter, after making certain suggestions which were given effect to, contained the following paragraph:—

Digitized by Google

"Subject to the foregoing suggestions the Secretary of State would be prepared definitely to advise the Iraq Government by telegraph that, in his opinion, the financial resources and stability of the companies are satisfactory, and that the companies appear to be such as will be capable of carrying out the work set forth in the concession. He would explain to the Government that a document designed to complete the safeguards in his opinion necessary from the Government's point of view is at present under consideration, but that its general terms are already accepted by the companies. It will of course be understood, as observed at the meeting, that the Secretary of State must leave the confirmation of the exact areas mentioned in the draft prospectus to the Iraq Government, and that he cannot be considered as accepting these figures on their behalf. He would propose, therefore, in his telegram to draw the Government's attention to the figures, and suggest their examination by local experts."

In a later letter from the Colonial Office to Eastern Irrigations, Limited, dated April 30, 1925, it was stated as follows:—

"The Secretary of State has addressed the High Commissioner for that territory (Iraq) by telegraph instructing him to inform the Iraq Government that the details supplied to the Colonial Office in regard to both Eastern Irrigations, Limited, and Diala Cotton Plantations, Limited, have been examined, and that in the Secretary of State's opinion the financial resources and stability of the companies are satisfactory, and that they appear to be such as will be capable of carrying out the work set forth in the concession. The High Commissioner has also been directed to inform the Iraq Government that you have undertaken to conclude a document designed to complete the safeguards considered necessary from the Iraq Government's point of view."

The Terms of the Concession.

Eventually, on May 25, 1925, a telegram was received from the Government of Iraq suggesting certain alterations in the statements in the prospectus, which suggestions were complied with. The telegram went on to refer to the water supply and, before I deal with that part of it, I should remind you that under the terms of the concession, the land which the company is at present entitled to develop is 36,000 acres—i.e., equivalent to 12,000 acres of cotton. Cotton has to be grown in rotation with other crops, and one-third only of the total acreage is under cultivation for cotton at one time, the remaining land being used for other crops. This 36,000 acres (or 12,000 acres of cotton) I will call the first 36,000 acres. The remaining 72,000 acres of land (or 24,000 acres of cotton) referred to in the prospectus might only be cultivated if your company undertook the construction of a weir on the Diala, together with canal headworks, etc., and if such work resulted in a saving of water sufficient to irrigate such 72,000 acres.

The Water Supply.

The Iraq Government's telegram to which I have referred, stated that on statistics they were very doubtful whether there was any prospect of economising Diala water sufficiently to secure eventual annual cultivation of 36,000 acres of cotton (that is, the cultivation for cotton and other crops of the whole 108,000 acres of land which this company would be entitled to cultivate if it undertook the construction of the weir, etc.), and added:—

"But as this calculation is made on the responsibility of Sir Thomas Ward, they (the Government) do not wish to press objection on this point, provided that it is clear that they do not share responsibility for this estimate."

You will observe that the Government did not suggest any doubt that it would or might be unable to carry out its guarantee with regard to the water supply as provided by the Concession in respect of the first 36,000 acres (that is, the first 12,000 acres of cotton) which was the extent of the company's operations with its present capital. What it said was that in the opinion of the Government it was very doubtful whether the saving of water after the construction of the weir would be sufficient to enable the whole 108,000 acres of land to be cultivated.

The question whether your company should, or should not, in the future increase its capital for the purpose of constructing the weir and of developing the further Government lands could not be considered by your directors until the first 36,000 acres had been proved as a profitable undertaking. Before recommending an increase of your company's capital to provide the large outlay involved in such a project, it would have been necessary to prepare careful surveys and make investigations in order that a precise estimate of its cost might be arrived at.

Assignment of the Concession.

In the meantime your directors were content to rely upon Sir Thomas Ward's opinion that if and when such a weir was constructed, a sufficient saving of water should be made to irrigate substantially more than the whole 108,000 acres.

After receipt of the telegram from the Iraq Government to which I have referred, communications were made to the Colonial Office, and on May 30, 1925, the Secretary of State for the Colonies wrote that the Iraq Government approved and consented to the assignment of the Concession subject to the execution of a certain deed in favour of the Government. It is unnecessary for me to enter into particulars with regard to this document excepting to say that by the terms of this deed the Iraq Government expressed approval of the assignment by Eastern Irrigations, Limited, to your company, and to all acts, matters and things contained in or affected by the agreement between the two companies, a copy of which agreement was scheduled to the deed.

I desire to emphasise that there was no suggestion on the part of the Government of Iraq prior to the issue of the prospectus which it had before it, that it would be unable to carry out its obligations with regard to the supply of water for the first 36,000 acres which this company was formed to cultivate, although the Government had the question of water supply in mind, and expressly referred to it in its telegram.

First Doubts Regarding Water.

I will now tell you how and when it first came to the knowledge of your directors that doubts had been cast upon the question of water supply for the first 36,000 acres. I should state that my board has from the outset acted in co-operation with Eastern Irrigations, Limited, of whose board I myself and Sir Douglas Newton are members. Shortly after the issue of the prospectus in June, 1925, Mr. Roger Thomas, formerly Inspector-General of Agriculture in Iraq, resigned his appointment with the Government of India, and joined the board of your company, and was appointed local managing director, as was foreshadowed in the prospectus. He proceeded to Iraq in August, 1925, having been previously engaged here in consultation with the board making the necessary arrangements for commencement of the company's operations.

A Commission of Investigation.

It was arranged between this board and the board of Eastern Irrigations, Limited, of which Lord Chelmsford is chairman, that a joint commission should be sent to Iraq with the object of preparing a programme of work for the two companies, and generally reporting upon the best methods of carrying out the obligations of the two companies. The commission consisted of Lord Chelmsford on behalf of Eastern Irrigations, Limited, and Sir Douglas Newton on behalf of your company, and was preceded by your chief consultant, Sir Thomas Ward, and Dr. Fisher.

On the commission's arrival in Baghdad on September 17, 1925, they found that altogether unexpected difficulties had been raised by the Government's representatives, especially as to the supply of water. The obligation of the Government under the concession is to supply a minimum of 300 "cusecs" of water, which is the supply deemed necessary for the cultivation of 12,000 acres of cotton on the first 36,000 acres. During the first and second years whilst the land is being progressively developed the guaranteed minimum is not to be less that 100 and 200 "cusecs" respectively.

The Commission was informed by the Iraq Government that when the concession was granted the flow of the Diala had been assumed at 2,000 "cusecs" of water, but that that figure had not been obtained from gaugings taken over a long period of years, as these were not available. The Commission was also told that such flow at 2,000 "cusecs" was based upon records of 1918 to 1923 and upon inquiries made by experts who thought that that figure might safely be taken as reliable, but that the discharge in 1924 was somewhat lower, namely, 1,600 "cusecs," whereas in 1925 it fell to about 700 "cusecs" only. Other difficulties were raised, but, as I have said these, in the opinion of your directors, could be surmounted in due course.

The Real Difficulty.

The real difficulty consists in the apprehension of the Government that it will not be able to ensure the supply of 300 "cusecs" to your company. We are advised by Sir Thomas Ward that the regular supply of 300 "cusecs" can undoubtedly be assured even in an exceptional year, when the flow is as low as it was last year, only provided that the Government assumes adequate control of the water supply in the Diala River. The Government seems, however, to be most reluctant to take the necessary steps for this purpose. In this connexion I should inform you that the Government's delay in appointing the Survey Commission provided for in the concession may have a serious effect upon its power to carry out its obligations under the concession with regard to our water supply.

I may explain that the lands to which your company is entitled are Government lands, and there are other lands adjoining known as "Mulk" and "Tapu" lands some of the owners of which claim certain prescriptive rights to water.

Under the concession the Government undertook within six months to appoint a Survey Commission to make a survey of the zones which were the subject of the concession, to compile a register of Mulk, Tapu, and Government lands, and that in the case of the Tapu lands, the areas actually cultivated should be ascertained, and that until such time as the Government and the Concessionaires

should agree that the supply of water due to storage or otherwise would enable more lands to be put under cultivation no Tapu owner should cultivate more than the areas so registered.

Had the Government complied with this obligation, the rights of the Tapu owners would have been restricted to the water requirements of the registered areas. Not only has the Government not taken the necessary steps to carry out its obligations in this respect, but it now appears that it doubts its ability to do so.

Various technical objections with regard to the land and water supply were put forward by the Government servants, and it was even suggested in interviews that the Government's liability to guarantee a supply of water to your company was limited to a period of three years, a contention which your directors are advised has no foundation whatever.

In justice to the Government of Iraq it should be added, however, that although there has been a considerable amount of correspondence with that Government no such contention has ever been expressed in writing.

Correspondence with the Iraq Government.

On September 23, 1925, a letter was addressed by your managing director in Baghdad to the Minister of Finance at Baghdad, requesting the Government to make over the block selected for the first 36,000 acres and the supply of water necessary for the progressive areas to be put under cultivation, and further intimating that unless the necessary assurance could be given in regard to the winter crop, and unless your company could commence the requisite irrigation works on the selected block forthwith, it was feared that it would be impossible to cultivate 4,000 acres of cotton during 1926 as originally intended. No official answer to this letter was received while the Commission was in Baghdad.

Correspondence with the Government has taken place as well as interviews with the Government officials in Iraq, and the board have discussed the position with H.M. High Commissioner for Iraq while the latter was on a visit to this country.

The Government's Proposal.

The matter has culminated in a communication from the Iraq Government dated January 7, 1926, which was forward to your directors by the Colonial Office, and this communication I will read to you *in extenso*:—

"Your 504; following is reply of Iraq Government to Dobbs, begins:—

"(1) Government's prescriptive right to water in Mahrut area has never been fixed and has in fact fluctuated during recent years. Fixation of the Government's right is not possible at present or in near future.

"(2) Statistics of the maximum share of the flow of the Diala at the point where the concession zone commences enjoyed by Mahrut area in the past years and of the proportion of water available taken by the Government land in Turkish times are available and could be collected and checked in the month.

"(3) All our information shows that the supply of water in the Diala zone owing to the maximum demand coinciding with the minimum supply will always be inadequate in the critical months until storage is provided as originally contemplated by the Concessionaires. In any case operations on 36,000 acres in the Mahrut area will demonstrate little not already known and could better be carried on by pumping water from the Tigris within the zone concession. It is therefore suggested that the company should concentrate energy on the study of the Tawila dam project and on cultivators, and meanwhile realise that, pending the provision for storage, water which they require must come from the Tigris and not from the Diala.

The Company's Reply.

To this your directors wrote the following answer:—

"The Under-Secretary of State, Colonial Office, S.W.1.

"Sir,—I am directed to acknowledge the receipt of your letter of the 12th instant, and of the communication from the High Commissioner for Iraq which accompanied it.

"My board desire me to express their surprise that such a communication should have been addressed to you by his Majesty's Acting High Commissioner, appearing as it does to ignore the obligations of the Government of Iraq under the terms of the concession held by my company.

"I am to refer more specifically to the Acting High Commissioner's communication:—

"(1) My board do not undestand the statement in this paragraph. It is said that the Government's prescriptive right to water in the Mahrut area has never been and cannot now be fixed. To what then does the right extend?

"(2) The statistics referred to in this paragraph do not appear to my board to be of any value unless they ensure that a definite and sufficient minimum amount of water will be available to my company on the site of its operations.

"(3) This paragraph appears to have been written with the

Why DUNLOP TYRES are supreme

THERE are very definite reasons for the supremacy of Dunlop Tyres. Obviously the surest test of their worth is to try them on your own car! If you have not yet done so, here are some reasons why you should:

¶ The Dunlop Company produces a greater proportion of its total requirements in raw rubber than any other rubber manufacturing company in the world. Its rubber estates in Malay cover approximately 76,000 acres.

¶ The rubber used for Dunlop Tyres is specially compounded for its purpose. Particular consideration has been given to toughness, liveliness, wear resistance, and avoidance of stone cutting.

¶ The whole of the cotton material used in making Dunlop Tyres is produced in the Company's own mills at Rochdale—the largest self-contained cotton mills in the world.

¶ Tools and moulds used in the manufacture of Dunlop Tyres are made by the Company in its own factory.

¶ The Dunlop Company maintains a big fleet of cars, solely devoted to testing Dunlop Tyres, so that the many lessons of road usage may be learnt and applied in the Dunlop mills.

¶ The completely equipped Dunlop laboratories are staffed with the most highly skilled technicians. They are engaged in ceaseless research to ensure that only the finest materials obtainable are used in the making of Dunlop Tyres.

These are but a few of the many reasons why Dunlop Tyres are fitted as standard equipment on about 95% of British cars.

Therefore you can with confidence

'fit Dunlop and be satisfied'

DUNLOP RUBBER COMPANY LIMITED, BIRMINGHAM, ENGLAND Branches throughout the World.

object of attempting to persuade my company to abandon the project set out in its prospectus in exchange for another which has never been contemplated by it, and does not in any way commend itself to my board.

"My board think it right to place on record that, relying upon the good faith of the Government of Iraq, they have expended large sums of money and incurred very serious liabilities, and that it is their duty to their shareholders to do all in their power to safeguard their interests either by securing the rights conferred by the concession or by obtaining full compensation from the Government.

Communication from the Colonial Office.

(1) Notwithstanding that this letter was written on January 21, 1926, and your directors pressed for a reply, no reply or acknowledgment was received until March 13, 1926, when the Colonial Office wrote as follows:—

"Sir,—I am directed by Mr. Secretary Amery to acknowledge the receipt of your letter of March 1. Mr. Amery undestands that in the couse of a discussion with Sir E. Manville and Sir Auckland Geddes on February 18 last, Sir Henry Dobbs suggested that your company should communicate direct with the Iraq Government in matters arising out of your concession. Mr. Amery concurs in this suggestion, and I am accordingly to suggest that the inquiries contained in your letter of January 21 should be addressed direct to the Iraq Government.

"(2) Although arrangements were, as a matter of convenience, made for Sir H. Dobbs to send a message on behalf of your company to the Iraq Government through the Colonial Office and the Acting High Commissioner for Iraq, Mr. Amery cannot undertake to continue this procedure, which is open to obvious objection. In this connexion I am to point out that the telegram of which a copy was enclosed in Colonial Office letter No. C. 796/26 of January 12 last, was expressly stated to be 'the reply of the Iraq Government to Dobbs.' i.e., to your company, on whose behalf the original inquiry was made, and the objection to the use of this Office as a channel of communication between the company and the Iraq Government is emphasised by the second paragraph of your letter of January 21, which conveys the inaccurate impression that the telegram emanated from the Acting High Commissioner and was addressed to the Secretary of State.

"(3) I am to add that a copy of your letter of January 21 has been sent to the Acting High Commissioner, who will no doubt communicate its contents to the Iraq Government, but if the company desire to ensure that they will receive a reply, Mr. Amery considers that they would be well advised to act upon the suggestion made by Sir H. Dobbs and communicate direct with the Iraq Government."

You will have observed that the Colonial Office state that the communication from the Iraq Government of January 7, 1926, was not addressed by the Acting High Commissioner to the Secretary of State, but was addressed to Sir Henry Dobbs, on behalf of the company. The point does not seem very material.

It is true, as appears from the telegram itself, that it emanated from the Iraq Government, but it was forwarded by the Acting High Commissioner to the Colonial Office, and by that office to our company. It was clearly, therefore, our duty to reply to the Colonial Office, and this we did on January 21, although our letter received no acknowledgment for over seven weeks. We are still, however, without any communication from the Iraq Government or the High Commissioner, although the Colonial Office state they forwarded our letter of January 21 to the High Commissioner.

An Early Hitch over Water.

Before closing my remarks, I should perhaps mention that your directors experienced difficulty in regard to the water supply for the small area planted for the limited pioneer crop in compliance with the terms of the concession. Owing mainly to the inadequate water supply the yield was very much lower than was anticipated, and part of the crop had to be abandoned. The main technical purpose of this pioneer cultivation was, however, secured by the training of 141 Arab families in cotton-growing on up-to-date methods. These would form a valuable nucleus for a larger development.

The Present Position.

The present position, therefore, is this:—The communication of January 7, 1926, from the Iraq Government, which I have read to you, makes it clear that the present opinion of the Government is that it will not be able to fulfill its obligations to supply the water guaranteed by it under the concession, without which the business of your company, the cultivation of cotton, as foreshadowed in the prospectus, cannot successfully be carried on. On the other hand, I must repeat that Sir Thomas Ward is quite satisfied that the Government is perfectly well able to ensure a 300 "cusecs" supply of water, provided that it takes control of the water supply, as it is its duty to do.

Secondly, the Government, in its most extraordinary and startling communication, now suggests a complete abandonment of our scheme and the substitution of one which has never been in our minds and would involve additional expenditure much beyond our resources. The Government makes this suggestion notwithstanding it had before it full particulars of our project, that its own advisers selected the land comprised in the concession as most suitable for immediate development, and that it never at any time prior to the issue of the prospectus suggested that it apprehended a shortage of water for the first 36,000 acres, or had any reason to believe that there was any other objection to the cultivation of the 36,000 acres (12,000 acres of cotton) to which we are entitled.

"A Very Serious Situation."

Your company's position is therefore a very serious one, especially in view of the large expenditure and obligations which have already been incurrred, and it has given and is giving your directors the greatest anxiety. In view of the Government's attitude, and of our experience with the pioneer crop to which I have referred, we have endeavoured to obtain an assurance from the Government that it will act up to its guarantee and ensure to us a sufficient water supply, and, having failed to obtain this assurance, we have felt it our duty to convene this meeting in order that the shareholders may have a full statement of the position clearly set before them.

It will, however, I think, be palpable to you that the position as between your company on the one hand and the Government of Iraq on the other, cannot be discussed in all its details at a public meeting, and I put forward the suggestion that the shareholders present should nominate a small committee to confer with the board as to the course to be adopted. If that suggestion is complied with the committee will, of course, be given full access to the whole of the documents and correspondence of which I have only been able to give you a summary, and your directors will report the result to you at a subsequent meeting.

A discussion followed, at the close of which a resolution of complete confidence in the board was passed, and a committee, as requested by the board, consisting of the Right Hon. Sir Alfred Mond, Bt., M.P., Sir John Latta, Bt., and Mr. E. T. Campbell, M.P., was appointed.

A vote of thanks to the chairman concluded the proceedings.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, March 20.

War Debts.

The terms of the agreement arrived at between the British and Roumanian Governments for the consolidation of Roumania's War Debts to Great Britain are published in the *Argus* of March 20. Great Britain holds Roumanian Treasury bonds to the value of £18,448,200, and this sum is to be paid off in yearly instalments ranging from £50,000 to £750,000 per annum, the final payment to be made in 1987. Up till 1930 the annual instalments are smaller in consideration of the payments due by Roumania up to that date on account of Relief Bonds.

Roumania has obtained from Great Britain a remission of her debt to the amount of 5 million pounds as damages for the destruction of her oil fields during the War. This is sure to cause great satisfaction in the country, as the destruction of the oilfields has long been a very sore point. On the other hand the fact that this indemnity comes to her not in cash, but in the form of a reduction of her own liabilities makes it more difficult for her to distribute to the petroleum companies the proportionate indemnities due to each under this heading, and these payments will no doubt be allocated over a number of years.

British Chamber of Commerce in Bucharest.

Sir Herbert Dering, as Honorary President, presided at the sixth annual banquet of the above chamber. The Minister remarked on the gradually increasing trade of Roumania with Great Britain (the value of Roumania's imports from the United Kingdom having risen in 1925 to 3.1 million pounds from 2.8 millions in 1924), and spoke in hopeful terms of future commercial developments. This will unfortunately be the last time that Sir Herbert Dering will occupy the presidential chair, as he leaves Roumania at the end of this month.

Miscellanous.

Direct postal communications for ordinary letters have been resumed between Roumania and Russia through the post offices of Cernauti, Kisinef and Bucharest. Registered letters can be received from Russia through the Bucharest General Post Office, but none can be sent from Roumania to Russia in the meantime.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Yugoslav Cabinet Crisis.

The form that the solution of the Ministerial crisis in Yugoslavia has taken suggests that the whole story has not yet been made known. Before M. Raditch presented his ultimatum regarding the early reassembling of the Skupshtina to M. Pashitch and caused the latter to hand in the resignation of the Cabinet, the political waters in the Government parties had been gravely troubled by a variety of incidents. Apart from M. Raditch's attacks on his colleagues and the consequent friction between the two parties of the Coalition, there had been outspoken criticism of the Budget by a fairly numerous section of the Radical deputies; more serious still, the personal feud between M. Liuba Yovanovitch, the second leader of the Radicals, and M. Pashitch had broken out afresh over charges laid by the son-in-law of the former against the Prime Minister's son, who was accused of using his father's position to feather his own nest. M. Yovanovitch identified himself with his son-in-law in the matter, and ostentatiously withdrew his name from the Committee in charge of the celebrations in honour of M. Pashitch's eightieth birthday. Against this lurid background the Ministerial crisis has been solved by the Radical-Raditch combination's remaining in office with only two changes in the composition of the Ministry. M. Pashitch withdraws and his post of Prime Minister is taken by his loyal supporter and former Minister of Public Works, M. Ouzounovitch; at the same time the country loses its able and hard-working Finance Minister, M. Stoyadinovitch. As the new Prime Minister takes for the present the portfolio of Finance, only one new appointment has been made: his own place at the Ministry of Public Works is filled by M. Milorad Vouitchitch, a supporter of M. Liuba Yovanovitch. To complete the picture, it may be mentioned that M. Raditch is said to have withdrawn his demand that the Skupshtina should meet before May 5, the date to which it stands adjourned.

The Raditch Enigma.

From the fact that M. Pashitch has left the Cabinet, while M. Raditch remains, the conclusion might be drawn that the solution of the crisis has been wholly favourable to the leader of the Croat Peasants. If M. Raditch, however, is to be taken seriously, he is more concerned with principles than persons. Behind all his oratorical fireworks there is a good deal of sound sentiment; but his energy has not hitherto been directed towards the translation of the sound sentiment into practical politics. His task, therefore, will not have been accomplished merely by the removal of M. Pashitch, especially as the Radical group still dominates the Cabinet. The extent of his victory, if such it is, will be better gauged by his own attitude in the near future. A charge brought against the late Cabinet was that the whole of its time was taken up with composing its own differences, so that it had no opportunity of applying itself to constructive work on behalf of the State. Inasmuch as the differences would hardly have been there, if M. Raditch had not created them, the outlook for the new Cabinet will be happier only if the Croat leader entirely forswears platform speeches and applies himself to the work of his Ministry of Education.

Busy Days in Greece.

What with mutinies below, revolutions above, and General Plastiras somewhere in between, the Greek people must be having their craving for news almost satisfied these days. (As the writer of the Acts of the Apostles found that the Athenians spent their time in nothing else but either to tell or to hear some new thing, it is to be inferred that "What's the news" was a common form of salutation in his time as well as to-day). It can hardly be accounted a dull week which makes General Pangalos

Digitized by Google

President as well as Prime Minister, produces a mutiny at Salonika, drives by means of a Constituent Decree yet another nail into the Greek Parliament's coffin, and offers a reward of half a million drachmæ for the arrest of General Plastiras. There does not seem, fortunately, to have been anything serious in the mutiny at Salonika, except possibly for the misguided soldiers who, to judge from their precipitate surrender, cannot have had their heart in the game. The Constituent Decree, on the other hand, is more disturbing for those onlookers who believe that the best thing both for Greece and for General Pangalos is to get back to normal constitutional conditions. According to the President's own explanation, the powers now conferred on the office by his own "sic volo sic jubeo" are designed to enable recalcitrant Parliaments to be dissolved, and, he might have added, generally kept in order, by the President single-handed, without recourse to the Army which will, inferentially, be free to attend to military instead of to political affairs. But this Decree, in common with all General Pangalos's edicts, is *ad hoc* legislation directed against naughty politicians, a naughty Parliament or a naughty Press. Greece with a rapidly deteriorating exchange and a score of other problems awaiting settlement must be getting tired of being told that it is so very naughty and that General Pangalos alone is good. The President-Prime Minister struck the right note when he declared that the country was weary of its politicians; but the next worst thing to hearing politicians talk is hearing too much talk about politicians, when the country as a whole wants to get busy with business that matters.

Greek Military Discipline.

The officer who appears to have taken the lead in the Salonika "movement," and is to plead his case before a court-martial, has issued a statement to the Greek Press taking exception to the use of the term "mutiny." His action, he explains, was not directed against the Government, but was the result of a disagreement between himself and his superior officer. This "explanation" suggests that, in spite of General Pangalos's reforms, which have admittedly raised the Greek Army out of the rut into which it had fallen, the conception of discipline prevailing among some of the officers is, as far as other armies are concerned, an unusual one. In a personal quarrel between an officer and his superior, there must be other ways of working for a settlement than by involving a whole regiment in an action which lends itself to being regarded as an insurrection. The point is only of interest outside Greece in connexion with the fact that the Army has come to regard itself less as an instrument for military purposes, in respect of which a proper sense of discipline is essential, than as an administrative weapon for controlling contentious politicians. In its latter capacity discipline can be subordinated to what a junior officer considers ought to be the proper attitude for a senior officer to adopt towards him. Possibly, under General Pangalos's inspiration, the Athens court-martial trying the Salonika officers will seek to prevent this impression from gaining further ground in the Army.

Turkey and Criticism.

In expelling the Correspondent of *The Times* from Turkey the Turkish Government has followed the precedent set in other countries where a constitutional régime is more or less in abeyance, of refusing to tolerate criticism of its acts. The position in Turkey, however, is different from that of Italy or Greece. Both Signor Mussolini and General Pangalos have had to join issue with a form of domestic politics that was quite obviously playing havoc with the national interests, and they have taken up the attitude that it is better for their respective countries to be freed for a period from criticism of a political character, which is inevitably biased and generally captious. Foreign criticism in such circumstances is mainly academic and is more inclined to fasten on interpretations of modern-day conceptions, as may be involved, for instance, in the adjustment of the claims to liberty of the subject and the enforcement of the greatest good of the greatest number. Certainly no one denies that the régimes associated with the names of Signor Mussolini and General Pangalos have brought much good to Italy and Greece. Mustapha Kemal Pasha is on different ground. His challenge is directed not against subversive or hostile elements in Turkey, but is deliberately thrown down against what he describes as the West. His main grievance is that the West insists on regarding Turkey as an Eastern country, whereas he has decided that it is to be wholly Western and as good as any Western country. Now this is a very fine ambition, and, although Mustapha Kemal Pasha will not believe it, one that commands the admiration and support of all Western peoples. But it is quite obvious that the West knows more about what is Western than Mustapha Kemal Pasha does, and must be a better judge than he of what is or what is not up to approved Western standards.. Unfortunately on this point the Turkish President refuses to be convinced. Western is not as Western does, but as Angora chooses to interpret it, and partly as a result of this doctrine the Correspondent of *The Times* has to leave Turkey.

Cause and Effect.

The immediate cause of the expulsion appears to have been a telegram, which was suppressed, giving an account of an incident in Constantinople, involving the death of an officer, that the Turkish authorities were anxious to hush up. Now it would be nothing out of the way for the Angora Government or even the local authorities to decide that the less said about such a matter the better, and to suppress the telegram, with or without a polite note to the Correspondent explaining the action taken. To expel a foreign correspondent in such circumstances is entirely arbitrary, and may be due to the fact that for a long time Mr. Maxwell Macartney, the very able correspondent in question, has been a source of worry to the Angora Government. Two years ago, when the official policy towards Constantinople pressed heavily on Turks and foreigners alike, it was difficult for any intelligent foreign observer to understand the mentality of Angora. The point of view that the Turkish Government then took up was that it did not mind fair candid criticism on the part of a correspondent, but it had a strong objection to being made fun of. The establishment of personal relations between the two parties brought about a better state of affairs, and for some time an improvement in Angora's policy towards Constantinople followed.

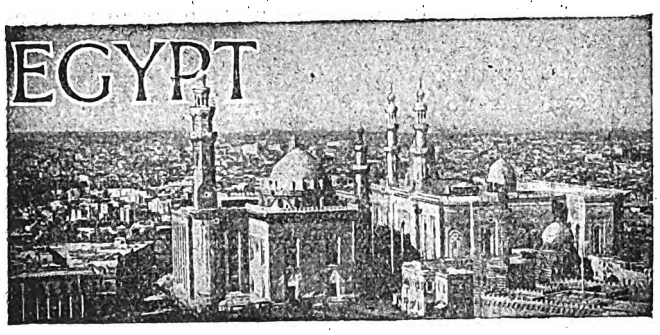
A NEW LEAD IN ROUMANIA.

After the first surprise over King Ferdinand's selection of General Averescu to succeed M. Bratianu as Prime Minister, Roumania is beginning to take stock of the political situation thus created. As far as can be gathered in the short time that has elapsed since the change of Government, two main considerations are in evidence; it is very widely desired, first, that the coming elections should produce a reasonably stable Government, and, secondly, that other parties than the National Liberal should have a chance of showing what they can do for the country. In the latter consideration there is not necessarily any ill-will against M. Bratianu and his followers. Ever since the earliest days of the Roumanian State the country has been accustomed to two chief political parties, who have succeeded one another in office, until it came to be regarded as a settled feature in politics that when a Government resigned it should not pose nor be regarded as eligible for re-election. Post-War conditions have led to a multiplicity of parties, and there has been no obvious successor to the compact National Liberal group. The misgivings in regard to General Averescu's candidature for the Premiership were due mainly to the fact that his People's Party of itself is too exiguous to hold its own in Parliament, and that his alleged understanding with M. Bratianu was considered as a bargain to secure the latter's immediate return to power. There is possibly no foundation at all for this latter insinuation; in any case it loses much of its force in the strong bid that the new Prime Minister is making to be regarded as a factor in the political situation and in the anxiety of all the other parties to have some voice in the administration of the country or in keeping the Government in office. In deciding that the main change of Roumanian policy is to be in the economic sphere General Averescu has thrown down a very vital challenge to the National Liberals; he is opposed to their policy of deflation and seems anxious to stabilise the currency as it now is. At the same time he is to change round from the Liberal policy of keeping foreign capital at arm's length to one of encouraging it to take part in the trade and industry of the country.



It would be thought that General Averescu's declaration on the subject of his policy and his resolve to concentrate attention on fiscal and economic questions would make it easy for the other parties of the late Opposition to come to an agreement with him. If it be the case that the National Liberal Party has been able by one method or another to "dig itself in" among the electorate, while its opponents have been quarreling among themselves, there will be little chance of the other parties reducing the large Liberal majority in Parliament at the approaching elections, unless they come to a working arrangement among themselves. The Prime Minister has already gone outside the narrow limits of the People's Party for his Cabinet and is known to be trying to secure other support; but until the Nationalist Party of Transylvania officially throws in its lot with the People's Party, there can be no permanent strength in the forces nominally arrayed against the strong National Liberal phalanx. The obstacle is understood to be one of persons rather than of principles. If this should be the case, it would be well for the Transylvanians to reflect that they will lose nothing by serving an apprenticeship under a politician of the Old Kingdom. They were able, it is true, to show their worth during the short Premiership of Dr. Vaida Vaivod in 1919, but the fact that they were no match for the more experienced politicians of the Old Kingdom suggests that they will do better in the long run by climbing slowly to power. No less than the People's Party, they stand to benefit more from the general desire in the country for a political change, if they can join forces at least for the elections with General Averescu. For, while the desire for a change is there, the desire for stable government is equally pronounced: and the stronger the coalition that makes its appeal to the electorate, the greater its chances of receiving a decisive verdict in its favour.

Although it is not desirable that each successive Government should spend its time in undoing the work of its predecesssor, it is evident that the four years' record of legislation standing in the name of the late National Liberal Government invites a fairly thorough scheme of overhauling. The Party remained long enough in office to realise of its own accord that modifications of earlier legislation were necessary, and it was sufficiently master of its art to be able to fit these modifications into the scheme of its general policy. But its failure to cope with a steadily depreciating currency proved that there was something wrong, for all the bold words with which the Party's programme was decked out. The point to be kept in mind by the new Government is that past legislation should not be attacked merely because it was passed by political opponents, but only where it runs directly counter to the interests of the State. A charge brought against the late Ministry was that it was too apt to regard the State as its own exclusive reserve. Legislation consequently became tinged with the point of view of party interests. As an instance may be cited the Law dealing with Chambers of Industry and Commerce. When the strictest economy ought to have been the order of the day, there must have been many arguments against a system which made the Chambers little more than outside offices of Government, however useful it might be to those in power to have their finger on the whole trade and industry of the country. General Averescu and any politicians associated with him will deserve well of the country, if they can make a final break with the pernicious doctrine that the holding of office is primarily intended to serve the personal interests of the party in power. The Roumanian Government of to-day is not called upon to mark time or to regard itself as a makeshift. It has a very definite work of construction to perform, and for this reason deserves that it should be provided with the best brains and the most honest politicians that the country can produce.

The Near and Middle East*

From Our Own Correspondents.

Cairo, April 2.

Lord Lloyd at Alexandria.

Alexandria came into its own this week-end when the High Commissioner paid it his first official visit. Lord Lloyd's programme included a meeting of the Anglican community at which he delivered a speech (not for publication), conference with various local British authorities, reception of the heads of the Maltese and Cypriote communities, a visit to Sir George Alderson, the father of the British community, and a reception at Victoria College where he and the Prime Minister, Ziwar Pasha, addressed a cosmopolitan gathering of over a thousand people.

While the High Commissioner was carrying out his conferences, Lady Lloyd was active in her own sphere She inspected the girl guides in Mrs. Carver's garden, and she inaugurated the new building of the Lady Cromer's Dispensary and later the Scotch School for Girls. Altogether those were an exceedingly busy two days, but their Excellencies can be well satisfied with the result of their exertions, for they established contact with their fellow-countrymen in Alexandria, and gained the goodwill of the cosmopolitan population of the city to an extent that has not fallen to the lot of a British representative for many years now.

Victoria College.

The reception at Victoria College and the publicity since given to the speeches delivered by the High Commissioner and Ziwar Pasha have brought this institution well into the limelight. As Lord Lloyd said, it deserves to be much better known than it is. Victoria College, which was founded a quarter of a century ago, owes its existence to the generosity of a number of Britons in Egypt—especially Sir George Alderson—and to the foresight of Lord Cromer. The Maker of Modern Egypt realised that there would always have to be a close association between England and Egypt, and that for that association to be harmonious and mutually beneficent, as it should be, it was essential that all the parties concerned should learn to understand and to appreciate one another; and it was with the object of providing a means to this end that Lord Cromer encouraged the foundation of Victoria College, where boys of all the races and the creeds domiciled in the land of Egypt could receive an education at an institution run on the lines of an English Public School by men versed in English Public School methods.

As Lord Lloyd further very rightly pointed out, just as Alexandria has always been, and always will be, the link on a large scale between the East and the West, so Victoria College has been the link in miniature between the various Eastern and Western peoples forming Egypt's great cosmopolitan population. The great part it has played, and is still playing, in the intellectual and moral education of the inhabitants of this country is to be seen in the numbers of men prominent to-day in Egyptian affairs, who have passed through its doors and in the numbers of sons of non-British residents in Egypt—80 per cent. of the total at present on its books—who are to-day receiving education within its walls.

On the occasion of the visit of the High Commissioner and in order to mark their high appreciation of the work the College is doing, the following scholarships have been offered by residents in Alexandria:—Mr. John Casulli, a scholarship of the value of £E20 per annum every year for six years, open to boys of Greek race; Emin Pasha Yehya the sum of £E1,000 to endow a permanent scholarship, its conditions to be settled with the Council of the College; Mr. Oswald Finney, two scholarships of the value of £E25 per annum, open to boys under 13, and this every year for the next ten years; Mr. Edwin Goar, one scholarship of the value of £E20 per annum, every year for six years; the firm of Rolo and Co., one scholarship of the value of £E25 sterling per annum every year for six years; Mr. Joseph Smouha, two scholarships of the value of £E50 sterling per annum, every year for ten years. Each of these annual scholarships will be held at the school by the successful candidates for three years running, except those of Mr. Finney which are to cover a period of six years.

The Political Murders Trial.

After two adjournments, due in the first instance to the illness of the President, Judge Kershaw, and in the second to the retirement of one of the members of the Court, the political murders trial in which are accused, amongst others, a Cabinet colleague of Zaghloul Pasha, his Under Secretary of State for the Interior and one of the active members of the Wafd, started before the Assize Court this week.

Counsel for the defence made much heavy weather with regard to the retirement of the Judge mentioned above. They visited Ministers in search of an explanation, they served summonses on the Judge calling upon him to attend when the trial started, they caused articles to be written in the Press protesting indignantly at the interference, of which they alleged the British had been guilty in forcing this judge, well known for his Zaghloulist leanings, to quit the bench and they threatened to throw up their briefs if satisfaction were not given them.

But at the last minute they abandoned these tactics and decided not to neglect their duty to their clients. The explanation of this sudden capitulation was that in the first place the Native Court of Appeal in General Assembly had decided that the retirement of the Judge in question had been quite regular, and that he could not be compelled to reconsider his decision, and that secondly the general

public had got to know of the fact of which counsel for the defence were themselves fully aware, that the Judge in question had committed certain indiscretions which made it expedient for him to retire from the Court before the trial started.

Liubliana, April 1.

Statement by Dr. Nintchitch.

On March 30, the Skupshtina passed the State Budget, which comes into force on April 1. The discussions of the estimates for the various individual Ministries gave rise to interesting debates between the Government majority and the Opposition parties. Especially interesting and important for foreign opinion was the debate upon the foreign policy of the Kingdom of Serbs, Croats, and Slovenes, which arose from the discussion of the estimate for the Foreign Office.

The Foreign Minister, Dr. Nintchitch, opened the debate with a long statement, giving an all-round summary of the foreign policy pursued by the State. It is important that it should be realised abroad that Dr. Nintchitch most thoroughly and at length defined Yugoslavia's attitude towards the present efforts for peace in Europe; towards the League of Nations and its pacifist activities; towards the Pact of Locarno and the frame of mind known as the Locarno spirit; towards the protection of national minorities, and so on. Dr. Nintchitch revealed himself throughout his speech as a practical, sincere, and consistently peace-loving statesman, whose first care is the preservation of peace in Europe. He pointed out that Yugoslavia's prestige in the League of Nations is steadily increasing, as the result of her sincerely pacifist policy; that Yugoslavia was represented in many of the permanent branches of that institution, and that she will also henceforward participate in the settlement of all questions which come up before the tribunal of the League. The Opposition agreed with the Foreign Minister in expressing the firm determination to see Yugoslavia a sincere adherent of the pacifist principles of the Europe of to-day. The Foreign Minister's statement makes it quite clear that the Balkans are no more to be used to provide a permanent source of strife and a standing menace to the peace of Europe.

The rest of Dr. Nintchitch's statement was in a similar pacifist strain. At this moment, when doubts as to the continued existence of the Little Entente are arising in Europe, it was important that Dr. Nintchitch should speak most appreciatively of it, pointing out above all the fruitful results of the last Conference of the Foreign Ministers of the Little Entente on February 10 at Temesvar in Roumania. He considered that for the purpose of a quick change of views it was really advisable that these conferences should take place more frequently than heretofore. These words constitute a complete endorsement of the Little Entente, and with this, also, the Opposition found itself in complete accord.

As regards Yugoslavia's relations with Italy, the only Great Power upon her borders, the Foreign Minister stated that all the more important questions between the two States were now settled or on the way towards being satisfactorily settled, and that a new era of friendly cooperation on all directions was about to begin for them. Of his recent conversations with Signor Mussolini in Rome, Dr. Nintchitch said that the comments passed upon them by a certain section of the European Press were uncalled for, since an exchange of views between Yugoslavia, France and Italy was altogether natural and intelligible. He would not speak in detail about his conversations with Signor Mussolini, and for this the Opposition took him to task. The Opposition speakers reproached him with reporting far too little about his conversations in Rome, but their sharpest criticism was directed against Italy herself. So long as the latter, they said, continued to disregard the most elementary rights of her Yugoslav minority, so long could there be no question of sincere friendship between the two States.

Touching Greece, Dr. Nintchitch pointed out that there were still certain outstanding questions between her and Yugoslavia, but none that could not be satisfactorily settled with mutual good will and compliance. In a similarly conciliatory strain he summarised the attitude of the Kingdom of Serbs, Croats, and Slovenes towards Bulgaria, Albania, Hungary, and Austria, and finally expressed his satisfaction over the resumption of normal relations with Turkey, which took place last year.

When Dr. Nintchitch passed on to Yugoslavia's relations with France, the Skupshtina broke into enthusiastic applause in order to show its sympathy with that State. Similar applause greeted the reference to Great Britain, when the Foreign Minister found occasion to speak of the sincere confidence with which Yugoslavia regards the pacifist activities of Great Britain.

Dr. Nintchitch's statement shows once more that the idea of the pacification of Europe and her peaceful consolidation on the basis of the present status possesses a most sincere and consistent adherent and champion in the Yugolav Minister for Foreign Affairs.

ROUMANIA.

Bucharest, April 6.

The New Government.

Contrary to the expectations of the majority—although towards the end of the Liberals' term things did seem tending in that direction—the King has entrusted the Government to the Party of General Averescu. That is to say to the most Conservative party in the country, and one which may be relied on to carry on without too great changes, the policy of their "Liberal" predecessors. This time General Averescu has included several representatives of Transylvania in his Cabinet and a great number of the Nationalists, from the party of M. Maniu, have gone over to the Averescans, so that there seems to be some hope that the Averescu party will succeed in the elections, and also in governing more effectively than at their last trial in 1921. Their programme is said to include the stabilisation of the leu, the reconstruction of means of transport, and the encouragement of foreign capital by

all means consistent with the interests of the country. One of their first aims, no doubt, will be to obtain a loan for the railways, and rumours are afloat among the protagonists of the new Government that negotiations to this end have almost been concluded. I have reason to believe, however, that this is an exaggeration.

The New Cabinet is composed as follows:—

President of Council, General Averescu. Minister of Foreign Affairs, I. Mitilineu (ex-Minister of Roumania in Vienna). Minister of Finance, I. Lapedatu (with Under-Secretary M. Manvilescu, who in 1921 showed much energy at the Ministry of Industry and Commerce). Minister of Interior, Octavian Goga (Transylvanian). Minister of Industry and Commerce, General C. Coanda. Minister of Labour, M. Gr. Trancu Jassy (the founder of this Ministry in 1921). Minister of Public Health, Professor Dr. I. Lupash. Minister of Communications, General G. Valeianu (with General M. Ionescu as Under-Secretary). Minister of Public Works, P. Groza (Transylvanian). Minister of War, General Ludovic Mirescu. Minister of Education, Dr. Nigulescu. Minister of Justice, D. Th. Cudalbu. Director-General of Prisons, Major G. Cernat. Minister of Religion, V. Goldish (Transylvanian). Director-General of Posts and Telegraphs, P. Papacostea.

As regards the foreign policy of the new Government, M. Mitilineu, in taking over his office from M. G. I. Duca, announced his intention of following in the footsteps of M. Take Jonescu. There are to be no changes in the staffs of Legations abroad.

Although this Government is decried in the Press of the extreme Left as a camouflage of the Liberals, it is more than probable that the prosperity of the country will be better furthered by its moderate innovations than by the violent changes which might have been introduced by a combined Nationalist and Peasant Party Government, however honest in its intentions. It is true that the Communal elections showed a considerable majority of the voters in the country to be in favour of the latter parties, but since the Government has been entrusted to the Averescu party, the Transylvanian Nationalist party of M. Maniu has completely broken up, a large number of his followers having joined the Averescans, and many others the Peasant's Party. The results of the coming elections are, therefore, awaited with the greatest interest. Another point in favour of the Averescans is that the Liberals will no doubt offer them no strenuous opposition in the elections as they are not anxious to come into power again for the moment, feeling confident that the main lines of their policy will be carried on by the successors of their own choice. The latter, on the other hand, will be able to give way on certain points where the dignity of the Liberals obliged them to maintain their professed policy, although the expediency of a concession was recognised even by them.

Obituary.

The death occurred last week of Professor Towa Ionescu, brother of the famous politician M. Take Ionescu. M. Towa Ionescu was a surgeon of European fame and his death will be felt as a great loss to the University of Bucharest and the medical faculty generally.

CYPRUS.

Nicosia, March 23.

Sequels to Tithe Abolition.

The abolition of tithes—on wheat, barley, oats, vetches, favetta, and vikôs—besides throwing out of employment many temporary officials, brings to an end the practice of issuing seed corn on loan to needy agriculturists, a custom which has been continued from Turkish, and no doubt previous, periods under British rule. The grain was issued from Government tithe grain stores and repaid in kind at convenient seasons. It is now represented that hardship may probably be caused to many poor cultivators if the facilities hitherto afforded are entirely discontinued in future. It is probable that Government will arrange for the granting of loans through village credit societies, which will enable villages to buy seed corn, and collect the sums, when repaid, in money or in kind. This may lead to other advantages, such as purchase of selected or superior seeds, which would gradually bring about improvements in the quality of crops.

The Jerusalem Pilgrims.

A considerable number of the British pilgrims of the order of St. John of Jerusalem, who touched at Cyprus, have visited Nicosia. The Governor invited the Greek Archbishop to Government House to meet them, and presented them to him, on March 18. The pilgrims visited various places of interest; some of them going to Kyrenia, to the beautiful ruined abbey of Bellapais (14th century), to Famagusta, and to the tower of Kolossi—a castle of the Hospitallers (in the Limassol district) which is of great interest but badly in need of repairs. They embarked at Larnaca on March 19 on their return journey via Rhodes.

Emigrants to Egypt.

His Excellency also consulted the Archbishop on the subject of young migrants, of both sexes, many of whom still endeavour to seek a livelihood in other countries, especially in Egypt. Notwithstanding the pains taken by the Government to ascertain, before an issue of passports, that intending emigrants have an assurance of employment in the countries to which they proceed, cases have recently occurred in which they have been granted on false information, with undesirable results. His Beatitude expressed the greatest desire to give every possible assistance, and stated that he would take steps to co-operate with the large "Cypriot Brotherhood" in Egypt, and other Hellenic associations, including the "Union of Hellenic Ladies," with this object and also for the protection and welfare of new-comers.

General News.

Lady Nettleton, wife of the Chief Justice, arranged for an admirable representation of parts of a "Midsummer Night's Dream" in the theatre at Nicosia on March 16, in aid of schools at the capital. It was a great success. The Governor, the official world, ex-King Hussein, and a large company from all ranks of society attended. His Excellency and others expressed the great pleasure which had been given through the efforts of Lady Nettleton.

A sharp shock of earthquake was felt at Nicosia and other places on March 18.

Mr. R. S. de Vere has been appointed President of the District Court of Papho.

SOME IMPRESSIONS OF IRAQ.

(From a Correspondent.)

First impressions of a foreign land have something of that vivid quality, that magical distinctness, which belong to the scenes of our childhood, and linger in our retrospect. But there is a difference in perception—for the grown man receives and grasps new visions and sensations consciously, with every faculty, knowing well that they can never reach him again with the same colour and intensity. They, too, must needs fade into the light of common day.

Before that happens, it seems worth while to make some record of everyday life in Iraq—the country with an unhappy past, which has come into international prominence to-day, and may conceivably have a future of wonderful development before it.

When I landed at Basra last December, I found occasion to use the small amount of Arabic which I had already learned, and the effect was both gratifying and disproportionate. A friendly Englishman lent me his car to make a tour of the bazaars where I was received with polite boredom, until I plucked up courage to try the proper formula of greeting, and met at once an almost effusive welcome. Next day, I started for Baghdad by the train which rocked along at twenty-five miles an hour through the desert, stretching featureless to the horizon, except for the little tussocks of camel thorn which cover its face. No rocks, not a stone, just flat brown mud baked hard till it looks like a yellow sea. The chief memories of that journey which remain with me are:—

(1) The dust—said to be harmless, but of such a fine and insidious kind that one is not aware of it except by smell and taste. It is quite invisible till it has settled in a thick coat over everything; and it is impossible to have a window open while the train is moving.

(2) Sunset over Ur of the Chaldees, which I will not attempt to describe, and

(3) Sunrise over Baghdad, as we approached the city—of unimagined beauty, which might well make an artist weep for his inability to paint it.

I arrived at Baghdad in time to see the outward, and quite spontaneous signs of the people's jubilation over the Mosul Decision. All the shops and cars and carriages had flags and other decorations. There is a growing sense of patriotism among the Iraqi, and I am told that even those who were formely officials under Turkish rule do not want the Turk back, because they are beginning to appreciate the freedom from corruption and oppression which weighed on all officials, high and low. Naturally, the Iraqi and the Arab do not love the Power which has ruined their country, although they may have taken service under it and, in their turn, have made their own squeeze.

The Iraq Army is fine material, and the men's powers of endurance remarkable. The other day, after practising "desert warfare," the Pack Battery kept up with the cavalry in the last twenty-two mile march; and showed off, on reaching Baghdad, by doing an Arab war dance round the column, which never once checked its pace.

I was escorted to the English Church on Christmas Day by my "boy," Karaf (not at all like a water bottle in figure), who comes from Amara. He walked respectfully on my left rear and directed my steps by *Hadha tariq, sa-hib* ("This road, sir"). The Arab pronounces it as two distinct syllables—which has a much pleasanter sound than the Indian *sah'b*. Such a funny little church, like a mosque built of mud outside, with one bell on top, and inside it is like a whitewashed cellar, on account of the summer heat. Cane-seated armchairs joined together make the pews.

In these early days, I am struck specially by the amazing likeness of the Iraqi (as distinct from the numbers of Persians, Kurds, Jews, Armenians and Turks one sees about) to ourselves, quite apart from the sprinkling of fair-haired people due to Circassian blood. That driver grooming his mule might easily be Bill Smith from Shoreditch! Nor is the resemblance only physical, for the educated men, soldiers and civilians, have similar tastes to Englishmen, and think and talk about nearly the same subjects. The one of whom I see most is an officer in the Iraq Army, who now gives me lessons in Arabic in exchange for English ones. He speaks French fairly well, having been at the Turkish Staff College, and having fought in four wars, starting with the Balkan campaign, and ending up at Gallipoli against us. On day in December, he and I and two other Englishmen took a long ride into the desert and camped for the night outside a Pilgrim Khan, where the Police Superintendent invited us to take coffee. As we sat on the terrace of the Police station, I was discussing the country in English with one friend, while N., the Iraqi officer, talked broken French with the other Englishman. Presently N leaned across and said in Arabic, "I am learning your language, and my ear is the guest of your words." Now we had said nothing in the least likely to offend him, even had we been talking Arabic, but his innate politeness would not let him leave us in ignorance that he had caught a word or two of our conversation. It seemed to me a rather significant little incident.

I soon discovered that the way to keep fit out here is to ride a great deal, and nothing could be more enjoyable than those days spent mostly in trotting across stretches of desert, interspersed with patches of dry brown ploughed land—only waiting for the irrigation canals to fill with long overdue rain to become acres of waving corn. It was cold at night, but the days were glorious with bright sunshine and dry wind, and wonderful dawns and sunsets. On returning to Baghdad, I had the luck to be invited by a Civil Administrator to join his party and visit Kadimain (the name, apparently, can be spelt in three different ways, so I choose the simplest). I rode out and met them at the entrance to the town, where the domes of the Mosque show above the palms. We looked into the gateways and then went to tea with the Big Man of the town in his private garden. The table was set on priceless carpets, spread beneath the laden orange trees, with three large bowls of freshly gathered oranges down the middle; and, all round it, little dishes of Arab preserves, apples, apricots, pumpkin, and other Oriental fruits. Then there were pistachio nuts and salted almonds;

and a special delicacy which none of us touched—Huntley and Palmer's mixed biscuits! At the head of the table sat the *Said* himself, a courtly old man, with his flowing *aba* adorned with gold embroidery, and a green turban round his fez—for he is also a *Hajji*. After tea we went on the roof of his house in the town to see the golden domes and minarets, and then back to Baghdad. The sun was setting in a haze of rosy clouds, which were reflected in the waters of the Tigris as I crossed the bridge of boats.

Before the New Year, I moved from the hotel to an Arab house which I shared with some other Englishmen. It has two courtyards, and is built on a "rabbit warren" plan of curious unexpected rooms. I, as one of the senior tenants, am fortunate enough to have the suite intended for the principal wife in the *haramlik*: a sitting room opening on the verandah and a bedroom approached by three steps—one of them two feet in height, the next eighteen inches, and the third of nine inches. All the rooms have the usual uneven floors of rough cement tiles; and my bedroom has five windows opening on to a little courtyard between other houses. Three of these are level with the floor and heavily barred, and two are high up near the ceiling. The bathroom windows also are heavily barred, adding to my sense of importance. House rent in Baghdad is high, and wages at the rate of £4 a month the lowest for a manservant who may reasonably be expected not to lose or steal your belongings.

Just at this time, I had an attack of "Dust catarrh," which everyone gets out here, but on January 1 rain fell and the dust in the streets turned to a glutinous mud, ankle-deep in some places and as slippery as a soap slide in other. Most unpleasant; but as the season's crops depend on a good dose of winter mud and a big flood in the rivers, we just made the best of the variation between plasticine and porridge which followed. And the Baghdad climate—with the dust gone—was like February in England, if you could ever get air so dry and bracing there.

It is interesting to watch the Kurdish porters carrying most amazing loads on their backs. I saw one man with a steel girder fifteen feet long. He could only just stagger under it, yet not one piece touched the ground, and when our furniture was brought to this house, one porter was carrying a three-foot iron bedstead, complete with mattress, an armchair, a small table, and a crate full of china. With this load he walked upstairs, and dumped it on the verandah. They use a long strip of webbing round the load and round their foreheads, so that the weight rests on the back while the muscles of the neck prevent it from slipping.

I regret intensely that I am no artist! Especially since I went round the copper *sûq*, for I never tire of this bazaar. The din is terrific; you cannot speak and be heard, and yet if you watch the men and boys sitting in rows you will notice a rhythm in their work. "Tank-a-tank-tong! Tank-a-tank-tong! Tank-a-tank! Tank-a-tank-tong!" In fact, it is "Go to bed, John" beaten out on resounding copper. Other rhythms they have, too, and they vary them, almost unconsciously, with syncopation. The money changers, also, chinking their handful of coins with monotonous persistence—when they pause to speak to a customer, the chinking runs like an obligato through their talk; and yet if you count the beats of the time, you will find, however long the pause, the next jingle comes in exactly at the right moment. If only I could draw little vignettes of the figures here—of that little boy of nine or ten, in his long *aba* like a nightshirt, helping his father to shape up a large copper cauldron. Or, in the quiet silversmiths' street, the famous Zaroun Subbi looking like John the Baptist in his best robes—indeed, there *is* one silversmith who calls himself "John de Baptist Subbi," and they all belong to this one family. Again, I should like to make a portrait of the "Pilgrim Father," a Bengali at Basra, who is quite indispensable. He puts you in the train, buys your ticket, talks half a dozen Oriental languages as well as perfect English, herds all the pilgrims into their cars, and is altogether a marvel.

CORRESPONDENCE

The columns of The Near East and India *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East and India.

THE PRESS AND ITALY.

To the Editor of The Near East and India.

Sir,—We, the undersigned members of the British Colony in Florence, claiming collectively by long experience and intimate relations with Italians of all classes to know more of public opinion in this country than any single newspaper correspondent can possibly do, desire to protest in the strongest possible terms against the manner in which the state of public affairs in Italy has for a considerable time past been misrepresented to a large and important section of the British Press. As guests in this country we make no comment on its internal political policy, which is not our concern, but we wish to state most clearly and emphatically that there exists here to-day nothing that can be justly termed either tyranny or suppression of personal freedom as guaranteed by constitutional law in any civilised land. We believe that the present Prime Minister, Signor Mussolini, enjoys the enthusiastic support and admiration of the vast majority of the Italian people, who are patriotically co-operating with him in building up the economic welfare of the country and who are contented, orderly and prosperous to a degree hitherto unknown in Italy and probably without parallel at the present time among other great European nations still suffering from the War.—We are, etc.,

(signed) George Dick-Lauder (Chairman).

"THE MOSLEM WORLD."

The April issue of the *Moslem World* contains many interesting articles, notably "Nationality and Islam," by C. R. Watson, in which the opportunity of Christianity in the guiding of the present nationalistic movements in the Islamic world is set forth, "The Kurds," by Roger C. Cumberland, who suggests among other things, that these primitive mountaineers may with proper education and direction become the Scots of the East, and an important translation, by Sir Thomas Arnold, of an article by Muhammad Shakir on "The Translation of the Koran into Foreign Languages," protesting against such translation. There are, besides, many other things of value to the student of Islam.

MODERN TURKEY.

Captain Harold Armstrong, O.B.E., will lecture to the Central Asian Society to-day (April 15), at 5 p.m., on "The Limitations of Turkey." The lecture, which will be illustrated with lantern slides, will be given at the Royal United Services Institution.

The widow of M. Alfred Sursock, a wealthy Syrian, entertained M. de Jouvenel, the French High Commissioner for Syria, and the members of the Archæological Congress in Beyrout last Thursday.

PERSONAL AND GENERAL.

TO-DAY

April 15, 1926 (New Style).
April 2, 1926 (Old Style).
Shawall 2, 1344 A.H., of the Moslem Calendar.
Iyar 1, 5686, of the Jewish Calendar.

Lady Newnes has returned to 1, The Boltons, S.W., from Palestine.

Colonel and Mrs. Selby Lowndes left Cairo on March 28 on their return to Whaddon Hall, Bucks.

The Hon. Michael and Lady Doreen Knatchbull have returned to 11, Eaton Place from Egypt.

Lord and Lady Plunket are expected to return to 38, Upper Brook Street, W., to-day from Egypt.

Admiral of the Fleet Sir John and Lady de Roebeck returned to London last Saturday from a motoring tour in the Pyrenees.

Major-General Sir Cecil and Lady Lowther, who have been spending a holiday in Egypt, are expected home about May 9.

Sir Alexander and Lady Roger left last Friday for Constantinople, and will return to London towards the end of April.

The Hon. Mrs. Herbert Pease and the Hon. Elizabeth Chaloner have arrived at 22, Ennismore Gardens from Wad Medani, the Sudan.

Mrs. Otto Kahn and Miss M. Khan left Claridge's Hotel last week for a tour in the Near East. They will return to London in May.

Major and Mrs. C. Court Treatt had the honour of being received by the King and Queen at Buckingham Palace on April 7, upon their return from their successful Cape to Cairo motor-car expedition.

To celebrate the anniversary of the Independence of Afghanistan, the Afghan Minister in London will hold a reception to-morrow (Friday) at the Legation, 31, Prince's Gate, from four o'clock to seven o'clock.

Viscount and Viscountess Allenby arrived at Liverpool last Saturday in the Canadian Pacific liner Montrose, following a six months' pleasure tour. They were visited on the liner by the Lord Mayor, and afterwards left for London.

An arrangement has now been made whereby Mr. G. G. Knox, First Secretary of the British Embassy in Constantinople, will be Resident Secretary at Angora, the new Turkish capital. Sir Ronald Lindsay, the Ambassador, will continue to reside in Constantinople as heretofore.

M. and Mme. Gennadius left last week for Athens to be present at the opening of the Gennadeion, the building erected by the Carnegie Corporation to house the library presented to the American School of Classical Studies by M. Gennadius in memory of his father. M. and Mme. Gennadius will be away for five or six weeks.

General Sir Claud Jacob had the honour of being received by the King at Buckingham Palace on April 7, upon relinquishing his appointment as General Officer Commanding-in-Chief, Northern Command, India, and upon his appointment as Military Secretary, India Office.

Lady Lloyd, wife of the High Commissioner for Egypt and the Sudan, has been recently staying in Jerusalem. Lady Lloyd, who was accompanied by Colonel the Hon. Edward and Mrs. Wyndham, has been the guest of the High Commissioner for Palestine and Lady Plumer at Government House, and later of Sir Ronald and Lady Storrs at the Residency.

Sir Ronald Lindsay, the British Ambassador to Turkey, returned to Constantinople on April 6.

The Prince of Wales received at St. James's Palace on April 7, Colonel Nawabzada Hamidullah Khan of Bhopal.

NEWS IN BRIEF.

The death is announced from Berlin of the German Vice-Admiral Marten Pasha, who commanded the defences of the Dardanelles.

The Albanian delegation for the discussion of the conclusion of a commercial treaty with Yugoslavia arrived in Belgrade last week.

Chief Rabbi Dr. Ehrenpreis, of Stockholm, has been elected by the Board of the Jewish community of Salonika as Chief Rabbi of Salonika. Dr. Ehrenpreis was formerly Chief Rabbi of Bulgaria.

Mr. Alan Cobham is to be the guest of honour at the Overseas League monthly luncheon at the Criterion Restaurant to-morrow (Friday). The chair will be taken by Sir Ernest Birch, chairman of the Council of the League.

Ibn Saoud, the Sultan of Nejd, has caused to be published in Cairo a categorical contradiction of the allegations made by the recent Indian Delegation to the Hejaz. He asserts that public security reigns everywhere in the Hejaz, that the Moslem religion is respected according to the Sharia (sacred law), and that everything has been done to safeguard pilgrims to Mecca.

Book Reviews and Notes.

ASSYRIA AND HER CONTEMPORARIES.

"THE CAMBRIDGE ANCIENT HISTORY." Vol. III. The Assyrian Empire. Edited by J. B. Bury, S. A. Cook, and F. E. Adcock. (Cambridge University Press. 35s. net.)

This great work moves on. It is still entirely concerned with area covered by this journal, but the centre of interest is now beginning to move from Asia to Europe. While the Persian Empire is left in command, we have the beginnings of Greek civilisation. Also international communication becomes much more marked and the ancient world is ceasing to be divided into more or less watertight compartments without much more intercommunication than results from hostile raids. We are now, to a far greater extent than formerly, in more or less historic times, though the history has to be pieced together from the results of excavations, from traditions and from records which were compiled long after the events chronicled actually occurred. Even then there are large gaps which can hardly be filled in except by cautious conjecture and inference. But materials are fast being accumulated by the spade, and the more we know the more able are we to take advantage of new finds. The best proof of this is that the period of history originally intended to be covered by this volume is now to occupy two, of which this is the first.

The period covered is roughly from 1000 to 500 B.C. Naturally the marvellous rise and the spectacular fall of the Assyrian Empire take pride of place. Of these Mr. Sydney Smith, in his five chapters, gives us a wonderfully readable and reasonably detailed account. His task must have been an extraordinarily difficult one, but future field work is hardly likely to do more than fill in his outline and, let us hope, solve such doubts as still exist.

Dr. Hogarth in this volume takes up the Syrian offshoots of the Hattic Empire, a history full of difficulty which no one alive is so well qualified to deal with. Our material is still small and, till more sites have been examined and the Hittite writings have been finally deciphered, much must remain obscure, especially as regards chronology and the connexion between these people and the Hatti proper. The same applies to Hattic art on which, however, Dr. Hogarth gives us a masterly, if summary, chapter.

After chapters on the Van or Urartu Kingdom by Dr. Sayce and on the invading Cimmerian and Scythian nomads by Dr. Minns, we have a short account of the Neo-Babylonian Empire by Dr. Campbell Thompson which hardly fits into the general frame of the rest of the book. To us it seems a pity that the author has not kept his contribution as free from rhetoric as his colleagues have succeeded in doing.

Dr. Hall takes up the tale of Egypt from the XXIst to the XXVIth Dynasty, a period certainly not devoid of interest in world history but almost entirely deserted by the glamour of the earlier periods, and also somewhat obscure. It need hardly be said that Dr. Hall executes his task with scholarly skill.

Dr. Stanley Cook's contribution on the early history of Palestine and the beginning of Israel was one of the outstanding parts of Vol. II. The 150 pages devoted by him in the volume under review to the continuation of this theme are of even greater importance and, to our mind, eminently satisfactory. With the help of local archæology and of what has been discovered of the history of Egypt, Assyria, Babylonia and the neighbouring realms of less importance, he is able to bring some order into the wonderful mass of tradition preserved in the books of the Old Testatment compiled, for the greater part, long after the occurrences which they profess to narrate and strongly tinged with the prejudices of later days. With these materials he is able to make what is at all events a likely reconstruction. He is cautious, and gives full reasons for his conclusions, and never hesitates to point out lacunæ which must wait for further evidence before they are filled in. Not the least interesting and brilliant of his chapters are those on the religion and on the Prophets of Israel. Israel, even at the height of its strength, had but a small territory and population, but its size was altogether out of proportion to its enormous importance in the history of the world.

What facts can be ascertained about ancient Phrygia and Lydia and of the latter's relations with the Ionian Coast cities are told, as is fit, by Dr. Hogarth, bringing the story down to the fall of Lydia and Ionia to the advancing Persian Empire.

So, by way of Ionia, we pass to Europe. Mr. Wade-Gery sketches the growth of the States arising from the Dorian conquests in the Peloponnese, tracing the passing of power from Argos to Corinth and finally to Sparta. We found Dr. M. Cary's account of the early history of Attica, Athens and the early States in Northern and Central Greece somewhat unsatisfying.

Professor Myres has a long and deeply interesting chapter on Greek colonial expansion which suffers wonderfully little from its severe compression and is brightened by the useful introduction of several very apt modern analogies. The subject has always been to the present reviewer one of extraordinary fascination, and nothing could be more delightful to look forward to than a leisurely survey of the whole field by the author. Will he not do it? By the way, the story of the ancient Greek cities of Cyprus with their dialect akin to that of Arcadia and their peculiar script deriving from the Minoan syllabary points to an earlier and closer connexion with Greece than a recent writer in THE NEAR EAST AND INDIA appears to have contemplated.

A short and rather sketchy chapter by Professor Adcock on the growth of the Greek City-State completes the volume, leaving the Persians, Etruscans, Carthaginians and other matters for Vol. IV., which will be published at an early date. C. S-W.

NEW YUGOSLAV CABINET.

The new Yugoslav Cabinet was formed on April 8. The members of the outgoing Cabinet remain in the same offices, except the Prime Minister, M. Pashitch, and M. Stoyadinovitch, Minister of Finance. The new Prime Minister, M. Ouzounovitch, will for the time being take the portfolio of Finance.

Professor Davidson, of New York, who will hold a professorship at the Hebrew University for six months, has arrived in Jerusalem to take over a Chair at the University.

The Emir Ghazi, the only son of King Faisal of Iraq, left Baghdad on March 22 by motor car *en route* for Europe. The Emir Ghazi, who is thirteen years of age, is coming to England to pursue his studies at Harrow.

THE PERSIA SOCIETY.

President : Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor Street, W.1.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

THE WEEK AT HOME.

London, Tuesday Morning.

Important Gatherings.

There will be two important gatherings to-day, when Parliament reassembles, and the Miners' Federation meet the Mining Association. In the Commons most of the next fortnight (at the end of which the Budget is to be introduced) will, it appears, be occupied with the Committee stages of the Economy and Electricity Bills. But it is outside the House where the more important business of the nation will be carried on.

One refers again to the mining industry. Last week a certain amount of relief was expressed by the public because the miners did not definitely slam the door in the face of the mineowners and of the Government, but left it cautiously open. It seems fairly obvious that the miners are not out for any merely destructive policy, and that they are genuinely anxious to help the Government. In the circumstances it is surprising that Mr. Baldwin could not promise them, of whom reductions in wages are now being asked, that the constructive part of the Samuel Report would be acted upon by the Government. For there is more than a possibility that the miners, if reforms are guaranteed, may consent to retrenchment.

In the meantime, the talk that has been indulged in certain quarters about the miners being the only party not to have accepted the Report, is not only ignorant but much to be deprecated. Psychology is not without its influence in this affair, and any pronounced tendency to judge against any particular party in this coal dispute is most mischievous.

The Motor Hansom.

The dispute between the Home Secretary and the owners of taxi-cabs seems now to be resolving itself into a dispute between the Home Office and the Ministry of Transport. The first Government Department wishes, as a flouting of the taxi-owners' claims, to introduce on to the streets the two-seater taxi, the "Jixi," or motor-hansom, as it is called; but the second Government Department is all out for reducing the number of street vehicles. It appears, therefore, that some months must elapse before Sir William Joynson-Hicks sees his pet conveyances usurping the place of the four-seater taxi.

That this motor-hansom will ultimately prevail is not to be doubted, and by those who are "above the battle" it is looked upon as being as desirable as the horse-hansom was in those delightful days when London was London, the time, I mean, when Verrey's was a place that King Edward and University dons of the indiscreeter sort could visit, when at the Empire no mere cinematographic display could suffice the audience, and when over all the romantic scene the "darlin" statue of Eros threw his unceasing darts.

Piracy Unchallenged.

It is amusing to reflect that while this little war goes on between the two Government Departments the private 'buses continue to defy the authority of the police. All that happens, so far as I have seen, is for a constable to stand at an end of the route forbidden to the pirates and stolidly to take their numbers. One supposes that out of all this display summonses will eventually descend upon the popular heroes of the hour—and, indeed, a few have already been issued at Ealing Police Court—but the hesitation of the authorities is certainly attributed by the million of people who petitioned the Government against knuckling under to the Combine (and by many more who did not sign that petition) to reluctance on the part of the Government to be guilty of bureaucratic tyranny.

Oil Pollution of the Sea.

Nothing appears yet to have been done in regard to the pollution of the sea by oil, the offensive extent of which I have before noted here. One is glad, therefore, to learn that the United States Government has fixed a date for the conference of maritime Powers on this question. Not only is this oil on the waters troublesome to human beings, it also kills both birds and fishes. Unless it is checked soon by international law it will surely spread.

Whether, as has been suggested, vessels should be compulsorily provided with separators, or whether, as appears to be the views of British shipowners, the discharge of oil should be barred within 150 miles of the land, remains to be resolved by the conference, which it is hoped will definitely restrict this very noxious by-product of modern civilisation.

April Blossoms.

There may have been more lovely Aprils than this, but I do not remember one. It is not that we have had sunshine all the time, for there have been such showers as to remind us vocatively of "April, April, laugh thy girlish laughter, And the moment after, weep thy girlish tears." But the blossom of this month has been amazing in its loveliness.

Cherry and plum and pear are everywhere thrumming to the content of bees. It seems that unless a severe cold snap comes the fruit year may be a record one—except for apples. But even these are already looking beautiful.

Nor is it only the fruit trees which cast a spell on our countryside. In every hedge and field there is burgeoning new life, so that even through the rain Nature states her smiling case.

London Theatres.

Without very apparent reason the state of the London stage has suddenly improved, and—*pace* those who dispute the sanity or judgment of dramatic critics—the improvement has been duly acknowledged.

Master-pieces may not be abounding, but there are a number of pleasant plays in which one does not have to keep either one's ears or one's eyes closed. It would almost seem that, for the while, the conquering *divorcée*, the devastating demi-mondaine, the ever-sharp soprano, the eternally-flat baritone, and the rest of those things that one had begun to think perennial spectacles, are at a discount.

For those who wish to laugh and not to have their eyebrows puckered in intellectual puzzlement there are "The Cat's Cradle," "A Widow's Cruise," "The Best People," and other things; and for those whose food must be stronger there are plays like "Autumn Fire," "Con-

flict," and, of course, "Saint Joan" and "The Widow and the Paycock."

Some of the American productions, also, are vastly entertaining.

But the most surprising departure of all was the production, last Saturday, by Mr. Nigel Playfair, of *revue* at the Hammersmith Lyric. I haven't seen it yet, but it is certain to be intriguing and original.

Music and the Film.

It has been difficult, even with the best will in the world, for anyone with artistic sensibilities to take seriously the music that is commonly played by orchestras in cinemas. Too often it consists either of sentimental airs or of classical excerpts brutally ravished from their context. Always it is subsidiary to the inferior art that is temporarily its master, the film. All this, of course, is well known to students of the problem, who have for many months now endeavoured in vain to raise the standard of cinema music.

Dr. Richard Strauss is now in London, whither he has come to conduct for the film version of "Der Rosen Kavalier." I did not hear him last night at the Tivoli, but personally, I have not the smallest hope of the film's being worthy of the music.

Modern Youth.

It is perhaps the proverbial urge of the time that has lately been impelling the newspapers to discuss the relative merits and demerits of modern youth. Old people have, especially in *The Times*, been either decrying the complete absence of graciousness in the younger generation, or revelling in the privilege accorded to the very old of praising the independence which they in their own youth were (or say they were) denied. The great and worthy protagonists of this ageless dispute were a Norwich man (who has, as material to judge upon, as good women as are to be found in England), Mr. Wilding, and Dame Millicent Fawcett, whose generosity of estimate is almost notorious.

Of course it all gets nowhere. It is a dispute that can never be resolved. I incline to the view that women's conventions move in circles and more rapidly than those of men, that the "unchanging male" is a less false phrase than the "unchanging female." But argument is quite useless. The only certain thing in the whole affair seems to be this: that the girls of to-day, be they better or be they worse than their mothers and grandmothers, are radically mistaken in thinking that in their fashion of dress and deportment they are really being new. For there is in fact no daringness or freedom which the Eves of bygone centuries had not perpetuated or achieved. Probably, indeed, the advanced youth of, say, the Minoan period, would have turned the red lips of our post-War females white with envy.

The Cricket Season.

The complete fixture list for the cricket season of 1926 has now been published, and it is once more to be regretted that the counties have allowed important games to clash with the more important Tests. County games are very good, but it is not questioned by cricketers that there are too many of them. On the day of the first Test, for instance, June 12, there are no fewer than seven County games. It is obvious that the counties thus stand to lose both money and (for those who have representatives in the national team) points.

Little doubt exists that the general interest in watching cricket is greater now than ever it was—this unfortunately does not mean that there is more cricket being played than there ever was, but merely that the game as a spectacle is beginning to take hold of what is mysteriously called the public imagination. Everywhere you may hear the various prospects of teams being discussed, and not without a certain amount of knowledge. This is largely owing to the fact that the popular Press have seized upon the subject as one to be exploited, with the result that one sees all sorts of articles, many of them not altogether desirable, on the peculiar merits or demerits of particular players. Practically all sportsmen in this country are deploring the tremendous—though not to be wondered at—boosting of the Australian cricketers by Australian cricketers turned for the time being into journalists.

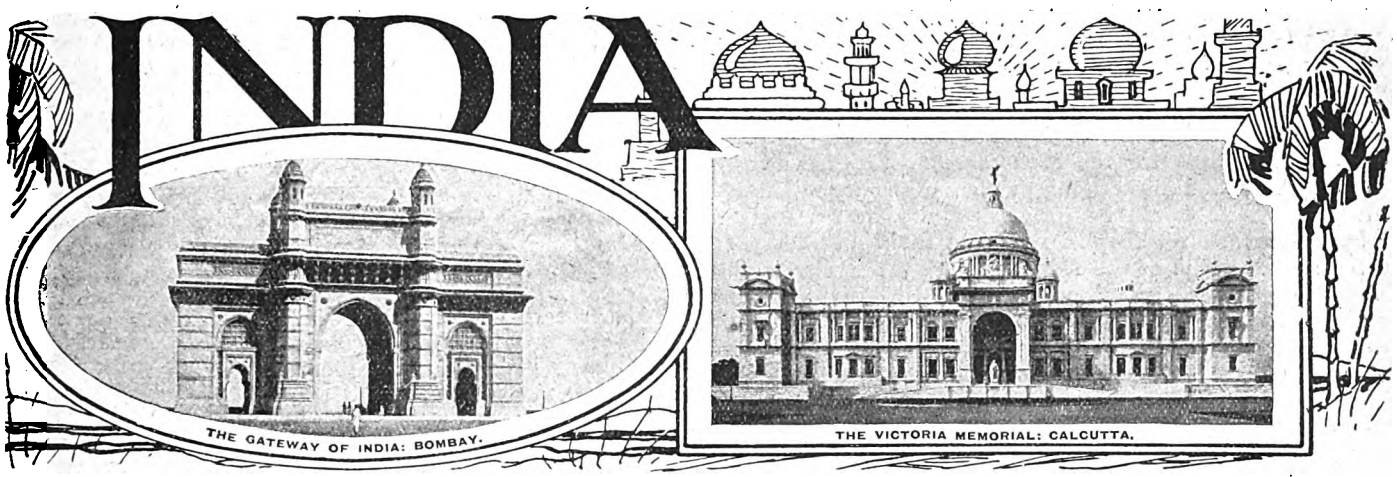
In this country, at any rate, there is little disposition to prejudge the Tests. It is recognised that the chances are very even. Not until May is out and the form of the Colonial visitors has been disclosed will there be any great manifestation of either pessimism or optimism.

ALTER EGO.

NOTES OF THE WEEK.

(Continued from page 438.)

Friends of Turkey.



The Turkish Government has again paid special attention to Constantinople, but its measures are now directed wholly against foreigners and, perhaps, more particularly against British subjects. Judged by Western standards or by the canons of ordinary common sense, these measures have nothing to commend them. In view, therefore, of the declared policy of the Turkish Government that it intended to bring Turkey into line with the West, it is the plain duty of those who are interested in Turkish affairs to point out that neither are these Western measures, nor can they ever lead Turkey into line with the West. If cynicism has been given too much rein, it may be that the Turkish Government has made it difficult to some more highly developed intellects to treat its actions seriously or to regard them as the considered policy of sober, thinking men. There are some people in Great Britain calling themselves friends of Turkey who imagine that they are serving Turkey by lauding to the skies every action of the Angora Government and denouncing all that their own country does. Their unintelligent support very probably encourages the Turkish Government to continue a policy that must ultimately bring ruin in Turkey; in this way friendship for the Turks is not shown. Angora needs more candid friends and to pay more heed to their strictures. It is to-day bringing Turkey rapidly to a financial abyss; if she should go over the edge, she can hardly hope to extricate herself otherwise than by civil war and foreign control, and the hands of the clock will have been set back a long way in Turkey.

The Baghdad Flood.

So far it has not been Iraq's fate to suffer from an excess of good fortune. While the success of the Diala cotton-growing experiment is being delayed by lack of water the Tigris has burst one of its banks above Baghdad in the immediate neighbourhood of King Faisal's Palace. What is described as a terrific torrent is surging round and through the building, and the inhabitants of the city are anxiously watching to see whether the weak embankments protecting them will hold, and whether the surrounding country can go on accommodating the mass of water pouring over it. Baghdad North station is under six or more feet of water, with only the roofs of railway carriages showing. The damage already done to buildings and goods is estimated at a million pounds, and still the uncertainty prevails as to whether the water will recede in time to save the city from a worse disaster. Three years ago there was a similar breach in the river's bank twelve miles from Baghdad, caused by an exceptional flood, and it seems as if Iraq in spite of financial stringency will be obliged to spend large sums of money in thoroughly overhaulng the banks of the Tigris over a considerable distance.

The Chaplin-General to the Forces, Dr. Jarvis, has returned from a highly successful tour of inspection in the Mediterranean, in the course of which he visited Gibraltar, Malta, and Egypt.

COMMUNAL DISSENSIONS.

When, in the last issue of The Near East and India, we spoke of "the acute communal dissension that forms perhaps the most disturbing legacy that Lord Reading has left to his successor," we had no reason to suppose that it would be so suddenly and startlingly brought to his notice. But the serious outbreak of rioting in Calcutta is only another reminder, if any were needed, of the quantity of communal powder that is always lying about in India waiting for a spark to explode it. It is in this state of affairs that practically all Englishmen, and a considerable body of Indians, find their justification for insisting on the paramount necessity for the existence of a strong and impartial Government, that can be trusted to hold the balance between the warring religions. It ought, however, to be remembered that the great majority of politically minded Indians do not hold—or, at any rate, do not express—this view. There are many who assert that Englishmen have deliberately fostered the great communal differences between Hindu and Mohammedan, which, they declare, did not exist before the advent of the British Raj, and would automatically vanish with its disappearance. There is a considerably larger number who, while agreeing in putting the blame on the British Government in India, do so on slightly different grounds. They say that the reason for the constant outbreaks of Hindu-Moslem disturbances is that each side relies upon the presence of the British "policeman" to prevent matters from going to extremes: that the aggressor, of whichever side, can always be sure that the Government will intervene to save him from full retribution for his aggression: and that, if this comforting assurance did not exist, neither side would run the risk of complete defeat, so that the starting of a communal riot would be too serious an adventure for either to embark upon. It is noticeable that those who profess these views are invariably Hindus. The Mohammedan view of the British "policeman" is very different. If he were not there to keep the peace, say they, they would be only too ready to take on the Hindus and chance the consequences, which they feel confident would be favourable to themselves. It may be supposed that the Hindus hope that, if in India it should so happen that Hindu and Moslem are left face to face without the restraining power of the British-controlled Government, the overwhelming Hindu mass would swamp, and perhaps in time succeed in assimilating, the Mohammedan minority. But, as things are, with the British policeman handy, they look forward to achieving the same result in a peaceful manner—to acquire the political power that will, at a later date when the British decide that India can stand alone, have put them in possession of all the material resources of government, which will enable them to deal faithfully with the Mohammedan if he should then try to disturb the balance. And this is what the Mohammedans are afraid of. In the progress of India towards self-government they discern the approach of a "Hindu Swaraj," in which the Hindus will concentrate all power in their own hands, to the virtually complete exclusion of what, in any other country, would be looked upon as the enormous number of seventy million Mohammedans; though, in India, it constitutes less than two-ninths of the total population. The Hindus, on the other hand, see in the Mohammedan minority a truculent community that not only believes in force as the only resource of a virile minority, but also believes that, when the day of self-government arrives, it will be able—if necessary, with the assistance of its co-religionists across the North-West Frontier—to impose its will on the Hindu majority by force of arms. If, when that day comes, matters are permitted to adjust themselves peacefully, there can be no doubt that the Hindus will have the lion's share in the government of India; but that the Mohammedans do not look forward to a peaceful solution is evident from recent speeches by some of their leaders: and it is equally certain that they are confident of a result favourable to themselves if matters have to be settled by force. For instance, the implication in a speech by Sir Abdur Rahim at the Aligarh meeting of the All-India Moslem League was very clear, when he spoke of "the baneful activities of those Hindu politicians who, under the protection of Englismen's bayonets, are sowing trouble in the land to obtain Swaraj." It is certainly the fact that both sides have lately been increasing their activities, and that each of them finds the activities of the other to be baneful. The sparks that fire the powder have always been there—Hindus playing music before a mosque, Mohammedans slaughtering kine at the Id festival; but it is the powder that is increasing in quantity. Within the last few years, each of the communities has started two new organisations—one for the defence of their co-religionists and the other for the spread of their religion: Sangathan and Shuddhi by the Hindus, Tanzim and Tabligh by the Mohammedans: and each maintains that its action, in doing so, was forced on it by the activities of its opponents. In the case of the Mohammedans, a large number of their co-religionists are strongly infected with Hinduism, having been converted, in many cases forcibly, in and after the time of the Moguls: and, though orthodox Hinduism does not recognise the possibility of conversion, the reforming Hindu sect of the Arya Samaj—which actually produced the spark that fired the powder in Calcutta—is bound by no such scruple. In any case, it is rather a matter of re-conversion than of conversion: and the Mohammedan leaders recognise, clearly enough, that their religious hold on these comparatively recent converts to Islam is not strong enough to withstand material inducements that the better organised and wealthier Hindu community is in a position to offer. In the case of the Hindus, there are in India sixty million "untouchables"—persons who are only nominally Hindus, since they are outside the pale of the Hindu religion: and, as conversion to Islam instantly removes untouchability, since the Mohammedan religion recognises neither caste nor the absence of caste, the Hindu leaders recognise, equally clearly, the enormous dislocation in the comparative numbers of the two great religions of India that would accrue should the untouch-

Digitized by Google

ables decide to get rid, once and for all, of their degraded outcast condition by acepting Islam; which, contrary to orthodox Hinduism, is a proselytising religion. As for the Hindu fear that the Mohammedans may try to redress the balance of numbers by calling in their co-religionists from beyond the Frontier, this is fear of a bogey rather than of a reality; for the Mohammedans realise clearly enough that, though there might be no difficulty in calling them in, there would be great difficulty in persuading them to leave, after they had fulfilled their contract.

In the last issue of the *Round Table*, the writer of the Indian article says that he has never yet seen a single constructive proposal put forward by any Indian politician towards the reconciliation of Hindu-Mohammedan antagonism. Apart from the solution suggested by the ardent soul who proposed to divide India into two portions, the Northern third to the reserved for Mohammedans and the Southern two-thirds for Hindus, the arrangement being carried through by wholesale transfers of population, there have in fact been at least four solutions put forward. The militant Hindu leaders propose to swamp the Mohammedan minority by the weight of their numbers. Their Moslem counterparts look forward to the forcible suppression of the Hindus by what they believe to be their own superior fighting qualities. The Third International have their own solution—a campaign in favour of the expropriation of landlords and employers, without compensation, which should, they think, serve to combine the masses, without distinction of religion, in the pursuit of their material interests; and should end in the forcible ejection of the British and their replacement by an "Indian bourgeois" Government: after which, the Bolshevists would step in and take charge of the situation, with the result, if their present proceedings in Russia are any guide, that all religions would be at a discount. And it is not many years ago that a leading Mohammedan firebrand suggested the formation of the "United States of India," to be brought into being as a "parallel government" on the Sinn Fein model, of which the component States should play off their minorities against each other: those in which there was a Mohammedan majority using a threat of oppression of their Hindu minority to prevent those larger and more numerous States, where there would be a Hindu majority, from abusing their opportunities. All these schemes, of course, depend for their success on the disappearance of the British Government; and, if this is not to be accepted as a postulate, it is quite true that no constructive proposal has been put forward.

The true conclusion seems to be that, after all, the only reasonable course is for the British Government to "carry on," continuing to hold the scales even between the warring communities, and trusting to agricultural development to provide the money required for education which, in the end, is the only possible means of achieving a lasting solution. The writer in the *Round Table* holds the view that unity will be reached through the Legislative Councils; which, he says, are now indisputably the only national and All-India bodies. The Congress, the Muslim League, the Hindu Mahasabha, are now only representative of sectional interests, and none of them will in future be able to challenge the claim of the Legislatures to speak for all classes and communities in India. "More and more, as time goes on, will all true patriots, all who want to think and work for India, be drawn irresistibly towards the Legislatures. And such men will be the best in the country, men who will be prepared to sink all separatist interests in the all-embracing common interests of India. They will try to examine economic and political problems from the point of view of the welfare of the whole country, not from that of the Hindus or Mohammedans or Sikhs, and in this there is infinite promise. Already the best minds of India are turning in disgust from the suicidal strife between Hindus and Mohammedans; and, in the development of a real party system under the new Constitution, they have a potent means of translating their disgust into constructive action calculated in the end to do away with its cause." One may hope that he is right; but, even if so, the end is certainly far off: and, in the meantime, all that the Government of India can do is to "carry on."

CURRENT TOPICS.

The Public Services Commission.

It was announced on April 6 that the Secretary of State had appointed Mr. W. R. Barker to be Chairman of the Indian Public Services Commission, and that he will sail for India on April 16. Mr. Barker retired last year from the post of legal adviser to the Board of Education; so that he combines the legal and educational qualifications which must necessarily be represented on the Commission. The appointment will probably cause some surprise in India, where it appears that European public opinion has, for some time past, had its own ideas about a suitable Chairman; for, though it was generally expected that the Commission would include an educational expert from England, it was thought that such a man would be a member, rather than the Chairman: and the present appointment, of a man whose name is probably quite unknown to ninety-nine out of every hundred Englishmen in India, to the most responsible post in what is generally agreed to be a body of the very highest importance, is an experiment the result of which will be watched with great interest.

To the interested onlooker, perhaps the most important point in the announcement is the date of Mr. Barker's departure for India; since this appears to make it reasonably certain that all four of the members of the Commission will be chosen from persons already in India. Such forecasts of the composition of the Commission as have been made in India have, in practically all cases, been made on the assumption that it would consist of three Englishmen and two Indians: and have generally been to the effect that the former would represent the Indian Civil Service, the other important All India services, and education, respectively: and that the latter would represent the judiciary, and moderate political opinion. But it has been very widely felt that the persons selected ought, in all cases, to be men who have already finished their service—who should be entirely free from any sort of official pressure, and should have no axe to grind of their own. These conditions are already fulfilled in the case of the Chairman: in whose case the rules also lay down that he shall be ineligible for further service other than reappointment under the Crown in India, though this proviso does not apply to the members. There are many who feel, and feel strongly, that this is a mistake: and who hold that it is of the first importance that it should apply to all. More than that, they hold that it should, so to speak, apply retrospectively: that any officials appointed should be selected from among men recently retired: and that, if it is thought desirable to include an Indian politician, the selection should be made from among those who have ceased to play an active part in the political arena. The departure of the Chairman for India before the selection of any of his colleagues has been announced does not, of course, preclude selections of this nature from among the Indian candidates for membership: but it would seem that it does do so in the matter of his English colleagues. It is permissible to think that, if the appointments made in India do not follow the precedent set by that of the Chairman, and are not made on the lines indicated above, a grave mistake will have been committed one that will imperil the success of what many Englishmen in India look upon as the most important of the recommendations of the Lee Commission.

In view of the very great delay that has already occurred in this vitally important matter, one is glad to think that the fact that this announcement follows so quickly on Lord Irwin's assumption of office is not accidental: and that it is due to his recognition of its importance

Digitized by Google

that the proverbial inertia of the Government of India in such matters has received a jolt The belief that this is so leads one to hope that not only the constitution, but the composition, of the Commission has received his personal attention; though, for the reasons given, it must be admitted that this seems unlikely. If, when it at last does get to work, the Commission proves unable to do so in an atmosphere of complete detachment and independence, it may turn out, after all, that it would have been better if the ordinary Indian precedent had been followed in this case also, and the delay allowed to continue indefinitely.

Women and Children Workers.

On March 19 Lady Chatterjee read a paper on "Women and Children in Indian Industries" before the Indian Section of the Royal Society of Arts. She spoke of the great contribution made by women and children workers in India's industrial development during the last thirty years; during which the number of women employed in factories has increased five-fold, and the number of children more than three-fold. The employment of children at night has been prohibited for a considerable number of years, and recent legislation has extended the prohibition to women. In the Indian mining industries about a third of the total employees are women, about-two-thirds of whom are employed below ground. The employment of children below ground was prohibited in 1924, and that of women is now being considered, in the face of strenuous opposition; though the Indian Mining Association, representing the European mine-owners, has already approved in principle the gradual and ultimate elimination of female underground labour in mines.

The lecturer explained that a distinguishing feature of female industrial labour in India is that the women employed are mostly married and are frequently the mothers of young children. It is not to be expected that the earnings of the men only will suffice to keep a family even at the existing standard of comfort: and the general exclusion of women would certainly lead to a further lowering of that standard. The demand for industrial labour has for some time past been greater than the supply: and, unless their women folk could also find employment, even fewer men than at present would be prepared to offer themselves. It must also be remembered that in India—as, indeed, in most Oriental countries—practically all women, except those belonging to the higher classes, are compelled to work: in the case of the agricultural population from which industrial labour is drawn, the work of the women in the fields is arduous, exhausting and, at certain times of the year, unremitting. India is a country of small holdings where, owing to Hindu and Mohammedan laws of inheritance, a continual subdivision of land is always taking place; consequently, for great numbers of small landholders, it is necessary to find outside employment during the seasons when work on the land is slack: and this applies with even greater force to the landless labourers whose staple employment is provided by agriculture.

The result is that, in most cases, it is a choice between labour offering itself by families or not at all: and this is a fact eager theorists in England, anxious to improve much that is bad in working conditions in India, would do well to remember. Their probable remedy would be, that the wages of the male workers should be raised to a point where the man's earnings would be sufficient to keep the whole of his family. Any suggestion that, in view of the low standard of efficiency of the Indian worker, and the fact that his products have to compete in the markets of the world, such an increase in wages would spell bankruptcy for the industries concerned, would, no doubt, be brushed aside as irrelevant: but, quite apart from this, there remains the age-old Oriental idea that, in the lower classes, the woman has to work as well as, and often at least as hard as, the man: and it is difficult to imagine any scale of wages that would induce an Indian of the landless labourer class to do all the work himself for the express purpose of enabling his womenfolk and children to do none.

Advertising.

The American Supplement to the *Advertising World* for March contains some interesting comments in an article on India as a market for American goods. The writer says that, despite popular belief to the contrary, the modern Indian is a materialist and rupees are with him as favourite a topic of conversation as are dollars on Wall Street. That this is certainly true, anyone who has listened to the ordinary conversation of the Indian peasant can testify—he never seems to talk about anything but money; though it is "pice" more often than "rupees." And a piece of advice that it would be worth the while of British advertisers in India to note is given in the statement that "to all intents and purposes, press advertising is the hundred per cent. efficiency method. English is the commercial language of the country, and those engaged in selling and buying read the English Press. What they do, others (to whom 84 out of the 85 main different Indian languages are unknown) imitate. The newspapers reach all the prospects. "Reason why" copy should always be used in preference to bald statement: in India it is better to err with over-description than to be too brief. In Western countries much may be left to the imagination: it is not safe to do this with Indian advertising."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 25.

The New Nationalists.

One hundred and twenty-five Indian politicians have signed a manifesto calling a conference to form what will be known as the "Indian Nationalist Party." The signatories include Mrs. Annie Besant, Messrs. B. C. Pal, B. Chakravarty, A. Jinnah and Sir Dinshaw Petit; the party is really a coalition of the variously labelled Nationalists, Liberals, Independents and that section of the Swarajists which has called itself the "Responsive Co-operation Party." They describe their objects as "discriminating co-operation and opposition, or responsive co-operation and constitutional agitation, including parliamentary obstruction as and when necessary." In other words, the new Party stands for orderly and constitutional progress as against the Swarajists' methods of disorder, civil disobedience, blind obstruction and anarchy; its formation is an encouraging sign of the progress of political sanity.

"Walk-out or Wash-out."

Mr. B. Chakravarty, the Editor of the *Bengalee* and until recently almost indistinguishable from a Swarajist, thus pungently comments upon the Swarajists' latest move. The party in Madras duly formed their procession, but it is significant that the Extremist Press has almost dropped the subject of "walk-outs," and it is only the Nationalist organs which keep the subject alive. The *Bengalee* says that the whole thing is the last of a series of "stunts," every one of which has been a fizzle, and it proceeds to make a critical analysis of the practical results of the Swarajist agitation of the last few years; nothing has been accomplished except noise and an equal nastiness of temper and manners. The Extremist Press for once has no reply; and the material for sensations is so lacking at the moment, that "A Country Betrayed," in double headlines in the *Amrita Bazar Patrika* turns out to be the refusal of the Assembly to reduce the price of postcards from a halfpenny to a farthing.

Student Strikers.

The students of the Medical College have been on strike against their Principal; a number of instruments having been stolen after a lecture, he issued a notice of the facts and made it a rule for students to leave the operating

Digitized by Google

theatre promptly when work was finished. The painful protest has collapsed within a week, in spite of the "intervention of influential medical men" on behalf of the strikers. The students of another Calcutta College have been on strike, and have issued a statement that they were dissatisfied with some members of the staff; and the students of the Rajshahi College, following the Mandalay martyrs, imposed on themselves a day's hunger strike as a protest against the undignified conduct of the Principal, who had "suspended a lecturer for trivial causes." These news items are featured in the Extremist Press, where they form pleasing variations from advertisements of quack cures for unmentionable diseases, charms for bringing success in life, and husbands required for daughters with varying dowries.

Coal in the Dumps.

Mr. A. A. F. Bray presided yesterday at the annual meeting of the Indian Mining Association, and he emphasised the importance in the present state of the coal trade of securing every possible market within reach. The slump in coal shares is more than pronounced, and on the Stock Exchange it is a case of all sellers and no buyers. The trade is reaping its crop of wild oats which it sowed lavishly in the post-War boom, and at present there is little encouragement in sight. The President hoped that, with grading under the ægis of Government, encouragement from the Railways and the Calcutta Port Trust, and an improvement in wagon supplies, the trade would improve and some of the pre-War markets be recovered. Mr. J. A. McKerrow referred to recent statements by Mr. Pagett Johnston, M.P., in regard to miners digging up rats and eating them; the latter may be interested to know that not only do his Extremist friends disbelieve him, but his statement is such an outrage on Indian sentiment that the whole incident is omitted from the Indian reports of the meeting. Mr. W. C. Banerjee, the doyen of the Indian traders, spoke in favour of a protective tariff, but his views are strongly opposed by the representatives of the principal companies; what is wanted is a return to quality and honest trading, which are the only things that will restore confidence.

PHILHARMONIC HALL

Great Portland St., W.1 Mayfair 0606-0607

ENORMOUS SUCCESS

of the INDIAN PLAYERS' Wonder Film from Romantic India:

"THE LIGHT OF ASIA"

A Riot of Oriental Splendour and an Epic Story of a Great LOVE.

Starring

HIMANSU RAI & SEETA DEVI

of the famous Indian Players.

10,000 Artistes. Hundreds of Elephants, Camels, and Horses in the First Screen Masterpiece produced solely in India.

NEVER HAS A FILM RECEIVED SUCH PRAISE FROM THE PRESS.

"Superb Film Masterpiece."—*Daily Sketch.*

"Gorgeous beyond the wildest dreams of Hollywood."—*Daily Express.*

DAILY at 2.20 & 8.15. SUNDAYS at 7.30.

Corporation Carelessness.

A Swarajist Member of the Corporation has introduced another novelty in municipal administration; he slipped on a patent stone floor in the offices, and he is suing the Corporation for Rs. 10,000 damages; the matter has been referred to the President of the Calcutta Improvement Tribunal for arbitration. The Councillor's friends will probably not be slow to see the possibilities which are opened up in a city where it is the standard practice to have manhole covers inches above the roadway, water hydrants inches below, and gins and pitfalls of every shape and kind left open and actively dangerous even when the pedestrian is careful. Such a state of affairs in the West would produce thousands of claims for injuries and a feast of costs, but in this lawyer-ridden country the fields has hitherto been uncultivated. It has been left for a Corporation member to indicate how ripe is the harvest.

Politics.

The Income Tax Amendment Bill, with its obnoxious provisions for secret inquiries, has passed the Council of State by a majority of one, and it will presumably now become law. Sir Abdur Rahim has again been pointing out the distinction between Mohammedan and Hindu interests; an Extremist paper heads its report "Communal Fads Again. Sir Abdur Vomits Venom"; how these people love each other. The Assembly has finally passed the resolution that the Reforms should be extended to the Frontier, and Government have promised to consider the recommendation carefully. At the request of the Home Member in the Assembly, the motion for a debate on the Asiatic Bill, now before the South African Parliament, was withdrawn in view of his assurance that efforts were being made to find a settlement, and that these would be imperilled by a debate at this stage. The veteran Lord Sinha, who is going to Europe for six months to seek better health, has given a refreshing interview to an Indian journalist; he has endorsed Mr. Pagett Johnston's opinion that to seek an improvement in economic conditions by legislation is a waste of time. The Calcutta Corporation have just passed their education grant for the forthcoming year for primary schools, the amount being 1s. 6d. per head for boys and double this for girls; the quality of the primary education corresponds to the amount of the grant.

Men and Things.

This has not been a happy week on the personal side. There are times when an epidemic of tragedies seems to occur, and possibly the extreme depression in trade is responsible for some recent unhappy acts of pessimism. Calcutta has read with interest of the passing at a ripe old age of Sir Bradford Leslie, the designer of the present floating Howrah Bridge; it looks as if the bridge will hardly outlive him. Commander F. M. Duignan, the blind travelling representative of St. Dunstan's, is in the city and hopes to arouse further interest in that deserving institution. Mr. Leslie Lamb, the genial and popular stipendiary Judge of the Turf Club, has been thrown from his horse and is lying in hospital with an injured spine. An action is on in the Courts which seeks to make Col. Frank Johnson (of "Whereas" fame) personally liable for the recent unsuccessful Burma Oil flotation. Mr. Alan Cobham's flight to and from the Cape is exciting much interest here. The news from China is a little better and, unless the Censor lies, the Reds are on the down grade.

The Trivial Round.

The March Meeting continued on Saturday last with a somewhat improved attendance, probably due to a cool

Digitized by Google

afternoon; honours between bookies and backers were fairly even. The Lincoln result is out this morning, but the price of the winner has not yet arrived. The paper-chase season is now ended, and Mrs. Faulkner won the Ladies' event, with Mrs. Fred. Lemon Walker second; a thrusting and long chase. Clydesdale (the Marquis) and Eagan did as they liked with two of the best local men last Saturday at a crowded boxing show: there is no one of their class in the city just as present. Hockey is in full swing, the Customs continuing their last year's successes and Calcutta being well down the list. Tennis continues in the suburbs, South having beaten the Calcutta Club, and the Jute Mills are well on with their annual championships. The symphony concerts ended with a very fine performance on Sunday evening, the concluding "Meistersingers" overture being a *tour de force;* the crowded house rose to it. The Italian Opera Company is playing to diminishing houses, but they are still doing reasonably well; another company on a much larger scale is returning from America to Italy via India next cold weather, and promises especially good things. Charlie Chaplin still continues to fill Madan's Theatre in "The Gold Rush." Scotland's win at Twickenham was not begrudged by any of us; it is good that the Calcutta Cup should change hands occasionally.

Markets.

Unchanged conditions prevailed in the jute market for most of the week, with sellers keen on disposing of their stocks but finding few buyers even on a further lowering of prices; the position at the close was decidedly steadier. The new crop reports continue to be very satisfactory. Hessians fluctuated within narrow limits, mostly on speculative account; but later the position improved considerably and closed firmer than it has been for some time. A point of interest is a decision at which the mills have arrived, by which any working time lost through holidays will in future not be made up; this will curtail production further, and should be beneficial to the trade. The piece-goods market registers a further set-back in prices, but is expected to right itself again to some extent after the beginning of the Bengali New Year, in the middle of April. The tea market in London is reported as steady, and opinion is firm here that the next month or two will see higher prices. The reports from the gardens of the new crops are somewhat varied; it appears that hail has done a certain amount of damage, but nothing of a serious nature The next month is the most treacherous period.

With Government Securities, teas and rubbers in good request, the Stock Exchange has passed through a rather better week, although the other markets have been very weak Jute shares fell away further at first, but closed the shade higher. Rumours are rife of America's coming in as a large buyer of hessians in the near future: and, if this is so, the position should improve slightly, coupled with the approaching Plate Season. Unless this rumour becomes a fact, or a real demand sets in at once, there appears to be no doubt that a further drop in shares prices is in store. Coals and cottons continue scarcely to be mentioned. Tea shares, without creating any great enthusiasm, have been very steady, and any cheap parcels are quickly snapped up; rubbers have begun to come into their own again; there has been a keen inquiry all the week, and business would have been on a larger scale had there been more scrip on offer. Provided the commodity remains steady at round about its present price, a further improvement in prices may be anticipated. Government Stocks have been the most excited market, and the present demand is described as the liveliest there has been since the War; the 5 per cent. 1944-55 Loan and 3½ per cent. Paper have again provided the chief features, with the former maintaining a further considerable rise, mainly due to speculative buying in Bombay in the anticipation that the new 1926 Loan will be issued on terms which will cause a further improvement in the long-dated securities later in the year.

Money has been in less demand, with call and short notice quoted at 4¾ per cent. Exchange has fallen further, with the rate for ready T.T. down to 1s. 6d.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay March 27.

The Viceroy is retiring after a rule of extraordinary success and progress towards the development of India. The wise man in every sphere of life, and particularly in the short career of an Indian Governor or Viceroy, is very slow to aim at popularity: and most administrators whose terms of office have ended, like Lord Reading's in a blaze of glory, have, like Lord Reading, had a quiet and unspectacular time of it in their first two years.

During that time they are necessarily studying the conditions of the country, and they are fortunate if they have, like Lord Reading, really good and reliable advisers in the Provincial Governors: and we in Bombay, who are not backward in claiming merit for ourselves and our administrators, may be pardoned for thinking that we provided Simla with the two best and strongest advisers that the Government of India has ever had, in Lord Willingdon and Lord Lloyd.

The turning point of Lord Reading's administration was the arrest and imprisonment of Gandhi. With no particular political creed beyond a general belief in the goodness of all humanity, except the English, Gandhi was not a man with enough strength of character or of mind to evolve either a constructive or destructive policy; but he stood in the minds of the masses as the protagonist of anarchy: a mild and beneficent kind of anarchy enough in his own mind, but an anarchist is never a very satisfactory person to have about: and, so long as Gandhi went about unarrested, there was a general feeling that

P. S. KING & SON, Ltd.

OUTLINES OF INDIAN CONSTITUTIONAL HISTORY.
By W. A. J. ARCHBOLD, M.A., L.L.B., late Scholar of Peterhouse, and Whewell University Scholar in the University of Cambridge, formerly Principal of the Aligarh, Dacca, and Muir Central Colleges, and Fellow of Calcutta, Allahabad and Benares Hindu Universities. Demy 8vo. 420 pp. 18s.

In this book an attempt is made to trace in broad outline the constitutional development of British India from the foundation of the East India Company to the Montagu-Chelmsford Reform Scheme. It is hoped that it will prove useful both to students of the history of India and to those who wish to be familiar with the recent and important changes which have been made in that country.

THE CONSTITUTIONS, FUNCTIONS AND FINANCE OF MUNICIPALITIES IN INDIA.
By K. T. SHAH, B.A., B.Sc. (Econ.), Professor of Economics, University of Bombay. Royal 8vo. 500 pp. 25s.

INDO-ARYAN POLITY.
By PRAPHULLACHANDRA BASU, M.A., Vice-Principal, Holkar College, Indore. Demy 8vo. 152 pp. 7s. 6d.

This book is an attempt to construct the economic and political condition of India as depicted in the Rig Veda.

THE ECONOMIC POSITION OF PERSIA.
By MOUSTAFA K. FATEH M.A. Demy 8vo. 100 pp. 6s.

CONTENTS:—Introductory—Agriculture and Irrigation—Agricultural Products—Mineral Products—Mineral Resources—The Oil Industry—Manufactured Articles—Modern Industry—Communications—Finance and Banking—Commerce and Trade—The Future Economic Development of Persia.

14 Great Smith Street, Westminster, S.W.1.

Digitized by Google

everyone in India was free to say, or even do, whatever he chose, and that the Government of India was too far gone in paralysis to take any action.

With the arrest of Gandhi, the habit of loose seditious speaking and writing came to an end. The news of the arrest was received with complete resignation everywhere: and, when Gandhi was released from prison on the ground if ill-health some eighteen months later, the bubble had been broken.

Though for a year or two before Gandhi's arrest popular opinion had clamoured for such action on the part of Government, it is probable that no better stategy has ever been shown than in the selection of the right moment. A year earlier, when Gandhi was at the height of his popularity, there really might have been serious trouble: a year later his arrest would probably have had no significance at all. For Gandhi had quite definitely passed the zenith of his career: and the final blow to his prestige was initiated, a very few months before his arrest, in the collection of his great Swaraj fund.

Gandhi owed much of his influence to his perfectly genuine indifference to money. His personal expenditure is almost nothing: he carries frugality in food to the extreme of asceticism: and his clothes, on the rare occasions when he wears any (for it is his special delight to be photographed at the chharka in a loin-cloth) are the khaddar offerings of the faithful—always, by the way, scrupulously and spotlessly fresh and clean.

But to know nothing and to care nothing about money is not a qualification for the administration of large sums: and Gandhi's friends were very ill-advised when they persuaded him to devote a year of his life to the collection of a crore of rupees, to ensure Swaraj: and still more ill-advised in their announcement that the crore had been triumphantly collected, for it was perfectly clear that at least ninety per cent. of the amount was in promises and not in cash. Gandhi was thereby committed to the administration of a crore of rupees nine-tenths of which was non-existent. This was so obviously too much for him that, to the best of my belief, no questions have been seriously asked. We know what has happened to the Khilafat Fund: but, apart from the vaguest hints that a part of the Swaraj collection has been devoted to extremely secret service, nothing has been ascertained about its administration.

But the bare collection of this huge sum was, in India, sufficient to impair the already tottering reputation of Gandhi as an ascetic and a prophet: and, at this critical moment in his career, Lord Reading stepped in and upheld the reputation of the Government of India for the maintenance of law and order. Whether Gandhi was not infinitely relieved by the decision is very doubtful. He had raised storms which he probably never intended, and which he certainly felt himself entirely incompetent to control: and he disappeared into a very comfortable seclusion from which he has emerged as an amiable but exceedingly prosy old gentleman, who is now engaged in writing an indecently naïve book of recollections.

To us in Bombay, to whose eyes Gandhi has always loomed large, the wonderful timeliness of his arrest has seemed the turning point of Lord Reading's career in India. Since then, political agitation has run on more constitutional lines: and in Bombay the responsible Indians have cut adrift from the more blatant aspects of Swaraj. One does not flatter oneself for a moment that they are extraordinarily devoted to the cause of British rule in India: they are no doubt anxious to play their own part in the administration of the country, and to pitch their ambitions rather higher than is acceptable to us: but the tendency of India to a very foolish form of anarchy came to an abrupt end when the Viceroy, with the full concurrence of two distinguished Governors, arrested Gandhi, and from that moment begins the enormous improvement in the general condition of India.

For the rest, Lord Reading's rule has seen also the remarkable improvement in India's finance: and lastly, as in private duty bound, we in Bombay have to thank him for the abolition of the cotton excise, which is enough in itself to earn him our lasting gratitude. Of his final action, his reply to the Nizam on the question of the Berars, I can say nothing: the political side of it is far beyond my comprehension. But, on the legal side, the joint opinion of Lord Reading and Lord Birkenhead must be fairly conclusive.

THE BUSINESS ASPECT OF THE COW-KILLING AGITATION.

(By Lieut.-General Sir George MacMunn, K.C.B., K.C.S.I., D.S.O.)

Frequently in the Indian Press, and from time to time in the Legislative Assembly, the subject of cow-killing is brought up, with the request that Government shall be pleased to prohibit it, in view of the horror of Hindus at the idea of the slaughter of the sacred cow. The agitation is sometimes got up for the mere purpose of embarrassing Government or annoying Moslems, but is sometimes the perfectly genuine complaint of really sincere Hindus to whom the practice is most repellent, as the most sacrilegious crime they know. Manu, no doubt, inculcated the criminality of slaughtering cattle for economic reasons, when cattle were not plentiful; but, for many hundreds of years, the economic origin has been lost in the religious conception. That is as may be; but there is a very interesting point involved. The legislators who raise the question in the Assembly always refer to the wasteful practice of slaughtering these valuable creatures when milk and ghee and draught cattle are scarce. Now, though there are some 80,000,000 Mohammedans in India who may and often do eat beef, and 60,000 British soldiers who cannot be fed on the skinny sheep of India alone, it is a strange fact when viewed from a European or American standpoint, that in the whole of India no cattle are grown for slaughter. What is in Europe and America a prime agricultural industry does not exist in India, solely because of the Hindu feeling on the subject. No Indian farmers or graziers produce cattle for the food market. How then is beef produced for those Mohammedans and Europeans who require it?

The answer is somewhat curious. The only source of beef supply are barren cows, and bullocks, too lame or too intractable to be worked in cart or plough: a fact that disproves the legislators' familiar argument about the "wasteful practice" of slaughter. The Hindu farmer dares not kill his barren cow and realise even the value of its hide: but the cow or the bullock that is of no use to him is eating good fodder. So he salves his conscience in this way. He sells the animal to some Mohammedan meat contractor, who drives the beast away with no questions asked. He fattens it or not as may be—usually not—and sells it to the butcher. The latter generally buys the animal for a few shillings and lets it graze on what it can pick up alone, unless some young beast is worth grain feeding for the European market. That is why beef is still to be bought at about twopence a pound retail, and could be bought by contract a few years ago at perhaps a penny a pound.

From another point of view, the Military Authorities are often urged to insist on the use of humane cattle killers. Again a religious difficulty comes in. Meat is bought and killed by contract for the Army, but only the best bits are taken. The rest is sold by the contractors to the Mohammedans of the neighbourhood. They will only buy meat that has had its throat cut and the blood run out, and to the Moslem that must have been done while the beast is alive. The only way to avoid the slaughter by throat-cutting (which, if well done, is prompt enough) is for the Army to buy and slaughter animals itself; when it would have no market for the parts its does not require, and the price of its meat would be doubled. So in this matter there is a dilemma also. The Royal Commission on Agriculture in India will find many such checks to the free run of production and progress.

THE INDIAN MAIL.

The Indore Abdication.

Some weeks ago, the writer of these notes expressed doubt whether public opinion, particularly in Bombay, would accept the abdication of the Maharaja of Indore as a satisfactory alternative to a full inquiry. The mail papers show that the *Bombay Chronicle*, at any rate, does not; it continues to urge the necessity for inquiry and charges the Government with condonation of crime for having decided to drop it. It is left for Mrs. Besant, that champion of lost causes, to strike an entirely different note. In her newspaper "New India," she writes that the State of Indore is an independent ally of the British Government, that the late War was fought to re-establish the sanctity of treaties, that the only relation of the Viceroy with the major Princes is with them as independent allies of the British Crown, and that his proposal "to set up a Commission in breach of treaties is an act of brute force menacing the safety of every Indian Prince who is an ally of the King Emperor and not his subject." It will perhaps be remembered that Mrs. Besant's "Commonwealth of India Bill" expressly excludes the Indian States from its purview. If these are her opinions on the subject, the exclusion is not to be wondered at.

Telephones.

It is announced that a trunk line between Delhi and Calcutta will be opened on April 1. This will, with one exception, mark the completion of the programme of trunk telephones which was begun in 1923. The exception is the connexion of Calcutta with Bombay—a distance of 1,250 miles—on which work is at present in progress. It is not to be expected that, in a country like India, these long-distance telephones will be an immediate financial success; but the authorities are confident that they will become so before very long. It is, for instance, expected that the charge for a three-minute conversation between Bombay and Calcutta will be fifteen rupees—about 22s. 6d. at the present rate of exchange: and even a commercial magnate in a hurry will think twice before he indulges in many conversations at this rate.

A few years ago, trunk telephones in India were so much in their infancy as to be almost unborn. The writer remembers an interview with Sir George Lloyd, not long after he had taken over the Governorship of Bombay; in the course of which he said that one of the first things he did, after his assumption of office, was to instruct his Private Secretary to put him through to the Viceroy at Delhi: and how astonished he was to hear that this was impossible. Sir George Lloyd had a habit of getting things done: and it would not be surprising to learn that the recent improvement in the trunk facilities in India had its origin in representations made by him.

But, if India has lagged behind in the matter of trunk telephones, she has not done so in her local services; for the automatic telephone has been installed in Simla for many years past, and the same thing either has been, or is being, done in a number of other important centres. The automatic system, immensely convenient as it is, suffers in India from one curious drawback—the ease with which it can be "anonymously" used. There have been several cases of late years where Europeans, women as well as men, have been made the targets of persistent attack by this means. The method adopted is, to ring up the victim, discharge a torrent of virulent and generally filthy abuse into his or her ear, and then immediately shut off. A (male) friend of the writer, a high official of Government, who was persistently pestered in this manner, was able to work a special arrangement with the exchange, whereby he was given an extra line that enabled him to warn the central operator, by pressing a button that turned on an electric light, that he had been called up, and thus give the latter a chance of spotting the delinquent—an otherwise hopeless task with the automatic telephone. It so happened that, for a long time, the operator never saw the warning light in time except where the call was an ordinary one; but at last the trap worked, and the source of one of the abusive calls was identified. It proved to be one of the small local police stations! It was found that, at this particular moment, all the inmates of the station were absent except one constable; who, after at first stoutly maintaining that he was in the room all the time, and that nobody had used the telephone, finally admitted that, finding himself alone and free from observation, he had just stepped out to talk to a friend, leaving the place untenanted; so that the coup had missed, after all.

The *Pioneer*.

Mr. J. E. Woolacott, the retiring Editor of the *Pioneer*, was entertained by the staff of the paper at Allahabad, and by the Associated Press of India at Delhi, before leaving for England, besides receiving appreciative valedictory notices from a number of newspapers in India. His Indian journalistic activities included Calcutta and Bombay: but he will be specially remembered by the present generation of Englishmen in India for his work with the *Pioneer*, which he joined in 1916, at first as correspondent at Simla and Delhi in succession to the late Mr. Hensman, and later as Editor at Allahabad. In both of these capacities he had a difficult task to perform: in the former, to succeed a man of extraordinary popularity and amazing discretion, a veritable "power behind the throne" to whom the highest officials could, and did, freely impart the most secret information with the completest certainty that their confidence would never be abused: in the latter, to prove himself a worthy successor to such famous predecessors as Sir William Rattigan and Mr. George Chesney. How well he has succeeded is recognised by all who know Mr. Woolacott and by all who read the *Pioneer*. The paper has, for many years past, been the leading journal in Central and Northern India: where its influence, which, before Mr. Woolacott's succession to the editorial chair, had shown some signs of waning, has now been firmly re-established. It remains for his successor to carry on the good work, and it is undoubted that he will have the good wishes and the support of the large clientele commanded by the *Pioneer*, in his efforts to do so. But, to one of the paper's most devoted followers, some disquieting signs seem to be presenting themselves. One hears a good deal, nowadays, of the medium who professes to be under a "control": which, for some curious reason, often takes the form of an illiterate person talking broken English. It would be a real calamity if so important a medium of publicity as the *Pioneer* should fall under any such control: but the last two numbers of the *Pioneer Mail* undoubtedly suggest something of the sort. Such phrases as "Even Mr. Winkle, apprising the errand boys of Ipswich of the bellicosity of his almost immediate purpose" and "that strength of character necessary to withstand the blandishments of the gentleman from below whom *(sic)*, we are told, can always be depended on to supply delightfully intriguing occupation for idle hands": and a use of metaphor such as "the accentuation of the centrifugal forces which have again made the Hindu-Moslem problem a thorn in the side of the nationalist and the administrator alike": these, and others of the same kind, are enough to

make Mr. Woolacott squirm in his berth, and some of his distinguished predecessors turn in their graves. In the conduct of a newspaper, just as much as in any other commercial undertaking, it is doubtless necessary to take care of the pence; but the particular connexion with pence that the first two of the above quotations brings to one's mind is one that is sadly out of place in the conduct of a great and influential newspaper like the *Pioneer*.

The *Bombay Chronicle*.

It appears that the breach between Mr. Horniman and the *Bombay Chronicle* is complete. The former held a meeting in Bombay on March 11, at which he made a lengthy statement regarding his dismissal by the majority of the Directors—it seems that there were two dissentients in his favour—and announced the formation of a Company to start a new newspaper. This is to be called the National Newspapers (India) Limited, with a nominal capital of three lakhs of rupees in shares of ten rupees each. Mr. Horniman was described as "a great national asset," and his narrative of the circumstances that led up to his dismissal was received with cries of "Shame"; while his suggestion that his hearers might think that he "had betrayed the public interests in letting the editorial control of the *Chronicle* go out of his hands" was enthusiastically repudiated. It was mentioned that the Indian Newspaper Company, which produces the *Bombay Chronicle*, is already in the hands of liquidators: and Mr. Horniman said that he did not want lakhs of rupees with which to start his new paper, but "only a few thousands—made up of the tens and fives of poor people." It would seem, therefore, that the *Bombay Chronicle* is in a bad way: and that, if the public of Bombay are as lavish of their "tens and fives" as they were with their applause at Mr. Horniman's speech, he has a reasonable chance of making a success of his new venture. But the "if" is a large one.

Swarajist Threats.

The Swarajist leader in the Bengal Legislative Council, in his speech announcing the withdrawal of his Party, indulged in some remarkable invective. He claimed that the Swarajists had "torn the mask from the faces of bureaucracy and exposed the vicious character of the present system of government in all its nakedness." Perhaps it was necessary for the speedy attainment of freedom that Government should continue its career and tighten its grip on the nation even more relentlessly and ruthlessly, so that the nation might feel the absolute necessity for immediately ending it. "If, when we return next year in greater numbers and with added strength, we find the bureaucracy still obdurate, I feel sure that the nation will not hesitate to employ other and more effective weapons as the last resort of a disarmed, downtrodden and oppressed people."

The nature of the "more effective weapons," though thus plainly hinted at, was not disclosed; nor, in the course of the "whirlwind campaign" among the electors, of which this speech gives a foretaste, is it likely that it will be. The campaign will doubtless be fought once more on the racial issue—the revolt of the Swarajist-led peoples against an alien domination: and will be specially directed against those Indians who have attempted to assist in the working of the Constitution. They will be plastered with the familiar extremist mud as "sycophants" and "lick-spittles," and urged to withdraw from public life lest a worse thing befall them. A recent issue of a leading extremist newspaper contained an edifying homily on this theme, from the pen of an ex-revolutionary in America. He wrote: "Who are against the interests and welfare of India should get out and stay out. Better, they can wallow in the slush and garbage of the gutter outside India." Considering that the writer is one of those "political exiles" who are free to return to India at any moment if prepared to take the risk of being called to account for traitorous conduct during the War, but that he himself prefers to "wallow outside India," this will strike most readers as "a bit thick."

INDIAN EXCHANGE.

London, April 12.

The past week has witnessed some very erratic movements in Rupee Exchange, the weakness in the early part of the week becoming so pronounced that the T.T. rate in the London market touched 1s. 5 23-32d., at which some business was done. This rate was also recorded in India last Wednesday, and three months' commercial paper was quoted as low as 1s. 6d. that day in Calcutta.

So far as we are able to ascertain, very little business was done at bottom rates, and when the India Government announced on the 8th instant that they were willing to sell Reverse Councils for immediate requirements at 1s. 5⅜d. exchange became much steadier, and settled down in both markets at 1s. 5 27-32d. T.T.

Good commercial bills are quoted 1s. 6⅛d. to 1s. 6 5-32d. three months' sight, and business has been done at these figures.

Whatever may be the outcome of the Currency Commission, the India Government have given an indication of their ideas of the level at which the rupee should be established. No doubt, advocates of a sixteen-pence rupee may have something to say about the action of the Finance Minister in this direction.

Forward rates, after fluctuating rather widely, have settled down to 1s. 5 13-16d. T.T. May to September, and 1-32nd per month higher to the end of the year, with no inquiry whatever, except at 1-32nd higher still.

In the London market, business has been handicapped by the wide movements in Exchange: but a moderate amount was transacted on the fall, and the closing rate may be called 1s. 5 29-32d. for ready and near delivery, with a small inquiry by remitters.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Palestine's Trade Position.

The past year was not on the whole a good one for Palestine, and this fact gives the trade statistics for 1925 a special interest. The value of the imports showed a sharp rise from £E5,266,349 in 1924 to £E7,338,491, while the value of the exports was £E1,297,559 as against £E1,200,812. There was thus an increase in the adverse trade balance, and this is to be accounted for to some extent by increased imports of commodities for development purposes such as wood and timber, cement, and machinery, and also to the enhanced demand for other materials for new settlers. It is, of course, much too early yet to attempt to forecast the possible development of the country's commerce. This is still the period of development and, as in similar cases, it is natural to expect at this stage a great excess of imports over exports. The problem Palestine has to solve is the development of the export trade, and that is not likely to be an easy matter. Wembley accomplished a great deal in showing the Empire the products of Palestine, but if the fullest use is to be made of the opportunity afforded by the Exhibition, the work must be carried on by a consistent scheme of publicity. The memory of buyers is short, and frequent reminders are necessary before the stage is reached when certain markets can be regarded as permanent outlets for products.

The Exchanges.

At a time when trade is definitely on the upgrade and when with a few exceptions the countries affected by the War are making increasing progress towards the recovery of their economic position, it might reasonably be expected that the exchanges would on the whole show a tendency to improve. Unfortunately, as anyone who studies the quotations from day to day is aware, this is not the case. In the Near East we find the Yugoslav dinar stabilised at 276, reflecting the successful efforts made by the authorities to promote the country's development; but with regard to the other countries, where there is no definite depreciation there is no improvement. The Greek drachma is now 376½, the Turkish piastre, which has depreciated much less than the majority of currencies, stands at 982½, the Bulgarian leva is at 675, while the Roumanian leu is at 1,185. It is impossible to attribute the failure of these currencies to appreciate to any one factor, nor are the causes necessarily the same in all the countries. It would appear, however, that a principal cause is to be found in the tendency which has been so marked ever since 1918 to interfere with the free play of trade, whether as in the case of Roumania by innumerable restrictions and dues on exports and imports, or as in the case of Turkey by curtailing the activities of foreign traders, oblivious to the fact that it was these people who had built up the country's commercial prosperity before the War. It is only right to say that as regards Roumania recent policy has been in the right direction, and with economic conditions so much in her favour the new Government should not find it difficult to carry out its expressed intention of stablising the leu.

Near Eastern Loans.

It needs scarcely be emphasised that the continued tendency of the Near Eastern exchanges to depreciate still further, reflecting the unsatisfactory conditions that still obtain in so many of the countries in that region, will make it increasingly difficult to obtain financial assistance abroad. One would think from some of the things that have been said that the floating of a loan provides an easy solution for the reconstruction of a country, but a loan can accomplish little unless it is accompanied by the necessary measures of internal reorganisation—measures doubtless distasteful but essential for the restoration of normal conditions—and it is quite certain that there will be a growing reluctance on the part of financial houses to afford assistance unless there is very clear proof that a country is on the right road to economic recovery.

Thomas Cook and Son Move.

The removal of Messrs. Thomas Cook and Son from their well-known offices at Ludgate Circus to their new headquarters in Berkeley Street, Piccadilly, is an event that, one might say, will be read with interest by people the world over. The move was a prodigious undertaking, involving, as it did, the transference within a few hours of tons of property and its rearrangement in the new offices in time for the opening of business on Monday. But naturally to the famous travel company the organisation necessary for the undertaking presented little greater difficulty than the thousand and one problems with which they are constantly faced in meeting the varied requirements of their clientele. The removal is due to the fact that while the business is rapidly increasing the premises at Ludgate Circus afford no room for expansion, and it was further felt that offices in the West End would be a greater convenience to the company's

clients. The new offices in Berkeley Street are most commodious. The booking hall occupies one-third of an acre, and has an island counter 150 ft. long, while other counters are fitted at each side of the hall. There are large reception, reading, and writing rooms on the second floor for the use of patrons, while the offices have accommodation for a staff of three thousand, for whom a restaurant, lounge room and smoking room have been provided.

The Budget.

In less than two weeks now we shall know the best or the worst of Mr. Churchill's second Budget. I see that it has been suggested as just possible that there may be a further reduction in the income tax. While I should like to believe that there are adequate grounds for this view, I am afraid that I can see no reason for holding out any hopes in this direction. If it had been found possible to make more striking economies then a reduction would be a certainty. On the other hand, I am quite confident that whatever future Budgets may bring forth, there is no chance of an increase in the income tax this time. If, unhappily, there should be a coal strike of course all Budgetary calculations would be upset, and we should have to prepare ourselves to face fresh taxation next year. Even if there is to be no change in the income tax, it may be taken for granted that it will not be a humdrum Budget, and I shall be very astonished if Mr. Churchill has not one or two surprises up his sleeve. It will be a great relief to trade and, incidentally, to the Stock Exchange to get past the Budget and an even greater one to arrive at May 1 without a failure to achieve a coal settlement. Certainly we are not likely to witness any revival in stocks and shares until this month is over.

COMMENTATOR.

Steaua Romana (British) Limited are advised that the production of the Steaua Romana Company of Bucharest for March was 29,550 tons,

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended March 20 amounted to £E8,803, making the total from April 1, 1925, £E350,727.

A number of reductions have been made in Roumanian export duties. The duty on maize has been reduced from 20,000 to 10,000 lei per truck-load of 10 tons; that on linseed and sunflower seeds from 30,000 to 15,000 lei; on millet from 12,000 to 8,000 lei; on barley from 12,000 to 10,000 lei; on charcoal from 1,000 to 500 lei; on preserved meats from 6 to 5 lei per kilogramme; on leather from 10 to 4 lei; on hare and rabbit skins from 250 to 120 lei; on woollen fabrics from 10 to 2 lei per kilogramme.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, April 6.

Increased Import Taxes.

On March 27 the Liberal Government met for the last time, and on that day passed a considerable number of new laws, of which perhaps the most important in its consequences was one which raises the import taxes on textiles and metallurgical goods very considerably. This new tariff is designed to protect the home industries, but it can hardly be claimed that Roumania produces or can produce within the next few years all the textiles or metallurgical goods of which she stands in need. Moreover, the increased tax applies also to such raw materials as cotton yarns, of which large quantities of the finer Manchester makes are used for the national embroideries. Even at the old price of yarn the cost of these embroideries had increased so enormously that their sale had become comparatively limited, and it looks as if the new tax would go a long way towards killing this industry, which hitherto has been the pride of the country. The law states, however, that the taxes are subject to modification, so evidently the Government felt doubtful of being able to maintain them in face of the opposition they were sure to arouse.

Bucharest March 20.

Electric Power Scheme.

Consultations have been going on for some time between French, Swiss, and Italian experts and Roumanian electrical engineers with a view to drawing up a plan for utilising Roumania's water power resources for the installation of electric power stations all over the country to provide current for the railways, industries, and lighting of towns, etc. It is a very large scheme, but no full reports of the proposals have yet been published.

Miscellaneous.

It is reported that the town of Cluj in Transylvania has obtained a loan of one million dollars at 7 per cent. interest redeemable in 20 years, only the interest to be paid for the first 5 years, and amortization to begin after that, and that the towns of Brasov, Aradea-Mara, and Arad are in negotiation for similar loans.

The report of the Spring Valley Ceylon Estates for 1925 states that the output of tea from the company's estates totalled 1,105,519 lbs. against 1,197,670 lbs., tea made from bought leaf totalling 19,290 lbs. With interest and sundry receipts, the net profit amounted to £48,679, as against £54,062. After placing to reserve £7,500, the directors recommend a final dividend of 35 per cent., making 50 per cent. (less tax), leaving to carry forward £11,123, against £10,844 brought in.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 13.

Business in the Stock Exchange continues of very small proportions and business this week has remained on an attenuated scale. Nor is there much likelihood of any expansion until the uncertainties of the coal position and of the Budget have been removed. In spite of the lack of activity, however, prices keep fairly firm, especially in the gilt-edged market, where the possibility of a lower level of money rates is still apparently taken account of. In other directions, though prices have been inclined to sag a little in the absence of business, movements have been mostly of little importance. In the speculative sections a decline in the price of raw rubber has had a slightly depressing effect upon share prices, which a number of excellent dividend declarations have failed to counteract. In the oil market Mexican Eagles have been active and strong, on well-supported rumours of better results from the recent drilling programme, though profit taking at one time depressed the market. Tin shares have weakened on a further relapse in the price of the metal. Apart from these few features markets may be said to be still "in the doldrums."

Gas and Electricity.

Comparing present prices of the securities of the big London gas companies with the quotations ruling a year ago, the most noteworthy feature is the decline which has occurred in values. The fall has been generally shared, and of a list of fifteen representative stocks, not one stands as high as twelve months ago. To some extent, probably, the uncertainty of the position in regard to the coal industry has been an unsettling factor, while more recently an adverse effect may have been exerted by the Government's electricity proposals.

The advent of new legislation regarding electricity has naturally been followed by a revival of the controversy which raged a few years ago concerning the relative prospects of the two industries. Not so very long ago the prediction was freely ventured that competition of electricity would mean the ultimate decline of gas. Subsequent events have proved that both industries can flourish together. Is there any reason now why they should not continue to do so? We think not. As the directors of the South Metropolitan Gas Company pointed out in their report for 1925, "proposals are not likely to be made of such a character as to constitute a menace to the gas industry which it will be unable to meet by closer co-operation and improved methods of working." It is the last part of this statement which is the most important. Already gas is one of the most efficiently organised industries in this country, but that does not mean to say that further improvements cannot be made. Indeed, we have an indication of the possibilities in this direction in the experience last year of the South Metropolitan. During the twelve months, although the gross cost of coal fell somewhat, the decline in the price of residuals resulted in a contraction of revenue from the sale of by-products. The result was that the Gas Light and Coke, the South Suburban, the Commercial, and the Wandsworth Companies were all obliged to increase their charges for gas. The South Metropolitan, however, enjoyed the proud distinction of being able to record that "although the prices obtained for chemical by-products have been lower, improved methods of working have more than neutralised this reduction." We venture to suggest that the other big gas companies should make every effort to emulate the South Metropolitan.

Last Year's Results.

So far as financial results are concerned, 1925 provided quite a good experience for London gas undertakings. On the revenue side of the accounts of the five most important concerns, receipts from the sale of gas were higher in every case, all the companies having sold more gas than in 1924. The amounts received from rentals was also higher, but, as noted, above, residuals brought in less than in the preceding period. Thus we find that total receipts generally were lower, except in the case of the South Suburban, which secured £992,306 against £970,120, as a result of the substantial improvement in revenue from sales of gas from £658,691 to £748,074.

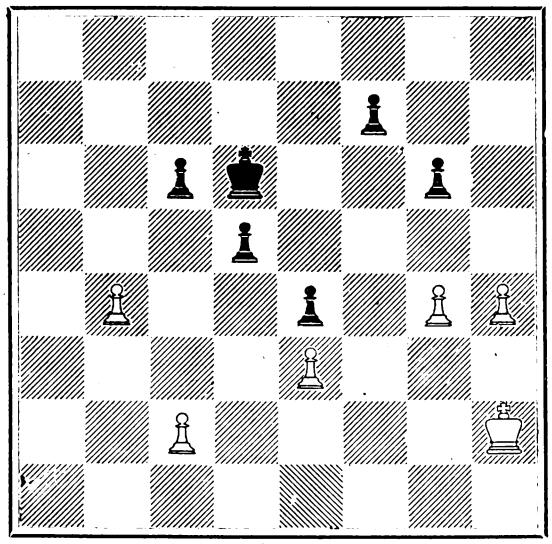
Owing, probably, to the lower cost of coal, the expense of the manufacture of gas was reduced by all companies. On the other hand, the Commercial was the only undertaking to bring down its expenditure on distribution. Total expenditure, therefore, is shown to have been lowered except by the Gas Light and Coke, whose figure went up from £8,268,856 to £8,307,233, and the South Suburban, where the increase was from £871,687 to £872,016.

The result of the year's working is that, but for the Gas Light and Coke, which earned £1,262,959, compared with £1,376,739, the balance of net revenue shown by the undertakings comprising the group was higher. Especially satisfactory was the achievement of the South Metropolitan, whose net revenue rose from £363,731 to £471,565. The latter was the only company to increase its ordinary dividend rate (from 5¾ to 6 per cent.), and although some of the stockholders in other companies received less than in 1924, the reductions made in the payments were more or less unimportant. On the whole, stockholders have little to grumble about, and although the market values of their investments have declined to some extent during the past twelve months, the movement seems to have been due more to sympathetic reasons than to any weakening of the fundamental position of the industry. Indeed, on the basis of present yields (more than 6½ per cent. is obtainable in most cases) gas stocks are not without attraction for those investors who are looking for a good return on their money together with a reasonable prospect of ultimate capital appreciation.

The Imperial War Graves Commission have arranged for the erection of twenty war memorials in various places in Palestine to commemorate the soldiers who fell during the War. The German, Turkish and Egyptian dead will also be honoured.

A Letter from the British Government to the Secretary-General of the League of Nations, together with Proceedings of the Council of the League regarding the determination of the Turco-Iraqi frontier, has been issued as a White Paper (Cmd. 2624).

In Nahalal, the most ambitious of Zionist settlements in the plain of Esdraelon, Lady Samuel, wife of the former High Commissioner, on April 7 opened a girl's agricultural school founded and supported by the Women's International Zionist Organisation. Dr. Chaim Weizmann presided, and those present included Mr. Abramson, the district Governor.



It is reported that the United States Government has declined a joint offer, made by Czecho-Slovakia, Poland, and Yugoslavia, to erect at Washington a monument to the late President Wilson, as a permanent expression of gratitude for his services in the liberation of Central European nations. In declining the offer, the United States Government declared that the question of a monument to President Wilson was a matter for Congress.

CHESS.

By "CARO-KANN."

PROBLEM No. 40.

White to play and win.

We are now arriving at the slack season of English chess. The last league matches take place this month, the winter tournaments are a thing of the past, and except for the Whitsuntide meeting at Scarborough and the Federation Congress in August there is nothing to interest players until October if we except the various summer tournaments, mostly handicaps, which serve to keep the game alive during the summer. Principal among these tournaments is the Murton Cup handicap at the City of London Chess Club. This event is being played in three sections of ten players each. The first two sections began a few weeks ago, and the third, which includes three IA players, is due to commence a week to-day.

ADEN A MARKET FOR MOTORS.

Aden is a new market for motor vehicles (says an American Consular Report). Imports were negligible up to a few years ago; but with the introduction of light American touring cars, followed by a much smaller trade in French, British, Italian, and German makes, the demand for motor vehicles has been steadily increasing, until at the end of 1924, there were 348 passenger cars and 90 lorries in use. Of the cars, 315 were American made, 13 French, 12 British, 7 Italian, and 1 German. Lorries comprised 64 of American origin, 12 French, 4 British, 6 Italian and 4 German. These figures do not include some 65 motor cycles, of which 60 were of British manufacture and the remainder American.

The last half of 1925 witnessed a considerable increase in the imports of motor vehicles and accessories, not only in Aden itself but also in the neighbouring ports. Although exact figures are not available, it is estimated that there are 600 touring cars in use at present while lorries now number 110 and motor cycles almost 100. From the present rate of importation of about 8 cars a months, it may be seen that Aden is importing cars for local use at the rate of 100 per year.

Although the city of Aden offers a steady market, its real future lies in its advantageous location as a distributing port for the Arabian Peninsula, Ethiopia, the three Somalilands, and Eritrea. The present rate of importation is likely to be maintained, if not increased, on account of the new low-priced cars available, the rapid deterioration from humidity, and the ability of British officers to take their cars with them when transferred to other posts. The European population, numbering 2,500 and chiefly British, changes for the most part every year or two, and this results in a constantly freshened market.

The demand for light passenger cars is spreading to ports along the Red Sea. In addition, the outlying markets in the southern part of the Arabian Peninsula also have begun to realize the value of motor transportation.

Utilitarian motors are in demand. They must be simple, sturdy, powerful, economical, and well protected to resist the corrosion that is so rapid in the humid heat of this area. The strong monsoon winds of July and August are especially harmful to the finish, and trouble is often caused by fine dust being blown into the carburettor and cylinders. Price is another important factor in this market. Buyers of cars in Aden are not wealthy as a rule, and the best selling cars are those priced locally between £140 and £220.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Liverpool, April 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Verentia for Port Said, Colombo, Madras, and Calcutta (London, April 17).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, April 21).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, April 24); s.s. Gharinda for Bombay and Karachi (London, April 17).

Cunard Line.—S.s. Sea Glory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Fiume, Venice, and Trieste (also Brindisi, Ancona, Corfu, and Gravosa (Gruz) if sufficient inducement offers) (Swansea, April 18); s.s. Phrygia for Gibraltar, Malta, Patras, Piræus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Swansea May 4, Glasgow, May 6, Liverpool May 8).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 1); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 21).

P. and O. Line.—S.s. Rawalpindi for Bombay, London, April 16); s.s. Nankin for Colombo, Madras, and Calcutta (Liverpool, April 17).

Prince Line.—S.s. Cyprian Prince for Syrian Coast and Cyprus (Manchester, April 30).

A contract for the construction of a new building for the Salonika Y.M.C.A. has been awarded to a Greek firm of building contractors (says an American Consular Report). The land on which the building is to be erected has an area of 2,000 square metres. The building will have four floors, consisting of dormitories, restaurant, a complete gymnasium with baths, one large hall for lectures, a library and reading room, and several club rooms. The structure is to be completed within 20 months at a cost of 9,942,500 drachmæ, paper.

Motors and Motoring.

By G. B. B.

On the one side rise, in the distance, the great heights of Lune Forest, with Mickle Fell and Long Crag and Green Fell; by our side are the rushing water of Rowton Beck. Over yonder, beyond Hardberry Hill one can see Langdon Common and Ettersgill, and the bleak summit of Harthope Moss; below us is Monk's Moor, so called for some reason lost in the dimness of time, and Langley-dale Common. All round are great hills rising their 2,000 feet into the fleecy clouds that are sailing across a sky of perfect blue. Just across the road are the rushing waters of the River Tees, bristling down to flow sedately past the frowning walls of Barnard's Castle, and then to hurry on past Darlington and Stockton to the waiting waters of the North Sea. Up here, at Middleton-in-Teesdale all is quiet and hushed in a simple, peaceful majesty; the majesty of an old and thoughtful world that knows the vanity of human things. And there, by the roadside—one could fancy it impatient to be away conquering fresh hills and rioting through more wild passes—is the work of man that has brought us here, a little Austin "Seven" that has brought us, unfaltering from London, through Pontefract and York and Boroughbridge and old-world Catterick, and to-morrow is to take us on by St. John's Chapel and Allendale Town to Haydon Bridge and the grim, grey Roman wall.

It is a wonderful country, this that we are in: a country of mountainous fells and black woods and shallow, brawling streams that tumble down great crags and wind through great clefts in the rocks; shallow with here and there a deeper place where the water runs dark and still. I wonder more of our South country motorists do not forsake the crowded roads and beaten lanes of Kent and Surrey, and Sussex, or Hants and Dorset and Devon to come up here to this magic land in the north of the Pennines where every village was, ere ever Normans came, and where the spirit of old England shines wondrous bright, untarnished by the passage of countless ages. It is a land of mystery, of surpassing grandeur and, in places of overwhelming beauty; a land that might have been called into being by the spells of Merlin; that might be peopled by the wild horses of the hills on which Sir Huon rode. It is a long drive from London, but it is a good drive; the roads seem never ending, but they are all the motorist could wish and it is well to be here if for no other reason than that one has escaped for a while from the turmoil of the Strand and the never-ending crowd from Shepherd's Bush to Finsbury Park. The endless beauty spots that can be unlocked in England by the key of the light car; the deadness of the spirit of adventure that makes us always travel the hackneyed paths from Camberwell to Eastbourne; from Hammersmith to Henley; from Golders' Green to Royston or the Downs at Dunstable!

Passenger Vehicles.

A very interesting map has been prepared by the U.S. Department of Commerce showing the approximate number of motor omnibuses in use in various countries. It is estimated that over 60,000 are plying for hire in the United States where the development of this form of transport has been little short of remarkable during the past two years. At the same date, January 1, 1926, there were 35,000 in use in France and 18,000 in operation in Great Britain. Canada had 2,000; Cuba 1,150; Chile 1,200, and there were about 1,100 at work in other parts of Latin America. Coming to our own particular districts there were 1,800 in India, 1,000 in Ceylon, 700 in Japan, 300 in China, 1,700 in Greece 400 in Turkey 1,000 in Egypt, and 177 in Palestine. By way of comparison, it is somewhat interesting to note that there were only 400 motor omnibuses at work in the whole of the Union of South Africa. Evidently the Far and Near Eastern markets offer a vast field for development.

Skidding.

For many years promises have been held out to motorists that if they used this, that, or the other, device or shod their cars with all sorts of special tyres, they would be immune from skidding. Few of these devices have been of great use, and as regards tyres those made by our oldest and largest British tyre makers have proved superior to any of much vaunted importations. But no matter what tyres are used, on some surfaces cars will skid; a car may skid even when travelling slowly if the street surface is slippery and the brakes are applied in such a manner that the rear wheels lock. The machine then simply slides along the pavement. If the rear wheels are allowed to keep turning the danger of skidding is diminished. The novice may ask what he is to do in an emergency, when a collision appears to be inevitable and when his natural tendency is to cram on all brakes as quickly and as hard as possible. If the surface is slippery and an emergency stop must be made, close the throttle and apply the brakes without throwing out the clutch until the car has slowed down. The friction of the moving parts assists the action of the brakes and slows down the car, but the wheels will continue to turn and the car will answer its steering instead of slipping sideways or sliding forward, as it would do if the wheels were locked by the brakes. This method will not absolutely prevent skidding, but the tendency to skid can be reduced considerably if this method of stopping be adopted.

Road and Rail.

It is probable that more will be heard in the near future regarding the competition of commercial motor transport with our railways, and the chief engineer of the U.S. Bureau of Public Roads has just placed the situation before the public with refreshing clarity. The comparison with the railways has been made largely because of the opinion held by so many that the supposedly free highway service enjoyed by commercial motor vehicles gives them an unfair advantage as compared with the railways which had to construct and have to maintain their own roads. It is said that this supposed advantage enables motor

Digitized by Google

owners to establish such low rates for goods transport that the business which should fall to the railway is diverted. Actually this impression is founded on a fallacy; there is no free use of the roads, as all concerned, producer, carrier and consumer are paying highway and other rates. It is not the case, either, that commercial motor vehicles came largely into competition with the railways; on the contrary the competitive field is comparatively narrow. Broadly speaking, most commercial motor vehicles are engaged in a service of distribution to and from railway centres, in the extension of transport service into districts which the railways do not serve and in short distance hauls which would be far from profitable for the railways to handle.

It is presumed by those who hold the view that the commercial motor is "strangling" the goods train, that commercial vehicles are operated largely as common carriers at a profit. Actually, the great majority are used by persons and industries for transporting their own commodities as owner-operators. Further, it may be taken that the proportion of common carriers in the ranks of commercial vehicle owners will remain comparatively low. Those who have entered this field have found that profits, so far from being high have been so low that the venture has hardly paid them.

The third presumption is that the owners of commercial motor vehicles, by virtue of their use of the public highways, are able to charge lower freight rates than it is possible for the railways to do and that in the way they take profitable business that would otherwise be railborne. For this presumption, also, there appears to be no reasonable foundation in fact. Motor vehicle rates seldom, if ever, are lower than the corresponding rail rates; in many instances they are actually higher and the business which comes to the commercial vehicle owner comes to him and must continue to come to him simply because he offers a quicker and more efficient service, and handles the goods with less crating and risk of damage.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended April 1, state:—

Since our last report the futures market has been very nervous, and after having shown considerable firmness closes to-day with an unsettled tendency. The week's summary of price movements is as follows:—Sakellaridis: May, 30.07 dollars, 0.67 dollars up; July, 28.75 dollars, 0.30 dollars up; November, 28.28 dollars, 0.60 dollars up. Ashmouni: April, 20.95 dollars, 0.20 dollars up; June 21.45 dollars, 0.05 dollars up; August, 21.55 dollars, 0.05 dollars up; October, 21.95 dollars, 0.15 dollars up.

The beginning of the week was marked by a series of excited sessions, with advancing prices; May Sakel touched 31.20 dollars and April Ashmouni 22.20 dollars. The improvement was due to a somewhat better demand from abroad which induced some short covering. The rise, however, had the effect of checking the trade demand, and prices have since sagged so that practically all the advance has been lost.

In spite of the fact that for the last few weeks the trade demand has been principally for Ashmouni, this market continues relatively much heavier than the Sakel market. The explanation of this anomaly is found in the fact that, by reason of the large quantities of tenderable cotton bought and held by the Government, the Sakel market has become very narrow and sensitive to any improvement in the demand.

The Government has bought very little cotton on the spot market this week, not that there has been any lack of offers but simply because they have not desired to buy more than absolutely necessary. Government purchases for the week are about 700 bales Sakel, for which they have paid from 32 to 34 dollars. Total Government purchases from the beginning of the season to date amount to about 42,000 bales.

The statistical position continues to be heavy. The Alexandria stocks are about 2,137,000 kantars whilst the cotton held up country amounts to about 1,173,000 kantars, making a total of about 3,310,000 kantars against 1,697,000 kantars at this time last year. Assuming that exports for the balance of the present season will be about the same as during the corresponding period last year, i.e., 1,254,000 kantars, this means a carryover, Alexandria and Interior, into next season of about 2,056,000 kantars against 443,000 at September 1, 1925. Naturally it must not be forgotten that the big difference in present prices and those of a year ago may possibly lead to increased takings during the next five months, indeed, this is very much to be hoped for, otherwise the carryover at the end of August will be so heavy as to have a very unfavourable effect on prices of the coming crop.

The markets will be closed for the Easter holidays until Tuesday next. We look for rather quiet sessions even after the holidays as there is still too much cotton and too little demand to justify any expectation of a substantial real improvement in values.

The week's receipts amount to 93,349 kantars against exports 177,043 kantars; the stock stands at 2,137,220 kantars.

Spot:—We have had a fairly active week at Minet-el-Bassal and sales amount to about 12,800 bales, of which we estimate 5,300 bales Sakel, 5.700 bales Uppers, 1,200 bales Zagora, 500 bales Pilion and 100 bales White. Considerable interest has been shown in Uppers which are apparently cheap in comparison to other competing growths. The Government have bought only about 700 bales of Sakel this week.

Sakellaridis:—A fair business has been done covering all styles. Spot differences are without much change from last week.

Ashmouni and Zagora:—A good business has been done, mainly in the medium qualities which have been eagerly sought after, although all grades have been dealt in. Spot differences are appreciably dearer all round, the grades below Fully Good Fair especially so, and holders generally are at present rather difficult to deal with.

Brown and Pilion:—Brown is neglected and no business has been done, but Pilion has met with quite a good inquiry. Spot differences for both varieties are generally rather dearer.

White:—A fair business has been done. Spot differences are inclined to ease a little.

Crop 1926: Climatic conditions during the week have continued very favourably. Sowing in the South and Central Delta has been completed, and is finished in about 50 per cent. of the plantations of the North Delta. Owing to the bad weather at the beginning of March, germination in a considerable number of fields is not as good as could be desired. The crop, generally speaking, is a little late, but if climatic conditions continue as favourable as during the last two weeks, this delay will quickly be recovered. The supply of water continues to be considerably less than last year at the same time and prospects for the future are not, at present, very bright.

MANCHESTER COTTON MARKET.

The Manchester Cotton trade review of the Ottoman Bank for the week ended April 10, states:—

The more hopeful feeling referred to in our last review as regards the outlook after the holidays has proved to have had very little basis up to the present. It has been an exceedingly dull week in all sections, and many traders have prolonged their absence from business. The position has not been helped by the failure of American cotton to maintain the slight improvement in quotations which took place some days ago.

Yarn.—Although spinners of Egyptian varieties were encouraged by the recent rise in quotations for the raw staple this did not last long enough for any material benefit to be derived.

Demand for both American and Egyptian varieties has been small, and no improvement in the position of spinners can be reported. The American section is now working 33 hours per week, but it is very doubtful whether the production of even the previous 30½ hours schedule is being absorbed. There is a growing feeling that proposals for some more drastic action to regulate production would meet with a favourable reception.

Cloth.—A disappointing period has been experienced and, in particular, the fresh disturbances in India have had a serious effect. It is understood that trade in Calcutta is almost at a standstill and the bazaars may remain closed for some days. The reports from China continue to be fairly good but prices are said to be slightly lower. Some reduction is reported in the undigested stocks in Egypt but only orders for occasional special lots are being received from that market. Certain classes of goods have been in demand for South America and the requirements for Home Trade are about normal for this time of the year.

Raw cotton.—Whilst the alteration in quotations during the last few days are unimportant the tendency is unfortunately weaker. "Spot" sales have been exceedingly moderate and very little business has been done in "futures." The official estimate of the Egyptian crop at only 7,500,000 kantars is not taken seriously and is thought merely to reflect a desire to support the market in view of the Government purchases of cotton which now have every appearance of turning out unsatisfactorily. Closing quotations yesterday were as follows:—American Middling 9.99, Egyptian Fully Good Fair 15.70

According to official statistics the Greek merchant fleet consisted on December 31 last of 1,281 ships of over 50 tons, totalling 980,405 tons, including 467 steamers of 912,609 tons, and 814 sailing ships of 67,796 tons.

Near East Markets.

GOOD PALESTINE CROP PROSPECTS.

The Director of Agriculture and Forests in Palestine in his report for March, says:—

Since the last report frequent and well distributed rains have fallen with great benefit to growing crops.

In the north "afir" wheat is everywhere well advanced except in low lying fields between Haifa and Zikron Jacob, where growth has been retarded somewhat by an excess of rainfall. Later sown wheat has also made good progress and now needs a period of fine weather. The barley crops are in excellent condition, the plant being already in ear in the Beisan district. Leguminous crops are flourishing both in hilly areas and in the plains, lentils and beans being the best seen for the past six years. Reports are equally good for the southern districts with the exception of later sown cereals at Jericho and round Beersheba. Ploughing for summer crops is in progress and in many places sowing has commenced.

The mild weather has had a good effect on vegetables which are being marketed in good supply at normal prices. Good crops of cabbages and cauliflowers have been realised, while the prospects for egg-plants, tomatoes and other vegetables are good.

Slight damage was caused to orange groves by local hail-storms. Citrus, almond and apricot trees are in full blossom and vines and fig trees are forming their first leaves.

Speaking generally it may be asserted that prospects are excellent both for cereals and fruits, and that exceptionally high yields will be obtained, given a period of fine weather followed by sufficient late rains.

SUDAN MARKET REPORT.

The current issue of the Monthly Review of Barclays Bank Limited, contains the following report, dated March 15, on Sudan market conditions.

Gum arrivals during February were better than in the previous month and prices declined both locally and abroad, some contracts being made at as low as 46s. per cwt. c.i.f. United Kingdom. Nevertheless, there was no large buying, as still lower prices were thought to be possible. During the past month, about 2,000 tons of ground-nuts were exported, mostly to the United Kingdom and Continental ports, although Egypt continues to take her share. Sesame exports to Egypt continue, but there are no large stocks available, while in the case of durra, stocks in the country are rumoured to be very small and the Government are importing in order to prevent prices rising too high. To-day, the local quotation for assabi is Pt. 320 per ardeb of 500 rotls, as against Pt. 190 on October 2 last, and this fact, coupled with the low price of cotton, is making the cultivators who grew cotton this year instead of their usual durra, very discontented. The rain cotton from Gedaref and Medani districts is reported to be of poor quality and with the large American crop available, is not likely to attract good prices in Liverpool.

The cotton goods market was very depressed during most of February, but showed some recovery towards the close, and further improvement is expected. With the exception of coffee, which is rising steadily, other imported articles have not shown much movement.

The general situation is regarded optimistically, and, in the absence of unforseen adverse factors, it is thought that the next two months should show a large turnover.

MOTOR CARS IN CEYLON.

H.M. Trade Commissioner at Calcutta (Mr. D. M. Clarke) reports that according to a statement just compiled by the Director of Statistics, Ceylon, there are no less than 201 different makes of motor vehicles in Ceylon, while the total reaches 10,240. Of this total 5,720 are motor cars, 2,261 motor cycles, 1,268 motor buses, 937 motor lorries vans, etc., and 54 miscellaneous motor vehicles.

The number of American motor cars in use is 2,974, and the number of British cars 1,296. The number of French and Italian cars is very much less, being 321 and 232 respectively. The greater proportion of the American cars are of the cheaper makes such as Ford, Chevrolet, Overland and Hupmobile, while France is represented by the Fiat. Most of the motor cycles in use are of British manufacture.

The motor car can no longer be regarded as a luxury in Ceylon. The statistics which show that there is now one motor vehicle to every 459 persons indicate that the motor car has now to be regarded as a necessity.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Cabinet Purging in Yugoslavia.

The new Prime Minister of Yugoslavia, M. Ouzounovitch, has displayed less patience with the vagaries of M. Raditch than M. Pashitch contrived to do. Before many hours had elapsed after he had taken the oath of office in the new Cabinet, from which M. Pashitch had been eliminated, M. Raditch began once more his open denunciations of his colleagues of the Radical Party. At the end of a week of this abuse the Prime Minister called upon M. Raditch to resign for the sake of the maintenance of the collaboration between Serbs and Croats, and on M. Raditch's refusal, M. Ouzounovitch handed in the resignation of the Cabinet, and immediately resumed office with a reconstructed Ministry, from which M. Raditch was excluded. This step appears to have driven a wedge into the Croat Peasant Party, as two of his Croat colleagues in the Ministry, one of them being his nephew, have resigned office, but two remain. It is difficult for a foreign observer to believe that M. Raditch's behaviour and methods can promote the interests of his country or enhance the prestige of his Croat Party. As was stated in these Notes last week, it is possible every now and then to discover some good points in M. Raditch's speeches; but inasmuch as all of them are to be found in any copy-book of political maxims, what is needed by Yugoslavia is not their mere recital, but their application in a practical way. No better opportunity of helping on reform in a country, it would be thought, could be provided than by a seat in a Cabinet; but apparently, according to M. Raditch's philosophy, the best way of inducing a Ministerial colleague to mend his ways is to subject him to unmeasured abuse in public. If there were the least chance of his party's holding office alone, political ethics *à la* Croat Peasant Party might justify such tactics; until then his methods appear abroad as the antics of a vainglorious irresponsible demagogue, who is deliberately injuring his country by impeding the carrying out of the proper business of the Yugoslav Government.

The New Greek President.

The new President-Prime Minister of Greece, who took the oath of his office last Sunday, has made an auspicious start by refusing to begin his new duties by signing death warrants. The officers responsible for the recent movement in Salonika—whether it was subversive merely of military discipline or aimed at upsetting the Government is not clear—were condemned, rightly in any case, to death by the Court-martial; but it would have been another ill day for Greece, where some allowance has to be made for a slow recovery from the demoralisation caused by the events of recent years, if further blood had been shed in connexion with any incident that even remotely bears on political antagonisms. At the same time those who are responsible for inculcating military discipline in an Army with a traditionally lax appreciation of the necessity of it will not be envied their task, if the idea becomes prevalent that extreme measures will not be taken against offenders. General Pangalos, therefore, was well advised in accompanying his act of clemency by an announcement to the effect that the next act of serious insubordination in the Army would be followed by a lesson "that not only the present but coming generations will remember with terror." This is quite in the approved Dictator-style, but hardly superfluous in the light of the offending officer's attempt to justify the mutiny on the ground that he objected to his superior officer. Yet another move in the right direction is the removal of the ban of deportation on the political leaders who have been spending several weeks on Greek islands.

The Powers and Abyssinia.

In spite of being vicarious neighbours, with a long stretch of common frontier, Great Britain would have little occasion to concern herself with Abyssinia, if it were not for two things, the existence of the head waters of the Blue Nile in Abyssinia and an Abyssinian propensity for raiding British territory. In the far-off days before the War, when there was no League of Nations, and if there had been one, the idea of Abyssinia's being a member would not have been regarded as practical politics, the three Powers, Great Britain, France and Italy, by an Agreement dated December 13, 1906, pledged themselves to co-operate in maintaining the political and territorial *status quo* in Ethiopia and to respect the special interests that connected each of them with that country. Nowadays agreements between foreign Powers regarding a weaker State are looked at rather askance as apt to encroach upon the sovereign rights of the latter; but, with due allowance made for an imperfect world, the Tripartite Agreement regarding Abyssinia was actually in the interests of the Abyssinians, as it prevented any one of the three Powers from taking undue advantage of the weakness of the Ethiopians. In actual practice the spirit behind the 1906 Pact has not been very conspicuous in Addis Ababa, where the tendency of one or more of the Legations concerned has been to curry favour with its Government at home by stressing its smartness in putting a spoke in the wheel of any other Legation that tried to do the Abyssinians a good turn. That, however, as they would say in Amharic, is Fanny's little way. Here it may be mentioned that there is a fourth Power that counts in Addis Ababa to-day, and that is Belgium, which takes much credit to itself for various concessions held by its nationals in Abyssinia.

A Straightforward Arrangement.

None of the other three Powers has the vital interest in the country that Great Britain has in respect of Lake Tana as the source of the Blue Nile; this interest moreover is not a mere money-making interest, but is forced upon Great Britain in her position of trustee for the Sudan and Egypt. Sooner or later it will be necessary to undertake large works at Lake Tana for the sake of the water supply of the two countries dependent on the Nile; fortunately any such works will also be for the benefit of Abyssinian territory as well. As the time approaches for dealing with this problem, the British Government, with which the Abyssinian Government is in general accord on the subject, is naturally anxious to carry out the final negotiations with the Abyssinians without any attention, delicate or otherwise, from third parties in Addis Ababa. Accordingly a further agreement has been concluded with Italy, of which France will be asked to take cognizance, and which will naturally be laid before the League of Nations, intended to give Great Britain a free hand in her negotiations, while Italy places on record her intention to develop her East African colonies by means of railway connexion with Abyssinia, which so far has only one railway, the French line from Jibouti, the port of French Somaliland. If, as seems probable, these negotiations have been misrepresented as entailing some sinister design for the partition of Abyssinian territory, it is unfortunate that for once in a way more open diplomacy was not indulged in before the agreement was reached.

GALLIPOLI ANNIVERSARY.

Arrangements are being made by representatives of the various units which served in the 29th Division during the campaign in Gallipoli, to lay commemorative wreaths at the foot of the Cenotaph in Whitehall next Sunday (the 25th inst.), the anniversary of the landing of the Division on the Gallipoli Peninsula. All men who served at any time with a unit of that Division are invited to join the representatives of their unit on the Horse Guards Parade at 11 o'clock next Sunday. General Sir Ian Hamilton, who was Commanding-in-Chief at the time of the landing, will be present to take the salute on the return of the representatives to the Horse Guards Parade.

THE NATIONAL PAINTER OF ARMENIA.

The brilliant British artist, Mr. Frank Brangwyn, has called M. Sarkis Katchadourian, who has now an exhibition at the galleries of the Fine Art Society, New Bond Street, "the national painter of Armenia," and the title appears to be well deserved. Readers will remember the extraordinarily vital studies of Armenian life and character which M. Katchadourian exhibited a few years ago in London; at the present show they will find a more restrained, more objective, but equally convincing treatment of some of the possessions of his country.

His landscapes, which in the previous exhibition made so notable an impression, are in this show comparatively few, but there are, in such works as "The Monastery of Sevan," "Mount Ararat from Erivan," and "Rest," that same abundant zestfulness and atmosphere. Nor are the smaller representations of Armenia's riches any less pleasing: one likes particularly the delightful lines of the girl in "Good Morning!" and "Good Night!" and "The Dyer" is unalloyedly beautiful in its wealth of colour.

But perhaps the most satisfying of all are M. Katchadourian's exquisite paintings of Armenian and Persian bowls and flowers and books. The significance with which he can invest such things is extraordinary. For example, "A Page from Saadi," or, better still, "In the Porch of the Mosque" (showing a pair of green slippers), brings up to the mind that loves Oriental things much of the indefinite mystery, of the interminable longing, of the ineffable beauty of the Middle East. This exhibition, mainly perhaps because it bears no trace or intention of propaganda, is better than M. Katchadourian's last. It is, in fact, an art show of memorable order.

Dr. Chaim Weizmann, the Zionist leader, on April 14 visited the Emir Abdullah at Amman and was entertained at a luncheon at which Colonel Cox, the chief British representative in Transjordan, and Colonel Kisch, the political representative of the Zionist Executive in Palestine, were present.

According to the *Daily Telegraph* Ibn Saoud has caused a very great sensation in Moslem pilgrim circles by a recent decree prohibiting in future the worship of the Tomb of Eve, one of the minor holy places of the Hejaz. Hitherto both "languishing maidens and childless wives" have been allowed to view this shrine.

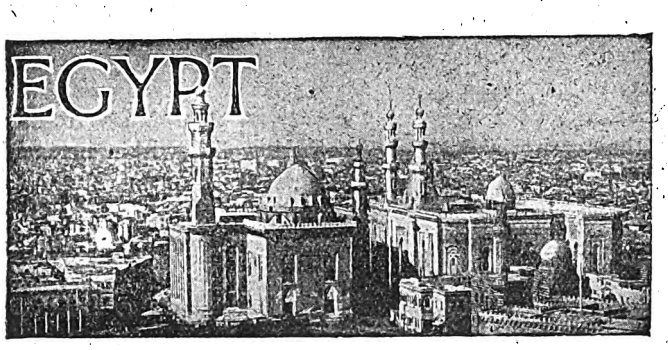
THURSDAY, APRIL 22, 1926.

ITALY, TRIPOLI AND TURKEY.

If there are still any serious thinking people in Turkey, Signor Mussolini's visit to Tripoli may well have aroused strange reflexions among them. Fifteen years ago Tripoli was a Turkish possession, slightly more unprofitable, perhaps, than other outlying territories of the Ottoman Empire. In the interval Italy's hands have been too full at home to allow her to pay much attention to her Libyan colony; but there can be no doubt as to the intention of the Italian Government to-day. Signor Mussolini's tour was not a mere spectacular display for the glorification of Fascism, and there may well be less exaggeration than appears at first sight in describing it as the first day of Italy's colonial empire. Considering itself as firmly established in Italy as it has any reason to expect to be, Fascism is now able to apply itself to the pressing national problem of expansion. In Signor Mussolini's description of Italian Imperialism as an attitude rather than a determination on territorial conquest we may read a tacit acknowledgment that present-day circumstances call for a solution of the problem of expansion by evolution as far as possible, and only by violence in the last resort. In other words, Italy would not be justified by world opinion in seeking outlets for her growing population by means of territorial conquest until she has put to the best use the areas that she already possesses and exhausted all means of obtaining others by peaceful negotiation. Accordingly, encouragement is to be given to those who have already come forward as pioneers in colonial expansion and a "colonial conscience" is to be aroused among the Italian people as a whole. Under the driving force of Fascism it is likely that the slender capacities of Libya for absorbing an Italian population will soon be strained to the utmost, and the problem of finding room for a surplus population will have to be dealt with on a larger scale. In these circumstances it is idle to ignore the fact—and least of all in Turkey will it be overlooked—that Italian attention has been drawn to the advantages of Asia Minor as a field for Italian settlement.



No injustice is done to the peaceful professions of the Italian Government in attributing the obvious to it. Expansion can take place only where the ground is not already occupied, or is occupied so unprofitably that, as the world is continually filling up, it has to be regarded as relatively waste ground. Larger portions of Asia Minor are in danger of coming under one or other of these categories, and they offer an ideal outlet for an industrious progressive people. Italy, no doubt, realises that the day has gone by when forcible seizure requires no other justification than necessity; but she cannot be blamed if, although the fruit is out of reach to-day, she sees it ripening and makes her preparations to catch it when it shall fall. Cultivation of a colonial conscience is as definite a measure of preparation as the resolute retention of the Dodecanese and the fortification of one or more of the islands. The future in regard to the coveted portion of Asia Minor rests entirely with the Turkish Government, for the only possible danger to-day to the territorial integrity of Turkey lies within her. If she cannot or will not govern herself in such a way as to bring reasonable content to her people, then it can be only a question of time before outside interference takes place under one form or another. No country deliberately desires this fate for the Turks; many probably regard it as inevitable, owing to the indications of the last two years. The republican régime at Angora started under the very best auspices. Mustapha Kemal Pasha had galvanised old Turkey into self-respect and high purpose. The country would readily have followed him in any wise and cautious policy of reform. His sweeping changes and the foolish dissipation of the country's strength in a meaningless antagonism to all foreigners have left Turkey seemingly unable to hold out on her own much longer. It is still not too late for her to be saved, but in the absence of any sign of sober common sense in Angora, little wonder that the Italians are beginning to count the days or months to the time when the ripe fruit will fall into their mouths.

Not the least pathetic aspect of the situation is the fact that Turkey has no lack of friends willing and anxious to save her from herself; but she is dominated by a small clique that possesses no real statesmanship itself and refuses help or advice from outside. Trade and industry are the essentials of a modern State; yet the Turkish Government has done its best to kill the first and to render the second impossible, while concentrating its attention on customs and costumes, on religious and linguistic matters. Its insistence on the non-essentials of public life has had the effect of stimulating reaction, even where outward acquiescence in the new order has been imposed. Yet the intentions of the Angora Government were good: it recognised the more obvious shortcomings of the Turk when held up to comparison with the peoples of the West, and imagined that to eradicate these shortcomings would immediately leave the Turks on a level with any Western nation. While, however, the Turk is being reformed not only against his will, but also beyond the capacity of his understanding, the edifice of the State is crumbling away as palpably as the houses abandoned by banished Greeks, yet with equal indifference in either case on the part of Turkey's rulers. Under such conditions there can be no real progress in the country. Angora, when it looks out on a sea of nondescript headgear, may cajole itself into believing that Turkey is indeed now of the West; but it must realise that without the terrorism behind its methods it would have carried hardly a single Turk with it. The result cannot be good for Turkey, for it means that sooner or later reaction will assert itself. There was, it is true, the need to do away with some of the things that have fallen under the ban of the Angora Government; but it was the spirit rather than the letter that was killing the Turk. The spirit, however, could be exorcised only by degrees. Sudden repression may have removed outward signs of it, but it has by no means changed the mind of the slow-moving Turk.

The Near and Middle East*

From Our Own Correspondents.

Cairo, April 10.

The Rockefeller Offer.

As you will have learned from the cables, the attempt to get the Egyptian Government to accept the offer made by Mr. Rockefeller for the creation of an Archæological Institute and the building of a new Museum in Cairo has proved abortive. Somehow or other a misunderstanding appears to have arisen between Ziwar Pasha and Professor Breasted with regard to the contract which was recently sent to Mr. Rockefeller. The Americans maintain that the contract which was drafted by the Government lawyers embodied all the Egyptian Government requirements, and was sent to Mr. Rockefeller with the express assurance of the Prime Minister that if the donor accepted it he would recommend the Council of Ministers to adopt it. The Egyptian Government, on the other hands, asserts that this contract was merely sent to Mr. Rockefeller *ad referendum*, and that the condition that Egypt should only have two representatives on an international board of eight which would control the Museum for thirty-three years was such that no Cabinet could accept without the approval of Parliament.

The unfortunate thing is that although the refusal of the Egyptian Government to accept the contract signed by Mr. Rockefeller has not actually ruptured negotiations, it has resulted in somewhat strained relations between the Egyptian Government and the American intermediaries who are now on their way to the States to explain what has happened to Mr. Rockefeller. It is stated that the latter may now withdraw his offer. This would be a pity, but at the same time if he insists on the conditions as to control and so on, it is difficult to see how any Cabinet could accept them.

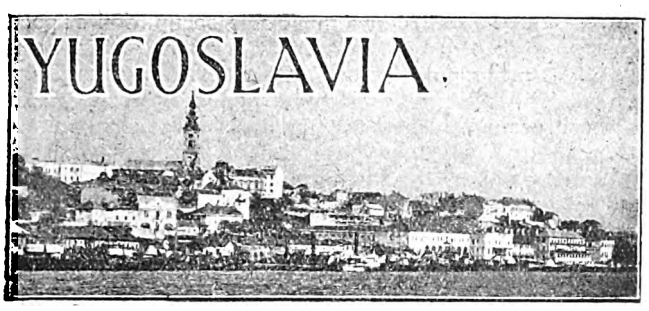
The Stadium Lottery.

Considerable criticism has been aroused by the action of the Alexandria Municipality in the matter of the Stadium Lottery. This lottery was organised by the Municipality with the approval of the Egyptian Government to raise funds for the building of the Stadium in which are to take place the Pan-African games. The lottery consisted of 60,000 tickets of £E1 each with £E20,000 in prizes, and it was stated the drawing was to take place on March 31 this year. But before that date arrived, the Municipality, without any explanation, postponed the drawing until December 31. Not unnaturally this action aroused an outcry on the part of those who had purchased tickets. The Municipality has so far turned a deaf ear to the demand for an explanation, but it has transpired that the reason for its action was that only about one-third of the tickets, representing about £E24,000, had been sold.

That the action of the Municipality is illegal there can be little question. Those who bought tickets bought them on the basis of the advertisement which definitely stated that the drawing would take place on March 31. In postponing the date for the drawing the Municipality undoubtedly committed a breach of contract, and the ticket-holders would appear to be fully justified in claiming either the immediate return of their money or the immediate holding of the lottery as originally advertised.

It is, moreover, just a question whether those who bought tickets on the basis of a drawing on March 31 have not in addition a claim for damages against the Municipality for not holding the drawing on that date.



In any case the Municipality has done itself no good—in fact, a great deal of harm—by its arbitrary action. No matter what settlement is now made there would appear little prospect of the Municipality's securing by this lottery—or indeed by any other lottery—the money which it may require for the Stadium, for no one would care to risk anything on its word in future. And finally by its organisation of this lottery the Municipality has proved once more its total incapacity for running anything on business lines. Apart from the question of the postponement of the drawing date, which no one with the slightest idea of business or equity would ever have done, it is a glaring revelation of its ignorance of such matters that it should have started a lottery of this magnitude without taking the ordinary business precaution of getting it underwritten against the possibility of an insufficient number of tickets being sold before drawing date, such as has now actually arisen.

Hat versus Tarbush.

In a recent letter I quoted the *Fetwa* issued by the Rector of Al Azhar and the Grand Mufti in regard to the wearing of hats, intermarriages and women's rights of inheritance, and I said that its tone showed a retrogression in the attitude of Al Azhar towards the affairs of the world since the day when the great Mohamed Abdu presided over its destinies. I have now seen a copy of the *Fetwa* issued by that great reformer in regard to this very question of hat-wearing. He gave it as his opinion that if the Moslem who wanted to wear a hat had no intention of renouncing Islam there could be no objection, and that if the object of wearing a hat was protection from the sun or other ill or for some personal interest this could not be considered as imitation of the "infidel" within the meaning of the Quran. Which it must be conceded is a far more broadminded attitude than that taken up by Al Azhar to-day, over twenty years later.

Liubliana April 15.

The Government Crisis.

The Government crisis in Yugoslavia has come rather unexpectedly. For some long time past one has been told that relations between the two parties forming the Government Coalition, viz., the Pashitch Radicals and the Raditch Croat Peasant Party, were anything but cordial. The lack of confidence which prevailed between the two would every now and again break out, yet it never came to a definite crisis, although the latter was often enough prognosticated by the Opposition. In the end the crisis did come to a head over an altogether chance occurrence.

On March 30 the Skupshtina, with 186 votes to 90, passed the Budget for 1926-27, which came into force on April 1. Herewith its principal task was accomplished, and M. Nikola Pashitch took this opportunity to adjourn the Skupshtina on the very same day (March 30) until May 5. Then, without warning, M. Stepan Raditch, Minister for Education, rose and demanded that the adjournment be cancelled and the Skupshtina summoned at once to reassemble on April 12. There was, he said, so much urgent business on hand which could not brook postponement, that such a long recess was inadmissible. An external reason for this long holiday (as it is considered here) is provided by the fact that Yugoslavia has not yet got a unified calendar and thus keeps two Easters—Catholic and Orthodox. This year there is a difference of several weeks between the two festivals, and the parliamentary recess has to be extended so as to include both—apart from the Moslem holidays.

The Radical members refused M. Raditch's demand for curtailment of the parliamentary recess, and the Raditch Ministers retorted by tendering their resignations. Herewith the Cabinet crisis was duly ushered in, because on April 4 M. Pashitch submitted the resignation of the whole Government, which the King at once accepted.

This is the outward course of the crisis, which shows only the occasion. The true causes of it are different and lie deeper.

Cause of the Crisis.

The Radical party includes a great many incongruous elements which threaten to break up this, the strongest party in Yugoslavia, which commands about 47 per cent. of all mandates. These differences within the party show most strongly in the splitting up of its adherents between its two leading personalities, M. Nikola Pashitch and Liuba Yovanovitch. MM. Pashitch and Yovanovitch differ greatly from one another. The former is more conservative, representing a more patriarchal, practically autocratic régime. He is far less accommodating in his attitude towards other parties and lays greater stress on the more narrowly Serbian point of view. M. Liuba Yovanovitch, on the contrary, is very popular with all the Opposition parties; he has long been in favour of coalition with some of them, and is more considerate towards the demands of the parties representing the formerly Austro-Hungarian provinces (the so-called *precani*). And as he is more liberal towards other parties, he is distinctly opposed to the autocratic attitude of the aged M. Nikola Pashitch and emphatic in his demands that an end must be put to certain irregularities and corrupt practices which some of the Radical politicians stand accused of. The difference between M. Pashitch and M. Yovanovitch entered into an acute phase just before the crisis and an outbreak of public hostility between them coincided with the advent of the crisis itself.

M. Dragisha Stoyadinovitch, son-in-law of M. Liuba Yovanovitch, had exposed what is now referred to as the Rade Pashitch affair. One had long heard gossip about profitable (to himself) transactions engaged in by M. Radomir Pashitch, old Nikola Pashitch's son, and now M. Stoyadinovitch has been taking him to task very sharply in the Press for certain deals negotiated (thus runs the accusation) by him to the detriment of the State and with the help and connivance of distinguished functionaries of the Radical Party, who are moreover accused of the most undeniably corrupt practices. This wrangle between Rade Pashitch and Dragisha Stoyadinovitch is the biggest political "affair" in the recent history of the young Kingdom. It caused an immense sensation throughout the country, and shook the position of the aged Premier himself. Of course the last word in the matter lies with the law courts; but it must be pointed out that public opinion in Yugoslavia has already made up its mind, and no judicial finding will suffice to alter that very materially.

This affair, and the difference between the two Radical leaders, determined both the course and the solution of the crisis. One was told of the possibility that M. Yovanovitch with some of the Radical deputies would break away from the main body of the party and form a new Government in conjunction with M. Raditch and the majority of the Opposition parties, leaving M. Pashitch in the Opposition. But M. Yovanovitch has too few of the Radicals on his side. The overwhelming majority of them obviously stand firm for M. Nikola Pashitch, and so this scheme had to be dropped. Then came a solution of the crisis which took everybody by surprise. The veteran M. Nikola Pashitch had to stand aside in his own party while the King entrusted the formation of a new Government to M. Nicholas Ouzounovitch, a leading Radical politician and friend of M. Nikola Pashitch. He enjoys the reputation of being a thoroughly honest man. The first Government he formed was practically the old one over again, only without M. Pashitch; and with the latter resigned M. Milan Stoyadinovitch, for many years Minister of Finance, whose place has been taken by Dr. Ninko Peritch.

Difficulties of the Coalition.

As has been said, this solution of the crisis came as a great surprise. It is a public secret that the Crown is not in favour of M. Pashitch's autocratic methods, and would prefer a Yovanovitch Government. But M. Pashitch is not the man to be thrust aside without further ado, and he at once began an energetic offensive against the new Government, which was not, in fact, a very satis-

factory solution. M. Pashitch's plan is, first to settle with M. Yovanovitch and his none-too-numerous adherents within the party. To this end he has called a meeting of the Central Committee of the Radical Party for May 25, and this meeting will be practically decisive for the further development of the situation. An open vote of the whole party will doubtless overthrow the present Government, which will be an easy matter, since it is obviously only a temporary makeshift. In his campaign M. Pashitch has found an involuntary ally in M. Stepan Raditch with his interminable loquacity, attacking and insulting Radical Ministers, and—in spite of the Agreement—constantly harping upon the difference between Serbs and Croats. Owing to these attacks the Minister of Transport, M. Krsta Miletitch, tendered his resignation, and others will doubtless follow. The rift between Radicals and Raditch followers becomes more patent from day to day, and it is impossible for the Coalition to last, unless—and voices to this effect are already being raised in the Press—M. Raditch follows his great senior and rival into retirement. It seems as though the country might be on the eve of a fresh crisis. If it does not occur before the date of the Radical Party meeting, it is sure to be provoked on May 25. What will happen then, is all uncertain. Perhaps a fresh general election will prove the only way out.

April 16.

A Compromise.

At this moment of writing, events have overtaken anticipation. M. Raditch has had to go. The first Ouzounovitch Government resigned, and the King for a second time confided to M. Nicholas Ouzounovitch the task of forming a Cabinet. Two of the Raditch Ministers followed their leader, but two remain, so that there is now in Yugoslavia a Radical-Raditch Party Government without either M. Pashitch or M. Raditch. In theory there is a good deal to be said for this conjunction. A very brief space of time will show whether these parties—the two strongest and best-organised in the State—have indeed outgrown the leading-strings of their chiefs and are capable of working together in that greatly-to-be-desired Government of True National Agreement, in which the Slovenes, as a matter of course, must also be adequately represented.

IRAQ.

Baghdad, April 5.

The Nature of Present Nationalism.

The capital still presents—marred, it may be, by a few touches and suggestions—a picture of political tranquillity. Not that the diwans are idle or silent. No day fails to produce its rumour, its alleged regrouping, its sensational but unconfirmed conversion: there still exists, the most common and permanent of middle-Eastern phenomena, the small but swelling group of schoolmasters, briefless lawyers, unemployed or pensioned officials, and a handful of doctors, telegraph clerks, and the like; nor can these be restrained from their almost sole occupation of political gossiping merely by the momentary absence of a major issue. Parliament elected and in session, Treaty signed and sealed, Mosul decision published and already *vieux jeu*—these seem to leave no materials for the manufacture of attractive crises. One wonders at times what, with so much fixed amid so general an agreement, is to occupy the restless hands and tongues of Nationalism for the long remainder of the Treaty period. The reduction of foreign officials has already proceeded far, and the survivors are for the most part serving on long-term contracts, which a nation applying for membership of the League of Nations will scarcely venture to set aside. The whole façade of democratic institutions—assess how one may their suitability to the almost primitive conditions of Iraq society—has been installed. Pro-British and Anti-British, those hideous labels surviving from 1920 and (even more) from the sad controversies of 1922, have already lost their real significance, now that the actual rôle of Great Britain has declared itself as one both absolutely essential to the interests of all parties (save those of mere anarchy), and offensive to no reasonable nationalism. What, then, to talk about?

Some anti-foreign feeling, the child of personal disappointment and sometimes of a deep *a priori* antipathy, there will always be: and it will always be at the service of the ambitious or disgruntled elements of the moment. That such elements are at the moment few in number, publicly discredited and unpopular, and powerless in the Chamber, explains the pleasant spell of quietude that Baghdad, and Iraq in general, is enjoying.

The Opposition's Tactics.

The Opposition, always restless but (at the moment) obscurely breaking and reforming, can to-day find no better occupation than in attacking possibly controversial clauses in the 1926-27 Budget, now before the Chamber: fostering rumours that Great Britain is intriguing against Iraq interests at Angora, and threatening within Iraq itself to set up independent enclaves of Kurd and Assyrian: hoping that Bolshevist and reactionary forces in Persia will overthrow the new régime there, which for some reason is represented as Anglophil; taking up the cudgels for a suppressed Nationalist newspaper; and assailing the Prime Minister and his followers for excessive subservience to Iraq's Ally, and failure to press for revision of terms of the Agreements subsidiary to the Anglo-Iraq treaties.

Such are the topics which keep the dapper politicians running from lawyer's office to Pasha's house. The student of Iraq politics will not be surprised that they all appear emptily alarmist and unpromising enough as rallying-cries; but he will be no profound student who does not realise, with a tolerant smile, that the real strong plank in the Opposition platform, which gives its whole attraction and solidity to that erection, is delicately concealed. Only for the benefit of the distant and uninstructed reader is it necessary to mention it. It is, in fine, "Unite, my friends (for the moment only) to push out the present Government and the greatest possible number of officials; and then, Mashallah! what portfolios,

what oportunities!" That ninety per cent. of Iraq's publicists freely admit the dominance of the personal motive in their politics, is a naive and doubtless an encouraging feature of public life; scarcely a fire-breathing Nationalist but, taxed with this foible, will disarmingly and humourously admit it. It is very human; but it does not make straight-forward progressive administration any easier.

Leave: and Those Left Behind.

Sir Henry Dobbs is still away, but expected back very shortly. Meanwhile, the leave-season migration of British officials has begun, sad spectacle to the wing-clipped stay-behinds who, for rupee or other reasons, must face the summer already stoking its fires.

Sofia, March 29.

A Political Entente.

The tendency towards an entente among political parties to which reference was made in my last letter, and which may be regarded as the direct outcome of the policy of conciliation inaugurated by the Liaptcheff Ministry is becoming more and more manifest. A notable indication of this fact has been given in the publication of an article by one of the most respected leaders of the Government party, M. Vlaikoff, a former Radical, in which the writer establishes that the Democratic Entente is a formation to be regarded as now complete, that has absorbed all that it could absorb of political elements in the way of fusion, and that it must hereafter try to unite the parties among themselves on the basis of a common programme regarding the great national problems, whether political or economic, in order that the present Government and those who come after it may speak and act in complete accord with the country and without running up against internal contradictions. This idea, otherwise obvious enough, is still far from being realised in Bulgaria, and for this reason M. Vlaikoff's article has made a profound impression.

Agrarian Evolution.

In this order of ideas, notice may be taken of the very definite evolution which is taking place among the Agrarians, who, realising the delicate situation in which the country finds itself, are carrying out in silence their work of reorganisation under the guidance of M. Tourlakoff and M. Tomoff, in preaching reconciliation and oblivion for the past, and in lending also direct help to the policy of the Government. To this end they have delegated the former Minister, M. Omartchevsky, to visit the *emigrés* who are still in Yugoslavia and Czecho-Slovakia in order to exhort them to return to Bulgaria under the terms of the amnesty voted by the Sobranye. At the same time M. Omartchevsky has been authorised to disavow openly in Yugoslav and Czecho-Slovakian official circles the subversive actions of the leaders of the *emigrés*, who arbitrarily assume the title of representatives of the Bulgarian Agrarian Party abroad, but whom the Party strikes off the list of its organisation.

Bulgaria and the League.

The Bulgarian people is certainly among those most affected by the check at Geneva. It is doubly affected, both from the point of view of the general interests of Europe and of its own particular interests. A small, conquered country, and completely disarmed when all her victorious neighbours are armed to the teeth and do not always harbour good intentions towards her, Bulgaria looks to the League for the protection of her territory and of her independence, as well as for the safeguarding of her imprescriptible rights. This time she looked for something even more tangible, namely, the concluding under the auspices of the League of Nations of an international loan for her numerous refugees. This loan, as a consequence of the Geneva crisis, has been postponed to the session next June.

In face of this uncertainty the idea is being entertained here of making direct pourparlers with the London Banks, and it is announced that the Finance Minister will embark on a voyage abroad as soon as the Sobranye has voted the Budget and the economic projects under discussion.

Sofia, April 12.

A Bolshevist Offensive.

Reference has been made in the European Press to an alleged decision on the part of the Executive Committee in Moscow to inaugurate a policy of personal assassination with a view to hastening the tardy world revolution. As a result of this decision it is inferred that terrorist groups have been formed by the Comintern and that in particular a definite plan of campaign has been drawn up for the Balkans. The report continues that the execution of this plan was to be arranged at a secret conference summoned for the immediate future in Vienna. Here we have been given to understand that Bulgarian Communists were to be represented by one of their most active and most fanatical leaders, Christo Kabaktchieff, who, in addition to his undeniable ability, now wears a martyr's halo, as he has spent two years in prison. Kabaktchieff, Member of the Central Committee of the Bulgarian Communist Party, was arrested as a preventive measure on September 12, 1923, a few days before the Bolshevist revolution planned

at that time, in which for this reason he was not able to take a part. Brought to trial and condemned for having taken part in the decision regarding the proclamation of the revolution, he was recently set at liberty as a result of the amnesty. On leaving prison he was believed to have foresworn Communism as a result of the bloodshed for which his party was responsible, and he announced that he intended to abandon active politics. On April 5, however, he presented himself before the authorities at a small place close to the Serbo-Bulgarian frontier, in a state of complete exhaustion as the result of a forced march across the mountains in company with one of the most redoubtable anarchist-Communists who had also been amnestied, for the purpose of crossing into Yugoslav territory. Kabaktchieff's companion, a much stronger man, succeeded in passing the frontier, while Kabaktchieff, at the end of his physical strength, had to renounce the enterprise and was sent back to Sofia. The Vienna Conference will have to take place without him. This mysterious attempt seemed to confirm the indications of a new offensive on the part of Bolshevism in Bulgaria, and the police have accordingly taken a series of steps to deal with it, and have paid a number of visits to certain quarters in Sofia and to certain provincial towns. The authorities in any case are forewarned, and will not be caught unawares.

Reparations and the Internal Situation.

It may be stated that these Bolshevist attempts find no support in political circles here, even among the extremists. On the other hand, there is a fear of repercussions of the serious financial and economic crisis from which the country is suffering and which has already laid a heavy hand on all sections of the people. A formidable stagnation in trade, a dangerous set-back in production and a considerable increase in the cost of living have given rise to anxieties to which the Sobranye itself cannot remain indifferent, and during the discussion on the Budget for the Ministry of Foreign Affairs last week vehement protests were raised by the spokesmen of the Opposition against the intolerable financial charges which the Treaty of Peace has imposed on Bulgaria, and which Bulgaria cannot support without heading straight for bankruptcy. All these spokesmen pointed out, not without reason, that in the Budget of 7 milliards of leva, 2 milliards are for the Ministry of War for the upkeep of a very costly volunteer army. If to this sum are added reparations payments, one has a sum of almost 3 milliards increasing every year as a result of the progressive payments of reparations, in other words, nearly half the total revenue of the Treasury to be devoted to the carrying out of the Peace Treaty. These criticisms of the Opposition were sufficiently founded—the more so as the loan hoped for is still postponed by the refusal of London Bankers to consent to any loan without a previous decision of and some sort of moral guarantee by the League of Nations—for M. Bouroff, Minister for Foreign Affairs, to be obliged to reply to them. It is true that he replied in a very shrewd and worthy manner, assuring the House that the problems which preoccupy it are also the object of the Government's pre-occupations, but that their solution depends on other factors over which the Bulgarian Cabinet has little control. In any case the idea is gaining ground and everybody is beginning to realise that the country sooner or later will be forced into a moratorium, if not to abandon reparations, at least to obtain financial aid sufficient for its recovery, and to reinforce its powers of production.

The foreign policy of Bulgaria, as M. Bouroff has just defined it in the Sobranye, resolves itself into the loyal execution of the Peace Treaty, which defines the obligations as well as the rights of the Bulgarian people. It is in the loyalty of this execution that M. Bouroff is looking for the possibility of obtaining the alleviation which the Sobranye claims with so much insistence and such complete unanimity. At the same time the Government has promised to take the steps desired as soon as the moment appears opportune; but it asks political parties to unite in order to lend more weight to its eventual action in this direction. This appeal to union, made by the man who occupies the most important post in the Cabinet after the Prime Minister, was couched in such eloquent terms that it was supposed to reflect a desire in certain Government circles to enlarge the base of M. Liaptcheff's Government either by inviting the participation of one or two of the Opposition Parties or by bespeaking their collaboration without office. Behind it also may have been the echo of a report to the effect that, at the time of sounding the London market for the direct conclusion of a loan intended for the refugees, the Government received from English financiers a warning that it must renounce all hope of finding money except through the intermediary of the League of Nations, and on conditions that it secured the direct concurrence of all loyal parties, in other words introduced a Government coalition.

To assure the success of his policy, which is, as he pointed out, that of his predecessor, M. Bouroff counts on the solidarity of the Balkan States, to a close understanding among whom he looks forward, and above all on the League of Nations, of which he is a firm admirer and in which he places the greatest confidence.

The Balkan Workers' Conference.

The solidarity of the Balkan peoples has found expression recently in a Balkan Workers' Conference, summoned by the International Workers' Federation of Amsterdam, which was held in Sofia on April 9 and 10 under the Chairmanship of M. Mertens, Vice-President, and M. Sassenbach, Secretary-General of the International. There were present at this Conference, in addition to the two representatives of the International, two members of Parliament, one from the Belgian Chamber, the other from the German Reichstag, together with four professional secretaries, there were delegations from Roumania, Yugoslavia, Greece and Bulgaria. The Yugoslav and Bulgarian delegations had ten members each, those from Roumania and Greece three. All the representatives had come to convey the assurance of the working classes of their countries apart from their other workers' claims, that they would work by all means in their power for the union of the Balkans, and the Conference proclaimed the brotherhood of the Balkan peoples which, according to their way of thinking, are naturally oppressed by an Imperialist bourgeoisie. In this sense a number of speeches were delivered at a big public gathering held at the end of the Conference. Four resolutions were passed; the first affirmed the resolve of Balkan workers to have the right of association and co-operation respected and to claim recognition for their working organisations by employers' associations and public authorities. The second demanded the improvement of existing social legislation and its application in the different Balkan States. The third laid down the future direction of the Workers' Movement in the Balkans, claiming a reduction in the hours of work, an increase in wages, the creation of appropriate social institutions and the improvement of the intellectual standard

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

of the working classes, which, moreover, in spite of being divided among political parties, are to remain united in their Unions. The fourth resolution recommended the Trades Unions in the countries where they are not already so grouped to enter as soon as possible into negotiations for their incorporation in the Workers' International, Amsterdam, that is to say, against Moscow. In this particular, this Balkan Conference has lent indirect support to the struggle against Bolshevist intrigues in the Balkans.

PERSIA.

Teheran, April 6.

The Coronation.

Everyone is now beginning to think about the Coronation, which is fixed for Sunday 25th instant, although there are as yet no outward signs of the preparations, which will no doubt proceed apace as soon as the present month of fasting, Ramadan, is over, next week. It was rather unfortunate that the Persian New Year's holidays fell this year during this month. The jollification and rounds of visits and entertainments which usually take place during the day had this year to be postponed to the night time, after the evening gun had announced the end of the day's fasting.

The Coronation, which it is understood will be on a grand scale worthy of the occasion, will undoubtedly attract a great number of visitors to the Capital, and a large influx, both of Persians and foreigners, is expected from all parts of the country and Mesopotamia. The official programme of events is not yet published, but the celebrations and festivities in connexion with it, and the illuminations at night, will probably be spread over the best part of a week.

The Opium Commission.

The Commission appointed by the League of Nations to inquire into the production of opium in this country arrived here last week, and, after staying only a day or two in Teheran, have proceeded to Ispahan and Shiraz, the most important centres of the opium industry in Persia. On their return from these places in a fortnight's time, the Commission, which consists of an Italian and a French delegate, under the presidency of Mr. Delano, an American, with four secretaries and stenographers, will visit other parts of the country, to study local conditions on the spot.

General News.

A sum of 10,000 Tomans has been sanctioned in connexion with the construction of a dam on the Jargerood River, flowing from the Elburz Mountains to the north-east of Teheran. If practicable, this scheme, which has been discussed for many years past, would prove a great boon in many ways, harnessing, as it would, much precious water which is at present allowed to go to waste.

The elections for the sixth Assembly of the Mejliss are proceeding throughout the country, but this is a long business in Persia, and the new Parliament is not expected to be opened for another two or three months.

The overprinted stamps of the regular issue have now made their appearance, and the surcharge consisting of the Persian lion and sun, with the words "Régie de Pahlavi" and the date of Reza Shah's accession to the throne, December 16, 1925, in Persian script, very effectually obliterate the ex-Shah's features.

The terms of the Junkers Company's contract with the Ministry of Posts and Telegraphs and the tariff to be applied to postal matter by air mail on the three routes for which a five years' concession was recently granted by the last Mejliss, do not yet appear to have been settled, and no air mail has been sent up to the present, though the despatch of the first post by this service is now announced for Coronation Day.

Spring-like weather has prevailed throughout the country for the past few weeks, and it is satisfactory to note that reports from the provinces announce that during the past winter sufficient rain and snow have fallen to ensure a plentiful harvest this summer, for which everyone will be heartily thankful, for the high prices ruling for all foodstuffs this winter and the great scarcity of bread, even of an inferior quality, have been a severe strain on all classes, as well as a source of much anxiety for the Alimentation Service, which is to be congratulated on maintaining, very often under exceedingly difficult conditions, a consistent adequate supply of wheat and other commodities to stave off the threatened famine.

CORRESPONDENCE

***The columns of* THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.**

COMRADE KEMAL?

To the Editor of THE NEAR EAST AND INDIA.

Sir,—As Hon. Secretary of an Association of which one of the objects is to promote the renewal of friendly relations between our country and the Turkish people, may I be allowed to offer a word of comment on one or two observations made in the Notes of the Week in the current issue of THE NEAR EAST AND INDIA?

The interests of British commerce in the Near East are suffering because the relations between Great Britain and Turkey are still critical. But, if the relations between the two countries are to become normal, I would urge that it is essential that the Turkish point of view should be understood. Whether or not we sympathise with it is a matter for individual judgment.

The Turks to-day are smarting under a sense of injustice and, rightly or wrongly, they blame our country. Their reason becomes more clear if we study Article 3 of the Treaty of Lausanne by which Turkey, while consenting to submit the Mosul question to the League of Nations, was not bound to abide by the decision of the Council of the League. On this question Mustapha Kemal's Government has suffered a serious check and is again faced with the alternative of accepting the full support of Moscow. Therefore is it really surprising that the Turkish Government desirous, as we know it is, of Westernising Turkey, should appear inconsistent, that some British subjects in Turkey should be regarded askance and that British trade with Turkey is languishing?

I venture to suggest that the point of cardinal importance is whether the action of our Government supported by public opinion, will force Turkey (now, with the exception of Japan, the strongest Asiatic Power), to turn again to the East, to become a member of the "Eastern League of Nations" over which Bolshevik Russia aspires to a hegemony, and thus to complete the link in the sequence of Russia's Eastern policy. Temporarily the Bolshevik's dream of world revolution in the West has failed. In the East the issue is undecided; but the hope of success has greatly increased since the decision of the League of Nations on the Mosul question—a decision that was a godsend to the Bolsheviks. For these reasons I would urge that a fair consideration of the Turkish point of view and a sympathetic and knowledgeable handling by our Government of the problems outstanding with Turkey, are a vital factor in deciding whether or not the Eastern revolutionary policy of Moscow shall triumph and thus enable the Bolsheviks to turn again with renewed strength to their task in the West.—I am, etc.,

EMILY L. COBHAM, Hon. Secretary,
Near and Middle East Association.

March 17.

[The only point that the Notes of the Week, to which our correspondent refers, sought to make was that the relations between Great Britain and Turkey are gradually moving towards a more satisfactory state and will in-

Digitized by Google

evitably arrive there in the near future, if certain people in this country will discontinue to declaim—without reference to any particular matter—that Turkey is entirely in the right and Great Britain entirely in the wrong. Not only is the Turkish point of view perfectly well understood in this country, but the Turks have also had it explained to them sympathetically and knowledgeably that, as a point of view, it has nothing to support it or to commend it and that it will bring the Turks neither internal peace nor national progress. At a time when the Turkish Government shows signs of realising that there is something after all in Great Britain's contention, the Honorary Secretary of the Near and Middle East Association seems anxious to prompt the Turks once more to kick against the pricks. The bogey of two States unable to stand alone by leaning up against one another becoming a world menace would hardly seem a worthy reason for deflecting Great Britain from a course of right and justice. Article 3 of the Lausanne Treaty reads as follows:—

"The frontier between Turkey and Iraq shall be laid down in friendly arrangement between Turkey and Great Britain within three months. In the event of no agreement being reached . . . . the dispute shall be referred to the Council of the League of Nations. The Turkish and British Governments reciprocally undertake that, pending the decision to be reached on the subject of the frontier, no military or other movement shall take place which might modify in any way the present state of the territories *of which the final fate will depend upon that decision.*"

The Near and Middle East Association is at liberty to hold, in opposition to The Hague Tribunal and the British Government, that a final fate is not final, but in the circumstances it is mischievous or worse to encourage the Turkish Government to act upon the Association's view. —Ed.]

THE LIMITATIONS OF TURKEY.

It was under the above heading that Captain F. H. Armstrong lectured to the Central Asian Society on April 15, Sir Michael O'Dwyer being in the Chair. Captain Armstrong divided his subject into two parts, painting Turkey as it was during the years between the end of the War and the Allied evacuation and between the Treaty of Lausanne and the present time. In an extremely vivid way he showed how the Allies (despite the fact that Mr. Lloyd George went to the Conferences at Paris with at least one clear idea in his head—and that, too, was shared by M. Clemenceau and President Wilson—the final banishment of Turkey from Europe) lost their chance with Turkey. That this could have been realised at the end of the War was undeniable: the Turks would then have accepted any terms. Unfortunately, hesitation followed hesitation, and, worse still, jealousy grew among the Allies in the Near East. Mistakes, both of particular and general kind, were made in the Allies' dealings with the Turks. In these circumstances a Nationalist movement in Turkey reared its head, under Mustapha Kemal. This, however would have had no chance of success had not the Allies (in the absence of an Italian representative) committed the folly of sending the Greeks to Anatolia. That act alone set the jaded Turks aflame. The Italians were on the Turkish side from the start, and after the returning to power by the Greeks of the "Hun King Constantine," the French also worked against the nominees of the Allies. The rout of the Greeks took place, the French and Italians left Chanak and, by very astute diplomacy, General Harington persuaded the Turks to sign a truce at Mudania.

In tracing this story, Captain Armstrong carefully pointed out that the Turks were left with no modification of the idea that what the Allies wished was the destruction of Turkey—an idea which is still, he said, at the back of their minds, particularly of those Turks (of whom 75 per cent. should have been hanged and 25 per cent. were entirely innocent) who were deported to Malta.

Followed the humiliating Treaty of Lausanne. But for Turkey from this time onwards there could be high hopes. She was now clear of her domestic problems, and there was a real chance, particularly in 1924, for a re-birth of the Turkish nation. Unhappily, however, the constitutional opposition which had been developing in Turkey was, when the Kurdish rebellion under Sheikh Said broke out, entirely smothered, and the régime in Anatolia now was that of a terrified Dictator aided by a few boon-companions—than which there was no worse type of government. The Nationalist Turks, in whose future he at one time genuinely believed, had committed incredible follies, of which those pertaining to trade were not the least. In particular, they had erected a great protection tariff wall with nothing inside to protect. They had shown not the slightest inclination to become mechanicians in this mechanical age, and in fact their material development was languishing all round. Politically, it was Abdul Hamid over again, and it appeared possible, with prosperous and fecund nations looking with keen eyes upon Eastern Thrace and the rich part of Anatolia, that the Turks might revert to the remote Asiatic tribe from which they had originally sprung.

In the subsequent discussion, Sir Valentine Chirol said that he was in complete agreement with the lecturer except on one point—the allegation of Mr. Lloyd George's wholehearted desire at the Peace Conference to wipe out the Turk from Europe. If that really was the ex-Premier's aim, he had, by saying that the East was never in a hurry and could therefore wait for its treaty of peace, shown extraordinary ineptitude. The secularising of the Turkish State, he went on, was absolutely opposed to Islam. And in commenting upon the possibility or even probability of the Italians' going to Asia Minor Sir Valentine proved from personal knowledge that the Italians were at the present time extremely anxious to be friendly with Greeks, whose regard of Eastern Thrace as a Turkish possession was a most impermanent thing.

Colonel Cornwall, who was with the British Army at Chanak and had stayed on in Turkey for two years after the evacuation, recounted how high was the prestige of the British Army in Turkey. "The British Army," said the Turks, "have no patches on their uniforms."

Colonel Cunliffe-Owen, recently returned from Greece, contrasted the thriving Greek-inhabited Western Thrace with the Turk-inhabited Eastern Thrace. One was alive with crops and every form of activity; the other a desert. He fully believed in the possibility, and in fact in the desirability, of Greece's return to Eastern Thrace and Italy's expansion into Asia Minor.

To Mr. F. H. Skrine's question whether the alleged reverting by the Turk to a mere Asiatic tribe was not contradicted by the substitution of the fez by the billy-cock, the lecturer replied that the change of hats had nothing to do with Europeanisation. The purchase of Europe's surplus hats by the Turks and the permission given by certain ulema to Moslems to forsake their fez were just inexplicable pieces of folly.

In summing up, Sir Michael O'Dwyer complimented the lecturer on the unanimity with which his opinions of modern Turkey had been accepted in the audience. Of Mustapha Kemal Pasha the Chairman said that, although he was a magnificent soldier, his statesmanship was contemptible. He concluded by subtly hinting that the agitation about the hats in Turkey had been engineered by the adornment-loving Turkish young women.

Three aeroplanes were flying from the Shaibah station of the Royal Air Force, near Basra, to Abu Ghar last Thursday morning when they encountered a very severe sandstorm and turned back. Two of then reached Shaibah in safety, but the third, having been separated from the others owing to the very bad visibility, failed to return. The wrecked aeroplane was found the following day near Jaliba, a desert post 100 miles north of Basra. Both occupants were dead. They were Flying Officer James Eric Tomes and Leading Aircraftsman F. E. Leatherdale.

BOOK REVIEW.

PERSIA'S POTENTIALITIES.

"THE ECONOMIC POSITION OF PERSIA." By Mustapha Khan Fateh. (London: P. S. King and Co. 6s.)

If Persia as an economic factor in the world is perhaps less fascinating a study than the land of Reza Shah Pahlevi as a political factor in the affairs of the world, its importance in this respect is certainly permanent and likely, indeed, to increase. It is good, therefore, to have what is claimed as an authoritative account of the economic resources of the country. M. Fateh, the writer of this account, does not, to be sure, err on the side of pessimism in regard to his country's future, but in the main his record, so far as we have been able to check it, may be relied upon. Speculation in his pages is easily disentangled from fact, so that the observant reader may gain a great deal of useful, and indeed to the keen student, indispensable, information from this expansion of a thesis which was originally written for an American University.

After dealing with the population of Persia, which is put at about ten millions, the author takes in review the agriculture, mineral resources, oil industry, manufactured articles, communications, finance and commerce and trade of his country. For the greater part he keeps closely to fact, although he does not resist roseate contemplations of Persia's future, especially in regard to railway construction. One notes with interest in this latter regard that he thinks that Persia should follow the plan adopted in India—the Teheran Government would guarantee the interest and invite the foreign investor to lend—and that the most practical line in his opinion is the Mohammerah-Teheran line via Khurramabad, Burujird, Sultanabad, and Qum.

In a concluding chapter the author discusses the future developments of Persia's industries, but although he is cautious in a measure, he does not appear to weigh with sufficient gravity those political considerations which have in the past always hampered the progress of this undeniably wealthy but somewhat inaccessible country. For it is true that those who know best Persia's potentialities are the least hopeful of, say, the possibility of her grain competing with Indian or Iraq grain, or of her railways becoming self-supporting.

The book would have been much improved by the inclusion of a map.

The fifth annual dinner of the Salonika Army and Black Sea Forces will be held in London on June 18 at the Hotel Cecil. General Sir George Milne, Chief of the Imperial General Staff, will preside.

M. de Jouvenel, the High Commissioner for Syria, has returned to Beyrout from his first visit to Palmyra, accompanied by a party which included Sir Ronald and Lady Storrs and Senator and Mme. Eccard.

Mr. W. Ross Barker, whose nomination to be the first chairman of the Indian Public Service Commission was announced on April 6, has postponed his departure for Bombay until April 24, when he will embark at Plymouth.

THE WEEK AT HOME.

London, Tuesday Morning.

The Paper Duty.

Some of the duties imposed by the Conservative Government have been accepted philosophically, but over the proposed protective duty on packing and wrapping paper it appears that there will be a strenuous fight. Already representatives of manufacturing firms have visited Sir Philip Cunliffe-Lister in protest, but without avail; and the tax is to be included in the Budget.

It is said that the wrapping paper mills, who persuaded the Government to impose the duty, employ about 7,000 men, whereas the industries that use wrapping paper as an essential raw material in manufacture employ, it is claimed, over a quarter of a million people. If these figures are correct, there seems a good chance of the Commons' rejecting the duty.

A propos of fancy taxes, the opinion is growing that the Chancellor of the Exchequer is to introduce into next year's Budget a tax on betting. The opposition to this, however, would be moral as well as interested.

Socialists with Money.

Partly because, in these sensational days, the sight of a father quarrelling with his son is relished of the populace, and partly because the protagonists in the dispute had previously attained or secured a certain notoriety, the controversy raised between Mr. Oswald Mosley and his father over the proper allocation by a wealthy Socialist of his moneys has enjoyed very considerable publicity. It is true that from such publicity Mr. Mosley and his Socialist wife do not appear to recoil in pious horror; nor is it particularly patent that his Conservative father is annoyed at the prominence given to his not too profound views upon the inequalities of our social system.

Personalities apart, however, this ethical problem of the desirability of using and condemning that by which we live is of perennial interest. Theoretically there is some justification in the plea of the wealthy Socialist that his means enable him more effectively than would his poverty to attack the social system. In practice, however, it is difficult to distinguish between under-mining of a system and enjoying of it. Obviously there is a curse in money, and commonly those plutocrats who are also democrats are in fact some of the most selfish (in the sense of serving their own will) members of society. In any case, however, there is no solution to this problem; even under a Socialist régime the same questionings of conscience would arise. Philosophically, this little outburst of the Mosley's in the Press is an illustration of the eternal (though quite conceivably undesirable) Necessity for Compromise.

The Industrial Crises.

But for our national habit of always leaving the settlement of our more serious disputes until the last minute, the lack of progress both in the mining and in the engineering industries would be alarming. Nothing fresh is to be done in the mining negotiations until to-day. And the present situation is serious enough. The miners have been promised international support in the event of a stoppage here: the International Miners Federation decided last week that an embargo should be placed on the export of coal to England. In the districts the mineowners have posted notices to end the wages agreement; and Mr. Baldwin has seen the King.

In the engineering industry the national negotiations completely broke down last week. The wage proposals submitted by the employers have been summarily rejected by the men, who appear to want an unconditional advance in wages. It is expected that the unions will concentrate on the London area in their district applications for increased wages, and that if they do not succeed, a strike ballot will be taken. On the other hand, the employers may re-employ their old threat of a lock-out.

Divorce Reports.

It has been obvious for some time that the stream of public opinion showing nausea at the prominence given in sections of the Press to objectional or criminal cases had been welling up in sufficient volume to get a Bill passed through Parliament which should attempt to restrict the licence of the Press in this respect. Last week in the Commons the second reading of a private member's bill was carried by 223 votes to 3, and, indeed, opposition to it was practically impossible except on technical grounds.

Unfortunately the tendency of the "stunt" Press to exploit divorce cases and the like is in fact extremely difficult to repress. The trouble lies with the definition of obscenity. How difficult that definition is is shown by the present Bill, which can get no nearer than a prohibition of matter "calculated to injure public morals or otherwise be to the public mischief." Recognising the vagueness of this, the Bill tries to deal with the offence by prohibiting publication of all but a limited number of particulars about certain specified class of legal proceedings. But the sensationalism of the Press is not confined, as the Bill implies, to divorce proceedings and nullity suits, outside which there is yet an immense field of suggestiveness which those papers which pander to the unclean will surely exploit. In supporting the Bill, therefore, one realises that it is hardly likely to effect an improvement in morals. What really seems to be needed is a measure prohibiting newspapers from reporting any case until it is concluded—that would destroy the hour-to-hour sensationalism. As for "the freedom of the Press," with which this present Bill undoubtedly interferes, we have long recognised, even in this liberal country, that liberty may degenerate into licence.

The Women's March.

An unusual spectacle was seen in London on Saturday when 20,000 women from all parts of England, Wales, Scotland, and Ireland demonstrated in protest against strikes and lock-outs. All sorts of women there were, fisherfolk and miners' wives, women members of the Whaddon Hunt on their horses, Scots girls pipers, Welsh women in national dress, and so on, organised by the Women's Guild of Empire. And at the head of the movement was Mrs. Flora Drummond, who will perhaps be better remembered by her former exploits in Suffragette days than by this entirely peaceful parade.

It was inevitable that this procession should be looked upon as much in a political as in a social light, and possibly it was more to the credit of the hearts, than to the heads of these women that they should have come all the way to London to denounce those measures which none but fools lightly undertake. Mrs. Drummond said that the gathering represented "the inception of organised women's opinion on industrial matters." This, of course, is the old Suffragette tale. One has noticed no difference in our politics since "the inception of organised women's opinion on political matters," and, speaking generally, it may be taken for granted that women's opinion on industrial matters will be important in just the proportion in which it confirms, not in which it opposes, the opinions of the husbands and fathers and brothers.

Sport.

Various things are happening to make the summer sportsmen feel a thrill through their wintry bones. First of all, of course, is the visit of the renowned Australians, whose advance under their preliminary barrage has been made as if they were on parade. To suppose, however, that they can walk through any position is not a mistake likely to be made by any of them taking part in the Tests, for the actual cricketers know very well that this series will be the hardest-fought since the War.

Another event that has sent English hopes pulsating is the success of H. W. Austin, the Cambridge Freshman who is both son and brother of tennis-players. He has shown such excellent form lately that there have been people to compare him with the Doherty's and with Lacoste. Such comparison probably does little good, but there seems to be no doubt on the part of any one who has seen him play that he is already in the first-class, and, indeed, to have run a player of the calibre of Brugnon to five close sets is adequate proof of that. It is particularly gratifying to have in Austin a purely English and post-War product about whom public opinion can rally with most justifiable sentimentality.

Baptists and Church Unity.

The possibility of reunion between the Church of England and the Nonconformist Church, upon which, after the Lambeth Appeal of 1920, such high hopes were built, has been lately decreased by the publication of a document drawn up by the Baptist Union. This statement is extremely able and reasonable, and should be read by all students of ecclesiastical affairs. It proves that the Baptists, although in a different frame of mind, stand firm on the position which they took up when they dissented from the Anglican Church.

Briefly, they reassert their belief in individual liberty ("the individual Church under Christ has the sanction of Scripture and the justification of history"), in adult baptism ("the baptism of infants incapable of offering a personal confession of faith subverts the conception of the Church as the fellowship of believers"), and in the Lord's Supper. Further, they disagree with the place given to sacraments by the Lambeth Appeal. But their whole statement is couched in such generous and dignified language that the halt thus called in the march of Church unity will probably be regarded by neither side as the *ne plus ultra*. The ideal of union surely will always be worked for.

Alter Ego.

The Air Ministry regrets to announce that, as a result of an accident at Amman, Transjordan, to a D.H.9A. of No. 14 Squadron last Saturday, Squadron-Leader Harley Alec Tweedie, O.B.E., A.F.C., and Flight-Lieutenant Stanley Harry Wallage, M.C, were killed.

Squadron-Leader Tweedie, who was the only surviving son of Mrs. Alec Tweedie, the authoress, was recently posted, as officer commanding, to No. 2 Armoured Car Company, Royal Air Force, at Sarafend, Palestine. Flight-Lieutenant Wallage was an officer at headquarters, Royal Air Force, Transjordan, at Amman.

The funeral of both officers took place the following morning at Ramleh Military Cemetery. Field-Marshal Lord Plumer, the High Commissioner, was present.

PERSONAL AND GENERAL

TO-DAY

April 22, 1926 (New Style).
April 9, 1926 (Old Style).
Shawall 9, 1344 A.H., of the Moslem Calendar.
Iyar 8, 5686, of the Jewish Calendar.

Sir Otto and Lady Beit have returned to London from Egypt.

Prince Antoine Bibesco last week left the Ritz Hotel after a short stay.

Mr. and Mrs. Edward Le Bas and the Misses Le Bas have returned to London from Egypt.

Field-Marshal Viscount Allenby and Viscountess Allenby have returned to Deal Castle, Kent.

Lord and Lady Cable have returned to 44, Grosvenor Square, from Lyndridge, Bishopsteignton, South Devon.

Viscount and Viscountess Lee of Fareham returned last Saturday to 18, Kensington Palace Gardens, from the East.

Air Vice-Marshal Sir Sefton Brancker, K.C.B., A.F.C., F.R.Aë.S., has been elected president of the Royal Aëronautical Society.

The Earl and Countess of Reading arrived at their home, 32, Curzon Street, Mayfair, last Saturday, on their return from India.

The Dowager Lady Boyle gave a reception at 64, Queen's Gate last Saturday to meet Judge and Mrs. Atherley-Jones on the occasion of their golden wedding.

On the occasion of the Coronation of Riza Shah Pahlavi, on April 26, Prince Nadir Mirza Arasteh, Persian Chargé d'Affaires, is holding a reception at 47, Bramham Gardens, S.W.5., from 4 to 7 p.m.

By command of the King, the Lord Colebrooke (Lord in Waiting) was present at Victoria Railway Station last Saturday upon the arrival in London of the Earl of Reading (late Viceroy and Governor-General of India).

Mr. J. E. B. Hotson has been appointed a Temporary Member of the Executive Council, Bombay, vice his Excellency the Hon. Sir Henry Lawrence, Acting Governor, pending further orders.

Lieut.-Colonel the Right Hon. Sir Leslie Wilson (Governor of Bombay) was received in audience by the King at Windsor Castle last Friday, and subsequently had the honour of being invited to luncheon with their Majesties.

Sir Henry Dobbs, High Commissioner for Iraq, who has been in England for some time, left London yesterday for Cairo travelling via Trieste, and after staying with Lord Plumer at Jerusalem will reach Baghdad by air about April 29.

M. Polychroniades, Hellenic Minister to Belgrade, arrived in Athens last Thursday in order to discuss with the Government and the technical services concerned the preparation of a memorandum which will be submitted to the Yugoslav Government embodying the Greek proposals for the railway convention securing certain privileges on the Ghevgeli-Salonika line for Yugoslav transit commerce.

DOMESTIC ANNOUNCEMENT.

BIRTH.

STANCIOFF.—To Mr. and Mrs. Ivan Stancioff (*née* Marian Mitchell), on April 18, 1926, at 52, Queen's Gate, S.W.7, a son.

Prince Mohamed Ali, brother of the former Khedive Abbas Hilmi Pasha, travelling *incognito* as Rustum Bey, arrived last week at Marseilles *en route* for England.

The Afghan Minister in London held a reception at the Legation last Friday, on the occasion of the anniversary of the Independence of Afghanistan. Among those present were:—

The Belgian Ambassador and Baroness Moncheur, the German Ambassador, the Portuguese Ambassador and Mme. Norton de Mattos, the American Ambassador, the Brazilian Ambassador and Mme. Régis de Oliveira, the Turkish Ambassador, the Japanese Ambassador, the Swedish Minister, the Venezuelan Minister, the Estonian Minister and Mme. Kallas the Polish Minister, the Siamese Minister, the Colombian Minister, the Greek Minister, the Bulgarian Minister, the Lithuanian Minister, the Hungarian Minister and Baroness Rubido-Zichy, the Latvian Minister and Mme. Vesmans, the Czecho-Slovak Minister, the Mexican Minister, the Persian Chargé d'Affaires, the Egyptian Chargé d'Affaires, the Chinese Chargé d'Affaires, the Chargé d'Affaires of the Soviet Union, Mr. J. B. Monck, the Diplomatic Agent for Iraq, Baron Guillaume, Baron Plessen, M. Yoshida, M. Okamoto, Mr. Kuramatsu Murai, Mr. Ray Atherton, Dr. Wendler, Vedad Bey Ouchaky-Zade, Gholah Ali Khan Ardalani, M. Dufour-Feronce. Lord Danesfort, Dr. and Mrs. Wilfrid Bleadon, Mr. Norman Lamplugh and Miss Ethel Lamplugh, Dr. and Mme. H. M. Leon, Sir Louis Dane, Mrs. L. S. Cobham, Miss M. A. Broadhurst, Mrs. Daly, Dr. Sheldrake, Lord Clifford, Colonel Sir Charles and Lady Wright, Mr. Charles Woods, Mrs. C. G. Hancock, Mrs. Hamilton Lamplugh, Major-General V. de Slovitsky, Professor Toynbee, Dr. and Mme. Serge Zarchi, Sir Edward and Lady Boyle, Mr. and Mrs. Copey-May, and Mr. Charles Hancock.

THE INDIAN STATES.

The publication of the papers regarding the claim of the Nizam to the restoration of Berar is a matter of first-class importance, less to the State immediately affected than to the whole of the Native States of India. The fact that the Nizam of Hyderabad is the Premier Prince of India—a position recognised by the grant of the style of "exalted Highness"—gives special prominence to a question that, though it has been present in the minds of the Princes for many years past, has only recently assumed large proportions, owing to the visible progress of British India towards self-government. In putting forward his demand for the reconsideration of the agreement arrived at between the Government of India and his predecessor, the Nizam refuses to admit the right of the former to decide, or to treat as *res judicata*, a matter which he declares to be "a controversy between two Governments that stand on the same plane without any limitations of subordination of one to the other": and adds that the rejection of his claim cannot be looked upon as a decision, but only as an expression of the views of His Majesty's Government, that "cannot impose upon me or my House any obligation to treat the subject as closed." Lord Reading's reply, which is stated to have been textually approved by the Secretary of State, altogether dissents from this view: it says "the sovereignty of the British Crown is supreme in India, and therefore no ruler of an Indian State can justifiably claim to negotiate with the British Government on an equal footing." The Nizam had proposed the appointment of an impartial Commission which should inquire into and report upon the issues in dispute, its report to be used as the basis for negotiations for a mutual agreement to be arrived at between the Government of India and himself: and in rejecting this proposal, Lord Reading wrote: "It is the right and privilege of the Paramount Power to decide all disputes that may arise between States, or between one of the States and itself: and, even though a Court of Arbitration may be appointed in certain cases, its function is merely to offer independent advice to the Government of India, with whom the decision rests."

In a recent issue of The Near East and India, reference was made to what appeared to be a hint by the Gaekwar of Baroda of a position similar to that now known to have been taken up by Nizam. He is now represented as demanding that those Kathiawar States, which were originally tributary to the ruler of Baroda in his capacity as agent for the Peshwa, but which have, for over a hundred years, been in direct relations with the Government of India, should be restored to his rule: and, apparently, as suggesting that the matter should be made the subject of negotiations between the Government of India and himself. Mrs. Besant's published views on the independent status of Indian States in general, and of Indore in particular, were mentioned last week: and to judge by the Maharaja's letter announcing his abdication, which he explained as due not to any consciousness of guilt but to a desire to avoid the humiliation of an inquiry, he held the same view himself. The abdication of his predecessor on the throne of Indore was, at the time, condemned by his partisans for similar reasons: as was that of the Maharaja of Nabha, in whose case it was made the excuse for a violent exacerbation of the existing Akali agitation. These cases might have been dismissed as special pleading on the part of notoriously inefficient rulers or openly disaffected adherents; but the views put forward by them have recently received support from a most unexpected quarter. In a highly interesting paper read before the East India Association on March 8, Colonel C. E. Luard gave an account of the opinions of the late Maharaja Scindia, of Gwalior, who has been described as "one of the most remarkable and efficient rulers that the British administration in India has known." It is true that Scindia admitted the power of the Government of India to take disciplinary action against unsatisfactory rulers of Indian States; but he did not admit their right to do so, even in extreme cases. "Supposing that the ruler is not a satisfactory individual, his own people should lead him on the right course by counsel. If a ruler goes wrong, no matter for what reasons—whether hereditary or congenital defects, evil counsel or fondness for despotic power, the Government of India ought still to keep him on his throne, in all his dignity." He thought that the enforced abdication of the late Maharaja of Indore (the father of the present ex-ruler) was impolitic and wrong, and was much resented by Indians: and that, in the Nabha case, the judicial Commission which inquired into the dispute between the Maharajas of Patiala and Nabha ought not to have been set up. In his view, cases of this sort ought to have been discussed with the Ruling Princes, who should have been officially asked to advise, even if not requested to adjudicate. Scindia's argument was based on what he held to be the first and most important duty of the Government of India—the preservation of the *izzat* of the States in the eyes of India and of the world in general. There is no exact translation of this word in English: perhaps "honourable public reputation" comes as near it as any English phrase can—it is something the same as what the Chinese call "face." In Scindia's eyes, any diminution by Government of the *izzat* of a ruler destroyed the *izzat* of the State—and this throws a curious and penetrating light on the attitude of Indians in such matters, even of such enlightened and altogether admirable Indians as the late Maharaja of Gwalior. Let the ruler display "hereditary or congenital defects, evil counsel or fondness for despotic power," neither he nor his State loses *izzat* if his people are left to deal with him themselves: the loss only accrues if the Government of India intervenes. Sir Robert Holland, in the discussion that followed the reading of Colonel Luard's paper, expressed surprise that Scindia should, as he phrased it, have put the cart before the horse: for Government had always tried to maintain the *izzat* of the State quite apart from that of the ruler, which is sometimes deliberately sacrificed by the ruler himself. He went on to say that, in old times, unsatisfactory rulers were often deposed by their people. "It is we who, as the Paramount Power, have shifted the whole centre of gravity of the State and have rendered it impossible for the people to resort to the only remedy that they had, in

Digitized by Google

the old times, against actual misrule on the part of the Prince: and it stands to reason that we must put something in the place of that which we have taken away." But it is permissible to think that Sir Robert missed the point of Scindia's argument; which, while admitting that the creation of the Paramount Power had deprived the people of a State of the exercise of any restraining influence over their ruler except that of "counsel," yet insisted that, even in the worst possible case, the people of the State should be left to deal with the situation themselves. This, to all intents and purposes, is tantamount to insistence on the absolute sovereignty of the State and of its ruler: if there is to be any "paramount power" over the States, it is to be that of the general body of Princes, but evidently in a form something like that of the League of Nations—if they should be asked "to advise or adjudicate," their advice should assist the parties to the dispute to come to a free agreement between themselves, and their adjudication should be subject to a previous undertaking by both parties to abide by it. In no case should the Government of India intervene: and, if it is itself one of the disputants, the advising or adjudicating power should still be that of the body of Princes.

It would seem that public opinion in some at least of the States does not go so far as this, but admits the right of the Government of India to take action in extreme cases. But this admission—if indeed it exists—takes a characteristic form. An article in one of the leading extremist papers in British India suggests that, as "the machinery of the Political Department is so clearly manipulated at the Residency that it knows everything that passes in the State, that Department could and should have interfered in time and corrected the young ruler of Indore." That it did not do so is "attributed to the tactics of the British Government to connive at grave irregularities till something very abnormal happens which eventually permits the British to interfere. The Regency period of an Indian State is a most welcome one to Government, which is then able to remove restrictions and secure concessions which are not possible when an Indian Prince is actually at the helm of the State. Indore subjects pray that this may not happen during the present minority." And, in the matter of the *izzat* of the States, the Nizam had, for reasons that it is unnecessary to particularise, certainly lost *izzat* in his own eyes, and probably also in the eyes of at least the ruling caste among his subjects, by eventually consenting, after a number of abortive suggestions, to entertain Lord Reading at Hyderabad, in the hope that a personal interview might predispose the Viceroy to take a favourable view of his pretensions to Berar. He had done his best to avoid this distasteful necessity, by sending his Prime Minister, armed with a large sum of money, to London, to try and work the oracle there: and it was only after he had returned and reported that nothing was to be done at that end, that the Nizam at last decided to put his pride in his pocket and to try what could be done at his own end. The result of his efforts must have made him wish that he had not done so; but it is unlikely that he will admit defeat, and it is pretty certain that he will try again. Perhaps this time he will accept the advice of an official, before whom one of his agents laid the case two or three years ago. The official asked how much money had been given to the Prime Minister when he was sent on his mission, and was told sixteen lakhs of rupees. The official suggested that, for that sum, a unanimous petition for re-incorporation in Hyderabad State could have been obtained, signed by every one of the three million inhabitants of Berar, at an average expenditure of a little more than eight annas a head: and that such a document would carry much greater weight than any number of politico-legal arguments. It is, in any case, fairly certain that, if the Nizam does try again, he will have the support of many of the leading Princes of India: who might even be induced to back his demand in what they certainly believe to be the best interests of the States as a whole, faced as they are by the imminent prospect of a new dispensation in which their own future is disconcertingly uncertain.

CURRENT TOPICS.

Mr. E. C. Handyside.

The death of Mr. Handyside, the Commandant of the Frontier Constabulary, in an encounter with outlaws near Peshawar, will be very deeply regretted by all who knew him. Mr. Handyside's reputation for sustained and desperate gallantry was widely known far beyond the limits of his own Province: and every policeman in India will feel his death as a personal loss. It is a good many years since Mr. Handyside won the King's Police Medal for an act of gallantry, and later achieved the very high honour of a bar to the medal; since when, scarcely a year has passed without his qualifying for an additional bar, though, greatly as he deserved it, he never obtained a recommendation for such an unprecedented distinction. One can but suppose that the authorities looked upon a single bar as the maximum, beyond which it was impossible to go; for, if it had not been so, it is difficult to believe that he would not have been recommended several times more.

In some respects, the King's Police Medal is an unsatisfactory decoration; but not so the bar. The "policeman's V.C." is, more often than not, awarded for an act of conspicuous gallantry; but not by any means always. The rules lay down a number of reasons for its award: and these include long and meritorious service, outstanding detective ability, and special services rendered to Royal tourists. There must be many people who share the strong conviction of the writer of these notes, that this is wrong. It is doubtless advisable that there should be a method of rewarding good service on the part of the members of the police force; but it seems altogether wrong that this should take the same form as a reward for conspicuous personal gallantry. In the Indian police list, the names of those who are holders of the King's Police Medal are starred; but, unless the reader is personally acquainted with the record of the individuals so distinguished, he has no means of telling how the medal was won. A separate decoration, on the lines of the military "Long Service and Good Conduct" medal, would surely meet the case of the man whom it is desired to reward for sterling professional attainments: and some such distinction is certainly needed in the case of the subordinate personnel—much less so, one is inclined to think, in that of their European superiors, to whom it has lately been a common practice to award the King's Police Medal for a long and blameless career in the Indian Police, such as would be correctly described as "long service and good conduct." But the bar, at any rate, has nothing dubious about it: whatever the reason for the original award, the much-coveted and very rarely granted bar can only be obtained by an act of conspicuous personal gallantry; so that, in actual fact, while the King's Police Medal may be, but quite often is not, a "Policeman's V.C.," a bar to the medal always is so, without any exception. There is no record of anyone having won more than one bar: and now that the career of Mr. Handyside, who unquestionably earned such a special distinction over and over again, has closed without the bestowal of a second, it is safe to predict that such a record will never be set up in the future.

Punjab Irrigation.

Everyone will learn with great regret that Lord Irwin was unable to fulfil his first public engagement in India—the opening of the head-works of the canal at Suleimanke, in the Punjab—owing to an attack of fever. It is bad luck that the Viceroy should have fallen a victim to fever so soon after his arrival; but it is good news to hear that the attack was a slight one, and that he is getting over it all right. It is to be hoped that this misfortune will not delay his departure for Simla: where he can reasonably hope to be free from any recurrence of it.

The Suleimanke canal forms part of the great Sutlej Valley scheme, which will, when completed, irrigate nearly five million acres of what is, at present, practically desert. The boast of the Punjab authorities that, in the matter

Digitized by Google

of irrigation, the Punjab leads the world, has considerable justification already: and, when the Sutlej Valley scheme is completed, this will be in a fair way to be completely justified, even in the face of such vast projects as the one now being undertaken at Sukkur in Sind. The existing Punjab canals already irrigate about 10½ million acres, or approximately a third of the total irrigated area of India: and, from the portion of this land that is under wheat, it is estimated that more than two million tons are produced annually. In the enforced absence of the Viceroy, the opening ceremony was performed by Sir Malcolm Hailey, the Governor of the Punjab, who made a stirring speech, packed with figures testifying to the wonderful results achieved already, and to the even more wonderful promise of the future.

The Future of British Textiles in India.

In a letter written from Bombay at the beginning of March, the *Manchester Guardian's* "Travelling Commissioner" drew attention to the effect of the rapid growth of education in India on the British trade in textiles. "With education," he wrote, "comes individuality, and dress is one of the forms in which individuality is expressed." He therefore urges British textile manufacturers to make a special effort to cater for the more prosperous and "individualistic" classes, who will readily respond to an attempt to supply goods of the better class at a reasonably cheap price. In particular, he sees a great future before artificial silk, particularly when dyed: an opening to which, he thinks, British manufacturers have not paid nearly enough attention, though there is no trade in India that deserves it better. Courtaulds, of course, as the writer of the letter was doubtless aware, opened a branch in Bombay some little time ago, and their experience should prove interesting. The general conclusion drawn by the Commissioner seems to be that, in view of the competition of India and Japan, the export of low-grade Lancashire piece-goods is no longer an economic proposition; for the poorest and least educated classes look upon cheapness as the only real desideratum, and pay small regard to quality; but that there is still a very great future for moderately priced goods of a higher class, the potential Indian customers for which are already numerous, and are rapidly increasing.

The Light of Asia.

This film, which represents some of the earlier scenes in the life of Gautama Buddha, marks a new departure in film production in England, since it is acted entirely by Indians. The setting, particularly in the first half of the play, is strikingly beautiful, the scenes being laid in the Rajput city of Jaipur and including a number of really fine settings, both interior and exterior; among the latter are several State processions with gorgeously caparisoned elephants and jewelled chariots whose splendour is thrown into strong relief by the typical Indian crowds assembled to watch them pass. Among the more homely scenes is a particularly attractive one of a lotus pool, in which we were introduced to the heroine of the film, Princess Gopa, taking a quite unconventional bath—one that came to an end all too soon when the time came for the little Princess to step out into the jealous protection of a voluminous cloak held ready for her by a waiting handmaiden. English and Indian ideas of acting differ widely: and, to the latter, no doubt the important male actors in the piece make a strong appeal, though, to an English audience, they were far from convincing. But the most stolidly British audience could not fail to be captivated by the acting of Miss Seeta Devi as the Princess—an exceedingly pretty girl, whose performance was characterised by grace, charm and refinement. The film, at any rate to English eyes, is unequal; but it is one that can confidently be recommended to all audiences, from the most exacting to the least. Some parts of it will please the former, and other parts of it the latter; but the beautiful setting of the play, and the delightful personality of Miss Seeta Devi, will assuredly please all without distinction. For those two reasons at least, all film patrons may be cordially advised to go to see The Light of Asia.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 1.

The New Indian Courtesy.

Lord Reading has now left Delhi and during the week he has made his personal farewells; both he and Lady Reading have been the recipients of sincere congratulations from all moderate men on the work that they have accomplished during the last five years. On the other hand, the Extremist Press is almost unanimous, to quote *Forward*, "in their opinion that Lord Reading has proved the most miserable failure as a Viceroy." This journal and the *Amrita Bazar Patrika* have gone to great pains to dig up and display the largest possible heaps of discourteous and abusive comments upon the late representative of the King. After all, this is perhaps the best possible testimonial to Lord Reading's success; for a less astute and tactful ruler, with his legal equipment, might easily have been faced long before now with open rebellion in India, following the sinister disturbances that were rife when he took office.

The Sanity of Lord Sinha.

A great Indian is also leaving Bombay this week; Lord Sinha, the first Indian peer and the first Indian Governor of a Province, is going to Europe to seek better health. Before his departure he has written an open letter to his countrymen, and this sane and balanced announcement appears in the columns of the *Statesman*. He coldly analyses the present situation; he refers to the plain efforts of authority to meet co-operation with sympathy, and points out that the Extremists are proving that any confidence in their ability to rule themselves, let alone anyone else, is mere folly. His parting advice is for India to trust England; to cease to hope that further instalments of self-government can be obtained by threats: and to recognise that the road to political progress is through the education of the masses. The wild men of the Congress Press are kinder to him than to the departing Viceroy; they merely suggest that he has reached an age when he should be ceasing to think of earthly things, as he is no longer able to appreciate them. A quotation from the beginning of a leading article in *Forward* this week may fittingly round off these instances of the courtesies of public life as they have come to be understood in Bengal. "Intrigue and roguery are not the strongest commentary on official depravity and injustice in India. The pity is that intrigue can be so epical and depravity so massive."

The All-India Legislators.

The last session of the Assembly at Delhi is ended and, in the absence of the Swaraj Party, a considerable amount of business was cleared up in the last few days. The walk-out was a fitting termination to the continuously diminishing influence of the Congress Party and the corresponding rise in the power of the Independents and the non-official Europeans. The special correspondent of the *Statesman* thinks that the signs are on the whole encouraging: and he comments favourably on the increase in debating power and political authority of the officials who sit in the Assembly. In another column, however, an "An Independent Observer" sets out some piquant comments which are reminiscent of The Gentleman with the Duster; he finds no justification for the sort of smug content which, he says, characterises every official. He shakes his head mournfully at the spectacle of a Government that can placate but cannot govern, and of politicians who are all for the Party and none for the State. Everything, he says, is discussed either from a racial and communal or purely personal standpoint; the future of India, the prosperity of her railways, her trade, her revenue, are as nought when compared with the inclusion of an Indian in the Railway Board, the harassment of "foreign" traders, or the remission of taxation

Digitized by Google

which touches the politically-minded Indian—that is, the man who can best afford to pay. Not a pleasant picture: and, in spite of the fact that the article receives a douche of editorial cold water, its truth is obvious to everyone who follows the development of political life under the Reforms.

Johnston and Sime Again.

Mr. J. F. Sime, Secretary of the Dundee Union of Jute Workers, has written at length traversing the *Statesman's* comment on the report of Mr. Pagett Johnston and himself on their recent voyage of discovery to the banks of the Hooghly. Mr. Sime should have sought the assistance necessary to enable him to express his meaning in terms and language which would have been understood and effective among both Indians and Europeans; the arguments of the street corner orator are out of place in a responsible newspaper in this country. Nevertheless, once again it is desirable to say that the jute interests will be well advised not to let the statements of these two gentlemen pass unchallenged.

Corporation Assessments.

The Swaraj Party in the Corporation are making desperate efforts to cultivate popularity in the face of the falling barometer of public opinion as to their achievements. Their first term of office in the Corporation is drawing to a close, and in some respects their record compares favourably with that of their predecessors; but they are taking no chances. The party organisation has produced a standard objection form to the assessments for municipal taxation, and this form is delivered from house to house, in many cases personally by Councillors, who lend assistance in filling up objections to the valuations made by the Executive; they promise to see the objections through and to obtain a reduction in taxation, and in practice the matter is working out so that there is an unprecedented number both of objections and appeals to the Court against decisions after hearing. The matter is becoming so serious that even the Mayor, who is also the Swarajist leader, is reported to be perturbed at the threatened breakdown of the whole machinery of assessment; the effect on the morale of the employees can be imagined.

Politics.

The reorganisation of the new Nationalist Party goes on apace, and a conference is shortly to take place in Bombay with a view to settling the party programme. In the meantime the election campaign has been opened by a strong appeal to the country on behalf of the new party, pointing out the folly of a continuous negative policy and the open road to progress by utilising the powers which are at present in existence. Pundit Nehru has been thundering at the suggestion that the new party contains any Swarajists, and his threats to any member of the Congress Party who should dare to become a new Nationalist are simply dreadful! Lala Lajpat Rai oracularly gives the new party a life of seven days; the time is almost up. Electioneering is in the air, which rings with phrases and catch-words meaning nothing to the orators, but unfortunately liable to mean only too much to ignorant hearers. The favourite slogan is "Prepare for civil disobedience"; what this is no Swarajist has yet had the courage to say, but Lord Sinha pertinently observes that it is simply open rebellion, and no one has any doubt that open rebellion will be put down by the only method of meeting it. It will be interesting to see if hysteria is again to succeed in stampeding the electorate.

Men and Things.

The passing of an eminent Indian official, Sir K. G. Gupta, is to be noted this week: he died full of honours after a most distinguished career in the Civil Service, culminating in membership of the India Council; he leaves a large and distinguished family. The European Association at their monthly meeting listened to an address by an Extremist leader, Mr. S. K. Basu, on the work of the Corporation; as is usual in such cases, he produced a favourable personal impression, but, as Sir Hubert Carr remarked, it is difficult to accept the claim of "no politics" in the Corporation in the face of the Mayor's proclamation of a *hartal* which included the shopkeepers in the Municipal Market. The necessary outlay for the provision of the first instalment of Air Force facilities at Karachi has been sanctioned; another step towards Croydon. The London paper which stated that the Begum of Bhopal had never heard of Gandhi or Rabindranath Tagore is probably beginning to realise that India is a larger place than England.

The Trivial Round.

Calcutta, like London in August, is emptying fast; but there are still one or two people left in spite of the fact that there has been a special sailing of the China from Bombay, and all the connected trains are running in duplicate. It is interesting to note that the P. and O. are running an intermediate steamer; surely this cannot be the effect of competition. The Spring Meeting concluded last Saturday, and the absence of the unexpected caused rather a surprise; there was one dead-heat and one or two long-priced winners, but on the whole honours were fairly even. Mr. Galstaun heads the list of winners for the meeting; he is a consistent supporter of the game and it is good to see him get home for once. Cricket averages for the past season are published; Reggie Langden heads the batting with 76.77 in 14 innnings; J. L. Guise, the late Oxford captain, is third at 46.77; Alec Hosie, being fourth in the batting and third in the bowling, stands out as the best all-rounder. Hockey is now filling all the pitches, and the entry of a Punjab Team for the Beighton Cup will lend further interest to this year's games; teams from other Provinces are also possible. Calcutta tennis is in full swing, and Calcutta have beaten the Calcutta Club for the Hechle Cup; South Calcutta took their revenge on the Japs for last year's beating. The Opera Company are finishing this week and the Denishawn Dancers return for a short season; Calcutta will be very pleased to welcome them after their successful Indian tour. The School of Music pupils gave an excellent Concert At Home on Saturday last; some of the playing reached a high standard, and there is no doubt that the influence of the Symphony Concerts is making itself felt.

Markets.

Dullness has pervaded the jute and gunny markets during the past week and, apart from spasmodic periods of speculative buying, business has been on a very small scale; mills have shown no signs of coming in as buyers; but, with sellers not pressing to deal at current prices, rates have remained comparatively firm; at the close the undertone is steady. With dealers closing their books for the ensuing Bengali New Year, business in the piece-goods market has been almost at a stand-

still; but, with stocks steadily decreased during the past months, the position should gradually be righting itself, and opinion is firm that the near future will at any rate see an increase in the value of forward business. The tea market in London is reported as steady to firm: but the quantity offered has been considerably smaller than usual, probably owing to the coming Easter holidays. The new crop appears to have made a good start.

In the Stock Markets, Government Securities have again taken the bulk of the business, and an indication of the amount of money available for gilt-edged stocks is given by the result of the new Calcutta Port Commissioners' 5 per cent. Loan for one crore of rupees, which was offered at 97 and over-subscribed about eighty times. 3½ per cent. Paper and 1945-55 Loan have again registered increases, but the business actually passing has been small owing to the lack of sellers: a similar situation is appearing in the debenture and preference share market, where buyers are predominating in every direction. Jute shares maintained the rather better tendency displayed at the close last week, and some of the more speculative counters have risen considerably above the worst, mostly on account of Bulls pressing for delivery. Coal and cotton shares call for no mention, both markets being lifeless; teas are steady with sellers scarce; but in the rubber share market prices have continued to improve, and business has only been restricted owing to the reluctance of holders to part with their scrip even at the higher prices offering.

Money has been in less demand with call and short notice quoted at 4½ per cent. Exchange has been weak owing to a good demand for remittance and a scarcity of bills: the rate for ready T.T. is 1s. 5⅞d.

THE PROGRESS OF THE COMMUNAL DISPUTE.

Reforms on the Frontier.

The adoption by the Legislative Assembly of the resolution in favour of the extension of Council government to the Frontier Province marks another stage in the Hindu-Moslem controversy. The Government front benches remained officially neutral, and the decision was left to a free vote of the house. Pandit Motilal Nehru, the Swarajist leader, had announced that the Swaraj Party would, if present, have been unable to support the resolution, since Mr. Gandhi had advised them not to do so: but the Moslem Swarajists asked and obtained permission to return to the Assembly for the occasion. Thereupon the Hindu members of the Party demanded the same liberty, with the result that the Pandit withdrew his assent; though it would appear that the Moslem Swarajists took part in the debate, and voted in favour of the resolution, in spite of their leader. The opposition was voiced entirely by Hindus: oddly enough, as the Home Member pointed out, not by Hindus from Northern India, but from the South: and it is worth noting that the recent meeting of the Hindu Mahasabha at Delhi declared strongly against the proposal.

Hindu politicians would be prepared to advocate the extension of the Reforms to the Frontier Province only on condition of its re-amalgamation with the Punjab: and as the Government spokesman announced that this suggestion had been definitely rejected, Hindu opposition was uncompromising. The fact is that, in the future "United States of India" that they envisage, the Hindus desire as few States as possible with a Moslem majority. The Punjab has a Moslem majority already; so that, if the Frontier Province were amalgamated with it, the grant of representative institutions to the Frontier would, from the Hindu point of view, be unobjectionable; but not so, otherwise. One of the Government front bench speakers remarked that the homogeneity of the Pathan population of the Frontier Province was such as was unknown in any other Province of India, an observation that was enthusiastically welcomed by the supporters of the resolution as strongly supporting their cause: and Mr. Jinnah, the Mohammedan leader of the Independent Party, pressed for a decision by Government on the ground that its "halting attitude" had created the impression that the failure to extend the Reforms to the Frontier Province was due to the attention paid by it to the obstruction of the numerically insignificant Hindu minority—a belief that was likely to cause greater communal strife in the Province than any decision, however unfavourable. The Government, however, declined to be drawn; and contented itself with stating that, though it welcomed the guidance afforded by the debate, no definite decision could or would be reached or announced until it was satisfied that it had reached the correct conclusion and that the moment was ripe for its announcement. The Hindus, though greatly disappointed at the definite rejection of the proposal for amalgamation of the Frontier Province with the Punjab, nevertheless found some comfort in this statement.

Political Rivalry.

An Indian writer of Communist leanings has lately set himself to prove that the Calcutta riots are only another manifestation of the "bourgeois" influence which, according to the exponents of Communism, is omnipresent in modern politics. He represents Mr. Gandhi's non-co-operation campaign as having been on the way to bring about a genuine mass movement of workers and peasants until it was "effectively side-tracked by the sinister activities of upper-class Indian politicians—those bourgeois friends of the landlords and capitalists who, in order to divert and dissipate the revolutionary enthusiasm of the masses, have been deliberately fanning the flames of worn-out religious superstitions" by devoting themselves to strengthening the two great communal organisations, the Hindu Mahasabha and the Moslem League. He declares that the leaders of both these sectarian movements are not religious fanatics, but "slim and astute Nationalists"; who, in the name of national unity, affect pious horror at the idea of class divisions that would endanger the material interests of the propertied classes, but are only too ready to create spiritual divisions among the workers, whose economic and cultural interests are identical irrespective of religious distinctions, in a struggle for predominance in the allocation of seats in the Legislature and jobs in the public services, which depend on the numerical strength of the electorates of the future.

Whatever one may think of the reasoning that leads up to this conclusion, there is undoubtedly a great deal of force in the conclusion itself. Some excitement has recently been caused in India by a statement (since denied) that the Aga Khan had decided to devote a million pounds to the conversion to Islam of the fifty million "untouchables" who are classed as Hindus. It is beyond doubt that the caste Hindus who compose the Mahasabha are very nervous regarding the future of these out-castes, whose conversion from nominal Hinduism would enormously reduce the existing numerical superiority that their inclusion as Hindus makes it possible for that community to claim in India: and, for years past, the removal of the untouchable stigma has been a plank in the political Hindu platform, though it has so far proved impossible to fit it into the religious structure. £1,000,000 would represent more than four annas a head: a sum which, though individually insignificant (but not really so insignificant as it looks, in India) it might well be worth the while of many untouchable communities to accept in the aggregate; for most of their members are sunk in degradation and poverty from which there is no possibility of escape so long as they are content to hang on to the skirts of the Hindu religion. And, in a speech delivered at the Calcutta meeting of the Jamiat-ul-Ulema (Association of Moslem divines) last month, Sir Abdur Rahim displayed the other side of the shield, by voicing the nervousness felt by Indian Mohammedans at the prospect of the reconversion to Hinduism of the lower classes of their community, mostly themselves originally converted Hindus. These people, he said, have received but little enlightenment from Islam: "caste ideas still cling to them, they are not above an inclination for superstitious rites and ceremonies, and on occasions they even indulge in some

Digitized by Google

forms of idol worship. Most of them are so sunk in poverty and distress that the prospect of relief from any quarter might be to them a temptation too strong to resist." He spoke of the proselytising efforts of Christian and Hindu missionary societies, and urged the formation of a Mohammedan missionary organisation, not only to counteract them but to carry the war into the enemy's country.

Each side fears an absolute reduction in its numbers, such as might result from successful Christian missionary enterprise; but each has a much greater fear of a relative reduction which would transfer members of its community to its rivals. Both Hindus and Mohammedans look forward to a Swaraj on their own pattern: and both are confident that, when the time comes, given a fair field and no favour, they could arrange matters accordingly. But both realise that that time may be long in coming and that, when it does come, the side that finds itself in effective control of the existing machinery of government will start with a great initial advantage. To this extent it is true that, as has been asserted by a number of recent political writers about India, the intensification of the Hindu-Moslem difference is due to the introduction of the Reforms. But the difference has always been there, and is now neither wider nor deeper than it has ever been: it is only that each side now fully realises its position *vis-à-vis* the other, and is straining every nerve to improve it against "the day" that is coming.

An Indian Lingua Franca.

Sir Abdur Rahim, now the most prominent Indian Mohammedan leader, has taken the proposal of the Calcutta University, to introduce Bengali as the medium of instruction up to the matriculation standard, as his text in a dissertation on the need for a national language in India. He said that Moslems, at least, could not be party to the foolish policy of setting up local venaculars as vehicles of education: that, great as may be the literary achievements and possibilities of the Bengali language, "no one can doubt that its genius is wholely alien to that of Islamic culture": and that he could say, without the least hesitation, that the wisest policy would be to adopt Urdu as the national language. He went on to speak of the Mohammedans of Bengal as "members of one homogeneous Indian Moslem community": and to deplore the fact that a majority of them spoke "a mixed dialect" of Bengali. It is therefore evident that what he really meant was, that Urdu should be adopted as the lingua franca of India primarily in the interests of Indian Moslems and only secondarily in the interests of Indians in general.

When Mr. Gandhi started his campaign, he quite clearly realised that, before India could achieve national independence, it would be necessary to create an Indian nation: and that one of the most important desiderata was a national language: which he thought ought to be Hindi. The nearest approach to a national language that exists in India is what is generally called Hindustani: of which Hindi and Urdu are respectively the Hindu and Moslem variants. In construction and grammar both are the same language: they differ widely in vocabulary and entirely in script, Hindi deriving these from Sanskrit, Urdu from Persian. It would seem then that Mr. Gandhi envisaged a "Hindu Nation" of India, to whose variant of the national language the Moslems should conform: and that the Moslem leaders take exactly the opposite view. There is, however, little doubt that, in this controversy, the Mohammedans start with a considerable advantage; for whereas, in Northern India, it is roughly true to say that Hindus speak and write Hindi and Mohammedans Urdu, most of the other great languages of India are spoken by Hindus: and, what is more, by Hindus who have a strong leaning towards local "nationalism." As the Mohammedan speaker admitted, Bengali is an exception; though the idea of the "Bengali Nation" is almost exclusively a Hindu conception: and this, no doubt, is why his speech specially dealt with Bengali, and contained no reference to the other "non-Moslem" languages of India.

If, however, it should prove possible for Mr. Gandhi's advice to be taken by the Hindus, and that of Sir Abdur Rahim by the Moslems of India, a great advance would be made towards the realisation of the idea of an Indian nation. For, after all, the differences in vocabulary between Hindi and Urdu are not so very great. The real difficulty is the script: and the only reasonable way surmounting this would seem to be the adoption of the Roman alphabet. Romanised Urdu is already fairly widely used, especially in the Indian Army; so that the idea is not altogether an unfamiliar one. And it has lately been announced that the Turks have decided to adopt the Roman alphabet: a fact which, if the experiment is successful, would go far to remove any objection that might otherwise be felt by Indian Moslems. Hindus, still largely under the influence of the anti-foreign tendencies of Mr. Gandhi's campaign, would probably feel much stronger reluctance to agree to such a departure: and, if a difference in script should remain, after the adoption of an otherwise "national" language, this would only serve to accentuate, once again, the Hindu Moslem difference that confronts one at every turn in modern Indian politics. But, if better counsels should prevail, the adoption of the Roman alphabet for both Hindi and Urdu would be very decidedly advantageous: and many more spectacular, but much less valuable, campaigns might be undertaken by British educationalists in India than one which concentrated on a sustained effort to popularise it.

THE INDIAN MAIL.

The Precious Metals.

Letters from correspondents in India seem to suggest that the importation of gold and silver into India has reached its economic limit, and that the dealers are finding a difficulty in disposing of their stocks. It would appear, if these correspondents are right, that the "small hoarder" is going out of the market. It is asserted that it is now possible to buy a sovereign from the Bombay money changers for thirteen rupees five annas, while a currency note for a pound costs an anna more: and silver is cheaper still—a pound in English silver can be bought for thirteen rupees three annas. People going home from India are said to be taking their cash with them in the form of English coin—sovereigns and silver. If this is so, some of the shopkeepers in London will get the shock of their lives when they find a customer proposing to pay for his purchases in gold rather than in notes. The writer knows of one charming "small hoarder" who still treasures four golden sovereigns as a "store of value" saved from pre-War days: if she should happen to see this paragraph, she will probably regret the passing of the glamour of her treasured sovereigns; but, at the same time, will doubtless be confirmed in her conviction that India is a much better country than England to live in, in post-War times and under post-War conditions.

Missing the Mail.

A few weeks ago, it was mentioned that our Calcutta letter "appeared to have missed the mail": and the next delivery showed that it had. It is perhaps in the pursuit of economy that the Post Office seems nowadays to be specially sparing of postmarks—letters almost invariably reach their addressees with a dispatch postmark only, none of delivery: and they are lucky if the one that does appear is legible, especially in the case of letters originating in India. In this particular case, both the postmarks were legible, and the two covers, that were delivered together, were postmarked Calcutta G.P.O. 11 (and 18) III 26 Lyons C—4: no time of dispach, in either case. It is annoying enough to find that important correspondence has missed the mail; but it is doubly annoying to be unable to discover any reason for it. In old days, a letter that had missed the mail from Calcutta would have borne some indication of what had happened—a dated and timed Bombay postmark, endorsed "Too late," or something of the sort: but now, nothing. Complaint

Digitized by Google

to the postal authorities naturally produces no result, beyond the stereotyped replies that everyone is familiar with; for, in the absence of any guidance from the cover, it is quite as impossible for the Post Office to discover the reason of a failure as it is for the complainant. From this point of view, therefore, economy in postmarks is a good thing, for it saves them the trouble of making inquiry: all that it is necessary for them to do is to allow a suitable interval to elapse and then send a formal reply. The advantage to the public is not so obvious. After all, the Post Office is, no doubt, only following what appears to be the almost universal post-War practice in England—that the man who pays for the performance of any service ought to consider himself devilish lucky if it is performed at all: and that, if he doesn't like the way in which it is performed, he can just lump it.

INDIAN COMMERCIAL NOTES.

Although the British share of India's imports of cotton manufactures has fallen from 90 per cent. pre-War to 80 per cent. to-day, it must not be supposed that this reduction of trade has taken place evenly throughout the various classes of cotton goods with which India is chiefly concerned. It is in cotton yarns that we have lost most ground. In 1925 we did less than one-third of the trade, exporting to India 15 million lbs. of yarn, as compared with 31 million from Japan, out of a total trade of nearly 49½ million lbs. Pre-War, India's imports of cotton yarn amounted to nearly 42 million lbs., of which England did 37 million.

In grey piece-goods, the British share has fallen from well over 90 to 80 per cent. of the trade; and in coloured, printed and dyed from 90 to 75 per cent. It is in bleached goods that Lancashire still holds its own, exporting in 1925 96 per cent. of India's total imports of this class. Indeed, were it not for the trade in white goods, the United Kingdom would have lost still more ground than it has in the Indian markets. Whereas before the War India imported roughly two bales of grey goods to one of white and one of coloured, she now imports seven bales of grey goods to five of white and four of coloured. In other words, the proportion of white goods in India's import trade has advanced from one quarter to nearly one third: and, as already said, it is precisely in this class that Lancashire is best able to hold its own with Japanese and Continental competition.

Another line of trade which is of particular interest at the present time is artificial silk. In artificial silk yarn Italy has made tremendous strides in the Indian market during the past three years, from 27,000 lbs. in 1923 to 263,000 in 1924 and 956,000 in 1925. During the same three years the British share of this trade advanced from 225,000 lbs. in 1923 to 869,000 in 1925. The total trade in this class of yarn to India is now well over two million lbs. Piece-goods of mixed cotton and artificial silk constitute another important class of the textile trade. In 1923, the United Kingdom exported 3½ million yards of such goods to India and in 1925 6 million yards, out of a total trade during the two years of 6 million yards and 13½ million yards respectively. Here again the biggest advance has been made by Italy, from 2 million yards in 1923 to nearly 4½ million in 1925. Switzerland is also increasing her share of this trade.

Another line of trade in which Italy is making strides is in the export of woollen piece-goods to India. During 1923 India took 6½ million yards of these goods; in 1924, 12 million; and in 1925 14 million. During the three years the British share of the trade has advanced from 3 million to 5 million yards, and Italy's share from less than 500,000 to 2¾ million yards. The United Kingdom is still the biggest shipper of woollen piece-goods to India, but our supremacy is being rapidly challenged by Germany, with nearly one million yards; by Belgium with over one million, and by France and Japan with nearly two million each. The annual value of this trade amounts to nearly three crores of rupees.

Germany is also recapturing the market for woollen shawls, of which, it will be remembered, she made a great feature before the War. Out of nearly 570,000 shawls imported into India in 1925, 233,000 came from Germany, and less than 170,000 from the United Kingdom.

INDIAN EXCHANGE.

London April 19.

Since the announcement of the India Government that they were prepared to sell Reverse Councils at 1s. 5¾d., Exchange has remained very steady with only a small amount of business passing, as the speculative tendency has been checked. Calcutta and Bombay markets have been firmer with cash T.T. at 1s. 5 29-32d. occasional operations being put through at 1s. 5 15-16d., although this rate has never been established.

Rates are advised to-day a shade weaker, chiefly influenced by the Bombay market, which quotes no better for T.T. than 1s. 5 27-32d. The export market has shown more animation and commercial bills, which were done early in the week at 1s. 6 5-32d. three months, found no takers during the latter part under 1s. 6 3-16d.; but the lower rate is again available to-day.

We understand that the bullion demand in Bombay has fallen off considerably and it may have been noticed that there is less activity in gold shipments from this side.

Forward rates are a shade firmer, and in both markets are called 1s. 5⅞d. T.T. to the end of August, with 1-32nd higher per month to the end of December, but no operation have been reported.

In this market remitters have been willing to take T.T. at 1s. 5 29-32d., but there has been little available. We heard of some business at 1-64th above this figure and more sellers than buyers at 1s. 5 15-16d., but easier conditions have been manifest to-day with small sellers at 1s. 5⅞d., which is being readily absorbed.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Credit Insurance.

It is an axiom that British manufacturers and merchants stand in need of ever-widening markets; it is equally certain that for a long time to come much profitable and safe business abroad will be lost, if there is to be a hard and fast insistence on cash payments. The objection attaching to long credit is twofold: first, that money is locked up that might be more usefully employed in other directions, and, secondly, that anything may happen before payment falls due—the "anything" including a mishap to the debtor firm, depreciation of exchange, and all that comes under the term "catastrophe." In these days of universal insurance, freak and otherwise, it would be thought that protection against bad debts would have been developed as widely as any other form of insurance. Yet the fact remains that it has been left for a long time to one or two men to win recognition for the importance of this branch of insurance business, and no one has worked harder in the cause than Mr. Cuthbert Heath, Chairman of the Trade Indemnity Company, which held its eighth annual meeting last week. It was mainly owing to the pioneer work performed by him that the British Government took up the subject last year and appointed a committee to consider the question, with special reference to the steps that the Government might usefully take in the matter. That Committee has recently issued its report, and as it found itself unable to accept the suggestions made to it on behalf of the Trade Indemnity Company, special interest attaches to the Chairman's remarks at the annual meeting, at which he analysed the Committee's findings. These remarks will be found on another page in this issue.

The Committee's Findings.

The proposals put forward to the Committee by the Trade Indemnity Company were to the effect that, if credit insurance is a good thing, the wider the scope it acquires the better; and to this end, as the Company found by experience that an obstacle to the extension of the system was the risk of catastrophe in the form of war, revolution, or national bankruptcy, it urged the Government to offer firms taking up insurance against bad debts reinsurance against the risk of catastrophe. The Committee rejected these proposals for reasons which, as Mr. Heath pointed out, are not convincing, and at the same time paid the Company and its Chairman the compliment of recommending that the Government should practically duplicate the Company's activities. It proposes that credit insurance should be built up on the existing Export Credits Scheme, partly by removing the chief drawback to that scheme, the low percentage of risk hitherto accepted, and adopting the percentage on which the credit insurance system has actually been built up in practice.

State v. Private Insurance.

Now the essence of credit insurance is that it should increase trade by enabling business to be done with a larger number of firms than would otherwise be possible; that means that it should have to do with foreign firms which may not be so well known as, but are far more numerous than, big firms. To be able to gauge accurately the standing of each firm, it is necessary to have reliable agents on the spot, and this is the system on which the Trade Indemnity Company works, but which is hardly open to a Government to adopt. The Company associates itself with corresponding companies—ready-made or created *ad hoc*—in the different countries, which not only act as channels of information, but also "back" their opinion by accepting part of the insurance. In this system it is clear that more flexibility is required than is possible with any Government system, if the scheme is to be applied generally. The suggestion, however, is that the Government scheme should not be continued after 1929. In the meantime it is satisfactory to learn that the pioneer company is doing well. Its ramifications already include one country in the Near East, Roumania. The difficulties in connexion with its extension in that part of the world are obvious; but in view of the fact that nowhere would British trade stand to benefit more by the introduction of insurance against bad debts, it is to be hoped that methods will be devised to overcome these difficulties, and I would strongly urge business men of standing in the various countries to go carefully into this matter of credit insurance to see whether they cannot work in with the Trade Indemnity Company's system.

Near East Budgets.

Two Budget estimates for Near Eastern countries have been forthcoming during the week—those for Egypt and Greece. Egypt's Budget total is £E41,000,000, the expenditure being estimated at that figure, while the revenue is put at £E38,000,000, and the difference is to be met from the reserve fund. A year ago the revenue was estimated at £E36,870,000, provision being made for a surplus of £E581,734. This time an extensive programme of new works is being undertaken, calling for an expenditure of £E8,000,000, of which £E1,900,000 is for new rolling-stock and extensions of the railway system and £E3,170,000 is for irrigation, £E2,000,000 of this amount being in connexion with the Gebel Aulia and Nag Hamadi barrages. It will be noted that only a very small allowance has been made for an increase in the revenue though the past year has been a satisfactory period for the country. At the moment the outlook for the crops on which Egypt mainly depends for her prosperity is somewhat uncertain, and it is not surprising that the efforts of the Government to support the price of Sakellaridis should have been unsuccessful when it is borne in mind that we have a world cotton production which is a record while the demand for the commodity is

THE BRITISH COTTON GROWING ASSOCIATION.

Mr. Himbury on his Tour.

Lord Derby, presiding at the monthly meeting of the Council of the British Cotton Growing Association held at 333-350 the Royal Exchange, Manchester, on April 13, extended a hearty welcome to Mr. Himbury (General Manager) and Mr. Thomas, on their safe return from their long journey to India, Kenya, Uganda, the Sudan, and Egypt, and said he was sure their visit would be of great benefit to those localities in the future, and also to Lancashire.

Mr. Himbury thanked the President for his kind remarks, and said that the five months they had been away had consisted of really hard labour. They left England on October 28, and proceeded to Karachi, where they saw how the work in connexion with the Sukkur Barrage was proceeding; they were very pleased with what they saw there. All the preparations were ready for the actual work, and by this time he hoped the Barrage would be in course of erection, which would result in five million acres of land being brought under irrigation in Sind, one million acres of which would be capable of producing the best American type of cotton.

From there they proceeded to Khanewal, where the Association have a seed farm; great improvements had taken place on the Khanewal Estate of 7,500 acres since he was last there two years ago. The cotton grown is an improvement on American, and it was being demonstrated to the cultivators that with up-to-date methods of cultivation they could obtain a larger crop and make money. The Association had been approached to take over other estates, to carry on similar operations in other areas, and some of these propositions would receive consideration.

At Delhi they had an interview with H.E. the Viceroy, Lord Reading, which lasted about forty minutes, to whom Mr. Himbury put the question of the shortage of staff. In addition they also held interviews with Sir William Hailey, Governor of the Punjab, and Lord Goschen, Governor of Madras, and since their return information had come to hand that the authorities were speeding up the recruiting of the agricultural staff for the Department of Agriculture for India. He believed the country is going to produce very large quantities of raw material, not only cotton, but wheat, jute, and other commodities. Mr. Himbury pointed out that in his last report on India made two years ago, he had said the cotton crop was five million bales, and would increase to six million bales in five years; this year the crop was over six million bales, the increase anticipated having come about in two years' time. When these great schemes of irrigation are complete, India will produce eight to ten million bales, and Mr. Himbury believed that this would come about within the next five or six years, and there would be large quantities of the improved types.

They sailed from Bombay to Mombasa (Kenya) on December 23. Whilst Kenya was not going to be a great cotton-growing country, there are possibilities on the sea coast where the Association carried out experiments many years ago. Mombasa was interesting as being the port for the Uganda Railway, and they had looked into the question of storage accommodation, which was at present quite inadequate, and a letter had been sent home suggesting that additional sheds should be proceeded with. At Nairobi they interviewed Sir Edward Grigg, who had promised to do everything he could to improve transport. From Nairobi they went to the Lake side of East Africa where the Kavirondo people are one of the most progressive races in East Africa. They then went to Jinja, where the headquarters of the Association are, and from that centre Mr. Himbury said he must have covered several thousand miles in order to see the cotton-growing districts and the ginneries. Uganda has made enormous strides in cotton growing, and as regards output it is really the best place the Association can point to, with the exception of India. From Jinja they proceeded to the Mwanza district situated in the North-West circle of Tanganyika Territory. From Mwanza they returned to Jinja, and afterwards set out for the Nile. At Mongalla they saw the Governor-General of the Sudan, who had gone south to study rain-grown cotton in that region. The seed cotton at present is being transported down the Nile 1,100 miles for ginning. Whilst there are enormous possibilities there, Mr. Himbury did not think the proposition was a commercial one; at present the transport charges are so high, and in order to encourage the industry it is essential to pay the growers the highest possible prices, therefore it was necessary for the Government to continue the work it was doing, but possibly with the help of the two cotton growing organisations.

Afterwards they sailed down the Nile to the Gezira. When Mr. Himbury was there three years ago he had been rather disappointed because the yield had fallen from 4 kantars in previous years to 3 kantars. This year, when he was there, they had already picked 3½ kantars, and he believed the output will amount to 4½ kantars per feddan, and the cotton was of very high quality. Another cheering feature was the opportunity of going over the Barrage, and to see the water running underneath. Most of the credit for that dam was due to the Association for the action they had taken, in obtaining the first loan and in getting the authorities to provide further funds during times of great financial stringency. Altogether, the Gezira, Tokar, Kassala and the rain-grown areas were going to produce enormous quantities of cotton.

Mr. Himbury expressed the opinion that the future cotton-growing areas outside India were Uganda, the Sudan, and Nigeria, and he was sure it was possible to produce within the British Empire, and as cheaply as it could be produced in America, all the cotton required by Lancashire.

Mr. Thomas said he would like to pay his acknowledgment and thanks to Mr. Himbury for all the trouble he had taken during that journey. As one who had never been to India before, it had surprised him that there are so many million acres of good fertile land there that have never hitherto been under cultivation, for the want of water. They had travelled hundreds of miles, and found this land where water was put on to it to be very fertile. Millions are being spent on irrigation, and Mr. Thomas believed that in a few years there would be millions of acres more land growing produce than there was to-day. With India more prosperous it would reflect upon industry in this country, and he thought we would be able to supply those people with goods which they do not need at present.

So far as East Africa is concerned we need not look for any large growth of cotton, but in Uganda he believed there were possibilities of immense extensions. In the Sudan territory which was absolutely barren a few years ago is now fertile with cotton and other crops.

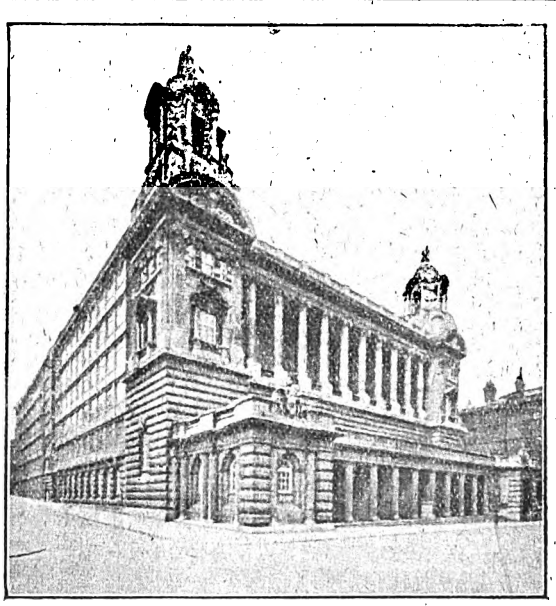
THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 20.

The approach of the Budget usually produces an element of uncertainty in the movement of Stock Exchange prices and, although this year it is greatly overshadowed by the Coal problem, the Budget is still an influence in shaping prices. As a market factor it tends to accentuate the depression which has ruled in nearly all sections of the Stock Exchange for several weeks past. The fact that the gilt-edged market has been maintaining a firm front indicates that Stock Exchange opinion regards any increase in income and super tax or death duties as unlikely. As regards indirect taxation, while the likelihood of an increase in the tobacco duty is thought to be improbable, seeing that the rate is already at a high level, tobacco shares have lately been exhibiting considerable dullness, and the cause is generally ascribed to the Budget. Distillery shares, too gave way recently on rumours of heavier duties on spirits, but the brewery section shows a firmness which is surprising so near the Budget date. The possibility of a new tax on artificial silk has also been canvassed. Apart from these few features the movement of Stock Exchange prices gives little indication of what may be looked for in the Budget statement.

Actual movements during the past week have been out of proportion to the amount of business involved. The general labour outlook, for no very apparent reason, is regarded as less menacing, and prices of stocks likely to benefit from a satisfactory settlement have been marked up, including home rails. Rubber shares, on the other hand, have fallen still further with the decline in the price of the raw material to below 2s. per lb. At this level consumption will not be checked once industrial confidence is restored, and there is ground for quiet optimism when once the present depressing period has passed. In the industrial market the feature has been the active dealing in Dunlop shares on the publication of an excellent report and the payment of a dividend of 15 per cent. on the ordinary shares of a denomination of 6s. 8d. At the present price the yield on this basis is less than $4\frac{1}{2}$ per cent., but the market evidently anticipates that the Company is well on the road back to its old-time prosperity.



Markets and Strike Possibilities.

Although hope of a peaceful coal settlement runs rather surprisingly high in some City markets, it is important that investors should prepare themselves for all eventualities. If happily, a peaceful settlement comes, the great relief felt by the whole nation would probably be reflected the more clearly in the stock markets because months of idleness and liquidation have produced in most sections a sound position in which the response to favourable news ought to be quick and marked. But what if events take an unfavourable turn and negotiations fail? A general strike in support of the miners, if successfully organised (and this is a very big if) would be very grave, but in the nature of things could not be prolonged. But a national coal stoppage is at any rate a contingency to be considered. This too would be serious in many respects, and might last some weeks. But investors should resist the belief that its results would be catastrophic. A glance back at the experience of 1912, the year of the long coal strike, should serve to prevent an undue anxiety on the part of investors. Turn to the financial Press of those days and you will find that none of the dire market slumps, then so freely predicted actually took place. Even Home Rails stood the strain very well, and among other stocks which might have been expected to feel the strain, shipping stocks actually rose. Indeed after six weeks of a complete coal stoppage the markets generally were reported as in a healthy and cheerful condition. Circumstances alter cases, but the recollection of that experience should help to restore a proper perspective among those who may be inclined towards paniky views.

Option Dangers.

With the Stock Markets in their present state of uncertainty the bucket-shops are given a good opportunity to bring before investors with a speculative turn of mind the facilities they can provide for option dealing. We therefore feel it incumbent upon ourselves to offer a word or two of advice and explanation to those who receive such offers.

Firms which specialise in this form of business agree to buy a certain amount of a given stock, at a named price, on some fixed date, if called upon, or to sell a given amount under similar conditions. The price is usually that current in the market when the bargain is made, plus "contango" interest, and the period of the option from a day to several months ahead. The first-mentioned agreement is known as a "Put Option," the second as a "Call Option. If the Option-giver agrees either to buy or sell as the option-seeker may decide, the agreement becomes a "Put and Call Option." The consideration payable is fixed according as the stock in question is or is not liable to wide temporary fluctuations, and according to the length of time during which the option runs. If the prognostications of the option-seeker turn out to be correct he exercises his option on the due date and pockets his difference. If markets move in the wrong way he refrains from exercising the option, and his resultant loss is limited to the amount he originally paid as consideration. Option dealing offers many attractions to the skilled operator, and numerous ingenious variants of the method outlined above are used on the Stock Exchange from time to time, but on the whole, so far as the ordinary investor is concerned, the system is better left alone. Should he desire to experiment in this direction he should take care only to do such business through a member of one of the recognised Stock Exchanges.

COMMERCIAL BOOKSHELF.

Romance in Commerce.

Romance of Great Businesses. By William Henry Beable. (Heath Cranton. 15s. net.)

Of this book it is certainly true to say that it blazes a little-worn trail. The romance of wonderful and stirring developments is usually associated with fields far other than those of the shop, the counting house, and the factory. But as Mr. Beable so ably demonstrates in his graphic and most interesting description of the rise of thirty-two of the businesses which are household words to-day it is not necessary to seek romance on the battle-field or in the ranks of statesmen. Business has her own romances to show, at least as vivid and graphic, and from the broader aspect not a whit less important than those with which the interest of the schoolboy is apt to be intrigued. Indeed, in view of the conditions of to-day, when the need for ever increasing scope for employment is the all-pressing necessity, it is open to argument whether the field in which those of whom he writes have made their mark is not the all important outlet of human enterprise, for the time being at any rate. To indicate the list of the firms whose story Mr. Beable tells is outside the scope of this review. Suffice it to say that it covers businesses such as those of Colman, Bass, Dunlop, Glaxo, Whiteleys, Gamages, Newnes, and Kelly. It says much for Mr. Beable's powers that the story of each of these businesses is a living narrative, and it is impossible to peruse the book without having the romance of business brought home to one very forcibly. In producing this book Mr. Beable has rendered a most valuable service, since by showing what has been achieved in the past he has given an incentive to the present generation, for the paths of enterprise in commerce are never ending, and if the openings are perhaps not quite so perceptible as they were in past generations, they are none the less to be found by industry and perseverance. And the moral of Mr. Beable's book is that the torch of initiative must be handed on unquenched. As Lord Riddell says in a foreword "Britain has been made by the commercial spirit. If we cease to keep shop we shall cease to live."

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended April 17 states:—

A better tone has prevailed during the past week, inquiry has been on a rather larger scale and more orders have been booked; whilst the improvement has only been small, it is nevertheless very welcome.

Yarn.—There appears to have been more inquiry for certain of the finer counts of American yarn and it seems probable that a fair proportion of the increase has resulted in actual business. Producers of other counts report no improvement. There is nothing fresh to report with regard to Egyptian yarn, buying of which continues to be fairly regular without attaining dimensions of special note. Exports of yarn during last month were 16,004,000 lb. as compared with 15,652,100 lb. in February and 17,853,400 lb. in March of last year

Cloth.—Buyers have exhibited a little more activity. Conditions in Calcutta are more settled and a fair number of orders have come through from there, whilst for other Indian outlets also a fair business has transpired. Sufficient orders have been booked for China to give encouragement to the hope that with more settled conditions in that country a much larger turnover would be attained. Demand for Egypt and the Near East generally remains at a low ebb and there is nothing of interest to report for other outlets. Shipments of cloth during last month amounted to 403,249,600 sq. yards as compared with 366,409,600 sq. yards in February and 416,619,800 sq. yards in March last year.

Raw Cotton.—This market remains in a dull and lifeless condition. Operations in Liverpool continue to be restricted and variations in prices unimportant. The weather reports from the United States have been distinctly favourable, but on the other hand it is stated that the acreage under cotton will be larger than last year which was itself a record. Neither of these factors, however, appears to have any effect on quotations.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Liverpool, April 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—M.v. Somersetshire for Port Said, Colombo, Madras, and Calcutta (London, May 1).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, May 5).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, April 24); s.s. Hatimura for Bombay and Karachi (London, May 1).

Cunard Line.—S.s. Phrygia for Gibraltar, Malta, Patras, Piræus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Swansea May 4, Glasgow May 6, Liverpool May 8); s.s. Sea Victory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Fiume, Venice, and Trieste (also Brindisi, Ancona, Corfu, and Gruz if sufficient inducement offers) (Liverpool May 13, Swansea May 18); s.s. Sea Glory for Gibraltar, Algiers, Malta, Patras, Piræus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool May 11, Swansea and Glasgow same date).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 1); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 21).

P. and O. Line.—S.s. China for Bombay (London, April 30); s.s. Nagoya for Colombo, Madras, and Calcutta (Liverpool, May 15).

Prince Line.—S.s. Cyprian Prince for Syrian Coast and Cyprus (Manchester, April 30).

ANCHOR LINE

*First class passengers only. Specially low fares.

SPECIAL NOTICE.

New T.S.S. CALIFORNIA, 17,000 tons, carrying 1st, 2nd and 3rd class passengers, sails from Liverpool October 26, Marseilles November 1. All 1st and 2nd class staterooms are fitted with punkah louvres and with fans. This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

NOTES AND NEWS.

(Continued from page 487.)

still at a low ebb. Greece's revenue is estimated at 8,820,000,000 drachmæ, while the expenditure is put at 8,471,000,000 drachmæ, provision thus being made for a surplus of 349,000,000 drachmæ. The unsatisfactory feature of the Budget is the relatively large expenditure for the Army and the Navy. The expenditure includes three thousand million drachmæ for the Ministry of War and 561½ million for the Ministry of Marine. It is much to be regretted that so much of Greece's revenue should be allocated to unproductive purposes, and the policy which this line of action indicates is not likely to be viewed with favour by financial circles abroad and will contribute nothing to the improvement of the drachma which in recent weeks has displayed fresh weakness.

Motors and Motoring.

By G. B. B.

At this season of the year a number of writers on motoring subjects permit themselves the luxury or indulging in a Budget forecast; an indulgence which may be fascinating but hazardous. Personally, I prefer to go no further than to say that I think—I know no more than anyone else; let me make that clear—that the coming Budget will leave the Road Fund alone, so far as any raid upon accumulated surplus is concerned. I think it will contain provisions for some alteration in the present taxation of heavy motor vehicles and private cars; the taxation on light vehicles will probably be reduced somewhat and there will be no petrol tax as a substitute for the present basis of taxation. We may also see some form of super-tax on purely luxury vehicles over a certain value. And those opinions are as hazardous as any others that have been or may be expressed before the Budget provisions are disclosed and, I may add, they have an equal chance of being right.

Motors in India.

The official publications of the Government of India contain a variety of interesting information regarding the business side of the Indian motor trade. To be sure, this information is scattered, like a few nuggets of pure gold, throughout a mass of data regarding rise, and jute, and tea, and the importation of Japanese goods and the textile industries, but it can be easil yseparated from its, to me, less important accompaniments. I find that since 1921-22, the imports of motor vehicles into India have steadily increased, and the number of cars imported in the fiscal year 1924-25 amounted to 9,380 as compared with 7,984 in 1923-24, 4,324 in 1922-23, and 2,895 in 1921-22. Although the quantitative increase was 17 per cent., the increase in value was only 7 per cent., Rs.2,20 lakhs in 1924-25 as compared with Rs.2,05 lakhs in 1923-24. This was due to low prices all round. The average declared value of cars imported from Canada was Rs.1,657 (Rs.1,962) as comared with Rs.2,365 (Rs.2,424) for each car from the United States and Rs.3,620 (Rs.4,311) from the United Kingdom, the values per unit in the preceding year being shown in brackets. Of the total imports 42 per cent. came from Canada, 33 per cent. from the United States, and 18 per cent. from the United Kingdom, as compared with 41, 36 and 13 per cent., respectively, in the preceding year. An analysis of the figures which accompany this information shows that the United Kingdom has steadily improved her position during the past three years, and, as I have always said, in and out of season, it could improve it still further and more substantially were our British manufacturers to realise the importance and value of India's waiting maket and, by advertising steadily and consistently, let the Indian buyer know what they have to sell.

Some Indian Imports.

I notice that for the period under review Bengal had 32 per cent. and Bombay 38 per cent. of the trade. Sind took the lowest position with 8 per cent., and Burma and Madras were in a slightly better situation with 11 per cent. of the trade each. To show the leeway due to the failure of the British manufacturers to advertise, I would mention that in 1913-14, the year before the War, we sent 1,669 motor vehicles into India. In 1919-20, just after the War, we sent in a mere 448 as against the American imports of 9,353 cars. The following year we made a great spurt, to 2,541 cars, which the Americans answered by sending in 10,120. Canada, which had only sent in 20 vehicles of all kinds previously, sent in during that year 1,938. Then came the slump; we exported the following year 790 cars to India; America 802, and Canada 576. Financial and other conditions became more favourable in 1922-23 as was instanced by the American imports rising to 1,386 and the Canadian to 1,846. Our poor contribution for the period was only 449 cars. In 1923-24 the figures were: Great Britain 1,005, America 2,865, and Canada 3,290. For 1924-25 the totals were: Great Britain 1,682, America 3,106, and Canada 3,956. From this we see that for the year before the War we were sending into India just double the number of cars that came into the country from the American continent; to-day, eleven years later, we send in only 16 cars for every 70 sent in by America and Canada. These are facts on which our British manufacturers should ponder awhile!

The Values.

The value of the cars imported has risen in accord with the increased numbers, and whilst those sent in during 1923-24 by Britain were valued at Rs.45 lakhs, those for 1924-25 were valued at Rs.61 lakhs. The value of the Canadian imports rose from Rs.65 lakhs to Rs.66 lakhs, and the American imports from Rs.69 lakhs to Rs.73 lakhs. I notice that the number of motor cycles imported increased in the year 1924-25 by 23 per cent. from 1,182 to 1,456, and the value of the imports by 4 per cent. from Rs.9,25,000 to Rs.9,66,000. The United Kingdom increased her supplies from 831 (70 per cent.) to 1,201 (82 per cent.), the United States reduced her shipments from 228 (19 per cent.) to 180 (12 per cent.), and Germany supplied 9 as compared with 63 in 1923-24. The number of motor omnibuses, vans and lorries imported more than doubled from 1,044 to 2,162, while the value increased by 55 per cent. from Rs.25 lakhs to nearly Rs.3 9lakhs. Canada supplied 1,225, the United States 782, and the United Kingdom 100, as compared with 599,352, and 61 respectively in the preceding year.

Russian Prospects.

A report from Moscow states, according to *Motor Transport*, that it is expected that there will be an increasing demand before long for up-to-date means of transport throughout Russia. The first few motor omnibuses in Moscow started work about eighteen months ago, whilst there are now about 160 in service. A considerable number are being run in many other towns

and it is expected that omnibuses will be purchased and operated by the municipalities in the various towns as well as by all kinds of co-operative organisations. Between towns, lines will be worked by district soviets or by concessionaires. In South Russia, the Caucasus, and the Crimea, where even in rural districts the highways are somewhat better and motor vehicles can be used throughout the year, there will be, it is stated, a marked demand for omnibuses fitted with internal combustion engines. In the picturesque Crimean and Caucasian mountain regions, where highways hundreds of miles in length connect towns and popular health resorts, ancient horse-drawn omnibuses will shortly be displaced by motor coaches.

The Road Situation.

The Report of the Commercial Motor Users' Association contains the following passage:—"It must not be overlooked that any appropriation of the money now available for road construction, improvement and maintenance for any other purpose must inevitably mean an increase of taxation on motor vehicles, if the proposed and necessary road development programme is to be carried through. The question of extending classified roads and the betterment of rural roads will occasion still greater expenditure."

The production of the Dacia Romano Petroleum Company for March amounted to 674 tons.

Increased import duties on metal and textiles, which came into force in Roumania on April 1, having provoked a storm of protest on the part of both importers and consumers, the Government has decided to revise the tariff, and the Tariff Commission has been convoked. The first result of the new duties was an all-round increase in the cost of living, which was accentuated by the further depreciation of the lei.

Company Meetings.

TRADE INDEMNITY COMPANY.

A Year of Progress.

Mr. Cuthbert Heath's Speech.

The eighth ordinary general meeting of the Trade Indemnity Company, Limited, was held on April 15 at the Institute of Chartered Accountants, Moorgate Place, E.C.

Mr. Cuthbert E. Heath, O.B.E. (chairman of the company), presided.

The Secretary (Mr. G. de B. Brounlie, A.C.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts said:—Gentlemen,—When last we had the pleasure of meeting the shareholders I thought a short history of the origin and methods of the company would be interesting to them.

Well, gentlemen, a year of progress has been added to our history and our methods—methods which have been gradually evolved out of 25 years' experience have in no material respect been changed.

I think the results have justified these methods, and not only you but Mr. Spain can be congratulated on the progress of the company during the last year.

Policy of the Board.

At the general meeting a year ago it was mentioned that we hoped in time to have a network of associated and corresponding companies abroad.

Our object was twofold. First to obtain information, and, secondly, to obtain business. As regards information, you will readily understand that once we have perfected a system of conducting our business on sound lines, then success or otherwise must depend almost entirely on our intelligence department.

We thought that by far the best method of obtaining good information for foreign business was to get our friends abroad to form their own companies to work with us. As an instance of how they do now work with us, if we have a French bill offered for insurance we refer it to our French associated company. If the risk is approved, the French company takes part of the risk with us. If there is a loss, it acts as our agent in conducting things to the best conclusion. In fact, our foreign intelligence department is such that those who give us the information back their opinion by sharing the liability with us. I can imagine nothing sounder.

Co-operation with Foreign Companies.

So far we have companies with whom we correspond in this way in France, in Germany, in Holland, in Roumania, and in the Argentine. Other countries are also becoming interested, and in time I think the field will be entirely covered. These associated companies are not mushrooms. They are directed by men whose names stand very high in their respective countries and who represent most influential institutions. Just to give an example. This week I had the pleasure of meeting three gentlemen who intend to form in their country a credit insurance company to be associated with us. One is a prominent director of the most important bank, the second is the president of the largest group of associated manufacturers, and the third is the hon. president of the Society of Actuaries. That is a typical case.

In addition to obtaining information we also obtain business. In all cases these companies reinsure with us. This should, later on, make an important addition to our premium income.

Both Mr. Spain and myself have been impressed by the extreme care with which these foreign companies are conducting their business. Whether it is due to the intrinsic nature of affairs or the position of the law, the fact remains that our friends seem to be able to collect a good deal of premiums on terms which we should hardly dare to propose to our clients. Of course this is all to the good so far as we are concerned.

State and Credit Insurance.

Now, gentlemen, I should like to refer to something else. We have suggested to three successive Governments that if it is recognised that credit insurance is a good thing, if it is for the good of the country that it should develop and extend, then there is one thing the Government might do which would not only help to enlarge the market but would most likely broaden the basis and enable the insurance world to undertake risks which at present some of the members of it are shy of doing.

The suggestion was that for a premium the Government should relieve such insurance companies as wished for it of what may be called the risk of catastrophe. War, revolutions, national bankruptcy, and so on would come under this heading. Safeguards were provided which would ensure that real disaster had overtaken the insurance company from these causes before payment was made to it.

Company's Proposals Rejected.

Largely, no doubt, due to our representations, a committee was eventually appointed, and no one could possibly object to the composition of it. The gentlemen chosen to consider the matter were such as we could have wished for. This committee has gone into the whole question of credit insurance, including our proposals. These proposals have been rejected on three grounds: First, because there does not seem any demand for catastrophe insurance by itself. The merchant or exporter wishes to be covered for his whole risk. Well, gentlemen, that is no doubt true, but surely it is beside the question. Our proposal was for reinsurance—a very different thing. That reason seems to me to be no reason.

The second reason is that our definition of catastrophe was too vague and, what seems to be impossible, that the Government might sustain losses not due to the risks insured against. I do not say our definition was a perfect one. It was quite easy to amend it, but it was quite definite on one point—that no claims were to be paid unless they were reasonably due to the perils insured against. So, here again, I really do not understand how the committee arrived at their conclusion.

It should be remembered that it would be for the reinsured company to prove its claim. I could give the committee the names of half a dozen adjusters who would make quite certain on behalf of the Government that the claims came within the four corners of the reinsurance before it was paid. It is also the fact that a claim would not occur once in 20 years.

The last reason was that it might be difficult for a company to separate the insurance on goods of British origin—the debts on which the Government alone insure—from their other business. Well, if the Government can do it a company can. If it did not it would not be paid on its reinsurance, that is all.

I think you will agree with me that none of the reasons given is valid, but there is one factor which the report does not mention. It is the premium which should be paid to the Government for its protection. That is certainly a difficulty. I gathered that the ideas of the committee on that point and ours were so different that it is very likely we should never have come to an agreement.

Now, gentlemen, the reason for our proposal was not to benefit our company. We are quite content to go on as we are, and I told the committee so. It was to enlarge the market, not in our interests, but in the interests of the community. But there it is. I think the suggestion might well have been adopted, but it really does not vitally affect us.

Committee's Recommendations.

As regards the committee's recommendations in other respects, they seem to be twofold. One is that the Overseas Department shall be empowered to accept reinsurances from the companies. That is a valuable suggestion, and might certainly be a help in the case of very large risks, always provided that the settlement of losses is left in the hands of the reinsured company.

The other is that the Government should adopt our methods; in other words, simplify theirs and alter the proportion of any debt to be insured to 75 per cent., which is our practice. But I do hope the Government are not going to do anything but fill gaps. If they are going in for strong competition, all I can say is that though they may divert business from the legitimate markets I do not believe for a moment that they can carry on successfully. Our sources of information can never be open to them, and our flexibility can never be theirs. As your chairman I shall not be afraid; as a taxpayer I shall be. At any rate, we are pleased to see that it is recommended that operations should cease in 1929.

I hope I shall not be misunderstood. Our relations with the Overseas Department have always been of the pleasantest. Nothing could exceed the courtesy of Sir William Clark and his officials. If there is to be rivalry, I am sure it will be a friendly one. Meanwhile, I am glad to say that since we last met more of the great insurance companies are taking an interest in credit insurance.

The Accounts.

Now we come to the accounts. As is our usual practice, we deal with the 1924 results; 1925 we do not touch. You will see that after reserving what we consider an ample amount (£20,000) for claims still to be liquidated on 1924 underwriting and previous years, we have £16,911 left. In addition, interest received and balance brought forward, less income-tax and commission and a small bad debt, brings the amount we have to deal with to £28,040. We propose to start a reserve by putting by £10,000, to pay a dividend

of 5 per cent., and to carry forward £5,540. We hope you will consider that satisfactory. The only unfortunate point is the depreciation in investments. We hope it is only temporary. In any case it is covered by our carry-forward.

As regards 1925 account, our premiums have increased by about £25,000, and we have been able to retain £72,000 out of the total as against £51,000 in 1924. The claims again have been light. After paying expenses and making provision for all known claims for both 1925 and previous years, we have £51,918 left, to which must be added the interest which we shall receive from our investments.

Since the end of the year 1925 the claims have been quite moderate in amount. Although the increase in premiums has not been maintained, we hope to have a satisfactory statement to present next year. I may add that our Manchester office under Mr. Dean is proving a success.

Tribute to Mr. Spain and the Staff.

I cannot conclude without again bearing tribute to the services of your staff. Mr. Spain, as usual, has worked like a Trojan, and his judgment in the selection of risks has again proved to be sound. We owe him all possible thanks. (Cheers.) Naturally as business has increased we have had to add to our personnel. Fresh blood has been introduced, and I believe Mr. Spain will tell you that he is satisfied with the help it is giving.

I am continually urging Mr. Spain to delegate. His work is very hard for one man. I am very happy to think that as things go on there will be persons in our office to whom Mr. Spain will think he can safely leave the detail work, while he will be able to confine himself more to general policy. (Hear, hear.)

Mr. James Hamilton (managing director) seconded the motion, and it was carried unanimously.

The proposed dividend was approved; the remuneration of the board was voted; the retiring directors and auditors were re-elected, and the proceedings terminated with a cordial vote of thanks to the chairman.

AGRICULTURAL BANK OF EGYPT.

Bank's Strong Position.

The report of the directors on the working of the bank for 1925-6, submitted to the shareholders at the twenty-third ordinary general meeting, held at the offices of the bank in Cairo, on April 16, states:—

The directors have to report that the net profits of the bank for the financial year 1925-26, established in accordance with Article 40 of the Statutes, amount to £E435,130.588. From this amount there have to be deducted: (i) interest on debentures, £E142,471.876; (ii) provision for the reserve fund, £E10,896.362; (iii) provision for the special reserve fund, £E16,102.641—£E169,470.879; leaving £E265,659.709. And there have further to be deducted: (iv) dividend on £1,250,000 preferred shares, £E48,750; (v) commission to the National Bank of Egypt, £E10,297—£E59,047.742; leaving £E206,611.967; which is available for distribution as dividend on ordinary and deferred shares. The ordinary shares have to receive, in the first instance, dividend at the rate of 5 per cent. per annum, £E120,000; balance, £E85,711.967. The balance of £E85,711.967 is available for the ordinary shares to the extent of one-half, or £E42,855.983, and for the deferred shares to the extent of one-half, or £E42,855.984.

Ordinary shares.—The amounts therefore available for dividend on these shares are as follows: Balance for the year ending January 31, 1925, £E221,401.209; interest for the year, accrued on the above balance, £E11,070.060—£E232,471.269; dividend at the rate of 5 per cent. per annum, as stated, £E120,900; further amount available, £E42,855.983; total, £E396,227.252. The directors propose to pay a dividend at the rate of 10 per cent. per annum, requiring £E241,800, and to carry forward the balance of £E154,427.252.

Deferred shares.—The amounts available for dividend on these shares are as follows: Balance from the year ending January 31, 1925, £E139,027.186; interest for the year, accrued on the above balance, £E6,951.359; total, £E145,978.545; further amount available, £E42,855.984; total, £E188,834.529. The directors propose to pay a dividend of £55 per share, requiring £E107,250, and to carry forward the balance of £E81,584.529.

It will be seen that there is a decrease in the annual profits of £E51,000, due chiefly to the decreased amount collected out of the annual instalment, but the directors feel that the position of the bank justifies them in recommending the payment of the same dividends as in the previous year.

Mortgage Company of Egypt, Ltd.—A dividend of 12 per cent. was paid for the year ended March 31, 1925, with a bonus of 2 per cent. making 14 per cent. in all. Business in new loans was not very active but collections have been satisfactory, especially considering the fall in price of cotton and the slow marketing of the crop. The British Government, whilst intending to proceed with their appeal relating to income tax, has not yet taken the necessary steps for the hearing of the case.

Arrears.—Out of the instalments in arrear on January 31, 1925, amounting to £E179,708 a sum of £E166,587 has been either collected or written off during the year: the amounts collected are included as profit in the profit and loss account for £E104,911 as capital and £E61,554 as interest. The instalments due in 1925-26 which have not been collected in the year amount to £E191,855 of which £E69,608 are for interest; no credit has been taken for this sum in the profit and loss account as, in accordance with the statutes, only interest actually encashed can be included in the profits. The balance, £E122,277, representing capital due and not received in the course of the year, has, as required by the statutes, been deducted from the receipts before arriving at the net profits for the year. Any encashments on the total outstanding arrears—£E205,006—will be included in the profits of the year in which they are affected.

Output and collections.—We have made during the year 188 A Loans for a total of £E5,541 and 54 B Loans for a total of £E20,080. The total of loans exceeding £E1,000 each was £E95,161 on January 31, 1926. The arrears on these loans were £E5,933. A sum of £E350,370 was collected out of the annual instalment of £E542,255 and a sum of £E166,465 was collected from the arrears, making a total collection of £E516,835. The percentage of the annual instalment collected is 64.6 per cent. against 70.5 per cent. in the previous year. This is the lowest percentage collected for several years past; it is due to the reasons connected with the cotton crop already mentioned. The percentage of arrears collected by the bank was 92.6 practically the same as in the previous year.

Expropriations.—The number of expropriations made by the bank during the year are as follows: Number of cases in hand on February 1, 1925, 393; number of caces begun during 1925-26, 220; total, 613; cases settled, 393; balance, 220; cases brought to expropriation, 33; balance pending, 187. In 4 of these cases of expropriation 45 feddans were bought in by the bank, and in 29 remaining cases 209 feddans were bought in by third parties.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended April 8, state:—

Since our last report the futures market has only been open for three days owing to the Easter Holidays. Prices have fluctuated considerably, but at the close to-day the tendency is weak, both for Sakel and Ashmouni. The week's summary of price movements is as follows:—Sakellaridis: May, 29.60 dollars, 0.47 dollars down; July, 28.25 dollars, 0.50 dollars down; November, 28.08 dollars, 0.20 dollars down. Ashmouni: April 20.75 dollars, 0.20 dollars down; June, 21.18 dollars, 0.27 dollars down; August, 21.38 dollars, 0.17 dollars down; October, 21.50 dollars, 0.45 dollars down.

There is nothing fresh to report. The demand from abroad continues to be only moderate, and most of the orders received are for Ashmouni. All reports from consuming centres agree that Ashmouni at present prices is relatively cheaper than any competing growth, and the general opinion is that the Ashmouni market will keep firm. At the first April tender, 19,250 kantars dockets were issued.

Purchases by the Government during the week amount to about 800 bales of Sakellaridis between Fully Good Fair and Good, for which they have paid from 32 dollars to 33½ dollars. Total Government purchases from the commencement of the season to date amount to about 42,800 bales. Persistent rumours are abroad that the Government has decided to cease buying, but the native newspapers are unanimous in contradicting these rumours.

We look for rather quiet markets for the present, with prospects of a slight rise in Ashmouni prices. Without doubt the statistical position of Ashmouni is not nearly so unsatisfactory as that of Sakellaridis. The week's receipts amount to 66,445 kantars against export 42,635 kantars; the stock stands at 2,162,560 kantars.

Spot: Owing to holidays, Minet el Bassal has only been open three days this week. A very fair business has been done and sales amount to about 6,600 bales, of which we estimate 3,900 bales Sakellaridis, 1,950 bales Uppers, 400 bales Zagora, 250 bales Brown and Pilion and about 100 bales of White. Government purchases for the week amount to about 800 bales of Sakel between Fully Good Fair and Good.

Sakellaridis: Has been in slightly improved demand and a fair business has been done covering all styles. Spot differences are without much change from last week.

Ashmouni and Zagora: The demand continues fairly good but the proportionate volume of business actually put through is not so good as last week, due to some extent to the exigencies of holders who have become very difficult to deal with and ask ridiculous prices for their cotton. Spot differences are a little dearer than last week and cotton from Fully Good Fair downwards, which is most in favour with spinners, is only offered at very stiff parities and in limited quantities.

The Report of the Ministry of Agriculture for March reads:

"Many cultivators prepared their land early, reasoning that those who planted cotton early last year harvested a good crop becuse of the fact that the Boll and Pink Boll worms cause less harm to early plantations. During the first half of the month, however, the weather was changeable, cold and rainy with strong and dusty winds; all this had a bad effect on the cotton plantations and many seedlings died and the growth of the plants stopped. Resowings were necessary everywhere and some cultivators are reported to have completely resown their fields; the average of resowings is not less than 40 per cent. The crop was, on the whole, a week earlier than last year but it is now two weeks later. The rains which fell in some of the villages of Staff Merkaz about the 14th of the month spoiled the sown cotton areas. Profiting by the good weather prevailing towards the end of the month, cultivators have been making good progress in preparing the land, sowing and resowing the crop. A slight attack of cut worm and Laphygma Exigua appeared during the second half of the month in some localities, especially in Sharkiya, but without causing any damage."

The directors of the Anglo-Egyptian Oilfields propose to distribute a dividend of 12½ per cent. (less tax) on the "B" shares for the year 1925.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Turkey's Anxieties.

It was suggested in these pages last week that the significance of Signor Mussolini's visit to Tripoli and his insistence on Italy's need for colonial expansion would not be lost on Turkey; but it was hardly to be expected that the Angora Government would be able to persuade itself that it was confronted with any immediate danger. Whether its fears were genuine or whether they were affected to serve ulterior reasons of a domestic nature, is not clearly established; but the Turkish Government allowed it to be noised abroad that it had information of an Italo-Greek agreement for hostile action in Asia Minor and that it was consequently calling several additional classes to the colours. There was, of course, no truth in the report of an Italo-Greek pact, at least not on the lines alleged, and it is probable that Turkey's purpose was served by the report of special precautionary measures without actual recourse to the expensive luxury of increasing the strength of her standing army. Both Italy and Greece gave a formal denial of the existence of the alleged agreement, and presumably "as you were" has been given as the *mot d'ordre* in Turkey. The incident proves the truth of the contention that the present policy adopted by the Turkish Government is bound to cause it embarrassment and many uncomfortable hours. If Angora were adopting as sensible a policy as even Albania or Persia, there could not be the least occasion for supposing that Italy had designs on Asia Minor any more than on any other country in the Near or Middle East. Both Albania and Persia offer reasonable prospects of stable conditions, to the extent that interference from without can be regarded as out of the question. If Turkey is fearful of Italian encroachment in South-west Asia Minor, it can be only because she knows that conditions are tending towards a state of affairs which may render intervention inevitable. Such a development would be most unwelcome in Great Britain, where there is a real desire to see the Turks pull through and make a success of the new order.

The Writing on the Wall.

Signor Mussolini will have done better work than he realised at the time, if his insistence on Italy's need for colonising centres has the effect of detaching Turkey from the suicidal policy that she has been following for the last two years. The publication by a Constantinople paper of the terms alleged to have been offered to Turkey by Great Britain is an indication of a desire to find an avenue of retreat from an untenable position. The version given may be regarded as a *ballon d'essai*, but it bears sufficient likeness to points in the offer which Great Britain has for a long time been ready to make, to show that the Turkish Government is feeling the need of closing the negotiations. If the attention of Angora has been directed to the existence of a number of sunken ships of war in the Dardanelles, the suggestion that they should be salved will have been made not from any consideration of the peril to navigation. It is money, not ships that the Turkish Government wishes to raise: and it will have been persuaded to take the step either by the promise of a cash payment by the contractors or by the prospect of recovering treasure from the sunken vessels. There is nothing unworthy in Turkey's need for money to assist the process of reconstruction. The mistake that her rulers have made is to adopt from the outset a hostile attitude towards the countries to which alone she can look for financial help, and in the desperate straits to which this policy has reduced her to commit acts which inevitably injure her credit and make it more difficult to obtain a loan when she can no longer dispense with one. Turkey might

Digitized by Google

have counted upon being in a comparatively sound financial position to-day if she had obtained a loan two or three years ago and had used it wisely. Now any negotiations for financial help will have to deal first with the awkward questions such as recent defaults and the lapses involved in the seizure of the Galata Bridge tolls. The chief point for Angora to remember, however, is that further delay only makes the situation worse; an acknowledgment of past mistakes and the adoption of a sane policy may be gall and bitterness; but it can still count on long-suffering Britain's good will, and the Turkish people will be too well satisfied with the improvement in their own affairs to dwell upon the ills from which they will at last have a chance of escaping.

Roumania and Poland.

A defensive alliance has existed between Roumania and Poland since March 31, 1921. As the date of expiry of the original Convention, which was concluded for five years, approached, the two countries entered into negotiations for its extension, but decided, instead of merely renewing the old agreement, to conclude a new one slightly extending the scope of the former. The Convention of 1921, as far as its military provisions were concerned, was directed to the protection of the eastern frontiers of the two countries. The new alliance provides, in the event of either party being attacked by an aggressor, for immediate help being given by the other. In other words, the 1926 Convention, which holds good for five years, assures Poland of Roumanian help against Germany as well as against Russia, and Roumania can similarly count on Polish assistance from whatever quarter an unprovoked attack comes. Other clauses provide for co-operation in the determination of foreign policy and for the settlement by arbitration of any differences arising between Poland and Roumania. In so far as these treaties extend the sphere in which countries in international relations undertake to behave properly to one another they may be regarded with complacency. In their military aspect they argue a lack of faith in the League of Nations that is regrettable; but as they are concluded for a limited period, during which there is little chance of their military provisions being tested, and the League may be expected to outlive that and many similar periods, no special harm is done. The League is given time to gain strength, and the more timorous nations may sleep more easily in their beds as a result of these superfluous treaties. The majority of Roumanians, it will be imagined, would prefer, in the event of difficulty arising with Russia, to rely upon the League of Nations, whose protection they can command gratis, and the whole-hearted support of a Bessarabia entirely at one with the New Roumania, to rash commitments which may involve them in a quarrel in which they are in no way concerned.

The Economic Situation in Roumania.

A far more urgent matter for General Averescu's Government than securing help against Red armies incapable of serious military aggression is the condition of Roumania's exchange. The downward trend that had already become established before the Bratianu Ministry resigned has recently gained momentum, and the leu is uncomfortably near 1,300 to the pound sterling. It is gradually being brought home to the Roumanian people that, however attractive in theory the fiscal policy of the late Government may have been, it has imposed on the country a strain that it cannot bear. The principle that the wealth of Roumania must belong to Roumanians is sound enough, but if Roumanians by themselves are capable of converting the country's resources into cash only at a given moderate rate, it is of no use simultaneously to attempt to push the country at three or four times that rate. If Roumania could be picked up and deposited in the middle of an ocean, she might conceivably dispense with foreign capital, and in the meantime leave her railways as they are, close down on all ideas of improving the lot of civil servants, and industrial and commercial employees, and discourage the expansion of industries. On the other hand, if she is going to make the best of her geographical position and wonderful resources, she must see that production not only keeps pace with her present-day requirements, but also provides a surplus to make up for arrears. That means almost a complete reversal of the Liberal Government's attitude towards foreign finance. To the credit of the Liberals, however, it must be remembered that they did have a definite fiscal programme, with several good points in it. What is needed by Roumania now is a modification of that policy in the details where experience has shown that it is absolutely necessary. A new policy must look equally far ahead, and be based on a clearly defined programme, so that it too can be carried on, if ministerial changes occur. No haphazard tinkering in the financial affairs of the country will do any good.

The Political Crisis in Yugoslavia.

It is evident that the Cabinet crisis in Yugoslavia has not been solved by the withdrawal of M. Pashitch and the elimination of M. Raditch. The Prime Minister, M. Ouzounovitch, has to meet the Skupshtina on May 5, and, if he is to avoid immediate defeat, he must arrange for support from a majority of the 325 members. So far he has been sure of the backing of only 150 deputies, 141 belonging to his own Radical group, and nine dissident Croats, including the two Ministers who have broken with M. Raditch. The strong support given to the latter at a meeting of the Croat Peasant Party seems, however, to have rendered the attitude of the dissidents rather doubtful, and in any case there was still a big gap to fill in the Government following before a workable majority could be assured. In these circumstances it must not be regarded as strange that M. Ouzounovitch has shown himself ready to listen to fresh overtures from M. Raditch. The Croat leader's terms are understood to be that the coalition of Radicals and Raditchists should be restored, without M. Pashitch and M. Raditch, but also with the elimination of the two dissident Croat Ministers, M. Nikitch and Dr. Shaperina. For the moment M. Ouzounovitch has refused to throw the latter two overboard, and it is to be hoped that for the sake of political morality and of Croat interests M. Raditch will not insist on his point. A final solution of the difficulty is not likely until there have been fresh elections, but conditions in Yugoslavia, where the peasants of all the provinces are busy on the land, make it probable that elections will be put off until the autumn.

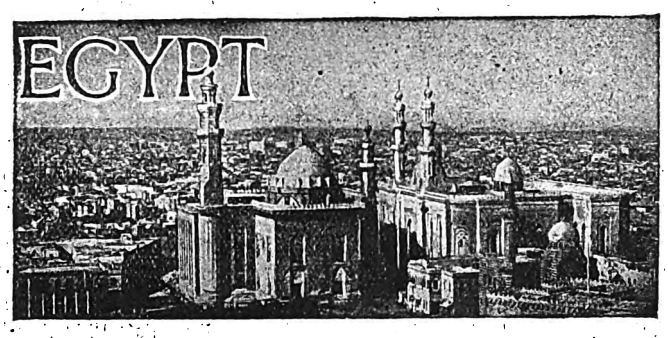
THE PERSIAN CORONATION.

The coronation at Teheran last Sunday of His Imperial Majesty Reza Shah Pahlavi has a wider significance than that of a mere spectacular setting to the climax of a successful career. In several countries to-day the State is embodied in one man; as the task of each is theoretically the same, it is of interest to compare the methods adopted to attain the goal in view. In Italy and Spain the Dictators have found means of having their own way within the four corners of a constitutional monarchy; in Greece and Turkey they have made a concession to modern phraseology in having themselves appointed as Presidents of republics. Reza Shah Pahlavi, on the other hand, has prefered to call a spade a spade and has mounted the throne of Persia. In so doing he would seem to have conformed more to the spirit of the East than has Mustapha Kemal Pasha, who is trying to fit Turkey to a Procrustean bed of Western catchwords. In other respects too, the new Shah's instincts have stood him in better stead than Angora's attempts at statesmanship. Recognising the limitations of Persia, he has made full use of foreign guidance and help in the administration of the country; the scope of the American Financial Mission is continually being widened, Belgians control the Customs, a German firm has inaugurated an air service. The new Shah is a man of energy, with a capacity for hard and sustained work which alone would raise him above his generation in Persia. At the same time he seems to be happily free from the weakness that so often prevents strong men from tolerating ability in their immediate entourage. His acceptance of the Crown implies that, rather than attempt to reform Persia single-handed, he prefers that the work should be done through a Government of which he is not a member, provided that he can inspire and control its activities. The Persian experiment is, on this account, the more valuable, as the widening of responsibility increases its prospects of stability. If the life of the new Shah is spared, and if the pomp and circumstance of monarchy exercise no harmful influence on his character and energy, Persia may yet take her stand at the head of the nations of the Middle East.



With the coronation over, the Shah and his Government should be able to approach the problem of Persia's future with more set purpose than was possible before the settlement of the dynastic question. No country can hope to raise itself out of the rut of mediævalism, in order to qualify as a standard-bearer of modern civilisation, unless it keeps a definite programme before it, based on knowledge of the conditions and the capacity of the people. To carry through reforms that are beyond the understanding of the nation is as worthless as to introduce haphazard uncorrelated reforms which have no part in a long-sighted scheme of national rehabilitation. Under the guidance of the American Financial Mission it is hoped that Persia will avoid those flashy meaningless innovations which in Turkey are supposed to constitute the essentials of Westernisation. The main outlines of her problem are clear enough: the country is large, but sparsely inhabited; agriculture is the main industry, and the population is divided into settled cultivators, townsmen, and tribesmen. Reforms must be carried through in such a way that they avoid doing immediate violence to ingrained traditions and established custom; but they must not pamper the town minority to the prejudice of the agricultral backbone of the population. The economic prosperity of the country should be the first goal, rather than the adoption of political or social labels. If the tribesmen are to be won over to settled conditions, it must be not by the application of force, but by convincing them that the change entails for them greater comfort and prosperity. The pace at which reform can usefully progress must be determined by the dominant conditions of the country, and not by mere zeal, however praiseworthy, divorced from all practical considerations. That pace, in view of the fact that the Persians are in the main agriculturists, must necessarily be slow, and it is essential that the productivity of the people should not be handicapped by the rapid extension of a class which of itself produces nothing, but looks to Government service for its means of livelihood. A Civil Service is indispensable, and under the new conditions it should represent a complete break with the corrupt and effete methods of the old bureaucracy; but care should be taken that the Civil Service should always remain a help to the country and should not be allowed to become a burden upon it. The first step in the reform of the Civil Service, by the abolition of favouritism and the introduction of a pensions fund, has already been taken; but a danger lies in the sparseness of the population, lest a too close adherence to Western systems causes the Government to increase its officials beyond the capacity of a relatively poor country to support them.

The sound judgment of the new Shah has been shown as conspicuously in regard to foreign affairs as in the domestic sphere. Soviet Russia is his only source of trouble at the present time, and difficulties in this direction are, perhaps, a greater credit to him than amicable relations purchased by subservience would be. His accession to the throne was a challenge which Moscow could not ignore. Persia's danger, however, is economic rather than political, and the surest way of being able to resist Soviet penetration is to promote the material prosperity of the country. The Persian Government has secured the interest of the League of Nations in her opium problem, and as a result of her candid presentment of the facts—an acknowledgment that production was out of hand and that in view of the social, political and economic difficulties she was unable to suppress it without help—an international commission is touring the country with a view to making suggestions for substitute crops. Linked up with this question is the provision of means of communication. A monopoly of tea and sugar has been introduced and the proceeds, estimated at a million sterling, have been earmarked for railway construction. In the meantime the Persians have been given an object lesson of the potentialities of mechanical transport with an adequate provision of roads, and it may be hoped that before money is invested in railways, a careful investigation will be made of the total requirements of the country and its financial capacity to meet them, with a view to drawing up the most effective system of communications that Persia with her recognised limitations can expect to have in the near future.

The Near and Middle East*

From Our Own Correspondents.

Cairo, April 17.

The Political Situation.

The four-day feast of Bairam, with which the Ramadan fast concludes, has followed immediately on the Easter Holiday and consequently there has been very little doing in official circles. Apart from the question of candidates, for the presentation of whom to-day is the last day, and the issue by Zaghloul Pasha of an appeal to the electorate not to vote for Ittihadist candidates, but for those put forward by the Tripartite Opposition, there has been little of note to record in the political situation. It is, however, more and more evident that Zaghloul Pasha is the dominant factor in the Opposition, and that neither the Liberals nor the Nationalists, particularly the former since they have far more at stake, are altogether happy with regard to the future.

The Budget.

The question which seems to be preoccupying the higher administrative circles is the procedure to be followed with regard to the Budget for the new financial year. The point that appears to be puzzling the authorities is whether the new Budget, with the extra credits for the new works, should be promulgated by decree, or whether it shall be left for the new Parliament, and in the meantime the old Budget be applied according to a provision made in the Constitution for the contingency of Parliament not having approved of the new estimates before the opening of the new financial year. Each proposal has much in its favour; but the second is the more attractive, as it does undoubtedly follow the spirit of the Constitution.

The Political Murders Trial.

Meanwhile the trial of the seven men accused in the political murders case continues its weary course before the Cairo Assize Court. To anyone accustomed to British Courts and to the similar cases that took place on this very spot before the Military Courts, it is most painful to sit and listen to the cross-examination by the defending counsel. So puerile appear many of the questions they put and so trivial the incidents they try to create that, as they pass for intelligent men, one is driven to the conclusion that they are trying to prolong the case as much as possible. It has already absorbed thirteen days, and it is computed that at the rate matters are progressing it will need another twenty-five days before the Court can give its decision.

"The Yeoman of the Guard."

The Cairo Amateur Dramatic and Musical Society are cordially to be congratulated on their very creditable production of the "Yeoman of the Guard" at the Royal Opera House this past week. Each of the seven performances drew a crowded house. His Excellency the High Commissioner was present on the first and last evenings, and on the latter occasion Lady Lloyd came straight from the station on her return from Palestine—a graceful act which was appreciated by both actors and audience. Apart from the talent shown by the cast, due credit must be given to Capt. Hordern, Capt. Henson, and Wing Commander Evans, who have been responsible for the stage and musical management of what is generally conceded to have been an unusually successful production of the opera, which is among the most popular, as it is also one of the most difficult of the long series bequeathed to us by that talented partnership, Gilbert and Sullivan.

The Anglican Cathedral.

A most gratifying response has been made to the appeal for funds for the new Anglican Cathedral, in support of which Lord Lloyd recently addressed the Anglican communities in Cairo and in Alexandria. Although only a fortnight has elapsed since the meeting in St. Mark's Hall, Ibrahimia, it has been possible to publish a first subscription list showing donations of about £E4,000, amongst them £E100 from the High Commissioner, £E1,000 each from Mr. and Mrs. K. P. Birley and Mr. and Mrs. F. H Cook, £E250 each from Messrs. Peel and Co., Ltd., Messrs. Carver Bros. and Co, Ltd., Mr. and Mrs. H. E. Barker, and £E100 from Mr. H. Farnall, Mr. W. E. Peel, Mr. and Mrs. L. H. Rickards, and Mr. H. Arciniega. It is to be noted that prominent amongst these donors are members of the Alexandria community, which was said to be strongly opposed to the scheme. From this it is permissible to adduce that Lord Lloyd's personal appeal has overcome whatever objections or scruples that community had previously felt.

German Enterprise.

German traders have for some little while now been steadily penetrating into various branches of local commerce, and are on the way to regaining some of the position which they held before the War. In the circumstances, the re-opening of the Deutsch-Orient Bank, which constituted the financial backing of German pre-War commercial enterprise in the Orient, need come as no surprise. The Bank has secured again the services of Hassan Pasha Said, its former Egyptian Director, who as soon as the Deutsch-Orient Bank had been sequestered started a small banking business of his own, in order, as rumour had it at that time, to keep touch with the Bank's clients with a view to the day when it could resume its operations.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

IRAQ.

Baghdad, April 15.

The Baghdad Flood.

Baghdad has added a big page of history to its long record, and another misfortune to the many it has suffered. From a desert city on the banks of a big river Baghdad has become an island, with water on every side of it at the same, or possibly a higher, level than itself. The river was rising for a few days, and it was known that floods from the two main subsidiaries—the Upper and Lower Zabs—might coincide at Baghdad, where the river narrows to a dangerous extent. Vague fears were entertained for floods, but nothing like the reality. At one spot, only a mile or so upstream, adjoining the King's Palace, a cultivator had breached the bank for the purposes of irrigation. He repaired it as the river rose, but the weak spot was soon detected by the river, which was bound to burst somewhere for relief. At 1 a.m. on April 9 the river broke the bank at this point, which is a most dangerous corner exposed to the full force of the current, and with a few minutes swept away an entire village located on the bank. Fifteen people only were drowned, but immense damage was done, and the King's Palace was almost the first properly built building to suffer. As the river rose, the breach widened until soon it extended over 70 yards, with a broad river flowing through it towards Baghdad. Breaking down the various dykes in its way, it broke through the railway embankment and appeared at the North Gate of Baghdad by 5 p.m. I happened to be there then, and saw the most exciting race which ensued between it and those cut off. It raced round along the main road on which I had been a short time before, and broke across it to flood the square by the Barracks. Mud houses disappeared like packs of cards, and the Barrack Square was soon 7 feet deep. The flood then burst towards Baghdad North Station, the main railway centre this side of the river. It arrived there about 8 p.m., and although the engines got away, all the trucks remained, and still remain in 6 feet of water. All the station buildings collapsed with the exception of a few brick buildings containing bonded goods. The trucks were all full of sugar, tea and piece-goods for Persia, so the damage is enormous. The loss at the station alone is estimated at £500,000. Through the railway station the flood broke into the open desert at the back of Baghdad, which it usually attains by a more devious and open route to the north. It raced round the protective banks towards Hinaidi Military Cantonments, and on thence to the Diala River. By next day Baghdad was an island, and there is now a sea where open desert existed. Boats now ply for hire on the desert, and coffee houses have been opened for spectators to bathe or boat from.

Every available idler was conscripted to work on the banks, and since then work has been continuous, heightening the big earthen banks which surround and protect Baghdad. Labour was imported from outside, as the townsman is not of much use at digging, but no available source was scorned. Perhaps the best of all were the convicts, more especially perhaps as one or two of their number are said to have been shot trying to escape during a change of quarters the first night. Searchlights were established at all weak points, hundreds of mats, thousands of sandbags, were produced for the work of facing the earthen banks, below which water is likely to seep after a time. The work is still going on, though the pressing danger is now over and the river is falling.

The Royal Air Force and military in Hinaidi are even more anxious, as the Diala River, which is also in flood, holds back and banks up the waters coming from the Tigris. All ranks have been busy day and night. Baghdad itself has escaped a flooding such as it enjoyed last in 1914, but even so the damage is estimated at over a million pounds all told. Even when the Diala falls sufficiently for the desert water to drain out that way, it will be months before most of the water goes, and even the station cannot be drained for weeks. The authorities have been very energetic, and are already keeping the ordinary railway services at work, but even so the dislocation is dreadful. Salvage proceeds from the wagons and station buildings, but most of the sugar has been spoiled, as well as much of the other goods rescued. It is a sad tale, but has been a most thrilling experience, and marks an important event in Baghdad history.

CYPRUS.

Nicosia.

Cyprus and Britain.

There have been comments in the Greek papers on the article in The Near East and India of March 11, on "Cyprus: An Obligation." Objection is taken to the view that Cypriots are still a backward people, and not yet "on a level with the progress of the age." The writers offer nothing that is new, and seem quite incapable to take any but a very insular view of the situation as regards Greek claims and British obligations. Exception is also taken to the reply of the Secretary of State for the Colonies to the last memorial, especially to the view that Cyprus is not yet sufficiently developed to warrant the extension of political liberties. Yet another communication is being forwarded to the Governor, Sir Malcolm Stevens, for transmission to the Secretary of State, as a rejoinder to his reply. A draft prepared by the Bishop of Kition has been revised by some of the Greek Members of Council, and signed by all of them. What advantage can be expected from this ill-advised step it is difficult to imagine.

Legislation.

The Legislative Council has met several times and has passed several measures. A Vote has been passed to enable the Government to provide for publication of the *Cyprus Gazette* in English, Turkish, and Greek, simultaneously. Turks and Greeks are now in agreement in claiming abolition of the Cyprus share of the Ottoman Debt charge. A law to prevent the adulteration of foodstuffs and of many articles of produce has long been advocated. The draft of a measure is now under consideration. The practice to be dealt with has been only too common and has done much harm to Cyprus trade. A law, when passed, will give great general satisfaction.

Steamship Communications.

A new steamship service between Greece, Crete, Rhodes, and Cyprus, which is subsidised by the Hellenic Government, has been inaugurated, and, it is said, will call regularly every ten days at Cypriot ports. One of the steamers which will leave Famagusta, Larnaka, and

Limassol on April 24 and 25, will probably take a number of passengers to the Pan-Hellenic sports at Athens.

Agricultural Prospects.

The agricultural outlook is very promising. Plentiful rain has fallen throughout the island at an auspicious moment, and the wheat and barley crops should be good. Of caroubs and grapes it is too early to speak.

ITALY AND THE NEAR EAST.

A meeting of the Near and Middle East Association will be held on Wednesday, May 5, at 8.30 p.m., at 42, Lower Sloane Street, by kind permission of the Viscount and Viscountess Dunedin of Stenton. The subject of discussion will be "Italy and the Near and Middle East." Lady Dunedin will preside, and among the speakers will be Sir Graham Bower, Mr. F. N. Hillier and Mr. C. F. Melville.

GALLIPOLI DAY.

April 25, the eleventh anniversary of the first landing at Gallipoli, was celebrated this year in London by a parade at the Cenotaph, and by various gatherings in the evening. Members of the 29th Division assembled at the Horse Guards Parade in the morning and, marching past General Sir Ian Hamilton, proceeded to the Cenotaph, where wreaths were laid on behalf of the Division by Major-General D. E. Cayley and representatives of the various units. The gathering was subsequently addressed by Lieut.-General Sir Aylmer Hunter-Weston and General Sir Ian Hamilton. Ex-members of the Australian Imperial Horse met in the afternoon at Australia House and attended a commemoration service at St. Clement Danes, Strand. In Australia House they were addressed by Sir Joseph Cook, High Commissioner of Australia, Lord Novar, formerly Governor-General of the Commonwealth, and General Sir Ian Hamilton. In the evening members and ex-members of the 29th Division met at the Café Royal, where Sir Ian Hamilton was the principal speaker.

THE FUTURE OF MACEDONIA.

By Eglantyne Jebb.

The traveller in Western Macedonia, journeying across some great expanse of upland, girt round by mountain chains whose snowy summits intermingle with the clouds, is tempted into dreams by the silent beauty of the place. The brown mountain slopes are lit to amber and mauve in the sunshine, in the evening light they will turn rose-coloured, and all day long their myriad hues are flecked with purple shadows. As he moves nothing but the colour seems to change in an otherwise unchanging scene. But in imagination he wanders far, now back into the past, now forth into the future. He recalls how this country was once the granary of a great civilisation, he anticipates the time when it will be so once more—when again the valleys will stand thick with corn and the mountains slopes be belted with forests. And snatches of old words echo in his mind—"A highway shall be there" . . . . "the wilderness and the solitary place shall be glad" . . . . "they shall blossom abundantly."

No doubt if Macedonia could be given fifty years of peace, this half century would see its penury give place to wealth. Yet if this simply meant that the richness of the country was exploited, it is questionable how far this would be in the interests of its inhabitants. The prosperity one desires for Macedonia is not a gradual industrialisation, bringing with it the creation of a restless and half-starved proletariat, but a wide extension of well-being and contentment. If, however, the prosperity, not merely of the few but of the many, is to be achieved, then it must be the work of the many and not of the few. And it must largely be the work of people who to-day are broken, destitute, despised—the new settlers in the country, the Greek refugees from Asia Minor.

Sorovitch, the railway head for Western Macedonia, was the site in 1922-24 of two camps—the camp of the out-going Turks and the camp of the incoming Greeks. The former chiefly went out with their household goods and gods, the latter came in ragged and starving. And then the heroic task of settlement began. Some 65,000 refugees were gradually dispersed from Sorovitch into the villages.

The difficulties of this undertaking would have been formidable even without the shortage of funds which rendered them well nigh insuperable. The houses and lands vacated by the Turks were to be divided amongst the refugees—a complicated task owing to the absence of title deeds and of any survey of the country—but the land was too little and much of it sparsely cultivated, the houses too few and many of them tumbled down and old. In some districts whole new villages had rapidly to be run up before the winter cold set in. Whereas twelve acres are considered enough to support a family, in many instances it was impossible to give more than two or three. In some cases a family received a couple of oxen and a plough, or two families shared them; but the inventory was generally insufficient for the proper cultivation of the land. Add to this that though it had been the intention of the authorities to support the refugees at any rate until after their first harvest by the issue of grain for food in addition to seed grain, in the latter part of 1924 they were obliged to discontinue this through shortage of funds. Tenacious as the peasants are, inured to hardship, capable of the impossible, passionately determined to dig in their roots once more into the soil they worship, their conditions in Western Macedonia are such that a desperate struggle has to be waged before they can secure even a precarious foothold.

In this struggle many who, one hopes, will win out in the end, would already have succumbed unnoticed to misery and despair, had it not been for British charity. Surely never was charity exercised in a better cause. Month by month the refugees tramp out from isolated villages and from hamlets lost in the mountains, and walk sometimes nine or ten hours, perhaps all through the night, to reach the nearest store-house which floats the Union Jack. Here food and clothes, conveyed from Sorovitch by car or

Digitized by Google

camel, are given out to them by the agents of the Save the Children Fund. They arrive in the most extraordinary garments, ragged and mended like a crazy patchwork, yet nevertheless preserving their fine manners, and with something almost regal in their bearing. They bring sacks for flour and for a small quantity of beans, rice, sugar and salt, and watch intently while their month's supply is measured out. The slow gleam of pleasure which comes into their eyes is enough in itself to tell one what the food means to them and their families. They go back, happy and elate, bearing their precious burden and prepared for another month of intense effort and sustained toil.

Thus the settlement has been accomplished *tant bien que mal*, and the friends of the Save the Children Fund and of the Imperial War Relief Fund (which contributed substantial sums for feeding) may feel that they are not only bringing a momentary alleviation to suffering but in many instances are turning the scale between failure and success for the colonists, as, without food, it would be wholly impossible for them to make a satisfactory start in their new life. This means again that much has been accomplished to secure a happier future for Western Macedonia.

But a doubt naturally presents itself. To-day it is for Macedonia rather than for Italy that one must wish "*o fosse tu men' bello*!" Are the settlers doomed to be overwhelmed by some fresh catastrophe and the strenuous work of the past few years to be swept into oblivion? The stranger in Western Macedonia who pauses to-day, as strangers have always paused, to watch a peasant following his ox-plough in the solitude of some forgotten valley, may perhaps see something which those who came before him did not see, and which he may take as a good augury. Slowly the ploughman advances a few furlongs across the level expanse towards the distant barrier of blue mountains, slowly back again, a tiny moving speck in a great space; for all his patient toil, his progress seems as nothing. Yet it may be that he no longer turns up the earth by handfulls with the wooden ploughshare with which his ancestors have been contented time out of mind: he may have an iron ploughshare, one of those introduced into the district by the League of Nations Settlement Commission. How far away Geneva seems from this quiet sunlit valley. How far away the League of Nations! Yet there is the iron ploughshare—a tangible evidence that a new factor has been introduced into the business of mankind, a symbol of hope that Macedonia may yet have its fifty years of peace, of steady industry and growing wealth.

An accidental explosion on April 23 destroyed a private explosives factory in the neighbourhood of Salonika, which was utilising war material left over by the Allies after the War, killing five people and injuring several others.

Last Friday (St. George's Day), the Pope received in audience Sir Francis Younghusband, president of the Mount Everest Expedition Committee, who presented His Holiness with some works regarding the famous expedition.

THE WEEK AT HOME.

London, Tuesday Morning.

The Coal Crisis.

The dispute between the coal-owners and the miners has reached a crisis as serious as that of last July, and the negotiations between the two parties have once more issued in complete deadlock. All that is known at the moment of writing is that Mr. Baldwin has again intervened, that he has requested each side to nominate a negotiating committee, and that much is going on behind the scenes. Meanwhile Lord Birkenhead made a week-end speech on behalf of the Government, in which he declared that they could offer nothing but conciliation and that all idea of further financial aid from the State, except in the form of minor temporary alleviations of particular hardships, was out of the question. In short, the Government holds to its original declaration of policy with relation to the Report of the Coal Commission. It would seem, therefore, that there is every likelihood of a national stoppage at the end of this week, unless some wholly unexpected turn of events takes place. Nevertheless, despite the obvious seriousness of the situation, many people express the view that the active efforts for peace now being made may yet avert a catastrophe from which both parties to the dispute and the whole country can only suffer the greatest injury. Certainly if a strike occurs, the immediate problem of the organisation of the life of the community will be of immense difficulty, for the Continental miners have already expressed their intention of boycotting all coal consigned for England and there is little doubt that the General Council of the Trades Unions would place a strict embargo on all movements of coal in this country. To what extent the transport workers might become involved is a matter of uncertainty.

The Army Bill.

The Army and Air Force (Annual) Bill was before the House of Commons last week, and gave rise to an interesting discussion. The inevitable motion for the abolition of the death penalty was moved and, as in former years, was defeated. The debate resolved itself for the most part into an attempt to define cowardice. Mr. Thurtle, Labour Member for Shoreditch, asserted bluntly that there was no such thing. It was all a question of nerves and will power, which depended upon the inherited qualities of an individual and the training and environment to which he had been subjected since birth. Clearly, on such grounds the death penalty cried aloud for abolition. "It was a wanton outrage on elementary justice to shoot a man in cold blood, because he broke down owing to weakness for which he was not responsible." But, the House was not convinced by Mr. Thurtle and rejected the motion by roughly the same majority as last year. The debate showed, however, that the House was by no means divided into "humanitarians" and their opposites. Gallant members spoke from personal experience in the War to prove the necessity of capital punishment, and challenged those who advocated abolition to cite one single case of the miscarriage of justice. Far the most effective

argument adduced for its retention was that it was impossible to ask men to advance to death, unless they knew that those who remained behind would have to face death also. Nevertheless, despite the large majority of roughly 150 who rejected the motion for abolition, I suspect that one day not too far distant the death penalty, like flogging, will be abolished. Many of those, indeed, who spoke in favour of its retention, seemed to think that the time for re-consideration of the matter had come and that public feeling was favourable to a change. After all, the Australians acquitted themselves very creditably in the War without the deterrent of a death penalty.

Soldiers and Strikes.

A point of greater novelty that arose concerned the use of troops in trade disputes, a matter which has no small interest in view of the present industrial situation. Doubtless the Government point of view is sound, that an obligation to assist the civil power in time of emergency rests upon all citizens and that the soldier is not exempt from such obligation. Nevertheless there can be no doubt that the appearance of the military on the scene is apt to embitter relations in a trade dispute. Too many people are prone to regard trade disputes on a large scale as a class war in which the civil power takes sides, and the use of the Army in such circumstances, unless absolutely necessary to protect life, is an added stimulus to disorder. Such a view is, of course, totally false and much to be deplored, but, doubtless, it exists. Even a Labour Government, one supposes, might find itself compelled to invoke the assistance of the Army.

Squire Bancroft.

It must be rarely indeed that anyone but a statesman of the first rank receives such universal tributes as have been rendered to the late Sir Squire Bancroft. To the modern generation he was little more than a name, and it must have come as a surprise to many to learn how much the theatre of to-day owes to him. They can hardly be blamed for their ignorance, for the Bancrofts retired from the stage as long ago as 1884, but, though still in early middle age they had rendered such eminent services both to the drama and to "the profession," that they had made for themselves a unique reputation. They were not slow to find imitators. In the score of years following their retirement a dozen or so new theatres were built in London inspired by Bancroft principles and run often by former Brancroft actors.

The secret of Bancroft's influence and success is not difficult to discern. He was not a great actor, and on no occasion did he aspire to tragedy, but he was an astute business man and a supremely good judge of a play. He thus had the qualities of a great manager rather than those of a great actor, and it was as a manager that his characteristic work for the theatre was achieved. By his reforms at the old Prince of Wales's he took the first step towards the reconcilement of "society" to the theatre and the raising of "the profession" from something that was "not quite the thing" to a new era of public esteem and a new place among the arts. Not many people who go to the theatre to-day realise that they owe their comfortable stall and elaborate stage settings to the pioneering enterprise of Sir Squire Bancroft.

The Houston Millions.

Press comments on the will of the late Sir Robert Houston, who died about a fortnight ago, have been justifiably bitter, and it is certain that a good many questions on the subject will be asked in Parliament. One journal of standing, and of undeniably moderate views, goes so far as to publish an article entitled, "Millionaire Tax-Dodger" and to accuse the testator of "having bequeathed his wealth with the stigma of bad citizenship written all over it." The exact amount of Sir Robert Houston's estate is not publicly known at the time of writing; but it is generally believed to be in the neighbourhood of £7,000,000. Sir Robert made his will three months ago and in the first paragraph he declared that he had given up and relinquished his domicile of origin and that he proposed for the rest of his life to be domiciled in Jersey—where there are no death duties. If this declaration is held by the Courts to be of legal effect, the result will be to rob the British Treasury of between £2,000,000 and £3,000,000, the equivalent roughly of a penny in the income-tax, and Sir Robert will then have evaded paying the taxes of the country of which he was a citizen and under whose laws and institutions he amassed his fortune. It is not likely that he will find many imitators, but it is obvious that if a man can avoid death duties simply by buying a house in the Channel Islands and declaring that he means to live there, some revision of the existing arrangements is urgently required.

The Budget.

I may have something more to say next week about Mr. Churchill's second Budget, which he introduced yesterday afternoon in a House of Commons filled to overflowing. The two most controversial measures—a tax on betting and a "raid" on the Road Fund—had been long anticipated; so also had some rearrangement of the method of taxing motor vehicles, a source of revenue from which Mr. Churchill expects £21,600,000 in the coming financial year. The three years' average for Schedule D of the Income Tax is abolished and the Schedule is to be founded exclusively on the previous year's income. The total estimated expenditure is £820,641,000 and Mr. Churchill budgets for a surplus of £4,109,000.

Art Shows.

Two of the art exhibitions recently opened in London—the New English Art Club at Spring Garden Galleries, Trafalgar Square, and the Derwent Wood Memorial Exhibition at the Leicester Galleries, Leicester Square—will bring delight to many and to the most different types of man. The New English, it seems to me, are just now at an extraordinarily satisfying level of sanity and adventure; this year's show is really of consistently high standard. There are, of course, a few impossibly daring or immature things, but for the most part even the younger artists have attempted to show the same preoccupation in the zest of life and in its technically correct representation as such acknowledged masters as Wilson Steer, Rothenstein, Muirhead Bone, D. S. MacColl, Henry Tonks, or Francis Dodd manifest. Particularly, the water-colour section has a magnificent collection, and contains the "Andalusia" of Muirhead Bone which is surely destined for post-honours fame.

Iyar 15, 5686, of the Jewish Calendar.

The Ceylon Association will hold a reception on June 25 at the Hyde Park Hotel.

The Indian Civil Service reception will take place on June 11 at the Hyde Park Hotel.

The Bishop of Bombay will leave India on May 1, and expects to arrive in England on May 15.

Mr. and Lady Margaret Loder have returned to Maidwell Hall, Northampton, from the Sudan.

Mrs. Joseph Addison and Miss Addison have returned to 18, Hans Road, S.W., from Egypt and Palestine.

Princess Andrew of Greece visited the King and Queen at Windsor Castle on April 21 and remained to luncheon.

Lady Wormald has returned to 87, Sloane Street, from Egypt, where she has been for the past three months.

Brig.-Gen. Sir Gilbert Clayton, who arrived at Windsor Castle on April 23, had the honour of being received by His Majesty.

Sir Arthur and Lady Froom arrived in London last week from India. They are staying at the Hotel Washington, Curzon Street.

General the Right Hon. Sir John Maxwell and Lady Maxwell have returned to 103, Lancaster Gate from Egypt, where they spent the winter.

Colonel the Master of Sempill has returned from Greece after having spent some months in Athens, at the invitation of the Greek Ministry of Marine, to advise on aeronautical problems.

General Sir Alexander Cobbe, V.C., left London last Thursday to take up his appointment as G.O.C., Northern Command, Indian Army. Lady Cobbe will join him in India shortly.

The Begum of Bhopal is extending her stay in England to the middle of May. The British Indian Union is giving a reception in her honour at the Hotel Cecil to-morrow (Friday) at 4 p.m.

Lord Woolavington arrived at the end of last week at 25 Berkeley Square, W.1., from the Sudan and Upper Egypt, to spend a few days in London before going to Lavington Park, Petworth.

Lord Reading, on whom the King has conferred the dignity of a Marquessate, in recognition of his services as Viceroy of India, arrived at Windsor Castle, accompanied by Lady Reading, on April 20 and had an audience of the King the same day.

Field-Marshal Viscount Allenby, who recently returned from his visit to Australia, will preside at the Palestine dinner at the Trocadero Restaurant to-day (April 29). This annual event was postponed from November last owing to the death of Queen Alexandra.

Emir Ghazi, only son of King Faisal of Iraq, who is now in England, is expected to continue his private studies for nearly a year before going to Harrow. His cousin, Emir Talal, son of Emir Abdullah of Transjordan, who arrived in England early this month, accompanied by Akram E. Ricaby Bey, son of the Prime Minister of Transjordan, is at Hayling Island, where he is studying under an English tutor.

HONOURS, APPOINTMENTS, PROMOTIONS, ETC.

King Fuad has conferred the Grand Cordon of the Order of Ismail upon Sir Geoffrey Archer, the Governor-General of the Sudan.

Mr. Benjamin Dickinson (President of the District Court of Nicosia) has been appointed Puisne Judge of the Supreme Court of Cyprus. Mr. Dickinson, who was called to the Bar (Lincoln's Inn) in 1904, served on the Gold Coast for some years before his appointment as President of the District Court, Cyprus, in 1918. He acted as Puisne Judge and as Judge of the Supreme Court.

MARRIAGE.

WILLIAMS-DICKINS.—On April 21, at Christ Church, Barnet, by the Rev. S. Roberts, Aubrey Kenneth Williams, eldest surviving son of E. T. Williams, of Field House, Barnet, and Phyllis Emily Dickins, youngest daughter of the late H. C. Dickins and of Mrs. Dickins, of Manor Road, Barnet.

The King's Indian Orderly Officer for this year arrived in London last Thursday, accompanied by the British Officer-in-Charge, Major F. M. Matthews, 3-14th Punjab Regiment.

At a meeting held recently in Jerusalem, attended by Christian and Moslem Arabs, it was decided that the fez was not a national Arab headgear and had no religious significance, and the adoption of the European hat was advocated.

A LOAN FOR BULGARIA.

To the Editor of The Near East and India.

Sir,—We desire to draw attention to the serious situation in Bulgaria caused by the influx into that country of a very large number of destitute refugees—a situation which demands earnest consideration in view of the menace it contains to peace in the Balkans and in Europe.

The Bulgarian Government has not failed in its endeavours to cope with the problem, but is gravely handicapped by lack of funds. British charity has been working to establish colonies in Bulgaria, where at least some of these refugees may become productive workers on the land; but these schemes for reclaiming land on which these starving people may in time become useful citizens and not, as they are present, likely victims of revolutionary and seditious propaganda, demand a considerable initial outlay which the Bulgarian Government cannot meet. Therefore we would urge that the solution of this problem, crucial as it is both from the humanitarian and political standpoint, can only be found in the issue of a loan to Bulgaria. It is understood that the Reparations Commission would not object to such a loan which might be raised on an international basis, as was done in the case of Austria and Hungary, or possibly by Bulgaria in the London market on her own credit. To us the first alternative would seem preferable.

Meanwhile the difficulties of the Bulgarian Government and people have been greatly increased by the non-fulfilment of one of the provisions of the Treaty of Neuilly—a Treaty which was duly signed and ratified. By Article 48 of this Treaty Bulgaria was promised outlets to the Ægean Sea which she has not yet received. The economic development of Bulgaria is gravely impeded by this lack of outlets to the Ægean Sea; trading by the ports of Varna and Bourgas on the Black Sea entails a longer voyage and unnecessary expense; and there exists no direct means of communication with the Western Powers.

Finally, we would point out that while Bulgaria has fulfilled all her obligations under the Treaty of Neuilly, she has not received any help since the War. Austria and Hungary have been enabled to raise loans, and with Germany the Locarno Pact has been signed. Surely the time has come for Bulgaria to receive the support in dealing with the grave problem of her refugees which a loan would give, and the outlets to the Ægean Sea to which she has a right under the Treaty.—Your obedient servants,

E. N. Bennett

NEWS IN BRIEF.

Strong earthquake shocks were felt last Thursday at Krasnodar, Maiokop, and Eisk, in the Kuban Province (Northern Caucasia).

Sir Maurice and Lady Hayward, who recently arrived in Cairo, on their way to Palestine, were the guests of Lord and Lady Lloyd at the Residency.

Expenditure recently voted by the Madras Municipality for the purpose of putting up Mr. Gandhi's portrait in the Council Hall has been disallowed by the Madras Government.

The delegation of the Central Caliphat Committee, which is to attend the World Moslem Congress called together by King Ibn Saoud, will said from India for the Hejaz on May 10.

The Commission sent by the Government of India to South Africa to inquire into the position of Indians and secure first-hand information, left Cape Town on April 17 and is due in Bombay on May 15.

A meeting of the members of the Soviet-Afghan Mixed Commission for the settlement of the recent border incident in the region of the island of Urta-Tungai took place on April 22 on the Soviet-Afghan frontier.

The Board of the Church of England Council of Empire Settlement have appointed General Sir George MacMunn, late High Commissioner and Commander-in-Chief in Mesopotamia and Quartermaster-General in India, to be Organising Director. Sir George will take up his duties on June 1.

Colonel Commandant H. W. Jackson, C.B., C.S.I., D.S.O., vacated the command of the Bangalore Brigade area on April 21 on his return home The command will be temporarily held by Lieutenant-Colonel T. Kirkland, D.S.O., commanding the 12th Field Brigade, R.A., until a successor is appointed.

A Reuter message from Bombay states that Mr. Gandhi has accepted an invitation to attend the World Students' Conference in Finland early in August, but has informed the organisers of the Conference that he could not change his dress or diet, and would prefer not to make any speeches at the Conference.

A message from Mahabaleshwar states that, at the request of the Acting Governor of Bombay, Mr. Gandhi is to meet him early in May in connexion with the Royal Commission on Agriculture. Mr. Harold Mann, Director of Agriculture, Bombay, will also shortly meet Mr. Gandhi at Ahmedabad in the same connexion.

The text has been issued of the Indian and Colonial Divorce Jurisdiction Bill, introduced in the House of Lords by Lord Birkenhead. By this Bill it is sought to confer on courts, in India and other parts of His Majesty's dominions, jurisdiction in certain cases with respect to the dissolution of marriages, the parties whereto are domiciled in England or Scotland, and to validate certain decrees granted for the dissolution of the marriage of persons so domiciled.

THE PERSIA SOCIETY.

President : Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor Street, W.1.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

Book Reviews and Notes.

ARABIAN MEDICINE.

"ARABIAN MEDICINE AND ITS INFLUENCE ON THE MIDDLE AGES." By Dr. Donald Campbell. 2 vols. (Trubner's Oriental Series. Kegan Paul. 21s. net.)

An animal burdened with a tail as long as itself and twice as heavy might count on the sympathy of the humane even if it offered a melancholy spectacle to lovers of the symmetrical and well proportioned in Nature. A book with an appendix as long as subject matter would be liable to produce the same effect on the reading public, and we think that Dr. Donald Campbell was happily inspired when he decided to relegate his list of Latin translations of the works of Galen to the second volume of his work on "Arabian Medicine and its Influence on the Middle Ages." The fact that the tail is detachable should reconcile even the most fastidious to its portentous length and impressive weight.

The mass of information regarding the little known section of mediæval history discussed in this erudite work has been collected from many sources, and an admirable bibliography, supplemented by an excellent index testify to the care the author has taken to facilitate the work of any historical students who may be tempted to follow him into the field he has so thoroughly explored. But while it is obvious that this book is intended for the student rather than the general reader, the latter will find in it much that will interest him, and enlighten him on a subject which has a much more important bearing on the history of civilisation than is perhaps generally appreciated.

The debt European civilisation owes to Arab culture under the Caliphates has been amply acknowledged by many writers in many languages, but the debt Arab culture owed to the orthodoxy of the Eastern Church in the fifth century is perhaps not so generally appreciated. Yet, one may say without exaggeration that so great was that debt that if the Patriarch Nestorius had not fallen under the ban of the church for his pedantic objection to the words commonly employed in his time for proclaiming a generally accepted theological dogma, it is very doubtful whether the world would ever have heard of Arabian medicine. The excommunication of Nestorius and the suppression of the heresy associated with his name led to the wholesale emigration of his followers from Syria, where they were mostly to be found, to Persia, where they found a congenial asylum. Among them were many monks, and among these were many scholars who carried with them into Persia not only the sacred writings of Christianity, but also the Syriac translations they had made of the Greek texts of the works of Hippocrates and Galen which then represented the sum total of medical knowledge in the Eastern Empire.

In Persia these Nestorian scholars came into contact with men of a like turn of mind from India and the Far East, and the intellectual *entente cordiale* brought about by this meeting of the sages resulted in the foundation of the great medical school of Gundë Strapur, famous in the later days of the Persian Empire. When in its turn the Persian Empire fell before the conquering hosts of Islam its intellectual no less than its material wealth passed into the possession of the victors, and this, happily, at a time when they were ready to make use of it. The Abbasids with their establishment at Baghdad "began to take as much interest in learning as the Ammayads had done in military adventure." The encouragement given by the Abbasid caliphs soon made Baghdad a great centre of culture, and it was from Baghdad that the wisdom of the Greek masters of medicine, brought from the Empire by the persecuted Nestorians, was carried by the conquering Arabs to the confines of the Caliphate to find its way later into Europe through Spain and Sicily. This is the theme elaborated in Dr. Campbell's work with a wealth of detail with which he has prosecuted his researches. The result is a book which contains practically all that can be learned about a subject hitherto only dealt with in cursory and fragmentary fashion by the historical writers who have included it within the scope of their researches.

Whether humanity ever derived any great benefit from the ancient medical philosophy founded by the Greeks, elaborated by the Arabs and corrupted by the Europeans of the Dark Ages, is an open question, but there is no doubt that such positive knowledge as it contained was never more intelligently applied than by the Arabian physicians whose achievements are recorded in this work.

E. H. B.

£4,000 FOR ORIENTAL STUDIES AT CAMBRIDGE.

Professor Edward Granville Browne, M.B., F.R.C.S., of Pembroke College, Cambridge, and of Firwood, Trumpington Road, Cambridge, Professor of Arabic in Cambridge University and Fellow and President of Pembroke College, who died on January 5, aged 63, left estate in his own disposition of the gross value of £166,167, with net personalty £162,811. He left:—

£2,000 to the Master and Fellows of Pembroke College, Cambridge, to be applied as they may deem best "for the furtherance of sound learning and scholarship" (if possible by creation of a scholarship, exhibition or prize) in Oriental learning, especially in Arabic, Persian or the Turkish languages. This legacy is not to be employed for building, unless the College shall (as below) become possessed of the whole or a considerable portion of his Oriental books and MSS., and shall desire to provide suitable accommodation for them.

£2,000 to the University of Cambridge for the promotion of the study of the languages, literature, history and religions of the Arabs, Persians and Turks or other cognate Asiatic peoples, preferably by the purchase or acquisition for the University Library of books and MSS. connected with these subjects, or by means of grants and endowments for the publication of texts, translations, or books designed for this branch of study, or for the teaching and investigation of these subjects.

He appointed as his literary executors Dr. Ellis Hovell Minns, Fellow of Pembroke College, Cambridge, and Dr. Reynold Alleyne Nicholson, Lecturer in Persian in the University of Cambridge, to examine his unpublished literary and scientific papers and to endeavour to secure the publication of such as they may deem worthy of publication, and particularly of "my almost completed catalogue of my own collection of Arabic, Persian and Turkish MSS.," and to offer such of the rarer MSS. and books as his sons may not require to retain to the University Library of Cambridge, the Library of Pembroke College, Cambridge, the FitzWilliam Museum, Cambridge, or such other literary or learned Society or Institution, preferably in Cambridge, as in their opinion would be most likely to appreciate them and render them accessible to scholars and students.

"A monument to a friend"—OBSERVER.

THE SHAH'S CORONATION.

On the occasion of the Coronation of His Imperial Majesty Reza Shah Pahlavi, Prince Nadir Mirza Arasteh, Persian Chargé d'Affaires, held a reception at the Persian Legation, 47, Bramham Gardens, S.W.5, on Monday, April 26. The reception rooms of the Legation were tastefully decorated with a wealth of pink flowers, tulips, azaleas and roses. There was a large attendance of guests, including Members of His Majesty's Government, of the Diplomatic Corps and of the Persian community in London.

FOREIGN DECORATIONS.

The King has given the following gentlemen authority to wear decorations conferred on them by the President of the Hellenic Republic, in recognition of valuable services:—

Cross of Commander of the Order of the Redeemer.—Sir Frederick Loch Halliday, C.I.E., M.V.O., head of the British Police Mission to Greece.

Cross of Officer of the Order of the Redeemer.—Alfred Henry Boobyer and Trevitt John Read, of the Metropolitan Police Force, Officers of the British Police Mission to Greece.

The King has also given the following gentlemen authority to wear decoratons of the Order of the Nile conferred on them by the King of Egypt, in recognition of valuable services:—

Order of Ismail.—Insignia of the Third Class.—Mr. Oswald Longstaff Prowde, Resident Engineer, Gezira Irrigation Scheme, Makwar, Sudan.

Order of the Nile.—Insignia of the Third Class.—Mr. Walter James Ablitt, Assistant Commandant, Cairo City Police.

At a meeting of the Senate of Madras University a motion to confer the honorary degree of LL.D. on Mr. Gandhi was lost.

The Albanian and the Yugoslav delegates met recently to discuss the drawing up of a commercial treaty between the two nations.

Dr. Elijah Moses, J.P., has been elected a member of the Bombay Corporation and is the first B'nei Israelite to become a member of that body.

General Bruce recently announced that the decision of the Tibetan authorities against Mount Everest expeditions is fixed, and that no further expeditions can be made until the prohibition has been removed.

The Bishop of Gloucester is paying a short visit to Serbia. His object in doing so, apart from the desire for a holiday, is to renew acquaintance with the many Serbian students who were among his pupils during the time that he was Regius Professor of Divinity at Oxford. These young men, who at Oxford showed great capacity for entering into the life of the place, are now for the most part occupying positions of responsibility in Serbia.

That Book you Want!

Foyles can supply it. Immense stock (second-hand and new) on every conceivable subject, including Commerce, Industries, Oriental Languages, Sport, Tropical Medicine. etc., etc.

Write for General Literature Catalogue 165 (free), mentioning requirements or interests, and other suitable Catalogues (20 issued) will be included.

Books sent on Approval to any part of the World.

Books Purchased, best prices paid.

FOYLES, 121 Charing Cross Rd., London, W.C 2

THE GENNADEION OF ATHENS.

The Gennadeion, the building erected in Athens by the Carnegie Institute, to house the magnificent library presented to the American School of Classical Studies by M. Gennadius, was opened on April 23 in the presence of M. and Mme. Gennadius, Colonel Capps Hill, Director of the American School, and Mr. Pritchett, President of the Carnegie Institute. The religious ceremony in connexion with the opening was performed by Mgr. Chrysostomos, Metropolitan of Athens.

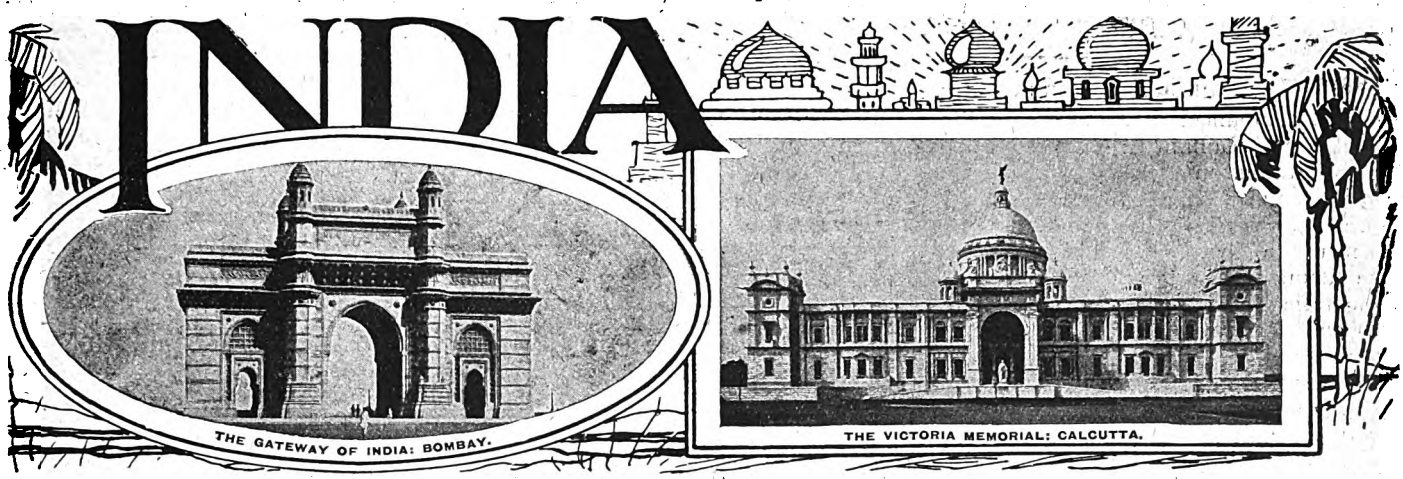
General Tseroulis, the Commander of the First Army Corps, has been appointed Greek Minister for War.

Sir Henry Dobbs, High Commissioner for Iraq, recently arrived at Jerusalem from England, and made a short stay at Government House as the guest of Lord and Lady Plumer before leaving for Baghdad.

At the Old University of Belgrade on April 24 the ceremonial opening took place of the first Congress of the Balkan group of universities, at which the representatives of the University Associations of Belgrade, Zagreb, Liubliana, Athens, Sofia, and Tirana were present.

The Egyptian Government has received assurances from Sultan Ibn Saoud through his Majesty's newly-accredited representative, who has recently arrived in Cairo, that the Holy Carpet and its escort will be permitted to enter Mecca according to ancient custom. The Egyptian Government has, therefore, decided to make no change in the arrangements already announced for the departure of the official caravan.

Mohamed Hedaya, Egyptian Minister to Constantinople, who is also accredited to Bulgaria, presented his credentials on April 24 to King Boris. M. Liaptcheff, Bulgarian Prime Minister, in the place of M. Buroff, the Foreign Minister, who was ill, was present at the ceremony.



It is announced officially that on and after May 3 travellers to and through Egypt must obtain the necessary Egyptian *visa* at the Egyptian Consulate, 34, Victoria Street. The hours at the Consulate are 11 a.m. to 1 p.m. The charge for British subjects will be 8s. 6d. and for the transit *visa* 1s. Applications on the prescribed form may be made personally or by post.

Reuter reports from Simla that, as the result of the persistent refusal to vote Ministers' salaries by the Swarajist majority in the Central Provinces Council, the Government of India, with the sanction of the Secretary of State, has now suspended the diarchical administration until January 31, 1927, when fresh elections will bring a new Council into being.

Professor Father Guadenzio Orfali, of the Franciscan Order, member of the Archæological Advisory Board of the Palestine Government Department of Antiquities, Rector of the Franciscan Archæological School in Jerusalem, who organised the Palestine Pavilion in the missionary exhibition of the Roman Catholic Church held in the Vatican grounds in Rome last year, was killed in a motor-car accident on April 20, while proceeding from Capernaum to join the International Archæological Congress being held in Syria.

The Commission of Inquiry on Opium Production in Persia, appointed by the League of Nations, which consists of three members: Dr. Delano, an American railway engineer, M. Cavara, an Italian professor of botany, and M. Victor Cayla, a French expert on colonial agriculture, is now visiting the different centres in Persia where the poppy is grown. The object of the mission is to assist the Persian Government in devising satisfactory methods for promoting the cultivation of substitute crops for opium.

THE MARQUIS OF READING.

The bestowal of a Marquisate on Lord Reading closes another chapter in the romantic story of the great public servant who, in Lord Birkenhead's words, began his career as "a little ship's boy polishing the brasses" fifty years ago. It will be generally hailed in India even more heartily, perhaps, as a recognition of the progress made during the past five years than as a personal tribute to the man during whose term of office this has been achieved; though the extremists—if one may say so, on both sides—will, no doubt, concentrate more on its personal aspect. The ultra-Nationalist Press, which pretends to see in Lord Reading's Viceroyalty nothing but a succession of failures, will doubtless express its own views: and some of its opposite numbers may be expected to go almost as far in the contrary direction.

The valedictory notices in the great Anglo-Indian newspapers make interesting reading. The *Pioneer* writes that, for Lord Reading's own countrymen in India, "the parting is sad but glorious." In commenting on his farewell address to the Indian Legislatures, the paper invites its readers to "realise the sincere yet all-pervading modesty of the retiring Viceroy's apologia pro sua gubernatione," and the "lofty magnanimity" of his refusal to discuss the occasions when he felt obliged to have recourse to his powers of certification. In his declaration that the reformed Constitution has not been a failure—a cry that has been heard "even from among the ranks of the non-official Europeans, seeking a bubble reputation at an entirely imaginary cannon's mouth"—Lord Reading has "preferred facts to fantasies, however ingeniously dressed up in the domino of compromise." In its more cautious comments on the same speech, the *Statesman* observes that, when a Viceroy comes to cast his eye back over the five years of his labour in India, he "is apt to be his own sternest critic." The *Englishman* says that "the difference between the situation in India when Lord Reading landed and when he departs is the best tribute to the wisdom of his policy of Wait and See." This may perhaps be taken to mean that the Calcutta paper supports a view rather widely held, though seldom openly expressed, by Europeans in India: that Lord Reading's chief claim on India's gratitude is what has been described as his "almost Oriental patience"—a quality that causes its possessor to delight in examining a question from every possible point of view, but to defer coming to a decision until the necessity for it has either passed or has been taken out of his hands. After all, there are few questions that will not settle themselves, one way or another, if only they are given time—was it not the great Marquis of Salisbury who said that he never answered a letter, because his experience was that, in time, every letter answered itself? And critics are apt to overlook the fact that, in a difficult situation, the man who pursues a policy of masterly inactivity will often, in the end, achieve better results than will he who indulges in spectacular activity. In the old days of the *Vanity Fair* "Hard Cases," where the stock question was "What should A do?", the man who, without troubling to read the subject matter, sent in week after week the invariable answer "Nothing," found himself a prize winner in the end. The *Times of India* discerns occasional spots on the sun of Lord Reading's Viceroyalty, though its general conclusion is that "he has done for India almost all that it was humanly possible for him to do." The paper says that Lord Reading "has, in one decisive way at least, been the master of India's fate"—by his substitution of a trained financier, in the person of Sir Basil Blackett, for the gifted amateur of the Indian Finance Department, and by his translation of the latter (after, it must be confessed, an interim appointment that was not one of Lord Reading's happiest efforts) to the Governorship of the Punjab. For some of Lord Reading's other selections, particularly in the Political Department, the *Times of India* expresses no admiration; nor for his handling of the problems that presented themselves in certain of the Indian Native States; while it also regrets that the great possibilities existing in the Chamber of Princes have not received "the help of a stronger lead from the Viceroy." It further voices the natural disappointment felt by the inhabitants of what is universally admitted to be at any rate the second city of India (its own citizens claim it as the first) at Lord Reading's neglect not only of the City but also of the Province of Bombay, especially of Sind.

On the opinions expressed by the English newspapers of India, particularly those of the *Pioneer* and the *Statesman*, Lord Reading has himself supplied a remarkably apt comment. In his farewell speech to the Legislatures, he said "While I have been in India I have always striven to labour for her best interests. I may not always have succeeded, for human effort has its limitations": and, in his conversation with the pressmen who met him on his arrival in England, he said "All is now well with India. The great point is to compare the situation out there now with what it was five years ago. Peace and order prevail, except perhaps through communal differences. To me the five years in India have been five great years: and, if only my period of office has been of any sort of use to the Empire, to the country and the people of India, I am more than satisfied. As I look back upon my years of office, I cannot find anything to cause me a moment's regret." In the course of his long and distinguished career as an advocate, Lord Reading can never have addressed a jury with so overwhelming a case for his client. And he argues it like a master: glancing, with studied ambiguity and caution, at unessential side issues—"perhaps through communal differences"—he leads up to the triumphant conclusion. And the verdict that he asks for is freely given: to quote the words of a Manchester newspaper, "The full harvest of the Reading Viceroyalty has yet to be garnered. If Lord Irwin returns with sheaves which he has reaped but did not sow, we shall all ungrudgingly give him his full share of praise."

CURRENT TOPICS.

The Indian Sandhurst Committee.

It is announced that the deputation from the "Indian Sandhurst" Committee, charged with the duty of making investigations on the spot, outside India, and of submitting a report on their result, sailed from Bombay on April 10. It was at one time expected that Pandit Motilal Nehru, the Swarajist leader, would have formed part of the deputation; but any such idea had to be abandoned when the Pandit resigned his membership of the Committee, following the decision of the Swaraj Party to withdraw from participation in any Government enterprise. The deputation is, in one sense, unrepresentative, since all three of its members hail from the Bombay Presidency. Two come from Bombay itself—Mr. Jinnah, the Mohammedan lawyer who leads the Independent Party in the Legislative Assembly, and Mr. Sethna, a Hindu banker: the third, Major Zorawar Singh, a Rajput of the Kathiawar State of Bhavnagar, is an officer in the forces of that State. So that, in another sense, the deputation is quite widely representative: legal, political, commercial and military opinion are all there, awaiting the stimulus of a journey to foreign countries. And the journey should not only be a stimulating one, but a very enjoyable one as well; for the deputation proposes to visit not only Sandhurst and Woolwich in England, but Kingston in Canada, West Point in the United States, and several of the military training establishments in France. No doubt, they would not need much pressing to extend their investigations further still: and, in view of the keen interest in India recently displayed by the Duce, it is not unlikely that they may receive an invitation to Italy. It is, perhaps, not probably that, from their visits to these numerous military colleges, the deputation will learn much that will be of practical use in drawing up plans for the establishment of an "Indian Sandhurst"; but, at least, the trip ought to widen their ideas, and should prove a pleasant, and to that extent an instructive, joy ride.

Swaraj Party Compromise.

What is described as "an honourable compromise" has been arrived at between the orthodox Swarajists, led by Pandit Motilal Nehru, and the "responsive co-operators" whose recognised leader is now Mr. Jayakar, one of the original Bombay seceders. To the dispassionate onlooker, the "compromise" appears to denote what has all along been obviously inevitable—the surrender of the orthodox Swarajists. It is true that a saving clause has been inserted, that will, on paper though not in fact, mitigate the severity of the Pandit's defeat: he has agreed to the responsive co-operators' demand for permission to accept office under Government, only on condition that "the power, responsibility and initiative necessary for the effective discharge of their duty are secured to Ministers." The presence or absence of this condition is to be decided, in each case, by the Congress members of the Legislative Council concerned, and their decision is to be subject to confirmation by Messrs. Nehru and Jayakar. In fact, of course, no Minister will really be able to come to a correct decision on the points mentioned, until he has had practical experience of the working of his Department; after which, if he arrives at the conclusion that the condition has not been fulfilled, it will be open to him to resign. Resignations, on these or any other terms, are however likely to be very rare: the only probable reason for any Indian Minister to take such a course will be one similar to that which brought about the only such resignation that one can, at the moment, call to mind—the failure of a Minister to get his own way in a personal quarrel with one of the European officials of his Department.

A leading extremist Anglo-vernacular newspaper finds, in the "compromise," proof of "unshakable loyalty to the Congress" on both sides. Accepting this opinion at its face value, one is impressed with the encouraging change in the "angle of vision" that has taken place during the last few years, not only among Indian politicians but in the Congress itself. From its original attitude of absolute non-co-operation and the boycott of the Councils, it has progressed through Council entry, at first purely obstructive but later grudgingly co-operative, to the open acceptance of "responsive co-operation" and to the decision to take an active constructive part in the government of India. Its chief spokesman, Pandit Motilal Nehru, must now be regretting his precipitate action in resigning his seat on the "Indian Sandhurst" Committee, and his consequent loss of the chance of participating in the glorified joy-ride on which some of his less obstinate colleagues have lately embarked.

The Hejaz Conference.

It is announced that Ibn Saoud has invited the Central Khalifat Committee to send a delegation to the World Moslem Conference which is shortly to be held under his auspices: that the invitation has been accepted, and that the delegation, which will include the brothers Shaukat and Mahomed Ali, will sail from Bombay on May 10.

It may be supposed that Ibn Saoud believes that the Central Khilafat Committee—which, in effect, is "Maulana" Shaukat Ali—represents Indian Moslem opinion. If so, it is not the fault of about the only other individual who believes so—Shaukat Ali himself. As the result of his recent India-wide pursuit of the "funds" that seem to be growing more and more elusive, it must presumably be supposed that he has succeeded in persuading the faithful to produce enough money to pay for the delegation's passage to the Hejaz; though it is not to be expected that, while there, he will miss any opportunity that may present itself for obtaining a little more—possibly through an appeal to Ibn Saoud to find the money for the return passage, and a little bit over for expenses. It would seem that he is, at last, beginning to tire of his missionary efforts; for, in a speech delivered at Bombay about a month ago, he is reported as saying that "he hated politics or a fight of any kind, and preferred a jolly, peaceful life. What was it," he asked, "that had made him give up his peace of mind and go about the country?" The answer—though it is not the one that he gave himself—would seem to be, in his own words, the desire to find the means of living a jolly, peaceful life. The *Times of India* evidently takes the same view; for, in commenting on Shaukat Ali's speech, it particularly commends his reference to "the tremendous possibilities for Indians in the years to come." The paper says that this is a matter on which none is better qualified to speak than he. There were tremendous possibilities in the Non-co-operation movement, and they were turned into hard cash by one fund after another. "For the moment, the possibilities have dried up; but while there is life there is hope. In the years to come another agitation is sure to arise, and then once more the possibilities will be as bright as they were in the great days of the Central Khilafat Committee."

Squadron-Leader Tweedie.

The aeroplane accident that resulted in the death of Harley Tweedie will occasion special regret in India. He had the reputation of being one of the most skilful pilots in the Royal Air Force, and it was this that led to his selection for the dangerous duty of bringing the first aeroplane to Simla, and the even more dangerous duty of taking it away again. The Simla landing ground is at Annandale, the only considerable flat space in the neighbourhood: it is about 6,000 feet above the sea, lying 1,000 feet below the Simla ridge: and its formation is something like that of a bottle, with the only avenue of approach or departure, from the air, through a narrow neck between high hills by which the whole of the circumference is otherwise enclosed. The air currents in the neck are necessarily strong, and there was very little definite information about them: it was considered very doubtful whether they would allow of a landing, and still more doubtful whether, if they did, they would permit a departure. Tweedie himself was confident of being

Digitized by Google

able to land, but much less confident of being able to leave; but both feats were successfully accomplished, though the former was only achieved just in time, after a race with a violent hail-storm that burst immediately after the plane had landed, the stones driving through the wings as if they had been made of paper: a state of affairs which, if it had occurred while the plane was in flight, must almost inevitably have resulted in its being wrecked. To the writer who, in India, twice sat in front of Harley Tweedie in an aeroplane and many times behind him in a motor car, besides accompanying him on shooting expeditions both with gun and rifle, and so had many opportunities of admiring his exceptional skill as shot, driver and pilot, his death brings a very real sense of personal loss. In him the Royal Air Force loses an unusually capable officer: and the general regret felt at the early termination of a promising career will be intensified in the minds of all who knew him, especially of those who, like the writer, were brought into sufficiently close contact with him to realise the sterling merit and essential kindliness that lay behind his rather brusque manner.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 8.

The Harvest Comes Home.

To-day, for the first time, the riots cease to occupy the centre of the newspapers, and it can be said, at least for the moment, that the disturbances are dying down. Riots, especially communal ones, have a family likeness, but the present are the worst that Calcutta has seen; this is partly indicated by the "official" casualties, about 40 dead and 500 seriously wounded; but the exact tale of damage will never be known, for it is only the cases in the hospitals that get into the returns; there must be hundreds licking their wounds in the back streets. Fighting generally was confined to up-country men; dreadful head-wounds were the rule, and they were hitting to kill; the anger and hatred would not have blazed so suddenly had they not been long smouldering. In spite of the fact that the original riot burst into a hundred scattered fights, the disturbances have been entirely confined to the Indian portion of the town and everything is normal in the European quarter, except that for one week there has not been a single policeman or soldier there to keep order or give protection. As the newspapers were not published on Saturday, many residents knew nothing of the disturbances, and to go from the south to the north of the city was to leave civilisation and pass into something like a state of war.

Joyful Murder.

In spite of scores of looted and burnt shops, there is little to show what the city has been through, except the presence of armed police and troops, who are still holding all the main corners in the disturbed areas. The Marwaris, however, refuse to leave their houses, so that business is very nearly at a standstill in Clive Street; apparently their mentality is not so agile as that of the Bengali or the European, and there must be many pictures stamped in their minds which it will take some time to forget. The writer did not actually come into contact with the rioters, although distant fighting was visible more than once; but a murder was committed at a road junction within five minutes of his leaving it, and a few yards away a petrol shop was smashed in with paving stones and its contents set alight by the mob. The rioter who laughs until he is knocked senseless is a dangerous person to tackle: and, when a dozen ordinary-looking people standing on the footpath can suddenly rush into the middle of the road and joyfully murder a passer-by by smashing his head, the difficulty of handling the situation may be imagined. Murder, personal assaults and looting, however, were not the only occupations of the factionists; never have there been so many attacks and desecrations of temples and mosques, and a determined assault was made on the principal hospital in the north of the city. To-day there is news of the first serious disturbance in the outer mill areas, with four Europeans injured; but the situation is said to be well in hand.

High Courage.

Every honest and dispassionate observer who knows the facts marvels at the work of the Police. Only an Englishman would consider the possibility of facing such a situation without firearms; it is certainly open to argument whether wholesale shooting in the early stages would not have quenched the blaze. *Forward* says it would have done so. There could be no surprise to-day, however, at the hesitancy of any official in India in such circumstances: and so we have had police and troops, fully armed, being stoned and at times attacked with lathis (heavily loaded six-foot bamboos), defending themselves with sticks. There is a deliberate and wonderful courage in the method settled by the covenanted police themselves for dealing with such disturbances when they break out; when the alarm is received, they drive straight to the centre of the trouble, absolutely unarmed, walk into the thickest point of it and cry out in the vernacular "Now children, what is the matter?" and they talk to them as man to man. They may get hurt—Mr. Bartley, the senior Deputy Commissioner, who with Mr. Armstrong, the Acting Commissioner, has been dealing with the situation, has been badly wounded in the head—but the system is based on a deep understanding of the native mind, and it has stopped many troubles at the beginning. Police, Military, and Auxiliaries are all entitled to the highest praise for their work: not forgetting to mention especially the three staff N.C.O.s of the Presidency Battalion, who, when four hundred rioters attacked and routed the police outpost adjoining their headquarters, went out and faced the mob, and eventually posted a machine gun until a dozen Volunteers could arrive from police headquarters. This was the only occasion on which firing had to be resorted to, but it was successful in stopping the trouble from boiling over again.

Praising the Troops.

There could be no greater tribute to the white forces, nor any more eloquent indication of the difficulties of the situation, than a letter from Mr. Yacoob Ariff, a Member of the Legislative Assembly, to the Press. He states that the Hindu policemen guarding mosques were adopting unnecessarily severe tactics in dealing with Moslems, and he suggests that all mosques and temples should be at once taken over by the Military or members of the Auxiliary Forces. (Very pleasant, incidentally, for us Volunteers!) Another Moslem publicist writes to the

LONDON CITY MISSION.

AYAHS AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and to introduce them (if disengaged) to families about to travel to the East.

Press in loud praise of the North Staffords and their restraint under great provocation; but it is significant of the demoralisation of Indian public opinion that hardly a single word has been said in their Press in praise of the police, although their work has been exactly the same as that of the soldiers, and the brunt of the affair fell upon them alone.

The Extremist Press.

It would not have been surprising if the Extremists had seized the occasion of the Executive Government in Calcutta being only in the hands of one Hindu and one Moslem Minister, to give them credit for the remarkable handling of a dangerous situation; such things have been known to occur even outside India! It would also have been open to Mr. Sen Gupta, the Mayor and the leader of the Extremist Party, and a man of culture and intelligence, to have taken a broad view and to have thrown his weight on the side of the forces of law and order, the very foundation of civilised life. He has chosen as an alternative, probably unconsciously, to show the same basic mentality as that of the mobs of his fellow citizens: and the newspaper under his control has been filled with every kind of material that will vilify and blacken the police and promote racial hatred and distrust. It is this very indiscipline and defiance of authority, the seeds of which have been so assiduously sown and watered by him and his friends in the past five years, that produce their inevitable harvest at such times as the present. His complaint now is not that the police and the military have been brutal, but that they did not shoot in the first instance and kill off the rioters! Even the other Extremist papers will not go so far as this: and the *Bengali*, the new Nationalist organ, may be left to continue to deal effectually with Mr. Sen Gupta. Meanwhile, another paradox is noted: the cables to England were censored, but there is no restraint upon the stream of poison gas exuded by the Indian Extremist Press.

The Present Situation.

As this will arrive after the event, there is no danger in saying that considerable trepidation is felt at the coming of the *Id* this week, when the Moslem temperament is particularly sensitive to excitement; there are two days' holidays, and the Bengali New Year day comes in between them. The attacks on temples and mosques, which have been a conspicuous feature of the present trouble, have burnt deeply into the minds of both communities: and, although things are quiet at the moment, there is always a danger of the large mill communities going berserk; it is impossible to guard the whole of the river frontages of the city, and country boats can carry a great many men. The authorities are doing wisely, therefore, in keeping the police and military out, and having armoured cars ready for emergencies. Meanwhile strenuous efforts are being made by the leaders of both communities to tranquillise the public mind.

Politics.

The new Nationalist Party has duly held its conference in Bombay, and has settled its constitution and enrolled its principal members. The occasion was celebrated by an enormous public meeting, but this was far from being a demonstration in favour of the new party. Babu Bepin Chandra Pal, in one of his recent articles, has been examining the situation in regard to the next elections: and he states that the bureaucracy want the Swarajists to be returned, in order that the Reforms may be definitely wrecked and the whole scheme scrapped. It is interesting to see that even Bepin Babu, who is a generous-minded man, cannot rid himself of the idea that the average official in India is a man of devilish cunning, eternally plotting to grind down a subject race. The fact is that the majority of races in India are by instinct, tradition, training and education, opposed to discipline: and this is coupled, especially in Bengal, by a touchy sensitiveness in regard to what is considered to be dignity. The Swarajists' principal success is to have rebelled against authority: and it is this fact which, in spite of their complete lack of achievement, gives them their popularity in Bengal—a "naughty boy" temperament and outlook. If these men are returned by the electors, it may be unfortunate: but Bepin Babu will have to recognise that it will be a fair indication that a democratic form of government is out of place in this country.

Men and Things.

Lord Irwin has arrived and is proceeding to Delhi; he is the subject of an elaborately ironical article in the *Amrita Bazar Patrika*, and the Indian Press generally is waiting to pounce on his first speech; not an enviable position. Two Danish airmen have stopped at Calcutta on a flight from Copenhagen to Peking: they arrived here thirty-one hours after leaving Karachi. This lends point to Sir Eric Geddes' announcement that the Cairo-Karachi route will be open before the end of the year. Col. Gidney has arrived back from England, and has been given the usual reception; he is emphasising the necessity of unity of outlook amongst the Domiciled Community. Mr. R. B. Wilson, speaking at the annual meeting of the District Charitable Society, again voiced the general demand for co-ordination of charities in the city: he rightly describes the present state of affairs as nothing but a scandal. Home-going ships are taking away some well-known residents for the last time; "Timothy George" Evers, the head of Thomas's, has left, and India loses one of the finest G.R.s ever seen here; a Steward of the Turf Club who had ridden 156 winners of first-class races, he had perhaps even a finer achievement, for he takes with him five Paperchase Cups. Mr. R. N. Band, Chairman of the Jute Association, retires from Thomas Duff and Co. Mr. G. A. Achard, once of the Planters' Stores but more recently the founder of Achard and Co., has had an affectionate send-off from his staff.

The Trivial Round.

There was a large exodus for the Easter Holidays: and; while the officials tended to follow the Governor to Darjeeling, the sea drew most people to Puri and other bathing spots on the Madras Coast. Those who stayed behind had the pleasure of standing by "with horse and 24 hours' rations" at headquarters, running round with armoured cars, or route marching through the disaffected areas late at night with the Calcutta Scottish. Hear a Dundee man on the instructions given to this martial race before they started: "It does not matter what they do to you. They can trample on you, jump on you, bang you and bash you, but the only use of your rifle is, at the last gasp, to disengage the belt and swallow it." There were a few hockey matches in the week-end, and the trials for the Bengal Team to meet the visitors from the Punjab are now taking place. In tennis, Calcutta just managed to beat the Japs, whose team included Okamoto, which seems to indicate that the Club form is pretty good this year; the Mills are continuing their league matches. The Denishawn Dancers are at the theatre and giving more brilliant shows than ever; the whole performance is really beautiful. Luckily the weather is cool; for the first time in memory we did not reach 100 in March.

Markets.

The Easter holidays alone were responsible for a cessation of business in most markets; but, with the outbreak of the communal riots, the closure was further extended, and only to-day are operators beginning to take a serious interest, as a result of which the jute and gunny markets were inclined to firm up at the close: reports from the jute country indicate the need of more rain for the new crop. The local piece-goods market has yet to reopen after the riots, but it is anticipated that the resumption will face a very restricted market in view of the strained feeling between the two communities.

Digitized by Google

Conditions in respect of the tea crop are reported as normal, but hail appears to have caused damage in some parts.

The Stock Markets suffered from civil disturbance, and the Exchange Rooms were deserted until Wednesday, since when business has been on a small scale but inclined to expand. The opinion is that jute shares have about touched bottom: and buyers, especially of the higher-priced denominations, have shown a greater desire to deal; prices closed steady at the higher level. Coals and cottons again call for no mention, but teas and rubbers remained steady, with sellers firm in their expectation of higher prices in the near future and unwilling to sell at current rates. The steady rise in Government Securities continues, and the market is strong with no sellers in evidence.

Money is in fair supply, with short notice and one month quoted at 4¼ per cent. Exchange weakened further; but, on the announcement to-day that Government would sell Reverse Councils at 1s. 5⅜d., the market recovered to 1s. 5 13-16d. for ready T.T.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, April 9.

I have not been able to send a regular letter for the last two weeks, nor do I find anything special to write about to-day. The serious riots between Hindus and Mohammedans in Calcutta, which your correspondent there will doubtless discuss fully, have overshadowed all other happenings in India for the moment. From what we know about them here, they appear to have been definitely riots between the followers of the two great Indian religions: and, though these faction fights may at any time involve Europeans, and are in any case dangerous to British interests in India, they are as far as possible removed from anti-foreign demonstrations.

The efforts of the Government in general, and of the police in particular, to check these internal troubles are the greatest possible proof of the absolutely disinterested nature of our rule in India. All the time that Gandhi was talking proudly of the fraternity of Hindus and Mohammedans, the unity and solidarity of the Indian nation, and the Machiavellian subtlety of British rule, it was perfectly well known to everyone that, if the police had lifted a finger, or even if they had relaxed their attention for a moment, there would have been a first-class riot in every city in India. The present peacefulness of Bombay at times of tension between the rival sects is solely due to the arrangements made by Mr. S. M. Edwardes years ago, and continued by successive Commissioners of Police, after all negotiations between the interested parties had failed: and it is perfectly certain that, if the unity of India is to come, it must come under the guidance and control of more independent and impartial administrators than India seems able to produce from her own stock.

A TAMIL PROVINCE.

An interesting development of the idea of a Federal Government in India was reached when Sir Sankaran Nair brought forward in the Council of State, on March 18, a resolution recommending to His Majesty's Government the creation of a separate Province, with complete self-government, from the Tamil-speaking districts of the Madras Presidency. The boundaries of the proposed Province are substantially the same as those of the "Congress Province" of Tamil Nadu, given in the map published by The Near East and India of September 17 last. Sir Sankaran Nair, though best known to the British public through the libel action brought against him by Sir Michael O'Dwyer, has other and more enduring claims to fame—he has served on the Councils of the Viceroy and of the Secretary of State, and is a sensible and moderate Nationalist politician. His proposal was that the Government of the Province should be modelled on that of the self-governing Dominions of the British Empire, and should consist of the King, a Senate and a House of Commons. He said that the Reformed Constitution had worked better in Madras than in any other Province of India, and therefore appealed for the grant of the constitution, that he was asking for, "so that there could be established a British Commonwealth of Nations in which each nation or race might develop its own civilisation." In the course of his speech he mentioned that the relations between Hindus and Mohammedans in the Madras Presidency were most cordial; that in the "Tamil Province" there were 800,000 Mohammedans out of a total population of twenty millions, but that communal electorates would be unnecessary, as not only candidates, but voters, would be allowed to choose their own electoral districts, and this would ensure a proper communal representation. He also said that the Province should have control over its own military, naval and air forces, and that in this there would be no danger, since "the Tamil land was in the extreme south and did not fear any foreign invasion. It did not require an army except for police purposes, but it might be desirable to create one so that eventually, when British India got Home Rule, there might be provincial armies that would be able to take their part in the defence of the Empire."

The Government opposer dealt with the resolution from two aspects—the first, the constitution of a separate Province on a linguistic basis, the second the grant to it of complete self-government. As to the first, he said that the Joint Parliamentary Commission had laid down that any such proposal must emanate directly from the community concerned—that there must be a strong indication of public opinion expressed through the local

Legislature. The present proposal had not come to the Government of India "through the proper channel": and, though he would not say that it was unsound, he was yet unable to accept it on the authority of the mover alone. As to the second, constitutional questions of this kind must come before the Royal Commission, and it was impossible for the Council to do or say anything that would amount to prejudicing that inquiry. In the end the resolution was negatived: that was, of course, inevitable. But the proposal is specially interesting in that it put forward a new variation of the idea of "provincial autonomy." Such suggestions as have hitherto been made in this direction have, with one exception, been in favour of a self-governing Dominion of India made up of a number of autonomous but subordinate Provinces and States. The exception is Burma, on the ground that it is, in every respect except the accident of comparative contiguity, a country altogether distinct from India. Sir Sankaran Nair's suggestion is that each of the (reconstructed) Provinces of India should be a separate self-governing Dominion, owing allegiance to no Indian Federal Government, but directly to the Sovereign.

In an article that appeared in the supplement of the *Spectator* of March 27, Lord Meston wrote "Federation in India may come some day, not necessarily a union of the artificial geographical units which compose the existing Provinces, but an association on the one hand of administrative areas determined on closer affinities of local patriotism, and on the other of the self-governing Indian States. To labour the idea at present is, however, sheer waste of time: none of the essentials are ready. It is worse; because the cry for federation is a symptom of that pathetic devotion to the arid mechanism of politics rather than to the spirit of humanity which makes political progress a reality." But, with all respect to so great an authority, the Royal Commission, that will examine the working of the Indian Constitution at the latest in 1929, will certainly be bound to consider the idea: and it is not waste of time to examine now the possibilities of a system of which, quite possibly, the Commission's report may recommend at least a tentative trial. And events are moving so rapidly in India that it is unwise to relegate to a distant "some day" the consideration of a condition of affairs that may have to be faced in three years from now. Whether the ultimate decision will be in favour of an extension of the diarchical idea in the direction of federation, or of its continuance on its present general lines, there are many who believe that a recasting of the existing Provinces into "administrative areas determined on closer affinities of local patriotism" is a certainty, though opinions differ as to the method by which this should be attempted. The exact solution proposed by Sir Sankaran Nair is unlikely to commend itself to more than a very few; but the general principles underlying it certainly command wide acceptance among Nationalist politicians all over India to-day, and are likely to do so to a rapidly increasing extent as time goes on. It is, of course, perfectly true that Nationalist politicians do not really speak for the peoples of India; but they will claim, and will necessarily receive, from the Royal Commission the consideration due to the only articulate political opinion to be found in India at present. The Reforms have come to stay: and, as things are, it is inevitable that they must progress. The exact form in which they will do so cannot be prognosticated; but it is safe to say that a move towards Federation is at least as likely as one in any other direction.

TO INDIA BY AIR.

Some four or five months ago, the writer of these notes expressed the hope that the Government of India would realise the need for getting a move on, in the matter of preparing the Indian end of the projected aeroplane service from Egypt. He also ventured to suggest that, if Karachi were fixed upon as the Indian terminus, the scheme was likely to prove a financial failure: and that Delhi, holding an eminently central position, would be a better choice. There has been no indication of any action in the latter direction; but the mail papers make it possible to gauge the extent of Government activity in the former.

The Standing Finance Committee discussed, on March 23, the question of the provision of a hangar and hutments at Karachi. They were informed that the Air Ministry "was about to recommend to the Government of India that they should take an active part in the furtherance of aerial development, in order that India might not lag behind other countries in this sphere of progress": and that, though "the question of general aerial development had still to be considered by the Government, it had always been their accepted policy that all the necessary equipment should be provided by the State, and should not be permitted to become the property either of the Airways Company, or of His Majesty's Government." They were therefore invited to approve of a grant of one lakh of rupees: which, though it had "unfortunately been impossible" to include it in the Budget estimates for 1926-27, the Government of India had suggested that the Air Ministry should advance, against repayment as soon as the necessary funds were voted by the Legislative Assembly. The Committee agreed; but expressed regret that the matter had not been laid before them earlier, so as to admit of the necessary budget provision being made.

In commenting on this the *Englishman* (Calcutta) congratulates the Government of India on the attitude that it has adopted in the matter, and particularly on its decision to ask the Air Ministry to advance the money that it had found it "unfortunately impossible" to provide itself—which, the paper observes, "shows how desirous is the Government of India to assist in inaugurating the service as speedily as possible." It also remarks that no other civilised country in the world is so backward as India in the matter of aerial development: and adds "The Government of India has at last begun to show some interest in the matter, and should be encouraged to show much more. Aerial development in India must not stop at Karachi." This is distinctly unkind: it is less than eight months ago that the conclusion of the contract with Imperial Airways was announced, when it was stated that the service was expected to begin in the early summer of 1926. After this almost negligible lapse of time, the Government of India have already got as far as a proposal to build a hangar of very nearly definite proportions—"of a minimum span of 85 feet"—and an unspecified number of hutments—"only such as would be essential for offices, customs purposes and temporary storage of goods": and a declared intention to ask somebody else to pay for them. Their estimate of the date of commencement of the service is now January 1, 1927: its postponement for the insignificant period of eight months or so being, no doubt, due to the same sort of "unfortunate impossibility" as that which prevented them from making the necessary provision in the Budget—and also, perhaps, to the feeling that they had been indecently rushed by

the conclusion of the agreement with Imperial Airways before they had time to get their own arrangements stated. And as for further development, after Karachi, have they not distinctly stated that this " has still be be considered by the Government?" This ought surely to satisfy the most impatient enthusiast. There may possibly be found some to suggest that the Government of India's sudden spasm of eleventh-hour activity was induced by the impending arrival of Lord Irwin, and the prospect of having to answer inconvenient questions. If that is so, it is a good omen for the future.

CORRESPONDENCE.

THE ENGLISH IN INDIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Would you kindly allow me to ventilate a matter that has often exercised my mind, namely, that England does not understand the English people in India. A retired Governor of an Indian Province estimates that not one per cent. of people in England know who the English in India are. I went the other day to a big meeting in London convened to consider "Our Countrymen Overseas." The only reference that I heard made to English people in India was a statement that some of them do not understand Indians, which they ought to do. Assuming that that statement was correct, it seemed to me that it might have been more to the point if reference had been made to the fact that not only some English people in England, but ninety-nine per cent. of them, do not understand their own countrymen in India, for the simple reason that they do not know who they are.

Much is being done in the way of Empire studies in schools, but text books on the Empire do not as a rule give much information about the English people in India. They usually dismiss them in this not unfriendly sort of way: "To deal with all the difficult and complicated problems in India there is just a handful of English people, and that all goes to show what wonderful people English people are." But they do not as a rule go much into detail as to who the English people in India are. The existence of the Indian Civil Service is generally realised. With a little coaxing and persuading, people are often willing to realise that there are also other officials in India; but few people are so democratic as to realise the existence of English artisans in India. I had a talk with a schoolmaster who is developing Empire studies at a leading public school and doing it on careful and systematic lines. I asked him whether his boys had a good working knowledge of the English people in India: whether for example they knew that there are in India many more Englishmen working on railways than there are Englishmen in all the Civil Services put together? He told me that he did not suppose that they would have heard of their existence—that few people in England would have heard of a fact like that.

I don't think the race problem will be settled simply by England saying to the English railway staff in India "We know nothing about you, but we instruct you to understand every Indian you have to do with." On the other hand, it might ease the industrial situation in England if England could show that, although the English railway staff in India never think of going out on strike, she was still trying to understand them.—I am, etc.,

OSWALD YOUNGHUSBAND.

75, Victoria Street, S.W., April 25.

THE INDIAN MAIL.

The Centre Party.

It really looks as if the attempt to form a constitutional Opposition in the Indian Legislature is taking shape. A manifesto has been issued by a number of prominent Indian politicians, including Liberals, Independents and "Responsive Co-operators," announcing the formation of the "Indian Nationalist Party," and the intention of its members to combat the Swaraj Party at the General Election of November next. The manifesto states that the Party will work for the speedy achievement of Dominion status and, with that object, will employ the methods of "discriminating co-operation and constitutional agitation, including Parliamentary obstruction as and when necessary." The election cry of the members is to be "Every vote given to the Swarajists is a vote for bureaucracy," on the ground that the return of the Swarajists at the polls will merely provide the Government with an excuse for refusing any advance in the Constitution and will supply the Royal Commission, when appointed—whether in 1929 or earlier—with good arguments for supporting such a refusal. The violent attacks of the extremist Press on "this unholy combination of title-holders, office-seekers and creatures of the Government" seem to show that the Swarajists are seriously alarmed at their election prospects; for, after all, the programme that they will be able to place before the electors remains a purely negative one—the continuation of sterile years of ineffective obstruction culminating in an equally ineffective gesture of eleventh-hour refusal even to persist in that; though now, it is true, tempered with vague threats of "more drastic" action that can only be interpreted as suggesting an attempt at active revolution.

With an ordinarily intelligent electorate, such a programme would have no possible chance of success; for a policy of passive, and quite obviously futile, obstruction has nothing attractive about it; while it is quite certain that, whatever the electors may want, they most emphatically do not want a revolutionary upheaval. But it would seem, unfortunately, that the programme of the new Party is almost equally passive. It is true that they repudiate any idea of revolution; but the Swarajists in fact, though not in words, do the same—while claiming that their ultimate aim is "mass civil disobedience," and admitting that this is tantamount to revolution, they confess that they are aiming at an impossibility. The "Indian Nationalist Party" will have to produce a constructive policy of a kind that can appeal to a singularly unintelligent electorate, and will have to put a good deal of political ginger into it; which, as things are in India nowadays, almost necessarily means violent language about the "bureaucracy," its members and its methods. For the Indian electorate is not attracted by policies, but by personalities: and the personality that can shout the loudest and with the least restraint is the one that is likely to get the most votes. The Swarajists, of course, have learned this lesson thoroughly: and count, no doubt, with some confidence on the probable unwillingness of the average voter to desert a vitriolic Tweedledum for a milk-and-water Tweedledee. And, unless the "Indian Nationalist Party" gets going, during the next four months, to better purpose than their manifesto indicates that they are likely to do, it must be admitted that the Swarajists will probably turn out to be right.

Trade Returns for February.

The January improvement in India's sea-borne imports was not maintained in February. The returns show a fall from 2250 to 1803 lakhs, too heavy a drop to be merely due to the shortness of the month, though this doubtless accounts for the small decrease in the value of exports, from 3460 to 3443 lakhs. It is, however, noteworthy that a decrease of 100 lakhs occurred in the exports of raw materials and produce, while those of manufactured goods and of food, drink and tobac· both increased·

Digitized by Google

appreciably. Under the major heads of imports, the value of manufactured articles fell from 1695 to 1335 lakhs, of raw materials from 201 to 161 lakhs, and of food, drink and tobacco from 311 to 278 lakhs. Of the decrease in manufactured articles, piece-goods accounted for nearly half. The figures are not given in detail in the mail papers, though it is stated that decreases occurred in all three classes—grey, white and coloured: but the totals show that February's imports amounted to 122 million yards valued at 412 lakhs, against 172 million yards and 582 lakhs in January.

Great Britain's share in the imports, which had been 52 in January, fell back to 49 per cent. in February: and her share in the exports continued to decline, from 18 per cent. in January to 14 in February; while Japan's share continued to rise, from 19 per cent. in January to 22 per cent. in February. The shares of the United States and Germany remained practically stationary, being 10 and 5 per cent. respectively against 11 and 5 in the previous month. The shares in imports of Japan, the United States and Germany also remained practically the same, at 8, 8 and 6 per cent. against 9, 8 and 5 in January.

Net imports of treasure fell from 405 to 386 lakhs: and the visible balance of trade in India's favour rose from 893 to 1340 lakhs. Figures regarding the export of cotton are still lacking; but there was a marked fall in the export of raw jute—45,000 tons, valued at 296 lakhs, against 65,000 tons and 421 lakhs in January—accompanied by a rise in that of manufactured jute, gunny cloth and bags increasing respectively from 102 million yards and 26 millions, valued at 245 and 173 lakhs, to 124 million yards and 37 millions, valued at 298 and 230 lakhs.

German Trade with India.

The Review of the Trade of India for 1924-25 contains figures that give a striking indication of the success of Germany in her attempts to rehabilitate her trade with India; since they show that, in the year under report, she had already regained her pre-War position in the Indian market. In the fiscal year 1913-14, the German proportion of the Indian export trade was 10.6 per cent., and it is now 7.1 per cent.; but this decline is more than balanced by the increase in Indian imports of German goods: which, before the War, averaged 9½ crores in value, while in 1924-25 they amounted to 15½ crores. The general result is, that Germany has now regained the place held by her before the War, as fourth in order of importance in India's foreign trade. The United Kingdom, of course, remains easily first, her share of India's exports having risen from the pre-War percentage of 23½ to 25½, though it has fallen, in imports, from 64 to 54 per cent.: Japan is second, and the United States third. The improvement in Germany's exports to India is mostly under the heads of iron and steel, machinery, hardware, railway plant and rolling stock, instruments, liquors, and paper.

Delegates for Geneva.

It is announced that Lala Lajpat Rai, the well-known extremist, has accepted appointment as a delegate to represent Indian labour at the eighth session of the International Labour Conference which will meet at Geneva on May 26. The nominee for the ninth session, due to begin on June 7, is Mahomed Daud, Secretary of the Indian Seamen's Union of Calcutta. Both these appointments will occasion some surprise in India: the former because Lajpat Rai, as a Swarajist (who, by the way, has no claim to be considered an expert on Indian labour) might have been expected to refuse nomination: the latter because Mr. Daud is a member of the "professional agitator" class, who, though he may perhaps know something about the conditions under which Indian seamen work, is certainly quite ignorant of Indian industrial matters of any other kind.

INDIAN EXCHANGE.

London, April 26.

We have to record a quiet week in Rupee Exchange, with rates very steady, although a dull market.

A week ago quotations in Calcutta and Bombay stood at 1s. 5 7/8d. T.T., with some business reported at 29-32nds. Since then, however, the market has gradually softened and 1s. 5 27-32d. is the best available, with few buyers under 1s. 5 7/8d., which has been off and on available to a small extent for cash.

Importers, however, have settled very little exchange, and the same can be said on the other side of the book, where exports appear to be a diminishing quantity.

During the period under review, three months' commercial bills were quoted 1s. 6 5-32d., but they have since been marked down to 1s. 6 1/8d. at which we understand only a small business is reported. Last week's Imperial Bank report shows a further slackening off in the demand for money, as the requirements of trade are down by Rs. 140 lakhs.

Forward rates in India have been very steady, but hardly so firm as they were reported last week.

T.T. for April to August is quoted 1s. 5 27-32d. with 1-32nd. higher each month, September to December.

In the London market some days ago, remitters paid 1s. 5 29-32d. but with easier conditions prevailing on the other side, the quotation has come down, and business has taken place for ready and near delivery at 1s. 5 7/8d. T.T.

The outlook is quite steady, but with very little doing.

The film, staged with Indian players, entitled "The Light of Asia," which is now in its fifth week at the Philharmonic Hall, W.1., was shown this week by Royal Command at Windsor Castle.

NOTES AND NEWS.

17a, Strand, London, W.C.2.
Tuesday Morning.

The Budget.

The salient features of Mr. Churchill's second Budget have little in common with those of his first. Last year he was able to announce some remission of taxation; not large but none the less welcome, but this year we have instead new taxes and re-arrangements of existing ones to enable him to make the Budget balance and yield a surplus large enough for contingencies. Judged as a method of meeting a complex financial situation it is impossible to have anything but praise for the Budget, but it is the total that gives cause for criticism. Mr. Snowden's Budget totalled £795,000,000, but we have an estimate of expenditure of £820,641,000, which makes it evident that, allowing for additional expenditure in various directions, not much has so far been accomplished in the direction of economy. As I have previously pointed out to effect economy on our present expenditure is no easy matter, and it is rendered more difficult by the captious conduct of the Opposition. As someone remarked in the course of the recent debate on the Economy Bill, that measure afforded the critics full scope so that those who normally could not hit a hayrick were scoring bulls eyes. I merely advert to this to illustrate the overwhelming difficulty of pursuing the path of economy, yet there is no question that the expenditure must be reduced substantially. The most hopeful part of Mr. Churchill's speech was that in which he dealt with the repayment of debt. On March 31 the total floating debt stood at £704,250,000 as compared with £1,412,000,000 on the same date in 1919, while our nominal deadweight debt stood on March 31 at £7,616,000,000, a reduction of £30,000,000 having been effected during the year. It is a ground for criticism in some quarters that we are trying to do too much in the direction of debt repayment, and that it would be better to leave more of the burden for posterity and gain ourselves by more remissions of taxation. But there is to my mind no question that the course being pursued is the right one,, provided that the savings in annual interest are not frittered away on the expansion of what is known as social services which ought to wait until the nation is once again in a position to undertake additional obligations.

Trade Prospects.

In a survey of general trade conditions in an introduction to the annual report of the London Chamber of Commerce some extremely interesting criticisms are made with regard to the present position. With the notable exception of France, who continued her policy of inflation, 1925, it is pointed out, witnessed a real willingness on the part of the nations to face hard economic facts. Unfortunately as far as many of the Near Eastern countries are concerned this desire has still to be translated into concrete results, and as I had occasion to remark recently the exchanges generally have tended to go worse in recent weeks, so that we now have the Roumanian leu, for instance, at over 1,200. Last year was a thoroughly bad one from the point of view of British trade, there being an increase in the adverse balance of nearly £54,000,000. The interesting point is made that this increase occurred entirely in the first-half year, whle for the second six months the adverse balance was £21,000,000 less than for the same period of 1924. As to the outlook it may be noted that attention is drawn to the modernisation of factories abroad and the increasing use of electricity for power with an adverse effect on the demand for coal and a favourable influence on the exports of the electrical industry, which enjoyed a record year. "In last year's report," it is added, "attention was drawn to the fact that the new factories in the war zones as well as those in countries with depreciated currencies, were being equipped with the most up-to-date appliances. It is essential that a forward policy in this matter should be followed by manufacturers here, and that the Trade Unions should abandon their opposition to all things new. The day has gone by when the buyer was prepared to take what British manufacturers made, and not necessarily what he wanted.

Sudan Cotton.

Reference was made by Mr. Himbury in his report on his recent tour to the very important fact that cotton in the Gezira promises this season to give a much improved yield per feddan. Up to the end of February 2.6 kantars per feddan had been picked as against 2.09 kantars for the same period in 1923 in which year the total yield was just over 4 kantars. When Mr. Himbury was in the Gezira 3½ kantars had already been picked, and in his view the output will amount to 4½ kantars, and, what is very important, the cotton is of very high quality. The value of developments in the Gezira to the Sudan is the subject of a most interesting article in the current issue of the *Journal of the Sudan Chamber of Commerce.* It is pointed out that while the production is almost negligible in comparison with the American and Egyptian crop, "in quality it is equal to the best Egyptian Sakellaridis and as the proportion of this to the total Egyptian crop is small, the Sudan is now producing an important proportion of the world's supply of best Sakellaridis cotton. It is doubtful if the amount of this class of cotton produced in Egypt is over 1,000,000 kantars, so that this year's anticipated production of something over 250,000 kantars may be more than a quarter of the Egyptian crop of this class of cotton. When it is remembered that Tokar and Kassala produce the same class of cotton and the the Gezira Scheme is not yet fully developed it is clear that our position in the market for really high-class cotton is now a very important one."

The Sudan as a Market.

In the article in question a return of £E20 per feddan is estimated—a yield which, it is pointed out, may be on the low side, "but it is probably not safe to count on this figure being maintained for more than a few years"

—and that figure would make this season's crop worth £E1,600,000 and next season's £E2,000,000. Of these totals it is estimated that something like 60 per cent. will be expended in the Sudan—or £E960,000 this season and £E1,200,000 next. "This increase in the purchasing power of the country," it is emphasised, "must stimulate trade in all directions. The money will be spent partly on imported goods and partly on the produce of other parts of the Sudan, and the increased purchasing power will therefore not be confined to the Gezira. Further, there can be little doubt that the stimulus to the production of local goods which will be given by this increased purchasing power will cause increased production generally and greater wealth to the whole country." I have quoted from this article in detail because it bears out so fully what I have said time and again regarding the potentialities of the Sudan as a market. Our merchants and manufacturers are as a general rule slow to take an interest in new outlets, though there are happily very many exceptions, and it may be hoped that in view of the great future opening out for the Sudan they will pay increasing attention to this important market. It may be noted in conclusion that the view is taken in the article that there is no reason why the average value of the crop should fall below £E20 per feddan, though there will doubtless be bad years and good years.

The Turkish Trade Ship.

Some further details are now available with regard to the Turkish trade ship which is leaving Constantinople in a few weeks time to visit a number of European ports. The vessel is due to arrive at Liverpool in the middle of June, and after a few days at that port will proceed to London. It will carry samples of Turkish produce, such as dried fruit, tobacco, carpets, and cotton, and films will also be shown of the principal industries, such as the dried fruit trade; in other words, Turkey proposes to take advantage of the opportunity to counter the campaign in favour of Empire-grown dried fruits. With sufficient publicity the vessel may well prove quite an attraction in London unless—and I have not my diary by me—its visit happens to coincide with one or more of the principal events of the social season.

COMMENTATOR.

IVORY IN FAIR DEMAND.

Messrs. Hale and Son's report on the quarterly ivory sales which were held on April 20, states that they comprise 28¼ tons (against 39¼ tons at the same time last year), viz.: 12 tons Zanzibar, Bombay, Mozambique, East African and Siam, 1 ton Abyssinian, 3 tons Egyptian (Alexandrian description) 9¼ tons West Coast and Central African, and Lisbon, and 3 tons land carriage; also 2¼ tons sea horse tusks, and ¼ ton rhinoceros horns; Total 30¾ tons.

The following was the assortment of the East Indian description: 6½ tons soft tusks, ½ ton hard and few Siam, ¾ ton billard ball pieces, ¾ tons bagatelle pieces, ¼ ton cut points for balls, ¼ ton cut points off large tusks, ½ ton under-sized and defective points, etc., ½ ton billiard ball scrivelloes, ½ ton bagatelle scrivelloes, ¾ ton cut hollows, and ¼ ton cores and mixed pieces, and ½ ton scrivelloes.

Of the above quantities 7¾ tons consisted of lots previously offered or indirect import, viz.: 2¼ tons East Indian, 1 ton Abyssinian, 1¼ tons Egyptian, ¼ ton Congo, and 3 tons land carriage.

During the progress of the sales 10¾ tons were bought in, viz: 2 tons East Indian, ½ ton Abyssinian, 1 ton Egyptian, 2½ tons Congo, 2¾ tons land carriage, and 2 tons sea horse tusks.

The quantity catalogued was small, being only 28½ tons of all descriptions. There was a fair demand, but a quiet tone prevailed throughout, and prices in some instances were lower. America and the Continent took a fair quantity, and the Home trade were only moderate buyers.

Abyssinian were partly sold, large tusks being steady to £2 per cwt. easier, and medium and small £2 to £5 per cwt. lower. Ball scrivelloes were £5 to £10 per cwt. lower. Scrivelloes were steady to rather easier.

Only a small quantity of the Alexandrian description was catalogued. Prices for soft tusks were steady to £2 per cwt. easier, while hard were rather lower. Ball scrivelloes were £5 to £10 per cwt. lower. Scrivelloes were steady to rather easier. Soft bangle tusks were steady to £2 to £3 per cwt. lower.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended April 24, states:—

The tone in all sections of the cotton trade is unsatisfactory, and buyers still lack the necessary confidence to place orders on such a scale as would give relief to spinners and manufacturers alike. The weakest section of the industry is that of the American spinners, many of whom are in an extremely difficult position.

Yarn.—Business all round has been of small dimensions with prices irregular, but slightly lower on the week. Offers from overseas have usually been on a basis which spinners could not possibly accept, and only in finer counts has there been any activity at all in the American section. As regards Egyptian spinnings, the conditions are somewhat better on balance since a week ago, but compare unfavourably with those prevailing in February and March. Recommendations continue to be made for drastic action to be taken with a view to improving the position, the latest being that mills should close for a whole week as from the 3rd of next month.

Cloth.—The week closes with a rather better feeling owing to the more favourable political news from China, and the statement that satisfactory quantities of goods were disposed of at this week's auctions in Shanghai. Indian business has been mainly confined to small sales of grey and white shirtings, bids for most other goods being said to be mostly unacceptable. The demand from Egypt is slightly better and rather more business has been booked for South America. Home trade inquiry has been of a restricted character.

Raw cotton.—Fluctuations have not been very striking though more in evidence than in recent weeks. The receipts of cotton at the American ports to date are advised as 8,897,000 bales compared with 8,987,000 bales at this period last season. The receipts of Egyptian cotton at Alexandria so far are said to be 7,157,384 kantars as against 7,028,838 kantars at the same time last year. The actual stock now lying in Alexandria is reported to be nearly 1,000,000 kantars higher than in April, 1925. Closing quotations yesterday were as follows:—American Middling 10.01d., Egyptian Fully Good Fair 16.40d.

THE YUGOSLAV BUDGET.

Statement by M. Stoyadinovitch.

M. Stoyadinovitch, the then Minister of Finance, made a statement on the general financial position at the meeting of the Skupshtina on March 27. He said:—

The financial situation of all the States that took part in the Great War does not depend at the present time only on the labour of the inhabitants, on the natural resources of their countries, or on the conditions political or otherwise which obtain. The position is affected to a certain extent by the solution of a great international problem, that of the Inter-Allied War Debts. I lay stress on the Inter-Allied Debts, because I have just returned from a visit to America, Great Britain, and France, in accordance with the decision of the Government, to consider the settlement question. By the force of circumstances this visit was extended beyond the time originally fixed, so that I have been to some extent prevented from taking part in the debate on the Budget for 1926-27. But the question of Inter-Allied Debts is of crucial importance for the future of our finances; its solution should have a profound effect on the Budget, and, be it noted, not only on the one which you have before you to-day, but also on those which will follow for several generations; so that it is truly the duty of a Minister of Finance to discuss this question personally with the Governments concerned and to obtain all the necessary information with a view to a final settlement.

The importance to us of this question of War Debts will be clear from the amount of our obligations. We owe (1) to the United States 62,850,000 dollars, (2) to Great Britain £33,283,743, (3) to France 1,738,566,000 francs. It is necessary to point out that the amount of the debt to Great Britain and France is not yet definitely fixed. If we turn these various amounts into dinars at the present rates of exchange we obtain a total sum of 15,183,000,000 dinars for our War Debt. But whatever the extent of the total, and although we are specially interested in the question of War Debts, the problem is not a private matter. The question of our War Debt is governed by the general principles which are conceded by the foreign countries that are our creditors.

When the Great War began in 1914, it seemed likely to be short. At the beginning of 1915 the situation had assumed another aspect. It was felt then that the war would be prolonged, and in February, 1915, the Finance Ministers of the Great Powers, Great Britain, France and Russia, met in Paris to arrange a common financial policy. The feeling ruling at that period was shown by a decision with regard to the finances of the Kingdom of Serbia. It was decided to make a new advance to Serbia of 150 million francs, the payment of which would be made by monthly instalments of 30 million francs, each of the Powers mentioned being responsible for a third of this total. But, owing to the financial difficulties of Russia, Great Britain and France took over the payment of Russia's share so that these two Great Powers gave 15 million francs each per month. It will be seen then that there was perfect agreement; a unified financial front had been created. It was in a way the unity of command which much later was brought into the field of military operations under General Foch; at that period, in financial language, the practice was described in the official *communiqués* as "the equitable distribution of War expenditure."

From the declarations of many statesmen the conclusion was drawn, rightly or wrongly, and for a time the opinion was general in England, that, broadly speaking, the payment of War Debts would never happen. Public opinion in Europe anticipated with complaisance the cancellation of all War Debts. When it is a question of War expenditure, it was pointed out at that time, it is necessary not to forget that factors that are more important than gold and silver enter into the question—these are the lives of men, liberty, and lastly honour, which is still a thing greater than life, for men very often sacrifice life for honour. If one wishes to estimate the War Debts, it is necessary to take all these things into consideration. The countries entered into the War and gave each what they had. Some sacrificed their blood, their territory, their hearths, their property. Others gave their fleet or their money. All that has to be estimated. It is not admissible that those who lent should be repaid now to the last centime.

America and War Debt Cancellation.

The idea of the cancellation of War Debts found up to recent times many supporters in Europe. But opinions began to change. It is not necessary to seek the reasons

Digitized by Google

for the alteration in Europe, but only in America. The United States declared war on Germany in April, 1917. From that time the immense riches of North America were available for the Allies, who speedily began to ask for and to obtain loans. The first loan was granted at a rate of interest of 3.5 per cent. Subsequently the rate of interest increased, until it finally reached 5 per cent. These loans were contracted not only during the War for the purchase of material and foodstuffs, but also after the Armistice, in 1919 and 1920. At this period the loans were utilised mainly for the revictualling and reconstruction of the devastated regions by the purchase of American stocks remaining in France. Thus on the morrow of the Armistice the American Minister of Finance had in his hands undertakings from about twenty different States, undertakings for the most part payable immediately at sight which carried interest at 5 per cent. The position of the United States is characterised by the fact that that country is the creditor of the whole world. All the other States are its debtors, while America owes nothing to anyone. Thus, while in the case of European States, whose debts among themselves would cancel out, a debt in one direction may correspond to a credit from another, and even debts owing to the United States can be set against credits due from other countries, the United States can point to no compensating circumstance, as they are creditors only. The strength of the United States does not consist merely in their being general creditors, but in the fact that they are the most important creditor.

The War Debts of European States to the United States amount to the enormous total of twelve milliard dollars, principal and interest; that sum constitutes moreover, the great bulk of the total of the Inter-Allied Debts. When it is added the United States has remained the most important financial market in the world for the issue of foreign loans, it will be clearly appreciated why the attitude of the American Government has had a decisive influence on the development of the question of War Debts. That attitude was clearly defined during the War and especially toward the end of the struggle by the American Government, which decided that War Debts ought to be paid. Up to the present a great number of arguments have been adduced in favour of this course. I will emphasise here that which to my mind is the most important and which is more often mentioned by American officials with respect to international engagements. The loans have been contracted on the strength of signatures solemnly appended. If the signatures are not honoured, where will be the sanctity of engagements? What will become of public credit? What confidence will there be in a country which does not adhere to its undertakings? Who will trust it in the future, and who will offer it a loan since no engagement is binding? For these reasons it is considered in American official circles that the payment of War Debts is as much in the interest of the debtors as in that of the creditors. That point of view has prevailed in all the States, debtors as well as creditors, and you have seen how Great Britain in 1923, first, and, after her, various other States concluded an agreement for the settlement of War Debts to America.

At the invitation of the American Government we sent a delegation in April, 1924; but it was only charged with explaining to the American War Debts Commission our economic and financial position and the reasons which prevented us at that time from undertaking the settlement of the War Debts. The Commission noted our statement, but at the same time expressed the desire that our Government should present proposals as soon as possible for the settlement of the question. Since that time we have endeavoured to draw up proposals, and now that, thanks to the efforts of our people and their spirit of sacrifice, we have succeeded to some extent in improving the financial situation of the country and have assured a Budget equilibrium, we have fallen in with the request of the American Government in sending last January a special delegation, over which I had the honour to preside, to negotiate with Washington the question of the War Debts. The time appeared favourable, seeing that the Belgians had obtained in August, 1925, much more favourable terms than those conceded to Great Britain in 1923, while the Italians had obtained in November, 1925, still better conditions than those of the Belgians.

The Yugoslav Mission.

I can tell you that we were received with sympathy at Washington. The American Commission studied our memorandum with great care, and examined with good will the arguments that we advanced. The discussion regarding our debt is now entirely completed. It only remains to affix the signatures to a document in which our points of view have been met. The signing has been postponed owing to circumstances outside the control of the two Commissions. The American fiscal law and the question of the ratification of the Italian agreement having encountered strong opposition in the American Senate, it has been impossible for our negotiations to progress other than slowly pending the development of events in America. We have no reason to be surprised at that or to be impatient. We are not creditors receiving something from the United States, but debtors who will begin payments the moment that the treaty is signed. For the settlement of the debt it is necessary that we should have as much time given us as possible, just as is the case with those who are our creditors.

It would be a very different question if we had sought to avoid our engagements, if we gave the impression of being bad payers, or if the agreement could not be signed by reason of some fault on our part or of some kindred cause. Only in such a case could it be urged that the prestige of our country had been affected and that our mission had failed. This is not the case. As much by the personnel of the delegation which consisted of eminent authorities on economics and finance fully cognisant of the questions to be discussed, as by the term of our memorandum which received the eulogies of those who had to examine it, and the proposals which we made for a settlement, I can say with an absolutely calm conscience that our mission has succeeded, that it has accomplished its task with honour, and that the prestige of our country abroad has been enhanced since the negotiations.

The strengthening of our credit abroad and in particular in America is shown by the price of our 8 per cent. dollar loan of 1922. While during 1922 the price of the shares did not cease to fall rapidly, touching in January, 1922, the lowest quotation of 54, we have seen the rate progressively improve in 1923 and 1924. The price in 1925, it will be noted, was for several months 88, and reached 91 at the beginning of this year, at the time of the arrival of our delegation in America, and at the moment of my departure, as it is to-day, had risen to 93.5. This fact merits special attention, for nothing better illustrates the general credit of a country and the confidence felt in its economic and social position than the course of the Stock Exchanges.

In conversations that I had with the authorities in London and Paris I explained, as at Washington, our determination to effect a settlement. By mutual agreement the negotiations in London will be begun shortly.

As regards the Serbian pre-War loans, issued in France, the holders of the shares have asked, with the support of the French Government, that the payment of the coupons should be effected wholly or at least in part in gold. The question was too important, both from the legal and the financial point of view, to be decided in haste during my stay in Paris. Further, I was not even authorised to agree to such a solution, and I limited myself to hearing the views of the bondholders and to stating that I would present a report on the matter to my Government on my return. The Government will devote to this question all the attention that it deserves.

Returning to the results of the visit to America, England, and France, I can say that we can now regard the question of the settlement of the War Debts with much more data than before. We can now look forward to a final settlement, and, trusting in the spirit of justice

Digitized by Google

national history, we can justly anticipate that the annual payments that we shall have to make will not hamper our future economic development.

The 1926-27 Budget.

I have not introduced into the Budget before you any alteration as a result of my journey. We are able, therefore, calmly to devote ourselves to the discussion on the Budget for 1926-27. The estimates of expenditure and receipts for the year which have been presented to you by the Finance Committee, are as follows:—Expenditure, 12,279,899,631.70 dinars; Revenue, 12,504,392,616 dinars; surplus revenue, 224,492,984.30 dinars. That surplus has been realised thanks to the untiring and conscientious efforts of the members of the Finance Committee in collaboration with the members of the Government. It will be seen that zeal for economy has dominated the activities of the Commission, and I believe that the whole country will be grateful to the Skupshtina for this effort to economise, which forms one of the most important points in the financial programme of the Government.

A solid barrier has been set up against the rapid increase of the Budget—an increase which was manifested from 1919 to 1925. The Budget of 1926-27 marks a change. Compared with that of 1925-26 and taking account of the fact that the State Domains of Belye and Topolovatz do not enter into the Budget of 1926-27 just as the Budget of the Railways of the South did not figure in that of 1925-26, the present Budget, which amounts to 12,504,000,000 dinars, is in fact 317,000,000 dinars less than that of the previous year. The supplementary estimates which I shall present to you during to-day's session will not exceed the amount of the surplus of 224,492,984.30 dinars which the Finance Committee pointed out would serve to cover supplementary estimates for expenditure. The proposed amendments deal especially with the credits necessary for carrying out the laws recently passed by the Skupshtina. They are the laws regarding agricultural credit, for which 52,000,000 dinars will be required; the law for the establishment of a Trade Bank, 3,500,000 dinars; the law regarding those disabled in the War for the National Fund for that purpose, 2,000,000 dinars; and the law for the insurance of aviators, 500,000 dinars, or a total of 58,000,000 dinars. Other estimates provide the necessary reserves for bringing into force the new law regarding Civil Servants. These credits for meeting the increased cost of living total 70,000,000 dinars. The third part of these estimates provides for an increase of 60,000,000 dinars in the general reserve credits (totalling 150,000,000 dinars) which will considerably facilitate the application of the Budget. Lastly, there are estimates providing for the completion of Government buildings begun at Belgrade, Skoplye, Kavadar, Nish, Novi-Sad, and Dulcigné, which total 26,477,984 dinars. In meeting in this manner a considerable part of the country's needs, the Government has in no wise endangered by these supplementary estimates the Budget equilibrium. The expenditure is strictly limited to the anticipated receipts.

Although it may be said as a rule that in the matter of State finances expenditure is first determined and then revenue, that is to say, first the country's needs and then the means of meeting them, it is necessary in every Budget to take account of the extent of the revenue, so that this consideration has its influence on estimates of expenditure. If we examine the development of the revenues during the last three years we can point to a permanent and continued progress, which is the more significant, because at the same time the value of the exchange has appreciably improved, so that the increased revenue is more important than would appear at first sight. I will only cite as an example the revenues from direct and indirect taxation and from State Monopolies, leaving aside the revenues from the Railways, Posts and Telegraphs, Forests and Mines, and the State Domains, since these institutions only yield enough for their own needs and provide insignificant surpluses, if any, for the general needs of the State.

The trend of revenues from direct taxation with the additional receipts arising from the tax on business turnover and that for disabled soldiers has been as follows:—

1923	1,183,000.000	dinars
1924	1,446,000.000	„
1925	1,899,000.000	„

Customs receipts have been:—

1923	1,432,000.000	dinars
1924	1,371,000.000	„
1925	1,812,000.000	„

Receipts from the tax on consumable commodities have been:—

1923	592,000.000	dinars
1924	668,000.000	„
1925	786,000.000	„

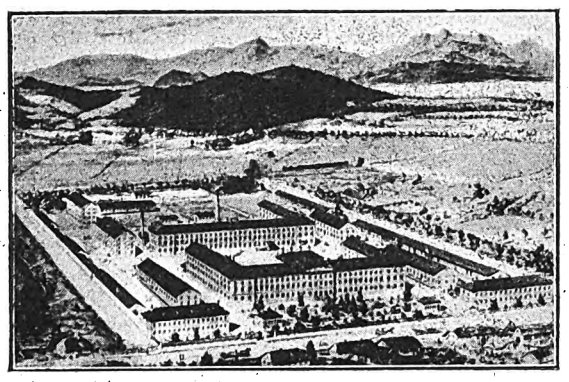
Receipts from other taxes have been:—

1923	832,000.000	dinars
1924	1,188,000 000	„
1925	1,186,000.000	„

Receipts from Monopolies have been:—

1923	2,008,000.000	dinars
1924	2,300,000 000	„
1925	2,466,000 000	„

As will be seen there has been success all along the line. This expansion of the State reserves proves beyond question that the amounts estimated in the Budget for the year 1926-27 will be fully realised. Consequently the totals on the expenditure side in the Budget do not represent pious aspirations but a programme which will be fulfilled. The policy regarding expenditure remains intrinsically the same as for the year 1925-26. As far as possible and within the limits of financial possibilities particular attention has been devoted to the construction of railways and roads, to education, agriculture, and national defence. It would be an exaggeration, however, to say that all requirements are satisfied; but the projects whose realisation has not been achieved will be carried into effect by decreasing within reason expenditure in directions where it is still possible to make economies to the advantage of more pressing national needs.



Stabilisation of the Exchange.

Thanks to the stabilisation of the exchange, the present Budget estimates are the more correct, so that our financial policy is placed on an assured basis. The rate of the dinar during the past year has been maintained with hardly any change with respect to the gold standard on the basis of 9.15 Swiss francs per 100 dinars. The policy of the stabilisation of the dinar, with slight improvements arranged at long intervals, has been crowned with success. It will be our policy in the future until the time arrives for the final reform of the exchange. We ought not to hasten that reform, for there could be nothing worse than to take such a crucial decision too soon. Peace and security are necessary for the economic position of the country. The War caused such upheavals that many years must still pass before all economic relations can be regulated. It is on that account that it is important not to touch the dinar, so that it may remain for a certain time at a fixed level without any artificial influence being brought to bear on its value. When this end has been attained and when we know the details of what we have to pay, and above all what we are to receive under the head of reparations, the moment will have arrived to approach the final solution of the reform of the exchange.

The interventions on the Bourse of the National Bank, in agreement with the Minister of Finance, had as their object the prevention of violent fluctuations in the exchange either in favour, or to the detriment, of the dinar. When offers of exchange are intense, the National Bank buy to resell on the market on the days of heavy demand. That is a sane policy of stabilisation that nearly all the European States strive to carry out, for a stable exchange is the ideal of all exchange policies. We see similar action by the greater part of the States of Europe, usually through the intermediary of the

State Tobacco Factory in Liubliana.

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration, — BELGRADE —

issuing banks, not only in the countries of depreciated exchanges but also in those where the exchange is on a parity with gold, as for example in Switzerland. The report of the National Bank of Switzerland for 1925 is very illuminating in this respect. This report has much in common, from the point of view of exchange policy and the methods of carrying it out, with that of our National Bank, though the two have been drawn up at the same time independently of one another. In the two reports reference is made to the struggle for exchange stabilisation.

When we see that this is characteristic of the entire world, and especially when we read and hear that abroad our exchange is pointed to as an example, we ought to ask ourselves whether it is fitting to reply seriously to those who here in our own country to-day try to criticise this exchange policy.

When, three years ago, we began to intervene on the Belgrade and Zagreb Bourses, through the intermediary of the National Bank, the objection was advanced that this undertaking would lead to a catastrophe, for, it was maintained, the National Bank was not prepared for this task. Certain experts wrote then that it was necessary to follow the line adopted by Czecho-Slovakia, who possessed for this purpose a financial section at the Ministry of Finance. However, after a very short period our National Bank has become a decisive factor and can be termed to-day the dictator of the rates on the Bourse. On the other hand, in Czecho-Slovakia, they are proceeding to-day to close down the banking office of the Ministry of Finance and have created a new National Bank, in other words they have changed their policy under the direction of the most eminent Finance Minister they have ever had in Czecho-Slovakia, M. Englis.

These are the facts which indisputably prove that we are working on the right lines. The improvement of the dinar has already brought about a considerable fall in prices, which means, of course, a decline in the cost of living. Wholesale prices reached their maximum in 1924, when the index figure was 2,016 as against 100 in 1913. The figure for 1925 fell to 1,804, so that prices in 1925 were below those of 1924 and those of 1923. The mean figure for January was still lower, being 1,596. Thus the cost of living is now 16 times above the pre-War level, while in 1924 the proportion was twenty times. The improvement of the dinar is shown also in the fact that the current and deposit accounts at the banks are increasing. The country's economic life cannot fail to gain from this development, although it would be premature to speak of an abundance of money here, when the rate of interest on loans at the principal banks varies from 14 to 20 per cent. But the improvement of the dinar has restored not only confidence in our national exchange, but also faith in the strength and greatness of our beautiful country. Not the least merit of this exchange policy is that it has been pursued for three years.

However, it will not be denied that difficulties of an economic and financial nature exist in our country. But look around you and ask yourselves whether these difficulties do not exist elsewhere. Are we in a worse position, or are there countries where the difficulties are greater than here? I shall not answer these questions here, but those who have been abroad and all at least who have read what goes on elsewhere will be able to give an accurate reply.

Of the handicaps with which we have to deal, reference must be made to two in particular:—(1) the fall in the prices of agricultural products; (2) the inequality of taxation. The favourable influences during and after the War affecting agricultural products no longer exist. More wheat was produced in 1925 than before the War. Naturally, therefore, prices have fallen to the pre-War level and even below that level. Our country is not an isolated State. Linked, as we are, by the Danube to Central Europe and by the Black Sea and the Adriatic to the whole world, the prices of wheat follow in this country a course parallel to the world prices, and if we

Digitized by Google

watch, for example, the movement of wheat prices on the markets of Chicago and Novi-Sad, we notice a striking similarity. But the fall in prices affects the whole mass of our people. When the peasant suffers, the merchant, the artisan, the manufacturer, and the State itself suffer. It is a problem which it is necessary to consider very seriously in order to undertake the most useful measures.

The unification of taxation is another important problem. Direct taxes are paid in an unequal manner in the different provinces, and they are also unequal in their incidence on the various social classes. Fiscal changes have reached their limit. It is necessary to proceed with reform with as little delay as possible. The proposals are already prepared, and will constitute one of the most important legislative works of the Skupshtina.

If we find ourselves confronted with certain difficulties we have at our disposal all the means to surmount them. The spirit of sacrifice of our people, their unwearying energy in work, and the agreement between the two strongest Parliamentary groups are assurances that we shall overcome these obstacles and that we shall lead our gallant people to a still brighter future.

ECONOMIC CONDITIONS IN YUGOSLAVIA.

During the last few weeks the daily papers throughout the S.H.S. Kingdom have been writing of the "economic crisis" in the country. The expression, however, is exaggerated, for the economic life of this country is not suffering from any really destructive crisis, but is rather in a state of relative stagnation after a period of rushing activity in the years 1920 to 1924. But in order that it may be clear why so much is being talked of the economic crisis, certain phenomena and facts which have led to such conclusions and assertions may be analysed.

The most alarming fact is that a number of firms have either failed or are in process of bankruptcy. But this fact, which at first sight seems to prove the existence of an economic crisis, has a different explanation. In the years from 1919 to 1924 there was a constantly progressive inflation of the paper currency. The value of the money unit constantly fell. During those years many business undertakings grew up on credit simply on speculation of the future fall of the dinar. When inflation stopped and the value of the dinar began to improve, many of these speculative schemes were spoilt and some of the enterprises doomed to ruin. Some of them tried to maintain themselves by means of compulsory settlement with creditors, in accordance with a temporary law which strongly favoured debtors, and left the creditors practically at their mercy. But the public desire for orderly credit conditions demanded that this temporary legal arrangement should be annulled, and this was done at the end of last year. The normal process of bankruptcy, which is now revived throughout the country, is very strict as regards debtors and permits creditors to force bankruptcy proceedings on their debtors quickly and easily. Consequently there has been a movement to the other extreme, and creditors have hurried to liquidate enterprises which obviously have no sound economic basis, but were rather the ephemeral creations of unhealthy speculation. The failure of such firms cannot, therefore, be called a crisis, but implies indirectly a strengthening of home industries and their settlement on a proper footing.

The fact that economic life is becoming more healthy and rational is evident in many respects. The exaggerated optimism which prevailed in the first years after the War and brought about an exaggerated extension of business and industrial undertakings, and which was encouraged by a series of fruitful years and high prices of agricultural products on the world markets, a fact of essential importance to a country primarily agricultural, like Yugoslavia, has been dealt a serious blow by this year's low corn prices in Europe. The harvest was excellent last year also, but the unsteadiness of prices kept products from the markets and prevented exporters from buying. Producers are still depressed by the low prices on the corn markets and under the influence of this depression are reducing expenditure. This has had an effect on the business of importers, who, reckoning on the rich harvest, bought in advance large stocks of goods for sale among all classes. Now most of the importers have enormous stocks of imported goods in which they have sunk large sums of money and credit, and on which they have had to pay in advance high import duties and State taxes; these they can now sell only gradually. This is making them impatient and nervous, and it is from among their ranks that the assertions most frequently come that the economic life of the country is in a state of crisis.

Although considerably lower than in previous years, the prices of agricultural products still leave agricultural production quite profitable. Considering, too, that 85 per cent. of the population of the country is engaged in agriculture, that such a large proportion is engaged in profitable occupations and that they can keep employed at full capacity the industry and commerce of the State, on which only 8 per cent. of the people live, then it is evident that there can be no question of an economic crisis, but rather of a calmer economic period, which allows no extravagant speculation, but which to many unrealised hopes may seem somewhat cruel.

On the money and credit markets a greater liveliness and a greater demand for turnover capital are noticeable. In the autumn of 1925 the market of this country was characterised by an abundance of ready money idle for a long time in the form of deposits at the banks. The same was the case with many private individuals, who wanted positive assurance of the trend of events before investing. The constant rise of the dinar encouraged still further this policy of abstinence, because to keep a stock of ready money often meant greater gain than a turnover in goods. Consequently the deposits at the National Bank of the S.H.S. Kingdom stood for a long time at almost a milliard dinars, and at the Postal Savings Bank at from 400 to 500 million dinars, while the private banks were at some times so flooded with deposits on short term that they stopped accepting them, because there were no means of investing them. During the last three months this abnormal money abundance has ceased, and as a result of the stabilisation of the currency and the increase of business on the corn markets capital is being absorbed in business again. On March 15 deposits at the National Bank stood at 296 million dinars, and at the Postal Savings Bank at 271 million, while the other banks are returning to a normal state of affairs with a perceptible demand for money. Business, therefore, is becoming more lively, a phenomenon which can hardly be considered a characteristic of an economic crisis.

Prof. Milorad Nedelykovitch.
General Director, Postal Savings Bank.

THE MONOPOLY ADMINISTRATION.

For the first ten months of the fiscal year (April to March) the Yugoslav Administration shows receipts amounting to 2,138,636,090 dinars, as compared with 2,015,617,309 dinars for the period April 1, 1924, to January 31, 1925, and an estimated revenue of 1,929,666,661. To the total the Tobacco Monopoly contributes 1,437,643,830 dinars; salt 320,253,232 dinars; kerosene, 132,236,110 dinars; matches, 121,536,983 dinars; cigarette paper, 120,217,720 dinars.

The statement of revenue and expenditure issued by the Monopoly Administration for the ten months ending January 31, 1926, was as follows:—

REVENUE.	Dinars.
Monopolies (January) ...	199,707,811
" (Apr.-Dec.) ..	1,938,998,279
Customs (January) ...	102,697,161
" (Apr.-Dec.) ...	1,392,564,306
Stamps & Duties (January)	90,468,033

THE FOREIGN COMMERCE OF YUGOSLAVIA.

Imports during 1925.

Imports into Yugoslavia for the last two years have been as follows:—

	Tons.	Gold Dinars.
1924 ...	1,127 686 ...	578,588,568
1925 ...	1,513,862 ...	769,145,759

During the first six months of 1925 particularly large quantities of goods were imported in order to avoid the increased Customs duties imposed by the new tariff which came into operation on June 20 with the general Customs revision.

The *chief articles* of import in 1925 were:—

	Value Gold Dinars.	Per cent.
Cotton fabrics	121,019,285 ...	15.74
Woollen	54,172,494 ...	7.04
Cotton yarn	34,869,721 ...	4.53
Machinery and apparatus	32,414,282 ...	4.22
Various iron goods	30,832,651 ...	4.01
Raw coffee	24,397,960 ...	3.17
Coal, all kinds	23,618,138 ...	3.07
Flour	20,059,921 ...	2.61
Hides of domestic animals	17,279,278 ...	2.25
Raw cotton	15,242,273 ...	1.98
Vehicles	13,462,678 ...	1.75
Kitchen salt	12,544,270 ...	1.63
Unwrought and half-wrought iron ...	10,572,951 ...	1.37
Petroleum	10,557,833 ...	1.37
Shelled rice...	10,246,450 ...	1.33
Electro-technical goods	9 566 604 ...	1.24
Sacks	9,208,636 ...	1.20
All vegetable oils	8,572,101 ...	1.11
Sheet iron	8,518,126 ...	1.11
All kinds wheat, rye and spelt ...	8,010,703 ...	1.04
Rails, rly. material for bridges, roofs and workshops	7,964.172 ...	1.04
Footwear, not sandals and topboots	6,682,146 ...	0.87
Ready-made woollen goods	6,674,268 ...	0.87
Cotton gloves and hosiery	6,177,029 ...	0.80
Sole and similar leather	5,654,650 ...	0.74
Other goods	260,827,079 ...	33.91
	769,145.759	100 p.c.

The importation of flour is abnormal, because, as an agricultural country, Yugoslavia exports flour. The imported product comes from Italy and America for use in the Dalmatian coastal districts, where the high railway freights make it difficult for flour from the corn-growing parts of the Kingdom to compete with the oversea product.

In 1925 the chief countries from which imports came were:—

Country of Origin.	Gold Dinars.	Per cent.
Italy	144,473.675 ...	18.78
Austria	140,966,893 ...	18.33
Czechoslovakia	136,981.204 ...	17.81
Germany	76,126 806 ...	9.90
Great Britain	62,668,639 ...	8 15
Hungary	38,698,899 ...	5.03
U.S.A.	30,009,904 ...	3 90
France	28,392,555 ...	3.69
Roumania	27,733,286 ...	3,61
Greece	22,956,848 ...	2.98
Holland	14.015,486 ...	1.82
Brazil	8,704,912 ...	1.13
Switzerland	7.426,223 ...	0.97
Poland	6,515,387 ...	0.85
India	6,429,038 ...	0.84
Belgium	3,716,539 ...	0.48
Argentine	3,069,386 ...	0.40
Tunis	1,656,189 ...	0.22
Denmark	1,313,739 ...	0.17
Bulgaria	1,002,072 ...	0.14
Other countries	6,228,072 ...	0,80
Total	769.145,759	100 p c.

Balance of Trade.

As is well known, all parts of Yugoslavia suffered economically during the European War, and especially the chief and central province of Serbia. During the long occupation and their retreat, the enemy destroyed the railways and plundered the machinery of the little industry which the country possessed. Consequently, although an agrarian country, Yugoslavia had immediately after the War to import even cereals. Being deprived of imported goods and desiring to assure the feeding of her population, she was obliged during its first two years to favour imports and prevent export. The economic recovery of the country was a slow and difficult process, partly because its production had been so seriously damaged by the War, and partly because the country was in need of new political arrangement and organisation. By 1924 a favourable trade balance had been obtained. The movement of foreign trade has been as follows:—

Year	Imports Tons	Imports Million Gold Dinars	Exports Tons	Exports Million Gold Dinars
1919	155,170	712.2	282,679	164.0
1920	439,563	746.9	915,186	284.6
1921	733,638	538.1	1,583,658	321.2
1922	1,232 414	452.3	2,213,881	259.2
1923	1,123,019	493.4	3,025,914	477.9
1924	1,127,686	578.6	3,915,700	671.3
1925	1,513,862	769.1	4,398,466	782.4

The relative percentage of the value of exports to the value of imports during the same years was as follows:—

Year	1919	1920	1921	1922	1923	1924	1925
	23.03	38.10	59.69	57 29	96.56	116.02	101.73

Exports in 1925 were rather less than had been expected, chiefly because of the fall in the price of agricultural products on the world markets, and also because of the rise in the value of the dinar in 1924. The tonnage of exports, however, is constantly rising, a fact which shows that the country's production is strengthening and developing.

The School of Slavonic Studies and the Czech Society of Great Britain will be at home on Tuesday, May 4, at 8.30 p.m., at the School of Slavonic Studies, Malet Street, Bloomsbury, to welcome Dr. Leosh Janachek.

In order to ease the financial position of the peasants who are harassed by usurers, the Bulgarian Government has put 100,000,000 levas (£150,000) at the disposal of the Agricultural Bank to be lent to farmers during the coming season.

THE NATIONAL BANK OF THE S.H.S KINGDOM.

THE WEEK'S FINANCE.

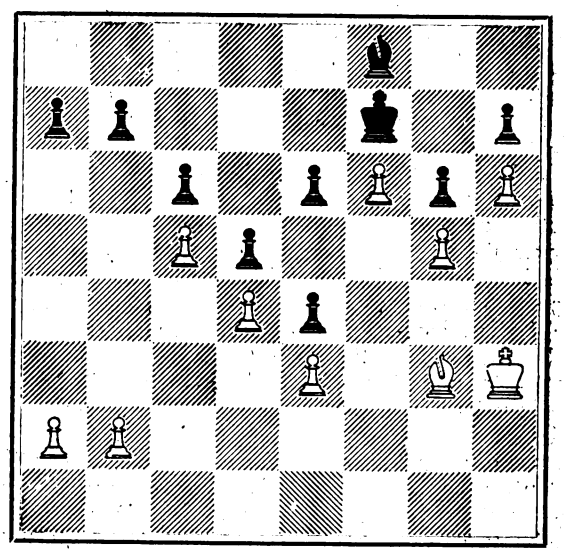
(By Our Financial Expert.)

London, April 27.

Certain sections of the Stock Markets have this week responded to the satisfactory financial features of the Budget; the gilt-edged market in particular improved on the sound policy adopted by Mr. Churchill in regard to the sinking fund, which is raised from £50 to £60 millions, and the termination of the Trade Facilities Act. The coal crisis, on the other hand, which has now reached its acutest stage, has prevented any general expansion of business. Markets, however, are in a thoroughly sound condition and dealers are carrying no large lines of stock on their books. Consequently, should a strike be called no collapse in prices is likely to follow. A little marking down in certain directions might perhaps be expected, but nothing more. On the other hand markets are now in a position to respond to any favourable influences that may present themselves, and should an eleventh hour settlement in the coal dispute be arrived at a sharp rally in prices in many sections could be confidently anticipated. A factor which has contributed to the present healthy conditions of markets is undoubtedly the practical cessation of new issues, for which the coal crisis is probably mainly responsible. One of the effects of this has been to allow the heavy amounts of script with which underwriters of some recent issues were left, to be re-absorbed by genuine investors. As soon as the coal uncertainty has been removed the output of new capital issues will doubtless expand once again.

Industrial Company Profits.

In its quarterly analysis of the profits of industrial companies the *Economist* shows that there was an increase in the profits disclosed by 460 companies during the past quarter of over £3½ millions or 7.6 per cent. All classes of company have not shared equally in this increase. For example, while 41 rubber companies show an increase of 253 per cent. and seven motor and cycle companies an increase of 31 per cent., 25 iron coal and steel companies recorded a decrease of 32 per cent., and six shipping companies a decrease of 6 per cent. Of the aggregate profits of £51½ millions disclosed during the past quarter 58.9 per cent. went to ordinary shareholders, and 18 per cent. to preference shareholders, leaving 23.1 per cent. placed to reserve or added to balances carried forward. The motor group shows the most conservative distribution, less than one-third of profits going to shareholders. The rubber companies distributed over 80 per cent. of profits to ordinary shareholders and reserved 17 per cent. The ratio of total profits to ordinary and preference capital works out at 11.4 per cent for the past quarter, which compares with 10.9 per cent. for the whole of 1925. The average rate of interest paid on debenture capital was 4.65 per cent., and the average rates of preference and ordinary dividends 5.4 and 10.9 per cent. respectively. The latter compares with 10.5 per cent. for the first quarter of last year and 10.3 per cent. for the whole of 1925 The rubber group shows an average ordinary dividend of 20.8 per cent. against 6.1 per cent. for the previous year. The motor and cycle group pays 3.9 against 2.5 per cent.



Japan's Progress.

One of the outstanding features of the recent past is the emergence of Japan. Almost at a bound she has become a trading power, and, in a remarkably short space of time, has successfully adopted the economic methods of the West. But she is not content with things as they are, for her business men and students are making a first-hand study of the West in ever-increasing numbers. That her hold on Western methods is not light and that she has tremendous energies is partly shown by the extent and rapidity of her recovery from the great earthquake disaster. Thus, given freedom from exceptional obstacles, it cannot be doubted that she will continue to make a large measure of economic progress.

Bearing these facts in mind, it is somewhat remarkable that her leading corporation stocks should give so high a yield. At any rate, it provides an opportunity for the investor to acquire good stock on favourable terms, Thus the City of Osaka—which is the Manchester of Japan—5 per cent. Sterling Bonds (1919-39) can be obtained to yield about £8 per cent. The City of Yokohama 5 per cent. Sterling Loan (1917-37) yields only a little less, at £7 18s., while the City of Tokyo 5 per cent. Loan (1912-52) gives £7 10s. There is a lower return on the City of Nagoya—the Liverpool of Japan—5 per cent. Sterling Loan (1917-43), which yields about £6 11s. It will be noted that the interest in each case is payable in sterling, so that fluctuation in the rate of exchange does not enter into the question. Taking all the factors into account, it seems that these securities are well worth the attention of investors who are looking for high-yielding issues for "mixing" purposes.

COMPANY NOTES AND REPORTS.

KASSALA COTTON.

The report of the Kassala Cotton Company, Ltd., for the year ended December 31, 1925, states that during the first half of the year a labour force of some 800 men was continuously employed upon the improvement and extension of existing irrigation works, and upon the excavation of a new canal with brick head-regulator at Mitateib. Both banks of the Magauda canal were protected with dry stone pitching for nearly three kilometres west of its head-regulator; and brick bungalows for the staff and sheds for storing cotton-seed were erected.

The company's first crop of cotton, grown from the 1924 flood and picked and marketed during the first half of 1925, amounted to 27,177 kantars of seed cotton. Approximately half the crop was sold locally at Port Sudan in public auctions; the balance was sold in Liverpool. Good prices were realised in both cases.

The Gash flood of 1925 arrived at Kassala on July 18—three weeks later than in the previous year. The period of flow was 68 days—only 4 days more than the minimum period of which there is any record—the discharge of water being 56 per cent. of the annual average discharged over the previous 15 years. The area irrigated sufficiently to carry a crop to maturity and sown during the autumn amounted to some 12,000 acres—as against 16,000 acres last year. Latest reports indicate a satisfactory crop on this reduced area.

In the latter half of the year wells were dug at Mekali, pumps and a water tower were erected, and some 32 kilometres of pipeline were laid, so that drinking water is now available in the Aroma and Magauda areas. This installation is working satisfactorily and is facilitating the operations of the company and of its tenants.

The Italian irrigation works in Eritrea were not far enough advanced at the date of the 1925 flood for any serious testing of that scheme to be made. These works are designed to irrigate some 30,000 acres, and are expected to be ready for the 1926 flood.

The profit and loss account for the year, after deduction of all outgoings, but before charging debenture interest, shows a net profit of £69,861 12s. 4d. Deducting from this debenture interest, £30,000, and the debit balance brought forward from 1924, £15,499 1s., there remains a credit balance of £24,362 11s. 4d., which the directors propose to carry forward.

EGYPTIAN MARKETS.

The report of the Egyptian Markets, Ltd., for the year ended December 31, 1925, states that the gross receipts from the cattle markets, etc., exclusive of slaughter houses, show an increase of £840 as compared with the year 1924, the total being £74,260 against £73,420. The gross receipts from the general markets for the year under review were £35,931 as compared with £35,516 for the year 1924, an increase of £415. The net receipts from the slaughter houses worked during the year were £1,086 against £1,222 during 1924, a decrease of £136. Forty slaughter houses have been worked by the company during the year, none having been taken over by the Government during that period. The expenses in the trading account show an increase of £798 under rents, salaries and wages, and maintenance and repairs of markets. The net profit derived from the sale of miscellaneous articles and sundries was £6,603 as compared with £8,921 for the previous year, a decrease of £2,318.

The net revenue from all sources for the year 1925 amounted to £71,320 17s. 7d., as compared with £71,295 14s. 7d. during the previous year, an increase of £25 3s. After deduction of the amount of £29,803 2s. 2d. which it is estimated will be required to meet payment of the Government's share of profits, for 1925, a balance of £41,517 15s. 5d. remains, which, with the amount of £11,961 18s. 11d. brought forward from 1924, makes a total of £53,479 14s. 4d. to be dealt with. The fixed charges comprising the annual premia for the amortisation of the share capital and debentures and debenture interest amounted to £6,538 1s. 6d. The sum of £5,292 11s. 3d. has been transferred to general reserve (which includes provision for certain contingent liabilities) and a balance of £41,649 1s. 7d. remains available for distribution. The directors recommend the payment of a final dividend (No. 43) on the ordinary shares for the year ended December 31, 1925, of 5 per cent., and a bonus of 4 per cent. making with the interim dividend of 5 per cent. paid in November, 1925, a total of 14 per cent. for the year, absorbing in all £24,458 and in accordance with the terms of the memorandum of association of the company, and subject to the settlement of the proportion of profits due to the Government the payment of a dividend (No. 16) on the deferred shares at the rate of £17 9s. 1 19-30d. per share for the year 1925, which will absorb £5,237 0s. 10d. and leave a balance of £11,954 0s. 9d. to be carried forward, which balance is also subject to the settlement above referred to.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.
MODERATE FARES.

SPECIAL NOTICE.

New T.S.S CALIFORNIA, 17,000 tons, carrying 1st, 2nd and 3rd class passengers, sails from Liverpool October 26 Marseilles November 1. All 1st and 2nd class staterooms are fitted with punkah louvres and with fans. This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Liverpool May 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—M.v. Somersetshire for Port Said, Colombo, Madras, and Calcutta (London, May 1).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, May 5).

British India Line.—S.s. Hatimura for Bombay and Karachi (London, May 1); s.s. Golconda for Colombo, Madras and Calcutta (London, May 8).

Cunard Line.—S.s. Phrygia for Gibraltar, Malta, Patras, Piræus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Swansea May 4, Glasgow May 6, Liverpool May 8); s.s. Sea Victory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Fiume, Venice, and Trieste (also Brindisi, Ancona, Corfu, and Gruz if sufficient inducement offers) (Liverpool May 13, Swansea May 18); s.s. Sea Glory for Gibraltar, Algiers, Malta, Patras, Piræus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool May 11, Swansea and Glasgow same date).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 1); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 21).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, May 14); s.s. Nagoya for Colombo, Madras, and Calcutta (Liverpool, May 15).

Prince Line.—S.s. Cyprian Prince for Syrian Coast and Cyprus (Manchester, April 30).

Complete equipment for a modern paper mill, to be erected at Aigion in Greece, has been shipped from Gothenburg. The chief part of the paper machinery has been manufactured by Karlstads Mek, Verkstad, the steam plant by Joukopings Works and the electric motors by Luth and Rosens, Electric Works, Stockholm.

Motors and Motoring.

By G. B. B.

There are few bodies which are more energetic than the Commercial Motor Users' Association. It is as well that they should be up and doing as it is evident that the commercial motor trade is about to enter on a period of unexampled prosperity. The "disposals" vehicles are finished with; a large number of the vehicles in use by smaller owners are within a stone's throw of the scrap heap, and many of the better known makers are beginning to call the attention of the motor user to the excellence of their products. This is a striking departure, as hitherto makers of commercial motor vehicles have been content, with few exceptions, to advertise to one another! This new departure should bring business, and if our makers will also allow the army of prospective users in the Near, Middle, and Far Easts also to hear something about the good qualities of the British made lorry and delivery van, what might be called a "boom" would almost certainly result.

I was talking on this subject of the motor trade of the country a few days ago to a leading American who is conducting a trade mission in this country. In other words he is looking round to find out what he can about the weaknesses of our trade, and will, eventually, make a report to the motor manufacturers of America. He seemed to be dazed at the success of our light car builders' policy; to be astonished at the number of British light cars to be seen on the streets; to be despondent regarding the prospects of getting American light cars into the British market. He hinted at a policy of intensive advertising; perhaps a joint effort on the part of American light car builders, but I explained that I felt the effort would be useless. "You see," I said, "we in England do not take too kindly to advertising; our British manufacturers never advertise except in their trade papers, which no one sees but themselves, and our public are not used to it. You Americans shock us, rather, with your advertisements; you give us details of the insides of your cars, and show us pictures of intimate details regarding transmission and power units. It seems to us indelicate. We are not used to it. Our makers never tell us anything of the kind. They just say, in due course, that they are ready to sell a car. Then all the patient people who have been waiting for months line up and look hopeful. One of them gets the car, and the others are placed on the waiting list. You must not think that we, as prospective customers, are ever told anything about the cars we may eventually be able to buy."

As a matter of fact my picture was not badly overdrawn. I asked seven motorists to-day whether certain light cars had a two or a four cylinder engine, and none of them knew. I followed by asking if a certain big car had four or six cylinders; with what make of lighting and starting set it was fitted; whether it had side-by-side, sleeve or overhead valves, and what was the size of its tyres, and again no one could say. Yet, I suppose, over there, everyone knows all about Studebakers, Overlands, Oaklands, Buicks, Essex Sixes, and all the rest.

Commercial Motor Costs.

A few days ago I was talking over the question of the cost of commercial motor transport with a large user of heavy lorries and light delivery vans, and we went as closely as possible into details. As a result we decided that the best way would be to issue a book or set of cards, for each vehicle, giving its number, make, type, and the year it was put into service, together with any other information likely to be of value. There would have to be compiled a list of wages, insurance costs and other items pertaining to the remuneration of drivers and garage helpers, cleaners, etc. A card, or a space in the book, would be reserved for entering up details of petrol consumption, with the price paid per gallon at the date each supply was taken in. Another card, or book division would contain entries relating to oil and grease consumption and cost, whilst another would contain data relative to tyres, tubes, repairs, and miscellaneous items; whilst the last card of book division would be kept for items dealing with the cost of insurance, depreciation allowance and so on. The speedometer readings would be entered against the petrol supplies on the petrol card, and from this we should keep accurate records of mileage, total cost per mile, and cost per mile exclusive of wages and expenses of drivers and garage assistance. Other cards would give weights and values of freights carried, and from these the exact cost per ton mile for carrying and the exact amount received per ton mile for freights could be worked out.

Mysterious Marks.

Many British owners of American built commercial vehicles have been puzzled by certain mysterious marks on the engine flywheel. There seems, at first sight, no reason for their existence, and some owners have quite erroneously arrived at the conclusion that some idle fellow in the factory, killing time, just stamped his initials and those of his friends on the rim of the wheel. That is not the true explanation.

The marks, curiously enough, are timing marks. If the average British engineer-driver upsets his timing in any way, he just proceeds to re-time his engine, and finds little or no difficulty in so doing. Evidently the average American regards timing as something that is full of difficulty, and so the manufacturer makes things as simple as possible for him by providing a pointer as "datum" mark near the flywheel and putting timing marks where they cannot be missed.

Amongst these flywheel markings "I.C." means "Inlet closed," and when that mark has exactly reached the pointer the inlet valve on some certain cylinder has just bedded down on its seat. Similarly, "I.O." means that when that mark is turned to the pointer, the inlet valve will have started to move off its seat. "I.O." therefore, means "inlet opens" and not "inlet opened." It is as well to remember this, as there is a substantial difference. "E.C." means that the exhaust valve on that particular cylinder should have just completely closed when that mark reaches the pointer, and amongst other marks which

may be met with on the flywheels of American engines are "U.D.C." which means "upper dead centre"; "T.C." which stands for top centre; "T.D.C." which means top dead centre; "L.C.," which means lower centre; "L.D.C." which means lower dead centre; "C." which means centre, either top or bottom; "IGN," which means ignition—when this mark on the flywheel reaches the pointer, the spark should just be taking place in the cylinder to which the marks refer. Usually, these marks bear, after them, a figure from one to four which shows which cylinder is meant. There is also sometimes found the word "centre line" which is a mark used for either top or bottom dead centres. The numbers, in a six-cylinder car refer to two cylinders; thus "T.C. 3-5" means that when that flywheel mark reaches the pointer, the pistons in cylinders 3 and 5 are at the top dead centre position of the stroke.

Using Chains.

I have been struck with the advice given by an authority to commercial motor vehicle drivers, namely that if you are going to put chains on to prevent slip, do the thing thoroughly and put a full set on each back wheel. He recommends the use of chains continuously in snow or mud. In the absence of chains I have found a good substitute, that will provide sufficient grip to get the car out of any ordinary bad patch, to be pieces of rope or even of lightly twisted canvas, passed round and round the tyre and fastened to the spokes.

Messrs. Walter Judd have removed their offices from B. F. and C. House, 81, Gresham Street, to Leith House, 47, Gresham Street, E.C.2.

A Reuter message from Bucharest states that the Cabinet has decided to reduce the taxes fixed by the previous Government on textiles and metals. It is expected that the entire tariff will soon be revised.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended April 15 states:—

Although the turnover of business has been only moderate, the future market during the week under review has been firm. The week's summary of price movements is as follows:—Sakellaridis: May, 30.48 dollars, 0.88 dollars up; July, 29.45 dollars, 1.20 dollars up; November, 28.88 dollars, 0.80 dollars up. Ashmouni: April, 21.80 dollars, 1.05 dollars up; June, 22.05 dollars, 0.87 dollars up; August, 22.20 dollars, 0.87 dollars up; October, 22.20 dollars, 0.70 dollars up.

The better tone may be attributed to a certain amount of purchasing by exporters against forward sales to spinners. The quantity bought has not been large but the mere fact that after so many weeks of inactivity, the exporters have again commenced to use the futures market, has been sufficient to induce some optimism.

The demand from abroad has been more or less equal for Sakel and Ashmouni; it is the difficulty of quickly buying the spot cotton required which has induced the export houses to re-enter the futures market. This difficulty of buying on the spot market may, in view of the heavy exising stocks, seem somewhat anomalous, but it is nevertheless a fact, and every day it is becoming more and more difficult to obtain good stapled Sakellaridis whilst, as regards Ashmouni, the quantity of Fully Good Fair and below—the grades most asked for at the moment—offered for sale is almost negligible. At the second April tender 2,750 kantar dockets were issued.

Government purchases during the week amount to about 500 bales Sakellaridis, for which prices from 32 dollars to 33⅞ dollars have been paid. Total purchases by the Government from the beginning of the season to date amount to about 43,300 bales.

We give below a Government report on the 1925-26 crop. The production figures given are, in our opinion, well below the reality, and we maintain our estimate of a total yield of about 8,000,000 kantars. It is quite possible that a part of the crop will be carried over up country into next season; in view of the fact, however, that the Government has authorised the continuation of work in the ginning factories until the end of June, we do not look for a large up-country carryover, and anticipate that a good proportion of the stock at present held in the villages—which we estimate at about 1,000,000 kantars—will come down to Alexandria.

The present statistical position is: stock Alexandria 2,138,000 kantars, stock up country (say) 1,000,000 kantars, 3,138,000 kantars against last year's figures at the same time of stock Alexandria, 1,206,000 kantars, stock up country (say) 396,000 kantars, 1,602,000 kantars. Of this stock of 3,138,000 kantars, about 375,000 kantars are held by the Government so that there remains a quantity of 2,763,000 kantars in the hands of exporters, merchants, banks and growers.

It is naturally very difficult to say with any degree of accuracy of what varieties this stock is composed, but we would estimate the Sakel proportion at from 50 to 60 per cent., and Ashmouni and other growths at from 40 to 50 per cent. The Sakel stock covers all grades, but as mentioned above, desirable cotton of good staple is scarce; as regards the Ashmouni stock, the bulk is composed of grades Fully Good Fair to Good and above. The week's receipts amount to 49,581 kantars against exports 74,199 kantars; the stock stands at 2,137,942 kantars.

Spot: Minet el Bassal has only been open four days this week. Business has fallen away somewhat and sales amount to about 6,700 bales, of which we estimate 3,100 bales Sakellaridis, 2,600 bales Uppers, 550 bales Zagora, 300 bales Pilion, 150 bales White and a few bales of Brown. Desirable cotton is at present very hard to buy. Sakel is not offered freely at all and Uppers, when offered, are only for sale at very high premiums. An exception to this is the top range of Sakel which can be bought fairly readily but for which there is very little demand. The present spot situation is very unusual and such as we have not encountered for some considerable time past.

Sakellaridis: A very moderate business has been done and all styles have been dealt in. Spot differences show very little change from last week.

Ashmouni and Zagora: A fair business has been done, principally in the medium and lower qualities, holders of which are still very difficult to deal with. Spot differences are about at last week's rates.

Brown and Pilion: A retail business has been done in Brown, whilst Pilion has met with a fair amount of attention from buyers. Spot differences for both varieties are at about last week's rates.

White: A fair business has been done. Spot differences are unchanged.

Crop 1926: In Upper Egypt the crop has started badly. Weather conditions were unfavourable for germination of the seed and for the seedlings, and as a result there have been very heavy resowings. This bad start does not, however, necessarily mean a poor crop; given favourable conditions during the next month, the crop can recover the initial delay. In Lower Egypt, conditions are relatively better, especially in the Central and North Delta districts, and the state of the crop may be considered to be nearly normal. The water supply continues to be below that of last year, but as the present needs of the crop are only moderate, this question is not as yet of great importance.

Government report on the 1925-26 crop: cotton ginned to March 10, Sakellaridis 3,255,328 krs., Ashmouni 3,003,251 krs., Pilion 172,268 krs., Afifi 23,278 krs., Nubari 1,188 krs., Divers 214,790; total, 6,670,103 krs., cotton unginned 873,309 krs., grand total 7,543,412 krs.
