NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

France and Syria.

French military operations in Syria have made considerable progress during the last fortnight. Sueida, the capital of the Jebel Druse, has been captured, and, although the insurgents declare that they were prepared for this loss, which will not cause them to abandon the struggle, it is evident that the all-important initiative in the fighting has now passed definitely to the French. Their casualties before Sueida, however, which can hardly be regarded as light—eighty killed and 370 wounded—suggest that the Druses are still capable of putting up determined opposition. In accordance with the policy that he has pursued from the beginning, M. de Jouvenel continues to show himself anxious to reduce as much as possible his military expenditure. The capture of Sueida was immediately followed by a proclamation on the part of the High Commissioner notifying a further instalment of self-government for Syria. This time it was the appointment of a Head of the Syrian State, pending the choice of a successor by a regularly elected Parliament, and M. de Jouvenel's nominee was Damad Ahmed Namy Bey, who was charged to select his own colleagues.

Syria's Gift Horse.

Syria's nominated Head is a Turk. He owes his title Damad (i.e., Son-in-law) to the fact that he married a member of the Sultan's family, actually a daughter of Sultan Abdul Hamid. From the point of view of personal qualifications, M. de Jouvenel's selection may have been quite justifiable; but he will presumably have been prepared for Syrian disappointment that a Syrian Head was not appointed and for the comment that France's concessions are not wholly sincere. The Syrians, however, will be well advised to accept what is given them, with a resolve to make the best of it. Damad Ahmed Namy Bey will, no doubt, know how to make himself more Syrian than the Syrians. He has lost no time in issuing a proclamation of his own in which he points out, very shrewdly, that the wisest means for the attainment of national aspirations is pacific negotiation. He then propounds as the fundamental basis of the new Syrian State a thirty-years' treaty with France similar to the Anglo-Iraqi Treaty, Syrian unity with free access to the sea, and, thirdly, the voting of a Constitution recognising the right of all Syrians to exercise independence. M. de Jouvenel has declared his readiness to accept the first two conditions but stipulates that the third shall be preceded by an undertaking on the part of the Syrian Parliament not to use force against its neighbours, but to resort to arbitration in case of differences. If the game were Bridge, and M. de Jouvenel and the new Head were partners, the onlooker would be forced to admit that they were playing well into one another's hands. A treaty for five years longer than the Anglo-Iraqi Treaty is obviously a piece of Franco-Turkish subtlety that will not appeal to the Syrians in the least.

Awaiting Events in Egypt.

The certainty of a Zaghloulist majority—or more strictly speaking an Opposition majority—robs the Egyptian elections of much of the excitement that would otherwise attach to them. Interest now will centre in the use that Zaghloul Pasha will make of his fresh lease of power. It is unlikely, even with the possibility of friction over the distribution of the spoils, that domestic affairs will occupy the whole attention of the new Parliament, and tilting at the Reserved Questions will still be regarded as the hall-mark of patriotism. The movement, however, will not, unless the political signs are at fault, receive this time so much encouragement from Zaghloul Pasha himself. Provided that the next Prime Minister is

Digitized by Google

prepared to make the government of the country his first concern and to relegate the baiting of Britain to the category of subordinate duties, his efforts to strengthen his own position and to hearten his followers by denouncing the British Government may do no great harm. It is by no means out of the question, however, that a wholly better spirit will prevail on the banks of the Nile. If Zaghloul Pasha should not feel equal to the burden of office, his nominee for the post of Prime Minister may decide that he can serve his country's and his own interests better by prolonging his own term of office instead of throwing down a challenge to Great Britain on academic questions, which have remained now *in statu quo* for four years without the least sign of harm or disadvantage to Egypt.

King Fuad's Projected Visit.

Nothing, it will be hoped, will happen to prevent King Fuad from paying his contemplated visit to London in June. His presence in this country will be an indication of the sincere desire of both peoples for an amicable understanding, however conflicting the points of view that the two parties now hold on the subjects that divide them. King Fuad's visit, indeed, has been all too long delayed for the establishment of that close touch which ought to have been a feature of the British Government's relations with the ruler of Egypt. By a happy inspiration King Fuad has reminded the British people that Egypt can find other than merely political links with Great Britain. In sending a handsome donation of five hundred pounds to the Shakespeare Memorial Theatre fund, His Majesty has called attention to an aspect of modern Egypt that is apt to be overlooked in the hurly-burly of post-War readjustments. A country that is conscious of Shakespeare's spell has a strong reason for holding that a permanent working arrangement with Great Britain satisfactory to the honour and interests of both countries should not prove beyond the capacity of its politicians.

Yugoslavia's War Debts.

By the irony of fortune M. Stoyadinovitch, the Yugoslav Minister of Finance who has been mainly responsible for the marked success of the country's financial policy, is no longer in office when the negotiations which he inaugurated two months ago for the settlement of Yugoslavia's indebtedness to the United States have been concluded. The terms secured by Yugoslavia are a vindication of the optimism that M. Stoyadinovitch has shown in dealing with the difficult problem with which he was confronted. Yugoslavia is not required to pay any interest for twelve years, and at the end of that period will begin by paying only an eighth of one per cent. For the last twenty-seven years of the sixty-two year period she is called upon to pay three-and-a-half per cent. The leniency or generosity shown by the United States in this adjustment will not be overlooked. At the same time Yugoslavia may congratulate herself on the fact that the virtue that she has displayed in maintaining a wise fiscal policy has met its reward in this as well as in other spheres. It is to be hoped that the political difficulties through which the country is now passing will not react unfavourably upon its finances. M. Stoyadinovitch, whose very able speech on the Budget we published in our issue last week, is understood to have resigned, because his insistence on national sacrifices, in order that Yugoslavia should pay her way, had impaired his popularity, and his indifference to politics had left him without much support in the Cabinet when M. Pashitch, who realised his value as a Finance Minister, had withdrawn from it. It will be well for the country, if the principle of a Finance Minister settling his policy by the country's needs and not trying to adjust them to the exigencies of party politics has been established as a permanent feature of Yugoslav administration.

Progress in Iraq.

The pessimists who are convinced that Iraq is nothing but a stretch of desert with the Turks at one end, the British pouring in gold at the other, and King Faisal in the middle, will be disturbed by the news that a new channel has been opened across the Fao bar to Basrah. On April 29 the Khor al Rooka channel was formally opened by King Faisal, and the occasion was rightly celebrated as an event of some importance in Iraq's history. It is still early days in that country, and the vagaries of the Tigris are a constant reminder that only by hard and unremitting effort can Iraq hope to win through to permanent prosperity; but with the port of Basrah not only paying its way, but also paying an annuity to the British, who made it what it is, with dues reduced sixty per cent. in four years, the signs are at least hopeful. The new channel, with a depth of twenty-four feet, will not only be a convenience to shipping, but should also, by the elimination of lightering, entail a reduction in the cost of transport to Iraq.

INDIAN PUBLIC SERVICES COMMISSION.

The India Office announces the appointment of the following to act on the I.P.S. Commission:—Mr. W. R. Barker, Chairman, Mr. Arthur Herbert Ley, I.C.S., Sir Philip Hartog, Hon. Saiyid Raza Ali, Diwan Bahadur Sir T. Dijaya Rothava Athaiyar, K.B.E., M.L.A., Commissioner of Indian Section, Wembley Exhibition.

The Government of India has decided to extend the appointment of the Tariff Board for one year, with effect from July 5 next.

Plague in a severe form has broken out in the Hissar district of the Punjab, and courts and offices have been closed for one month.

A fire broke out on April 29 in the goods sheds at the Southern Station in Bucharest. The damage done is estimated at 100,000,000 lei (£80,000).

Mr. Francis W. H. Smith, of the India Office, and Mr. Janardan Atmaram Madan, I.C.S., will act as Joint Secretaries to the Royal Commission on Agriculture in India, the constitution of which was announced on April 1. Mr. D. Clouston, C.I.E., Indian Agricultural Service, will be appointed as Liaison Officer between the Commission and the Government of India and Local Governments.

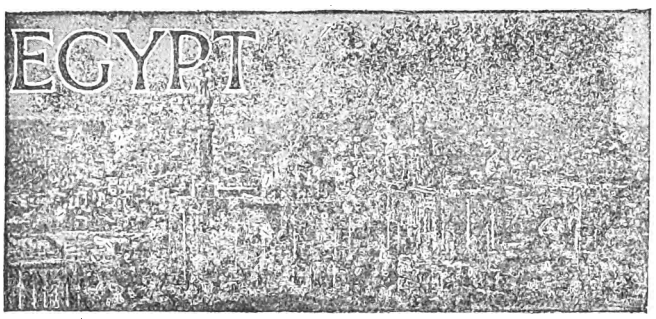
POLITICS v. WORK IN YUGOSLAVIA.

After a hectic recess of five weeks, during which there has been a change of Prime Minister and three rearrangements of the Cabinet, the Skupshtina reassembles this week. At present it is possible to do little more than chronicle the various changes that have taken place in the political situation, without attempting to explain them. It is, indeed, not improbable that the chief actors themselves have been responding to influences that they have not entirely understood, for the course of events eliminates the possibility that the situation has developed in accordance with the plan of anyone who is or was in the Cabinet. The main upshot of the crisis is that the Government under M. Ouzounovitch is able to meet the Skupshtina with a majority of the Chamber supporting it. Neither M. Pashitch nor M. Raditch is a member of the Ministry; but whereas the former retains his position as a deputy, the Croat leader disappears from the Skupshtina, where he sat last session in his capacity as Minister, until such time as he is re-elected or his mandate is restored to him. The coalition between the Radicals and Raditchists holds good; unity in the latter party reigns once more, and four of the five seats allotted to it in the Cabinet are retained by the Ministers who held office under M. Pashitch; the fifth portfolio, that of Education, which M. Raditch himself held, has been exchanged for the Ministry of Agriculture and is given to the leader of the Slovene Agrarian Party, which joined the Raditchists last year. Unfortunately all these manœuvres, however happy the issue, give little ground for confidence in the stability of the new Government. M. Raditch's attacks on individual Ministers, if continued, will be only one degree less embarrassing from outside the Cabinet than they were when he was a member of the Government. If his purpose is to put an end to corrupt practices in political life, the fact that the personnel of the Ministry remains to a great extent as it was under M. Pashitch would seem to furnish him with a reason for continuing his campaign. He has not to meet the immediate objects of his attacks at Cabinet Councils, but his nominees in the Government have to sit with them and will presumably be held responsible for the excesses of their party chief.



A further disintegrating factor is to be found in the trouble within the Radical Party. The feud between M. Liuba Yovanovitch and M. Pashitch has resulted in the exclusion of the former from the party, by the substantial majority of forty-six to one at a meeting of the Central Committee, with twenty-two members abstaining from the voting; but it is not clear that this verdict will end the matter. The speech delivered by M. Pashitch on this occasion was instructive. Behind all the manœuvres that were taking place, he declared, the real issue was between centralisation and federalism. By the former only could unity of the State be maintained, as federalism, apart from the economic difficulties that it must encounter, would encourage each unit to think only of its own affairs and to neglect the interests of the common State. He called upon the Radical Party to remain solid in support of the unity of the Kingdom, and one of the charges that he brought against M. Yovanovitch was that he had coquetted with federalism even during the passing of the Constitution. The outcry against corruption, M. Pashitch stated, was only a mask for the federalist campaign. Corruption made its appearance in 1919, and unfortunately was not fought against then. The guilty people at that time did not belong to the Radical Party, but an attempt was now being made to hold the Radicals entirely responsible for it. The people who were raising their voice against corruption, however, were those who did not want a unified State and saw in the fight against corruption only a means to achieve their particularist aims. Further charges against M. Yovanovitch were that he had published the incriminating statement regarding the Sarajevo crime, and that he had collaborated with the Opposition, in particular with Dr. Koroshetz, the leader of the Slovene Clericals. The result of the trial of strength between M. Pashitch and his challenger was flattering to the former; but the voting, it will be imagined, was prompted by a desire to save the unity of the party in the face of attack from without, rather than by conviction in M. Yovanovitch's guilt. Certainly the opponents of corrupt practices will not have found much in the speech to encourage them to count on M. Pashitch's support for purifying the public service.

Yugoslavia has still too much ground to cover in her task of reconstruction to be able to indulge with advantage in the luxury of embittered political strife. The coalition between Serbs and Croats was understood to imply that the federalist issue was for the time being in abeyance; but according to M. Pashitch it is as acute as ever. One danger in this situation is that it may tempt a Government not too sure of its position at home to seek in foreign complications distraction from its domestic troubles. An attempt is already being made to represent Yugoslav foreign policy as having been worsted by Italy in regard to Albania, and Signor Mussolini's exuberance of language is being interpreted as entailing designs upon the integrity of Yugoslavia. Now whatever surprises the Italian Government may have in store for an expectant world, we may feel sure of one thing, that it will not waste its strength and substance for the very little gain, if any, that it could count upon as the result of a conflict with Yugoslavia. Italy has far more serious problems to cope with than can be settled by the acquisition of even the whole of Dalmatia, and no one imagines that that task would prove an easy one. The Italian penetration of Albania is a different matter. It may be political in motive, but it is economic in method; and if it is to be checked or prevented by Yugoslavia, her people must be in a position to give the Albanians the things that they are now looking to Italy to provide. The Yugoslavs, however, have their own wants to supply, and are themselves candidates for foreign help in the work of reconstruction. The danger for them from Italy is not a military one, and those who try to create alarm in the country on this score are doing a disservice to the nation. On the other hand, the longer political strife, which, as it has done during the last six months, holds up the ordinary business of government, and retards the material progress of Yugoslavia, the more securely will Italy be able to drive her economic roots into the Balkan Peninsula, which the Balkan peoples, if less intent on politics, would be quite capable of developing themselves.

The Near and Middle East*

From Our Own Correspondents.

Cairo, April 24.

The Season.

The 1925-26 season may now be considered at an end, and all concerned therein can congratulate themselves on its success. It is many years since the accommodation in the hotels was taxed to the extent to which it has been this winter. Indeed never before has a tourist steamer had to be requisitioned as an annexe to take the over-flow of visitors which the hotels could not accommodate. Already the prospects of next season announce themselves as good, and everyone anticipates another bumper season in 1926-27, provided that the political situation does not become too active.

It is to be hoped, however, that between now and then the "Tanzim" service will have become more conscious of its duty to the public in regard to the state of the streets of Cairo than has been the case during the past year. It is no exaggeration to say that never—even during the famous three weeks' strike of the scavenger-boys in 1919 in support of Zaghloul Pasha's "Complete Independence" movement—have the streets of Egypt's capital been persistently in such a disgraceful condition. Whereas six years ago they were watered at regular intervals during the day, and were in fact an object of admiration to all visitors, nowadays they are lucky, if they receive one daily watering. The result, with the great increase of fast motors is simply appalling and, whereas formerly sore throats and bad eyes were the exception amongst the better-class inhabitants, to-day they have become an unpleasant concomitant of a sojourn in Cairo.

Egyptians themselves are beginning to complain bitterly of the neglect shown by the responsible municipal authorities, and during the past week or so I have been repeatedly asked by them to ventilate this serious complaint in your columns, as the local Press seems far too occupied with the political situation to worry about sanitation or kindred less sensational subjects, and it is of vital importance to the public health in general and Egypt's reputation as a winter resort in particular that this state of affairs should be remedied without delay.

The Parliamentary Elections.

The official list shows that 155 Wafdists, 43 Liberals, 9 Nationalists, making 207 official candidates for the Opposition, 100 Unionists and 102 Independents have been registered for the elections which are to take place on May 22. During the past week, however, the Unionists have lost several of their candidates, who after publication of their names have declined to stand as members of the party and are presenting themselves as Independents. In short, they realise that their party stands no chance at the elections and so, in order to succeed themselves, they are swelling the ranks of those who after the elections will be free, according to what has now become political tradition, to rush to the rescue of the party which has secured a majority or is likely to attain office.

There is, indeed, little doubt that the Opposition will sweep the polls and that the Wafd will attain a clear majority. The question which is now preoccupying everybody's mind is the action which the Coalition-Opposition will take after the elections. Will the Wafd insist on forming a Cabinet itself, or will it consider it more expedient to have a Wafd-Liberal combination? Will Zaghloul Pasha, in spite of what he now says, insist on taking up again the reins of government, or will the so-called Coalition Cabinet be led, as is at present suggested, by Adly Pasha or Sarwat Pasha? These are all questions which are being generally debated, but no one has any idea of what will actually happen, least of all the leaders of the three parties forming the Opposition, who, realising the delicate issue involved, have so far carefully avoided any discussion of their post-election policy.

A Gun Accident.

A tragic accident occurred at Luxor on the second day of the Bairam Fast when the gun, with which the evening salute was being fired, "back-fired" and seriously wounded a policeman who was assisting the firing party. I quote this incident, which is of course of purely local interest, because it is stated that the gun in question bears the name of "Krupp" and the date 1871. It may be remembered that Mr. Van den Bosch, the Procureur-Generol in his able address at the Jubilee ceremony of the Mixed Tribunals, mentioned the curious fact that after Nubar Pasha had secured from Bismarck, whom he interviewed in Berlin, the Federal Government's agreement to participate in the International Commission, which was to elaborate the creation of the Mixed Tribunals, the Iron Chancellor informed him that Germany had decided to present Ismail Pasha with a "Krupp" gun as an earnest of her good will. One wonders whether by any chance the gun which has now so tragically come into public notice, as the result of the accident reported at Luxor, is the one mentioned on that historic occasion.

IRAQ.

Baghdad, April 21.

The Flood.

Baghdad during the last ten days has been the victim of a plague—a plague of waters—as sudden in its onset and acute in its crisis as it will be slow from now onwards to abate its symptoms. Briefly, the city from which these notes are written is surrounded no longer by flourishing date gardens upstream and flat steppe-lands to the east, but by an immense lake of varying depth.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

Digitized by Google

There is little comfort in the reflection that the annals of the country contain many repetitions of the catastrophe. Since the British occupation it has happened upon a similar scale—but never involving quite such serious losses—in 1919 and 1923. There is less comfort still in the fear that, unless Allah decrees natural changes contrary to wont, or the Iraq Government spends on flood-protection more than it can hope to possess, the same thing is likely to occur at such intervals as the caprice of the Tigris waters may direct.

All was well for the first week of April, the river flooding normally and the dykes—known by Europeans as "bunds"—specially strengthened for hundreds of miles of river-side, as is the yearly custom. On April 7 the river rose rapidly; the next day it became dangerous and burst its bank in one place some miles above Baghdad, but not for long or seriously. At noon on Friday, however, with the river running at an almost unprecedented level, a sudden and dangerous breach declared itself in the garden of King Faisal's Palace, which lies between the city and Mu'adhdham. In a few minutes an enormous stream of water was flowing past and round the Palace, overwhelming a neighbouring village of Arab garden cultivators. The reception pavilions were soon awash, but, though the Royal Family had to leave it very hurriedly, the main building has remained high and dry. As the water scoured for itself a deeper and wider opening its volume increased and soon the Iraq Army Barracks, the Civil Gaol, and the railway station were wholly or partially surrounded. The Civil Hospital was seriously threatened, part of its buildings collapsed, and some of the patients and scientific apparatus were evacuated. The old military cemetery, where General Maude lies, was soon under several feet of water; and the crowded northern and eastern quarters of the city were only saved from a like fate by an inner bund, formed partly by the old city walls, and in appearance very inadequate for its work.

During the night of April 9, and for some days following, the immense stream of Tigris water—twice the volume of the main river itself at low water—continued to discharge itself into the dead-flat environs of Baghdad, forming an ever deeper and wider lake to press against the city bunds, and those of the civil and military suburbs lying below the town. For some hours the danger of a complete inundation of the city was critical in the extreme. It was prevented only by the most strenuous work, uninterrupted day or night, in heightening and strengthening the bunds, and this more especially on their northern sector separating the flooded railway from the town.

Gangs of coolies, recruited by the police, and reinforced by convicts, Iraq Army and Levies, worked day and night at the dangerous spots with sand-bags, loose earth and woven reed-mats; and by the 15th the river level had dropped considerably, the original breach was closed, and the critical period over.

The most serious losses have been caused by the inundation of the railway area. Lack of transport in Persia had resulted in an unusual accumulation of merchandise in the warehouses and trucks gathered there. This largely consisted of cases of tea, sugar and piece-goods; and the anxiety of the merchants was in marked contrast to the apathy of the general public, which throughout the whole affair was remarkable. Very great efforts have been made, and about two-thirds of the merchandise has been salvaged—much of it undamaged—by means of boats and coracles hastily carried to the flooded area on carts from the river. Rowing boats are now doing a roaring trade conveying pleasure-seekers, not unlike a brightly-dressed and decorous holiday crowd at home, all over the floods.

Of loss of life there has been little, though about a dozen Arab villagers are said to have perished in the first onrush of the water. The débris of their ruined village is pathetic enough, but is already partly reoccupied. Damage to the date gardens is very slight and that confined to the youngest trees. The crops submerged are entirely lost, the wheat and barley harvest being but a few weeks distant; but even these, viewed in the large, are surprisingly little considering their nearness to the Capital. The railway, accustomed in Iraq to not dissimilar blows of fortune, has already restarted essential services, though its sidings, station and store depots must remain water-logged for many weeks. The same applies, unfortunately, to the Barracks and other Government buildings as well as to the Palace and gardens of His Majesty.

But the worst is over, dire calamity to the city and camps has been averted, and no considerations of immediate loss or future difficulties must be allowed to spoil the sense of relief.

Liubliana, April 27.

Political Complications.

When on April 8 a new Government was constituted under M. Nicholas Ouzounovitch, it included all members of the preceding Government with two notable exceptions—M. Pashitch, the veteran leader of the Radical Party, and Milan Stoyadinovitch, for several years past Minister of Finance. It was generally assumed among the politically wise in the country that this Government would be a very short-lived one, and indeed it proved but a temporary expedient. Within a few days there was a fresh crisis. But this Government crisis assumed far greater dimensions and entered a far more virulent phase than its predecessor. It developed into an internal crisis of both Coalition parties, the Radical and the Raditchist.

The mere external course of this event was sufficiently bizarre. Immediately upon the elimination of M. Pashitch, the temperamental and all-too-loquacious M. Raditch at sundry Press interviews and meetings gave vent to such censorious, not to say abusive, utterances about Radical Ministers, both in and out of office, that the Prime Minister, M. Ouzounovitch, had to point out to him that it would not do for a Minister in office to decry his own Government and its members in public. And when these admonishments proved useless, M. Ouzounovitch openly called upon M. Raditch to tender his resignation, as it was impossible to work with so eccentric a Minister. When the Croat leader refused,

Digitized by Google

M. Ouzounovitch took summary measures. On April 14 he tendered unexpectedly his own resignation, which the King at once accepted, at the same time calling upon him to form a new Government. Within a few hours M. Ouzounovitch had constituted his second Government in which all the Radical Ministers remained the same as in the first, but which included only two of the Raditch Ministers—Dr. Shuperina and M. Nikitch. M. Raditch with his nephew, M. Pavel Raditch, and Dr. Krayatch were practically ejected.

This somewhat unusual method of dealing with a crisis—carried out, by the way, without the assistance of the Skupshtina—surprised everyone and has provoked much criticism. The elimination of M. Raditch, certainly, was admitted to have its advantages. But thereby the situation did not become any the less critical. On the contrary, the Raditch Party began to break up into two factions—the adherents of M. Raditch, who suddenly found himself back in the Opposition, and the Government Raditchists who with M. Nikitch and Dr. Shuperina remained faithful to the Coalition Government. But it was the greater number that stuck to M. Raditch, and he at once started a fierce campaign against the dissenters, of whom only eleven rallied round the two Ministers. And so M. Ouzounovitch's Government could not count on a majority in the Skupshtina.

Events developed with cinematographic rapidity. On April 22 there was a conference of the Raditch Deputies' Club. Most unexpectedly the two factions came to an agreement and the reunited party declared itself willing to continue to work in a Coalition Government with the Radicals. On the strength of this capitulation on the part of M. Raditch, the Ouzounovitch Government might have reinstated the Raditch Ministers in their offices—an easy matter, as the latter were still vacant—and thus regained its parliamentary majority.

The supreme crisis, however, seems only just to have begun. On April 25 and 26 there was a meeting of the Radical Club, called by M. Pashitch, so that he might then and there settle with M. Liuba Yovanovitch. M. Pashitch is known to be a shrewd and level-headed politician, who does not allow himself to be carried away by passion, but he insisted that M. Yovanovitch should be expelled from the Radical Party, although every effort was made to reconcile the two. Upon M. Pashitch's motion, M. Yovanovitch was turned out of the party by a majority of 46 to 1: but 22 of the delegates abstained from recording their vote.

This, however, by no means settles the matter. The question is, what will the Radical party deputies do? M. Yovanovitch, so it is reported, looked not at all cast down over the result of the meeting and his expulsion. He has a fair number of partisans in the party—how many, it is as yet too early to say—who will certainly follow him. In any case a split in the Radical Party must be pretty well reckoned with now, and the matter has become all the more complicated, since it is the section of the party under the leadership of Ministers actually in office which is breaking away from M. Pashitch, and is desirous of inaugurating a policy of its own.

The old Radical Party with its 111 members is thus split up into three groups. The nature and form of this division is not yet definite, but the veteran leader, who certainly did not count on so much latent opposition, can scarcely be in an enviable position.

The present Government has no majority in the Skupshtina. Its future career (if any) will be decided on May 5 when the Skupshtina reassembles. Its further lease of life will depend above all upon internal developments in the Radical party. In any case the situation is still critical, and the present crisis is the most acute and the most far-reaching that Yugoslavia has yet been called upon to weather.

ROUMANIA.

Bucharest, April 19.

Political Movements.

The political situation is still complicated, and, although there have been no loud demonstrations, there appears to be a widespread dissatisfaction with the choice of the Government. It is, however, an open question whether the choice was not a wise one in the circumstances, as it may give the country time to recover from the demoralising effect that the War had upon its national economy, and such revolutionising post-War legislation as the Agrarian Reform Law. One of the first guarantees offered by General Averescu was the guarantee of the right of property, so that it was apparently feared, not without cause, that a Government in which the Peasants' Party had a strong influence would succeed in extending the expropriation law, which has already impoverished a large section of the upper classes of society in Roumania. These former large landed proprietors are submitting to the inevitable with a fairly good grace, although the salutary effects of the measure upon the economic prosperity of the country are not yet very evident, apart from the important fact that it has completely undermined the influence of Bolshevism on the peasants. The agricultural production so far has suffered both as regards quantity and quality.

At present M. Maniu, the leader of the Transylvanian National Party, a man whose honest intentions are universally recognised, is suffering a bitter deception as a result of the breaking up of his party, whole sections of which have gone over to the Averescans, including the Transylvanian section headed by M. Goldish, now Minister of Religion, and the "Takist" section in the Old Kingdom. Another large section headed by M. Argetoianu is clamouring for unconditional union with the Peasants' Party. In these circumstances a general meeting of the Nationalist Party has been called at Cluj to round up their forces and find out how they stand as regards numbers and influence in view of the coming elections.

Customs Tariff.

In the meantime, the Government in deference to the clamourous representations of the Chambers of Commerce, has promised a revision of the new Customs Duties (in force since April 1) on textiles and metallurgical goods, and until this revision can be made has decided upon an interim régime, maintaining the new duties up to a certain proportion of increase, which is to be fixed immediately by a special commitee. These duties represent, in many cases, large increases on all goods manufactured in this country, regardless of quality. The tax on raw materials is also considerably increased, but in smaller proportion; that on cotton yarns, for instance, required for the peasant industry, amounting only to about 5 lei per kilogram.

Cost of Living.

The official index number for all Roumania for articles of "first necessity" for the year 1925 has just been published. It is calculated on the prices of 50 articles in

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor Street, W.1.

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

Digitized by Google

all the chief towns in the country, the basic 100 representing these prices in the year 1916. The number for 1925 is 3,250, that is to say, that the cost of living in Roumania generally is 32.5 times higher to-day than in the year 1916. For Bucharest alone the number is published monthly by the daily newspaper *Argus*, and is naturally considerably higher than that for the whole country; the general index number for prices in Bucharest during 1925 being 4850 (the basic 100 representing prices in August 1916). If the proportional increases of the two numbers be compared, however, it will be found that they run almost parallel since the first of January, 1922, when the official number was 12 and the *Argus* number 10. To-day the official number is 32.50 and the *Argus* number 48.50, so each has been tripled in that period.

Philadelphia Exhibition.

Roumania has decided to have a pavilion at the coming Exhibition in Philadelphia, and is spending a sum of 24 million lei for this purpose. The pavilion will be built in the style of an old house of a "Boyard," and the exhibits will be divided into a commercial and industrial section, and one for the Arts, where more than 100 pictures will be exhibited. In the industrial section will be included metallurgical and timber exhibits and special attention will be given to the tobacco exhibit.

Alliance with Poland.

On March 26, a treaty of alliance between Roumania and Poland was signed by M. I. G. Duca and the Polish Minister to Roumania, M. Wielowyeiski.

Miscellaneous Items.

The eminent French doctor, M. Sergent (with his wife and daughter) is at present on a visit to Roumania and has given several lectures at the Bucharest Medical School. He has been given a very warm reception and his lectures are attended by enthusiastic crowds of students and medical men.

The death was announced this week at the age of over 90 years of Madame Alexandrine Ghica, widow of Ion Ghica, who played an important part in the politics of Roumania in the last generation, being a contemporary of Jean Bratiano, father of the ex-Prime Minister.

GREECE.

Athens, April 21.

The Political Situation.

While, in the higher political sphere, events have been moving rapidly, the normal life of the country remains, to all appearances, unaffected. The stages by which General Pangalos has climbed to the Presidential chair are now familiar. The final ceremony of the taking of the oath took place in the Cathedral last Sunday. This, added to the swift crushing of the incipient outbreak at Salonika, permits the hope that, relieved of any feeling of insecurity, the President of the Republic will now be able to devote his unquestioned ability to the strenuous work of governing. Two of the exiles of Thera, MM. Michalokopoulos and Papanastasiou, returned to Athens yesterday. The logical sequence—a gradual unmuzzling of the Press—may now be expected, and is much to be desired.

The Gennadeion.

On Friday, April 23, the handsome library presented to the American School by the former Greek Minister in London, M. J. Gennadius, is to be opened, and many distinguished Americans have arrived in Athens for the ceremony. The President of the Republic is expected to be present. A party in honour of M. Gennadius is being given at the British School to-morrow.

The Missolonghi Celebration.

On Saturday, the centenary of the sortie from Missolonghi will be celebrated, and the Government is providing a special steamer to take its guests there. The actual date of the sortie was the night of April 22-23, but, in order not to clash with the opening of the Gennadeion, the celebration has been postponed, in deference to the wishes of the Americans—an act of courtesy quite characteristic of the Greek attitude to foreigners. It is right that the memory of that heroic episode—the sortie from Missolonghi—should not be allowed to grow dim. It will be remembered that Missolonghi was besieged, for the second time during the War of Independence, in May, 1825. For the first eight months things went favourably for the Greeks; but the arrival of Ibrahim Pasha from the Peloponnese at the end of November put a different complexion on the course of the siege. By the end of February the poor little town among the lagoons had been invested by land and sea, and by the middle of April the garrison, increased by 12,000 non-combatants, had already been reduced to eating rats and mice. Honourable terms had been offered to them and refused; only one thing remained—to cut their way out.

This they resolved to do on the night of April 22. The signal for advance across the moat was to be given by their friends on Mt. Zygós, where a feigned attack was to be made on the rear of the Turkish camp. The plan miscarried. Ibrahim was forewarned by a Turkish deserter, and the expected signal was never given. When, unable to wait longer, the impatient crowd of men, women and children poured out of the gates, the Turks were ready for them. Panic arose among the Greeks: some advanced others retreated into the town, where they were followed by the enemy and massacred to a man, but not without offering heroic resistance. Out of the whole number of defenders only 1,300 escaped.

The Soviet Government has appointed Araloff, manager of the Baltic States section of the Foreign Commissariat, to be director of the Political Section for the Balkans and Scandinavia. Stomoniakoff, the former Soviet Commercial representative in Berlin, succeeds to the post vacated by Araloff.

THE WEEK AT HOME.

London, Tuesday Morning.

The General Strike.

The stoppage in the coal industry took place on Friday at midnight, and, following a week-end of almost unceasing conferences and negotiations, the orders of the General Council of the Trade Union Congress for a general strike became operative at midnight yesterday. It was apparent earlier in the day that all hope of a settlement was past and that a trial of strength between the three and a half millions of workers in whose name the T.U.C. claim to speak and the remaining forty-three odd millions of the population had become inevitable. At 1 a.m. yesterday morning, after the breakdown of the final conference, the Government issued its reply to the trade unions' order for a general strike. It reiterated its belief that acceptance of the report of the Coal Commission in all its implications was an essential prerequisite to a settlement, and it refused to negotiate under the threat of a general strike. The Trade Unions for their part issued a manifesto disclaiming all responsibility for what had occurred and laying the blame upon the mineowners and the Government. Thus for the first time in its history the country is face to face with a general strike in which hundreds of thousands will be involved who have nothing whatever to do with the coal dispute and from which the workers and everyone else can only emerge greatly impoverished.

"Cease Work" Orders.

The T.U.C.'s "cease work" orders are comprehensive and extend to all the vital services on which the community is dependent. It is too early as yet to say with what measure of acceptance they are likely to meet, but if the unanimity of the executives that took the decision for a strike is in any way representative of the feelings of the men they officially represent, the plans of the Labour leaders are likely to be carried out with the strictest possible compliance. Not only will all transport be at an end, but the iron and steel industries will be closed down and all metal workers cease work. The building trade—one of the few, according to the latest returns of the Board of Trade, to show any revival—is also to be involved. The general strike has not from the outset been made complete, but the T.U.C. will call upon other trades as required. Already printing works, including the Press, are affected and some newspapers are not published this morning.

The Government, of course, has made its own preparations and if the Home Secretary's assurances, repeated in and out of season during the past nine months, mean anything at all, they mean that the public can rely on the Government organisation without misgiving. Certainly the preliminary measures have been such as to inspire confidence and have been marked by a studied absence of provocation. The public will no doubt suffer inconvenience and hardship, but it is not likely to find itself deprived of essential supplies or the means of existence.

Those who hoped that there would be some eleventh hour development in Parliament yesterday have been disappointed. The speeches of both sides were conciliatory in tone, but they merely emphasised the crude facts of the deadlock. The miners persisted in their original attitude towards wages and the Government refused to extend the subsidy without the assurance of a settlement. The situation was summed up by Mr. Churchill as follows:—"The nation is now confronted by this alternative—either being ruined or submitting to paying very large sums of money to one particular trade which they did not consider justified." So we are back again where we were last July with this difference, that we have paid £20,000,000 to buy off the situation with which we are now confronted.

Mr. Churchill's Budget.

All interest at home this week has centred round the debate on the Budget in Parliament and the negotiations to avert a coal stoppage. Mr. Churchill was bitterly assailed both by Liberals and Socialists, but he weathered the storm of opposition without great difficulty, and his Budget emerged from the ordeal of a three days' debate for practical purposes unimpaired. As was expected, it was the betting tax that has provoked the most embittered controversy, and the Chancellor was roundly accused of "outraging the most sacred feelings" of a large portion of the population and encouraging a social and moral evil for the sake of a few million pounds. Mr. Churchill retorted plausibly that the moral issue did not arise, since the tax was confined to legal betting where it was before. But this explanation has not reconciled the clerical opponents—far the most vigorous outside Parliament—who continue to carry on an active propaganda against the Bill. Of special interest in this connexion is a letter from Bishop Welldon in *The Times*. Alone amongst eminent churchmen he has publicly taken an opposite line of action in deploring the "fanatical campaign" of some of his colleagues, and writing as one "who has taken a keen interest in the anti-gambling cause" he welcomes what is at present the only suggested means by which the State can aspire to restrain the activities of the gambling fraternity. Whether or not the tax will actually diminish the vast sum of £170,000,000 which is estimated to be the annual "turnover" of legal betting, it is at least certain that it will remove some of the worst abuses. Perhaps, as the Bishop suggests, his colleagues will reflect once more on the wisdom of their policy when they find that their chief allies are the bookmakers themselves. It is a curious alliance.

The British Fascists.

It is not without interest that at the moment when the industrial situation was approaching a crisis, a split should have occurred in that peculiar body of unconstitutional patriots who style themselves the British Fascists. Those who have watched the movement with any care will hardly be surprised at what has taken place, and that the semi-military organisation of these declared anti-Communists, who, like the Communists they denounce, claim the right to act unconstitutionally in support of their beliefs has estranged the more moderate section of their former adherents. The clash of opinion between the militant and non-militant parties was inevitable, and was brought to a head by the Home Secretary's announcement that he could not recognise the British Fascists under their existing constitution. The majority of the council thereupon led a revolt, considering it their duty "to give an earnest of their law-abiding. This they have done by forming themselves into a body to be known as the "Loyalists" to work in collaboration with the O.M.S. Whether these independent voluntary bodies will be an aid or an embarrassment to the Government is a matter of no small uncertainty.

Unemployment.

In the industrial gloom that has overshadowed the whole week the official unemployment figures issued by the Board of Trade have not received the notice due to their significance. For the first time since 1920 the weekly register of unemployed has been below a million, and this reduction is not all to be accounted for by the coal subsidy and by the seasonal improvement which marks this period of the year. On April 19 there were 225,500 less unemployed than a year ago. It is true that any hopes of a continued revival in trade have been wholly dispelled by the present crisis, but these figures, if they are no longer any sign that better times are approaching, are at least a melancholy reminder that it was at the very moment when this seemed possible that it was indefinitely postponed.

Ahmed Nami Bey, the newly appointed President of the Syrian State, arrived in Damascus with M. de Jouvenel, and formally assumed office on April 30.

Book Reviews and Notes.

BOURCHIER OF THE BALKANS.

"THE LIFE OF J. D. BOURCHIER." By Lady Grogan. (London: Hurst and Blackett, Price 18s. net.)

Lady Grogan, it may be said at once, has done much better than probably she is aware. Her "Life of J. D. Bourchier" is not only an understanding and sympathetic tribute to a friend. In its pages "the Bouch," as he was affectionately known to some of his friends, lives again. Little seems to have been missed; all the old mannerisms are recalled; the motions of head and hands, the laugh, the passion for open air, for riding and bathing, the unpunctuality, the indifference to personal comfort, the sociability. It was his zest for life that made of his deafness a lighter cross for him to bear than it would otherwise have been; just as it was the cheeriness of his company, and the catholicity of his interests and knowledge that kept others amusedly tolerant of his idosyncracies and social heresies. One thing Lady Grogan omits to immortalise—Bourchier's dinner when alone. His favourite time for writing was from 6 p.m., and nothing would induce him to break off to go down to the dining-room. So the menu was brought up to his room and he ticked off the few dishes he fancied; a little later they came up all together on a tray and more often than not remained untouched until, having attained a uniform temperature, they would be consumed about 9 p.m. He thus kept himself in training for his Balkan travels, when fare even less palatable failed entirely to worry him. He could never quite overcome a mild intolerance towards a desire on the part of others for a more regular meal, and was equally contemptuous of anyone who regarded something more than a pocket-handkerchief as a suitable accompaniment to a bathe. Experience taught the writer during his association with Bourchier in the Balkans to regard a towel as essential an item in one's costume as shoes or a hat. Few parts of Attica proved far enough away from the sea to prevent Bourchier from turning the most formal outing into an opportunity for a bathe, and mankind has apparently to be divided into two categories, those who can dry themselves with a pocket-handkerchief and those who cannot.

Lady Grogan has done well to clear Bourchier's memory of the stigma that in the latter part of his career he had become hopelessly pro-Bulgar, in the sense that he was *ipso facto* out of sympathy with the other Balkan States. He had always been, and remained to the end, pro-Balkan; in other words, he had set himself the task of helping as far as in him lay the cause of the Peninsula as a whole. His sympathies were with all the peoples indifferently, and he never lost sight of the goal of ultimate equal federation. Deafness in a man seems to make for concentration on a given subject; it is as if his inability to take part in all that goes on around him leaves him less distracted from the subject of immediate preoccupation. To this extent, perhaps, Bourchier dwelt on the Bulgarian aspect of Balkan affairs seemingly to the temporary exclusion of the affairs of other countries. Yet his instinct was not far wrong; for he recognised that both before the War and after the War Bulgaria was the crux of the situation, in so far as it was necessary to have first a Bulgarian settlement, and on that to build up a satisfactory Balkan settlement. With passions in the state in which they were at that time, it was inevitable that his attitude should be resented by Bulgaria's neighbours; but this book shows clearly how whole-heartedly Bourchier threw himself into the cause of each one of the countries when occasion called. Never could a man of his parts surrender himself to mere propaganda; his critical faculty made him as alive to mistakes as he was keen to right a wrong, and he was Irish enough not to go out of his way to avoid a quarrel. Lady Grogan's narrative cites the denunciation of the local persecution of Turks in a Bulgarian district, but omits a less tragic tiff with the Greek Government in 1899. In that year a provincial reorganisation in Greece threatened to dethrone Thebes from its first position in Boeotia; the proposal roused the Thebans to fury and they threatened to march on Athens, armed with pitchforks, if with nothing else. All Bourchier's archæological sympathies were aroused, and his telegrams betrayed the fact. The Greek Government of the day, not finding them to its liking, suppressed them, and the fact leaked out only in a casual street conversation with the Foreign Minister. Bourchier's remark that even in Turkey one would have been informed officially the next morning caused an explosion, the effects of which subsided only on the intervention of the Prime Minister and explanations amounting to apologies. As the accuracy of his information had been challenged, Bourchier set off the same evening in a carriage and pair to drive to Thebes. Arriving there, he spent the whole day in investigations and substantiated the accuracy of his telegrams. Incidentally the Thebans were vindicated, and on the drive back through the following night the carriage was halted at 6 a.m. to enable Bourchier, in the best of spirits, and his companion (be-toweled) to have a bathe.

The stars in their courses defeated Bourchier's plans. It would be well, however, for the Balkans if his place there—as it was in his prime—could be filled. The gods of the newspaper world to-day ordain otherwise. *The Times* was, no doubt, long-suffering and conditions change; but, if there is any compensating alternative to dividends, it is to be found in the fact that, at a time when Great Britain was quite indifferent to the calibre of her representatives in the Balkans, *The Times* was represented by a man unique in character and influence, to whose devoted service to the Balkan peoples are due in no small measure the friendly relations between this country and the Peninsula that have weathered so many strains and storms.

region which thrills with romance, and for delineating the character of its inhabitants. Her plot develops in Western Persia, where Gilbert Lowndes, an erstwhile Indian officer, has obtained political employment under the Anglo-Persian Oil Company. His wife, Vera by name, has been detained for several years in England by the precarious health of her little daughter Ginty. *Les absents ont toujours tort;* the grass-bachelor succumbs to the wiles of a syren named Linda Vyte, wife of a quaint little man on the Company's staff. Gilbert's letters grow colder; and at length the dreadful truth dawns on Vera. She is faced by a dilemma which tortures the soul of many an Anglo-Indian mother—shall she leave a suffering child to the care of strangers, or lose her husband's affection by tarrying at Home? After many heart-searchings Vera determines to win Gilbert back at all costs, and travels to Baghdad by way of Beyrout. There she foregathers with little Vyte, who has his views on the policy of petroleum companies throughout the world.

Vyte accompanies Vera to the oil-fields, where Gilbert still under the syren's spell—gives her a cold reception; but his heart softens towards her when news of Ginty's death comes by cable, and a temporary reconciliation ensues. A little later Vera's position again becomes intolerable; she throws up the sponge in despair and sets out for England alone. Halting at Palmyra during the journey, she visits a neighbouring mountain retreat yclept Shuweir, and becomes the owner of the Peak Hotel, 4,000 feet above the burning plains. Among her earliest guests there comes an old admirer, to whose impassioned suit she would have hearkened but for a certain discovery that concerned Gilbert. And at this crisis the syren Linda abandons him for a newer flame; he returns, disillusioned and repentant, to Vera, whose apparently "losing game" culminates in victory.

But the story told of British enterprise in Persia is far more romantic than that of Vera's tangled love affair. Persia contains the greatest reservoirs of petroleum in the world; there can, indeed, be little doubt that her ancient religion was suggested by the natural fires which flicked from the Caucasus to the frontiers of India. Until the first decade of this century the thick brown fluid which oozes from innumerable springs served only for treating wounds and caulking boats. The possibility of extracting enormous wealth from this unpromising material dawned on the mind of Mr. W. Knox D'Arcy, who had made a fortune in the Australian gold-fields. He formed a syndicate in Glasgow, and spent £300,000 from his own resources in delving for petroleum in the mountains of Western Persia. For several years his quest met with no results, and in March, 1908, orders were actually cabled out from Glasgow to dismantle the works. Ere they arrived, however, a "gusher" was struck at 1,875 feet below the surface, and from that moment the Anglo-Persian Oil Company has never looked back. A forest of lofty derricks rises from the valleys of that wild region, where a happy colony of Britons enjoys all the luxuries of their fatherland. A pipe-line one hundred and fifty miles in length carries the raw petroleum to vast refineries, whence petrol and its by-products are shipped to every quarter of the globe. Thus the magic wand of industry is giving to the realm of Darius and the Sassanian Kings a more enduring prosperity than they achieved by the sword. F. H. S.

The Caliphate Conference will be held in Cairo on May 13 under the presidency of the Rector of the University of Al Azhar.

The Bishop of Nagpur, after more than 25 years' service in India, is resigning his see and will return to England in May. He has accepted the position of president of the Indian Church Aid Association.

Colonel W. H. Anderson, C.B.E., succeeds Major-General Sir W. Bernard James as Director of Remounts in India. He has been granted temporary rank of Colonel on-the-Staff while holding the Directorship.

THE SHAKESPEARE FESTIVAL AND EGYPT.

Among the sixty-three nations whose flags were unfurled at the Shakespeare Birthday celebrations at Stratford-on-Avon this year, there were no less than twenty that made their appearance at the ceremony for the first time. The fire at the Memorial Theatre had served to enhance the interest attaching to the celebrations, and many messages of sympathy were received by the authorities of the theatre. None, however, took such a practical form as that of King Fuad of Egypt—who in forwarding an expression of his sympathy sent a cheque for £500 for the rebuilding fund. A communication was received by Sesostris Sidarouss Bey from the Egyptian Minister of Foreign Affairs which read:—

"Please convey to the Chairman Shakespeare Memorial Theatre an assurance of the great interest felt by His Majesty in the immortal works of the great Shakespeare. His Majesty has ordered a donation of £500 towards the funds for reconstruction of the new theatre as an expression of His Majesty's sympathy with the great loss recently sustained owing to the destruction by fire of the theatre."

A wreath of white lilac and laurels, tied with the Egyptian colours and bearing the inscription: "Egypt's homage to the Universal Shakespeare" was laid on the Poet's tomb by Sesortris Sidarouss Bey. At the luncheon on the last day of the celebrations the toast of "The Ambassadors, Ministers and Official Representatives of other countries" was responded to by, among others, the Chargé d'Affaires of Egypt, the Secretary of the Roumanian Legation and Jaafer Pasha on behalf of Iraq. In the course of his remarks Sesostris Sidarouss Bey said:

"It is a great honour to find myself for the first time amongst those who come from different lands representing different countries to pay homage and unfurl their flag in this sacred place to the universal and eternal poet, Shakespeare. It is not my place to praise the memory of Shakespeare, as this is the privilege of those great scholars who have taken Shakespeare as a special study and have spent their lives in explaining and analysing the contents of his immortal works.

"All what I can say is that the thanks and praise of every country are due to the Shakespeare Club which arranges these International meetings every year and by so doing gives opportunity to all of us, irrespective of country and race, to come here and be inspired with Shakespeare's memory, memory which will be everlasting and ever outstanding, as that of the greatest poet who has influenced all countries alike. I can tell you that the name of Shakespeare in Egypt is probably just as popular in our schools as it is in the English schools, and his name is known to the Egyptian boy directly he enters upon his secondary education. Not only are Shakespeare's plays translated into Arabic and played in our theatres, but Shakespeare is read in English and recently some of our students have given successful performances in Cairo of Shakespeare's tragedy "Julius Ceasar" in English."

Sir Bradford Leslie, K.C.I.E., LL.D., of Maida Vale, W., the designer and builder of a number of large bridges in Bengal, and a pupil of Brunel, and who died on March 21, aged 94, left estate of the gross value of £19,889, with net personalty £19,617.

The trial in Milan of Dimitri Stephanoff, the Macedonian who was accused of shooting the komitaji leader, Peter Shauleff, in a café at Milan on December 23, 1924, ended on April 29. Stephanoff was acquitted.

The Metropolitan of India and the Bishop of Bombay, whom the last Provincial Council appointed as its delegates to confer about the proposed Indian Church measure with the Government of India, left Bombay on May 1 for England to discuss the details of the measure with the Secretary of State for India (Lord Birkenhead).

PERSONAL AND GENERAL

TO-DAY

May 6, 1926 (New Style).
April 23, 1926 (Old Style).
Shawal 23, 1344 A.H., of the Moslem Calendar.
Iyar 22, 5686, of the Jewish Calendar.

Lady Sassoon has returned to 49, Grosvenor Place from Egypt and Palestine.

Sir Mancherji Bhownaggree has returned to London from the Riviera.

Colonel Yovanovitch, Yugoslav Consul-General in London, has returned from Belgrade.

The Hon. Mrs. Harold Nicolson will arrive on May 14 at Long Barn, Weald, from Teheran.

Mrs. Mackenzie Low returned to 32, Prince's Gardens on May 1 after a trip to India and Palestine.

The Hon. Lady Lloyd-Mostyn and Miss Rhona Lloyd-Mostyn have returned to 25, Cadogan Place from Egypt.

Sir Hall Caine, who has spent four months in Palestine, Egypt, and Italy, has returned to England.

M. George Mélas, First Secretary to the Greek Legation, and Mme. Mélas have returned to London after a short stay in Paris.

The Begum of Bhopal gave a reception yesterday at Belmont, Wimbledon, as a farewell to her British friends, before leaving next week for India.

The Rev. H. F. Sturges, L.Th., lately Curate of St. Silas the Martyr, Kentish Town, N.W., has been appointed S.P.G. Missionary at Murhu, Bengal.

Sir Herbert Dering, who for the last four years has been British Minister to Roumania, arrived on May 3 with Lady Dering, at the Ritz Hotel, from Bucharest.

Lady Constance Milnes-Gaskell and Miss Milnes-Gaskell, who have been wintering in Egypt, have returned to Wenlock Abbey, Much Wenlock, Salop.

The Turkish Ambassador in London and Madame A. Férid Bey are holding a reception at the Turkish Embassy, 69, Portland Place, on May 17, at ten o'clock in the evening.

The Bishop of Fulham, Anglican Bishop for North and Central Europe (the Right Rev. B. S. Batty), attended by the Rev. R. Frew, D.D., was present at the Holy Saturday service at the Greek Orthodox Church on May 1 and occupied a stall of honour next to the Archbishop of Thyatira.

May 2 was Easter Day in the Greek Calendar, and a large number of members of the Greek colony attended service in the Greek Cathedral, Bayswater. Among those present were the Greek Minister, the staff of the Greek Legation, and the Greek Consul-General.

Mr. E. Hilton Young, M.P. (chairman of the Royal Commission on Indian Currency and Finance), gave a luncheon to the members of the Commission on April 17 at the House of Commons to meet the Earl of Birkenhead (Secretary of State for India). There were present:—

The Countess of Birkenhead, Mrs. Hilton Young, Sir Rajendranath and Lady Mookerjee, Sir Norcot and Lady Warren, Sir Manockji and Lady Dadabhoy, Sir Reginald and Lady Mant, Sir Alexander and Lady Murray, Professor and Mrs. Covajee, Mr. and Mrs. W. E. Preston, Sir Purshottamdas Thakurdas, Sir Henry Strakosch, Mr. G. H. Baxter, Mr. A. Ayangar, and Mr. G. E. Franey.

The Marchioness of Aberdeen is leaving England for Czecho-Slovakia and Yugoslavia in connexion with the annual meeting of the Women's International Council, of which she is President.

Sir Malcolm Hailey, Governor of the Punjab, presided at the prize-giving at Khalsa College at Amritsar on April 26. He mentioned that it was the ambition of the college to become a Sikh University, but said this ambition was not likely to be realised early, chiefly owing to financial difficulties.

Mrs. Woods and Mr. H. Charles Woods were at home at 171, Victoria Street, S.W.1, on April 28. Among those present were: The Ministers of Czecho-Slovakia, Greece and Estonia, Mme. Kellas, Djemal Bey Frasheri, M. Ghulam Ghaus, Mr. Sauerwein, Mrs. and Miss Dufour Feronce, Colonel Ostovitch, Mr. Smodlaka, Miss Christitch, M. and Mme. Stancioff, Prince Soumbatoff, Lady Frances Ryder, Lord and Lady Shaw of Dunfermline, Lady and Miss Norman, the Hon. Mrs. Boyill, the Hon. Edward Strachey, the Hon. Lady White Thomson, the Hon. Mrs. Durant, Lady Bradford, Sir Harry, Lady and Miss Lamb, the Dowager Lady Boyle, Sir Edward Boyle, Lady Horder, Sir George and Lady Greenwood, Sir Martin Conway, Lady Henry, Mr. and the Hon. Mrs. Harold Myers, Admiral and Mrs. Richmond, Mrs. Philby, Mrs. Dugdale, Mrs. Seton Watson, Mr. Leonard Stein, Mr. Leonard Rees, Colonel P. T. Etherton, Mrs. Murchison, Dr. and Mrs. Eder, Mr. Alex Devine, Miss Kisch, Mr. H. V. Cobb and Mrs. T. E. Stephenson.

THE CALCUTTA RIOTS.

The true lesson of the Calcutta riots is quite clearly apprehended in India, but does not appear to be understood in this country. Many people in England seem to believe that the conditions in Calcutta are peculiar to itself, and that the recent "terrifying glimpse of the fires beneath" is of local significance only. It is perhaps hardly fair to quote, in support of this view, the published opinions of one of the most prominent—and, it may be added, most perverse and most sublimely ignorant—English supporters of the programme of the Indian political extremists; but, though his arguments will not be accepted by anyone outside his own circle, his general conclusion is probably that of the majority of observers in England. While admitting that "all true friends of India" will regret those exhibitions of intolerance which "enemies of India hail with undisguised delight," he declares that "many of our Indian comrades are even now learning the futility of religious intolerance" and that "there is no need for supporters of India's claim to freedom to be discouraged." His conclusions are that the situation must be viewed in its true perspective, and that Calcutta cannot be taken as representative of India. In the first of these he is certainly right, though his own view of the perspective is certainly wrong; but in the second it may be remarked that the chief reason that he gives for it is that Calcutta is "a Westernised City"—the implication obviously being that, in places where the blighting Western influence is not so strong, conditions are quite different) he is altogether at fault; for, in the particular question at issue, Calcutta is certainly representative of the greater part of India, and probably of the whole. It so happens that a spark has been engendered there, to fire the local powder; but there are few places in India where a similar immediate cause would not have produced the same general result. Hindu-Moslem differences are of very old standing and have often, in the past, blazed up into fury; but they have recently been greatly accentuated by the words and actions of the leaders on both sides, and the violence of their manifestation has been intensified by a contributory cause that has only been brought into being during the past few years.

This cause is the preaching of the non-co-operation movement. The movement itself is dead, and Mr. Gandhi is discredited and repudiated as a political guide; but it and he have left a mark on India that it will take long to eradicate. The core of Mr. Gandhi's teaching was—to quote the words of the *Times of India*—that the British Government of India was evil, that it deserved no respect, that anybody who performed any act likely to weaken it deserved well of his country, and that eventually India's whole effort must be devoted to the overthrow of the existing Government. Respect for law and order, once a universal characteristic, has been overlaid and deadened by the incessant preaching of this doctrine of contempt for both, which shows itself the moment that the surface is stirred by the slightest disturbance of tranquility. The furious and bloodthirsty violence displayed by the Calcutta rioters is due not to a single cause, but to a double one—religious intolerance sharpened by the positive love for disorder that naturally follows an active campaign to discredit respect for law.

As for the present acuteness of Hindu Moslem differences, there can be no question at all that this has a political origin also. In the columns of *The Times*, Sir Michael O'Dwyer has stated that indisputable fact: and, when challenged, has proved his thesis out of the mouths of his challengers. If any further evidence were needed, one has only to turn to the report of the recently concluded Provincial Hindu Conference, held at Ambala in the Punjab. Dr. Moonje, now a "responsive co-operator" but till lately the leader of the Swaraj Party in the Central Provinces (where, as will probably be remembered, the Swarajists succeeded in bringing the working of the Reformed Constitution altogether to a standstill) delivered the Presidential address, which consisted almost entirely of an indictment of the anti-Hindu activities of the Mohammedans. He said that the Hindu-Moslem unity brought about by Mr. Gandhi was "as fleeting as a midsummer night's dream," and described the present communal dissensions as "nothing less than a kind of civil war to determine which of the two communities was to predominate." This amounts to exactly the same statement as that made by Sir Michael O'Dwyer in *The Times*—"the rival religions are now striving to swell their numbers, for the new pseudo-democratic system takes account of skulls." And the same spirit is in evidence on the Mohammedan side. It was recently announced that a "Khilafat Conference" would be held at Delhi during the first week in May, with the special object of appealing to influential Hindu leaders to help to restore harmony between the two communities. In the pursuit of this end, it was proposed that both Hindus and Mohammedans should agree to suspend the proselytising activities of their respective missionary organisations, Shuddhi and Tabligh; but it was added that, failing a response from the Hindus, "a powerful Tabligh campaign will be launched against the Shuddhi." But, at a meeting held to settle the preliminaries, it was found, "when discussing essentials," that agreement was impossible, and the proposal for the Conference was abandoned. The comment of the Simla correspondent who cabled this news is that "religious issues only cloak the real issue between the two communities, which is a struggle for the upper hand in politics." It is only the other day that Lord Reading claimed that, during his Viceroyalty, the foundation of the Reforms had been well and truly laid: and the Calcutta riots furnish eloquent testimony to the truth of this claim. They have been so well and truly laid that Hindus and Mohammedans—to say nothing of the Indian Princes, the Brahmins and the non-Brahmins—have realised that, in a future that now appears to them to be imminent, their very existence is at stake. Among the tasks confronting Lord Irwin, one of the most serious and most urgent is the discovery of a means whereby he may "well and truly lay" the passion that the Reforms have aroused, and the spirit that underlies its manifestation.

CURRENT TOPICS.

The Indian Electorate.

All political parties in India, of whatever complexion, are agreed on one subject—the necessity for the "education of the electorate"; though they differ widely as to the form that such education should take, and the objects with which it should be pursued. But, among the various suggestions put forward regarding the political changes that the Royal Commission of 1929 may be expected to recommend, the question of an alteration in electoral procedure finds little place. In his important contribution to the Empire Number of *The Times* last year, Lord Lloyd suggested the propriety of "considering whether the present methods by which the electorate express their will might not with advantage be modified to forms more suitable to the particular circumstances of the country and the degree of development of the electors"; but he made no definite suggestion as to how this should be brought about. Mrs. Besant's Commonwealth of India Bill proposes that elections shall proceed on the Soviet principle: that Villages, Districts, Divisions and Provinces shall successively elect delegates from whom shall be made the final selection of members to the Central Soviet: so that a constantly ascending scale of education, intelligence and fitness for public life is thus provided. A recent article in the *Times of India* discusses the same subject. The paper says that it is convinced that the defect in the Act of 1919 was not Diarchy, but the directe electorate. For that India was not ripe, and it is suited neither to her genius nor to her tradition. Direct election has not brought many men of the best calibre into public life from the general constituencies, and has reduced the calibre of those who man Municipalities and Local Boards: when these were gateways to the Councils, men of brains and ambition were willing to serve their apprenticeship in them, but now this is not the case. It urges the necessity of restoring the franchise of the local bodies, and consideration of the possibility, where the general electorate is maintained, of establishing electoral colleges between the electors and the Councils.

The General Election of next November may be expected to provide some sort of test as to how the electoral sense of the Indian electorate has progressed since the Reformed Constitution called it into existence. If it emerges from this test with reasonable success, that result will provide an argument for letting the matter alone, and for trusting to time and to the progress of education, in its ordinary sense, to improve matters still further. But, in the contrary event, the case for an alteration in electoral procedure will certainly be strengthened: and, though one does not find much in the Commonwealth of India Bill that is practical or worthy of support, the idea of progressive elections of delegates leading up to a final selection of legislators looks like one that would be worth consideration.

Education and National Wealth.

The special objects with with Lord Irwin has gone to India are the increase of the national wealth and the improvement of education: put in that order because the possibility of finding money for the latter depends on the successful achievement of the former. And it is generally admitted that the national wealth can only be increased by the improvement of agriculture, which is the sole means of support of more than seventy per cent. of the population of India. There are many people well qualified to judge, who believe that an enormous improvement could be brought about in a very short time if the problem were systematically tackled: it is asserted that, on such a proviso, the agricultural wealth of India could be doubled in ten years. The Royal Commission on Agriculture will have to take cognisance of facts, collected from all sorts of sources and from a great variety of places where local conditions vary greatly: but there are, in fact, two basic disabilities common to practically all agricultural localities in India, without any local variation—the fragmentation of holdings and the antiquated method of cultivation. Attempts have been made, for years past, to combat these two disabilities, and considerable progress has been made against both: but these attempts need to be pressed on with the utmost vigour. There is a tendency, not peculiar to India, but always peculiarly in evidence there, to accept the appointment of a Commission as an excuse for "marking time" until it shall have reported. More than in most countries of the world, in India this attitude is aggravated by what has, up till now, been the almost invariable procedure of Government. Though we may hope that, since "we have another Viceroy now, those days are dead and done," it is difficult for even the most ardent reformer to break the shackles of precedent: above all, in India. It has been the regular custom of the Government of India, on receiving the report of any Commission—whether direct, when appointed by themselves, or through the Secretary of State, as in the case of a Royal Commission—to appoint a Committee to examine and report on its Report: after which, they indulge in a discussion which generally includes all the Provincial Governments, and finally formulate proposals: in the case of a Royal Commission, where the proposals come from the Secretary of State, they follow the same procedure except that, as the Government of India's efforts take the form of "counter-proposals," the discussion is even more prolonged.

Whatever may be the recommendations of the Royal Commission on Agriculture, there will certainly be no need to await them before intensifying efforts to remove the great handicap under which fragmentation of holdings places the Indian cultivator. This is often carried to almost unbelievable lengths—the laws of inheritance demand that each member of the family of a deceased owner shall receive a certain fixed share of the land, not only in quantity but in quality also: so that it often happens that a number of separate fields have to be subdivided individually, and the process tends to continue indefinitely. It has been found possible, in quite a number of cases, to persuade villagers to agree to a series of exchanges that result, in the end, in the substitution of a comparatively small number of compact holdings for a very much larger number of scattered ones: and it is this process which it is vitally necessary not only to continue but to speed up. Second to this comes the equipment of the cultivator with improved implements, both for tilling the land and for supplying it with water, with improved varieties of seed, and with facilities for the use of suitable manures: this also is one of the existing activities of the Agricultural Departments, the effect on which of the appointment of a Commission will not, it may be hoped, be a diminution of effort: Commission or no Commission, what is needed is the greatest possible increase.

Third in order, but certainly less important than either of these, is the education of the peasant masses—on the right lines. That the present efforts in this direction are not now all that they might be, is being increasingly recognised in India. Among the papers received by the last mail, the *Times of India* says that, in order to increase the national wealth of India, "first and foremost we have to get brains and capital on to the land—to banish for ever the preposterous circumstance that to educate an Indian is to divorce him from the land whence three-fourths of the people derive their daily bread": and the *Statesman* declares that "it is a very real misfortune of the present system of education in India that the man who has taken full toll of its advantages is in almost all cases lost to the villages. These offer him no scope for ambition or for a livelihood on the scale that he has learned to expect. A change of mentality is required that will produce a sufficiency of men willing to make the considerable sacrifices that are demanded." Except that one does not believe that the provision of brains and capital comes first and foremost—the improvement of what exists already is a matter of greater urgency than the introduction of something new—one may heartily agree with these opinions: and may

Digitized by Google

repeat that the immediate task before the Government of India, quite irrespective of any recommendations that may, in course of time, emanate from the Royal Commission, is to press on with the consolidation of uneconomic holdings, the inculcation of improved methods of cultivating them, and the provision of the right sort of agricultural education—in that order.

Rebellion in India.

In the letter from our Calcutta correspondent that appeared in our issue of April 22, he expressed the opinion that "a less astute and tactful ruler than Lord Reading might easily have been faced long before now with open rebellion in India, following the sinister disturbances that were rife when he took office." One's own opinion—for what it is worth—is that our correspondent is mistaken in this estimate. Lord Reading's predecessor was, in fact, faced by what amounted to open rebellion in the Punjab: and he himself by open rebellion in Malabar. One believes that the prompt suppression of the former, and the complete and ignominious defeat of the attempted Afghan invasion of which the disturbances in the Punjab were the direct cause, formed between them the reason why the Moplah rebellion never became anything but local, in spite of the apparent impotence of the Government, through many long months, to end it. Its long continuance reflected no credit on the Government of the day, and still less on the prestige of the British power in India. The writer of these notes was at pains to inquire, from all his Mohammedan visitors, what their real feelings were in the matter: and their replies showed a remarkable unanimity. They said that they had been greatly surprised at the difficulty experienced by the Government of India in putting down a small local rising such as that which had occurred in Malabar: and could not but ask themselves whether a more wide spread effort might not have been successful. But, on consideration of all the circumstances, they had arrived at the conclusion that, though the Government had, for so long a time, refused to take the drastic action which, when at last they did take it, produced the immediate collapse of the rebellion, this must have been due to mistaken counsels that probably had their origin with the Government of Madras: a Province which contained no martial race except the Moplahs themselves, and the Government of which had no idea of what real fighting meant. If any serious attempt at rebellion had occurred in a more virile Province, ruled by a more virile Government, it would have been handled far more promptly and vigorously, not only by the local authorities but by the Government of India: who could doubtless afford to take things easy in the unwarlike South, but would give a very different account of themselves elsewhere.

As a subsidiary question, one also invariably asked one's visitor whether, if the Mohammedans of India as a whole had decided that it was worth while to try to turn the Moplah rebellion into a general Moslem rising, he would have joined in or not. Some admitted that they would have sat on the fence, and waited to see how things appeared to be shaping. Most, of course, repudiated with horror any suggestion that they would not at once have thrown their whole weight and influence on the side of the Government; but there was a residue, and one containing the most honest and independent individuals among the lot, which quite frankly declared that, in such circumstances, they would immediately have applied for a commission in the Moslem forces, and would have staked everything they possessed on the chance of a success that would have led directly to the re-establishment of a Mohammedan Empire in India. But they all agreed, though not without regret, that they had seen no hope whatever of success: and added that it was for that reason that a trial, though it might perhaps have been considered, was never made.

Indian Rice.

In his remarks at the opening of Veerasawmy's Indian Restaurant, noticed in THE NEAR EAST AND INDIA of April 1, Sir Atul Chatterjee mentioned that rice is one of the Indian foodstuffs that is not so popular as it should be: and an article, in the Empire Products Section of *The Times* Trade and Engineering Supplement for April 17, adds point to this statement. The article says that it is a curious fact that nine out of ten British housewives, if asked where rice came from, will reply India, and yet demand "Japan" rice from their grocers. "The so-called 'Japan' rice of the shops comes from Spain and Italy, and there are other varieties that come from Java and the Southern States of America: all of which are retailed at higher prices than Indian rices, the consumer paying for appearance only. 'Rangoon' for a cheap grade, 'Bassein' for something better, and 'Patna' for the finest quality, afford a range of rices all grown within the Empire (the first two in Burma, the third in India) which can be retailed at 3d., 4d., and 6d. a pound respectively, to show a fair profit."

These words contain one valuable hint to Indian growers, and two to British housewives. The former is that, being able to produce rice of unrivalled quality, they should set themselves to improve its appearance: the two latter are that, besides knowing that they can get the best rice in the world from the Empire at a lower price than that of its foreign competitors, they should also now have learned the price that they ought to be asked to pay for it—a piece of information for which they, if not the retail grocers, ought to be grateful to the writer of the article.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 15.

The Attacks on the Police.

Even while the riots were in progress, it became clear that the extremists would use them as a text for a new and even more virulent attack upon Government, and particularly upon the police: the tone which has since been taken by the organs of the Congress Party shows that this movement threatens to become a matter of the utmost importance to the political future of Bengal, if not of India. Ignoring for the moment comment which lies outside normal mentality, while the various Press accounts indicate wide differences of opinion, they do not differ greatly in their statements of the facts. All parties agree that the police acted promptly when the outbreak occurred: what the European papers describe as studied moderation in the use of weapons by the police is called, by the Congress journals, a callous indifference deliberately calculated to allow the outbreak to become as serious and widespread as possible and to ensure the greatest possible number of murders and injuries. The extremist ignores the fact that every policeman of every rank from the city and its suburbs was on duty for days at a stretch in the affected area, leaving the European quarter absolutely unprotected; he jeers at the impossibility of guarding every lane and sewered ditch with the handful of Europeans remaining in the police; he is blind to the sound tactical scheme for the disposition of the forces available; he even admits that the military were welcomed and did good work, but he does not mention that they worked under police control and were merely an addition to the armed police. In short, the European Press throughout India is loud in its praise for the police, while the Extremists are howling denunciations of them and are daily becoming more incoherent

and irresponsible in their attacks; there cannot be, and there never will be, any compromise between such divergent opinions.

An Honest Journalist.

All honour to the *Bengali*, which, under its present banner, that of the new Nationalist Party, and the editorship of Mr. Byomkesh Chakravarty, is calling upon all rational men in the country to face the facts and not be led away by the wild words of the irresponsibles. In the state of Bengal politics it requires some courage to point out that the police force has been cut down at the instigation of the Congress Party, who have used the Legislatures to attack it on every possible occasion and to cut down its finances, and have undermined its morale by open and secret propaganda. The *Bengali* rightly says that the free use of firearms might have smashed the outbreak in the first twenty-four hours, but it asks pertinently whether this would not certainly have been made another Dyer case by the Extremists. The fact is of course that the principal plank in the Congress platform is that whatever Government does, it is wrong; and, when this becomes sufficiently an obsession, it is very difficult to distinguish it from open advocacy of anarchy.

Forward's Twisted Mentality.

So much for normal comment. *Forward* has deserted normality and, with its usual ingenuousness, claims to represent "the nation's" opinions in a crescendo of pure hysteria; it may be a sorry fact, but a fact it is that *Forward* has the largest circulation of any Indian paper, and its leaders are really popular. Its latest effort is headed "Imperial Game," and its opens "Certain facts in connexion with the riots are beginning to be talked about." Then come the "facts." Lord Irwin's arrival in Bombay synchronised with the riots; it was essential that he should see things with official eyes and realise at the outset that India's advance to self-government is hampered by communal jealousies; a riot or two at this juncture would naturally be welcome in certain quarters to adorn the official tale. Therefore the riots were organised; but "the managers of the riot-factory keep their secrets well guarded," and how the details were worked out cannot be ascertained. The article goes on to set out other "facts" which point to the same conclusion: the absence of police precautions, and allowing the riots to spread before seriously trying to put them down. The Calcutta correspondents of the British Press were in the conspiracy, for there is a family likeness in all their accounts which is "unmistakable"; in other words, they were supplied beforehand by Government. And *Forward* sees behind it all a "master-hand." This is the type of reading matter which is being published daily without restraint, while the city is still picketted by troops and armed police, and we have yet to see the end of the month of *Ramzan*, the *Id* coming on Thursday.

An Independent Indian Speaks.

The opinions of a leading and enlightened Indian merchant, equally independent of Hindu and Moslem, but trading with all communities on a large scale, have more than a passing interest. He has prejudged the case against the police and condemns them for their leniency, particularly after the first few hours; he would have had firing, which he holds would have acted as an absolute deterrent. He blames Government for cutting down the police below a strength adequate to deal with such riots, and points out they have powers of certification which they use when they wish to. He alleges that *goondas* (hooligans) are only allowed to remain in Calcutta because their bribes are a source of income to the Indian members of the police force, and not only those in the ranks. He cannot understand a censorship of cables while the Indian Press is free to publish calumnies and lies more dangerous than dynamite in the present atmosphere. And he demands that, if an outside Government cannot maintain law and order, which he and his wealthy fellows can purchase at any time by employing their own guards, it should admit the fact and cease to pretend to govern; then peaceful and law-abiding citizens would know where they stood.

The Present Position.

Quiet has been almost entirely restored and, although there are still a few stabbings and robberies daily, the tale is probably little in excess of the normal. But in the areas affected the majority of shops are still closed, and all important points are held by police or troops. This is being read at a distance and after the event, and no harm will be done by stating the facts; a few small parts of the city are almost deserted, principally those where the disturbances were greatest. The Marwaris made a half-hearted attempt to trade after a visit from Sir Hugh Stephenson and the Commissioner of Police; but, on it being suggested that the troops would be replaced by Indian police, they at once closed down again. Business in Clive Street is almost at a standstill, and the stock-brokers are doing literally nothing. If we get through this week in peace, work should start more normally next Monday.

Markets.

After an improvement towards the end of last week, the jute and gunny markets have again taken an easier turn owing to a lack of business due mainly to the intervention of the holidays and the close of the Bengali year. Similarly, the piece-goods market continues more or less neglected, but hopeful of better days in the near future. The Home tea market remains strong, and reports from the gardens here at present indicate a normal crop.

In the Stock markets, business has again been restricted by holidays; jutes were responsible for a small turnover and improved at first, but fell away towards the close owing to a lack of inquiry, the downward tendency being more apparent in the more speculative counters.

BOOKS FOR ALL INTERESTED IN INDIAN AFFAIRS & GOVERNMENT

BRITISH INDIA

From Queen Elizabeth to Lord Reading.

By An Indian Mohamedan.

This work represents the studies and views of a prominent Indian Mohamedan who is holding a responsible official position and reveals to the English reader what intelligent members of the Indian community are saying among themselves.

While the author gives a full summary of events down to the supersession of the East India Company the more directly important part of the volume deals with occurences since the transfer of Direct authority to the Crown, and the interest increases as the subject approaches more nearly to the present time.

The evolution of India in the modern sense is his main theme, and he deals in great detail with the Reforms instituted in the period covered by Lord Minto and Lord Reading.

Cloth gilt. 32/- net.

THE EARL OF READING

By Syed Sirdar Ali Khan, Author of "The Life of Lord Morley."

This book traces the whole of Lord Reading's career as lawyer and statesman, and includes an excellent collection of his official and complimentary speeches.

"The real value of his book lies in its lucid and well-balanced analysis of the conditions which Lord Reading found in India, of the modifications they have undergone so far under his regime, and of the possibilities which they hold for the future."—

Coals and cottons show little change but for a greater preponderance of sellers in the former market; in the tea section a number of buyers came in for the better class of stocks, and prices tended to rise; rubbers remain unchanged. Government Securities have maintained their recent considerable rises and, owing to the lack of scrip on offer, rates continued to mount, 3½ per cent. Paper at one time being bid for at over Rs.77. Exchange improved on advices from Bombay, with ready T.T. quoted 1s. 5 29-32d.

The Id Festival.

Owing to an error in the calculations which fixed the *Id* to take place on Thursday, this festival was held on Wednesday: and the day passed without any untoward incident. *Id* ends the *Ramzan* fast, and is regarded by the Mohammedans almost in the same way that we regard Christmas; the first part of the day is given over to prayers and the remainder to feasting; it is their *bara din* (great day). Yesterday morning at seven o'clock services were held at all the principal mosques, and the attendance was so large that in most cases it overflowed into the roads adjoining. At eight o'clock there was a mass meeting on the Maidan, at which some 15,000 to 20,000 of the "faithful," garbed in their best and apparently radiating good fellowship, were present. Prayers were led by their *Maulvis* (Priests), after which the usual greetings and embracings took place. All the meetings were characterised by their orderly nature; some feeling, however, exists among Hindus that the Commissioner of Police should have banned their processions while at the same time allowing the Mohammedans to hold their large meetings. The extremist Press has not been slow in pointing out that Government is favouring the Mohammedans.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, April 16.

The obviously serious riots in Calcutta bring again into prominence the question of unpaid military service in the East.

I wish to make it quite plain that I am not at present contemplating any serious national rising against British domination in India. That may possibly come; but if it does, the crisis will be acute, and there will be no possible doubt about it that every Englishman in India will have to fight for his life. I am dealing now with much less remote contingencies—the constant minor disturbances that arise out of industrial or religious differences all over India.

In Bombay there have been serious riots in the mill area in 1908, 1917, 1919, 1920 and 1921; and there have been at least as many in Calcutta. In these great cities there has always hitherto been a sufficient force on the side of law and order to check these outbreaks of lawlessness early in their course; when they begin in districts where the necessary forces take longer to collect, they gain strength, and develop into such serious and lengthy affairs as the Moplah Rebellion.

But the British troops, on whom we have hitherto relied to support the police, are being very rapidly diminished in number, in the interests of economy; while the British population of the great cities is enormously increased and, being scattered over a far wider area, is becoming more and more likely to be involved in disturbances, even if they are not in any way directed against the British as a nation.

And the fact remains that Englishmen in Bombay are not showing any inclination to supplement the shrinkage of military aid, achieved in order to save their own pockets, by voluntary service. There has never been any enthusiasm in Bombay. Twenty years ago the Light Horse contained about sixty young riding men, and there were a few Englishmen in the artillery as well. During the riots of 1908, almost all the able-bodied young men joined the Gymkhana Company of the Volunteer Rifles, which continued in existence till the War broke out, though the early enthusiasm had by then considerably waned. During the War, all Europeans naturally joined, and in 1917 service in the Indian Defence Force became compulsory. Service in the I.D.F. was never popular: and, during the riots of early 1919, when the Act was still in existence, there was a distinct feeling on the part of a good many men that they were being called on to perform duties which ought to have been carried out by regular soldiers. In any case, after the I.D.F. Act had ceased to be effective, all inclination to serve came to an abrupt end, and it may be doubted whether there are now a hundred Englishmen in the ranks in Bombay.

This is due partly to sheer laziness, partly to a feeling that the ranks, which include a large number of low-class Eurasians, are likely to afford an unpleasntly mixed society, and partly to a fear that the military authorities will be too exacting, both in peace-time training and on occasions of emergency: the view being that in times of trouble a man's place is either in the personal protection of his family, or in his place of business.

These difficulties would in practice all disappear if every Englishman as a matter of course joined a military unit. men of every class would find their own society, work attended by adequate numbers would be made more interesting, and the officers would be able to make perfectly safe arrangements that military training did not clash with reasonable working hours. But that cannot occur till everyone joins together. There is no movement whatever in that direction, and there is not likely to be until the banks and other leading employers of a European staff show some enthusiasm for universal training. So far from this being the case, the Banks appear to discourage their young men in every way from incurring a liability to service which might, in certain serous cases, take away their whole personnel. Personally, I consider this fear to be a very remote one. Any contingency serious enough to involve the calling up of all men on local service would mean the almost entire dislocation of local business; and, if the volunteer force was strong enough, there could be no difficulty about organising a proper and well-prepared system of reliefs. What is difficult is the present situation, in which the military authorities have no means of discovering what, if any, force they have available, in the event of an emergency, from the European civilians. So, for the present, we are at a deadlock. Compulsory service is presumably impossible. It has an ugly name and would, on the face of it, diminish still further the already decreasing attractions of life in India. Universal voluntary service is hindered by the general fear that the military authorities will take undue advantage of the terms of enlistment; while the military authorities on the other hand say, with absolute truth, that they do not intend to take any but the most liberal possible interpretation of these terms which must necessarily be worded strongly.

It is most urgently desirable that all employers of European staff should insist on their men taking their part in local defence. The matter rests with a very few of them. If seven or eight of the banks and three or four of the firms made it a definite rule that every British employee should join the Volunteer Forces, the problem would be solved. No other Englishman could have the least excuse for staying out a moment longer, and Bombay would have a citizen force of fifteen hundred to two thousand highly efficient, if not highly trained, civilian soldiers, of whom not more than a quarter would be needed except in the gravest emergency.

There seems no alternative. There have been suggestions of enrolment of special constables and of units with even more nebulous duties and responsibilities; but it is quite certain that neither the civil nor the military authorities would, in a serious outbreak, have anything to do with men who were not technically subject to military discipline: and, though it is conceivable that a formula may be found to satisfy all those concerned, nobody has yet succeeded in discovering it.

So that it really comes to this, that the future of

Digitized by Google

voluntary service in Bombay rests with a very few of the leading bankers. If they will put their assistants into it, there will be no difficulty whatever in arranging for all the safeguards they need from the military. If they do not, Bombay remains inadequately protected against any sudden outbreak.

THE INDIAN MAIL.

The Bengal Detenus.

The release of Mr. Anil Baran Roy, one of the Members of the Bengal Legislative Council interned under "Regulation III." about eighteen months ago, was made the occasion for an encouragingly moderate speech by Mr. Roy himself: who, while maintaining that his internment was uncalled-for and mistaken, said that his release might reasonably be considered as the forerunner of that of his companions in misfortune: and, occurring as it did on the eve of Lord Irwin's arrival in India, as an indication that the new Viceroy really meant what he said when he asked that "we should all shake hands for India's sake." If so, said Mr. Roy, Indians would not be so ungenerous as to refuse him the hand of fellowship which he desired to take.

The speech of Mr. Sen Gupta, Mayor of Calcutta and leader of the Swaraj Party in Bengal, was of a quite different kind. He repeated the stock calumny that the arrest of Mr. Roy was quite unconnected with revolutionary agitation and solely due to the fact that he had been "the right hand man of Mr. C. R. Das in the work of the Congress and of the Swaraj Party": and added that, if any of his audience should be incited by anyone to acts of violence, he should at once conclude that this was the work of an agent provocateur: it was the duty of all to avoid "falling victims to the wiles of the police," and thus to prove that police reports were false and that there were, in fact, no revolutionaries in Bengal. We have not yet heard that Mr. Sen Gupta has denounced the recent riots in Calcutta as the work of agents provocateurs suborned by the wiles of the police; but, if he has not said so yet, no doubt it will not be long before he does.

Japanese Competition.

For some time past quite a pretty quarrel has been proceeding between the Bombay Millowners' Association and the Japanese Cotton Spinners' Association. Most of the arguments produced on both sides have been familiar—the Bombay references to sweated labour, the Japanese contention that, though they may be competing with Lancashire, they are practically not in competition with the Indian mills at all. But the final arguments produced by both sides have a spice of novelty about them. The Japanese say that they must be allowed a period of grace in which to make the necessary arrangements to give effect to the Washington Convention: and that the Japanese Government proposes to bring into force, in August 1928, an amendment to the Factory Act which will provide for the prohibition of night work by women and children three years later still—thus "loyally adhering to the decision of the Convention." To this the Bombay Millowners reply that the obvious meaning of this proposal is that Japan "intends to build up her textile industry at the expense of other countries and does not intend to alter her labour conditions until she is in a position to retain the markets that she has unfairly filched from her competitors": and that they themselves "do not wish to await the entire destruction of their home and foreign trade before taking action." The dialectic victory is certainly with Bombay; but, unless steps are taken to transform the wishes of the millowners into real action, it would seem that the practical victory will remain with Japan.

Safeguarding Duties.

The reply of the Government of India, to the suggestions of the Bombay Millowners' Association regarding the imposition of safeguarding duties on Japanese cotton manufactures, has now been published. The Association said that, when the Government of India enforced the Washington Convention agreement, they thereby made themselves morally liable for the protection of the Indian industry against unfair competition on the part of a country that, though it had accepted the Convention in principle, had refused to give effect to it: and urged that so long as Japan persisted in this attitude, her imports of yarn and piece-goods into India should be subjected to additional duties, the amount of which should be equivalent to the difference between what the cost of production in the Indian mills actually is and what it would be if they worked under the same labour conditions as those under which the Japanese mills are now working, and that a special Committee should be appointed to determine the exact amount of that difference.

The Government of India state that, in their opinion, a decision to impose safeguarding duties on Japanese cotton imports would involve the denunciation of the Trade Convention of 1905. No country, even if its representatives have agreed to the draft, is under any obligation to ratify a draft Convention adopted by a conference of the International Labour Organisation; so that the failure of one country to ratify does not justify another country, which has ratified, in denouncing a previously existing treaty. Secondly, they maintain that the ratification of the Convention made no alteration in the previously existing position between the Indian and Japanese mills; since it did, in fact, merely perpetuate what was already the existing practice of the Indian mills, in the matter of hours and of the employment of child and female labour; so that the basis of the Millowners' case "disappears." As is remarked in *The Times* Trade and Engineering Supplement, this last statement is only true in a technical sense, and does not dispose of the fact that India has carried out the Convention, while Japan has not. The Government of India go on to say that, while they do not admit that a case for the imposition of safeguarding duties has been made out, and they are therefore unable to agree to the appointment of a Committee to determine their amount, they yet recognise that the Bombay mill industry is passing through difficult times, of which they are anxious to assist the millowners to find the right solution. They are therefore prepared to set up a Commission of Inquiry to examine the whole question, and to base recommendations, for the proper remedies, on the findings of this Commission.

Apart from the interest attaching to the views of the Government of India on a very important matter, there are several points in the correspondence that claim attention. One is, that the Millowners appear to have dropped the argument about the advantage that accrues to Japan from the depreciation of the yen and the appreciation of the rupee. The former is now within a penny of its pre-War sterling value, while the latter is now almost as much below the 1s. 6d. rate as it was above it when the controversy started. Another is the remarkable promptitude

with which the Government of India have despatched their reply—less than a month after their receipt of the Association's statement. If, as seems not unlikely, this unusual expedition was attributable, as was suggested last week in the matter of the Egypt-India air route, to the imminence of Lord Irwin's arrival, it is another good omen. A third point is, that the Government of India have found additional reasons for adhering to their own solution of the difficulties of the Millowners, by declining to be limited to the single aspect of Japanese competition and insisting on a general inquiry into the conditions of the Indian industry. The millowners have all along strenuously resisted this idea; and their critics have not unnaturally deduced, from their attitude, the conclusion that there are many details of the industry, as at present conducted—particularly in the matters of management and agency—that the millowners do not desire to be brought into the light. It seems not unlikely that the resistance will continue, and that the subject of Japan's alleged unfair competition will be officially dropped—though it will, no doubt, still be debated unofficially. Government have definitely refused to reconsider the specific relief demanded, except on their own terms after a full investigation that is not only not demanded but altogether objected to; and, if the Millowners cannot have the one without the other, it is probable that they will decide to have neither.

INDIAN COMMERCIAL NOTES.

The Calcutta Jute Fabrics Shippers' Association have just published their report for the year 1925-26. An appendix to the report, written by Mr. Kenneth McLean of the Bengal Agricultural Department, is interesting as showing the methods employed by that Department for the distribution of Government jute seed.

The note shows that whereas the present out-turn of jute is between 80 and 85 lakhs of bales, the world's requirements of jute fibre are between 100 and 105 lakhs. The question is how to make up the deficit of 20 lakhs of bales, representing a deficit of roughly 5 lakhs of acres. In order to bring this increased area under cultivation, the existing seed crop must be increased by 50,000 maunds.

At the time the note was written, the Agricultural Department expected to have under its control 3,000 maunds of Government seed by December, 1925. Of this, 500 maunds will be sent out to cultivators and will produce 20,000 maunds of seed to be delivered in December, 1926. A further 2,000 maunds will be despatched to cultivators for multiplication, producing 80,000 maunds of seed by December, 1927. These quantities represent a considerable increase in the supplies of seed available to cultivators. It is generally recognised that shortage of supplies and high prices for jute are not in the best interests either of cultivators or manufacturers. India's best chance of retaining this valuable monopoly is to ensure by all possible measures that a crop is produced which is adequate to the world's demand.

There has been a slight improvement in the outlook of the Bombay cotton mills during the past month. Yen sterling exchange has advanced from over 1s. 9d. in January to over 1s. 11d. to-day. This advance has checked the benefits derived by Japanese manufacturers during the long period when yen exchange was falling.

India's trade in pig iron has developed considerably during the past three years. In 1923, she exported 181,500 tons; in 1924 271,000 tons; and in 1925 nearly 402,000 tons. Japan took 150,000 tons in 1923, and the same amount in 1924, increasing her purchases to nearly 159,000 tons in 1925. The chief increase has been in shipments to the United States of America, which took 20,000 tons of Indian pig iron in 1923; 98,000 in 1924; and over 177,000 in 1925. The value of pigiron exports from India has increased from 130 lakhs in 1923 to nearly 2 crores in 1925; or practically the same total value as her exports of pig lead.

INDIAN EXCHANGE.

London, May 3.

Quotations in Calcutta remained steady at 1s. 5 27-32d. with occasional sellers at 1-32nd higher for immediate delivery, but in Bombay, the general quotation remained at 1s. 5 13-15d. until the end of the week, when they came into line with Calcutta market and 1s. 5 27-32d. became available with no buyers under 1s. 5⅞d. for ready and near delivery.

A change took place to-day, when rates rapidly firmed up. We understand that buying orders reached London from Calcutta for a fairly large amount of rupees, and whilst business resulted at slightly under 1s. 5 29-32d. T.T., many buyers at this rate appeared, and at the close of business to-day, buyers' requirements remained unsatisfied and there are no banks willing to sell.

Forward rates are quiet, and there is no inclination on the part of the banks to operate for late deliveries. Speculative inquiries have been made, but business has been very difficult for any time after the monsoon months. November, December and January are nominally quoted 1s. 5 31-32d. with no fixtures reported. Exports have been particularly dull and ample confirmation of this is shown by the last return of the Imperial Bank of India, from which it appears that the trade demand has diminished by 250 lakhs of rupees. First-class commercial bills have been quoted 1s. 6d. three months' sight easily obtainable, but very few bills have been on offer.

To-day's quotations from India are advised as 1s. 5 5-32d. three months' sight and more activity has apparently been shown in shipments to the Continent.

In the London market, business has been done down to 1s. 5 55-32d. and 1s. 5⅞d. but towards the end of the week remitters found some difficulty in obtaining 1s. 5⅞d. and the demand for drawings has been steady at 1s. 5 29-32d. T.T. At the close the outlook is decidedly firm.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris between MOHAMMERAH (Persia) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Monday Evening.

The Strike.

So the coal strike is a *fait accompli*, and it seems probable that not long after these notes are written it will be followed by the withdrawal of labour in a number of other industries in support of the miners. The strike is a weapon with which unfortunately every country is now only too familiar, and the present development here is the more deplorable in view of the fact that it is purely and solely a strike against hard economic facts. If the miners, or shall I say their leaders (for there is no valid ground for supposing that the miners as a whole are in favour of a strike) really appreciated the position they would realise they are striking because foreign countries will no longer buy our coal on the pre-War scale and because the use of coal for industry has declined owing to the increasing use of oil as fuel. The War hastened a process which was inevitable, but normally would have been effected very gradually over a long period of years. Countries that can utilise water power for electricity have been doing so to an ever-increasing extent as is evidenced in the case of Italy, and in consequence coal markets that were ours no longer exist, while the shipping using oil has been increasing at a rate that suggests that before long there will be few steamships left. Obviously in the face of these circumstances a strike can effect nothing except to lose further coal markets for us temporarily at any rate, and the hope of the miners lies in the drastic reorganisation of the pits—a reorganisation which ought to have been effected years ago.

Yugoslavia's American Debt.

The interesting news is forthcoming that an agreement has now been reached for funding Yugoslavia's War debt to the United States which amounts to 51 million dollars (£10,200,000). I should think that Yugoslavia has no reason to be dissatisfied with the terms of repayment. The debt is to be repaid in 62 years, for the first twelve years of which period there is to be no interest, and subsequently there will be a rate of ⅛ of one per cent. rising slowly to 3½ per cent. at which it will stand for the final 27 years. Now that Yugoslavia has settled her obligation to America the way is clear for the commencement of negotiations for the settlement of her debt to Great Britain.

P. & O. Dividend.

The interim dividend of 5 per cent. declared by the P. and O. Company on the Deferred stock is 1 per cent. less than the declaration a year ago. The final distribution for last year was 4 per cent. making 10 per cent. for the twelve months, but as the trade position has greatly improved there is no reason for anticipating (except in the event of a prolonged strike) that the results for the current year will be much below those of the previous period.

Egyptian Tribute Decision.

The dismissal by the Mixed Courts of the appeal of the Egyptian Government against the judgment maintaining their liability for the service of the loans secured on the Turkish tribute will be hailed with relief by the bondholders who have been deprived of their interest for nearly two years. On July 9, 1924, Zagloul Pasha attempted to repudiate the debt as an act of sovereignty, and since that time sums covering the interest due have been deposited with the National Bank of Egypt. En passant it may be noted that on July 10, 1924, the Four per Cent. bonds were quoted at 63½ as against 89 last week while the Three and a Half per Cent. bonds stood at 54½ as compared with 82 a few days ago. It was desired at first by Egypt to take the question of liability to the Hague, but this contention was disposed of, and following a decision by the First Chamber of the Mixed Courts in favour of the bondholders the case was taken by the Government to the Court of Appeal of the Mixed Tribunal with the result that the responsibility of Egypt for the loans is definitely established.

Indo-European.

At the meeting of the Indo-European Telegraph Company Mr. H. L. M. Tritton, the Chairman, dealt in detail with the company's work. He pointed out that the company deals direct with its traffic or not at all. The value of this direct working can be realised when the nature of the route traversed is considered. There are 200 miles of cable across the North Sea, and the line runs through Germany and Poland to Russia and then to Persia and Teheran. The company and the Indo-European Telegraph Department have two lines between London and Karachi and a third between Berlin and Karachi, and Mr. Tritton stated that it is very rarely that all these are interrupted simultaneously, and the repairs are effected so quickly that often the lines are in working order before notice of the interruption has been received. Mr. Tritton gave remarkable figures with regard to accuracy of transmission. The percentage of errors made by the staff was .023, or 1 in 4,348 words, while the percentage of errors due to instrument or line faults was .019, or 1 in 5,263 words, making a total percentage of 0.24, or 1 in 2,381 words. The excellence of that record needs no emphasis.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., in their report dated April 30, state:—

Currants.—In the early days of the month a distinct recovering tendency was in evidence, mainly as a result of the favourable weather experienced during the Easter Holidays, assisted by the strong statistical position of the article, only 1,600 tons being held in first hands. Unfortunately, the further depreciation of the Greek Exchange upset the market, and prices slipped away, with a corresponding disinclination of buyers to operate. Consequently, the close is disappointing, after confirmation, and it would appear from latest estimates that some districts show a twenty-five per cent decrease in yield, against the past season. The Flaminian, with 300 tons, has been the only arrival. The Assyrian with further supplies is due. Sales reported, Pyrgos 30s., Amalias 30s. 6d. to 31s. Gulf uncleaned were in request at 33s. to 35s., but the cleaned variety is difficult to move at the same figure. Zante 31s. to 32s., Vostizza common 35s., ordinary 37s. 6d. to 40s., good 42s. to 45s. up to 49s. for Choice. Old fruit, 27s. to 28s.

Quotations:—Pyrgos 30s., Amalias 30s. 6d. to 31s., Zante and Patras 31s. 6d. to 32s. 6d., Gulf 33s. to 35s., Vostizza 35s. to 47s.

Sultanas.—Since our last report, easier conditions have ruled, which is not surprising considering the absolute lack of demand experienced. Reports of rain and damage to the growing Cretan crops had a stimulating effect on holders, in resisting the decline in values, and this news, coupled with firmer prices in Smyrna (quotations being raised 2s. per cwt.), caused buyers to show a little more interest in the article. A few sales were reported in Medium qualities 66s. to 67s., good to fine 70s. to 75s. Greeks 72s. to 77s.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Water Supply Works.—The Egyptian Ministry of the Interior invites tenders for the carrying out of water supply works at the town of Sennoures in the Fayoum. June 1. (D.O.T.)

Platform Weighing Machines and Counter Scales.—The Physical Department of the Egyptian Ministry of Public Works invites tenders for the supply of the following:—41 platform weighing machines, 12 personal weighers, 43 counter scales, and 61 Beranger balances. June 9. (D.O.T.)

TURKEY.

Leather Belting.—The Anatolian Railway Administration invites tenders for the supply of leather belting. (D.O.T.)

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT
Indian Government Vouchers accepted.

Passenger sailing dates:—

*CASTALIA, May 14. *ELYSIA, July 27.
*MASSILIA, July 6. *CIRCASSIA, Aug. 17.
*First class passengers only. Specially low fares.

SPECIAL NOTICE.

New T.S.S. CALIFORNIA, 17,000 tons, carrying 1st, 2nd and 3rd class passengers, sails from Liverpool October 26, Marseilles November 1. All 1st and 2nd class staterooms are fitted with punkah louvres and with fans. This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

Shipping Intelligence.

NEW ANDREW WEIR STEAMER.

The launch took place recently, from the Govan shipyard of Messrs. Harland and Wolff Ltd., of the twin-screw motor vessel Springbank (5,200 gross tons) for Messrs. Andrew Weir and Co. (Bank Line) Ltd. The Sprinkbank, which is a high-class cargo vessel, is 434 ft. by 53 ft. 9 in. by 37 ft. and is classed 100 A.1. at Lloyds. The double bottom extends fore and aft and is used for the carriage of oil fuel, fresh water, or water ballast. Seven bulkheads extend to the upper deck and divide the vessel into five cargo holds, motor room and fore and after peaks. The holds are fitted with cargo hatches of ample size, which are worked by twelve of the builder's special steel derricks, each suitable for five ton lifts, and rigged in the best manner for the efficient handling of cargo. The derricks are attached to two steel pole masts and four derrick posts, and in addition a heavy derrick is fitted at the after side of the foremast suitable for dealing with loads up to 25 tons. The Springbank will be propelled by two sets of Harland B. and W. six-cylinder 4-cycle motors, with electrically-driven auxiliaries.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Liverpool, May 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahanada for Port Said, Colombo, Madras, and Calcutta (London, May 15).

Bibby Line.—S.s. Golconda for Colombo, Madras, and Calcutta (London, May 8); s.s. Manera for Bombay and Karachi (London, May 14).

Cunard Line.—S.s. Sea Victory for Gibraltar, Algiers, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Fiume, Venice, and Trieste, also Brindisi, Ancona, Corfu, and Gruz if sufficient inducement offers (Liverpool May 13, Swansea May 18); s.s. Sea Glory for Malta, Patras, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool May 11, also Swansea and Glasgow same date).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 21); s.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 10).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, May 14); s.s. Nagoya for Colombo, Madras, and Calcutta (Liverpool, May 15).

Prince Line.—S.s. Cyprian Prince for Syrian Coast and Cyprus (Manchester, April 30).

The Egyptian State Railways Administration have accepted the tender of the North British Locomotive Company, Limited, of Glasgow, for 40 large tank locomotives.

A Reuter message from Belgrade states that M. Franitchevitch has given notice in the Skupshtina of a question to the Minister of Finance with reference to the periodical accounts of the operations in Serbia which have to be rendered by the Standard Oil Company for taxation purposes.

The necessary preliminary work having been completed by the Turkish Petroleum Company's geologists, the drilling plant for ten test wells is expected to arrive in Iraq in the near future (says a Reuter message from Baghdad dated April 30). The Turkish Petroleum Company, which is embarking on an important scheme of development, has engaged the services of ninety expert American drillers, and within the next twelve months will be paying a salary bill of more than £100,000 a year. The testing programme is expected to cost approximately £1,000,000.

Motors and Motoring.

By G. B. B.

At the moment of writing it is not possible to say what is or is not going to happen. These notes may not appear in print with due punctuality; we may not be able to obtain more than a scanty and strictly rationed measure of petrol; our very cars may be under the command of brass hats engaged in collecting milk and potatoes from outlying districts, and we, instead of motoring, may be driving trams or trains, acting as goods porters or, and more probably, driving food lorries. Well, we do not know; we shall be prepared to play our part whatever happens—nothing could possibly be worse than the weather we've just been having!

It is only natural that motorists should feel irritated at the raid on the Road Fund; everyone who has been on the road since Easter knows how badly in need of repair are the great majority of our highways. Definite pledges, honoured and repeated by successive Governments, have been repudiated, and no amount of argument, no sophistry, can alter the fact that the Fund was never a part of our national revenue, but was, on the contrary, a trust fund held and administered by the Treasury for a specific, particular purpose. It is idle to say that what has been taken was merely a surplus. The word "surplus" implies that some portion of the accumulated cash was not required for the purpose for which it was raised. As a matter of fact, there was no surplus; on the other hand, the money in hand had been allocated to road work during the present year. Now grants to local authorities for road construction and maintenance have been withheld and postponed; many have been cancelled altogether; big and important contracts will not now be placed, and men who would, in the ordinary course of things, have been busy this summer will be drawing out-of-work pay from Government funds. Economically, the raid is quite unsound. Of course, the last word has not yet been said. All over the country local and county authorities are protesting, and possibly the A.A. and the R.A.C. will be making their voice heard. The opposition Press will make it clear that what is at stake is not the actual taking of the money, but Parliamentary principle, and that is a matter of national importance.

High Speeds.

Once again British motoring has obtaned a secure and, I should say, safe hold on world's speed records for at any rate some time to come, and the achievement of Mr. Parry Thomas on the Pendine Sands is one of which all British motorists should be proud. The speed attained speaks volumes for the skill of the British designer, the splendid workmanship of the British car builders, and the courage and intrepidity of the British driver. There is, however, one thing in connexion with the event to which sufficient notice has not yet, in my opinion, been given. That is the fact that the Shell petrol and Shell motor oil used during the trial were just plain Shell petrol and motor oil; not prepared in any way for the trial, but just the same petrol and oil that anyone can buy, anywhere on the road. In these days, when we hear so much of "doped" fuels; of admixtures of petrol and ether, of picric acid and other additions to motor spirit used in speed contests, this is, I think, a fact to which due prominence should be given.

Motor Competitions.

This use of plain, straightforward fuel is a step in the right direction, and it adds some strength to the position taken up by the Society of Motor Manufacturers and Traders towards motor competitions generally. There has been evident, in the comments which have appeared in some journals on the attitude of this Society towards competitions, a disposition to criticise adversely, from the viewpoint that sporting motor competitions must necessarily be so affected as to become, ultimately, almost things of the past. The fact is, as the *Motor* points out, that the decision of the Society really establishes a situation which is entirely new, creating conditions which call for something more than superficial considerations. What we have to consider, those of us who are interested in the sporting side of motoring, is whether the action of the Society initiates a new and better era of motoring sport open to the enthusiastic motorist, who will be able to compete in events with the knowledge that he has for his fellow competitors only these who, like himself, participate for the love of the game with an equal chance of success. Mr. Bidlake, who is the trials secretary of the Motor Cycling Club, has written a rather interesting article on the subject to the paper mentioned. He believes that when the amateur private owners fully realise the position and join clubs from which they may have previously abstained because they disliked competing with those who have a factory behind them, they will participate in amateur events. He seems certain that there must be many owner-drivers waiting the opportunity to take part in competitive sport if they are assured that they will only be up against men in similar positions to themselves. There must be an end to the surreptitious bonus and the true amateur, competing only for his own amusement, should be absolutely independent of tips or gifts in any shape of form from whom he buys his goods.

Commercial Motors.

Those who have watched carefully the developments taking place in the commercial motor side of the industry will have noticed the change which is becoming apparent in connexion with the load line for goods vehicles. Almost universally the load line for vehicles, railway trucks, railway platforms and loading bays has hitherto been about 3 ft. 6 in. from the ground. This has been the usual height not only in this country but also in the

Near East and in India, and it is not going too far to say that this height has been employed for thousands of years, the reason being that it is the height from which a man can take a pack on to his shoulders and from which a pack mule can be easily loaded. I see that the *Commercial Motor* also considers that must have been the start of it, and with the taming of the horse and bringing it into the service of man, the height was continued without alteration, for it was found to be about the line of draught. Wheeled vehicles were built up to this line and it was found that it gave clearance for steering wheels of a satisfactory size. The railway truck was built with its platform at the level of the platform and the horsed vehicle to facilitate the transfer of goods.

With the coming of power-driven road vehicles, however, the practice has at last broken down, and in recent years designers have been able so to perfect their work, taking advantage of modern improvements in materials, that they have brought the platform level to 2 ft., or 2 ft. 3 in., thus increasing the scope of the road vehicles in that, whilst it is no more difficult to load from the height of the standard loading bay it is very much easier to load from the ground level. Users of mechanical vehicles are reaping great advantage from the adoption of lower loading standards because most products begin their career on the ground level or quickly reach it, and eventually come back to it prior to use. Any high intermediate raising is therefore unnecessary and should be reduced to a minimum.

COMPANY NOTES AND REPORTS.

DACIA ROMANO.

The report of the Dacia Romano Petroleum Syndicate, Ltd., for the year ended December 31, 1925, states that the production of crude oil for the year was 10,046 tons. Moreni Well No. 10 came into production in July and to the end of the year had given 5,823 tons. Wells No. 9 and 11 had been drilled to the oil sands. In addition, eight wells were commenced, of which three have been completed. The refinery remained closed throughout the year. The profit and loss account shows an excess of expenditure over income of £22,865 owing to the small production of the year and low prices realised. Depreciation amounting to £24,821 has been written off capital items, making the deficit for the year £47,686. For capital items, the leu has been taken at the average rate during the year, approximating 1,007. For floating assets and liabilities, the rate has been taken at 1,052, being the rate of exchange on December 31, 1925.

COMMERCIAL BANK OF THE NEAR EAST.

The report of the Commercial Bank of the Near East Ltd., for the year 1925 states that the net profit for the year was £9,889 11s. 8d.; add balance brought forward from the year ended December 31, 1924, £210 13s. 4d.; £10,100 5s.; deduct interim dividend at 6 per cent. per annum, less income tax, for the half-year ended June 30, 1925, which was paid on September 10, 1925, £4,205 16s. 10d., leaving a balance of £5,894 8s. 2d. The directors recommend the distribution of this amount as follows:—To write off the balance of preliminary expenses £614 10. 7d.; to transfer to reserve fund, including the 5 per cent. required by the articles of association £500; to payment of a final dividend for the half year to December 31, 1925, at the rate of 6 per cent. per annum less income tax at 4s. per £, making a total payment for the year of 6 per cent. £4,440; to carry forward to the current year £339 17s. 7d., £5,894 8s. 2d. A branch of the bank was opened on October 1, 1925, at 5, Stamboul Street, Alexandria, Egypt.

NATIONAL BANK OF EGYPT.

Position at January 31, 1926, published in conformity with Article 8 of the Statutes. Banking Department, Liabilities: Share capital, (300,000 fully paid shares of £E10 each.) £E2,925,000. Reserve Fund: statutory reserve, £E1,462,500; special reserve, £E1,023,750; current deposit and other accounts, £E13,244,528; Egyptian Government, £E24,001,149; Sudan Government, £E327,784; Mixed Tribunals £E1,633,237; bankers accounts, £E215,979; cheques and bills payable, £E194,930; sundry other accounts £E821,850; £E48,850,773. Assets: Government securities and securities guaranteed by the Egyptian Government, £E27,495,871; sundry securities £E334,357; advances on merchandise £E1,641,308; advances on securities, £E2,617,979; advances otherwise secured, £E903,708; sundry other advances, £387,132; bills of exchange £E5,140,576; local bills discounted, £E287,795; buildings and furniture, £E123,408; Money at call and at short notice, £E1,033,500; bankers accounts, £E3,893,163; sundry other accounts, £E31,565. Cash: £E1,762,243; Gold, £E56,440; Silver, Nickel, etc., £E325,659. £E2,164,638, £E48,850,773. Issue Department: Notes issued, £E33,960,000, £E33,960,000. Gold, £E3,339,576, *British Treasury Bills, £E13,010,424 £E16,950,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,356,249; British Treasury Bills and National War Bonds, £E15,593,751; £E16 950,000; £E33,900,00.

*By authority of the Egyptian Government these Treasury Bils are deposited in lieu of Gold. (See "Journal Official" of October 30 1916.)

MADRAS AND SOUTHERN MAHRATTA.

The Madras and Southern Mahratta Railway Company, Ltd., has declared an interim dividend, payable July 1, of £5 per cent.—namely, guaranteed interest £1 15s., stockholders' revenue account £3 5s. In addition to the above dividend, as announced last December, 1 per cent., free of tax, will be paid on July 1 next out of the reserve fund.

BARSI LIGHT RAILWAY.

An interim report of the Barsi Light Railway Company states that the approximate results for the year to March 31, 1926, are:—Gross earnings, Rs.17,85,911, working expenses, Rs.9,29,392, compared with Rs.8,86,907 (actual figures) respectively in the previous year. It is estimated that the net revenue for the year, including profit on exchange, but after providing for probable taxation in India, will amount to some £56,000. From this has to be met the interest on the Four per Cent. Debenture stock and the interest and sinking fund instalment on the Four per Cent. "Latur Extension" Debentures, totalling £11,255. The directors have declared a dividend in respect of the half-year to September 30, 1925, on the ordinary shares at the rate of 2 per cent., together with a bonus of 2 per cent., or 10s. per share in all (i.e., at the rate of 10 per cent. per annum), which will absorb £13,000.

NEW COMPANY.

VALONA OILFIELDS, LIMITED.

Valona Oilfields, Ltd., has been registered as a public company, with a nominal capital of £100, to explore, work and develop mines, deposits, wells, veins and seams of petroleum and other oils, asphalt, bitumen and other minerals and products, to organise, equip and dispatch expeditions and experts for inspecting and developing lands, districts and properties in Albania or elsewhere, etc. The registered office is at 64, Finsbury Pavement, E.C.

Company Meeting.

INDO-EUROPEAN TELEGRAPH COMPANY.

Great Progress in Land Lines Communication.

The fifty-ninth ordinary general meeting of the Indo-European Telegraph Company, Limited, was held on April 29, at the offices, 18, Old Broad Street, London, E.C. Mr. H. L. M. Tritton (chairman of the company presided.

The Secretary (Mr. John I. Bethell) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Before proceeding to the business of the meeting it is with regret that I have to refer to the absence to-day of our colleague, Sir Rayner Barker, owing to illness. I am glad to tell you that Sir Rayner expects soon to be back at work, and I am sure you will join with me in wishing him a complete and speedy recovery. (Hear, hear.)

With regard to the report and account for 1925 I presume it to be your pleasure to take them as read. (Agreed.)

I am glad to be able to record that our relations with the various Governments from whom we enjoy concessions continue on a satisfactory footing, whether they be British, German, Polish, Russian, or Persian. It is hardly necessary to mention the Indo-European Telegraph Department of the India Office, who are not only our active partners in the route to India, but co-operate with us fully in every matter concerning our joint direct working to Karachi. To the Indian Government proper, also, we are indebted for the provision of lines between Karachi and Calcutta, and for communication with all other places in India.

The Black Sea Cable.

I greatly regret that the Black Sea cable is still out of operation. I explained to you last year that the causes which have given rise to the interruption of working are entirely outside this company's control. No effort has been spared to overcome the difficulties that have arisen, and I am still hopeful that some satisfactory solution may yet be found.

We are living in an age of rapid development, and not least in the matter of communication—whether by land wire, as in the case of this company, or by cable or by wireless. As to the latter, interesting developments are constantly taking place, but I am convinced that in this modern world there is ample room for all three systems, and each one should be supplementary to the other.

You have, no doubt, read of the great strides made recently in cable communication, and I should like to-day to give you some idea of the accuracy, secrecy, and continuous service, day and night, year in and year out, given by this company, which is mainly concerned with land lines. The constant improvement in instruments and other technical matters, such as automatic transmission and re-transmission, has increased the working capacity of telegraph lines to an extent which I am sure the public does not realise. I will, therefore, give you in detail the method of working of this company.

London-Karachi Service.

I propose to take as a single unit the combined lines of this company and of the Indo-European Telegraph Department, whose lines, running from Teheran, in Persia, to Karachi, in India, are operated for through traffic in conjunction with ours from London to Teheran. You will note that the total distance from London to Karachi is 5,300 miles. This distance is covered by instantaneous telegraph signals; in other words, what is put into the line at London comes out at Karachi in the fraction of a second. This applies not only to the transmission of the actual telegrams, but to service inquiries, requests for repetitions, and the replies thereto, for all of which London is in instantaneous communication with Odessa, Teheran, or Karachi, as the case may be, such communication being practically that obtained in telephoning.

This direct communication is accomplished by the interpolation of 13 stations, called relay stations, where the original current put into the line is picked up, reinforced, and automatically passed on to the next station. Further, there is little of the human element either in the original transmission or in the ultimate reception. The telegram goes on to the line in the form of a slip perforated either by hand or by machine, and comes out in a printed slip at the other end, thus saving the low speed of Morse sending at one end and of writing up Morse slip at the other.

I want you to realise that a telegram, say, from India is transmitted direct to London, Manchester, or Liverpool from Karachi. Between Calcutta and Karachi, by the good offices of the Indian Government, telegrams are also carried direct; there is thus by our route one retransmission only between Calcutta and the United Kingdom. Traffic for South Russia is exchanged direct with Odessa, and traffic for Persia, Persian Gulf, and Iraq direct with Teheran.

Direct Communication.

I wish further to emphasise that we either deal with our traffic direct or not at all. Thus a telegram, say, from India cannot be delayed at any intermediate station between Karachi and London, such as Teheran or Odessa. Should direct communication by our route between Karachi and London become interrupted, arrangements are at once made by which telegrams are diverted to another route.

In estimating the value of this achievement of direct working, the composite nature of the line and the character of the ground traversed must be taken into account. The company's line, which includes 200 miles of cable across the North Sea, runs through Germany and Poland to Russia, where it passes over desert, forest, mountain, and river into Persia, again crossing a range of mountains and more desert to Teheran. Maintenance has, therefore, to be watched with the greatest care by the company's staff distributed along the line in Poland, Russia, and Persia for that purpose. In spite of all difficulties interruptions are, as a general rule, not of frequent occurrence on our route.

We and the Indo-European Telegraph Department have two lines between London and Karachi and a third between Berlin and Karachi. It is very seldom that all these are simultaneously interrupted. Owing to the manner in which our repair men are located in sections along the route interruptions are speedily restored. Indeed, the lines are so quickly made good that the route is often ready to resume transmission of traffic before the notification of interruption has reached the administrations concerned.

With regard to accuracy of transmission, the percentage of errors made by our staff was .023, or 1 in 4,348 words, which, you will agree, is very good. (Hear, hear.) The percentage of error due to instrument or line faults was .019, or 1 in 5,263 words, making a total percentage of .042, or 1 in 2,381 words.

An important feature of the company's administration is its clearing house system for the checking of errors. Each telegram is not only timed in and out of the company's section of the route, but the exact condition of every signal is recorded at entry and exit. The company is thus enabled to furnish indisputable records as to the accuracy of every signal transmitted in its section, and any complaint formulated by a customer, whether as regards the accuracy of a single letter or the transmission of the telegram as a whole, is investigated and dealt with within the limits of the day's work. This facility is much appreciated by customers.

The Accounts.

I will now ask you to turn your attention to the accounts for 1925. The receipts on message account are increased by over £15,000. South Russian traffic shows an improvement, as does

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

Digitized by Google

Persian traffic, especially since the advent of the new regime under H.I.M. Reza Shah Pahlavi. Traffic with Iraq also continues to make satisfactory progress.

Expenses on commercial and maintenance accounts together show a small increase of £4,800, which is attributable chiefly to maintenance expenditure in Russia, including obligations incurred under the Russian legal system. Salaries, retirement allowances, and wages show an increase of £9,500, but this is only nominal, being almost entirely due to the inclusion under this heading of certain items of expenditure hitherto included under agency and general expenses, which are now correspondingly lower.

Expenditure on reconstruction of line in Russia and Poland shows an increase of £22,300, due to the fact that reconstruction work is still taking place. The directors have this year set aside a further sum of £50,000 in reduction of this item, which, therefore, will now stand at £157,826. They have also reduced the heading Persian Section of Line by an additional appropriation of £5,000.

There are no other items in the balance-sheet calling for special comment. Sundry debtors and advance accounts are all good items. Sundry credit balances are normal. Unclaimed dividends due to proprietors have been reduced from £31,082 in 1924 to £2,697 as a result of the payment out to the Government Department concerned of arrears of dividends due under the Peace Treaty on a number of bearer shares.

The provision shown for investment fluctuations is well over the figure required, though there has been a slightly increased depreciation during the year. Galletti's Wireless Telegraph and Telephone Company, Limited, went into voluntary liquidation in November, 1925; this item will be dealt with in the accounts for 1926.

Dividend and Bonus.

While recommending the maintenance of the dividend at last year's figure of 7 per cent. for the year, the directors have felt justified, having regard to the satisfactory year's work, in recommending the increase of last year's bonus of 1½ per cent. to 3 per cent. (actual) this year, making a total distribution for the year from all sources of 10 per cent., free of tax, as against 8½ per cent. last year.

A payment of £15,000 to the retirement trust fund is proposed, and I am sure this will have your approval. I should like to take this opportunity of reminding shareholders that this company has been in existence for 58 years, and as the retirements of men who have given the company long and faithful service are now taking place it is necessary to accelerate the growth of the fund, and I have no doubt it will be your wish to endorse this recommendation. (Hear, hear.) An allocation of £5,000 to equalisation of dividends fund is also recommended. The directors' recommendations as above leave a balance of £16,339 to be carried forward to the credit of the year 1926.

Before I sit down I should like to place on record the directors' appreciation, and I am sure the shareholders', of the work done by the company's staff both at home and abroad. In a business such as ours the loyal co-operation of every member of the staff, from the highest to the last-joined recruit, is essential, and I feel sure that the results I am able to put before you to-day prove to you that you and we are well and faithfully served in that respect.

I now beg to move: "That the directors' report and accounts for the year 1925, duly audited, as presented to the meeting, be and are hereby received and adopted; that a dividend for the year ended December 31, 1925, be and is hereby declared of £1 2s. 6d. per share (making with the interim dividend already paid 7 per cent. for the year), and a bonus of 15s. per share, both dividend and bonus free of income tax, and payable on May 1, 1926, subject to the Trading with the Enemy Act, to shareholders registered on April 15, 1926; that £15,000 be handed to the trustees of the retirement trust fund, and that £5,000 be allocated to equalisation of dividends fund." I will ask Mr. Brown to be kind enough to second that resolution, and after that I shall be glad to answer any questions that shareholders may wish to put.

Mr. F. J. Brown, C.B., C.B.E., seconded the resolution, which was carried unanimously without discussion.

The chairman moved the re-election of the retiring directors, Sir Rayner C. Barker, C.I.E., and M. Claude H. Tritton, O.B.E. Mr. Brown seconded the resolution, which was unanimously adopted.

On the motion of Mr. J. F. Moran, seconded by Mr. Bryan Phelan, the auditors (Messrs. Kemp, Chatteris, Nichols, Sendell and Co.) were re-elected.

Vote of Thanks to Directors and Staff.

Mr. Drysdale said that before they parted he was sure that the shareholders would unite with him in offering to the directors and staff their very best thanks for the position in which they found themselves that day. When he looked back to a meeting that he attended there about five years ago he remembered that most of the shareholders present took a very dismal and doleful view of the matter. One gentleman then suggested that they were going to shipwreck and said that other very dreadful things were going to happen. He himself did not take that view. He was an optimist

then and he was an optimist now. He thought that the words he used were that not only were they not going to shipwreck, but that they were making for a good harbour; and so it had proved. The report that the board had put before the shareholders was really excellent. It was even better than he himself had expected, and he thought that the prospects that the chairman had held out to them would be no less welcome when they got the account for next year. He was also sure that the shareholders present would fully endorse what the chairman had said about the fund for the retiring of the officers. Certainly they should be provided for after their long service. They felt deeply indebted not only to the directors, but to the staff at home and abroad, for their attention to the company's business.

Mr. Phelan seconded the resolution, which was carried unanimously, and after the Chairman had briefly responded, the proceedings terminated.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended April 22, state:—Since our last report the tone of the futures market has been quiet but firm. The week's summary of price movements is as follows: Sakellaridis, May, 30.58 dollars, 0.10 dollars up; July, 29.60 dollars 0.15 dollars up; November, 28.68 dollars, 0.20 dollars down; January, 28.30 dollars, 0.18 dollars down. Ashmouni, April 21.45 dollars, 0.35 dollars down; June, 21.65 dollars, 0.40 dollars down; August, 21.75 dollars, 0.45 dollars down; October, 21.72 dollars, 0.48 dollars down.

There is very little fresh to report on the market. The demand from abroad continues to be poor, in fact during the last two or three days there has been hardly any inquiry, and but for the firmness of New York and the fact that speculators are more or less out of the local market, we should have seen a decline in prices as a result of this lack of demand. New crop options have been relatively fairly active; the bulk of the transactions, however, have been on straddle account between our market and the markets of New York and Liverpool. For our part, we do not think that present differences between the markets are, for the time being, tempting enough for straddling operations.

The statistical position does not show any great change from last week. Arrivals continue to be considerably in excess of the figures for the corresponding period of last year, whilst, on the other hand, export figures are relatively moderate. Government purchases for the week amount to about 600 bales Sakel, for which from 32½ to 33½ dollars have been paid. Total Government purchases from the beginning of the season to date amount to about 44,000 bales.

We do not look for any great fluctuations in the market, and unless crop reports, either here or in America, become really unfavourable, we are rather inclined to look for dull markets. The week's receipts amount to 67,343 krs. against exports 93,413 krs.; the stock stands at 2,111,872 krs.

Spot: We have had a week of quiet markets at Minet el Bassal and sales amount to about 12,100 bales, of which we estimate 5,700 bales Sakellaridis, 4,300 bales Uppers, 1,150 bales Zagora, 600 bales Pilion, 100 bales Brown and 250 bales White. Government purchases for the week amount to slightly over 600 bales of Sakel. Desirable cotton continues hard to buy and sellers very difficult to deal with.

Sakellaridis: A moderate business has been done covering all qualities. Spot differences are without much change excepting Fully Fair and below, which are slightly easier.

Ashmouni and Zagora: A fairly good business has been done, principally in the medium and lower qualities, which continue to be much sought after. Spot differences are generally appreciably stiffer.

Brown and Pilion: A moderate business has been done in Brown, and Pilion has been in good favour with buyers. Spot differences for both growths are appreciably dearer all round.

White: has met with a very fair inquiry at about last week's spot differences.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, Tuesday Morning.

Partly owing to the arrival of the coal crisis at its acutest stage and the commencement of the general strike, Mr. Churchill's Budget statement had very little effect upon the markets. The financial provisions of it, however, commend themselves to financial circles generally, especially the arrangement to increase the Sinking Fund this year from £50 to £60 millions, thereby restoring to debt redemption the amount borrowed last year for the payment of the coal subsidy. This sound policy, which shows that the Government has no intention of borrowing funds with which to pay a subsidy to any industry which may be in distress, has pleased the gilt-edged market, as has also the proposal to discontinue the Trade Facilities Acts. Both these steps should enhance the credit of the British Government, and this is an important point in view of the conversion operations with which it will be faced in the not very distant future. The keynote of Mr. Churchill's second Budget, in fact, is the maintenance of British credit. The City is disappointed at his failure to make radical economies in the large spending departments, and although the Chancellor's speech dwelt solemnly on the Government's intention to pursue the paths of public retrenchment, business men are becoming sceptical on this score.

Cautious Budgeting.

Yet when we talk of our £820 millions Budget as extravagant it is as well to remind ourselves that this may be misinterpreted. Out of that £820 millions no less than £60 millions will go this year towards repayment of interest on debt, and a further £33 millions to the United States under the debt funding scheme. If we further deduct the interest on the national debt and the cost of the Postal Services, which pay their way, we find that we are only actually spending on ourselves about £400 millions, or less than half the total budget, and this, moreover, includes a large and unavoidable amount for war pensions. As the Chancellor said on Monday, we have in six years paid our way, honoured our obligations, fought our way back to the gold standard and raised sufficient in taxation to reduce the National Debt by an amount which has lowered the debt charge by £75 millions. That is no mean achievement and Mr. Churchill deserves credit for maintaining the high traditions of British post-War finance in face of a temptation, which must have been strong, to frame his revenue estimates optimistically, and make some further remission in taxation. By cautious budgeting this year he is preparing the way for alleviation of the taxpayer's burden twelve months hence on a scale which could not be attempted at the present time if the national balance-sheet was to be kept in a sound condition.

THE NEAR EAST AND INDIA.

No. 782.—VOL. XXIX. THURSDAY, MAY 13, 1926.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The General Strike.

The attenuated appearance of this week's issue of THE NEAR EAST AND INDIA is due to the General Strike, which has handicapped, but not completely paralysed, the Press of Great Britain. Our issue of May 6 was delayed one week, and this week's issue will appear a few days late.

Negotiations with Turkey.

Many attempts have been made by Great Britain and Turkey since the Treaty of Lausanne to place on a satisfactory footing the relations of the two countries in the Near and Middle East. What it is hoped will prove to be the final stage in the long-drawn negotiations was inaugurated on January 21 last by a preliminary visit to Angora of Sir Ronald Lindsay, British Ambassador in Constantinople. Since that date Sir Ronald Lindsay has been to England to exchange views with the British Government. He is now back again in Angora, and before the outbreak of the General Strike in Great Britain there was reason for expecting that agreement between the two Governments would prove a matter of only a few days. Inevitably the preoccupations of the Government and public in this country during the last week have delayed the conclusion of the negotiations. Apart from any actual delay in the exchange of question and answer, the Turks would have been less than human, if they had not stayed their hand in order to understand what significance, if any, had to be attached to this General Strike. If the challenge of the Trade Unions Council should prove successful, a Labour Government would seem to them the least that could be expected. Even if the strike were broken, Turkish experience of European politics would prompt Angora to look for a change of Government in England. There was some reason, therefore, from the Turks' point of view to prolong the negotiations, as, on principle, a far-reaching agreement between two countries is not concluded with a Government likely to be replaced within a short time in case it may be possible to secure better terms from their successors.

A Turn for the Better.

By now the Turkish Government, if it is well informed, will have been able to satisfy itself that the General Strike is merely a domestic concern of Great Britain's and has to be regarded as one more enigma associated with the enigmatical British. For Turkey's sake, therefore, we may hope that the negotiations will shortly be brought to a successful conclusion. As far as Great Britain is concerned the delay is immaterial; a welcome improvement has taken place in the general attitude of the Turkish Government, and there is now a complete absence of the pin-pricks which during the last year or so have been administered to British subjects, whose presence in Turkey has always been of advantage, directly or indirectly, to the Turks. Moreover, Anglo-Turkish relations necessarily occupy a comparatively minor position in the scheme of the British Empire. It is a basic principle of that Empire to strive to the utmost for peace and friendly relations in every part of the world; and for this reason Great Britain has worked hard, and will always work hard, if necessary, for the re-establishment of friendly relations with Turkey, but there is no question of the normal development of the Empire being arrested by the kind of unfriendliness on Turkey's part which takes the form of imposing undesirable Turkish masters on a British girls' school or seizing bridge tolls which ought, if agreements are to be honoured, to be paid into a bank.

An Economic Solution.

With Turkey the continuation of strained relations with Great Britain in existing circumstances is a very different matter. If there were any doubt on this subject, it would be dispelled by the course of the Turkish rate of exchange during the negotiations. The marked fluctuations that have taken place have responded closely to the course that those negotiations were popularly supposed to be experiencing. A report to the effect that they had been suspended sent the Turkish pound rapidly down, to recover at once on receipt of a more hopeful statement in the Press; while all along there has been a steady improvement as the impression gained ground that sooner or later agreement would be reached between the two countries. When the course of the negotiations can be made known, we are confident that it will be found that Great Britain has given ample proof of her sincere desire for an honourable settlement with Turkey. Nearly eighteen months ago it was pointed out in these pages that Turkey's paramount concern in regard to the Mosul vilayet was economic rather than territorial. In her peculiar handling of her case she succeeded in alarming a certain number of well-meaning but ill-informed people in this country, who satisfied themselves that a firm and just attitude on Great Britain's part must spell war. The event will prove that, as soon as the Turkish Government had convinced itself that it could not hope for more than minor rectifications of the frontier between Turkey and Iraq, it devoted all its attention to the economic aspect of the question. The Turkish Press has busied itself with the Turkish Petroleum Company, in the belief that Great Britain could easily arrange to admit Turkey

Digitized by Google

to a share in that undertaking. This view, however, overlooks the extreme unlikeliness of certain American, French and other business interests considering themselves called upon to make sacrifices for the sake of Great Britain's relations with Turkey. The Turkish attitude towards foreigners of recent years, it will be recalled, has not favourably impressed foreign opinion towards the country. Great Britain, therefore, may have to find other means of meeting Turkey's desire to derive financial advantage from her former possession of the Mosul vilayet, and it should be possible to do this in such a way that the interests of Turkey and Iraq—therefore, of Great Britain as well—are made identical in the maintenance of friendly relations between the three countries and the peaceful development of the Mosul oilfields.

The Rockefeller Offer to Egypt.

When Mr. J. D. Rockefeller, Junior, offered the Egyptian Government two million pounds for the construction in Cairo of a Museum of Archæological Research, he took a very generous step, but at a singularly inopportune moment. It was only natural that he should wish to hedge the gift round with certain conditions, to make sure that even in circumstances against which Egypt herself could not provide there should be no possibility of the endowment's being deflected for other purposes, however worthy. At any other time his conditions might have been regarded as reasonable or have passed unnoticed: but in the present state of Egyptian politics it is unlikely that any Government in Cairo would lay itself open to the charge of having deliberately admitted foreign co-operation in the management of a new Egyptian institution. Both Egypt and the cause of archæology are the losers, and we can only regret that Mr. Rockefeller's advisers did not appreciate the peculiar circumstances and persuade him to withhold his munificent offer until a more appropriate moment.

A NEAR AND MIDDLE EAST REGISTER.

In connexion with the luncheon recently given by former residents in Constantinople in honour of Sir Harry Eyres, attention has been called to the absence of any organisation to enable those closely associated with the Near or the Middle East who happen to be in England to be communicated with when occasion arises. The suggestion has, therefore, been made that THE NEAR EAST AND INDIA should invite residents of the Near and Middle East on their return to England, either for permanent residence or on a visit, to send their names and addresses to this Office.

THE NEAR EAST AND INDIA is happy to fall in with this proposal.

When it is desired that the return to England should be announced, this can be done; but the main purpose of the list of names and addresses will be to facilitate communication with those who thus register their addresses, if at any time a reunion is considered desirable as on the occasion of the retirement of Sir Harry Eyres from the Diplomatic Service.

It is hoped that residents in the Near and Middle East and those who wish to keep up their ties with that part of the world will send in their names and addresses to this Office, and will make a point of inviting others known to them to do the same.

PERSONAL AND GENERAL

TO-DAY

May 13, 1926 (New Style).
April 30, 1926 (Old Style).
Dulkada 1, 1344 A.H. of the Moslem Calendar.
Iyar 29, 5686, of the Jewish Calendar.

Lady Lloyd has arranged to leave Cairo for England on May 11.

Aziz Izzet Pasha, Egyptian Minister to Great Britain, has left Egypt to return to London, but is expected to remain on the Continent until the General Strike is over.

M. Hadji Mischeff, Bulgarian Minister to Great Britain, returned to London on May 10 from Paris, where he had been staying for a short time after slight indisposition.

At Buckingham Palace on May 10 the Queen received the daughter-in-law of the Begum of Bhopal, Maimoona Sultan, and her Highness' eldest granddaughter, Sahibzadi Abida.

The King has been pleased to approve the appointment of the Rt. Rev. Alex. Wood, M.A., Bishop in Chota Nagpur, to be Bishop of Nagpur in succession to Bishop Chatterton who will retire on October 31.

M. Juritch, Yugoslav Minister to Great Britain, returned to London on May 11 from Washington, where, as a member of the Yugoslav Financial Mission, he negotiated the agreement for the settlement of Yugoslavia's indebtedness to the United States.

The Bishop of Oxford and Lord Blanesburgh have been appointed non-resident trustees of the Oxford University Endowment Fund in the places of the late Lord Milner and of Lord Irwin, who resigned on his departure for for India.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor Street, W.1.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

The Near and Middle East*

From Our Own Correspondents.

Cairo, May 1.

Presentation of Colours.

It is rarely that one sees such a picturesque spectacle as the ceremony which took place at the Citadel on Wednesday last. The occasion was the presentation of new colours to the First Battalion Argyll and Sutherland Highlanders by the High Commissioner, who was accompanied by Lady Lloyd. Amongst the other spectators were General Sir Richard Haking and Vice-Marshal Sir Oliver and Lady Swann. Everything went with a swing, and the evolutions of "trooping the colour" were executed with the precision that one associates with one of the crack regiments recruited from across the Tweed.

The Rockefeller Offer.

As the cables will have reported, Mr. Rockefeller has withdrawn his offer of ten million dollars to create an Institute of Archæological Research and a new Museum in Cairo "in order to relieve the Egyptian Government from embarrassment." Evidently some misunderstanding arose with regard to the amended agreement, which was sent to Mr. Rockefeller, and his representatives, interpreting what had happened as being really prompted by a disinclination to accept the offer, advised their principal to withdraw it. This he did in what must be admitted was a most graceful manner. From the very start, as comments in this correspondence have shown, there has been very little hope of the Egyptian Government's being able to accept the offer under the conditions attached to it. It was, frankly, too much to expect Egypt to agree to abandon control of one of her departments and to allow it to come under the independent direction of an international committee on which she would only have a 25 per cent. representation. The fact that such conditions accompanied the offer showed a complete misconception of local conditions on the part of those who presented the scheme on behalf of the donor; while, if it is true, as is reliably asserted, that for a long time the Minister of Public Works, from whom depends the Antiquities Service, was not informed by the donor's agents of the offer, that the head of that Service was given no hint by Dr. Breasted of what he was negotiating with the Government, and that even the Representative of the United States was kept in ignorance of the great offer made by one of his fellow countrymen, one is justified in thinking that the methods adopted by the negotiators were perhaps somewhat to blame, and that a very different result would have been obtained had negotiations been conducted in a different manner and with more appreciation of local psychology.

A Unique Literary Event.

On Friday an event unique in the history of Oriental journalism and literature and rarely equalled in the Western world of letters was celebrated at the Royal Opera House. Fifty years ago there was founded at Beyrouth by a then comparatively unknown graduate of the American University, Yacoub Sarruf, a monthly review called *Al Moktataf*, which had for its object to keep the Arabic speaking communities in touch with scientific, literary, industrial and agricultural development in the world generally. Yesterday's ceremony was to celebrate not only the jubilee of the foundation of this publication, which has steadily maintained its object and has attained a world-wide reputation by reason of the high standard of its matter and the excellence of the Arabic in which it is written, but also the completion by Dr. Sarruf of 50 years in the editorial chair of *Al Moktataf*. The composition of the gathering at yesterday's ceremony was in itself a testimony to the high place which this review and its editor hold in the opinion of all who count. The chair was taken by Tewfik Pasha Rifaat, the Minister of Wakfs, and King Fuad sent his Chief Official, Tewfik Pasha Nessim. The members of the Cabinet, the leaders of all the political parties, Princes of the Royal Family, all the literary celebrities of the Arab world, the leading foreign residents as well as the principal members of the Egyptian and Syrian communities were there. And in addition to the speeches of eulogy and congratulations came the tributes, telegraphic and otherwise, from the ends of the world where there exist Arabic-speaking communities, testifying to the high esteem in which they held *Al Moktataf* and its talented editor. It was a great occasion but by no means too great in recognition of the services which this veteran scientist-editor has rendered to the Arabic-speaking world.

The Tribute Case.

Amid all the rejoicing over the decision of the Mixed Courts in the Egyptian Tribute case one hears warm praise of Messrs. Rothschilds' counsel, Mres. Pezzi Bey and Alexander and of their conduct of what is generally admitted to have been a most difficult case. On the other hand, there is widespread adverse comment of the manner in which the Egyptian Government defended itself. In THE NEAR EAST AND INDIA of May 28 last year I dealt with the blameworthy attitude of all those who had been

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

officially concerned with the defence of the Government's case in the Court of First Instance, and I cannot say that what has happened in the Court of Appeal has done anything to alter that view.

Parenthetically, it may be said that the strengthening of the Contentieux, which plays such a dominant part in Government policy, by the appointment of another Englishman, is warmly welcomed as conducing, it is hoped, to the cessation of an attitude, which has cost the Government dearly in the past.

ROUMANIA.

Bucharest, May 1.

Political Activity.

The date of the forthcoming general elections has been fixed for May 25 in Bucharest and for May 28 in the Provinces, and all the parties are busy making their preparations. A congress of the Liberal Party, and another of the National Party, were held this week. At the Liberal Party congress M. Ion Bratianu took the Chair. He spoke of the "dissolution" of the National Party and of the "precarious" situation of the Peasant Party, and expressed the view that numerous small political groups constitute a danger to the uniform government of the country. This point of view was also clearly expressed in the new Electoral Law passed shortly before the Liberal Government went out of office—the aim of which obviously was to limit the number of parties by concentration. The Liberal Congress declared its intention of making no alliance with any other party, and the Liberals will no doubt avoid any strong opposition to the new Government in the meantime.

At the congress of the National Party, presided over by Professor Yorga, it was decided to make an unconditional offer of fusion with the Peasant Party, or at least of co-operation for the purposes of the election. The opinion is very widely held, however, that only a complete fusion of these two parties would enable them to make their influence effective. It remains to be seen what attitude the Peasant Party will adopt. In regard to their chances in the elections, it is probably a significant fact that the date for the annual calling up of men due to serve for the Army has been fixed for May 26, so that many of the Peasant Party will find themselves safely in barracks, or well on the way thither, on the day of the elections.

THE ESSENCE OF INSURANCE IS SECURITY.

The Polish-Roumanian Treaty.

A Treaty of Alliance for mutual defence has been concluded between Roumania and Poland, in renewal of the Treaty of 1921 which expired on March 3, by which each of the countries engages to defend the other in case of aggression from outside, and to contract no alliance with a third Power without first consulting the other. They also engage to submit to arbitration any differences arising between them upon which they can find no agreement. The term of the Treaty is five years. It has been signed by M. Duca, Roumanian ex-Minister for Foreign Affairs, and M. Wielowievski, Polish Minister to Bucharest.

The Russo-German Treaty.

The Roumanian Press comments with scathing irony on the new faith of Germany, who, after gaining all the advantages that she could from the conciliatory policy recently adopted by the Western Powers, has now (according to the Roumanian Press) turned her back upon them and has concluded an alliance with Russia, the most considerable danger to the peace of Europe which now exists.

Philadelphia Exhibition.

The Liberal Government voted a sum of 20 million lei for the erection of a Roumanian Pavilion at the Philadelphia Exhibition, and great preparations had been made both officially and privately for exhibiting Roumanian products of all kinds, including tobacco, cereals, timber, textiles and metallurgical goods. It was found, however, that the erection of the Pavilion alone would cost 65 million lei, and consequently at a recent meeting of the Council of Ministers a decision was reached—no doubt a very reluctant one—against Roumania's participation in the Exhibition. Certainly it was a wise decision, especially in consideration of the recent heavy fall of the leu, which reached 1,360 to the £1 yesterday, after having fallen almost daily for some time. It is impossible, therefore, to estimate into what enormous expense the country might be led by so large an enterprise.

BULGARIA.

Sofia, April 29.

The Government's Position.

The small disagreements in the various political groups which inevitably arose upon questions of minor importance, and, especially, over the often equivocal attitude of the ex-President of the Council, Dr. Tsankoff, now President of the Sobranye, gave rise to a belief in the existence of profound misunderstandings in the Government section of the Democratic Entente. Hence there resulted some doubt as to the position of the Liaptcheff Cabinet, and in political circles there was talk of the approaching dissolution of the Sobranye as a matter of some uncertainty. The situation has recently been made the subject of an examination by the Parliamentary group of the Democratic Entente, and this examination has resulted in a manifestation of solidarity, which has tightened the bonds between the members and the Cabinet. The Government's position has thus been strengthened, especially after the formal declaration of Prof. Tsankoff that he remained faithful to the Democratic Entente and that he intended loyally to collaborate with his successor, M. Liaptcheff.

DOMESTIC ANNOUNCEMENT.

DEATH.

BARFF. On April 29, 1926, at his residence in Boudjah, near Smyrna, P. G. Barff, aged 89.

ISLAM'S CHRISTIAN ENVIRONMENT.

"THE ORIGIN OF ISLAM IN ITS CHRISTIAN ENVIRONMENT." By Richard Bell. (London: Macmillan and Co. 10s. 6d. net.)

The study by Western scholars of Islam rightly proceeds apace, for there is still about one of the world's great religions a veil not only of ignorance but of wilful misrepresentation. This, one is afraid, must be charged alike to Christians, Jews, and Moslems, all of whom have at one time or another treated Mohammed merely as an impostor or as the last, and therefore the best, of the Prophets.

Dr. Richard Bell's expansion in book-form of the lectures given on the Gunning Foundation in connexion with the Divinity Hall of Edinburgh University is, therefore, to be heartily welcomed. These lectures, the aim of which has been to present the origin of Islam against a background of surrounding Christianity, are of course mainly historical, but their interest will be by no means confined to the student. They should in fact be in the hands of all intelligent men who come into contact with Islam, for they are broad-minded, learned, and sober. Certainly Dr. Bell has seen both sides of the problem presented by the emergence of Islam, and spends no time in vain regrets or imaginings; he sees, too, the greatness and the permanent attraction of Islam, even though he may think that a Moslem "Reformation" is inevitable.

He explains clearly that Islam is—what is often charged against it—not only a religion but a political conception too because Mohammed saw in Christianity (and in the Old Testament, for that matter) the idea of a State. Nor was this due only to the intellectualising of the Eastern Christians, who fell such easy victims to the conquering Moslems, but also to the mighty pretensions of Rome. It was, however, in part due to the vain subtleties of Eastern Christian thought, particularly to the theories of the Monophysites, that Mohammed regarded the doctrine of the Trinity as tritheistic, and also that the humanity, as apart from the divinity, of Jesus Christ was understressed. In the clash which came between the Moslems, the Eastern Christians, only too anxious to score off their "heretical" fellow-Christians, even at the price of a new dependence, and the major Church of the Empire, it was perhaps inevitable that confused ideas of the real Christianity should be entertained by the Moslems, especially as incomplete conceptions had already been assimilated by Mohammed into his religion.

In Arabia, Christianity existed at the time of the birth of Mohammed in three principal centres:—Syria in the North-West, Mesopotamia in the North-East, and Abyssinia in the West. (The last Power had an indirect but temporary influence in the Yemen.) Of the Church in Syria and Palestine it is reasonable to say that it had extended its sway over all those Arabs who dwelt under the protection of the Roman Empire. The Arabs appear to have been peculiarly attracted by the monk in his cell, and, indeed, Mohammed himself always had a good word for the monks and priests of Christianity—a point which, incidentally, is often forgotten in the polemics of to-day. But these Arabs never fully acknowledged the official dicta of Byzantium, with the result that when another Semitic religion claimed their homage, they willingly exchanged the old bonds for the new. The extent of Christianity in Mesopotamia is more difficult to estimate, but the Church there had to contend with the hostility of the Persian Empire, and although certain Arab tribes adopted Christianity, its influence thence cannot have been so considerable with Mohammed. With Abyssinia the Mecca community had of course frequent communication, but here, again, the religion was Monophysite. With the brief sway of Christianity in the Yemen there is no space here to deal, but it is manifest that Arabs of the Hejaz must have been familiar with the Church of Nasran. Thus it can be seen that the desert from which Islam spread was, while politically secure, ringed about with Christian influences.

It is extremely difficult to judge upon Mohammed's attitude and conduct towards Christianity, for his contact with it was spasmodic, and, before he had any real or considerable knowledge of it, circumstances had forced him to make up his mind concerning it. Dr. Bell says: "His own direct knowledge of it was to begin with, I believe, just such knowledge as we might expect in a caravan trader who had been to Syria and seen Christian Churches, and perhaps Christian services." But it appears to be fairly certain that Mohammed had no scruples about appropriating those parts of Christianity which would be of use to him (just as he retained the Kaaba and the Pilgrimage from the Arabs' primitive paganism). Moreover, he was on the quest for revealed things all the time, and it mattered not to him whether these revelations came from Judaism or Christianity. For a time he was groping, religiously as well as politically.

The turning point in his career came, as has always been recognised, in the Battle of Badr (from which *furqan* the month of Ramadan has been appointed as a fast month). Not only the political success of Islam, therefore, but also the Quran, the Book sent down from Heaven, was thenceforward to take shape. In other words, both the kernel and the expanding shell of Islam were to be forged rather at Medina than at Mecca. It is curious to trace how at Medina it was that the idea of finding predecessors to Islam who were prior to and independent of Jews and Christians alike came to Mohammed. These he found in Abraham and Ishmael.

Much has been made in recent time of the Prophet Mohammed's original tolerance towards Christians, and the *sura* is often quoted:—"Those who have believed, the Jews, the Nasara, and the Sabiin, whoever believes in God, and the Last Day, and acts uprightly, have their reward with their Lord." And, indeed, it is patent that he at first attempted to find a common basis among Monotheists. But, Dr. Bell's suggests, Mohammed's demand for absolute obedience soon crept in. He claimed especially that the Christians had corrupted the revelations extended to them. The conclusion is, therefore, that conflict was inevitable.

Upon the success of Arab arms, Islam was fortified with a mass of intellectual power Persian, Aramaic and Egyptian, for example—to which the development of the religion was due. Now many of these intellectuals had once been Christians, and in the subsequent consolidation of Islam Christianity indirectly played an important part. For instance, popular influence was largely responsible for the incorporating into the Traditions of many sayings of Christian origin; the subtle logicians of Syria and elsewhere built up such an intellectual defence of Islam as was not then and is not now to be broken down by any Christian scholastic dogma; and, of course, it was mainly through these Islamicised Christians that the transmission of Greek Philosophy came.

THE INDIAN CIVIL SERVICE.

Speaking at the Pilgrims' dinner immediately after his return from India, Lord Reading referred to the improvement in the feeling among the members of the Indian Civil Service in India, due in particular to the adoption by his Government of the recommendations made in the report of the Lee Commission: which, he said, had given, "if not complete contentment—because that you can expect from no Service—at least satisfaction": and went on to speak of the future. "I believe," he said "that the need for quality at this moment in British youth for service in India is more insistent than ever. There are fewer posts than in the past, for we are embarked on a policy of Indianisation of the Service; but yet there are opportunities for our young men with the right quality. In my view that quality is a combination of courage, tenacity, fair-mindedness and devotion to duty." Though these words apply with equal force to all the other European services in India, the call that they make is specially insistent in the case of the Indian Civil Service—the key service of India that must, in the long run, set the standard of quality to all the rest.

About seven months ago, the Secretary of State stated his considered opinion that, after a number of lean years, the English competitors at the Indian Civil Service examination of 1925 had reached the standard of those who offered themselves before the War. If this diagnosis was correct—which can only be proved by experience—it constitutes a great tribute to the young men of the right quality. There seems little doubt that the actual examination standard is not as high as it was, though that standard is not by any means the most important. A University professor was quoted in the newspapers, a few weeks ago, as saying that, before the War, the successful candidates for the Indian Civil Service from the Universities reached an educational standard at the very top of the First Class; whereas, nowadays, it was near the bottom of the Third. There is good reason to believe that this statement pretty accurately represents the facts; but, even if so, it probably represents no more than a fall in what may be called the market value of an appointment in the Indian Civil Service. The adoption of the report of the Lee Commission has certainly done something to raise that value; but it was, in fact, much more greatly raised by an improvement in the financial prospects of Indian Civil Servants at the end of their service, that attracted but small attention at that time, though it was of the utmost importance: the abolition of the principle of contribution to pension. This great benefit was granted without any flourish of trumpets, and doubtless designedly so; for, if the real implication, of what was made to appear to be no more than an administrative adjustment, had been grasped by the Indian legislators of the Assembly, they would certainly have protested most strongly against it and have done their best to prevent it from going through. Up to four or five years ago, the Indian Civil Servant contributed four per cent. of his pay, throughout his service, towards his own pension: and it was actuarially reckoned that, by so doing, the man who completed his full term without filling any of the highest posts had, by the time that he received his pension, contributed the capital value of half of it himself: in the case of those more fortunate, who reached the highest posts, a good deal more than this—in some cases, indeed, up to practically all of it. The compulsory contribution of four per cent. still continues, but is credited to the officer himself; who receives it, with accrued interest, at the end of his service. At the time that this innovation was introduced, one of the Indian members of the Legislative Assembly said that the Indian Civil Service had just increased their own pensions by fifty per cent.; a statement that was promptly denied by the Government spokesman, who said, with strict verbal truth, that the I.C.S. pension had not been increased at all, but remained what it had always been: whereupon the Indian member quite handsomely apologised for his erroneous statement. But, of course, if not accurate on paper, his statement was perfectly accurate in fact: and it is certainly a remarkable thing that the Indian Civil Service should have been able to grant itself so great a financial boon without attracting any serious notice from so keen and inquisitive a body of critics as the Indian members of the Legislative Assembly.

One thing that has got to be faced, however, is that there is no practical possibility of any further financial improvement in the Service—what they have now achieved, by their quiet grant to themselves of greatly improved pension conditions, and by the adoption of the Lee concessions (which, though in fact of considerably less benefit than the pension alteration, had to be done in the light of day, and aroused the fiercest opposition) is a maximum beyond which they can never hope to go. Those who are really acquainted with Indian conditions know only too well how greatly this maximum, in spite of recent improvements, falls below the standard of even a few years ago: but, to those not so qualified, the pay of the Indian Civil Service still appears a highly attractive proposition. And in this there lies a very real danger. In

these democratic times, it is only right that every British citizen should feel that he "carries a Marshal's baton in his knapsack"; but there are some services where this doctrine is a dangerous one, and in none more so than in the Indian Civil Service. The aristocratic idea is firmly implanted among Indians, and before all this it is necessary that the Englishman who embarks on the career of an official in India should be what the Indian calls "a Sahib"—a gentleman by birth, breeding and training: and there is no one in the world more quick than the Indian to note, and to take advantage of, the smallest failure in this respect. The financial prospects of the Indian Civil Service will certainly still appeal to the young man whose presence in India is not only not wanted, but whose absence from India is definitely needed; but it cannot be hoped that they will, by themselves, appeal to the young man who is needed there. To him it is necessary to make a different kind of appeal, and one that must not be made in vain; for, if it is, this will be a sure and certain mark of the beginning of the end of the British task in India, which, whatever eager politicians may say to the contrary, is yet by no means completed. "The need for quality at this moment in British youth for service in India is more insistent than ever." There are many who declare that, in the reaction after the Great War, the spirit of adventure has suffered an eclipse among British youth: and it cannot be denied that there are some grounds for this assertion, though even the most pessimistic of those who make it do not profess to believe that it is more than temporary. To arouse, if it is dormant, and to stimulate, if it is still active, that spirit of adventure in "young men with the right quality" is the most important work to-day before all those who have the true interests of India at heart. If the young English gentleman can only be brought to realise that service in India is now truly not only a great, but a knightly adventure, and that by undertaking it in the right spirit he is performing a patriotic duty second to none in the Empire to-day, he will surely respond to the call. And, at the same time, he should clearly understand that the financial advantages will be adequate, the social amenities considerable, the opportunities for sport still very great: and that the chance to make a great name for himself is still there—though the Service is no longer what it once was, it is still one of the greatest of all Services and materially by no means one of the least attractive. If the manning of it should be allowed to fall to any class but the very best, then the outlook, not only for the Service but for India, is black indeed. This year's Indian Civil Service examination is close upon us now; and a rough and ready test, as to whether we are likely to be getting "the right stuff" or not, is to be found from the names of the public schools at which the successful English candidates are educated. Last year, this test was not fulfilled any too satisfactorily: and there will certainly be many among those who can scan the final list who will look at this particular point first of all, with a hope which the young English gentleman of to-day will surely not disappoint.

CURRENT TOPICS.

The General Strike.

The current topic overshadowing all others at the moment is the General Strike: and it is certain that its development will be watched with the greatest interest in India. Mr. Gandhi's non-co-operation movement was based on the same idea—the paralysis of the whole life of the country: and he and his followers will regretfully compare the complete failure of their own efforts with the remarkable measure of solidarity shown by the British trade unionists. Apart from this, there are many Indian politicians who hold, and some who have not scrupled to declare, that England's difficulty is India's opportunity: and they and their friends will be keenly following events in the hope of being able to come to the earliest possible conclusion whether England's present difficulty is grave enough to offer a promising opportunity for India to take advantage of. The longer that the Strike lasts, the more marked will its effect be on India: and, though it is probably quite impossible to persuade the strike leaders that this also is a matter of national importance—or, indeed, if so, to persuade them that it is a matter for anything but congratulation—the fact is one that will call for the earnest attention of the new Viceroy and his Government. The one bright spot, and one that should specially appeal to Indian imaginations, is the wonderful response to the appeal of the Government for volunteer labour and for special constables. Incidentally, it is interesting to note that when, during the recent Calcutta riots, Bengali residents were invited to enrol themselves as special constables, the Swarajist Mayor of Calcutta protested, on behalf of the citizens, against the use of so "derogatory" a title: which, he said, young Bengali looked upon as insulting—they would only be willing to serve, and then only under their own leaders and not in subordination to the police authorities, if they were accorded the more dignified title of volunteers. Young Bengal should be interested to learn that Englishmen face

an emergency without taking any notice of unessentials: and to realise that, if any emergency were to arise in India, they would do the same there. Among the unessentials that they would disregard one may safely reckon the Mayor of Calcutta.

The Public Services Commission.

The long-expected announcement of the personnel of the Indian Public Services Commission has at last been made. While no exception can be taken individually to the names of any of the members who compose it, it is certain that a good deal of disappointment will be felt in India at what will strike most Englishmen as a serious omission in its general qualifications. It has all along been assumed that, of the five persons composing the Commission, three would be Europeans and two would be Indians: and that the latter would be one Hindu and one Mohammedan. In these respects, anticipations have been fulfilled; where they have been falsified is in respect of the services represented by the three European members. It was confidently hoped that these would be the Indian Civil Service, the Educational Service, and the other important all-India services, particularly the Police. The first two are well represented: the Indian Civil Service by Mr. A. H. Ley, who has, in addition, had very considerable commercial experience of late years, though one may be excused for adhering to an opinion, already expressed in these columns, that a serving Civilian should not have been selected—a more appropriate selection would have been that of one recently retired: and the Educational Service by a very distinguished expert one who has recently retired in the person of Sir P. Hartog. But the third is altogether absent. That the ideal should have been departed from, in so important a particular, is more than unfortunate: and the high hopes rested upon the Commission by the other great European services, and especially by the Police, will now remain unrealised. This is a very great pity. Vocal Indian politicians have made it clear that they do not want the Commission at all. It was generally felt that the Indian Civil Service, though certain to be represented on it, did not really need it. What were above all needed were an Educational expert—who is there: and a representative of the "other European services"—who is not. His absence will go far to undo the good that the establishment of the Commission might otherwise have been expected to bring about in India.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 22.

A Silly Manifesto.

Mr. J M. Sen Gupta is the Mayor of Calcutta, the President of the National Congress and the Leader of the Swaraj Party in Bengal. He is a barrister-at-law, a member of an English University and of the English bar. He, and a self-appointed Moslem leader, have issued a joint manifesto upon the Riots. It had been received with pity or contempt, or both, by almost every newspaper in India except *Forward*, the organ of his party, and even *Forward* is trying to forget it. Mr. Sen Gupta considers that the quarrels between Hindus and Moslems are due entirely to the failure of an alien Government to educate the ignorant fighters and looters; Government fosters communal hatred and the police deliberately allow the riots to spread; the Congress volunteers and their leaders alone pacified the mobs; and the riots called forth beautiful examples of mutual support and protection between members of the opposing communities who were in danger; therefore the Riots have served to prove the wonderful strength of Hindu-Moslem unity. Twaddle, Mr. Sen Gupta, which deceives no one, not even yourself. Unfortunately it serves to keep silly boys excited and to feed the flames of hatred of Government, the bureaucracy and Europeans, which are the only light on the road down which you and your companions are steadily marching to oblivion. Fortunately for your nation, for India, and even for yourself, in the long run commonsense prevails.

Anarchy on Sale.

The newspapers have almost ceased to comment on the Riots, but it is interesting to look over the leading articles of the last fortnight and to assess the facts as they are likely to appear in the minds of the public by what they have been reading in their daily papers. The European Press is unanimous in praising police and troops for the remarkably efficient handling of a very dangerous situation with a minimum display of force and a quiet persistence which eventually completely smothered the blaze; all ranks were on duty, sometimes for over 24 hours at a stretch without a regular meal: and, although there were probably individual cases of excessive zeal, moderate opinion universally agrees that the members of the forces are entitled to unstinted praise. The Nationalist organ throughout followed cautiously on similar lines, but it has now raised strong objections to the posting of an additional Deputy Commissioner to the Northern Division of the town, where a Hindu has been in charge for some years past. Of the Extremist Press, one section, whilst attacking Government and the police, praises the military and says that they ought to have been employed earlier and to have opened fire; they are content to stop at this point. It was left to *Forward*, the official organ of the Congress Party, to make the suggestion that the whole of the Riots were organised by Government on the lines set out in our letter of last week; since this, however, *Forward* has given a further example of its complete irresponsibility by stating that the Riots were caused entirely through the recent speeches of Sir Abdur Rahim. This line is apparently being taken in order to damage the new Nationalist Party of which Sir Abdur is a member, but he is also charged with the crime of having been a member of the "Satanic" Government, which is alone sufficient to account for his wickedness in having caused the recent outbreak. On the whole, therefore, the Indian section of the Press can be said to have taken a fairly reasonable view of the situation, but unfortunately the circulation of *Forward* is larger than that of any other paper, and it is undoubtedly popular for its opinions and the tone in which they are expressed. It continually preaches direct hatred of Government and everything con-

nected therewith, and it distorts all news to fit in with its own myopia. It is a public danger, probably the best friend that anarchy and Bolshevism have in this part of the world; it is directed by men of breeding, education and understanding, and it is difficult to escape from the conclusion that its dealings in anarchy are a form of commercialism, based upon a shrewd assessment of the strength, or weakness, of Government in the face of such an open danger.

The Mob in Power.

Babu Bepin Chandra Pal again lets the cat out of the bag. He declares that the Indian political classes have already reached the parting of the ways, and he labels these Democracy, Mobocracy and Autocracy. He says that all the old parties are bankrupt both of principles, programmes and leaders: and he admits that the political activities of the last few years, in which he has taken a leading part, have led to nothing but the stirring up of the passions of the mob and the lessening of the bonds of discipline which have held them in ever since the Mutiny. He prophesies that in the immediate future political parties in India will be re-settled on purely religious lines, and he is frankly afraid that further outbreaks are inevitable. Naturally, perhaps, he thinks that the only hope for the political Indian now lies in the new Nationalist Party which he has joined, but he regretfully admits that this is largely a party of leaders without followers, whereas the extremists are at the moment the most popular party in the country, although they have neither leaders nor any programme but a negative one. He is a little late in admitting the inevitable result of the political agitation produced by the Reforms, and his endeavours to remedy it are slightly pathetic; even though the excitement of the Calcutta Riots has died down, there are still armed police at the principal street corners in the North sections, and daily the papers record small communal outbreaks all over the Province. We may only yet be at the beginning of the harvest, for the seed has been widely sown; meanwhile, Bepin Babu appears to think that in India there is no difference between Democracy and Mobocracy, and the Swarajists are daily confirming his views.

Conspiracy in the ~~Central~~ United Provinces.

A train dacoity at Kakori near Lucknow put the police on to investigations which have disclosed the existence of a revolutionary organisation, including several prominent Congress men, which was planning dacoities and robberies, including an attempt to loot Post Office treasure in the course of transit. Three persons have absconded and twenty-one have now been committed for trial, and it is interesting to note that no question was raised by any of the defence counsel as to the *bona fides* of the police who have been handling the investigations. Although the trial is a public one and reports are appearing in the European Press, no report nor comment has yet been seen in an Indian-owned newspaper on this side.

The Congress Party.

Certain of the Congress leaders have been on tour, and some have visited Calcutta; but their public utterances do not remove the impression that matters are at sixes and sevens behind the veil. The Extremist Press is unable to agree as to what the policy or the programme of the party should be; they cannot even agree to a complete denunciation of the new Nationalist Party, although *Forward* is only less virulent in regard to it than in its comments on Government and Europeans generally. In the meantime Lala Rajput Rai is to get a trip to Switzerland as the representative of "All-India Labour" and the *Bengali* plainly accuses him, a Swaraj Non-Co-operator, of accepting a free holiday trip from the Government of India when he knows that the Trade Unions have no genuine existence here and that he has no claims to represent Indian labourers of any kind. Correct in both cases.

Markets.

Apart from a few covering transactions, the hessian market has passed a very quiet week and prices have sagged further; at the decline the position is rather steadier and opinion indicates a healthier market in the near future. The jute market has followed a somewhat similar course, and is easier in sympathy; the weather continues favourable, and the new crop reports are satisfactory. No improvement is apparent in piece-goods, and fears exist that unless confidence is restored almost immediately, the buying season will be past and the position will go from bad to worse. For no apparent reason the London Tea Market has been irregular and slightly easier this week; but this is expected to be only temporary in view of the sound position in which the industry is now placed. The first sale here of the new crop has been provisionally fixed for the 1st of June.

In the stock markets jutes have made a better showing, but it cannot be said that the present position of the industry justifies any material improvement; the better tendency is probably due to the large amount of money here awaiting investment, and to the popularity of speculation in jute shares; at the close the weaker hessian market brought about a slight reaction in share values. Coals and cottons continue to be ignored, and rubbers have been dull owing to a further set back in the price of the commodity. Tea shares continue to be popular, and the number of investors in this market is increasing rapidly; prices generally are above the level of last week's rates. Government Securities have eased after their recent rapid rise, and 3½ per cent. paper, after touching Rr. 78, has declined about one rupee; the 5 per cent. 1945-55 Loan has reacted similarly. In the miscellaneous section, Imperial Banks have been the feature, with a rise of some Rs. 50 in the last few days, and are now quoted at Rs. 1,580. Money is easy, with rate for call and short notice at 4½ per cent.; owing to inquiry for remittance on bullion account, the rate for ready T.T. has reacted to 1s. 5 27-32d.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Monday Evening.

An Opening Lost.

I have had a good deal to say in recent months with regard to the necessity for doing everything possible to meet the requirements of foreign markets particularly those of the Near and Middle East where competition promises to be specially intense. A case came to my knowledge recently which shows very plainly how we sometimes fail to take advantage of our opportunities. An order had been obtained by a firm for a Near Eastern country, and it was necessary for the firm to obtain part of the material required from another concern. Unfortunately the question of price proved an obstacle, and the other firm called a meeting of the men to try to persuade them to modify their regulations so that the order should not be lost to this country. They proved absolutely adamant, and so the first firm was obliged to decline the order, which went, I understand, to one of our Continental rivals. The incident is illuminating for it illustrates very plainly how the cast iron rules of the unions operate to the disadvantage of our foreign trade. The view is apparently taken that it is better to lose business than to make a trifling concession and be working full time.

Kassala Cotton.

A comprehensive survey of the operations of the Kassala Cotton Company was given by the Chairman, the Hon. Arthur M. Asquith, at the general meeting of the company on May 6. The area flooded in this first season of the company's responsibility for cultivation was roughly 16,000 acres, and the crop picked and marketed amounted to 27,177 kantars. The net proceeds of the crop accruing to the company totalled £89,704, this satisfactory result being due to the exceptionally high prices ruling at the time for Sakellarides. Prospects for the current year are, however, indifferent owing to the poor Gash flood. It was not only small in volume, Mr. Asquith explained, but also bad in the manner of its arrival, and it only sufficed to irrigate properly about 12,000 acres, whereas if the flood had been of the volume of that of 1924 the acreage irrigated might have been doubled. The crop on the reduced acreage has been satisfactory in quantity and quality, but it has to be remembered that much lower prices are now ruling for cotton. "So far as one can judge from the available statistics," said Mr. Asquith, "it is reasonable to anticipate a bad flood of this sort once in every four or five years. We must hope that in 1926 our further improved and extended system of canals will have a fair chance of showing what they can do."

Halem Tea.

The past year was not quite such a good one as 1924 for the Halem Tea Company. This was mainly due, Sir Charles C. McLeod pointed out at the general meeting, to the short crop harvested. This shortage, which took place almost entirely in the Halem garden, was due to the unsatisfactory weather, which with the finer plucking reduced the output by 200,000 lb. The quality of the teas was well maintained, and an average price was realised of 18.86d. per lb. as compared with 19.18d. per lb. As regards the outlook for the current season Sir Charles McLeod stated that provided climatic conditions are favourable good crops should be harvested in both gardens.

COMMENTATOR.

ROUMANIA'S CURRENCY DEPRECIATION

(From Our Own Correspondent.)

Bucharest, May 1.

The Roumanian currency has now reached the lowest figure touched since it began to depreciate after the War—1,360 to the £, and this is causing considerable anxiety in commercial circles. There are still many foreign debts to be paid off in half-yearly instalments under the Moratorium Law, and as business has not been good and money is very scarce many firms will no doubt have a hard struggle to meet the increased liabilities caused by this sudden depreciation. Several causes are said to have contributed to this fall, one of them being the fall of the French franc with which the leu always moves in sympathy. Another, is the large purchases of foreign Bills by the Banca Nationala on account of the State to cover obligations in connexion with the recent consolidation of foreign debts, and a third is by merchants in payment of their orders from abroad. To this must be added the speculative activity immediately excited by any tendency to fluctuation. As usual the immediate result of the fall in the leu is a rise in the cost of living, and in spite of the spring season household bills have gone up 10-20 per cent.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 11.

It is perhaps remarkable that such a heading at that which appears above should be possible after the first week of the greatest industrial upheaval that Britain has ever faced. Yet in a limited sense there has been "a week's finance," and in view of all the circumstances the financial world has carried on, at immense inconvenience, but with more success than might have been expected. The Stock Exchange indeed may be said to have shown a very bold front. As a precaution prices were generally marked down on Monday morning. But absolutely no signs of panic appeared; there was no rush of selling orders; even a few orders to buy came through, and indeed there was a disposition in some quarters to try bargain-hunting; and although business inevitably was of very small dimentions prices in most, if not all, sections, literally obeyed the Prime Minister's behest to "keep steady." Home rails improved on Wednesday, and rubber shares ended the week at above the level recorded before the strike began. British Government securities stood firm after the initial marking down and showed a harder tendency as the week went on. Nowhere was there a real slump in industrials, among which the leaders stood firm. Altogether the week's story in the stock markets has exploded the idea that the general investor has any inclination to be stampeded. The fact that most markets were in a sound intrinsic position before the trouble began has, of course, also been of immense assistance.

Stock Exchange Emergency Plans.

When the first news of the commencement of the general strike came to hand the suggestion was made in certain quarters that the London Stock Exchange would close its doors in much the same way as it did on the outbreak of war in 1914. So far, however, the suggestion has never even been brought before the Stock Exchange Committee for discussion. One reason why a policy of "business as usual" is continued, is that investors are given the opportunity of seeing exactly how matters stand in the financial world. At times like the present Dame Rumour is a very active body and investors could easily be scared if they were told exaggerated stories. With the Stock Exchange open, however, it is possible to see from the course of business, how true any reports of panic really are. It would be just the same in the case of a joint stock company which failed to issue its accounts. Were the shareholders told that the undertaking's affairs were in a very serious condition, and with no balance-sheet with which to verify such statement, the logical assumption would be that a large number of the proprietors would hasten to sell forthwith at the best price obtainable. On the whole, therefore, the action of the Stock Exchange authorities in permitting the continuance of business seems to be a wise one.

Temporary Investments.

The main trend of Stock Exchange prices during the strike indicates that the general body of investors is possessed of some degree of courage and a fair sense of values. At the same time to go into the market as a buyer requires at the present time considerable confidence, but we do not consider confidence to be entirely lacking, and it would not be surprising that when conditions are normal again it will be found that quite a fair number of inquiries have been made for sound securities. Probably, however, the main demand will run on short-term issues, which are attractive to those who do not wish to lock their money up for very long. It may be useful, therefore, to detail a few of the short-term investments which seem to possess good prospects and which stand at reasonably modest levels. First of all, Gordon Hotels 8 per cent. notes, redeemable by January 1, 1928, at 107, can be bought to yield £7 17s. A slightly lower yield of £7 13s. is given by British Burma Petroleum 6 per cent. Debentures, redeemable by January 1, 1932, at 110. The Mond Nickel 5 per cent. Debentures, redeemable by January 1, 1935, at 105 give the investor £6 4s., while only one shilling less is yielded by Marconi Wireless Telegraph 6½ per cent. Debentures, redeemable 1923-32.

Company Meeting.

KASSALA COTTON COMPANY.

Progress of Development Work.

The third ordinary general meeting of the members of the Kassala Cotton Co., Ltd., was held on May 6, at Winchester House, Old Broad Street, E.C., the Hon. Arthur M. Asquith, D.S.O. (the Chairman), presiding.

The Secretary (Mr. W. O. Simms), having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen, I presume you will agree to take the balance-sheet and accounts as read.

During the year our company sustained a severe loss in the death, from typhoid, of Mr. Gray, our first manager. Mr. Gray was a man of quite exceptional abilities; he came to us with a distinguished record of service in the Army, and under the Sudan and Egyptian Governments. He tackled the multifarious difficulties of the early stages of development work and of the organisation of our activities in Kassala Province, with unflagging energy and with unfailing quiet efficiency. He was held in high esteem by the Government's officials, by your directors, by his subordinates, and by the natives of Kassala, and by his death we suffer a serious personal as well as an official loss. We are fortunate in having available as Mr. Gray's successor in the local management, Mr. Fleming, a man in whom your directors have the greatest confidence. He was Mr. Gray's second in command during the arduous early stages of the work. Formerly in the service of the Government and latterly in the service of this company, he has for many years devoted rare qualities of energy and enthusiasm to the agricultural development of the Gash delta.

Turning to the balance-sheet: On the liabilities side you will observe little change since last year. A further call will be made on the preference shares as and when more money is required. On the assets side the figure of expenditure in the Sudan has increased from £118,736 16s. 2d. to £206,146 1s. 10d.

The increase under the heading of canalisation is mainly due to the widening and improvement and extension of the Hadaliya canal, and to the construction of the new Mitateib canal, 22 kilometres in length.

Digitized by Google

Buildings and furniture have risen from £6,167 9s. 11d. to £39,453 5s. 7d. This increase results chiefly from the provision during the year of proper housing accommodation for our staff, and of storage accommodation for our cotton seed. Both in themselves and from the point of view of the health of the staff temporary buildings are a false economy in this part of the Sudan. The maintenance of grass huts is costly, and the discomforts of living and working in them in a climate of intense heat, and occasional severe storms of dust and rain, are considerable. I am sure you will share the Board's satisfaction in feeling that our staff are now properly housed.

Concession Account, £300,000.

This figure of £300,000 is not a final figure, as there will be added to it any sums which we may have to pay irrecoverably in connexion with our guarantee to make good one-half of any deficit on the operation of the railway. Any payments by us under this guarantee in excess of a total of £50,000 are eventually recoverable by us from any surplus railway or cotton profits received by the Government during the concession period. The year 1926 is the first year in which our guarantee begins to operate.

You will remember that the £300,000 is the cost of the 300,000 shares in the Kassala Railway which we subscribed and under the terms of our concession had to hand over to the Sudan Government on the opening for traffic of the Kassala Railway, and that it was this payment by us, and this guarantee of railway deficits, which enabled the Sudan Government to take advantage of the Trade Facilities Act; and to construct the Kassala Railway.

At the date of the Concession it was believed by both parties to the negotiations that the waters of the Gash would suffice to irrigate annually an average of 70,000 to 100,000 acres or more of the delta. It was on such estimates of irrigable acreage that the price paid by this company for its concession was based. We do not yet know exactly how much water is required for the effectual irrigation of an acre of land. But on the delta available it seems clear to us that quite apart from any diminution of water which may be caused by Italian operations in Eritrea, the waters of the Gash will only suffice to irrigate effectually an area considerably less than was anticipated by both parties to the negotiations. I hope that if and when they are convinced that this is so the Sudan Government, in view of the above facts, and of their Eritrean water agreement, may consider the question of an equitable adjustment of the load of the price which shall be paid for our concession.

Debtors: Sudan Office, £6,923 15s. 3d. About £6,200 of this sum represents advances to tenants to enable them to finance their cultivation.

Turning now to the profit and loss account, bonus to Sudan staff for 1925; you will see that we ask you to approve a bonus of £1,600 for the year 1925, to be divided among our now more numerous Sudan staff. I feel sure that you will back the directors in this token of recognition to Mr. Fleming and his staff in the Sudan for the fine work which they have achieved under arduous conditions.

You will see that, after extinguishing the debit balance of £15,499 1s. brought forward from last year, and after meeting our debenture interest, we are left with a balance on the right side of £24,362 11s. 4d.

You will remember that the area properly flooded and upon which our cotton matured in this the first season of our responsibility for cultivation was about 16,000 acres. The crop picked and marketed amounted to 27,177 kantars of seed cotton.

Of the figure £96,670 13s. 4d. in the profit and loss account £89,704 13s. 6d. represents our share of the net proceeds of the cotton crop, the balance being interest and small miscellaneous receipts.

On such a modest acreage and crop we are lucky to be able to show such good figures, and I wish to make it clear that these satisfactory results were due to the exceptionally high prices then ruling for Sakellaridis cotton.

Now, owing to the date at which our financial year ends and to the dates of the Gash Flood and of the season for cotton growing in Kassala, we are always in the position of being able to make some sort of a guess as to what the current season is likely to bring forth at the time when we present to you our report and accounts for the past year.

In the present instance I am sorry to have to inform you, and you will be disappointed to hear, that prospects for the current season are poor. Last year we said: "We hope to make a good step forward during the coming season in extending our acreage crop. How far we shall succeed in this depends largely, of course, upon that rather uncertain factor, the nature of the Gash Flood, and partly upon climatic conditions; but granted a good flood we shall be very much disappointed if we do not succeed in largely increasing our crop." I am much disappointed to find that one of my pessimistic provisos was justified. Climatic conditions were all right this season, but the Gash flood, as stated in the report, was bad. It was not only small in volume; it also was bad in the manner of its arrival. If it had arrived in the form of a few good spates, each lasting for several days, it might in spite of its scanty volume, have irrigated a much larger area. As it was, it arrived in a low, steady and fairly continuous flow, and only sufficed to irrigate properly some 12,000 acres. With the canals which we had ready in 1925, and with the flood which we had in 1924, we believe that more than double this area might have received sufficient irrigation.

So far as one can judge from the available statistics it is reasonable to anticipate a bad flood of this sort once in every four or five years. We must hope that in 1926 our further improved and extended system of canals will have a fair chance of showing what they can do. The only consolation which we can derive from our bad flood in 1925 is that it taught our staff a lesson which they showed themselves most apt to learn—that is, how to economise water and use it to the best advantage.

Climatic conditions were good and the crop from our reduced acreage has been satisfactory both in quality and quantity. About 19,000 kantars have been picked to date, and of about 2,000 bales shipped to date, over 1,900 are classified as being of 1st or 2nd quality. Picking will continue until the end of the present month. You will realise that with the lower cotton prices ruling this year, and with a smaller crop, our share of the proceeds in 1926 will be considerably less valuable than it was in 1925; and, in view of all the circumstances, we are proposing to carry forward the credit balance of £24,362 11s 4d. So much for the accounts.

Progress of Canalisation.

Now to turn to our work of canalisation and development. You will have observed in the report that at the

date of the flood, July, 1925, we had four main canals with a total length of 58½ kilometres as against at July, 1924, three main canals with a total length of 33½ kilometres. I am glad to be able to tell you that last season's experience appeared to justify the stonepitching and other modifications of the Magauda Canal, and to prove that its general design is entirely satisfactory. The new Mitateib Canal also appears to have been designed on the right lines, and, generally speaking, during the current season we have confined ourselves to extending and improving existing works and to making provision for rotation.

I mentioned to you last year the problem of drinking water and how we and our tenants were handicapped by the business of carrying it on camel-back from distant wells.

The Mekali pipeline gave a satisfactory supply of drinking water to the Mekali, Magauda and Aroma areas during the growing season. It has been of great convenience to the company, and has enabled our tenants to settle on their fields and to devote increased attention to their cultivation. Those in the Magauda area now have to go a maximum of about 3 miles to get drinking water, whereas in the past they often had to go 10 miles or more. Information received since the publication of the report indicates that the Mekali wells looked like running dry at the end of last month. If these wells are inadequate for permanent requirements it may be necessary to extend our pipeline so as to draw upon more copious and certain sources further South—a contingency contemplated when the Mekali experiment was made.

We have concerted with Mr. Robin Bailey, the new Governor of Kassala, certain arrangements for improving the water supply in existing wells and for watering old well centres which had gone out of use.

Now regarding the Italian irrigation scheme in Eritrea: Sir George Schuster, Financial Secretary to the Sudan Government, accompanied by Mr. Johnston, of the Egyptian Irrigation Department, and Mr. Allan, one of the company's engineers, recently visited the site of the Italian irrigation works at Tessenei in Eritrea. The Italian works, which are on a considerable scale, are reported to be so well advanced towards completion that they hope to be able to make use of the 1926 flood. When we say in the report that these works are designed to irrigate 30,000 acres we mean that that is the area which they hope eventually to irrigate.

Last year in the report and in my speech the agreement between the Governments of the Sudan and Eritrea limiting abstraction of water by the latter and the extent to which our interests may be affected by the Eritrean scheme were dealt with as fully as possible. No new facts are available, and I do not propose to traverse the same ground again to-day.

Our relations with our Italian neighbours are good, and we are much beholden to the Italian Governor-General, Sr. Gasparini, and his officials for the courtesy and hospitality which they have extended to officials of this company on their visits to Asmara and to Tessenei.

In conclusion, I am glad to be able to report that relations with the Sudan Government and with the natives were all that can be desired, and that we are most loyally served by a keen and efficient staff.

I now beg to move: "That the report of the directors and statement of accounts to December 31, 1925, now laid before the meeting, be and the same are hereby received and adopted."

Lt.-Col. S. H. Pollen, C.M.G., seconded the motion, which was carried unanimously.

Capt. Bernard Eckstein proposed the re-election of the retiring directors, the Hon. A. M. Asquith, D.S.O., and Mr. F. Eckstein. This was also seconded by Lt.-Col. Pollen and carried unanimously.

On the motion of Mr. C. S. Wilson, seconded by Mr. P. C. Lord, Messrs. Cooper Brothers and Co. were re-appointed auditors.

The proceedings then terminated.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended April 29, state:—

Since our last report the futures market has been quiet but firm, and daily price fluctuations have been very small. The week's summary of price movements is as follows: Sakellaridis: May, 30.35 dollars, 0.23 dollars down; July, 29.60 dollars, unchanged; November, 28.80 dollars, 0.12 dollars up; January, 28.45 dollars, 0.15 dollars up. Ashmouni: June, 21.50 dollars, 0.15 dollars down; August, 21.68 dollars, 0.07 dollars down; October 21.75 dollars, 0.03 dollars up.

There has been a slight improvement in the demand from abroad, especially for Sakel. The bulk of the demand has come from Lancashire, which would seem to indicate a belief in a quick and satisfactory settlement of the coal crisis in England. Continental orders have been very small, whilst practically nothing has been sold to America. Latest reports from consuming centres are slightly better in tone, and generally indicate that mill stocks are only sufficient for immediate requirements. With mill stocks so small the trade will probably be in the market during the whole of the summer, but the demand will be governed by the level of prices, the conditions of the textile industry, and the progress of the new crop.

Speculators have been more active than usual this week. In view of the fact that the rumours that the Government would take up March dockets did not materialise, holders of the near position are getting anxious, and this week there has been a good deal of selling out of May held on straddle with November. With May at such a big premium over July, and only a very moderate spot demand for qualities Fully Good Fair, Good and Good, and it is natural to expect that holders of these qualities will deliver against May contracts, the more so as the season is already far advanced and new crop prices at a considerable discount. There is some controversy as to whether the Government will intervene at the last moment. This is a point which must not be lost sight of—they have already taken a big hand in the market and one cannot be sure that they will not do so again.

At the third April tender 4,250 kantars dockets were issued. Government purchases during the week amount to about 600 bales Sakellaridis for which prices from 32 to 33 dollars have been paid. Total Government purchases from the commencement of the season to date amount to about 44,600 bales.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The End of the Strike.

Great Britain has no reason to be proud of her General Strike, but there must be many thoughtful people in many lands who are feeling grateful to her at this time for the example that she has set in dealing with a situation to which any nation will have been liable in these days. As the success of the General Strike in these islands would have proved a serious menace to other countries, so its complete failure will have saved the world from many attempts to imitate it. The movement to paralyse the life of the country has not been defeated by force, so as to leave those who engineered it able to persuade themselves that, if the loyalty of the Armed Forces of the country could be undermined, they might yet hope for success one day. It has been defeated in a manner that leaves no room for self-deception amongst its promoters by the common-sense, the courage and the resourcefulness of the people as a whole, and against this combination the most subversive agency will not easily prevail. Another notable feature of the example that Britain has set is that she has deliberately chosen a New Testament settlement in preference to Old Testament methods. The earth has not opened to swallow up Korah, Dathan and Abiram, and it is reasonable to suppose that the country has thereby escaped the subsequent bitterness of feeling which in that early wilderness revolution proved far more destructive of life than the original challenge to constituted authority. According to Lord Acton, the native qualities of perseverance, moderation, individuality and a manly sense of duty, which gave to the English race its supremacy in the stern art of labour and which enabled it to thrive as no other can on inhospitable shores, caused Napoleon to exclaim, as he rode away from Waterloo, "It has always been the same since Crecy."

Islam in Council.

The significance of the Caliphate Conference which was opened last week in Cairo by the Rector of Al Azhar would in any case have depended upon its relations with the Moslem World Conference which King Ibn Saoud is understood to have summoned to meet in Mecca on June 2. The purpose of the latter gathering is primarily to arrive at an agreement regarding the future administration of the Holy Cities; but a decision on the future of the Caliphate would appear, in the present circumstances of Islam, to be a very one-sided affair if it were not endorsed by the Wahhabi leader. The Conference, however, has come to no decision regarding the Caliphate, apart from recording its opinion that a decision would not be opportune. It now remains to be seen whether the politicians of the Mecca Conference will declare that the question which the divines of Al Azhar lacked the courage to deal with belongs more properly to their domain. Relations between Egypt and the Wahhabi ruler appear to have been placed within the last few weeks on a satisfactory footing. Only last month the Egyptian Government was contemplating the necessity of having to cancel Egypt's official participation in the Pilgrimage to Mecca; but the conditions imposed by the King of the Hejaz have been formally accepted in a *fetwa* issued by the Rector of Al Azhar, from a desire, perhaps, to bespeak King Ibn Saoud's approval of the Caliphate Conference.

The Egyptian Elections.

The elections that are due to take place in Egypt this week will in all probability bring that country once more to the parting of the ways. All the indications suggest that the Zaghloulists will be able to count on a majority in the new Legislature, even without the help of the other parties of the Opposition. It is expected, however, in some quarters that Zaghloul Pasha will be content at first to allow one or other of the leaders of those parties to form a new Government. Such an arrangement, according to the same view, must at best prove temporary; for even if the Wafd leader were inclined to acquiesce in it, the more extremist among his followers could be relied upon to make the position intolerable for men of the calibre

Digitized by Google

of Adly Pasha or Sarwat Pasha. When once this stage has been reached, it would be difficult for Zaghloul Pasha to resist the pressure that would be brought to bear upon him to take the helm himself. From that point the danger would be that the history of 1924 would repeat itself. Thus at least argue the pessimists in Egypt. Fortunately there are new factors in the situation, and the gloomy sequence of events foreboded may quite well be broken at any one stage. It may not be amiss, perhaps, for Egyptians to appreciate the potentialities of the position. The lesson driven home so forcibly to Great Britain less than two years ago was that it would be folly, and wholly prejudical to Egyptian interests, ever again to allow things to drift indefinitely. No attempt was made to check the agitation over the four Reserved Questions, and the result was regretted by Egyptians and British alike. It would be unfair to Zaghloul Pasha to allow him to be placed in a similar position, and one way of saving him from his own extremists would be to make sure that, before he took office, the Reserved Questions were finally and irrevocably out of the way, so that there was no possibility of an agitation growing up round them. The advantage to Egypt would be incalculable, as it would leave the Government, whether Wafdist or otherwise, free to devote the whole of its attention to the material progress of the country.

Elections in Roumania.

Special interest attaches to the General Election which is being held in Roumania next week. When the Liberal Cabinet resigned King Ferdinand entrusted General Averescu, leader of the People's Party, with the task of forming a new Ministry. In spite of his small following in Parliament General Avereseu seems to have experienced no difficulty in doing so; he was even successful in detaching some of the Transylvanian representatives of the National Party and so was able to make his Cabinet representative of the whole Kingdom. In order to strengthen its position the Government made an electoral pact with the Transylvanian Minorities; but the agreement entailed such far-reaching concessions to the latter that public opinion in the country was disturbed on the ground that the Government had made promises to the minorities which Parliament alone had the right to make. A further difficulty in regard to the pact is that it is alleged to have been made for the benefit of the so-called magnates rather than of the more numerous peasants, with the result that the latter have shown themselves by no means inclined to act up to the agreement. The elections are being fought under the new electoral law, which entitles a party polling forty per cent. of the total number of votes to sixty per cent. of the seats in the Chamber. If no other incentive were present to urge the smaller parties to a great effort, this provision of the new law is calculated to add zest to the elections, and it is not surprising that already conflicts between the police and the electors are reported from numerous constituencies.

Roumanian Parties.

The present elections in Roumania have also an interest in their possible bearing on the state of Roumanian political parties. Until the War there were two main parties which by tacit consent took it in turns to form a Government. New conditions since the War and especially the considerable increase in Roumanian territory have brought about a marked increase in the number of parties. The new groups are all small and have been unable to make much impression on the solid Liberal phalanx that follows M. Bratianu. Two years ago a movement was started to bring about a coalition of the Opposition parties, in order that the country might return to the two-party system; but so far it has led only to the fusion of three groups into the National Party under M. Maniu and M. Jorga, with which the Tsaranists, or Peasants' Party, have now thrown in their lot for the purposes of next week's elections. General Averescu's refusal to bring his group into line with the National Party suggested that he still had hopes of building up a following which would entitle the People's Party to be regarded as the natural alternative to the Liberals. In these circumstances the fight between the present Government and the Nationalist and Peasant Parties is likely to be bitter, with the result, most probably, that the Liberals will be the chief gainers. When, however, the Roumanians begin to realise that an ordinary electoral campaign leads to far more casualities than Great Britain records in the course of a General Strike, they may decide that the multi-party system is a luxury that can be avoided with advantage.

Yugoslavia's Difficulties.

After two reconstructions the Government of M. Ouzounovitch has again resigned, and at the moment of writing it is not clear what political character the next Yugoslav Cabinet will take. Trouble this time has arisen over a matter which was undoubtedly the root cause of M. Pashitch's withdrawal from the post of Prime Minister. Charges had been made in public against his son Radomir Pashitch, who was accused of using his father's position for his personal benefit. As counter-charges were brought against his accuser, the subject seemed to belong to the law courts rather than to politics. Parliament, however, was not to be denied, and the Government was interpellated last Friday on the "Pashitch affair." On one of the charges brought against M. Radomir Pashitch in connexion with a contract for repairs to locomotive and railway coaches, the Government was able to show that no irregularities had occurred. In connexion with the second charge dealing with a Government cheque for 508,000 dinars which had been cashed by M. Radomir Pashitch, Mr. Ouzounovitch read out an order issued by the Prime Minister's Office in 1924 authorising M. Radomir Pashitch to cash this cheque; he added that the Government did not intend to shelter anyone who had been guilty of acts against the State; the law would be given a free hand, and he appealed to the Skupshtina and to public opinion to support the Government in its efforts in this matter. The Government's resolution on the subject, however, was rejected in favour of an Opposition amendment which differed very slightly from it. Not only did the Raditchists vote against the Government, but M. Liuba Yovanovitch and his ten Radical followers left the Skupshtina before the voting.

INDIAN PUBLIC SERVICES COMMISSION.

The name of the Hindu Member of the Indian Public Services Commission was wrongly given in our issue of May 6. It should read Diwan Bahadur Sir T. Vijayaraghava Achariyar.

The Near and Middle East*

From Our Own Correspondents.

Cairo, May 8.

Reception at the Residency.

The High Commissioner and Lady Lloyd held a brilliant reception at the Residency on Wednesday evening. Their Excellencies received their guests in the ballroom, whence all made their way out into the gardens, which, beautifully illuminated with coloured lights, presented a most attractive appearance. There were about 1,300 guests, who, in addition to the Diplomatic Corps and the leading British officials and residents, included a large number of prominent Egyptians and Europeans. The bands of the 3rd Hussars and the Royal Irish Fusiliers played an excellent programme of music. Between the items the pipers of the First Argyll and Sutherland Highlanders performed, while an enjoyable novelty was introduced in the shape of dances by three Spanish dancers who had just arrived from Athens. The hosts moved about freely amongst their guests who, in spite of the heat of the evening, seemed thoroughly to be enjoying themselves.

Cairo's Pavement Pests.

The thanks of the European communities have been extended to Mr. Lomas, H.B.M.'s Consul in Cairo, for the decision he delivered this week in a most disgraceful case and for the scathing censure he addressed to the complainant. For some time now it has been gradually becoming impossible for respectable members of the fair sex to go out unaccompanied by their menfolk without being accosted by a certain class of young man who seems to think that every attractive woman he sees is fair game for his attentions. In this instance one of these pavement pests accosted two ladies the presence of whose escort, two Englishmen, he had not noticed. Ordered to go away the Egyptian became abusive, and, refusing to desist, he was given a thorough thrashing by one of the Englishmen, against whom he had the audacity to bring an action for assault. Mr. Lomas, who dismissed the case with costs up to ten pounds against the complainant, said that he fully endorsed the remarks of Mr. Powell, counsel for the defence, as to the attitude adopted not only by night but also by day by a certain class of the inhabitants of this city towards the more attractive members of the opposite sex, which he said was deplorable and which was such as to warrant severe chastisement more frequently at the hands of their male escort. It is to be hoped that this salutary punishment will have its due effect on the category of Egypt's modern youth referred to.

The Tribute Loans.

Great satisfaction is everywhere expressed at the promptitude with which the Government has taken steps to cause the instalments due on the Tribute Loans to be paid without waiting for the accomplishment of the usual legal formalities in the matter of the judgment delivered by the Mixed Court of Appeal. It has been noted that the two amounts representing the annual instalments due on each of the Tribute Loans referred to in the judgment are together less, by £E72,000, than the total amount inscribed in the budget which the Egyptian Parliament ordered to be suspended in July, 1924. This difference, as a matter of fact, represents the sum which Egypt has paid annually towards the interest charge on the Turkish Loan known as the Defence Loan of 1855. This Loan was guaranteed by England and France and, not being secured on the Egyptian Tribute, was not included in the action thus dealt with by the Mixed Courts. The question that is being widely asked is whether it is not now possible to compel the Egyptian Government to resume the payment of the remaining £E72,000 due on this third Loan.

Incidentally, a curious situation has arisen with regard to the interest due on the Tribute Loans. Under the original arrangement payment was made to the bondholders in London at par, funds being remitted for this purpose from Egypt to Messrs. Rothschild and the Bank of England. At that time practically the whole of these two Loans was held in Europe, but since the Egyptian Government stopped payment in 1924, and particularly since Messrs. Rothschild started their action a little over a year ago in the Mixed Courts, a considerable portion of the Loans has been acquired by investors in Egypt, who, if the original arrangement is adhered to, will have to send their coupons to London for payment at the rate of exchange out of funds simultaneously transferred from Egypt for the purpose of paying the coupons.

A Heat Wave.

This whole week we have sweltered in a heat wave, and everyone has suffered terribly. 'Tis an ill wind that blows no one any good, however, and landowners have been able to derive solace from the thought that this is just the sort of weather to kill the cotton pests. In Egypt man must suffer for cotton to thrive.

Athens, May 8.

Necessity for Improved Communications.

The President of the Republic received a good object-lesson in the urgent need of better communications in Western Greece, when he visited Missolonghi for the celebrations of the centenary of the sortie. A strong gale rose in the Gulf of Corinth in the early hours of the morning of April 24, so that neither he nor the invited

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

guests could land at Krioneri, the small jetty that serves as port for all the trade of the interior. Happily the wind dropped during the night, and a landing was possible on the morning of the 25th, so that a curtailed programme could be carried out. The laying of the foundation stone of a new harbour (the necessity for which was illustrated in such a timely manner), was one of the items on the programme. It is no uncommon thing for these winds to blow for several days in succession.

Only on those rare occasions when they have to visit the eparchies do the politicians of Athens realise the pressing need for improved communications. In the past, in order to get a road or a bridge made, the inhabitants of a district have had to wait until one of their fellow townsmen has become Deputy. The unfinished road which was to connect Agrinion in Aetolia with Karpenisi in Thessaly was begun when Kaphandaris, a native of Karpenisi, was Deputy. Similarly an all-but-finished road in Arcadia is a memorial of the deputyship of M. Papanastassiou, a native of the district. It must be admitted also that it is the contract for the making of the road rather than the road itself or the benefits it may bring, that interests the local businessmen. Consequently roads in Greece are not made to last a long time, nor when made, are they kept in repair (with a few exceptions). Hence in a few years a new road is required, which means a new contract. By that time, the Government that signed the original contract has long fallen, and the new contract has to wait until the district can produce another Prime Minister. To put an end to this state of things, to systematize roadmaking and, what is equally important, road-repairing, is one of the first duties of any Greek Government, and there are great hopes that General Pangalos is the man to do it. In the course of a recent tour from West to East Greece across the ranges of Pindus, which effectively cut off the one side of the country from the other, and which, throughout their whole length, can at present be traversed only by the roughest bridle-paths, the present writer had a good opportunity to discover the attitude of the mountaineers towards the present régime. He found opinion quite solid for General Pangalos—not indeed because of the form of government which he represents (to forms of government Greeks are mostly indifferent) but because he is believed to have the will and the energy to carry out those local improvements which the provinces demand. While no truer lover of Greece can wish to see the country become a second Switzerland, or be "opened up" to all the horrors of tourism, one sympathises with the desire of these dwellers in remote villages to be brought more into contact with the world beyond their mountains, and to be able to dispose of their surplus produce, fruit especially, which at present is allowed to waste.

Spetsae's Scholastic Venture.

From the island of Spetsae in the Gulf of Nauplia, report says that the buildings of the new boarding-school which is to be run on English public-school lines and with an English and English-trained staff, are progressing rapidly. It will be remembered that this scheme was started immediately after the War with the warm support of M. Venizelos, who was then Prime Minister. The fall of the drachma and the political troubles of the time caused the scheme to be dropped; but during the last two years, by the efforts and generosity of a native of Spetsae, it has been revived and it is expected that the buildings will be ready in little more than a year's time. The success of the scheme may safely be predicted, and there is reason to suppose that, if it were opened to-morrow, the school would immediately be filled.

Refugee Settlement Commission.

Mr. Howland, Chairman of the Refugee Settlement Commission will be away from Greece for some months, and his place will be taken by Sir Robert Graves. The Commission will remain at work until the loan is exhausted: after that, its continuation will depend on whether a further loan can be raised. The need of such a loan is obvious, since, when the first estimate was made, no account could be taken of the refugees from Pontus and Constantinople who have since swelled the original numbers. Even when all the refugees have been settled, the work of the Commission will not be complete, as the 500,000 hectares in Western Thrace, which are held as part of the security of the loan, will still have to be administered, and the repayments for the advances of stock and material will have to be collected from the refugees That the loan will be obtained is generally believed, as the refugees have shown that they can "make good."

General News.

The Gennadius Memorial Library was duly opened on April 23. The American delegates in their academic robes made a bright display of colour. Out of an imposing number of speeches, that of Dr. Gennadius himself (the donor of the library) delivered partly in English and partly in the purest modern Greek, was conspicuous for the note of genuine love of learning and love of country, which not even the Greek practice of reading a speech from type-written manuscript could entirely conceal.

The bomb thrown in the coffee-house at Strumnitza on the eve of Easter Sunday seems likely to have repercussions all over the Balkans. This time, happily, Greece is not involved.

Jerusalem, May 7.

The "Anxious Season."

It is a healthy and welcome sign of the times that the "anxious season," the time of the year in which fall the Moslem Ramadan, the Christian Easter and the Jewish Passover can pass without agitation and excitement, or, as was the case a short five or six years ago, serious disorder. As the period of festivities was about to be ushered in, Field Marshal Lord Plumer, the High Commissioner, in a message to the heads of the denomination of the three religious communities, urged that this was a season for greater love rather than intensified hatred. As is usual in the rare utterances by this silent but determined Executive it did not fail to convey a rather artfully veiled warning that the Government was prepared to deal adequately with disorders fomented at this or at any other season. But it was not the effect of this message alone that made the triple festivities pass without

incident. Comparative prosperity and the general contentment arising from this prosperity make the professional agitators' task rather onerous. Added to this, there is less even than the usual accord in the Moslem camp. The elections for the Supreme Moslem Council have brought into sharp relief the smouldering enmities known always to exist between the leading Moslem families. The Husseinis who have been in control of the Council have been challenged by the Nashashibis, one of whom holds the prominent post of Mayor of Jerusalem, to show cause why they should continue to monopolise the influential and remunerative council jobs. The result of an appeal to the electorate is by this time well known even abroad. So many irregularities, to put it mildly, were adduced and apparently proven by each side against the other, that the Courts presided over by British Magistrates nullified the elections in nearly every district. This action, which Moslem politicians are pleased to denounce as "Christian interference" with internal and inviolate Moslem affairs, has made any semblance of co-operation between Moslem and Christian against "the common enemy," the Zionists, more chimerical than ever.

With the Moslem house divided against itself and with the Moslem community incensed against the Christians what chances there even were of united Moslem-Christian action against the Jews have been dissipated by the cloud of misunderstanding based on alleged Christian wrongdoing.

Nebi Moussa.

A not undesirable by-product of the dispute over what Americans call "patronage," in respect of the Moslem Supreme Council, is the diminishing popularity of the Nebi Moussa procession. This, as generally known, was a mere official invention a few generations back when the Turkish masters thought it necessary to neutralise or to counter-balance the procession of Christian pilgrims, mostly Russians, who during the Eastertide were wont to fill Jerusalem and literally choked the roads leading to Jericho and the Jordan beyond. A site was hit upon, by strange coincidence just off the Jericho road, where the "Tomb of Moses" was supposed to have been revealed to the official Turkish seers. During recent years the arrival in Jerusalem of the Nebi Moussa pilgrims from the countryside, more especially from Nablus and from Hebron, constituted to the British authorities a problem bordering on a menace. A way was found of giving the procession so orderly and ceremonial a character as to deprive it of any opportunity for mischief. At Ras-el-Amud, on the Jericho road, it became the custom to stage an official reception with the Mayor of Jerusalem as host, the Governor as chief welcomer, and the High Commissioner (who attended on this occasion alone in uniform) as principal onlooker, prominent citizens from all communities as witnesses, and a very generous sprinkling of mounted and foot police to see to it that the procession followed its appointed course. This year, however, however, the Nebi Moussa procession was a sadly reduced affair. Owing to the quarrel between the Husseinis and Nashashibis the number of actual marchers dwindled from the usual few thousand to several hundred. The official welcoming and speeding ceremony at Ras-el-Amud was whittled down in proportion. But the most significant and surprising departure was that Lord Plumer was not present—abolishing with one stroke, so to speak the traditional importance lent the Procession by the presence in full regalia of his predecessor, Sir Herbert Samuel. Unless, therefore, a desperate effort is made to rehabilitate Nebi Moussa in the eyes of both Moslems and the general public, one may predict that this purely local affair will in the course of a few years disappear.

The Trans-Jordan Defence Force.

The Jewish population made no effort to disguise the hopes and expectations they attached to the visit of Dr. Weizmann, the President of the Zionist Organisation, who came in April, after a year's absence from Palestine. To him were left the final negotiations with Lord Plumer concerning the admission of Jews into the Transjordan Defence Force. Originally excluded by an administrative order which, owing to an official's carelessness found its way into the Hebrew Press, Dr. Weizmann was able to secure from Lord Plumer a disavowal of any intention to discriminate against Jewish residents and an undertaking that suitable candidates, within reasonable numbers of course, would be accepted into the Force. The delicacy of the situation which the recruitment of the new force created was heightened by the fact that the force virtually displaces the Emir Abdullah's Arab Legion, inflicting a rather sad blow on the independence of that region. To introduce Jews in large numbers into a force, officered by Britons, and subject to orders from Government officers in Jerusalem rather than the Emir's palace at Amman would. in the view of Transjordan officials, be but adding another grievance to a palpable injury. On the other hand, as citizens of Palestine, the Jews could not be expected to accept without demur a ruling excluding them from service in a unit recruited from Palestinians of all shades and intended in case of need for service in Mandated territory on both sides of the Jordan. It was, therefore, a matter of moral if not actual satisfaction to the Jews that following upon Dr. Weizmann's interview with Lord Plumer a statement was issued that recruitment for the new Force would be conducted without discrimination.

Dr. Weizmann's Visit.

On the whole, the Zionist leader spent a very busy three weeks in Palestine. The economic situation not unnaturally caused him much concern, and he was engaged almost continuously in conferences with his Zionist colleagues seeking a solution of the problems arising out of the financial stringency, the consequent diminution in the building activities, particularly in Tel-Aviv and Haifa, and the resulting unemployment which has had the effect of reducing by more than 1,000 the monthly average of over 3,000 persons maintained by Jewish im-

migration the preceding year. It is understood that the Zionist leader left Jerusalem convinced that the Zionist budget of £600,000 a year provided exclusively by the Keren Hayesod, or Palestine Foundation Fund, would have to be augmented, perhaps by a small loan, if the progress of the Jewish National Home is to continue unabated. On the political side, while impressing upon his audiences at two great public receptions in Jerusalem and Tel-Aviv that political progress must be slow and that the ultimate success of the Zionist cause depended more upon what the Jews of the world were prepared to sacrifice than on the measure of direct and perceptible help the British Government was ready to extend, the leader advised the Vaad Leumi or National Council of Palestine Jews to prepare for the information of members of the Permanent Mandates Commission a memorandum setting out the claims and the grievances of the Jewish community—he undertaking to help the Palestine envoys to the Commission's meeting in Geneva in June to bring the memorandum before that body. Dr. Weizmann's complimentary visit to the Emir Abdullah and his subsequent journey to M. de Jouvenel at Beyrout excited considerable interest and comment. It is safe to state, however, that nothing was contemplated by either visit beyond a timely display of goodwill, on the one hand, to the ruler of an adjourning territory, with which Palestine is becoming increasingly connected and identified, and on the other to the representative of France in Syria, between whom and the Palestine authorities, a new era of understanding and of co-operation is beginning.

The Fez in Palestine.

This is apparently the season when the young Moslems' fancy turns to thoughts of his headgear. Angora's example, and, more recently, Cairo's, have caused the Arabs of Palestine to reflect on the appropriateness of the Fez. To faithful Moslems who had been led to believe, mistakenly, that the truncated cone with the dangling silk tassel was ordained by his religion, has come the revelation, too long withheld, that it is the badge of a Turkish subject made part of the official Turkish dress by Sultan Mahmud in the nineteenth century. This startling discovery has made the Arab wonder why he should continue to suffer the inconvenience of the *tarboush*. The religious Moslem authorities in Palestine have not been slow in declaring that European headgear is permissible.

IRAQ.

Baghdad, May 5.

Recovering from the Floods.

The dangerous stage of the floods is well over, but various unpleasant stages remain. The gradual drying of a vast inland lake cannot, even under an Iraq summer sky, be a matter of days. Many square miles east of Baghdad will take months to pass from deep to shallow, from shallow to slime, from slime to mal-odorous mud, and from that to a rock-like clay. Already the voice of the frog is heard in the land, and evil smells arising in the Baghdad North area—the most critical point in the bad days of a fortnight ago—are driving residents of that quarter to seek cover elsewhere. In the agricultural lands, ruined crops are slowly emerging above water-line and in the riverain gardens normal conditions, changed only by a fresh coating of silt, will prevail within a few weeks. The Palace buildings are being actively prepared for re-occupation, and the Iraq Army, with the other evicted departments, can hope within a month to return to their quarters.

Possibility of Remedying.

That the whole affair is under inquiry—as on similar occasions it has been before and will be again—is a matter of course. The flood situation is, in general terms, bound to recur. Neither Royal wishes nor departmental instructions can make the inadequate bed of the Tigris capable of containing the flood water which, during three or four days every year, it is asked to carry innocuously to Basrah. Possible remedies, as they appear to the lay mind, must lie on one of two lines. Either hundreds of miles of really impregnable flood banks must be constructed, or so capacious a flood escape must be arranged north of the city that the dangerous surplus of water can be diverted harmlessly. Either of these two alternatives must be highly costly, neither secures absolute safety, and both must to some extent interfere with existing irrigation. Meanwhile the whole position is under the closest scrutiny by the experts of the departments concerned: and if anything can be evolved which makes Baghdad unfloodable it will be a triumph indeed. The siting of the city itself, or certainly its left bank portion, is the most unfortunate possible, and seems designed rather to invite than to defy an annual deluge.

Allocation of Blame.

The somewhat malicious and not very brilliant Nationalist journals are making what capital they can out of the general misfortune. Why, it is asked, should the flood-bank in the Palace gardens be the only one to have breached? Why, it is broadly suggested, should emergency labour be employed to safeguard the earthworks round Alwiyah, the British civil cantonment? Who, in fine, is responsible for the whole trouble? Not so much, it is hinted, the river Tigris or the location of Baghdad in a depression, or primitive canal-heads, or apathetic or shortsighted cultivators, but in some way, which long experience of Iraq alone helps one to understand, His Britannic Majesty's Government. As this, however, would be no less culpable if a volcano emerged in the centre of the city, or the Tigris elected to flow northward into Asia Minor, it is scarcely a matter for serious argument.

General News.

Sir Henry Dobbs returned on April 30, flying the last stage from Palestine, and was received officially at Hinaidi, on the R.A.F. landing ground. Mr. Bourdillon who has been acting at the Residency, becomes Councillor again, and is shortly to proceed on leave. The King, it is said, proposes another visit to Europe this summer, a visit which the London Press will probably misinterpret as needlessly as last years's. He is looking, indeed, thin and delicate. His elder brother, ex-King Ali of the Hejaz, is now ensconced in a riverside house at South Gate, and seems likely to remain permanently in Iraq. He wishes, it is said, to take up land and cultivate, an ambition shared by a somewhat embarrassing number of the Royal Family.

THE WEEK AT HOME.

London, Tuesday Morning.

The Strike.

The General Strike is now over; and since it is not for a mere week-to-week recorder of events to examine the larger causes and effects of the strike, I shall confine myself to its more immediate aspects. Whosoever may have been responsible for the actual outbreak of the strike, and whether it could possibly have been avoided, are questions to which more than one answer is possible, but in any case a reply to them is not demanded in this chronicle. It is sufficient to state that, the General Strike having been declared, the Conservative Government found itself at once and enthusiastically supported by such a section of the unorganised nation as inevitably to annul or at least adequately to thwart the intentions of the Trades Union leaders who called the General Strike. The decision of these leaders, made towards the end of last week, to call off the strike, has been variously interpreted, but for my part I see in it little else than a timely recognition by these leaders that their aim—the prevention of the proposed reduction in the miners' wages being used as a precedent to lower the whole standard of the living of the workers—could in no way be furthered by the general withholding of labour. This recognition, together with a fine belief in the integrity of the Prime Minister, produced, after ten days of considerable inconvenience, the result which the country as a whole desired and which it knew, almost from the beginning of the strike, to be the only outcome possible, did it but hold on determinedly enough.

There are, as I have hinted, several theories concerning the strike, its origin, its conduct, and its ending. These opinions range between the die-hard alarmist who, whenever industrial trouble arises, hastily scans the horizon and invariably espies the hand of Moscow, and the sentimentalist who affirmed that the Government should treat with the discontented while the General Strike was still on. With the first view one or two journals, whose enthusiasm no strike of the printers could ever damp, are generally connected, but the amount of truth that it contains is, in my judgment at least, confined to the fact that the Bolshevists always welcome and would, were they allowed to, help to prolong the troubling of established governments. To those who, without preconceived ideas, had conversation with the strikers, the conception that a reduction in the miners' wages was a sure forerunner of a general attack upon the workers' wages was seen to be held in the nature of a religious belief, and the remarkable loyalty of these men to their respective Unions seemed something of rather pathetic magnificence.

There can be no question, however, that the main opinion of the country was that the strikers were doing wrong—wrong to those employers whose contracts they had without warning broken; wrong to the nation whose sympathies with the locked-out miners could hardly be increased (it is proof of the nation's estimate of the miners' worthiness that it has not been changed by the recent crisis); and, finally, wrong to themselves, in the sense that their last position must be worse than their first. In sum, the General Strike was a melancholy exhibition of the British worker's loyalty to his "mates" and of his heedless trust in his leaders. In the opinion of the country, however, he is still, if one of the most misguided and stubborn of creatures, the honestest and best fellow in the world.

The Premier and the Strike.

It is, as I have said, no part of my duty to examine the immediate causes of the strike, nor to record the hourly conduct of the Government in the days just before the strike. Whether or not the Conservative Government could have avoided the conflict, whether it might have overlooked certain events whose importance may or may not have been rather local than national, are questions which will for some time be subjects of controversy; but this at least is certain: Britain found, both during and after the General Strike, the man of the time—Mr. Baldwin. This Englishman's attitude has been so far beyond reproach as to make some of our realists doubt his wisdom; his conciliatoriness, his generosity, in fine, his largeness of spirit, have not before been seen in a politician of this era. The Prime Minister, in that simple, earthy-of-English-earth, way, said he thanked God that the T.U.C. leaders had called off the strike; and in less eloquent, but in equally sincere manner the country has thanked God that it had at the helm a man who could steer an inflexible course, and, at the end of the first stage of the voyage, could call on those who had wished him to dip his flag, to rally round the ship that was and is greater than any crew that may at any time happen to be in charge. With unerring and the most laudable instinct Mr. Baldwin has seen what it is for us to forget —the occasional violence of the strikers, their broken promises, the tendency of the "Old Adam" to vindictiveness or gloating (it was strange to note the dissonance once or twice displayed in the official Government journal with his own views); he has reminded us that the strikers are of the nation, and that the nation is one; and he has counselled the forward tilt of the eyes in contrast with the backward, brooding contemplation. It is certainly not extravagant to state that, had anyone else been in power, the General Strike would not have been over last week. Mr. Baldwin is no great politician, but in view of the fact that he was surrounded by great politicians, the triumph of his many-sided Englishness—a triumph universally acknowledged—is the most hopeful thing that has happened since the War.

The Premier's every step since the strike broke out has been correct. He might have rushed to the conclusion that here was an attempt at genuine revolution, a sinister plot to overthrow the industrial system of the country, or at least a bold and open endeavour to overcome the authority of Parliament. Instead, he at once realised that the men had struck simply and solely out of a desire to stand by the miners in their threatened misfortune. Against the steps taken to display this attitude he was sure that the common-sense of the nation would prevail; and he has been justified. But he is no impossible idealist. He saw that some employers would be tempted to make capital out of the situation, and to try to erode that Trade Unionism which has been the increasing bulwark of the working man ever since the Industrial Revolution was fully acomplished. He knows the record of nineteenth-century employers too well not to be aware that without some such institution as Trade Unionism the workingman would be reduced to a mere economic unit. It is with all these things in mind that he has declared, on the enormous problem of reinstatement, that there must be no victimisation on either side. Than a guaranteeing of the protection of the "loyal" men he could have done no less. He might have pledged much more. With a

Digitized by Google

liberalism that will be recognised in history as one of the most remarkable characteristics of a Conservative Premier he has promised nothing more. His simple enunciation of Christian virtues has put to shame those of his followers who talked loudly during the strike of the inevitable "smashing of Trade Unionism"; he has imposed an admiring silence on, and placed a new hope in, the expectant multitudes. There are, indeed, certain wise men who think that all this General Strike may in the end prove to have been well worth the money spent on it.

A Crowded Time.

But for the strike, which demanded all one's powers of concentration, this time would have been crowded with the spirit of May. Instead of being the twenty-fifth in a railway carriage, or the footsore plodder over London streets, one would have been the first into the fields of bluebells and cowslips, and the care-free wanderer along lanes banked with primrose and violet. It was curious how during the week and a half of an almost quiet England, Nature herself seemed to take on the spirit of the period, being now sunny with hope, and now threatening thunder in a wild north-easter.

At last, however, the time has turned. Britain is at work again: which means (for the purpose of this paragraph) that we can study the scores of the Australians, the form of the Derby horses, the waxing of Lawn Tennis stars. No one can find the heart to do these things and doubt that the Government will solve the problem of the mines and that employers will employ not only a considerable number of the misguided strikers but unwonted wisdom in the national question of reinstatement. There have, it is true, been disappointments in the last days—it must be far from comforting to those strikers who sincerely and whole-heartedly displayed a most unmaterialistic spirit to have discovered their sacrifices to be of no apparent benefit, and to individual firms the loss of trade is a deplorable thing that is not easily forgotten—but in the main the national feeling is one of joy and of hope. To collaboration a new significance has been given; of Britain's determination fresh proof has been afforded; and from the fine spirit of sacrifice that has just been displayed on both sides it is not too much to believe that an earnest has been provided of what national co-operation may effect. In the directing of Britain's loyalties is now, more than ever, seen to lie the possibility of her national greatness. Time, one may hope with the Prime Minister, will not be slow in welding together the forgiver and the forgiven. It seems probable that any reorganisation of the Trade Unions is best left to the Unionists themselves, but for the moment the motto is: "Get on with the job."

ALTER EGO.

JEWISH IMMIGRATION INTO PALESTINE.

We have received from the Zionist Organisation in London a copy of a pamphlet entitled "Palestine: The Land of Jewish Immigration." Afer pointing out that Palestine is *par excellence* the land of Jewish immigration—having already outstripped, for example, the United States and Canada (no mention is made in connexion with Russia)—it describes the various types of settlers and their occupations. The direction of this immigration is in the hands of the Keren Hayesod, which aids the immigrants on arrival. In five years' activity in Palestine, this Fund has spent £2,200,000, and has collected from Jews in different countries £2,260,000. An appeal is made to all Jews to uphold the Keren Hayesod.

THE ORIGIN OF THE TURKS.

Sir Denison Ross will lecture to the members of the Near and Middle East Association on June 3, at 8.45 p.m. on the subject of "The Origin of the Turks. The meeting will, by kind permission of Mrs. Eskstein, take place at 18, Park Lane, W.1.

THE INDIAN NATIONAL PARTY.

The Swarajists, both in speech and writing, continue to do their best to discredit the new Party. They have specially fastened on the election cry of "Every vote given to the Swarajists is a vote for bureaucracy," and profess to draw from it the inference that the sole object of the coalition is a temporary union for election purposes. In a recent speech, Pandit Motilal Nehru is reported as saying that, when the Swarajists withdrew from the Legislative Assembly, those who stayed behind thought to themselves "Who will listen to us after this? Let us try to put our own meaning on the walk-out. Let us try to fritter down their obstructive policy, and let us try to pose as the best friends of the people and not the Swarajists." From the day that the Swarajists withdrew, "all life fled from the Assembly. It was but a soulless body, lying helpless at the feet of the bureaucracy." The Liberals and Independents felt the humiliation, and it was to wipe out the disgrace that they had started the new Party.

Some of the extremist newspapers declare that what the National Party's election cry really means is that the Swarajists and not the bureaucracy are the real enemies of the country. And this in the face of the fact that, when the Swaraj Party preserved its honour, "the Liberals and their allies burned the last rag of relf-respect, went down on their bellies before the bureaucracy, repudiated their right to freedom, and changed their policy from fighting to begging." The title of "National" Party is also held to be objectionable—with unintentional humour, a Swarajist organ asks what right has this heterogeneous collection of arm-chair politicians to claim to represent the masses who form the real nation. To prepare the people for any sort of political action is no easy task: "speech making and article writing will not do for us. We want sincere and earnest men, ready to go through fire and water, willing to face persecution, imprisonment or even death. We want men who will work with their muscles and not those who indulge in mere bunkum." The same paper goes on to say that, in their approval of the walk-out policy, there are many who feel that the Swarajists should not enter the Councils again, but should "go down into the country with a strong, intense and vigorous programme." But this is to take a wrong view—the Swarajists must not only enter the Councils again, but must do so in greater numbers than before; for otherwise "these self-seekers and opportunists will sweep in, will co-operate at any cost, will offer to work the sham reforms and, in collusion with the bureaucracy, will strive for the repression of their political rivals. This is a very serious danger, and it is only proper that the public should know what they are doing when they vote at the coming elections."

This, then, is to be the question on which the General Election is to be fought. The National Party's cry, that every vote given to the Swarajists is a vote for bureaucracy, is to be countered by the cry that the National Party is itself indistinguishable from the bureaucracy: and that, though pretending to ask for votes against it, they are in fact asking for votes in its favour. That their campaign against the Swarajists is based on the argument that the latter are so anti-bureaucracy that their return at the polls will provide the bureaucracy with a reason for refusing the grant of any further measure of freedom; but that this is the best possible argument in the Swarajists' favour, and the most complete condemnation of the National Party. "The nation" demands the most vigorous opposition to the bureaucracy, and rejects the very idea of obtaining a further measure of freedom except on their own terms—not what the Government may be pleased to give, but what they themselves are determined to take. "Speech making and article writing will not do" for the "strong, intense and vigorous programme" that is to be carried out on these lines; yet it looks as if the Swarajists who will "work with their muscles" in pursuing it will only do so by thumping the tub in the front line and wielding the pen at the base: and that, when undertaking these exertions, they will only be found, as has invariably been the case before, to be "indulging in mere bunkum."

CURRENT TOPICS.

The Khilafat.

Dr. Ansari, a leading light of the Indian Khilafat organisation, has "addressed a letter to the people of Egypt" explaining why Indian Moslems are unable to accept the invitation of the Egyptian Ulema to attend a Conference for the election of a Khalifa. India, he says, is greatly preoccupied in settling her disputes and putting her house in order: and, while in Egypt itself a great political struggle is going on over the rights of the representatives of the people, other Moslem countries are in even worse case. Turkey is, at the present time, "entirely engaged with the possibility of a fight with England, in the near future, over the Mosul question": a matter in which the British mandated States of Iraq, Palestine and Trans-Jordania are scarcely less interested. Syria is affected by the Druse disturbances, and Algiers, Morocco, Tunis and Tripoli with "the valiant struggle" of the Riff for independence; while Afghanistan is disturbed by the Russian menace to her frontier. Persia is not mentioned—possibly because, as a Shia country, she has no interest in the question of a Khalifa; or perhaps because of the recent dynastic change: and the Central Asian "Soviets" are not mentioned either, nor the large Mohammedan populations of China and Java. But the conclusion drawn by Dr. Ansari is that, if the proposed Conference is held in Egypt, it cannot reasonably be expected to be attended by representative Moslems from any country except Egypt itself: and a Khalifa elected solely in Egypt "can command no respect, can have no status in the Moslem world. Anyone so elected would be exposed to everyone's ridicule and would become the laughing-stock of the whole world."

Dr. Ansari says that the proper person to convene such a Conference is Ibn Saoud: who, "in spite of many initial mistakes and especially the blunder of a hurried

Digitized by Google

assumption of the title of King of the Hejaz, is probably the only Arab Chief endowed with the necessary qualities of head and heart": and he adds an outline of his own scheme for the solution of the question. This proposes that international gatherings of Moslems shall be held yearly in different countries with the object of forming a "Khilafat League of Moslem Peoples," with Khilafat Committees in every Mohammedan country. As soon as the latter have been established, the annual gatherings shall cease, and the Khilafat League, with its seat "at some central place," shall come into being. It shall have a Council, the elected President of which shall be the Moslem Khalifa, which shall make the necessary rules and regulations: regarding, for instance, the number of members and the financial contribution from each Moslem State, the scope and conduct of its work, the functions of its officials, and "the relation of the Khalifa, of the Council and of the League to the future Government of the Hejaz." Apparently the idea is to start a Moslem counterpart of the League of Nations: and it would seem that Dr. Ansari, at any rate, is not in favour of Ibn Saoud combining the offices of King (or President) of the Hejaz and of Khalifa. Soviet Russia has, for some time past, been looking round for an organisation in opposition to the League of Nations: and, as her dominions contain a large number of Moslems, it is not unlikely that she may support this idea: but, to judge from present indications, the unanimity among the Moslems of the world, that must necessarily precede the adoption of any such scheme, is unlikely to be reached in any reasonably near future, if indeed it is ever reached at all. Recent developments in the Turkish Republic suggest that the Turks would have nothing to do with it: and, if it should come to fruition without their adherence, not only would they refuse to recognise the person or the powers of the Khalifa, but the abstention of the most important Moslem State would—at any rate until India should be, as her Moslems doubtless hope that some day she will be, in a position to supply the deficiency—deprive the League of all practical significance.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 29.

The Riots Again.

The riots broke out again last mail day and they have continued for a week; for the first time there is to-day an easing of the situation, but these are riots with a difference; they are more sinister than those of Easter Week. They have produced more panic, and not only has almost the whole of the north of the city been shut up till it looked like a city of the dead, but normal Indian life everywhere has been almost suspended. Food supplies have been held up and there is an acute shortage all over the city, which would have been worse had not Col. Crawford, the Secretary of the European Association, taken drastic steps, with the aid of volunteers, and provided motor transport under escort for limited supplies. Street refuse and sewage have been left unremoved all over the town for days and we shall be lucky if we escape an epidemic. All trade and business, shipping, exchange, and the markets are at a standstill. Tens of thousands are out of work and are unable to procure food. Sir Hugh Stephenson, the Senior Council Member, rightly says that the situation is unprecedented: and he boldly adds that communal hatred now exists from the highest to the lowest of the communities. The casualties to date in this outbreak are 53 killed and 378 seriously injured: these are the official figures and there are probably hundreds of others, for this has been a week of secret stabbings.

Secret Organisation.

To-day, the eighth of the outbreak, Government has issued a *communiqué* which indicates that adequate steps are now to be taken to deal with the situation. Once again, sections of the Frontier Rifles will be brought in and the Police Force will be augmented by 100 European sergeants drawn from British regiments. The Governor also states that, if necessary, he will call up the military. One thousand bad characters resident in Calcutta have been listed, and orders have been issued to arrest anyone on this list at sight. So far so good; there is, however, a universal conviction that there are secret influences behind the present outbreak which are responsible for keeping it alive, and action of the strongest character by the Government is obviously necessary to deal with the situation. Leaflets are still being distributed, and open and secret propaganda is taking place amongst the ignorant members of both communities, inciting them to murder at sight. The organising capacity behind these activities is of no mean order, and no one familiar with the recent state of affairs in China can escape making an obvious deduction as to what is going on here.

Race Hatred in Reality.

The remarkable fact should be noted that hitherto not a single European has been attacked, apart from members of the Police Force who have sought to disperse mobs or arrest rioters. Hindus and Moslems of all classes blame each other and, in certain of their newspapers at least, make little attempt to conceal their mutual antipathies, whilst each community admits that its lower elements are culpable. Numbers of acts of conspicuous bravery amongst the Police are continually reported; two European sergeants faced a mob of over a thousand armed with knives, cudgels and stones and succeeded in stampeding them! There is no question of the respect of the ordinary Hindu and Moslem for police, troops and private Europeans, and the moral effect of their presence has to be seen to be believed. If further proof were required of the unreality of the racial hatred against Europeans that has been cultivated since the Reforms by the Extremists, it is found in the open contempt of the combatants for the advice and assistance of the so-called political leaders who have attempted to influence them.

Government from the Hills.

Babu Bepin Chandra Pal, in his weekly article this morning, calls upon the Government to govern or get out: and to judge from the Press, both European and Indian, this sentiment is universal. Those who consider that the transfer of Government to the genial and remote atmosphere of the Himalayas for a large portion of the year is a good thing, will regret that these riots happened to come at a time when even with the aid of the telegraph it seems to have been at least difficult to obtain orders. *Forward* has been more outspoken and personal in tone than ever before in commenting on the absence of Government, except when, for personal reasons, a flying visit to the City has been desirable: and finally even the most responsible European papers have been almost equally outspoken. Comments in the markets and the clubs have been reminiscent of the days of the Ilbert Bill, and no one will be surprised if this is the beginning of the end of the yearly Darjeeling exodus.

Oil on the Flames.

There are still numbers of broadminded officials, honestly sympathetic with the aspirations of the Indian political classes, who are prepared to risk the sacrifice of their careers by acting courageously where courage is necessary, but their hands are tied to-day as they have never been before. Fear is out of place in Government in India, and a firm heel should be put down upon the activities of the greater part of the Extremist Press at the present time. Hatred and defiance of authority, the foulest accusations against all ranks of the Police, daily open statements that the whole disturbances are being engineered by Government—these are the commonplaces of editorial comment, and all news is filtered and distorted to fit in with this attitude. Government's apparent

Digitized by Google

placidity may be partly explained by the difficulty of sensing the position of affairs from a distance of 300 miles, but the danger of pouring this inflammable rubbish into the minds of a million people—and it is almost universal in the popular papers—is so obvious that it is impossible to understand why no check is imposed.

The Present Situation.

Even if the decline which has started to-day continues, no one dares to say how long it will be before another outbreak takes place: and, in any event, merely to clear up the present mess must take weeks and months. Thousands have left the city, and thousands more will do so when they feel it is safe. The disturbance of trade and finance this year is already enormous, amounting to crores of rupees, and the end is not yet. It is early to draw conclusions, but never in personal experience has so much open communal hatred been expressed by all classes. Is this the first fruits of the attempt to impose a democratic system of government on the East? The distrust, with which the Reforms have been regarded from the beginning by many detached observers, will increase when so-called political education of the minds of the ignorant can so awaken old feuds and light up these never-dying fires. It is not too much to say that, while Indians of all classes and communities are in a state of fear such as they have not known for generations, the thinking European feels to-day puzzled and more than worried at the state of chaos into which things have been allowed to drift.

Markets.

With the renewal of communal rioting, the jute and its allied markets have been completely disorganised, and business is now more or less at a standstill. Prior to this, the jute market was quiet with mills interested to a small extent; in heavy goods a large business was put through. The piece-goods market has been closed for the entire week. Reports from London indicate a rather irregular and easier tea market, followed by a better tendency at the close; reports here from the tea gardens are somewhat varied in character, but there is no doubt that in some parts rain is badly needed and, unless it is forthcoming very shortly, the crop in such districts will be below normal. For the last four or five days business on the Stock Exchange has been almost entirely stopped owing to the recurrence of the riots. Towards the end of last week a number of changes have to be recorded, but these are confined mostly to Government Securities and jute shares. The latter shares closed at the worst, on rumours that the forthcoming dividends would generally be about fifty per cent. of those for the previous half-year. Government Securities have been the subject of rapid changes. 3½ per cent. Paper, after being quoted at Rs.78, fell within a few days to Rs.76/4/-: and similarly 1945-55 Loans reacted from Rs.108 to Rs.106/4/-. The decline is probably due partly to natural profit-taking following such a rapid rise, and partly to the fact that prices of local loans here are so much higher than the prices of similar loans in London: the result has been that operators have dispatched money to England for investment at the more advantageous rates obtaining in London. One or two of the better coal shares have improved, but business generally is small: similar remarks may be made of cotton shares. The tea section has been distinctly firmer, with more buyers in evidence; but the sellers showed no inclination to meet the market. Rubbers have been dull, on the further reaction in the price of the raw commodity.

Money has been in rather better supply and rates are lower, call and short notice being quoted at 4 per cent. Exchange has remained steady during the week, with T.T. at 1s. 5 27-32d. Business is at a complete standstill.

THE INDIAN MAIL.

The Swarajists and Communal Dissensions.

In his letter published in our last issue, our Calcutta correspondent informed us that the local extremists have discovered that the recent riots in Calcutta were deliberately engineered by the authorities, and deliberately encouraged to assume serious proportions before any attempt was made to get them under control, for the express purpose of impressing the new Viceroy, at the very outset of his term, with the width and depth of the gulf between Hindus and Mohammedans, and the futility of listening to political demands on behalf of "the people of India" so long as it persists. Something of the sort was, of course, only to be expected; though it did not seem probable that even the most irresponsible of Indian politicians would seriously pretend to support so patent an absurdity. It seemed more likely that the thesis would rather be sustained by suggestion: as, indeed, has been done by one of the less irresponsible leaders.

Speaking at Lahore on April 9, Pandit Motilal Nehru said that, in his opinion, Hindu Moslem differences were not inherent in the communities themselves, but were the result of the alien rule under which they lived: a change from slavery to Swaraj would obliterate communalism. The solution of the problem lay in the attainment of Swaraj: and, to those who asked whether this would be a Hindu or Musulman Raj and, if either, what was going to happen to the other community "once it was placed at the mercy of its implacable foe," he replied that it was all to the good if Hindus and Mohammedans were each to try to establish their own Raj because, in either case, the necessary condition of success was the elimination of the foreign Raj. "Let them hate each other as much as they like, but combine to get rid of the foreign Raj. In the process of acting together for that purpose, they were bound to cultivate a common feeling between themselves, which would in course of time obliterate the hankering for Hindu or Musulman Raj and establish Swaraj for both. Whatever their mutual differences might be, they had to realise that the elimination of the foreign element was necessary to establish the Raj that they wanted." Once they began to work for it, they could not but end with a common Swaraj, of all communities combined, for the process of the struggle would necessarily convince them that no single community, however strong, could secure Swaraj for itself to the exclusion of others.

In a recent issue of THE NEAR EAST AND INDIA, the opinion of the *Round Table's* writer on India was quoted —"Already the best minds of India are turning in disgust from the suicidal strife between Hindus and Mohammedans: and, in the development of a real party system under

the new Constitution, they have a potent means of translating their disgust into constructive action calculated in the end to do away with its cause." It would almost seem that Pandit Motilal Nehru had read this passage and had determined to adopt it, while putting on it his own construction. The Pandit, who is generally admitted to be one of the best minds of India, is the leader of the Swarajists, who claim to have developed a real party system under the rules of the new Constitution which they have set themselves to destroy. According to him, the cause of the suicidal strife between Hindus and Mohammedans is the existing alien rule: and the constructive action that he proposes, in order to mark his disgust at communal differences and to do away with their cause, is to urge Hindus and Mohammedans separately to strive for the destruction of the foreign element in India; in the belief that, if each community can be induced to bend its whole energies towards the attainment of this common end, both will ultimately find it necessary to sink their own differences and to join forces in order to achieve it.

The Currency Question.

Mr. Jwala Prasad Singha, Lecturer in Economics at the Dayanand Anglo-Vedic College at Dehra Dun, has sent us a long article containing his opinions on the Indian Currency system. The article is, unfortunately, too long to print, and contains little that is new. Its writer surveys the history of the issue of token coinage in India, from the leather money of Mahomed Tughlak and the silver rupee of Sher Shah to the rupees of the Honourable East India Company: and asserts that, up to 1835, the main currency of India was in gold. In that year the Company did away with gold coins as legal tender and introduced, in their stead, the uniform silver rupee; though, according to Mr. Singha, "the people continued to demand gold." He says that, in 1841, when gold rose in value, the Government, "ostensibly in deference to popular opinion," declared its readiness to receive payment of taxes in gold; but that, owing to the high value of gold, the offer was not taken advantage of until 1852, when gold fell in value, whereupon the privilege was at once withdrawn. But, as "the people continued to press the demand for a gold currency," a Committee was appointed in 1866, which declared in favour of gold, but the Government refused to move. The author proceeds to trace the history of the various Committees appointed subsequently: and reaches the conclusion that all attempts to establish a gold exchange standard have broken down, and that the only proper solution is the establishment of an effective gold currency. This, he says, existed before 1835 and could exist again if an open mint for gold and an unlimited legal-tender gold coin were given. He also combats the prevalent belief that India is "a sink of gold" and declares that, in case of necessity, India is as willing to export as to import treasure; "moreover, even if we admit for argument's sake that there is a hoarding, it is not likely to be decreased by the present unstable and artificial system, which does not inspire any confidence. It is likely to be decreased, however, by an effective gold currency, when the people can take their gold ornaments to the mints in time of financial stringency. India's traditions, the currency instincts of the people, the necessities of the position, the solid mass of Indian opinion demand an effective gold currency. Its introduction will remove a cause of irritation that is injurious to England as well, and the suspicion, prevalent in the minds of thinking Indians, that the present system is maintained only because India is a dependent country: and will facilitate trade between the two countries. Let England think well what will be her answer."

INDIAN EXCHANGE.

London, May 17.

In our last week's report Rupee Exchange closed strong at 1s. 6d. T.T., in Calcutta and Bombay, and first-class commercial paper was quoted 1s. 6 9-32d., three months' sight. The firmness was more noticeable in Calcutta where more activity has lately been shown in exports and bills have consequently been offering fairly freely. Bombay has lagged behind and has usually been 1-32nd below Calcutta quotations, which is rather surprising in view of the large amount of raw cotton still awaiting shipment.

Three months' credits are now called 1s. 6 3-16d. for delivery within two months, and T.T. is available at 1s. 5 15-16d.

In the London market, after business had been done to a fair extent at 1s. 6d., remitters retired and the quotation sagged to 1s. 5 15-16d., at which the market is very steady with only a moderate amount of business passing.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Roumania's Debt to Britain.

It may be of interest if I give brief details of the settlement arrived at for the repayment of Roumania's War Debt to Great Britain for which Roumanian Treasury Bonds for £18,448,200 are held. Roumania is to make the following yearly payments: 1926, £50,000; 1927, £100,000; 1928, £150,000; 1929, £200,000; 1930-34, £250,000; 1935-44, £275,000; 1945-66, £500,000; and 1967-87, £750,000. In the case of 1926 payment will be made in one instalment on November 15, but apart from the present year payments will be in equal half-yearly instalments on May 15 and November 15 in each year. The small annual payments up to 1944 inclusive have been arranged because of the payments Roumania has to make during that period for the Relief Bonds of £2,200,000 held by Great Britain. Provision is made for interest at the rate of 6 per cent. on overdue instalments: Special bonds have been issued by Roumania for each half-yearly payment. These bonds are exempt from all Roumanian taxes present or future as long as they remain in the hands of Great Britain or of a person, firm, association, or corporation which is not domiciled or has not its usual residence in Roumania. Provision is also made for the exchange by Roumania for all or part of the bonds of bonds destined for sale to the public, either bearer or registered or inscribed, for such amounts and denominations as Great Britain shall desire. It is arranged that the payments provided for shall constitute a charge on all the assets and revenues of Roumania, and that the sums due annually shall be included in the Budget of each year. Finally, if Roumania gives more favourable terms to another creditor the agreement with Great Britain is to be modified accordingly.

Burmah Oil Bonus.

The announcement by the Burmah Oil Company of a bonus issue of one share for every three held will come as a welcome surprise to the shareholders. The company proposes to write its holding in the Anglo-Persian Oil Company up from 13s. to £1, and as the holding consists of 2,374,660 ordinary shares this means an increase in assets of £831,131, which amount, transferred to the profit and loss account, with the allocation from the profits for the year, brings the reserve to £2,117,064. The proposed share bonus will absorb £1,717,064 of this total. The present price of the Anglo-Persian ordinary shares, it may be pointed out, is 86/3 so that the directors of the Burmah Oil Company in proposing to write them up to their parity of £1 are acting on very conservative lines.

Egyptian Tribute Loans.

The interesting announcement is made that Messrs. N. M. Rothschild and Sons have received from the Egyptian Government the funds in arrear in respect of the coupons and drawn bonds, due October, 1924, and after, of the Egyptian Tribute Loans of 1891 and 1894, and such coupons and drawn bonds may now be presented to the respective paying agents in London for payment. The Mixed Courts of Appeal in Egypt have awarded certain interest on the arrears, and in regard to this the directions of the Chancery Division of the High Court of Justice in London will be obtained at an early date.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 18.

The firmness of Stock Exchange prices which manifested itself after the second day of the General Strike, became accentuated at the beginning of the current week, and by Wednesday prices in most departments had recovered to the pre-strike level. When the actual news that the strike had been called off arrived, therefore, prices exhibited little further movement, dealers showing an inclination to await further developments. During the strike period business was on a very small scale, and until interest in the stock markets revives any further advance in values is unlikely. At such times as these prophecy is dangerous, but there seems to be no reason for anticipating any serious crumbling in security prices. As we have recently pointed out the stock markets as a whole are in an extremely healthy position. There are no large speculative accounts open, and dealers have no large lines of stock upon their books. It may be argued, of course, that after the initial wave of optimism following the end of the General Strike, reaction will set in as the heavy cost of the strike to the country becomes more apparent. On the other hand, investors will not be slow to recognise one great advantage arising from recent events, namely, the passing of the threat which has hung over the industrial world for so long a period. More than one section of the Stock Exchange has suffered depression from time to time in recent years entirely owing to threatened danger of strikes and disputes in one industry or another, and with this menace removed steady progress becomes a much more practical possibility.

The Money Market.

The money market has remained remarkably unperturbed during the strike. It might have been thought by some that a rise in Bank Rate would have been necessary. Fortunately, however, the reduction made in the New York Federal Reserve Bank Rate to 3½ per cent. on April 22 had already made such a possibility much less likely; events have shown that during the past ten days the Bank's position has been strengthened by a substantial influx of gold, and the possibility of a reduction in Bank Rate in the course of the next few weeks cannot be ruled out. The value of sterling in the principal financial centres of the world has been well maintained. Some slight fall at first was only to be expected, but since the strike

finished all the ground lost has been recovered, and the New York rate has gone above par for the first time for eleven years. The French and Belgian francs, on the other hand, have slumped as a result of selling from Paris and Brussels, but energetic negotiations to secure some sort of stabilisation are proceeding.

Railway Stocks and the Strike.

With the General Strike out of the way the future course of home railway stocks should be of especial interest. During the strike prices have, in the circumstances been remarkably steady and there has been no panic-selling. But what will their future course be? As yet there are few indications that investors are over-concerned by the loss which the railways have sustained as a result of the strike. Thus it is possible that there is here a factor which might eventually exercise a depressing influence. But, if past experience of railway strikes —though of course not complicated by a general strike— is any guide to the present, it is probable that the influence of this factor will be negligible. This, at any rate, is what happened at the time of the railway strike of 1919, which began towards the end of September and lasted until well into October. For instance, London and North Western ordinary stock at the beginning of September stood at 89 and throughout the month was never lower than 88¾. In October it opened at 89½ and closed at 88. Again, Great Western ordinary stock was 84¾ at the beginning of September and was never more than ¼ below this figure throughout the month. In October it opened at 85½ and closed at 84½. Thus there were less violent movements in prices than might have been expected, and it is not improbable that prices will show the same tendency in the present case.

During the past nine months the Home Railway market has been depressed more than any other section of the Stock Exchange by the position in the coal trade and the general uncertainty of the labour outlook. If, therefore, as the result of recent events the menace of labour troubles in the railway world is removed the outlook for the companies from the shareholder's point of view becomes distinctly brighter. It is this aspect of the case which is doubtless responsible for the marking up of prices in the home railway market this week. Very little business has been done in this as in other sections, but the upward movement has been more pronounced in the past few days than in any other department, just as the decline when the General Strike began was the sharpest.

The directors of the South Indian Railway Co. Ltd., have decided to pay on July 1, an interim dividend from surplus profits of 2 per cent., less income tax (compared with 2 per cent. paid on July 1, 1925) making with the interest guaranteed for the half-year ending June 30, namely 1¾ per cent., less income tax, a total distribution for the half-year of 3¾ per cent.

Prince Line.—S.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, May 22); s.s. Lancastrian Prince for Malta, Alexandria, Jaffa, Haifa, nnd Beyrout (Middlesbrough May 22, London June 2).

Company Meetings.

COMMERCIAL BANK OF THE NEAR EAST.

Business Conditions Difficult.

The fourth annual general meeting of the Commercial Bank of the Near East, Ltd., was held on May 12, at 4, London Wall Buildings, E.C.

Mr. Charles H. D. Moberly, the managing director, who presided, said: Gentlemen,—On behalf of the Board I have to apologise for, and to regret the absence of, our co-directors, Messrs. Empedocles, Petracochino and Merlin, who are detained by their duties in Athens. I have also to apologise for the absence of Mr. E. L. Lambrinudi, an alternate director on behalf of Mr. Gregory Empedocles, who is engaged on duties in connexion with the strike.

Times have been bad, and business conditions have been very difficult in some of the countries of the Near East. The instability of currencies and the consequent wide fluctuations in exchange have been one of the main factors in their troubles. Under these circumstances, we may consider as satisfactory that our profits for the past year amounted to £9,889 1s. 8d., as against £10,239 11s. 7d. in 1924. We have received applications for shares during the year, and the paid-up capital of the bank has increased from £175,935 to £185,000.

A branch of the bank was opened at Alexandria, Egypt, on October 1 last, and it is making satisfactory progress. I am proceeding shortly to the Near East to visit the branches, and obtain first-hand knowledge of conditions. The Constantinople "Bourse"—that is to say, the Stock and Foreign Exchange Markets—having been transferred from Galata to Stamboul, a sub-branch of the bank was opened on March 15 of this year in Stamboul, and I hope its establishment will conduce also to an increase in our business generally in Constantinople. The directors informed you in their circular of September 4, 1925, that they had decided not to issue half-yearly balance-sheets.

I now beg to propose: "That the report and the statement of accounts for the year ended December 31, 1925, be received and adopted, and that a final dividend for the year 1925 at the rate of 6 per cent. per annum, less income tax, be paid on the shares of the company on and after May 13, 1926."

Mr. D. J. Cassavetti, in seconding the resolution, paid a tribute to the good work done by the staffs in London and in the Near East.

The resolution was unanimously adopted.

The retiring directors, Mr. C. S. Merlin and Mr. D. J. Cassavetti, were re-elected, and Messrs. Price, Waterhouse and Co. were re-appointed auditors.

EGYPTIAN MARKETS.

A Satisfactory Year.

The ordinary general meeting of the Egyptian Markets, Ltd., was held on May 12 at Winchester House, Old Broad Street, E.C., Mr. G. H. Redwood presiding.

The Secretary, Mr. F. R. Parker, having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: As a preliminary to the remarks I have to make on the year's business I must explain that your Chairman, Colonel A. St. John Cooke, is absent from the meeting for the reason that he is in Egypt, where he has been unavoidably detained by important business which it is hoped may, in equity, lead to a modification of the recent decision of the Egyptian Government in connexion with cattle market tariffs, and Government's participation in this company's

Digitized by Google

receipts, or at least that some compensating concession will be granted as a result of his efforts.

With your approval, I propose, as is usual, to take the directors' report and accounts for the year ended December 31, 1925, as read.

During the year which has elapsed since we last met considerable progress has been made in Egypt towards the establishment of the old friendly relations between the Egyptians and the British, which have been so seriously disturbed during the recent period of political unrest.

I feel I can safely say that the prospects for British commercial interests are to-day brighter than they have been for many years. There is, it is true, a possibility of local disturbances during the forthcoming Parliamentary Elections; these may always be expected, but they are, as a rule, confined to small areas, and the authorities appear to be fully prepared for all emergencies.

As you have no doubt gleaned from the Press, Lord Lloyd, the new High Commissioner, has, by his acts and his speeches, created the best of impressions on both the European and Egyptian communities, and it is believed that during his term of office, which I trust will continue for a great many years, a state of affairs will gradually evolve from which a condition of accord will develop between the varied nationalities, residents of Egypt, which must tend to improve prosperity in that country, and all associated with it.

Now, with regard to the report and accounts before you, I feel sure you will agree with me and my colleagues that the results for the year are satisfactory, in view of the decision of the Egyptian Government to increase the amount of their annual participation in the receipts from our cattle and general markets by 10 per cent., which is referred to in paragraph 11 of the report, and was the subject of a circular letter dated October 29, 1925, addressed to you by your Board.

The gross receipts from cattle markets amounted to £74,260, an increase of £840 over those of the year 1924.

During the year a considerable shortage of Syrian camels was reported. This was the direct result of the troubles in Syria and Arabia, but everything possible is being done to induce the big dealers to get in larger herds.

The development of motor traffic (private and public vehicles and cycles) and the resultant competitive efforts of the agricultural railways in providing cheaper, quicker and more frequent service have also appreciably reduced the number of riding donkeys, and our receipts from that source have consequently fallen.

The general markets have also shown improved revenue, the gross receipts being £35,931 as compared with £35,516, an increase of £415, and this notwithstanding the detrimental financial effect upon the fellaheen of the fall in the price of cotton, and the withholding of part of the crop in anticipation of better prices.

It is true that, as a result of the intervention of the Government by large purchases of cotton, the price improved at a later date, but the improvement was of little or no benefit to the small farmers, who had already disposed of their crops.

The figures I have quoted refer only to the 120 cattle and general markets which come under the Government Concession. Additional receipts from the cattle and general markets outside the Concession amounted to £1,366, a small increase of £202 over last year.

This company's share of the Abattoir revenue shows a small decrease of £136.

With regard to the remaining item to the credit of our trading account, viz., chemical manures, salt and sundries, I regret to say that, as compared with the year 1924, this shows a decrease of £2,318. This decrease is largely attributable to the intense competition in the sale of artificial manures, which are being imported in large quantities by the Government, the Agricultural Society, and a considerable number of prominent trading firms, and to the termination during the year of a remunerative agreement with a firm of prominent Egyptian cigarette manufacturers, which was not renewed.

The development of the commercial side of our business is receiving our closest attention. At the moment we are engaged in examining several promising agencies, and have just entered into an arrangement with the Khedivial Mail Steamship Company for the sale of passage tickets to pilgrims and other visitors to Arabia or Red Sea ports.

We have also made an agreement with a travelling cinema and advertising company for the display of educational and other films, accompanied by explanations through a loud speaker. The fellaheen are greatly interested in these performances, taking the keenest interest in the added attraction of the loud speaker. When I tell you that some 90 per cent. of the fellaheen are illiterate you will better appreciate the value of the descriptive part of the programme. The results so far from the travelling cinemas which are already at work are satisfactory.

We come now to the revenue account. After making provision for the share of profits payable to the Egyptian Government, amounting to £29,803 2s. 2d., and after payment of debenture interest, £2,840, and share capital and sinking funds premia, £3,698 1s. 6d., and carrying £5,292 1s. 3d. to general reserve, your Directors recommend the payment of a final dividend of 5 per cent. and a bonus of 4 per cent., making, with the interim dividend of 5 per cent. paid in November, 1925, a total of 14 per cent. for the year on the ordinary shares, which will absorb £24,458, and the payment of a dividend of £17 9s. 1 19-30d. per share on the deferred shares, which will absorb £5,237 0s. 10d. After payment of these dividends a balance of £11,954 0s. 9d. will remain to be carried forward, as compared with £11,961 18s. 11d. brought into the accounts from the year 1924.

The resolution was carried unanimously.

Motors and Motoring

By G. B. B.

Possibly it is because I have had more opportunity of observing such things lately, but it strikes me that people are becoming more careless, thoughtless or awkward in entering or leaving a car than they used to be. Surely when an owner invites a friend to accompany him on a trip, it is not too much to expect that friend to take a little care when getting in or out, so as to keep the paintwork free from scratches. Yet care is the last thing many seem to think about, and there is actually a type of person about who seems to think that it shows *savoir faire* to treat a friend's car roughly. Of course, that type is fortunately far from common; the offenders are principally people who either do not think or else are awkward through nervousness. Either way, the owner suffers and, equally of course, he suffers in silence as no one would dream of calling a passenger's attention to his clumsiness.

It would not, however, be quite fair to fasten the blame always on the passenger, for at times it is the driver himself who is at fault, either by getting in the way of his passenger or by showing clumsiness himself. There are cars from which it is admittedly far from easy to dismount, and some are badly designed for both mounting and dismounting. But even so all that is needed is a little thought and deliberation; there is no need to kick doors or to rake one's boot toes down an enamelled panel. True, also, it is that centre gear change leads at times to awkwardness in passing into or out of the driving seat, but all that is needed is, as I said before, a little care and thought.

Re-assembling.

Every motorist, sooner or later, succumbs to the lure of taking down his own engine. At first he resolves never to touch it, no matter what the provocation. Then he hears stories from his friends of how they used to have garage men see to their engines and of how they suspected that these workmen did not know their business and of how, at length, they "took down" their engines and found half an inch of play on the big ends or two inches of carbon on the tops of the pistons and of how they put matters right in the twinkling of an eye and of how the cars now go more like birds than cars. So the day comes when, more in fear than in anything else, the car owner handles a wrench, loosens a nut, screws it up again and hopes he hasn't ruined something or other by so doing. After a little of this; this timid tinkering with sin, so to speak, the victim at last gains courage enough to take his engine limb from limb and lay its parts out in proper order for re-assembling. Re-assembling is generally easier than taking down; a Scotchman of someone's acquaintance found it economical also, as he always had some part or other left over after the operation. But easy though it be to re-assemble an engine there are few who, having done it, can honestly say that any real improvement is manifest. They must have passed well out of the novice stage before they know enough to effect the slightest improvement in any respect by taking down an engine and putting it together again. In fact, I should not be greatly beside the mark if I said that in nine cases out of ten interference with an engine by an amateur leads to loss of time, if not worse.

To give only one instance of this. How many motorists pay any attention, when re-assembling an engine, to the position of the gaps in the piston rings? Those who do probably make a point of spacing the ring gaps fairly equally round the circumference of the piston, if three rings are used, or of getting them opposite one another where only two are employed. An expert, on the other hand will get a pair of inside calipers and with the greatest care will test the internal diameter of the cylinder for wear, and will replace the piston with the gaps in the rings along the tightest diameter. This means that as a general thing the best way is to replace the piston rings so that the gaps are close to the ends of the gudgeon pin. If there are only two rings, one gap should be to the right and one to the left, as close to the ends of the pin as possible. Three rings means that the bottom and top ring should have their gaps at one end of the pin and the middle ring have its gap at the other end. A cylinder seldom or never wears oval with its biggest diameter parallel with the crankshaft and gudgeon pins; it is the angularity of the connecting rod on the compression and firing strokes that drives the piston against the cylinder wall and so causes wear, and the piston can never be driven in any direction except at right angles to the crank shaft.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended April 20, amounted to £E7,371, making the total from April 20, £14,840.

COTTON GROWING IN THE SUDAN.

By W. H. Himbury.*

On my previous visit to the Sudan my route to Khartoum was via Cairo and the Nile, in order that I might see something of the progress being made with cotton growing in the Gezira Plain by the Sudan Plantations Syndicate at their several pumping stations, where quite large areas were being cultivated for the training of tenants, and the production of seed required for the larger area which would be available when the Dam was completed. I also desired to visit Kassala, another new and promising area, with a view to obtaining some idea of its possibilities for cotton, its transport difficulties, etc.

On this last occasion I entered the Sudan from Uganda, accompanied by Mr. Thomas. The object of the visit was to see the work already being done by the Administration and Agricultural Departments to encourage the production of American cotton in the Southern Sudan, and also to discuss with Sir Geoffrey Archer, Sir George Schuster, and other prominent officials, how best to continue, augment, and speed up such work.

Leaving Jinja on February 24 and crossing Lakes Kioga and Albert, we arrived at Nimule, the extreme south of the Sudan, on the 28th. The journey between this place and Rejaf, about 100 miles, was covered by motor lorry. The first 50 miles were most interesting—a good many plots of cotton were visible. Some had been picked and the seed cotton was being transported. The natives at this season appeared to be busy rebuilding or repairing their huts.

The journey between Rejaf and Mongalla was also covered by car. We remained at this place several days, and whilst there had an interview with Sir Geoffrey Archer, the Governor-General, who was touring the Province. There is little doubt that quite a good type of American cotton can be grown in the areas already passed through. Cotton growing, however, is a new industry for the natives; in fact, until the Government officials interested themselves in the matter the people produced little or nothing for export, and yet in one year there are sufficiently promising indications that cotton growing has taken on. The transporting of the seed cotton to the nearest ginnery situated at Makwar, near Khartoum, is already causing some difficulty, and the erection of one or two ginneries somewhere in the Province to deal with the seed cotton in the area where it is being produced, is an absolute necessity. This will not only largely assist in solving the transport problem, but greatly reduce the cost, it being practically impossible to carry economically seed cotton a distance of over 1,000 miles by shallow draught vessels taking 8 to 10 days.

It was quite a remarkable sight travelling down the Nile to see natives picking cotton from their small patches, or seeing the cotton in small baskets along the river awaiting canoes to bring it to market. At the larger wood

Digitized by Google

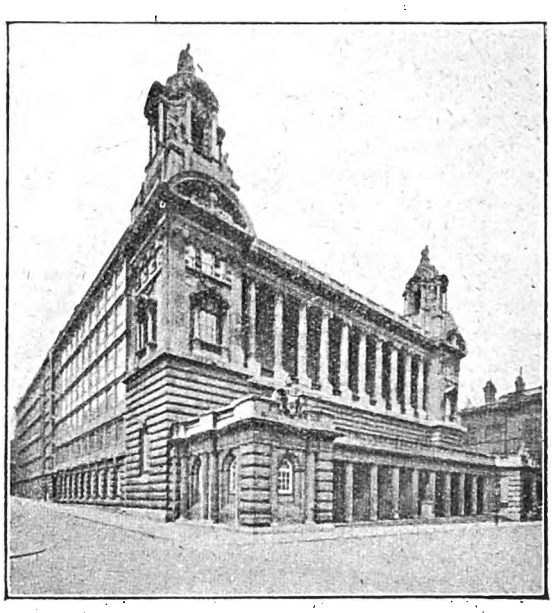
stations and Administrative centres we saw huge bags of seed cotton ready for the river steamer to convey down stream; in fact, from the time of leaving Nimule till our arrival at Kosti we were not without the sight of cotton in the growing or harvesting, or in small lots for sale or large bags for transport, especially at such centres as Bor, Shambi, Hillet Nuer, and Malakal. At the latter place I had an interview with Mr. Davis, the Agricultural Officer, who quite expected to get about 3,000 kantars of cotton, or 750 bales of 400 lb. each. All this is bought in the seed cotton and shipped to Wad Medani for ginning. It consequently has to be carried by car to the ports, and then the bags are sent down on the river barges and steamers. The cotton I examined was of quite a good type, staple averaging a full 1⅛ in., in some cases up to 1 3-16 in., and I should consider it worth anywhere from 150 to 250 points on American Futures. The Government was paying about 60 to 70 piastres for a kantar of seed cotton, roughly 1½d. per lb., which I consider a good price, and I doubt if any commercial venture could pay so much, in view of the very costly transport. The Agricultural Officers buy the cotton, and the District Commissioners render valuable help in transport, etc.

I am convinced of the possibilities of producing large quantities of cotton of a desirable type. It is, of course, not an irrigation proposition, so that the type grown will be the American, and the yields will naturally be nowhere near those obtained under irrigation. At the same time I see no reason, as the new industry advances, and its progress will naturally depend on what the grower gets for his labour, why some of the more intelligent cultivators should not irrigate by lift from the Nile in the same way as is done on the Lower Nile, by the aid of the shadouf and shakier.

As to how this present development work of producing rain-grown cotton in the Southern Provinces should proceed, there may be various opinions, but to my mind there is only one way and that is for the Government to continue its control, and any assistance required should be provided by the two public bodies, viz., The British Cotton Growing Association and The Empire Cotton Growing Corporation, who are organised for this work. There is certainly no room here to-day for any sort of commercial enterprise, the reasons operating against such being chiefly: that the country is in a primitive stage of development, and it must be the first duty of the Government to see that the native who undertakes the growing of a crop at its instigation, gets a full reward for his labour, especially when such a crop happens to be one which he cannot eat nor use for his own needs.

Arriving at Kosti on March 13, the authorities very kindly granted us facilities for travelling by train from this station to Makwar, where, accompanied by Mr. Proud, the Engineer, and Mr. Crawford, the A.D.C., we inspected the great Dam. We walked the length of the whole structure, nearly two miles, and then went underneath to see some of the discharge. The whole structure is a splendid piece of work, and great credit is due to the constructional engineers for completing it in record time. Only those intimately connected with the work can appreciate the difficulties successfully surmounted. The masonry of the Dam weighs about one million tons; the reservoir above the Dam will be a lake 50 miles long, and its capacity 140,000,000 gallons; total length of canals, 9,286 miles. I shall not give more details, so much having been written lately about this wonderful work. I cannot, however, adequately express my feelings as I viewed this great dam.

(To be Concluded.)



The directors of the Ionian Bank have declared an interim dividend at the rate of 6 per cent. per annum, free of tax.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Adjustment in Yugoslavia.

The crisis that led to the resignation of the Ouzounovitch Cabinet last week has since been explained as being due to a misunderstanding. There was found to be nothing antagonistic to the Government in the resolution that the Skupshtina adopted, and before King Alexander had time to decide whether he would accept or reject M. Ouzounovitch's resignation, the latter was able to withdraw it. Only one change was made in the Cabinet. M. Pavle Raditch, nephew of the Croat leader, resigned, and his place has been taken by the former Vice-President of the Skupshtina, Dr. Stanko Shibenik, a Raditch deputy, who becomes Minister for Agriculture. The intention of the Government is to pass its own motion leaving what is known as the Corruption Affair, in which M. Radomir Pashitch is implicated, to the judiciary. M. Stepan Raditch remains outside the Ministry, but, in spite of the withdrawal of his nephew, it has to be inferred that the continued co-operation of the Croat Peasant Party with the Radicals has the support of the leaders.

The Caliphate Congress.

As was to be expected in existing circumstances, the Caliphate Congress that has been sitting in Cairo could register only negative conclusions. It decided that no appointment could usefully be made to the Caliphate at the present time. A solution of the question must be compatible with the interests of the whole body of Moslems, but these were now divided among a number of different nationalities, who could come to no common agreement on the subject. The Congress favoured the proposal that Islam should hold conferences regularly for the exchange of views regarding conditions in the Moslem world until such time as it might be possible to reconstitute the Caliphate; further, that a permanent committee should be formed to meet yearly and to serve as a link between Moslem countries. A noticeable admission on the part of the Committee appointed by the Congress to report on the question of the Caliphate was that there was no proper body at present vested with sufficient authority to nominate a Caliph. It now remains to be seen whether the conference to be held shortly at Mecca will feel strong enough under the ægis of King Ibn Saoud to adopt a bolder attitude. The Turkish Government is reported to have decided to send delegates to this conference, which promises to be far more representative of the Moslem world than the Cairo gathering was.

Anglo-Turkish Relations.

So many newspapers these days are fired with a desire to be "first with the news" that hardly a day passes without an attempt in one quarter or another to reveal the actual terms of an agreement between Turkey and Great Britain which has hardly passed beyond the stage of the first preliminary draft. As far as can be judged, the basis of all these versions is to be found in a statement that appeared in the Turkish Press many weeks ago regarding the terms of a pact that the British Government was alleged to have offered Turkey. This statement contained a modicum of fact with a considerable amount of padding which, it must be inferred, represented the terms that the Turkish Government would like to obtain. Later versions of the pending agreement, which are appearing not only in a section of the British Press (mainly that section which a few months ago was very emphatic that at about this date there would be war and not treaty negotiations in progress between Turkey and Great Britain), but also in various Continental journals, ring changes on these terms and others akin to them. In all the circumstances of the case the game of "spotting the winner" in this instance is not difficult. The negotiations are known to be proceeding amicably and the work of drawing up a draft treaty is known to be nearing completion. The chief points at issue are the delimitation of the frontier, the possibility of giving Turkey an interest in the Mosul oilfields, and the prospect of securing for Turkey some alleviation of her financial stringency. All the prophets, therefore, consider themselves on safe ground when they

Digitized by Google

predict a rectification of the frontier and Turkey's participation in possible profits of the oilfields. As shares in the Turkish Petroleum Company may be regarded as already allotted, practically the only way of according Turkey a share in the proceeds of the fields is that she should be given a portion of the royalties that Iraq will have as proprietary State. As for a British loan to Turkey, the question, properly speaking, does not fall within the purview of the British Government. When Turkish relations with Great Britain have been placed on a satisfactory footing, the Government at Angora can count on the readiness of British financial interests to discuss the subject of a loan, as soon as it cares to show that it is prepared to deal straightforwardly in all financial matters, including both its past and its future indebtedness.

France in Syria.

In spite of a further bombardment of one section of Damascus by French troops early in the month, the work of the pacification of Syria appears to be making headway. A Syrian Government under Ahmed Nami Bey is in office in Damascus, and has had its proposals in regard to the terms on which peace can be based accepted by the High Commissioner. M. de Jouvenel has, accordingly, left Syria for Paris in order to discuss the situation with the French Government. He has thus shifted the responsibility of peace on to the shoulders of the Nationalist Government, with the promise of a general amnesty to rebels in the field and the release of political prisoners provided that the rebellion is completely at an end by June 15. The issue, therefore, for the moment is between the traders and townsfolk with a stake in the country on the one hand and on the other the Druses rendered more or less desperate by the loss of their capital and much of their territory, together with the leaders of the extreme Nationalist party, who presumably suffer a minimum of inconvenience from the indefinite prolongation of hostilities. All but the most fanatical Nationalists must realise that the most opportune moment has arrived for negotiations with the French. France has so many preoccupations at home that she is bound to welcome the chance of restricting her commitments in Syria and of reducing her expenditure. The Syrians may well find, if they avail themselves of the psychological moment, that they can obtain everything that really counts in the matter of independence. The more they can disguise the extent of France's change of attitude and allow for the gradual transfer of authority, instead of pressing for something in the nature of an abject surrender, the more likely are they to obtain the substance of the independence that they are hankering after. The time is ripe for a display of statesmanship among the Syrians, and if men like Dr. Shabandar are incapable of showing any, it is hardly to be expected from the Druses.

The Egyptian Elections.

The victory of the Zaghloulists in the elections held in Egypt last week was expected; but it has proved more sweeping than could have been foreseen. Of the 180 deputies whose election has been reported up to the time of writing only three are Ittehadists, or supporters of the Government, and the Zaghloulists will, in all probability have the unquestioning support of three-quarters of the members of the new Parliament. Already it has been suggested that this overwhelming majority may cause Zaghloul Pasha to reverse his decision to allow a Constitutional Liberal, such as Adly Pasha Yeghen, to be the head of the next Government. Speculation regarding what the future has in store is bound to be rife until Zaghloul Pasha shows his hand. His past record justifies the gravest misgivings on the part of the British Government, but will not prevent it from meeting half-way any signs of an altered frame of mind in Egypt's popular leader. Perhaps the greatest disappointment that Great Britain experiences in regard to the whole matter is to find men like Sarwat Pasha and Adly Pasha Yeghen in a different camp from that which contains Ziwar Pasha and his colleagues. If they decided that the bogey of palace influences was a greater menace to the country than mob rule, it will be of interest to see what steps they propose to take, now that they are freed from the former, to eliminate the latter, which as a result of the elections would seem to have been given the chance of a fresh lease of life.

The fire which destroyed part of the Roumanian town of Bacau is estimated to have done damage amounting to more than £1,000,000.

The Times Beyrout correspondent, in reporting that the Senate of the new Syrian State has been now definitely formed adds that M. de Jouvenel (the High Commissioner) has left the question of an amnesty to the new Government.

It is reported from Bucharest that the correspondent of a well-known New York newspaper has been requested to leave Roumania because of a series of articles written by him which are regarded by the authorities as defamatory and injurious to the country and the Crown.

The King has given the following gentleman authority to wear decorations conferred on them by the King of Egypt, in recognition of valuable services:—

Order of the Nile.—Insignia of the Third Class.—Lieutenant-Colonel George Gough Cobden, C.B.E., Regular Army Reserve of Officers, 9th Lancers.

At the request of the Government of Bombay the Government of India have decided, in the exercise of their powers of superintendence, direction and control, and with the approval of the Secretary of State, to appoint a Committee of Inquiry in connexion with the Back Bay Reclamation Scheme. Personnel of the Committee and terms of reference will be announced later.

The Greek Legation in London states:—

The discontinuation of the services of the British Naval Mission and the French Military Mission in Greece is due exclusively to reasons of economy. The Greek Government does not intend that their places should be taken by other foreign missions. As for the British Police Mission under Sir Frederick Halliday, it continues to remain in the service of the Greek Government.

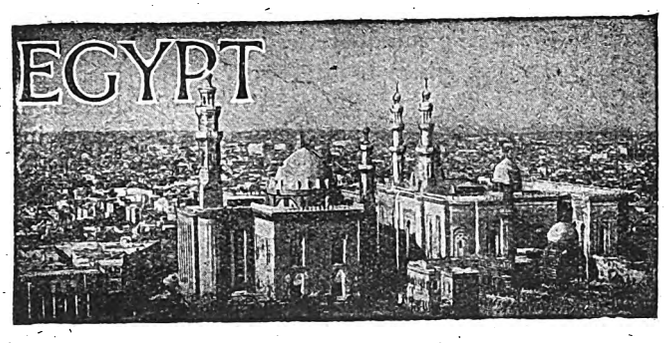
GREECE IN TRANSITION.

Greece, there can be no doubt about it, is thriving under her dictatorship. Not the least satisfactory aspect of the situation is the fact that the steady improvement seems to be due more to the innate qualities of the Greek people as a whole than to exceptional statecraft on the part of the Dictator. For this reason the improvement is likely to prove more lasting than if it were dependent entirely on the driving force of one man. Before General Pangalos effected his *coup d'état* last year Greece had already benefited from the steadying influence of the Government of M. Michalokopoulos. The latter's policy was sound, but his handling of a difficult situation was too mild to rescue Greece from the political quagmire in which she was floundering. M. Michalokopoulos has had to share the odium into which all the leaders of political parties have fallen; but when the time comes for a return to a more regular political régime, it would not be a matter for surprise, if he alone of the former prominent politicians came into his own again. General Pangalos's main service to his country has been that he recognised that Greece could not prosper until she had thrown off the evil traditions that had come to be regarded as the inevitable and proper feature of all political life. To this end he has dealt drastically with the political machinery of the country. The politicians resented his actions and rebelled. When General Pangalos became more drastic still, the Greek people gave no sign that their sympathies were more with the politicians than with the Dictator. They seem to have understood that General Pangalos held no fundamentally heterodox views on the subject of constitutionalism, but was concerned to have the affairs of the State conducted for the benefit of the Greek people instead of allowing them to be the close preserve of a handful of politicians. His attempt to run the State single-handed produced as large a crop of mistakes as was to be expected, but with this innovation that the Dictator showed no false pride by refusing to rescind an unworkable Decree. Consequently the history of Greece during the last twelve months has been for the most part a record of the two sections of the State attending each to its own affairs, the Government has been governing and the people have been attending to their business. The arrangement has worked well enough for a limited period.



General Pangalos has now wisely decided that the time has come for the Administration to strengthen its own position by placing itself in closer touch with the people as a whole. In a well-ordered democracy this closeness of touch is maintained in the ordinary course of events without detriment to either party. After the interruption to which the system has been subjected in Greece it is proposed to reintroduce it gradually. Elections are to be held and Parliament will meet again; but if General Pangalos continues to have his own way, he will see to it that the Administration is not conducted solely in the interests of the politicians. To what extent this state of things formerly prevailed in Greece has been brought home to the public mind by the impartial attention that the Dictator has given to the requirements of all parts of Greece. Unlike the ordinary Prime Minister, he has been able to treat the whole country, instead of a single town or village, as his constituency. His provincial tours, undertaken with an open mind, have shown him in yet another way the defects of a system in which politics are allowed to run riot, obscuring the general interest of the nation in the rivalry between parties for the spoils of office. It may be, perhaps, in furtherance of this desire to break away from the particularist tendencies of the ordinary politician that General Pangalos has entrusted the Prime Ministership to General Paraskevopoulos, who was Commander-in-Chief of the Greek Army at Salonika. The main qualification of the new Prime Minister is, apparently, that he has been absent from Greece for the last five years. Although identified with the Venizelist régime, he has not felt sufficient sympathy with the latter-day developments in Greek politics to terminate the exile which he imposed upon himself at the end of 1920. His first duty will be, presumably, to hold elections. In spite of a new tendency in Greece to give political instead of personal names to parties, it is to be feared that an election in the near future will find the electorate still split up into more groups than the successful working of parliamentary institutions can assimilate. General Pangalos would put a fitting copingstone on his work, if he could bring about a re-grouping of political parties into two, or at the most three, divisions, each of which could justify its existence by the special emphasis that it chooses to lay on one or more of the national needs of the day.

For the moment one of Greece's paramount needs is a sound financial policy, and it would be well if the best brains of the country could unite to approach this problem from a long-sighted point of view. General Pangalos has dealt with it on rough-and-ready lines: he has had a forced loan and is insisting upon retrenchment with a characteristically heavy hand. A number of Ministerial motor cars have been suppressed, and both the British Naval Mission and the French Military Mission have been terminated. By the terms of their agreements the members of these missions have to receive six months' pay; consequently the full benefit of this economy, which will amount to 1,200,000 drachmæ or a little more than thirty thousand pounds, will not be felt until next year. The proposal to dismiss the British Police Mission which under Colonel Sir Frederick Halliday has been training the Greek police for the principal towns has been defeated by the discovery that the members would have to be paid full salaries for the whole period of their contract, which does not end until September 1927. As these reductions are taking place at the same time as fresh orders are being placed in Italy for war munitions, the question has been raised in some Greek quarters as to whether the Government's financial policy is being prompted by sufficiently long views. Greece under the guidance of her enlightened Foreign Minister, M. Rouphos, has embarked upon a policy of friendly relations with all Balkan States, and it would be a pity if she stultified this good work by starting competition in armaments, and identifying herself too closely with the possible restlessness of Italian foreign policy.

From Our Own Correspondents.

Cairo, May 15.

The Elections and Parliament.

The nearer Egypt gets to the elections, which are fixed for May 22, the surer does it become that the Government i.e., the Unionist or Palace Party, will be defeated, and the tripartite Opposition secure an overwhelming majority in the new Chamber. One of the most remarkable features of the past three weeks has been the steady dwindling in the number of Unionist candidates. Just as a block of ice when exposed to the atmosphere melts away, so the list of Unionist candidates has steadily contracted since the first day of its publication, until at the present moment it is very doubtful whether more than forty of the original hundred still stand by their colours. This remarkable defection, an unmistakable admission of the unpopularity of the Unionist cause and of the strength of the Opposition position, has resulted in an addition either to the ranks of uncontested Wafd or Liberal returns or to those of the so-called Independents, some of whom are even now themselves withdrawing in favour of the official Opposition candidate.

Although the polling day is so close, the great topic of discussion wherever one goes is not the elections but the decision of the Ziwar Cabinet not to resign before Parliament meets. It is understood that the Cabinet has decided that Ziwar Pasha shall accompany King Fuad to the inauguration, that he shall read the Speech from the Throne, which will set forth all that the Cabinet has done since the dissolution in March, 1925, and that, thereafter, and only then, it shall present its resignation to the King. The reason that the Cabinet wants to present an *exposé* of its actions during the past year in the Speech from the Throne instead of resigning immediately the result of the elections is known and including that *exposé* in the Premier's letter of resignation, as has been the custom in the past is by no means clear, and the Opposition are much exercised at what they consider is unconstitutional action on the part of the Cabinet. As a matter of fact the question ought not to have much influence on the situation beyond delaying the accession to office of the new Cabinet by about a week, but to the Opposition at any rate it is evidently of sufficient importance for their journals to devote their leaders exclusively to the subject.

An Interesting Wafd Lawsuit.

A decision of interest to the political world was given this week at the Cairo Mixed Tribunal of First Instance in a case brought against Zaghloul Pasha and Mohamed Pasha Mahmud, both in their personal capacities and as members of the Wafd El Masry. The plaintiff, Mrs. Folk, widow of the American Senator Folk, one time Counsellor to the State Department of Washington and Governor of the State of Missouri, sued for payment of the balance of honorarium due for services rendered in the campaign for Egyptian Independence and of the sum of £E100,000 promised on the day Egypt gained her independence.

The pleadings afforded interesting revelations of the manner in which in 1920 and 1921 Zaghloul Pasha and Mohamed Pasha Mahmud sought to bring pressure to bear on the British Government by means of propaganda in the American Senate and throughout the United States, and the extent to which they used and sought the advice of the late Senator Folk. Among the interesting facts that emerged was that the latter, to whom Zaghloul Pasha submitted the proposals of the Milner Mission, replied that he considered those proposals a wonderful victory far exceeding what Zaghloul Pasha had himself told him he wanted to obtain and that he strongly advised him to accept and not quibble at any details.

The conditions, under which Senator Folk agreed to work for the Egyptian cause, were 5,000 dollars monthly during his service, 100,000 dollars in the event of his having to plead before the League of Nations, 100,000 dollars if he were called upon to carry on the campaign in the United States for a minimum period of two years, while if his efforts finally enabled Egypt to obtain her independence the Egyptian people were to pay him £E100,000. Senator Folk started his propaganda in July, 1919, and it was not until the end of January, 1921, that Zaghloul Pasha cabled him that he no longer required his services. During the whole of that period Senator Folk only received 35,000 dollars, and neither he nor his widow could get a farthing more out of either of the two Pashas or the Wafd.

The Cairo Courts have now awarded Mrs. Folk 55,000 dollars, the balance of the fees due, which they ordered Zaghloul Pasha in his capacity as head of the Wafd El Masry to pay. But they have disallowed the claim for £E100,000 which the late Mr. Folk claimed to be due to him because Egypt had gained her independence as a result of his efforts. The Courts avoid giving an opinion whether Egypt has or has not obtained her independence, and declare it to be a historical fact that the American campaign had no practical effect on the present political situation of Egypt or on the arrangements made between Egypt and Great Britain, and that consequently Mrs. Folk has no claim in this respect.

In a way, it is a somewhat empty victory for Mrs. Folk, as the Wafd has no funds in its name, care having been taken some years ago, when there was a question of the Military's sequestrating these moneys, to transfer them into the name of one or more of the members. But from the point of view of the Wafd the decision is satisfactory, since without paying anything it has now had its legal personality established by the Courts. In the circumstances it seems scarcely probable that Zaghloul Pasha

will appeal against the decision of the lower Court, but it is just possible that Mrs. Folk may consider it worth while to take the matter to the upper Court in the hope of securing a decision against one or other of the Pashas in their personal capacities, and so being enabled to get execution of the judgment.

Liubliana, May 15.

The Inner Political Situation.

The inner political situation in Yugoslavia is still dominated by the Government crisis. Time has proved those in the right who at the beginning of April, when M. Pashitch resigned with his Cabinet, foretold a greatly protracted crisis. Things have fallen out exactly as was expected in quarters where the inner workings of M. Pashitch's fall were known. So far, Yugoslavia's political life has not yet returned to a normal course.

The second phase of the parliamentary crisis led to dissension and disruption in both the leading political parties in the Kingdom of Serbs, Croats, and Slovenes—the Radical no less than the Raditch party split into factions, and it seemed for a while as if both were doomed to break up in earnest. But, contrary to expectation, the spirit of conciliation and judicious common sense prevailed in both camps. The Raditch deputies made it up among themselves; the dissenters returned to the fold, i.e., the party's deputies' Club, which was thereupon able to state that the party as such was still prepared to go on co-operating in the Government with the Radicals. If one bears in mind that the Raditch Ministers resigned because after the passing of the Budget on March 29, the Skupshtina was at once adjourned until May 5, instead of going ahead with parliamentary business after a short break for Easter in accordance with M. Raditch's demand just before his resignation, one cannot but admit that the Radichists have come back without scoring a single point. Before the end of April, M. Nicholas Ouzounovitch completed his Cabinet by including the Raditch Ministers and with them the Slovene deputy Ivan Pucelye—but not M. Stepan Raditch.

And when the Skupshtina reassembled on May 5, according to the original arrangement, the Government represented the very same Radical-Raditch Coalition as before, with this difference—that neither of the two party chiefs was in it, though each still controls his party no less than heretofore. On May 5 there was also that meeting of the Radical Club which had been awaited with such keen interest, because it would show what was the party's attitude towards the fact that the Executive Committee had expelled M. Liuba Yovanovitch from its fold. One was told that M. Liuba Yovanovitch had a strong following in the party; nevertheless the Club elected M. Nikola Pashitch for its President and took note in silence of the exclusion of his chief opponent from the party.

Outwardly and to all appearance the crisis was thus definitely weathered, and the Ouzounovitch Government assured of the support of the same two-party coalition as the preceding Government under M. Nikola Pashitch. The Skupshtina has started upon normal parliamentary work. Yet nobody believes that the present situation can go on. It is not easy to demonstrate its untenableness in a few words. Perhaps it is best explained by the fact that both chiefs are now outside the Government against their own will, M. Pashitch because of the unpleasantness caused by the financial transactions of his son, and the revolt among his own partisans under the leadership of M. Yovanovitch, and perhaps still more because he is not countenanced by the supreme factor in the State; and M. Stepan Raditch, because M. Ouzounovitch simply turned him out of the Cabinet and will not have him back, for his all-too-temperamental eloquence and his incalculability render him impossible as a ministerial colleague. The present solution of the crisis may, therefore, be summed up as an attempt to oust Yugoslavia's two leading politicians from their dominant positions in the foreground of political events, and yet to go on governing with their parties. The Raditch party is content to co-operate, because otherwise its place would be taken by some other Opposition party. In the Radical Party matters are fairly involved. M. Pashitch's opponents have been joined by such eminent politicians as M. Momtzilo Nintchitch, Bozha Maksimovitch, and Milan Srshkitch, yet it has not come to a definite split, and, to all appearance, the veteran M. Pashitch is still in absolute control of the situation. Thus the position of the Government is for the moment dependent upon leaders who have been ousted without being exactly defeated. At any moment one or other of them may provoke a fresh crisis. This state of affairs is held to be abnormal and untenable, and more and more frequently the opinion is heard that the only satisfactory way out is offered by a General Election.

PERSIA.

Teheran, May 3.

The Coronation.

The Coronation with its attendant festivities extending over a period of seven or eight days, is at last over, and everyone is breathing a sigh of relief, for the past week since the memorable event of last Sunday, has been a very full and busy one. Receptions, banquets and dinners given by the various Government departments and the different foreign Legations in honour of the event have been the order of the day, and every night, after the official functions and ceremonies of the day, has been fully occupied. The Italian Legation in their palatial new residence were the first to give a reception and dance in their beautiful ballroom, on the Friday preceding the Coronation, followed the next evening by an equally brilliant function at the British Legation, and all the other Legations have followed suit. The events of the week have indeed been numerous and varied.

The actual Coronation ceremony has been so fully described in the telegrams from the correspondents of the English papers, some of whom came out expressly for the occasion, that a long description here would merely be a tardy repetition. A brief résumé will suffice to show that the scene was brilliant in the extreme, and the care which had evidently been lavished on every detail, in order to make the historical occasion a fitting one, deserves the highest praise, and did much to make the pageant the imposing one it undoubtedly was. There

was no jarring note throughout the proceedings, and the tawdriness usually associated with such functions in Persia was conspicuous by its absence.

At 3.30 the privileged few who had been invited (for the Museum Hall is not large and invitations had been sparingly issued) had all taken their allotted places, the High Clergy being on the right of the throne: the *corps diplomatique* with their ladies were on the left, and standing along either side of the hall were the staffs of the various Ministries, Government officials, tribal representatives, notabilities, the representatives of various trades, guilds and communities, and of the Press, and certain foreigners.

The Crown Prince then came in, a little boy of eight in military uniform of blue and red, self-possessed to the last degree, saluting as he proceeded up the hall to take his place at the right of the throne, his absolute composure throughout the whole ceremony impressing everyone. He was followed by all the Ministers of State in their long cashmere robes, bearing the regalia, including the new crown, orb and sceptre, Nader Shah's sword and buckler and the old pearl crown of the former Shahs, all on bright red velvet cushions. A few minutes afterwards the Master of the Ceremonies announced His Imperial Majesty, who entered, smiling, in military cap with the royal aigrette, wearing over his uniform the royal cloak of cashmere embroidered in gold and pearls, followed by General Khodayar Khan bearing the royal banner, and the other generals. Having taken his seat on Nader Shah's throne in front of the famous Peacock Throne (which was not used), his Army chiefs standing in a semi-circle before him and behind them the Cabinet Ministers, the Shah listened to an address of welcome delivered by the Chief Mullah, a salvo of guns being fired during the proceedings. Then followed the actual Coronation, exceedingly simple and of short duration, the Shah taking from the Minister of the Court the new Pahlavi crown of diamonds, emeralds and rubies which has been specially made here, and placing it on his head, he took in his right hand the beautiful jewelled sceptre—a present from his loyal subjects in Azerbaijan—and with Nader Shah's famous sword buckled on in place of his own, he listened to another address, from the Prime Minister, and then read a short speech in reply, a truly regal figure of imposing dignity. After stating that he would always uphold the principles of religion, so essential for national unity, he said that he has always preferred deeds to words, and that his success has been solely due to work and action, and he exhorted all his subjects to place this principle among the foremost of their duties, and to remember that no object can be attained without effort and perseverance. He briefly enumerated the reforms which he hoped would be passed at the next Assembly of the Mejliss, and concluded by saying that all Government officials must be models of honesty and straightforwardness.

This terminated the proceedings, and the Shah left the hall, and after a brief rest he drove, still crowned and wearing the royal mantle, in the state gilt coach through the town, along the gaily decorated streets which were densely thronged, under the many triumphal arches which had been erected, to his residence outside the town. Immediately following him drove the Crown Prince—his diminutive figure being almost lost in the large state coach, but self-possessed as ever!—and after him drove the Ministers of State, the procession being wound up by the special mounted escort of all the tribes in Persia, who in their multi-coloured and variegated tribal costumes and widely varying headgear, provided a vivid splash of colour, and lent a distinctly picturesque aspect to the already brilliant pageant. Berbers, Baluchis and Hazaras, from the frontiers of India and Afghanistan, in their bright uniforms and flowing turbans; Turkomans from Khorassan in their long red robes and huge shaggy busbies; Bakhtiaris in purple and black, wearing their white round hats; Kurds and Lurs in their more elaborate headdress; Kashgais from Fars in their squat brown *kolas*; and Shahsevens from Azerbaijan in their tall black hats—all brought home to the onlookers an idea of the extent and varied nature of the Persian Empire, and emphasised the great achievement of the new monarch, who by his own efforts, his untiring energy and masterful character, has succeeded during the last five years in establishing order throughout a country composed of tribes and peoples of such widely divergent nature and customs, eventually bringing them all under his sway.

Holiday-Making.

A general holiday was observed throughout the country for three days, and the Capital was brilliantly illuminated at nights. The first public function was a reception on Sunday night at the Municipality in the brightly lighted Artillery Square, in which all the buildings vied with one another in the brilliance of their illuminations. The next morning, Monday, the Shah held a salaam at which he received the congratulations of the diplomatic corps, and in the afternoon he attended a grand military review in the Drill Square, presenting new colours to the various regiments and taking the salute from some 6,000 troops, the smart bearing and efficiency of the Army creating a good impression on the large and distinguished crowd of spectators present. That evening a banquet was given by the Minister of the Court at the Palace, and at the reception after it the various gifts to the Shah on the occasion of his Coronation were exhibited, and attracted much attention and admiration. These included the pair of massive gold vases presented by King George; a portrait of President Coolidge in a gold frame, the gift of the United States Government; jewelled sabres from the Soviet Government and the Sheikh of Mohammerah; and, as mentioned above, a beautifully jewelled sceptre from the province of Azerbaijan. The next day the Shah opened the wireless station of "Pahlavi" at Kasr Kajar, outside the town, and a message was broadcasted to Paris, Berlin and Moscow, a reply being received from the last-named place signed by Chicherin and Kameneff. Wednesday was fixed for the first days of the Spring Races, but a regular downpour of rain in the afternoon resulted in their postponement till the following Friday. In the evening a ball was given at the Ministry for Foreign Affairs, which was attended by a brilliant assemblage. On Thursday morning the Shah received in audience the delegations from various parts of Persia who had come to assist at the Coronation, and in the afternoon a garden party was held at the Royal Palace of Farahabad. The following day the first day of the races attracted a large crowd to the racecourse near

Doshan Teppeh, and although His Majesty did not attend, his young son ably filled his place and was the cynosure of all eyes and the subject of all the photographers present, professional and amateur, His Imperial Highness being only too pleased to pose for all and sundry. On Saturday afternoon everyone flocked to the Aerodrome to the South of the town, where the German aviators stunted and the Persian pilots, recently taught, acquitted themselves very creditably. Yesterday was the last day of the official functions, the second day of the races, but although the Shah and the Crown Prince were both present, the rainy weather brought only a very poor attendance. So ends a memorable week, after the strain and bustle of which everyone is now thinking of settling down once more to their ordinary humdrum mode of life.

A PILGRIMAGE TO SVETI NAUM.

By W. A. HEURTLEY.

Communication between the eastern and western parts of Yugoslavia improves from year to year. Two years ago the railheads on either side of the old frontier, at Vardishte and Uzitze respectively, were connected, thus bringing the main Belgrade-Nish line into touch with Sarajevo, and Dubrovnik. Last year the track between Andriyevitza in Montenegro, and Petch in Old Serbia, has been transformed into a motor-road, so that the fertile plain of Kossovo and the Skoplye districts are now linked up with distant Cattaro and the Adriatic. All the world knows that part of the road with its forty-seven hair-pin bends between Cattaro and Cettigne, and some the descent to Podgoritza on the other side: the next sector betwen Podgoritza and Andriyevitza is known but little, and that between Andriyevitza and Petch hardly at all. And yet these two sectors go through some of the finest scenery in the Balkans. After you have left Podgoritza and crossed the high watershed between the valleys of the Moratza and the Tara, the bare mountains give place to Alpine valleys, with dense beech-forests, houses with steep-pitched roofs and saw-mills. Beyond the forests, the mysterious peaks on the Albanian frontier accompany you all the way to Andriyevitza which lies enfolded among hills and woods in the valley of the Lim. Its house-fronts are white with gaily-painted patterns upon them: its single street is full of colour and movement. It is always market day in Andriyevitza, and the blue breeches and red waist-coats of Montenegrins mingle with the striped white trousers of Albanians. Between Andriyevitza and Petch, when I passed, the road was being feverishly prepared for the King's visit, a month later. It too crosses from one valley to another, over a high ridge, and the crossing is marked by another complete change. The western valley had been wood and pasture with tiny farms each standing among orchards of apple and plum-trees; the eastern soon becomes a narrow gorge between whose walls there is just room for road and river. As Petch is approached, the gorge gets narrower and wilder: the road has to be tunnelled in the rock, the sides of which rise up sheer thousands of feet: rare pines clothe but do not conceal the scarred cliffs: the sun cannot penetrate, and the traveller feels oppressed in the gloom of the ravine. A turn of the road, and all is changed: the mountain walls fall back and stop abruptly: through a gap appears a limitless plain, in the foreground of which, peaceful in the evening light, rise the cupolas and minarets of Petch.

Petch lies in the heart of Old Serbia. Here Stepan Dushan called the council which proclaimed the archbishopric of Petch a Patriarchate, and here it remained, independent of Constantinople, until the Turks abolished it is 1766. This year it has been restored, though the Patriarch resides elsewhere, and some day perhaps, Serbian kings will again be crowned within the walls of the cathedral, which with its three churches side by side and its lofty narthex, all under one roof, is the glory of Petch.

I could not pass through Petch without turning aside to visit the monastery-church of Detchani—perhaps the most noble Christian building in the Balkans. A level road runs to it southwards between hedges, keeping to the foot of the hills. Rain was falling, and the country-side with its streaming hedgerows and line of misty hills in the background was for all the world an English scene.

Built by an architect of Cattaro in alternating courses of red and white marble, from the outside the church, in colour as in line, is Western. Inside, except for certain details, the impression is pure Byzantine. Every foot of wall seems covered with paintings, toned by age into a subdued blaze of colour. Respected by Turks and Albanians alike, Detchani has suffered hardly at all. In a coffin before the Ikonostasion, beneath a silken pall, lies the body of the "Saint King," Stepan Detchanski, the founder. They raise the lid, and show you the body of the king in his royal robes, one shrunken ebony hand laid across his breast. I was told that, during the War, the Bulgars took the body away in a motor car, but outside the gates the car broke down, and at that moment Austrian officers came up and intervened. So the sacrilege was averted. The atmosphere of Detchani is different from that of any Balkan monastery I have visited. So often set, like Ostroz or Megaspélaion or Eloni in almost inaccessible crevices of the rocks, or suspended, as the Metéora, above sheer precipices, or half-monastery, half-fortress, as at Athos, all have some tale to tell of fire, or war, or violence. Detchani, lying in the plain, among fields and hedges, by a running stream, and preserving the body of its founder, speaks of continuity and peace. Because of its rare completeness, its position and the calm that broods over its mellowed walls, it is like some remote English village church, that the centuries have left serene and undisturbed.

From Mitrovitza, the rail-head for Petch, the train took me through the Field of Kossovo, to Skoplye. Skoplye itself had nothing to detain me, but in the gorges of the Treshka, and the surrounding country are many churches of great interest to the student of Byzantine

ANCIENT CHRISTIANS:

A LEGACY TO THE CHRISTIAN WORLD.

The aftermath of the Great War—*plundered*—*deported* from their homes in which they have lived for a *thousand* years—now *homeless* and *hopeless*.

ARMENIANS and ancient Christians of the Near East,

LOOKING to you for help and succour after suffering

EXTREME cruelties and massacres unparalled in history,

GRATEFULLY thank you for your help, and trust that you will

ANTICIPATE their present **URGENT NEEDS.**

CHRISTIANS! Can you fail them in their need? They did not fail

YOU in your hour of Peril in the Great War.

"They were stoned, they were sawn asunder, were tempted, were slain with the sword: they wandered about . . . being destitute, afflicted, tormented; they wandered in deserts and in mountains and in dens and caves of the earth."

architecture. Time did not allow me to visit them, and Prilep was my next halting -place, where the memories of Bulgar and German occupation are still strong. Two hours away on a high ridge among a wilderness of fantastic rocks, stands the monastery of Treskovatch. Greek, Bulgar, Serb, and lately Russian monks have occupied it in turn: a Roman altar lies beneath its sanctuary. The German High Command held its deliberations here. Close by are the Babuna Pass and the heights of Kaimákchalan. In contrast with Detchani, Treskovatch with its rambling architecture, its crazy cupolas, and crumbling gateway seems to reflect the vicissitudes of Macedonian history.

So at Ochrid. But here Norman and Turk have left their traces too. And yet neither decay nor squalor can affect—even if they do not enhance—its almost poignant beauty. I reached Ochrid on a warm September evening after a long drive from Monastir. The moon had risen when later I strolled through the winding, cobbled street. As I turned a bend, a cool breeze met me; another turn, and I found myself in a wide open space, beyond which lay a dark mass, faintly luminous. I went on and presently heard the lapping of waves, and knew that the dark mass was the lake of Ochrid. As I watched, the moon swam out from behind a wooded promontory on the Serbian side, and seemed to set all the ripples dancing in its rays. Enchantment lay on lake and hills, and somewhere in the distant haze lay, I knew, the goal of my pilgrimage—Sveti Naum.

Sveti Naum, the most holy and the most learned of the companions of SS. Cyril and Methodius, belongs to Catholic and Orthodox alike. For, though the schism of Photius took place in his lifetime, he died more than one hundred years before the final rupture, and at a time when Bulgaria still oscillated in her allegiance between East and West. He brought the still undivided Faith to these mountains and valleys, built his monastery on the lake and died there. His grave is shown in a small chapel attached to the church, where Greek, Serb and Albanian, Orthodox, Catholic, and Mussulman come to venerate it. The monastery is very small. It is not, like so many Greek monasteries, a rambling complex of buildings to which new parts are added, while the old are left to decay, and, though its component parts are of different dates and styles, it is compact and occupies little space, perched on a rocky neck that overhangs the lake. An avenue of eucalyptus trees along the water's edge leads to the lodge, beyond which you cross an open space and mount to the main gate. Above the entrance a picture of a peasant ploughing with a bear instead of an ox, recalls one of the saint's most popular miracles. In the middle of the inner court, surrounded on three sides by buildings, the fourth open and looking across lake and mountains, stands the tiny brick church, dwarfed by its three cupolas and by a huge concrete tower, which is being erected at its eastern end. The original church, built by St. Naum himself, has disappeared and the present building belongs to some time between the eleventh and fourteenth centuries.

Such is the small secluded shrine that has played such an important part in the history of Christianity in the Balkans, and which has lately been dragged, for political reasons, into unsought prominence. I do not think that the stir which their monastery has made in Europe had much affected the three old monks who entertained me so kindly in the refectory with its open windows looking on the lake. But political passions are notoriously strong in Balkan monasteries, and I may have been mistaken. I stayed an hour, and then took the road back to Ochrid. My pilgrimage was over. As I crossed the ridge that hid the concrete tower from sight, I turned to take a last look at the famous monastery, and I reflected that as St. Naum is the common property of all the Balkans, in an ideal state of things, his monastery should be extra-territorial, as its unique position on the borders of three countries seems to demand, and that, whenever the fourth re-union council between East and West is held, it could meet in no more appropriate spot than the cloister of a Greek monk, who, setting out with the blessing of Rome, converted the Slavs to Christianity. And, reflecting on these things, I set my face towards Ochrid.

BOOK REVIEW.

THE MESOPOTAMIA CAMPAIGN.

"THE MESOPOTAMIA CAMPAIGN," 1914-1918. Volume III. By Brigadier-General F. J. Moberly, C.B., C.S.I., D.S.O. (His Majesty's Stationery Office. 15s.)

It is announced that the official history of the campaign in Mesopotamia is to be completed in four, instead of three, volumes. The third volume, now published, deals with the progress of the Indian Expeditionary Force "D" from the fall of Kut al Amarah, on April 29, 1916, to the defeat of the Turkish 2nd and 14th divisions on the Adhaim River, on April 30, 1917. It recounts, with lucidity and in considerable detail, Sir Percy Lake's energetic preparations for a resumed offensive and the operations under General Maude, which, during the period under review, include the defeat of the Turkish XVIII Army Corps at Kut, the advance on Baghdad and its capture, and the measures adopted for the consolidation of our position prior to the abnormally hot summer of 1917—a remarkable record of gallantry and endurance on the part of British and Indian troops. General Moberly is to be congratulated on the able manner in which he has compiled a work which will be invaluable to students of military history and of absorbing interest to those who were directly concerned in the incidents described.

Certain of the events, and decisions regarding policy, of this period deserve particular attention at the present time.

The narrative brings into considerable prominence the chief factor governing British strategy in Mesopotamia during the earlier stages of the campaign, namely, the necessity for close co-operation with the Grand Duke Nicholas' Army of the Caucasus in order to deny the Central Powers a passage for their troops eastward into Persia; but, in addition to this, it shows that, during the year 1916, the British Government did not contemplate a permanent occupation of the lower Tigris area which would leave the Turks in unfettered possession of the middle reaches of that river, with a military base at Mosul. When Sir Stanley Maude began his advance, on December 14, the Turkish XIII. Army Corps, containing General Baratoff's I. Caucasus Cavalry Corps on the Sultan Bulagh Pass, between Hamadan and Kasvin, was a potential source of danger to the interests of the Entente Powers, which the Russsians, operating in columns separated by considerable stretches of mountainous country, were unable to remove. It was anticipated, therefore, that our movement against Baghdad from the south-east would relieve enemy pressure in Persia and, after the capture of the city, enable the Russian columns to unite on the Iraq plain for the purpose of establishing

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor Street, W.1.

their authority in the Mosul Vilayet. Success in this would have lightened the task of the Russian force on the Erzerum front. Although the Entente Powers had reached an agreement regarding the post-War allocation of conquered territory, it was intended that, after the occupation of Baghdad and until the cessation of hostilities, the British troops in Mesopotamia should confine themselves to countering any threat from the direction of Dair al Zor, on the Euphrates.

The first part of this programme was carried out with skill and determination by General Maude, who achieved his first objective; for his partial destruction of the XVIII. Army Corps at Kut brought about an immediate evacuation of western Persia by the Turks, with General Baratoff's force following close on their heels. On the day after the fall of Baghdad, however, the Russian Revolution intervened, and it soon became apparent that the assistance of the Army of the Caucasus would be no longer forthcoming. The final volume of the History will, no doubt, explain the manner in which it was agreed that our occupation of Mosul and the despatch of a force to north-western Persia became unavoidable.

In view of the interest taken in our responsibilities in Iraq it is disappointing that General Moberly has found it impossible, or inadvisable, in include within the scope of his work any detailed account of the operations of the I. and II. Caucasus Cavalry Corps on the Hamadan-Kirmanshah-Khanikin and Urmi-Ushnu-Rowanduz lines, regarding which there is, at present, no authoritative source of information. His brief references to their movements are obscured, also, by a mistake in transliterating the name of the capital of Persian Kurdistan Sehneh, instead of Senneh, since there is a town called Sahneh on the main road from Hamadan to Kirmanshah. He does not mention General Baratoff's difficulties due to the hostility of the Guran and Sinjabi Kurds, on the Tak i Girreh Pass, who, although friendly to ourselves, have been consistently anti-Russian; and no reason is given for General Chernozuboff's failure to reach the Mosul plain in 1916 with a detachment of the II. Caucasus Cavalry Corps from Urmi—due to the virtual impregnability of the position held by the Turks near Rowanduz. A complete division with tribal auxiliaries, given as the estimated strength of the Turkish force under Duke Albert of Mecklenburg which opposed the Russians there, is, as compared with the statements of the inhabitants of that district, a considerable over-estimate. The configuration of the north-eastern frontier district of Iraq offers such obstacles to an invading force, at all seasons of the year, that an effective defence can be maintained by the smallest detachment of ground troops, provided that the Kurdish tribes are friendly.

References to the origin of reinforcements to the Turkish Sixth Army have some bearing on Middle Eastern problems of to-day. During December 1916, the Turkish 14th. Division was transferred from the Erzerum Front to the Tigris, and in January the IVth Army Corps (47th and 48th Divisions) was also ordered south. The leading units of the 14th Division (41st and part of the 64th Regiments, with Divisional Engineers and Artillery) arrived in the Kut area on about February 15, and were identified in the Turkish force which opposed Sir Raleigh Egerton's 14th Indian Division at Shumran on the 23rd of the same month. As the winter of 1916-17 was exceptionally severe, it can be deduced from this that the Erzerum-Bitlis-Jezireh ibn Omar route is passable for troops, including artillery, throughout the year, which finally disposes of the alarmist theory that it was only the winter season which prevented Mustapha Kemal from launching an attack on the Iraq frontier when the British Government refused to surrender Mosul last December.

General Moberly pays a tribute to the fine qualities of the Turkish private soldier, but he shows that the Turks' reverses—notably the failure of their counter-attack on the 38th Brigade, at Diyalah Crossing, on March 9—were not infrequently due to jealousy and lack of co-operation between senior officers. It is clear that an important reason for their ultimate defeat was the ineptitude of their statesmen, who violated elementary principles when, after General Townshend's surrender, they withdrew an Army Corps and a Cavalry Brigade from the attenuated force on the Tigris front in order to forward the political ambitions of Germany in Persia.

THE WEEK AT HOME.

London, Tuesday Morning.

The Coal Imbroglio.

The coalowners are well on the way to being the most despised set of men in England, and this on account not only of their greed and imperviousness to general suffering but also of their diabolical cleverness. For, in contrast with the miners, who, ever since last July, when the Government commenced the lost-for-ever subsidy, have stoutly and openly maintained the impossible slogan of "not a second on the hours, not a cent off the wages," the coalowners have delayed—in a way that they alone could afford—showing their true colours until the danger of the General Strike was over. Their statement upon the Government's proposals, had it been published before that strike, would in all probability have been promptly torn up by the public.

It is worth while looking upon this strange document, which it must surely be a libel to imagine as representative of the best intelligences among the colliery owners. In a few sentences they destroy the atmosphere of good will which the Prime Minister has striven so hard to induce. They are at once ox-like and parrot-like in their demand for an eight-hour day and a ten per cent. wage cut. They, whose industry is one above all in national importance, and whose sense of business has been in striking contrast with other big industries—they insist (or attempt to insist, for it is now plain as a pike-staff, and, indeed, has been unmistakably foreshadowed by the Government that so intractable and mean-spirited a set of men will have to be coerced) on all freedom from political interference. The reluctance and discourtesy which were occasionally shown before the Royal Commission are, incidentally, now seen in their true light. To the fact that their profits during the last nine months have been guaranteed by the taxpayer they appear to pay no attention; nor is their equanimity disturbed in the slightest by the prospect of the continued languishing of many of the industries of this country. There are, in fact, many reasons for supposing that a considerable number of colliery owners are aiming at a prolongation of the lock-out.

Such a flouting of the nation's best intentions and a disregard of the Government's obvious responsibilities, the Prime Minister has lost no time in answering in the most emphatic manner. And beyond all question he has the nation behind him.

To write thus is not, of course, to suppose that the miners' case as expounded by Mr. A. J. Cook is unassailable, but there is no doubt at all that the balance of pig-headedness and of impossible mentality lies on the side of the coalowners. It is the saddest fact of all the situation that those who are most wrong in this struggle can best afford to indulge in their evil-doing. The owners are convinced that, if they hold out so long as their once very fat purses allow them, the miners must yield. Their whole attitude, in fact, is one rather of militarism than of industrialism. The inevitable sufferings of thousands of Britons other than miners mean little to them, for the only justification they have for their *non possumus* is the well-known miners' slogan. But before a tragedy becomes a catastrophe the Government, it is to be hoped, will have imposed terms of peace.

The Aftermath of the Strike.

It is difficult to generalise upon the opinions held on the achievement of the Strike. They are extraordinarily complex. In the view of a considerable number of intelligent people, not all of whom are Trade Unionists, the strikers have won. These observers think that fair-play to the miners is now assured, and that such assurance is due entirely to the Strike. It is the judgment, again, of numerous men, including some Trade Unionists, that the Strike was an absolute failure, and that the miners are in a less safe position than they were before.

The topic that is of most interest, however, is the effect of the Strike upon the Trade Unions. Among the wealthier classes the view is widely expressed that the Unions have been crushed, and, indeed, it seemed, for a few hours after the Strike's ending, that some such intention was in the minds of many employers. But between that intention and its accomplishment the Prime Minister speedily stepped in; and the end of the Trade Unions, as we have known them for the last twenty years, is certainly not yet.

Upon the workers themselves it is possible that the Strike will have a double effect. Politically there will be a concentration upon the activities of the Labour Party, whose Right Wing will be strengthened. It is probable, in this connexion, that the *entente* between the Liberal and Labour Parties will be considerably strengthened. And industrially one would be surprised if there were not a turning away, as if in disgust, from all political ambitions of Trade Union leaders, and a concentration upon the economic weapon. The Syndicalist movement, by whatever name it be called, is not likely to be permanently checked by the Government's success in the Strike.

In any case, it seems foolish to suppose that there will never be another General Strike in our generation. It may be merely a simultaneous stoppage of work in many and separate industries, but its effect will be the same. That is, of course, unless the capitalist system takes on a new elasticity which will make strikes unnecessary.

Material Effects of the Strike.

It is, of course, early to estimate the material effects of the strike upon this country, and there does not appear to be much wisdom either in the gloomy estimates or in the optimistic prognostications of the situation. The general opinion seems to be that the strike has cleared the industrial atmosphere, which in the opinion of large employers had become impossibly murky during the last few years. But further than this most men are not prepared to go.

One of the optimists, however, Mr. Runciman, has attracted a great deal of attention. Speaking in the House of Commons with a certain authority, this shipping expert characterised as "rubbish" all talk about the shakiness of Great Britain's finance and the blackness of her future. His belief in this country's resiliency is profound, and it was certainly helpful to be reminded of the ease with which we recovered after the thirteen weeks' stoppage in 1921. Moreover, his convictions are secretly shared, though more timidly expressed, in more than one quarter in the City. But the normal observer sees as yet only that the miners are still locked out, and that as one result of the General Strike there are 1,576,000 men unemployed—400,000 more than a year ago. The shadow, however silvery be the cloud's lining, is still heavy over us.

Another Liberal Canard.

Around the dovecotes of Liberalism continue to hover those winged messengers whose aim it is to bring anything but peace. Once more over the elusive figure of Mr. Lloyd George they have sought to breathe the fumes of war. Dissension in the Liberal Party, they said, was again in process owing to two things:—(1) An article by Mr. Lloyd George which was published in America (it would also have appeared in the *Daily Chronicle* but for the Strike) in which prophecy upon the General Strike was indulged in with no more than the ex-Premier's ordinary indiscretion; and (2) the letter that he wrote to the Liberal "Shadow Cabinet" explaining his disagreement with other Liberal leaders, such as Lord Oxford and Asquith and Earl Grey, over the Government's conduct in the Strike.

It is now, however, all blowing over: and Mr. Lloyd George is exactly where he was before the Strike—a dispossessed man (except for his private party funds) who, unlike his Liberal colleagues in the Lords, needs votes badly. His sense of the correct thing to do has been no more at fault than it generally was. In a word, he has been rather unfairly treated. Obviously there has been misunderstanding somewhere, but it may perhaps be true to say that there will always be misunderstandings between Mr. Lloyd George and some of his colleagues.

Whitsuntide.

In the South of England at any rate Whitsuntide burst with unusual and welcome brilliance. The sun which during almost the whole of April and early May had suffered itself to be extinguished by clouds of the most inferior quality at last reasserted itself; and the people answered to the call of the country like bees with flowers. The roads were packed with every kind of vehicle; the few trains were equally packed with every kind of traveller. It was as if anxiety long pent up were exploding in journeys of determined and happy forgetfulness.

PERSONAL AND GENERAL

TO-DAY

May 27, 1926 (New Style).
May 14, 1926 (Old Style).
Dulkaada 15, 1344 A.H., of the Moslem Calendar.
Sivan 14, 5686, of the Jewish Calendar.

Princess Antoine Bibesco left London on May 20 for 45, Quai Bourbon, Paris.

The Marquess of Reading's son will continue to use the style of Viscount Erleigh.

The Maharaja of Rajpipla and his suite have arrived at the Savoy Hotel for the season.

The Jam Sahib of Nawanagar sailed on May 22 from Bombay to Great Britain.

Miss Gilstrap has returned from Egypt and Palestine, and will be at 7, Wilton Crescent after Whitsuntide.

Viscountess Goschen and the Hon. Mrs. Francis Balfour have arrived from Madras and are staying at Seacox Heath, Hawkhurst.

The Countess of Lytton and Lady Hermione Bulwer-Lytton have arrived from India and are staying at 32, Upper Brook Street, W.

The examiners have elected N. S. Doniach, Hodg Hebrew Scholar of Wahdam College, Oxford, to the Boden Sanskrit Scholarship.

The Marchioness of Aberdeen, who is visiting Roumania in connexion with the meetings of the International Women's Council, arrived at Bucharest on May 21.

The Maharao of Kutch, the Begum of Bhopal, and the Nawab Hamidullah Khan embarked on May 21 at Marseilles in the P. and O. s.s. Kaisar-i-Hind for Bombay.

At the Calcutta dinner to be held at the Hotel Cecil on June 1, the Marquess of Reading will be the guest of the evening, and Mr. T. McMorran will be in the chair.

The English-speaking Union will entertain Lord and Lady Reading at dinner on Monday, June 7, at the Savoy Hotel on their return from India. Lord Lee of Fareham will preside.

Professor Stephen Langdon, Professor of Assyriology at Oxford, has returned from Baghdad, where he has been seriously ill. Although greatly improved in health, he is still an invalid.

Mr. R. H. Greg was received in audience by His Majesty the King, on May 19, and kissed hands upon his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Bucharest.

Sir Herbert Dering was received in audience by the King at Buckingham Palace on May 21, upon relinquishing his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Bucharest.

Sir Leslie Wilson leaves London to-day to return to Bombay. Lady Wilson has now left the nursing home in London and has gone to Glebelands, Wokingham, which will be her address until she returns to India. It is hoped that she will be well enough to leave for India at the end of October.

The King has appointed the Earl Granville, G.C.V.O., K.C.M.G., his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Copenhagen, to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary at The Hague, in succession to Sir Charles Marling. Earl Granville has served, among other places, at Cairo, Salonika and Athens.

Mr. Bradley-Birt, who recently returned from India, stayed at the Ritz Hotel for a few days before leaving for Birtsmoreton Court.

Marquis Alphonse Pallavicini has been appointed Secretary to the Hungarian Legation in London, in the place of Dr. Francis de Mengele, who has been transferred to Belgrade.

Prince Nicolas, second son of the King of Roumania, met with an accident while motoring last week near Piteshti. The car ran into a ditch, and overturned. The Prince was unhurt.

The unveiling by Field-Marshal Lord Allenby of the War memorial to the Jewish men of East London at the East London Synagogue, Stepney, has now been fixed for Sunday, July 4.

Mgr. Meletios Metaxakis, the ante-penultimate Œcumenical Patriarch, has been elected Greek Orthodox Patriarch of Alexandria by 138 votes against 122 for Mgr. Nicholas Evanghelides, the Metropolitan of Nubia.

King Albert recently attended a lecture in Brussels on the sensitiveness of plants by Sir Jagadis Chunder Bose, of Calcutta University, whose laboratory in the Himalayas the King inspected during his visit to India.

EUROPEAN NON-OFFICIALS.

It is gratifying to see that one of the earliest speeches of Lord Irwin in India—his reply to the deputation from the Calcutta European Association—shows that he has already recognised the very important part that has been played by non-official Europeans in the development of India, no less than the great share that they are taking and must continue to take in the furtherance of her political progress. It is not so long ago that it was always possible to detect signs of impatience, not to say intolerance, among the officials of the Government of India, particularly at the Headquarters of Government, towards the non-official in India who presumed to develop opinions of his own on any matter not strictly confined to his business of trade and commerce—even, sometimes, on the latter also. It was common to hear, in those days, as the answer to an inquiry as to who So-and-So was, "Oh, he's a Box-wallah of sorts": a term the strict meaning of which is pedlar or tallyman. This rather patronisingly contemptuous term has almost entirely disappeared from the official vocabulary: and, if one hears it at all nowadays, it is generally from the lips of one of Calcutta's merchant princes who uses it with a sort of proud humility. The main reason for its official disappearance may reasonably be believed to be recognition of the great figure that the non-official Europeans have cut in the Reformed Councils, in which they have exercised an influence wholly out of proportion to their numbers. This was perhaps specially noticeable in the first Legislative Assembly; for Local Governments, when called upon to send officials to the Indian Parliament, were apt to select the men whom they felt that they could best spare and who were therefore not by any means the best that they could send. The contrast between the average European non-official member and the average Provincial official member was much too striking to escape the notice of the Government official benches, who set themselves to bring about an improvement in the calibre of the latter, a task which has been attended with considerable success; though the non-official Europeans have continued to show a standard of excellence that, though now beginning to be approached by the official members of the rank and file, has never been seriously challenged by them.

In the course of his speech, Lord Irwin said that the political ideals rooted in British traditions made it impossible for non-official Europeans to be indifferent to the Reforms, and impelled them to take a direct and important part in furthering them. He might have added that the commercial interests of British merchants in India made this equally impossible; for the enormous amount of capital that has been sunk in India by British firms, whose members have been the driving force in almost every one of the many material developments of the country—to take the most outstanding examples, the development of the great ports has been entirely, and of the great railways very largely, due to their initiative and persistence—is of necessity profoundly sensitive to political changes. Thus the ideals and interests of the European non-official community go hand in hand, and are perhaps more surely directed towards sane and sober political advance than those of the officials of Government; who, with interests much more ephemeral than those of the great British firms, are apt to let their ideals run away with them. For the Indian official is a bird of passage: and, at any rate when he reaches a position of eminence, is apt to allow himself to think of his own reputation, to be achieved, if at all, in the few brief years of high office: whereas the European non-official's interests are bound up with those of his firm, and it is these that he primarily serves while serving his own. In actual fact, the successful British commercial man generally passes more years in India than the official; but, even after he has left the country, his firm remains, and his interest in it remains also—his stake in India is a permanent one, while that of even the most brilliant and successful official can never be more than temporary. Vigorous efforts have lately been made to improve recruitment for the official Indian services, in particular for the Indian Civil Service, whose disabilities were brought into the limelight by the Lee Commission: and there has been an insistence on the necessity that, in these critical days, England should send to India of her best. It has, perhaps, not been fully realised that the necessity is at least as urgent on the non-official side.

The men now at the top of the European non-official tree are certainly of the first rank; but what of those who are to succeed them? In the general weariness that followed the War, in the general disillusionment that has resulted from the Peace, it was possible to discern signs that the young men of England were more and more turning their thoughts inward instead of outward. About a year ago, a Doctor, an important part of whose work lies in the medical examination of recruits for a number of the great Banks, told the writer that he found a general disinclination for foreign service: that whereas, a few years ago, the difficulty was to persuade the young men to agree to serve at home, the difficulty now was to get them to consent to go abroad. There is reason to suppose that, if this was the case then, it is less so now; but there is some evidence in favour, if not of a reluctance for foreign service, at any rate of a disinclination to make the best use of it, in the article contributed by our Bombay correspondent, on "The Younger Generation," three months ago. In this he deplored the tendency of the younger Englishmen in India "to devote themselves more and more to the games that bring them in contact with each other—such as lawn tennis and golf—and less and less to the sport that takes them into the villages among the Indian population, their association with whom so enormously helps the cause of Britain in India." India's demand for the best young Englishmen is quite as insistent in the case of the non-officials as of the officials: and it behoves the leading non-official Europeans, both in and connected with India, to do their utmost to see that it is supplied.

CURRENT TOPICS.

Agriculture in India.

The visit of Messrs. Himbury and Thomas to India was mentioned in the Commercial and Financial Section of THE NEAR EAST AND INDIA of April 22. Apart from its purely commercial side, their report contained some interesting remarks on the Agricultural Departments of the Indian Provinces and the Agricultural Colleges existing in them. As to the former, Mr. Himbury said that, when he was last in India three years ago, the uncertainty regarding tenure had produced a great deal of unsettlement among the expert members of the Agricultural staffs: and that, though matters have certainly improved since, there is still a scarcity of qualified men. Considering the great improvements that have been brought about in recent years, particularly in the matter of such crops as sugar, wheat, rice and cotton, in industries such as dairying, and in the breed of cattle, all of which have been entirely due to the efforts of European experts, he believes it to be of the first importance that recruitment for the Agricultural Services shall again be started in England; as, otherwise, India will not obtain the maximum benefit from her Agricultural Departments. In the latter, Mr. Himbury finds the same defect: practically all the colleges are understaffed. He adds: "It is very desirable that all the vacancies should be filled as soon as possible, and with the best experts that can be found: since, for high-grade teaching and research work, it can never pay to appoint the second best, and much of the excellent work now being done will be wasted if there are not first-rate men available to finish it." As regards the students, he notes that one of the difficulties is that of finding suitable positions for those who have been trained; for most of those who take the course do so with the object of getting an appointment under Government, and but few with a view to returning to the land.

Another important point mentioned by Mr. Himbury is that the system of auctioning previously waste land in the Canal Colonies is not always a satisfactory one. It undoubtedly brings in a lot of money, but it not infrequently happens that the successful bidders are not practical farmers, but people on the look out for a gamble, or merely afflicted with the national land hunger. He considers it most desirable that care should be taken by the authorities to ensure that every person who obtains such land is capable of cultivating it properly. He believes that this is not the case at present: and that, though the present high prices obtainable for crops make the plots owned by indifferent cultivators paying propositions now, if a slump in prices should occur, many farms would become unprofitable if not derelict, to the detriment of the whole community.

It may be hoped that copies of this valuable report are in the hands of the Royal Commission on Indian Agriculture. If not, they certainly ought to be; for they will find in it a number of suggestions, put forward by two specially competent observers, that deserve attention: among which those mentioned in this note are not the least important.

The Indian Investor.

Commenting on the strength of Indian securities which has been a notable feature on the Stock Exchange lately, *The Times* of May 21 says that this is mainly due to buying from India, where the replacement of hoarded rupees by investments is reported to be fairly widespread, and there are signs that "the Indian is at last abandoning the back garden as a bank in favour of the more modern system of banking and investment." The paper adds that well-placed observers are becoming more and more impressed with the potentialities of India as a supplier of capital, first for her own needs and secondly for external investment. The development of the banking and investment habit in India, even though as yet only in its very early stages, is an event of the first importance, for it means the mobilising of her capital in a way that cannot fail to stimulate and fructify the sources of production.

About a year ago Sir Basil Blackett, in an address delivered at Delhi, spoke of the great possibilities of the future that would result from the economic use of India's unproductive hoards: and the recent insistent demand for an inquiry into India's banking facilities is doubtless due to recognition of the change that is beginning to come over the mentality of the Indian peasant in this respect. It is reasonable to suppose that this change, which really does seem to be in evidence, is due in the main to the extension of the co-operative movement in India: and that the devoted efforts in this direction made by the servants of Government are at last beginning to produce marked results. The great progress exhibited in the Punjab has recently been noted in THE NEAR EAST AND INDIA: and the last mail brings a gratifying report of the success of the movement in Bengal; where the number of Societies in June 1925 was over 11,000, with a membership of 386,000 and a total working capital of 618 lakhs of rupees. Whatever the cause, there can be no doubt that *The Times* correctly describes its effect as an event of the first importance.

Women Legislators.

A cable announces that women have been declared eligible for election to any of the Indian Legislatures: which, except in the case of Burma, is a new departure: and, indeed, a very significant one. Though women have, for some little time past, been eligible for election in Burma, no woman candidate has yet offered herself; but this is not likely to be the case in India, where women have lately been increasingly coming into political prominence. Mrs. Besant has, of course, been in the arena for a long time past; but she, after all, is a European: the emergence of Indian women is not only a recent phenomenon, but one that indicates a profound change in Indian ideas. The Apostle Paul's ban on women speaking in public has long been out of date in Western countries; but, in Eastern countries it has been their practice to conform to his admonition that, "if they will learn anything, let them ask their husbands at home." It would seem, indeed, that the Government of India does not anticipate a rush of female candidates; for the new rule lays down that, in any Legislature, a resolution may be moved, after one month's notice, permitting the election or nomination of any woman as a member: and that, if the resolution is adopted, the Government concerned will make regulations giving effect to it. But one may feel sure that the necessity for these preliminary formalities will not deter some of the women of India—such, for instance, as Mrs. Sarojini Naidu, the President of last year's National Congress—from putting forward a claim to stand for election; and, in view of the fact of her election to that office by the popular vote, it is not to be expected that the male members of any Legislature, which she should desire to favour, would be so ungallant as to refuse their consent to her candidature. The new departure opens up a more pleasing prospect for the next General Election than the mere strife between Swarajists and anti-Swarajists: or even that prophesied by several correspondents of English newspapers—apparently oblivious of the existence of communal electorates—between Hindus and Mohammedans on communal lines. It may be remarked that this prophecy is not really so absurd as it looks—there is certainly a prospect that, in non-Moslem constituencies, strictly orthodox Hindu candidates may be run against others whose political leanings are thought not to be exclusively communal: and it is possible, though less likely, that similar action may be taken, here and there, in Moslem constituencies.

The Begum of Bhopal.

The abdication of the Begum of Bhopal in favour of her youngest and only surviving son is, no doubt, a natural corollary to her success in obtaining his selection as her heir, in preference to the sons of his deceased elder brothers: and the reason that she has given for it is an eminently practical one. Her object, she says, is to see her son happily settled on the throne while her own mental and physical powers are still vigorous, so that he will have the benefit of her experienced advice in undertaking the

Digitized by Google

responsibilities of rule, to fit him for the time when he will have to rule without it.

The accession of Nawab Hamidullah Khan brings to an end the period of female rule which, in Bhopal alone among Indian states, has endured for so long; though, as his only children at present are daughters, it is not improbable that it may be revived when the time comes for him to pass on his rule to his successor. As a matter of fact, female dominion in Bhopal has, almost from the beginning, been the rule rather than the exception; for the widow of the second Nawab entirely controlled the Councils of the State for fifty years, during the titular reigns of a succession of puppet Nawabs: the daughter of the third of whom, Kudsia Begum, was Regent to her daughter, Sikandar Begum, from 1819 to 1838, in which year she retired: and Sikandar Begum, whose husband (a cousin, of the blood royal) reigned till 1844, herself became ruler in that year, and passed on the succession to her daughter Shah Jahan Begum and to her granddaughter Sultan Jahan Begum, the present ex-ruler. It is curious that, for four successive generations, the ruler of Bhopal should have had daughters only, and no son: and it will be still more curious if, after the present departure from that custom, it should reassert itself in the next generation.

The Swaraj Party "Compromise."

The cables report the breakdown of the so-called compromise between the Swarajists and the "responsive co-operators." The rank and file of the former accuse, with perfect truth, their leader, Pandit Motilal Nehru, of surrender to the latter; who, unmoved either by the "compromise" or by its breakdown, remain firm in their intention to pursue their own policy. This was, of course, quite obvious from the beginning: and nothing that the Swarajists can say, either for or against that policy, will make any difference at all in the matter. They are now faced with the alternatives of accepting responsive co-operation or of ploughing a lonely and unproductive furrow. In the end, they will doubtless choose the former; while, no doubt, striving to convey the impression that they do so of their own free will—if not, indeed, on their own unaided initiative, as they are quite likely to pretend—instead of on compulsion.

Incidentally, it is interesting to note, from the reports of the "compromise" meeting contained in the mail papers, that the parties to it were exclusively Hindu, and that no Mohammedan took any part in it. This, if any were needed, is a further indication of the resolve of the Mohammedans to go their own way and to leave the Hindus to settle what the Moslems have now decided to treat as a purely Hindu squabble in the attempt to evolve a programme that should lead to the result that they view with real apprehension, and that they have definitely decided to do everything possible to prevent—a Hindu Swaraj.

STALKING MILLIONAIRES.

By MUSAFIR.

This is a story of that distant time when England, her ardous task successfully accomplished, had finally divested herself of the sovereignty of India, and was free to watch with kindly interest the first steps of the great nation, independent and allied, which she had brought into being. As everybody knows now, the prophets of good and of evil were ludicrously discomfited by the results. Some of them had foretold an immediate millennium, but in fact things went on very much as before. Others had gloated Jeremiah-fashion over the prospect of a general smash, and a relapse into anarchy of the old Indian type, but they were almost equally wide of the mark. It is true that Bengal broke away at the last minute, and spent her provincial contribution on fortifying the historic Pass of Teliagarhi, but then Bengal has always had a way of her own, and, as Akbar's official historiographer recorded long ago, "it is a country where the climate favours the base, and consequently the dust of dissension is always rising." There was a little dust in the South also, but Hindustan, the thing that really mattered, stood firm and united, from the Rajmahal Hills to the Indus, and from the Narbada to the Himalayas, a great country, equipped with all the latest mechanism of the West, but faithful to its own ideals, and drawing its inspiration from its own sacred soil.

This happy result was due largely to the emergence of the right man. Ram Singh was a Sesodia, who had gone straight from Sandhurst to the Frontier, where he had learned to keep his mouth shut till the time came for opening it. In due course he had risen to the command of a division, and then he retired to his family estate, saying very little, thinking a good deal, and getting rather stout, as Rajputs sometimes do in retirement. Then, when the country was like to founder in a sea of eloquence, he had quietly stepped on to the bridge, brought the ship safely into harbour, and emerged as first President of the United States of India, a President in name, but looking uncommonly like a King, so that ordinary people felt quite comfortable. They felt more comfortable than ever when the President announced that he would celebrate his birthday in the traditional manner by being weighed in coins, which would then be distributed in largesse. The thrifty folk in the Treasury suggested that three weighings would suffice, one in bronze, one in nickel, and one in silver; but Ram Singh had no use for nickel, and substituted currency notes—which is where the trouble began.

The ceremony was a great success, the largesse was equitably distributed, and it was only when everything was over that the authorities learned of an unfortunate accident, the sort of thing that may happen, even in United States. The Treasurer's people had made a mistake, and issued notes of large denominations instead of the ten-rupee ones which had been sanctioned. It takes a good many notes to weigh fourteen stone, which was the President's normal figure: and, if you use thousand-rupee notes for the purpose, you find yourself confronted with a very heavy bill. So at least the Finance Minister gloomily observed, sitting in secret conclave a couple of days later with the principal permanent officials, the Diwan and the Mustaufi. They twisted the Budget this way and that, they cut out all "avoidable" items of expenditure, they raised the estimates of income to the verge of impossibility, and still the figures refused to balance. "A deficit of at least three crores," the Mustaufi concluded drily. "And our credit ruined in the world's eyes at the very outset," the Minister interposed. "We must avoid that at all costs."

"We might replace the notes," the Diwan suggested.

"That means inflation, which is worse than a deficit. What's the good of being the most enlightened country in Asia, if we're to begin by copying all the vices of the West?"

"There's just a bare chance in the new Death Duties," the Diwan remarked in a tentative tone. "If three millionaires extra were to die in the sixty per cent. grade, we could count on about a crore from each."

"What's the use of talking that way?" said the Mustaufi hotly. "Nobody dies nowadays. The doctors have driven plague and cholera out of the country, and Mother Kali has to beg for blood. Besides, the actuaries say we're counting on too many deaths as it is."

The Minister rose with a grave face. "I must tell the Cabinet then," he said, "that it's a choice between inflation and a deficit. It's their decision, not mine, anyway."

II.

The conclave broke up, and Benarsi Das, the young Treasury-lion who had been taking notes of the discussion, gathered up the papers with a heavy heart. He was one of those Indians of whom England may fairly be proud. Coming of an old official family—his ancestors had been the first in Delhi to learn English, as their ancestors, six centuries earlier, had been the first to learn Persian—he had grasped every chance of fitting

Digitized by Google

himself for the service of his Motherland. While taking his London doctorate in economics, he had found time to represent India in the Davis Cup, and, when he got back to Delhi, he had thrown all his spare energies into the Treasury Troop, the crack territorial unit which collectively gave itself such tremendous airs. His healthy good looks and quiet easy manners combined with his brains and knowledge to mark him out for rapid promotion: and, in the eyes of the world, he was a civil servant of the best type, but in his heart he was something very much better than that. The hereditary devotion to service as a career, the tradition of his caste, had become interfused mysteriously with the intense patriotism which Englishmen all unwittingly had brought into India, and now he was a servant in a higher sense, a worshipper of the sacred Motherland, yearning for the chance of sacrifice, for the order to do some great thing, ready to offer his life joyfully for the needs of his Mistress—or her whims. But he did not talk about these matters.

He brooded over the impending national disgrace. He stayed away from the club, ate practically nothing, and worked on till midnight, seeking some method of restoring the financial position. The words he had heard burnt themselves into his brain, "deficit," "inflation," and the rest: and, as the sleepless nights succeeded the overwrought days, he balanced more and more precisely the lives of a few multi-millionaires against the sacred honour of Hindustan. And so, when all the necessary conditions had been realised, the inevitable vision followed. It was Kali herself who roused him from the deep sleep of exhaustion, Kali, with the blood dripping from her mouth as she gave her order: "The millionaires must die, and by your hand."

Benarsi Das received the order as decisive, and next morning he stepped over to the super-tax office, to talk about millionaires. The record-keeper was an old friend, and made no difficulties about showing him the secret list. "There you have them," he said, "all the richest men in Hindustan, valued for probate on their tax-declarations, so that we may know what to look for when they die."

"But I have never heard of these people," Benarsi replied, looking at the first page of the register. "Where are Dina Nath, and Jaggi Lal, and all the others?"

"Further down the list. Men like them, who spend their time talking, can't do so well as the ones who mind their business. The real millionaires are the men like Janki Prasad of Cawnpore, here at the top. He's worth 3½ crores on his own declaration, so he'll pay over two crores when he dies, apart from anything he's hiding. If he died now, we should practically balance the budget, but they say he's a healthy old man, worse luck." The record-keeper's attitude was strictly, even brutally, official.

"Over two crores," Benarsi repeated mechanically, while the names and figures on the list before him burned themselves into his brain. He talked for a short time; then, going back to his own office, asked for a few days' leave on the time-honoured pretext of the illness of a near relative, and, after making a few necessary preparations, caught the night express for Cawnpore.

III.

Lala Janki Prasad was sitting in his private room in the big brick mansion just off Collectorganj. It was a warm morning, and he was lightly clad; to be precise, in a couple of yards of muslin loin-cloth. He had been looking over his private account books, and now he was thinking about the end of things. From the Indian point of view he was a very high Tory; he cared nothing whatever for politics, and he loathed paying taxes, while the duplicate book-keeping they necessitated vexed his thrifty soul: he wanted to be quit of the whole thing. Roughly speaking, there were six crores in hand, and his grandsons in the business need not have more than two; he was considering what to do with the balance, when Benarsi Das entered unannounced. The old man glanced at his visitor with eyes that missed nothing. He noted the outline of the pistol and dagger, disclosed by the thin silk, which was the fashion in Delhi that year, and he noted also the wild look in the beautiful eyes. He knew that look, the outward sign of the potion with which Kali nerves her votaries for their tasks—there is hemp in it, besides other things—and he spoke lightly of the weather and inquired the object of the visit.

"I've come to kill you," was the answer given in a hard, monotonous voice.

"To kill me. *Achcha!*" The Lala spoke quietly, giving every c and every h the full phonetic value, but his nerves locked crisply at the words. "And afterwards?" he went on, "You will be broken up by an elephant; that is the law."

"Death is nothing."

"True words, but then you will go back to the beginning—a worm in a pig's belly, a flea on a mangy dog. Is that nothing?"

Benarsi Das believed these things, and had tried not to think about them. His tone altered perceptibly as he answered. "It is the Mother's order: she will see to the end of it."

"How should she? Kali gives the order, but the result is Karma, not Kali. Sit down, and talk it over."

The young lion was perturbed. He had expected his victim to cringe or fight, and had not anticipated a religious discussion of this sort. Also, he had made the tyro's natural mistake, and drugged himself too early. The exaltation was already weakening: and, accepting the invitation to sit down, he explained in precise official language the reason why his host must be killed. And as the old man listened, he was filled with great pity, not for the young life before him, but for all the lives which must inevitably follow it.

"But," he objected, when he had heard everything, "if the Sirkar wants money, the Sirkar can take it. Jahangir Shah took 63 lakhs from my fathers, and lakhs were lakhs in those days."

"Yes, but there's the Constitution now. The Government can take nothing except by law."

"That's what you call progress, I suppose. They used to rob men, and now they only rob widows and orphans. But would the Sirkar take money as a gift?"

"Oh yes! It would be credited to Miscellaneous Receipts—Other Items. That would be quite correct procedure."

"Then listen to me. You say the Sirkar needs three crores: I will buy you for four."

"Buy me! I'm not for sale."

"Not in this life, but I'm buying the other lives, the worm, and the flea, and all the rest. And I buy merit for myself as well: it's a good bargain for an old man."

Benarsi Das was dumbfounded, and the drug was dying out. "You mean," he said, slowly, "that you will pay four crores not to be killed?"

"Being killed is nothing, as we agreed. I pay to avert evil, that is all."

"And what security is there?"

The Lala drew his visitor to the veranda, from a corner of which one could look down on the great wholesale market, and watch the wild fury of a thousand brokers. "That is my security," he said. "Go down there, and ask if Janki Lala ever broke his word. If even one man says he did, come back and kill me, and gain merit by the killing."

"Forgive me, Father!" And the young lion stooped to kiss the old lion's feet, and went humbly out.

. . . . . .

So everything ended happily. The money was, of course, duly paid, the Finance Minister was able to announce a realised surplus, and everyone not in the secret was astonished to find in the next Honours Gazette that Lala Janki Prasad had been raised to the Privy Council for eminent but unspecified public services. The Opposition Press scented a job, but could make nothing of it, and waited eagerly till the newest Privy Councillor should come to Delhi to take his seat. But they waited in vain, for the Lala did not come to Delhi. The seat he took was a seat on the Ganges bank at Kashiji, where an old man has time to think, and where, even in the blackest age, an ex-millionaire will not be allowed to starve.

THE INDIAN MAIL.

Elections on Communal Lines.

It seems probable that the example of Sir Abdur Rahim, in starting a Mohammedan Party in the Bengal Legislative Council, will be followed by his co-religionists in the other Provinces and in the Central Legislature as well. The effects of such a move will be far-reaching. In the Bengal Council, for instance, there are forty elected Mohammedan representatives: and, if Sir Abdur Rahim plays his cards reasonably well, he will be in a position to form a Ministry and to command the support of a solid block of followers whose votes, together with those of the Government benches, will enable him to defeat his opponents on every subject which he may desire to bring forward so long as it is in consonance with the general policy of the Government. The *Statesman* declares, and certainly with complete accuracy, that Nationalism as a political creed is being submerged in communalism: and "Swaraj" is in danger of becoming a purely Hindu demand—a result which, deplorable as it may be, is one for which, consciously or unconsciously, Indian political leaders have consistently worked during the last few years. "The whole problem of Indian politics has moved in a few months from the question of how best to win a larger measure of self-government to that of how to avoid a conflict that will end for a generation all chance of responsible government of any kind."

Even the "Central Khilafat Committee" is preparing to move with the times. In a last despairing effort to keep up the fiction of Hindu-Moslem unity, it has decided to appoint a Committee, to include the inevitable Ali Brothers, to confer and discuss the whole question with Mr. Gandhi, Pandit Motilal Nehru and Mrs. Sarojini Naidu. In case of a failure to agree, it was announced that they "would adopt some particular programme of work, mainly in self-defence of Moslems." The Committee further declared that they had definitely decided not to set up candidates of their own for the Legislative Councils—in which they are certainly wise, since no single one of their discredited junta could hope to obtain more than a negligible number of votes; though, by way of an attempt to emphasise their anti-Government tendencies—their sole remaining claim on public attention—they added that "they would not induce anyone to stand for election or to vote for a candidate if he considered it against his religion and conscience to take the oath of allegiance."

Later reports, though they make no specific reference to the conference proposals, show that it either failed or was abandoned: for it is recorded that, at a meeting of the Committee held in Delhi early in May, an allusion to "Hindu brethren" raised a violent protest. To quote the Simla correspondent of *The Times*, the Swarajist compromise, the National Party and the like are of merely academic interest at present, as communal feeling cuts across all parties and is likely to have a powerful effect on this year's elections. It is, of course, the fact that the system of communal electorates prevents a Hindu standing against a Mohammedan for election; but, if a member of either community should stand, as a Swarajist or an Independent, against a rival who stands merely as a Hindu or a Mohammedan, as the case may be, it is safe to predict the success of the latter, and the consequent composition of the next Councils on a purely communal basis.

The Khilafat Conference.

It was stated, some weeks ago, that Ibn Saoud had invited the Indian "Central Khilafat Committee" to send a delegation to the World Moslem Conference shortly to be held under his auspices, and that the brothers Shaukat and Mahomed Ali would be included in the delegation. This news is confirmed by the mail papers, with an important variation. It is asserted that Ibn Saoud has no intention whatever of allowing anyone but himself to settle the future of the Hejaz, and that what the Central Khilafat Committee have represented as a World Moslem Conference for the settlement of this question and for arriving at a decision regarding the election of a Khalifa is, in reality, nothing more than a consultation by Ibn Saoud, with Moslems from countries that provide pilgrims to the Holy Places, with a view to the establishment of the confidence of the Moslem world in himself as the protector of pilgrims going to the Hejaz for the "Haj."

At a meeting of the Central Khilafat Committee held at Delhi on April 20, at which the composition of the delegation to the Hejaz was fixed, it was also decided that the Committee should embark upon a "construotive programme" which should take the form of "working up mass adult education." For this purpose a party, to include the members of the delegation to the Hejaz, was to "tour round the country in order to popularise and encourage the movement." Messrs. Shaukat Ali and Mahomed Ali have therefore quite a busy time in front of them, to be spent in travelling, on the proceeds of the "funds" already collected, with the congenial object of collecting more—which will doubtless be spent, as they have been in the past, on objects only distantly connected with the ostensible purpose of their collection. The "jolly peaceful life," for which Shaukat Ali describes himself as yearning, is obviously still a good way off: and he has evidently made up his mind to continue to "go about the country" in pursuit of it, so long as the game appears to him to be worth the candle.

The Hoogly Bridge.

The type of bridge that is to be built over the Hoogly at Calcutta continues to exercise the minds of the citizens. It would appear that the Government of Bengal has decided to disregard all questions except that of cost, and to proceed with the erection of a floating bridge at an estimated cost of 165 lakhs of rupees. At a meeting of the Calcutta Rotary Club on April 27, a speaker declared that this estimate was too small, that the life of a floating bridge might be taken as forty years, and that a permanent bridge, with two piers in the river, could be built for about 290 lakhs, while its life would be at least three times as long as that of a floating bridge. The Government of India had declared its willingness to contribute to the cost of a permanent bridge, but had definitely refused to do this in the case of a floating bridge. The only alternative to the latter that had been officially proposed is a cantilever bridge: and it is generally admitted that the cost of such a bridge would be almost prohibitive. But a permanent bridge is an absolute necessity for Calcutta: one that will carry much heavier loads than any floating bridge, and that could, in addition, carry trams and, if necessary, trains: neither of which can be carried by a floating bridge constructed over a tidal river like the Hoogly, owing to the "kinks" that would develop in the roadway at low tide, quite apart from the necessity for an opening span. The conclusion drawn was that pressure ought to be brought to bear on the Bengal Government to induce it to take up the proposal, made some months ago by the Institute of Engineers, that two trial piers should be erected in the Hoogly, in order to see whether their presence would really prove the danger to the port of Calcutta which the opponents of a pier bridge prophesy, from silting or possibly even diversion of the river. Calcutta never tires of referring to herself as "the second City of the Empire": and, if she is to live up to that title, a permanent bridge over the Hoogly is so nearly a necessity as to call for erection if in any way financially possible. If the Government of Bengal cannot, or will not, face—even with the assistance of the Government of India—the cost of a cantilever bridge, the least that they can do is to make certain that no less expensive form of permanent bridge is a feasible proposition, before finally deciding to take refuge in the cheap and nasty.

Trade Returns for March.

The returns of India's sea-borne trade for March show an increase both in imports and exports over those for February, the value of the former amounting to 2230 lakhs and of the latter to 3702 lakhs, against 1803 and 3443 lakhs in the previous month. India's net imports

Digitized by Google

of treasure rose from 386 to 570 lakhs, and the visible balance of trade in her favour fell from 1340 to 1010 lakhs. During the financial year ending March 31, 1926, India's total imports of gold and silver amounted to 5200 lakhs, against 9393 lakhs in 1925: and the total visible balance of trade in her favour was 10,936 lakhs against 6074 lakhs in 1925.

Under the major heads of imports, the value of food drink and tobacco was 321 lakhs, of raw materials 185 lakhs, and of manufactured articles 1695 lakhs, compared with 278, 161 and 1335 lakhs in February. The piece-goods imports amounted to 169 million yards in quantity and 571 lakhs in value—very nearly the same as in January, and marking a decided increase on the February figures of 122 million yards and 412 lakhs. The mail papers give no details, nor do they contain the usual statistics regarding the shares of the various importing and exporting countries: and the only detailed information that they give regarding exports is confined to the jute trade. The export of raw jute amounted to 33,100 tons valued at 211 lakhs, against 45,000 tons valued at 296 lakhs in February. There was also a fall in the export of gunny cloth (123 million yards, valued at 268 lakhs, against 124 million and 298 lakhs) and of gunny bags (31 million, valued at 188 lakhs, against 37 million and 230 lakhs) from the figures of the preceding month.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 6.

The Fighting Babu.

Babu Bepin Chandra Pal wants Government to stand on one side and let Hindus and Moslems fight out their quarrels among themselves. "The growing feeling therefore is that, if the Government cannot or will not control the elements of disorder in the country, they had better stand aside and allow the people to fight their respective rights out among themselves, without futile, or possibly even mischievous, interference from outside. This is not wisdom, we all know. This is ordinary human psychology." Something has happened to Bepin Babu; it may be the Reforms, or the peculiar distinctions achieved by the Bengali Regiment, or the drilling of the Calcutta University Battalion, or the football record of the Mohun Bagan team; something has persuaded him that Bengal has at last bred a martial race. The Gloomy Dean and A. J. Cook wanting to have it out to a finish with the raw 'uns would be nothing to this; we know now how Mary would have felt on that day when the lamb turned round, barked, and bit her.

The Prairie Alight.

This cannot be dismissed however, as the *Statesman* wishes, with an exclamation of "Pernicious Nonsense." The riots have died down again; but, apart from the fact that their effect has spread all over the Province, and that communal antagonisms away from the centres have become intensified to a degree hitherto unknown, there are very definite signs that they have profoundly changed social as well as political life for a long time to come. A year ago it would have been inconceivable that a moderate politician, one of the most respected elders of the Hindu community and a leader whose wisdom has been proved for over a generation, should suggest in a leading European journal that Hindus and Moslems should be allowed by Government to engage in open civil war in order to determine which is to be master in the future. In spite of denials there is no doubt that Mohammedan tenants are being evicted from their houses and shops, employees are being dismissed, boycotts of all kinds are being advocated by pamphlets and inflammatory speeches. These things do not happen by chance: the hidden influence, that has been sowing the spirit of unrest and lighting the fires of race-hatred in the last six years, has been quick to seize upon the present opportunity, and the ground is all too ready. Leaders may talk, but they cannot control their Press, let alone their followers: and the atmosphere reeks of racial antagonism.

The Bladder Bursts.

All other factors in the political world have ceased to count in the face of the riots and their aftermath. Chaos is a feeble word to express the present state of affairs and, in Bengal at least, not only is dyarchy dead, but the whole body politic that the Reforms sought to create has disintegrated; the bladder has been punctured and there was nothing in it but wind. Frantic efforts are being made to patch up some sort of party or organisation that may save the face of the politically-minded classes before the 1929 Commission. The sanest leader, however, can only suggest salvation through the abandonment of Swaraj as a cry and the immediate erection of a strong Hindu party, pledged to cry "The Nation," first and last, but to stand firmly against the insidious efforts of Sir Abdur Rahim to capture the Council for Mohammedanism! Conferences, mostly secret, are the order of the day everywhere, and the extremist Press switches daily with blame in one hand and olive branches in the other. Government at last has instituted proceedings against *Forward*, and also against nearly every other Indian daily, in respect of their recent outpourings: and we are in for some wonderful bursts of police-court eloquence.

Men and Things.

There has been a very considerable exodus in the last few weeks, and home-going steamers are still crowded. Mr. Kenneth Campbell, the last President of the Bengal Chamber of Commerce, has retired; but it is understood he will be out here again, on pleasure bent, next cold weather. The Governor and his Council are now in the city, having been called from Darjeeling by the riots; His Excellency was to have gone to Simla last night but, at the last moment, the journey was cancelled. Batches of American pilgrims are still regularly descending upon us to the great joy of the sellers of brass and carpets which may, or may not, have been made in India; it is not only the shortage of money which has almost completely destroyed this trade in Calcutta. The Mayor has left for a Conference in order to endeavour to patch up the schism in the Swaraj Party, half of which is suggesting that the time has come when co-operation with Government is essential if there is to be any progress to report to the 1929 Commission. Mr. B. Chakravarti, the Nationalist leader, has been conferring with the Governor in regard to communal disturbances in the Province outside Calcutta. Eyebrows have been lifted at the presence in Calcutta of an official from the Inland Revenue Department, who has been sent out to judge for himself the value of the items contained in the block account of a sterling company.

Markets.

Throughout the week the jute market has been quiet, with mills showing little interest except for the last two days, when a small business for the new crop has been done; the prospects in this connexion are described as good. In hessians, only a small trade has been done for export, and generally there has been a further drop in values, largely owing to the forward selling pressure by mills; but at the close the market is distinctly steadier on the appearance of a number of buying orders. The piece-goods market has opened briskly after the long closure due to the riots; but dealers are nervous of the possibility of further disturbances, and are not prepared to commit themselves to any large purchases. With the London tea sales held up on account of the strike, there is little news apart from the further reports from the gardens that the crop is likely to be a normal one, erring, if anything, on a lower figure.

On the Stock Exchange business was at first disturbed

Digitized by Google

by the riots, and this was particularly noticeable in the jute section, where dealings were almost impossible owing to the absence of the Marwari members, most of whom reside in the centre of the disturbed area; later the market improved on Bear covering. There was a rather better inquiry for coal shares, without providing any feature; but cottons remained neglected. The tea and rubber sections have been firm, and a fair amount of business has been put through at round about previous rates. It is probable that the announcement this week by the Colonial Office, of a modification of the Stevenson Restriction Scheme, will benefit the commodity market, as it will remove to a great extent the possibility of a temporary slump owing to the present excess of production over consumption; this, in its turn, should benefit the share market. Government Securities have settled down on a steadier basis, and there has been an absence of the excited buying which has prevailed for the last month or so; the market however is strong with sellers reserved. Money is appreciably easier with call and short notice down to 3¾ per cent. More bills have been showing during the week: and, with little inquiry for remittance, rates have firmed up, ready T.T. being quoted at 1s. 5 29-32d.

ACCOMMODATION FOR INDIAN STUDENTS IN LONDON.

The High Commissioner for India has set up a small committee to assist Indian students to find suitable accommodation during their stay in London with private English families willing to receiving paying guests. The committee will also be prepared to give advice and information regarding suitable lodging, boarding houses, hostels, and holiday homes. The co-operation of families and others interested in the scheme is welcomed. Letters should be addressed to the secretary, Indian Students' Acommodation Committee, at 21, Cromwell Road, South Kensington, London, S.W.7. Indian students who desire to avail themselves of the facilities offered by the committee are invited to apply to the secretary to the committee at the same address.

INDIAN EXCHANGE.

London, May 25.

For the past week, Rupee Exchange has shown little animation. The Calcutta market has usually been a shade firmer than Bombay. Early in the period under review T.T. at 1s. 5 29-32d. was offering freely, and at times importers were able to secure some cash wire at 1s. 5 15-16d. The rate in both places has now settled down to 1s. 5⅞d. with small buyers at 1-32nd higher; but less interest seems to be taken in exchange at the fall.

The reduction in the Imperial Bank Rate of interest from 6 to 5 per cent. is an indication of less inquiry for money, and the usual lull which takes place before the advent of the monsoon may cause rates to remain easy for a time.

In shipping circles, less business is apparent in exports, and three months' commercial credits, which were quoted 1s. 6 7-32d., have now been marked down to 1s. 6 5-32d. for delivery within a month; but the supply of mercantile paper has been very meagre.

In the London market some transactions took place at 1s. 5 31-32d. T.T. but with the easier tendency on the other side business has been practicable at 1s. 5 15-16d., with only a small inquiry at that rate, as buyers are now looking for a slightly lower level.

The outlook appears to be quiet but steady.

NEWS IN BRIEF.

The Caliphate Congress ended in Cairo on May 19.

The statue of Field-Marshal Lord Kitchener of Khartoum on the Horse Guards Parade will be unveiled by the Prince of Wales on Wednesday, June 9, at 11 o'clock.

Correspondence concerning the inquiry which the Sudan Government, at the request of the League of Nations, is conducting into the position of "slavery," domestic or otherwise, in the Sudan, with a view to its eventual disappearance, is published by H.M. Stationery Office in a White Paper (Cmd. 2,650, price 4d.).

British travellers visiting the Kingdom of the Serbs, Croats, and Slovenes for not less than 15 days, and making journeys over the State Railways of not less than 310 miles, are now granted a rebate, to destination on the Dalmatian coast of 50 per cent., and to other parts of the kingdom of 25 per cent.—50 per cent. when five or more persons travel in company—from the current fares.

A Reuter communication from Jerusalem states that Professor Bade, Director of the Expedition, organised by the Pacific School of Religion, which is excavating the site of Tel el Nasbeh, six miles north of Jerusalem, which is supposed to be the Mizpeh of the Old Testament, has discovered some very interesting remains of the old fortifications of the town, and also interesting objects representing various epochs from the year 3,000 B.C. to the time of the Jewish Monarchy.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning,

Egypt as a Motor Market.

I referred recently in these columns to the growing scope provided by Egypt as a market for motors. It is significant that there as everywhere else where promising openings exist the United States are well to the fore, and last year 65 per cent. of Egypt's imports of motors came from that source. The imports for that period numbered 5,491, of the value of £E764,423, while for the previous year the respective figures were 2,968 and £E481,404. These figures will bring home very clearly, I imagine, the rapid development of this market. An American report which has just reached me mentions that in the early months of this year there were very heavy imports and owing to the decreased sales due to local conditions the position has not been so favourable. That is perhaps the inevitable consequence of the progress already made in motor traffic, but it is held, however, that the difficult period is passed provided the market is not unduly flooded, and as Egypt's financial and economic position suggests that the country is capable of absorbing steady supplies, I hope that British manufacturers will not be backward in seeing to the market's requirements.

British Motor Cycles in Palestine.

If British motor cars have not hitherto been prominent in most of the Near East markets it is satisfactory to be able to record the fact that our motor cycles are more than holding their own in these regions. I have on more than one occasion referred to favourable news in this connexion; and I have just been reading in the Monthly Review of Barclays Bank, Ltd., a very satisfactory reference with regard to Palestine. There, as elsewhere in the Near East, there is a conspicuous lack of British cars which is stated to be due "chiefly to the fact that the cheap English car, owing to its low clearance and low horse power, is not considered suitable to the country." But the British motor cycle business, we are told, shows signs of improvement in the near future, "as the superiority of British makes is appreciated, and despite high prices in comparison with those of Continental manufacture, there appears to be a keen demand for the British production."

Position in Palestine.

The report to which I have referred, which covers the general position in Palestine, gives a most encouraging survey of developments there. The prospects for agriculture for this year are said to be excellent, speaking generally, both for cereals and fruit, and it is held that "given a period of fine weather, followed by sufficient late rains, exceptionally high yields will be obtained." Good progress is reported as regard the tobacco industry, and from May 1, 1925, to April 16 of this year 219,800 kilogrammes of cigarettes, 12,000 of cut tobacco, and 42,000 of tombac had been produced. "About 40 per cent. of the tobacco used by the factories is grown locally" the report states, "and 3,000 acres were planted with tobacco and tombac during 1925." Finally, the orange season, which means so much to the country was highly successful, and the exports to the United Kingdom amounted to 1,448,000 cases. The value of the exports of oranges is estimated at £E800,000 as compared with £E700,000 for the previous year. As the economic situation in Palestine in recent months has not been altogether satisfactory it goes without saying that satisfactory agricultural progress will mean much to the country.

Phœnix Oil Progress.

Sir Edward Manville, the Chairman of the Phœnix Oil and Transport Company, who has recently visited Roumania, gives a most satisfactory account of the company's position and prospects. "The progress made since my visit last year," he states, "is gratifying, and I may say that all departments of the company's activities are not only maintained but are making considerable headway. Operations in all the fields continue to progress satisfactorily, and developments on new areas are being continued, to which full reference will be made in my speech at the forthcoming meeting." For April the gross production of crude oil was 24,367 tons, and the total output for the first four months of the current year was 106,210 tons.

Roumania's Trade.

The figures for Roumania's exports of cereals and their derivatives in 1925 make a poor showing compared with those of the previous year. The exports only amounted to 841,587 tons as against 1,410,013 in 1923, and this, of course, has not been without its influence on the adverse course of the leu. The decline was spread over the whole category of these exports. For wheat the figures were (in tons) 5,238 as against 121,615, for rye 660 as against 30,517, for maize 580,087 as against 739,860, for millet 10,360 as against 15,675, for oats 20,728 as aginst 91,365, for wheaten flour 25,747 as against 116,527 and for bran 16,075 as against 19,123. The exports of timber and livestock made a much better showing, those of the former totalling 2,420,757 tons as against 2,447,927 tons and those of the latter being 78,416 tons as against 69,700 tons. In these cases, however, the export duties were not the obstacle they were in the case of the exports of cereals. The one bright spot in the year's trade was the great increase in the exports of oil products which rose from 435,890 tons in 1924 to 783,101 tons in 1925. But this substantial rise in oil exports was not sufficient to avoid a considerable adverse trade balance, and all things considered it is not surprising that the leu should have declined to such a low level. It is to be hoped that the new Administration with the experience of its predecessor before it will now endeavour to do everything possible to free trade from the handicaps which have prevented its development.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 25.

However long the great strike had lasted its end would have caused a relief calculated to create new confidence in the business world. Since the end came dramatically and sooner than anyone had dared to hope, the optimism which it has generated is the more vigorous. But for this very reason it may easily be overdone. An illustration of this is afforded by recent events this week in the Stock markets where a boom in industrial shares has been in progress. But while everyone recognises the benefit conferred upon British industry by the removal of a menace which has been hampering progress for several years, many economic problems remain still unsolved and we are not yet in smooth waters. First and foremost, the coal deadlock persists, and so long as the mines remain closed there can be no possible hope of trade expansion. On the contrary, if the pits do not re-open very soon, the effect upon trade will become more and more marked and factories will have to go on short time and transport facilities become seriously curtailed. There seems to be little room, therefore, for an outburst of enthusiasm as to the immediate prospects of our great manufacturing concerns. So long as the coal stoppage continues the reverse is the case, and as every day passes the loss of trade increases. At the moment, indeed, all signs point to a period of cheaper money and strength in the gilt-edged market. The possibility of a reduction in Bank Rate from its present level of 5 per cent., which was brought nearer before the strike by a reduction in the New York Federal Reserve Bank's Rate to 3½ per cent., is rather unlikely so long as the deadlock in the coal industry continues; but in the event of a settlement such a move is quite within the bounds of possibility, for the position of the Bank of England has been greatly strengthened by a considerable acquisition of gold during the past three weeks.

The Markets.

Developments in the monetary situation and the successful way in which the General Strike was met by the Government and the country are perhaps equally responsible for the strength shown by the gilt-edged market during the past fortnight. The leading stocks in this section now stand at an appreciably higher figure than in the days preceding the strike. The Home Railway market, prices in which suffered the severest decline in the early days of the strike, have recovered in striking fashion, but the whole of the recent rise has not been held, it being realised that the railways will be among the heaviest sufferers from a continuance of the coal stoppage. As already mentioned the industrial market has been enjoying a boom, but more sober views appear to be prevailing at the moment. Oil shares have also attracted a good deal of attention and have risen a little, the position of the industry being regarded as sound. All sections, in fact, are in a healthy condition but, as we have said, the moment for unbounded optimism does not yet appear to have arrived.

The Franc and Lira Exchanges.

Further depreciation in French and Belgian francs and in the Italian lira have been the feature of the foreign exchanges. The lira, after collapsing suddenly to 140 has since recovered, and it would appear that some kind of steadying influences are at work to support it at the lower level. It is indeed reported that heavy selling of French francs by Italy is partly responsible for the further collapse of the franc exchange. Rumour has been busy with reports of the granting by America to France of reserve dollar credits, but these are unconfirmed, and would appear to lack foundation, seeing that the debt agreement between France and the United States has not yet been ratified. Weakness in the Belgian franc may be traced to the determined move against stabilisation on the part of certain Belgian interests, the difficulty of completing loan negotiations, and the upset of budget estimates caused by the recent depreciation.

British Film Finance.

Until recently the film-producing industry in Britain has had a far from happy experience, but during the past few years progress has been made and the outlook is more hopeful. Moreover, recent discussions have tended to concentrate attention upon the more serious weaknesses in the position of the industry thus increasing the possibility of their gradual repair. All the same, the British film producer's task is not an easy one. For instance, he has no vast home market such as the American producer has. In this connexion Lord Ashfield, Chairman of the Provincial Cinematograph Theatres, recently gave some interesting figures. We have in this country 3,760 cinema theatres, while in America there are 17,000. The number of weekly attendances at picture theatres in this country is approximately 7½ million, as compared with America's 60 millions. At £50,000,000 the capital employed in the British industry is five times less than that employed in America. These figures clearly indicate the value of home market to the American producer. Doubtless those who have been disappointed at the comparatively slow progress of the British industry have not given this factor its due consideration. And not only is the British market more limited than the American, but the standard of British taste, we are told, is much higher than that across the Atlantic. Therefore, to succeed, British films must be world-wide in their appeal and second to none in their technique. As a result of the measure of agreement recently arrived at between various branches of the industry, it is to be hope that British film-producers will meet with increasing success. In the meantime, the shares of this type of company cannot be regarded as other than speculative.

A CORRECTION.

In the conditions in which newspapers have been produced in the past fortnight it has been impossible to avoid occasional errors, and in the report of the meeting of the Kassala Cotton Company in our issue of May 13, there were unfortunately three mistakes, all of them on page 568. In line 39 in column one "delta" should be "data," and in line 49 in the same column "shall be" should be "we," while in the second column "we" in line 33 should be "I." The material portion of the first column should therefore read as follows:—"But on the data available it seems clear to us that quite apart from any diminution of water which may be caused by Italian operations in Eritrea, the waters of the Gash will only suffice to irrigate effectually an area considerably less than was anticipated by both parties to the negotiations. I hope that if and when they are convinced that this is so the Sudan Government, in view of the above facts, and of their Eritrean water agreement, may consider the question of an equitable adjustment of the load of the price which we paid for our concession."

ECONOMIC CONDITIONS IN YUGOSLAVIA.

The business world is still suffering from the influences of the economic crisis that prevailed in 1925, of which the chief effect was the fall in the prices of agricultural products on the world markets. In Yugoslavia, where 85 per cent. of the population are dependent entirely on agriculture, the surplus agricultural production which is exported abroad provides the large majority of the people with the pecuniary means for the purchase of industrial products. The poorer condition of the agricultural population has susceptibly affected commerce and industry, which still suffer from a certain stagnation in spite of the somewhat improved prices of cereals in the last two months.

The fall in the prices of agrarian products has alarmed public opinion to such an extent that it was the only subject on the agenda paper at the Congress of the Chief Federation of Agricultural Co-operatives held in April. The chief experts at the Congress foresee steadily worse conditions on the international corn market in the future, on account of the policy of many European States to increase the home production of corn, in order to decrease its import, and also as a result of the greater agricultural export from overseas countries. In order not to remain confined to the export of these goods, of which a future fall in prices is prophesied with almost mathematical certainty, the expert advisers at the Congress urged the Yugoslav peasant in proposals which were unanimously adopted by the Congress to turn rather to cattle-raising and derived products, such as meat, milk, butter, cheese, meat products, wool, leather, etc., and also to industrial plants whose market is assured.

To change the line of production, especially in agriculture, demands much capital. Yugoslavia is a country of small peasant holdings. Agrarian reform was introduced in the Kingdom as early as the beginning of the 19th century, and in the newly acquired provinces in the years 1919-1925, by the abolition of large estates and of large holdings in general, the maximum area retained being fixed at 30 hectares. All the cultivable land was transferred to the peasant population, so that together with the absence of serfs, there has been also a disappearance of the large rich landlord. This social change has made for greater political stability, but where large economic reforms are needed, as is now the case, a scarcity of capital is felt. Consequently the question of credit has become acute.

It is fortunate that this year has seen the foundation of an important economic institution, the Agricultural Credit Management. The State has undertaken the obligation to put at the disposal of this institution 500 million dinars. One hundred million dinars have already been handed over, and the remainder will be supplied in the course of the next four budgetary years. In addition many other public funds have been made over to the Management which were previously in the hands of the State Mortgage Bank, as well as the capital of an old liquidated agricultural bank. Finally, the State Lottery will make over to the management 50 per cent. of its revenue. In this way a large amount of capital has been concentrated in the hands of this one institution, and this will be placed at the disposal of national agriculture in the form of credit.

In order that the credits may be distributed as equally and as appropriately as possible, local Agricultural Credit Co-operatives will be set up on a basis of mutual guarantees. These local co-operatives will form themselves into District Federations of Agricultural Co-operatives. All members of the local co-operatives will have to pay a certain share in money on entering, and in the same way the local co-operatives will have to make some payment on joining the District Union. These payments will provide a certain amount of capital which, with the mutual guarantee of all members, will form the guarantee for the credit which will be obtained from the central Agricultural Credit Management.

The Management will distribute credits to the District Unions, and these, in their turn, will distribute them to the local co-operatives, their members, taking care at the same time that the money is used for rational and productive purposes.

Experts in agronomy and finance have been appointed to the Management by the Minister of Agriculture, and everything has been done to ensure that the credits shall be distributed as widely and as rationally as possible. The Management is already formed and will begin its work in the next few days.

Great hopes are being placed in this institution. Hitherto no such large effort to assist agriculture has ever been made, and the peasant has always been left to work

Digitized by Google

in his own groove and to find his own credit. This system worked as long as the high prices of agricultural products made a large national revenue possible, however production might be organised. Now, when the fall of the prices of the chief articles of national export threatens the general welfare and the stability of the State finances, a great legislative action has been taken which may have important consequences.

It is very interesting to note what conscious efforts Yugoslavia, an essentially agrarian country, is making for the improvement of the condition of its peasant population. After the great agrarian reform referred to, which assures to every landowner the free possession of his own portion of land, there comes the foundation of this important financial institution, one of the largest in the Kingdom, whose task it will be to finance the progress of agricultural production.

These are real economic creations of the country; and they deserve mention as a set-off to the political and parliamentary events of the last few days.

Prof. Dr. Milorad Nedeljkovitch,
General Director Postal Savings Bank.

THE DEVELOPMENT OF SHIPPING.

The S.H.S. Kingdom has been paying greater attention recently to the matter of maritime shipping. Engrossed with the regulation of conditions within the country, it was not able formerly to attach to the sea the significance which its economic importance demanded. Moreover, although the fatherland of many sailors, of whom first-class maritime Powers were glad to be able to make use, and on whom the entire strength of the former Austro-Hungarian Empire at sea rested, it was forced during the last seven post-War years to watch its mercantile shipping limited simply to coastal navigation. Naturally this state of affairs could not last long. The sailors have patiently awaited their hour, in order to place their capacity, experience and love of the sea at the service of their own young State.

The maritime policy of the S.H.S. Kingdom is of first-rate importance, both in respect of the geographical position of the country and also of its economic life, which in the present circumstances of the Levant States could make the merchant marine an abundant source of income. In approaching the settlement of the problems which come under the head of maritime policy, two facts could not escape notice. First, the Yugoslav merchant marine has no great tonnage at its disposal, and secondly, it is in conflict on every hand with the competition of Italian merchant shipping. As regards the first, the S.H.S. Kingdom has sufficient vessels for coasting trade, but its boats are insufficient to set up lines like those which formed the backbone of Austro-Hungarian merchant shipping, and which, now, must support the navigation of the S.H.S. Kingdom, in the interest both of the economic needs of the country, and of the necessity of finding a livelihood for a large number of its people.

Having overcome Italian competition in navigation within the Adriatic Sea with some success, the S.H.S. State has to reckon seriously with its competition as soon as it passes the Straits of Otranto. For its shipping outside the Adriatic Yugoslavia had to buy ships, increase its tonnage and repair its equipment, for all of which large investments were required, the necessity of redeeming which made it difficult for her to compete with the ships of other nations, bought and paid for long ago. Moreover, the S.H.S. merchant marine determined not to remain tied any longer to the Adriatic, but to venture on wider seas.

The realisation of Yugoslav ambition had to be in the direction of the Levant, whither a large proportion of S.H.S. exports are sent. Hitherto, a large percentage of these have gone, not via Salonika, as might be expected from a glance at a map of the Balkans, but either via Trieste or Marseilles. In order, therefore, to direct S.H.S. export trade out of this unnatural path into its proper route, Yugoslav shipowners have instituted direct lines from Sushak and the other S.H.S. ports on the Adriatic coast along the Albanian and Greek coasts to Salonika, and then through the Bosphorus to the mouth of the Danube, thus connecting the Danube with the Adriatic Sea. This first step has already brought success to Yugoslav commercial life, since it has strengthened the part which Yugoslav river shipping plays on the Danube international waterway, both from the point of view of the imports and exports of the S.H.S. Kingdom and as a means of transport for the merchandise of Hungary, Roumania, Russia and Turkey. Following up the success which they have achieved on the Black Sea route, the S.H.S. shipowners have undertaken the opening of direct lines from the S.H.S. ports to the ports of the Ægean and Mediterranean, thus connecting the Adriatic with Asia Minor, north Africa and the coast of Spain.

In order that these lines may be strengthened and made permanent, the S.H.S. Shipping Companies have bought abroad in the last few months six large ships of sufficient tonnage for these routes.

The initiative of the S.H.S. shipowners is an unusual instance of love of one's country, for, it should not be forgotten that they are executing these plans in the face of a general post-War economic crisis, which is specially severely felt in the shipping of all maritime States, and they are doing this without the help of the State. For the maintenance of these coastal and overseas lines all the companies together have only 4 million dinars in subsidies and the right of importing new ships from abroad without the payment of customs.

Faithful to their maritime traditions, the S.H.S. shipowners with such well-known builders at their head as Mihanovitch, Benatz, Beburitza, Petrinovitch, Kolin and Rachitch, are proudly endeavouring to develop the merchant shipping of the S.H.S. Kingdom even in the far seas and on British and American coasts, and thus to realise the third point of S.H.S. shipping policy, putting their ships at the service of foreign trade and at the same time connecting the home coast with the most distant parts of the world.

In developing the shipping policy of the Kingdom there should be developed also the home shipbuilding industry. At present there are only three docks in the country, and although one is able to undertake the building of large ships, it is unable for the moment to supply the needs of the shipowners in new ships, for such building requires time and large outlay. Consequently the shippers are still forced to buy their ships abroad. In the intervening period the shipbuilding yards will be strengthened by means of all kinds of repair work and the building of small ships, so that later on they will be able to build large tonnage vessels more quickly and more cheaply.

Jasha Grgashevitch.

THE OUTLOOK FOR THE EXPORT TRADE.

Both the larger demands for dinars at the Bourse and the reports from the provincial markets suggest that the period of stagnation in Yugoslav trade, which has lasted since the autumn, is coming to an end and that spring trade promises to be livelier. This belief is also supported by the fact that the fall in agricultural prices, which prevented export owing to the losses that it entailed for the exporters, has come to a standstill, and further that in the chief article of Yugoslav export, i.e., corn, a certain stiffening is taking place. Thus while between April, 1925, and January, 1926, the index figure of prices fell from 2,004 to 1,596, it remained steady during April, 1926, at 1,593. This steadiness, it should be noted, is due to the fall of the index figure of industrial goods on the one hand and the rise of that of agricultural products on the other, the former having fallen from 1,758 to 1,705, while the latter figure rose from 1,377 to 1,420 during the last two

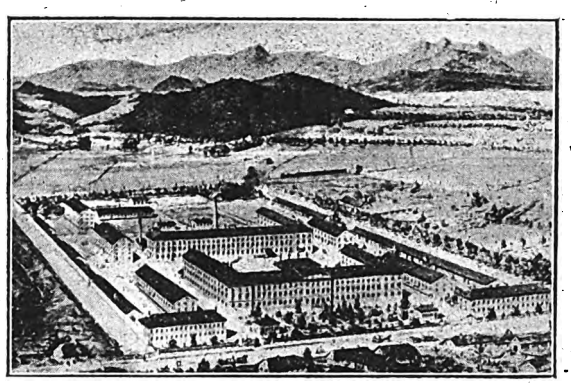
Digitized by Google

months. Finally, no small part in easing the situation is being played by the National Bank, which by giving more abundant credits and granting them only to institutions which charge a relatively reasonable rate of interest, is gradually decreasing the dearness of money and making business more profitable.

All these facts are of great importance to the country, which still has large stocks of unsold corn—the amount of unexported maize alone is estimated at about 200,000 tons. These large stocks are due to the belated demands from the corn importing countries, partly on account of their own better harvests, and partly as a result of large offers from overseas and the Russian grain scare. Now, however, these countries are coming to the end of their reserves, and the demand from abroad for Yugoslav corn is increasing, particularly from Italy, and also from Germany, Austria and Czecho-Slovakia. At present most of the grain export is going up the river Sava and thence by rail to Italy, and down the Danube to Braila, where it is reloaded into ocean liners and sent to western countries. Wheat is now quoted at about 300 dinars, while advance sales of new wheat for September are being transacted at 250 dinars. The quotation for maize is from 130 to 135, advance sales for June being slightly higher. Merchants urge the facilitation of export via the Adriatic coast, in order to avoid the intervention of Viennese and Hungarian firms at Braila, which make a good profit for themselves and raise the price of Yugoslav corn.

This problem of export via the Adriatic is becoming daily more urgent, since with the recovery of Russia, who is appearing as a competitor in the Levant, Yugoslav grain exports for Greece are already on the decline. The competition is extending to cattle also, and the Soviet Government has established cattle pens at Volos, near Salonika, where the cattle shipped from Odessa may recover from the voyage. It is true that the competition is not serious as yet, but it points the way of future development, and emphasises the necessity for Yugoslavia to develop her Adriatic coast and her commerce via the Adriatic ports. This is the more necessary, as Italy is still Yugoslavia's best customer for wheat, as well as for cattle, which are scarce in Italy. The need for developing commerce via the Adriatic with Italy may be of decisive importance if, as seems probable, Yugoslavia may have gradually to change from pure agriculture to cattle-raising as the primary industry.

Changes are also taking place in the tobacco export trade. The Monopoly Management has accepted the offer of a group of French, Belgian and Turkish companies to purchase the monopoly right for four years, and in return to build storehouses, classify the tobaccos and create regular markets. This offer, which only awaits the consent of the Ministerial Council, may prove of great importance in making the first step towards free tobacco production an dexport. In the meanwhile transactions are proceeding for the sale of a large quantity of tobacco to Czecho-Slovakia, the probable amount being 2 million kilograms.



CROP REPORTS.

Period from April 16-30.

General Conditions.

Throughout the Kingdom both winter and autumn crops are from good to very good. In some districts the winter and spring sowings are *very good.*, i.e., Srem, Sumadiya, Morava, Nish, Vranye, Skoplye, Uzhitze, and Bitolye; they are *good to very good* in the Liubliana, Maribor, Osek, Bachka, Belgrade, Danube, Podrinye, Valyevo, Pozarevatz, Kossovo, Dubrovnik, Tuzla, and Vrbas districts; *good* in the districts of Krajina, Zagreb, Timok, Bregalnitza, Rashka, Krushevatz, Split, Sarayevo and Mostar.

State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes

State Tobacco Factory in Liubliana.

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration, — BELGRADE —

Weather Changes.

In the second half of April the weather varied in the Kingdom. The northern districts had rainy as well as fine days, so that the land did not suffer from lack of water. In the borders of Old Serbia and in South Serbia there was no rain during the fortnight, and as a consequence drought ensued and the growth of winter and spring sowing stopped. The drought was especially severe in the districts of Podrinye, Sumadiya, Rashka and Krushevatz, where sowing of spring wheat and maize was held up because the ground was so dried by the warm winds that it was too hard for germination. Reports received at the beginning of May announce rain and this state of affairs will consequently soon improve. In Bosnia, Herzegovina and Dalmatia there was sufficient rain, and crops are progressing satisfactorily. In some places heavy rain brought about floods, especially in the districts of coastal Krayina, Dubrovnik, Vrbas and Bihatz. Heavy downpours of rain caused much damage also to sown crops. Hail occurred in the districts of Split (no damage), Dubrovnik (considerable damage) and Vrbas, where the damage was great, because it fell just when the fruit trees were in full blossom. There was frost in the Uzitze district but it did no harm. Snow fell in Uzitze and Mostar districts, but without doing damage.

Field Work.

The sowing of spring wheat and maize, and the planting of tobacco and vegetables are completed.

Pests.

Field mice have appeared in large quantities in the Liubliana, Maribor, Bitolye and Travnik districts.

Condition of Cattle.

This is satisfactory. In the districts of Rashka, Krushevatz, and Uzitze fodder plants make slow progress because of the drought.

Infectious diseases reported are swine fever in the districts of Liubliana, Valyevo, Dubrovnik, Split and Bitolye, and sheep scab in the Nish area.

Under the heading "Cash" a gold dinar is reckoned as a dinar an English pound as 25 dinars, a dollar as 5 dinars, an Italian lira as one dinar, a Swiss or French franc as a dinar, a coined silver dinar as one dinar, etc.

Discount rate: 6 per cent. Loans on securities: 8 per cent.

THE MONOPOLY ADMINISTRATION.

For the first eleven months of the fiscal year (ending March 31) the Yugoslav Monopoly Administration shows receipts amounting to 2,309,174 dinars, as compared with 2,185,021,936 dinars for the period April 1, 1924 to February 28, 1925, and an estimated revenue of 2,122,633,333. To the total the Tobacco Monopoly contributes 1,559,791,240 dinars; salt 337,773,220 dinars; kerosene, 142,683,373 dinars; matches 131,201,738 dinars; cigarette paper, 130,599,113 dinars.

The statement of revenue and expenditure issued by the Monopoly Administration for the eleven months ending February 28, 1926, was as follows:—

REVENUE.	Dinars.
Monopolies (February)	170,538,070
,, (Apr.-Jan.)	2,138,636,090
Customs (February)	117,874,271
,, (Apr.-Jan.)	1,495,261,470
Stamps & Duties (February)	111,333,412
,, (Apr.-Jan.)	981,308,868
	5,014,952,181

EXPENDITURE.	Dinars.
5% Loan 1913	96,097,527
Blair Loan 1922	70,581,788
5% Montenegrin Loan (1909)	2,561,439
Administration Expenses	702,748 093
Current a/c (Min. of Finance)	4,112,050,074
Sundry a/cs. & Cash in Hand	30,913,260
	5,014,952,181

YUGOSLAV EXPORTS.

Exports during the first quarter of 1926 amounted to 1,113,041 tons valued at 161,503,304 gold dinars as compared with 1,106,968 tons valued at 189,816,626 gold dinars exported during the corresponding period of 1925. The fall in value is due to the fall in the price of agricultural products since last autumn and the increase in the value of the dinar. This increase in the value of the dinar for the first quarter of this year as compared with the first quarter of 1925 was 9.27 per cent.

The chief articles of export from Yugoslavia during the quarter was the following:—

Article	*Unit*	*Amount*	*Millions of gold dinars*
Maize	Tons	191,453	24.3
Wood : a/for building	,,	282,852	20.1
b/for fuel	,,	87,831	1.7
Eggs	,,	9,347	17.1
Corn : a/wheat	,,	49,483	13.5
b/other	,,	7,179	1.0
Meat : a/fresh	,,	5,556	7.9
b/meat products	,,	397	1 1
Live cattle	Head	29,940	8.6
Raw copper	Tons	3,727	8.0
Live pigs	Head	39,296	4.7
Prunes	Tons	6,521	3.5
Cement	,,	84,100	3.3
Live Horses	Head	11,287	3.3
Calcium cyanimide	Tons	10,297	2.9
Hemp	,,	3 269	2.8
Wheat flour	,,	5,972	2.6
Sheet lead	,,	2,301	2.2
Wild animal skins	,,	78	1.1
Calcium carbide	,,	4,117	1.1
Tanning extracts	,,	2,605	1.1
Wooden articles	,,	3,288	0.9
Oak sleepers	No.	148,579	0.9
All other	Tons	323,714	27.8
	Total tons	1,113,041	161.5

The bulk of the above articles were exported to the following countries:—

Maize: Italy 10.2 million dinars, down Danube via Braila 7.5, Austria 3.7.

Wood, (a) building:—Italy 13.2 million dinars, France 1.9, Hungary 1.1. *(b) fuel:*—Italy 1.3 million dinars, Hungary 0.4.

Eggs:—Switzerland 6.2 million dinars, Germany 4.6, Austria 4.5.

Corn (wheat):—Down Danube via Braila 6.7 million gold dinars, Italy 3.7, Greece 1.5. *Other Corn:*—Greece 0.5 million gold dinars, Austria 0.3, Italy 0.1.

Meat (fresh):—Austria 4.2 million gold dinars, Germany

Digitized by Google

2.2, Italy 0.6. *Meat (products):*—Italy 0.4 million gold dinars, Austria 0.3, Germany 0.2.

Live cattle:—Italy 5.5 million gold dinars, Greece 1.7, Austria 1.1.

Raw copper:—German 5.2 million gold dinars, France 2.8.

Live pigs:—Austria 3.2 million gold dinars, Czecho-Slovakia 1.3, Greece 0.1.

Prunes:—Germany 1.6 million gold dinars, Italy 0.6, Austria 0.4.

Cement:—Egypt 1.4 million gold dinars, Greece 1.5, Italy 0.4.

The chief countries receiving Yugoslav exports during the quarter were:—

Country	Tons	Mill. gold dinars	Percentage of Total export
Italy	547,683	51.2	38.55
Austria	77,380	27.9	17.33
Germany	22,620	16.3	10.08
Roumania and via Braila ...	85,970	14.8	9.18
Greece	43,596	9.2	5.68
Switzerland	11,678	8.3	5.11
Czechoslovakia	58,025	7.9	4.88
Hungary	116,571	6.2	3.86
France	26,994	6.1	3.81
Great Britain	14,294	1.9	1.22
Other countries	108,230	8.7	5.30
Total	1,113,041	161.5	100%

During the first quarter of 1925, the chief countries of destination for Yugoslav exports were, with percentages of totals in brackets:—Italy (29.15), Austria (18.59), Czecho-Slovakia (11.01), Greece (7.28), Germany (6.23), Hungary (6.09), Roumania and down Danube via Braila (4.91), Switzerland (3.63), France (3.28), and Bulgaria (2.51).

Lady Blunt, widow of Sir John Elijah Blunt, formerly Consul-General at Boston, U.S.A., has died at her home in Malta.

The Bulgarian Government has asked the League of Nations to assist in the formulation of a scheme for the settlement of Bulgarian refugees.

The Turco-Bulgarian Treaty of Friendship concluded last autumn was laid before the Bulgarian Sobranye at Sofia on May 20 for ratification.

The new Nawab of Bhopal landed in Malta on May 23 from the P. and O. liner Kaisar-i-Hind, and drove round the island, accompanied by the Governor's staff. He afterwards dined with Sir Walter and Lady Congreve at the San Antonia Palace.

Negotiations for a Treaty of Commerce between Yugoslavia and Albania were concluded in Belgrade on May 21, with the final adoption of the draft Treaty. A Consular Convention, a Frontier Traffic Convention, and an Extradition Convention were also approved.

News reached Aden last week that the Hashid Tribe, to the north-west of Sanaa, near the marches of the Idrisi Emirate of Abu Arism and Sabia in Asir, is likely to revolt against the overlordship of the Zaidi Imam Yehia.

Dr. Charles Montague Doughty, M.A., Litt.D., of Merriecroft, Sissinghurst, Cranbrook, Kent, one of the leading explorers of Arabia and Asia Minor and author of several books on travels and archæology, who died on January 20 aged 83, left estate in his own disposition of the gross value of £4,691, with net personalty £4,357.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, May 18.

An Italian Loan?

It is reported on good authority that Italy has offered Roumania a loan of 200 million lire. This friendly act is attributed to the excellent relations which General Averescu has always retained with Italy since the days when he finished his studies at an Italian University. There are, however, technical difficulties in the way, as the loan would have to be made in dollars, to avoid the fluctuating currencies of both countries, and the Italians are afraid of the effect on their own currency of the purchase of so large an amount of dollars. On the other hand, the sum offered is not nearly enough to cover the present needs of Roumania, and her statesmen are reluctant to accept this loan if it would in any way prejudice their chances of obtaining a larger one elsewhere. Some ten days ago the fall of the leu to about 1,600 caused a panic in financial circles here, and the Government was constrained to fix a rate independent of that obtainable on the open market. A decision was also passed providing for the submission of all cheque payments abroad over a value equivalent to 5,000 lei to supervision by the Office for the Control of Foreign Payments. This restriction is causing grave inconvenience to British and other firms in this country. A proposal was also made to stop completely all imports of every kind, but this has not yet been put into force. One step has been taken toward facilitating exports, however, by the cancelling of the super-tax of 30 per cent. on the transport of exports, which has long been a thorn in the side of Roumanian exporters.

Miscellaneous.

A devastating fire broke out in Bacau a few days ago, and it is reported that 500 buildings, including two cloth factories and three large flour mills, have been destroyed and thousands of people rendered homeless. The dry weather and fresh wind blowing made it extremely difficult to get the fire under control.

The agricultural situation is said to be satisfactory. In most parts of the country abundant rain has fallen during the past fortnight, which was much needed for the autumn-sown crops and to soften the ground for the sowing of maize.

Motors and Motoring

By G. B. B.

A Motor Clock.

I hear of a new electrically wound clock for motor use which should not only sell well in this country, but should command a ready sale in India and other parts of the East. In the ordinary clock the works unwind as the spring runs down, but in the new clock this movement is so arranged as to make an electrical contact which, by means of the circuit, flicks a small armature and winds up the spring by one tooth of a rachet wheel. The spring is consequently always fully wound within the limits of this one tooth, and thus, with its strength always constant, its time keeping is extremely accurate. Further, it is always in service. It will fit the ordinary opening in the dash and all the fitting that is necessary is the connecting up of the couple of wires to the battery. I have not heard the price, but I understand that the complete clock is quite inexpensive.

Lighter Cars.

The day of the still lighter car seems to have dawned. The Austen "Seven" was certainly an advance guard, but even that seems about to be outdone in lightness, although I think it will be a long while before it is equalled as regards efficiency. I hear that a few weeks ago a deputation of French car manufacturers visited American motor car firms engaged in mass production.

As a matter of fact the small powered car has been built for some time in France, but not on what the United States would call a large scale. The chief point in its favour, in my opinion, is that its coming would relieve traffic congestion. As the small French model takes up only about half of the space required by the average ten to fifteen horse power car, it is easy to see how the parking problem would be simplified. A leading engineer told me recently that he felt that the right kind of small car would sell well in America provided it could be cheaply produced on mass production lines.

Vice-Admiral George Robert Mansell has been elected a head office director of the Royal Exchange Assurance.

The Saikowah (Assam) Tea Company has been registered with a capital of £100,000, to acquire grants of land in Kakhimpur, Assam.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended April 30, amounted to £E8,771, making the total from April 1, £E23,611.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT.
Indian Government Vouchers accepted.

Passenger sailing dates :—

SPECIAL NOTICE.

New T.S.S. CALIFORNIA, 17,000 tons, carrying 1st, 2nd and 3rd class passengers, sails from Liverpool October 26, Marseilles November 1. All 1st and 2nd class staterooms are fitted with punkah louvres and with fans. This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Terentia for Bombay (Liverpool, June 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Holywell for Port Said, Colombo, Madras, and Calcutta (London, May 29).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (London, June 16).

British India Line.—S.s. Manora for Bombay and Karachi (London, May 29); s.s. Mandala for Colombo, Madras, and Calcutta (London, June 5).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, Trieste, also Algiers, Corfu, and Gruz if inducement offers (Liverpool July 1, Swansea July 6); s.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, also Algiers and Volo if inducement offers (Swansea July 6, Glasgow July 8, Liverpool July 10).

Johnston Line.—S.s. Dromore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 2); s.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 23).

Prince Line.—S.s. Lancastrian Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (London, June 2).

P. and O. Line.—S.s. Morea for Bombay (London, May 28); s.s. Nagoya for Colombo, Madras, and Calcutta (Liverpool, May 29).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Fishplates.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 500 metrical tons deep angled fishplates. June 3.

Cast Iron Weights.—The Physical Department of the Egyptian Ministry of Public Works invites tenders for the supply of 27,650 cast iron weights of various dimensions in accordance with specifications and drawings. June 2. (D.O.T.)

Water Pipes.—The Municipalities and Local Commissions Section, Cairo, invite tenders for the supply and laying down of water pipes in the town of Sembellawein. June 24. (D.O.T.)

Dynamo and Motors.—The Controller of Technical, Industrial and Commercial Education, Ministry of Education, Cairo, invites tenders for the supply of dynamo and motors. June 19. (D.O.T.)

Weaving Machinery.—The Controller of Technical, Industrial and Commercial Education, Ministry of Education, invites tenders for the supply and delivery of weaving machinery required for Assuit modern workships. June 19. (D.O.T.)

Centrifugal Pumps and Semi-Diesel Engines.—The State Domains Administration, Cairo, invites tenders for the supply of 2 centrifugal pumps and 3 semi-Diesel engines of 28-30 h.p. The engines are to be of the vertical type, burning Diesel oil, and lubricated under pressure. Starting is to be by compressed air. Priming pumps, driven off the crankshaft by fast and loose pulleys must be supplied. The existing pumps which the above engines are required to drive are respectively 12 in., 14 in., and 16 in. The suction head is 2.5 metres, but the delivery head and rate of delivery are not stated. The new pumps required are to be belt driven from existing 28-30 h.p. engines. They are to be of such a design that the impellor may be removed without splitting the volute casing. The static head is given as 1.50 metres, and the sizes of the pumps are respectively to be 15 in.-16 in. and 10 in.-12 in. July 1. (D.O.T.)

TURKEY.

Locomotive Brakes.—Tenders are invited for the supply of locomotive brakes required by the Anatolian Railway Administration. June 14. (D.O.T.)

A new survey of Kashmir is to be made this summer, says *The Times*. The work will begin this month and will be completed by October. Some photographical surveying instruments, including a stereo-photo theodolite and a stereo-auto comparator, will be tested. The survey will consist of Major Kenneth Mason, R.E., Survey of India, Major H. D. Minchinton, 1-1st Gurkhas, Major R. C. Clifford, I.M.S., Captain F. O. Cave, the Rifle Brigade, and Khan Sahib Afraz Gul Khan, Survey of India.

Engineering Topics

New Type of Melting Equipment.

The foundry industry is one which has made considerable strides since the time in the not very distant past when more than one successful foundry was started with rough-and-ready cupolas built up with the assistance of jobbing bricklayers from a discarded steamer funnel or some old boiler flue. The increasing need for economy, to say nothing of the more stringent requirements in the way of casting now required, many of which have to conform to specifications, have resulted in the disappearance of such picturesque makeshifts from the plant of all up-to-date foundries, superseded by the productions of makers who specialise exclusively in the construction of foundry melting equipment, and whose whole energies are consequently devoted to increasing the efficiency of this particular apparatus.

As a melting equipment supplementary to the main plant, the cupolette offers many advantages to the average foundry. In slack times it affords the necessary facilities for putting through a small melt quickly and economically without having recourse to the main cupola. There are few foundries, jobbing or otherwise, which are not with more or less regularity called upon to satisfy a demand for a few odd castings without delay—a demand which probably it is inexpedient to ignore, although its immediate fulfilment can only be effected on a thoroughly uneconomic basis on account of the melt having to be put through the main cupola specially. Such contingencies, which become more frequent in slack times when the number of regular melts are decreased, can now be met with this type of small emergency cupolette.

There is yet another regular foundry difficulty which can be met by the same means. This is the problem of producing castings in special mixtures upon an economical basis. There are few purchasers of castings who are not frequently obliged to procure special castings of this description from foundries right out of the district on account of the inability of the local foundries to comply with special requirements; and, on the other hand, there are few ironfounders who are not regularly called upon to explain the impossibility of producing a mixture of more than one grade, or of altering the standard composition of the regular cupola charge for a comparatively small number of castings. Though this subject of special mixtures is not so pressing on regular commercial productions as it was with much of the special work which the iron foundry had to tackle during the War, the call undoubtedly exists, and the engineering shop which depends upon outside sources for its castings knows at what cost in the way of extra carriage charges and with what difficulty the demand is met. The small cupolette not only enables a foundry to cater for special work of this description, but it also furnishes the ironfounder with the means of constantly pursuing his own experiments on an economical basis.

A Cupolette Described.

It will be of interest to describe a typical small emergency cupolette of the type referred to, built by the Constructional Engineering Co., Ltd., of Titan Works, Birmingham. It might be explained that it is mounted on trunnions and carried on a couple of "A" standards, this provision for tilting being to facilitate the rebricking of the shell when necessary. The fan, which is mounted upon a separate standard, requires from 1 to 2 b.h.p. to drive, according to the volume of air required. Drop doors are fitted to the cupolette, which enable the contents to be readily dropped after each blow, and the apparatus with its special tuyeres, pouring and slagging spouts, peep holes, etc., is really an up-to-date cupola in miniature. For normal requirements a range of three sizes is provided having melting capacities of 10, 15, and 20 cwt. per hour respectively. The consumption figures run on an average to about 2½ cwt. of coke per ton of metal brought down by this means, a figure which would be considered impossible of attainment for the production of merely a few isolated emergency castings in a special blow in a larger apparatus. It is, however, on time that this small emergency appliance shows at its best, for it is possible to have hot and perfectly fluid metal within some eight or ten minutes from the time when the blast is turned on, so that in many cases the metal can be ready before the mould.

For the very small foundry such results as the foregoing raise the pertinent question whether a small self-contained plant of this description which enables a pour to be effected daily is not a better policy than the practice which has generally been adopted of installing a cupola of such a size that it is capable of coping with the most optimistically estimated demand, and which in actual practice is frequently only operated once a week, thus rendering it a matter of impossibility to cope with "rush" orders.

Apart from its importance as an adjunct to the regular foundry, the cupolette is coming into popularity as a melting equipment for the small engineering repair shop of the type which is encountered in many agricultural districts and countries overseas which are little industrialised. It is of the highest importance that such an establishment should be able upon occasion to provide simple castings if it is to cater adequately for the needs of the district, even if such needs do not call for the provision of a regular foundry. In many agricultural districts abroad where a vast amount of agricultural machinery is employed, and where the nearest regular foundry is hundreds of miles away, the ability to produce upon occasion a casting which is urgently wanted to put a machine into commission again becomes an asset of considerable commercial importance, and this is the reason why such cupolettes are gradually being installed in mines, collieries, and repair shops abroad. Taking the cupolette as the melting unit, it is interesting to note that it is now possible completely to equip a small foundry with all essentials in the way of ladles, moulding boxes, tools, sand, etc., as well as the melting plant, for a sum in the neighbourhood of £150.

One interesting application of the cupolette is to be seen in several towns in this country with a tramway system, where, mounted upon a tramway trolley and with the fan electrically driven, such small foundry equipments are regularly to be seen in use for cast welding the joints in the tramway track as this is laid or repaired.

COTTON GROWING IN THE SUDAN.

By W. H. Himbury.*

(*Concluded.*)

Furthermore, as long as the work is carried on under some system of control, the whole of the Political Administration, Agricultural and Transport staff are interested, and the Government can pay or guarantee a price remunerative to the natives. No commercial concern could afford such an organisation; what staff it did require would have to be paid for, and in such a huge scattered country the expenses would be enormous and the difficulties great. Later on, when the bales are counted by their hundred thousands and the grower has large sums of money to spend, it would assist further developments if commerce stepped in and took its share of the work. With Government control and ginneries, the Southern Sudan offers great promise for cotton and other produce, the limiting factor in this far-flung area being reasonably cheap and efficient transport.

Later, in company with Mr. Huddleston, the Governor of the Province, we motored over about a 20th area of the Gezira. A visit was first paid to the four new ginneries. The buildings are very substantial, machinery good and all well erected, each building containing two units of 40 roller gins complete with press. Electric light is installed, and the plants are protected from fire by sprinklers. I understand they were getting 700 bales per day of 10 hours from the 320 gins, which is quite good, and the crop should be finished and away by June. The inside of the gin buildings was being kept very free from dust and rubbish by constant sweeping, so we did not see the large amount of fluff which is usually present. One of the most wonderful and impressive sights I have ever seen in connexion with cotton growing was the thousands and thousands of large bags, each containing 320 lb. of cotton in the seed store or on the ground around the ginnery. I believe something like 80,000 bags were stored in the open between these huge ginning factories. All was visible from the railway, and travellers passing must realise that there is no doubt as to the Gezira being a cotton-producing area of great magnitude. The staple of the cotton I saw appeared to be if anything better than usual, and some was exceptionally good.

After leaving the ginneries we proceeded by car to the main canal, passing many squares of cotton en route. All looked exceedingly healthy, better than I had seen on my former visit. There was little evidence of thrips, although in some places the crop had suffered slightly from black arm; nevertheless, nearly 3½ kantars had already been picked, and the final results are likely to exceed 4¼ kantars, which is exceedingly good, and more than equal to old times. Last year the crop was not much better than 2½, and had it not been for high prices, matters would have looked black for all concerned. This year the 4¼ kantars will more than compensate for lower prices. If this yield can be averaged year after year the present value of cotton, or even a lower value, will still make the proposition an exceedingly good one. On some of the new land as much as 600 kantars have been obtained, which is a very splendid return. Of course, although the crop has not suffered so seriously from pests and diseases this year it is important that the research work in connexion with insect pests and diseases should continue.

After seeing the main canal we motored on to two of the discharges, and then through several large Medani villages, which appear to be well peopled, over some more cultivated area, and then back to the Governor's house at 6.30 p.m. One thing I noticed was that the cultivation of this large area did not appear to have interfered in the slightest with the village life of the people, who had huts at the ends of their blocks of cotton for storing the day's picking, etc., otherwise they still live in their villages. One might have thought there would have been a large exodus of population to the fields.

I must pay a well-deserved tribute to the Sudan Plantations Syndicate for the speedy and thorough manner in which they got this huge area tenanted, the land prepared for cultivation, and the ginning factories erected. I am certain that without the experience of the Syndicate the Government would never have brought the scheme so rapidly to such a successful completion as it has to-day, but it is owing to the Government, the Syndicate and all interested pulling together, that the present result has been made possible.

The next day we arrived at Khartoum, when I had a long, interesting talk with Mr. Hewison, the Director of Agriculture, and some of the members of his staff, and we discussed important matters connected with the encouragement of rain-grown cotton, etc. Later with Mr. Hewison I called on the Financial Secretary, and put before him my views as to new ginneries, etc. I was informed that my suggestions would have full consideration, and I am pleased to say that since my return the Government have decided to instal two new ginneries with saw ginning plants in the Mongalla area. In the afternoon a visit was made to Khartoum North, to see the work which is being undertaken by Mr. Bailey, the Plant Breeder, who was working under a scheme in which the Sudan Government, the Sudan Plantations Syndicate, and the Empire Cotton Growing Corporation provide the funds. Mr. Bailey's laboratory was not yet finished; therefore he had been working under rather trying conditions. I saw, however, a good deal of his plant work, and examined numerous samples of lines, some of which were very weak, especially the American ones, but one or two of his Sakel type were quite good. In plant breeding so many things have to be considered that it take time to get any fair results. You not only want length, strength, fineness, etc., but have to consider yield per acre, lint percentage, plants which resist disease, and insect pests, etc. When you succeed in one feature it often follows that one of the others is lacking; therefore it is necessary to wait patiently for results.

Although the climate of the Sudan is exceedingly hot, there is something about the energy of the officials and the way in which decisions are made and work commenced which is most bracing. One could see the whole place was alive and full of energy, and had a prosperous look about it. I do not think it will be very many years before very large quantities of both Sakel and American cotton are produced in this country, so that it will take its place as one of the most important Empire fields.

* A preliminary report to the Council of the British Cotton Growing Association on the cotton industry in the Sudan following Mr. Himbury's recent tour.

LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows under date May 19:—

Egyptian Futures.—Sakel Contract:—As in this report we have to cover ground spreading over the last three weeks, we only propose to deal briefly with the markets experienced during the strike period. Whilst the dislocation of trade witnessed between May the 4th and 13th naturally restricted operations, the market maintained a fairly steady tone, and nothing in the way of forced liquidation or panicky selling took place. A certain amount of trade selling, probably against stocks, was periodically in evidence, and with buyers distinctly cautious, values at the lowest declined to 14.50d. for the May position and 14.25d. for November. The firmness of the American markets and increasing hopefulness of an early settlement then began to exert their influence, and when the general strike was called off the level ruling at the time of our last report had been re-established. Since this, a further upward movement, especially in old crop positions, has been in operation, so that at to-night's close the list shows gains of 35 to 50 points for near and 30 points for distant positions since the 28th ult. Small tenders at the beginning of the month and the stoppage of spot business had a depressing effect on the current position during the crisis, but throughout the past week the resumption of trade activity and the more widespread attention focussed on the scarcity of tenderable cotton has led to a sharp widening again in the old and new crop differences. Whilst the trade are still hampered by the outstanding coal dispute, the outlook is not without favourable features, and once this last bar to an industrial peace is removed, and we do not think this will be long delayed, producers should enjoy a spell of steady activity. The Alexandria market has, apart from a short spell of weakness at the beginning of the month, remained at a very steady level; the Government continues to purchase, but latterly only sparingly, so that to date their commitments amount to some 46,000 bales.

Crop reports have been better, and under the influence of favourable conditions during April, the plant is said to have recovered the ground lost earlier and to be actually almost as advanced as last year. At the time of writing, we must confess that we perceive little in the situation to warrant any material alteration in the level, with the Egyptian Government holding up so much tenderable cotton at the other side, and, as mentioned previously, little in stock here, and we cannot anticipate much easing in prices. Fairly large stocks of Sudans are accumulating here, and these may affect the situation later. Trade support at the moment is not sufficient to justify a further advance, and it is from this source and new crop progress that further developments must emanate. We, therefore, prefer to advise a waiting policy for the time being, with the idea of making conservative commitments, should prices recede.

Upper Contract.—Business in this option continues to run on restricted lines, and in view of the relative cheapness of this option in comparison to spot and replacement values, the apathy of operations is rather difficult to explain. New crop reports, on the whole, have latterly been more favourable. Values since our last report show minor advances of five to fifteen points.

Egyptian spot.—Owing to the abnormal conditions which have prevailed during the greater part of the period under review, anything in the nature of a steady business has been out of the question. During the early days of the strike, trading in spot cotton practically ceased, owing to the uncertainty of delivery ex-warehouse, but a partial recovery speedily took place. C.i.f. business, of an irregular character, continued, and several quite respectable lines of forward cotton (chiefly Sakel) were booked. Somewhat contrary to expectation, spot business has been slow to recover since a return to more normal conditions has been indicated, and only a moderate inquiry, with sales commensurate, has been seen during the past week. Of course, it has to be remembered that a settlement of the coal dispute has still to be arrived at, and in the interim mills are being restricted to 50 per cent. of their normal consumption of coal and electric power.

Sakel has come in for an increased amount of attention, particularly for cotton about Good in grade. Attractive lots are rapidly disappearing, and the selection becomes poorer daily. It is now a rarity to come across a lot of F.G.F. Sakel which possesses good staple. Values have hardened. Uppers have also hardened slightly, but inquiry still centres on cotton about Good in grade. Attractive lots are rapidly disappearing, and the selection becomes good staple. Values have hardened. Uppers have also hardened slightly, but the inquiry still centres on cotton between 11.50d. and 12.00d, a range at which very little is now to be found. White Sudan, up to 275 points on American, still continues in fair request, and Sudan Sakel remains in favour at steady rates, the bulk of the business passing having taken place at about 18.00d. The better qualities appear, at the moment, to be rather out of reach of the majority of would-be buyers. C.i.f. business during the past week has been quiet.

Company Meeting.

CALCUTTA ELECTRIC SUPPLY CORPORATION.

The annual general meeting of the Calcutta Electric Supply Corporation, Ltd., was held at its London Office, 3 and 4, Clements Inn, on May 19, and the accounts and director's report for 1925 were presented. A dividend of 5 per cent. actual for the first half of 1925 was distributed in July, and the directors now recommend a further dividend of 7 per cent. actual for the second half year, making 12 per cent. for the whole year. £50,000 was carried to reserve, including £39,000 profits on exchange; £115,000 was set aside for depreciation. There was left a carry forward of £33,000, or slightly higher than last year.

The Chairman (Lord Meston) in his speech explained that the First Mortgage Debenture Loan had been reduced by £430,000 owing to the exercise by holders of their right of conversion into Ordinary shares. Although there had been no addition to the Capital plus Loan Account during the year, the fixed assets had increased by £320,000, partly due to the commencement made with the new power station at the Calcutta Docks. The balance of the necessary finance for this station had been found by a successful issue of shares since the close of the year, and it was proposed to employ a part of the proceeds temporarily in reducing the outstanding balance of the First Debentures next November.

Although 1925 had not been a good year for Calcutta trade, the company's sales had gone up by 15,000,000 units, and the proceeds had risen by £30,000, while cheaper coal had enabled the cost of production and management to remain practically stable.

When the new Southern Station opened they ought to be in the happy position of being well ahead of the requirements of Calcutta and reasonably assured of immunity from interruptions in their supply. Meanwhile they had done all that was practicable in adjusting their charges. A substantial reduction, which was already costing them £15,000 a year, was made in the rates of supply for industrial purposes, and they had earnestly considered the possibility of some corresponding concession to the domestic consumer. It looked, however, as if any step in that direction must stand over until the considerable capital sunk in the new Southern Station had ceased to be wholly fallow. They did not admit that 3¾ annas net per unit was anything but a very reasonable charge in view of the general scale of values in Calcutta to-day; indeed, it would be a cheap rate for domestic current anywhere; at the same time they fully recognised their obligation to give the Calcutta public the lowest rates which was compatible with the prudent management of the company, and the whole situation would be again reviewed when their new station was running.

The year was singularly free from labour trouble, and the thanks of the Board were due to the staff, European and Indian, for their admirable work.

The Chairman himself and another of the directors, Sir George Sutherland, had inspected the work in Calcutta last winter, and gave the meeting a very satisfactory account of the progress of the business and prospects of its development.

The accounts and the proposals of the Board were passed *nem. con.*

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Roumanian Elections.

It is difficult for public opinion in Great Britain to understand a general election in Roumania. Democracy, like wine, is common to many countries, but the connoisseur, if he can help it, will have nothing to do with the product of any country apart from the two or three where the best is to be found. A common mistake made by the less favoured producer of wines is to call them by names which challenge comparison with recognised vintages. His beverage, unlike the rose, would have a much better chance of being appreciated, if he did not label it claret, hock, or port, as the case may be. So is it apparently with political systems. The fashion nowadays is to call them all democratic or constitutional, thereby challenging comparison one with another. There is no reason, however, why all countries should feel obliged to adopt the same nomenclature in regard to systems which have only a few points of similarity between them. In Great Britain, for instance, the employment of trickery or force in the normal conduct of public affairs would be regarded as the very antithesis or negation of democracy. It would also be condemned as silly, and possibly the British are more fortunate than they realise in having a horror of appearing intellectually foolish. No Government in Great Britain could conceivably "make" elections in its own favour. The nation, being democratically minded, could not tolerate for a moment that those who are temporarily entrusted with power should use physical force to compel the electorate to adopt views that it shows no signs of adopting otherwise. The wise man does not politically hit his neighbour on the head when he can be certain that, if he does, he will in his turn inevitably be stabbed in the back.

General Averescu's Victory.

The fact that the British conception of elections does not apply in Roumania does not justify us in holding that it ought to prevail there. In borrowing democratic institutions the Roumanians have preferred to adopt their own interpretation of them, and in so doing they are not alone in South-Eastern Europe. Their Constitution is in many respects a model of democracy. Roumanians, it lays down, "without distinction of ethnic origin, language or religion enjoy liberty of conscience, liberty of education, liberty of the Press, liberty of meeting, liberty of association and all liberties and rights established by law." "Individual liberty is guaranteed," "all powers of the State emanate from the Nation," while the only adjective missing from the suffrage, which is described as "universal, equal, direct, obligatory and secret," is—free. Fortunately for General Averescu, the Roumanian Prime Minister, who was charged with holding the elections, none of these provisions has prevented him from converting his six or seven supporters in the last Parliament into 286 in the new one. There is a strong feeling in Great Britain that the successful working of constitutional government requires the two-party system. Roumania is a convinced supporter of this theory. She established it in practice right up to the War, and as soon as she was confronted with a multiplicity of parties a new electoral law provided in effect that two only should count. This was contrived by an ingenious device. When a Government has reached the end of its four-year parliamentary period—or before, if shown to be necessary—custom requires that it should resign, and that the leader of another party should be called upon to form a Cabinet and hold elections. His party has only to obtain forty per cent. of the total votes polled to have allotted to it sixty per cent. of the seats in the new legislature. General Averescu's success suggests that, however exiguous a party may be in a given Parliament, it need never despair of coming back with a substantial majority, if only its leader can be in charge of the Government before the elections are held. Thus the number of four-year changes that could be rung between General Averescu and M. Bratianu would be restricted only by the length of their respective lives. At the last elections in 1922, it will be recalled, the Transylvanians, taking part in a Roumanian election for the first time, complained so bitterly of their novel experiences that for a long time

Digitized by Google

they could not be persuaded to participate in the parliamentary life of the newly united Kingdom, which had gone through the ordeal of the Great War in the cause of national unity. In view of the report that M. Vaida Vaevod, a former Prime Minister, was prevented during the recent electoral campaign from leaving Cluj to return to his constituency, and that there was bloodshed in Bessarabia, a reputed stronghold of the Tsaranist or Peasant Party, there may be increased bitterness among the National Party and Tsaranists, who are already sore at not having been invited to form a Government, on the strength of being the strongest Opposition combination when the Liberals went out of office.

Politics or Prosperity.

While the non-Roumanian is not called upon to pass judgment on the Roumanian electoral system, he will find it difficult to help wondering how long a nation will be in favour of appearing to exalt politics above domestic happiness based on prosperity and mutual good will. In the case of the 1922 elections it took the Transylvanians two years to abate their soreness, and their experiences were responsible for their grave mistake in absenting themselves from the Coronation ceremony, an offence which, in the light of King Ferdinand's refusal to entrust them with the Government this time, has been held to carry with it their exclusion from office during his lifetime. Unless recent reports are entirely inaccurate, there will be a fresh accession of bitterness in Transylvania, which, when it is found that the office of Prime Minister can be permanently restricted to politicians of the Old Kingdom, may be directed as much against the State that sanctions such an electoral law on its Statute Books as against the politicians who administer the law. It would certainly be a bad thing for Roumania to have entered upon a long period of political instability, and as General Averescu has set himself to reverse that part of his predecessor's policy which was handicapping the country's development, it may be that he will know how to remove the possibility of any lasting breach between Transylvania and the rest of the Kingdom.

Greece and Political Normalcy.

The hopes of a smooth and speedy return to constitutional normalcy in Greece will have received a check with General Paraskevopoulos's rejection of the offer to form a Government. There would seem, however, to be no need for pessimism, if only for the fact that General Pangalos showed sound judgment in his selection of the first candidate for an admittedly difficult post. By common consent General Paraskevopoulos was the right man for the position. The political leaders, who are playing the part of reformed Knaves of Hearts in the Pangalist political kitchen, had promised him their support, and all that was necessary was that he and the President should see eye to eye in regard to the scope of their respective offices and to the rate at which the Constitution now in cold storage should be thawed for the benefit of an expectant public. The President, it appears, was not ready to adopt the pace recommended by General Paraskevopoulos for the return to normalcy; but the latter paid a loyal tribute to the genuineness of General Pangalos's intentions, while excusing himself from working with him. If Greece can show her disappointment objectively without making the setback in her hopes a matter of politics, the President will be the more ready to believe that the worst of Greek politics has been exorcised, and may reconsider his views on the amount of power that he considers it necessary to keep in his own hands. Hitherto he has shown a genius for getting the right men round him; the next step is to allow them more scope for exercising their talents. Greece is too many-sided to be governed by the knowledge of one man.

Towards a Balkan Settlement.

Two events in the Balkan Peninsula last week may be regarded as encouraging by those who believe in the possibility of the different countries ultimately pulling together and are content to have the progress to this end slow provided that it is maintained steadily. There was another "incident" on the Græco-Bulgarian frontier; but this time both parties united in making light of it, although it was entirely on all fours with the similar incident that not many months ago led to an invasion of Bulgarian territory by Greek troops. A *komitaji* band, it appears, tried to force its way on to Greek soil; it was opposed by a Greek post and as a result of an exchange of shots a Greek soldier and one of the *komitajis* were killed. The Swedish officers appointed by the League of Nations to deal with incidents of this kind at once took charge of the matter, and there is no question of any strain on the correct relations existing between the two countries. Apart from the reserve maintained officially in Greece, it appears that the Press on each side has on this occasion held itself in with a firm hand. This, too, is a welcome development, for it cannot be too strongly insisted upon that the Press of the Balkan countries has it in its power to make the relations between the different peoples good or bad, as it pleases. A second incident, bearing indirectly on Balkan relations, is the ratification of the Turko-Bulgarian treaty, signed last October. Its provisions met with considerable opposition in Bulgaria, because by it the Bulgarian Government abandoned all claim on Eastern Thrace and on the properties formerly belonging to the Bulgarian population established there, and there was considerable delay in the ratification. The Treaty has now been endorsed by the Sobranye, and once more Bulgaria has given proof of a spirit that has already stood her in good stead—the spirit that prompts her to look forward instead of backward. She has made a further contribution to the cause of peace which will not be lost on her neighbours, if at the same time she can continue to deal with the *komitaji* problem.

be gained by attempting to drive through them. Such problems as those of the Sudan and of Imperial communications time will surely solve, and if there is one thing above all that well-wishers of the Egyptian people may hope for, it is that their present leader's closing years may be spent, not in bitter and certainly futile struggling, but in striving to approximate the real and permanent interests that bind Great Britain and Egypt together. That the High Commissioner will leave no vagueness concerning Great Britain's attitude may be taken for granted: it is to be hoped that Zaghloul Pasha will be equally and harmoniously unequivocal.

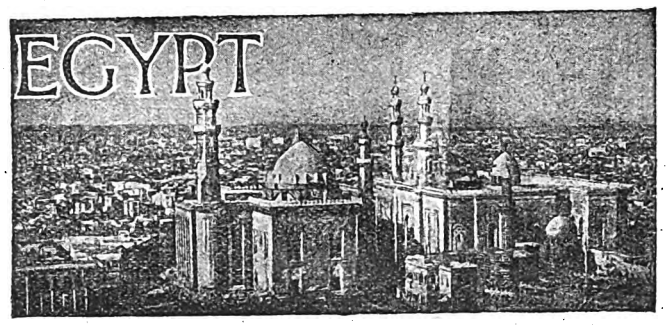
THE EGYPTIAN TANGLE.

If ever the ageless Gods who preside over the land of the Nile found cause for cynical laughter, surely they will be merry at this moment, when strident students and feckless fellaheen, with eyes still wet and throats still hoarse through crying for the moon, may be finding that, in the new, post-War political usage (the only usage they have ever known) their interpretation of Western conceptions is not the true interpretation. It is not for us now to examine at whose door lies the responsibility for granting them personal but theoretically conditional independence; we may say, however, that the impartial historian of the future will conceivably blame the British politicians who, without first guaranteeing absolutely, instead of merely reserving, the famous "Four Points," gave Egypt independence and a Constitution, equally with the Egyptian Nationalists who imagined that Egypt had thereby become a sovereign State. Be that as it may, it is patent that the Egyptians, who have just returned Zaghloul Pasha in such a manner that, speaking in the democratic jargon fashionable to-day, he, and he alone, may be said truly to "represent" his people, are possibly to be awakened, not rudely, perhaps, but sternly and memorably—awakened, that is, if they do not themselves awake and remove the blinkers that have hitherto prevented their seeing the realities of the situation. The views of successive British Governments upon Egypt, and particularly the views of the British High Commissioner in Egypt, are well enough known: there can, so long as the Zaghloulists persist in that attitude of mind which governed their administration up to the time of the assassination of the Sirdar, be no accommodation between the British Residency and those numerous Egyptians who have as yet given no sign that they recognise the special position of Great Britain in Egypt. Of all the facts that shape the events of the world, geographical facts are perhaps capital; and it is not an English fault, but more (yet superficially) an Egyptian misfortune that Egypt lies on the route of British Imperial communication, and that next to the land of the Pharaohs (or, rather, separated by a few hundred miles of desert) is a land of increasing cotton, the Sudan, which was reclaimed largely by British enterprise, and which, moreover, will one day want its independence. Through inexorable circumstance, therefore, Great Britain is forced to supervise the use which Egypt makes of her new freedom; but actual independence she is only too glad to see the Egyptians enjoying. That the sweeping return of the Zaghloulists renders an already unenviable situation most delicate, if not dangerous, is true, but that a way out can be discovered—and one, too, in accordance with modern ideas of political liberty—we are yet hopeful. England holds an unparalleled reputation as the fashioner, slow but ingenious, of political systems, and it surely will not be beyond her power, through the admirable medium of Lord Lloyd, to give to political science a new connotation of independence, in which the actual and the theoretical conditions of sovereignty are more nicely laid down than they have been hitherto. We will not be so foolish as to prophesy upon future events in Egypt (prophecy upon such a subject contains but one certainty—that of going wrong), but we have abundant confidence that a solution, by other means, too, than a retrogression to Cromerism, which, incidentally, was not an end but a beginning, will be discovered.

Instead of vainly groping into the future, let us, therefore, turn to the immediate past, and try to see whether any lessons are therefrom to be learned. This is no place to discant on the demerits of the Administration of Ziwar Pasha, who, indeed, played a notable part in enabling his country slowly to recover its breath after it had been staggered by the murder of Sir Lee Stack and the consequences of that vile deed; but it is obvious that his Administration was before the Election becoming increasingly unpopular. In part this may have been due to the fact that Ziwar Pasha, like M. Venizelos when he was Premier of Greece, spent a large section of his time on foreign affairs, a subject in which the fellaheen is not yet so far advanced as to take more than an unintelligent interest. In his occasional absence from the helm of the domestic ship of State, the pirate politicians grew bolder and bolder; they came creeping out of the coves into which they had been cowed by the anger of Lord Allenby, until at last they could claim to have stolen almost all the votes of the country. It is to be remembered, therefore, that the all-absorbing interest of the Egyptians is, not foreign, but local affairs. This decline in the real power of Ziwar Pasha's position received inpetus from the variously estimated dismissal from an anomalous position of Nashaat Pasha. The downfall of this young politician left the road widely and inevitably open to the Zaghloulists. That cultured men like the Liberal Constitutionalists should have joined forces with the Zaghloulists can surprise only those who are aware how the Palace Party attempted to use its power; but it was a tragedy that the two best elements in the Egyptian nation should have opposed one another. The result of this secession was inevitable, and the defeat at the polls of the Unionist Party became one of the most signal on record. Realities once more are on the surface in Egypt's political life. Now it is not to be supposed that, in obtaining the dismissal of the only man, in the opinion of some observers, who could avert a return of Zaghloulism, the High Commissioner in Egypt did not foresee the result of this actions; rather is it to be presumed that the time was now adjudged ripe for a more precise definition of Britain's position *vis-à-vis* Egypt and also of Egypt's position *vis-à-vis* Britain. British intentions in regard to the Egyptian Monarchy have already been made clear; and a similar clarity is now, presumably, to be shown elsewhere. So far as we know, there had been no meeting until last Sunday between the British Residency and the aged Nationalist who has just been returned triumphantly at the polls; but the future cannot for very long contain in secret the respective views of each. Whether the new Egyptian Government works under a Liberal Constitutionalist screen, or under full Zaghloulist colours, is a matter of minor importance, seeing that the real powers in the country are, respectively, the Egyptian Monarchy, Zaghloulism and the British Residency. The problem would appear to lie in finding a *via media* between the second and the third.



Naturally we should like to hope that the Zaghloulism of 1926 is different from the Zaghloulism of 1924, the latter being so poisonous and obnoxious a growth as to demand eradication. We should like to hope that Zaghloul Pasha, who has never been a profound student of other than domestic politics will, either as Prime Minister or as the power behind the Prime Minister, so concentrate on the local affairs and the material advancement of his country as not to impinge upon the Four Reserved Points. That he should unreservedly swallow these points would argue a capacity of digestion which it is hardly fair to expect him at his time of life to possess. He is an old and aging man, but if so be that he should so devote himself to the local, or rather, the real interests of the country until such time as he may retire from politics in merited popularity, he will have done his country infinite service. There is ample room for Egypt's expansion apart from the Four Points, and there is nothing at all to

(Continued on page 620.)

The Near and Middle East*

From Our Own Correspondents.

Cairo, May 22.

The Indian Memorial.

The unveiling at Port Tewfik of the Memorial to the members of the Indian Army who fell in Egypt and Palestine during the Great War, performed by Lord Lloyd on Sunday last, was in every respect a ceremony befitting the high and solemn occasion. The staff-work was excellent. There was not a single hitch in the arrangements made by Lieut.-Col. C. E. Hughes, of the Imperial War Graves Committee. The introductory speech by the Hon. Sir Cecil Campbell, Chairman of the Anglo-Egyptian War Cemeteries Executive Committee, was admirable in delivery as well as in substance, the address by Lord Lloyd was fully up to the high standard which the High Commissioner's utterances since he has been in Egypt have accustomed us to expect from him, while the closing speech of the Maharaja of Alwar was welcome in its unexpectedness (by the general public) and in its tone and substance.

There were two dramatic moments: one when the Rajputana with its passengers and crew lining the decks steamed past the Memorial as the unveiling concluded, and the other when the Maharaja of Alwar solemnly removed his shoes before mounting the steps of the Memorial to deliver his speech.

As one watched this latter little ceremony and listened to the references made by this dignified son of India to "our glorious Empire" and "the ties that unite Indians in their attachment to the British Crown" one could not help remarking, that here was the accredited representative of the proudest ruling races the world has ever seen publicly and gladly acknowledging their pride in forming part of an Empire, association with which Egyptians, the highest as well as the lowest, have proclaimed to be beneath their dignity. One would have wished for a much bigger audience of Egyptians to note the splendid presence of this Indian Prince and to hear the words of proud loyalty to the Empire that fell from his lips.

The Egyptian Army Sports.

Cairo is still talking about the amazingly bad staff-work at the Egyptian Army tournament on Tuesday last. Beyond the Royal Party and the Diplomatic Corps no adequate provision was made for the less important guests, who were left for all practical purposes to fend for themselves in the sun and see what they could from behind the broad backs of Egyptian officers who showed little consideration in this respect for their guests' not unnatural desire to see something of the display for which they had been invited. It is not to be wondered at that in the circumstances numbers of the European guests left early in disgust. To old-stagers this contretemps has come as a great surprise, since in the past entertainments of this nature given by the Egyptian Army have always been characterised by their good organisation and the excellence of the arrangements made for the comfort of their guests.

A Charity Tattoo.

The British troops in Egypt are organising a military tattoo to take place on the Gezira racecourse on the evening of June 5. The proceeds will go to the Soldiers and Sailors Families' Association Fund. It is understood that in reality this is a rehearsal for something on a much bigger scale later on. If the present venture, which has been hurriedly arranged and is on a relatively small scale, is at all successful, it is proposed to organise something really big—modelled on Wembley—for production during the winter season, with the double object of providing entertainment for the visitors and funds for Service charities. The idea is excellent, and is deserving of the fullest support from the public.

The Cocaine Vice.

Details have just been published showing what has been done in dealing with the cocaine traffic since the new "noxious drugs law" was introduced a year ago. The figures quoted are a positive revelation and fully justify the campaign carried on by the police authorities to obtain the extra powers and the heavier penalties that have, on the one hand, made it worth while to track down these offenders and, on the other hand, are calculated to have a deterrent effect on their activities. It is satisfactory to learn that as a result of the convictions obtained the price of the drug has been driven up beyond the reach of the lower class. At the same time one notes with surprise that these statistics refer only to the local population, and one learns with regret that the new law is applicable only to local subjects. Foreign offenders are still amenable to the old law with its ridiculously low penalties, which made it so impossible for the police to cope with this vice in the past. Foreign subjects are the most serious category of offenders, since it is they who import the drug and carry on the wholesale trade, and in view of the success which has attended the increase of penalties in the case of local subjects, it is sincerely to be hoped that the foreign Powers, without whose consent a similar change in legislation applicable to foreigners cannot be made, will not hesitate to give their immediate consent, for otherwise they will lay themselves open to the very just complaint that they are encouraging the exploitation of the Egyptians for the benefit of their own nationals.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

Constantinople, May 22.

The Mosul Negotiations.

The Mosul negotiations still continue to be a mystery, as the alleged agreement made by Sir Ronald Lindsay and Tewfik Rushdi Bey to make public nothing whatsoever regarding the progress of the *pourparlers* has been rigorously respected. The Parliamentary Commission of Foreign Affairs was, on Saturday, let into the secret of how things stand, but apart from announcing this fact and reporting that a somewhat momentous Cabinet meeting was held immediately afterwards, the Press is constrained to content itself by supposing that things are going well. It is perfectly clear, however, that the negotiations have entered into such a stage as has never yet been recordable in any previous attempt to settle this controversy, and it appears certain that territorial differences are not constituting any serious difficulty in the present discussions. To judge from the actual financial condition of Turkey, propositions envisaging possible economic benefits would be expected to assume the place of primary importance, and this theory also appears to be held by many of the leader-writers of the Turkish Press. If the rumours which are current—representing the negotiations to be at present entirely engaged on questions of financial compensation for any possible territorial cession—can be relied upon, tremendous progress has been made on the situation of a year ago, when no common ground could be found.

The New Taxes.

Since May 1 the outstanding question of the day has not been Mosul or Mussolini, but the new taxes. Everyone talks—or rather groans—about this additional burden in their offices, clubs, houses and even in their sleep. It cannot be gainsaid that there is sufficient reason to groan Everything is taxed or monopolised, and many things come in for both. How long the public of Turkey will be able to respond to the ever-increasing demands on their pockets, it is impossible to say, but some idea of their opinion on the new law is being manifested daily through the medium of the Press and personal representations, in the form of committees, to the Government. All commodities bought in shops are taxed at the rate of 2½ per cent.—the purchaser to pay the tax. In some instances as much as 15 per cent. is exacted. This is in the case of confectioners' shops, which also provide accommodation for a few people who can be served with tea. Whether one takes advantage of the tables and chairs in these shops and eats a cake sitting down, or whether one buys cakes and other things over the counter for home use, a tax of 15 per cent. is charged. Such cases provide just cause for criticism and protest, and reports point to the fact that the authorities are realising that something of a mistake has been made and are considering the possibility of modifying the law. The tax and the unfortunate results of its application have been the subject of some heated discussion in the Grand National Assembly, and it is not at all difficult to imagine on whose side are the people.

The task of collecting this much-resented tax is by no means an easy one, as no notion exists as to the extent of stock possessed by shopkeepers on May 1. Again, many of the latter are charging 2½ per cent. but not giving the necessary stamps in return but pocketing the tax, and this form of "loyalty" is being practised to such an extent that the Government received during the first two weeks of May only 25 per cent. of the taxes collected by shopkeepers, and so forth. In view of the fact that from Constantinople alone the Government is profiting at the rate of one million liras a month, the coming year's Budget appears to be in for a good time—always providing that there is money still left in the people's pockets after the first three months.

On June 1, which in future will constitute the beginning of the Turkish financial year, a new income tax law comes into force. This new law will entail all business people keeping personal ledgers in Turkish, so as to permit effective control by the fiscal authorities. No matter how diligent the surveillance by these functionaries the same difficulties as those mentioned with regard to the collection of the "consumption" tax will doubtless be encountered.

Turkey on Britain's Strike.

The prestige of Great Britain and especially that of her Government has registered a remarkable improvement here as a result of the way in which the General Strike was handled, and the Press, which undeniably expressed the general opinion of the whole of Turkey, was admittedly astounded that such a crisis should have passed with so little incident. Every phrase of the strike and every move of the Government were watched with the keenest attention, and the news of the settlement was published in every paper side by side with the finest eulogistic leaders. "Never has such a victory been known and never has a country seized the chance of demonstrating how weak are the germs of Bolshevism" was the unanimous demonstration of all, and no matter what opinions are held as regards the present British Government's foreign policy, no tribute was considered too high for the way the situation was liquidated.

Accidents in Constantinople.

Some light has been thrown on the reason for the exceedingly high number of motor car accidents which are reported daily in Constantinople. Compared with other important towns and cities of the world, Constantinople must certainly be well up the list of street accidents, and at least 90 per cent. of these are attributable to fast and careless driving. This last week the civil officials of the Prefecture have been extraordinarily diligent, with the result that they have discovered that a quite considerable number of driving licences have been issued to incompetent individuals who have succeeded in bribing the clerks whose work it is to issue licences and permits. Consequently a strict combing out of false-licence holders is being made, and an alarming number of arrests have already been made. Naturally such corruption has pointed to the possibility of like systems in other departments, and to-day's papers state that inquiries have

unfortunately shown that the corruption is not confined to the first-mentioned department. It is to be hoped that the measures of investigation and punishment will not be relaxed until a thorough purging of this detrimental element has been effected, as nothing is so damaging to the prestige of the authorities as the knowledge that some individuals are utterly corrupt.

General News.

During yesterdays' discussion of the new Budget in the Assembly the question of the repair of the Dreadnought Yavouz—the ex-Goeben—was again brought up. Provision has at last been made for this man-of-war to be repaired and brought, more or less, up to date, and an allocation of three and a half million liras has been made. Specifications for the required work are being immediately prepared and on completion tenders will be accepted from any interested firms.

In accordance with the statement made at the time of the recent mobilisation that troops were required solely for the spring manœuvres, many of the men called up are now being demobilised.

ALBANIA.

Tirana, May 20.

Diplomatic Changes.

The new Minister for Great Britain, Mr. O'Reilly, presented his Letters of Credence three weeks ago, in succession to Sir Harry Eyres, who represented England for five years, and who leaves in Albania the happiest memories. He was highly esteemed for his sympathy with the country.

Great Britain has in Albania interests not only political but also economic, in consequence of the concession which the Anglo-Persian Company has obtained. The impression is held that the new head of the Legation will find in the country as much sympathy as his predecessor. It is thought here, however, that the British Legation may leave Durazzo and establish itself in Tirana. For Durazzo, a sea-port, is 35 miles from the capital—only an hour's run by motor, it is true, but an inconvenience all the same. It may be remarked that only the British, Greek, and Italian Legations are at Durazzo, while eight Legations are at Tirana, the seat of the Government.

After Mr. O'Reilly, M. Triandafirescu, the Roumanian Minister, has presented his Letters of Credence, succeeding M. Simon Mandrescu. The ex-Minister has left Albania to take up his Chair of German Literature at the University of Bucharest. It is being said here that his mission failed, for he had advocated the project of creating large numbers of Roumanian schools and colleges in Albania. That, apparently, was a chimera, for Albania has decided not to allow the opening of any schools for foreign propaganda.

One may note here, among the diplomatic changes, the resignation of M. Midhat Frasheri from the post of Minister at Athens, and the nomination of M. Jemil Dino at Rome. M. Frasheri, under his *nom de plume*, Lumo Skendo, has just established a library at Tirana, wishing in this way to give an example of independence and of love of work to his fellow-countrymen. M. Dino is the future brother-in-law of Ahmed Zogu, whose sister he is marrying. The recall of M. Ekrem Lipohova, the present head of the Albanian Legation in Rome, appears to be motived by the discontent which surrounds the questions of the Bank, of the Loan, and of the purchase of two small steamers—arrangements concluded with Italy through the medium of the brothers Lipohova, Ekrem and Myfid, ex-Ministers for Finance and Foreign Affairs respectively.

Italy and Albania.

Three weeks ago the newspapers published speeches made by Signor Armando Mussolini, Editor of the *Popolo d'Italia*, which treated Albania as a future colony for the purposes of Italy's surplus population.

This statement, coming from the brother of the Duce, has created a painful impression in certain circles, while others attach no importance to it. It is worth noting, however, that Baron Aloisi, the present Minister of Italy, who arrived here about six weeks ago, is an intimate friend of the Duce, and that it was because of this that he was chosen to replace the Marchese of Durazzo.

Political Sentences.

A special tribunal has been established at Tirana for political crimes. It has to judge upon all cases of attempts against the Government, the State, or the person of the President of the Republic.

According to the official journal, the *Fletorja Zyrtare*, Sotir Pechi, Ali Klisura, Fan Noli, Kemal Bushati, and Angjelin Luma have been condemned *in contumaciam*, while Dr. Michel Turtuli has been sentenced to ten years' hard labour, also *in contumaciam*. Of these men, Sotir Pechi and Michel Turtuli were Members of the Council of the Regency in 1921-1922, while Ali Klisura and Kemal Bushati were Deputies, the former for Argyrocastro and the second for Scutari; Angjelin Luma is a Scutariote and an ex-employee of the Finance Department; and Mgr. Fan Noli is an Orthodox Bishop who filled the rôle of Albanian Delegate at Geneva, Minister of Foreign Affairs, and President of the Council. All have been accused of high treason against the State, and against the person of the President of the Republic. Since the arrival of Ahmed Zogu all have been living abroad.

The Albanian Church.

It is known that the Orthodox Church of Albania became an autocephalous church in 1922, breaking all relations with the Patriarchate of Constantinople. A Commission was appointed at the beginning of 1923 to regularise the position with the Phanar, but the Patriarch Meletios proved himself intransigent, not being willing to accord autonomy to the Albanian Church.

Since that time relations have been in abeyance between the Albanians and the Phanar. Nevertheless, the Patriarchate has just appointed the Metropolitan of Trebizond, Mgr. Chrysanthimos, to get into touch with the Albanian Government. He came to Tirana two weeks ago. It is said that Greece is interesting herself particularly in this question, as an excuse for interfering in Albanian affairs, and, in general, for playing the rôle *vis-à-vis* this country which Russia formerly played towards Turkey, as Protector of the Christians. That is a state of things to which Albania would be very unlikely to submit.

Opinion in Albania inclines towards complete autonomy with the creation of a National Orthodox Church on the model of Greece, Serbia, Roumania, and even Czecho-Slovakia and Poland.

ROUMANIA.

Bucharest, May 18.

Political Activities.

The electioneering activities of the Government are now in full swing, with the result that motor tourists in Transylvania are liable to be held up by the police on attempting to enter or to leave any of the important constituencies, and to be conducted to the local prefecture of police to prove their identity—that is to say to convince the authorities that they are neither Nationalists nor Tsaranists trying to reach their respective constituencies. The elections for the Chamber of Deputies are to take place on May 25 and for the Senate on the 28th, and until these dates are past there will be no political business to report on. It seems fairly clear, however, that the Averescu Government stands a good chance of being returned with a sufficient majority. The Nationalists and Peasants Party appear to have lost ground very considerably through want of unity.

Obituary.

The death took place last week, after a painful illness, of M. George Marzescu, Minister of Justice in the Liberal Cabinet, a man who appears to have been universally loved and respected. He was still in the prime of life.

CYPRUS.

Nicosia, May 19.

Laws Against Adulteration.

The recent passing of measures to provide effectively against the adulteration of Cyprus products gives general satisfaction. Legislation has been long overdue. It has been called for by merchants and agents in foreign countries, especially perhaps by those resident in Egypt, who have pointed out what very serious injury has been done to Cyprus trade by unscrupulous dealers in island products. The Greek Press has strenuously advocated drastic measures. Much care will no doubt be needed at the outset in application of the laws, and some difficulties may be encountered. As regards the exportation of wines e.g., there may be difficulty in tracing at what stage adulteration took place, as manufacturers are mostly individual villagers, from whom wines are bought for blending purposes by the merchants. It should, however, soon become generally easy to discriminate between offences proceeding from ignorance and those due to deliberate dishonesty. As regards cereals, especially wheat and barley, which are important among the products of Cyprus, they now often contain a large percentage of impurities from the not seldom rude, open air, stone threshing floors on which the primitive methods of winnowing and stacking are carried out, and on which the grain lies exposed. Now that tithe is abolished (and simultaneously, it would appear, imposed in Greece!) there should be great improvements, and grain properly cleaned as well as selection of grain for sowing introduced.

General News.

The Cypriote athletes who entered for the Pan-Hellenic Sports received a cordial welcome at Athens. Several distinguished themselves by winning first and second prizes. They have received an enthusiastic welcome on their return to the island. It is said that the next Pan-Hellenic meeting will be at Nicosia.

The Anglican Bishop in Jerusalem, Dr. MacInnes, arrived last week, and is a guest at Government House, where a reception is being held by His Excellency, the Governor.

A new Anglo-Greek fortnightly paper, published at Limassol, called the *Observer*—"Paratérétes"—which is described as the organ of the Agrarian Labour Party in Cyprus, contains a translation in English of a long speech by the Hon. M. H. Michailides, in the Legislative Council, in support of a motion introduced by himself for the abolition of the "Tribute" or Cyprus share of the Ottoman Debt. It is many years since an English or Anglo-Greek paper appeared previously in Cyprus: and it is to be hoped that it will have a successful carrer.

Mr. B. Dickenson, President of the District Court of Nicosia, has been appointed Pusine Judge.

The weather has become much warmer. It is expected that there will be a large influx of visitors next summer, probably earlier than usual.

CORRESPONDENCE

THE LUXOR KRUPP GUN.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In THE NEAR EAST AND INDIA of May 6, your Cairo Correspondent wonders whether the Krupp gun that caused the accident at Luxor was the original gun presented by the Germans to Ishmail Pasha as a token of his good will. May I enlighten him?

Some forty years ago a similar accident occurred at Suez while the Police were firing a salute, but on that occasion the gun used was a muzzle-loader. General Valentine Baker, who was head of the Police at that time, hoped to prevent similar accidents in the future by providing the police with breach-loading Krupps instead of the old muzzle-loaders which were all withdrawn.

Suez was in my command and the inquiry into the accident showed that the police completed the salute before granting first aid to their unfortunate comrade, whose arms were practically blown to pieces. Hence the accident was impressed on my memory.

I fear, therefore, that the Luxor Krupp had no connexion with the presentation referred to by your Correspondent.

Moreover, it would seem probable that Bismarck would show his "good will" by giving a whole battery of Krupps. Or was it a sample to induce Ishmail Pasha to re-arm his whole artillery with Krupps?

This sounds perhaps more like the "Honest Broker's" policy at that period.—I am, etc.,

THE LEBANON AS A SUMMER RESORT.

BY E. S. STEVENS.

The Lebanon is already a summer resort for the native inhabitants of Syria, and is rapidly becoming popular with the Egyptians and the people of Palestine. But it is of the Lebanon as a summer resort, not only for British officials in Egypt, Palestine and Iraq, that I am writing, but also for such people in England who are weary of wet summers, loathe the idea of a Switzerland crowded with tourists, and are tempted by the thought of cool mountains where the rain never falls from the month of June to the month of October, and of scenery which unites the charm of the Austrian Tyrol with the colour of the Riviera. I am writing for people who like to leave the beaten track; for those attracted by the odd blend of East and West and ancient and modern which is Syria, where ragged dervish and wearer of green turban jostle Greek priest and Maronite bishop, and the casino the mosque; where in one valley you will find a ruined temple to the Sun or to Astarte, and in another a Crusader's chapel; where, in one solitary eyrie you will find a hermit living the life men lived long ago in the Thebaid, and in another a *khalweh* or meeting place of Druse mountaineers, whose religion has been kept more secret than the mysteries of the Freemasons during centuries of curiosity.

. . . . . .

For those with cars, the whole Lebanon is accessible, as there are car-roads everywhere. If they wish to leave the roads and travel by mule, horse, or afoot in places where cars cannot go, they are undertaking no great expenses, for the Syrian pound makes an English pound go a long way, and out of Beyrout everything is reckoned in Syrian pounds except in a few hotels in fashionable places like Aley and Sofar. For those without cars, there is the taxi, ubiquitous now in the villages of Syria. Nor need the question of language present difficulties. Syrians are polyglots, and even in the most remote hamlets one usually finds one inhabitant at least who has been to America and can speak "English." But with French as a second language, one can get on well, and there is no need of dragoman or guide. It is preferable, of course, to speak Arabic, as without that language one is unable to communicate with the humbler people on whose lips so much of the charm and legend of the country still lingers, but it is not essential.

. . . . . .

The Lebanon offers every variety of climate in summer, from the not overwhelming heat near Beyrout—where there is excellent bathing—to the regions where the snow never melts; for, even in hottest August, patches of snow are to be found in deep crevices on such mountains as Hermon, Sannin, and Kanisen. At Aley and Sofar, where there are bands, dancing and bridge, with plenty of tennis, the heat is that of a pleasant English summer. But I fancy that those who care exclusively for such attractions as dancing and tennis would not come to the Lebanon in search of them; and there are other places, such as Brumana, Ain Zahalta, Baalbek and Shuweir, which, while catering for Europeans in the way of hotels and tennis courts, have more to offer in the way of beauty, interest and peace. For one thing must be said frankly at the outset: with few exceptions, very few, there are no hotels which come up to European standards in Syria; and in any of the much-advertised mountain hotels the presence of Levantines—Egyptians and Syrians—is apt to render the place unattractive for such as like peace and quiet. For neither Syrian, nor Egyptian, nor Oriental Jew, however Occidental in dress and education, seems to understand that to speak quietly is a courtesy which they owe to other visitors. They behave as if they had the place to themselves. The handsome, expensively-dressed Levantine matrons, with their numerous offspring, who vary painfully progress in high-heeled shoes about the village roads with excursions in taxis to coffee-houses in other mountain resorts, may be charming people to meet, but they are trying to live with. I imagine that, being indolent, they find it easier in their own houses to shout conversation to others than to go to them, and that the habit insensibly grows upon them. Even when they do not shout, the quality of the Levantine voice is peculiarly penetrating. Again, a native has a constitutional inability to close a door. He prefers to bang it, and will bang it at whatever hour he re-enters his room. And if these idiosyncrasies are perceptible in older people, it may be imagined that the children, full of holiday health and spirits, and rarely corrected by indulgent parents, are somewhat noisier than European children. I am not complaining. It is their country and they have a perfect right to make as much cheerful noise as they wish. But the European is often happier in places where human life is less exuberant and all-pervading.

. . . . . .

Many hotels are built on a plan which ensures the maximum of echo and sound. The favourite device of the hotel architect in Syria is to build all bedrooms off the central hall used for eating and loitering, and to leave an open space above each door, so that the visitor may have the full benefit of the performance of stout paterfamiliases from Beyrout or Alexandria on the out-of-tune piano—Cavalleria Rusticana played with one finger to a fancy bass is a favourite—or of the gossip and giggles of dark-eyed maidens whose high, minor voices are raised above the arpeggios and grace-notes of papa. It was much the same in ancient times. Athenæus, quoting Posidonius, writes of the Syrians:—

"They passed all their time in their . . . . public eating rooms, as if they had been their own private houses; and the greater part of the day they remained in them, filling their bellies with meat and drink, so as even to carry away a good deal to eat at home: and they delighted their ears with the music of a noisy lyre, so that whole cities resounded to such noises."

. . . . . .

Moreover, where the Levantine goes, there goes the bed-bug. This curse is all but universal in Syria, and the tourist must be forewarned. For those who are horrified by this statement ("English people have such sensitive skins!" a hotel manager said plaintively to me once when I made complaint), let me add that there are hotels where they are safe from such pests, and they are the hotels least frequented by the people of the country, such as the spotlessly clean little Peak Hotel at Shuweir, which only takes English and Americans, the Hotel Little at Brumana, certain hotels at Aley, Sup al Gharb and Sofar, and others whose names can be easily learnt in the country when one arrives. Hotel-keepers say to me, "How can it be prevented? This is a hot, damp country, and

PALESTINE EXPLORATION FUND.

The 61st Annual General Meeting

will be held at the ROOMS OF THE SOCIETY OF ANTIQUARIES, BURLINGTON HOUSE, W.1,

on WEDNESDAY, 9th June, 1926, at 3.30 p.m.

SIR CHARLES MARSTON
will Preside.

An address will be given by Dr. E. W. G. MASTERMAN (illustrated by lantern views) on the Archæological Sites visited by the recent INTERNATIONAL ARCHÆOLOGICAL CONGRESS to SYRIA and PALESTINE.

E. W. G. MASTERMAN, Hon. Secretary, 2, Hinde Street, Manchester Square, W.1

British School of Archæology in Jerusalem.

The ANNUAL GENERAL MEETING OF SUBSCRIBERS will be held on Friday, June 4th, at 5 p.m., at the ROOMS OF THE SOCIETY OF ANTIQUARIES, BURLINGTON HOUSE, PICCADILLY, W.1.

The Chair will be taken by Professor J. L. MYRES, M.A.

Professor F. C. BURKITT, D.D., F.B.A., who has recently returned from attending the International Archæological Congress in Palestine, will speak and the DIRECTOR OF THE SCHOOL (Professor John Garstang, M.A., D.Sc.) will describe the work of the School and Students during the past year dealing particularly with the **Pre-historic Discoveries at Tabgah** and the important **Excavations at Jerash.**

Both addresses will be illustrated with lantern slides.

Subscribers are invited to bring friends who are interested.

2, Hinde Street, Manchester Square, W.1. C. E. MOTT, Hon. Secretary

Digitized by Google

travellers bring the vermin with them." My reply is, that it can be prevented. Hotel managers in Syria are apt to sit comfortably in their offices smoking nagilehs and discussing politics with their visitors, leaving everything to the casual mercies of the native servants whom they employ. Let the manager see that rooms are properly cleaned, let him have floors washed with mild disinfectant after the departure of every guest, let him see that bedding is spread in the sun, and, above all, let him eschew wooden beds, wooden furniture, and wooden ceilings. Such wooden furniture as there is should be thickly enamelled, and examined constantly. Hotel servants should never be allowed to use hotel beds, and lastly, the hotel manager should not only give orders for cleanliness, but ensure by personal inspection that they are carried out.

But until the hotel keeper learns his business, to those going at all off the beaten track, I counsel taking a light tent and a sleeping-bag, easily stowed into a car or fastened to a mule. With these, one can go anywhere and do anything in peace and comfort; camping places are found everywhere, and food can be obtained anywhere. The food at most of the hotels, though not up to European standards except in Beyrout and the largest hotels in the Lebanon, is eatable anywhere, if somewhat Syrian in character. Moreover, if the guest is not accustomed to the over-fat and over-sweet character of Oriental food, he can usually select dishes more to his taste, and the manager will try to suit him. For myself, I find *lebban* (curdled milk), eggs, bread, honey and fresh fruit, which are obtainable for the most part in the poorest locanda, more than ample fare, and very health-giving; but to these may be added chicken and vegetables, which can be prepared to suit the visitor, if he orders them in advance. All through the summer fruit is plentiful and cheap. I have never eaten such huge and delicious plums as in the Lebanon, and there are, besides, fresh figs, white and black, fresh bananas, apples, pears, peaches and the best grapes in the world. Mountain honey, if you can get it, is delicious, so is the grape *dibis*, or syrup, a honey-like, healthful addition to bread, whether the unleavened Arab loaf or the usually procurable French roll.

(To be continued.)

OVER-SEAS LEAGUE LUNCHEON.

Lord and Lady Allenby are to be the guests of the Over-seas League at their monthly luncheon at the Criterion Restaurant on Friday, June 4, at 12.45 p.m. The Chair will be taken by the Rt. Hon. L. S. Amery, Secretary of State for the Dominions, and further particulars may be obtained from the Secretary, Over-Seas League, 6, Park Place, St. James', S.W.1.

BRITISH SCHOOL OF ARCHÆOLOGY IN JERUSALEM.

The annual general meeting of subscribers to the British School of Archæology in Jerusalem is to be held to-morrow (Friday), at 5 p.m., at the rooms of the Society of Antiquaries, Burlington House, Piccadilly. The Chair will be taken by Prof. J. L. Myres. Prof. F. C. Burkitt, who recently attended the International Archæological Congress in Palestine, will speak, and the Director of the School, Prof. John Garstang, will describe the work of the School and Student during the past year. He will deal particularly with the pre-historic discoveries at Tabgah and with the excavations at Jerash. Subscribers are invited to bring friends.

Two Danish officers, Lieut.-Colonel Winkel and Captain Berg, who have been appointed by the League of Nations to delimitate the boundary between Iraq and Turkey, are leaving Copenhagen very shortly for the Iraq Frontier.

NEWS IN BRIEF.

The death is reported from Bombay of Goolbai, Lady Jejeebhoy, widow of Sir Jamsetji Jejeebhoy, fourth baronet.

In the presence of members of the Diplomatic Corps and numerous prominent residents, a Carnegie library was opened in Belgrade on May 25.

An Indian police superintendent, Rai Bahadur Bhupendranath Chatterjee, was killed by a political prisoner at the Central Jail, Alipur, on May 28.

The Greek Government has offered to provide the marble required for the Byron monument which is to be erected at the poet's place of burial.

The Bulgarian Sobranye in Sofia on May 27, ratified the Turco-Bulgarian Treaty. The Ministerialists voted for ratification and the Opposition abstained.

A storm of extreme violence, accompanied by torrential rain, swept down on the town of Novisad (Yugoslavia) and the surrounding country on May 25, and did great damage. Nine persons lost their lives.

Ons Vaderland states that the South African Government has invited the Indian Government to hold an Asiatic Conference at Cape Town or Pretoria during the Parliamentary recess.

One of the Steaua Romana oil wells at Ceptura, in the Prahova Department, was struck by lightning last Saturday and caught fire. This well produces a hundred wagon-loads of oil daily. Measures have been taken to prevent the extension of the fire in this very rich oilfield.

Some 10,000 head of cattle on their way to summer pastures in the Caucasus between Tiflis and Mengliz were overtaken by a rainstorm which lasted several days. Hundreds fell over precipices and were killed. A cattleman committed suicide in his despair.

Three delegates of the National Council of Palestine Jews, the Chief Rabbi Uziel of Jaffa, Mr. Dizengoff, former mayor of Tel Aviv, and Dr. Arlosoroff, Labour leader, left Jerusalem last Friday to present a memorandum of the Council to the Permanent Mandates Commission at the meeting to be held there this month.

An Army Instruction states that all ranks serving in India may be required to go up in aircraft as part of their training or for specific duty. The authority for ordering flights rests with generals commanding, colonels on the Staff commandants of schools, and commanders of regiments, battalions, and artillery brigades, by written authorization. Casualties arising from such duty will be regarded as due to active service for the purpose of pension or gratuity.

THE NAIRN TRANSPORT SERVICE.

The Nairn Transport Company is now running its overland desert service by the northern route, Beyrout-Tripoli-Homs-Palmyra-Rutba-Baghdad. Convoys leave Baghdad and Beyrout on Thursdays, arriving at Baghdad on Saturdays about 2 p.m. and at Beyrout about 5 p.m. Passengers from Beyrout sleep on the Thursday night at Tripoli, while those leaving Baghdad sleep at Tripoli on the Friday night if the convoy arrives too late to proceed to Beyrout by daylight. Extra convoys now leave Baghdad every alternate Tuesday. There is a frequent service of steamers from Beyrout to Europe, and through passages can, of course, be booked from Baghdad to London and vice versa. Besides the desert service the company arranges special tours for parties desiring to visit Palestine or Baalbek, also other places of interest in Syria.

Book Reviews and Notes.

AN UNCHRONICLED TALE OF IRAQ.

"THRO' THE GATES OF MEMORY. FROM THE BOSPHOROUS TO BAGHDAD." By Betty Cunliffe Owen. (London: Hutchinson and Co. 21s.)

Mrs. Cunliffe Owen in the course of her sojourn in the Middle East has met many interesting people and has experienced the usual sensations enjoyed by intelligent travellers. Her book, if it contained nothing else would re-open the Gates of Memory to those who have bolted and barred those portals of romance.

But her reminiscences deal with a series of events which have not yet been adequately chronicled and in which she and her husband played leading rôles. The full story of the Assyrians, the part they played in the Great War and their subsequent vicissitudes has still to be written, but Mrs. Cunliffe Owen has given us for the first time an account of the Refugee Camp at Baqubah (near Baghdad), where at one time Col. Cunliffe Owen had to control 80,000 refugees of every Christian sect, race, and language in the Near East. The word control is used advisedly, because among these Christians were the wild untamable mountaineers of the Hakkiari who were impatient to return to their ancient homes, and who could not understand why the all-conquering Allies were unable to restore those lands to them. Mrs. Cunliffe Owen does not tell us—as we know she could if she chose—of the struggles and heartburnings of Baqubah, of the intrigues of the Agha Petros party against the Mar Shimun. She does indeed relate—but not at first hand—the wonderful defence the refugees made when the camp was left exposed to the full brunt of the Arab attacks, and how by endurance and courage the camp saved Baghdad from attack.

Sill, perhaps she can induce "F." to collaborate with her and to give us a detailed account of those sad but interesting years. If she does so, we hope she will see that her publisher does not repeat the blunder made on the jacket of the volume under review where the refugee camp is described as existing "shortly after the outbreak of War" at "Baguta."

Mrs. Cunliffe Owen is pleasantly independent of the conventional system of transliteration of Oriental names, but she should be consistent and not confuse us with Kurds and Khurds. These, however, are small criticisms which should deter nobody from reading this charming volume.

THE TRADE WITH CHINA.

"THE CHRONICLES OF THE EAST INDIA COMPANY TRADING TO CHINA, 1635—1834." By H. B. Morse (Oxford University Press. 4 vols. 70s. net.)

A monumental work of learning, this is also a very interesting book, and one which ought to make its way into the library of every decent college in India. We take that point first, because Indian librarians, reading on the cover the reference to the trade between Canton and London, may think that the book is no concern of theirs, when, as a matter of fact, it is a most important contribution to Indian commercial history. The trade between Canton and London was triangular, not linear, and India was the third point of the triangle, supplying a large proportion of the purchasing power with which the merchants in China financed the trade, and we know of no other source where Indian students can gather the facts of the trade in opium and raw cotton, or the remarkable interchanges of specie, by means of which tea, silk, and other goods were moved to the European markets. In form the book is a chronological summary of the relevant records preserved in the India Office, with convenient tables showing the most important data, from the time of the "London's" first abortive venture Macao in 1635, down to the termination of the Company's trading privileges just two centuries later. Dr. Morse's special qualifications for such a task are well known, and we have no criticisms to offer on the result: the thing is done once for all, and students now have at their disposal in convenient form the masses of facts for which they have hitherto had to search the records. It is a great achievement, on which we can congratulate the author without reserve.

MOSUL AND ITS MINORITIES

By H. C. LUKE

(1920-24 Asistant Governor of Jerusalem), Author of "The Fringe of the East."

Illustrated with many reproductions of photographs and 3 maps. Demy 8vo. Cloth. **10s. 6d.** net.

"Whether dealing with the past or the present, with devil worshippers or primitive Christians, Mr. Luke carries his immense erudition with grace, and when one has finished with these pages and their many photographs it is difficult to realise that under the guise of travel sketches one has been reading history of a difficult and unfamiliar kind."—DAILY TELEGRAPH.

14, HENRIETTA STREET, LONDON, W.C.2

LECTURESHIP IN ASSYRIOLOGY.

On the recommendation of the General Board of Studies, the Senate of Cambridge University on May 21 approved of certain proposals for the establishment of a University Lectureship in Assyriology. The report of the Board explained that in founding the Eric Yarrow Studentship for the encouragement of Assyriology, in memory of his son, an undergraduate of Trinity College in 1914, who fell in the War, Sir Alfred Yarrow wished it to be understood that if the student proved himself a competent scholar and was prepared to continue the study of Assyriology, he and Lady Yarrow would be prepared to establish in perpetuity, with a stipend of £500 a year, an "Eric Yarrow Lectureship for the study of Assyriology."

Mr. C. P. T. Winckworth, of Christ's College, was appointed Eric Yarrow student for the period of three years from January 26, 1923, to January 26, 1926. The Special Board of Oriental Studies thereupon reported to the Vice-Chancellor that Mr. Winckworth's work had been entirely satisfactory, and that in the event of the establishment of a University Lectureship in Assyriology the appointment of Mr. Winckworth as the first lecturer would meet with their complete approval. The Financial Board expressed the opinion that in that event he should be included in Schedule "A" of the pensions scheme, and this would involve an annual charge of £50 upon the University Chest. The General Board therefore proposed that the generous offer of Sir Alfred and Lady Yarrow should be gratefully accepted.

ENGLISH ZIONIST FEDERATION.

At the Conference of all English Zionists, which was held at the Queen's Hotel, Leeds, on May 23 and 24, delegates attended from the constituent bodies of the English Zionist Federation, Order of Ancient Maccabeans, Jewish National Fund - Central Office for Great Britain, Federation of Women Zionists, Association of Young Zionist Societies, and the University Zionist Federation. One of the resolutions passed related to the Palestine Mandate:—

"Resolved that the delegates of the Zionist bodies in the United Kingdom in Annual Conference assembled have received with satisfaction the statement of Dr. Weizmann, the President of the World Zionist Organisation, express-

Digitized by Google

ing the view that His Majesty's Government "desires faithfully to discharge its obligations in the spirit of the Mandate.

"The Conference appreciating the endeavour of His Majesty's Government to give effect to the spirit as well as the letter of the Palestine Mandate, expresses the earnest hope that His Excellency the High Commissioner for Palestine will take the necessary steps as speedily as possible to accede to the representations of the Jewish Agency in regard to the allocation of State and Waste Lands for close settlement by Jews, as provided in Article 6 of the Mandate and for adequate grants in aid of the maintenance of Jewish schools in the country.

"The Conference further begs to urge upon His Excellency the High Commissioner for Palestine the desirability of putting into effect the Communities Ordinance 1926, in so far as the Jewish population of Palestine is concerned, and to accord to the Vlaad Leumi the legal recognition due to it as the elected National Council of Palestine Jews.

"The Conference urges also the necessity of safeguarding the status and the moral prestige of the Jewish people giving them the opportunity to share in defence of the Jewish National Home.

"That this Conference places upon record its strong disapproval of the action taken by the Agudath Israel in its action against the unity of the Jewish people in relation to Palestine."

ARMY DECORATIONS.

The King has given orders for the following promotion in and appointments to the Order of the British Empire, and has approved of the following awards, for services connected with the operations in Iraq from September to November, 1924:—

O.B.E. (Military Division.—Lieut. (local Capt.) J. O. Watt, M.B.E., Reg. Army R. of O., Gordon Highlanders, and 3rd Bn., Iraq Levies; Capt. A. I. Sargon, D.S.O., Ind. Army, Inspecting Officer of Police, Iraq; Squadron Leader E. R. L. Corballis, D.S.O., R.A.F.; Flight Lieut. H. V. Drew, A.F.C., R.A.F.

M.B.E. (Military Division).—Lieut. R. Hart, W. Yorks. R. (Prince of Wales's Own) and Iraq Levies; Zabit Class II. Shain Giwergis, 4th Batallion, Iraq Levies; Zabit Class III. Zia Giwergis, 3rd Battalion, Iraq Levies.

Distinguished Flying Cross.—Flight Lieut. E. P. Roberts, M.C., D.C.M.; Flight Lieut. S. L. G. Pope.

Distinguished Flying Medal.—240449 Ldg Aircraftman (now Corpl.) F. M. Pape; 342485 Ldg. Aircraftman T. J. Waddel; 344579 Aircraftman 2nd cl. E. Barber (since killed in action).

Meritorious Service Medal.—No. 5763209 Sergt. H. J. Edwards, D.C.M., Norfolk R. (local C.S.M., Iraq Levies).

The King has given orders for the following appointments to the Order of the British Empire, and awards, for services connected with the operations in Kurdistan (Choarta region) from June 6 to July 10, 1925:—

C.B.E. (Military Division).—Lieut.-Col. G. C. M. Sorel-Cameron, Extra Regimentally Employed List and 2nd Bn., Iraq Levies.

O.B.E. (Military Division).—Capt. R. Merry, Reg. Army R. of O., Gen. List and 2nd Bn., Iraq Levies.

M.B.E. (Military Division).—Lieut. A. G. Fairrie, The Queen's Own Cameron Highlanders and 2nd Bn., Iraq Levies.

Distinguished Service Order.—Squadron Leader J. M. Robb, D.F.C.

Distinguished Flying Medal.—142494 Serg. (Pilot) E. P. H. Wells.

Military Cross.—Rab Kamshi Slieman Sleewa, 2nd Bn., Iraq Levies; Rab Emma Izario Tamras, 2nd Bn., Iraq Levies.

M. Paraskevopoulos has resigned his mandate to form a Cabinet, and leaves Greece shortly for Paris. M. Rouphos is now mentioned as Premier.

THE WEEK AT HOME.

London, Tuesday Morning.

The Liberals' Death Rattle?

Incomparably the most important thing to record this week is the prolongation of the coal lockout, but for a day or two even that black shadow was covered by the quarrel between the Generals in the Liberals' camp. It seems that I was monstrously wrong in supposing last week that the dispute between Lord Oxford and Mr. Lloyd George was one of their periodical affairs, to be followed by the usual reconciliation, for to Liberals at least it has assumed the dimensions of a nightmare, or, perhaps, a release from one. It really appears that the pontiff has attempted, belatedly but very earnestly, to excommunicate the heretic; whereat the embers of the dying sect have burst into flames, magnificently heedless of the fact that the bodies of a few young Liberals are likely to be burned at the stake. Internecine warfare is never a very edifying spectacle for those not engaged in it, and though one may approve the mode in which Lord Oxford, with Earl Grey behind him (and also the unsuccessful hunters, Sir John Simon and Mr. Runciman) threw down the gauntlet to Mr. Lloyd George, it is difficult to see that any possible outcome may be worth the fuss and bother. One would despair of the future of Liberalism, indeed, if Mr. Baldwin were not so good a Liberal.

At the prolonged obsequies of the Liberal Party some have mourned, others have been gleeful, and the majority stolidly unmoved; scarcely anyone, however, could have desired it to peter out in so personal and futile a way. It may be that the soundest section of the Party is behind Lord Oxford in his disapproval of Mr. Lloyd George's action during the Strike—an action which is regarded as having been motived more by opportunism than by conviction; but there is no doubt at all that Mr. Lloyd George still commands a very considerable following. In certain quarters he yet holds enthusiastic sway, and it would be rash to assume that his personal influence is now at an end. My own opinion of his work for post-War England I have often enough stated here, but that does not alter the fact that, except among an intelligent few, the voice of the older and more principled leader of Liberalism carries little weight when democratically compared with his.

Hence the rock that was Liberalism is irretrievably split; nor is it only into two sections. For there are

members in the Liberal Party who will now follow neither Lord Oxford nor Mr. Lloyd George. There may yet be more moaning and gnashing of teeth in the twilight of Liberalism; but it will never again see the dawn.

The Strike and Politics.

Ostensibly the cause of disagreement between Lord Oxford and the leader of the Liberals in the Commons was over the question of constitutionalism during the General Strike. The orthodox Liberals were as convinced as the Government that no negotiations could take place between the Cabinet and the T.U.C. while the Strike was still on; Mr. Lloyd George, together with a certain number of independent men of all three parties, apparently thought that such negotiations could be indulged without harm to the nation. As far as we can judge, however, the greater number of votes supported the Government's attitude.

It is amusing to find some Labour politicians, now that the General Strike has failed, endeavouring to set out to their followers the advantages of constitutionalism. Mr. Ramsay MacDonald, for instance, who said that the T.U.C. were left no alternative but to declare a General Strike, has more recently written in praise of those slower, more constitutional methods by use of which he has risen to such eminence. Mr. Clynes, too, has condemned—after the strike—the use of direct action to attain an economic end. The Labour politicians are, in fact, trying hard to reap where at the critical time they failed to sow.

This dilemma in which the official Labour politicians were caught does not, however, appear to have impressed the public, which rallied to their side in the recent election at Hammersmith, where the Government candidate was easily defeated, and where the Liberal candidate had the melancholy but not unique privilege of paying a fee for failing to secure 2,000 votes. It perhaps is not unfair to say that, while the national estimation of the Premier remains extraordinarily and deservedly high, there is in the country a certain distrust of his Cabinet. How could one otherwise account for so signal a Labour success at Hammersmith?

Elsewhere, there have been indications that the "politicals" are distrusted, and that the Strike is regarded as by no means an obsolete weapon. When the coal lock-out is ended, we may expect some hard hitting on both sides, the economic and the political, of the Trade Union movement.

The Coal Situation.

To-day in the House Mr. Baldwin is to speak upon the coal situation, so that any remarks that might here be made would probably be superfluous. The position is not very hopeful, from whatever point of view it be looked at. The Government's promise for a £3,000,000 is at an end; there is still hesitation on the part of the Premier to get back to the Coal Report; and alike on the mineowner's and the miners' side there is still much stubbornness displayed. In some quarters, however, the clouds are said to be breaking, and one hears fairly generally of the alleged willingness of a majority of the men to return to work on the basis of an eight-hour day. Some Trade Union leaders have even gone so far as to counsel (conditionally, of course) a reduction in wages.

The public as a whole appears to be weary of the protagonists on either side, and is looking anxiously to the Government to end the dispute. Not that it has as yet been seriously inconvenienced by the shortage of coal, but the horrible shadow of uncertainty is once more protruding its head into the national life. The most picturesque reminder of this fact is the probable stopping of all racing after the Derby, to-morrow. But the possibility of the supreme tragedy, a victory for the colliery-owners by process of starvation, is steadfastly regarded as inconceivable. Those who do not understand these things can only hope that indeed such an end is not to be the nation's fate.

The Australians.

To those who hoped that the difference between the English and the Australian wickets would cause a decline in the Colonial cricketers' form, the solid performances of H. L. Collins' team must have caused surprise. But the deeper student of the game is really full of admiration for these men, whose spirit reminds one of nothing so much as the Yorkshire team. It is suggested, incidentally, that *the* Test team against them should be Carr, Hobbs, Tate, and the remaining eight Yorkshiremen. That, however, is most improbable, for Chapman and Hendren appear to be certainties.

In the county games, Yorkshire are still showing how unable they are to lose games, and Middlesex how to win them. Surrey, Notts, and Lancashire have scarcely settled down yet, but there seems little doubt that none of these has consistently touched its last year's form.

The Policeman and Golf.

This country in general has lately been talking much of two things, the policeman and golf, the first for what he did during the General Strike, the second because of the Championship at Muirfield. It has fallen to Mr. J. H. Taylor, one of the most popular golf professionals, to combine the two subjects. He has lately suggested that Golf Clubs should allow policemen of their districts to play on their links, of course under restrictions and during certain hours. He says that the game is a particularly suitable one for policemen to play, and his suggestion appears to have been received with considerable sympathy.

One doesn't quite know why, but the idea of policemen's playing games seems curious. One had never thought that they did much when off duty except such brawny exercise as tug-o'-war and Indian clubs and so on. But of all the less hazardous pastimes golf is indubitably the most apt for the imperturbable "Robert"; his temperament should be ideal, and his vocabulary quite adequate.

Art Shows.

The restlessness of modern English art and the distance which separates the younger generation's ideals from, say, the ideals of a man like Sargent, are admirably seen in two exhibitions that are now being shown in London, at the Leicester Gallery, Leicester Square, and at the Goupil Gallery, Regent Street. It is probable, indeed, that they will provide more interest to the student of art than to the general seeker after aesthetic pleasure.

At the Leicester Gallery is the "London Artists' Association"—a group of artists comprising Bernard Adeney, Keith Baynes, Vanessa Bell, Frank Dobson, Roger Fry, Duncan Grant, and F. J. Porter. Of their aims Mr. Roger Fry is, of course, the very capable propagandist and also a very capable exponent; but, artistically speaking, Messrs. Grant and Dobson are in advance of the others. Mr. Grant can really paint; and Mr. Dobson's sculpture and sculptural drawings are delightfully fresh.

Even faster in their self-imposed conventions are Messrs. John Nash, Gilbert Spencer, and Mark Gertler at the Goupil Gallery. The work of the first-named, however, hardly excites the interest which he once promised, for his trees are still without root in the soil, the surface of his lanes against all principles of road-making, the wheels of his farm-carts still impossibly awry, and so on. Mr. Spencer, in his heavily stylized way, attains at times a delicious freshness of vision and colour; and Mr. Gertler still summons with effect from those primitive, uncouth deeps that are in him. His brooding, thick-souled types are now deservedly well-known, and he has latterly achieved considerable success in studies in still-life.

PERSONAL AND GENERAL

TO-DAY

June 3, 1926 New Style).
May 21, 1926 (Old Style).
Dulkaada 22, 1344 A.H., of the Moslem Calendar.
Sivan 21, 5686, of the Jewish Calendar.

Mr. Arthur Hudson, K.C., has returned from India to 2, Vicarage Gardens, Kensington.

Sir Leslie Wilson, Governor of Bombay, left London on May 27 for Bombay, to join the P. and O. liner Cathay at Marseilles.

The Prince of Wales has consented to open formally the Ross Institute and Hospital for Tropical Diseases, Putney Heath, S.W.15, on July 15.

Professor Moret, the Egyptologist and Mme. Moret, of Paris, are staying with Mrs. Eckstein, at 18, Park Lane, during their visit to London.

It is officially announced from Cambridge University that Dr. R. A. Nicholson has been appointed Director of the School of Living Oriental Languages.

Mr. Rudyard Kipling has returned to his residence at Burwash, Sussex, after spending several weeks in the South of France recuperating from his severe illness.

The Lord Mayor of London and the Lady Mayoress will give a luncheon at the Mansion House next Tuesday (June 8), to meet the Marquess and Marchioness of Reading.

Aziz Izzet Pasha, Egyptian Minister in London, accompanied by Mme. Izzet, arrived in London last Thursday evening from Zurich, and is staying temporarily at Claridge's Hotel.

M. de Jouvenel left for Paris on May 27 to discuss the situation arising out of the formation of a provisional Government in Damascus and the promulgation of a Constitution for the new Lebanese State.

The High Commissioner for India accompanied by Lady Chatterjee left England last week for Geneva to attend the International Labour Conference. They will return to London about the middle of the month.

Under the auspices of the Anglo-Palestinian Club, Mr. Basil Worsfold will speak on "The Economic Outlook in Palestine," at the Jews' College, Guilford Street, W.C.1, on June 6. Dr. M. D. Eder will take the Chair at 8.15 p.m.

Sir Charles Walpole, who was found shot dead in London on May 24, was in 1882 appointed President of the District Court of Larnaca, Cyprus. His published works included "An Alphabetical Synopsis of the Turkish Criminal Code."

The sixty-first annual general meeting of the Palestine Exploration Fund will be held on June 9, at 3.30 p.m. in the rooms of the Society of Antiquaries, Burlington House, W.1. Sir Charles Marston will preside, and an address will be given by Dr. E. W. G. Masterman.

We learn that Lady Aberdeen, whose arrival in Bucharest was reported, was unable, owing to the strike, to proceed to her engagements in the Yugoslav and Roumanian capitals. She hopes to visit these places later in the year.

At the Gieves Art Gallery, Old Bond Street, Mme. Nasta Royits, the Croatian artist, is holding an exhibition of Yugoslav art from June 8 to June 18. The exhibition will be opened at 3 p.m. next Tuesday by Miss Lena Ashwell (Lady Simson) and Mme. Maja de Stroyzi, of the Zagreb Opera House, has kindly consented to sing.

M. Venizelos arrived at the Ritz Hotel last week for a few days, and left on May 29 for Paris.

Lady Lloyd, the wife of Lord Lloyd, High Commissioner for Egypt, left Port Said on May 24 for Marseilles.

Among the vice-presidents of the British and Foreign Bible Society recently appointed is the Bishop of Lucknow.

Owing to the indisposition of Field-Marshal Lord Plumer, the High Commissioner of Palestine, the State Dinner to be held in Jerusalem on the King's Birthday has been postponed.

The Rev. John Caley, who had been rector of Bradley, near Grimsby, since 1905, died on May 26. For many years he was a C.M.S. missionary in India, and was Archdeacon of Cottayam for 20 years.

M. Nintchitch, the Yugoslav Minister for Foreign Affairs, was received on May 26 by M. Briand, with whom he discussed the impending signature of the agreement between France and Yugoslavia, which will be a kind of pendant to that already existing between France and Czecho-Slovakia.

Mr. Clarence Streit, special correspondent of the *New York Times*, has been expelled from Roumania by order of the Government owing to a series of articles dealing with the Roumanian Crown and Government which appeared early in April. This is the first time a foreign Press correspondent has been expelled from Roumania.

Sir Milne Cheetham, K.C.M.G., British Minister in Athens, has been appointed British Minister at Copenhagen, in succession to Lord Granville, who has been transferred to The Hague. Among other places in which Sir Milne has served may be mentioned Cairo, Paris and Berne.

DOMESTIC ANNOUNCEMENT.

ENGAGEMENT.

The engagement is announced between Charles A. M. van Milligen, M.C., late the Rifle Brigade, elder son of the late Rev. Professor Alexander van Milligen, M.A., D.D., of Robert College, Constantinople, and Marjorie Elizabeth, daughter of Mr. Joseph Boardman, of Wallasey.

THE EXODUS TO THE HILLS.

Our Calcutta correspondent, in his letter published in our last issue, referred to the absence of the Government of Bengal at Darjeeling during the month that the riots lasted. He said that the most extreme Indian journals, and the most responsible European newspapers, had been almost equally outspoken on the subject: and added "Comments in the markets and the clubs have been reminiscent of the days of the Ilbert Bill, and no one will be surprised if this is the beginning of the end of the yearly Darjeeling exodus." Examination of the mail papers shows that the extremist and European newspapers, though arriving at much the same conclusion, approached the subject from different standpoints. The extremist *Forward* takes the view that the existing Government of Bengal is of no use, any way: and asks why, when it has abdicated its functions in favour of a hooligan Raj, and has supinely allowed the second city of the Empire to be "given up to the savagery of criminal bandits," should the members of such a Government, and in particular its official head, be allowed to remain "on the pay list of the Accountant General." *Forward*, of course, adheres to its pretence of believing that the neglect by the Government of the troubles in Calcutta was deliberate, and indeed but a logical part of its policy of fomenting them: and that Lord Lytton, though only primus inter pares in this criminal policy, has nevertheless, by his refusal to quit Darjeeling, made himself peculiarly responsible for it by advertising to the public in general, and to his subordinates in particular, his complacent approval of its continuance. The European newspapers, while giving full praise to the efforts of the local authorities to minimise the trouble and to put a stop to it as soon as possible, express regret that the Governor and his Government should not have thought it their duty to lend them their personal assistance at the earliest moment. *Capital*, commenting on "the lethargic stupidity of the Government," characterises Lord Lytton's belated return from Darjeeling as "a death-bed repentance, nevertheless welcome": his Government, it says, has played a sorry part in the great convulsion. When Lord Hardinge removed the Capital to Delhi, he was flatly told that he had done so because he wanted to get away from enlightened public opinion; "but what of a Government which, in the white light of public opinion, hesitated to do the right thing at the right moment?" The *Statesman* says that, whatever may be the most convenient arrangement in normal times, there can be no two opinions as to where the centre of Government ought to be when rioting has brought Calcutta to a point at which a breakdown of all ordered administration seemed a near possibility. "We want no panic measures, but we do wish to see a real attempt to co-ordinate all the good elements in the community for the restoration of peace and its future maintenance. In that effort the Government of Bengal must show that it takes the lead and is ready to act as a rallying centre: the resources of the Government should be centred in Calcutta. If rioting and pillage could be ended to-morrow, there would remain work to occupy the whole energies of the Executive for many weeks to come." A correspondent of the same paper asks whether, at a moment when the ordered life of his Capital was partially paralysed by civil strife, anyone would believe that the King would remain at Balmoral or the Home Secretary at Harrogate. This letter was written a day or two before the outbreak of the general strike in England, when the King immediately returned to London, not from so distant a place as Balmoral, but from so near a one as Windsor.

The particular circumstances of Calcutta have naturally again brought to the front the general question of the exodus to the Hills. Things have greatly changed since Rudyard Kipling wrote of Calcutta and Simla, that the former resented the flight of the Government of India to the latter, declaring that "Because, for certain months, we boil and stew, so should you—Cast the Viceroy and his Council to perspire in our fire": and that the believers in the Simla move replied "that an amateur Saint Lawrence cannot cry "All must fry." In one respect, perhaps, things have not changed much—one can still say that "The Babu drops inflammatory hints, in his prints, And matures—consistent soul—his plans for stealing to Darjeeling"; but in practically all others, the change is great, and due to the introduction of electricity. The substitution of the electric fan for the man-pulled "punkah" is a great advance; but an even greater one is the replacement of the heat, the smell and the flare of the oil lamp by electric light. These improvements have robbed the hot weather in the Plains of so large a proportion of its terrors that not a few Europeans, including ladies, have come nowadays to prefer to remain "down below" rather than face the various disabilities of the hill stations—chief among which are exhorbitant hotel and lodging charges: and this is specially the case in Calcutta. Many of the other large plains stations are not nearly so well equipped. Delhi, for instance, has been for many years past considering schemes for a much-needed improvement in the water supply, and for the lighting by electricity of many parts of the city that now have to depend upon oil: a reproach to the Capital of India that it is now proposed to make a serious attempt to remove.

It is, perhaps, not unfair to say that the location of the Central Government in the hot weather is a matter of less moment than that of any of the Provincial Governments, with the exception of Assam. The latter has, in fact only one Headquarters, at Shillong, and has no Plains Capital; though the fact that the Governor usually spends a good deal of the cold weather on tour in his yacht points a moral that, in the case of this particular Province, needs no emphasising. Such a view would, at any rate, command enthusiastic approval in Calcutta, whose inhabitants look upon the desertion of their city by the Government of India as a deliberate preference for a city of the dead, between which and the remoteness of Simla there is little to choose. The Central Legislatures, however, think otherwise. Whatever may be said against Delhi, it is at any rate very central, and very easy to get at, neither of which advantages can be claimed for Simla: and there have been several attempts on the part of the

Digitized by Google

Legislative Assembly to persuade the Government of India to make Delhi an all-the-year-round Capital, at any rate so far as the meetings of the Legislatures are concerned. The annual move always causes considerable expense, and sometimes great inconvenience: as, for instance, when Turkey was inconsiderate enough to come into the War while the Simla-Delhi move of 1914 was actually in progress. But the houses in New Delhi have most of them been built for cold weather habitation only—a fact which the chief architect, Sir Edwin Lutyens, has vigorously denied in print, though wisely abstaining from any attempt to back his denial by personal experience. But it seems certain that, as the years go by, it will be recognised as more and more desirable that the headquarters of every Indian Government, Central or Provincial, should be permanently situated in its Plains Capital. This is not to say, of course, that every member of every Government should personally conform—only that the framework should remain in situ. The Viceroy, the Governors and the majority of the Councillors and Ministers, might all be allowed a reasonable "long vacation in the Hills, one or more of the latter being left, by arrangement among themselves, as "vacation" Councillor or Minister. But it should be recognised that residence in the Hills is only a recess: and that, in case of emergency, the members of the Government must immediately assemble at their headquarters, and take personal charge of activities which, when everything is peaceful, they can quite adequately direct from a distance. At least ninety per cent. of the work of any Government Department is carried on by the Secretaries and Deputy Secretaries, without any need for reference to their official head—in not a few individual cases of late years, those who have had first-hand experience would put the percentage a good deal higher: and, though the Secretaries and Deputy Secretaries would certainly complain of an arrangement that kept them all the year round in the Plains, except for short spells of leave, they are, or should be, young men, on whom the Indian hot weather has much less effect than on those of riper years. The merchant, the policeman, the executive civilian, the soldier, all stay in the Plains during the summer in most cases: it is true that the latter, at any rate, is more favoured in respect of leave than his civilian confrère, but this is a matter that it would not be difficult to adjust. It is tolerably certain that the change is coming: and the action, or inaction, of Lord Lytton and his Government during the Calcutta riots has, in the opinion of competent observers, brought it visibly nearer.

CURRENT TOPICS.

"Young Bengal."

The cabled reports of the proceedings at the recent meeting of the Bengal Provincial Conference do not make pleasant reading. The speech of Mr. Sasmal, the President, included a passage in which he condemned the Anarchists, though apparently less for their revolutionary activities than on the ground that these misguided young men were apt to switch off from "patriotic" dacoity to vulgar robbery for personal gain. Even this seems to have been too much for a section of his audience, whose noisy interruption made it impossible for him to proceed. Even when he agreed to delete the offending passage, the malcontents persisted in their refusal to hear him: and the conference eventually broke up in confusion.

This is, after all, only the natural sequence of the action of the late Mr. C. R. Das: who, when condemning the actual deed of the youth who murdered Mr. Day in mistake for the Commissioner of Police, yet placed on public record his admiration of the patriotic spirit that had impelled him to so misguided an action. The Bengali has been labouring for generations under the imputation of cowardice: and any criticism, of those who have shown the particular sort of bravery which most people stigmatise as cowardly murder, is deeply resented by the young men of Bengal, who see in the actions of these "heroes" a practical refutation of the charge of national cowardice. So long as "young Bengal" remains in this frame of mind, the authorities must needs be cautious of acceding to the vehement demand for the release of the revolutionary detenus. Since it is beyond question that their internment brought about the immediate cessation of anarchical attempts, it is only reasonable to expect that their release would lead to a recrudescence. As mentioned in the last letter of our Calcutta Correspondent, Mr. Bepin Chandra Pal, the well-known Bengali publicist, declared recently that Hindu-Moslem differences in Calcutta would never be settled until the two communities had fought the quarrel out: and invited the Government to stand aside and allow them to do so. In some such drastic way as this, "young Bengal"—which is exclusively Hindu—might have a chance of proving its bravery; though it does not seem to have grasped the extensive opportunity offered it by the riots: according to all the accounts, the actual fighting was done by the hooligan element. The "bhadra-lok"—the educated young men who have been the perpetrators of practically all the "political" dacoities and murders in Bengal—appear to have been content, when opposed in the open by men ready to fight back, to use their voices or their legs, according as they chanced to be the attackers or the attacked. It is possible, though not perhaps probable, that they might do better in the absence of the police and the military, and so justify the confidence that Bepin Babu appears to repose in their prowess.

A Canarese Province.

About a month ago reference was made in THE NEAR EAST AND INDIA to the proposal, brought forward in the Council of State by Sir Sankaran Nair, for the formation of a separate Tamil Province. It now appears that a similar movement has been started in favour of the formation of a Canarese Province—the "Congress Province" of Karnatak. This proposal is said to be supported by "the patriots of Karnatak" in the local and central legislatures, and to command the unanimous adherence of all its inhabitants, irrespective of caste and religion. The Canarese speaking districts include the southern part of the Bombay Presidency, the northern half of the Malabar coast, practically the whole of the State of Mysore including the British enclave of Coorg, and a small part of the State of Hyderabad: and their inhabitants, though predominantly Hindu, include about 13 per cent. of Mohammedans and a numerically important minority of Indian Christians. The main lines of the suggestion follow pretty closely those put forward by Sir Sankaran Nair in the case of the Tamil Province, with one interesting variation—the inclusion of the Native State of Mysore. Its supporters only touch lightly on the fact that the ideal Karnatak Province should also include some of the subjects of the Nizam, an obvious difficulty as to the solution of which they offer no advice; beyond suggesting that it might be possible to "lump together the Canarese portions of British India" in the Madras and Bombay Presidencies, and in Coorg, "with Canarese Indian States attached to them." This, however, is only their second alternative: the first is the consolidation of the whole of Karnatak "except the portion in the Nizam's dominions" into one Province, with the Maharaja of Mysore as Governor of the British Karnatak, while retaining unimpaired his existing powers as ruler of his own State. This idea, which its sponsors admit to be a novel one and "bristling with difficulties of all sorts," will, in their opinion, "if it comes to fruit, lead to the greatest benefit of Karnatak as a whole."

This is quite a new departure. There have, in the past, been several more or less nebulous suggestions as to how the Indian States should be worked into the scheme of Reformed India; but this is the first time that it has been suggested that the Ruler of an Indian State should become a sort of ex-officio Governor of neighbouring British districts—"in addition to his other duties," as the official phrase runs. It appears to follow that the

Digitized by Google

Governorship should be hereditary, and be vested in the ruler of Mysore for the time being: since, otherwise, the demise of the Prince would entail the partition of the "Karnatak Province." It seems almost a pity that this picturesque experiment has no chance of an actual trial.

Kangra Valley Railway.

The cutting of the first sod of the Kangra Valley Railway by the Governor of the Punjab is of rather special interest in view of the discussion now proceeding in Calcutta regarding the summer exodus of the Bengal Government to Darjeeling. For many years past Simla has been the summer Capital not only of the Government of India but of the Punjab Government as well: an arrangement that has been found inconvenient by a succession of Viceroys, if not of Governors. The existence of "two Kings" at Simla has always been anomalous. The Punjab "King" finds himself put completely in the shade by the Viceroy, with a resulting loss of that valuable form of prestige known in India as "izzat"; while the Viceroy feels that he ought to be undisputed "King" in his own Capital, without any rival, even if of inferior rank. One remembers hearing a recent Viceroy say, when a vacancy occurred in the Lieutenant Governorship (as it then was) of the Punjab, that he felt inclined to make a conditional offer, to all the various candidates in the running—the condition being that they should find a summer Capital of their own in some place other than Simla: and see what they would say. There was, at one time, a suggestion for the removal of the summer Headquarters of the Punjab Government to Dalhousie, a hill station situated in a small British enclave in Chamba State: at another, a tentative survey of a motor road into Kulu was undertaken, with the idea that the Punjab Government might find a suitable summer home in that beautiful valley; but both these projects, if ever seriously entertained, came to nothing. It is possible that one of the reasons for undertaking the Kangra Valley Railway has something to do with this question: for, though the cabled report says nothing about its proposed alignment, it may be presumed that it will run in the direction of the Kulu Valley, even if it does not reach so far as that, to begin with. But, as things are at present, it looks as if future inquiry will tend rather to discovering whether the various Indian Governments cannot each have one single Capital, and stick to it. In practically all cases, such a Capital will have to be in the Plains; so that, if the Punjab Government is really putting out a feeler towards a new summer Capital of its own, it would seem that the effort has come too late.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 13.

Hindu-Moslem Amenities.

The feature of the week in the political outlook has been the complete failure of every attempt, and there have been many, to close the ever-widening gap between Hindus and Moslems. There have been numerous Press accounts of meetings that have been called by leaders of both sides, but they have all failed to achieve anything; one such meeting is reported as having been "very uproarious and had to be adjourned *sine die*," and this is typical. The Mohammedans have closed up their political ranks and the Moslem Party is now a very real thing: its strength will probably increase, as Government has reiterated its intention of granting 45 per cent. of all new appointments to Mohammedans; for patronage is the breath of political life in India. The Khilafat side of the organisation, which was largely religious in its framework up to a few months ago, had almost lost touch with realities since the secularisation of the Turkish Government; but the riots have caused an enthusiastic revival of the movement. At a Delhi Conference this week, a speaker who used an expression which was almost universal up to a few months ago—"Our Hindu brothers"—provoked a howl of disapproval which was almost audible in Calcutta. On the other hand, all the Hindu organisations have been strengthened by the tonic of antagonism and bloodshed; the papers of both sides are full of cross-talk, and from blaming each other they have now taken to shouting a mixture of veiled threats and truculence.

The Sikh Procession.

The annual Sikh procession, a comparatively small affair in ordinary years, was due to take place during the time of the Easter Riots; but, on pressure from Government, the leaders of the community agreed to postpone it to a more favourable time. After the second batch of trouble, an attempt was made to obtain an agreement between the communal leaders as to when it might be held; but agreement there was none, particularly in regard to the playing of music before mosques. In the end Government took charge of the proceedings, and decided that the procession should be held under an official guarantee of protection from attack; on which all political leaders published statements disclaiming responsibility. The day fixed was Sunday last; and, thanks to the sacrifice of the day of rest of the whole of the Police, Military and Auxiliary Forces, the procession passed off without trouble of any kind. It assumed an unreal importance owing to the fact that Hindus of all grades took the opportunity to make the occasion a demonstration of defiance. The Sikhs in the procession probably numbered two or three thousand; but behind them was a tail of Hindus, variously estimated in the Press at from five to fifty thousand. It is generally agreed that the Sikhs refrained from playing before mosques; but the rest of the procession brought out the noisiest and most martial musical instruments they could find, and indulged in vocal and instrumental frenzies opposite every mosque. The Moslem population seemed to have entirely disappeared on the route; but the fact that this was guarded at every point by Europeans is the real explanation of the martial ardour with which the tail was wagging the dog.

The Security Bill.

The Governor has now summoned a meeting of the Legislative Council to consider a new Security Bill, which is to give immediate powers to the Police to deport undesirables as soon as a state of emergency arises; this is to remedy the defect in the present "Goonda Act," under which the process of ridding the city of hooligans is a lengthy one, necessitating procedure through the Courts. The Moderates are in favour of the Bill, but the Extremist Press, which ten days ago was yelling for the suppression of the *goondas*, is now, with the return of surface tranquillity, up in arms against increasing the powers of the Police. It seems clear that Government has once again "missed the bus"; for, had they been in Calcutta instead of Darjeeling at the time of the riots, they could have passed this Bill with universal approval, at a day's notice. Incidentally, in warmly praising the Bill, Babu Bepin Chandra Pal uses some illuminating expressions: "Bureauracy, irresponsible as it is, must govern with an iron hand." "The main problem cannot be solved immediately or even in the near future." (This is the problem of Hindu-Moslem unity.) Nationhood cannot be built merely on a "hatred of the common enemy" (the British). "A Government, whether controlled by the British Parliament or by the Indian legislatures, must govern." Correct, Bepin Babu: Government must govern.

Politics.

The riots have crowded out ordinary politics recently; but it may be noted with satisfaction that the Indian question at the Cape has now been deferred until there has been a conference between the representatives of India and South Africa. Sane opinion here welcomes the suggestion that Lord Reading might represent the former; the Marquisate conferred upon him for his distinquished services in India is noted with satisfaction in the same quarters. News is to hand this morning of the collapse of the general strike at Home; but the most significant item in the cables, in our eyes, is the announcement that the Home Secretary has proof of its genesis in Moscow, and of proposals to organise insurrections in countries where subject races are governed by Europeans. Although there has been no statement by Government, it is generally accepted that the Riots, and particularly the stirring up of communal differences that is now proceeding throughout Bengal, are connected with the same source. The breakdown of the negotiations between the two sections of the Swaraj Party, one of which wishes to co-operate with Government, is now complete: and neither seems to know what to do next. In the distribution of plums in the Calcutta Corporation, a Hindu having been appointed Mayor, it was necessary of course to make the Deputy-Mayor a Mohammedan. Ninety per cent. of the Commissioners have now signed a memorandum requesting the latter to resign; it would be interesting to know the reason, but this is being kept carefully in the background. A pleasant sign of the trend of events in the Corporation is the personal good-fellowship that exists between all parties; Mr. Walter Goode, a civilian, who at one time was Chairman of the Corporation, has on a recent occasion been elected to the Chair in the absence of the Mayor—the first time that anyone but an Indian has filled the position under the new régime.

The Exodus to the Hills.

Much has been heard lately in regard to the persistence of the idea that, while everyone else can work in the plains for twelve months of the year, it is necessary for officials to retire to the hills when the weather gets unduly warm. The Riots have given much point to the arguments against the expense and inconvenience that is involved, which have been common ever since the electric fan revolutionised life in India. Landowners and hotel keepers in Darjeeling are already despondent, for hardly anyone but officials and planters now goes there; it is cheaper and more convenient for wives to take a journey Home if the heat becomes intolerable. Lord Hardinge's claim to the fatherhood of New Delhi, which he made at a recent meeting in London, will not be disputed by anyone in India: and, if it has done nothing else, it will probably give a permanence to the Simla exodus that is not likely to be the case in any other hill station. It really looks as if Simla will shortly have a monopoly of "Plain Tales from the Hills."

Men and Things.

Another sterling fellow, Handyside of the North-West Frontier Police, has gone west in action, as he would have wished; the generous tribute in the London *Times* to him and his kind is noted with satisfaction out here. Lieutenant Hirschend, the Danish Airman, has flown through Calcutta on his way back from Bangkok; so casual are these things becoming that the event is almost unnoticed. One of the last things that Sir William Currie did before he left for good was the signing of the report on the Canteen Board, which damns very comprehensively the experiments that have been made since the War in running Army Canteens by an official Board; not only are they a failure commercially, but they are very unpopular with the men. There was no excitement in India when Mr. Saklatvala was sent to prison for seditious speeches; those who wish India well, however, sincerely regret that such a man should be taken to be a typical Indian. He is not even a representative Parsee, and the Parsees are as much foreigners here as we are.

The Trivial Round.

There is still no racing at Headquarters and, at the moment, the Turf Club is primarily occupied with another matter; one hears that the plums this year will be the largest ever known. Meanwhile racing goes on, mainly in Poona, Ootacamand and other delectable spots; what with the cutting down of the Army and the growth of motoring, the soldier-man cannot afford to keep the horses he used to, and the entries at these meetings become more and more Indian. Hockey is now finished, and the season ended with a very fine win by the Customs Team over the strong eleven sent down by the Punjab Hockey Association which had previously defeated Bengal in the same week; a fine achievement for the local men. Soccer has commenced and its popularity increases, if anything; political disturbances have not in any way affected the attendances within recent years, even though they have at times increased the intensity of that big howl of "Foul" which is so characeristic of one side of the grounds in Calcutta. Calcutta, who won the championship last year, have lost half their team from *anno domini*, but they have a wide field of choice in new men. Cricketers here, and that is all Calcutta, congratulate England on its choice of A. W. Carr as captain against the Australians; many of us know him as a fine captain who plays real *English* cricket.

Markets.

There is little to report this week in the jute and gunny markets; the tendency is steady, and the opinion here is that the market only needs to receive a little confidence for a material change to result. Stocks in New York and Germany are said to be low, and we may expect these two countries to come into the market in the near future. Reports from the jute districts regarding progress of the new crop continue to be good, and the crop is likely to be better than that of last year. In the piece-goods market, conditions in the bazar are becoming more normal. Dealers who left Calcutta during the riots are returning, and sales are now on a more satisfactory scale; prices generally show no appreciable change. With the strike in England the delivery of tea has stopped, and sales have been postponed; this will no doubt affect the market to some extent for the next few weeks; but the first sale here, which will take place on the first of June, is expected to attract a considerable amount of competition, as it is understood that a number of Continental orders has been received. With regard to figures, it is estimated that stocks up to the end of April for northern India are one million pounds above those at the same time last year; but this surplus is likely almost entirely to be wiped out by the end of this month.

On the Stock Exchange quite a considerable activity has arisen at the close for the speculative jute shares, and the prices of the more favourite counters show a material increase over those obtaining of late. A number of the Companies have issued their reports for the past half-year; and the fact that, taken all round, they have made better reading than anticipated, may have caused the fillip in jute shares generally. More interest in both coal and cottons has been displayed, but there is little alteration in rates. Tea shares are quiet but steady; rubbers too have been a firm market: and, if the commodity settles down on the basis of its present price of about two shilings a pound, excellent reports and good dividends should be forthcoming from all the first-class Companies. Government Securities are inclined to be dull, and an outstanding feature was the number of sellers of 3½ per cent. Paper. It is reported that sums of money are being sent to England for investment in Indian sterling loans, which now give a better return than the rupee loans in this country.

At the close of last week there was a fair number of bills showing: and, with little or no demand, the market firmed up. At the close, however, with a dearth of bills and quieter advices from Bombay, an easier tendency has followed: and the market closes quiet 1-32d. below the

Digitized by Google

best, at 1s. 5 31-32d. for ready T.T. Money has been plentiful, and rates have declined to 3¼ per cent. for call and short notice.

INDIAN TEA.

In their annual review of the tea season for 1925-26, Messrs. Thomas and Co., of Calcutta, say that the year has conclusively proved that the world's maximum output is still greater than the present maximum demand; but that the consumption of tea of good quality is fully equal to the available supply. They are of opinion that the average quality was below that of the last five years, especially in the teas produced during the earlier part of the year under review: and hold that one of the chief reasons for this is to be found in shortage of labour. Labour, says the review, is the most difficult, as it is in some ways the controlling, factor in the industry: and it has, for a long time past, been found impossible to maintain the old standards which were considered essential ten years ago. The chief factor working against recruiting was the continued prosperity experienced in the recruiting districts, which enjoyed a bumper harvest for the seventh successive year; with the result of the permanent return to the land of a considerable proportion of the labourers who had previously been partly dependent on industrial work. Attempts made to extend recruiting areas have not met with much success, many of the persons so recruited having proved quite unsuitable for the work: and the result has been that the gardens are tending more and more to rely on local labour, which is not sufficient for their requirements. The labour problem is no nearer solution than it has been for several years past, and the position is becoming increasingly serious.

The report says that a feature of the Calcutta market has been the additional support given by the out markets. The shipments to Burma, South America, North Africa and Australia all show gratifying increases, ranging from 500,000 to 1½ million lb.; the outstanding improvement is that which has occurred in the direct shipments of Indian tea to Russia: which, up to the end of January 1926, amounted to 4 million lb. from Calcutta and 5⅓ million from London, against 1 million and 2¾ millions respectively in 1924-25, and an almost negligible quantity in 1923-24. Calcutta shipments to the United States have been disappointing, totalling 1¼ million lb. less than in 1924-25; though the total exports of Indian tea to the United States in 1925, from India and the United Kingdom together, were 3½ million lb. more than in 1924. Canada has proved even more disappointing: she took from Calcutta in 1925-26 a million lb. less than in 1924-25, and 4½ millions less than in 1923-24. The consumption of Indian tea by France is still well under half a million lb., though the figures for 1925 show an increase of 58,000 over those for 1924. The Cess Committee is continuing its propaganda efforts in the United States and France: the year's allotment for the latter country being £10,000 (against £15,000 in the previous year), and for the former £35,000, which it is hoped to increase to £40,000, besides an additional special sum of £7,500 for the Philadelphia Exhibition.

The main activity of the Cess Committee, and its most striking results, have been exhibited in the Indian market, for propaganda work in which 4½ lakhs of rupees, or about £37,500, have been allotted. While in the United States an extensive advertising campaign is being undertaken, and the work in France consists mostly of demonstration and general publicity including a considerable amount of newspaper advertising, in India the work, which has been chiefly carried out on railways, at fairs and public meetings, and in the smaller towns served by the railways, takes the form of demonstrations of how to prepare tea, and the establishment of shops for the sale of tea both in dry and liquid form. Once tea drinking is established in a town or district, the direct agency of the Cess Committee ceases, but touch is retained with it by periodical visits: which have invariably shown that, so far from falling off, the demand has usually increased. A new field of activity this year has been the tea districts themselves, where tea has been supplied at low rates to the Cess Committee's agents for sale locally. It is estimated that, during the five years before the Cess Committee started work, the average consumption in India was about 18 million lb., and that this figure has now been increased to nearly 50 million, and is still on the increase. This is the more gratifying when the high price of tea during the last three years is borne in mind.

CONGRESS POLITICS.

The last mail brings details of the breakdown of the attempt to reunite the Swaraj Party, by the conclusion of a pact between the Swarajists and the Responsive Co-operators. It appears that the original "compromise" was arrived at by according permission to the "Responsivists" to accept ministerial appointments from Government, on condition that they felt that they would be allowed a reasonably free hand in the working of their Departments. This seems to have been a verbal agreement, which was to be formally confirmed at a later conference: and the interval, between the two, showed the existence of violent objection, on the part of the rank and file of the orthodox Swarajists, to the conclusion of a pact on these terms. Pandit Motilal Nehru, the Swarajist leader, bowed before the storm: and produced, at the second conference, a number of preliminary conditions which had not been mentioned at the first. He has now declared that acceptance of ministerial office can only be allowed, on the terms originally suggested, after the Government of India have announced their readiness to hold a "round table conference," and to release unconditionally all the detenus interned under "Regualtion III." and the Bengal Ordinance. The "Responsivists" absolutely refuse to allow these extra conditions to be imported into the discussion: and say that, while they are prepared to ratify the original "compromise," they are not prepared to go outside it. As a result, the Conference was abandoned, after a great deal of talk on the part of the Swarajists—for the Responsivists did not even attend it: and the "pact" has definitely broken down, with the additional result that the Responsivists are withdrawing from the Indian National Congress, which now remains a purely Swarajist "rump." Most of the extremist newspapers have condemned the Swarajist tactics, which one of them describes as a series of "frogleaps and crabwalks": while a speaker at the non-Brahman Conference, that was held about the same time, characterised the efforts at a compromise as "a search for a formula on which the Swarajists can bamboozle the ignorant voters at the forthcoming elections."

For the out-and-out supporters of the Swaraj Party, however, all roads continue to lead to Rome. In commenting on the proceedings of a Conference of leaders of the Depressed Classes of India—the so-called "untouchables"—the *Bombay Chronicle*, while admitting "the inhuman disabilities" under which the depressed classes labour, and "the cruel ritual and unsavoury social usage which disfigure Hinduism at present" in this respect, declares that "it is very short sighted policy to mix up social injustice with politics": and, in support of this advice, explains that the only true policy is to refrain from trying to obtain "a few more loaves and fishes of office and a few more Council seats," and to co-operate with "those who, whatever their present caste, are willing to abolish untouchability and that too as soon as possible and by every means at hand"—the members of the Indian National Congress! All that the untouchables' leaders have to do is to "come into the Congress fold" and to bring their followers with them: when, "by uniting their labours with those of the Congress they will soon make untouchability a thing of the past."

It is not a good omen for the intelligent use of their votes by the Indian electorate in November, that responsible publicists, who are in as good a position as anyone

Digitized by Google

to judge of the kind of arguments that are likely to appeal to them, should think it worth while to put forward solemn fustian of this kind. It is, of course, certain that the election will not turn on policies, but on personalities: the quotations given above do but emphasise what is already perfectly well known—that it is quite unnecessary for any candidate for the suffrages of the average Indian voter to be able to talk intelligently on any subjects except those likely to offer an immediate appeal to his hearers: which may be summarised as abuse of the Government and the promise of material advantages in an immediate but altogether visionary future.

THE INDIAN MAIL.

Indians in South Africa.

The extremist press of India, while not withholding a meed of praise from the official deputation, or—somewhat more grudgingly—from Lord Reading, welcome Mr. C. F. Andrews, who has just returned from South Africa, as the victorious "Ambassador of India." The Union Government having agreed to a conference, it is first and foremost necessary that its Indian members should be truly representative: and one is not surprised to learn that "the Indian people" will not be satisfied if they do not include Mr. Gandhi, Mrs. Sarojini Naidu, and Mr. Andrews—representatives who can be trusted to speak, not with the voice of the Governor-General in Council, or of the Secretary of State, or of "the subordinate branch of the British Government," but with the voice of India. It is also interesting to be told, from the same source, what should be the contribution of the Indian members of the Conference towards the honourable settlement that it will be its business to reach. The wording of the Union Government's formula—"the safeguarding of Western standards of life by just and legitimate means"—is described as seemingly harmless but containing immense potentialities of mischief. In fulfilling their just and legitimate aspirations, the whites of South Africa must consider those of Indians, which are enumerated as follows. "Let Indians be given equal citizenship rights: let the same facilities for education be given to their children as to those of the whites: let the locations, and other humilating disabilities under which they labour, be abolished: above all, let them not be penalised for their crime of colour: and there will be no Indian voice raised against any economic or sanitary laws applicable alike to Indians and to whites." It is perhaps fortunate for the success of the Conference that there is as little prospect of the selection of the suggested Indian representatives as of the adoption of the programme put forward—which is a characteristic example of what modern Indian political opinion regards as a "compromise."

Hindu and Moslem.

The Calcutta riots have brought home, even to the usually impervious Indian political "leaders," the necessity for taking some definite steps to allay communal dissension. Needless to say, these steps are to be taken quite independently of Government—even, in a certain sense, in opposition to it. As the correspondent of a leading extremist newspaper puts it, all such attempts will be ridiculed by "those Anglo-Indians who will regret it very sincerely if Hindus and Moslems really come to understand each other"; but it is none the less necessary to undertake them "in spite of the mischief of all manner of birds of passage." The original proposal put forward appears to have been that each community should organise bodies of volunteers, of its own creed, to act as guards over its own most vulnerable buildings, such as mosques or temples; but it was realised that this would be likely to accent dissension rather than remove it: and the proposal that now holds the field is the formation of joint bodies of volunteers, Hindus and Moslems in approximately equal numbers, who should impartially guard the threatened points of either. The Mayor of Calcutta (a Hindu) offered to organise such joint bodies during the riots, and correspondence passed between him and the Commissioner of Police on the subject. The latter, while welcoming the proposal, suggested that the volunteers should be enrolled as special constables: a suggestion that did not commend itself to the Mayor, on the ground that "the people looked upon such enrolment as a punitive measure derogatory to their self-respect." The Commissioner thereupon waived the idea of enrolment as special constables, but pointed out that, if the volunteers were to be given police powers, it was at least necessary that they should be formally enrolled as volunteers, and that they should be prepared to work under the direct control of police officers. To this the Mayor replied that he saw no reason why it should be necessary for the volunteers to receive police powers, or why they should not be allowed to work "with their own badges and under their own captains," even if under general police supervision. Pundit Motilal Nehru has apparently adopted the idea of the Mayor of Calcutta, and is "holding a conference" to consider it; but the proposal seems to be on its way to the usual deadlock—if the volunteers are to work, they must do so independently of the regular police and of Government; otherwise, there will be no volunteers; when it will be argued that an obstinate and reactionary alien Government has not only refused to avail itself of the only reasonable means of allaying communal troubles but, by so acting, has clearly showed its desire that they should continue.

Indo-Burman Railway.

The question of railway connexion between India and Burma is one that has been debated for many years past, but has so far resulted in nothing more than a multitude of surveys and reports. There have lately been several statements in the Indian newspapers that the matter is to be taken up seriously; but the latest report from India seems to show that this is still unlikely. The authorities have apparently come to the conclusion that none of the three routes—northern, central, and southern—already considered is likely to be a remunerative proposition: and it is said that they are now on the look out for a fourth: a report says that search is being made for a "traditional route through the mountains of South Arakan, which has been abandoned and forgotten." This route, if found, would apparently mean connexion between Chittagong and Mandalay—a variation of the old central route. But the mere fact that there should be an intention to explore a new route seems to show that the question of an Indo-Burman railway is still in a rather nebulous state.

Whatever the ultimate destiny of Burma in regard to India—whether she is fated to develop into a separate "Dominion" or not—it is quite obvious that railway connexion with India, no less than with Siam and China on the other side, will be necessary for her future development. It would seem also that her present position, as part of the Indian Empire, is one that she would be wise to take advantage of, in this respect: it will certainly be easier for her to finance what, at any rate at the outset, will

LONDON CITY MISSION.

AYAHS AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and to introduce them (if disengaged) to families about to travel to the East.

necessarily be an unremunerative railway, while she is in partnership with India, than it would be if the partnership should cease. That is to say, Burma's well wishers would like to see her making a new departure, and taking action on the ground instead of only on paper. Separation from India is doubtless looked upon as a vision of the far future, if it should ever come at all; but it is doubtful whether this is a wise view. Events are moving with some rapidity in India: and it is not impossible that the Royal Commission of 1929 may have something to say about the political connexion between India and Burma that would profoundly affect the prospects of their connexion by rail.

Income Tax.

Compared with the British income tax, the Indian impost is so small as to be almost negligible; though, to those who have experience of the latter only, it does not appear to be so. The collection of income tax from the non-official Indian has always been done more by guess than from knowledge: the usual practice has been to assess the apparently wealthy Indian at a reasonably high figure: if he does not appeal, the assessment is substantially raised, the following year: and so on. This is not an altogether satisfactory method, for the absence of an appeal generally means either that the demand has been pitched too low, or that the assessee thinks that his "izzat"—his personal reputation in the eyes of the public—has been raised by a rather too high assessment, and is unwilling to lower the one by an attempt to disturb the other. When he does appeal, and produces his books in support of his plea, they are usually of a very complicated kind: it is said, indeed, that many Indian merchants go so far as to keep three distinct sets, which have been described as "one to show to anybody interested, one to produce in court or to the income tax authorities, and one that enables him to see what is the exact state of his business." It is generally believed that the amount realised from income tax in India falls far below what it ought properly to be: and it is said that a serious attempt is to be made to improve collections—an attempt that is easier in theory than in practice. Indeed, it may be said, as a general proposition, that the correct amount will never have been realised until a point has been reached when every individual assessee has appealed against his assessment.

The March Trade Returns.

Information received too late for inclusion in last week's notes supplies some of the details then missing. Compared with the figures for February, India's exports of food drink and tobacco rose from 620 to 989 lakhs, while her exports of manufactured goods fell slightly, and of raw materials and produce considerably, to 759 and 1918 lakhs respectively against 763 and 2036 in the previous month. The United Kingdom's share of India's imports rose from 49 per cent. in February to 54 per cent. in March, while her share of the exports remained constant at 14 per cent. Japan's share showed a notable decrease, from 22 to 19 per cent. under exports and from 8 to 6 per cent. under imports: the share of the United States, which remained at 10 per cent. under exports, also fel from 8 to 6 per cent. under imports: while that of Germany rose, from 6 per cent. imports and 5 per cent. exports, to 7 and 6 per cent. respectively.

INDIAN EXCHANGE.

London May 31.

Markets both here and in India have been much quieter since we last reported, and Rupee Exchange seemed inclined to be slightly easier. In Bombay and Calcutta when we closed last week T.T. was available at 1s. 5 29-32d., although it was not so freely offered in the Bombay market. Business appears to have been very slack, and from all accounts, import markets on both sides are suffering from lack of orders.

Later advices from India to hand to-day, indicate that some activity has been shown and T.T. which for the past few days has been quoted 1s. 5 7/8d. has moved up again to 1s. 5 29-32d. with no buyers under 1s. 5 15-16d.

The Banks' buying rate for three months commercial credits was fixed at 1s. 6 3-16d., but failed to attract any business, and latterly it has been possible to place bills for one or two mails at 1s. 6d 5-32d., but this rate has disappeared in India to-day and it has not been possible to obtain better than 1s. 6 3-16d. Forward rates are called 1s. 5 5-16d. July, 1s. 5 31-32d. August and September; October 1s. 6d. and November onwards 1s. 6 1-32d., and we hear that business has been done for some deliveries forward at 1-32nd above these quotations.

Exports have been far from brisk. It is said that there will probably be about 200,000 tons of wheat available from Karachi, but in spite of a further fall in freights, we have heard of only some 40,000 tons having been booked for this side during May. In the last statement of the Imperial Bank of India, the requirements of trade show a further shrinkage of Rs. 160 lakhs, and money is decidedly easier.

In the London market business during the week has been round about 1s. 5 29-32d. T.T. but few Banks would operate under 1s. 5 5-16d. To-day's quotation is 1-64th higher to 1s. 6 31-32d. and the market although dull is very steady.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning,

The Burmah Oil Report.

The dividend statement of the Burmah Oil Company has now been followed by the issue of the report, the nature of which should, I think, satisfy the most exacting shareholder. The net profits after writing off £489,000 for depreciation amount to £2,405,000, which represents an increase of £148,000. The allocations proposed are £20,000 to the insurance reserve, £292,580 to the general reserve, and £150,000 to the fields' expenditure equalisation reserve, leaving available with the carry forward £2,244,718. The amount required for the preference dividends is £263,750, and that for the interim on the ordinary shares £566,094, and the directors propose a final ordinary dividend of 4s. 6d. per share, less tax, making 7s. for the year, leaving £395,903 to be carried forward. As already stated, the company's holding of Anglo-Persian ordinary shares has been written up from 13s. to £1 per share, and the amount accruing therefrom has been transferred to the general reserve, bringing it to £2,117,064. Of this amount it is proposed to capitalise £1,717,064 by the issue of a bonus of one share for every three held to the ordinary shareholders.

Turkish Unified Debt.

The announcement is made that the negotiations which have been proceeding in Paris between representatives of the Turkish Government and of the bondholders for a settlement of the Turkish Unified Debt have broken down. These negotiations have been in progress for nine months, and have been terminated owing to the refusal of the Turkish Government to recognise the contractual rights of the bondholders or to submit a reasonable offer of settlement. The syndicates representing the Unified bondholders have addressed letters to their respective Governments requesting their support. They point out that any difference as to the interpretation of the terms of the contract with the bondholders is, under the Decree of Muharrem, to be referred to arbitration. The stumbling-block in the negotiations has probably been the fact that Turkey has been endeavouring to utilise the question of the payment of the arrears as a means of obtaining some concession over the Mosul question, and when that matter is finally settled it is not at all improbable that the intransigeant attitude of the Turks will vanish, for they must have foreign capital for development whatever they may say to the contrary, and they are equally aware that the effect on their credit of the existence of these arrears must be such as to render foreign assistance impossible while they exist.

Sudan Trade Progress.

The volume of the trade of the Sudan last year hardly fulfilled expectations, but the progress made in cotton growing had not had time to make its influence widely felt in the commerce statistics, and the figures for the first two months of the present year suggest forcibly that henceforward this factor will be increasingly in evidence. For the two months there was an increase in the volumne of trade as compared with the same period in 1925 of £E357,764, and it is noteworthy that while imports rose from £E857,359 to £E967,626, an increase of £E110,267, exports expanded from £E521,547 to £E774,666, an increase of £E253,119. The volume of trade for the period totalled £E1,804,412 as against £1,446,648, representing, I think it will be admitted, a most promising commencement for the year's commerce.

New Indian Rupee Loan.

Last week the details were forthcoming of a new Indian rupee loan. It is a 4 per Cent. issue repayable on September 15, 1970, or at the option of the Government on or after September 15, 1960. The loan is issued at the price of 88, and its amount is limited to Rs. 25 crores, and the cash yield will be Rs. 22 crores. Since the presentation of the Budget the Ways and Means position has improved to a certain extent, and it would have been possible to meet the minimum requirements with a smaller loan. The net loan figure of Rs. 22 crores has, however, been maintained because the Government of India contemplates applying about £2,000,000 to the discharging of sterling railway debentures which it was previously intended to renew. It is pointed out that the adoption of this policy of replacing sterling debt by rupee debt is necessarily contingent on the exchange position during the year admitting of additional remittances, which that policy involves in order to lay down the requisite funds in London, being conveniently effected.

The Problem of Rubber.

It is some time since I have touched on the rubber situation, which has now remained largely unchanged over a considerable period. We have the same factors still in operation—restricted demands, a falling commodity price, and share prices only upheld by the promise of dividend declarations. It is difficult to anticipate an early change in the position, and unless there is a development of American buying (which has been checked *inter alia* by the prolonged winter) it looks as if we may see the 20 per cent. reduction of output at the appointed time. Should this eventuality happen, it will be a subject for regret, for it cannot but intensify the shortage which must happen, in default of totally unforseen developments, in the course of the next few years.

ALBANIAN NOTES.

(From Our Own Correspondent.)

Tirana, May 19.

Financial Difficulties.

The country is quiet, and there is little to report of any note. This is all to the good. Albania needs a long period of quiet, and Ahmet Zogu's strong rule is undoubtedly securing this most essential requirement. The only disturbing feature of the situation is the financial one. The revenue, which was estimated at 19,000,000 gold francs for the past financial year, did not come up altogether to expectations; while expenditure was considerably more than the estimate, owing to increases in the cost of the Army (which is organised on a cadre basis, having as its main object the training of the annual levies), and owing to increased expenditure on behalf of refugees and of certain irregular bodies of men who came over in the service of Ahmet Zogu at the time of his *coup d'état* and are still unsettled in the land.

The conditions of the proposed loan of 2,000,000 sterling by Italy are proving also beyond the capacity of the country to meet. An attempt is being made to alter certain of these conditions, and negotiations are in progress to this end between the two Governments interested.

The Italian Minister.

The new Italian Minister, Baron Aloisi, who was substitued for Commendatore Cora, previously nominated, is proving himself *persona grata* among Albanians. He is an ex-naval officer; but he won his spurs in the Diplomatic Service as Minister at Bucharest, where he earned a deserved reputation. He is to be assisted by an entirely new staff, namely, by Signor Cortese and Signor Jacomoni, the latter being due to arrive before the end of the present month. Signor Gobbi is the only one of the former Secretaries who is remaining at his post. The above changes, however, do not imply any change of policy by the Italian Government.

General News.

It seems that the case of Mufid Bey Lipohova, ex-Minister of Foreign Affairs, who was to have been arraigned before a Parliamentary Commission on the accusation of receiving bribes in connexion with the establishment of the National Bank (in which the Italian bank "Il Credito Italiano" is chiefly interested) is to be adjourned *sine die*. It is not always advisable to wash dirty linen in public, and perhaps no advantage is to be gained by bringing matters into the limelight in this case.

No definite news is forthcoming from the oilfields, although the date cannot now be far distant when the first definite results will be known. The Anglo-Persian Oil Company have two boreholes in the course of being drilled, one of which has already reached a considerable depth. The Italian State Railways have also reached with their first borehole a depth of about 300 metres.

THE BRITISH COTTON GROWING ASSOCIATION.

The report of the British Cotton Growing Association, for the year ended December 31, 1925, which has just been issued, states that considerable progress has again to be recorded throughout the cotton-growing areas within the Empire, and the supplies of cotton which are being produced outside the U.S.A. have again been an important feature on the cotton market in this country, as will readily be seen by those who study the Liverpool Cotton Association's daily and weekly reports. Steady progress has been maintained more particularly in Uganda, the Sudan, and the Northern Provinces of Nigeria, and it is mainly to these countries that Lancashire can look to receive large and increasing supplies of raw cotton suitable to the industry here.

The state of the cotton trade during the period under review has been most disappointing, and, although at times there have been indications of some revival, it has been necessary for mills using American types of cotton to run short time owing to the limited demand for cotton goods. Nothwithstanding this, there has been a fair demand for cotton of good grade and staple, and the total sales of cotton other than American and Egyptian in Liverpool during the season ended 31st July, 1925, were 548,780 bales, made up as follows:—East African 70,870, Sudan 34,490, West African 25,880, Australian 11,370, West Indian 6,660, Sea Island 3,900, South African 3,300, East Indian, etc., 90,270 Peruvian, 252,640, Brazilian, 38,900, China, Smyrna, etc., 10,500; total 548,780 bales.

The cotton of Empire growth included in the above figures again showed a substantial increase, but there was a reduction of 53,000 bales in Peruvian, 11,000 bales in Brazilian, and 10,000 bales from China, Smyrna, etc.

The number of bales dealt with by the Association was considerably larger than in any previous year, and the value of the cotton also established a record, as will be seen from the following statement of cotton which has passed through the hands of the Association during the last six years:—

Year.	Bales.	Value £.
1920	23,513	1,699,144
1921	63,966	1,597,702
1922	67,386	1,628,778
1923	54,606	1,588,480
1924	59,583	1,922,097
1925	84,320	2,502,967

These figures only show the quantities of cotton which the Association have purchased outright from the growers, and cotton which has been consigned to them for sale by merchants and planters. With a rapid increase in production the number of British firms and others who are taking an interest in handling and marketing the crops continues to expand.

The income and expenditure account shows a surplus on the year's working of £81,598 10s. 9d. after making provision for depreciation, and income tax, and reserving a further amount of £10,000 on account of bad and doubtful debts. The excess of income over expenditure is increased to £347,676. In order that the native growers may not be unduly discouraged by the fall in values, the policy of the Council will be to pay the highest possible prices for seed cotton, and in some cases it will be advisable to buy at higher prices than the relative values ruling in Liverpool. By this means the Council will be carrying out the object for which the Association was formed, and will be doing everything possible to prevent a setback to the industry.

The heavy fall in the values of cotton as the result of

Digitized by Google

the huge American crop will be a severe test on the industry in some parts, but there is every reason to believe that even at the lower level of prices which have been obtained during the latter half of the year, it is possible to produce within the Empire, and as cheaply as it can be produced in America, all the cotton necessary. Apart from India, the future cotton growing areas are Uganda, the Sudan and Nigeria, and steady progress may be looked for with every confidence in other Colonies and Protectorates.

The following extracts are taken from reports dealing with developments in various cotton growing regions:—

India and Ceylon.

The operations of the B.C.G.A. (Punjab) Ltd., on the Estate near Khanewal, which is under the supervision of Professor W. Roberts, were again an unqualified success.

The returns from this estate are invariably ahead of those of other growers in the Province, and results are generally obtained showing two or three maunds of seed cotton better even than those of other European-managed concerns. This is in part due to the soil being especially good, but more to the improved methods of cultivation and regular system of work. There is a keen demand for seed from the estate, and for some considerable distance around the system of cultivation as carried out on the estate is being copied by others. Furthermore, the cotton is in much demand and is worth 25 to 50 points more on the Bombay and Liverpool markets.

During the year a new up-to-date ginnery was erected by the company, consisting of a substantial brick building which contains a complete pneumatic saw ginning plant in one section, and roller gins in the other. A large hydraulic plant is in a separate building, and the whole plant is driven by two 140 h.p. steam engines, the power for which is supplied by two Lancashire boilers working alternately—the fuel used being coal. There are also large godowns or warehouses and numerous brick platforms for the storage of seed cotton whilst awaiting ginning, which can be stored in the open without risk during the dry weather. At the time the lease of the estate was granted to the Association, the undertaking was given to erect a modern and up-to-date plant as an object lesson, although such a large expenditure on buildings, etc., for the better storage and handling of the cotton does not make the proposition very remunerative under present conditions of ginning and baling in India.

Reference has been made in previous reports to the Indian Central Cotton Committee, which works on lines in India similar to those of the Empire Cotton Growing Corporation here, and obtains its funds from a cess on all bales of cotton grown in India, used locally and exported. The Committee have an excellent Technological Cotton Research Laboratory in Bombay, which is doing very good work; they have recently obtanied a cotton botanist from Egypt who is attached to the College at Lyallpur, and some further scientific staff is being supplied to Madras for work at Coimbatore. The committee also award scholarships, and their arrangements for supplying experts and giving scholarships are very similar to those adopted by the Empire Cotton Growing Corporation.

The two most important developments in India in connexion with agriculture at present are undoubtedly the Sukkur Barrage and the extension of irrigation in the Punjab and Sutlej Valley Scheme. Approximately 13 million acres are already irrigated in the Punjab and native states, and it is possible to increase this eventually to 20 milion acres. A large proportion of this land is eminently suitable for cotton, and a fair proportion is capable of producing the American type. In regard to the Sukkur Barrage, the actual erection of the dam should shortly commence, all the preparations being practically complete, dredgers, etc., on the spot, and provided the erection is commenced shortly, there is a promise that it will be completed in 1929 or 1930, when several million acres will be brought under cultivation, out of which a million acres should be suitable for growing a good type of American cotton which it is confidently expected will do well in this area. At the present time some 2½ million acres are irrigated by inundation canals, which is not the best method, and with the opening of the barrage, six million acres will receive water, representing an addition of 3½ million acres, so that provided the land can be properly colonised within a reasonable time, there is a great promise for considerable quantities of good cotton from this area.

(To be Concluded.)

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 1.

The outburst of optimism which followed the conclusion of the General Strike, has given place to a much more sober view of the outlook, and although the tone of markets has remained good and fairly cheerful business has been quieter. The restraining influence is the continuance of the coal deadlock, the hampering effect of which upon British industry grows at an ever increasing rate as the days go by. After its usual custom the Stock Exchange has been a hotbed of rumour during the past week on the subject of the coal dispute, and stories that a settlement is imminent have been responsible during the past few days for brief spurts in prices in the home railway market. The report that the great British lines are rapidly converting a large number of their locomotives for oil burning is taken as a bull point in that it should enable them to extend their services, but it has been without any effect on the oil share market.

There has been a slight stirring of activity in the new capital market. An offer for sale of £2¼ millions in 6½ per cent. cumulative preference shares at 21s. was made on Thursday by No. 2 D.R. Cotton Mills, principal, interest and premium being guaranteed by the Dunlop Rubber Co. Ltd., and was rapidly over-subscribed. One or two smaller issue have also made their appearance during the week and on Monday an issue of £6 millions in 5 per cent. at 98½ by the New Zealand Government was rapidly over-subscribed. It was hardly expected that any change would be made in the Bank Rate this week in view of the industrial situation, but a period of cheaper money is a possibility for the near future, a fact which borrowers are likely to take into account. In the foreign exchanges the feature, apart from the wide fluctuation of the franc and lira, has been the maintenance of the sterling-dollar exchange at a high level.

The Future of the Franc.

An event of the past week has been the striking recovery in the French franc, which probably reflects in some degree the great relief felt in France at the successful close of the Morocco war, which means an easing of the Budget position. Nevertheless, much uneasiness is felt as to the future of the franc. The recent slump was clearly caused by a "flight from the franc" by French people themselves. Unless and until France squares up to the fact that a balanced budget, though immensely im-

Assets: Government securities and securities guaranteed by the Egyptian Government £E29,396,724; sundry securities £E332,308; advances on merchandise £E1,140,587; advances on securities £E2,486,669; advances otherwise secured £E692,489; sundry other advances £E438,151; bills of exchange £E3,393,732; local bills discounted £E384,351; buildings and furniture £E126,248; money at call and at short notice £E936,000; bankers accounts £E3,793,400; sundry other accounts £E85,754. Cash: notes £E1,556,135; gold £E79,202; silver and nickel, etc., £E361,991; £E1,997,328; £E45,203,741. Issue Department: notes issued £32,100,000; £E32,100,000; gold £E3,339,576; *British Treasury Bills £E12,710,424; £E16,050,000; securities: Egyptian Government securities and securities guaranteed by the Egyptian Government £E1,356,249; British Treasury Bills and National War Bonds £E14,693,751; £E16,050,000; £E 32,100,000.

SOSPIRO OILFIELDS.

The report of the Sospiro Oilfields for the year ended March 31, 192, states that the nominal capital of the Company is £1,365,000, divided into 1,300,000 Preference shares of £1 each and 1,300,000 Ordinary shares of 1s. each; 209,007 Preference shares have been issued, of which 206,507 are fully paid up and on 2,500 shares 1s. per share has been paid up; 800,000 Ordinary shares have also been issued and are fully paid up.

The geological survey of the extensive lands of the "Sospiro" Societate have been completed, and their great potential value is now being confirmed by an exploratory drilling at six different points of the property. A drilling programme of twenty wells is in hand, of which seven are in production. A substantial output of oil is already being obtained and should be greatly augmented at an early date by further wells which are nearing completion, and a great advance, therefore, has been made during the past year in still further establishing the value of the Sospiro oil lands.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold (See "Journal Officiel" of October 30, 1916).

FROM STEAM TO MOTOR.

A Boat for Alexandretta.

An increasing number of small steam craft have been converted, during the last year or two, to motor-driven commercial boats. An interesting conversion of this kind was carried out recently for an owner at Alexandretta.

Originally a 56 ft. Admiralty pinnace, having a beam of 9 ft. 9 in., with a moulded depth of 4 ft. 7 in., the craft has been very successfully transformed into a powerful heavy duty harbour service vessel. In order to effect the necessary alterations the internal accommodation, with the exception of the forward cabin, which was left practically in its original state, was completely gutted out. The engine-room has been arranged slightly aft of 'midships and a low deck casing extends over this compartment, as also a small cargo hold forward. Aft of the engine-room is another small cargo space, having a trunk hatch. The holds are together capable of carrying about 15 tons of cargo, consisting of ship's stores and general merchandise.

The propelling machinery consists of a two-cylinder 55 b.h.p. Ellwe semi-Diesel engine and reverse gear. The vessel is controlled from a steering shelter situated forward of 'midships, and the original steering gear has been utilised, together with the balanced rudder. On trials, carried out before shipment, the satisfactory speed of 9½ knots was attained. The vessel has now been placed on service at Alexandretta.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Tarantia for Bombay (Liverpool, June 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Holywell for Port Said, Colombo, Madras, and Calcutta (London, June 5).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (London, June 16).

British India Line.—S.s. Mandala for Colombo, Madras, and Calcutta (London, June 5); s.s. Madura for Bombay and Karachi (London, June 11).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, Trieste, also Algiers, Corfu, and Gruz if inducement offers (Liverpool July 1, Swansea July 6); s.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, also Algiers and Volo if inducement offers (Swansea July 6, Glasgow July 8, Liverpool July 10).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 23).

Prince Line.—S.s. Lancastrian Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (London, June 4).

P. and O. Line.—S.s. Rajputana for Bombay (London, June 11); s.s. Novara for Colombo, Madras, and Calcutta (Liverpool, June 12).

NEW COMPANY.

ANGLO-BURMA TIN.

The Anglo-Burma Tin Company, Ltd., has been registered as a public company with a nominal capital of £250,000 in £1 shares, to adopt an agreement with the Anglo-French Exploration Company and H. Higgins, to work leasehold tin mining properties and other assets in Burma, etc.

Motors and Motoring.

By G. B. B.

Were I to hazard the suggestion that there are more Morris-Cowleys on the road than there are cars of any other particular make there would be few who would venture to disagree with me, provided that I made it clear that I was referring to this country and was not including the United States. "Over there," of course, there are Dodge Bros., and Fords, Durants, Studebakers, and a host of others, but here, in this country, every second or third car one sees seems to be a Morris-Cowley. And were I asked for my opinion as to the car—which I am not, so I volunteer it in this roundabout way—I should say that it is a far better car than its price indicates. It is a thoroughly good production, and I will not qualify that statement by adding "of its kind." It is a thoroughly good, well made, and admirably designed production, and to any one who wishes to enter the motoring world, with a certainty of partaking in all its pleasures and having as little a share of its many troubles as possible, I would say, "Buy a Morris-Cowley and you will never regret your choice or blame me for my advice." All of which is due to the fact that I have just finished a no-trouble run on a car of that make, during which run we covered more miles in the time, climbed more ferocious hills and went over worse roads than I think we could have negotiated in any other car, unless, of course, we had been in one of the finest and most expensive productions that British motor manufacturers can turn out.

The Carburettor.

The Morris-Cowley carburettor is one which stands by itself as regards design and which differs considerably from any other on the market. It is a "Smith," of the "straight through" type, with five jets, four of them together, and automatic air dash pot, a butterfly throttle, and a hand controlled air regulator. The older model had three differences; there were four of the jets in a circular cluster, whereas now these four are in line. The older model had a long, horizontal mixing chamber, whilst the new type has a short mixing chamber, with a straight flow, and, further, in the older pattern the screw adjustment of the pilot jet was at the side, in a horizontal position, whilst the new model has a vertical screw adjustment. The standard setting for the new five-jet carburettor is as follows: well or pilot jet, 15; No. 1 jet is 17; No. 2 jet, 20; No. 3 jet, 17; and No. 4 jet, 10. In the older model, correct setting of the jets was: well or pilot jet, 17 or 20; No. 1 jet, 25; No. 2 jet, 22; No. 3 jet, 15 and No. 4 jet 10. It has been pointed out before, but I think it well to emphasise the fact, that the only service attention likely to be needed is that a certain amount of adjustment may become necessary in connexion with the controls of the throttle and the auxiliary air slide when they eventually develop a little backlash, or slackness. At the same time, it must not be supposed that that is a contingency likely to occur at any moment; on the other hand, it may be taken that neither control is likely to require anything doing to it until after the car has covered about 20,000 miles on the road. As a rule, the carburettor should not be touched by the amateur, as in the first place, it is not likely to go wrong, and, in the second place, if it does go wrong for any reason or through any cause no amateur is likely to be able to put matters right.

The total value of the export trade of Cyprus in 1925 was £186,619, as compared with £194,641 in 1924.

It is announced that the Marquess of Reading has joined the board of directors of the London and Lancashire Insurance Co., Ltd.

At the annual general meeting of the Shipping Federation last week, Viscount Inchcape was elected president, in succession to the late Sir F. Shadforth Watts.

Bonds of the Kingdom of Roumania Four per Cent. External Loan drawn for repayment, and coupons falling due June 1, should be presented for payment at the Counting House of Helbert Wagg, and Co., 41 ,Threadneedle Street, E.C.2.

(Continued from page 641.)

portant, is not sufficient by itself to stabilise the franc quotation. Not until the franc is once more tied to gold, will it become immune from attacks of lack of confidence, such as that which we have just witnessed. Unfortunately neither the French Cabinet nor French public opinion seems to be anywhere nearly ready to contemplate the stabilisation of the franc at the very high rate at which stabilisation would now have to take place, and a step of this kind is not likely in the near future. Meanwhile, in the next few months new dangers to the exchange are only too possible. It is by no means certain that the Franco-American debt settlement will be promptly ratified in both countries, nor that a binding arrangement over the Franco-British debt will be reached. Disappointment may arise and lead to fresh mistrust of the franc, and every successive step may be expected to be a little worse than its predecessor. Clearly one of the greatest financial and economic disappointments of 1926 is the renewed instability of Continental currencies. Against this the conspicuous strength of sterling during the recent great national emergency stood out in sharp contract, and should be, in the eyes of the world, an object lesson of the wisdom of the return to the gold standard.

London Stores' Progress.

The majority of the London Stores again show an increase in net profits, so continuing the movement which has been in progress in recent years. Thus the Army and Navy have increased from £229,888 to £249,627; Harrods from £630,189 to £688,751; John Barkers from £414,135 to £449,477; Selfridges from £343,488 to £444,709; and Maples from £342,892 to £354,761. With these figures before them, and in view of the progress during recent years, investors may be tempted to take up the shares of the London stores. In a number of cases they would be justified in doing so. But discrimination is necessary since the question may soon arise as to how long the recent rate of progress will be mantained. Moreover, the recent strike may result in some of the stores sustaining a temporary set-back this year. Among those which the investor might consider are Selfridges' preference, although the yield of £4 18s. 6d. per cent. shown on them is low. John Barkers' ordinary, which yield £6 5s. 6d. per cent.; Liberty and Co.'s 6 per cent. cumulative preference, returning £5 14s. per cent.; and Army and Navy, which give £6 13s. per cent. are also not without attractions. Of the higher yielding shares, those of Whiteleys and Harrods, both returning £7 2s. per cent., may be noted.

Cotton and Cotton Goods.

LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows under date May 26:—

Egyptian Futures, Sakel Contract.— Trading in this contract has broadened out considerably during the curtailed period covered by this report, and values show an appreciable hardening all round. We fail to trace, however, the necessary trade support to warrant the movement, which appears to be mainly speculative in character, and on this account are rather inclined to anticipate a retrograde movement in the near future. In fact, at the time of writing, the market appears to be developing a reactionary tendency, as prices have eased 10 to 43 points from the best, reducing the advance on the week to 37 to 57 points for both old and new crop positions. The main feature in the earlier trading was a belated rush on the part of May shorts to cover; they found this rather a costly business, and in the process of obtaining their cotton forced a further sharp widening in old and new crop differences. With the open interest in this option now much reduced, the parity shows signs of narrowing again, as holders are inclined to take their profit instead of forcing tenders of probably undesirable cotton.

The change of Government in Egypt, consequent to the elections held on Saturday, seems to have encouraged "bullish" activity at the other side. In this, new crop options appear to have been mainly favoured, and our market has participated to a fair extent in this fresh business. We have to-day received a cable from a conservative source expressing the opinion that the Alexandria market appears overbought. We are inclined to think this surmise will shortly prove correct, as there are no apparent factors at the moment to justify any further upward movement. Only in case of poor crop reports, and at present these are quite satisfactory, or a material improvement in the trade outlook, would we consider purchases at the present level to be warranted.

Upper Contract.—Transactions in this contract continue to be very restricted and of quite an unimportant character. The demand for both spot and forward cotton has been limited throughout the week, but with American values holding very steady, this has not affected the level. Only minor fluctuations have taken place, prices since our last report showing advances of 10 to 15 points.

Egyptian Spot.—The effect of the protracted dispute in the coal trade, coupled with the intervention of the Whitsuntide holiday, has tended further to restrict business in this department. The daily inquiry has dwindled to somewhat meagre proportions, and spinners have been reluctant to appear in our market. Prices have fluctuated somewhat, rather as a result of the customary end of the month sqeeze in Alexandria, coupled with the recent political developments in Egypt, than to any material change in the demand for actual cotton. On the whole, the tendency has been for prices to harden slightly, particularly for G.F. and F.G.F. Sakel. The local inquiry has been lacking in features, if one excepts an improved demand for Pilion cotton at from 12½d. to 13½d., prices which sellers as a rule find singularly unattractive. An unusually large proportion of the demand has been for "Egypts 10½d. to 12.00d." The better grades of both Sakel and Uppers have been comparatively neglected, and such sales as have taken place have been of little importance. White Sudan at from 150 to 250 on has continued in fair request, but Sudan Sakel has been quiet. C.i.f. business on the whole has not been very encouraging. Forwardings to spinners, however, for the week ending 21st instant, show a marked improvement at 7,962 bales. Estimated sales 1,000 bales Egyptians and 800 Sudan. Quotations of Sakel are unchanged from last week, with the exception of Good Fair and Fair, which show an advance of 15 points. Quotations of Upper and Brown have advanced 10 points. F.G.F. Sakel to-day 17.00d. F.G.F. Upper to-day 12.60d.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended May 20, state:—

Since our last report the futures market has been quiet but firm, especially for Sakellaridis. The week's summary of price movements is as follows:—Sakellaridis: May, 30.90 dollars, 0.60 dollars up; July, 30.08 dollars, 0.56 dollars up; November, 29.70 dollars, 0.48 dollars up; January, 29.42 dollars, 0.50 dollars up. Ashmouni: June, 21.52 dollars, 0.07 dollars up; August, 21.74 dollars, 0.14 dollars up; October, 21.95 dollars, 0.03 dollars down; December, 22.10 dollars, 0.03 dollars down.

Operations in the futures market this week have consisted mainly of selling of new crop options by Liverpool operators, apparently on straddle account; the export houses have hardly been in the market at all this week. Speculators show very little interest in old crop and the market in these options tends to become narrow. The demand from abroad has been fair; the bulk of the business put through has been for Lancashire account, the Continent and America contributing very little to the week's total. The week's receipts amount to 72,122 krs. against exports 134,743 krs.; the stock stands at 1,913,760 krs.

Spot:—The market has shown a little more activity during the week due to a slightly increased demand from abroad. Sales amount to about 10,000 bales, of which we estimate 5,000 bales Sakellaridis, 3,400 bales Ashmouni, 1,000 bales Zagora, 400 bales White and 200 bales Pilion.

Sakellaridis:—There has been an improvement in the turnover of business in this variety, with a little more interest in the better grades. The spot differences for Fully Fair up to Fully Good Fair have hardened somewhat —the remaining grades are unchanged.

Ashmouni and Zagora:—The demand for these cottons is well maintained and still favours Fully Fair to Fully Good Fair. Holders of these grades are very hard to deal with. The better grades are more or less neglected and spot differences for these are unchanged.

Brown and Pilion:—The small business done in Pilion has been confined almost entirely to Fully Good Fair to Good without change in the spot differences. No operations in Brown have been recorded.

White:—A small business has been done in this variety covering Fully Good Fair up to Good, Casulli particularly being in favour. Spot differences are, if anything, a little easier.

Crop 1926:—Weather conditions during the past week have been favourable and the crop is progressing normally everywhere. We have had reports of slight attacks of leaf worm in isolated districts but no damage has resulted. The germination of the seed in the North Delta has been very successful and hardly any resowing has been necessary. Temperature during May has been above normal, except for two or three days in the early part of the present week.

In face of competition from American, German, French, Swedish and Italian concerns, the New Antwerp Telephone and Electric Works has secured sole rights for the reorganisation and exploitation of the Greek telephone and wireless services. The contract is worth about two and a half millions sterling.

Colonel Walter Thomas Grice, V.D., C.I.E., of The Coppice, Cookham Dean, Berks., of Messrs. Smith, Stanistreet, and Co., of Calcutta, manufacturing chemists, formerly commanding 1st Battalion Calcutta Volunteer Rifles and 5th Battalion Indian Defence Force, who died on February 28, aged 57, left unsettled English estate of the gross value of £37,609, with net personality £29,449.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Steel Bridge.—Tenders are invited by the Alexandria Municipality for the construction of a steel bridge over the Mahmoudieh Canal at Moharrem Bay, Alexandria. Copies of the specifications and plans may be obtained by interested firms from the Director-General, Alexandria Municipality, at a cost of Pt. 80 per set. November 10. (D.O.T.)

Machine Tools.—The Department of Technical, Industrial and Commercial Education, Ministry of Education, Cairo, invites tenders for the supply and delivery of the following machine tools and workshop equipment required for the Cairo model workshops, Boulac. One milling madhine for cutting straight and helical gear wheels up to 14 in. in diameter, complete with cutters for wheels and millings; one horizontal boring machine with revolving table and to be locked at 90 deg., the distance between table and centre of boring spindle 18 in. minimum and to bore 5 feet long, all axles and spindles of the machine must run in ball bearings; one capstan lathe 8 feet bed with all automatic operations and hollow spindle, the lathe should be supplied with all the necessary equipment; two portable electric drilling machines to be used by hand and to bore 1 in. diam x ½ in. thick, the current is 210 volts continuous; one plate rolling machine to roll up to 7 feet in length and ½ in. thick; one two-tons foundry cupola for melting cast iron of the latest type; one brass furnace of ½ ton capacity of the modern type as used in the big firms in Europe; five die casting machines for, brass aluminimum, and cast iron of different articles; one liquor spraying outfit complete for more than one pistol, and fitted with electric motor and air compressor and drying oven; two electric brass carving machines for fancy work complete for continuous current 210 volts; three power press for general work also fitted with special dies for making forks and spoons middle size. Quotations should also include delivery of the above at Cairo Model Workshops. June 19. (D.O.T.)

Rails.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 4,980 metrical tons flat bottom rails. July 1.

Drainage Works.—The Director-General, Main Drainage Department, 2, Sharia El Maleka Nazli, Cairo, invites tenders for the construction of a rising main from Ameria to Kafr el Gamous and a bypass to the emergency storage reservoir:—(1) Supplying, laying, jointing and testing approximately 7,800 lineal metres of 46 inches diameter cast iron pipes (British Standard) and accessories at and between the sites of the proposed new Sewage Pumping Station, Ameria, and the existing Sewage Pumping Station, Kafr el Gamous. The supply and laying of approximately 4,700 lineal metres of 0.60 metre gauge light railway, and the construction of a metalled road from Ein el Shams to Kafr el Gamous. (2) Supplying, laying, jointing and testing approximately 1,400 lineal metres of 36 inches diameter of cast iron pipes (British Standard) and accessories at and between the site of the existing Sewage Pumping Station, Kafr el Gamous, and the proposed Emergency Storage Reservoir, south of the old Suez Railway embankment and the supply and laying of a light railway approximately 1,500 lineal metres, 0.60 metre gauge. (3) Supplying special castings at Kafr el Gamous Sewage Pumping Station. Contract No. CXXXIX. July 1.

Water Supply Works.—The Egyptian Ministry of the Interior invites tenders for the carrying out of water supply works at the town of Sennoures in the Fayoum. June 1. (D.O.T.)

Platform Weighing Machines and Counter Scales.—The Physical Department of the Egyptian Ministry of Public Works invites tenders for the supply of the following:—41 platform weighing machines, 12 personal weighers, 43 counter scales, and 61 Beranger balances. June 9. (D.O.T.)

Water Pipes.—The Municipalities and Local Commissions Section, Cairo, invite tenders for the supply and laying down of water pipes in the town of Sembellawein. June 24. (D.O.T.)

Dynamo and Motors.—The Controller of Technical, Industrial and Commercial Education, Ministry of Education, Cairo, invites tenders for the supply of dynamo and motors. June 19. (D.O.T.)

Weaving Machinery.—The Controller of Technical, Industrial and Commercial Education, Ministry of Education, invites tenders for the supply and delivery of weaving machinery required for Assuit modern workships. June 19. (D.O.T.)

TURKEY.

Semi-Portal Crane.—The Anatolian Railway Administration invites tenders for one electrically driven semi-portal crane. June 28. (D.O.T.)

Leather Belting.—The Anatolian Railway Administration invites tenders for the supply of leather belting. (D.O.T.)

Locomotive Brakes.—Tenders are invited for the supply of locomotive brakes required by the Anatolian Railway Administration. June 14. (D.O.T.)

Company Meeting.

ANGLO-EGYPTIAN OILFIELDS.

Improved Results.

The fifteenth ordinary general meeting of the Anglo-Egyptian Oilfields, Ltd., was held on May 27, at Winchester House, E.C. Sir Reginald Macleod, K.C.B., Chairman of the company, presided.

The secretary (Mr. W. A. Turner, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I have the good fortune to refer to a more favourable report than that placed in your hands last year when the Board did not feel justified in recommending more than a dividend of 10 per cent. after two years in which 12½ per cent. had been paid on the "B" shares, and we are now able to revert to this latter figure. The total estimated net production is larger by more than 15,000 tons, an increase from 160,251 to 175,758.

At each of the last four meetings I have referred in some detail to our difficulties in dealing with the amount of water in a state of emulsification with the crude, a condition which made it impracticable to operate certain wells with a high proportion of salt water. This problem has been vigorously attacked with the aid of the technical staff of the Royal Dutch Shell Group whose chemists and engineers have given the closest attention to this work, spending months on planning, organising, and perfecting a dehydration system which is now at work on a larger scale and to the great advantage of the company.

I stated last year that the dehydrating plant was brought into successful operation at the end of June, 1924, but it has been greatly developed and improved since that date. By a subsequent process the salt in the water can now be eliminated to so small a fraction as to be negligible.

During a great part of the year our gas compression plant has been in effective operation, and is the means of securing a considerable amount of benzine which would not otherwise be available.

Our drilling operations were so far successful that 4 wells out of 5 completed on the northern extension of the main Hurghada Field were brought in and one in the main field itself.

Practically the whole of the production was obtained from our Hurghada Field, and although we obtained from Gemsah some 500 tons more than in the previous year, the total from this field is relatively unimportant. Up till now it has been the practice to publish the production figure for the Hurghada and Gemsah fields separately, but it is felt that there is no longer any advantage in this and it is proposed in future to publish the total figure for the two fields.

The Hurghada Field.

Now, with regard to the increased production obtained from Hurghada, it is important to remember that, generally speaking, all wells on an oilfield show a steady decline from their initial production. On some fields the decline is rapid and on some it is slow. Happily on the Hurghada Field the decline rate up to now has been slow. You will see, therefore, that to increase production on an established oilfield it is necessary first to make up for the natural decline of old wells by the production from new wells before the results for the year show any increase over those of the previous year.

During 1925 we were able to achieve this by the help of two factors. We drilled four successful wells on an area to the north of the main field, which gave us about half of the extra production, and we are enabled, thanks to the excellent results given by the dehydrating plant, to take production from a number of old wells containing a high percentage of salt and water in their production. It must be borne in mind, however, that some of these wells had not been pumped for a long time and naturally tended to give a higher proportion when first put on the pump than they could be expected to maintain over a longer period.

Further progress was also made with the provision of gas separators and gas-tight tanks, so that we were able to produce a proportionately larger amount of benzine per ton of crude than in previous years. We also extended further the manufacture of asphalt at our Suez Refinery to meet a growing local demand.

The failure to find oil in other areas outside Hurghada, to which I referred last year, has not been broken with any gleam of success. The drill is now at work on one of the Ashrafi Islands in the Red Sea, but the progress made is not yet sufficient to give any indication as to the result. I referred last year to the possibility of utilising some of our cash reserves—if our persistent efforts in Egypt continue to be unsuccessful—for exploration in some other country. This consideration is permanently before the Board but I am not in a position to carry the matter any further on this occasion.

Turning to the profit and loss account, the small addition to the general and refinery expenses is no more than proportionate to the quantity of production dealt with. The receipts for refining foreign oil, which form so large an element in reducing our refinery costs and for which we are indebted to the Asiatic Petroleum Company, amounted to £52,532, a few hundreds more than in the previous year. On the other hand, the value to us of the payments made to the Egyptian Government in cash and kind for licence, leases, and royalties amounted to £33,223, an increase of over £10,000.

It may be added that the dividend payable on the "C" shares, which are owned by the Egyptian Government, amounts to £20,000, making the total net receipts by the Government from the company's operations of a value of over £53,000 in the year.

The prices obtained for our products have on the whole been well maintained. The higher figures received for liquid fuel are due at least in part to the superior quality realised through the effective working of our dehydration plant. There has also been a considerable increase in the available tonnage of benzine.

It is unnecessary to detain you by detailed observations on the balance-sheet. You will observe that depreciation—augmented this year by £57,272—stands at £929,182. The sum due by debtors exceeds the sum due to creditors by £139,000. We have a deposit with the Anglo-Saxon Petroleum Co. of £20,000, and investments in British Government securities amount to £547,373. The balance of profit is £244,097, and after payment of the dividend the sum carried forward to next year will be £237,854, an increase of over £10,000 on the amount carried over from last year.

Current Year's Prospects.

You will no doubt wish me to say a few words as to the results which may be expected during the current year. From the published figures you will have seen that production during the first five months of the year is below that for the corresponding period of 1925, and I do not expect that we shall be able to equal the production for that year. I have already indicated that a decline must be expected in the production from old wells, but this is to some extent made good from the new producing wells on the northern extension of the field.

The outlook in other directions appears to be satisfactory. The electrical dehydration plant on the field continues to operate very efficiently and to enable our refinery at Suez to produce a better quality of fuel oil, and the new gas compression plant is working very satisfactorily.

It is too early to say whether the prices obtained for our products throughout the year will remain at a satisfactory level, but I am hopeful that there will be no substantial decline in any of them from the average for 1925.

It would be ungrateful if I omitted to express our warm recognition of the excellent service rendered to this company by our managers at Hurghada and Suez and by the staff they direct; conditions of life are trying in that country, and they merit our hearty thanks.

The report was unanimously adopted.

Before closing the proceedings the Chairman referred to the addition of Mr. Acland to the Board of the company, and said he was sure that the shareholders would congratulate themselves on having such a distinguished and able representative on the Board.

A telegram to the *Madras Mail* from Secunderabad states that the Nizam of Hyderabad has undertaken to repair, at his own expense, the mosques at Mecca, which are reported to have been damaged by the Wahhabis. It is understood that an engineer has been sent to Mecca to estimate the cost, which may amount to some lakhs of rupees.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Mosul Agreement.

The signing at midnight on June 5 at Angora of the Anglo-Turkish Agreement puts a seal on the settlement of the Mosul question as laid down by the Council of the League of Nations, and places on a satisfactory basis Anglo-Iraqi-Turkish relations. The policy consistently advocated in these pages for the last eighteen months has in due course reached the desired and inevitable goal. It was towards the end of 1924 that it was made known semi-officially in Angora that the agitation over the Mosul question need not be taken too literally. The Turks would have liked to possess the Mosul vilayet, and were prepared to work hard to obtain it; but even at that date they were contemplating the unlikelihood of their being successful, and were discussing the possibility of finding a satisfactory monetary or economic substitute. Aware of these facts, the Secretary of State for Foreign Affairs has striven hard ever since to build a bridge of retreat for the Turkish Government. His task was rendered all the more difficult by the ill-informed and mischievous outcry of a section of the British Press, which deliberately used the bogey of a war with Turkey to undermine the Government's position and to stiffen the Turks in their intransigent attitude. To-day it is possible to see how well the whole situation has been handled by the Government. The Turks have found themselves up against Sir Austen Chamberlain's imperturbable good will and courtesy, the trenchant logic and hard hitting of Mr. Amery in debate, and, finally, the obvious friendliness and staying power of Sir Robert Lindsay. The combination has broken down even Turkey's capacity for provocation and prevarication, mightily aided by the uncomfortable quarters in Angora from which the British Ambassador conducted the protracted negotiations.

Terms of the Treaty.

There is nothing in the Agreement to cause the least misgiving in any one of the three countries that are party to it, for Iraq also was a signatory. The Brussels Line is confirmed as the boundary between Turkey and Iraq. It was not the frontier that Great Britain asked for, but it was the one awarded by the Council of the League of Nations. Great Britain, therefore, is not responsible for leaving Assyrians and Chaldaeans in Turkish territory, for their fate had to all intents and purposes been settled beforehand. The only modification of the frontier laid down by the League Council is a minor one. At a point near the Persian frontier the boundary as previously traced round a mountain formed a wedge between two Turkish villages, causing the road connecting them to pass through Iraqi territory. The Turks asked for and obtained a rectification of the frontier, so that both the mountain and the road between the two villages will in future lie wholly in Turkey. There is to be a neutral zone on each side of the frontier, with a view to eliminating causes of friction as a result of the activities of marauding parties. Turkey for her part receives for twenty-five years a tenth of all royalties accruing to the Iraq Government from the Mosul oil-fields, with the option for a year of capitalising the value of this concession, if agreement can be reached between the parties as to the figure. Permission is accorded to any residents of the Mosul vilayet to opt within a fixed period for Turkish nationality, and there is to be an amnesty for those who have been imprisoned for offences against the Iraqi State by furthering Turkish propaganda.

Turkey's Gain.

Both in Turkey and in Iraq, it will be imagined, the Agreement will be hailed with unreserved relief. The real friends of Turkey in Great Britain—where they are numerous—will regret the long time that it has taken the Angora Government to reach its present frame of mind, but they will welcome it none the less cordially. Turkey is relieved of a bogey, entirely of her own creation, which has interfered with the normal development of the Re-

Digitized by Google

public for several years. It is to be hoped that, with the Agreement, she has satisfied herself that she can still count on the friendly interest and support of Great Britain. The official relations between the two countries are now happily correct; but it is to financial and business interests in this country that the Turks have to look for that practical assistance which is required to set their Republic on its feet. To secure the help they need, they must show that the end has now been reached of the pinpricks administered to the foreign business world of Constantinople. No one challenges the Turk's right to be master in his own house, but the business of a modern State is too complex to allow lucrative undertakings in foreign hands to be transferred suddenly into inexperienced Turkish hands and still to remain lucrative. Capital will go only where confidence precedes it. The resources of Turkey justify in a very large measure the expectations that the Turks have of the potentialities of their country; but if they are to be developed by foreign capital, it must be on lines that commend themselves to foreigners. These lines can easily be laid down by means of frank discussion; it is of no use for Angora to imagine that it can lay them down without such discussion.

Relief in Iraq.

For Great Britain the advantage derived from the conclusion of an agreement with Turkey consists mainly in the relief that it brings to Iraq. With its northern frontier settled in friendly understanding with Turkey, the Iraq Government can now proceed about its ordinary business with a mind freed from an anxiety that has weighed upon it for the last five years. Development schemes that have been held up on account of the uncertainty of the position in the north can now be undertaken with some assurance; administration of the Mosul vilayet should be simplified as a result of the abandonment of Turkish propaganda, and there should be a marked improvement next year in the agricultural returns of the vilayet under the more settled conditions. The British taxpayer will, no doubt, learn in due course that a further reduction in the annual cost of the Middle East Department has been made possible. The total of the Vote is now about £4,500,000, a sum that includes the cost of maintaining an Air Force that would still be a charge on the British Exchequer, even if it were withdrawn from Iraq. The next Budget should be able to reduce the Vote to below four million pounds. It should also be a source of legitimate satisfaction to find that the policy maintained by the British Government has been entirely justified by the event. Its attitude, both dignified and consistent, has been actuated throughout by friendliness towards Turkey and by patience and tolerance until such time as the Turks were able to satisfy themselves that the hostility that they were affecting towards Great Britain was hurting no one so much as their own country.

The New Government in Egypt.

The formation of a Cabinet by Adly Pasha Yeghen introduces a welcome relief into the strained situation that has characterised Egyptian affairs since Zaghloul Pasha decided that he must be the new Prime Minister. Unless unforeseen events arise, it may be anticipated that Parliament will meet this week and will occupy itself with the Address from the Throne and such business as may be necessary, until it adjourns towards the end of the month for the summer recess. In these circumstances there should be nothing to prevent the visit of King Fuad to England in July. It goes without saying that His Majesty is assured of a warm welcome. The British public would still appreciate, even if the Egyptians failed to do so, the value of friendly relations between Egypt and Britain, and it will look to the Throne, as being above the hurly-burly of political passions, to exercise a steadying influence on the policy of the country. For this reason, as well as on more personal grounds, a postponement of King Fuad's visit would be regretted. There has been no tendency in this country to misread the broad facts of the position in Egypt. The excesses of politicians cannot be ignored, but they have to be discounted when an attempt is made to appraise the real relations between two countries. In spite of agitation and worse the identity of interests as between the great bulk of the Egyptian population and the British has remained constant. Waters that might otherwise have remained smooth have been troubled by a mere handful of politicians, and during the last few weeks the mischief was virtually confined to one man. If Zaghloul Pasha will subordinate personal ambitions to the welfare of his country, there will be no serious trouble between Egypt and Great Britain, and time may convince both him and his followers that there is no divergency between the real interests of the two countries.

The Roumanian Elections.

The completed returns for the Roumanian elections held on May 25 and 28 give the Government (General Averescu's People's Party) 54.6 per cent. of the votes and 286 out of 387 seats in the New Chamber. The National Party and the Tsaranists (Peasants' Party) who together polled 29.3 per cent. of the votes have 77 seats; the remaining seats are divided between the Liberals (15) and the Christian League or Anti-Semites (9). The Nationalists in Transylvania remained for the most part loyal to Dr. Maniu and Prof. Jorga, and the defection of the three Transylvanians who have become Ministers in the new Government does not appear to have caused any serious breach in their Party's ranks. All the Ministers were elected, the only notable "casualty" being M. Ion Bratianu, the late Prime Minister, who failed to secure election in Bucharest. As a Senator "of right," however, he has a seat in the Upper House. According to present arrangements Parliament will meet towards the end of the month, and will adjourn after a fortnight's session.

The will of Sir Paul Chater, Hong Kong's "Grand Old Man," who died last Thursday week, provides, among other legacies, for an annuity of £10,000 to be paid to Lady Chater, while a sum of £10,000 is left her as a legacy. A legacy of 50,000 dollars is also bequeathed to the Jockey Club, while the remainder of the estate, after most substantial provision for his nephews and their children, goes to the Armenian Holy Church of Nazareth at Calcutta.

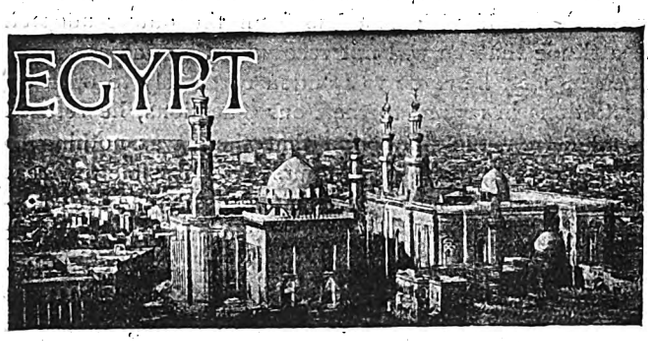
THURSDAY, JUNE 10, 1926.

A WISER MOVE IN EGYPT.

The past week has brought a welcome change in the situation in Egypt. Zaghloul Pasha, a man of many minds and moods, has abandoned the idea of forming a Government himself, and is prepared to give his support and that of his following in the Legislature to a Cabinet of which Adly Pasha is the titular head. The sequence of events has been significant. Before the elections were held it was generally understood that Zaghloul Pasha, whose victory at the polls was a foregone conclusion, had resolved that he would not accept for himself the task of forming a new Government, but would leave it to one of his political allies, Adly Pasha or Sarwat Pasha. As soon as the results of the elections were known the Wafd leader suddenly changed his mind; his Liberal associates were cold-shouldered, and he let it be known that he expected, as head of the strongest part in Parliament, to be called upon by King Fuad to form a Ministry. His decision, it is supposed, was not altogether unconnected with the acquittal of two of his prominent colleagues of the Wafd on the charge of complicity in the long series of crimes which led up to the murder of Sir Lee Stack. An adverse verdict in that trial would have laid the Wafd under a stigma that, with all its self-assurance, it would not be able to ignore. The acquittal, therefore, was acclaimed as a complete exoneration from any responsibility for the crimes, and the temper of the Zaghloulists showed signs of reverting again to what it had been—with such disastrous results—in 1924. The situation was one which Great Britain could no longer affect to ignore. A meeting took place between Zaghloul Pasha and the British High Commissioner, at which the Wafd leader, it is to be inferred, was invited to give assurances that no attempt would be made to reopen the Reserved Questions in the spirit in which he had approached them when previously in power. Zaghloul Pasha could not give these assurances, and the situation of necessity became strained. It was not improved when, a few days later, the British Judge of the Court which had on the majority vote of the two Egyptian Judges acquitted Zaghloul Pasha's colleagues resigned his post on the ground that the verdict was against the weight of the evidence and constituted a grave miscarriage of justice.



Great Britain's position in Egypt is admittedly a difficult one. A tactical mistake was made when in 1922 Egyptian independence was recognised before a settlement had been reached in regard to four points which it was agreed should be reserved for future negotiation. The fact of their reservation implied two things; first, that Egypt recognised by accepting independence the compatibility of independence with the reservation, and, secondly, that the questions at issue were vital enough in Great Britain's opinion for settlement outside, so to speak, the accepted interpretation of independence. Towards the Reserved Questions Zaghloul Pasha has from the outset adopted the attitude that he will not recognise them as reserved. When in 1924 he came to London ostensibly to open up negotiations in regard to the Four Questions, he refused to budge from the standpoint that there was nothing to negotiate about, as no other course was possible to Great Britain than to abandon without discussion her reservation. In the circumstances it is not surprising that Great Britain has refused to accept Zaghloul Pasha's dictation. On the other hand, she is anxious to impair as little as possible Egypt's complete freedom to manage her own affairs. For four years now the Points have been reserved, and no single Egyptian can contend that he or the country has been a piastre the worse for the fact. Among many thinking Egyptians the conviction is gaining ground that the Four Questions, if left to themselves for a period, will prove far more susceptible of an adjustment satisfactory to both parties than appears possible to-day. This is not Zaghloul Pasha's policy. His past record suggests that, if again head of the Government, he will once more act in the belief that shouting and intimidation will force Great Britain to surrender. Thus the history of 1924 will be repeated. It is a position that no self-respecting Power can tolerate, quite apart from the personal danger to which foreign residents in Cairo would thereby be exposed. The action of the Wafd in connexion with the proceedings in the Assize Court that ended in the acquittal suggests that under Zaghloul Pasha the independence of the judiciary would disappear and that there would be an early reversal to conditions from which Egypt, it was hoped, had successfully emancipated herself as a result of her efforts during the last forty years.

Although the position in Egypt is eased by the withdrawal of Zaghloul Pasha, it is not wholly free from embarrassment. So long, however, as Adly Pasha is at the head of the new Government, he can be relied upon to set his face against the crude policy associated with Zaghloul Pasha's name. His tenure of office, however, must be entirely at the mercy of the Wafd votes, as far as proceedings in Parliament are concerned. In spite of his political association with Zaghloul Pasha during the last few months, his political honesty is recognised. Fearing as a Liberal the danger to Constitutionalism that would result from the giving of a free hand to extra-parliamentary intrigue, he threw in his lot with the Zaghloulists for a season, in the hope, presumably, that a little Liberalism might leaven, if not the whole lot, at least the leader. He has been conspicuously undeceived. If the British Government feel obliged to insist that the Reserved Questions can no longer be left unsettled, but must at once form the subject of a definite agreement, Adly Pasha will realise that confidence in him personally has not been destroyed, but his dependence on the whims of the Wafd's leader has introduced a weak spot in his armour. Not the least hopeful feature in the situation is that Zaghloul Pasha's withdrawal has been effected with the complete endorsement of his party. It is just possible that the leading spirits in the Wafd have begun to realise, as a result of recent events in Europe, that an arrangement which safeguards Egypt from the substitution of any Power in Great Britain's place is, perhaps, worth an attempt to reach an understanding on a few points that experience has shown do not affect the every-day life either of the nation or of the politicians anxious to run the country on their own lines.

The Near and Middle East*

From Our Own Correspondents.

Cairo, May 29.

Empire Day Celebrations.

For the first time on record Empire Day was officially celebrated in Cairo this year by the British Community. Hitherto, the celebration has annually been confined to Alexandria, but on the suggestion of Lord Lloyd a committee was appointed to organise a similar celebration in the Capital, where, as in Alexandria, children's sports were held at the Sporting Club in honour of the day. Everything proved most successful, and Lord Lloyd delivered an admirable little speech, which he prefaced by reading a message of good will from the Chairman and Council of the Royal Colonial Institute. The celebration in Alexandria took place on the 25th, having been postponed one day to enable the High Commissioner to attend in accordance with time-worn custom.

The Elections.

As my letters have all along foreshadowed, the elections have resulted in an overwhelming majority for the Wafd, who under direct ticket have secured two-thirds of the seats in the new Chamber. The Liberals succeeded in gaining only a little more than half of the constituencies in which the tripartite opposition agreed to lend to their candidates its united support, and sixteen of their official candidates were actually beaten by Independents who are ardent Wafdists and will certainly add to the Wafd majority in all the divisions. The surprise of the elections has been the complete eclipse of the "Ittihad" party. Not that it was expected that they would gain a large number of seats, but it was thought that at any rate they might possibly equal what the Liberals might get. The result, only five seats, has in fact surpassed even the hopes of their bitterest enemies, and one can now consider as definitely eliminated from the political arena the party whose foundation in January, 1925, was heralded as destined to knock the Wafd out of existence.

Meanwhile the pourparlers for the formation of a Cabinet representing the majority are still being conducted between Adly Pasha and Zaghloul Pasha without any successful issue. At the moment of writing it is stated that Zaghloul Pasha has changed his mind and has decided to form the Cabinet himself. This would not surprise anyone who knows the Extremist leader's character and who fully anticipated that the shouts of victory would act as a stimulant on him and tempt him once again to seek office.

The Political Murders Trial.

The great sensation of the week has been the acquittal of all but one man, convicted on his own confession, in the political murders trial. There are a number of "wiseacres," who now say that they never expected a conviction, but the fact remains that all those who followed closely the trial, and a good many others, who only read the able indictment of the Procureur-General's assistant, anticipated that two of the released accused would be condemned to death for active participation in several anti-British murders, and that two others at least would be found guilty of criminal conspiracy. Indeed, the pleading of one of the defending counsel plainly showed that he expected his client, one of the more important of the accused, to be found guilty of criminal conspiracy.

That there has been a miscarriage of justice seems perfectly clear, for, while there might have been doubts with regard to one or two of the accused, there was on the other hand conclusive evidence in the case of others. In the circumstances a wholesale acquittal was plainly unjustified, and, granted the importance attached by the Wafd to the position of Ahmed Maher and Nokrashy, it is not surprising that in many circles, qualified to judge, the decision of the Court is regarded as prompted purely by political considerations. What serves to confirm this impression is that although no intimation has been given in the verdict as to whether it was unanimous, it is asserted that judgment was given by majority and that the British president did not agree with his two native colleagues.

The Wafd Press have seized on this acquittal as an ideal opportunity to heap calumny and vituperation on the police and the Parquet, whom it accuses of having fabricated all the evidence brought against the men now liberated by the Assize Court. But no sensible person credits these accusations, while the Wafd itself is scarcely entitled to point the finger in view of its own conduct of affairs during its term of office and the manner in which Fathalla Pasha Barakat, the Minister of the Interior, and Mahmud El Nokrashy, his Under-Secretary of State, tried to burke the inquiry into the murder of the Sirdar when it started. In conclusion, it is instructive to note that although the acquittal verdict was delivered on Tuesday, the 25th inst., the drafting of the judgment giving the reasons has not yet been completed.

Sofia, May 28.

The Turko-Bulgarian Agreement.

On October 18, 1925, the Bulgarian and Turkish Governments, after two years of laborious negotiations, signed a treaty of amity with a protocol and a settlement convention. It was the prelude to the re-establishment of diplomatic relations interrupted by the unhappy end of the War which was waged in common and in consequence of which the Allies imposed on the two countries complete separation from each other during the period of occupation. This prelude was essentially an act of liquidation of the past and of provision for the future. But the conditions of this liquidation, approved by the Zankoff Cabinet, were adjudged, when they became known, so grievous to the national Bulgarian sentiment that the Government was obliged to defer ratification of the agreements reached, especially as it did not wish such ratification to coincide with the critical phase of the Turko-British dispute on the subject of Mosul. Not till this last week, therefore, were the Turko-Bulgarian Agreements, published for the first time, disposed of by the Liaptcheff Cabinet in the Sobranye, which ratified them in the session of May 27.

Parliamentary Opposition.

The Sobranye's vote was not obtained without difficulty; on the contrary, the difficulties were such that, the debate having lasted for two days, ratification seemed at one time problematical, all the Opposition Group, with the exception of the Liberals and a fraction of the Governmental party, having demanded revision of the Agreements and particularly of the Protocol annexed. The personal intervention of the President of the Council was necessary, and he had to furnish detailed information to a special meeting of the members of the Democratic Entente in the Sobranye to get the Treaty and its annexes approved at least by almost all the members of the Governmental majority.

The reluctance of the Sobranye in following the Government in this matter is easily explained by a simple analysis of the Treaty. In effect, while the Treaty, properly so called, contents itself with proclaiming that henceforth "there shall be inviolable peace and sincere and perpetual amity between the Republic of Turkey and the Kingdom of Bulgaria," and declares, moreover, that "the high contracting parties agree to conclude a commercial convention, a settlement convention and a treaty of arbitration"; while the settlement convention accords to the nationals of each of the two parties the right to establish themselves and to live in the territory of the other, to follow freely their profession, commerce, industry, business, and so forth, and to acquire and possess without hindrance "all kinds of goods, movable and immovable, rural property excepted, in conformity with the laws and rules of the country," the same stipulations being valid as well for companies, which constitutes a notable progress for the Bulgarians—the Protocol annexed which has seized the attention of the deputies and of the public, contains a ruling of an affair long outstanding between Turkey and Bulgaria, to wit, the fate of the goods of Turkish and Bulgarian refugees on and beyond the Turko-Bulgarian frontier, and it is this ruling which appears to sacrifice important national interests, both political and material.

Minorities Question.

The Protocol begins by affirming the maintenance in the two countries of the protection of minorities laid down in the Treaty of Lausanne. Seeing that there are hardly any more Bulgarians in Turkey—four or five thousand at the most—this clause becomes somewhat illusory and, it is said, a little dangerous, since it consolidates unnecessarily the question of the Moslem minority in Bulgaria. In reality, there is no danger, the Bulgarian Moslems, like all the other minorities, having always enjoyed in Bulgaria the greatest freedom, and no Government has ever wished to deprive them of it. But the protection only envisages the Bulgarians who are actually in Turkey and the Turks who are in Bulgaria. Apart from them, there are the Moslem emigrants who abandoned their possessions in the course of the wars in old Turkish territory and Bulgarian emigrants who had to flee before the Turkish prosecutions and to take refuge in Bulgaria, or those who, after 1912, were literally expelled as a consequence of the return of the Turks in Eastern Thrace. On this point the Protocol makes an important innovation in decreeing:—(1) That the emigrants shall compulsorily acquire the nationality of the country in which they are refugees, the Moslems becoming Turkish subjects and the Bulgarians Bulgarian subjects, and, what is more essential, these new subjects of the two contracting parties shall not be able to benefit by the rights mutually conceded by the settlement convention, that is to say that the Bulgarians of Thrace shall not return to Turkey and that the Turks of the regions annexed to the Bulgarian State shall not return to Bulgaria; and (2) that the refugees who left these regions after October 18, 1912, the date of the declaration of the Turko-Bulgarian War, will lose all titles on property left by them in their country of origin, these properties becoming public property, taken by the respective States, exception being made for those of refugees before 1912, which remain in the hands of their original possessors and shall be liquidated by them or by their plenipotentiaries. Over this a great political dispute has arisen. The Thracian refugees, in number 200,000, roundly assert that they do not want Bulgarian nationality and that they only ask to regain their homes in Thrace, there to continue their peaceful work. This demand has been supported by the whole of the Parliamentary Opposition (with the exception of the Liberals), which has insisted upon the repatriation of the refugees. It emphasises that this repatriation, admitted by the Turko-Bulgarian Treaty of 1913, is claimed without thought of conquest, in the sole interest of friendship between the two countries. To this the Government has replied that this claim, though quite legitimate, is, by reason of present circumstances, impracticable, and that instead of leaving an abnormal situation to grow without hope of ever reaching the solution vainly sought for years, it is better to end it by a fresh liquidation.

There is also a material side to this controversy. The

solution reached carrying with it so to speak an exchange of property belonging to the refugees, the opponents of the Treaty maintain energetically that the property of Bulgarians in Eastern Thrace represents a sum much greater than that of the property of the Moslem emigrants in the annexed Bulgarian territories, that, besides, the majority of these have already succeeded in selling their property thanks to interested intermediaries, and that by consequence the Bulgarians will be doubly let down and will receive only a miserable compensation for a precious loss. The supporters of the Treaty assert that this compensation is not to be so despised and that the inventory of the property to be exchanged is not sufficiently known that sacrifices can be spoken of.

IRAQ.

Baghdad, May 26.

A Mysterious Political Event.

The local political world remains remarkably quiet. The Moderate Party, which easily commands a majority in the Chamber during the present session, survived, and has now checked the process of attrition which appeared to be diminishing it some weeks ago; some members, indeed, have returned to the fold after trying their luck elsewhere. The Opposition still lack an attractive programme, and yet more notably lack reliable and confidence-inspiring leaders. The recent sensation in high politics has been the resignation of the President of the Chamber of Deputies, Rashid Ali Beg—an episode not wholly comprehensible even to that inner circle in which your Correspondent claims a place. The trouble arose on an occasion when the Minister of Finance, Subih Nishat Beg, was thought to flout the authority of the Chair by remarks in the Chamber improperly addressed. Rashid Beg took instant offence, left the Chamber and incontinently resigned. No subsequent efforts (including those of the Minister and of the King himself) availed to make him relent, and every form of apology was refused. The resignation was, therefore, necessarily accepted, and the position became vacant. It has been filled—without difficulty, thanks to the majority commanded by the Hizb al Taqaddum (Progressive Party)—by Hikmat Beg Sulaiman, Minister of the Interior. No new appointment in the latter capacity has yet been made, the Prime Minister temporarily performing the duties.

Ministerial Changes.

Another Ministerial vacancy has occurred through the resignation of Nouri Pasha al Said from the Ministry of Defence, which he held—a thing possible under the Constitution only for six months—concurrently with the post of Deputy Commander-in-Chief. When the choice came, he has wisely preferred the more permanent, and not less respectable, of the two. Hamdi Beg al Pachachi, Minister of Auqaf (Religious Endowments), is to act in Defence; this may in itself be the shadow of a coming event, for it is widely reported that Auqaf is to be abolished as a Ministry and re-established as a Directorate under the Prime Minister himself. Whether this will ease or increase the difficulties of those who seek to do business with this most conservative (indeed, mediaeval) of Ministries, is doubtful.

Nouri Pasha's Mission.

The disappearance of Rashid Ali Beg has demolished the considerable position he had built up for himself, and postponed the hopes—centred in himself—of the formation of a middle party whose programme was to combine the more marketable features of the Moderates and Nationalists. He appears, however, to have yielded not to an opportunity to form and foster his party, but to a caprice which his youth and a certain lack of balance explain. Nouri Pasha, relieved from Ministerial cares, is at once to be employed on a responsible mission. He is to proceed by air to Aleppo (with the consent of the French) and thence by train to Angora, where he will represent his Government in the negotiations now in hand between Sir Ronald Lindsay and the Turkish Republic. Such representation, admitted by the Turks, is in itself a momentous gain for a Government hitherto unrecognised in Turkey; but it is less interesting than the negotiations themselves, which he will witness and countersign. Upon the particulars of these, Baghdad rumour is busy. Their subject matter is said to include the League of Nations (or the Brussels) frontier, mutual undertakings of peace, and a share for Turkey of Iraq's takings from the Turkish Petroleum Company.

The Budget Passed.

The Budget for the financial year 1926-27 has at last come safely through both Chambers, unscathed in spite of numerous attacks from various angles. Neither the Budget Law nor other less controversial measures put forward by the Government this session can boast much benefit from the expensive installation of Parliamentary institutions which Iraq now maintains. Officials and public alike groan in chorus at the further delays, difficulties, and obstructions which the two Chambers involve: but this subject, as morbid interest would pursue it, would lead into controversial regions beyond the range of the present notes.

The Floods.

The Baghdad floods are already ancient history. The vast lake surrounding the city has already yielded far to the influence of soil and sun; but, neither novelty nor freshness now remaining, we find ourselves in the worst stages of a muddy and malodorous aftermath. There exists indeed at the moment an obnoxious rivalry between the North and South Gates of the city. Outside the former, tons of miscellaneous merchandise were mixed with the flood water, a loss the memory of which is kept green by the variety of poisonous smells which assail the nostrils at that quarter. At South Gate, on the other hand, a large depression forming part of the ancient city moat has been but partially reclaimed by the depositing of thousands of donkey-loads of city refuse. These blend aromatically with the seepage water with which the high level of the Tigris fills the place. The direction of the wind, there-

fore, is no matter of barren meteorological interest to Baghdad to-day.

Like the Tigris some weeks ago, the Euphrates has during the last few days been making havoc of previous records. The Habbaniyah Depression east of Ramadi—the Heaven-sent flood-escape upon which great future schemes are built—has proved inadequate to its task, and, overfilled, began a week ago to return its water to the parent stream. The Hindiyah Barrage has stood the strain; but, the tale of many days of the acutest anxiety for the scores of miles of flood-banks is perhaps not yet complete. The most dangerous areas lie between a point north of Fallujah, on the left bank, and the Barrage. A breach at any of the more critical points on this sector must lead to widespread and disastrous flooding across the developed canal system of the Saqlawiyah or Yusifiyah, across the main roads west and south of Baghdad, and probably across the Baghdad-Hillah sector of the railway—all tragedies of the first magnitude. The river is past its worst, but even now one dares not declare that the danger is over.

THE LEBANON AS A SUMMER RESORT.

By E. S. Stevens.

(Concluded.)

Baths are advertised in many hotels in the Lebanon, though in some cases one finds that they are apparently little used, and that unaccustomed machinery must be set in motion in order to obtain one. I remember going to a much-advertised hotel in Tripoli, and at six o'clock ordering a bath for half-past nine that evening, having been assured that there was an excellent bathroom. At half-past nine, armed with my towel, I sought it. I found that the bath was so built into a corner of the so-called bathroom that to get at the taps the bather had to scramble down the interior of the bath; moreover, it was apparently inhabited by happy families of cockroaches. I summoned the attendant, and we made various efforts to obtain hot water from the really beautiful plated taps, but as none was forthcoming, and the cockroaches seemed inclined to dispute possession, I finally retired to the bedroom, where eventually a jug of hot water was brought me. One becomes an adept in bathing in a basin or in small tubs, and hot water is usually available. Sanitary arrangements, too, leave much to be desired in the Syrian hotel, even when they are European in character.

. . . . . .

To hardened travellers, of course, the details I have mentioned are negligible, but to tourists and folk accustomed hitherto to European travel, they should be mentioned, in case they lead to reviling. If such people are prepared beforehand, they cannot plead that they have been misled, and if they have not been put off by my frank statement of what they would never gather from hotel advertisements and the circulars of travel agencies, and are prepared for a few inconveniences, I think that they will come to the conclusion that a summer holiday in the Lebanon is worth while in spite of all, and more than worth while. After all, such discomforts are easily alleviated. I am told that a few drops of iodoform sprinkled on a bed will keep away all vermin, and dyspeptics afraid of native food can easily supplement their diet. Moreover, after a week or so travelling in mountain air, I can guarantee that they will eat almost anything and sleep anywhere.

. . . . . .

I hope that what I have written will show would-be tourists a little of the intensely varied interest of the Lebanon and of Syria generally, and convince them that to go East in the summer is far from being an unthinkable enterprise. As for those who already live in the Near and Middle East, the drawbacks I have mentioned will not seem serious. To officials living in Egypt and Palestine, the Lebanon has the advantage of being very near, and of being cheap. To dwellers in Iraq, it may yet become a hill station, for they have none of their own. The Kurdish hills, which offer a climate as temperate as the Lebanon and scenery almost as magnificent, are difficult of access, and often unsafe because of local disturbances; moreover there is no accommodation for visitors. And a visit to Persia costs as much as going to the Lebanon, without offering as much variety and charm. At present the cost of crossing the desert deters many in Iraq who would otherwise send their women and children to the Lebanon for the hottest summer months, but in time, I do not doubt, the various overland transport companies will see their way to running "summer leave" cars at greatly reduced rates.

. . . . . .

For those who need rest and quiet there are the pine-scented slopes of Brumana, and of Ain Zehalta, or the scented loveliness of Shuweir on the mountain-top. There are many people who find it pleasanter to take a furnished house—they are obtainable for the whole summer for as little as thirty pounds—in some place like Suq al Gharb, Bhamdun, Bet Mirri, Shuweir, Muruj, or Raifun. Some like to go from place to place until they find a resting-place which pleases them, and I met a couple who spent a delightful summer walking in the mountains with a donkey to carry the kit. Others I know have taken tents to the Cedars, and lived there for a glorious summer, going off when the fancy moved them for tramps in the Qadisha valley, or ascents up the mountains. The Lebanon offers the entomologist a world of rare butterflies, the archæologist a rich field of interest and discovery, the historian a mine of commentary in ancient building and modern tradition, the student of folk lore a living library in the daily practices and belief of the people he will meet every day. The botanist will do better to visit the Lebanon in the spring or early summer, for by August the wealth of flowers has vanished, and by the end of September only a few wild flowers recall the glory of May. I really do not know why I have headed this article "a summer resort," when I come to think of it. The Lebanon is lovely, even in winter. There are flowers always on the lower slopes, and some people living in Beyrout tell me that every winter they go to the slopes of the snow-mountains for winter sports, sleighing and ski-ing.

. . . . . .

Lastly, as to clothes. Ordinary summer clothes, such as are worn in England, are suitable to the Lebanon, with a warm coat to slip on in the evenings. Shoes

should be strong, flat-heeled and with nails in the soles. Except in Beyrout, or in one or two hotels at Aley or Suq al Gharb, evening dress is not necessary at all. The smaller the wardrobe, the better, and it is possible to get washing done at short notice almost anywhere in the mountains. Laundry is often included in the hotel terms.

If a house is taken, and servants are required, it is as well to remember that the Near East Relief officials in Beyrout are sometimes glad to find summer work for Armenian protégés, or, failing them, application may be made for help to the Bureau de Tourisme, of Cook's office in Beyrout, both institutions being anxious to help travellers in any way that they can.

BOOK REVIEW.

PALESTINE OF THE MANDATE.

"PALESTINE OF THE MANDATE." By Basil Worsfold. (London: Fisher Unwin. 21s. net.)

The purpose of this book is primarily utilitarian. The author seeks to show exactly how Palestine as a mandated territory in the hands of Great Britain is working; his aim is, therefore, rather to describe the progress, both actual and potential, apparent in the Post-War Palestine. In these circumstances one need not expect much examination of the political or religious problems which in the opinion of some observers, although not of Mr. Worsfold, are the Holy Land's more abiding problems, but the book does contain a lucid and much-needed description of the mandated Palestine's non-political and non-religious activities. The author has given very considerable study to his subject, and it is no exaggeration to say that he has produced a work which is indispensable to those who would understand what is being done and attempted in Palestine.

It is the author's judgment that the solution of the political problem, the conflict between Zionist immigrant and Arab native, is to be found rather in economic action than in anything else. There is, of course, much to be said for this view, although it would be interesting to know whether it is merely the application of a theory universally held on Mr. Worsfold's part or an estimate formed after individual investigation of Palestine. In any case, the meeting of the Permanent Mandates Commission on Palestine this month at Geneva should provide illuminating commentary upon this particular thesis. In this conviction, the author set out chiefly to examine the activities of the two main causes of progress in the country—the Jerusalem Government and the Zionist Organisation. Being determined that Palestine is to be welded into an industrial unit and that in such a welding the Zionists are the only hope of the country, he naturally devotes considerable space to the various manifestations of energy upon the part of the immigrants. (It is only fair to state that his visit to Palestine was paid in 1924, that is, before the present industrial depression and the consequent increased inclination, among certain Zionists, to criticise the British Administration). There he found abundant cause for optimism; it is obvious that his faith in Zionist intentions and capabilities, and particularly in the future of the so-called "Rutenberg schemes" for transforming the country, is profound. And, indeed, he sets down much to justify his faith.

He is enthusiastic in praise of the natural resources of Palestine. Apart from the hydraulic potentialities of the Jordan, he describes the future of Haifa, and the contents of the Dead Sea, potash and magnesium, in terms that would make the winner of the Calcutta Sweep turn pale with envy. There is such wealth in the country, he is convinced, that would the Administration but cease to "go on foot" the social and economic redemption of Palestine would be no longer problematical but assured.

The book contains admirable chapters upon Law and Order, Education and Health, Agriculture, and Monuments. For the Government's share in all these cares the author has (with the possible exception of Education, limitations in which were due to the financial stringency) many encomiums. These chapters are most informative, and the details therein given have not altered much during the last two years.

Since Mr. Worsfold's book is, as we have said, primarily utilitarian, there is little point in commenting upon his judgments; rather should one be grateful for his facts. It may be permissible, however, to suggest that the British Administration has more excellent reasons than the author and his Zionist friends imagine for not telling "the Arab leaders that the Administration and not they must decide whether the Jewish expansion is, or is not, hurtful to the population whose interests they claim to represent." But that is impinging upon those political and religious points which it was not the author's aim to emphasise.

One final word upon Mr. Worsfold's style. It is clear, but curiously uneven. He can, for instance, thus emulate the guide-book, and, too, on the profoundest of themes. He is writing on the Lake of Galilee:—"I think I should like to find the origin of Christianity not in the earth, but in the air of Palestine. Lying as it does, a narrow strip of highlands between the desert and the sea, two reservoirs of atmospheric purity, its air is of pellucid nature, medicinal to the lungs, and so translucent to the eye that every quality of colour is rendered to the brain in uncontaminated delicacy and undimmed brilliance." And yet, as, for example, in his chapter on Mount Carmel, he can so write on realities:—"The air was very still, and the surface of the bay unbroken. As the light fell, the colours upon the landscape became for a time strangely pure and delicate. Too soon the opal, rose and violet faded from the mountains, the emerald and saffron from the plain, and the flowers hid themselves in the grey slopes of Carmel. Far beneath us lights glowed here and there, and one by one; then suddenly all Haifa leapt out of the darkness in stars of electric brilliancy." The first quotation is as turgid as Mr. Worsfold supposes Palestine without the Zionists to be, the second as pulsating as Palestine succcessfully with them.

A History of The Campaign in MESOPOTAMIA

By Brig.-Gen. F. J. Moberly, C.B. C.S.I. D.S.O. p.s.c.

This History of a very stirring episode of the War has been generally acclaimed as one of the most valuable additions to military literature made within recent years. Alike for the fascination of the subject matter and the skill and literary excellence of the narrative, Gen. Moberly's work is destined to rank as a military classic of a high order.

To those who helped to make the History which is recounted in these volumes, few books can possess greater interest. None therefore could be a more appropriate or a more tactful gift.

"A fine piece of military history."—MANCHESTER GUARDIAN.

"Will certainly become a classic on the subject with which it deals."—The late Col. Repington in the DAILY TELEGRAPH.

"Exactly what an official history should be."—TIMES.

THE WEEK AT HOME.

London, Tuesday Morning.

Coal: An Explanation.

I have received a certain amount of correspondence upon some remarks made recently in these columns upon the coal question. Most of these letters, espousing the coal-owners' cause, denote an inability to recognise the ordinary public's attitude towards the mine-owners. That attitude I believe when I wrote and still believe to be one of almost unmitigated suspicion or impatience. It may indeed be shown that this general opinion, one of "no use for" the colliery-owners and of considerable sympathy with the miners, is due more to ignorance than to anything else, but I set out to record its existence, not to analyse closely its merits. Speaking personally, I confess that I have never been able to conclude that the colliery-owners have, *vis-à-vis* the Government, a better case than the miners. To some observers (and perhaps more easily to actual participants in the industry) it is possible to range alongside either the owners or the miners in their conduct towards the Government, but to the majority of whom I am one, it seems that the Government must demonstrate the nature and the folly of each side's extremism. It may be said that I have dwelt more on the owner's iniquities than on the miner's; and that is so. I endeavoured to prefer the impossibility of the owners' attitude towards their national responsibilities more boldly than the miners' perhaps more widely known hostility towards interference with *their* share in the coal industry because, as it appeared to me, the onus of providing, or adopting a more reasonable and workable plan, lay more with the educated members of that industry than with the rank and file.

One correspondent in particular attempts to defend the owners' case (in shielding them from my remarks) by pointing out that they were always opposed (just as the Coal Commission was opposed) to the Government's subsidy, and also that, even if the contemplated reductions were effected, many mines would be run at inadequate profits, if indeed at a profit at all. These two facts are, of course, very well known to the least profound student of this national problem; it is precisely the latter fact, indeed, which, in the opinion of the Government, supported by the country at large, has made it imperative that that re-organisation of the industry to which, apparently, some owners still strongly object, should be introduced by legislation. In conclusion, it may be stated that my remarks upon the owners' seeming reluctance to comprehend the national effect (and the Government's regard of it) of their past failure to reconstruct their industry, were prompted by the Prime Minister's letter of rebuke to the protagonists in this dispute.

Mine-Owners and Miners.

It is now the sixth week of the stoppage, and yet there is no definite sign of peace. Last week, however, the impression gained ground that a large majority of the miners were willing to return on the basis of an eight-hour day, and the mine-owners approached the miners for the purpose of a conference under a neutral Chairman. What will be the outcome of this I have no means of knowing. It is said that the rest of the Trade Unionists are showing resentment at the miners' "Never, Never" policy, and it is fairly plain that some of the petty actions of certain leaders are not approved.

In view of the Government's apparent inactivity, it is fair to assume that unofficial negotiations are being conducted between the various parties affected by the strike, and that if a "face-saving" formula can be evolved, the Government will then step in to assist the industry over such time as may be necessary to lay down new plans.

The Liberals' Ghor.

The Ghor is, I believe, a great geographical rift or fault or depression, and I can think of no apter word to apply to the fissure that has cleft the Liberal Party. The long smouldering enmity between the Asquithians and the Lloyd Georgians has at last broken out in apparently unquenchable vigour; at the moment, at any rate, its flames are still soaring fiercely, with here and there a crackle as if something more than newspaper rubbish were on the bonfire. An attempt is being made to represent the conflagration as one of martyrs at the stake, impaled by the unyielding orthodox, and for anyone who can discover real and vital principles in Liberalism the spectacle does probably take on something of the heroic nature. To many people, however, this year of 1926 is for the Liberals but 1916 turned upside down; in other words, the personal motive is at the bottom of the trouble.

This personal nature of the case does not, of course, necessarily detract from the merits of those who have forced it on the public notice. If Mr. Lloyd George were an uninfluential man, possessed of no separate funds and of no Coalition past, his differences both in thought and in conduct would probably be overlooked or at least officially disregarded, but the chances of the survival of any sort of doctrinaire Liberalism are not, in the opinion of the stricter brethren, so rosy that they can afford to be jeopardised by a free-lance Liberal who may at one time finance a "Socialist" land-scheme with his individual "fund" and at another so gainsay the inviolable principles of Liberal (or any other) "constitutionalism" as to appear to be catching the votes of the Labour Party. It is decidedly not necessary to take sides as against Mr. Lloyd George to express wonderment that he should so long have dominated his party.

But it is well to remember—especially for those who judge that his actions during the General Strike were quite unforgivable—that Mr. Lloyd George still sways a multitude; even in so orthodox a city as Manchester, a Free Trade town that might possibly have suspected the genuineness of the ex-Premier's constant abhorrence of any sort of Protection, even here Mr. George was received with open arms, and, indeed, is reported to have said that he had never seen such enthusiasm in his life. *Quel jeu!*

On his side, too, Lord Oxford, is standing to his word, and is being called either firm or obdurate. Betting on the final result is keen, I believe, in the Conservative clubs, where the odds are said to favour Mr. Lloyd George. We shall all know the ultimate winner at the approaching meeting of the National Liberal Federation.

Asia and Christianity.

The Dean of St. Paul's has been accused of many things, but at least he cannot be charged with being a Christian optimist. Whatever may be thought about his commentaries on his own religion, he is always listened to with respect when he is unfolding some other religion or philosophy. Last week he gave a most interesting

address on Christianity in Asia. He believed the East was settled in its opinion that the less it had to do with the West the better, but he defended the practice of missionary work. However much Judaism, Buddhism, and Mohammedanism might be changed or changing, they still condemned Christianity as ineffective. Then, turning to the question whether Asia would become nominally Christian or whether Christianity would modify still further the old religion without destroying it, he said that he was quite certain that Asiatics would never become Anglican, Romanists, or Scots Presbyterians. If they became Christian they would develop a Christianity of their own. And the result, a Christianised religion, was to be welcomed, for a being with the same attributes might without disadvantage be called either Buddha or Christ. The medium of such modifications was not by mass movement but by the personal lives of Christian saints.

This address seems to me so noteworthy I have summarised it without comment. It received little enough notice in the Home Press.

Cricket.

Two events during the past week have stirred cricketers here: the death of Spofforth, and the bowling of Root against the Australians. Those who saw the Demon Bowler play have been having vast (and slightly incredulous) audiences in the last day or two; it seems that "Spoffy" is immortal chiefly through having been the first of his kind. Contrary to the opinion on which we as schoolboys were brought up, he was not a fast bowler, not even so fast as Tate, and it appears that his success both in getting wickets and imperishable fame was as much due to his knowledge of psycho-analysis as of finger-spin. He was a character indeed.

Root has immensely braced those faint-hearts in this country who could never see the Australians out for fewer than about 400 in a Test Match. The dismissal of the Colonials for 105, and his 7 for 42 are talked of gleefully, but the doleful ones are busy already explaining that the downfall before Root was due only to inexperience of in-swingers with a field on the leg-side, not to innate deficiences. I have never played against Root's kind of attack, but it is manifest that if the only way to counter it is, as is said, to use the "dead bat," the Australians will very soon employ it. I have seen the Australians twice at Lords, and there is not much that they do not know about defence. However, this display of the North against the possessors of the "Ashes" and, again, Yorkshire's treatment of them, have made us all look forward to Saturday at Trent Bridge with hopeful eyes.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA

THE DOFFING OF THE FEZ.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In a story told on June 3 to the Near and Middle East Association, a Turk, after the Battle of Gaza, took off his fez and with some feeling damned all politicians for keeping England and Turkey apart.

Why did the Turk remove his fez? Was it to give greater force to his curse? As is well known, Turks who wish to show their respect for a superior, whether God or man, keep the head covered. Logically enough, they may remove the fez to show disrespect and to curse more forcibly, but here I am only guessing and should be most grateful to any reader of THE NEAR EAST AND INDIA who will enlighten me about this curious detail in the story.—I am, etc.,

MARGARET M. HASLUCK.

184, Cromwell Road, S.W.5., June 5.

THE OVER-SEAS LEAGUE.

Under the auspices of the Over-Seas League a luncheon was held on June 4 at the Criterion Restaurant to entertain Viscount and Lady Allenby. Mr. L. S. Amery presided, and the company included:—Mrs. Amery, Lt.-Col. H. V. de Satge, C.M.G., D.S.O., Mr. Evelyn Wrench, C.M.G., Mr. William C. Noxon, Agent-General for Ontario and Mrs. Noxon, Mrs. Sinclair, Miss Scott, Mr. J. Howard, Agent-General for Nova Scotia, and Mrs. Howard, Mr. Victor Gordon, High Commissioner for Newfoundland, the Hon. H. P. Colebatch, C.M.G., Agent-General for W. Australia and Mrs. Colebatch, Sir Francis Newton, K.C.M.G., C.V.O., High Commissioner for Southern Rhodesia, Lady Newton, Mr. J. L. Price, Agent-General for South Australia, Mrs. Price, Mr. Bulkeley-Evans, C.B.E., M.A., Mr. E. A. McTierman, Acting Agent-General for New South Wales, Mr. and Mrs. W. F. Dunn, Mr. F. A. Pauline, Agent-General for British Columbia, Mrs. Pauline and Miss S. Appelly, and Lady Guggisberg, C.B.E.

The Secretary of State for the Dominions referred to Viscount Allenby's greatness as a soldier, particularly as a cavalry officer. He referred especially to the brilliance of his performances in South Africa and in Egypt and Palestine. His military successes in the East had made possible the taking over by Great Britain of vast political responsibilities, and in the new govenance of old lands Lord Allenby had, subsequently to the War, shown the path which his political successors were to tread. In Egypt for six years he had consistently followed the call of duty, even when policy at home towards Egypt appeared hesitant and uncertain.

Viscount Allenby related the impressions which he had gained from a visit that he and Lady Allenby paid to the Dominions after he had relinquished the post of High Commisioner in Egypt. He referred in glowing terms to Ceylon, Australia, New Zealand, Canada, and Newfoundland. Of Ceylon in particular he wished to correct one impression, an impression that might have been gained from the hymn in which the lines occur:—"Where every prospect pleases, and only man is vile." Man, he said, was emphatically not vile there, but a prosperous and contented person. He hoped Mr. Amery would use his influence to have this affront to the inhabitants of Ceylon removed from the hymn-book. Whereupon the Dominions Secretary suggested the amendment: "And all the planters smile."

General Pangalos, the Greek President, left Athens on June 2 for Corfu to attend the celebration of the anniversary of the union of the Ionian Islands with Greece.

PERSONAL AND GENERAL

TO-DAY

June 10, 1926 (New Style).
May 28, 1826 (Old Style).
Dulkaada 29, 1344 A.H., of the Moslem Calendar.
Sivan 28, 5686, of the Jewish Calendar.

The Dowager Lady Boyle gave an At Home on June 8, at 64, Queen's Gate.

Captain the Earl of Altamont will arrive home on leave from India on June 20.

Mr. George Cunningham, I.C.S., has been appointed Private Secretary to the Viceroy.

The Hon. Mrs. Gideon Murray left this week for Vichy, and will not be in London again till early in July.

Lady Lloyd arrived in London last week from Cairo at Russel's Hotel, 12a, Curzon Street, till the end of July.

The Maharaja of Rajpipla and the Raja of Nanpara gave "Derby Night" dinner parties at the Savoy Restaurant.

The Archbishop of Simla left Southampton last Saturday in the Aquitania for New York, to attend the Eucharistic Congress in Chicago.

Lord Winterton, Under-Secretary of State for India, is to lay the foundation stone of the new wing of Ardingly College, Sussex, on June 19.

The Maharaja of Kapurthala, accompanied by his son, Prince Karamjit, arrived at the Savoy Hotel last week and is staying in London for about three weeks.

Viscountess Inchcape and the Hon. Elsie Mackay, left 4, Seamore Place, last week for the Empire Hotel, Bath, where they have been joined by Viscount Inchcape.

Sir Arthur Hirtzel, Permanent Under-Secretary of State for India, has appointed Mr. R. E. Field, of the India Office, to be his Private Secretary vice Mr. G. G. Dixon.

Captain A. B. Leslie Melville has given the Lincoln Museum a valuable collection of classical and Egyptian antiquities, including Phœnician, Apulian, and Roman glass.

The Right Reverend Eyre Chatterton, who has for 23 years been Bishop of Nagpur, India, has been nominated by the Archbishop of Canterbury to the rectory of Merstham, Surrey.

General Sir George Milne, Chief of the Imperial General Staff, will preside at the fifth annual dinner of the Salonika Army and Black Sea Forces, to be held at the Hotel Cecil on June 18.

At a Council held by His Majesty the King at Buckingham Palace on June 1, Sir John Edward Power Wallis (late Chief Justice of the High Court of Madras) was sworn in a Member of His Majesty's Most Honourable Privy Council.

Mr. A. Staveley-Hill, Staffordshire Yeomanry, eldest son of his Honour Judge and Mrs. Staveley-Hill, who was recently employed in Patiala, has been appointed as A.D.C. to the Right Hon. Sir Leslie Wilson, Governor of Bombay, and sails for India next Thursday.

The War Office announce the following promotions: Lieut.-General Sir P. W. Chetwode, Bt., K.C.B., K.C.M.G., D.S.O., to be General, in succession to General the Lord Horne, G.C.B., K.C.M.G., retired pay. Sir Philip Chetwode, who is Commander-in-Chief at Aldershot, took part in the capture of Jerusalem and the campaign in Palestine during the Great War.

Sir Rabindranath Tagore, who has been in Rome as the guest of the Italian Government, was received on May 31 by Signor Mussolini.

Viscount Lee of Fareham will preside at a luncheon to be given by the British-Indian Union in honour of Sir Jagadish Bose, at the Hotel Cecil to-morrow (Friday).

The following are declared by the Civil Service Commissioners to have obtained the first three places in the competition held in India in January for appointments in the Indian Civil Service (the names are in order of merit): S. K. Chatterjee, N. S. Arunachalam, S. A. Rahman.

Lieut-Colonel George Schuster (Financial Secretary, Sudan Government) had the honour of being received by The King at Buckingham Palace last Friday, when His Majesty conferred upon him the honour of Knighthood and invested him with the Insignia of a Knight Commander of the Most distinguished Order of St. Michael and St. George.

Major-General G. McK. Franks, C.B., has been appointed to officiate as General Officer Commanding-in-Chief the Eastern Command, India, in the place of General Sir George de S. Barrow, K.C.B., K.C.M.G., A.D.C., on leave. Major-General Franks has handed over temporarily the command of the United Provinces District to Colonel Commandant A. E. McNamara, C.M.G., D.S.O., whose brigade at Lucknow will be taken over by its senior battalion commander, Lieutenant-Colonel H. D. Goldsmith, D.S.O., of the 1st Duke of Cornwall's Light Infantry.

Sir Maneckji and Lady Dadabhoy gave a dinner party at the Langham Hotel last Thursday Their guests included Sir George Barlow and Miss Barlow, Sir Frank Sly, Mr. and Mrs. George Lambert, Sir Alexander Muddiman and Mrs. Muddiman, Sir Pierce and Lady Lacy, Sir Purshottamdas and Lady Thakurdas, Sir James and Lady Walker, Sir Reginald and Lady Mant, Sir Thomas and Lady Carey-Evans, Sir D'Arcy Lindsay, Colonel and Mrs. A. D. Bannerman, Professor and Mrs. Coyajee, Mr. and Mrs. T. Preston, Mr. and Mrs. C. H. Kisch, Mr. and Mrs. Kharagat, Mrs. Bartlett, Mr. Mocatta, Mr. and Mrs. McLean, Mr. and Mrs. Tilley, Mr. Kiek, Mr. Iyengar, Mr. and Mrs. Wilkinson, Mr. and Mrs. Franey, Miss Dadabhoy, Mr. F. H. Brown, Mr. and Mrs. Mather, Mr. Holmes, Mr. Bachelor, and Mr. Tilden Smith.

THE ORIGIN OF THE TURKS.

Sir Denison Ross, Director of the School of Oriental Studies, gave an address on June 3 on the subject of "The Origin of the Turks" at a meeting of the Near and Middle East Association, held at 18, Park Lane, W.1., by kind permission of Mrs. Eckstein.

Although he disclaimed any knowledge of the origin of the Turkish race, Sir Denison Ross gave an address of absorbing interest on the history of the Turks, covering the fifteen hundred years or so since they emerged from the Hiung-nu. With the help of a sketch map the lecturer pointed out the relative positions of the Chinese, the Hiungnu and the Tunghu in the region of Lake Baikal, tracing the gradual migration westward of the Hiungnu. Our knowledge of these people has been based for a long time on the Chinese Annals, which since the ninth century B.C. have provided a regular chronicle of events in China and to some extent of Chinese relations with neighbouring peoples. From the earliest times different names more or less similar in sound to Hiungnu had been applied by the Chinese to the horse-riding barbarians of the north (Tatar was a later variation) and it is not unreasonable to find an etymological connexion between this term and the Hunnoi and Huns of later times in the west. East of the Hiungnu were the Tunghu or Eastern Hu, who come into prominence at a later date and are to be regarded as the progenitors of the Koreans and Manchus. The earliest relations between the Chinese and the Hiungnu were confined to the raids of the latter on the fertile lands of Shansi and Shensi. Moving freely on horseback the Hiungnu made light of the Gobi Desert and proved troublesome neighbours of the settled populations of the Chinese provinces. The solution of the problem was ultimately found in the building of the Great Wall, which running from the sea coast at Shanhaikuan stretches for some twelve hundred miles into Kansuh province. Its efficacy lay largely in the fact that the individual Hiunghu was inseparable from his horse, and where the latter could not go he would make no attempt to force a way. Confronted with this insurmountable barrier, the Hiungnu started their westward migration; thus the construction of the Great Wall of China, which was completed in the third century B.C., is linked up with the premature fall of Rome and won for China the security which she put to such good use in the cultivation of the arts and duences.

Sir Denison Ross favoured the theory that the many peoples identified with Central Asia—Tatars, Turks, Turkomans, High Carts, Uighurs, etc., were so many branches of the original Hiunghu stock, breaking away at different times and coming under different influences to account for latter-day differences. Although the word Turk does not appear before the 5th century A.D. there is evidence enough to identify the tribe to which the name was first applied with the Hiungnu. In company with the Romans they traced their descent from a she-wolf; a wolf's head figured at the top of their standard poles, and guards were known as *fu-li (vari)* i.e., wolf. The Chinese Annals attributed to the Turks a written language, and striking confirmation of this fact was provided less than forty years ago by the discovery some fifty miles north of Karakoram of the Orkhon inscriptions—stone monuments set up in A.D. 732, bearing identical inscriptions in Chinese and Old Turkish relating to the exploits of one Kul *teghin*. The lecturer was inclined to attribute a common Aramaean origin to all the old Asian alphabets, with the exception of Chinese. He called attention to the fact that on the Orkhon stones as in modern Turkish the language was called *Turkje*. A characteristic of the Turkish migration was that, though the people moved on, they left their language behind them, and in this way the successive stages of their journey could be traced. It was significant that Turkish at one time became the medium of poetic expression in revolt against the more stilted Persian forms. As a Turkish offshoot the Uighurs flourished from A.D. 750 to 850, but thereafter, according to the lecturer, became better known for their literary attainments. Following up this part of his subject Sir Denison Ross reminded his audience that the recent movement at Angora to write Turkish in Latin characters was not the first time that the practice had been adopted, as there was in the Library of St. Mark's at Venice a Turkish version of the Psalms in Latin script dating from the 12th century. In this connexion he also recalled that there had been at one time Christian Turks. The only reference to modern politics that the lecturer allowed himself was to touch briefly on the subject of Pan-Turanianism. He imagined that it had not taken any deep hold on the Turkish people. There had been too much admixture of foreign blood in their veins to make the racial call convincing, and he inferred that under the Republic, with its declared support for Western ideas and customs, the academic appeal, started fifty years ago, would carry less weight than ever.

ITALY AND THE NEAR EAST.

The Near and Middle East Association is meeting on June 17, at 8.30 p.m., to discuss the subject of "Italy and the Near and Middle East." The speakers include Messrs. H. St. John Philby, F. N. Hillier, and C. F. Melville. The gathering will take place, by kind permission of The Viscount and Viscountess Dunedin of Stenton, at 42, Lower Sloane Street, S.W. The Viscountess Dunedin will preside.

LEBANON HOSPITAL MEETING.

On June 1 the twenty-seventh annual meeting of the Lebanon Hospital for Mental Diseases, Asfuriyeh, Beyrout, was held at the rooms of the Medical Society of London, Chandos Street. Dr. E. W. G. Masterman presided. He mentioned, in introducing the general report for the year, some of the most pressing needs of the hospital—the completion of boring for water to a depth where an ample permanent supply was available (at a cost of about £400); the modernisation of the present small, old-fashioned laundry (£300); and single rooms for acute women patients (about £1,500).

Mr. F. Hourani, in seconding the adoption of the report, spoke of the great service of the hospital (the only one of its kind from Constantinople to Cairo) to the Syrian nation. It was one of the bright spots in his country, and in course of time he hoped Syrians would take the burden of the work upon their own shoulders.

Dr. J. F. Whitwell presented the report of the Medical Director, Dr. Watson Smith. Two hundred and thirty patients (131 men and 99 women) had been under care and treatment at the Lebanon Hospital during the year, with good results. Ill-treatment for mental sufferers was still not uncommon in Syria, where the humane and enlightened work of the hospital was doing a great work.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

MOHAMMEDAN POLITICS.

The emergence of a Mohammedan Party, prepared to co-operate with Government in working the Reformed Constitution, is an event of real importance in Indian politics. In three of the Provincial Legislative Councils—Bengal, Bombay and the Punjab—a solid Mohammedan party would, if supported by the European non-officials and the Government benches, command an absolute majority: in Assam it would find itself in an apparently exact equality: in the United Provinces and in Bihar and Orissa, its voting strength would amount to something over 40 per cent. Only in Madras and the Central Provinces would it be in a hopeless minority; but, in the former at any rate, the communal division is not between Hindu and Moslem, but between Brahman and non-Brahman. There are some observers who declare that the proper course for the British Government in India is to ally itself openly with the Mohammedans, and to carry on the government with their assistance. To the present writer at least, this seems an impossible suggestion: it is the business of the British Government to continue its efforts at making India a nation, irrespective of creed or caste, however hopeless the task may seem: without this, all talk of self-government and Dominion status is nothing but empty words. This, of course, is not to say that Government should not co-operate with those who show their readiness to co-operate with it: in Bengal, for instance, where the Swarajists have contrived to bring the experiment of Diarchy to a stop, if after the General Election it is found that the Mohammedans are prepared to form a cohesive party under a capable leader such as Sir Abdur Rahim, the obvious course will be to instal it in power. When Lord Lytton offered the Ministerships to Mr. C. R. Das, as the leader of the strongest party in the Council, he did so on the strictest constitutional principles: and he would be following the same principles if, after the General Election, it should appear to him proper to offer it to Sir Abdur Rahim. Such an action would, it may be supposed, prove a useful lesson to other parties and lead them in the direction which, whatever the irreconcilables may say to the contrary, is the goal which the British in India definitely envisage and are striving for—that of popular government.

The prospect of Mohammedan co-operation with Government has alarmed the extremists, and not least the Moslem extremists. This is shown by the proceedings at a special session of the Khilafat Conference held at Delhi on May 8 and 9, when it was decided to take advantage of the existing state of tension between Hindus and Moslems to transform the "Central Khilafat Committee" into an Indian political organisation which, in the words of one of its supporters, would represent the most advanced wing of Nationalist opinion among Indian Mohammedans, unrepresented by the Moslem League. The Central Khilafat Committee, which has, from its inception, been under the domination of the brothers Shaukat Ali and Mahomed Ali, both of whom are irreclaimably anti-British, was originally formed, as its name implies, in order to uphold and strengthen the position of the Moslem Caliph—at the time, the Sultan of Turkey, in whose person it was sought to combine the sovereignty of the most powerful Moslem State with spiritual authority over all the Mohammedans of the world. When Mustafa Kemal deposed the Sultan and abolished the Caliphate, the Committee expected that the Turkish leader would, as soon as he had completed his task of putting the temporal affairs of the Republic into order, himself assume the Caliphate, in which capacity they were prepared to accept him. But it soon became obvious that Mustafa Kemal had no such intention: and that the secularisation of Turkey, to which he set his hand so vigorously and with such surprising success, had come to stay. They then turned to Ibn Saoud, to whom they were specially attracted by the fact of his victory over the Hashimite family in whom, thanks to the part that it played in the War, they affected to discern nothing but a contemptible set of "creatures" of the infidel British. The activities of Ibn Saoud and his Wahabi followers, however, took a form so distasteful to Indian Moslem opinion that, after a vain attempt to whitewash them, the Khilafat Committee abandoned their claim in favour of Ibn Saoud; who, besides, showed quite plainly that he intended to pursue his own policy, neglectful of interference or advice from Indian Moslem leaders. From the very beginning, the policy of the Khilafat Committee, though professedly religious, has been—except in so far as the political triumph of Islam would be a victory for the Faith—entirely political. Their preaching of the spiritual sovereignty of the Sultan of Turkey over Indian Moslems included the quite definite aim of the recognition of his temporal sovereignty as well. They were working for the realisation of the pan-Islamic ideal—of a world confederation of Moslems owing spiritual allegiance to the head of the most powerful Mohammedan State: a spiritual allegiance that would naturally tend more and more to become a temporal one. Failing the late Sultan of Turkey, Mustafa Kemal and Ibn Saoud, no other candidate for the Khilafat was in sight: and the Khilafat Committee, making a virtue of a necessity, have now formally dropped their search for one. They have formulated a new "creed," from which all direct reference to a Khalifa has been dropped. It provides for the foundation of "one great Khilafat central organisation" which shall make every effort to achieve the freedom of the Jazirat-ul-Arab (the "Island of Arabia"), the betterment of the Heiaz and the Holy Cities, and the "introduction of reforms in those places according to circumstances": shall struggle for the attainment of Swaraj in India: and shall always strive to safeguard the religious, educational, social, economic and political interests of Indian Moslems, and to reform and organise them. Mahomed Ali is reported as declaring that the hand of the Moslems was stretched

Digitized by Google

out to the Hindus, for acceptance or rejection: and that, whether the Hindus joined with them or not, they would continue to work for Swaraj. This, of course, amounts to the announcement of a determination to work for a Moslem Swaraj: and indicates that the Khilafat leaders still hope to bring about the Mohammedan world confederacy of which they dream. If any such thing were really possible of achievement, a Moslem Empire of India would naturally assume the leadership that has been relinquished by Turkey: and though few of the leaders go so far as to envisage such a result, there are certainly some who look forward to it as a practical possibility. To such, it is not the Hindus that are the obstacle, but the British.

In the course of the discussion at the Conference, one speaker said that they were gathered together to deliver a funeral oration on Hindu-Moslem unity. Slavery was ingrained in Hindu blood, and the Hindus could not bear to see Mohammedans free; so the Hindu organising and proselytising movements—Sangathan and Shuddhi—had been started in order to divert the Moslem mind from ideas of Swaraj towards those of communal strife, and thus "to enchain them for years to come." Another speaker said that, though the Moslems did not pay any attention to the Sangathan (organising) movement, they were much concerned at the Shuddhi (proselytising) activities of the Hindus: and that the latter had been started "at the instigation of a third party," not for accelerating the attainment of Swaraj, but for the purpose of retarding the progress of the Mohammedans towards it. Shaukat Ali declared that it was England that had led the Hindus away from Nationalist to communal activities: in the heat of communal strife, Hindus had lost sight of the ideal of a National Swaraj, and it was for the Mohammedans, and particularly for the Khilafatists, to make the ideal their own. Another speaker asked how long could they allow the Mohammedans to be victimised (one report gives the word as "butchered") by the Government on one side and the Hindus on the other. It was not, he said, a courageous step, or one worthy of Moslems, to retreat before the strong enemy and advance against the weak one—Mohammedans must not depend on the help of anyone else, but must live by their own strength. It was resolved that the activities of the "Khilafat Volunteers" should continue, to protect Moslems and to preserve the peace: and that the Khilafat Committee should "take all necessary and urgent defensive action wherever innocent Moslems had to be protected from the grip of the law courts and the tyranny of the police." There followed the inevitable appeal for money. In view of past unfortunate incidents, Mahomed Ali was perhaps well advised to couple the appeal with a demand for "the right to kick out those workers who misappropriated their funds." Shaukat Ali, who was of course in his element here, brought forward a resolution instructing all local Committees "to collect funds and to invite permanent subscriptions to further the aims of the Conference": while, in order to placate the local Committees, who feel that, in the past, the leaders have had too much, and they themselves too little, of the great sums collected, they were authorised, in case of necessity, to raise special funds and to spend the necessary amounts, either from these or from the general fund, on their own initiative. It is but the bare truth to say that the immediate object of the Khilafat Committee remains what it always has been—the collection of "funds": and they have rather skilfully combined the religious appeal for the protection of the Holy Places, the communal appeal of a Moslem defence association, and the political appeal of Moslem Swaraj, for the purpose. For the prosecution of the latter, they have decided that they will remain members of the Indian National Congress: a decision that implies a doubtful accession of strength to Pandit Motilal Nehru, even if they rescind their previously announced resolve not to run candidates of their own at the General Election: and one that is not likely to disturb Sir Abdur Rahim and the "right wing" of the Moslem League.

CURRENT TOPICS.

Diarchy in Madras.

The Madras correspondent of *The Times* explains, in a letter printed in the issue of June 3, the reason why in Madras, alone among the Provinces of India, the principle of Diarchy has achieved a very considerable measure of success. Madras, he says, has always led the march of political progress in India; but to-day she "no longer supplies the storming parties in the never-ceasing attack against the ramparts of established government, but has developed a genius for normal and conservative politics." The two great reasons for this he finds in "the Brahmin and the Schoolmaster." The extreme south of India has never experienced the invasions that convulsed the rest of the country, with the result that its inhabitants were a settled and unchanging community for centuries before law and order were definitely established elsewhere. For this reason, the Brahmin priestly class has wielded more power and influence, among a population mainly Dravidian, and the people have had greater opportunities of cultivating the arts of peace, than their northern neighbours, among whom education has tended to be confined to the higher castes. The spread of education among the lower castes in Madras led to the growth of discontent at Brahmin dominance: and, when opportunity came with the introduction of the Reformed Constitution, it was immediately seized by the non-Brahmins. They routed the Brahmins at the elections, and found themselves at the head of a majority in the Legislative Council that no coalition of opposing interests could defeat. The result is that a great deal of sound work has been done, and more—particularly in the departments of education and medicine—is in prospect, though hampered by the universal lack of money; while measures of social and religious reform have been successfully brought forward which the official side of the Government would not have dared to handle. In Madras, in fact, there is a real elected party in power, and the Opposition devotes at least as much attention to criticism of the Ministerial policy as to the official administration.

When one speaks or thinks of the Mogul Empire, one is apt to think that it embraced the whole of India; but, in fact, it was only half way through the reign of Aurungzebe, the last of the Great Moguls, that it extended even so far as the south of the Bombay Presidency and over the State of Hyderabad: and, when Aurungzebe died, it only reached as far south as Tanjore. It has been said that the success of Diarchy in Madras has been due to the fact that it was not actually practised there; the explanation being that the reserved and transferred sides of the Government were but parts of a harmonious whole, and that such opposition as existed was directed impartially against both—at least as much against the conduct of the latter as of the former. In all the other Provinces opposition was, to a greater or less extent, concentrated against the British administration: and the Ministerial, or elected, administration depended for its existence on official support, while in Madras it was in fact, though not of course in practice, independent of it. It is the success of this form of Indian government in the Presidency that has led to the demand for a further measure of local autonomy that has found expression in the proposals for its sub-division on a racial and linguistic basis, as in the case of the suggestions for the setting up of separate Tamil and Canarese Provinces, which have recently been mentioned in THE NEAR EAST AND INDIA.

Apparently the Brahmins of Southern India favour these proposals; perhaps in the hope that, in smaller political divisions, they would find it easier to recover their lost influence; but, be this as it may, it is certain that, at the coming General Election, they will make a sustained and organised effort to secure the election of their own candidates: and the political future of Diarchy in Madras depends on the result. If the non-Brahmins hold their position, the existing system of administration is likely to continue undisturbed: but, if they fail to do so, and the Brahmins succeed in obtaining an elected

Digitized by Google

majority, it is probable that political developments in Madras will follow the example set by the other Provinces. It has to be remembered that the Madras "storming parties,' of whom *The Times* correspondent speaks, were exclusively Brahmin: and, should the Brahmins reassert themselves in the Legislative Council, there is every reason to suppose that they will immediately resume their "attack against the ramparts of established government."

The Begum on Fashions.

In one of the last interviews that she gave before leaving England, the ex-Begum of Bhopal expressed her disapproval of the modern fashions of the shingled head and the short skirt. From the view-point of an Indian lady, both these objections are readily intelligible; though Indian women of the lower orders habitually go about with their legs bare half way up the thigh, those of the upper classes invariably wear long flowing skirts, or "trousers." The returned exile from India will probably —at any rate, if he is a mere male—agree with the first, but almost certainly not with the second of the Begum's objections. Though bobbed hair is often exceedingly becoming in the case of a young girl, shingling usually strikes the male observer as nothing but a modern labour-saving device—useful, but not attractive. But the short skirt fashion seems to be one of the few feminine modes that is both useful and ornamental: it certainly strikes the writer as at once eminently sensible and, in general, extremely attractive. On the whole—or, at least, so thinks the present observer—English girls have made the best of it, and have skilfully adjusted the length of their skirts to suit their natural advantages—or disadvantages: it is seldom that one sees, at any rate in London, a really short skirt that the proportions of the wearer do not justify. And, to the ordinary sinner with an eye for feminine beauty, it has a special advantage of its own. In the old days, one was shy of staring at a pretty face, for fear of being thought rude; but, since one cannot get the full effect of a pair of really pretty legs unless the skirt is short enough to show the bend inside the knee: and, as fashion does not compel any girl to wear a skirt as short as that; she who does so does it from choice and not from necessity. Thus one feels the comforting assurance that one's admiring survey will not only not be resented, but will be accepted as a proper tribute to a friendly challenge.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 20.

The Legislative Council.

The Parliament of Bengal reassembled on Monday last, after a long spell of inactivity, in order to consider the Security Bill. This was put forward by Government with a view to obtaining further powers to deal with "goondas" and dangerous characters when a state of emergency arises such as was caused by the recent riots. The Swarai Party had already violently denounced the principle of the Bill; but, as they had "walked out" of the Councils for ever, or at least until the next elections, there was some doubt as to what their line of action would be in regard to the Bill itself. They turned up, however, in full force, and opposed the motion for the introduction of the Bill, only to be soundly defeated; they thereupon left the Chamber in a body. Fortunately, their appearance for these few minutes had the same effect as their attendance on the first day of the last session, in order merely to walk out at the beginning of business; it secured their travelling allowances, which is no small consideration to up-country members who are struggling to earn their daily bread at the over-crowded Calcutta Bar.

Racial Hatred Still.

The pathetic contentment of the masses continues to be unpleasantly disturbed by communal amenities. Early this week at Khargpur, the headquarters of the Bengal Nagpur Railway, eighty miles from Calcutta and a model township, there were communal riots in the course of which five people were killed and twenty-one injured. Prompt action by the authorities prevented the trouble from spreading; but feeling is still high in the town and minor collisions continue, two more being killed yesterday. An official announcement has been made that the reports coming in from outlying places as to the destruction of places of worship, and of communal hostilities, are exaggerated; but conditions are certainly more unsettled than they have been for generations. There have been disturbances in two of the mill areas this week, the ostensible cause of each being labour troubles: but these have been properly handled and quiet restored. The Governor called a conference of all communities at Government House on Monday, to consider the conditions under which licenses should be issued for religious processions, which really means whether music shall be prohibited before mosques; but the meeting was abandoned without agreement upon any point. Mr. Sen Gupta, the extremist leader, grandiloquently declined to attend this conference, on the ground that he did not recognise the right of Government to bring the opposing factions to agreement; but, in spite of this, it will be left to Government to make the regulations and to take the responsibility of seeing that they are obeyed. Meanwhile the antagonism between the leaders of the two communities shows no sign of abatement.

A Stolen Letter.

The principal meal of the extremist Press this week is a stolen private letter. It was sent to the Calcutta office of the *Statesman* in December 1924, and it referred to the libel action commenced against the *Englishman* by Mr. S. C. Bose, the Executive Officer of the Calcutta Corporation who is confined in Burma under the Bengal Ordinance. The letter is printed in full in *Forward*, and it shows that endeavours were made to induce Government to assist in the defence of the action; a conversation with an official of the India Office is also repeated, including his statement that, so far as he could recollect, "there was no documentary evidence against Bose, but only the testimony of highly creditable witnesses who spoke of their own knowledge of Bose's connexion with the revolutionary activities." The action against the *Englishman* arose from a reprint of an article from another paper which suggested that Mr. S. C. Bose was connected with revolutionary activities. The *Englishman's* case has now been heard, and damages have been awarded against the proprietors; a similar result followed an action against the proprietors of the journal containing the original article; a further action against the *Statesman*, which also reprinted the article, is pending. No comment is

necessary upon the action of *Forward*; it has shown from its inception that it has no regard for the ordinary decencies of civilised life. The ingenuity of Mr. Bose's legal advisers must however be admired. He, having been imprisoned under the special legislation directed against revolutionary anarchists who cannot be tried in open Court owing to the almost inevitable murder of witnesses that follows, is able to say that he has not been convicted, and is therefore innocent when it comes to a suggestion in the Press that he may be connected with terrorists. *Forward* has since been shrieking that the stolen letter exposes the whole of the Government plot to crush the Swaraj Party by the deliberate invention of a terrorist conspiracy. "If you believe that you will believe anything," said the Iron Duke; unfortunately, the majority of politically-minded Indians do believe it.

The Legal Mind Again.

Another instance of legal ingenuity is reported this week in connexion with a prosecution arising out of a death following a case of assault. There was conflicting medical evidence, and counsel for the accused suddenly sprang upon the expert for the prosecution a severe cross-examination as to the identity of the body of a mill worker upon which he had conducted the post mortem examination. The prosecution were apparently taken by surprise, and it is of course at this stage quite impossible to identify a body which was burnt a month ago. The Bar Library is very sceptical as to the possibility of supplying the necessary legal chain of evidence to connect the coolie who was assaulted with the body that was examined, let alone the one that was burnt! Within a week a similar point has been taken in the case of a Calcutta prosecution; there appears to be little doubt that it directly influenced the Sessions jury to refuse to convict a body of rioters who were caught red-handed at murder, and they would not go beyond a verdict of simple rioting. It will serve to encourage the factionists at the next religious fights, provided they can rely upon an ordinary trial in Court after they have finished their murdering.

Politics.

Forward still continues its personal attacks on Lord Lytton, and apparently there is no one strong enough in the Secretariat to handle this dangerous poison-gas factory as it deserves. Cases against the various newspapers which arose out of the publication of inflammatory articles during the Riots are now coming up for hearing; in one of them a youth of nineteen, who appeared as the Editor, seemed to be quite unable to comprehend the meaning of a simple sentence addressed to him in the vernacular! Mr. B. C. Pal's article in the *Englishman* this week calls upon Europeans to co-operate with Indians in order to assist in the realisation of their demand for self-government. He conveniently forgets altogether the recent riots and their aftermath: and, to read his columns, one would come to the conclusion that it was the European community that has opposed the working of the Reforms since their initiation, and not the Swaraj Party; a farcical contribution to a subject which is rapidly becoming nothing else but a farce. The *Amrita Bazar Patrika* calls on Indians to protest emphatically against the Colour Bill which has recently been passed by the South African Parliament. It admits that the Bill will not affect Indians in any way, but it suggests that the Government of India should be forced to interefere between the South African Government and its black population; a pleasing example of what is likely to occur when a self-governing India speaks with its own voice in the councils of the Empire.

Rangoon Notes.

Little is heard of Rangoon doings in Calcutta, but possibly the fact that a whole quarter in the Kemmendine suburb was burnt out during the week may account for a mild column in the Press during the week. We learn that political parties in Burma resemble their Indian brethren in that they are completely unable to come to any agreement as to joint action; a speaker has recently suggested that all members of the various political organisations should cease to pay their subscriptions, and so bring their leaders to their senses by starvation! A counter move to political activities is the inception of a new society —"The Youths' Improvements Society," which aims at "the promotion of intellectual, moral and social qualities amongst university students." Lastly, an interesting development of village sports under the Reforms; the question of repelling the attacks of dacoits has again become a vital one for village communities, now that dacoity is one of the standard methods of augmenting "political" funds; at Kyayklat village sports this year the whole of the programme was made up of anti-dacoit events, including spear throwing, throwing of brickbats, bow and arrow and catapult shooting, and air gun competitions. The events concluded with a demonstration of how to deal with bad characters generally; who, in this instance, were represented by members of the local Police Force, to the intense delight of the spectators.

Men and Things.

A statement is published in the *Englishman* this week that Sir Charles Tegart, who is at Home on leave, will not be returning to his post as Commissioner of Police in Calcutta, as he has accepted an important appointment in the C.I.D. at Scotland Yard. This brilliant policeman, who has lived under a daily meance for the last six years that would have broken most men, is entitled to a rest if ever man was. All the thrillers written around the revenge of secret organisations in the East pale before the simple facts of the daily life in Calcutta of his wife and himself: and it was not until the Bengal Ordinance was passed in 1924 that his friends felt that he had even a sporting chance against the overwhelming odds laid by Mr. Montagu's release of the anarchists whom it had taken a dozen years to track down and intern; hosts of friends congratulate him, and wish him equal success in his new work. Another fine character goes to England shortly in Mr. Surendra Nath Mullick, who is to join the India Council at Whitehall. He was the first Indian Chairman of the Corporation, and did brilliantly well there showing courage of a rare type amongst Bengalees, for he was never afraid to offend his friends. He was appointed a Minister under the Reforms, and did equally well until the Swaraj Party turned him out; then for a time he tasted the bitterness of those who, beaten by their enemies, are apparently deserted by their friends. At last Government has moved, and Surendra Babu will find scope for his abundant energy in London; he should be a popular and capable official.

The Trivial Round.

A counterblast to the suggestion, that Darjeeling is becoming dull since it was deserted by any but officials and residents, appears in the papers this week. A local resident protests vehemently against the suggestion that further "amusements" are required in Darjeeling, and prays that it may be left alone in its beauty amongst the mountains; his suggestion, that "box-wallahs" will never be content until they can motor to the top of Everest and jazz there, is a pointed jibe and possibly a full half-truth. The soccer season is in full swing, and it looks as if Calcutta will again have a strong team, as they have not yet lost a match. Tennis is closing down and, in the last match, Calcutta again beat the North Club in the return game; the Mills are having a lightning tournament. The theatre has opened temporarily again with a Musical Comedy Company; and the Ypres film has arrived and is being shown by Madan's House. The monsoon is in the Bay, and it looks as if it will break early; meanwhile free Turkish baths are compulsory.

Markets.

During the past week, very favourable reports have been received from the jute districts regarding the progress of the new crop, and this has had a considerable influence in the market. At the close, little or no business is passing either in the jute or gunny market, in spite of a further decline in prices: and the tone is weak and the

Digitized by Google

tendency still lower. In the piece-goods market, there has been a better inquiry for replacement goods; but the volume of business actually done continues to be small. The London tea market opened well after the strike, prices opening about previous levels and tending higher. Large orders are being received for the first of the new crop, which will be offered here on the first of June, and keen competition is expected by the trade at this sale. Dealers would not be surprised to see the bidding of rates above those in London.

In the stock markets, jutes have been remarkably steady in spite of the weakening tendency of the hessian market, and prices generally have improved. Many scrips, especially the more speculative shares, are decidedly scarce: and, with purchasers insisting upon delivery, brokers are finding it difficult to obtain the shares except at increasing rates. Coals and cottons call for no comment, except that the quotations of one or two coal companies show a slight improvement; it is understood that a few cargoes of Indian coal are being shipped as a result of the coal strike in England. Teas have been the feature for the last few days; buyers are in abundance, and all the more popular stocks are in request at higher rates. There has been little doing in rubbers, but prices are steady. Government Securities have firmed up again after an easier market last week; 3½ per cent. Paper is back to Rs. 77/10.

Exchange has been steady during the week, ready T.T. being quoted at 1s. 5 29-32d. Money is in plentiful supply, rates for short and one month's deposit being 3 to 2¾ per cent.

INDIAN SANDHURST COMMITTEE.

The Indian Sandhurst Committee Deputation which arrived in England on April 25, and which consists of Mr. Jinnah, Mr. Sethna and Major Zorawar Singh with Major Lumby as Secretary, for the purpose of visiting educational institutions in this country and elsewhere, sailed from Liverpool in the "Montclare" on May 28. They will be visiting Canada and the United States, and will see the Military Colleges at Kingston and West Point.

During the past month they have visited in England two L.C.C. schools (the Peterborough School, Fulham, and the Kensington Central School), Ashdown House Preparatory School, Forest Row, Sandhurst and Woolwich, the School of Military Engineering at Chatham and the Artillery School at Larkhill. They also paid a visit to Combridge University. In France they visited St. Cyr, the Ecole Polytechnique and the Lycee St. Louis.

THE INDIAN MAIL.

The Development of Calcutta.

A special correspondent of the *Statesman* puts forward a comprehensive scheme for the improvement of the port of Calcutta. He says that the various discussions that have been proceeding, for many years past, regarding the form to be taken by the new Hoogly bridge, and regarding schemes for an overhead railway and a Central railway station, are merely concerned with details: and that the fundamental problem is to arrive at a definite policy for the development and improvement of a "Greater Calcutta." The city owes its importance solely to the fact that it is a port: and it can only maintain its position so long as it continues to be a first-class port. Many persons appear to consider that the main problem to be decided is whether Calcutta should be provided with North and South, or with East and West, communications: but in reality there is no such problem. Calcutta has already grown North and South, along the river: and, if it is to develop into a real Greater Calcutta, must also grow East and West. But, at present, a very large amount of the import trade of the port is dealt with at the jetties in the heart of the business area: a fact that entails the daily unloading of thousands of tons of merchandise on to the roads of the city, and is responsible for keeping some five to seven thousand bullock carts every day on the streets of that section of the City which should above all be clear of them. The writer of the article believes that the jetties should be abolished and all unloading of merchandise relegated to the docks; which should be served by a circular railway running along both banks of the river and following in the main the existing Port Commissioners' line on the left bank and the East Indian railway on the right, with two railway bridges over the Hoogly, the northern being the Bally bridge, and the southern a new bridge near the Howrah terminus of the East Indian and Bengal-Nagpur railways, close to the place where the existing bridge of boats is situated. Other road—but not railway—bridges would be built later, as the development of the Howrah (western) side of the river proceeded: since, given proper communications, it must only be a matter of time for that side to become as densely populated as is the Calcutta (eastern) side at present. For the proper development of this Greater Calcutta a single directing body should be created, somewhat on the lines of the London County Council; which should supervise the separate municipalities of Calcutta and Howrah, as well as the district boards that control the neighbouring suburbs.

This scheme, which the correspondent elaborates in considerable detail, will doubtless receive a full measure of discussion in the Calcutta Press, whose opinions cannot be expected to be unanimous; but, whatever local critics may think of the particular proposals contained in it, there can be no doubt that they will agree with the main thesis. This is, that it is necessary to take a long view of the situation, and never for one moment to lose sight of the fact that the importance of Calcutta lies not in the greatness of the city but in the greatness of the port; so that "all other considerations must be subservient to those which aim at keeping the city, as a port, abreast of the greatest in the world."

Superintendent Chatterjee's Murder.

The murder of Superintendent Bhupendranath Chatterjee in the Alipur Central jail, as the result of a concerted attack made on him by a number of the prisoners recently convicted in the Dakhineswar bomb case, is an unpleasant reminder that anarchism in Bengal is still a force to be reckoned with: that its ranks still contain desperados ready to sacrifice their own lives if, by doing so, they can remove men whose activities are a danger to "the cause." Mr. Chatterjee was a prominent figure in the Criminal Intelligence Department in Calcutta, and one whose life had frequently been threatened. One is accustomed to look upon the Bengali as, in Kipling's phrase, "a fearful man"; but there are few finer examples of placid courage and devotion to duty than that offered by the Bengali officers of the C.I.D. in the days when the revolutionary movement in Bengal was at its height, and the anarchists deliberately set themselves to clear the way for the continuance of their operations by the murder of Indian police subordinates, with the intention of establishing such a reign of terror among them that those who escaped the pistol or dagger of the assassin would consent to save their lives by withdrawing from the fray. This attempt signally failed: if a police officer were murdered—and there were many who were—there was always another ready to take his place: and this band of devoted officials never faltered, but went on with their business of investigation and inquiry, with the imminent threat of death hanging over them at every moment, with a courageous disregard of the consequences that must command the highest admiration. It was always possible to take special measures, for the protection of European police officers, that were impossible in the case of their Indian colleagues, who lived among the very men who had set themselves to remove them: and who never knew, from day to day, when they might meet their fate on their own doorsten, or on their way to or from it. Among these devoted servants of the State, Mr. Chatterjee stood

Digitized by Google

high: and sorrow for his loss will be accompanied by admiration for his courage and for that of his confrères who, in the face of every kind of temptation, have remained—as so many of them, during the last ten or twelve years, showed themselves literally to be—faithful unto death.

INDIAN COMMERCIAL NOTES.

The Government of India were wise when, many years ago now, they decreed that the financial and trade year should run from April 1 to March 31; for the start of the hot weather marks the beginning of a new trade season. The spring crops are mostly harvested by the end of March, and the dull season of April-May shows Nature marking time until relieved by the rains of June.

A new monsoon will be on us soon, and it is time to look round and take stock of the position. One thing may be said with confidence. India's general economic position is stronger to-day than it was a year ago. This time last year the peoples of India were seriously apprehensive that the monsoon might turn out badly. Prices were high, and yet the return on agricultural produce, excepting only cotton, was inadequate—certainly inadequate to pay the prices asked for cotton goods. To-day the cost of foreign manufactures is much more reasonable. The dread of a short monsoon is always felt in India during the summer months. One can only say that this year the apprehension is not so acutely felt, because the general economic situation is distinctly better than it has been for some years past.

All the official returns of the 1925-26 crops are now in, and we can take effective stock of the position. It is now pretty clearly realised that the official estimate of the jute crop was, as usual, an under-estimate. High prices have called out some 15 lakhs of bales more than were anticipated; but then high prices usually do mean a mobilisation of hole-and-corner reserves. Sowings for next year are well up to standard, and a 100 lakh crop is looked for if all goes well.

Not long ago the Indian Central Cotton Committee issued their annual report, summarising measures taken to improve the quality, quantity and staple of India's cotton crop. It is a fine record. Legislation has been passed prohibiting the transport of short-staple cotton to long-staple areas, and thus preventing the adulteration of good with poor staple. Measures have been taken for the reform of gins and press-houses, and to prevent the spread of pests. Finally, to supplement this report, there has just been published the Review of Agricultural Operations in India, giving a wealth of information. On the cotton side I will only quote one statement, which shows that the area under improved cottons in India has increased from one million acres five years ago to three million last year.

The wheat crop is nothing to boast about: indeed, at present prices, it corresponds roughly to the normal demand for consumption in India (between 8½ and 9 million tons and will leave little if any surplus for export. Rice is up to standard, and the high exports of last year will probably be maintained; though it must not be forgotten that consumption of rice in India is as high as it ever was.

Sugar-cane and tobacco have both done well during the season just concluded. Oilseeds on the whole show little expansion, save only groundnuts, for which there is an ample and satisfactory market in France.

All things considered, the crop position in India is well up to standard, and good prices are being realised in foreign markets, though the rupee equivalents are naturally diminished, in comparison with earlier years, by the higher rates of exchange now ruling. India's purchasing power is gradually increasing: and it would be as well for Lancashire to bear in mind and so far as possible anticipate the changes of taste and fashion, in favour of finer and brighter goods, which have clearly come to stay.

INDIAN EXCHANGE.

London, June 7, 1926.

It is customary to experience a lull in Exchange before the arrival of the Monsoon, but this year, markets in India appear to be duller than usual.

The rains set in as a rule about June 12 in Calcutta and Bombay, and little improvement in business takes place until weather conditions become more settled.

Rates have remained steady since the date of our last advice, at 1s. 5 29-32d. T.T. with occasional transactions reported in both Calcutta and Bombay at 1-32nd higher. So far as we can ascertain, however, importers have been doing next to nothing and exchange settlements have been limited to very modest ready and near requirements.

Early in the week, when rates were looking firmer, an attempt was made to raise the quotation for three months commercial paper to 1s. 6 7-32d., but as this failed to attract any bills the rate was put back to 1s. 6 3-16d., which is quoted to the end of this month with very little doing in exports.

Forward rates are practically unchanged at our last week's quotations and the only fixtures reported have been some inter-bank business for January at 1s. 6 3-32d. T.T. in Calcutta.

The London market has been stagnant, and the best rate available has been 1s. 5 15-16d. T.T. with only a small business passing. The outlook is uncertain and merchants are evidently waiting for the Report of the Currency Commission.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning,

Greece's Economic Crisis.

In a thoughtful article in a Greek contemporary, M. G. Stringo, President of the Piræus Chamber of Commerce, deals in detail with the economic difficulties with which the country is confronted, and what he says is of such interest that I think it well worth while to devote some attention to his remarks. In the article in question, which is a reply to a previous statement on the economic situation, M. Stringo stresses the shortage of the note circulation. He entirely disagrees with the view that industrial over-expansion has played an important part or even that it has substantially contributed to the shortage. He states, however, that the importation of several thousand motor cars *de luxe* has resulted in the utilisation for unproductive purposes of an amount of foreign exchance exceeding by far that used for all the post-War industrial installations. "We have, in fact," he says, "been spending too much lately, and it should be clearly understood that we have become less wealthy from the point of view of foreign reserves." Answering the argument that the lack of confidence on the part of capital is the cause of the depreciation of the exchange and that the possessors of paper money transfer it into healthy currency or into merchandise or real estate M. Stringo points out that there has lately been a fall in the price of shares, depreciation of the drachma, a fall in the price of, or a lack of demand for, goods, and a fall in the value of real estate. It is not, therefore, a "confidence" crisis, but an actual shortage of the note circulation. He proceeds to explain that the rise in the rate of interest to levels hitherto unknown has led to the fall in the price of values as well as in that of real estate. "It cannot certainly be maintained," he adds, "that a revenue of 5 to 8 per cent. on shares and real estate can be indefinitely justified when the investment of money at an interest of 15 to 20 per cent. becomes easy and safe."

Burmah Oil Progress.

The meeting of the Burmah Oil Company was noteworthy for a comprehensive survey of the progress of the concern by the Chairman, Sir John T. Cargill. He was able to state that his anticipations of a year ago had been fully realised in the increased profits of £147,800 after writing off an increased amount of £109,628 for depreciation, and he pointed out that the result is the more gratifying as it has been obtained from practically the same volume of production, without advance in the price of any of the company's products, and in the face of a crude oil cost again somewhat higher.

Developments in Assam.

Turning to the question of crude oil production, Sir John Cargill referred to the lack of success so far in the drilling tests in Burma outside the proved fields. He mentioned, however, that one of the tests that the company has been carying out in Lower Assam, had disclosed what appeared to be a promising oil seam at some 2,500 feet, but added that it was too early to speak definitely of the prospects of this development being on a commercial scale. He also referred to the greatly improved possibilities of the fields of the Assam Oil Company, and it is his view that the promising developments by the Company in Lower Assam and by the Assam Oil Company probably outweigh the disappointment so far encountered in the search for fresh sources of the raw material in Burma. While Sir John Cargill was, as usual, very guarded as to the outlook, it will be noted that he said that there is no present reason for anticipating inferior results for the current year. His final statement that the balance sheet for the past year was the finest and strongest that he had had the pleasure of submitting during his 22 years as Chairman is self-evident.

Rubber Falling.

Rubber continues to decline, and is now round about 1s. 8½d., but that fact is not likely now to occasion undue anxiety to shareholders. If there were no prospect of a further restriction of output in view they would doubtless be alarmed, and would give expression to their feeling by unloading shares. But Rubber is at the moment one of the firmest markets on the Stock Exchange, and apart from the important influence of good dividend declarations—past and to come—it is quite understandable in view of the potential 20 per cent. decrease in output which will take place at the end of July if the raw commodity does not average 1s. 9d. for the current three months. Whether it will do so or not depends on the reluctant buyers across the Atlantic. If they understand the position they will buy to force the price up, but if they continue to abstain there they will find themselves forced to make purchases at a price far different from that which obtains at present. Should the latter eventuality happen we must be prepared for the usual outcry in America, and we must get ready to bear it with patience.

An Indian Banking Appointment.

An interesting banking appointment is just announced, Mr. O. A. Smith, London Manager of the Commonwealth Bank of Australia, has joined the Imperial Bank of India, and will be appointed a managing-governor of that bank when the next vacancy occurs. Before joining the Commonwealth Bank, Mr. Smith spent 20 years in the service of the Bank of New South Wales, and his wide experience of banking should be of the greatest value to the Imperial Bank of India.

THE ECONOMIC OUTLOOK IN PALESTINE.

On June 6 Mr. W. Basil Worsfold spoke on "The Economic Outlook in Palestine" to the members of the Anglo-Palestinian Club at Jews College. Mr. M. D. Eder was in the Chair.

The Chairman said that Mr. Worsfold's book on "Palestine of the Mandate" showed evidence of being the work of a trained observer with a deep insight into the problems of the country and a welcome impartiality. That Palestine was in an excellent economic position was shown by the twofold fact that it was the only country of the late Ottoman Empire which had so far paid anything towards the Ottoman public debt under the Treaty of Lausanne, and that, furthermore, it was one of the few countries in the world which had an actual surplus on its budget which for the current year is being estimated at £E750,000.

Mr. Worsfold, after outlining the physical features of Palestine, went on to describe the material benefits to the country and its population which had been the result of British administration. This fact, together with the valuable monetary help and energy poured into the country by the Zionist Organisation, was bound to help greatly in developing the economic resources of the land, the soil of which was cultivable only to the extent of one-half of the total of six million acres, and of these three million acres about one million were actually under cultivation.

In mentioning the most important economic factors at the present moment in Palestine, the lecturer named the Palestine Electric Corporation, which had already supplied Jaffa, Tel Aviv, Haifa and Tiberias with electric power. Mr. Rutenberg was at present in this country in order to obtain machinery for extending his undertaking further south. There had been a certain delay last year—through no fault of Mr. Rutenberg—owing to the protracted negotiations for the delimitation of the Palestine Trans-Jordan frontier, which had now been settled in such a way as to prove no obstacle to his plans. Another important project was the Haifa Harbour Scheme for which provision was made in the Palestine loan which the Government would be submitting very shortly to Parliament for a guarantee. Haifa had been given preference over Jaffa owing to the fact that it stands at the seaward end of the Esdraelon plain which extends to the Jordan valley and through which a railway line connecting Haifa and the Hejaz Railway runs, thus enabling Haifa to tap the important and fertile Trans-Jordan area as well as Syria, south of Damascus, including the Hauran wheat district. The London firm of consulting engineers which had reported to the Palestine Government on the Haifa harbour were now preparing specifications which, if approved by the authorities, would enable port construction to be started in the near future. A third hopeful undertaking was a funicular railway from Haifa to the top of the Carmel, which should prove a very profitable investment and do away with the circuitous 'bus route at present in existence. Fourthly, there was the Tiberias hot springs project, for which several tenders had been received at the Colonial Office. The Tiberias springs were known in immemorial times, and last year over one thousand bathing tickets were issued to persons who made use of them for their medicinal properties. Lastly, there was the extraction of potash and other minerals from the Dead Sea. The Colonial Office had put the matter up for public tender in October last and a few tenders had been received. The best of these, however, could not be carried out owing to the absence of capital.

Although the latest figures for imports were roughly £E6,000,000 and exports over £E1,000,000, this adverse trade balance should not be construed unfavourably with regard to business prospects in Palestine, as the figures for imports included temporary items such as machinery and plant for starting industries and remittances of between £E500,000 to £E600,000 per annum to the Zionist headquarters in Jerusalem, and permanent items such as the considerable amounts of money which various ecclesiastical institutions in Palestine, convents, monasteries, and so on, received from abroad.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Brocklebank Line.—S.s. Manaar for Port Said, Colombo, Madras, and Calcutta (London, June 26).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (London, June 16).

British India Line.—S.s. Madura for Bombay and Karachi (London, June 11); s.s. Margha for Colombo, Madras, and Calcutta (London, June 19).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, Trieste, also Algiers, Corfu, and Gruz if inducement offers (Liverpool July 1, Swansea July 6); s.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, also Algiers and Volo if inducement offers (Swansea July 10, Glasgow July 10, Liverpool July 10).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 25); s.s. Incemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 17).

P. and O. Line.—S.s. Rajputana for Bombay (London, June 11); s.s. Novara for Colombo, Madras, and Calcutta (Liverpool, June 12).

Ellerman and Papayanni Lines.—a.s. Roumelian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona,* Venice, Trieste, and Fiume* (Swansea, June 14); s.s. Egyptian for Malta, Alexandria, Jaffa,* and Haifa* (Liverpool, June 12); s.s. Assyrian for Gibraltar, Malta, Alexandria, Jaffa,* and Haifa* (Liverpool, June 23); s.s. Mardinian for Gibraltar, Patras, Piræus, Volo,* Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool June 12, Swansea June 12); s.s. Algerian for Algiers,* Malta, Piræus, Volo,* Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 3); a steamer for Gibraltar, Malta, Alexandria, Jaffa,* and Haifa* (Glasgow, July 16). * Subject to sufficient inducement.

Prince Line.—S.s. Stuart Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli (Syria), Mersina, and Alexandretta (London, June 26).

Certain modifications have been made in the Turkish Customs Tariff Law. A new clause has been added which provides for the application of Customs duty on bunkers and ships' stores purchased by Turkish vessels in foreign ports, on arrival at the first Turkish port. Various additions have been made to the list of articles which will benefit by Customs exemption, including one covering material for the repair or cleaning of ships, aeroplanes and railway rolling stock, on condition that this material is eventually re-exported.

A tornado with a waterspout has caused great damage at Pantchevo, on the Danube (Yugoslavia). There was no loss of life.

Motors and Motoring.

By G. B. B.

The Customs returns for Ceylon for last March show that the motor trade with the island continues at a most gratifying rate. An exceptionally large number of motor cars, buses, lorries, light cars, cycle cars and motor cycles have been coming into Ceylon since Christmas; in March alone 276 cars, including specimens of every one of the above categories, were imported at a price of Rs. 649,285. The total for the first quarter of 1926 is thus: 722 cars of all kinds valued at Rs. 1,858,309. The car imports, it is interesting to note, show some slight concession on the part of British makers in permitting the Ceylon buyers to hear something about their products, for of the above total 255 cars valued at Rs. 747,504 come from this country. The United States sent in 214 cars, worth Rs. 604,757 and Canada 155 cars at Rs. 249,810. The balance was divided between Italy, France and Belgium, and one German car, valued at Rs. 3,522, entered the island. During the first quarter of the current year, 208 motor lorries, valued at Rs. 627,330 were imported into Ceylon, of which 70, valued at Rs. 196,901 came in during March. Of these 123 came from the United States, 54 from Canada, 25 from Great Britain, 5 from Italy and one from France. The American lorries were valued at Rs. 437,233 and the 25 British lorries at Rs. 115,113.

The figures show that the price is by no means the chief consideration of the buyer in Ceylon's market. For instance, he bought only 25 British lorries as against 54 Canadian. But he paid Rs. 115,113 for the 25 British lorries and only Rs. 60,896 for the 54 Canadian. Yet the tonnage of the lorries was about the same. From this one gathers that the Ceylonese, like every other buyer in the Near, Middle, and Eastern markets is willing to pay more for British goods than for those from any other country. The only reason why he does not buy more is that he has no time to spare. He is occupied from morning till night in trying to find out what British manufacturers have to sell!

By the way, the figures for motor cycles may as well be included. During the first quarter of this year a total of 183 were imported into Ceylon, valued at Rs. 101,890 Of these, 102, valued at Rs. 56,594, were landed during March and of the total of 183, no fewer than 178 came from the United Kingdom. Further evidence, were further evidence needed, of the great demand in Eastern markets for British goods.

Faulty Pumps.

Some little time ago there was a good deal said regarding short measure given by roadside petrol pumps. I see that renewed attention is being paid to the matter, and an eminent authority has just said that in his opinion some of the types in use are so inaccurate they they should never have been allowed to be used for sale purposes. Personally, the matter concerns me very little as, with wisdom approaching to that of the serpent, I never patronise the pumps, but always buy petrol in the tin. I know where I am then.

The new controversy has arisen as a result of the remarks made by the Chief Inspector of Weights and Measures at Liverpool. "Personally," he said, "I do not put the slightest faith in a petrol pump. As if it is accurate at the moment, before long it will be wrong again. The stamping of a petrol pump does not make it accurate: it is merely a warranty that the pump was accurate at the moment of stamping, and the stamp does not ensure that it will remain correct. Petrol is of so low a specific gravity that it is difficult, if not impossible, to ensure that it will not leak back through the piston leather or by way of any other path, large or small, that may be open to it." My query was as to whether a pump was not in the same category as any other measure: if, I asked, a motorist asks for a gallon of petrol from the pump is he not entitled to have what he wants? But the answer seems to be that a pump is, by law, a measuring instrument and not a measure, and so does not require to be stamped under the Act. So, obviously, a petrol pump may be accurate and it may equally well be inaccurate and nothing, apparently, can be done about it. I could ask for a gallon of petrol and be served with three quarts and a splash and nothing could be done about it, and yet, if I bought a packet of cigarettes after 8 p.m., the law would sit up and take notice at once.

Let us read some facts. Says this chief inspector: "I have recently had 39 piston pumps tested, and found that 59 per cent. delivered short measure on the first pull; 10 per cent. delivered too much and 31 per cent. were correct. The deficiencies ranged from a gill to 9 gills, or over one quart, per gallon. One pump was one quart one gill short on every gallon: another was 1¾ pints short and three were a pint short in every gallon."

The Persian Government has decided to expend up to £80,000 in the purchase and building of a paper-making plant to be operated in conjunction with the Government printing plant established last year (says an American Consular report). It is intended to manufacture newsprint, book, and writing paper, and other kinds of paper.

H.M. Consul-General at Beyrout reports that, in addition to the *ad valorem* Customs duty levied on imported playing cards, a further specific duty has now been imposed on these articles by a recent Decree issued by the French High Commissioner. This additional duty amounts to 10 Syrian piastres (two francs) on each pack containing 32 or 36 cards and to 15 Syrian piastres (three francs on each pack containing 52 cards.

A Reuter message states that the Turkish Cabinet has approved the offer of a Polish group of financiers for the exploitation of the spirits monopoly. The concessionaires have agreed to pay the Treasury £E1,500,000 immediately and 40,000,000 Swiss francs are to follow within three months.

CHEAP OCEAN TRAVEL.

The inauguration of the introduction on Canadian Pacific liners of the new Tourist Third Cabin accommodation which has been designed to meet the requirements of those desirous of visiting Canada and the U.S.A. at the smallest possible cost consistent with comfort and service, took place on June 3, when a party of approximately 150 Tourist Third Cabin passengers left Southampton for Canada and the States by the Canadian Pacific liner Melita. All classes and professions from all parts of the country are availing themselves of this moderate priced form of travel, school teachers, clergymen, business men, nurses, engineers, civil servants, farmers, storekeepers, auctioneers, millers, company directors, architects, printers, dressmakers, cotton spinners, artists, professors of music, farriers, etc. Some are spending a brief week in Canada or the States, whilst others are making a more extended visit to the Dominion, and are proceeding to the Pacific Coast and back. Frequent departures from Southampton, Liverpool, etc., will take place throughout the summer.

A Teheran message announces the resignation of the Persian Cabinet. Mostofol Mamalek has been asked to form a new Government.

DISCOVERIES IN PALESTINE.

At the sixth annual meeting of the British School of Archæology in Jerusalem, held on June 4 at Burlington House, Piccadilly, Professor Garstang, Director of the School, and Director of Antiquities in Palestine, said that the two caves in Galilee just examined had given results of great value, including remains of Neanderthal man. The Government museum had begun to organise a new section devoted to prehistoric remains, among which the school's discoveries formed the central pieces. With Dr. Mond, he had held conversations with the Government of Palestine on the subject of the future relations of the school and the Department of Antiquities, which from the time when the latter was founded had been worked almost as a combined institution. The Government realised gratefully the help the school had rendered to them and to the cause of archæology in Palestine. They felt, however, that the time was coming, now that both bodies were established and gaining experience, when it would be more convenient for each to develop in its own direction independently, and they asked the council to consider the matter from this standpoint in framing their programme for the future.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 8.

In spite of the continuance of complete deadlock in the coal industry, a firm tone has been maintained in the stock markets. In the case of the gilt-edged market, this is partly attributable to the monetary situation. Were it not for industrial trouble we should no doubt already have had a lower Bank Rate, and although a prolonged coal stoppage will tend to lessen the prospects of an early change, a settlement in the near future would no doubt be followed by a decline in the Official Minimum. More cautious observers, however, are already pointing out not only that the period of the year usually associated with a lower Bank Rate is passing, but also that after a prolonged trade stagnation, it is usually the export trade which is the last to revive, and the excess of imports over exports tends to increase for some length of time. In other words the strain on the exchanges is prolonged. In the meantime, as we have said, Government securities maintain a firm front, another partial explanation being that owing to trade stagnation caused by the coal stoppage a substantial volume of funds, which would otherwise be employed in trade, is temporarily flowing into investment channels. In other sections quiet conditions prevail, though prices remain steady. Home rails have been idle and inclined to flag on the traffic figures which show that as a result of the strike gross traffics have been reduced by over £7,000,000. Against this, of course, have to be set compensatory savings on the score of wages and fuel, but when normal services are resumed the companies will have much leeway to make up. Further weakness in the price of raw rubber has not had much influence on share prices; oil shares have enjoyed some activity and one or two sections of the miscellaneous market have shown strength.

New Issues.

The New Zealand Government Loan of £6,000,000 issued on May 31 in the form of 5 per cent. at 98½ was very heavily over-subscribed and large applicants only received on the average about 4 per cent. of the amounts applied for. Dealings opened on Thursday at a premium of 1½. Since the announcement of this issue the new capital market has been more active and several new offers have made their appearance. On Thursday the second instalment of the State of San Paulo Coffee Institute Loan was underwritten. It may be remembered that January £4,000,000 of this loan was issued in London and £1,000,000 in Holland and Switzerland. The same proportions are now being issued in these centres at 7½ per cent. interest at 97½, at which the yield works out 7¾ per cent. allowing for redemption. Following the success of the New Zealand loan has come an issue of £3,000,000 on the same terms by the Government of Victoria, while several industrial issue of varying importance are making their appearance.

Are Industrial Shares Too High?

Investors who have access to a library might spend a profitable hour in turning up some pre-War volume of some investment magazine. A perusual, for instance, of the Investors' Montly Manual for 1913 reveals, among other things, the rather surprising fact that the general run of yields on ordinary shares of industrial companies was higher then than it is now, and this in spite of the fact that gilt-edged yields are much higher now than then. One has also to remember that the income tax to be deducted from dividends received is now 3½ times as heavy as in 1913; so that the investor nowadays is contented with a very much lower net return on industrial ordinary shares than before the War. One at least of the reasons for this fact is clear. With income tax still at a high level investors pay more attention to the chance of capital appreciation than to dividends. In the industrial share market capital profits through quick and sporadic market movements are so possible that this class of share is bought by an enormously larger circle of investors than before the War. So the pursuit of favourites by a profit-seeking public keeps prices at a relatively high, and yield at a relatively low, level, thus making the object aimed at the less likely, except in the case of those who by luck or inside information buy at a psychological moment.

This is all very well. But to-day, when the prospects of hosts of industrial companies have been damped by labour troubles, the time has come for investors to review very carefully their holdings of industrial ordinary shares, and to consider whether the question posed at the head of this paragraph applies to their own particular holdings, or whether special reasons exempt them from anxiety.

Stale Mining Reports.

Several events this week have emphasised the point that an unnecessary delay sometimes arises in the issue to the shareholders of the annual reports of mining companies. For example, the statements for 1925 of the Robinson Deep and the Simmer and Jack Companies have only just made their appearance here. The reason for the delay is that they are accompanied by a report of the proceedings at the annual meetings which was held in the one case in the middle of April and in the other at the end of March. But the result is that by the time the documents in question reach the hands of the shareholders in this country they are distinctly stale. Moreover, the facts and figures embodied have long been in the possession, not only of operators in South Africa, but of people elsewhere, who subscribe for Johannesburg publications. Further, the City columns of an enterprising daily have contained a forecast of the accounts of an important Broken Hill enterprise. It is understood that the directors of the concern in question are much annoyed at the premature disclosure of the information in question; but leakage of the kind is difficult to prevent if there is delay in the publication of the official statements.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Electrically Driven Centrifugal Pumps.—Tenders are invited by the Department of Municipalities of the Egyptian Ministry of the Interior for the supply and installation of centrifugal pumps and electric motors required in connexion with water supply works at the town of Minieh. July 20. (D.O.T.)

Semi-Diesel Engines and Pumps.—The Director-General, State Domains Administration (Commercial Service), Savoy House, Qasr el Nil Street, Cairo, invites tenders for the supply of 3 semi-Diesel engines and 2 centrifugal pumps. July 10

Diesel Engine, Etc.—The Director-General, Main Drainage Department, 2, Sharieh El Maleka Nazli, Cairo, invites tenders for the supply, erection and maintenance of a 400 b.h.p. Diesel engine driving an air compressor together with auxiliary machinery. August 2.

The American House of Representatives has approved the Yugoslav Debt Settlement by 80 votes to 14.

An Ordinance has been issued by the Government of Palestine exempting cotton, wool and silk yarns from import duty.

M. Pashitch, the former Prime Minister of Yugoslavia, who has been suffering from a renewed attack of jaundice, left for Karlsbad on June 3.

The London offices of the Italian State Railways and State Tourist Department and the Italian Steamship Lines have moved from No. 12 to No. 16, Waterloo Place, the rebuilding of which has just been completed.

Messrs. Moore's Modern Methods, Ltd., London, have been awarded a contract by the Survey of Egypt (Giza Mudiriya) for the supply of 3,000 loose leaf post binders for 1926-27, at the total amount of £E3,700, f.o.b. English port.

Near East Markets.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows under date May 31:—

Our last report dated March 1, dealt comprehensively with the extent of the yield of sultanas and figs of the past season and the approximate distribution at that date to the various consuming markets. Both crops may now be regarded as disposed of, and below we give a final summary of the season's operations which will be found of interest in comparison with the previous year's figures and helpful in gauging the coming year's prospects.

Sultanas.

According to Government returns, the yield last season reached a total of approximately 29,000 tons as against 50,700 tons the previous year. The distribution has been as follows (in tons):—

	1925	1926
United Kingdom	12,000	7,000
North Continent	27,500	14,000
States, Canada, South America and New Zealand	2,000	500
South Continent	6,000	4,000
Black Sea Ports and local consumption	3,200	3,300
Estimated Stocks		200
	50,700	29,000

The prices throughout this season have ruled on a relatively high level, and yet the absorption of the whole crop, and the material advance in prices towards the close, can be regarded as full justification for the level of values that obtained throughout the season.

There is left over on this side yet to be marketed between 100 to 200 tons of fruit. There is a small but steady daily demand and, in spite of the almost fancy level of prices ruling here, it is manifest that the small quantity remaining will be cleared over the next few weeks.

Figs.

The Government return of the yield is shown as about 19,600 tons. The distribution has been as follows (in tons):—

	1925	1926
United Kingdom	12,800	5,575
States and Canada	9,500	8,807
Continent	2,500	372

The world's demand for figs appears to be on the increase. There are new markets coming into play which, hitherto, for economic or other reasons had not drawn supplies over the past few years since the War. With the gradual re-establishment of more settled conditions in Russia and South-Eastern European countries, these markets are likely to draw gradually increasing supplies of figs in the future.

This Year's Crops.

Atmospheric conditions during the past winter have been generally favourable. Rainfall has been normal and evenly distributed over the winter and spring months. All crops, including those of sultanas and figs, give promise of substantially larger returns than last year. Present estimates for the coming yields of sultanas and figs vary between 40,000 to 45,000 tons and 25,000 to 26,000 tons respectively.

HEAD OFFICE:— SOFIA, BULGARIA

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated May 31, state:—

Currants.—During the early part of the month the market was under the shadow of the general strike, and business was restricted, very few operations being concluded. The demand has improved since the strike was called off, and considering the lull in activity which is customary prior to a holiday, and the uncertainty regarding the issue of the coal dispute, we think we have reason to congratulate ourselves upon the amount of trading which was possible, and the maintenance of prices under these adverse circumstances.

Further arrivals per Assyrian and Roumelian, principally of Vostizza grade, have replenished our dwindling stock, and transactions have mostly comprised Vostizza fruit 39s. to 46s. and smalls 36s. to 40s. Other sales were Pyrgos 29s. to 30s., Patras 31s. to 32s., Zante and Gulf 32s., to 33s., old fruit 29s. Quotations:—Pyrgos 29s. to 29s. 6d., Amalias 30s. to 31s., Zante and Patras 31s. to 33s., Gulf 32s. to 34s., Vostizza 35s. to 45s.

Sultanas.—There is a distinctly healthier feeling about which promises well for increased sales when the upset caused by the labour trouble has been overcome and the coal controversy is settled. No doubt the reception accorded to the first Australians to arrive in London, and the prices realised, have stimulated the demand for other growths, evoking general interest, assisted by the inquiry from Hamburg, and sales were effected, Smyrna and Cretan 67s. to 68s. for medium, and 70s. to 77s. 6d. good to fine, Greek 61s. to 75s., and choice 80s., prices which were unobtainable a few weeks ago. Capes have also benefited by the healthier tone, Sundried F.A.Q. variety selling at 58s. to 60s., G.A.Q. at 70s., and sulphured varieties at 70s. to 72s.

The new Roumanian Customs tariff was to come into force on June 5.

Mr. J. O. Robinson, of Messrs. Spencer and Co., of London and India, has accepted a seat on the Board of the Mercantile Bank of India.

Steaua Romana (British), Limited, are advised that the production of the Steaua Romana Company of Bucharest for May was 29,800 tons.

The Rohilkund and Kumaon Railway Company has declared an interim dividend for the half-year of 4 per cent., together with a bonus of 2 per cent., on the ordinary stock, payable, less tax at 2s. 3d. in the £, on July 26.

The Bengal and North-Western Railway Company, after transferring £50,000 to reserve and placing, as usual, £35,000 to sinking fund, has declared an interim dividend of 4 per cent., together with a bonus of 3 per cent., on the ordinary stock, payable less tax at 2s. 3d. in the £, on July 26.

The report of the Land and Mortgage Company of Egypt for the year ended March 31 last states that the gross receipts amounted to £11,084, against £12,883 for the preceding year, and the net profits to £5,039, as against £6,107. Adding the balance brought forward of £7,609 gives £12,647. The directors recommend a dividend of 10 per cent., less tax, leaving £7,647 to be carried forward.

Company Meeting.

BURMAH OIL COMPANY.

Survey of Year's Operations.

Satisfactory Outlook.

Sir John T. Cargill's Speech.

The twenty-fourth annual general meeting of the Burmah Oil Company, Limited, was held on June 4 in the Merchants' Hall, Glasgow.

Sir John T. Cargill, Bart. (the chairman of the company), presided over a large attendance of shareholders.

The Chairman said:—Ladies and gentlemen,—You have had the accounts in your hands now for some time and, with your permission, I propose as usual taking them as read, referring merely to their outstanding features.

The anticipations ventured by me when we met here last year are fully realised in the increased profit of £147,800 13s. 9d.—even after writing off for depreciation £109,628 3s. 4d. in excess of the 1924 provision—a result all the more gratifying since it has been secured from practically the same volume of production without advance in the price of any of our products, and in the face of a crude oil cost again somewhat higher for the reasons so fully explained by Mr. Watson and myself when we last addressed you.

To the benefits on balance of a higher rupee—for exchange fluctuations affect you in opposite directions according as you are receiving or remitting—and to increased revenue from investments, to some extent due to the inclusion in the year's accounts through the alteration in the dates of payment of two years' dividends on our holding of Anglo-Persian Oil Company, Limited, ordinary shares—an incident which will not occur again—the satisfactory results are partly attributable. These, however, are extraneous sources of revenue, so that you will be pleased to learn that as the result of concentration and reconstruction of your refineries, and the improved technique and more modern plant, there have been secured not only direct economies, but sources of revenue in the shape of savings in fuel oil consumption and in evaporation losses which, converted to marketable products, have materially contributed to the better results for the year.

Profits and Allocations.

The profit of £2,404,958 4s. 9d. is arrived at after providing for all charges and after, as usual, charging all fields expenditure and writing off depreciation amounting to £488,609 4s.

The allocations of £20,000 to insurance reserve, £292,580 to general reserve, and £150,000 to fields expenditure equalisation reserve, or £462,580 in all, reduce the balance of profit for the year to £1,942,378 4s. 9d., and, adding to this the 1924 "carry forward" of £302,339 12s. 8d., there is an available amount of £2,244,717 17s. 5d., of which the preference and interim ordinary dividends for the year absorbed £829,844 10s. 9d., leaving £1,414,873 6s. 8d. to be dealt with by you to-day, and as to which your board recommend a final dividend on the ordinary shares for the year of 4s. 6d. per share, less tax at 2s. 5d. per pound (being amount of British income-tax, less relief in respect of Dominion income-tax), payable on the 18th instant, and that £395,903 3s. 4d. be carried forward.

Coming now to the balance-sheet, there is an increase in the amount standing against refineries, etc., mainly due to the expenditure during the year on reconstruction and concentration. There is also a large increase, viz., from £810,270 15s. 3d. to £2,115,780 11s., in the amount of loans, deposits, and cash in hand and in bank. The latter may seem large, but your board, faced with the knowledge of definite and considerable capital commitments, and recognising the necessity for a company operating on such a scale as yours to have ample liquid resources available at all times, do not consider the amount to be in excess of what is necessary or prudent.

Anglo-Persian's Progress.

In view of the extremely satisfactory developments in recent years of the Anglo-Persian Oil Company under the energetic guidance of Sir Charles Greenway and his lieutenants, your directors had no hesitation in giving effect now to the very moderate revaluation of our holding of ordinary shares in that company. The writing up of this investment to par, or one-quarter or less of its present market value, is not, and must not, be taken in any way as your board's view of the real value of these shares. It is simply in line with the safe and conservative policy which your board have always adopted in their administration of the company's affairs. (Cheers.)

You will observe that in spite of the increase of the valuation of the Anglo-Persian ordinary shares by £824,484 the investment account shows only an increase of £39,174 5s. 11d. as compared with the amount at which it stood in the 1924 balance-sheet. This is accounted for by the transference, as explained in the report, to trustees, as at December 31 last, of an equivalent amount of Government stocks in respect of the £998,940 14s. 8d. at the credit of the employees' provident fund at that date. Your directors have felt for some time past that this fund should be invested outside the company, and their decision I feel certain will meet with general approval. While the fund will now be administered by trustees and not appear in the balance-sheet, the figures showing the annual contributions to it and the total amount of the fund will be regularly incorporated in the annual reports.

The General Reserve.

The general reserve, increased out of the year's profits by £292,580 to £1,292,580, has been further augmented to £2,117,064 by the appreciation of £824,484 in the book value of the Anglo-Persian ordinary shares, and you are to be asked at an extraordinary general meeting following on this one to pass resolutions increasing the nominal capital of the company by £1,000,000 to £11,000,000 by creating a further 1,000,000 ordinary shares of £1 each and capitalising and appropriating for distribution as a capital bonus to the ordinary shareholders £1,717,064 of the general reserve.

I have already dealt with the employees' provident and profit-sharing fund account. The insurance reserve has had the usual appropriation of £20,000 and fire and marine insurance account has expanded by almost £100,000 from premia credited on risks carried internally, less claims thereon in the period.

These, ladies and gentlemen, are the results for last year and your board's recommendations. I am sure that you will agree with us on this side of the table that we can all congratulate ourselves—not only as to the past year but also as to its promise for the future. (Cheers.)

Through the medium of our provident fund, which being based on our dividends is a profit-sharing scheme and therefore one of the surest ways of promoting harmony between employers and employees and encouraging everyone to give of their best for the business, we show in a practical and very tangible way our appreciation of the loyalty and good work of our staffs, but I know that they feel grateful and proud when they are remembered at our annual meetings and you authorise me to convey to them your hearty thanks for their continued and untiring efforts on behalf of the company which they are so proud to serve, and I feel sure, especially in view of the very satisfactory result of the year's operations, that your appreciation of their services will be all the more hearty.

(Cheers.) And here, appropriately, I would like to give public expression to your board's sense of the great loss which we have recently suffered in the sudden death in Rangoon of Captain James Younger, the senior active captain of our tanker fleet. Captain Younger had served the company loyally and efficiently for close on a quarter of a century, and his death is greatly deplored by all.

Labour in Burma Fields.

Before leaving the subject of our organisation I make brief reference to a recrudescence this year of labour troubles in the Burma fields reported in the Press at the time. When I tell you that no complaints had been lodged prior to your Burmese and Indian labour going out on strike and that for some time after they went out they not only did not know what they had struck for but, as a matter of fact, expressed themselves as unwilling strikers, you will realise that the cause was entirely political. Economic reasons, or rather excuses, were subsequently put forward in the form of demands by those responsible for the strike, but their value can best be measured by the fact that all labour has long since been back to work without any change whatever in the conditions of their employment. I am satisfied that—free from political agitation and threats of intimidation—this labour is happy, contented, and loyal. On the occasion of the last trouble I told you, as they also had been told, that our practice and our policy have always been to keep in the van as regards our conditions of employmnt with those of the most enlightened employers of similar labour in India and Burma, and, beyond this, to endeavour to educate these men up to better positions, and to recognise special efficiency and merit by appointments to more responsible posts with equivalent advances in remuneration. Steadily, and as the position justifies, this policy is being pursued simultaneously with schemes for the improvement of the physical and intellectual welfare both of our employees themselves and of their dependents.

So far as the effects of the strike on our operations were concerned, as we fortunately had adequate stocks of crude oil both in the fields and in the refineries, it affected us no more than by delaying drilling operations, production itself being again almost completely maintained by loyal native labour assisted by our British and American staff.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED
Head Office: 41 Lothbury, London, E.C.2

Crude Oil Production.

These remarks take me to the crude oil producing side of our business. Of this, and our interests generally in India and Burma, Mr. Watson and I gave you such exhaustive reviews last year that it is unnecessary to-day to do more than briefly touch on the more important developments since.

Through greatly intensified drilling efforts the output of crude oil from the Burma fields was maintained at fully the level of the previous year, but at the greater cost stressed so much in your managing director's remarks a year ago. And in that Province, unfortunately, outside the proved fields nothing but blanks so far continue to be drawn in the great lottery of outside test drilling. Whether or not better fortune may await us in such of these as are still drilling, or may yet be started up, is, of course, in the lap of that somewhat fickle jade. On the other hand, at one of the tests which we have been carrying out in Lower Assam additional encouragement has recently been secured in what looks to be a promising oilsand at some 2,500 ft., but it is too early yet, and we have had too long experience of the disappointments of the producing side of the oil industry to speak definitely of the prospects of this development being on a commercial scale. A reliable test of the well has not yet been possible, but even if this should in due course prove it to be a steady producer, at least one other well in the same area will be necessary before we can come to any safe conclusions.

Prospects of Assam Fields.

Then, while the small Badarpur field in Lower Assam is only just about paying its way, our friends, the Assam Oil Company, Limited, in Upper Assam, are finding justification for their more intensive and extended developments of recent years—and we incidentally for our investment in that company—in the greatly improved possibilities of their fields which these have disclosed. Our friends are still some considerable way off being able to pay dividends, and will, indeed, require large additional financial assistance to enable them to realise the potentialities I have alluded to, but there is every prospect that their and our reward will come in due course.

As mentioned in the report, a test of an area in the Native State of Khairpur, in N.W. India, has been abandoned after exploring to the greatest depth at which there was any possibility of production.

I make no apology for thus dwelling on the most vital part of your enterprise, and, summing it up, I feel that on balance these promising developments of our own and of the Assam Oil Company, Limited, in India proper probably outweigh the continued disappointment met with in our efforts to discover fresh sources of your raw material in Burma and the tendency of its cost in the developed fields there to advance as deeper and greater number of wells require to be completed merely to maintain their production up to our requirements.

The electrification of the Yenangyoung field has continued to give complete satisfaction, and after careful consideration it has been decided that the time has now come for the electrification of the Singu field, and steps in that direction are now being taken.

Refinery Concentration and Reconstruction.

As already mentioned, the scheme for concentration at one point of the three Rangoon refineries and reconstruction with modern refining facilities—mainly the patented ideas of your works manager, Mr. Allan, and your superintending engineer, Mr. Moore—has made great progress, and, in its original form at least, should be completed during the year. Reference has previously been made to the great advance in refining technique represented in this new plant, and, as the scheme has gradually materialised, there have been instalments of the ultimate advantages to be secured, which already have made important contributions to the improved results of this and the previous year. But we shall do better still when the whole of this scheme, and the further additions to the flexibility of our refining facilities which we have recently decided on, are in full operation.

The tanker fleet has performed its duties without serious accident or delay. A growing disparity between the capacity of your own tonnage and the trade you have to serve in India, consequent mainly on the expansion of the demand for petrol there, has decided your board in principle to add another tanker to the fleet, and this matter is now under consideration.

Market Conditions.

The report has really told you all that matters as regards your markets in the period under review. Some 80 per cent. of the total volume of your products was disposed of in India itself—principally in the form of kerosene, which all goes there—and petrol, the consumption of which there is increasing in a most gratifying manner. Indian petrol prices came down on April 1, 1925, to the extent of the reduction in the Excise duty on that date, and no advantage has been taken of the much stronger world market for petrol—reflected in the recent advance in prices in this and other countries—and your selling prices for that product in India remain unchanged. Keen competition in the lubricating oil trade in India resulted in

Digitized by Google

lower values. By the addition of the most up-to-date plant your production of these oils is being considerably increased and improved in quality. Your increased wax production was disposed of in the markets of the world at not materially lower values, and we believe that the market has sufficient powers of expansion to absorb the still further increases which both we and the Assam Oil Company, Limited, expect to have available.

Royal Dutch-Shell Arrangement.

You will, I know, be interested to learn that in the autumn of this year we shall reach the majority of the very friendly and, I am convinced, mutually satisfactory arrangements—modified as they have been in the period from time to time to meet changing circumstances—which have subsisted between our company and the Royal Dutch-Shell organisation since 1905. I have on a number of occasions referred to the immense advantages these arrangements have brought to the Indian consumer, not alone because of the reasonableness of the prices fixed under them—particularly for kerosene—but also because of their stability. The broad basis of these arrangements has been the recognition of the folly of forcing production to find a market outside the country in which it has been produced until the capacity of absorption in that country has been exhausted. I feel I should not like to let this opportunity pass without thus publicly testifying to what cannot be fairly described as other than a wonderfully successful and harmonious association, formed admittedly in the interests of the two parties concerned, but at the same time with the intention and determination on our part that the Indian consumer was to benefit very largely through the arrangements come to. These arrangements were only arrived at and carried on successfully throughout this long period by a mutual desire to overcome the difficulties which were constantly cropping up, and by the exercise on the part of both sides of a large amount of good humour and patience—our associates' shares of which it gives me great pleasure publicly to acknowledge at this opportunity. (Cheers.)

The Outlook.

As to the prospects of the current year, my traditional and racial caution only permits me to say that we have no present reason for anticipating any inferior results than the eminently satisfactory ones I have just been commenting on. Statistically the industry as a whole appears to be much healthier than for some time past, but I am not one of those people who pin their faith on statistics—rather the reverse—and in my day I have seen such unexpected and far-reaching changes take place, not only in the general situation, but in the affairs of individual companies, that I think it much wiser to refrain from entering into the realms of prophecy in regard to the future of oil. I will say, however, that the balance-sheet I have put before you to-day is the finest and strongest one I have had the honour and pleasure of submitting during the 22 years I have been chairman of the Burmah Oil Company, and I look forward with the greatest confidence to the continued prosperity of the company for many years to come. (Cheers.)

I now beg to propose: "That the report of the directors and audited statement of accounts, including the balance-sheet and profit and loss account to December 31, 1925, presented to the meeting, be received, approved, and adopted," and I shall call on Mr. R. I. Watson, the managing director, to second this motion. After the motion has been seconded an opportunity will be given to any shareholder who wishes to ask any question or make any remarks.

Mr. R. I. Watson.—I have much pleasure in seconding the motion

The Chairman.—Does any shareholder wish to put any question to the meeting or to make any remarks? There being no questions, I beg to put formally to the meeting the resolution which has just been proposed and seconded .

The motion was then put to the meeting and declared by the Chairman to be carried unanimously.

Dividend Resolution.

The Chairman.—I have now pleasure in moving that the dividend on the ordinary shares recommended by the directors at the rate of 22½ per cent. per annum, 4s. 6d. per share, less tax, making, with the interim dividend paid in November last, 35 per cent., less tax, for the year be adopted, and that the same be hereby authorised to be paid on June 18, and that the balance of £395,903 3s. 4d. be carried forward.

Mr. D. Brodie MacLeod.—I have much pleasure in seconding the motion.

The Chairman.—I am quite sure, ladies and gentlemen, that you will all approve of this motion. (Cheers.)

Mr. Leonard Gow.—I beg to move: "That our excellent chairman, Sir John T. Cargill, be re-elected a director of the company." (Cheers.)

Mr. John G. Carruthers—I beg to second the resolution.

The Chairman.—May I ask is that is agreeable to you all? (Cheers.) I now beg to move: "That Mr. H. S. Ashton be elected a director of the company."

Colonel D. S. Morton seconded, and the motion was approved.

The Chairman.—I have also very great pleasure in moving the re-election of Mr. R. A. Murray.

Mr. Thomas Gibson seconded, and the motion was approved.

Mr. John Wate moved the reappointment of Mr. J. Herbert Wilson, C.A., as auditor for the current year at the remuneration of 500 guineas.

Mr. Murray T. Gow seconded, and the motion was approved.

The Extraordinary Meeting.

The Chairman.—That, ladies and gentlemen, concludes the business of the ordinary meeting, and I will now convene the extraordinary general meeting to deal with the resolution set forth in the notice which you have all received. I presume you are all agreeable that the notice should be held as read. I do not intend trying your patience any longer. I accordingly have much pleasure in proposing the resolution increasing the capital of the company to £11,000,000, as set forth in Schedule 1 of the notice.

Mr. F. Moncrieff Wright.—I beg to second.

The Chairman.—Are you all agreeable to that, ladies and gentlemen? (Cheers.) Then I have much pleasure in proposing the resolution authorising the issue of £1,717,064 bonus shares as set forth in Schedule 2 of the notice.

Mr. A. C. Anderson.—I have much pleasure in seconding the motion.

The Chairman.—I am sure, ladies and gentlemen, you are all agreeable to that. (Cheers.) That terminates the business of the meeting, and I have to thank you for your attendance.

Vote of Thanks to Chairman.

Mr. Robert Clark.—Before we go, I am sure you will all wish to accord a very hearty vote of thanks to our chairman, Sir John Cargill. (Cheers.) We come to the meetings of the Burmah Oil Company expecting an interesting and informative account of the activities of the company, and we are never disappointed. I want you to show by the heartiness with which you receive this resolution the appreciation you have, not only of Sir John's conduct in the chair, but of that of himself and his co-directors in guiding the affairs of the company in the way that has brought it to be one of the largest oil-producing companies of the world. I ask you to give a very hearty vote of thanks. (Cheers.)

The Chairman.—You have given me, as usual, a very attentive hearing, and you have given a very cordial reception to the very kind remarks in which Mr. Clark has conveyed the vote of thanks to me for my conduct in the chair, which I appreciate very highly. This is the 22nd year in which I have had the honour of occupying the chair, and I do not think there are many chairmen who have had the good fortune that I have had in that long period of submitting year after year such very satisfactory reports and statements of accounts, and also the great pleasure of asking you to declare, or at least to accept, the very handsome dividends which we have offered to you. (Cheers.) I would like just again to take this opportunity of expressing to you, to my colleagues, and to everyone who has been associated with me in these 22 years, my deep gratitude for the unfailing support that has always been given to me as chairman of this company. I assure you that in a very large measure that support has been the keystone and the keynote of the success of your company. And so long as you have, and I have not the slightest doubt that you will continue to have, such a magnificent body of men carrying on your day-to-day business and looking after the interests of your company, you will go on receiving the same satisfactory reports and accounts that I have put before you these 22 years. I thank you most heartily for your vote of thanks. (Cheers.)

This terminated the proceedings.

A further donation of £50 has been sent by the Government of British Honduras to the Ross Institute and Hospital for Tropical Diseases.

Cotton and Cotton Goods.

THE BRITISH COTTON GROWING ASSOCIATION.

(Concluded from page 641.)

The Sudan.

The Kassala Cotton Company, which is developing the area in the Eastern Sudan served by the new Kassala Railway and irrigated by the Gash Flood, produced their first cotton during the year, and the quantity picked and marketed amounted to 27,177 kantars, equal to 6,794 bales of 400 lb. each. In the first half of the year a labour force of some 800 men was continuously employed upon the improvement and extension of existing irrigation works, and upon the excavation of a new canal. A large area is capable of development, and will be gradually put under cotton. Unfortunately the Gash Flood of 1925 was only about one-half the volume of the annual average discharged over the previous fifteen years, which necessitated a reduced area being put under cultivation for the 1925-26 crop.

The crop at Tokar on the Red Sea, owing to a smaller flood, is less than last year's, the yield being estimated at 40,000 kantars.

The prospects for rain-grown cotton in the south of the Sudan are quite promising, and there is no doubt that a good type of American cotton can be grown in extensive areas in that part of the country. It is an entirely new industry for the natives, yet after one year's experiments there are sufficiently promising indications that cotton cultivation is becoming popular. Until the Government officials interested themselves in this question the people produced little or nothing for export, and it is really remarkable how they have come to take so great an interest in cotton growing within such a short time.

The export of ginned cotton from the Sudan during 1925 amounted to 42,706 bales of 400 lb. each. Whilst these figures show a reduction in comparison with the previous year, the future prospects are most encouraging, and with the extended area now under cultivation in the Gezira, and the promised developments in the South Sudan, the export figures in the immediate future will be considerably increased.

Iraq.

In order to obtain first-hand knowledge as to the general conditions under which cotton is grown in this territory, and the prospects for the future, Mr. W. H. Himbury, the General Manager, visited the country at the commencement of the year and spent a full fortnight there. The impression which he was able to form was that the political factor was one of the most important questions affecting not only cotton growing, but also the general economic development of the country. The climate of Iraq is pretty well defined—a cold season which coincides with the winter in England, and a hot season. During the winter of 1924-25 the cold was extreme, with heavy falls of snow on several occasions in the Desert. The rainfall varies from 6½ in. to 13 in., and generally comences early in February. The planting of the cotton commences early in March after the first flush of rains, and is continued for several weeks, and in some parts rain plays a very important part in the production of cotton and other crops. It is not considered that any great extension of irrigation would be beneficial for long unless it was accompanied by the necessary drainage, owing to the salting of the land. Insect pests are not very important at present, the chief being the spotted bollworm, and another enemy to crops is the locust, which, however, keeps well north near the Mosul area where large grain crops are grown, and so far has not affected cotton to any serious degree.

The area cultivated with cotton during 1925 was adversely affected through the unprecedented cold winter, and the quantity of seed issued for planting was only 80 tons, which was about two-thirds of the previous year's total. The cold weather resulted in the loss of many thousands of animals, as well as certain crops, so that many farmers had either to discontinue the cultivation of cotton or restrict their acreage in order to grow food crops. Notwithstanding these drawbacks the crop has done well, and with a spell of mild weather later in the season the bolls ripened that would have been lost had the wet weather continued, and the total crop dealt with at the Association's ginnery at Baghdad was equivalent to 2,485 bales of 400 lb. each, as compared with 2,500 in 1924, 1,500 for 1923, and 300 bales for 1922. Credit for most of the progress which has so far been made is due to the work of the Association, who have attended to the distribution of seed, and paid the highest possible prices for the seed cotton.

LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 2:—

Egyptian Futures.—Sakel Contract.—Values in this contract have not been subject to any fluctuation of importance since we last wrote; at times the market has shown a disposition to ease off, but with Alexandria sending through consistently steady reports the level has been quickly restored. The two markets are running at such a narrow difference, especially in new crop months, that for any decline to materialise, the lead must emanate from the other side. At the moment, weakness here is immediately met by straddle buying, and it certainly appears a reasonable proposition for those prepared to run the operation well into the late summer or early autumn to purchase Novembers locally against sales of the same position in Alexandria whenever a level parity is obtainable. On statistical and trade grounds, it is difficult to explain the "bullish" sentiment and speculative activity now in operation at the other side. Crop reports continue to be favourable, and latterly the Government have abstained from further purchases. The local trade are becoming increasingly hampered by the prolonged character of the coal dispute. Yarn deliveries are being held up, and with the uncertainty of being able to continue running full time, spinners generally show little disposition to enter into further cotton commitments. Under present conditions, the market appears quite high enough, and in the absence of detrimental crop reports or

a substantial brightening in the trade outlook, we are inclined to anticipate an easier tendency, especially in new crop months.

Upper Contract.—Very few transactions have taken place in this contract during the past week, and with one or two small selling orders in evidence a moderate decline has taken place. The cotton covered by this contract is meeting with a moderate demand at the moment, but with spot values maintained at 50 points premium, we do not anticipate any further falling away for the immediate future. Crop reports continue to be favourable.

Egyptian Spot.—Although some improvement has latterly been noticeable in the inquiry, the resultant business has only been moderate and spinners' activities are becoming increasingly hampered by the protracted character of the coal dispute. Such buying that has taken place has been of a retail character, generally odd lots to fill in spaces between the arrivals of shipment cotton. Sakel grading from G.F. to St. F.G.F. has been mainly favoured, and at the risk of reiteration we again emphasise the paucity of the local stock in the above range. The Good to Fine qualities are more freely offered, but only occasional business has transpired. The Upper varieties have met with a very poor demand and, apart from a line of 300 bales sold at well below market rates, few sales have been effected. In certain quarters we notice a disposition to pick up high-grade extra-stapled Pilion lots at prices ranging from 14d. to 14¼d. At the present spot difference with Sakel, this cotton appears likely to develop in favour.

Sudan Sakel and Tokar Sakel have attracted a moderate amount of attention throughout the week and White Sudans have only occasionally been asked for. The forward inquiry has only been moderate. Estimated sales 1,300 bales Egyptian and 450 bales Sudan. Quotations of Sakel are reduced 10 points for Fair, G.F., and F.G.F.; Good and above being unchanged. All grades of Upper and Brown are reduced 30 points. F.G.F. Sakel to-day, 16.90d. F.G.F. Upper to-day, 12.30d.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended May 27 state:—

Since our last report the futures market for Sakel has been moderately active with a very firm undertone; on the other hand, Ashmouni has been quiet. The week's summary of price movements is as follows:—Sakellaridis: July, 30.57 dollars, 0.49 dollars up; November, 30.20 dollars, 0.50 dollars up; January, 29.90 dollars, 0.48 dollars up. Ashmouni: June, 21.47 dollars, 0.05 dollars down; August, 21.67 dollars, 0.07 dollars down; October, 22.00 dollars, 0.05 dollars up; December, 22.15 dollars, 0.05 up.

There has been a good deal of speculative buying of new crop Sakel options during the week, though it is difficult to find any sound reasons for this buying. The spot demand shows a distinct improvement over last week, but as there have been no signs of a better demand from abroad, this improvement must be attributed rather to the fulfilling of earlier contracts. The Government has not effected any purchases at Minet el Bassel this week. At the third May tender, 4,000 kantar dockets were issued. This figure was below the expectations of the market and its smallness is in all probability due to the improvement in the spot offtake. Reports from consuming centres are not very bright. We do not think the present firmness of prices is the forerunner of any permanent improvement—we consider the statistical position still too heavy. The week's receipts amount to 61,882 krs. against exports 72,793 krs.; the stock stands at 1,902,849 krs.

Spot:—The spot market was closed on Monday last owing to the Whitsun Holidays. The increased activity mentioned in our last report has continued and the turnover of business has been proportionately larger than last week. Sales amount to about 9,800 bales, of which we estimate 6,000 bales Sakellaridis, 2,500 bales Ashmouni, 700 bales Zagora, 300 bales Pilion and 150 bales White.

Sakellaridis:—There has been quite a fair demand from Fully Fair to F.G.F. Good especially for the staple qualities. Spot differences below F.G.F. are somewhat easier, but for F.G.F. and above remain unchanged.

Ashmouni and Zagora:—The business done in these varieties is still concentrated on the medium grades and a good turnover has been registered with an easier tendency in the spot differences.

Pilion:—A negligible business has been done in this variety in the grades F.G.F. and Good. Spot differences remain unchanged.

Brown:—No transactions have been registered.

White:—A few lots of Casulli Good have changed hands at about last week's premiums.

Crop 1926:—Crop news continues to be satisfactory. Temperature this week has been variable, but the young plants have not suffered. Slight attacks of leaf worm are reported from certain districts but without causing any damage. On the whole, the plants are healthy and progressing normally. The water supply is sufficient for all requirements.

COMPANY NOTES AND REPORTS.

MORTGAGE COMPANY OF EGYPT.

The report for the year ended March 31, 1926, states that the net profit, after providing for interest on Debentures and loans and applying £1,500 in writing down the value of premises in Cairo, was £129,247. The directors recommend a dividend of 13 per cent. on the amount paid up on the Ordinary shares, a bonus dividend of 2 per cent., and an addition to the special reserve of £16,747, leaving to be carried forward £125,000. The 1925 cotton crop was a very large one and will probably be found to exceed 8,000,000 kantars. Prices in September and October were good, but on account of the important world production of cotton, they afterwards gradually declined throughout the season, with only a temporary improvement due to purchases made on behalf of the Egyptian Government. Taking into consideration the state of the market, the collection of the annual instalments has been on the whole satisfactory and there is only a small increase in the arrears as compared with the previous year.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Egyptian Parliament.

After an interval of fifteen months Egypt has resumed her normal parliamentary régime. The third Parliament was opened by King Fuad on June 10, and for the present there is no reason to suppose that during the brief session which should terminate in July the Egyptian political barometer will not indicate fair weather. A noticeable passage in the King's speech stated that the Government was particularly concerned to establish between the British and Egyptian nations and their respective Governments mutual confidence and cordial relations, and to prepare an atmosphere of good understanding which will permit Egypt to enjoy complete independence. The sentence that followed will necessarily command attention: "The Government considers that the measures taken in the Sudan cannot impair Egypt's legitimate claims, which remain what they were, and will do all that is possible to reach in this connexion a solution giving Egypt satisfaction." A Speech from the Throne delivered by a Government dependent on the support of an overwhelming Zaghloulist majority could hardly have said less. The trouble in the past has been due not so much to the nature of Egypt's claims as to the wholly improper, irresponsible and impossible way in which Zaghloul Pasha has tried to assert those claims. The difference that is expected to reveal itself between a Government under the present Prime Minister and one presided over by Zaghloul Pasha is that the mutual irreconcilability of Egyptian and British claims to the Sudan will be recognised by both parties, and that neither will attempt to browbeat the other into an unreserved withdrawal. Zaghloul Pasha's attitude and action in regard to the Sudan have hitherto been those of a street urchin who snatches a handbill without stopping to reflect that, as he cannot read, it may not be of much use to him. In view of her responsibilities in Egypt, Great Britain is entirely within her rights in holding that political mentality of this order, if it should represent all that Egypt can evolve, would debar her from governing herself and still more from governing others. Fortunately, Egypt can produce something better than the Zaghloul mentality, and it is for those Egyptians who can rise superior to it to combine to prevent the real genius of the country from being swamped by mere mob clamour.

A Full Programme.

What may be called the business section of the Egyptian Government's programme contained sound matter, and it is to be hoped that the big Wafd majority will appreciate the necessity of concentrating upon the carrying into effect of the proposed measures. The decision to strengthen the parliamentary régime and to "compel everyone to respect the Constitution" may be regarded more as a justifiable reference to circumstances that broke up the last coalition Government than as a prelude to practical legislation. On the other hand it is a sound principle that Egypt at the outset of her parliamentary history should set her face against changing her civil service with every change of Government. Education and sanitation, the Speech announced, would receive special attention, the reference to the latter being, no doubt, intended to reassure those who have commented upon the rapid deterioration of the municipal services in Cairo and elsewhere. Another promised preoccupation of the Government is to be the concerting of measures to improve existing resources and to create new resources necessitated by the continually increasing population of Egypt. Thus in brief compass the Egyptian Parliament is invited to consider a variety of problems with which the immediate welfare of the country is linked, and, if it can seriously devote its attention to these matters first, it will find itself able to approach the so-called Reserved Questions in a far more effective manner than if it insisted on a settlement at this stage. Any attempt of the Zaghloulists to disturb the smooth conduct of business

Digitized by Google

in Parliament during this session will be regarded as a deliberate challenge to the Monarchy, as political trouble during the next few weeks would inevitably prevent King Fuad from undertaking his proposed visit to England.

The Anglo-Turkish Agreement.

Every allowance will be made for the heart-searchings in the Turkish Parliament over the Anglo-Turkish Agreement. This document takes such a different line from that which the Turkish public had been led to expect, that the Deputies were within their right in insisting upon knowing the why and the wherefore. To the credit of all concerned it can be stated that a very fair explanation appears to have been given in Parliament. The Government frankly admitted that it had to choose between friendly relations and war, and that, in full appreciation of present conditions in Turkey, it chose without disguise or reservation the immediate advantages of peace. The Angora Parliament showed its good sense and level-headedness by accepting this explanation and proceeded to ratify the Agreement by an almost unanimous vote. Its sense of proportion and the statesmanship of the Turkish Government may be commended to the Egyptian Parliament, which is also confronted with the alternative of barren strife and the frank acceptance of facts, which will enable it to turn its attention in more profitable directions. The economic advantages that Turkey must hope to secure from the restoration of good relations with Great Britain are outside the scope of the actual Agreement; but we trust that, in spite of this, a real effort will be made to help Turkey to secure the financial assistance of which she stands in need. A considerable amount of ground may have to be cleared first; but the point to be borne in mind in England is that the indirect advantages will be in direct proportion to the speed with which Turkey is enabled, with the help of a loan, to set her house in order and to start the systematic and scientific development of her resources. The Angora Government would do well to bear in mind that the event has proved that the real friends of Turkey were those who have all along denounced its foolishness in postponing a settlement with Great Britain. Its past line of policy has compelled it to regard these critics as its enemies; but it can now turn to them in so far as they are to be found in Turkey itself with some confidence in their advice and help.

Bulgaria's Refugees.

The general aspect of Bulgaria's refugee problem is dealt with in the leading article on the opposite page. As the League of Nations in deciding upon a loan of £2,265,000 has been guided by the report of its Commission of Investigation, it may be of interest to have the latter's findings summarised. The Commission decided that the refugees for whom no permanent settlement had yet been found constituted a grave danger to the social peace, while seriously upsetting labour conditions in the country and hindering the application of social legislation. It recommended that, while everything possible should be done to prevent further immigration into Bulgaria, by protecting Bulgarian minorities, and to relieve the burden on the country by repatriating Russian and Armenian refugees now in Bulgaria and by securing for the Bulgarian refugees who had quitted Thrace or Macedonia the compensation to which they were entitled for the property left behind, agrarian reform in Bulgaria should be pushed on energetically with a view to obtaining the necessary land for the settlement of the 30,000 families formerly engaged in agriculture. If it is established, the Commission's report continued, that Bulgaria cannot assure a rapid settlement of these refugees from her own resources, then international financial assistance should be contemplated. It estimated the cost of settling 31,000 families on the land at £2,265,000, inclusive of £20,000 for clearing forest areas and draining marshes. These two sources are expected to provide 250,000 acres towards the total area of 660,000 acres which under the scheme of agrarian reform are needed to secure a minimum of from seven to ten acres for each refugee family and for indigenous families that are either without land or have an inadequate amount. The balance of the land required is to be taken mainly from communal or State lands. The Commission, it may be noted, recognised that Bulgaria would require to spend in connexion with any settlement scheme money over and above the bare cost of the land and the installation of families, and estimated the total expenditure as probably three million sterling.

Mandatory-Baiting.

The Permanent Mandates' Commission of the League of Nations has already established its reputation as a conscientious body, taking its work seriously and genuinely anxious to see the spirit of the League applied in Mandated Territories. Close attention to detail, however, is unlikely to cause an international body to lose its sense of proportion. Consequently, when it is confronted with "growls" or "charges" against the Mandatory in Palestine, from the Jews on the ground of neglect and from the Arabs on the ground of the Jews' being specially favoured, its first instinct will be to shorten its own labours by discovering how many of the complaints cancel one another. One danger attending these Jewish complaints, it might be imagined, would be that sooner or later they will force the League to attempt to lay down a hard and fast ruling as to how far the application of the Jewish National Home principle—a British creation—is compatible with the League's interpretation of the mandatory principle. The indictment of the Vaad Leumi, as our Jerusalem letter points out, includes charges of "delay in giving the Jewish community the status of an internally autonomous group, official lapses in the recognition of Hebrew as a language of the country." It is conceivable that the Mandates Commission, on receiving these and similar complaints insisting on Jewish privileges, will reflect that, so long as money continued to pour in for the Jewish settlers, little was heard beyond gratitude to the British; whereas, now that there is financial stringency, an attempt is to be made to repair the position at the expense of the Government. In these circumstances it may feel inclined to inquire closely into the grounds on which the Mandatory is opposing the Arab demand for "a national Government, representative proportionally of the different sections," which, it may be supposed, must command the League's sympathy. The wisdom of the Latin adage *Quieta non movere* is not appreciated, it is to be feared, at Tel-Aviv.

Ex-King George and Queen Elizabeth, of Greece, have arrived at the Hotel Meurice, Paris, from Italy.

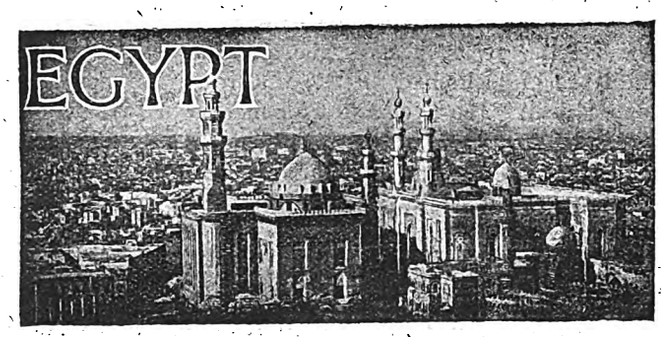
THURSDAY, JUNE 17, 1926.

BULGARIA'S REFUGEE PROBLEM.

The Council of the League of Nations has approved of a League loan of two and a quarter million pounds sterling being made to Bulgaria for the settlement of her refugees. In view of the nature of the report submitted by the Commission sent out by the International Bureau of Labour to investigate the Bulgarian refugee question on the spot, it was a foregone conclusion that the League would not wish to shirk its responsibility in enabling Bulgaria to cope more successfully than she has been able to do in the past few years with a very grave problem. As the success of any loan floated for the settlement of these unhappy people will depend largely on the measure of public support given in Great Britain, it will be well that the full extent of the difficulties with which Bulgaria is confronted should be realised. In the course of her short history as an independent State it is estimated that Bulgaria has had to deal with seven hundred thousand refugees in a total population in the neighbourhood of five million. At the present moment, however, her concern is for the 220,000 who have entered the country in the twelve years between 1913 and 1925. Of these close upon one hundred thousand may be regarded as able-bodied, more than three-quarters of them being formerly peasant proprietors, paid agriculturists or rural artisans. Until 1923, when the exodus from Thrace and Macedonia assumed formidable proportions, no seriously organised attempt was made to arrange for the reception and distribution of the refugees on their arrival on Bulgarian territory. Until August, 1924, the task of looking after the new-comers was in the hands of the Ministry of the Interior. From that date the supervision of the agricultural section of the refugees was entrusted to a special body formed for the purpose, known as the Direction of Landed Property. The system then introduced was that the incoming refugees should present themselves at certain specified frontier posts to be examined and registered, and that after reference to the central authorities they should be sent to the district to which they had been allotted. In practice the arrangement worked badly, because there was no means of regulating the numbers of the refugees arriving to the capacity of the frontier posts to deal with them. Congestion and scarcity resulted; the refugees when they reached their destination found themselves not always welcomed by a population already needy; often there was neither work nor accommodation for them, and they began to drift into the towns, in the hope of finding work, only to dislocate still further the machinery that was trying to help them. To-day it is probable that little more than a fifth of their number have been successfully installed on the land; many of the remainder are living under the most miserable conditions in huts, barns or tents, often on the verge of starvation.



Unfortunately for the Bulgarian Government, it did not realise the seriousness of the situation confronting it, until the problem had already outgrown its capacity to cope with it. The League's Commission of Investigation found many organisations charged with the task of looking after the refugees, but lack of co-ordination as well as lack of funds stultified much of their work. The greatest handicap was the general impoverishment of the country. Between 1920 and 1925 the total of the amounts voted in the Budgets for the relief of the refugees was less than four million leva. Reliance was placed on private charity and organised collections, but not unnaturally incessant demands on the public purses had dried up the fount of generosity. To remedy this defect, the present Government has arranged for an expenditure of twenty million leva for the purpose of settling refugees on the land and supplying them with accommodation, seeds and implements. For the great bulk of the immigrants, if not for all, provision must be made on the land. The capacity of Bulgarian industry is too restricted to absorb any appreciable number of the new-comers. The agrarian position in Bulgaria, however, at the present time leaves much to be desired. According to an agricultural census of 1908 forty-five per cent. (425,000 in number) of the agricultural holdings at that date consisted of less than five acres; forty-one per cent. ranged from five to twenty acres, with an average of twelve acres. As it is reckoned that fifteen acres are required for the proper maintenance of a family, the difficulty experienced in placing a large number of refugees on the land is apparent. Even without the refugees Bulgaria had reached a stage when agrarian reform was long overdue, and was confronted with the problem of finding an additional 750,000 acres of cultivable land, in order that some of her existing population might be freed from chronic want.

The anomaly of the relative success of Communism in a country of peasant proprietors is explained when the actual position in Bulgaria is understood. The conditions among the agricultural population determine to a very large extent the general economic situation of Bulgaria as a whole. It is to the interest not only of her immediate neighbours, but also of the rest of Europe that there should be a greater measure of national content and well-being among the virile Bulgarian people. As there is no considerable area of cultivable land in private hands to be expropriated by the State and distributed among a landless peasantry, the problem of agrarian reform in Bulgaria, apart from a more scientific distribution of available State or communal lands, consists in reclaiming land for cultivation from forest and marshy areas. This work, however, calls for more capital than the country can provide. In the meantime the refugees constitute a still more pressing problem. By the common consent of all who have visited the chief refugee centres in Bulgaria, the conditions under which many of these people are living are so appalling that the mortality is almost less to be dreaded than the demoralisation that must be the lot of the survivors. Soviet propaganda is unlikely to lose any opportunity of exploiting so favourable a field. For this reason it is a matter for regret—although it may have been inevitable in the circumstances—that the League of Nations should have delayed so long in enabling Bulgaria to deal with her refugee problem as successfully as Greece with foreign aid has dealt with hers. It would have been better if the amount of the loan had been fixed at three million pounds sterling, for it must be remembered that, if the end in view is to be reached, Bulgaria must be able not only to make provision for her refugees, but also to increase the general productiveness of the country, in order that she may liquidate the more easily her indebtedness to the Allies.

The Near and Middle East*

From Our Own Correspondents.

Cairo, June 5.

The King's Birthday.

The King's Birthday was celebrated to-day by a garden party at the Residency, which was attended by nearly a thousand members of the British community, civilians and military. For the first time no cards of invitation were issued—merely a notice inserted in the Press that the High Commissioner would welcome any adult British subject who cared to come. This is what is done by all the other foreign representatives on their national fête days, and the innovation does away with a source of irritation which inadvertent omissions on the part of the clerical staff have always caused to those affected thereby. I referred to the necessity for altering the system in my letter on this occasion last year.

British Prestige.

Zaghloul Pasha's abandonment of his intention himself to form the Cabinet is a great victory for those who have worked for the return of the parliamentary régime with a stable and satisfactory government. It was, presumably, his interview with the High Commissioner and the intimation which the latter gave him that the British Government were determined not to allow him to return to office and reintroduce in Egypt the régime of terror, tyranny and xenophobia which had characterised his administration of the country in 1924, that produced this change in him and in his followers. The latter may, as they did, base their request to him to give place to Adly Pasha on his precarious state of health and their solicitude for their beloved chief, but the fact remained that the deciding factor was fear of a dissolution with loss of posts and opportunities of patronage which it was clear that persistence in his intention in the face of the British Government's attitude would produce.

This much is clear to all thinking people in Egypt, be they of the Wafd, or of any other political colour, and the net result has been that British prestige has gone up with one bound to a point it has not attained since the palmy days of the Baring régime. And in this enhancement of our prestige full credit should be given to Lord Lloyd, whose skilful handling of what was an exceedingly difficult and delicate situation has aroused warm admiration in British and European circles. He has, in fact, gained the full confidence of the foreign communities, and at the same time instilled in Egyptians of all classes a respect for Great Britain that cannot fail to increase his influence for good in the future affairs of the country.

Adly Pasha's Position.

At the time of writing Adly Pasha has not definitely made up his mind whether he will accede to the unanimous request of the Chamber of Deputies that he should form the Cabinet. This reluctance is not surprising seeing that he will be entirely dependent on the Wafd majority in the Chamber and must have adequate guarantees from Zaghloul Pasha, who controls that majority, before he can undertake the government of the country. It is believed, however, that this question will be satisfactorily settled within the next day or so. But even if he to-day gets the necessary assurances, his position will always be precarious, in view of the capricious and jealous temperament of Zaghloul Pasha, who at any moment on some excuse or another may easily turn round and bring about his defeat in the Chamber.

It remains to be seen whether Zaghloul Pasha and his followers have learned their lesson. If they make it impossible for the Adly Cabinet to continue in office, they must not be surprised if Great Britain regards this as justification for action in favour of stable and orderly government which but for the eleventh-hour capitulation of Zaghloul Pasha would have already been taken.

The Political Murders Trial.

There is reason to believe that one of the factors that so suddenly changed the attitude of Zaghloul Pasha and his adherents was the Note presented by the British Government as a result of the resignation of Judge Kershaw. My last letter last week reported that the impression in instructed and legal circles was that the acquittals in the political murders trial were purely political, that the verdict was a majority one from which the British president dissented and that at least four of the six men acquitted were guilty. This has all been confirmed by the letter of resignation of Judge Kershaw.

While Egyptian circles, particularly the Wafd, attack him for having, as they say, revealed a professional secret in the matter of the deliberations of the Court of which he was President, on all sides one hears the greatest admiration for his public spirited and self-sacrificing action and the deepest regret that Egypt should lose his valuable services.

Judge Kershaw is regarded by all who had come into contact with him, particularly Egyptians, as one of the ablest judges the Egyptian Bench has had, uniting an extensive knowledge of Egypt, her people, and her language to a keen judicial mind. His impartiality and sense of justice were proverbial. The satisfaction expressed at the time of his appointment to the Court that tried the Sirdar's assassins and the men accused in the political murders trial was a testimony to this high opinion. And his considered pronouncement in his letter of resignation, combined with the knowledge that by his action he is losing not only his post, but also the pension and indemnities that he had earned by long and faithful

service, has made a profound impression and has done more than anything else to establish in the minds of Egyptians that justice was not done in the verdict in the political murders trial.

Liubliana, Undated.

The Yugoslav Army.

On Whit-Sunday and Monday, May 23 and 24, the Union of Officers and Combatants of the Reserve forces of the Kingdom of Serbs, Croats, and Slovenes, met at Zagreb, to hold their festival Congress. It was in every way a brilliant success.

The Congress was numerous and impressive; there were in all seven thousand guests. Officers from all parts of the young Kingdom attended it, veteran warriors who bore their part in the Great War and experienced all its vicissitudes. Among them one met men who had fought under Voivoda Kosta Pétchenetz, that dare-devil hero who flew across the enemy lines from the Salonika front in 1917 to Central Serbia, where he raised among the population a serious revolt, which gave much trouble to the Germano-Bulgarian troops in occupation.

The Union of Officers in the Reserve has over 15,000 members. The object of the organisation is to foster mutual good fellowship among officers in the Reserve itself, and the maintenance of close touch between the forces of the Reserve and those with the colours. Both objects are well suited to the times. Because, as at present constituted, the Yugoslav Army is a very recent creation with officers from Montenegro and the ex-Austro-Hungarian provinces—Bosnia, Dalmatia, Slovenia, Croatia and Slavonia—associated in the same service with those of the pre-War Kingdom of Serbia. Hence the importance quite rightly attached to this Congress, at which the Government was represented by no less personages than General Trifunovitch, Minister for War, M. Boza Maksimovitch, Minister for Internal Affairs, and the Raditch Ministers, Drs. Shuperin and Nikitch.

The business part of the Congress passed off satisfactorily. Many points concerning economic questions and general principles in regard to the position of officers in the reserve were dealt with. The chief feature of the gathering, however, was its splendid demonstration of the whole-hearted unity of the Serb-Croat-Slovene reserve forces. In this demonstration each and all took part—officers with the colours as well as those in the Reserve, and with them the civic representatives of the pretty town of Zagreb. This one saw, above all, on Monday afternoon, May 24, when in the name of the King General Trifunovitch presented the Union with a banner, the gift of the King himself. The ceremony of the presentation took place on the Mazuranitch Square in presence of the troops, military and civil dignitaries, and a large and enthusiastic crowd of onlookers.

The Congress had a distinguished participant in Lt.-Colonel Fred W. Abbot, President of the propaganda section of the International Association F.I.D.A.C. Colonel Abbot was welcomed by all with special enthusiasm, as the representative of that mighty spirit of unity which pervaded the Allied Armies during the Great War and marshalled them to ultimate victory. In a cordial speech, which was received with cheers, Colonel Abbot expressed his greetings in the name of F.I.D.A.C., in which Association Yugoslavia holds the office of Vice-President.

For this country the main significance of the Congress lies in its manifestation of the fact that the Army of the Kingdom of Serbs, Croats, and Slovenes, whether with the colours or in the Reserve, is a body united and unified in love of country and mutual good fellowship—a sure guarantee of the durability and internal vigour of the young State.

CYPRUS.

Nicosia, June 1.

The Silk Industry.

On May 24 took place an event of great importance for the future of sericulture, viz., the inauguration of the new filature at Ieroskepos (the Sacred Garden)—a small place near Papho—a name which recalls the ancient cult of Aphrodite at spots so intimately connected with that goddess. The Governor, Sir Malcolm Stevenson, and many leading officials and citizens were present as guests. It may now be hoped that the rearing of silk worms and the reeling of Cyprus silk locally, which until recent years have been so backward, owing to the importation of inferior eggs and other causes, will be actively advanced. Cyprus silks were to be seen at the British Empire Exhibition, and an interesting survey of Cyprus history by Major Flinn, at Nicosia, gave a sketch of recent developments, due to a law of 1922 to encourage sericulture, and other measures which are now bearing fruit. The enterprise at Papho now referred to should lead to rapid progress in one of the best island industries.

The Patriarch Meletios.

The election of His Eminence Meletios Metaxarches, ex-Œcumenical Patriarch, as Patriarch of Alexandria, gives great pleasure in Cyprus, where for some years, as Bishop of Kition, he did notable work for the autocephalous island Church. A telegram of congratulation was despatched by the Greek Archbishop to which a cordial reply has been received.

Greek Air Defence.

It is proposed to collect money throughout the Greek community of Cyprus in order to furnish two aeroplanes to the Air Force of Greece, according to a decision emanating from the Holy Synod. The time seems hardly opportune for calling upon the peasantry, regarding whose poverty such complaints are being made, to subscribe to this new burden; but, in reply to a question from Athens on the subject, the Archbishop has stated that the decision will be carried out.

General News.

The Government offices will be moved to the summer quarters on Mount Troödos on, or about, June 10.

The King's birthday will be celebrated as usual in all the district towns. Services in the Churches, Greek and English, will be followed at Nicosia by an inspection of a detachment of the local garrison by the Governor.

The cereal harvest in the hill districts is coming to a

close. Some damage was done in places by locusts, but no figures are yet available. There will now be a slack season in agricultural operations, until August, when the gathering of caroubs (locust beans) takes place, to be followed by the vintage. Prospects continue to be good.

Sofia, June 5.

The Army and Politics.

During the last few days, the Minister of War, General Volkoff, has undertaken, with the consent of the President of the Council, M. Liaptcheff, the purging of the Army of all elements which in the last two or three years had gradually obtruded themselves into politics. In this way a whole series of superior officers, headed by General Stoyanoff, have been relieved of their posts, and others expect their recall.

All these officers had recently made common cause with the ex-President of the Council, Dr. Tsankoff, and had carried their political intervention so far as to threaten the King and the Parliament in favour of a "Business Cabinet." This movement has been nipped in the bud, thanks to the energetic attitude of General Volkoff, who now finds the moment opportune, after the definite consolidation of the internal situation, to disembarrass the Army of chiefs who had violated its political neutrality.

Bulgarian-Roumanian Relations.

The advent of power in Roumania of General Averescu, whose moderation in the question of minorities is well known, aroused in Bulgaria serious hopes of a closer *rapprochement* between Bulgaria and Roumania by the liquidation of the outstanding problems and especially by an improvement in the lot of the population of the inhabitants of the Dobruja. These hopes were soon confirmed by the electoral agreement between the Governmental party and the Bulgarian Dobrujans, an agreement guaranteeing to the latter just representation in Parliament and a promise that the central authorities would suspend the operation of administrative commissions—in the Dobruja—commissions which were but organs for the molesting of the Bulgarians of this province, who were denied the right of option of Roumanian nationality and of possessing rural property, in the sole aim of forcing them to expatriate themselves and to leave the place for Roumanian colonists. But on the eve of the legislative elections the Averescu Government, under pressure of these colonists, grouped together in a secret organisation called "Actionea Romaneasca in Durostor" denounced at the last moment the agreement reached, thus denying its promises to the Bulgarian minority, in the matters of the amnesty to *émigrés*, the re-establishment of rights of property and of the right of option on the part of the native population, the revision of the process of confiscation of immovable property, the restrictions in matters secular and religious, and so on. This was the first deception.

After a short delay another followed, and one, too, to divide still further the two countries which, until 1913, had been united in friendship for centuries. The event occurred in the Dobruja, where, following upon this policy of expulsion which had been inaugurated by the Bratiano Cabinet, it very often happens that malcontents who have been forced into exile return armed to the frontier regions and deliver attacks which have as their aim nothing but the capture of what they can get of their confiscated goods, cattle, transport, and so on, but which exasperate the Roumanians and incite them to terrorist reprisals against the native population. Was there aggression on May 7? It is impossible yet to say. The fact is, however, that on that day, towards the evening, a Roumanian gendarme was killed in a wood, between the villages of Shahinlar and Disch-Doubak, District of Kourtbounar. This murder served as the immediate signal for gross excesses—one which cannot fail to drive a wedge in between the Roumanian and Bulgarian peoples. Under pretext of seeking and punishing the authors of the crime, the Roumanians gendarmerie arrested and the same day shot three peasants of the village of Kavourga. Their names were Gheorghi Deneff, Gheorghi Petroff, and Ilia Doneff, of whom the last, badly wounded, managed to escape during the night and to pass into Bulgarian territory. Five days afterwards, on May 12, the military Commandant of the region, Captain Polescu, went to the village of Denizler, District of Silistra, and there arrested the peasants Dragan Gheorghieff and Kalin Velikoff, whom he took by motor car to the village of Sarsailar, where he handed them over to his gendarmes with an order to take them to Silistra. When the convoy arrived at eighteen kilometres from the town, the gendarmes forced the two peasants to get out of the vehicle and shot them at a place called "Kalneja." One of these unfortunate men, still living, was taken to Silistra, where he was able, before he died, to make depositions before the Procureur and the President of the Tribunal which had been officially advised to deal with the affair.

Finally, between these two dates, it is stated that eighty notables were seen to leave the Bulgarian villages of Denizler, Garvan and Polina, District of Silistra. Some of these men have been murdered, others have been wounded, and those who have survived have had a mysterious fate which no one yet knows.

When these things were made known in Bulgaria they caused profound indignation and provoked a general demand for an international inquiry, to establish the responsibility for a monstrous crime, which no one would ever have thought could be committed by a civilised State. Thus a heavy cloud hangs over Bulgaria and Roumania.

Jerusalem, June 2.

Zionist Complaints of the Mandatory.

Complaints that the British Government as the Mandatory for Palestine failed to carry out important undertakings, specifically provided for or implied in the Mandate, are contained in the Memorandum submitted through the High Commissioner by the Vaad Leumi, the National Council of Palestine Jews, in the hope that it might be considered by the Permanent Mandates Commission during its ninth session in Geneva this month. While there is no mistaking the earnestness of the authors of the memorandum, or the gravity of the "charges," the document is in a vein which is understood to have given no offence in official circles, where, no doubt, comment has been prepared in rebuttal or extenuation. To Col. G. S. Symes, Chief Secretary of the Palestine Government, falls the task of reporting for the Administration and replying to criticism directed against it by inhabitants of the country. His task is perhaps unenviable, since members of the Mandates Commission are, to judge by past experience, rather keen on subjecting the Accredited British Representative to grilling examination. He will have to answer the accusation that the Government neglected to provide State and waste lands for Jewish colonisation, gave but a very inadequate grant-in-aid to the Hebrew educational system, and insufficient encouragement to infant industries. Absence of labour legislation, inadequate Government aid to Jewish public health work, delay in giving the Jewish community the status of an internally autonomous group, official lapses in the recognition of Hebrew as a language of the country, undemocratic administration of the Municipalities—these and other points are raised in the Vaad Leumi memorandum, the first ever laid before the Mandates Commission by the Jewish Community in Palestine itself.

Arab Grievances and Suggestions.

A much briefer document is that of the Executive of the "Palestine Arab Congress." The Arabs, who have never missed an opportunity of pressing their claims against the Jewish National Home, have this time contented themselves with referring merely *en bloc* to the past recitals of official misdemeanours. The present Arab memorandum impugns the whole of the basis of the Mandate, alleging that it clashes with certain clauses in Article 22 of the League Covenant. The principal specific request the Arabs make of the Mandates Commission is that the Commission come to Palestine to examine the situation on the spot in order to convince themselves that conditions are unfavourable to a large immigration of Jews. The demand that a national Government be established, representative proportionately of the different sections, is pressed with less vigour and appears to come in rather as an after-thought, that is, after reasons are advanced for the Arab boycott or the Legislative Council elections more than three years ago. Except for the unfounded allegation "that the Government is drifting amidst corruption and stagnation" and that "the atmosphere of Palestine is inflammable," this Arab document is a welcome departure from the gross inaccuracies that filled papers filed by this body in the past.

Zionist Organisation's Criticisms.

The memorandum of the Zionist Organisation, which is the third to be submitted since the Commission's session in October, 1924, has not at the time of writing been made public. But sufficient is known of its contents to assume that in many respects the criticisms of the Vaad Leumi are supported in the Zionist document. Reference is sure to be made to the land question, the school grant, and the aid for Jewish health work—which points were covered also in the memorandum submitted in 1925. It is understood that a letter by Dr. Weizmann, President of the Zionist Organisation, addressed to Lord Plumer, accompanies the memorandum. While the letter deals with political omissions, the memorandum is understood to emphasise Jewish achievement. The report is expected to show that 100,000 Jews have entered the country since the Armistice, when the Jews numbered little over 50,000. Jewish investments in the country under British administration will be referred to, showing that some £10,000,000 of Jewish money flowed into Palestine, of which half come from Zionist sources.

Three delegates have been selected by the Vaad Leumi to bring the memorandum to the notice of the members of the Mandate's Commission. It is understood that Dr. Weizmann and some of his associates will be present during the Commission's meetings in Geneva. No Arab representatives have gone from Palestine.

The Government and Labour Legislation.

As if to meet the criticism voiced in the Jewish document, the announcement was recently made that the Government is on the way to enact suitable labour legislation. An official Standing Committee was constituted in October to study and to recommend legislation and other measures for the betterment of conditions of persons engaged in industry. The Committee in its preliminary survey makes it clear, however, that "caution is necessary in the introduction of a programme of legislation that might be appropriate to the needs of a modern and

homogeneous State." With this reservation, an Ordinance has been drafted to make compulsory provision for compensation in case of accidents to workmen. The *communiqué* contains the agreeable assurance that the investigation revealed "very few cases of hardship or exploitation of children." This statement has been contested in the Hebrew Press, but doubtless the Committee knows whereof it speaks, although it does record that in certain trades the hours are unduly long, that young children are engaged in these trades, and that many of the older factories and workrooms are below European hygienic standards. The Committee acknowledges the valuable assistance it has received from reports by Jewish labour organisation and welfare workers.

Encouraging Local Industries.

The objection that the authorities do little to encourage local industry has also partially been met by a statement the Director of Customs, Trade and Excise has just made before the Jewish Chamber of Commerce in Jaffa. Beginning with the general assurance that the Government is desirous of extending every assistance to the young industries, the Customs Director informed the merchants that woollen, cotton and silk thread would be admitted duty free, as would also sugar destined for chocolate and sweets factories. If Press reports may be relied upon, the Custom Director's tone at this gathering rang differently from his pronouncements, a short few months ago, when he is reported not to have gone beyond stating that the Government had no objection to the development of local industries.

Arab "Unity."

Arab unity appears to loom larger than at any time since the rather abortive attempt to form a combination of Moslems and Christians. The present efforts, however, are confined to the Moslems, who seem to have realised that with their own house united, the chances of a union with other communities would be better. These efforts are due in the main to an outsider. Ahmed Zakki Pasha, a noted Egyptian scholar, was responsible for the recent reception at which 120 notable of all parties were reported to have been present. On Zakki Pasha's suggestion, it was decided to appoint a Committee to arrange for an All-Palestine Arab Congress. How much the Arabs of Palestine owe to outside intervention was acknowledged in a telegram Omar El-Bittar, the Jaffa leader, sent to the Egyptian Press expressing gratitude for Zakki Pasha's efforts and those of Abdul Aziz el Thalla'abi, the Tunisian leader, who spent some time in Jerusalem. Opposition to the organisers of this Conference has since been heard, notably in *Al Zamer*, where a writer asks why Zakki Pasha neglected to tour the country before sending out the invitations to the Conference, and why he failed to confer with all leaders in order to convince them of his impartiality. The writer contends that, the meeting having been held at the Moslem School for Girls, an official institution of the Moslem Supreme Council, Zakki Pasha's partiality to this Council is established, and "the opposition do not wish to be silent tools in the hands of people of Jerusalem, who have proved unfit for leadership."

Bucharest, June 1.

The Elections.

The elections for the Chamber of Deputies took place on May 25. The Government obtained 53.65 per cent. of the votes, and the Opposition bloc of Nationalists and Peasants Party 30.58 per cent, the Liberals 7.57 per cent. Some small modifications of these figures may be expected when the final figures are known, as there are one or two constituencies whose returns have not yet been published. The Socialist Party having obtained less than 2 per cent. of the whole votes, they will have no representatives in the Chamber. So much for Bolshevism in Roumania.

The elections have shown that the Nationalists are still very strong in Transylvania, but that in Bessarabia the Peasant Party is still strong. The Government obtained a surprising number of votes.

It is a well-known fact that in this country, as no doubt also in others in this part of the world, old-fashioned methods of coercion are employed at the elections, and astonishing tales are told of the measures resorted to by the present Government in order to obtain the required majority. These, however, are probably grossly exaggerated, even when told by foreign journalists, as in many cases all sides of the question are too little taken into account. Even if it be true that the Government party resorted to questionable methods, it is at least unlikely that it is the only one which did so, though of course it would have the powers of the State to back it.

An accident occurred last Friday night while the Nairn motor mail convoy was on its way to Baghdad. The leading car overturned near Palmyra owing to a broken spring causing the brake to jam, and Mr. Deacon, of the Anglo-Persian Oil Company, was killed instantly, while Lieutenant Hodges, of the Indian Army, was severely shaken and the driver bruised.

Every effort is being made to relieve the suffering caused by the Akyab cyclone. The Viceroy of India has sent a message of sympathy, and 30,000 rupees had already been subscribed over a week ago.

Mr. H. W. Kennard, the British Minister at Belgrade, on June 10 announced to the Deputy Minister for Foreign Affairs the forthcoming visit of part of the British Mediterranean Fleet, under the command of Vice-Admiral Sir Roger Keyes, to Adriatic ports. Between July 16 and 28 visits will be paid to the ports of Split, Sibenik, and Kotor (Cattaro).

M. Gavrilovitch, Yugoslav Minister at Athens, arrived in Belgrade on June 9 in order to report to the Government on his recent conversations with the Greek Foreign Minister, M. Rouphos.

A car carrying 15 million drachmæ (about £40,000 at present rates) belonging to the National Bank of Greece, has been attacked on the road between Preveza and Yanina by brigands, who shot dead the three gendarmes forming the escort, the chauffeur, a bank official and two servants, and made off with the money, says Reuter's Athens correspondent.

ARMY APPOINTMENTS.

The War Office announces the following appointments:—

Major-General J. R. E. Charles, C.B., C.M.G., D.S.O., to be Director of Military Operations and Intelligence, War Office, in succession to Major-General Sir J. T. Burness-Stuart, K.B.E., C.B., C.M.G., D.S.O., appointed to command the 3rd Division (July 3, 1926).

Major-General H. D. De Pree, C.B., C.M.G., D.S.O., to be Commandant (Major-General General Staff), Royal Military Academy, in succession to Major-General J. R. E. Charles, C.B., C.M.G., D.S.O. (July 16, 1926).

Major-General Sir W. E. Ironside, K.C.B., C.M.G., D.S.O., to command the 2nd Division in succession to Lieutenant-General Sir E. P. Strickland, K.C.B., K.B.E., C.M.G., D.S.O., promoted.

Major-General N. J. G. Cameron, C.B., C.M.G., to command the 49th (West Riding) Division, Territorial Army.

Major and Brevet Lieutenant-Colonel R. A. Bulloch, D.S.O, has been promoted to command the 1st Battalion, Black Watch, in the place of Lieutenant-Colonel the Hon. C. M. Hore-Ruthven, C.M.G., D.S.O., to half-pay list on account of ill-health (June 2, 1926).

General Charles was appointed commandant of the R.M.A. in April, 1924. In 1923 he commanded the Waziristan Force. Born in 1975, he has seen service in South Africa, with the Bazar Valley and Mohamand Field Forces in 1908, and in the European War, in the closing stages of which he commanded the 25th Division.

General De Pree was last year appointed to the command of the 55th (W Lancs) Division, T.A. He served on the North-West Frontier, in British East Africa, South Africa, and the European War, in which for some time he was Sir Henry Wilson's Chief of Staff in the Fourth Corps. In 1923 he commanded the 10th Infantry Indian Brigade.

Sir Edmund Ironside commanded the Allied Forces at Archangel in 1918-19, the Ismid Forces in 1920, and the North Persian Force in 1921, and since 1922 has been Commandant of the Staff College, Camberley.

General Cameron has seen service in the Nile Expedition in 1898, South Africa, and the European War. He was promoted Major-General last year.

POST-WAR R.A.F. IRAQ DINNER.

The second post-War Royal Air Force Iraq Dinner will be held at the Hotel Cecil on Saturday, July 3, the day of the Royal Air Force Display at Hendon, Air-Marshal Sir John M. Salmond, the first Air officer commanding His Majesty's Forces in Iraq will preside, with Air-Commodore A. E. Borton, the A.O.C., Royal Air Force Cadet College, Cranwell, as Vice-Chairman. Tickets for the dinner, which will be solely for Royal Air Force officers who have served in Iraq since the Armistice, can be obtained from Flight-Lieut. A. L. Chick, A.F.C., Room 564, Air Ministry.

MISSION TO ALBANIA.

Some months ago, says the *Daily Telegraph*, the Women's Engineering Society was asked to find a member who would join a medical mission being organised by the Countess of Carnarvon and others to combat malaria in Albania. A suitable volunteer was found in Miss E. Lindsay, and after a stay in Italy to receive some additional instruction she arrived at the State Hospital, Valona, on March 21. Her duties consist of organising and supervising the work of draining, ditching, and filling in pits and of dipping for and examining mosquito larvæ. The other members of the mission are two women doctors, a nurse, and a woman chauffeur.

NEWS IN BRIEF.

The Mosul Treaty was ratified by the Iraqi Parliament in Baghdad on June 14.

The Bulgarian Government has placed a Bill before the Sobranye relating to the opium traffic.

The Queen of Egypt gave birth to a daughter on June 8, this being her fourth child and third daughter.

The Mejliss and Senate in Baghdad have ratified the Anglo-Persian Oil Transferred Territories Concession.

A Teheran message dated June 14, states that the Valiahd (heir to the Persian Throne) is seriously ill with typhoid.

Lord Lloyd arrived in Jerusalem on June 11 by special train on a three days' visit to Lord Plumer. He was met by Sir Ronald Storrs.

An Anglo-Bulgarian group has held a meeting at Sofia to found an association for the development of cultural and commercial relations between Bulgaria and Great Britain.

The Roumanian Government has prohibited the projected demonstration by the Roumanian Socialist Party in commemoration of the murder of the Italian Socialist Deputy Matteotti.

The Afghan Legation in London has received a telegram from Kabul stating that the Ameer of Afghanistan will henceforth be known as H.M. the King of Afghanistan.

The Albanian Minister at Belgrade, M. Stavri, who is also the second delegate at the Albanian-Yugoslav Treaty negotiations, has been suddenly transferred from Belgrade and left there on June 9.

The special correspondent at Mecca of *As Siassa* states that the Moslem Congress has decided to meet yearly during the pilgrimage season in order to assure security, comfort, and hygiene of the pilgrims visiting the Hejaz.

General Pangalos, the Greek President, has conferred the Grand Cross of the Order of the Redeemer upon Signor Mussolini, as a mark of his esteem, and in gratitude for the interest the Italian Prime Minister has shown in Greek foreign affairs.

Lord Lytton, Governor of Bengal, who is proceeding on leave, Sir Henry Lawrence, who has been acting Governor of Bombay, and Lady Lawrence, and Mr. Surendranath Mullick, the new member of the Council of India, sailed from Bombay for England last Saturday.

A Reuter message from Athens reports that an explosion occurred on June 8 in a dynamite factory at Leurium while experiments were being made with a new process. The Director, a chemist, and a foreman were burnt to death.

The Air Ministry regrets to announce that No. 350375 L.A.C. Howard Keith Warwick died in the Citadel Military Hospital, Cairo, on June 8, as the result of injuries sustained on April 9 in an accident at Abu-Suier, Egypt, to an Avro of No. 4 Flying Training School there. At the time af the accident he was the pilot and sole occupant of the aircraft.

The two-year period of Commander H. J. Woodward, D.S.O., in command of the Clematis, expired last Saturday, and Commander C. H. Godwin, D.S.O., has been nominated to succeed him. This is one of the two sloops forming the Red Sea Division, and was last reported at Port Sudan. She is due at Malta this month to refit, the Cornflower, Commander E. T. Wickham, O.B.E., which has been under refit there, being finished and ready to return to her duties.

THE DOFFING OF THE FEZ.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Another instance of a Turkish citizen's parting with his fez can be given, although the full significance of the act may not thereby be determined.

In January 1918, the 1st Royal Scots were holding the village of Homondos, near Serres in Macedonia, with a line of redoubts on either side of the village. There had been heavy rains, and the sunken roads had become broad canals. One morning a girl of ten, her grandmother and her uncle appeared out of the darkness, making signals of surrender and distress from the Turkish side of one of these canals. They were safely brought over, provided with breakfast and dry clothes, and a dug-out put at the disposal of the ladies—a corporal on guard to protect their privacy. In a talk with the uncle, it was made clear that he was a chinganee or gipsy, smith by trade, and a soldier in the Turkish Army. He was so satisfied with the comforts of captivity, that he declared his desire to become one of the Allies, and to renounce his Turkish allegiance. At that point he took the fez from his head and cast it in the mud. The Royal Scots would not supply him with a bonnet, and he had to resume his old headgear for protection against the elements.

When the Royal Scots got out of these trenches for a few days in the rear camp, they had a concert. One song described their three wintry weeks in the line, and a verse of that song was:

"On a cold sleety morning, a gipsy princess
With her granny and uncle drew near to "D" mess;
A bold British soldier plunged into the flood,
And swam back with the ladies through water and mud,
Singing Tooral-a-looral, etc."—I am, etc.,

St. Andrews, June 11. D. M. KAY, C.F.
(Temp. att'd. 1st R. Scots.)

A CYPRUS DEFENCE FORCE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Every Dominion, Colony, or Protectorate in our Empire has recently increased its fighting forces; some of them even have their own Navy. This is quite natural and the most practical course that can be followed, as in time of danger every Dominion, Colony or Protectorate may defend itself without heavy expenses being incurred by the Central Government.

Our Colony unfortunately is absolutely lacking in any force. We have only a Cyprus Military Police, which is wholly devoted to police duties. A well trained force consisting of a thousand men is necessary to Cyprus; this in time of war might serve as a nucleus of a probable army of fifty thousand.

The question of the abolition of the amount paid by the Colony of Cyprus as interest to the Ottoman Debt was recently brought before the Legislative Council. Cypriots will be pleased to hear that this amount will be used for the force in question.—I am, etc.,

Nicosia, June 3. "KNIGHT OF CYPRUS."

FRENCH SELF-TAUGHT, GRAMMAR WITH KEY

By J. LAFITTE, BèsL.; Principal French Master, City of London School.

For learning the Language by the Natural Method. It contains Classified Vocabularies, Travelling by Rail, Road and Sea. Cycling, Motoring, Post, Telegraph, etc. Commercial, Naval and Military Terms, etc., Conversations so arranged that they may be learned AT A GLANCE, with ENGLISH PHONETIC PRONUNCIATION Tables of Money with illustrations of Coinage, etc.

A course of simple and practical lessons in the Grammar and construction of the French language, progressively arranged and fully illustrated with model sentences: useful exercises throughout, and an Alphabetical Vocabulary.

A CROATIAN ARTIST.

The exhibition of paintings by Mme. Nasta Royitz, of Zagreb, which is being shown at the Gieves Gallery, Old Bond Street, until June 18, was opened last week. At the formal opening Yugoslav songs were sung by Mme. Maja de Strozzi, of the Royal National Opera, Zagreb. She chose songs by such composers as Zayts, Grgoshevitch, Taychevitch, Dobronitch, and Konyovitch.

There can be little question that this show of paintings will immensely stimulate the interest taken in this country in the artistic achievements of the Triune Kingdom. As Dr. Seton-Watson pointed out in his introduction to the catalogue, England is largely ignorant of the art of the Serbs, Croats and Slovenes. Apart from Mestrovitch, indeed, there is hardly one artist in all this young country who is known here It is much to be hoped, therefore, that this show is but the precursor of others of a similar nature. In Zagreb itself there is a whole nest of painters whose work is insufficiently known in Western Europe.

Of Mme. Nasta Royitz's technical ability one is pleased to be able to speak highly. Both in the representation of scenes of her native land, and in the interpretation of English and Scottish scenes, and, most notably of all, in her work in terra cotta and in bronze, she shows herself a very accomplished artist. Eschewing all extravagant ways such as are often enough to be deprecated in the pictures of artists of the "new" old Europe, she steadfastly pursues her own (which is the traditional) path so that she achieves faithfulness alike in the depicting of such subjects as Croat peasants, snowy scenes in Yugoslavia, self portraits, or a part of the Scottish coast. It is particularly gratifying to find this artist from the Near East sternly refraining from the temptation, to which so many Oriental artists succumb, of ultra vividness of colour, for Mme. Royitz is everywhere sober and just, even when she paints the beautiful riot of colours in the dresses which are worn in Yugoslavia.

To our mind, the finest, or at least the most memorable, work in the show is that of "Tivat." Here is painted a scene of haunting loveliness, in which water, an old boat, and the encircling mountains blend to perfection. Poetry is in this work. Other pictures which will probably appeal to many are a portrait of the artist with her horse, one of the Yugoslav actress, Marchioness M. R. Strozzi, the island Lopad, Dalmatia, and the wholly delightful terra cotta studies of an onion seller and of a Serbian shepherd and his lover.

No one who knows the virility of the Yugoslav nature should fail to visit these confident paintings, which are the happiest prelude of what we hope will be a flourishing of Yugoslav art.

DEATH AND SICKNESS AMONG THE PALESTINE ARABS.

The following is the summary of a lecture delivered to the Folk-lore Society on May 26 by Mrs. H. H. Spoer on customs and superstitions connected with sickness and death among the Arabs of Palestine:—

Though a certain amount of empirical knowledge is utilised by the Arabs, such as somewhat crude methods of disinfection and the use of medicinal herbs, there is much dependence on amulets and charms for the counteraction of ailments of all kinds. Each village has its sacred tree or spring round which are hung fragments of clothing and other votive offerings, and every dwelling has one or more candles which have been lighted in some Holy Place. Sick Muslims, Christians and Jews alike repair to the Chapel of the Tomb of the Virgin and walk round the tomb to receive a blessing, and the children of Muslim parents are even taken for baptism in the belief that some benefit will perchance accrue, and at the worst no harm will be done. A visit to the Tomb of Rachel is especially efficacious for the removal of the curse of barrenness. A pious man will be asked to spit on the bread and salt to be given to a sick person, or on the eyes of children suffering from ophthalmia. An illness such

Digitized by Google

as measles or smallpox may easily be cured by inducing the patient to eat the head of a snake killed on a Saturday, but a case of fever requires the more drastic treatment of taking the measure of the patient with a long reed and laying it in the shroud of a dead man.

The body of a dying Muslim is turned towards the South (i.e., towards Mecca) and a portion of the Quran is read, the reader standing at the head if the dying person is a man and at the feet if a woman. After the death of a woman, cotton is placed between the fingers and the toes of the corpse and into the nostrils (but not into the ears, for that might prevent the departed one from hearing the words of the preacher at the graveside). and a needle, sweet-smelling herbs, some camphor, and a comb are put into the grave. A sheep is killed and all mourners and friends are invited to partake, and everybody receives a cake which is frequently taken to the grave and eaten there. The wailing dance of the women is repeated constantly during the seven days following burial, either at the house or at the grave.

Among the Christian people, the corpse is fully dressed in festive clothing and is carried to the grave in full view, the funeral meals, the wailing, and other after-death customs being similar to those in vogue amongst the Muslims.

THE WEEK AT HOME.

London, Tuesday Morning.

The Continued Lock-out.

Still there is no sign of the ending of the lock-out. Neither side seems yet to be willing to yield in the slightest, and fear that inactivity on the part of the Government may result in industrial catastrophe appears to be becoming real. Together with this anxiety is bound up an increasing dislike of the miners' "Never, Never" policy—of the owners it had long ago been realised that circumstances could not change *their* pre-strike attitude. In other words, the public is exhibiting with some unwillingness the patient mind which the Prime Minister has counselled us all to have.

This impatience was shown in a curious way last week. A flag day had been organised in London for collecting funds for the benefit of the wives and children of miners. Comments upon this collecting were most varied. In the West End and in the City the collectors had, on the whole, a fairly easy or idle time; but in the East End and in the more industrial districts, such as Islington, practical demonstrations of sympathy were marked. It is not fair to suggest that the lock-out has let loose class distinction (that futile growth which the War nearly succeeded in eradicating), but it is true, so far as my observation went, to say that the wealthier members of the community failed whole-heartedly to support the lead which the Prince of Wales had given in his assistance to the dependents of the miners in the West Country.

It was as if in realisation of the fact that the miners' case was being jeopardised by the uncompromising speeches of certain leaders that the Miners' Federation last week issued a manifesto which, though still very strong in its opposition to the one-sided proposals of the owners, does attempt to concentrate upon reorganisation. The Federation is seen to have opposed the Government's plans mainly because it did not trust a mere general undertaking to introduce reforms. What it wants is a precise scheme of reorganisation. It is emphatically in favour of closing those pits "which no reorganisation can make efficient," and it believes that the period of reorganisation—that time during which it wants a Government subsidy—need not be very long. (On this question upon the possibility of immediate reorganisation more, no doubt, will be heard during the debate on the question in the Commons this afternoon.) Upon the matter of wages the Federation's manifesto is a little obscure, but at any rate a reconsideration of wages, once reorganisation is assured, is not ruled out.

This elucidation of the men's position should considerably clear the air, which is apt to become cloudy when Mr. A J. Cook and others have, by force of circumstances, sometimes to substitute rhetoric for facts. But the matter will become complicated again if, as is reported, the Government intends to pass a measure permitting an extension of hours.

It seems well agreed that, if the Government does not intervene, and impose the recommendations of the Samuel Commission, the lock-out may continue at least until August or September. Those who have studied conditions at close quarters ridicule the talk of the possibility of "starvation" for the miners, whose qualities indeed they seem greatly to admire. It was interesting to find the *Morning Post*, for example, paying a most striking tribute to the Yorkshire miners, once and in the time of our greatest need, soldiers, who, it said, were now supporting Cook at once they supported Haig. To such men as these it is patent that only a comprehensive policy can possibly appeal. The trouble is that, unless the miners accept the Coal Report, the lock-out may go on until the Government may be in a position to bargain over certain of the Commission's recommendations. Meanwhile, havoc is being played with such trades as cotton, shipbuilding, engineering, potteries, steel and tin plates, metal working, rubber, boot manufacture, and so on.

Money from Moscow.

As is customary in great questions of the day the sensational Press is fastening on the unessentials—in this case the money which the strikers were offered and which the lockedout-men accepted from Russia. A ramp has been worked up over the cry of "Red Gold," and it is understood that the Government is disposed severely to remonstrate with the Soviet Government which allowed the financing by Russian organisations of one party to a purely domestic dispute in Great Britain. As is well known, the T.U.C. refused moneys from Russia; they realised, apparently, that in this country everything "Russian" is regarded as "Soviet" and everything "Soviet" as "Moscow Government." As a matter of fact, there is no proof yet available that funds to support the British "proletariat" did actually emanate from the Russian Government, although the close connexion

Digitized by Google

between that Government and various industrial organisations in Russia is generally admitted. There is bound to be a certain liveliness in the future history of this matter.

It is not the money which the miners have actually received that is troubling the Whitehall Government, but the rejected offer of assistance at the time of the General Strike. Without question the suspicion that exists concerning every Soviet activity is still intense in this country, and even if the Government were to take the strongest possible line towards Moscow, it would enjoy considerable favour. It is curious, the persistence of this anti-Russian sentiment. Nothing can shake it. It matters not if even Unionist Members of Parliament visit Russia and come back with what on the whole are favourable impressions: there are hundreds of scribes who have not seen Russia since the Revolution only too ready to assert the incapacity of these visitors to judge. How it all will end it is, therefore, not easy to guess. There are people trying to imagine the effect of, say, the T.U.C. contributing funds to the "oppressed workers" of another country when a Labour Government was in office. Would the two institutions be identified in foreign eyes?

The Liberal Wake.

All sorts of hornpipes and reels and traditional dances are being indulged in the wake of Liberalism. As was expected, those who would fain have overthrown their Jonah, Mr. Lloyd George, have found the task rather more difficult than they had imagined. Yet it is as plain as a pikestaff that the Party could have got rid of him, had they but played their cards properly. For the supporters of Lord Oxford as against Mr. Lloyd George, though holding all the top cards, except the king, tried to finesse: to attempt to catch Mr. George out on the question of the strike was the stupidest lead of all. Since that vain endeavour was indulged, other things have come to light which caused one to deny the name of strategists to the orthodox Liberals. Last week Lord Gladstone published a letter recounting Mr. Lloyd George's financial relations with the Liberal Party—a letter which, had it been published before the various loyalties of the individual Liberal members had had time to rally round or against Mr. George, would almost without doubt have secured his dismissal from leader of the Party in the Commons.

As it is, none of the Oxfordites, save Mr. Pringle, seems willing to say anything on the controversy, with the result that the tendency among the wavering Liberals seems increasingly towards support of Mr. Lloyd George. He can now pose quite successfully as the most injured of men. Over nearly all the charges that have been made against his loyalty to the Party his opponents seem to have made a sad mess; the last straw was thatched when a prominent member of another Party, Mr. Philip Snowden, was called in to his aid.

The Betting Tax.

The Chancellor of the Exchequer had great fun in the House last week in defence of his betting tax. He overrode all the opposition to it, whether it was moral or practical or political. One concession he did make, however, and that was to reduce its incidence. He had found out that much more than £200,000,000 was turned over, so that he could lower his proposed tax.

He has carried the tax, but no one is in a position to calculate its effect, and one would be surprised if bookmakers do not become as agile as Arabs in the dodging of the tax.

Censorship of Plays.

The abundance of plays in post-War London which have offended either the susceptibilities or the sentiments of a considerable number of people was the subject of a debate in the House of Lords last week. A stricter censorship was pleaded for, and various suggestions were thrown out for the strengthening of the Censor's Department. But on the whole those had it who found no cause for complaint in the kind of play which London has of late been experiencing. One Lord, indeed, pointed out the fact that "Anthony and Cleopatra" contained situations which were certainly as lubricious as those in which the modern playwright revels.

And the critics, too, are, generally speaking, in favour of the greatest liberty in dealing with the staging of plays. They point out that the Censor exists to interpret public taste, not to force on the public what he thinks it ought to have. They claim for "serious drama" the widest possible license.

Well, well, perhaps we are as bad as the modern plays make us out to be. And, on the other hand, perhaps we are not.

Epstein.

Talking of this, one is led to reflect upon the latest exhibition of Epstein's sculptures, at the Leicester Galleries. There are, of course, those who claim for Epstein that he is of all time, but at least he is of his age in this, that he revels in the darker explorations of the soul or mind. From the representation of the bad or the remote that is in men he is so far from shrinking as to take a positive delight in it; for there is no doubt about the thrill which his deep work can give. At this show he is, to me at any rate, at his most Oriental. Not the slightest Englishness is there about Epstein, but a heavy, profound, almost obscurantist Semitism. It might not be too difficult to match in Western artists his choice of subjects, but it is in his treatment of them that the dark psychological secrets of the East are used in fashioning bronze. Such portraits as those of C. P. Scott or Professor Alexander convey indeed all that the faces of these masters of dignified journalism and of benevolent learning do in life connote; but what can one say of the studies of his Indian model, and particularly of his representation of a woman in awful pregnancy?

I confess to having no words to deal with such tortuous things: I can simply say that such things are Asiatic, in the sense that they are primaeval, non-reverent, endlessly remote. It is false to suggest that they are beastly or ugly or offensive; they are, however, not the product of our time or of our civilisation. In Central Asia there may be spots where Epstein would be proclaimed a King; but here the clamour of his little Republicans will hardly impress the welkin. That his technical skill is uncanny is, of course, true; but as potent as his, probably, were the spells cast by the warlocks of the Dark Ages.

Kitchener.

Last week the memorial to Lord Kitchener that has been erected in the Horse Guards Parade was unveiled by the Prince of Wales, who paid ample tribute to the one quality which will be an abiding memory in the British of this generation—the calmness of Kitchener's courage. In the Great War Kitchener stood for a tremendous thing. There may have been some who thought in his lifetime that the General's avid hands were too full for the work he desired to burden them with, but in none of those, at any rate, who were proud to be "Kitchener's men," was there any doubt about the greatness of their idol.

One was glad to see the *Manchester Guardian* take over a verse that was published in an American journal ten years ago, for it sums up admirably the feelings of the present generation towards Kitchener:—

> What matter where his body fell?
> What matter where they raise his tomb?
> Five million men from Calais to Khartoum,
> There are his wreath and his memorial.

By one of those strange twists of fate, to which, perhaps, historians pay more attention than actual witnesses, Kitchener has his back turned on Downing Street.

PERSONAL AND GENERAL

TO-DAY

June 17, 1926 (New Style).
June 4, 1926 (Old Style).
Dulheggia 6, 1344 A.H., of the Moslem Calendar.
Tammuz 5, 5686, of the Jewish Calendar.

Lieutenant-Colonel and Mrs. Vivian Gabriel have arrived at 21, Upper Grosvenor Street.

M. Sarraut, the French Ambassador to Turkey, arrived in Paris on June 9.

General Pangalos returned to Athens on June 7 from Epirus.

Sir Kay and Lady Muir have left for Constantinople and Bulgaria, and will be away for six weeks.

The Raja and Ranee of Pudukota have arrived at 3, Cleveland Row, St. James's S.W.1. for the season.

Sir Alexander and Lady Muddiman, who recently arrived in London from India, are staying at the Hotel Washington, Curzon Street.

King Ferdinand, former King of Bulgaria, was present recently at the International Ornithological Congress in Denmark.

Sir John Edward Power Wallis, formerly Chief Justice of the High Court of Madras, has been appointed a Member of the Judicial Committee of the Privy Council.

The death is announced, at the age of 76, of M. Garbaret Hagopian, who was known in England for many years for his work on behalf of his compatriots, the Armenians.

Lady Vaughan has arrived from India at 8, Park Row, Knightsbridge (Kensington 7178). Major-General Sir Louis Vaughan expects to be in England early in the autumn.

The Prince of Wales, attended by Sir Godfrey Thomas, Bt., and Mr. Alan F. Lascelles, was present at the Annual Dinner of the Indian Civil Service Dinner Club, which took place at the Hotel Cecil last Thursday evening.

The King has been pleased to appoint Sir Alfred Amberson Barrington Marten, LL.D., Barrister-at-Law, Puisne Judge of the High Court to Judicature at Bombay, to be Chief Justice of the Court in the place of Sir Norman Cranstoun Macleod, who has retired.

The King has approved the appointment of Lord Willingdon, G.C.S.I., G.C.I.E., G.B.E. formerly Governor in succession of Bombay and of Madras to be Governor-General of Canada, in succession to General Lord Byng of Vimy, G.C.B., G.C.M.G., M.V.O., whose term of office will shortly expire.

We regret to announce the death, which occurred from an accident in Piccadilly, of Brigadier-General E. A. Plunkett. General Plunkett, who was well known in Near and Middle Eastern circles—he strove hard for the establishing of closer commercial relations between Great Britain and the Balkans—had seen much service in the Sudan, in Persia, and especially as Military Attaché in Balkan capitals. For a time he was chief of the military missions at Belgrade, Athens, and Sofia.

CORRECTED NOTICE.

The engagement is announced between Charles A. M. van Millingen, M.C., late the Rifle Brigade, elder son of the late Rev. Professor Alexander van Millingen, M.A., D.D., of Robert College, Constantinople, and Marjorie Elizabeth, daughter of Mr. Joseph Boardman of Wallasey.

Mr. Gandhi has now decided not to go to Finland to attend the World Students' Conference in August.

Sir Leslie Wilson, Governor of Bombay, arrived in Bombay on June 11 from England and resumed duty.

Princess Helen of Greece, wife of the ex-Crown Prince Carol of Roumania, last week arrived in Florence, and is staying with her mother, the ex-Queen Sophie.

Owing to Mr. Howard Carter's being detained in Cairo, his lecture at the Royal Institution on June 12, on the examination of the Mummy of Tutankhamen, has been postponed.

Mgr. Meletios Metasakis, the newly-elected Patriarch of Alexandria, after receiving the highest Greek decoration, and after a cordial audience with General Pangalos, left Athens last Thursday for Egypt.

R.A.F. COMMANDS.

Air Vice-Marshal Sir Geoffrey Salmond, who has been for some years the Air Member for Supply and Research, will at the end of the year relinquish this appointment to take command of the Royal Air Force, India, at present held by Air Vice-Marshall Sir Edward Ellington. Sir Geoffrey Salmond, when he originally held the Middle East Command, also had India, then with one squadron only, under his direction. He now goes to a Command with three wings, as well as depots and a headquarters at Delhi. Sir Edward Ellington, it is understood, will assume the Iraq Command in succession to Air Vice-Marshal Sir John Higgins, who is due to return home next January.

FOREIGN DECORATIONS.

The King has given authority for the wearing of the following decorations conferred by the King of Egypt:—

Order of Ismail.—Insignia of Grand Cordon.—Sir Geoffrey Francis Archer, K.C.M.G., Governor-General of the Sudan.

Order of the Nile.—Insignia of the Second Class.—Mr. Arnold Charles Hann, Sub-Governor of the National Bank of Egypt. Insignia of the Third Class.—Mr. Egerton Charles Grey, M.A., D.Sc., M.R.C.S., L.R.C.P., Professor of Chemistry, Egyptian University, Cairo.

THE ABUSE OF PUBLIC ENTERTAINMENT.

In proposing the health of Lord Reading at the Mansion House luncheon, after the conclusion of the ceremony at the Guildhall, Lord Birkenhead remarked that, before Lord Reading left for India, he was entertained at thirty-eight banquets, and had to make thirty-eight speeches, in the course of which he did not repeat himself on any single occasion. This seems to have struck the audience as a good joke; but it is anything but a joke to the man who has to create the occasion for it. There can be no doubt that the custom of speeding the parting guest by public entertainment is very greatly overdone nowadays, and that there is the most definite need for its reformation. This is specially so in the case of a man chosen for so important, laborious and delicate a task as that of Viceroy of India. In the few weeks that intervene between the announcement of the choice and the departure of its object for India, it is absolutely necessary for him to do his best to obtain a real insight into a number of very intricate problems: and it is worse than unfair that he should be called upon, night after night, to waste his time in more or less stuffy rooms, eating more or less indigestible food and drinking a very varied assortment of wines, at the bidding of every Society or coterie that finds itself able to claim some sort of connexion, however distant, either with himself or with his activities, past, present or to come.

It is, no doubt, good training for a Viceroy designate to sit and listen to a series of speeches, all covering the same ground and all couched in very much the same phraseology; but—especially when, as does sometimes happen, he is a modest man with no great claims to natural eloquence—the mental and physical labour entailed by the composition and delivery of a multitude of speeches, in all of which he has to try to emulate Lord Reading and to avoid repeating himself, is one to which he most emphatically ought not to be exposed. One does not know how many of these entertainments Lord Irwin had to suffer, but the number was certainly very large, and undoubtedly constituted a great tax on his strength and endurance. Some there be, no doubt, who enjoy such an experience and welcome its extension to the utmost possible limits; but Lord Irwin is certainly not among the number: and one cannot help thinking that, instead of allowing all sorts and conditions of men to trade upon the willingness to accept, or the unwillingness to refuse—as the case may be—of the prospective guest, it should be made an invariable rule that the number of public entertainments permissible to a Viceroy designate is reduced to the smallest reasonable figure. Indeed, a formal announcement to this effect might well be made by the India Office, on public grounds—that the time and the health of a Viceroy designate are too valuable to the State to permit thoughtless hospitality to have the chance of wasting the one and impairing the other. The number of public entertainments permissible might be limited to three or four, and applications should be addressed not to the guest himself but to the Secretary of State, who would tell off one of his assistants to decide among the rival claimants—to refuse outright those who could not make out a really good case, and to arrange for suitable combinations so as to satisfy the reasonable claims of what would certainly be but a small residue.

Lord Birkenhead added that Lord Reading had had to attend fourteen public entertainments, and to make fourteen speeches, since his return; though, this time, he did not suggest that he had succeeded in doing so without repeating himself. To this there can, of course, be no objection on public grounds; any that there may be will be personal only. And there is a great difference between the sort of speech that a man has to deliver before taking up an anxious and difficult task, and that which is expected of him when he returns, bringing his sheaves with him. To judge by the frequent appearance of the interpolation—(laughter)—in the report of the speeches at the Mansion House, they were conceived in a gay and light-hearted vein; though it is true that this does not appear to have been the case at the Guildhall. There indeed the only serious attempt at humour would seem to have been made by the band: which, no doubt by way of a compliment to the first episode in a career "as romantic as any that could be found in the City since the days of Richard Whittington," is reported to have played Lord Reading in to the tune of "Rule Britannia," and to have played him out to that of "A Life on the Ocean Wave."

THE INDIAN CIVIL SERVICE DINNER.

Whether there was an intentional connexion, or only a fortunately accidental one, between the presence of the Prince of Wales at the annual I.C.S. dinner on June 10 and the fact that the next examination for the Indian Civil Service is due in about a month's time, the occasion was used to some purpose. The presence, for the first time in history, of a member of the Royal Family at the dinner is a reminder not only of the great hold on the imagination of Englishmen retained by the I.C.S., but of the paramount necessity that there shall be no falling off in the quality of its recruits. The Prince's very important speech was mainly devoted to this subject. He dwelt on the improvement that has recently occurred, after an anxious and difficult period, in the position of Englishmen in the Great Indian services—the Police, the Forests and the Medical Service as well as the I.C.S. He spoke in particular of the betterment in material prospects brought about by the acceptance of the recommendations of the Lee Commission, as well as of the opportunities for sport and enjoyment to be found in India which, in his own words, still provides opportunity for a life of responsibility and a life full of interest, and "is still a good show." In drinking the health of past and present members of the Service, he also asked his audience to drink "to the encouragement of future generations of members who absolutely must follow in the footsteps of those who have gone before."

The writer of these notes has been very recently told, by a very distinguished ex-member of the Indian Civil

Digitized by Google

Service, that one of the things that has struck him most forcibly, when listening to the conversation of the Indian Civil Servants now, as usual at this time of the year, coming home in large numbers on leave, is a marked decline in the recognition of the Imperial aspects of their work and a tendency to concentrate on its material aspect. If this is a correct diagnosis: if the younger generation of Englishmen have, to any great extent, ceased to consider the greatness of the work that they can be doing for India and the Empire, and are confining themselves to consideration of the greater or less amount that they can individually make out of it: this is one of the worst possible signs for the future. If it exists at all, one may hope that it is but a passing phase—a symptom of the industrial unrest that is almost universal in England at present, where too many people seem to believe that the sum of human happiness is to be found in doing the least possible amount of work for the highest possible wage. The Prince of Wales' words have the true ring: they are a call to duty, while at the same time pointing out that its acceptance will entail neither discomfort nor privation, but rather the reverse The signal honour done to the Service, both in esse and in posse, by His Royal Highness' presence, should be felt by both alike: and, if the latter respond, as all must trust that they will, to the invitation of the Royal recruiting officer, one may hope that the former will equally take his words to heart, and will ask themselves whether they too are, in the Prince's words, "doing their duty and playing the game" to the full extent of their ability.

CURRENT TOPICS.

Lord Willingdon.

Everyone who knew him in India will welcome the news of Lord Willingdon's appointment as Governor-General of Canada. During his service as an Indian Governor for the almost, if not quite, unprecedented term of eleven years, Lord Willingdon established a hold on the respect and affection of his "subjects," British and Indian alike, to which it is difficult to think of a parallel. He was generally believed to have the reversion of the Viceroyalty "in his pocket" when Lord Chelmsford's term ended: and the wish among his friends was so much the father of the thought that he received a host of congratulations on what their senders believed to be a settled fact. Considering the length of his labours in India, though their second part was spent in a much less strenuous atmosphere than that of the first, it is not unlikely that Lord Willingdon welcomed his release from India; though the keenest disappointment was certainly felt in other quarters when the decision went against him. Lady Willingdon's many friends, in and out of India, will be specially glad to welcome her once more as Her Excellency—a title which she so greatly adorned and which, in the case of wives of Indian Governors, virtually died with her; since, immediately after her departure from India, orders were issued confining it to the wives of Governors-General. In the appointment of Lord Willingdon to one of the highest posts in the Empire India will recognise a tribute to herself as well as, if one may say so without disrespect, to "one of the very best."

Lord Lytton.

Lord Lytton's intention to avail himself of the four months' leave out of India permissible to Indian Governors was announced before the outbreak of the Calcutta riots, so that there is no reason to look for a connexion between the two events. At the same time, it is not unreasonable to suppose that he will welcome the opportunity of amplifying, by word of mouth to the Secretary of State, the defence of the action of his Government which he recently offered to the Bengal Legislative Council. The great Anglo-Indian newspapers of Calcutta have described this defence as not altogether convincing; but, to the unbiassed observer in this country, it seemed quite a good one except in one particular, and that perhaps the most important of all—Lord Lytton's decision to remain in Darjeeling. It is now suggested that this was partly due to "heavy domestic anxieties"; but, with all the private sympathy in the world, it is impossible to admit anything of the kind as a valid reason for his decision; which, if it is to be justified, must be justified on public grounds alone. It is not, of course, unlikely that there were excellent public reasons; but, if so, one must admit that one would like to hear what they were.

Syed Hossain Bilgrami.

Syed Hossain Bilgrami, who has just died in his eighty-fourth year, was one of the most distinguished Indian Moslems of his time; though most of his life's work was done rather out of the limelight. For nearly forty years he served the State of Hyderabad in various important posts, including those of Private Secretary to the late Nizam and Director of Public Instruction. He resigned the latter appointment in 1907 to become the first Indian member of the Secretary of State's Council: a post which, however, he only held for two years, resigning it when Lord Morley declined to agree to his request to be allowed to winter in India and so to avoid the English climate at that season, which he found not only disagreeable but injurious to his health. On his return to India he again entered the service of the Nizam in the capacity of Chief Adviser to the Prime Minister, a post that he held for several years before he finally retired in 1913 A certain tendency to indolence, of which he himself was well aware and which was, perhaps, fostered by his career in one of the most conservative of the Indian Native States rather than in the more strenuous atmosphere of British India, militated against his achievement of so high an eminence as that to which he might otherwise have aspired. He was a man of essentially aristocratic ideas, in which the environments of his service in Hyderabad doubtless tended to confirm him: and he had small sympathy with the democratic movement in India, particularly in his native Province of Bengal; where, like most Bengali Mohammedans, he was a supporter of Lord Curzon's partition and was much disgusted at its repeal, which he regarded as an unwise concession to interested clamour. He was closely associated with the late Sir Syed Ahmed in the latter's foundation of the Mohammedan Anglo-Oriental College (now the Muslim University) of Aligarh: and, but for the tendency already mentioned, might to some extent have taken the place left vacant by the death of that really eminent man. He received the C.S.I. from the British Government, and various titles of honour, including that of Nawab, from the Nizam.

Agriculture.

The report on agricultural operations in India in 1924-25, issued by Mr. Clouston, the Agricultural Adviser to the Government of India, lays special stress on the need for better organisation of research and better facilities for the training of investigators. The first and most urgent necessity—one that will doubtless receive special attention from the Royal Commission—is to find a solution of the increasing difficulty in co-ordination between the Imperial and Provincial Departments of Agriculture, brought about by the "transfer" of the subject under the Reforms. And it is startling to find that the total combined expenditure of Government on the Agricultural Departments, both Imperial and Provincial—a little more that 82 lakhs of rupees—is substantially less than the amount expended on subsidising the Indian steel industry. Research work has already produced results of enormous importance, particularly in the staple crops of India, such as wheat, cotton, rice, jute, and sugar-cane, as well as in others less universally grown. Of the latter, the report mentions ground nuts, an improved strain of which has been successfully introduced in replacement of other crops of much smaller economic value, previously grown on comparatively poor soil. Mr. Clouston says "The Indian

Digitized by Google

peasant is not slow to recognise a good thing when he sees it, especially when its adoption does not mean any material increase in the expenditure he is in the habit of incurring. When he realised that greatly improved races of his staple crops were forthcoming, he did not fail to take advantage of that knowledge, with the result that to-day they are being grown literally on millions of acres throughout India."

The new Pusa varieties of wheat, besides being qualitatively a marked improvement on the old, need less water than the ordinary Indian wheats. In the year under review they occupied an area of over 2¼ million acres: and their reputation stands so high that demands for them have been received from a number of British and foreign countries, including places so widely separated as New South Wales, Rhodesia and the Ukraine. There has of late been a strong demand for improved varieties of bearded wheat in some parts of India, where the "naked "variety is specially subject to the depredations of birds: and this has been successfully met. In so vast a country as India, the most valuable strains naturally vary considerably, according to locality and nature of soil: and special attention is paid to the production of different sorts of seed to meet the widely varying conditions. The acreage under improved wheat crops represents an advance of 300,000 acres over that of the previous year: and a similar advance is to be found in the case of the other staple crops, of which the increase in acreage under improved crops is as follows: Cotton 660,000, jute 90,000, sugar-cane 25,000: though rice shows a decline of 34,000. The total acreage under improved crops in 1924-25 was 6,760,000: representing an increase, over the previous year, of nearly 1,100,000 acres.

Czecho-Slovakian Trade.

One's first feeling, on being confronted with a report on the trade of Czecho-Slovakia with India, is one of surprise that there should be any—at any rate, any worth a formal record. It appears, however, from a report dated June 3, by Dr. A. Sevcik, that a very considerable volume of trade does exist. The report says that, in the matter of trade with India, Czecho-Slovakia may be regarded as the successor of the Austro-Hungarian Monarchy: and that, while a considerable proportion is still being handled by re-exporters from Germany, the United Kingdom and Holland, the direct trade is steadily developing every year. In 1924 the direct imports from India amounted to 161 million crowns, and the exports to India to 180 million. These figures look more imposing than they really are; but they are important enough to deserve notice, even when it is remembered that the present rate of exchange is 164 Czecho-Slovakian crowns to the pound sterling.

The report says that, though the total import figures for 1925 are not yet available, it is apparent that a great advance has been made in a number of the most important items. In 1924, more than half the total imports consisted of jute, to the value of 82 million crowns. This figure was doubled in 1925, when it amounted to 165 million. An even more striking advance is shown by raw cotton, the value of which in 1925—223 million crowns—was nearly four times that in 1924, when it was 49 million. The imports of rice also doubled, from 13 to 26 million, and those of hides and skins more than doubled, from 6 to 14 million.

As regards exports, it would appear that no figures are yet available for 1925. In 1924 glassware accounted for 73 million crowns, or about 40 per cent. of the total. The various classes of iron and metal goods reached approximately the same value; and other important items were beet sugar (23 million) and textiles and cotton goods (18 million): though it is rather surprising to learn that the comparatively small proportions of the latter trade are due to "the fact that all textiles of foreign manufacture are being boycotted by the Indian population." What is described as an important factor in the trade relations between India and Czecho-Slovakia is the Prague International Fair, held twice annually in March and September: the report says that "the popularity of this Fair in India is growing every year: many Indian buyers have already visited it in the course of their trips to Europe, and many others have entered into advantageous trade relations with Czecho-Slovak manufacturers by addressing their inquiries to its Management."

Artificial Silk.

Some weeks ago, we referred to the large and increasing market for artificial silk presented by India. Some remarks by the Indian correspondent of the *Silk Journal* are of special interest in this connexion. He says that most of the shops that sell piece-goods in India are considered to be out of date if they do not keep in stock some varieties at least of artificial silk goods: and that Indian mills are making increasing use of artificial silk yarn for admixture with cotton yarn, especially for the borders of "sarees "and "dhooties." The imports into India of artificial silk yarn are increasing at an extraordinarily rapid rate: the correspondent gives the figures as 850,000 lb. in 1924, and 2,305,000 lb. in 1925.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 27.

Bloodless Revolution?

The Swaraj Party in Bengal is now for all practical purposes a caucus of Hindu Extremists; any doubt in regard to this has been removed by the proceedings of the Bengal Provincial Conference which met, and broke up in confusion, this week at Krishnagar. The President, Mr. B. N. Sasmal, made a reference in his opening speech to those of his party who believe in recourse to immediate violence, or had been marked as suspects: and he suggested that they should have nothing to do with the Executive of the Congress; but he added that he had heard that the majority of the delegates objected to these views, and he offered to withdraw them if this was the case! This produced such a demonstration against himself that he resigned his post; but he was afterwards persuaded to return. The proceedings however became more and more disorderly: and, by the end of the second afternoon, an attempt of Mr. Sen Gupta, the Leader of the Party, to restore peace having been howled down, the malcontents took charge of affairs and passed a resolution putting an end to the so-called Bengal Pact, thus ringing down the curtain on the farce of Hindu-Moslem unity which has bolstered up the Swarajists for the last four years. On this note the Conference was abandoned in confusion; but, apart from showing clearly the growth of open communal hatred, it has been the occasion of a definite statement which should remove any lingering doubt as to what is behind the Extremist mind. The President threw over Mr. C. R. Das's demand for political freedom within the Empire: and, in demanding complete independence, he openly stated that Revolution was the ideal method of gaining it and that "its place among the nations of the world is very high, nay, the highest." Then followed references to the relation between revolution, violence, and bloodshed, as to which his translators do not agree. All this is received with approval, while his mild condemnation of political anarchists who indulge in dacoities for personal gain and who threaten party leaders, creates an uproar which eventually ends the Conference. There is not a plain man in India who can understand why our rulers do not attack at its source the dissemination of such poison into the weak minds of wretched youngsters who will inevitably be inspired to murder and anarchy by it, while the astute lawyer leaders defy the Courts to find incitement in their devilish word-weaving.

Mrs. Sarojini Naidu's Account.

Mrs. Sarojini Naidu, one of the All-India leaders whose name is familiar in the English Press, was also at Krishnagar: and she issued a Press statement in Calcutta on her way to the United Provinces. She says that the unseemly and distressing scenes which eventually broke up the Conference caused her no surprise, as it already had the elements of disunion, and from the first it foredoomed its destruction. She speaks of the terrible storm of inter-communal bitterness and hostility which has swept over Bengal, which makes it impossible to bring a dispassionate and balanced judgment to the consideration of vital and far-reaching national issues; after which she closes: "I have supreme faith in the high and fervent patriotism of Bengal. I refuse to accept the fiasco of Krishnagar as anything but an unfortunate and momentary interruption of the great national programme for Swaraj through united action." Nothing but supreme faith could achieve such optimism.

Bepin Chandra Pal's Summary.

Babu Bepin Chandra Pal, the Nationalist leader, once in the forefront of the Extremists but now hanging on to their tails, devotes the greater part of his article in the *Englishman* this week to Krishnagar and its lessons. He thinks that it has brought out more clearly than ever before the "decadence, if not the complete destruction, of political thinking in Bengal." He reprimands Mr. Sasmal for toying with revolution, and he contrasts him with the late Mr. C. R. Das who, he pertinently observes, "was neither an ignoramus nor a fool, but was always able to keep himself within decent limits in public life." In his view the Swarajist Party in Bengal has completely disintegrated, because they are entirely divorced from realities, and are seeking to destroy the very foundations of civilised life. This is one of his closing paragraphs: "The almost universal opinion among the Hindus is that the present communal difficulties and dissensions in Bengal are very largely, if not entirely, due to Swarajist intrigue and bribery. The Swarajist leadership systematically tried to bribe the Mohammedan members of the legislature to join the campaign of obstruction. Mr Das's Hindu-Muslim pact was a part of this policy.

The Logical End.

The evidence for the 1929 Commission is slowly but surely preparing itself. Whatever may be the case in the rest of India, the attempt to thrust upon Bengal an alien system of democratic Government has utterly failed. It must be admitted that the Swaraj Party has swept the country and that, so far as there is any real enthusiasm for politics, it is exclusively confined to this party and its members; the politically-minded Indian in Bengal only counts in the degree in which he is an Extremist. When Mr. C. R. Das was the leader, he established an absolute autocracy, and no other person or party counted at all; but since his death the whole house of cards has collapsed. The Bengali Swarajist has proved that he cannot govern himself, he cannot manage a meeting or a party, let alone a Government, and his organisation is torn from top to bottom with dissensions, jealousies and intrigues. By bribery and intimidation it is still a power in the land, and nothing has been more striking than the pressure brought to bear, through the caste system, to give it a hold over Hindu society. The only permanent thing that has been achieved is the incitement of racial hatred to a pitch which it will take generations to allay: the pathetic tranquillity of the masses has indeed been disturbed. Finally, when the Extremist Press is not snapping at its opponents, it spends its time yelping at authority. To-day, if ever it did, the Bengal "nation" wants a ruler: but never has it been clearer that it is quite incapable of electing one.

The European Association.

Col. J. D. Crawford, General Secretary of the European Association, addressed the Calcutta branch last night on "Politics at Delhi." He is a Member of the Central Legislative Assembly, and he was giving an account of his stewardship in the past session. In his view the political organisations of the future will be on a communal basis: and he pointed out the necessity in these circumstances of the European party taking particular care in joining up with other groups. He mentioned incidentally the fact that British recruitment for the Indian Army has fallen away to far below normal requirements. He accented the part that the non-official European has now to play in political life, a fact which is all too clear to the already over-worked merchant in India. In this connexion the latter to the *Morning Post*, commenting upon Lord Reading's omission to mention the public work of the commercial community and the non-official European, is pertinent. When the time of the Executive seems to be so largely taken up by devising concessions and compromises, the inspiration and the will to rule must increasingly come from other sources, if government is not to become a mixture of drift and muddling through.

The New Loan.

Government has announced the issue of a new loan to the nominal amount of 25 crores of rupees, interest being at 4 per cent. subject to income tax. The price of issue is 88 and, in the view of the market, with the abundance of money now about, it is cheap.

Men and Things.

Another good fellow has gone this week; Leslie Lamb, the Clerk of the Course to the Turf Club and the best judge we have ever had, put up a fine fight for three months against the broken spine he sustained from a riding fall; but, to the sorrow of everyone who has met him, he has lost at last. The Registrar of the University, Dr. Paul Bruhl, is shortly retiring after a distinguished educational career in India; a great scholar and a picturesque personality, he will be much missed from the more serious circles that his presence adorned. Kesoram Poddar, a war millionaire who has been heavily hit since, has just lost an action against the Government of India in which he claimed 25 lakhs of rupees on the basis of two pencil ticks in a list of goods submitted to a Deputy Controller of the Munitions Board; had he won, they would have been two of the most expensive marks in history. The Rotary Club have been dining themselves this week, and they have also managed to get together a gathering of the newer public bodies of the City to insist on Government replacing the existing floating Howrah Bridge with a fixed structure; it begins to look as if the wheel of rotary is going to turn to some purpose here. Calcutta was hit by a 60-mile tornado on Tuesday; in three minutes it had torn up a hundred trees on the Maidan and had eight liners bobbing about in the docks, mashing the smaller fry to splinters. Luckily it stopped in time, but many lives were lost, and one of our beauty spots, the Casuarina Avenue on the Maidan, looks toothless The Deputy Mayor still clings to his post in spite of threats that, if he does not resign, the public shall hear all about him.

The Trivial Round.

There was hardly any mail in Calcutta this week, which is due to your strike; another reminder of the similarity between a general strike and war. Amongst the cabled news we note with satisfaction that Captain Meyer of the Calcutta Club is doing well at the Tennis Tournament at Surbiton. Probably you have already had the news that

UNIVERSITY OF DUBLIN. TRINITY COLLEGE.

The Professorship of Arabic, Persian, and Hindustani will be Vacant in Michaelmas Term. Applications, accompanied by a detailed statement of qualifications and copies of testimonials, must reach the undersigned on or before Monday, June 21.

The salary attached to the Chair is £250 per annum, and the duties consist chiefly in lecturing Probationers for the Indian Civil Service. The tenure of the Chair is seven years in the first instance, but the Professor will be eligible for re-election. Chambers in College will be provided. G. WATERHOUSE,

Secretary to the University Council.

Digitized by Google

the Indian Army is proposing to send a polo team to America; it will be a sporting crowd in any event. Soccer is now all the rage, and the enormous crowds on the Maidan make the need of a stadium more obvious than ever; last Saturday Calcutta beat Mohan Bagan 1—0 before the biggest crowd in memory, and were lucky to do so; Dalhousie, largely drawn from the Mills, are also unbeaten, and the meeting of these two next week-end is causing much speculation. The London Musical Comedy Company, with Madeleine Rossiter producing, is bravely defying the weather at the theatre; with the aid of Calcutta's own Telma Lonman and other amateurs, they have put up a very good revival of "The Belle of New York," and we are grateful to them for this diversion from the worst spell of weather we have had this year. Everyone is reading Miss Fitzroy's "Courts and Camps": she has managed to be witty and candid without affending. "Precedence," she says, "is the focal point of all Indian social nonsense." It may be in Simla but, especially since the War, there are many new circles in India which seem to have escaped Miss Fitzroy's attention; probably Simla has yet to hear of their existence.

Markets.

The jute market has been conspicuously featureless of late; apart from limited sales by mills, business for both old and new crop has been very limited. Gunnies have been steadier on buying for ready and May shipment, but the demand was easily satisfied, and prices have reacted. Heavy goods are dull, with no business to test the market. The piece-goods market is passing through one of its dull periods which is usually associated with this time of the year, but dealers are confident of a revival in the near future. With the London tea market closed owing to the Whitsun holidays, and no sale here until next week, there is nothing to report in this section.

The Stock Exchange has been responsible for a considerable turnover during the past week, with Government Securities and tea shares particularly in the foreground. Particulars have now been received of the new Rupee Loan, which is to be at 4 per cent. issued at Rs.88 and repayable at par between 1960 and 1970. Government 3½ per cent. Paper has picked up eight annas during the week, and most other gilt-edged have shown proportionate rises; the market is still advancing and the tone is strong. Buyers of tea shares continue to be on the increase, and rises in almost all the best shares are reported; a number of the more favourite issues are nearly impossible to purchase, as investors are holding out for better prices; and these appear to be within the bounds of probability with the prospect of a good opening at the first tea sale here next week The market closes a fraction quieter. Jutes have displayed a degree of activity but, after minor fluctuation, show little alteration on balance. Coals and cottons continue neglected, the little flutter in the former shares having now ceased; rubbers are slightly below the best on the reaction of the commodity price.

Exchange after receding 1-32d. earlier in the week, has steadied, and 1s. 5 29-32d. has been available for ready T.T. but, at the close, Banks are doubtful sellers over 1s. 5⅞d. Money is very easy, with call and short notice quoted at 2 to 2¼ per cent.

INDIA OFFICE COMMUNIQUE.

Extinction of Exports of Opium from India.

In reply to a question in the House of Commons on March 8, Earl Winterton announced that the Government of India intended, subject to the approval of the Legislature, to reduce progressively the export of opium to all destinations so as to extinguish the trade altogether within a definite period, except for strictly medical purposes. He also stated that the period within which extinction would take place had not yet been fixed, and that the position of the cultivators was one of the factors that must be taken into account in defining it.

Resolutions approving the Government of India's new policy were adopted by the Indian Council of State and Legislative Assembly on March 16 and 18 respectively.

The Government of India, with the concurrence of the Secretary of State, have now decided to fix ten years as the period within which the export of opium from India, for other than strictly medical purposes, will be progressively and finally extinguished. A ten per cent. reduction of such exports will accordingly be effected in the year 1927, so that the last export will take place in 1935; during this period exports will be under the system of direct sale to the Governments of the importing countries, the sale of opium by public auction at Calcutta having already been finally discontinued with effect from April 7, 1926.

A CORNER OF AFGHANISTAN IN THE 'NINETIES.

The assumption of the title of King by the Amir of Afghanistan is a natural result of the altered status of his country brought about by the treaty that followed on what the Afghans persist in regarding as their victorious war against the British Government of India in 1919, which they describe as their "Jehad for Independence." It also serves to remind one of the really great advance made by Afghanistan in the last few years under a ruler who clearly recognises the advantages of education and progress, and is making a not unsuccessful attempt to overcome, if only by very slow degrees, the dead weight of ignorance, conceit and suspicion that meets him at every turn.

Rather more than thirty years ago, the writer had a glimpse of one of the outlying portions of Afghanistan —the Province of Khost. I happened to be with my regiment in the Kurram Valley when the Political Officer there—the present Sir John Donald—was told off to delimit a short stretch of the "Durand Line" boundary: he was provided with a small escort of Indian troops, under a British officer—myself: and he was accompanied by a survey party in charge of Lieut. Macaulay, R.E., who was killed when the Wazirs rushed the camp at Wano, a few months later. Donald's "opposite number" was a locally very famous man, perhaps the most trusted of all Abdurrahman's counsellors—Shirin Dil Khan, nicknamed "the Thug Sardar" from his summary methods with evildoers: and mine was an Afghan Colonel whose name I do not remember. Of Shirin Dil it used to be said that the Amir had declared that, when he should die, he would like to take out his heart and make each of his counsellors eat a bit of it, in the hope that, by so doing, they might achieve some of his intelligence and courage. The boundary that was to be delimited had already been marked out on the maps; but it was not easy to fix it on the ground; because, though the maps of both sides were identical in every other respect, the frontier place-names on the Afghan map had been shifted approximately two miles further south than their position on ours. Donald and Shirin Dil used to hold a daily meeting under a "shamiana" tent, just inside the Kurram border, at which each of us was expected to drink two cups of green tea, plentifully sugared (with sugar candy, with a bit of string in it) but without milk: the convention was that, if one drank only one cup, and refused a second, one was lacking in appreciation and therefore in politeness; but, if one asked for a third, one was greedy. Besides his military escort, Shirin Dil had a sort of bodyguard of mounted ruffians who were literally armed to the teeth—they carried carbines and swords, besides a miscellaneous collection of pistols and daggers stuck all over them: but their clothes were hardly in keeping with their armament, as they consisted of a job lot of Indian railway uniforms that had lately been bought at auction in Peshawar: and it was curious to see a fierce looking desperado, bristling with weapons, with the legend "Ticket Collector" on the

Digitized by Google

collar of his coat. At one point of our trek, it would have saved us a very long detour if we had cut across a corner of the Afghan province of Khost, and Donald proposed to do this; but Shirin Dil flatly refused. Donald argued that, as there was peace between "the God-granted Government" (Afghanistan) and the British Government, there was no reason why a peaceful mission should not take a very convenient short cut through Khost: and said that he proposed to do so, whether Shirin Dil agreed or not. On Donald's instructions, our "munshi" wrote, in Persian, a statement of what we were going to do, and our reasons for it, with the addition of a paragraph saying that, if any trouble occurred, the responsibility would be Shirin Dil's. It so happened that, the day before, Shirin Dil's munshi had been sent to Kabul with a report, and there was no one competent to write a reply except Shirin Dil himself, who started to compose one. But the Thug Sardar was a poor hand with a pen: and, after a brisk start, the writing got slower and slower—I can see the old gentleman now, his face twisted with the effort of composition in a not too familiar language, as he pushed his turban further and further back over his shaven crown, and scratched his head—until at last he gave up the attempt, threw down the pen, and cried—"Oh, very well: come as my guests." And we did: and were royally entertained, particularly at dinner, where a number of dishes, each more succulent—and more greasy—than the last, followed in almost interminable succession.

The Colonel and I paired off for the march: and he told me a number of interesting stories, one of which is worth repeating. He had been one of the Amir Abdurrahman's orderlies at Kabul: and one day the Amir said that he had received indifferent reports of the state of discipline and smartness of the troops in Khost, particularly in the matter of drill: he had therefore decided to send a smart man to wheel them into line: and his choice had fallen upon the Colonel. The latter, who held a comfortable job at Kabul which he had no desire to exchange for a ticklish one in the wilds of Khost, put his hands together and represented that he was unworthy; but, said he, "the Amir merely looked at me, and said nothing; so I hastened to add that, though unworthy, I was full of zeal to go." Very soon after his assumption of command, one of his Captains committed so gross a mistake in his drill that the Colonel lost his temper, and so far forgot himself as to strike him: whereupon the Captain, supported by two sergeants, behaved in a mutinous manner. The Amir heard of the incident, and sent for all four of them to Kabul: where, after a full and patient inquiry, he hanged the Captain, blew the two Sergeants from guns, and sent the Colonel back to Khost to continue the motion. If the costume of Shirin Dil's bodyguard was peculiar, that of the Colonel was almost equally so. He was dressed in a puttoo suit, not unlike a modified pattern of the modern "plus fours," girt with several belts in which he wore a sword as well as an extensive armoury of smaller weapons: he sported a particularly aggressive pair of "love locks"—thick black curls hanging down in front of his ears; and he crowned the edifice with a very battered old bowler hat that had once been white—given to him, as he explained, by a British officer during the occupation of Kabul following on the Afghan War of 1878. When we arrived at his headquarters, at the end of our day's march, a parade was held in our honour. The troops included a pony battery, a number of (very) irregular infantry, in all sorts of dress and standing in various easy attitudes while they presented arms, a large contingent of drummers and trumpeters, each of whom beat or blew his instrument according to his own taste and fancy and without any attempt at harmony with the rest, two standards—if I remember rightly, a red St. Andrew's cross on a blue ground—and the Colonel. Donald inspected the troops and took the salute: and, as he and Macaulay and I rode slowly down the line, it was an impressive sight to see the Colonel standing stiffly between the two standards, with his left hand spread out against the once white bowler, and his right holding his sword in the regulation position of the salute.

C. K.

CORRESPONDENCE.

THE EXODUS TO THE HILLS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Your Indian leading article of June 3 quotes freely from Mr. Rudyard Kipling's poem on the subject of the Simla exodus. I have often wondered what precise effect Mr. Kipling meant the last three words of his poem to have on the meaning of the whole.

The last two lines are, as far as I remember, quoting from memory, "But for work, administration and the rest, Simla's best." Does "and the rest" mean, Latinised, etcetera, or does it mean et otium? The supporters of the exodus have always assumed the first meaning; but, as an inhabitant of the plains, I have always considered this a proof of the thickness of the skin of Homo migrans.

I shall never believe that Mr. Rudyard Kipling is wholly innocent of a double entendre which, by one word, alters the meaning of all that has gone before.—I am, etc.,

A. K. T.

"BRITISHER."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Those who read the reports of the Prince of Wales' speech at the Indian Civil Service dinner may have noticed his use of this rather curious variant of the more orthodox "Briton." It is a "dictionary word" all right, though one of the standard dictionaries gives it as of American origin. Among those who actually heard the Prince say "we Britishers," there must have been quite a number who recalled a previous use of the same phrase in the Prince's presence: when, at the State banquet given in his honour at Delhi, Lord Reading, in referring to the Prince's sportsmanship, said "We Britishers place a special value on the word Sportsman." They will probably also remember the sort of sough that went round the assembly, caused by the simultaneous creaking of upwards of eighty "boiled shirts" as every man instinctively turned and looked into the eyes of his neighbour when Lord Reading pronounced the two words.

—I am, etc.,

CALEB CALF.

THE INDIAN MAIL.

India's Industrial Population.

In our comments on Lord Irwin's message to THE NEAR EAST AND INDIA, rather more than two months ago, it was remarked that the total number of persons employed in Indian industries is not much more than a million, or about .3 per cent. of the population. The recently issued report, on the working of the Factories Act in India for the year 1924, shows that our estimate was pitched rather too low: for, in that year, India's factory population was a little over 1,455,000, that is to say approximately .45 per cent. of the total. The statistics given in the report show the number of male factory hands employed to be just over a million, with 235,000 women and 72,000 children, the minimum age of the latter being fixed by law at twelve years. It is stated that the number of women employed in the tea factories (one of whose chief difficulties is, as noted in a recent issue, the shortage of labour) and in the jute mills tends to rise, while the number of children employed in the latter remains constant, though it has fallen greatly in the cotton-spinning and weaving mills. The number of factories coming under the Act was 6,406, an increase of 520 over the previous year. One gathers, from a perusal of the report, that this increase is largely due to attempts to evade the provisions

Digitized by Google

of the Act by starting a number of small factories, the total number of hands employed in which was less than that recognised by the Act: particularly ginning factories in the Central Provinces and hand match factories in Bombay, in the latter of which children were being employed from six years old and upwards. In both cases, the Local Government promptly notified the factories concerned, and thereby put an immediate stop to the attempt of their owners to evade control.

The Garhwal Man-eater.

Mention was made last February, in these notes, of the man-eating leopard whose victims in Garhwal numbered 114 at the end of 1925, when the organised attempt to destroy it had to be temporarily abandoned. It was resumed in March and was brought to a successful termination on May 1, by which time the leopard had added eleven more persons to the tale of his kills. The previously unsuccessful, but finally successful, English sportsman bagged it in the end by a lucky accident. He had decided to sit up for ten consecutive nights in a likely spot: and, when this produced no result, he gave himself one more chance. On this last night, hearing the rush of some animal, he pointed his rifle in the direction of an indistinct blur, and switched on his electric torch; when he found the bead of his foresight exactly covering the body of a leopard at which he fired—the thing was all over in a moment, so that he would have had no time to adjust his aim. The leopard was found dead at the foot of a small cliff over which it had fallen, and has been identified as the man-eater: and a reign of terror that has lasted for nearly seven years has now been ended. The animal had appeared to bear a charmed life: it had twice been caught, once in a trap and once in a cave, but both times escaped: it had been many times shot at, and had on several occasions eaten poisoned baits without taking any harm. Its last exploit before it was finally shot is a good example of its almost uncanny wariness. Two rifles, with their muzzles directed on one of its kills, were fixed to a tree, with stout fishing lines joining their triggers to the kill, and a number of bushes were stuck in the ground between the kill and the tree, to ensure that the lopard should pull the kill away from the tree and thus set off the rifles. The leopard came in the night, uprooted all the bushes and carried them away so as to leave the ground open, and then dragged the kill towards the tree, thus slackening, instead of tightening, the lines attached to the triggers of the rifles. The sportsman who shot the leopard is credited with the statement that he is a poor "shikari" who cannot get the better of an ordinary leopard in four days. This particular leopard took him 2½ months—a tribute to the exceptional cunning of the animal no less than to the remarkable pertinacity of the sportsman.

The White Tigers of Rewa.

It is reported that the Maharaja of Rewa has shot a second white tiger, similar to the one whose skin he presented to King George last year. The writer of these notes, while on tour in Rajputana and Central India a few years ago, had the opportunity of seeing one of the white tigers in a cage at Rewa, as well as the black panthers at Udaipur. The latter are, of course, well known—they are represented in the London Zoo: and are merely examples of melanism, though. for some years past, those bred at Udaipur have "bred true"—the early litters were partly black and partly ordinary, but they are now invariably black. As regards the Rewa tigers, these are, no doubt, freaks: but they do not appear to be albinos, since the one in captivity at Rewa had pale blue eyes. The ground colour of the skin is whitish, instead of yellow, and the stripes are grey instead of black: the gums and the inside of the mouth are pale pink instead of red. The Maharaja said that six or seven of them were known to exist in the jungles of his State, and that it was believed that they were beginning to pair and to "breed true": a belief that seems now in a fair way to be justified.

The Student's Prayer.

The *Englishman* of May 13 prints a letter under the above heading, the writer of which explains that the Calcutta riots have had a most serious effect on the prospective examinees of the University. Not only have they given up their valuable time to action in defence of mosques and temples, but even now, when the actual riots are over, "the panic is not gone, and the examinees can scarcely pay full attention to their studies in such a panic-stricken state of mind. Besides, judging the question psychologically, it is clear that at such times they are more apt to forget things than to learn them. If no consideration in the way of lenient examination is shown, the condition of many examinees will be beyond pity. Specially, the examinees in Botany and Zoology deserve this favour."

Here is a tip for the Oxford and Cambridge undergraduates who worked as volunteers during the General Strike. No doubt they, in common with most other students, are always more apt to forget things than to learn them, and would always welcome "lenient examination"; though they are hardly likely to plead a "panic-stricken state of mind" as one of their reasons for expecting it. It may perhaps be presumed that the writer of the letter is a prospective examinee in botany and zoology, since he does not explain the special difficulties that beset students of these subjects—possibly the unwillingness of a panic-stricken youth to venture on the public roads leading to the Calcutta Zoo and Botanical Gardens. The appeal is characteristic: it is not a very unusual experience for an examiner in India to find that the answer to a question consists of an admission of ignorance coupled with a prayer for "leniency" on the ground that the writer is "a poor boy," or something of the sort: and, when such a heaven-sent excuse as the Calcutta riots presents itself, it is not surprising that it should be worked for all it is worth.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning,

Turkish Loan Prospects.

In the light of Turkey's known financial needs, it may possibly be assumed in some quarters that a sequel to the settlement over the Mosul question will be the commencement very shortly of negotiations for a Turkish loan. While it must be emphasised that there is every desire here to help Turkey in her efforts to re-establish her economic position, it must at the same time be pointed out that there can be no question of a loan until Turkey has come to an arrangement over the settlement of her existing liabilities. Her attitude over the Unified Debt and other cognate matters has had a very serious effect on Turkish credit, and it would be useless in the circumstances to approach either the London or the Paris money market without a proposal for dealing at the same time with Turkey's existing liabilities. As, however, Turkey has now shown that she is actuated by a different spirit from that which she has hitherto displayed it may be assumed that she will be anxious to meet her financial obligations which constitute the only outstanding question. If so, given, of course, adequate security, Turkey is not likely to experience the slightest difficulty in obtaining financial assistance.

The Turkish Floating Exhibition.

We have been so pre-occupied with home affairs that the fact that we are promised a visit this month from a Turkish ship bearing examples of the various products of the country has probably been forgotten by a good many people. As a matter of fact, the vessel—the Kara Deniz—should visit London on the 25th inst., if it be found possible to adhere closely to the schedule. Perhaps it would be well, however, not to take the dates too literally, and to allow something for the changes and chances naturally pertaining to such a maritime adventure—to regard them, in short, rather in the light of pious aspirations which may or may not be fulfilled in their entirety. It may be noted, *en passant*, that the Turks are paying considerable attention to the publicity side of the enterprise. I have just received a copy of an impressionist poster in striking colours designed to advertise the enterprise, and very possibly it or something similar will help before long to enliven our hoardings. The idea of a floating exhibition reveals very plainly the initiative of the present-day Turks, and we can only hope that the undertaking will have the success it deserves and that one result will be a considerable increase in the commerce between Great Britain and Turkey.

Bulgaria's Refugee Loan.

The Council of the League of Nations has now given its decision in the matter of a refugee loan for Bulgaria, approving on conditions of the negotiation of a loan of £2,250,000. As will be gathered from our Sofia Correspondent's message, which will be found on another page, this decision will be hailed with great relief in Bulgaria. It is about eighteen months since the question of a loan through the League was first raised, and the amount now sanctioned is somewhat below the figure asked for, but the League have made careful inquiries into Bulgaria's needs as regards the refugees, and the Committee appointed in connexion with the question are satisfied that the lesser amount will meet the requirements of the situation. While full details of the agreement are as yet lacking it would appear that as regards the security for the loan Bulgaria has been able to make better terms than she anticipated. The Sofia Correspondent indicated that the railways would be a guarantee for the loan, but this has not been the case probably because the loan is less than was asked for, and the loan will be guaranteed by the excise on spirits and the match monopoly. The actual negotiation of the loan is dependent on the satisfaction of certain conditions laid down, notably, that Bulgaria must arrive at an adequate arrangement with the holders of the pre-War loans. It may be taken for granted that little difficulty will arise on this head, and that London and Paris will shortly supersede Geneva as the scene of negotiations, and with the information of the League behind him, M. Molloff, the Finance Minister, will find the task of arranging a loan and of obtaining an advance very much simplified.

Suez Canal Progress.

The development of the traffic through the Suez Canal in recent years has been most striking, the more so in view of the depressed trade conditions, and it is very obvious that once world commerce becomes normal the utilisation of the Canal will increase enormously. During 1925 there were 5,337 passages through the Canal, repreresenting a net tonnage of 26,761,935, which constitutes a record figure and is an advance of 1,652,053 tons on the figures for 1924. It is interesting to note that the number of larger vessels using the Canal has continued to increase, and in 1925 the number of vessels of a gross register of over 10,000 tons represented 8.6 per cent. as compared with 8.2 per cent. in 1924. At the same time

the average period of stay of vessels in the Canal shows a decrease, being 15 hours 20 minutes for 1925. The financial results of the company were again very satisfactory. The total receipts amounted to 608,677,855.31 francs, an increase of 100,093,498.89 francs, and the surplus of receipts over expenditure after various allocations was 484,340,021.46 francs, and with the balance brought forward the available sum was 486,840,710.35 francs. The dividend on the shares has been raised to 412.484 francs, and the gross return on the shares is 424.984 francs, representing a net income of 300 francs.

The Rubber Situation.

There is not a great deal more to be said about the rubber market. The price still remains under 1s. 9d., and while there have been slight indications of American buying the fact that the price has not been affected shows that the purchases cannot have been of any great importance. It is not many weeks now to the end of the quarter, and it seems as if we are fated to experience a further reduction in output. The prospect is one which may encourage shareholders, but it cannot be maintained that the fluctuations which will assuredly follow a reduction can be good for the industry. But if the Americans continue to abstain from buying they can scarcely blame us if they have ultimately to pay very much higher prices to satisfy their requirements.

COMMENTATOR.

COMPANY NOTES AND REPORTS.

OCEAN SALVAGE AND TOWAGE.

The report of the Ocean Salvage and Towage Co., Ltd., for the year ended December 31, 1925, states that the company has balanced its revenue account. The estimated reduction in working expenses, indicated in the financial statement for 1924, has been more than realised, and trade in the Black Sea shows a substantial improvement. All ships and plant have been maintained in first-class condition, and all repairs and renewals have been charged against revenue. Owing to the exceptionally fine weather in the Baltic in 1925, the number of casualties in that area fell appreciably below the normal. The company has consequently received no dividend from the Neptun Company for 1925. That Company, after setting aside Kr. 10,000 to the necessary Legal Reserve, has carried forward a sum of approximately £5,100 to its current year's revenue account For the past few months of the present year the Neptun Company shows very satisfactory progress. In the company's own area the results for 1926 are more favourable than those for the corresponding period of last year.

THE BULGARIAN REFUGEE LOAN.

(From Our Own Correspondent.)

Sofia, June 5.

Everyone here is waiting anxiously for the decision of the Council of the League of Nations with regard to the request of the Bulgarian Government for the support of the League for a loan of £3,000,000 for the settlement of the thousands of Bulgarian refugees from Macedonia, Thrace, and the Dobrudja, who, driven from their birthplaces, have sought safety in Bulgaria.

The request for a loan was made for the first time last year by the Tsankoff Cabinet. Subsequently two special delegates of the secretariat of the League carried out a general investigation, and after they had made a favourable to report to Geneva the request was renewed by the Liaptcheff Cabinet in a more modest form. This step led to a new inquiry to establish the statements put forward by the Sofia Government, and as this inquiry confirmed the data given in the Bulgarian memorandum submitted at Geneva nothing further stood in the way of the settlement of a question which had been on the tapis for eighteen months and the solution of which is called for in the interests of the maintenance of order and tranquillity in the Balkans.

The settlement of the refugees requires disposable lands of an extent that the Bulgarian State does not possess, and calls for the drainage of vast marshy regions in the district of Bourgasle along the shore of the Black Sea, a step which would result in rendering these regions productive and in indirectly strengthening Bulgaria's economic position. It will be a heavy task, and it is necessary to undertake it at once. That is why the Government, after having obtained a decision in principle at Geneva, will do everything possible to obtain from the banks of Paris and London—especially London—who will issue the loan, an advance of £1,000,000, which will permit the immediate commencement of the works contemplated. If the Council adopts the Bulgarian point of view, which the Minister of Foreign Affairs, M. Bouroff, and the Finance Minister, M. Molloff, will put forward the utilisation of the loan, guaranteed by the land, the cattle and the agricultural stock granted to the refugees, and in the second place by the revenues of the Treasury, in particular those of the railways, will be carried out in Bulgaria not by international commissions as in Greece but by the State banks, namely, the Banque Nationale and the Banque Agricole, which will form part of the special department to be created by the union of the different services concerned in the matter under the control of a delegate of the League. Such are probably the general conditions of the loan; what will be the special conditions, and so to say the purely financial ones, will be determined at the negotiations which M. Molloff will enter into immediately with the London banks.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 15.

The continuance of the stoppage in the coal industry remains the prodominant influence in the Stock markets as a whole and is restricting business in many sections. Last week it was fully hoped that negotiations were about to be renewed, but the complete failure to find a common basis for discussion between the two parties to the dispute has suppressed what optimism there was. Both the market for British Government securities and the American exchange have been effected, for in regard to the former it is realised that with a prolonged stoppage of the coal mines the Chancellor's warnings in his budget speech cannot be ignored, while in regard to sterling exchange the fact that the mines have already ceased production for six weeks cannot fail to be reflected in our export trade. During the past week the gilt-edged market has also been affected by the heavy output of new issues of capital, and in some cases, particularly 3½ per cent. Conversion Loan, prices have eased. It has been estimated that total applications for four recent issues—the New Zealand, Victoria and San Paulo Coffee loans and the D.R. Cotton Mills—amounted to over £200 millions, and although allowance has to be made for the operations of "stags," the figures give some idea of the great volume of available resources and of the tendency of the present trade stagnation to divert capital into investment channels.

Home rails are naturally inclined to dullness in view of the losses arising from the industrial situation which the traffic returns disclose. In the speculative sections business is spasmodic and is rather dependent upon foreign operators. In the mining section Rhodesians have been prominently strong. Among industrial securities the feature has been the rise in tobacco shares following the announcement of the long-talked-of scrip bonus by the British American Tobacco. Imperial Tobaccos participated in the upward movement on the strength of its large holding of British American Tobacco shares. These two huge concerns are in an exceedingly strong financial position, and although the consumer of tobacco may perhaps look at the figures of profits with mixed feelings, the shareholder has every reason for satisfaction.

Company Law Reform.

The report of the Committee appointed some eighteen months ago by the Board of Trade to consider what amendments are desirable in the Companies Acts, 1908 to 1917, comes at a time when the question of the accounts of joint-stock undertakings has been raised in a somewhat acute form. We refer to the publication by Sir W. G. Armstrong Whitworth and Co., of a report and accounts which show the company to be in a most distressful plight financially, and the speech of the new chairman, Lord Southborough in which he set out the position in a commendably straightforward manner. From the facts disclosed by Lord Southborough it is obvious that the financial position of the company for some time has been far less sound than could have been gathered from the published accounts, and the question arises as to how far the publication of clear accounts should be made compulsory. The Company Law Amendment Committee is of opinion that in the matter of accounts companies should be left a free hand within reasonable limits. A number of useful but minor recommendations are made as to improvements in balance-sheets, but we doubt whether the greater protection for the shareholder will be secured until more drastic measures are taken.

The proposals of the Commitee in regard to "house to house" and circularised offers of worthless shares have already received considerable publicity in the Press. The Committee has taken the obvious line of suggesting severe penalties for offenders in this respect and recommends that liability should be extended to principals, agents and directors. For many years certain sections of the Press have been urging that steps be taken on these lines for the protection of the ignorant investor, and it is to be hoped that the suggestions of the Committee will be speedily adopted in this respect.

A Successful Investment Company.

When in 1924 the Independent Investment Company was launched many of us (including the writer) were sceptical of its success on the lines laid down in the prospectus. It was generally allowed that any investment company under the guidance of Mr. J. M. Keynes would be efficiently controlled. But that an investment policy would be followed which had up to that time "been acted on in only a limited measure" was considered somewhat of a reminder to the City that it had something yet to learn in the direction of scientific investment. Mr. Keynes can refer to the success of the Independent Investment Company as evidence of his ability to teach the City something new. Before, however, accepting this evidence as the final proof it might be well to consider if Mr. Keynes has not been aided by the trend of events which has brought prosperity in common to most investment companies. No one admires the abilities of Mr. Keynes more than the writer, and the Independent Investment Company is possibly and probably marked out to become one of our leading investment undertakings, but enthusiasts should not rush to the extreme and claim for the company a position which may in part be due to circumstances not wholly connected with the astuteness of the directors. It is possible that the investment policy oulined by the company at the commencement of its career has been followed by City financial experts for some years although perhaps with variations. We are inclined to think that the shrewd common-sense judgment of Mr. Keynes in selecting an investment has been a factor even more important than a rule of thumb investment principle.

The production of crude by the British Burmah Oil Company and the Rangoon Oil Company for May amounted to 52,667 barrels.

The production of the Dacia Romano Petroleum Syndicate for May was 1,640 tons. Ten wells are in drilling, nine are in production, and three are being fitted up.

The directors of the Bengal-Nagpur Railway have declared an interim dividend of 15s. per cent. on the ordinary stock, payable on July 1, which together with the guaranteed interest of £1 15s. per cent. will make a total distribution of 2½ per cent. for the half-year, less tax (the same as a year ago).

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, June 1.

Renewed Loan Rumour.

The financial articles in the commercial newspapers already begin to give expression to the general hope that the present Government will at least modify the financial policy of its predecessors and open the door more freely to foreign capital. For the hundredth time the rumour goes round that a loan is to be contracted on the London market, but there seems little reason to suppose that this rumour is better founded than the others, none of which was justified by events. It is a case of the wish being father to the thought. Money is badly needed for firstly the railways, for the lack of adequate transport facilities is being felt more and more as the industrial production of the country increases, and secondly to relieve the Budget from the heavy charges with which it is burdened for payment of the coupons of the Consolidated Debt.

The loan of 200 million lire from Italy is still under discussion, and M. Manoilescu, Under-Secretary for Finance, has left for Italy to take up the negotiations.

Trade in 1924.

The preliminary figures of the imports and exports of Roumania during 1925 have just been published. The value of the imports is given as 30,098 million lei as against 26,192 in 1924, and the value of exports as 29,025 million lei as against 27,823 million lei in 1924.

Shipping Intelligence.

DANUBE SHIPPING.

The Sulina Channel Problem.

(From Our Own Correspondent.)

Bucharest June 1.

Great inconvenience and no doubt serious loss has been caused to shipping companies trading with Danube ports by the inability of the European Commission to maintain the necessary depth of water at the Sulina Bar. This is partly due to the continued stormy weather which rendered dredging impossible, and partly to the fact that the northerly direction of the Sulina Channel renders it liable to be rapidly filled up with sand drifts, the prevailing direction of which is southerly. Moreover, the prevailing wind being from the north-east, this tends to bank up in the channel the silt carried down by the river.

A decision appears to have been reached that it will be necessary to cut a new channel in a southerly direction, which will give it more protection from the currents. The situation of the new channel has not yet been decided upon, but it has been suggested that the St. George arm of the river should be used.

Roumanian public opinion never ceases to agitate for the abolition of the European Commission, and the placing of all the supervision of Danube navigation under the jurisdiction of the International Danube Commission, the present seat of which is Bratislava.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Liverpool, July 3). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Manaar for Port Said, Colombo, Madras, and Calcutta (London, June 26).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (London, June 30).

British India Line.—S.s. Mantola for Bombay and Karachi (London, June 25); s.s. Matiana for Colombo, Madras, and Calcutta (London, July 3).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, Trieste, also Algiers, Corfu, and Gruz if inducement offers (Liverpool July 1, Swansea July 6); s.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, also Algiers and Volo if inducement offers (Swansea July 10, Glasgow July 10, Liverpool July 10).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 23); s.s. Incemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 17).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, June 24); s.s. Nellore for Colombo, Madras, and Calcutta (London, July 24).

Ellerman and Parayanni Lines.—S.s. Algerian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona,* Venice, Trieste, and Fiume* (Swansea, June 18); s.s. Egyptian for Gibraltar, Malta, Alexandria, Jaffa,* and Haifa* (Liverpool, June 23); s.s. Maronian for Malta, Alexandria, Jaffa,* and Haifa* (Liverpool, July 13); s.s. Gerano for Algiers,* Malta, Piræus, Volo,* Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 3); s.s. Lisbon for Gibraltar, Malta, Patras, Smyrna, and Constantinople (Liverpool, July 24). (* Subject to sufficient inducement.)

Prince Line.—S.s. Stuart Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli (Syria), Mersina, and Alexandretta (London, June 26).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Electric Power Plant.—Tenders are invited by the Egyptian Ministry of the Interior for the installation of electric power station equipment at the towns of Keneh and Luxor, for the production of three-phase alternating current, at 3,300 volts, 50 cycles per second. Tenders will be received by the Section des Municipalites et Commissions Locales, Ministere de l'Interieur, Savoy House, Cairo, up to noon on August 1 and must remain firm up to October 15. (D.O.T.)

Water Pipes.—The Municipalities and Local Commissions Section, Cairo, invite tenders for the supply and laying down of water pipes in the town of Sembellawein. June 24. (D.O.T.)

Steel Bridge.—Tenders are invited by the Alexandria Municipality for the construction of a steel bridge over the Mahmoudieh Canal at Moharrem Bay, Alexandria. Copies of the specifications and plans may be obtained by interested firms from the Director-General, Alexandria Municipality, at a cost of Pt. 80 per set. November 10. (D.O.T.)

Rails.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 4,980 metrical tons flat bottom rails. July 1.

TURKEY.

Tenders are invited by the Anatolian Railway Administration for the supply and delivery to Haidar Pacha of steel tubes and zinc bars. June 30. (D.O.T.)

Semi-Portal Crane.—The Anatolian Railway Administration invites tenders for one electrically driven semi-portal crane. June 28. (D.O.T.)

Motors and Motoring.

By G. B. B.

The operation of removing carbon from cylinders, or "decoking" as it is colloquially called, is not one beloved of any amateur, and is by no means welcomed even by professionals. The oxygen burning method is adopted in many garages as there is a widespread belief that it increases efficiency and improves engine performance. Some technical engineers of considerable experience, however, disapprove strongly of the oxygen burning method and pin their faith on the "old fashioned," as some regard it, use of the scraping tool.

Personally, I hate removing carbon by any method, but the job has to be done occasionally, and one must either do it well oneself or risk it being badly done by another. But as I have a very open mind on all subjects, due possibly to abysmal ignorance of most, I have been to the trouble of obtaining a precis of the replies of a representative group of factory managers; men who know all about motors and internal combustion engines, who were asked for their views on the question as to whether scraping or oxygen burning were preferable.

Of the replies received 63 per cent. were in favour of decarbonising by means of scrapers and of taking advantage of the occasion by grinding in the valves at the same time. About 18 per cent. of the remainder were in favour of oxygen burning, holding scraper cleaning to be inferior as regards results, more liable to leave particles of incrusted carbon, which, by becoming white hot, would cause pre-ignition. Of the remainder about 50 per cent. favoured oxygen burning, and about 50 per cent. favoured scraping, but made reservations which showed that they had some idea that at times oxygen burning and at other times scraping might be the more suitable.

One of the more experienced of these who replied, said: "Only in exceptional cases where carbon deposits interfere materially with the economical operation of the engine, and where the time cannot be spared to take off the cylinder heads and thoroughly scrape off the carbon, only then should oxygen burning be resorted to between intervals of valve grinding. When an engine is not operating efficiently because of excessive carbon deposits the heads should be removed, the carbon scraped, and the valve inspected and, if necessary, ground in." An opinion which, it will be seen, is somewhat of a hedging character, but which will, I think, commend itself to most readers.

Harmless?

On the other hand is the testimony of a leading firm of commercial vehicle repairers who say that they have used the oxygen burning process for a number of years and have found that it is absolutely harmless to valves or the metal of the pistons, provided proper care is taken. I suppose the whole pith of the matter lies in those last words. Care is the chief thing that goes to make success in most matters and I presume decarbonising is no exception.

At the same time it must be remembered that "carbon" in a cylinder or valve chamber is not pure carbon by any means. Actually it consists of about 75 per cent. road dust, the balance being about equally divided between oil, carbon, and petrol carbon. The latter two burn away entirely leaving no residue, whilst the whole of the road dust remains in a finely divided form. This has to be taken out in some way, either by blowing or by removal with oily waste, and if it is not removed it causes a good deal of wear on the cylinder walls; causing the cylinders to become oval with a consequent loss of compression, and a rapid depreciation of the engine.

Motor Maintenance.

Now that the commercial motor vehicle has become so popular in India and Far East as well as in the Near East, it may be as well for these notes to deal occasionally with questions of motor fleet maintenance. In many cases it is impossible for the owner to supervise everything, as, owing to the great improvement of late in Indian roads, the vehicles often operate far from their base, and yet upon this proper supervision and maintenance depends the success or failure, commercially, of the fleet of vehicles. From time to time, therefore, it is proposed to deal with items of interest to owners in India of commercial motor vehicles, and, initially, it may be said that lesser repairs by local mechanics, major repairs at an established repairing centre and accurate record keeping are all matters to which the closest attention should be and must be paid if successful operation is to result.

Brakes.

Very few car owners seem to realise that the chassis is subjected to far greater strains by the brakes than by the engine. If such owners only tried to visualise what influences are set up in the framework of an ordinary touring car which, travelling at 20 or 25 m.ph. is pulled to a standstill in 30 feet or so, they would realise why brakes require so much, and so frequent, attention. Before long some improvement in brake drum design will doubtless be seen, but at present it is by no means uncommon to see good brake linings working in conjunction with bad brake drums, a combination which is quite as bad as good drums with bad linings. It behoves every owner-driver to see that his brake drums have not warped and that his brake linings are in good condition, particularly if he owns and drives a light car.

The new six per cent. preference shares will receive a dividend for the half-year at the rate of 6 per cent. per annum for the half-year ended June 30.

Digitized by Google

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended June 12, states:—

The difficulties in the way of trade due to the coal strike are gradually increasing and it is, therefore, only to be expected that the volume of business passing in this market will tend to diminish rather than increase. Moreover during the past week a decline in raw cotton has also exerted a restraining influence on operations.

Yarn.—Spinners have not had a good week. The Federation of Master Cotton Spinners have now circulated their scheme for the fixing of basic prices for American yarns and developments will be followed with much interest. It is obvious that there are considerable difficulties in the way of making the scheme a success under present conditions. Sales of this class of yarn are at the moment at a low ebb. Spinners of Egyptian cotton are more favourably situated, but there is much complaining as to the prices now obtainable. Supplies of coal are being further restricted and mills spinning American cotton will in future only run alternate weeks whilst those spinning Egyptian cotton will run three-quarters of normal time.

Cloth.—A fair volume of inquiry has been experienced, but not much of it has resulted in business. The doubtful position as regards delivery dates is an important factor. Transactions for India have been mainly for small lines of light goods and there has been nothing of special interest with regard either to other outlets abroad or the Home trade.

Raw cotton.—Reports regarding the growing American crop have been the chief cause of a weaker tone in this section. No doubt also the smaller purchases of spinners have been a further contributory factor. Closing quotations yesterday were as follows:—American Middling 9.92; Egyptian Fully Good Fair 16.90.

The Bank of England announce the numbers of 592 Four per Cent. Egyptian Government irrigation trust certificates which have been drawn for redemption on July 1.

The Secretary for India gives notice of his intention to redeem the Government of India Seven per Cent. Loan at £102 per cent. on October 5, 1926. Repayment will be made at the Bank of England, from whom information as to the procedure that will be followed may be ascertained. As from October 5, 1926, interest on the Loan will cease to be payable.

Cotton and Cotton Goods.

EMPIRE COTTON GROWING CORPORATION.

A meeting of the administrative council of the Corporation was held in London on June 9. The Chair was taken by the Earl of Derby, K.G.

The report of the council and the accounts of the Corporation were adopted for submission to the general meeting which followed the council meeting.

In referring to the report the Director, Sir James Currie, mentioned that work had been started at the Corporation's new Research Station in Trinidad. The buildings and laboratories had been erected and a first-rate staff had been appointed.

As regards the Sudan, he foresaw in that country vast possibilities not only for the production of cotton under irrigation, but also in the South under rainfall conditions. In the latter connexion he thought that the Corporation, in conjunction with the British Cotton Growing Association, would be able to render material assistance to the Government. The extension of the railway from Kassala to the Blue Nile, which was to take place under the Trade Facilities Act, would be of great assistance as providing an alternative route from the cotton producing areas to Port Sudan.

The following extracts are taken from the report:—

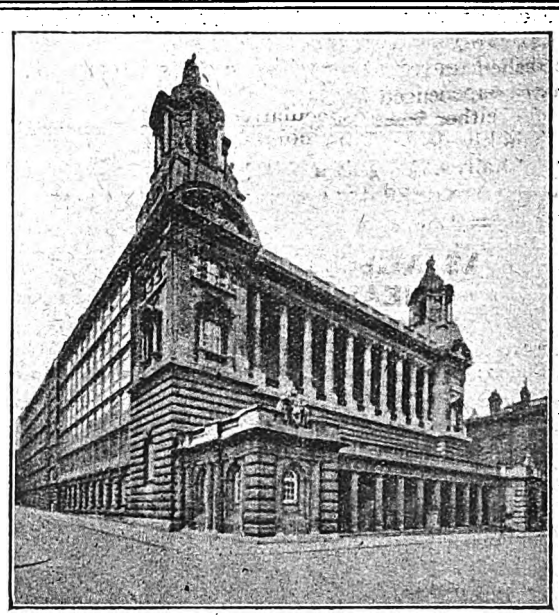
India.

The Indian Central Cotton Committee expressed a desire that the spinning tests carried out last year on single bales of cotton from India should be supplemented by more extensive tests on last season's crop. The Committee accordingly forwarded five bales each of seven different selected varieties, and the Corporation were able to arrange for spinning tests to be carried out on them through the courtesy of members of the Oldham Master Cotton Spinners' Association. The results of the tests will be published in the Corporation's quarterly Journal, the *Empire Cotton Growing Review*. In the meantime, the managers of the mills at which the tests were carried out have expressed the opinion that the varieties 1,027 ALF (Surat) and Cambodia No. 1 appear to be suitable for general use by spinners of ordinary American cotton. They strongly recommended, however, that saw-ginning should be tried on the Cambodia and further spinning tests made to demonstrate the result.

The Sudan.

The formal opening of the Blue Nile Dam at Makwar by the High Commissioner for Egypt and the Sudan marks the beginning of a new era in the development of that country. It represents the culmination of labours which have gone on without respite since 1904. Many of the pioneers of the movement for the development of the Gezira, of whom Sir Julius Wernher and Sir William Mather may be cited as typical names, have passed away without seeing the fruition of their labours—but Lancashire has stood unflinchingly behind the project from the day that it was initiated, and can look back with legitimate satisfaction to the part she has played. Lord Derby was unfortunately unable to represent the Corporation at the opening ceremony, but the Chairman of the Executive Committee and the Directors were present as guests of the Sudan Government. Eighty thousand acres are now under cotton, representing a marvellous piece of organisation on the part both of the Sudan Government and of the Sudan Plantations Syndicate in the few months at their disposal. This year the yield per acre is good—it ought to exceed four kantars per feddan—a marked improvement on the previous two years—and the quality is of the highest.

The Chairman and the Director likewise visited Kassala. The flood had been disappointing and the quantity of land under irrigation was much under an average, but here, again, the yield was excellent and the quality of the cotton very high. The Council desires to direct particular attention to the smoothness with which these great schemes are working out. The blessings which they have brought and are bringing to the inhabitants of the Sudan are incontestable, and the picture that those portions of the country under irrigation present to-day, compared with only a few years back, is indeed astonishing to those who are familiar with both spectacles.



Where the labours of so many, living and dead, have contributed to the present happy result, the Executive hesitate to mention any particular name, but they feel they would be lacking in their duty if they failed to point out the mighty debt that it owed to Mr. Eckstein, the Chairman of the Sudan Plantations Syndicate, who in fair and foul weather has stood behind the scheme and its fortunes for over twenty years.

Rainfall cotton prospects continue to make satisfactory headway. The recent decision of the Sudan Government to link up Kassala with the Blue Nile by means of a railway will facilitate progress. Provided the present high standard of general administration in the Sudan is maintained, it is difficult to place a limit on its possibilities.

So far as the particular efforts of the Corporation are concerned, Mr. M. A. Bailey has made an admirable beginning with his seed selection work, and the whole problem is being tackled in a much more comprehensive fashion than was the case a few years ago. Mr. Killby, who recently visited the country, has written a report, supplementary to that of Sir John Russell and Dr. Leake, on the subject of the organisation of Research Work, and this report will receive the careful consideration of all interested.

Cyprus.

Last year the Corporation secured for the Agricultural Department a supply of Triumph seed from America, as

the Department wished to carry out trials with this variety. This year the Governor has asked for the Corporation's assistance and advice regarding the possibility of extending the cotton-growing industry. He proposed starting an experimental station, and inquired if the Corporation could provide an officer to establish and run it. It appears that boring operations are being carried out to determine the possibilities of extending the area which can be placed under irrigation. The Executive Committee considered that it would be premature to start an experiment farm until the result of these boring operations is known. The Executive Committee consider that while the Corporation ought to neglect no opportunity of helping the various cotton-producing colonies, even though, as in the case of Cyprus, the total output can never be large, at the same time it would seem that information as to the quantities of water available for irrigation and the price at which it could be supplied to cultivators should first be obtained, since it is on these two factors rather than on the demonstration of improved cultural methods at an experiment farm that the possibility of extending the area under cotton must primarily depend. The Governor has been asked to keep the Corporation informed as to the results of the trial borings now being undertaken and to give an estimate of the increased water supply. The question of the possibility of finding an expert will then be further considered.

LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 9:—

Egyptian Futures.—Sakel Contract.—For the greater part of the week our market, under the influence of strong Alexandria advices, has shown an advancing tendency. The upward movement has uncovered a certain number of stop-loss orders, as noticed yesterday when November were rushed up to 16.15d. through this medium. To-day, we have experienced a reaction, and with little support in evidence either from speculative or trade sources, prices have quickly declined 45 points from the above-mentioned figure, finally closing at an advance of 39 to 53 points for near positions, and 47 to 52 points for new crop months since we last wrote. It is rather difficult to account for the recent "bullish" enthusiasm witnessed at the other side, and we can find no solid grounds to justify the advance that has taken place. At this time of the year, new crop contracts are generally scarce, and as the bulk of the Alexandria buying has been concentrated on these, prices have been pushed more rapidly than they would have been if the movement had come at a later date in the season. The Egyptian-American straddle difference has widened appreciably during the last few days, now standing, roughly, at 650 points (November and October respectively). Under present conditions, this premium appears rather on the excessive side, and sales in our market against purchases of American may ultimately be profitable.

The trade situation here at the moment is unsatisfactory, owing to the prolonged character of the coal dispute, and there is nothing in recent crop accounts to justify the appreciation that has taken place. In some quarters, it is reported that the improved political aspect in Egypt has encouraged speculators to operate freely. Whilst certainly, owing to the cotton held up by the Government, there is a lack of tenderable Sakel cotton offering, this is the only point to which we could attribute any sustained market strength, and even this is nullified to a certain extent in our market by the very large stocks of tenderable Sudan Sakel now on offer. Apart from spinners' activities being restricted by the recent rise that has taken place in the raw material, an appreciation they have been unable to obtain in yarns, it is almost certain that the Coal Controller will reduce the working hours in the Egyptian section to 50 per cent. of their working capacity. We still consider, in the absence of detrimental crop news, either Egyptian or American, or a sharp change in the commercial outlook, that prices are on too high a level, and that sales of new crop positions at about present levels are to be recommended.

Upper Contract.—We have again to report only a very limited business in this option, but with Alexandria showing more strength than we have latterly been accustomed to, an advance of 28 points has been influenced here. We do not look for much change from the present level, and probably prices will be guided by fluctuations in the American market.

Egyptian Spot.—An improved inquiry has again been noticeable during the past week, and the daily sales have shown a welcome increase. It cannot be said, however, that there is, as yet, any general tendency on the part of the trade to "come in" and replenish stocks at the mills, which, by most accounts, are now considered to be at a rather low ebb. Possibly, when the present dispute in the coal trade has been settled, movements in this direction will become more prononuced. In the meantime, buying on a hand-to-mouth scale still predominates. The daily spot demand has supplied no fresh features of interest. Trading in Sakel cotton has covered all grades from Fair to Extra Fine (for the latter quality up to 22.25d. was paid yesterday), but dealings have been of a very restricted character.

Uppers have attracted attention almost solely for the Strict Good Fair cotton at from 12.00d. to 12.50d., and Pilion has, this week, been rather neglected. The inquiry for low cotton, of all descriptions, still persists, and a fair business has been done at prices ranging from 5½d. to 10.00d. White Egyptian has been in some small request. Sudan Sakellaridis continues in favour at prices ranging from 18⅞ to 19.50d., but little inquiry has been experienced for Tokar. American Seed Sudan has been in improved request and a fair business has resulted at from 150 to 400 on.

C.i.f. business has been very quiet, but forwardings to spinners for the week ending 4th instant were returned as 11,275 bales. Estimated sales 1,800 bales Egyptian and 1,150 bales Sudan. Quotations of Sakel has been advanced 25 points for Extra Fine, 55 points for Fine, and 45 points for Good down to Fair. Upper and Brown have been raised 40 points. F.G.F. Sakel to-day 17.35d. F.G.F. Upper to-day 12.70d.

Company Meeting.

SUEZ CANAL COMPANY.

A Record Year for Traffic.

Increased Dividend.

The seventy-second general meeting of the Suez Canal Company was held in Paris on June 7.

The report presented by the board of directors stated that as they had ventured to hope at the last meeting the results, however brilliant, of the financial year 1924 had been surpassed in 1925. Never since the creation of the enterprise had the traffic of the Canal been so active; the receipts collected amounted to 192,081,000 gold francs, a surplus of nearly four per cent. over those of the previous year. Converted into French francs there was an increase of one-fifth in the net profit. It was therefore proposed to increase the gross dividend per capital share from 327 to 424.98 francs. It must doubtless be recognised that the shipping movement had been stimulated during the first quarter of 1925 by certain factors of an abnormal character, as an analysis of the traffic would show. That explained why the results of the first months of 1926 were inferior to those of the corresponding period of last year. But the second part of the financial year 1925, not having been affected by exceptional factors, it seemed that the comparison should henceforth be carried out under more favourable conditions. Even if that legitimate hope was not realised there would be nothing disquieting in that. Thanks to the prudent administration in the course of recent years which the shareholders had not failed to approve, the soundness of the enterprise was such that a slackening of world commerce would not menace the stability of their dividend.

The total receipts of the year 1925 amounted to 608,677,855.31 francs, showing compared with those for 1024 an increase of 100,093,498.89 francs. That increase they owed to the extent of one-half to the conditions in which the conversion into French francs of the receipts realised in gold francs was carried out; as regards the other part the surplus which arose from the comparison of the transit receipts in 1924 and 1925, converted in the same conditions, represented about 27 million French francs; lastly, under the heading "Proceeds of Investments," appeared a receipt which exceeded by 22¾ millions that which figured in the accounts of the previous year. The proceeds of the conversions of funds would be found to be less by about 50 millions as a result of the decision of the Court of Appeal of Alexandria by virtue of which the company must pay in francs (Egyptian tarif), which are at present at the parity of the gold franc, the coupons and the repayment of bonds. It would be noted that in the accounts of the year the amount of the company's charges remained the same as for the past year, although it would henceforth represent gold francs, as was already the case as regards expenditure in Egypt; that was precisely the additional expenditure expressed in a corresponding decrease in the proceeds of the transmission of funds. The expenditure totalled 64,257,333.85 francs. The increase compared with that of 1924 was 4,092,440.06 francs. It was due to the fact that the dredging effected in the Canal had been more important.

The position of the sinking fund for works of development had led them to propose the reduction from 50 to 25 million francs of the allocation for that account. On the other hand, the increasing rise in the cost of materials had compelled them to ask for an increase from 15 to 25 millions in the allocation to the account for the purchase of material, which ought to assure to them the necessary resources for the replacement of obsolete stock.

Allowing for these allocations the excess of receipts over expenses stood at 484,340,021.46 francs, and, adding the balance brought forward from 1924 of 2,500,688.89 francs, there was a disposable total of 486,840,710.35 francs. It was proposed to fix the profits for division at 464,770,704.22 francs, and to deduct from the balance of 22,070,006.13 francs a sum of 20,000,000 francs to be added to the extraordinary reserve, and to carry forward 2,070,006.13 francs. The division of the distributable profit of 464,770,704.22 francs between those entitled to it would result in a dividend of 412.484 on each share. That dividend, increased by 12.50 francs in the shape of interest, would represent a gross revenue of 424.984 francs and a net revenue of 300 francs.

The maritime traffic of the Canal during 1925 consisted of 5,337 passages, representing a net tonnage of 26,761,925 tons. This figure, the highest that had ever been reached, exceeded by 1,652,053 tons the 1924 result. The traffic in ballast amounted to 2,581,698 tons and represented 9.6 per cent. of the whole traffic of the Canal, against 9.2 in the preceding year. The average tonnage of the ships passing through the Canal showed a marked increase on 1924, reaching a gross tonnage of 6,916, against 6,765. The number of large vessels passing through the Canal continued to increase, as was shown by the proportion of passages made by boats exceeding 10,000 tons gross, which rose from 8.2 in 1924 to 8.6 per cent. The number of passengers amounted to 269,522, an increase of 5,653. The division into nationalities of the traffic showed little change. The British flag showed, as compared with 1924, a considerable progress of 1,021,758 tons; it was followed by the Dutch, German, and French flags. The special traffic of the port of Port Said, consisting of vessels which did not make the passage through the Canal, had reached 1,558,000 tons, an increase of approximately 10 per cent.

The movement of merchandise via Suez, pursuing the increasing progress that had taken place in recent years, amounted in 1925 to 26,578,000 tons in weight, exceeding for the first time the best pre-War figures. The traffic outwards, however, had not increased by comparison with 1924; while the exports to the Far East of oil and petrol remained without an appreciable change, those of manufactured articles had notably decreased. The increase was then entirely in the return traffic, and arose to an important extent from the abnormal activity in consignments of wheat. That activity was explained by the concurrence of bad European crops with the existence of considerable stocks in India and of an Australian crop much superior to that of the previous year. But the expansion of the return traffic was due also to other categories of merchandise, among which mineral oils, rice, and essential oils showed the most important progress. In particular the increase in the traffic in mineral oils was shown in the rapid development of the transit of tankers, the percentage of which in the traffic was 12.8. Finally it was necessary to record, among the characteristic features of the traffic of 1925, the appearance of some products new to the Canal: pig-iron originating from India, molasses from Java, sugar from Queensland.

As had already been remarked, the results of the commencement of the current financial year had up to the present been less satisfactory than those of 1925. The net tonnage passed through during the first three months marked, as compared with the corresponding period of last year, a decrease of about 700,000 tons, explained by the disappearance of the element of exceptional activity which was constituted, during the first quarter of 1925, by the commerce in wheat. The traffic in cereals had reverted to normal figures. As regards other products ordinarily carried through the Canal in the direction south to north, they continued to assure an abundant traffic. And, what was a more important thing, the outward-borne traffic showed a clearly characterised improvement, demonstrative of an interesting resumption of European exports of manufactured goods. These were favourable symptoms which permitted the hope that the decreased traffic placed on record during the course of the earlier months would not be markedly augmented between now and the end of the year.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Egyptian Parliament.

Although it is obvious that there is a considerable amount of explosive matter lying about in Egypt, the less the fuss that is made over it, the smaller will be its capacity for damage. Among Zaghloul Pasha's followers are many who would like to hold up the machinery of government, not because by so doing they would be able to give effect to any definite policy that they have worked out to its logical conclusion, but merely because they know of no other way of emphasising their own importance. So long as Parliament is sitting the deputies can be relied upon to make a lot of noise, and the greater the attention paid to them, the better they will be pleased. It is to be hoped that the Prime Minister and Sarwat Pasha, who represent the Liberal element in the Cabinet, will know how to avoid noticing non-essentials and will refuse as long as possible to play into the extremists' hands by yielding to the provocation that is sure to be given them in abundance. The postponement of King Fuad's visit to England is unfortunate, but the tactical reasons that prompted the decision were, no doubt, compelling from the Egyptian Government's point of view. When the parliamentary session is over there will be less opportunity for provocative speech and action, and Egypt will be able to settle down more easily to routine work. It would not be without advantage, if less stress were laid in the British Press on the lucubrations of Zaghloulist organs. Lack of self-control, ignorance of world affairs and failure to appreciate the responsibility of the Press combine to stereotype the kind of article which seemingly is the only one that comes readily to the pen of most newspaper writers in the country. In time they will grow out of this weakness; at present, if they were to commend moderation or to suggest that there are two sides to every question, they would be denounced as traitors to the Egyptian cause. Yet there is no reason to suppose that the bulk of Egypt's population would not welcome a friendly agreement with Great Britain which would give the country respite from political agitation and allow it to get on with the business that matters.

The Little Entente.

Fate seems to ordain that the Little Entente, when its meetings are not actually postponed, should hold them in haste, with eyes on the clock and special trains waiting at the railway station. Three days were promised for last week's meeting at Bled, one of Yugoslavia's most picturesque holiday resorts; but the conference had to be ended on the second day to enable Dr. Benesh to return to Prague, where the political situation is precarious. These meetings, however, even when hurried, enable the three Governments to maintain touch and make each one anxious to avoid possible causes of friction between their respective States. At Bled there was time to go over the old ground of the relations of each of the three with their neighbouring countries. The Roumanian Foreign Minister had to report the conclusion of the new Alliance with Poland, a matter which gave his colleagues an opportunity to repeat their resolve to retain freedom of action for themselves in regard to Russia. On this point, as well as on all others brought up at these meetings, a spirit of confidence and intimacy, which forms the basis of the Entente, simplifies the discussion. Its manifestation is to be welcomed wherever it appears, and in process of time it is to be hoped that the need will be felt of extending this spirit to include in its operations the other States of the Balkans.

The Syrian Mandate.

The report of their stewardship in Syria which the French authorities were allowed to postpone a few months ago owing to the change in the post of High Commissioner was submitted last week to the Permanent Mandates Commission in Geneva by M. de Jouvenel in person. He was able, accordingly, to confine himself to the events of his own tenure of office, and the episode of

Digitized by Google

the Sarrail régime may, therefore, be regarded as closed, as far as the Commission is concerned. M. de Jouvenel's main thesis seems to have been France's present anxiety that the people of Syria should work out their own salvation. Lebanon had itself elaborated a new constitution and elected an Assembly and a President. In Syria proper attempts made to set up a direct Government by the Syrians themselves had given hopeful results; Aleppo had decided from the first to unite with Damascus, while Alexandretta had resolved to separate, but while in Geneva the High Commissioner had received a telegram stating that Alexandretta had voted the abandonment of separation and would prepare for co-operation with Damascus. Another telegram will, no doubt, have informed M. de Jouvenel of the dissolution two days previously of the Syrian Cabinet and the placing under domiciliary arrest of three Nationalist Ministers on account of their "encouraging attitude" towards the rebels. Such incidents must be expected during the transitional period from widespread rebellion to a final settlement. Reports from Geneva suggest that the Commission was impressed by M. de Jouvenel's assurances. In Syria the French continue to have the situation in hand, and the High Commissioner has sufficient confidence in his subordinates to be able to absent himself from the mandated territory for two months.

Transjordan.

Transjordan is essentially a country that will fare better proportionately to the extent that it avoids having a history. There is good reason to suppose that some attention is now being paid to the promotion of its material prosperity, and in the country's chronicles these days economic affairs should figure more prominently than politics. The resignation of the Prime Minister, however, has broken the course of uneventful days. As the strong man in the country, Riza Pasha er-Rikabi has inevitably challenged criticism, and part of his troubles in office has been associated with the alleged violation of the Syrian frontier by Transjordan subjects. According to the Palestine newspapers, M. de Jouvenel adopted the unusual course during his visit to Jerusalem of pressing for his dismissal on the ground that he had always been a Francophobe; but it is more likely that the domestic affairs of Transjordan are responsible for Riza Pasha er-Rikabi's resignation.

Turkey's Share in Iraq Oil.

The recent Agreement between Turkey and Great Britain provides that the former shall receive a percentage of any royalties received by Iraq from the Mosul oilfields. As an afterthought letters were exchanged between the signatories to the effect that the Turkish Government could, if it desired, exercise the right to capitalise this interest in the Mosul oilfields within a year and receive the sum of half a million sterling from the Iraq Government. Very few days later it was reported from Baghdad that this right had already been exercised by Turkey. The report suggested some confusion of ideas or information in Baghdad and it has now been denied. To exercise its right so hurriedly would expose the Turkish Government to the inference that financial stringency in the country was even worse than had been represented. The value of the Mosul oilfields remains problematical, but few people, without more intimate knowledge than is likely to be possessed in Angora, would be found to advise the Turks to accept the capital sum until there had been time to go more carefully into the question of the prospects of the fields. Iraq would, no doubt, consider herself well off to be able to make a single payment of half a million sterling in discharge of all further claims; but as the interests of the two countries, Iraq and Turkey, are bound to be linked together in the future, it is to the interests of both that each should control as much wealth as it can employ to good purpose. If the oilfields are not a commercial success, there is no reason why Iraq should be mulcted in any payment for advantages that she will not receive. On the other hand, if the fields prove to be as rich as it is hoped, on the analogy of the Baku and Persian oilfields that they will, Iraq will be in a position not to grudge the percentage of her royalties that will fall to Turkey's lot. In the meantime, if the Turkish Government, as is not unlikely, should be financially hard pressed, it has the knowledge that a fresh orientation of its fiscal policy, in particular its attitude towards the payment of its foreign debts, will open the door to discussion for loans on a bigger scale than the half a million sterling involved in the Anglo-Turkish Agreement.

A Turkish Plot.

No plot against constituted authority which relies on bombs or revolvers as arguments can count for any sympathy in Great Britain. The greatest disservice that could be rendered to Turkey to-day would be to throw her into the chaos of prolonged civil strife; at the same time it may prove only a little less fortunate that there should be occasion for any savage tightening of the hold that the Angora Government exercises over the country. While, therefore, the British public will be ready to congratulate Mustapha Kemal Pasha on his escape, it is legitimate to express the hope that he will be wise enough to avoid adding to the number of his enemies by countenancing any attempt to indulge in panic-stricken repression of an unsuccessful conspiracy. There can be no question that the Republican régime is responsible for many internal improvements in Turkey. On the other hand, it has wasted much money and valuable time over a misguided foreign policy, and it has antagonised a considerable section of the Turkish people by a hurried and ruthless attack on the religious traditions of the nation. For a long time to come, we imagine, the Angora Government will be able to look after its own security, unless it is rash enough to give serious offence to the Army by withholding pay or by further attacks on Islam. The Turkish Government, however, needs a united people behind it, if it is to bring the country any distance along the path of material prosperity. Those who have actually conspired and failed must pay the penalty of their act, but we trust that the President will feel confident enough of the support of the great bulk of the nation to realise that there is no need to hunt for would-be conspirators who, not having had the courage to act, will be still less likely to do so now, and by a policy of generosity and conciliation may be won over to become loyal citizens of the Republic in the future.

Anglo-Turkish Agreement.

The full text of the Anglo-Turkish Agreement regarding the settlement of the frontier between Turkey and Iraq adds little beyond details to the original summaries. Sticklers for tight-rope equilibrium in diplomatic documents will note that, whereas Iraq undertakes not to "disturb or molest" Turkey's agents and propagandists, the Treaty is silent on the subject of the Assyrians and Chaldaeans in Turkish territory. This omission will be cited in America—the country that refused to charge itself with any responsibility for Turkey's Christian subjects—as a fresh instance of British heartlessness, and there will be many both in Britain and elsewhere who will regret that the Treaty makes no definite provision for these hapless people. On the other hand, the matter-of-fact student of contemporary events will reflect that a Government that massacres its subjects will not be deterred from maltreatment of them by paper promises of good behaviour—an abstract expression which has different meanings in different countries. The best way to secure the well-being of Assyrians and Chaldaeans in Turkey might be to arrange for their removal to the United States or to Iraq; but it does not appear that either country at present wishes to be charged with them. On the other hand, there is always a possibility that the Turkish Government, having no further purpose to serve by regarding these people as dangerous to the Republic, will be more likely to leave them unmolested if foreigners show no exceptional interest in them.

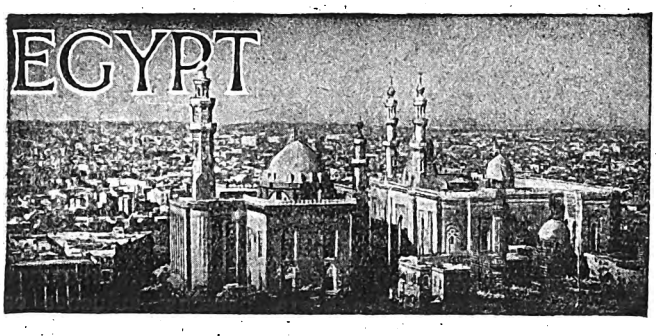
PERSIA AND GREAT BRITAIN.

For the satisfactory state in which Anglo-Persian relations are to-day Great Britain is indebted in no small measure to her representative for the last four years at Teheran. It is an axiom that personality often counts for more in the East than policy, and, although there is no reason to find fault with British policy in Persia during the last few years, it might well have happened that the correctness and friendliness of that policy would have been lost on the Persians, if there had not been someone on the spot to interpret the policy in his own personality in a way that carried with it far more conviction than the bare formalities of diplomatic relationships. This rôle has been most successfully played by Sir Percy Loraine. His appointment as British Minister to Athens will have struck others besides the Persian Government as a curious form of promotion for a representative who has admittedly done well in a post of some delicacy and considerable difficulty. As a matter of fact the transfer is not promotion, for the reason that with few exceptions there are no clearly defined steps as between different Legations, and a Minister even if due for special recognition, must wait for his reward until he receives Ambassadorial rank. Sir Percy Loraine, however, has been four years in Persia, at a distant post, and is entitled to a Legation "nearer home." His transfer, therefore, from Teheran to Athens has to be regarded as a matter of routine; it certainly reflects no change of policy on the part of the British Government towards Persia. On the contrary it may be interpreted as a sign that Great Britain regards Anglo-Persian relations as now on such a sure footing as to be indifferent to any change of personnel in the representation of either country in the capital of the other.



Five years ago—in July 1921—the late Lord Curzon delivered in the House of Lords a funeral oration on Great Britain's policy in Persia. No one, he reminded his audience, had laboured harder than he had, over a period of thirty years, for the integrity and well-being of Persia, and he referred to the sacrifices that had been made by successive British Governments to re-establish and strengthen and guarantee the future existence of the Persians. At the time when he spoke, however, as far as he could see, those labours had been largely in vain, and he was unaware of any encouragement to persevere in the task. The Persian Government, he continued, had deliberately rejected the chance of recovering its fortunes with British aid; it had preferred to fall back on the familiar game of playing off one foreign country against another, even to the extent of accepting Soviet blandishments in the place of British friendship. In commenting upon Lord Curzon's speech, we pointed out that, while many would share his feeling of disappointment, they would lack the personal incentive to despair, and would console themselves with the reflection that failure in the lifetime of an individual might easily be turned to success in a period that seems comparatively short in the history of a nation. Only a faint heart, it was added, could contemplate a scheme of things that subordinates for all time British influence to that of the Soviets, and the suggestion was made that Lord Curzon might yet outlive his disappointment in regard to Persia, if he would devote himself to the all-important task of finding the man who would take up the work of rehabilitating British influence in that country. Lord Curzon has passed; but it was shortly after he had given public expression to his disappointment over Persia that he was responsible for the nomination of Sir Percy Loraine to Teheran. If he had lived, he would have had the satisfaction of learning how, in the short space of five years, personal influence can accomplish what the best will in the world is unable to achieve from a distance over a period six times as long. Although he could not appreciate the fact at the moment, Lord Curzon's decision to abandon an active policy in regard to Persia and to leave the future of Anglo-Persian relations in the hands of the man on the spot may yet prove his most effective contribution to the well-being of the country that he had so much at heart.

British policy, towards Persia, it has to be admitted, has not always been consistent. Our good will towards the country has remained a constant factor, but the methods of showing it have often failed to carry conviction. At the end of the Great War it was almost inevitable that, among the hundred and one problems awaiting settlement we should have difficulty in seeing our way clearly through the entanglement in the middle East that followed the Armistice. The "forward policy" that was the logical sequence of the War failed to give adequate consideration, to the altered conditions in that part of the world. Under the impression that Persia would necessarily look upon Russia through British spectacles, we ignored the fact that in the past she had bracketed both the Russians and ourselves as undesirables, and that her point of view would be determined solely by the chances as they presented themselves to her of being rid of both. For this reason the feeling of despair that accompanied the adoption of a very pronounced "backward policy" was the more unjustifiable, as it argued a misgiving in the ultimate triumph of right over wrong. It was useless for Great Britain to attempt to persuade the Persians that she was actuated by a desire to promote the integrity and well-being of their country when, under the Anglo-Russian Agreement, she was identified with every act of Soviet aggression on the part of Tsarist Russia. Soviet Russia lost no time in making a parade of complete disinterestedness in Persian affairs, while Great Britain in perfect good faith imagined that a vigorous forward policy on her part would be the best for Persia from the Persian point of view. When the British Government discovered its mistake, it proceeded to wash its hands of the country. In so doing, it left the field clear to Russia, and Persia has been able to learn by practical experience that Soviet Imperialism, lacking the restraint that some regard for international opinion had imposed on its predecessor, can be even more dangerous and deadly than Tsarist Imperialism. In spite of a tendency to subordinate her action to the more imperious policy of Russia, the sincerity of Great Britain's intentions towards the Persians has been proved, and to-day Persia is able to indulge in her national aspirations as a united country, in the knowledge that she can always turn to Great Britain for disinterested advice without fear of impairing Persian sovereignty. But just as Persia herself has not yet attained the goal, either in the political or in the economic sphere, towards which she is striving, so for the sake of Anglo-Persian relations it is essential that Great Britain should continue to be represented in Teheran by those who can command respect by their intellectual ability, esteem by their devotion to Persia's interests, and affection by their personality.

The Near and Middle East*

From Our Own Correspondents.

Cairo, June 12.

Resumption of Parliamentary Life.

On Thursday Egypt resumed the parliamentary life which was interrupted on March 23, 1925. in circumstances fully justifying the use by the King of the prerogative granted him under the Constitution. The inauguration of the third Parliament has terminated a period of non-parliamentary government, which, as a matter of fact, has lasted for eighteen months, i.e., since the dissolution decreed after the ultimatum in connexion with the outrage on the Sirdar. During that period the affairs of the country have been directed by Ahmed Ziwar Pasha, to whose courage and devotion to duty Egypt owes her extrication from one of the gravest situations that have confronted her in her modern history and her peaceful guidance through a series of difficult and delicate internal political crises to the present point where once again she is able to enjoy the self-governing powers granted her under the Constitution.

Ziwar Pasha's Services.

Ziwar Pasha has aroused the criticism of all the political parties, who assert that he has betrayed the country and obstructed the execution of the nation's wishes. On the other hand, the foreign communities unanimously agree in paying a warm tribute to the invaluable services which Ziwar Pasha has rendered his country. Onlookers usually see most of the fun and are better able to form an impartial opinion than those directly interested, and it may safely be accepted that the opinion of the foreign communities on Ziwar Pasha's attitude is the correct one and the one that history will record, when it comes to review the past two years.

The New Cabinet.

As regards the new Cabinet, while it might have been worse, it could certainly have been better. Adly Pasha had no little difficulty in forming his Ministry in consequence of the pressure exerted by the Wafd, and obviously was compelled to subordinate ability to political considerations. If he had had a free hand and not been compelled to take Zaghloul Pasha's nominees he could certainly have secured the services of at least two other Liberal collaborators, who would have considerably strengthened the Cabinet from an administrative as well as an intellectual point of view.

Six of its members are full-blooded Zaghloulists. To the presidency, the two vice-presidencies and five of the seven parliamentary offices Wafdists have been elected. Add to that Zaghloul Pasha's speech of thanks after his election as President of the Chamber in which he made it perfectly clear that if Adly Pasha is Prime Minister it is he (Zaghloul) who has the fate of the Cabinet in his hands, and there remains no doubt whatsoever that, although its leader is not in office, the Wafd will nevertheless control the affairs of the country. The only saving grace is that so long as Adly Pasha, Sarwat Pasha and Mohamed Mahmud Pasha remain in the Cabinet one can be certain that none of the excesses which so marked the Wafd régime two years ago will take place. But the question which everyone is asking is, how long will Adly Pasha and his two colleagues find it possible, or be allowed, to retain their posts?

Judge Kershaw's Resignation.

In connexion with the political murders trial and Judge Kershaw's resignation, the humorous paper *Al Kashkul* published a cartoon which rightly expressed the opinion of the more instructed Egyptians. Two Egyptian washer-women are shown with their wash-tub by the side of a canal. They ask a fellah who is standing by whether he has any dirty clothes to be washed and he replies: "If you are clever, wash away the stain of the Kershaw resignation."

Some comment has been heard, particularly in foreign circles, with regard to the interval which, it is alleged, Judge Kershaw unnecessarily allowed to elapse after the acquittal, before he presented his resignation. Any criticism in this connexion displays, however, ignorance of procedure in the Native Courts. In the first place the President is compelled by the regulations to sign the judgment whether he agrees with it or not. Secondly, the law allows a week from the date of the declaration of the verdict for the preparation of the judgment, and until the latter is finally completed the formalities cannot be considered concluded. The verdict was given on May 25 and the judgment was signed and thus the acquittal confirmed on June 2, on which date Judge Kershaw presented his resignation; therefore no unnecessary delay took place. Both from the legal and from the practical standpoint Judge Kershaw could not have resigned any earlier than he did.

King's Birthday Tattoo.

A most successful Searchlight Tattoo took place last Saturday night on the racecourse at Gezira. It was held under the patronage of Lord Lloyd in aid of the Soldiers, Sailors and Airmen Families, and was attended by His Majesty the King, who was accompanied by his Ministers. The programme included tent pegging, musical rides, Highland dances, vaulting, musical jumping, a musical drive by the Artillery, a display by the R.A.F., and a sham fight, concluding with a torchlight parade with massed bands, very much on the lines of Wembley. Everything went with a swing. The organisation was perfect; and the execution of each number was excellent. Last Saturday's show was got up more or less in a hurry as an experiment to see what could

be done in this respect in Cairo, and in view of the great success that has attended this effort a display on a very much larger scale is to be organised for production during the next tourist season.

Alexandria.

Ahmed Bey Saddik has just taken over his duties as Director-General of the Alexandria Municipality, and it is a relief to learn, from an interview that he has just granted, that he intends to give early attention to the defects in the sanitation of Alexandria, which the Chief Sanitary Officer, Dr. Hamdy Bey, brought to public notice. Hamdy Bey's report was a most comprehensive one and revealed a state of affairs which, if only part of what he says is true, is little short of scandalous and the sooner the authorities take the matter in hand and carry out the urgent work that is needed the better it will be not only for the inhabitants of Egypt's second capital but also for the whole country.

Sofia, June 15.

The Harvest.

The period of prolonged drought which followed the rainy spring had begun to arouse serious misgivings, in agricultural circles as well as among the general population. But the rains which fell plentifully towards the end of May and at the beginning of June have dispersed all these fears, and it is expected that the harvest generally will be good.

The National Morale.

At the same time as manifestation of a sense of material relief, which will be immensely furthered by the Loan which the League has granted for the Refugees, one has witnessed here a remarkable improvement in the morale of the Bulgarian nation. This has been shown in recent patriotic festivities organised throughout the country on the occasion of the celebration of the great Bulgarian insurrection of 1876, the prelude to Bulgaria's war of liberation, undertaken by Russia against the Turks in 1877. First of all the jubliee of the proclamation of the rebellion was celebrated; then came representations of those glorious episodes which marked the development of the revolution; and finally, the tragic death of the poet-revolutionary Boteff, a national hero who placed himself at the head of a contingent equipped in Roumania, which crossed the Danube into the then Turkish province of Bulgaria, where he hoped to raise the whole people in an unequal struggle against the might of the Sultans.

As is known, this revolt was stiffled ruthlessly, and the crimes committed by the Bashibazouks were such as to determine Gladstone, whose memory was honoured in these celebrations, to undertake a notable electoral campaign in protest against the Turkish atrocities.

In all these festivities, in which the King and officials took an active part, the Bulgarians demonstrated that they retain a spirit of nationalism which has in it nothing of chauvinism but which renounces completely the national attitude of humiliation of the first years after the War.

The Army and Politics.

The changes recently effected in the high commands of the Bulgarian Army at first passed unnoticed here, but, the news having been transmitted to certain foreign journals, it is to be feared that certain misapprehensions may arise over this affair.

The changes in question are in fact very few in number. What has given them importance is the displacing of the Chief of the General Staff, General Stoyanoff. This measure, so courageously decided upon by the Minister of War, has a history that dates from the first ministerial crisis. It will be remembered that the removal of Dr. Zankoff was not accomplished without difficulty, and that the ex-President of the Council, before resigning, attempted in several ways to disembarrass himself of the Sobranye in which the Governmental majority had become recalcitrant, and to proceed to elections by which he hoped to obtain a Chamber more submissive to his desires. After all the endeavours he made in this direction had come to nought, the Chief of the General Staff under the instigation of MM. Zankoff and Kalfoff, became the promotor of the idea of obtaining the dissolution of the Sobranye by direct pressure on the Palace in the name of the Army. This incredible *démarche*, accomplished without the knowledge of General Volkoff, Minister of War, caused an enormous sensation at the time, but its only effect was to precipitate instead the fall of the Zankoff Cabinet, for no sovereign is more attached to constitutional forms of government than King Boris, who was firmly supported by General Volkoff in the matter of the Army's political neutrality.

From this time, General Stoyanoff was doomed. The new Government waited to see whether he would have the tact to resign of his own accord. And so the ordinary promotion, customary in Bulgaria, was even given to him as in the case of the retirement of officers on the active list. This gesture he did not understand, nor did he wish to understand it. Finally, it has come to dismissal. All sorts of rumours were flying round, and, to cut short these reports, the Minister of War presented to the King a ukase by which General Stoyanoff was recalled from his post on the General Staff and was replaced by Colonel Bakaradjieff, who had shown considerable soldierly qualities in command of his regiment of Philippopolis. At this moment, and to the general amazement, Dr. Zankoff, accompanied by one of his former colleagues, tried an immediate *démarche* and demanded the maintenance of General Stoyanoff at his post: then, having met with a clear refusal on the part of M. Liaptcheff, who defended the measure taken by his Minister of War, the President of the Chamber turned to General Volkoff, with whom, however, he had no more success. M. Liaptcheff and the Minister of War showed themselves adamant in this matter of proscribing all political influence in the Army. As if in spite, Dr. Zankoff, who himself could not ignore this necessity, thought for a moment of renouncing the Presidency of the Chamber in order to scheme against a measure which in his eyes affected some officers whom he counted among his friends, hoping thereby to exert pressure on the Government, for whom he could thus create Parliamentary difficulties and provoke a crisis in the heart of the Governmental party of the Democratic Entente. Fortunately, in face of the firm and unyielding attitude of the President of the Council, he abandoned this intention, which, moreover, was de-

plored by the greater part of his former colleagues. And to put the best possible face on things, he went to M. Liaptcheff to make a frank explanation to him, and to convey that he meant reconciliation instead of rupture.

Is this reconciliation sincere? One must hope so. In any case, it has ended an episode that might have had serious consequences, and the incident provoked by the intervention of Dr. Zankoff is liquidated, showing once more, and in peremptory fashion, that the Bulgarian Army which effected the *coup d'état* on June 9, 1923, to save the country from the anarchy of Agrarian Communism, remains impervious to all political intrigue, and refuses to follow the example of other European countries. In spite of personal idiosyncrasies on the part of a few officers, the Bulgarian Army is more united than ever around King Boris and General Volkoff.

ALBANIA.

Tirana, June 10.

The Carnarvon Mission.

Lady Carnarvon, mother of the late and regretted Aubrey Herbert, so beloved of the Albanians, arrived in this country six weeks ago. It is her fourth visit, for the Countess is carrying on a work in memory of her son in trying to alleviate the misery of this country. She is engaged particularly in the establishment of the refugees and in fighting malaria, the terrible scourge which ravages the coast of the Adriatic Sea. Lady Carnarvon has made her headquarters at Valona, using petrol to exterminate the mosquitoes and quinine to cure the sick. She has built a pretty little house at Valona. Mlle. Pennington and an English lady doctor are helping Lady Carnarvon.

The Refugees.

The Albanian refugees are of two categories, those from Yugoslavia and those from Greece. The first derive from Kossovo—they have been expelled by the Serbs and pushed towards Turkey, their emigration into Albania being vigorously prohibited. There are perhaps 200,000 of them at the moment in Asia Minor, exposed to all sorts of ills.

The Albanians deriving from Greece (Macedonia and Chameria) have been expelled by the Greeks since 1922 under the pretext of the exchange of populations and by their wrongful identification with Turks. Of these there are about 80,000 scattered all over Asia Minor deprived of everything, the Greeks having kept their property—which was the sole aim of their expulsion.

All these Albanians have one desire only: to be in Albania and thus to save their lives and their nationality which the Turks, by scattering them far and wide, intended that they should lose. Up to the present more than ten thousand have succeeded in leaving Turkey for Albania. Six thousand have established themselves at Fier, Durazzo, Kroja, Lushnia, and Kavaja (in the last prefecture a village of fifty families bears the name of Herbert, in memory of Aubrey Herbert).

The question of the refugees is the cause of great anxiety in Albania, which lacks all the fundamental necessaries. Last December the Albanian delegate at Geneva, M. Mehdi Frasheri, in protesting against the tendency of Greece to exterminate the Albanian element in the Chameria, asked the League of Nations for a loan of two million francs, for the purpose of establishing the refugees, and for the construction of the villages destroyed by the Greeks and the Serbians.

Unfortunately this loan was not agreed to, and Turkey has created another difficulty in preventing Albanians from leaving the country over which Mustapha Kemal rules.

General News.

The official journal *(Floto Zyrtare)* has published the names of ten other ex-Ministers and politicians who were summoned to appear before the special political tribunal As they are all abroad they will without doubt be condemned *in contumaciam* to different penalties.

Recently a so-called Indian fakir, a woman, arrived at Tirana and stayed at the Hotel Grand, where she gave *séances* of fortune-telling by cards. But, having predicted troubles, executions and general woe, she was prevented from giving *séances* and then expelled from the country.

IRAQ.

Baghdad, June 9.

The Harvests.

After a winter and spring of remarkable conditions the reaping of the wheat and barley harvests is in full swing, the former being normally three or four weeks later than the latter, and the harvest in general earlier in southern than in northern Iraq. Barley is everywhere well above the average in quantity. It would have been possible to say the same about the wheat, but for the appearance at the very last stage before maturity of a blight which has wrought widespread damage. The pest is known by a variety of local names, and by the Arab cultivators is unanimously attributed to the south-east wind. Its worst effects are reported from Diwaniyah district, where cultivation is by pump. But the wheat is also affected round Baghdad, on the middle Diyalah, and as far north as Kirkuk. The direct damage done to the winter crops by the normal river floods can now be assessed, and is far less than might have been expected. The actual acreage flooded, though it appears colossal to the cultivator concerned, is almost negligible as a percentage of the whole country. But high floods have other less obvious effects than the mere inundation of standing grain. On the Tigris, for instance, many cultivators fear to open their canal-heads at high flood lest the incoming water should pass beyond their control: it may, therefore, be that crops suffer from drought at a moment when wholesale inundation is being kept at bay by a few feet of anxiously-watched earthwork. And the watching of this earthwork on the Euphrates where the highest flood usually coincides with harvest-time—is in itself a task which attracts not the old man from the chimney-corner, but every avail-

able man from his harvesting. It is often necessary, though not for more than a few days at a time, to denude of its cultivators for urgent flood-work a district not itself in danger.

Crops and Revenue.

Although the Government's share in these crops is one of the Treasury's most important sources of Revenue, yet a bumper harvest does not by any means connote large receipts to the Exchequer. The collection of the Revenue share is not in kind but in cash, converted at the wholesale rate prevailing as soon as the new harvest has had its effect on prices. Now grain prices within Iraq bear almost no visible relation to world prices, except that the price within the country cannot fall below that at which it will pay to export; consequently, a harvest flooding the granaries immediately lowers prices perhaps several hundreds per cent.—so extraordinarily fluid are the rates—and the Treasury must convert its share at the bottom of the market. It has even been observed in the past that a bad harvest, accompanied by general poverty, can produce more revenue in cash to Government than a year of teeming plenty. The indirect effects of the latter, however, far more than compensate for this, and in particular the export of scores of thousands of tons of barley to Europe and America must bring into the country money that was not there before—a process too rarely seen in the economics of Iraq.

Rice.

The prospects for rice, the most important of the summer cereals, are excellent save for one point. The superabundant water has deposited silt and to spare, both in the flood-channels and canals of the lower Tigris and in the marshes and bifurcations of the Shamiyah; but this very copiousness, together with the slow fall in level notable on the Euphrates, seems likely to leave still water-covered at the transplanting season many areas where the silt should be exposed.

Cotton.

Not rice, however, but cotton, is at the moment engaging the best brains of senior officialdom in Baghdad. Colonel Stanley, a Director of Eastern Irrigations, Ltd., arrived a fortnight ago as the delegate of his Board to find with the Iraq Government a way out of the Asfar Concessions impasse. Discussions have been held and are continuing. Asfar apart, frequent applications from local would-be developers and cotton growers manifest the firm belief among enlightened Iraqis that cotton can be grown with profit in the soil of their country.

The livestock of the country has not recovered from the severe winter of 1924-25, when thousands of head of sheep and goats and probably a large majority of the lambs and kids, succumbed to the unusual frosts. The figures of the annual sheep-count, which begins in the middle of February, seem to confirm that a succeeding winter of mild and generous rains is not enough to restore the flocks. The desert vegetation of this spring and early summer have been exceptionally abundant; and this, while making life easy for the men of the desert, has had another effect reacting indirectly not on the nomad but on the cultivator: this is its effect on the locusts.

In the first place the mildness of the winter encouraged the hatching of eggs to hoppers early and irregularly. This, although it resulted in a few swarms being subsequently destroyed by cold, has generally made the task of locust-control more difficult. It has, in the second place, rendered nearly impossible some of the minor but usual methods of dealing with the locust in his hopping (that is, his most vulnerable) stage: for the obstruction of the ground by heavy vegetation makes impossible the destruction of a swarm with hand-nets, or its driving and sweeping into trenches. At the same time the desert grass and scrub has itself provided alternative items on the menu of a pest accustomed to dine solely on the grain crops to which his travels might bring him. As it is, this year's swarms have maintained a slower rate of progress from their desert homes to the cultivated areas, thanks to the distractions of the sustaining diet met with on the way. Many will never arrive at all; and in general the damage by locusts this year in the Mosul Vilayet (where alone it is serious in Iraq) is well below the average. In this happy result the Department of Agriculture, which has conducted a vigorous and well-directed campaign since the autumn, may claim a leading part.

CHRISTENDOM'S MOST SPECTACULAR CEREMONY.

The 1926 Celebration.

BY "SELIM."

"Do many really believe that the authentic Holy Fire descends from the courts of Heaven to light the candle of the Patriarch imprisoned in the Holy Sepulchre?"

The Armenian Bishop gave something very like a chuckle when the question was put to him as we sat in the balcony of the Armenian Chapel waiting for the hours to pass. He looked down reflectively to the dusty, cluttered roof of the Holy Sepulchre and to the throng which was already filling the rotunda.

"No one believes such nonsense nowadays," he assured us easily. Which was final—from a Bishop.

Certainly the miraculous nature of the fire is no longer insisted on as it was formerly. In those days a telegram announcing the happy arrival of the Holy Fire at such and such an hour was always despatched to the Sultan of Turkey. There would also be a fast boat in waiting at Jaffa to hurry the sacred flame to the nearest Russian port, thence to spread from candle to candle to the farthest corners of the empire. The Armenians now teach openly that nothing miraculous takes place, and the Greeks allow the same to be understood. But there still remain some of the smaller Oriental churches who make no such concessions to the modern rationalism, and who insist on having their Easter miracle.

This year Holy Saturday (Old Style) fell on May 1, and the ceremony of the Holy Fire took place, according to custom, at about noon. The usual families had camped in the church all night, some on the floor, others in boxes like swallows' nests fitted one above the other into the spaces between the heavy masonry piers. At the rear of the Sepulchre itself a crowd of several hundred Coptic pilgrims had been waiting since early morning—thoroughly un-Christian looking fellows in turbans and loose Arab gowns. A file of busy Palestine Police confined them to the matting which marked out the Coptic allotment of the limited floor space.

The central object in the rotunda of the Church of the Holy Sepulchre, it will be recalled, is the massive, ugly structure which contains not only the traditional rock-hewn tomb of Christ but a couple of small chapels as well. Its low entrance gives on to a marble platform with balustrades to left and right, whence a few steps lead down to the floor of the rotunda.

Between these steps and the church door stretched two files of police, each man armed with a stout pick-axe helve, a fair blow from which would give pause to even the most onward of Christian soldiers. There were other evidences that pandemonium was in prospect. A number of the police officers carried short, black quirts. A niche near the point from which each year the combined Copts and Syrians attempt to rush the proceedings harboured half a dozen laughing, heavy-fisted British Tommies. Native Palestine Police were everywhere active, for if, in the madness of its excitement, the crowd gets out of hand, fatalities are certain.

From nine to ten o'clock the crowd poured in. At one time eighty small Armenian orphan boys came boiling in and were arranged, as far as they went, as elastic borders to the necessary aisle. Behind them the crowd seemed packed like herrings. Yet down among their feet there must still have been room, for an occasional determined pilgrim would suddenly rise up from the floor in the very front row, after crawling through from the rear amid the thicket of legs.

A surprising number of infants and small children are brought under the comforting doctrine that for the ensuing twelvemonth the ceremony will either preserve them against the ills of life or ensure them entrance to Paradise. When the service was on the point of starting, one anxious father was observed in full retreat, a small boy and girl occupying either shoulder and clinging about his head. Plainly he considered the chances of his children's reaching Paradise in that shouting mob altogether too real.

Along one of the balustrades at the very door of the Sepulchre a number of excited little girls had perched like sparrows, but a gesticulating constable soon routed them—all but one little limpet who refused to leave unless dragged and was finally disregarded.

A group of villagers now occupied themselves with a long chant accompanied by slow clapping. At the end the women joined in a long steam-whistle cry that sent a sudden thrill through the congregation and was answered in the same fashion by women all over the church. A half dozen disciples of direct action, who had formed a flying wedge outside, came charging through the crowd like a projectile and fetched up, amid general execration, in front positions.

Preceded by sharp, authoritative tapping of silver headed staves, a dozen Syrian priests in parti-coloured robes of red, green and blue entered the rotunda and forced their way around to their chapel, where candle sparks floated mysteriously in the cavernous depths. When their singing rang out at half past ten excitement began really to lay hold of the childlike Copts and Syrians.

A young man was lifted shoulder high and set the chant—or more properly chantey—booming again. Waving his arms and rolling about in his seat he would call off a line, to which the crowd would roar a six syllable response, with the steady beat of clapping. Finally he snatched a cane and scrambling to his feet on the sagging shoulders began a sword dance—if moving the body on unsteady feet may be called dancing. The crowd was entertained and delighted, the clapping increased twenty-fold, the responses fairly crashed back and the shuddering, barbaric cries of the women rang out again and again. An older man in a yellow gown clambered on to a few convenient shoulders and tried to attract attention, but very few heeded him and presently he fell over on his back and slid down to oblivion.

At a quarter to eleven a procession of Armenian ecclesiastics entered and commenced to push their way slowly around the Sepulchre. Their magnificent robes of striped crimson and gold, the black, pointed cowls shadowing their eyes and matched by the massive, black beards below give the Armenians an indescribable air of antiquity, of remoteness from our age and of affinity with the Church Fathers and the Holy Martyrs. Behind his clergy the Armenian Patriarch of Jerusalem, magnificent in a tall mitre flashing with gems and a cope of cream coloured brocade all embroidered over with an intricate vine in green and red. After circling the Sepulchre once they move out. Owing to an inherited difference of opinion with the Greek Patriarch over some matter of precedence the Patriarch then retires to his chapel and becomes a mere spectator. His place is taken by one of his Bishops, who wears the Patriarchal robes and performs all the Patriarchal duties. Thus is avoided the scandal of having His Beatitude the Armenian Patriarch take second place after His Beatitude the Greek Patriarch.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

For a long half hour after this procession nothing significant took place and the crowd cooled down somewhat. Curving lines of police stood with linked arms along the denominational frontiers, straining against that compressed mass of humanity which rocked and swayed and formed eddies under the shaft of dusty sunlight striking through the open dome.

At half past eleven a rich bell began to toll and the Mohammedan doorkeeper of the Holy Sepulchre applied seals and tape to the door. The chanting swelled again as the eleven banners which headed the Greek procession advanced with the greatest difficulty to the starting point. Following the banners were two files of ecclesiastics—priests, Archimandrites and Archbishops—their robes of white silk heavily worked with gold embroidery. The Greek Patriarch, a tiny, old man with a glorious golden-white beard followed, crozier and cross in hand. Four or five priests in black robes formed a protecting ring around him. He is well past eighty, and must find the day's duties extremely arduous. As he moved some of the crowd attempted devoutly to kiss his robe; others were content to touch it and draw their hands slowly across their brows.

When this procession had made three circuits round the closed Sepulchre the Patriarch went up to its door and was partly relieved of his rich robes. A handkerchief was then bound round each of his hands. This custom appears to be part of the old hocus-pocus intended to make it seem impossible for the Patriarch to give heaven some small assistance towards the timely arrival of the fire. Meanwhile the Mohammedan guardian had ripped off the seals with a single jerk and thrown open the door. A bundle of candles and two peculiar brass holders were thrust into the Patriarch's arms and he stood ready. Bending low he entered the Sepulchre closely followed by an Armenian Bishop, and at once the door was shut.

The fire would soon appear at two round ports, one in either side-wall near the entrance. At each of these ports waited seven men in tight-fitting, white running costumes, ready to race with the new fire to their respective altars. What appeared at first like an incipient riot was merely an attempt at telescoping the crowd into itself so as to make a passageway wide enough for a single runner to dash through. Two or three excited individuals were dancing up and down this channel to keep it open. Another had jumped up on the balustrade and was waving a large signal cloth. The noise was tremendous. Even foreign spectators found themselves shaking with excitement. Now and then someone in the crowd fainted away where he or she stood and was brought round by such summary justice as could be administered in the press.

Suddenly bundles of flaming candles flashed at the ports, an immense shout went up from the assembly and the runners leaped away. The Armenian Patriarch, who had sat motionless and silent since reaching his balcony of retirement, now rose. Just above his head the chapel bells jangle wildly, and a woman who had found a precarious seat on the bracket from which they were hung began a bad five minutes. Almost with the bells a white figure darted across the chapel and threw himself panting before the Patriarch, extending to him a torch of candles ablaze with the new fire. The Patriarch took it and waved it slowly above the heads of the congregation, who shook the building with their cheers. The fire had presumably reached the Greek altars at the same time, for their bells began a frantic *tum tidlyum tum tum tum* that was to continue without rest for half an hour, until one's brain was cracking.

The floor was an inferno of smoke, flame and writhing masses of struggling bodies. Any who had succeeded in capturing the heavenly fire held their torches aloft and were mobbed from every side by those less fortunate. Almost as often as not the light would be extinguished by the numbers of torches thrust desperately into it. Indeed, a certain amount of this putting out appeared to be intentional horseplay or jealousy. But gradually the flame was increasing and spreading. Men were passing their faces and hands through it and playing it over

Digitized by Google

their breasts, for the belief is that this purifying flame will not burn.

All this was taking place on the left side of the Sepulchre. On the right or Greek side a curious accident had resulted in one of those situations out of which disaster darts like a lightning flash. The torches which the Greek runners had lighted as they passed out had every one been extinguished in the first struggles. Now that whole side of the church was left without a spark of the Holy Fire at which to kindle its lights. They could not even cross over to get lights from the Armenian side because of the big Sepulchre, the steps on which stood the British Governor, and the wide aisle maintained by the police from that point to the exit. There was nothing to do but wait for the fire to travel around the rear of the Sepulchre and back—and the roaring crowd was in no mood for waiting. The little girl who had earlier defied the police found herself on the cold Greek side, gazing longingly at the thousand candles that were glowing just beyond the opposite balustrade.

Up where the flame and smoke were thickest the police and Tommies were battling furiously to disorganise the annual rush of the Copts and Syrians, who always hope to lead instead of follow the Armenians in the procession which was about to commence. The work is necessarily fast and strenuous. There were only a half dozen of the Tommies scattered across the line of advance, and each was a sort of whirlwind as he used his fists to make a little clearing about himself. This done, he began to seize individuals and pitch them like human projectiles either into the struggling Copts or else aside. Sometimes a bewildered Christian was thus soundly punched and hurled to one spot, only to be seized there by another berserk Englishman, thumped again, and thrown back. There seemed to be no attempts at resistance. At one moment an officer, a nice English boy, was holding a big Copt by the throat, backed against the Tomb of Christ and administering two or three cuts of the quirt across the breast and shoulders.

All this was merely by way of keeping order. Farther back, near the Syrian chapel, real fighting was in progress where a banner was being wrestled for, priests against laymen. Now strong clerical arms would raise it high, now it would dart to right and left like a falling kite and then the staff would smack down on whatever heads were in the way. An excited mace bearer near these colours was using the steel-shod point of his badge of office as a spear, stabbing it again and again with all his might against the ribs of some offender too tightly hemmed in either to strike back or escape.

The fire had reached the wall by now and was leaping upwards from box to box. And still the other side of the building showed not a single flame. Something would have to happen in another minute to fill that terrible void.

Meanwhile the police and military had organised a little farewelling party on the useful lines of the bucket brigade. Those at the front were snatching unresisting individuals and giving them a push which threw them into the arms of the next official who as hastily pitched them on down the line until they passed inelegantly from view. As a little space was thus opened those hapless orphans began to come to light, most of them as blind and furious as bees. With heads down and fists and elbows going like pistons they were battling for their lives against any stomach or back which came within range. Even when orphan happened against orphan there was generally a blow or two exchanged before they opened surprised eyes to find friend smiting friend.

Suddenly the true miracle of the Holy Fire took place, not in any secret, priestly chamber but in the presence of all who had eyes to discern. On one side of the building was the prodigal, fire-mad throng, heedless of anything but its own ecstasy; on the other bellowed a passionate multitude starving for a touch of the sacred flame. Separating them was the avenue of police and the steps and platform of the Holy Sepulchre, shared by the British Governor and a little nameless girl holding a wistful candle. She had waited now as long as even politeness to the Governor could demand. Slipping down from her seat she hurried across the patform, behind the bare-headed, motionless official, and reached out her poor taper into the sea of fire. In an instant a little flicker of the holy flame shone on its point and she returned, satisfied, to her balustrade. But the crowd below saw the glint of flame and reached up their fat faggots of candles towards that trembling spark. Gravely, like a priest distributing the Holy Wafers, she moved up and down the railing, sharing her little fire with all. It was received with shouts of triumph and passed on with the usual disorder.

So it happened that a little child, forgetful of her own guttering taper, sat, chin on knees with her back against the Holy Sepulchre, absorbed in watching the fire—her Holy Fire—multiply and spread, struggled for by anxious hundreds, rolling smokily to the farthest dim corner of the church and mounting to the topmost balconies. After that who would assert that miracles no longer take place at the Holy Sepulchre?

Now Armenians, Copts and Syrians formed a procession that, in time, completely surrounded the Sepulchre with conflicting colours, chants and creeds. Each Patriarch in turn entered the Sepulchre and returned to read at the door in his ancient tongue the great words, "He is not here; He is risen."

The King of Yugoslavia, owing to indisposition, was unable to go with the Queen from Belgrade to the Royal castle of Svobor at Bled, Slavonia. The Queen gave a tea-party in honour of the delegates to the Little Entente Conference.

The will has been proved of Mr. Arthur Levien (96), of Alpha Cottage, Heydon's Lane, Sidmouth, one of the old "writers" of the East India Company, who saw service during the Indian Mutiny and was afterwards a District Judge in Bengal (net personalty £1,328) at £1,411.

Colonel Charles Arthur Johnston, C.B., D.S.O., I.M.S., retired, of Lee Croft, Liss, Hants, who saw service on the North-West Frontier of India, in Burma, and in China, and, during the Great War, in East Africa, a Rugby International and a well-known shot and polo and tennis player, who died on April 23, aged 59, left estate of the gross value of £5,001 with net personalty £3,767.

Book Reviews and Notes.

MOHAMMEDAN CO-OPERATION IN INDIA.

"BRITISH INDIA FROM QUEEN ELIZABETH TO LORD READING. By an Indian Mohammedan. (London: Sir Isaac Pitman and Sons 32s.)

The writer of this important book manages to present his facts in an interesting manner. He has a clear and easy style, and writes astonishingly good English—he has evidently had the assistance of an English reviser, at any rate, in all his chapters except the last. It is pretty obvious that the book, as originally written, stopped at the end of Lord Chelmsford's Viceroyalty, and that the final chapter, on that of Lord Reading, is in the nature of an addendum. The author has set himself to write a retrospect of the presence and rule of the British in India and to trace their transition from merchant adventurers to sovereign rulers: and he has performed this task with remarkable skill. Without any pretentions to original research, and content to accept the "text-book" version of history, he has selected the facts for the outline of his earlier period with considerable skill, reserving his more detailed examination for the period subsequent to the Mutiny. As between Hindu and Moslem, he preserves a commendable spirit of impartiality; even as controversial a question as Lord Curzon's partition of Bengal, and its subsequent revision by Lord Hardinge, being discussed with a restraint which is the more admirable in view of the opinions plainly held by the author on the subject. His reading of the history of the relations of Turkey with the Allies between the treaties of Sèvres and Lausanne is not so free from pro-Moslem bias, and he finds himself unable to absolve Great Britain from blame in the matter, though doing full justice to the efforts of the Government of India to obtain lenient terms for Turkey: and, in view of Turkey's part in the War, it is curious to find a writer with so obvious a pro-British bias talking gravely of the restoration of friendly relations achieved by the Treaty of Lausanne and of the hope that it will lead to the re-establishment of "the old Anglo-Turkish Alliance which ought never to have been severed." With this rather notable exception, the book is written throughout in a friendly spirit towards England, which is in keeping with the declared object of its publication, "solely as a humble recognition of the great blessing British rule has conferred on India." But it is in reality something more than this: and the clue to its real purpose may be found in a passage occurring in the last chapter; where the author writes that, after the conclusion of the Treaty of Lausanne, "the feeling revived that, with regard to the internal situation in India, it was better for the Mahomedan community to act with the British than with the Hindus. Obstruction in the Councils was gradually being recognised as an exhibition of foolishness, and more than one prominent Mahomedan leader has lately come forward to support a saner policy and a more dignified attitude. The movement is one that seems certain to spread." This passage is specially significant for the reason that it appears in the "addendum." As originally written, the real object of the book was only indicated by implication; but that which the author evidently considers the most important event in Lord Reading's Viceroyalty has given him the opportunity for putting its message into plain words. Viewed in this light, the book is an important contribution to current Indian politics, and deserves the attention of all interested in the problem of the future governance of India, irrespective of whether they do or do not agree with the solution suggested by the author.

BALKAN JOTTINGS.

"THE CAULDRON OF EUROPE." Harold Spender. (London: H. F. and G. Witherby, 15s. net.)

With the aid of fine large type, thick paper and much redundance of florid phrase, the late Mr. Harold Spender can certainly be said to have produced a handsome and imposing volume. But its material is merely a not very interesting account of a hurried trip to Greece in order to attend the Byron celebrations. On the way he made still more hurried excursions to Salonika, Monastir, Sofia, and Belgrade, in the course of which he neither saw nor heard anything worth recording. In fact neither the matter nor the manner of this book can in any way add to the reputation of the author, and respect for his memory makes us anxious to avoid criticising it in detail.

C.S.-W.

THE HAPPY WARRIOR.

"BUT IN OUR LIVES." By Sir Francis Younghusband. (London: Murray, 7s. 6d. net.)

This novel tells the life story of a young man who is killed on the Indian Frontier. Sir Francis Younghusband writes with deep admiration for the type which he has represented in Evan Lee. Evan is naturally religious and has a passionately high ideal of doing his duty in his regiment, and afterwards, when he is transferred to the Political Service, in the little State where he represents his country. The tone of the book is very serious, and impresses the reader by the sincerities of the feeling with which it is written.

With accounts of actual happenings, which one supposes to be drawn from experience, the author succeeds admirably. There are many vivid scenes, such as Evan's arrival to join his regiment, and again his return to England on his first leave. The accounts of forest life in India and of the greatness of the Himalaya are given with the authority of one who knows and with the understanding of one who loves. With his characters, Sir Francis is not so successful, and some of the long conversations between Evan and the two friends—a man and a woman—with whom he can talk freely, do not convince. This is not an account of their subject of religion and philosophy, but because these are stiff and miss the suggestion that these are spoken by living people. "But In Our Lives" will give pleasure to many by its straightforward account of regimental life in India and by its tribute to a type which has always held a high place in the admiration of the British people.

THE WEEK AT HOME.

London, Tuesday Morning.

The Government and the Mines.

At last the Government has spoken, but its declaration of policy has met with more mixed criticism than might have been expected. Or perhaps it is more accurate to say that the policy on which it has determined has surprised those whose interpretation of the phrase "keeping the balance even" does not coincide with the Prime Minister's. Briefly, the official policy is temporarily to suspend the Seven Hours Act, to make an eight hour day permissive, and immediately to introduce legislation incorporating some of the Royal Commission's recommendations for reorganisation of the coal industry.

The debate in the Commons last week was a remarkable one, in that the Prime Minister, in protesting that the steps that he intended to take were in the best interests of the miners (and no one but the most hopeless partisan need suspect the genuineness at least of *his* intentions) was regarded by all but his own supporters as having given way to the owners. He based his defence of extension of the miners' working day on the assumption that in 50 per cent. of the pits no reduction of wages would be necessary and that in the remaining pits a reduction of less than 10 per cent. would be involved. In this departure he was, of course, going against the opinion of the Commissioners, who claimed that option should be exercised in this matter of hours. That fact, however, is not necessarily to be laid against him (it would be different were there any tendency on the part of the owners and the miners to accept the Report as a basis of negotiations), for the Government has to take into account the actual and changing facts of the situation, and it is possible to presume that it has already satisfied itself that an eight hour day is in the miners' own opinion the best way out of the impasse. Whether such satisfaction is well founded it is naturally impossible for a mere observer to say.

The Labour Party is to fight this Eight Hours Bill tooth and nail. That it will be passed, however, seems to be certain. The problem then may be to persuade the men to work during the extended time. And in this connexion it is of interest to note the tendency manifested in some men's quarters, to accept the principle of reduced wages rather than of lengthened hours.

But the chief debate will probably arise over the Bill for the reorganisation of the coal industry. Critics of the Government have seized in advance upon the apparent omissions from the Bill—the nationalisation of the royalties and municipal trading in coal. But in its resolve to follow the recommendations of the Commission for the amalgamation of the industry, and to prohibit the recruiting of men into the mines without the permission of the Ministry of Labour, it is strongly supported.

It is extraordinary to perceive how the nation is divided over this matter of coal, and even more so now that the Government has shown its hand. There are, for instance, those who think the Government quite right in allowing the eight hour day, but quite wrong in interfering in other ways with the industry. There are others who simply "put their trust in Baldwin" and leave it at that. There are yet others who fear that the Government's proposals, which notoriously emanate from a Cabinet divided among itself, may be widely interpreted as a yielding to the owners' side. And there are those who roundly assert that the Government is not to be trusted, that the fight must go on, and so forth. But probably more interesting than the views of any of these categories are the judgments of independent men, such as Mr. Vernon Hartshorn, who states that no settlement is possible until unification had been arranged, or Sir Alfred Mond, who, as might be expected, loses no opportunity of stressing the international character of our coal industry.

Moscow's Gold.

Although the Government has made known its decision not to allow the actions of certain Russian bodies in support of British miners to interfere with normal Anglo-Russian relations, it is obvious that the Press has something to work on in its keeping up of the "Red Gold Stunt." Seemingly unimpressed with the nice philosophy of Earl Balfour, who explained that the Government's inaction was the result of complete knowledge both of the facts and of the potentialities of the situation, a section of the Press, fortified by some Conservative members and one or two Cabinet Ministers, chants repetitively its demand for rupture in Anglo-Russian affairs.

But it is not to be. No one now but is aware that the Russians' object in assisting the miners is rather of malevolence than of benevolence, but, so great is their world influence, it is considered wisest not to precipitate matters and so bring in the train of the coal crisis conceivably greater ills. Whether this large attitude of expediency is in strict consonance with British ideas of justice or even of the ordinary decencies will be made more patent when the subject is again debated in Parliament on Friday.

The Liberals' Position.

The great Liberal conference at Weston-super-Mare that was to solve the question of party unity is over; and still no one knows what is the Liberals' position. Liberal newspapers were at immense pains to explain the desire of the rank and file for unity, but, as in all modern democracies, the majority was distressingly unable to impose its will. The conference indeed broke up with everybody asking: "What is the position now?" Mr. Lloyd George had spoken on the Land Question, and had been resoundingly cheered; confidence in Lord Oxford as the Liberals' leader had been grandly expressed—and yet it was perfectly well realised that the rival leaders in the Liberal Party would never again work together. This fact was made somewhat brutally apparent in the disappearance of eminent Liberals who were down on the agenda paper to move resolutions.

In the circumstances it was pathetic to observe that a resolution was carried recommending the adoption of 500 Liberal candidates as soon as possible. It is amazing what fantasies can be committed in times of profound emotion.

Revision of the Prayer Book.

Not only in those journals which have lately found in religion an adequate substitute for such temporarily popular subjects as Imperial Preference, Mesopotamia, Divorce Laws, and so on, but also in the more respectable Press, has concern been shown in the results of the meeting of the Bishops in Lambeth Palace. The English bishops met last week and are still in session under the presidency of the Archbishop of Canterbury to decide on the question of the revision of the Prayer Book—the problem which, as is well known, has increasingly been threatening to divide the Church of England. After the bishops have decided (they meet again in the autumn to review their decisions) their proposals will be considered by the House of Convocation. The next stage is the Church Assembly, which has power to accept or reject, but not to alter; and the final decision must be made by Parliament.

The battle is to be waged, it appears, over the Anglo-Catholics' wish that the bishop should authorise in the Communion Service the Reservation of the Sacrament and the extra-liturgical services. This desire is widely opposed in the Church, from the Evangelical whose attitude generally is that "Ritualism is Romanism," to the Broad Churchman who, while not wishing wholly to dispense with ritual, deplores what he call the "superstitious" use of certain ecclesiastical practices. The Anglo-Catholics, on the other hand, though divided among themselves, have abundant energy and intellect.

How the Bishops will decide is purely a matter of conjecture. Some of their views are known. One finds Anglo-Catholic sympathies in, for instance, the Bishops of London, St. Albans, and Truro; one does not find them in the Bishops of Birmingham, Durham, Norwich, or Ripon. But how they will vote, or upon what compromise they will hit, nobody knows.

As for the threat that, if their demands are not granted, 700,000 Anglo-Catholics will go over to the larger Church of Rome, that is probably newspaper talk. More probably the Anglo-Catholics would (with the consent, though from different motives, of other Anglicans) attempt to disestablish the Church, and to make the appointment of bishops free from the secular authority, as in Wales and Scotland and Ireland.

Art Shows.

There are at the moment in London some unusually interesting exhibitions of pictures. Of these the most pleasing that I have come across are a selection of J. S. Cotman drawings at Walker's Galleries, New Bond Street, the summer show at the Goupil Gallery, and the etchings and aquatints, and paintings and drawings, by Mrs. Laura Knight and Mr. Richard Wyndham respectively, at the Leicester Gallery.

The Cotman exhibition, made up from the Bulwer collection, is really an exquisite affair. Norfolk as it was a hundred years ago must have been a fascinating place indeed, and it is good to have of so worthy a county such drawings and washes as Cotman made of its churches and ruins and halls.

The Goupil exhibition has, of course, a very high standard to preserve, but, with the help of one or two recently dead French and British artists, it easily maintains that reputation. Not often can one see in such abundance Johns, Orpens, Bones, Sickerts, MacColls, Tonks, and so on. Here are samples of the finest contemporary British art

Of the rooms at the Leicester Gallery that are not occupied by Epstein, one can say that the first at any rate contains a genuine surprise. Mrs. Knight as a painter is of course well and deservedly known, but one had not before suspected her of such beautiful work in etching and aquatint. Relying for the most part on the theatrical type, she sometimes goes outside it in her successful search for tragedy and comedy. One or two of her portriats are commandingly expressive, such as "The Madonna," "The Unfortunate," "Filia Mundi," or "A Daughter of Israel."

Amusement is to be found in the youthful work of Mr. Wyndham, who draws with a very care-free pencil. He has knack and individuality, as, for instance, in his sketches of the Adriatic town of Ragusa. But although he merits encouragement it would be extravagant to say that as yet he has produced very much.

The Unreal Kinema.

A most charming debate took place recently between Miss Betty Balfour, the "Cockney" film star, and Mr. G. K. Chesterton, upon the subject of "The Film and Reality." The actress strung up an enthusiastic defence of the kinema, in that for one and threepence you could see the Eskimos without being frozen or peep into the home life of the wasp without being stung. The author divested himself of the saying that the film was in reality a film: a veil between the spectator and reality. The kinema, he implied, should not be tolerated, because it made people used to, and to like, the world of sham. In other words, it destroyed the touch of humanity, which could be restored to our national life only through more and more people themselves becoming actors.

Against the author's attack there is nothing to say. Everyone of course can name half a dozen films which are of definite use, but the hundreds that are of no use whatever!

Sport.

We have arrived now at the climax of the sport season. Wimbledon began yesterday, and there is a good entry, although the more popular interest seems to be concentrating on the women's championship than on the men's. In cricket additional zest will be given to next Saturday's Test game at Lord's in view of the first washout at Trent Bridge. The issue between the Australians and ourselves has not been affected by recent form: it still is extraordinarily open. In golf the Americans have been amazingly prominent: Mr. "Bobby" Jones is, if one may say so without disrespect, the Solario of his game.

From the purely domestic point of view it was most pleasing to see "Lady Magger" go head of the river in the Cambridge Mays, which had been postponed because of the General Strike. St. John's as a college has many drawbacks, but as a rowing place it has always been famous although through many seasons one rather wondered why. At last it has justified itself. Nor should "First" and Jesus be disappointed, for their time, much more surely than John's, will come again.

PERSONAL AND GENERAL

TO-DAY

June 24, 1926 (New Style).
June 11, 1926 (Old Style).
Dulheggia 13, 1344 A.H., of the Moslem Calendar.
Tammuz 12, 5685, of the Jewish Calendar.

The Aga Khan arrived in London last week from Paris.

King George and Queen Elizabeth of Greece arrived in London last Sunday from Italy.

The Ceylon "At Home" will take place at the Hyde Park Hotel on June 25, from four to six p.m.

A reception to meet Major and Mrs. Court Treatt was held on the terrace at the House of Commons on June 17.

Mr. Norman Bentwich, the Attorney-General of Palestine, has arrived in England with Mrs. Bentwich for a short holiday.

Major-General Sir Graham Bowman-Manifold left London on June 17 to joint the Rajputana at Marseilles on his way to Port Said.

The Earl of Altamont has joined the Marquiss and Marchioness of Sligo at 7, Upper Belgrave Street, from India.

Mr. C. J. Hallifax, late Deputy Financial Commissioner of the Punjab, has been appointed Financial Adviser to the Khairpur State, in the Bombay Presidency.

The degree of Master of Arts, *honoris causâ*, has been conferred on Mr. Charles Norman Seddon (Balliol College, Oxford), University Lecturer in Persian and Marathi.

The Secretary of State for India in Council has appointed Mr. H. M. Edwardes to be Surveyor and Clerk of the Works, India Office, with effect from June 21.

The *London Gazette* announces the appointment of the Maharaja of Jind to be honorary colonel, and, of the Maharaja of Kapurthala to be honorary colonel 3rd Battalion, 11th Sikh Regiment.

The King has approved the extension of the term of office of Sir Charles Alexander Innes as Member of the Executive Council of Governor-General of India from September 10 to March 31, 1927.

M. Nicolas Mishu, Secretary to the Roumanian Legation in Berlin and formerly attached to the Roumanian Legation in London, has arrived in London to take part in the lawn tennis championships at Wimbledon.

The death has occurred of Queen Olga of Greece, mother of the late King Constantine. She was greatly honoured by the Greek people for her educational and philanthropic works; as a mark of honour to her memory the Athens Government has proposed to the former Royal Family to defray the funeral expenses.

The Rev. H. Buxton, curate of Christ Church, Westminster, and a member of the Archbishop's Eastern Churches Committee, has accepted an invitation from the Bishop of the Church of England in Jerusalem to go to Jerusalem to act as his accredited representative with the Eastern Churches and as curate at St. George's Cathedral. He will be in Jerusalem for at least a year.

The Maharaja of Kapurthala gave a luncheon party last Friday at the Savoy Hotel. Among the guests were the Earl and Countess of Birkenhead and Lady Eleanor Smith, Earl and Countess Winterton, Lady Swaythling and the Hon. Joyce Montague, the Hon. Elsie Mackay, Lady Henry, Lady Hohler, Lady Gibbons, Mrs. Bannerman, Mr. and Mrs. Sims, Miss Fay Lewisohn, Sirdar Muhabbet Rai, Sirdar Jarmani Dass, and Mr. Kotahwalla.

Lady Humphrys, wife of Lieutenant-Colonel Sir Francis Humphrys, the British Minister, recently laid the foundation of the new British Legation at Kabul.

Included in the programme of the fifty-first annual conference of the Société Internationale de Philologie, Sciences et Beaux-Arts, is a lecture, to be given on June 25, at 7.30 by Aziz Izzet Pasha, on "The Oldest Surviving University in the World." The meeting, which will take place at the Society's headquarters at 8, Taviton Street, Gordon Square, W.C.1., will be presided over by Sir Plunket Barton, Bart.

Lady Mond lent 35, Lowndes Square for a concert on June 15 in aid of the Jerusalem School of Music. The Marchioness of Carisbrooke, the Marchioness of Cholmondeley, the Marquis and Marchioness of Reading, Viscount and Viscount Erleigh, and the Very Rev. the Chief Rabbi and Mrs. Hertz gave their patronage, and the programme included Mme. Poldowski, Miss Helen Henschel, Miss Katharine Arkandy, Miss Margery Bentwich, Mr. Harold Samuel, Mr. Eric Marshall, and Mr. Ivor Newton.

Mr. Hilton Young, M.P. (chairman of the Royal Commission on Indian Currency and Finance), entertained at luncheon last Friday at the House of Commons to meet the Prime Minister, Sir Rajendranath Mookerjee, Sir Norcot Warren, Sir Maneckji Dadabhoy, Sir Reginald Mant, Sir Purshotamdas Thakurdas, Sir Henry Strakosch, Sir Alexander Murray, Professor J. C. Coyajee, Mr. W. E. Preston, Sir Charles Addis, Sir Arthur Hirtzel, Mr. Geoffrey Fry, Mr. C. H. Kisch, Mr. G. H. Baxter, Mr. A. Ayangar, and Mr. G. E. Franey.

The following promotions of Royal Marine officers have been notified by the Admiralty.

Lieut.-General St. G. B. Armstrong, C.B., C.M.G., to be General, June 16.

Major-General Picton Phillipps, C.B., C.M.G., M.V.O., to be Lieut.-General, June 16.

General Armstrong has been a lieut.-general since Dec. 11, 1925. In the War he held staff appointments during the Gallipoli operations. After the evacuation of the peninsula he served with the Egyptian Expeditionary Force.

Lieut.-General Phillips received his last promotion in July 1924. He served in the Medina when their Majesties made their Indian tour in 1911-12. He commanded a brigade of the Royal Marine Artillery in East Africa in 1916, and was Director of Naval Recruiting during 1919-21.

NEAR AND MIDDLE EAST ASSOCIATION.

A meeting of the Near and Middle East Association was held on June 17, at 42, Lower Sloane Street, by kind permission of Viscount and Viscountess Dunedin, to discuss the subject of "Italy and the Near and Middle East." The Viscountess Dunedin presided, and the following were among those present:—The Hungarian Minister and Baroness Rubido-Zichy; the Egyptian Minister accompanied by Sesostris Sidarouss Bey; the Albanian Chargé d'Affaires; the Counsellor of the Bulgarian Legation; Frau Dufour-Féronce; Princess Soumbatoff, Viscountess Dupplin, Sir William Clark, Sir Thomas Arnold, Lady Hewitt, Madame Yovanovitch, M. Emile de Nagy, Professor Arnold Toynbee, Mrs. and Miss Eckstein, Archdeacon Beresford Potter, the Rev. Chancellor Gordon Ponsonby, Professor Louise McIlroy, Mr. Ernest Richmond, Captain and Mrs. E. N. Bennett, Mrs. Charlotte Mansfield, Captain Gordon Canning, Mrs. Geoffrey Mander, the Rev. Harold Buxton, Mr. Percy Molteno, Mrs. de Bunsen, Mr. Eveleigh Nash, Mrs. Percy Bramley, and Miss Spalding.

Mr. C. F. Melville, who spoke first, emphasised that the new, Fascist Italy was driven by national pride and economic necessity to look to new fields. Signor Mussolini's talk of a Roman Empire was something that the Latin mind understood. Italy's "Colonial Conscience" received its greatest impetus from Fascismo. With the Yugoslavs the Duce, more practical than Salandra or Sonnino, sought co-operation rather than conflict. The Adriatic door being closed, Italy turned towards Northern Africa and Asia Minor. Of Anatolia, Mr. Melville said that, whatever there might have been in the Italo-Greek bogey for action against the Turks in the event of a dispute over Mosul, the Anglo-Turkish negotiations were hurried to a conclusion. That settlement caused Fascism to turn towards Morocco (which, however, did not imply that the Anatolian aspirations had been for ever relinquished). In the Balkans the new Italian policy was to help the various States to solve their respective problems. The aim of this was not altruistic but egotistic. And, although conceivably a Balkan Pact might result from this treatment, it did not make the danger more remote of a joint Italo-Greek descent upon Turkey. General Pangalos, supported by Signor Mussolini, would be very different from another Greek General supported by Mr. Lloyd George.

Mr. St. John Philby stated that in Arabia the Italians were energetically extending their influence, and that their consular representatives were men of experience and possessed of first-hand knowledge, of the language, people and the countries to which they were posted. Countries like Turkey and Abyssinia had a perfect right to live without interference from Imperialistic powers.

In the discussion that followed, Professor Arnold Toynbee suggested that the unknown quantity of Russia, the determination of the smaller European States to oppose any interference with their status quo, and the influence of the League of Nations all helped to limit the possibility of a military expansionist policy on the part of Signor Mussolini. There might, of course, be economic penetration and similar devices. Viscount Dunedin also spoke.

A message from Jerusalem says that some 300,000 new vines have been planted during the present season in various agricultural holdings of the Zionist Organisation. Bananas planted on irrigated farms, especially in the Jordan Valley, are also doing well.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA

BRITISH REPRESENTATIVE IN MONTENEGRO.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I send you herewith some particulars of Questions and Answers in the House of Commons on June 9, by the Hon. Arthur Ponsonby, M.P., who was Foreign Secretary in the Labour Government, and Mr. Locker-Lampson, on the subject of Montenegro.

You will remember that the Labour Government appointed a British Consul to Cettigne during their term of office; and it has been felt by the friends of Montenegro that the presence of an English official in the country has been directly and indirectly a great help to the inhabitants of Montenegro. Now the present Government are proposing to remove the Consul to the coast, and out of Montenegro. It is quite true, as Mr. Locker-Lampson says, that there are not many commercial duties at Cettigne, but none the less the friends of the country consider that it is most unfortunate that this post should be vacated.—I am, etc.,

ALEX DEVINE.

Northwood Park, Winchester, June 12.

Montenegro (Vice-Consul's Residence).

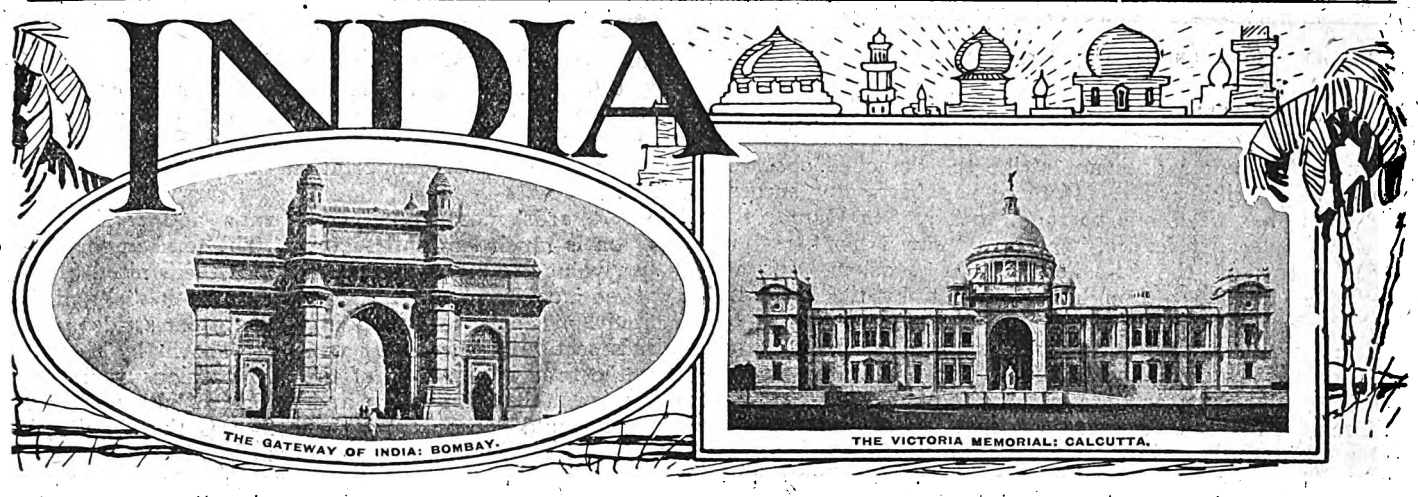
Mr. Ponsonby asked the Parliamentary Secretary to the Overseas Trade Department for what reason the residence of the Vice-Consul who was appointed for the district of Montenegro has been transferred from Cettigne to Gruz, Ragusa, which is not in Montenegro?

Mr. Locker Lampson:—I have been asked to reply. The reason for the change is that from the British commercial and consular point of view, Gruz is of greater importance than Cettigne, and the general work can be done as well from Gruz as from Cettigne.

Mr. Ponsonby:—But did not the Vice-Consuls predecessor do very good work when he was resident at Cettigne?

Mr. Locker-Lampson:—As a matter of fact, there are very few consular or commercial duties at Cettigne, and the new post includes the whole of the Montenegrin district. Our consular representative at Gruz will be able to tour the outside districts.

THE PERSIA SOCIETY: NEW YORK.



We are pleased to record the formation in New York, U.S.A., of the Persia Society. It is officially described as "a non-political, non-propaganda and non-endowed organisation of educators, writers, world travellers, students of Oriental art, literature and history, bankers, business men, and others with an international viewpoint who are interested in Persia and the Persians." The headquarters of the Society are at 353, Fourth Avenue, New York, N.Y., its Honorary President is the chief Diplomatic Representative of Persia in the United States, and its President is Dr. Herbert Adams Gibbons. It hopes shortly to begin publishing an occasional bulletin.

"FRIENDS OF ARMENIA."

The annual meeting of the "Friends of Armenia" was held on June 16 at the Central Hall, Westminister. Lord Radstock, who presided, said that the Society was seeking in a definite and special way to stretch out a helping hand to those who had been called upon to pass through the most awful sufferings any human being could conceive.

Captain G. F. Gracey, the General Secretary, said that from 1878 until December, 1922, when the late Lord Curzon, on behalf of the Allies, brought forward a proposal for the creation of a national home for the Armenians, promises in plenty had been made and none fulfilled.

INDIAN STATES UNDER THE REFORMS.

Lord Reading's reply to the representations of the Nizam of Hyderabad, regarding his claim to the rendition of Berar, has caused a good deal of discussion in the Indian Press. Most of this has been of the acrimonious anti-Government type with which we are only too familiar nowadays; upholding the view put forward by the Nizam, that he has the full right to negotiate with the British Government on equal terms, and scouting Lord Reading's refusal to listen to any such argument. A recent correspondent of the *Bombay Chronicle*, however, takes a very different attitude: one which probably represents the ideas of India's most advanced politicians on the general subject of the future status of the Native States under the Reforms, and is worth recording, for that reason.

The writer of the article fastens upon Lord Reading's insistence on the ultimate right of the British Government to intervene in the internal affairs of Indian States: particularly on his statement that "where the general welfare of the people of a State is seriously and grievously affected by the action of its Government, it is with the Paramount Power that the ultimate responsibility of taking remedial action, if necessary, must lie." He says that, in laying down this principle, the late Viceroy has done a great service to the subjects of Indian States, whose complaint is not of excessive interference, but rather of the repeated failure of the Paramount Power to intervene when their interests demanded that it should have done so. The columns of many vernacular and Anglo-vernacular "organs of public opinion" have voiced a "chorus of bitter criticisms and complaints against the maladministration, misrule, tyranny and corruption that are rampant in many of the Indian States," and it has long been a matter of wonder that the British Government should have "allowed its good name to be tarnished by such flagrant breaches of duty on the part of the Government of India and the Governor-General," in refusing to interfere on behalf of the general welfare of State subjects. The Indian States are as much part of India as are the British districts, and the Paramount Power is bound to see that the inhabitants of the former are in no way worse off than those of the latter. "The future of the Indian States has now become a burning question, and their subjects must have a voice in determining it." The article proceeds to enumerate three ways in which that future may be determined: first, by the establishment of limited monarchies with Parliamentary government: secondly, by "mediatisation of the smaller States, and the creation of Provinces, on a linguistic basis, which should include them as divisions or subdivisions of a single administrative Province, with a uniform standard of law, administration and efficiency": thirdly, by annexation pure and simple, so as to create one consolidated India under the British Crown, and by "pensioning off the Ruling Princes on pensions diminishing by a certain fixed proportion with each generation." It is urged that a Royal Commission should be appointed forthwith, to inquire into the whole subject, including "the grievances of the inhabitants of every individual State," and to make recommendations as to the adoption of any or all of the methods suggested, with a view to "the federation or annexation of particular groups of States in the future Commonwealth of India."

There have been a large number of different suggestions for the future of the Indian States under the Reforms, ranging from that of the ultra-extremist who believes that the constitution of the United States of India would be the signal for an immediate revolution in every Native State and its adherence to the nearest component of the Union, to that of the ultra-conservative who foresees the return of the whole of British India to personal rule, by the reintroduction of such representatives as can be found of the original rulers, until the country became a Commonwealth of individually independent monarchies; but this is quite a new suggestion. Though its author appears to put forward his "three ways" as alternatives, it would seem, when his proposals are examined, that this is not the case; but that they are three parts of a general scheme. Any State important enough, in extent and population, to constitute a separate component of the future Federation of India should remain as it is, except that its ruler should be a constitutional instead of an absolute monarch. The rulers of less important States should be mediatised—that is, they should retain their personal ownership but should be deprived of all ruling power, and their States should become part of the particular Province, "constituted on a linguistic basis," to which it would naturally belong. The States of least importance should be frankly annexed, and their rulers pensioned off. There are in all, in India, something like 750 ruling princes and chiefs, about 120 of whom are important enough to be accorded a salute of guns, ranging from the Nizam of Hyderabad, who rules a territory as large as Italy with a population of thirteen millions, to the pettiest of petty chiefains in Kathiawar whose holding, in some cases, is confined to part of a single village; so there is plenty of room for differentiation. And there are already in India quite a number of persons almost exactly in the position of mediatised princes; though, so to speak, "the other way up": for their princely titles came to them by creation of the ruling power, British or sometimes pre-British, not by conquest or "right divine." Of such are the great landlords of Bengal who bear territorial titles as Maharaja, Raja or Nawab: the estate of the Maharaja of Darbhanga, for instance, covers an extent of more than 2,400 square miles; but, though they are the owners of the land, they do not enjoy, and never have enjoyed, any ruling powers. On the face of it, it looks as if the proposal were worth examination: there are, of course, plenty of obvious difficulties, and an even larger number that are not so obvious; but none of the suggestions made hitherto has been free from them. To work the great States into a Federated India might not be an impossible task: a much more thorny problem is that presented by the smaller ones: and the idea of amalgamation, voluntary or enforced, that has been more than once put forward, presents at least as great difficulties as that of mediatisation.

CURRENT TOPICS.

Swarajist Success.

What is described in the cables as a success for the Bengal Swarajists does not strike the detached observer as a very striking one. If there has been any success at all, it has been one personal to Mr. Sen Gupta, the Bengal Swarajist leader, who has "saved his face" in the matter of the so-called Hindu Moslem "pact" arranged on paper though not in fact, by the late Mr. C. R. Das; under which a fixed proportion was to be observed in the Congress representation of Hindus and Mohammedans in Bengal, and in the apportionment of such appointments as were in the gift of the Swarajists—those, for instance, connected with the Calcutta Corporation. At the meeting of the Provincial Congress Committee held at Krishnagar in May, Mr. Sen Gupta put forward a motion that it was "inadvisable to take consideration of the pact": obviously because he knew that, in the present inflamed state of communal feeling, it could not survive if it were to be considered. This resolution was only carried by the casting vote of Mr. Sen Gupta himself; but when the meeting broke up in disorder after the resignation of its President, Mr. Sasmal, a residue of malcontents claimed the right to continue, elected a fresh President, and rescinded the pact by an overwhelming majority. The present special meeting of the Committee, convened for the purpose, has passsed Mr. Sen Gupta's original resolution, and has also declared the proceedings of the Krishnagar "rump" to be invalid.

The present position therefore is, that the Hindu Moslem pact remains part of the official policy of the Swaraj Party, though only because, for the reasons given, the members of the party are afraid to debate it. In fact, of course, it is incontestably dead, beyond any possible hope of revival; and, at the General Election in November, the contest is likely to be fought on strictly communal lines. In any constituency, either Mohammedan or non-Mohammedan, any candidate who admits adherence to the pact has only the smallest chance of success: whether he is a Swarajist or not, he will have to proclaim himself an out-and-out supporter of his own community against any possible claims that may be put forward by the rival one. One reads in the Indian newspapers suggestions that the election should be fought by a combination of all parties against the Swarajists, on an anti-Swarajist ticket; but one may prophesy with confidence that the only contests that will actually take place will be between 100 per cent. Hindus or Mohammedans against opponents representing, or believed to represent, a smaller percentage: with the odds very greatly in favour of the "whole-hogger." In such a contest there will be no room for any Hindu Moslem pact: and, if Mr. Sen Gupta prides himself on his success in preventing its formal repudiation, he is welcome to make the most of that.

Motor Trade with India.

An article contributed by a Calcutta correspondent to the Trade Supplement of *The Times*, shows the great improvement that has occurred during 1925-26 in the British position. In a world census of motor vehicles conducted by the Department of Commerce of the United States of America, it was estimated that, at the close of the year 1924-25, there were 82,737 motor vehicles in India, comprising 58,363 passenger vehicles, 1,700 omnibuses, 9,064 trucks and 13,610 motor cycles: and that the American percentage of these was, in the order named, 85, 75, 73 and 28. During 1925-26 India imported 12,757 passenger cars, of which the United States provided 4,143, Canada 4,775 and Great Britain 2,399—the latter number being an increase of 50 per cent. over the figures for 1924-25, and of nearly 140 per cent. over those for 1923-24. In respect of value, India's total importation of passenger cars in 1925-26 amounted to 282 lakhs of rupees (against 219 in 1924-25 and 204 in 1923-24), of which American cars accounted for 90¾ lakhs, Canadian 72¾ lakhs and English 77½ lakhs. These figures are specially noteworthy as revealing the fact that the value of each English car was almost exactly half as much again as that of the American, and twice as much as that of the Canadian. In the matter of motor cycles, Great Britain has, for many years past, held a strong lead, which was even more pronounced than usual in 1925-26, when, out of a total importation of 1,629 she provided 1,458.

As regards motor omnibuses, vans and lorries, the position is much less satisfactory. The total import was 4,853, valued at 88 lakhs, out of which the United States supplied 2,014 (41 lakhs), Canada 2,391 (30 lakhs) and the United Kingdom 338 (14 lakhs). The great strides made in this section of the motor trade are shown by the fact that the total importation of the two previous years was 1,044 (25 lakhs) in 1923-24 and 2,162 (39 lakhs) in 1924-25. It would appear from these figures that, while the extra cost of an English passenger car is no bar to a rapid expansion in what is, in the main, a "luxury" trade, the same is not the case with "utility" vehicles. The average value of these latter works out in rupees at Canadian 1,265, American 2,050, English 4,215: and the correspondent must certainly be right when he says that it seems unfortunate that so limited an effort is made by producers in Great Britain to meet a demand which, already large, has by no means reached its limits. "The trade will go on expanding; but, unless British manufacturers can adapt their ideas to Indian requirements, the whole benefit will be monopolised by the rival works in North America."

The correspondent adds a note on the possibilities for expansion existing in the trade, at present small, in motor tractors. He says that the types that have already undergone tests in India are neither fool-proof nor sufficiently heavy; but that, given intelligent use, the tractor is a farm-power unit with considerable possibilities in tracts where the available draught-power is inadequate and where in the absence of any other form of mechanical power, it is impossible for the agriculturist to perform his tillage operations under the best conditions.

Mrs. Besant's Messiah.

On the occasion of the formal announcement by Mrs. Besant, at her Queen's Hall lecture on June 13, of the advent of the new Hindu Messiah, a small minority of dissentients entered a protest against her "attempt to force a World Teacher on the Society at seven days' notice." This was, perhaps, hardly a fair way to put it, considering that Mrs. Besant's intentions have been well known for months, if not years, past. A resolution, that the Convention "welcomed all new expression of religious truth. from whatsoever source," was carried practically unanimously; but this, after all, does not commit the Society to approval of the actual proceedings. It is unlikely that Mrs. Besant will be able to persuade it to accept her Messiah; and acceptance of his "twelve Apostles" is even more unlikely: at any rate unless, if she becomes convinced that she has a Jonah aboard, she makes haste to jettison him. It is perhaps significant that, when speaking on the subject of the Apostles, she referred to the precedent set nearly two thousand years ago, when some of the Apostles forsook their Master, and one of them betrayed him.

New Delhi.

It is understood that the civil secretariat of the Government of India, or at any rate the major portion of it, will be provided with office accommodation in the Secretariat building at New Delhi during the coming cold weather: and that the Chamber, for the meetings of the Council of State and the Legislative Assembly, will be ready next January. The new Viceregal Lodge, however, will not be completed before 1928, and it is stated that the Commander-in-Chief, although his residence in New Delhi is ready for occupation, will not go there next winter, but will stay in old Delhi. Presumably the other members of the Viceroy's Council will do the same: so that it seems pretty evident that an important section of the civil and military secretariat will conform; for, as Raisina—the official name for New Delhi—is six or seven miles away

Digitized by Google

from old Delhi, the inconvenience to the high officials, caused by their Secretaries, clerks, files and records being so far away, is obvious. It is, however, believed to be the intention to hold the winter session of the Central Legislatures at Raisina; when the boot will be on the other foot.

Whichever way one looks at it, the transition period is bound to be a difficult one; nor will it be made any easier by the fact that the general public of every grade, from ruling Princes to shopkeepers, has so far shown but the smallest inclination to transfer itself from old to new Delhi. Whether they will think better of it when the official population, as it necessarily must in the end, finally deserts old Delhi, remains to be seen. One can but hope so, for an official city seven miles away from the commercial and business centre would be an uncomfortable place to live in, besides giving the ungodly—particularly those of Calcutta—opportunity of continuing to blaspheme. One is moved to speculate on the fate of the really magnificent "temporary" Secretariat building of old Delhi when its official inhabitants have all left. It would make quite a good school; or, perhaps, it might be turned into an "Indian Sandhurst," if it should be decided to start one. On the other hand, it might, of course, be left untenanted, and scheduled as a "protected monument."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 3.

Communal Amenities.

These are days of demonstrations; this afternoon the Hindu citizens of Calcutta are meeting in the Town Hall "to protest against the infringement of legitimate rights of the Hindus to lead the Raj Rajeswari procession as customary." The conveners represent all sections of Hindus, but the moderates and non-politicals predominate, and the occasion therefore demands more than casual attention. This procession is an annual one from a temple in the centre of the city to the river, where images are immersed, and it was licensed this year for 75 persons, with 40 musicians, on Tuesday last. For the first time the promoters issued general invitations to all sections of Hindus—Marwaris and Sikhs included—to join in, with the result that, hours before the starting time, thousands had gathered for the procession. The Mohammedans were not to be outdone. The processional route passes a mosque: and thousands of the faithful gathered and, putting down their mats, filled the roadway for some distance on either side and proceeded to pray without ceasing, thus completely holding up all traffic. The Commissioner of Police cancelled the licence and issued another for an alternative route; but the promoters refused this in high dudgeon, and left their images in the road. Excitement grew, and shortly all traffic outside the Temple was held up, while shopkeepers began to get panicky and close their shops. The situation was no better yesterday: and eventually the drivers of three motor-lorries, on which the images had been mounted, were arrested for refusing to move the vehicles. Late at night better counsels prevailed, and the images were taken inside; but the meeting was announced for this evening and a *hartal*, or closing of all shops, was called for throughout the city. The *hartal* is a failure, but the meeting promises well. The Indian Press comments are varied, but they all take themselves very seriously; up to the present no one has pointed out the fact that the Mussalman plan is a flagrant copy of the students' anti-European demonstrations organised in 1921-22 by Gandhi, C. R. Das and Co.

The Aftermath of the Riots.

The Hindu Press, without giving details, makes continual references to reports, coming in from the country districts, of temples being destroyed by Moslems; but the Mussalman organs are silent on the subject. They are concentrating on the point that it has always been the custom to stop the playing of music before Mosques. Mr. A. K. Ghuznavi, an ex-Moslem Member of Government, has organised a campaign with a view to proving this case; but he has only succeeded in raising a storm of denial from every part of the Province. There was a Moslem demonstration in the Town Hall on Sunday last, which will do nothing to ease the tension. A most significant incident was the hostile attitude of the audience to a suggestion that the time was ripe for the working of Hindu-Moslem unity through the Congress; it was very plain that the Moslems have no more use for Congress. This meeting was nominally called to record a vote of confidence in the Mohammedan Deputy-Mayor of Calcutta, who, having been appointed by the Congress, is now to be deposed by them; but the Chairman made it an occasion for a vehement attack on Mr. Sen Gupta, the Hindu Mayor. Thus the spirit of unity is being displayed: and *Forward* says "The most deplorable incidents in Calcutta and outside have given birth to a suspicion that the Pact is not working according to plan." The Extremist editors, who are charged with the incitement of disorder during the riots, are still in Court awaiting the Magistrate's decision. Khargpur, where the riots were last week, is now quiet: but there was a bad outbreak on Tuesday at Naihati, in the very centre of the mill area; 29 men were seriously injured before the situation was got under control, and the reports indicate a silly flare-up of blind fury for no apparent reason whatever.

Another Revolutionary Murder.

Another Indian Police officer has suffered the penalty of his efficiency. Rai Bahadur Bhupendra Nath Chatterjee had been promoted through the lower ranks of the Police into the covenanted service, and for some years he has been a Special Superintendent of the Indian Intelligence Branch, the name of our Criminal Investigation Department. He had to deal with revolutionary activities, and he was recently in charge of the investigations which resulted in the discovery of a bomb factory in a Calcutta suburb at the end of last year. He was visiting the prison on duty when he was recognised by some of the men convicted in this case; they overpowered their warder and, taking his keys, opened the gate which separated them from the Superintendent and killed him with an iron bar. The Extremist Press still maintains that there is no revolutionary conspiracy; it still vilifies the Police without cessation; and *Forward* says, in regard to this murder, "We cannot, of course, assume the guilt of anybody until he is legally tried and convicted; but the conduct of the person or persons responsible for such a dastardly outrage cannot be too strongly denounced." Every European police officer in Calcutta attended the funeral, but the Indian public apparently regarded the procession as only a matter of curiosity.

Revolution and the Indian Press.

It is possible that the outspoken criticism in the Administration Report of the Government of Bengal for the last year is responsible for an improvement in the tone of the Extremist Press during the past week. The ramifications of the revolutionary movement in the Province, and the encouragement of it by Extremist politicians and Press, form an important part of the Report. The facts which are set out are familiar enough: but definite references are made to the organisation of revolutionary activities by foreign agents, and particularly to the arrangements for smuggling arms and passing them to revolutionaries. The most welcome feature of the Report deals with the language and tone of the Extremist Press: and plain speaking of this kind can do nothing but good. Government states that,

Digitized by Google

during the year under review, there has been no noticeable improvement, and that the Indian Press, with few exceptions, shows as little sign as ever of appreciating the right use of the gift of free speech or of realising the responsibility that it involves. It is significant that, of all the Indian papers now in existence in the Province, not one purports to support the Government: and the majority do their utmost to vilify it at every opportunity. The Report sets out a number of the more gross instances of misrepresentation, and they are in some cases almost incredible. One must pity the men who command and write such rubbish, if they do so in good faith; apparently they can picture no motives better than their own, and the interpretations they put upon the actions of others are eloquent of the distorted vision of their twisted minds. It is impossible to believe, however, that travelled men of culture, as many of these journalists are, do deceive themselves: and, if this be so, they are deliberately inciting disorder for their own ends. They should be dealt with as other law-breakers are, and Government at last appears to be waking up to this.

The Wrong Turning.

Lord Birkenhead's speech at the Bombay dinner was cabled at some length by Reuter, and much has been made of his statement that the policy of the Home Government in regard to the Reform Scheme in India is unchanged. Seeing that even the Extremist papers have ceased to pretend that further progress under the present scheme is possible, it appears desirable that a definite statement should be made as to how, or on what lines, the British Government now proposes to proceed with the grant of self-government to India. Probably the last thing that the Bengal political leaders, principally a group of Hindu lawyers, anticipated from the Reforms was the reservation of a greatly increased number of Government posts for Moslems: when political power becomes a matter of the counting of heads, the distribution of patronage will be on parallel lines. The Hindu Bengalee has always been a better book-man than his Moslem compatriot and, when it comes to competitive examinations, he sweeps the board; consequently, if the "rights" of the minority are to be protected, a proportion of posts must be reserved irrespective of efficiency at examinations or in the office. C. R. Das tried bluff, and promised proportionate posts to Moslems when Swaraj was attained; the bluff has been even less permanent in its effect than the bribes for Council votes, and now we have the scramble for patronage in full swing. In Bengal the electoral system has broken down, and the Reforms have succeeded in one thing only, which is to create absolute political chaos in the Province. Will the House of Commons insist on steady progress down the wrong turning? Or will it seek another route?

Men and Things.

The description of the gale last week as a 60-mile one was from the official weather report; but further examination of the damage done makes it clear that this was an under-estimate. The way that enormous trees were smashed about was remarkable; but, in the Victoria Memorial, a number of imported bronze lamp-posts were actually bent at right angles by the force of the wind alone; it is rather wonderful that more damage was not done. News is to hand of another cyclone about the same time, near Akyab. Details are still lacking; but, in one town alone, nearly 3,000 people have lost their lives, and a tidal wave seems to have wiped out the whole district. We see that Mr. Eardley Norton is retiring from the Madras Bar, and will in future live in England. He made a handsome figure in Court, and was especially popular amongst Indians when he practised in Calcutta; he has had the courage to point out to his Indian friends, before leaving the country, that the achievement of self-government is a matter of centuries rather than decades. The Calcutta Deputy-Mayor refuses to be dislodged, and he has succeeded in obtaining a vote of confidence from the whole of the official members of the community; the Swarajists have retaliated by carrying a motion in the Corporation for the appointment of a Committee to investigate his conduct, and to decide whether Government should be asked to remove him.

The Trivial Round.

Now that the excitement of the Derby is over, and a Bombay consulting engineer is probably feeling rather glad that he sold half of Colorado for two lakhs, racing will shortly begin at Headquarters again; in the meantime the lads of the village are busily exercising their bits of blood for the Gymkhana at Tollygunge, which is looking more beautiful than ever under the care of the new Secretary, Major Preston, who took up his post early this year. Thanks to the succession of rainstorms which we have had throughout the hot weather, Calcutta has seldom looked so green: and the Maidan, in spite of the destruction that last week's storm worked amongst the trees, is delightfully fresh. Every evening now it is crowded with thousands of babus, shirt-tails a-waving, watching the bare-footed footballers making the most of it before the rain destroys their chances. Calcutta beat Dalhousie soundly in the rain on Saturday last, and Mohan Bagan have since defeated them by the same score, 4—1; half-way through the season, Calcutta has won every match. Tennis is now over so far as the clubs are concerned, but still goes on merrily in the hills, where every station seems to have its polo and gymkhana racing. Darjeeling now claims to be a little more lively; but Mussoorie, which has not the advantage, or otherwise, of an official side, has been making special efforts to increase its attractions, with apparently considerable success. It is too hot for theatres, but the Musical Comedy Company gamely stick to it; "The Light of Asia," the film which was produced successfully in London, is announced at three cinemas in the city in the near future; it will be at least a change from the travesties with which America floods the picture houses all over India.

Markets.

Another quiet week has passed in the jute and gunny markets; old crop jute is only in small demand, and sellers are still not keen to offer new crop to any extent. A fair amount of forward business has been done in hessians, and prices for heavy goods have rallied somewhat during the past few days. In the piece-goods market the one pleasing note is that, in spite of the dull conditions at present and recently prevailing, dealers continue to view the future with optimism. At the time of writing the market is more or less closed, as a protest against the Police authorities' action in altering the route of the Hindu procession; all the shops in the area have ceased business. In accordance with expectations, the first tea sale here on Tuesday last portrayed a strong demand, especially for Darjeelings, which were bid up considerably in excess of their valuations; the weakest spot was leaf teas. The official figures for May are not yet to hand; but they are expected to be about three-quarters of a million pounds down, compared with last year.

In the Stock markets jutes, specially the more speculative issues, continue to maintain their high level, in spite of the comparative weakness of the raw material: the shortness of scrip is almost entirely responsible for the position. Tea shares have continued their rise, and the more favourite shares can only be picked up at increasing rates. In the present sound condition of the commodity market a still higher level of share prices is expected. In other sections there is little to report, apart from the quieter demand for Government stocks; it is understood that the new loan is being well supported, but the figures are not yet to hand. There has been little business in Exchange, but rates have been steady with ready T.T. at 1s. 5 29-32d. Money is in abundant supply and the rate for call and short money is nominal at 2 per cent.; banks are declining to take money on deposit.

CORRESPONDENCE.

"INDIA'S GREAT PERIL."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—At a luncheon given by the British Indian Union at the Hotel Cecil, London, on June 11, Lord Lee of Fareham, Vice-President of the Union, presiding, Sir Jagadis Chandra Bose is reported to have said, "While all activity is paralysed by futile discussions, foreign nations not over friendly to Indian interests are pursuing their policy of exploitation and consolidation of their claims on India's resources. The peaceful penetration will inevitably lead to forceful occupation and the division of India into different spheres of influence. There lies India's great peril."

It would be interesting to know who are the "foreign nations" pursuing in India "peaceful penetration" with such disastrous results.—I am, etc.,

Edinburgh, June 12. RALPH RICHARDSON.

THE INDIAN MAIL.

The Bengal Anarchists.

The Calcutta letter printed in our last issue made mention of a passage in the speech of Mr. B. N. Sasmal, the President of the Bengal Provincial Conference held at Krishnagar, condemning the activities of the Bengal anarchists. In accordance with the usual practice, the speech had been printed and circulated before delivery: and Mr. Sasmal appears to have been informed in advance that his audience would object to the passage, so he offered to refrain from reading it, and to delete it from his speech. This offer was greeted with shouts of "Yes, we oppose it," and "Shame, shame" from his hearers: while an appeal from Mr. Sen Gupta, the Bengal Swarajist leader, that, as the President had agreed to delete the offending passage, he should be allowed to continue, was met with renewed shouts of "Shame, shame," with the addition of "Leave, leave." Mr. Sasmal thereupon left the rostrum. Mrs. Sarojini Naidu then intervened, asking the audience to agree to Mr. Sasmal's return, on the ground that he was, on this occasion, not only their leader but their guest. She continued, "Unfortunately he has written something to which surely the majority of us object. (Cries of "All, all.") Certainly all Bengalis object."

It is of interest to know exactly what it was to which "all Bengalis object." The speech was written in Bengali, but the last mail brings what is apparently the official translation into English: and the following is the offending passage, as published in this form. It is reproduced verbatim, without emendation or correction:

"I am showing if we can expect anything from terrorism or anarchist conspiracy. It is true that it (terrorism) is based on self-reliance but it is against moral law and is productive of bad result. Most of those who are worshippers of it turn out as cowards in respect of religion, moral law, and character. Its creed being the accomplishment of object in secrecy, they acquire the habit of speaking falsehood and become anxious to secure the salvation of the country by evading arrests. Their number in any country at any time never exceeded more than a handful of men and I do not know that there had been any exception in this country. Being only a few in number they naturally seek some short cut and if they are either unable to discover any short cut, or are baffled in any short cut discovered by themselves, most of them after a few days go to their own household and pollute the society by theft, dacoity, and various other misdeeds. Their natural weakness for the uncertainty of death which is the result of secret propaganda destroys the fearlessness and valour of meeting the certain death which follows open warfare and in consequence in a few days' time they become unfit even to be recognised as citizens. Their nature gradually develops in such a way, that more they forget the interest of the country, and begin to think of themselves, more they begin to ask for rewards from the leaders for their secret and unknown sacrifice. And if a leader refuses to give such rewards then they do not feel ashamed either to send bullets to him by post or to circulate abuses against him. Nothing more than this can be expected from those whose ideal is 'no means is too low.' These people on the one hand do not hesitate to commit dacoity in his own brother's house for the salvation of the country and on the other when arrested do not hesitate to do the same in another brother's house for the purpose of engaging counsels to defend them. I hear that some of them either work or worked in the past as spies under the Government on monthly wages. Others may be surprised at this news but I am not, for this is surely the ultimate end of those who either want to secure freedom for Bengal or India by short cut or begin to work out the same on the belief that the conspiracy of a handful of men can accomplish this object. They are probably unable to conceive that Swaraj, if established in this country as a result of the efforts of a few men like them, will never differ much from the present repressive machinery. May we never have the misfortune of seeing all wrongs and ills for the masses remain as they are and Swaraj brought about by a handful of Bengalis or Indians. Then who are really entitled to indulge in conspiracy? It will have to be remembered that this conspiracy is not the conspiracy of a few harassed tenants against their zemindars (land-owners), this is the conspiracy of an extremely weak nation against a mighty one. The moral courage necessary to make such a conspiracy successful cannot exist in terrorism or anarchist conspiracy. Therefore I can say with all firmness that there is not the least possibility of earning full freedom for Bengal or India with the help of terrorism or anarchist conspiracy."

The Public Services Commission.

Considerable dissatisfaction appears to have been expressed in India regarding the constitution of the Public Services Commission. A recent issue of the *Pioneer Mail* refers to criticism voiced by correspondents whose letters, though doubtless printed in the daily paper, find no place in its weekly summary; so that one can only guess at what they actually said. They all seem to agree that no objection to the personnel of the Commission can be taken on personal grounds; criticism is concentrated on the failure to make it truly representative, and in particular on the absence of any proper representation of the Uncovenanted Services. It is stated that, in the report of the Lee Commission, the number of members of the Indian Civil Service was given as 1290, and of the Uncovenanted Services as 2685: and one correspondent "entirely disagrees with the suggestion that the interests of the latter can be safeguarded by the appointment of a distinguished educationalist who, belonging to an entirely unnecessary University, has presumably been appointed mainly to prescribe satisfactory educational tests." Another is quoted as expressing the disappointment felt by the rank and file of the Indian Civil Service at the fact that their interests will be in the hands of a Secretariat, rather than of a district, officer. A third, whose letter is printed in the *Pioneer Mail*, draws attention to the recommendation made in the Lee report that at least two of the members of the Commission should have high judicial or legal qualifications: and to the fact that its personnel, though including two barristers, one of whom—the Chairman—was previously a permanent official in the English Civil Service, and the other—the Mohammedan member—was less a lawyer than a politician, includes no one with judicial experience. In short, it does not seem as if anyone in India—with the probable exception of the Commission itself—approves of the selection that has been made: but, after all, this is not perhaps of bad augury for its success. The Commission had to be a small one, and it is obviously impossible that all interests should have been represented on it, so that its composition necessarily partook of the nature of a compromise. It is a truism that a compromise between two parties, both of which denounce it as un-

Digitized by Google

satisfactory, is likely to turn out to be on the whole a fair one: and one may reasonably hope that this is the case in the present instance. The Commission will be judged, not by its composition, but by its results: and, whatever opinions may be held about the former, all concerned will join in the hope that it may justify itself by the latter.

Film Production in India.

Reports are arriving from India that point to the probability that film production is becoming firmly established as an Indian industry. In Bombay, in particular, it is stated that a regular Indian Hollywood is in process of development, where films are being produced for exhibition not only in India but abroad. Bombay is very fortunately situated in the matter of scenery, of which almost every possible variety is to be found at hand or at a very short distance: and the salaries of Indian film stars are surprisingly low compared with those of their opposite numbers in the West. The maximum salary of a first-class star is said to be £40 a month, while the services of "shining lights of the seventh and eighth magnitude" are obtainable at a monthly wage of no more than £1. For films that are to be shown in India, there is one special difficulty peculiar to the country—that of avoiding offence to one or other of the innumerable sects and religions that are to be found in it; but this, of course, does not apply to such as are intended for foreign consumption. The average Briton, for instance, is supremely indifferent to technical details of the sort: a fact that is clearly revealed every day, even in instances where it would not readily be expected. If, for instance, Conan Doyle's exciting story "The Sign of Four" should ever be filmed—for all that one knows, it may have been filmed already—no Western audience would be surprised to find the names of the "three Sikhs" who figure in the story are Mahomet Singh, Abdullah Khan and Dost Akbar: the first an impossible combination, the other two both Mohammedan names. It might have been supposed that so conscientious a writer would have asked some knowledgeable friend to check his "local colour" for him: but, no doubt, he was well aware that errors of this sort would pass quite unnoticed by at least 99 per cent. of his readers, and therefore dismissed the subject as of no importance. It is on record, of another well-known writer, who wrote a story in which Bombay was stated to be on the Bay of Bengal, that, in his preface to a subsequent edition, he said that it had been pointed out to him that Bombay is not on the Bay of Bengal; but that he wished his readers to understand that "for the purposes of this story, Bombay is, and will remain, on the Bay of Bengal."

INDIAN COMMERCIAL NOTES.

So the monsoon has broken definitely at last. A cable reports that it broke at Bombay on June 14. This is a bit later than the normal date, but it is better too late than too early, for late rains mean good sowings for the spring crops.

News has just come in that the Bombay millowners have definitely asked the Government of India to institute an inquiry into the condition of the cotton industry. The Government have agreed to hold an inquiry, but the terms are not yet published. It is understood that a special Board will be constituted for the purpose, under the Chairmanship of Mr. F. Noyce, C.S.I., C.B.E., I.C.S. It will be remembered that Mr. Noyce was Secretary to the Indian Cotton Committee of 1917-18, and thus gained a valuable insight into the industry as a whole.

Concurrently with this inquiry by a separate Board, the main Board will review the position of the iron and steel industry. The various companies concerned in India are preparing their evidence. There is little doubt that the Board will find the industry considerably less shaky than it was when their first investigations were made two years ago.

A recent announcement from Bombay indicates a suspension of the embargo which prohibited the import of American cottons into India during the period June 1 to October 31. It will be remembered that, in order to prevent the danger of admitting boll-weevil infection into India through the importation of American cotton, the Government of India decided that all American cotton (whether from North or South America) should be fumigated in barges in Bombay Harbour before being unloaded at the wharf for transportation to the mills or up-country. It was at first thought that fumigation measures would be impossible during the monsoon months, June to October. Apparently, however, the initial difficulties have been overcome, for fumigation will be allowed during the present monsoon, as an experimental measure. The charge is Rs.4/14 per bale of American cotton.

The cessation of rioting between Hindus and Mohammedans at Calcutta has resulted in a return to more normal trade conditions in that market. Piece-goods are again beginning to pass quietly into consumption. It cannot be said that the demand is very keen; but, on the other hand, there is no serious congestion of stocks. Indeed, it is getting more and more problematical to what extent Manchester will be able in the near future, if the coal strike continues, to satisfy India's normal post-War demand for Lancashire goods.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning,

The Coming Bulgarian Loan.

As will be seen from our Sofia Correspondent's message which will be found on another page, the decision of the League of Nations in regard to a refugee loan for Bulgaria has been received with great satisfaction in that country. A special source of gratification is the fact that the security demanded for the loan has not been so onerous as was anticipated. From what our Correspondent says, it will be realised that the loan, though a wholly necessary measure and destined for a purpose which, it might have been thought, would render the question non-contentious, was not approved without a measure of opposition. There is, however, no need now to labour that point; the main thing is that Bulgaria's needs are to be met, though not quite to the extent that she desired. The next step is the actual negotiation of the loan, and it will be noted that Bulgaria is under no illusion as to the possibility of obtaining particularly favourable terms.

The British Industries Fair.

While it is only a brief few months since the last British Industries Fair, preparations are going forward for the 1927 Fair, which, it has been announced by Mr. A. M. Samuel, the Parliamentary Secretary of the Department of Overseas Trade, will be held at the White City and at Birmingham from February 21 to March 4. It may seem, perhaps, rather early to draw attention to this event and to urge applications for space, but it has to be remembered that the organisation entailed in connexion with the Fair is very great, and it scarcely needs emphasis that the more publicity is given to it the more likely it is to prove really useful as a "spearhead" of British trade endeavour. The greatest hopes were based on the past Fair because of the very obvious signs of slowly improving trade, but it is to be feared that they cannot now be wholly realised owing to the industrial troubles that have since supervened, the effect of which in giving a setback to our export trade has yet to be determined. Once the coal dispute is settled—and the prospect seems much improved—the outlook will be much brighter, and provided industry gets rapidly to work again to recapture the lost ground it may be possible to make up much of the leeway before the year ends and at any rate to pave the way for a real trade revival in 1927, in which the coming Fair should play a very important part.

Bank of British West Africa.

A further improvement is shown in the results of the Bank of British West Africa for the past year. The net profits amounted to £114,368 as against £112,352 for 1924-25 and £95,990 for 1923-24, and the available balance is £152,400 as compared with £148,032 a year ago. It is proposed to maintain the dividend at 5 per cent. and again to place £25,000 to the contingency fund and a like amount to premises etc., leaving to be carried forward £42,400 as against £38,032.

The Turkish Floating Exhibition.

My anticipation that it was doubtful if it would be found possible to adhere to the schedule of dates adopted for the tour of the Turkish trade ship has received early confirmation; for I read in the current issue of the *Journal of the British Chamber of Commerce of Turkey* that the departure from Turkey of the Kara Deniz was only expected to take place in the second week in June, and that the vessel should reach London in the first week of July. I should think it probable that it will be much later than that before the London crowds have an opportunity of seeing this floating Turkish bazaar. The journal in question gives details of the samples section of the ship. It will cover the following:—1 Embroidery, carpets, silk from Broussa and Heraclea, porcelain ware from the Yildiz and Kutahia factories and pottery from Chanak Kale (Dardanelles), meerschaum from Eskishehir in its raw state and worked amber; 2 animal furs and skins of all kinds from the panther to the sable; 3 minerals, coal, Arghana copper, and various local minerals waters, Kissarna, Kara-Hissar; 4 forestry from lumber to the varnished plank; 5 agriculture. This section covers all local produce such as dried fruits, oils, tobacco, cotton wool, mohair, opium, etc. 6 Wrought copper industry. It will, in short, be a *multum in parvo* exhibition of the range of the country's industries, and should prove invaluable as a means of advertising the precise nature of Turkey's products.

Rising Rubber Shares.

During the past week marked strength has developed in the rubber share market, and the movement is of special interest as it is obviously totally unconnected with the present price of the commodity, which has continued to display a very uncertain tendency, and now stands round about 1s. 8½d. It will be noted that I have said the present price, for the change is undoubtedly due to two factors—the good dividend declarations and a growing confidence in the future outlook for the industry. The dividends alone are not wholly responsible; were the contrary the case there would be isolated and spasmodic

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 22.

Quiet conditions in the stock markets persist, as is indeed only natural in view of the continuance of the coal stoppage. Prices, however, keep firm and gilt-edged stocks have risen a little during the week, some optimists in the Stock Exchange indulging in talk of a possibility of a Bank Rate reduction on Thursday. In the industrial and speculative sections dulness has prevailed, fears of a prolongation of the coal deadlock prompting a reduction of commitments. The tobacco section has been relatively quiet after last week's activity, but Dunlops have spurted. The rapid fluctuations in the franc have naturally influenced the prices of French securities, which have moved up and down with the changing rumours as to the political situation. The rubber share market remains quiet, but in the past few days prices of some of the leading issues have been inclined to harden a little.

The Coal Stoppage and Money Rates.

The continued coal stoppage has substantially slowed down the volume of the nation's economic activities and one result of this is that trade and industry are making less demand than usual upon monetary resources, and funds which in the ordinary way would be employed in the finance of production and enterprise are seeking the alternative channel of gilt-edged investment. It is sometimes supposed that, because of this disaster which has so greatly upset the year's industrial output, we shall have a long period of easy money, and that, when once the end of the coal dispute is in sight, the Bank of England will reduce its official rate. This view requires cautious examination. It is fairly certain that every day the coal stoppage lasts makes a reduction in Bank Rate in the near future more and more problematical. During the stoppage such a step is altogether improbable; and it now looks as if, by the time the stoppage is over, we shall be approaching rather near to the end of that period of the year when international trade movements are favourable to sterling exchange. We shall in other words be coming within measurable distance of another period of the year, when even in normal times the preparation for the financing of heavy imports of foods and raw materials places a strain upon sterling exchange. An examination of the trade returns suggests that the coal stoppage has had the effect of delaying necessary imports, and that, therefore, later, our arrears of imports will have to be made up, and the normal strain on the exchange position of the £ will begin earlier and become more intense than usual. Such considerations as these are sufficient to justify caution with regard to the expectation that we shall have a period of lower Bank Rate, and it would be unwise for investors to count upon such an event.

Industrial Preference and Preferred Shares.

The preference shares of many first-class industrial concerns stand at levels at which the return is only 5 per cent. or a little over—a yield which is not so good as is obtainable on Colonial municipal bonds. It can, of course, be argued by the holders of such shares that a British industrial preference share of the first order is a very high class security, judged by the ample covering for the dividend service as shown by past annual figures. Such stocks, however, cannot by the greatest stretch of imagination be called gilt-edged, but they continue to be bought although the yield is comparatively so small. But some investors are turning their attention to preferred-ordinary shares of the industrial class, on many of which a return in the neighbourhood of 8 per cent. can be obtained. It should be pointed out, however, that the line of division between a preferred-ordinary share and the more common ordinary share is a very small one, and the intending purchaser should carefully ascertain whether the average margin of profits divisible to ordinary shareholders has been sufficient in the past to make the dividend on the preferred ordinary reasonably secure. In the event of misfortune overtaking the company it would probable be found that the preferred ordinary shareholder was very little better off than the holder of ordinary shares.

The Improvement of Mexico.

The instability of some of the South and Central American Governments has caused many investors to hesitate to place their money in these quarters. Such investors will, therefore, be interested to learn from Mr. Vincent Yorke, the Chairman of the Mexican Railway, that it is his opinion, based upon first-hand knowledge, that the Mexican Government of President Calles appears to be firmly established. Moverover, during the past few years this Government has effected valuable reforms, both in the financial and the industrial spheres. Not unnaturally, these factors are reflected in an improvement in Mexico's economic condition. Both in Mexico City and Vera Cruz Mr. Yorke discerned many signs of real improvement. Building and road-making operations are actively proceeding, there is ample employment and the appearance of the inhabitants suggests contentment and prosperity. As for the so-called anti-foreign legislation, he finds that among representative foreign business men the situation is not viewed with alarm. It is certainly high time that Mexico put her financial house in order. Although conditions now seem to be considerably better than for some time past, British investors in Mexico have been treated to so many disappointments that the Government will have to work very hard to re-establish confidence in its country.

The Viceroy will visit Poona on July 28, and will remain there until August 3.

King George and the King of Iraq have exchanged messages on the occasion of the signing of the Treaty regarding the Mosul boundary.

All the members of the British Naval Mission have left Greece except one, who has remained on holiday and leaves on July 3.

The Bishop of Egypt and the Sudan, Dr. L. H. Gwynne, who recently returned to Cairo from Abyssinia, is now on a visit to Baghdad.

The Queen has given a handsome ebony plaque, containing nine ivory panels hand-painted with Indian scenes, to the Okehampton, Devon, War Memorial Cottage Hospital fête. It is to be the prize in a draw.

A Decree issued in Athens imposes a tax on Greek citizens leaving the country between April and October. The measure has been adopted primarily in order to induce citizens to remain in the country during the summer months instead of spending their money abroad.

YUGOSLAVIA AS A TOURIST RESORT.

The geographical position of the S.H.S. Kingdom and its historical development have given it a variety of characteristics and types and have made it a country of unusual interest. Situated as the gateway between West and East, between Central Europe and the Levant, Yugoslavia lies on the main route of the migrating peoples passing from Central Europe to the Adriatic. It was within its territory that the hordes of the Vandals, Turks and Mongols broke. The two chief routes crossing the country are the east-west route from the Sava-Danube basin *via* Bosnia and the Dalmatian river valleys to the coast, and the north-south route *via* the valleys of the Vardar and Morava to Salonika and the Ægean. From the historical point of view Yugoslavia has many interesting links with the past. In the west the Croats formed their national State between the 7th and the 11th centuries. Many historical associations remain, dating from this time and the covering period of foreign influence in this part of the country, associations with the Croats themselves, with Venice in Dalmatia and with Islam in Bosnia. The development of Serbia too on independent lines has left there another series of historic remains, in particular the old churches of the middle ages. Throughout the country there is an infinite variety of costume and ornamentation, and although these now tend to die out, the museums of the large towns have preserved unique examples from all parts.

The extension of the Alpine system of mountains into the north-west of the Kingdom has made Slovenia a picturesque holiday centre. The district between the Julian Alps (with Triglav, 2,863 metres, its highest point) and the Karawanken Range contains the lake of Bled and the large mountain lake of Bohinye, the waterfalls of the Savitsa Springs and the wonderful gorge of the Vintgar. All over these ranges the mountain peaks are accessible, and the climber is rewarded with magnificent views from their summits. The whole country indeed is full of natural beauties, and it has modern hotels, good mountain roads and mountain huts.

All along the coast stretch the Dinaric Alps and their continuation, the Velebit range, with summits varying from 1,300 metres to Chrsnitza, 2,228 metres and Durmito 2,534 metres high. The centre for all tourists visiting this western part of the country is Zagreb, a modern town of 120,000 inhabitants, possessing a splendid new hotel, the Esplanade, with every modern comfort. From Zagreb there are railways lines to Sushak, Shibenik and Split, and also *via* Brod to Sarayevo, and thence over the Ivan range and *via* the Neretva to Dubrovnik (Ragusa) and the Bay of Cattaro. On the Zagreb-Split line are the famous Plitvitza lakes with their numerous waterfalls, and in the vicinity of these a series of interesting caves.

The Adriatic coast is famous for a number of romantic towns, which both in the north and around Dubrovnik in the south have good and comfortable hotels. In the north the chief places of interest are the Bay of Bakar, the holiday resorts of Crkvenitza and Novi, and of Omisaly and Malinska on the island of Krk, as well as the town of Krk itself. A little farther along the coast are the town and fortress of Senye, for years the centre of guerilla warfare, and the island and town of Rab. The latter has a wonderful situation and possesses a cathedral with an interesting 12th century belfry. There is also near here the narrow canal between the island of Tag and the coast, connecting with the Maslenitza gorge and the Novo Gradstko More which cuts deeply into the coast. The fiord of the Zrmanya River which is enclosed by rocks 200 metres high can be followed by boats.

Farther south on the coast lies the Bay of Shibenik, cutting into the coast and forming the mouth of the River Krka. It is approached by picturesque narrow straits, which were defended in the middle ages by a fortress dating back to the old Croatian dynasty, and which is still preserved. From this there is a good view of the town. Shibenik is both interesting and romantic. Its Cathedral, a masterpiece of Yurai Mateyevitz, of the fifteenth century, is a brilliant example of Venetian Renaissance work, influenced by the soft Slavonic conception. There are excursions worth making from Shibenik up the Krka to the Lake of Proklanye and old Skradin; to the beautiful waterfalls of the Krka; to the monastery of Visovo on an island in the river, and for antiquaries to Knin, with its large and well preserved fortress famed for the wonderful views of the Dinaric mountains which it commands. Knin also has a museum with relics of the old Croatian dynasty, comprising inscriptions, arms and ornaments. It is not far from the town, too, to the source of the Tsetina river, and its underground caves.

The next town southwards is Trogir (Trau), a storehouse of architectural monuments including a cathedral

Digitized by Google

with a fine stone portal of the 13th century by the Slav artist Radovan, and very old bas reliefs such as are characteristic of many old Dalmatian churches.

The coast of Castellana, not far distant, is a picturesque riviera, which will probably become a popular holiday resort, and inland are the old Roman remains of Salona, now called Solin. Next is Split, the commercial centre of Dalmatia. Split contains a wealth of Roman antiquities, of which the most remarkable is the Palace of Diocletian, with a complete Diocletian mausoleum and a beautiful belfry. In the baptistry of the Cathedral there is a Slav bas relief dating from the Croatian kings, and on the first floor of the Palace a chapel with Slav 9th century ornamentation.

The central Dalmatian islands are full of fascination. On Bisevo near Vis there is a blue cave like the famous cave of Capri. The island of Hvar is called the Yugoslav Madeira, while Korchula has a beautiful 12th century church with mediæval paintings, as well as old palaces and fortifications. Mlyet is famous for its romantic southern vegetation, and Makarska for its excellent foreshore. Dubrovnik farther south lies in beautiful green and flowery surroundings, together with its port of Gruzh, the shady peninsula of Lapad with its villas and the little island of Lokrum off the coast. Dubrovnik is a real gem, romantically situated, completely surrounded by its mediæval walls, and possesses architectural monuments, old ducal palaces, and Fransiscan and Dominican cloisters. Its beauty to-day makes it of no less importance than in the days of its mediæval fame and pride.

Continuing southwards by ship the traveller reaches the world-famed Bay of Cattaro, one of the most beautiful bays in the world, where the sea has penetrated far inland. Enclosed by mountains 900 metres in height, it combines the picturesque beauty of the fiord with that of the Swiss mountain lakes, while in its mild southern climate oranges and lemons grow out of doors by the open sea. On the land side the Bay is enclosed by the rocky face of Lovchen, which drops almost sheer into the sea. From Cattaro there is a road which zig-zags up the mountain side, affording wonderful views of the cliffs and sea below, and leading to Cetigne the capital of Montenegro. Around the Bay lie other picturesque little places, such as Herzegnovi, Zelenika, Prtzan and Perast.

The coast to the south of Cattaro also has its attractions. There is a good motor road along it to Bar and Ulcinye (Dulcigno) *via* Budva. Ulcinye has an old fortress and a wide sea front and should become an important resort. Near it is the mouth of the Boyana, which forms the frontier between Yugoslavia and Albania and connects the Lake of Skadar (Scutari) with the sea.

The centre for visiting Bosnia is Sarayevo, lying in picturesque mountain country. The whole province is full of natural beauty, not the least impressive of its sights being the fall of the Pliva River at Jajce (Yaitze). Near Sarayevo also there are the "Skakavatz" waterfalls below the Vranye mountain.

In Herzegovina, some distance to the south-east of Konyitch and 477 metres above sea-level, is the beautiful mountain lake of Borachko Jezero, and near Mostar are the springs of the River Buna.

The north-east of the country, in the rich plains of the Danube and Tissa, has a number of interesting towns, of which Subotitza is the largest.

Belgrade is the starting point for the tourist from central or northern Europe visiting the beauties of Serbia. The town, besides being the centre of Government, is famous for its striking situation at the confluence of the Sava and Danube; the speed with which it has grown after the War suggests that it will become one of the most important commercial centres of south-eastern Europe.

The Kingdom of Serbia is the meeting place of a number of mountain systems. The Sichevatz gorge in eastern Serbia, the Suva Planina district near Nish, and the Stara Planina heights, are only a few of the districts worth visiting.

A journey from Skoplye *via* Tetovo, Gostivar and Debar, typical Macedonian towns, brings the traveller to Ohrid (Ochrida), which lies on the lake of the same name. The lake lies 695 metres above sea-level and is 30 kilometres in length and 14 wide, reaching 285 metres at its greatest depth. From Bitolye there is a good motor road which leads to Prilep and thence to Gratzko, old Stobi, where excavations have revealed a Roman amphitheatre and an old Christian basilica.

Throughout Serbia there are to be found old churches in the Byzantine style dating back sometimes to the 9th century. Some, like the church of Krushevatz, are architectural monuments of the first rank. The best churches are in Macedonia and in the valleys of the Serbian Morava, the Ibar and Lim. Among these are the famous churches of Studenitza, Zicha and Arilye. Examples of the next period of church building under the influence of Salonika and Mount Athos are Grachanitza, the latest Studenitza monastery and Dechane near Petch. The last-named, near the Djakonitza road, is considered to be one of the largest mediæval foundations. The third period of building, lasting till 1450, possesses the greatest number of examples, showing very much ornamentation. The most interesting of these churches are Pavlitza, Ravanitza, Krushevatz, and Liubostina. It is interesting that in some cases the churches were built by Catholic masters, as for instance, Dechane by Vid, and Liubostina by Rade Borovitch, both from Dalmatia. This suggests that the Croatian mediæval architecture of Dalmatia influenced the Serbian Byzantine style.

Montenegro and the former Sandjak are not sufficiently known. Novi Pazar and Strumitza have little churches of the 12th century. Byelo Polye in Montenegro is an interesting town, which can only be reached on foot or horseback and has quite preserved its mediæval aspect.

The Kingdom as a whole abounds in thermal springs, some of them of first-class curative qualities, and with modern spas around them, as e.g., Vrnyatzka Banya on the line from Krushevatz to Kralyevo in Serbia. Serbia too has the radio-active springs of Nishka Banya. Bosnia has the Ilidya spa near Sarayevo, which possesses pleasant parks and good hotels.

The most important springs in Croatia are the Varashdinske Toplitze, north of Zagreb, hot sulphur springs, known even in Roman times. The district between these and Zagreb is full of thermal springs. Other spas in Croatia are Topusko for rheumatism, Daruvar, and Lipik, all provided with good hotels.

CO-OPERATION IN AGRICULTURE.

The Chief Federation of Agricultural Co-operatives, which comprises nearly all the co-operatives in the Kingdom, was founded immediately after the Great War at the time of union of all the provinces of the S.H.S. Kingdom. The idea in forming this federation was not to limit the business autonomy of the various unions comprising it, but solely to make the Chief Agricultural Federation the paramount protector of co-operative interests and the highest forum of co-operative ideology in the Kingdom. Now, after five years of work it is possible to estimate the success of the work acomplished.

Not only has the Federation achieved its task, but under the stress of economic circumstances has enlarged it to an altogether unexpected extent. In addition to a co-operative centre, an agricultural centre, representative of the whole Kingdom, was also required since the peasants form by far the greatest part of the population (over 75 per cent.) In the absence of Chambers of Agriculture as well as of any system of agricultural syndicalism, which could collect the votes of the peasants in all provinces for a central representative body, there was no other means of forming a rallying point for agricultural interests. In most of the provinces there are agricultural societies, but these are formed by the agricultural intelligentsia as voluntary and philanthropic organisations. In these societies the peasant does not work for his own advantage, but the society works in his interests by means of voluntary contributions and with the help of subsidies from the State. These societies also have no central body and their work is consequently limited to the provinces, and is fragmentary.

Digitized by Google

At the Ministry of Agriculture there is an advisory body called the Agricultural Council, but this is not organised so as to function continuously, and meets only when called by the Ministry. So far it has been summoned only once. In the place of this immovable and insufficiently organised general Agricultural Council, the Ministry makes use of special investigating bodies consisting of persons directly interested in the questions involved. Such bodies have been called to discuss the settlement of the crises in connexion with the over-production of sugar beet and hemp. Special bodies of experts are also called to discuss some of the more important proposals for agricultural bills. The Constitution also provides for the establishment of a special Economic Council to act as an advisory economic Parliament. Hitherto, however, it has been impossible to found this body, and the questions of its composition, sphere of action and budget are still under discussion.

It fell to the Chief Federation of Agricultural Co-operatives, therefore, by the force of circumstances to be the chief central representative of agriculture, for it is the Federation alone, which through its co-operatives keeps in touch with the masses of agrarian producers, and which has succeeded in collecting their votes within a central organisation.

In the co-operatives that are members of the Chief Federation there are, according to the latest (1924) statistics, the following numbers:—784,443 co-operators, each representing a family, i.e., 3,788,370 persons. This is 32.05 per cent of the total population, or about 40 per cent of the total agricultural population. The members of the co-operatives are the most wideawake, most progressive, and most moral element of the peasantry, and most of them are able to read and write. Consequently, the Chief Agricultural Federation is the central representative body of the most industrious section of the peasant class of the S.H.S. Kingdom. This characteristic is recognised by the State authorities and Ministries, which turn to the Federation not as the representative co-operative body only, but as the central representative of the agricultural class.

All laws and schemes touching agriculture are submitted to the Chief Agricultural Federation for its opinion, and its representatives are invited to attend all State or other inquiries concerning agricultural matters. This position of the Federation, however, was not gained simply owing to the lack of Chambers of Agriculture and agricultural syndicalism, but because the Federation has earned by its work the necessary public confidence, and the necessary authority among the peasants. Even before the War, owing to the services of the great Yugoslav co-operative thinker, M. Mihailo Avramovitch, the Chief Federation of Serbian Agricultural Co-operatives at Belgrade had succeeded in becoming the central representative not only of co-operation but also of agriculture as a whole in the late Kingdom of Serbia. When, after the War, the Federation was extended to the whole Kingdom, M. Avramovitch was its first manager. Thanks to his work and ideals, and to the help of many agricultural unions, the Chief Federation succeeded in achieving the same authoritative position in the new State. It is true that owing to abnormal circumstances during and after the War many unions were forced to abandon work of a purely ideal co-operative character. Against such unions the Chief Federation carried on a resolute and prolonged struggle. The struggle was a hard one, for some of these unions sought and found the protection of political parties possessing momentary power.

The Chief Federation has won this battle, for in addition to its purely co-operative ideals, it has also maintained its political impartiality and avoided in its work all poltical influence. In this way the Federation has achieved not only an economic, but also a real national success. Even in times of political upheaval and bitterest struggle, the Federation maintained the unity of its unions belonging to all provinces, of all religions and all sections of the nation.

Of the successes of the Federation making for agricultural progress one is particularly worthy of mention. Although the unification of the laws and of taxation in the different provinces has not yet been accomplished, the Federation has succeeded in unifying all the privileges given by law to co-operatives, in spite of the fact that no new coperative law has been passed. The Federation has also stimulated the passing of taxation reform laws and the solution of the agrarian crisis, which has been constant for the last few years. In addition, its conscientious and altruistic work has attracted to it other co-operative unions which are not its members and not even agricultural in character. Recently too it has been joined in its work by co-operatives of consumers as e.g., the Civil Servants Co-operative Union and the Workers Consumers Co-operative Union. This extension of the activity of the Chief Agricultural Federation has made the passing of a new co-operative law a matter of real urgency.

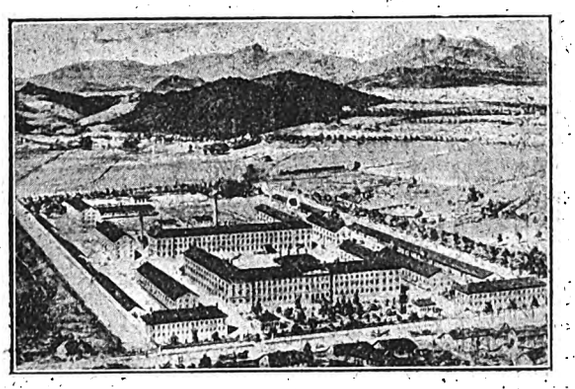
DR. LJUDEVIT PROHASKA.

THE FOREIGN TRADE OF YUGOSLAVIA.

I.—Imports January to March, 1926.

Imports during the first quarter were as follows:—

	Tons	Gold dinars (Sw. francs)
1st qr. 1926	269,464 ...	168.380.200
1st qr. 1925	305.763	177.959.472
Decrease in 1926	36.299 (13.47 p.c.)	9,579.272 (15.49 p.c.)



The chief articles imported into Yugoslavia during the quarter were:—

	Mill. gold dinars	P.c. of total imports 1926	1925

State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes

State Tobacco Factory in Liubliana.

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration, — BELGRADE —

II.—Trade Balance: First Quarter, 1926.

The trade balance of Yugoslavia for the first quarter of this year was returned as follows:—

	Gold dinars.
Imports	168,380,200
Exports	161,503,304
Exports less than imports by ...	6,676,896

The percentage value of exports as compared with that of imports during the first quarter was 95·91 per cent. against 100 per cent.

III.—Exports during the first four months of 1926.

Yugoslavia's exports amounted to the following totals:—

	Tons.	Gold dinars.
1st 4 months 1926 ...	1,649,521	... 235,622.316
1st 4 months 1925 ...	1,337,804	... 244,777,228
Increase or decrease in 1926	plus 311 717 (plus 23.30 p.c.)	minus 9,154,912 (minus 3.74 p c.)

In connexion with the fact that Yugoslavia's trade balance for the first quarter of this year was passive, it should be mentioned that during the first six months of the year exports are always less than during the second half-year.

Crop Report: May 15.

General Condition of both winter and spring crops:—*Very good*, in districts of Srem, Shumadiya, Morava, Nish, Vranye, Skoplye, Uzhitze and Bihatch.

From good to very good, in the districts of Liubliana, Maribor, Osek, Bachka, Belgrade, Danube, Drina, Valyevo, Pozharevatz, Kosovo, Dubrovnik, Tuzla, Travnik and Vrbas.

Good in districts of Coastal Krayina, Zagreb, Timok, Bregalnitza, Bitolye, Rashka, Krushevatz, Zata, Split, Sarayevo and Mostar.

Atmospheric Changes.—In the first half of the month the weather throughout the whole Kingdom was rainy and cool, while in the second fortnight it was changeable, both rainy and fine. The drought which was felt in the second half of April ceased, and in the following parts there was abundance of rain and moisture:—Drina, Danube, Valyevo, Shumadiya, Pozharevatz, Timok, Nish, Vranye and Kosovo. Rain fell, but less heavily, so that more is still required, in the districts of Skoplye, Bitolye, Krushevatz and Zeta. In the Bregalnitza district rain fell on the 11th, but little, and drought is quite serious. Later reports from the district announce that the rain which fell in the second half of May has ended the drought. Some hail fell in the districts of Maribor, Split, Tuzla, Mostar and Vrbas, but without causing great damage. Cold weather in the first fortnight of the month occurred only in the mountainous parts of Uzhitze, Sarayevo and Vrbas.

Field Work.—Field work went on busily on the warm days. The land was ploughed and prepared for the sowing of maize, which is now sown almost everywhere and undergoing the first hoeing. Sowing is still proceeding in the parts where it had been held up by drought. In general sowing and hoeing are being completed.

Vineyards.—These are being sulphured and sprayed. The vineyards in the Osek district which were pruned early, suffered from cold, and consequently many buds are not opening. Peronospora are appearing in the Osek and Morava districts.

Clover and Lucerne are improving since the rain and are yielding well.

Insect Pests in fairly large quantities are appearing in the Osek district, grasshoppers in the Djevdjeliya department, and plum blight in the Raska district, where it is doing considerable harm to the trees. Fungus diseases have not yet occurred to any large extent.

Digitized by Google

Condition of Cattle.—This is satisfactory. Swine fever has occurred to a small extent in the Liubliana district, and sheep scab among the sheep of the Srem, Nish, Skoplye and Dubrovnik districts.

MARKET FOR ELECTRICAL HOUSEHOLD APPLIANCES IN TURKEY.

Only three cities in Turkey—Constantinople, Angora, and Broussa—have electric power systems of considerable size. Individual lighting plants have been installed (says an American Consular report) in several other places but each of these can, at best, supply electric current to only a few homes. Constantinople is, at present, the only appreciable Turkish market for electrical household appliances. A limited amount of business is being done in these lines in Angora, but the market in Broussa is entirely potential. More than a limited use of electric devices is at present prevented by two factors: their high initial cost, and the rather high rates, 15 piastres per kilowatt hour, charged for electric current.

Electric washing or ironing machines are seldom found, but electric irons are quite generally used. It is estimated that about 2,500 to 3,000 of them are sold annually. Swiss, German, and French makes are offered for sale. Electric irons of from 250 to 600 watts are on display and retail from about 10s. up. The larger models are used only by tailors.

Electric ranges have been imported from Germany, Switzerland, and the United States, but their sale has been limited. Both the purchase price and the cost of operation are too high for the average Turkish family. Electric toasters are in fair demand, there being about 350 of them sold each year. There is practically no market for electric percolators because this device is not adapted to making Turkish coffee, which is very popular. Electric chafing dishes are little used, but about 400 tea kettles, retailing at about 10s. each, are sold annually. Disc stoves, particularly those having a capacity of 750 or 800 watts, are in considerable demand. "Therma" models are most popular.

Electric fans were introduced several years ago and about 700 of them are now imported annually. Both ceiling and desk fans are in demand, but the latter type, especially those having a diameter of 12 to 14 inches and retailing at about £2 10s. to £3, are preferred. Most of the desk fans have brass blades and trimmings, but some are nickeled and others are finished in black, green, or white. Red is a popular colour among the Turks and it is possible that a fan having a black body with red borders and decorations would prove attractive. Most of the ceiling fans in use have a diameter of 40 or 48 inches. Separate wall mounting regulators are, as a rule, desired. Exhaust fans must, by city ordinance, be used in restaurants, theatres, and cafés in Constantinople, but they are only rarely seen in homes. The 15 and 20 inch sizes, which retail at about £3 4s. to £5 8s., are preferred.

Only a few vacuum cleaners have been sold because the price charged for the European types offered, about £6 each, is more than the average purchaser can afford to pay. Hand-operated vacuum cleaners are unknown.

Under the heading "Cash" a gold dinar is reckoned as a dinar, English pound as 25 dinars, a dollar as 5 dinars, an Italian lira as one dinar, a Swiss or French franc as a dinar, a coined silver dinar as one dinar, etc.

Discount rate: 6 per cent. Loans on securities: 8 per cent.

An extradition treaty has been signed between Italy and Turkey.

Viscount and Viscountess Willingdon left Peking last Saturday, and are returning to England via Serbia. They are due back in London on July 4.

The Bombay Government has raised the tax on the totalizator from 2½ per cent. to 4 per cent. The increase begins during the coming Poona racing season.

Negotiations for a treaty of commerce between Yugoslavia and Great Britain have now been concluded. The portion of the treaty relating to tariffs has been initialled.

It is reported that the Bulgarian Government has approached the Reparations Commission with a view to obtaining its consent to the use of the revenues from the match monopoly and the excise on salt and spirits as guarantees for the refugee loan sanctioned by the Council of the League of Nations.

The Mohammedan festival of Eed-ul-Azha, which celebrated the sacrifice of Abraham, was held at the Mosque, Woking, on June 19. Visitors from Northern India were present, among whom were four native officers; Lord Headley, of the British Muslim Society, and several Indian cadets from Sandhurst also attended.

On June 18, in the Church of St. Nicholas, Cairo, was performed the concluding ceremony in the enthronement of Meletios II., who was recently elected Greek Orthodox Patriarch. His Beatitude arrived last Sunday week at Alexandria, where the first part of the enthronement ceremony was performed in the Cathedral of the Annunciation, which is his principal seat.

For the examinations of officers for promotion to be held in March and October, 1927, and in March, 1928 papers on military history will comprise the campaign of the British Army in Mesopotamia, 1916-17, up to April 30, 1917. This period is covered by "The Campaign in Mesopotamia," by Brigadier-General F. J. Moberly, C.B., C.S.I., D.S.O., in volume III. of the Official History of the War.

THE BULGARIAN REFUGEE LOAN.

(From Our Own Correspondent.)

Sofia, June 15.

Clearly the Bulgarian people will have no reason to complain of the League of Nations: following the mark of confidence shown in them in the occasion of the late dispute with Greece they have received to-day a further favour which is the more palpable since it takes the form of the concession of a loan to be raised on the international market for the benefit of the refugees in Bulgaria. It is true that the amount of the loan has been reduced a little, the Bulgarian Government having asked for £3,000,000 while the Council of the League has agreed to a loan of two and a quarter millions. Apart from the difference between the two totals which is not great it is necessary to note that the control organisation, which will only be concerned with three-fifths of the product of the loan, the two-fifths remaining to be expended in advance for the drainage of the marshlands allocated for the settlement of part of the refugees, as well as the nature of the securities allocated to the service of the loan —the Excise duty on spirits and the match monopoly— are in favour of Bulgaria, which, owing to the prudent conduct of the negotiations by the delegates at Geneva— M. Bouroff, the Foreign Minister, and M. Molloff, the Finance Minister—has been able to avoid mortgaging the railways which was at first anticipated. That is not to say that the conditions of the loan which, following the decision at Geneva, M. Molloff is going to conclude in London will be light; but the country cannot wait for better terms. This result has not been obtained without strong opposition on the part of the Little Entente from which France has not witheld her support, and it has required the forceful insistence of the representatives of Great Britain and Iitaly to overcome the objections. Bulgaria's representatives, MM. Bouroff and Molloff, have all the same undertaken, to satisfy France, to settle the pre-War debts arising from State loans concluded in Paris; and this detail on becoming known here produced a very bad impression, the two and a quarter millions which are being granted to Bulgaria being allocated to a purely humanitarian work called for by the very circumstances which have produced the Peace Treaties.

The loan that the League has conceded to Bulgaria will alleviate at last the lot of the refugees, who owe a very special recognition to the care of M. Vandervelde, the distinguished Belgian Foreign Minister. This alleviation will be, moreover, more marked because the Council of the League authorises Bulgaria to receive, on the product of the loan to be issued, an advance of £400,000, which will permit the immediate commencement of the work of installation and arrangement. Beyond this special result it is hoped here that the projected transaction will have a wider effect in, relieving, by the gradual influx of foreign gold into the country, the great economic crisis under the weight of which Bulgaria has suffered for so long a time.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

48, FENCHURCH STREET, LONDON, E.C.3.

Shipping Intelligence.

EGYPTIAN PATROL SHIP.

The launch took place recently at the Hebburn Shipbuilding Yard of the twin screw vessel El Amir Farouq, which is being constructed by Messrs. R. and W. Hawthorn, Leslie and Co., Ltd., for the Coastguards and Fisheries Service of the Egyptian Government. The naming ceremony was performed by Sesostris Sidarous Bey, Councillor of the Egyptian Legation, in the unavoidable absence of the Egyptian Minister, Aziz Izzet Pasha.

At the function which followed the launch Mr. J. T. Batey, managing director of Messrs. Hawthorn, Leslie and Co., Ltd., in proposing "Success to the vessel and her owners," explained that it was named after the Crown Prince of Egypt, and said that the vessel was not designed on the lines of an ordinary merchant vessel, but was built for patrol work. He added that he was sure she would prove a decided acquisition to the Egyptian Government's fisheries fleet.

Sesostris Sidarous Bey, in proposing the toast of the shipbuilders, congratulated the firm on the excellence of their work, which his Government greatly appreciated. He hoped that the vessel in her journey to Egypt and in her future operations would proceed as smoothly and as happily as she had done during her construction and launching that day.

The vessel is 255 feet long overall, and has a beam of 34 feet 3 inches. She is a two masted fore and aft schooner with raked stem and cruiser stern. On the upper deck is a suite of rooms for the use of official guests of the Government. Electric heating is provided throughout the accommodation and electric fans are also provided. The vessel is divided by eight water-tight bulkheads. The propelling machinery consists of two sets of triple-expansion engines. Steam is supplied by two cylindrical boilers working under Howden's system of forced draught, with an independent donkey boiler, and both main and donkey boilers are equipped with the "White" system of oil fuel burning.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Liverpool, July 3). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Manaar for Port Said, Colombo, Madras, and Calcutta (London, June 26).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (London, June 30).

British India Line.—S.s. Mantola for Bombay and Karachi (London, June 25); s.s. Matiana for Colombo, Madras, and Calcutta (London, July 3).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, Trieste, also Algiers, Corfu, and Gruz if inducement offers (Liverpool July 1, Swansea July 6); s.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, also Algiers and Volo if inducement offers (Swansea July 10, Glasgow July 10, Liverpool July 10).

Johnston Line.—S.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 17); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 24.)

P. and O. Line.—S.s. China for Bombay (London, July 9); s.s. Nellore for Colombo, Madras, and Calcutta (London, July 24).

Ellerman and Papayanni Lines.—S.s. Maronian for Malta, Alexandria, Jaffa,* and Haifa* (Liverpool, July 13); s.s. Gerano for Algiers,* Malta, Piræus, Volo,* Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 3); s.s. Lisbon for Gibraltar, Malta, Patras, Smyrna, and Constantinople (Liverpool, July 24). (* Subject to sufficient inducement.)

Prince Line.—S.s. Stuart Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli (Syria), Mersina, and Alexandretta (London, June 26).

Motors and Motoring.

By G. B. B.

Quite a number of owner-drivers overload their cars, apparently under the impression that all must be well so long as the engine can pull the car along. As a matter of fact, when a maker calls a car a two-seater, he means it is a two-seater, and not a vehicle to convey four adults and two children. The recent lamentable accident at Virginia Water lends sad emphasis to my remarks. "The extra passenger in the two-seater car might have affected the steering," was what was said at the inquest, the moral being, apparently, that a two-seater car should not be overloaded. The *Motor* has also been calling attention to the matter, and points out that a car may be overloaded in more ways than one. "Overloading naturally suggests a 750 c.c. chummy model filled to capacity with adults and luggage, but equally serious, although less obvious, is the harm caused to the small chassis by driving it all out for hours on end. The wonderful reliability attained by many makers of large and powerful cars is in no small measure due to the fact that the speeds at which they are commonly driven are well within the maximum rate of travel attainable. Similarly the car of low price is capable of giving long and trustworthy service if it is not forced along continually at full throttle.

I agree that many owner-drivers do not grasp the limitations of the small car, however, and endeavour to cover long distances on main roads at or very near to the maximum speed of which the car is capable. Downward gradients are taken with the engine "revving" still faster, whilst a hill is the signal for a change of gear and more full throttle work at high crankshaft speeds. It may be questioned whether, as the paper asks, the man who is continually over-driving his small car is really enjoying his motoring. Much of the charm of handling a car is to be found in the feeling of effortless travel. This is entirely lost in the noise and sense of hurry which are produced by a small car which is being pushed to its limit. The motorist who enjoys motoring to the full is he who drives in ordinary circumstances with a reserve of power in hand.

The Value of T.T. Races.

There seems to be an increase in the numbers of those who think that the Tourist Trophy races are now of no value. No view could be more mistaken; the value of the T.T. races to the motor cycle industry is incalculable. Track contests are all very well in their way; reliability trials, in which machines are called upon to do 200 miles or so, non-stop, at 20 m.p.h. over rough country are of some use; but the racketing all-out breakneck T.T. contest brings out weaknesses in engines, frames, springs and other components that no other trial could detect. It is the Tourist Trophy race that has made the British motor cycle what it is—the finest all-round motor cycle that the world can produce. A few years ago the Americans seemed about to capture the British market with the India, Harley-Davidson, Henderson and other machines. To-day these machines are no longer occupying the proud position they did; they have been beaten, by sheer merit, by the Triumphs, Sunbeams, A.J.S., Matchless, Lea-Francis, Cotton, Rex-Acme, and a host of other all-British machines; machines designed on the soundest lines, from experience gained in the Tourist Trophy contests.

Municipal Motors.

I noticed the other day that the Corporation of Calcutta was advertising for several 5-ton motor lorries, and wondered why it was that in face of such facts British manufacturers of commercial vehicles should, apparently, have firmly made up their minds that no one in the Near, Middle, or Far East is interested to the slightest extent in commercial vehicles. As a matter of fact, the motor lorry and the delivery van are in considerable demand in the East generally and one can hardly pick up a journal of any importance that is not dealing with motoring matters simply because of the interest its readers take in the subject. Quite a number of the Indian dailies and the Ceylonese, Burmese, Japanese and Chinese papers are carrying prominent advertisements of American motor lorries and vans—offhand I could mention half a dozen or a dozen American makes that are being pushed—I mean in the advertising and not the literal sense—in the Near and Far East.

It is quite evident, from the immense number being sold in this country, that the motor lorry, tipping waggon and van are just the thing for municipal work. All over the country municipal buyers are studying the various makes of cars and are eagerly assimilating every scrap of information they can obtain concerning them. Makers know that that is the case and are losing no opportunity of putting the good points of their vehicles before British municipal authorities. A moment's thought would tell these manufacturers that Eastern municipalities, from Greece to China, from Egypt to Ceylon, are modelling themselves on European lines; they read the British municipal institution journals and learn from them of the immense development that is taking place in the use of motor vehicles for refuse collecting, for passenger service, for everything in short that a municipality needs. Naturally, the members and associate members of these British municipal institutions do not mention makers' names as a regular thing in their institution papers, so the Eastern reader of the journal has no indication as to what vehicles to buy. Is it any wonder that, anxious to be up to date, he buys the American vehicle offered? When one considers that he probably has never heard the name of a British vehicle, the wonder would be if he did not. Yes, there's a big business waiting for the British commercial motor manufacturer who brings his goods before discriminating Eastern buyers.

DIPLOMATIC APPOINTMENTS.

The King has aproved the following appointments in the Diplomatic Service:

Sir Milne Cheetham, K.C.M.G., His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Athens, to be His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Copenhagen.

Sir Percy Loraine, Bt., K.C.M.G., His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Teheran, to be His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Athens.

Mr. R. H. Clive, C.M.G., His Majesty's Consul-General at Tangier, to be His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Teheran.

[Sir Milne Cheetham, who was born in 1869, was appointed to the Diplomatic Service in 1894. He has been a Minister Plenipotentary since 1918, and was Minister at Berne from December, 1922, to February, 1924, when he was transferred to Athens.

Sir Percy Loraine was born in 1880 and has been in the Diplomatic Service since 1904. He has been Minister at Teheran since 1921.

Mr. R. H. Clive was first appointed to the Diplomatic Service in 1902. He was Consul-General in Bavaria from July, 1923, to October, 1924, when he was appointed Consul-General at Tangier.]

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Steel Water Tower.—The Ministry of the Interior, Cairo, invites tenders for the supply and erection on site of a steel water tower for the town of Zifteh, contract No. 3. August 5. (D.O.T.)

Semi-Diesel Engines and Pumps.—The Director-General, State Domains Administration (Commercial Service), Savoy House, Qasr el Nil Street, Cairo, invites tenders for the supply of 3 semi-Diesel engines and 2 centrifugal pumps. July 10

It has been decided to erect a mosque in Athens for the use of Moslems, especially from Egypt, who may visit Greece on the way to take the baths at Loutraki, near Corinth, or on other business. The old Turkish mosques have nearly all disappeared from Greece.

To-morrow Major Ormesby-Gore, M.P., will unveil a tablet over the Ceylon bed in the Hospital for Tropical Diseases, Endsleigh Gardens, W.C., endowed by Ceylon residents in recognition of the part played by sailors in keeping open the routes between Ceylon and the Mother Country.

ALBANIAN NOTES.

(From Our Own Correspondent.)

Tirana, June 10.

The Budget.

Both Chambers of the Albanian Parliament have passed the Budget for 1926-27. It is based on an expenditure of 23 million gold francs with a revenue 90,000 francs below that figure. Actually the deficit will be much greater for the receipts will not attain the anticipated total; however, owing to economies in the various departments the Budget will be balanced, though in an abnormal manner.

The Budget shows an increase of 4,300,000 gold francs on the total of the previous year when the receipts only amounted to 15,781,000 francs. There has been an increase in expenditure under all heads. An example is the Budget of the President's Office which was 378,922 francs last year and has risen to 992,870 francs this year.

With the Budget out of the way the two Houses have risen for the summer vacation, finishing their labours on May 31.

The Italian Loan Service.

The current year has not seen the payment of the interest on the loan of 50,000,000 gold francs contracted in Italy. The interest represents 5,000,000 francs per annum, for a sum which in reality does not amount to 37,000,000 francs, the tax on the loan and the expenses of the issue accounting for the balance. Italy has made very severe conditions for the loan. The interest began to run from November, 1925, although the money remains in banks in Italy. Further, while the greater part of the loan ought to be devoted to works of public utility, Italy refuses to hand the money over to Albania on no better pretext than that all the works in Albania ought to be put up for adjudication, and, given equal conditions, granted to the Italian concern the Company for the Economic Development of Albania; so that the money of the loan will bear both interest and profits, and will be destined solely for Italian industry and enterprises. Thus it is that the Albanian Minister of Public Works, who wishes to construct a railway of 33 kilometres from Tirana to Durazzo, is not able to obtain the 1,700,000 francs for which he asks. On the other hand, the non-payment for the year of the interest of 5,000,000 added to that of next year means a sum of 10 millions for 1927 which it will be impossible to pay, and which will constitute a terrible and powerful instrument for pressure in the hands of the Italian Government, a point that is probably not lost sight of by the Consulta.

Meanwhile the Albanian Parliament has ratified the concession of 25,000 hectares of land for oil prospecting in the prefectures of Valona and Berat to l'Azienda Petroli Albania, which is a branch of the Italian State Railways that already holds a concession of 47,000 hectares in the same region of Albania.

The Pouka Mines.

My readers will possibly remember the Pouka mines, 70 kilometres north-east of Shkodra (Scutari), which are rich in copper and other minerals. These mines were prospected by the Albanian M. Boriçi, who was in negotiation with a French company, but nothing materialised and the concession passed to a Serbian, M. Lola Zuber. It is said that a nephew of M. Pashitch is directly interested in the concession.

Two oil wells at Gura Ocnita were struck by lightning on June 17 and caught fire. In order to prevent the fire from spreading, all work in Ocnita, one of the richest oil regions in Roumania, has been stopped. The damage is estimated at £2,000 daily.

COMPANY NOTES AND REPORTS.

EGYPTIAN HOTELS.

The report of the Egyptian Hotels, Ltd., for the year ending April 30, 1926, states that after providing for the charges payable in London and Cairo, the accounts show a profit of £107,482 19s. 9d.; the balance of undivided profit brought forward from last account is £8,868 15s. 6d.; from this has to be deducted depreciation of plant, fixtures and fittings at hotels, £5,079 13s. 5d., leaving an available balance of £111,270 1s. 10d. The directors recommend—(1) The payment of a dividend of 5 per cent. per annum on the preference shares for the year to April 30, 1926, absorbing £5,750; (2) The payment of a dividend on the ordinary shares of 35 per cent. for the year, £43,750, and a bonus of 4s. per share, £25,000, which will absorb £68,750; (3) To place to special reserve, £30,000—£104,500; leaving a balance to be carried forward of £6,770 1s. 10d.

In the directors' report for the period up to April 30, 1925, it was mentioned that an agreement had been entered into between the company and the Société Grands Hotels d'Egypte under which the hotels of the Société were leased to the company for a period of 25 years from May 1, 1925. In the year to April 30, 1926, the profits arising from the agreement with the Société appear in the accounts of the company for the first time. Under the able administration of Mr. Charles Baehler and the Local Board in Egypt, the results have been satisfactory. The directors have, however, thought it prudent to reserve £30,000 of the profits for the year to April 30, 1926, as appears from the recommendations above.

IMPERIAL BANK OF PERSIA.

The report for the year ended March 20 last states that the profits, after making provision for expenses of management, general charges in London and at chief office and branches, income tax, royalty, and bad and doubtful debts, amount to £129,401 17s. 11d., to which has to be added £34,565 16s. 2d. brought forward from last account, making a total of £163,967 14s. 1d. From this amount there has to be deducted £20,000, representing the interim dividend for the current year of 4s. per share, paid free of tax on December 22 last. The directors now propose to pay a final dividend of 6s. per share, free of income tax, which will absorb £30,000, making 10s. for the year, to add £50,000 to reserve, raising it to £470,000, to write off bank premises £30,000, and to carry forward the balance of £33,967 14s. 1d. to next account.

ORIENTAL TELEPHONE.

The net revenue of the Oriental Telephone and Electric Company for the year ended December 31, 1925, was £67,017. £11,889 was brought in, and after deducting interim dividends there remains £55,141. The directors recommend a final dividend of 6 per cent. and a bonus of 2 per cent., free of tax, on the ordinary shares, and to carry forward £14,218. The proposals of the directors as regards the question of the staff pension fund will be considered at the meeting.

The directors regret to record the death, on December 17, 1925, of their esteemed Chairman, Sir George S. Gibb, who had occupied that position for two years, rendering most valuable services to the company during that time. In January, 1926, Sir A. Henry McMahon, G.C.M.G., etc., was invited to join the Board as Chairman in succession to the late Sir George S. Gibb. Meeting, Great Eastern Hotel, Bishopsgate, June 29, 2.30 p.m.

It is reported that the Vatican is to utilise a small craft, the Pie IX., which has been built at a Milan yard, to supply the missions dotted along the Nile.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended June 10, state:—

Since our last report the futures market has been very active, but the tone at the close to-day showed some degree of nervousness. The week's summary of price movements is as follows:—Sakellaridis: July, 32,20 dollars, 1.45 dollars up; November, 32.05 dollars, 1.45 dollars up; January, 31.80 dollars, 1.50 dollars up; March, 31.70 dollars, 1.55 dollars up. Ashmouni: June, 21.98 dollars, 0.18 dollars up; August, 22.20 dollars, 0.30 dollars up; October, 22.34 dollars, 0.19 dollars up; December, 22.44 dollars, 0.14 dollars up.

The market this week has experienced the effect of a wave of speculation. No logical reason can be ascribed for the bullish sentiment, but the buying has been sufficient to raise November Sakel 1.45 dollars on the week. As was the case last week, Ashmouni has not been in favour, and the advance in this variety is only 30 points since last Thursday. The speculative long interest is now quite large and the position consequently far from healthy. For the present, however, the sentiment is still bullish and a further rise is not at all improbable. The trade has not used the futures market to any extent: Liverpool has continued to supply the contracts bought by speculators.

The decision of the Government to buy Ashmouni docket cotton has had little effect on the June price: they will get the 25,000 kantars right enough, and it is the small quantity that makes operators chary of buying June with the object of passing over to the Government—they fear to be left with the cotton.

The demand from abroad has again been checked by dearer prices; with the coal question in England still unsettled, Lancashire spinners have not shown any intention of following the advance. We hear of some sales to Russia recently through Liverpool, of the better grades of both Sakel and Uppers.

The statistical position is very heavy and compares unfavourably with last year. The following figures illustrate the position:—Alexandria stock to-day, 1,852,000 kantars; up country (say) 459,000 kantars; total, 2,311,000 kantars; against a total in Egypt at this time last year of 1,045,000 kantars. Assuming takings for the balance of the season to be on the same scale as for the corresponding period last year, this means a carry-over at August 31 of 1,764,000 kantars. The week's receipts amount to 67,181 kantars against exports 96,796 kantars; the stock stands at 1,851,068 kantars.

Spot: The market was closed on Saturday last and will close on Saturday until further notice. The market shows a slight increase in turnover—sales amount to about 9,000 bales, of which we estimate 4,700 bales Sakellaridis, 2,900 bales Ashmouni, 600 bales Zagora, 450 bales Pilion, and 350 bales White.

Sakellaridis: The demand for the better grades still continues but it is not sufficient to cause the holders of these cottons to become extravagant in their ideas, and premiums paid are about the same as last week. The spot differences of the medium grades show little change and a good turnover has been registered. There has been a small inquiry for low grade cotton and a few lots have changed hands at fairly reasonable prices.

Ashmouni and Zagora: All grades have been dealt in with a continued preference for the medium qualities. Spot differences on the whole remain unchanged.

Pilion: Buyers have shown a little more interest in all grades of this variety. Spot differences are a little dearer than last week.

Brown: No transactions have been registered.

White: There has been a slightly larger turnover in this variety, Casully mainly being in favour, but without change in the spot differences.

Crop, 1926.—The crop news is still quite good and the plants are making good progress. Leaf worm attacks became rather heavy, but the extreme heat of the last few days has put an end to that pest. Water is plentiful everywhere and there is now no fear for the summer supply.

LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 16:—

Egyptian Spot.—The inquiry has been fairly well maintained, and fresh features of interest have been entirely lacking. Following on the recent attempt in Alexandria to manipulate the futures markets towards a higher level, and the subsequent collapse of the movement, prices for actual cotton have had to go through a short period of readjustment, with the result that we are once again within sight of the lowest level yet reached for the season. Much of the inquiry appears to be based on renewed hopes of an early settlement in the coal trade dispute, which we fervently trust may not be disappointed.

Sakel cotton has only been sparingly in request, the grades below F.G.F. receiving most of the attention; 14½d. to 14¾d. being a popular range. Uppers have met with rather more support this week, the strictly Good Fair cotton at from 12d. to 12¼d. being once more the centre of attraction. The better cotton has been neglected. A small business has taken place in Pilion cotton at from 13½d. to 14d. Low cotton of all descriptions continues in request at from 5.00d. to 9.00d. This market has now been well combed out for staple lots at these prices. Sudan cotton continues to be a bright spot, particularly for the Sakel variety, in which a good business has been done at from 18.00d. to 19.25d. About 250 on July American appears to be the most popular quality in the White variety at the moment.

C.i.f. business continues quiet, though some little improvement on the previous week has been recorded. Forwardings to spinners show a considerable shrinkage, the figures for the week ending 11th instant being returned as 5,416 bales. Estimated sales, 1,500 bales Egyptian and 1,700 Sudans. Quotations of Sakel have been reduced 85 points and those of Upper 30 points on the week. Fully Good Fair Sakel, 16.30d. F.G.F. Upper, 12.30d.

The Greek Government will shortly submit to the Secretariat of the League of Nations a request for a supplementary Refugees Loan of £8,000,000 for use next September, when the present funds will be exhausted.

THE ROUMANIAN CURRENCY PROBLEM.

(From Our Own Correspondent.)

Bucharest, June 15.

An agitation has apparently started again in certain quarters for an inflation of the currency to relieve the money stringency which has been felt on this market for many months. The Government last week called a meeting of the directors of the principal banking institutions and of representatives of some of the large industrial houses in order to hear their views as to the financial and economic policy which should be adopted. Most of the delegates were in favour of the stabilisation of the leu, and as regards the economic policy each industrialist advocated such measures as would benefit his own industry. A reduction of export taxes was asked for by agriculturists and an increase of transport facilities by the petroleum industry, the output of which is rapidly increasing.

The main points emphasised as important were the stabilisation of the leu, say at 1,000 to the £1, the encouragement of production and exportation in all branches, and the improvement of the railway transport facilities. General Averescu thanked the meeting, and asked them to prepare a memorandum setting forth their views.

It is a strange phenomenon that on so fundamental a question as that of the inflation of currency there should be a divergence of opinion among men who profess to be students of political economy. Apart from the simple argument that the more money there is the cheaper it becomes, which the pro-inflationists may attempt to overweigh by other considerations, experience shows that in every case of inflation in other countries not only does the money fall in value, but all confidence in the respective market is quickly lost, and the financial condition of the country goes from bad to worse. Take the case of France or of Belgium in recent months. Does Roumania wish to follow their example in the teeth of the warnings of their National Bank? It appears to be an unfortunate fact that the human element of self-interest lies consciously or unconsciously behind much of the pro-inflation agitation. The banks want money, the industries want money, and there is not enough liquid money to go round. Ergo, print more! But why not first try to set the money there it moving round more rapidly? Why does not the State put pressure on its debtors, collect its outstanding credits, and even obtain a foreign loan on the best conditions possible and pay its debts of over 100 milliards to the National Bank, instead of increasing it by new issues of currency? The National Bank would then have money to lend to the industries and with which to buy gold. M. Vintila Bratianu perceived the wisdom of such a course, though he (also wisely) postponed the contracting of a foreign loan unil some of the country's other obligations were settled. He also stopped any further inflation of the currency by his law governing the State's agreement with the National Bank. The present Government would do well to beware how it interferes with a ruling based on such sound economic principles as this.

Miscellaneous.

The control of leu payments abroad which was made very strict at the time of the panic when the leu fell to 1,600 to the pound, has now been relaxed and commercial payments are not meeting with any serious obstacles. The leu now stands at about 1,075 to the £.

The cost of living, however, continues to increase, the index number for Bucharest for last month having gone up to 5,291, from 5,148 in April.

Numbers are published of 2,750 obligations of the Greek Government Five per Cent. Loan of 1914, amortisation of which has been effected by purchase in the market.

The degree committee of the Cambridge University Board for Oriental Studies have elected Mr. A. Yellin, B.A., (Christ's), to the Wright studentship (value £150) for the encouragement of the study of the Arabic language and literature.

The Postmaster-General announces that it has been found necessary to increase the rate of special air fee payable (in addition to ordinary postage) on air mail letters for Morocco and Algeria. The revised rates are as follows:—Up to ½ oz., 4d.; up to 3½ oz., 8d.; for each additional 3½ oz. or fraction thereof, an additional 4d.

Mr. I. Ben-Zwi, Secretary of the Palestine Federation of Labour and Member of the Executive of the Palestine Jewish National Council (Vaad-Leumi), addressed the Anglo-Palestine Club at Jews' College, Guildford Street, W.C.1, last Sunday on "Labour's Task in the Upbuilding of Palestine." Mr. Bertram Jacobs, LL.B., presided.

NOTES AND NEWS.

(Continued from page 729.)

movements among the shares in view of the vicissitudes which have been experienced, but the trend in evidence is general. The possibility that there will be a further restriction of output is undoubtedly playing its part, and I am inclined to attribute special importance to this factor, for it is no doubt generally appreciated that renewed restriction spells a very different price for the commodity from that ruling at the present time. There is further, of course—and this intensifies the influence of the factor in question—the knowledge that according to all the data put forward, some time in the next two or three years demand should outstrip output instead of lagging behind it as is the case at present. That in my view summarises the present position which certainly contains the germs of interesting developments.

Good Gezira Cotton Crop.

The directors of the Sudan Plantations Syndicate in a circular to the shareholders state that the 1925-26 Gezira cotton crop has been exceptionally good and that fair progress with sales has been made at satisfactory prices. The whole crop has now been picked and ginned; the official figures show that the acreage under cotton for the past season was 80,031 as compared with 21,616 for the previous twelve months, while the yield was 383,000 kantars as against 47,797. The directors regard an interim dividend as assured, but they feel that its payment should be postponed pending realisation of a somewhat large proportion of the crop.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Turkish Plot.

Events in connexion with the alleged plot against Ghazi Mustapha Kemal Pasha are developing along lines that are familiar to all who have studied the history of South-Eastern Europe. The existence of a plot is announced; one or more obscure individuals are reported to have been caught red- or sufficiently pink-handed to impress dutiful newspapers; on the strength of their "confessions" two or three prominent people are arrested, and information is provided on a crescendo scale, until the whole of the parliamentary Opposition or all public men who have not ranged themselves on the side of the Government are imprisoned. In none of these successive stages is there anything that can be ruled out as being impossible; but Western opinion becomes inevitably sceptical, as these dramas are unfolded one after another strictly in accordance with a stereotyped plan. Every country in the East seems to try at one time or other to establish for the benefit of the Western world two interesting facts: (1) that a certain number of its inhabitants are always available for assassination purposes; (2) that its Prime Ministers and other Ministers immediately on vacating office proceed to get into touch with these would-be assassins, in order to arrange for the murder of their successors. The plot always fails, because the would-be assassins are invariably discovered in time and make the necessary confessions. There may or may not be a few hangings, but the Opposition is effectually silenced for a period. In the present instance in Turkey the familiar gambit reappears, and there will have to be far more convincing evidence produced at the trial than appears as a rule to satisfy Turkish Tribunals of Independence before the West will be satisfied that a large number of Turkey's most prominent men are to be regarded as common assassins.

A Country's Honour.

It is strange that in the East the fact that a country's honour is entirely bound up with the honour of its individual citizens is so often overlooked. Until the conclusion of the recent Anglo-Turkish Agreement numerous points of difference have kept Turkey and Great Britain apart; but, however much the gulf between Turkish and British mentality may have been regretted, there has been a readiness in this country to accord the respect due to Turkey's public men and to regard them as fitting representatives of a country claiming equality with the rest of of the world. Yet, not only the President of the Republic himself, but also the head of the Tribunal that is to try the accused, have invited the West to regard such men as General Refet Pasha and Rauf Pasha, both former Prime Ministers, General Kiazim Karabekir Pasha, General Ali Fuad Pasha, Jaffar Tayar Bey and Javid Bey, at present Turkish representative on the Council of the Public Debt as mere highwaymen of less than ordinary intelligence. For according to the "evidence" so freely published about the plot before the trial takes place, the alleged conspirators were not contemplating an ordinary challenge to the Governmnt's authority, but were concerned to engage one or more people to kill Mustapha Kemal Pasha at a street corner. In other words men who have held the highest offices in Turkey are not only charged to-day with the most despicable of crimes, but are represented as being endowed with so little intelligence that they could not realise that the assassins whom they are accused of employing would according to the invariable habit of these people sooner or later betrav them. Until the issue of the trial an open mind must be kept: but it will be better for Turkey that the whole plot should prove to be a mare's nest than that Europe should have to regard not only those who are now accused, but, on the same analogy, those who are to-day responsible for the Government of Turkey as capable of the crimes alleged against them. For it is certain that, unless somebody in Turkey is big enough to submit to criticism and to meet it in the only way in which it ought to be met, what is happening to-day to the Opposition will eventually

Digitized by Google

be repeated with the leading rôles inverted. Both to the Government and to the Opposition Western experience utters the same warning: a country will never prosper if its leading people are petty-minded and stoop to ignoble measures. It was hoped that, with the removal of Abdul Hamid, Yildiz Kiosk methods of government by delation, intimidation and arrest had been eliminated from the new Turkey.

The Powers and Abyssinia.

A Command Paper publishes the text of the Notes exchanged last December between the British and Italian Governments on the subject of the respective interests of the two Powers in Abyssinia. As is known, the problem of the regulation of the Nile with a view to providing Egypt and the Sudan with the water that both countries are ultimately bound to require is dependent on the construction of a barrage at Lake Tana (also called Tsana), which forms the head waters of the Blue Nile. The Abyssinian Government is aware of the fact, but so far has not been able to bring itself to make a definite arrangement with Great Britain on the subject. Abyssinia is a country where local interests are apt to clash with or override national interests, and the Central Government has hitherto lacked the power or the inclination to decide that the Lake Tana scheme should be carried into execution on the ground that it would benefit the Abyssinians as well as the people of the Sudan and of Egypt. At one stage undoubtedly local opposition had to be overcome, as the report had been spread about that the construction of a dam at Lake Tana would raise the level of the lake and flood lands belonging to the Abyssinian Church and other owners. These fears have been proved to be groundless; but in Addis Ababa conditions have long been such that any request made to the Abyssinian Government by one of the four Powers primarily interested in the country—Great Britain, France, Italy, and Belgium—was sure to be opposed by one or more of the others. The correspondence now published establishes the fact that in November, 1919, the Italian Government offered its support at Addis Ababa for the Lake Tana scheme in return for British support of the Italian project for a railway across Abyssinia linking Eritrea with Italian Somaliland. At that time the British Government was not prepared to accord recognition to Italy's economic claims in Western Abyssinia, as the question of the head waters of rivers flowing from that region into the Sudan had not been regulated, and Italy's offer was not entertained.

A Question of Interests.

Since 1919 Italy has appreciated Great Britain's paramount interest in Abyssinian rivers flowing into the Sudan and in general a better understanding exists between the British and Italian Governments. Abyssinia also, in the person of Ras Taffari, the Regent, has agreed that no other Power or authority than Great Britain shall at any time be allowed to obtain any rights over Lake Tana's waters. Accordingly, it is possible to advance the negotiations for the construction of a dam at the Lake by securing Italy's active co-operation. British support for the Italian railway scheme could be given only in the knowledge that the project did not clash with French economic interests in Abyssinia. This proviso has been established by Italy's undertaking to keep her line to the west of Addis Ababa, the terminus of the French railway from Jibuti. There remain the attitude of the Belgian Government, which at the present time claims to have considerable influence in the Abyssinian capital, and is very busy pushing Belgian claims for a variety of concessions, and, more important still, the attitude of the Abyssinian Government. It is most unfortunate that Abyssinia should have occasion to regard the chief European Powers merely as so many claimants for her favours. The first instinct of the Abyssinians is still to live their own life in their own way; if there is anything that predisposes them to tolerate Europeans, it is that the latter are associated with the direct flow of money into Abyssinian pockets. A natural corollary to the Abyssinian mind is that the longer concessions are withheld, the greater the flow of money, and their inference has been confirmed by international rivalries. At first sight there would seem to be something reprehensible in this competition for concessions in Abyssinia; but recent events prove conclusively that the Abyssinians are not the peaceful hermits that they might like to represent themselves to be. Their manner of living has been from time immemorial associated with active slave-raiding, which is now indulged in on British territory, and there is not much likelihood of their mending their ways until the country becomes opened up to the march of civilisation, which brings with it, no doubt, some evils, but is inclined to make a people work. The Abyssinian of to-day does not take kindly to work, and slavery exists solely to enable him to have the work that he will not do himself done by others.

The Mecca Pilgrimage.

The Mecca Pilgrimage this year is notable as the first unrestricted one to be carried out under the auspices of Ibn Saoud, King of the Hejaz and Sultan of Nejd. With the change of régime it is expected that many of the old abuses that brought discredit on the rule of King Hussein will have been removed. Pilgrims will no longer be mercilessly fleeced, and will be able to make the journey to Mecca and to stay in the Holy City under less unpleasant conditions than their predecessors of recent years. As the dispatch of the Egyptian "Holy Carpet" has been resumed under a formal agreement between King Ibn Saoud and the Egyptian Government, the pilgrimage will be invested with its customary formalities, apart from certain matters of ritual which have been prohibited by the Wahhabi ruler. One point that would appear to have been overlooked was that the Egyptian escort of the "Holy Carpet" had not been notified of a

present. And when we say "prosperity," we do not mean the triumphing of that spirit which would turn the Church of the Holy Sepulchre into a kinema, but mainly we mean the development of agriculture in the interests of the natives of the country and of industries in the interests of the country and of the Zionists. Finally, between these two categories it is to be hoped that there will be a decreasingly marked division.

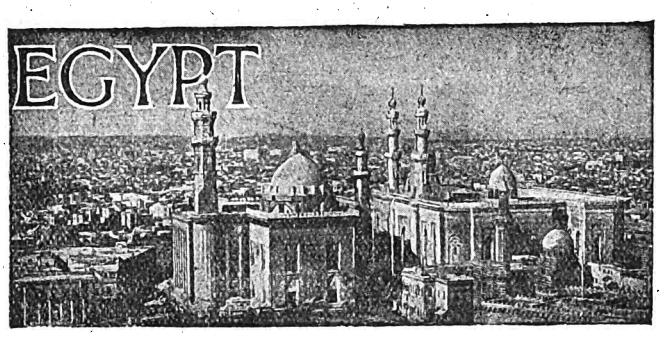
WEDNESDAY, JUNE 30, 1926.

PALESTINE AT THE LEAGUE.

It was with no such misgivings as may have been entertained by French authorities when they were summoned to report on Syria at Geneva that officials of the Jerusalem Government appeared recently before the Permanent Mandates Commission. For, despite the fact that in front of the Commission lay documents of protest alike from Jews outside and inside Palestine and from the Arabs, Col. Symes, Chief Secretary of the Palestine Government, had little difficulty in gaining the Commission's approval for his annual report. The contrast between Syria and Palestine is indeed startling. It would seem that the very fact that nothing of a sensational nature is to be found in the presentation of the Palestine report has induced the Press almost wholly to ignore it. But it may be well to examine the causes of the different conditions of the two countries. Palestine owes its tranquillity above all to the continuity of British policy, a continuity which repeatedly has irked both Arab and Zionist, but which at last is having its effect. There are those who assert—and with some show of reason—that the country is happier under the present Administration of Lord Plumer than it was under one presided over by a man whose dual character of British High Commissioner and of Zionist was apt to cause misapprehension; but it would be unfair to Sir Herbert Samuel to suppose that the policy of the present Jerusalem Government is in any way different from that so steadfastly pursued by his Administration. Again, this tranquillity is due to the fact that, whatever may be said of Palestine's new currency, the country has not been subject to such financial fluctuation as has unhappily but very naturally upset Syria. Other causes of the peaceful progress of the British mandated territory may be found, we think, in the peculiar religious dispassionateness of the officials, and, in a different way, in the difficulty with which Arab combines with Arab. We do not assert that the British Administration in Palestine is perfect—for financial reasons, (imposed from Whitehall) if for nothing else, that is impossible; when money is tight, it is not feasible to construct, for example, such a Civil Service as India or the Sudan possesses—but we do assert emphatically that this Administration is incomparably the best judge of Palestine's needs. Arabs may decreasingly declaim against the Balfour Declaration; Zionists may spasmodically urge the Government to a greater favouring of their particular desires; but in the reconciling end the slow wisdom of the Administration will be found to have been justified. Nor in Transjordan, where progress is even slower, is there much cause for dissatisfaction. The Emir Abdullah is fortunate to have had for so long the assistance of such an able man as Rikabi Pasha, whose services to the Arab cause are not, we may incidentally hope, at an end. In fine, therefore, it may be said that all is well in Palestine and Transjordan, wholly, from the official point of view, actually, if not theoretically, from the Arab point of view, and potentially, although perhaps more dubiously, from the Zionist point of view.

Let us take into some account the various complaints that appeared before the Permanent Mandates Commission, irrespectively of whether that Commission considered them or not. Dr. Weizmann, in his covering letter to the memorandum of the Zionist Organisation, makes quite clear the dissatisfaction of Jewry with the Jerusalem Government's allocation to the Jewish colonists of State and waste lands. He further charges the Government with granting, for the educational facilities of a community comprising nearly 17 per cent. of Palestine's population, only about 3 per cent of the sum appropriated from public funds. And further complaints relate to the delicate question of Jewish privileges at the Wailing Wall, and to the Jews' participation in the Defence Force of Palestine. Of all these problems, that pertaining to the allocation of lands is, of course, capital, but this particular question is complicated by the fact that the cadastral survey, being made under the supervision of Sir Ernest Dowson, is by no means complete. Of the other plaints, the Zionists appear to have the best case in regard to education. But a document that seemed much more likely to flatter the dovecotes of the Colonial Office emanated from the "Vaad Leumi," or Jewish National Council. This memorandum, the first to come from the Jewish community in Palestine itself, was a quite remarkable one, and must have caused surprise to those who imagined that the Holy Land was essentially an Oriental and agricultural country. That it should have been forwarded by the Mandatory to Geneva is in itself proof of the wide sense of justice, the willingness to hear all sides, which the British Administration has habitually shown. As a matter of fact it is probable that something on the lines of the Labour legislation which these "Left" politicians of Tel-Aviv and elsewhere demand will be introduced, although it is gratifying to notice that the Administration is not making the mistake of supposing that a Western industrial code is immediately applicable to an Eastern country which can but slowly allow factory life to supplement its agricultural labours. Turning to the Arab memorandum, we note with some satisfaction the moderation of its tone, even although it be the old, old theme that is being played. Gone are those rhetorical trills, and that seeming inability to refrain from extravagant *coloratura* with which formerly the Arabs' complaints were so heavily scored. But it is improbable that their demand for a national democratic Parliament will be granted, for the Government still stands on the ground taken up when the offer of an Arab Agency was rejected. It is, in other words, for the Arabs to come to say that they are willing to co-operate. That having been done, it is difficult to see how the Colonial Office could resist the duty of adding one more to the bugbears of the East—"democratic" Parliaments.



As far as can be judged by present appearances, Palestine is to enjoy the same rate of peaceful progress noted in the last few years. What prosperity falls to the lot of the Zionist colonies is largely their own affair; in accordance with the Mandate Great Britain provides the general means of and leaves to the Zionists themselves to find the particular way to success; and it is natural or at least to be expected that they should be more prone to criticise the Administration in the bad years than in the good. It is mainly as a spectator, therefore, that the Jerusalem Government may look upon any possible changes in the American immigration laws or in the Polish economic situation. In the meantime, certain things, such as municipal elections, and, as we have indicated, a mild form of labour legislation, will be proceeded with; these, however, are not changes but more or less inevitable developments. From the very nature of its task, which is dual if not conflicting, the Jerusalem Government can but go forward with a caution which is likely to exasperate all but those who are aware of the delicacies of its task. But how necessary is that caution may be demonstrated by referring to two questions alone: land and concessions. To these two things claims abound and persist in a fashion that may disappoint, for example, the colonists eager for further settlements and the business men anxious to develop the untapped resources of the country. But, once these legal problems are solved, there is no reason why Palestine should not enjoy a prosperity considerably in excess of that which it has at

(Continued on previous page.)

The Near and Middle East*

From Our Own Correspondents.

Cairo, June 19.

The New Parliament.

Except for a small outbreak on Wednesday in the Senate, which, compared with the last Parliament, seems in the matter of restraint to have changed places with the Chamber of Deputies, things have gone quite satisfactorily in Parliament, which has now risen for the Courban Bairam holidays. Zaghloul Pasha, who has presided sometimes for three hours at a time over the deliberations of the Chamber, has displayed wonderful powers of endurance, and it has been interesting and instructive to note how he controls the House and persuades members, who appear to be about to become recalcitrant, to bow to his wishes. In the manner in which he carries out his duties as President of the Chamber he does not altogether conform to the principles of impartiality and non-interference in the debates usually associated wtih the Speakership of a Parliament. But, as he is said to have explained to a friend, the members so lack experience and knowledge of parliamentary life that if they were left to themselves they would never get through the work, and it is essential both for their education and avoidance of unnecessary waste of time that there should be someone to exercise the control which he has been doing.

All manner of rumours are current with regard to the length of the present session and the questions with which Parliament will deal before it rises for the summer vacation. The reply to the Speech from the Throne and the Budget will, of course, have to be dealt with this side of the holiday. Election petitions, which in this country are handled without appeal by each House, will also have to be settled. And the committees are at the present moment hard at work on these questions. There has been much talk of amendments in the Constitution, mainly to circumscribe with further guarantees the power of dissolution, and of the unconstitutionality of the laws and decrees passed during the non-parliamentary period (December 24—June 25). But although these questions are being considered by special committees no one seems clear on whether they will be dealt with in the present session or left over until November. Indeed, there is vagueness everywhere in this respect, and the only thing certain is that no one seems to want any incident this side of the recess, and that everyone wants to get away on vacation as soon as possible. The unanimity on these two points may, therefore, have the happy effect of preventing any deep discussion even of the Budget, although it is to be foreseen that the Palace credits will not pass without comment. But in Egypt it is never safe to prophesy about anything, and experience shows that it is even more dangerous to forecast how the members of the two Legislative bodies will react to any of the questions now occupying their attentions.

"Yeomen of the Guard."

It is announced that the production of the "Yeoman of the Guard" in February last realised a net profit of £E234, which has been handed to the Committee of the English School in whose aid the entertainment was organised. No little surprise has been expressed at the smallness of the profit, which works out at about 18 per cent. of the gross receipts, and this result is all the more surprising when one bears in mind that the production was given on six nights with one matinée at the Opera House, and that on every occasion there was a good attendance. Without wishing in any way to disparage the efforts of those who organised the undertaking, one cannot help feeling, when one remembers other previous similar charity entertainments, that there has been wastage of funds somewhere, and it will be interesting to see the details of the balance sheet when it is published.

Holidays Approaching.

Next week will be entirely given up to the celebration of Courban Bairam, and all Government offices will be closed and Parliament will not sit for a week. King Fuad will move to Alexandria, where the Queen is already in residence, immediately after the receptions. But the seat of Government will not be transferred until Parliament rises. Usually by this time of the year Government is in residence by the sea-side, but it will obviously be most inconvenient for both Ministers and Deputies for the seat of Government to be in Alexandria while Parliament is sitting, and so everyone is being compelled to sacrifice personal comfort to the requirements of State. This is one of the reasons why many think the session will not be extended beyond the second week in July. Likewise the Residency will remain in Cairo until Parliament rises. It is expected that when the transfer takes place Lord Lloyd will go to England for a much needed change and rest.

GREECE.

Athens, June 17.

Brigandage in Epirus.

The isolation of Epirus from the rest of Greece—which has often been referred to in these letters—makes things possible there which could hardly happen in any other part of the country. An exceptionally audacious act of brigandage occurred near Préveza last Sunday. A car containing three officials of the National Bank at Yanina, four gendarmes and two private passengers was attacked an hour from Préveza—by brigands, disguised as soldiers. All except two of the occupants were killed, and the sum of fifteen million drachmæ which was being taken to the Bank of Yanina was stolen by the brigands, all of whom escaped. Full details have not yet appeared, but it seems

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

Digitized by Google

that no other protection than that of the four gendarmes, who, packed into the car would not be able to use their rifles, had been provided. A car containing gendarmes, but not detailed for the protection of the money, arrived on the scene immediately afterwards, but, for some unexplained reason, failed to do anything. That such a large sum of money should be transported in such a happy-go-lucky way in a district notorious for brigands seems incredible, and one can only suppose that the bank officials believed their secret had not leaked out. The intelligence service of the brigands was better than they supposed. Up to the present, no one has been captured. Two or three brigand bands are known to be working in the district. General Pangalos' comment that they were not brigands, but vulgar cattle-stealers seems to be a distinction without a difference.

Political Ignorance.

Apart from this incident there is little to report. Political life is dead, and perhaps it is no bad thing that it should be—for a time. But it is a pity that the opinion of the country cannot find expression, if not in Parliament—at any rate in the Press. One would like, for instance, to know the opinion of the country on the dismissal—abrupt to the point of discourtesy—of the British Naval Mission, as well as the inner history of the consistent cold-shouldering of it, while it was here. The exchange of decorations between General Pangalos and Signor Mussolini must indicate the recognition of mutual services, and one would like to know, what services? One would like to know what the feeling of the country about the new taxation is, and how the money raised is being spent? There are many other things the country would like to know, but the terse communications of the President to the Press do not add much to their enlightenment. It is surely time that he took the people more into his confidence.

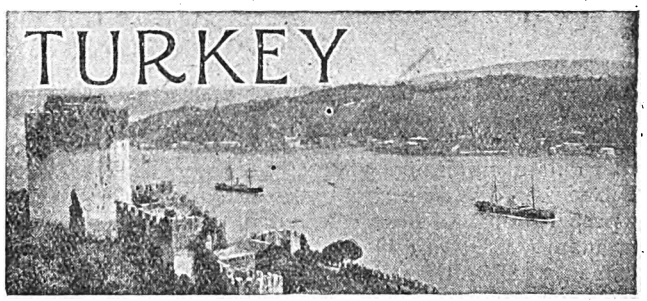
Archæology at Sparta.

The year's campaign at Sparta of the British School of Archæology has recently been completed. With great skill and patience, the intricate mass of buildings above the stage has been cleared, and the original plan with its successive reconstructions largely recovered. The remains of the theatre with its long parodos and eastern staircase now laid bare make a most imposing spectacle.

ROUMANIA.

Bucharest, June 15.

The Political Position.



For some time after the elections the newspapers were still full of stories of the abuses which took place at the polls. These, of course are not peculiar to any one party, but to the Western European they make strange reading. A case came to the personal knowledge of the writer of a woman who had come to Bucharest on business and was called back by an agitated relative to look after her house and children as her husband, the schoolmaster in a prosperous mountain parish, had been put in prison pending the polls, so the message ran, because he was a Liberal!

The important thing is that the Government has secured a good majority. It has not, however, succeeded in breaking up the Nationalist Party of Transylvania, although it looked like achieving success just before the elections, nor in spite of various machinations towards that end has it succeeded in winning over the Peasants' Party (whose stronghold is Bessarabia). It was apparently hoped by the Averescans and Liberals to unite the many existing small parties into two main bodies, viz., Government and Opposition, but this aim is far from realisation. The plan was that the Nationalists should join the Liberals, who are still weak in Transylvania, and the Tsaranists (Peasants) should join the Averescans. The Nationalists came out so strongly in the elections, however, that they have gained fresh courage and the Tsaranists profess themseves hopelessly shocked at the Government's electoral abuses. So the four parties remain as before. It is thought, however, in some quarters, that both Nationalists and Tsaranists might join the Averescans if the dissolution of Parliament were granted and new elections made, though that gain would provide too many candidates for places in the Council of Ministers.

In the meantime, thanks to the new Electoral Law, the Government has a good majority in both houses.

Agricultural Situation.

The harvest prospects are reported to be on the whole good. But during the last few days some districts have been visited by such severe thunder storms accompanied by hail and deluges of rain, that the crops are completely or partially destroyed. So severe were the floods in the Galatz district that ralway communications with Bucharest were interrupted for several days. Transport conditions are again normal, however, and the summer heat has set in in earnest.

Constantinople, June 22.

The Plot Against the Ghazi.

The main event of the last week was the discovery of a plot to assassinate Mustapha Kemal Pasha. Immediately after the settlement of the Mosul question Turkey has been faced with a domestic problem. According to the local papers, which have thrown open all space for this highly interesting question, the plot was not one of personal revenge of some fanatic but was the first move of a vast political organisation directed against the very foundations of the Republican Constitution. The first reports regarding the discovery of the plot pointed to nothing more than an attempt on the President's life, but every day has brought developments which, if the reports thereon are based on truth, certainly bring to light the activities of a movement which boded ill for the Government at present in power. In the absence of further information—which will doubtless be forthcoming when the Tribunal of Independence begins to function—it is extremely difficult to reconcile the arrest of practically the entire force of the Opposition Party (the recently sup-

pressed Progressionists) with the two or three individuals who were, it is reported, caught red-handed and who are by no means possessed of unblemished reputations. The reported arrest of such as Refet Pasha, Kiazim Karabekir Pasha, Ali Fuad Pasha, Jaafar Tayyar and other leaders of their party, has caused great astonishment here, and in some circles considerable apprehension. Besides these, many actual deputies of the Grand National Assembly figure amongst those already arrested, whose number is said to exceed sixty. The names of Adnan and Reouf Beys have also been mentioned in connexion with the movement. The police still pursue energtic investigations, and from the present rate at which arrests are being made there is no telling when and where the question is likely to end. Mustapha Kemal Pasha has declared that the Government will deal with the situation with an iron hand. He appears, however, to be in no way apprehensive of any movement ever being sufficiently strong to have really detrimental effects on the Republic. The Press is greatly concerned with the effect the discovery of this plot will have abroad, and expresses a natural indignation at the perpetration of such acts, which go to convince foreigners that unity is still a thing of the future for Turkey.

Compulsory Turkish.

As from the beginning of July all principals of non-Mussulman schools are required to pass an examination in the Turkish language, both for writing and conversation. This examination was to have been held last year, but in view of the numerous protests that insufficient time for preparation had been allowed it was postponed until next month. All candidates must furnish all diplomas, documents of identification, certificates of vaccination and good health before being permitted to sit, and all those not passing to the satisfaction of the Education Department will be prohibited from exercising their profession.

PERSIA.

Teheran, June 14.

The Cabinet.

Zoka ul Mulk (Foroughi) tendered his resignation and that of his Cabinet over a week ago, and the Shah called for Mustofi el Mamalek and entrusted him with the formation of a new Ministry, which has just been presented, as follows:—

Prime Minister, Mustofi el Mamalek,
Minister of Foreign Affairs, Taghizadeh,
Minister of Finance, Vossough ed Dowleh,
Minister of War, Zoka ul Mulk (Foroughi),
Acting Minister of Justice, Mansour es Saltaneh,
Minister of Posts and Telegraphs,
Mirza Ahmad Khan Atabaki,
Acting Minister of the Interior, Mansour ul Mulk,
Minister of Public Instruction, Nassir ed Dowleh.

The new Premier has not been at the head of a Ministry for a number of years. He is extremely popular with all classes and enjoys the esteem and confidence of everyone, and his Cabinet is well received. Interest attaches to the reappearance in the political world of the new Minister of Finance, Vossough ed Dowleh, who, it will be remembered, was the Prime Minister who concluded and signed the abortive Anglo-Persian Agreement of 1919, and after its rejection by the Mejliss he left the country, seeing that public opinion was against him. He had been living in Europe until last autumn, when he came to Iraq, and, being allowed by the new Shah to return to Persia, he came to Teheran in the Spring.

The Elections.

The elections for the sixth Mejliss are drawing to a close in Teheran and the provinces, and already a good number of the deputies have arrived here, and Parliament is expected to be opened within a month. So far Modarres, the leader of the Clerical party in the last Parliament, easily heads the poll in Teheran, which returns twelve deputies, in the list of which figure three of the Ministers in the new Cabinet, who will therefore not be able to sit in the House, as no Minister can be a deputy as well.

The Valiahd.

Consternation was caused in the town on Friday by the news that the Crown Prince was seriously ill. It now appears that His Highness has typhoid, and that no less than eleven doctors, Persian and European, are attending him. The young Prince, who is only eight, created quite an impression by his calm self-possession on the occasion of his father's Coronation, and it is everyone's hope that he may make a speedy recovery.

The Shah, who was out of town, was urgently summoned to his son's bedside. There was some doubt as to His Majesty's whereabouts, but it now appears that, hearing that some dozen people, mostly women, had been killed in Malayer (Dowlatabad) during the crush for bread by the crowds outside the bakers' shops, the Shah immediately ordered his car and proceeded there without loss of time to investigate the matter and do what he could to help his subjects. It is characteristic of the new ruler that, as the papers give out to-day, he went off alone, unescorted, with just a cushion, and some bread and cheese, on his 30 mile journey! A slight exaggeration, no doubt, but the Shah is the last to wait on ceremony or to waste time in making elaborate preparations when he feels his presence is required anywhere.

General News.

The weather has at last begun to warm up a little, though it is stil remarkably cool for the time of year. There was a heavy and quite unprecedented snowfall in mid-April, which has considerably helped to lengthen the Spring, and to retard the coming of the hot weather.

The High Clergy having again recently received reports from Nejef of the profanation of the Imams' tombs by the Wahhabis, meetings have been held, and the Shah has also interested himself in the matter. It has been decided to take no action until fuller reports are to hand.

The Opium Commission of the League of Nations left here a week or two ago, by way of Mesopotamia, visiting Burujird, an important opium growing centre, on their way.

Teheran Society, and the British community in particular, have lost one of their best known and most highly respected members by the departure for home of Dr. Joseph Scott, Medical Superintendent of the Indo-European Telepragh Department, and the best wishes of his host of friends, Persian and European, among whom he has been deservedly popular, will go with him in his well-earned retirement after his strenuous service of 30 years in this country.

It was recently announced that the British Minister, Sir Percy Loraine, is leaving Teheran in a fortnight's time, and is being replaced by Mr. Clive, Consul-General in Tangier. Lady Loraine left for England some weeks ago with her mother, the Hon. Mrs. Stuart Wortley, who came out here to witness the Coronation.

NEWS IN BRIEF.

It is officially announced that the Egyptian Government has decided to participate in the Moslem Congress at Mecca.

The Yugoslav Chamber has approved, by 122 votes against 29, the agreements entered into between Yugoslavia and Italy.

The Maharaja of Kapurthala will represent the Indian Princes at the League of Nations at the next assembly meeting in September.

Reuter reports from Sofia that four bombs were thrown at Petritch on June 23 by two unknown persons, who fled towards the frontier. Five people were injured.

The King of Roumania opened the Bucharest-Galatz-Kishineff air route last Thursday. The service will be maintained by De Havilland 9A biplanes which formerly belonged to the army.

Mr. Kenneth Armitage, an Assistant Commissioner in the Central Provinces, died at Amraoti (Berar) on June 25 after a riding accident. He was found in the jungle in an injured condition on June 15, with his horse standing by, and lay unconscious for ten days.

M. Nicolas Tesla, the Serbian scientist and electrical inventor, who lives at New York, has been awarded the Grand Cross of the Serbian Order of St. Sava and elected Doctor, *honoris causa*, of the Universities of Belgrade and Zagreb on the occasion of his 70th birthday.

In the course of a speech at Bassein on June 23, the Governor of Burma, Sir S. Harcourt Butler, expressed his confidence in the success of the special measures adopted to reduce crime in Burma, which stood out well in regard to police work.

The will of Mr. Robert Scarth Farquhar Macrae, C.I.E., C.B.E. (47), of Finchley Road, Hampstead, N.W. Commissioner of Police, Port of London Authority, and at one time Commissioner of Police for the State of Baroda (personal estate in Great Britain) has been proved at £6,119.

Mr. L. Evans, an accountant of the Bombay branch of the Hong-kong and Shanghai Bank, who was arrested at Aden while proceeding to England and taken to Bombay under arrest, was remanded on June 25 in police custody for a fortnight. The charges against him are criminal breach of trust and falsification of accounts.

The wife of the French Commandant at Palmyra has been murdered between Homs and Palmyra; also the driver of her car. The latter was shot by the native soldiers of the escort when the car had to stop owing to a puncture, and the corpse of the lady was found stripped by the side of the vehicle.

BOOK REVIEW.

DANTE'S INDEBTEDNESS TO ISLAM.

"ISLAM AND THE DIVINE COMEDY," By Miguel Asin, Professor o Arabic at the University of Madrid, and member of the Academia Espanola; translated and abridged by Harold Sunderland (London: John Murray, 12s. net.)

Intolerance was once the hallmark of all Semitic creeds; protagonists in controversy branded dissent as heresy and poured contempt on the history of alien religions. Ingrained prejudice is now yielding to dispassionate examination, and theological hatred is softened by outspoken sympathy. It is an encouraging symptom of the new departure that the Rev. Miguel Asin, who teaches Arabic in the University of Madrid, should write a weighty treatise in order to prove that Dante's immortal work was to a great extent based on Islamic tradition. The generosity of the Duke of Alba enabled him to publish the fruit of twenty-five years' exhaustive study: and thus his "Musalman Eschatology in the Divine Comedy" appeared in 1919. Its arguments aroused a storm of controversy. Many Italian Dantists stoutly maintained that their idol owed nothing to extraneous sources, and some attributed his poem to inspiration. But an overwhelming majority of Oriental scholars have accepted Professor Asin's daring thesis; and the bitterest critics render justice to his profound erudition. At Lord Balfour's suggestion the Duke of Alba determined to give wider publicity to Professor Asin's views; and the abridged English version which has appeared under his auspices is all that a translation should be.

The author's preface to the Spanish edition enables us to follow the steps by which he arrived at his startling conclusion. He found that twenty-five years before Dante's birth the *Futuhat*, written by a Murcian Sufi named Ibn Arabi, had depicted the ascent of a mystic philosopher to the Celestial regions, and had illustrated it

CASSELL BOOKS

An important record of a diplomatic career.

Sir Mortimer Durand

A BIOGRAPHY BY

SIR PERCY SYKES

The author gives a fascinating record of Sir Mortimer Durand's brilliant career in India, Persia, Spain, and the United States. His powers of statesmanship, and the remarkable ability which he brought to bear in dealing with Oriental potentates, are clearly revealed in this great work. *With maps and 8 half-tone plates.* 25s. *net.*

Cassell & Co. Ltd. London, E.C.4

Digitized by Google

with geometrical designs strongly resembling those which moderns have deduced from the vision of Dante's and Beatrice's ascent to the sphere of Paradise. Then the Professor's horizon widened. He learned that Ibn Arabi's work was based on Islamic traditions representing Mohammed's ascent to God's throne, preceded by a nocturnal journey to the nether regions. The similarity between these and the "Divine Comedy" is far too close to be accidental; it extends to innumerable picturesque details and to the topography of the after world. At this stage a doubt arose in our author's mind. Might not antecedent tradition and the conception of Dante be derived from earlier Christian legends? An exhaustive study of these legends proved conclusively that very many features common to the "Divine Comedy" and Islamic traditions are found nowhere else.

There follows an elaborate account of the genesis of the latter. Their germ is found in a Quranic text which praises the Almighty for having permitted His Prophet to travel by night from Mecca to Jerusalem. This mysterious passage seems to have fired the vivid Oriental imagination.

> Around an insignificant verselet of the Quran a plot was woven, and the story developed in the form of *hadiths* or traditions of the Prophet, who was supposed to describe the wonders he saw on that memorable night.

During the ninth century six *hadiths* were evolved, in each of which Mohammed told the story of his *Isra*, or ascent to Heaven; and a second group of traditions recounted his visit to the nether regions. Finally, the two cycles were fused in the "Tafsir" of the great historian Tabari, who flourished in that century.

Professor Asin's next care is to prove that Kipling's well-worn distich did not apply to mediæval Europe. Spain and Sicily were centres of Islamic culture which exercised a powerful fascination on the semi-barbarous nations of Christendom; Crusaders, pilgrims to Palestine and merchants maintained a constant stream of intercourse with the East. Dante, who is known to have absorbed all the learning of his time, must have been conversant with his Moslem models and there is ample internal evidence in the "Divine Comedy" that he sympathised with the intellectual side of Islam. He relegated Mohammed to the nether regions as a conqueror and a sower of discord; but he placed Saladin and a host of Muslem philosophers in "limbo"—the initial sphere of the after life.

Professor Miguel Asin's impartiality and his inexorable logic are as conspicuous as his profound acquaintance with Arabian learning: his book should be studied by all who realise the immense influence of Islam's culture on the trend of civilisation in Western Europe. F. H. S.

A NEW JEWISH ENCYCLOPEDIA.

"Enzyklopadie des Judentums."

Twenty years have lapsed since the publication of the "Jewish Encyclopedia" (Funk and Wagnalls, Co., New York), and a similar new work has for many reasons become necessary. The last two decades brought many great changes which altered the position and outlook of the Jews in nearly all countries of their dispersion. The interest, friendly and otherwise, taken in the Jews on the part of their co-citizens and hosts in the old and new States of the world is also to-day greater than and different from that of twenty years ago. The World War, with its aftermath and new problems, the Jewish National Movement and hopes, the stimulus given to the study of Jewish history and literature, life and lore, the crisis and sectarian split in Jewish religion and theology, the great amount of recent discoveries and new sources of knowledge, the increase in scholars and in scholarly productions—these are some of the motives inspiring the great plan of the new Jewish Encyclopedia, which is about to be published by the "Eshkol" publishing firm in Berlin.

The Encyclopedia will appear, for the present, in two languages: Hebrew and German. There is no definite announcement as to the English edition of this work. The specimen before us (in Hebrew and German) contains articles written by scholars who are experts on their subjects. We mention only a few, which may be of special interest to the readers of THE NEAR EAST AND INDIA, e.g., Abdullah Ibn Salam by Dr. T. Horowitz in Frankfurt, Alexandria by Dr. Simhoni in Berlin and Old Persian Religion and Judaism by Dr. I. Scheftelowitz in Cologne on the Rhine. Other articles also are well worth reading and studying. The Hebrew specimen is even richer than the German. Both, Hebrew and German, can be acquired from the "Eshkol" (Berlin Charlottenburg, Bismarckstrasse 106). Paper, print and illuminations are excellent. The work will be indispensable to all requiring information on Jewish subjects, and may be recommended to all, Gentiles and Jews alike.

HEBREW SELF-TAUGHT.

"SICHEN IVRI": Hebrew Self-taught. By Philip Blackman (London: R. Mazin and Co., 4s. net.)

This manual of conversational Hebrew is an excellent little volume to be put into the hands of a beginner. It is equally useful to the more experienced aspirant to conversational fluency, because of the inordinate amount of practical information that it provides ready to hand. It is not a mere phrase book, or list of vocabularies. It is a complete linguistic *vade mecum*, containing rules of grammar, a dictionary, idioms, and above all, a practically conceived and well arranged set of conversations. The classification is logical and the needed expression is easily found from the appropriate list. This book, which is small enough to lie comfortably in the student's pocket, should prove useful not only to the beginner in conversational Hebrew, but also in writing the language. The greatest difficulty met with in conversation in a new tongue is the lack of familiarity with the simplest expressions that make up the framework of casual small-talk, and which are the most idiomatic. To this need the author, in his wide experience as a manual writer, has given special attention. V. L.

VISITORS FROM YUGOSLAVIA.

A party of Yugoslav students and others from Liubliana—29 in all—arrived in London this week for a fortnight's stay in England. The tour has been promoted by Mrs. F. S. Copeland, founder and secretary of the Yugoslav Society for the Study of English in Liubliana, and is being carried out mainly under the auspices of the Catholic Council for International Representation and the Catholic University Federation.

The Roumanian Parliament was opened at Bucharest on June 25.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA

THE ASSYRIANS, TURKEY, AND GREAT BRITAIN.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your Editorial Note of June 10 on the terms of the Mosul Treaty, I read: "There is nothing in the Agreement to cause the least misgiving in any one of the three countries that are party to it . . . . The Brussels Line is confirmed as the boundary between Turkey and Iraq. It is not the frontier that Great Britain asked for, but it was the one awarded by the Council of the League of Nations. Great Britain, therefore, is not responsible for leaving Assyrians and Chaldeans in Turkish territory, for their fate had to all intents and purposes been settled beforehand."

At the end of the same note I find: "Permission is accorded to any residents of the Mosul vilayet to opt within a fixed period for Turkish nationality, and *there is to be an amnesty for those who have been imprisoned for offences against the Iraqi State by furthering Turkish propaganda.*" (The italics, of course, are mine).

There was a time when the world heard much of these Assyrians and Chaldeans, whom Great Britain could never abandon. That time, it seems, has passed. The treaty does not mention these Christian *protégés* of Britain, once so suffering, once so loyal, valiant and deserving.

There was a time when the world heard little of the friends of Turkey, imprisoned in Iraq. That time, it seems, has also passed. The Turks trumpeted abroad no promises, but in the treaty they have remembered, to protect, the men who stood by them—though they are on the other side of a frontier for which Turkey also did not ask.

In your previous paragraph you speak of "Sir Austen Chamberlain's imperturbable good will and courtesy, the trenchant logic and hard hitting of Mr. Amery in debate, and, finally, the obvious friendliness and staying power of Sir Ronald Lindsay," as a combination which broke down even Turkey's capacity for provocation and prevarication."

Still, I fear that neutrals who know the Near East, and, no doubt, some Englishmen, will be the more persuaded by this treaty that the Turk has not been wrongly called "a gentleman." And they will be the more inclined, when next England pleads her high humanitarianism, to suspect something rather worse than what we Americans call "bunk."—I am, etc.,

CLARENCE STREIT.

Hengelgasse 17, Vienna I., June 13.

[Our correspondent appears disposed to deny us any satisfaction on the score of the passing of the Turco-Iraqi Treaty. The cause of the Assyrians which, though a just one, was smaller than that of the now recognised Iraq, was fought hard for by British officials, but the League finally decided that the Hakkiari should remain outside Turkey. Against that decision the British Government could not agitate; and it is now, instead, doing what it can for these Assyrians within Iraq. The insertion in the Treaty of a clause amnestying these Assyrians who have been forced up into the heart of Asia Minor—a clause which Mr. Streit appears to think was desirable—was probably left out because of the futility of putting it in. In other words, the Turks insisted on something that would have been done in any case, and Britain failed to insist upon something which she had no means of imposing.—ED.]

It is reported in Jerusalem that Hassan Khalil Pasha Abu'l Hada has become Prime Minister of the Transjordan for the third time, says a Reuter message.

THE WEEK AT HOME.

London, Tuesday Morning.

The Government and Moscow.

Largely owing to the unintelligent attitude of one or two Cabinet Ministers and of an odd newspaper or two, and in less degree to the inside knowledge and personal acquaintance with Soviet Russia of a handful of Members of Parliament, the question of Russian relations with this country is still being kept prominent. Last week, indeed, the Government issued a Blue Book in which proof was given that the wiles of Moscow among British Communists are very well known to the British police. These documents, while not throwing much fresh light upon the machinators of Moscow, made one feel, not in the least alarmed, but rather proud of the imperviousness of Britons to Communist doctrines. They even, as Mr. Lloyd George said in the House, put the British Labour Party in a favourable light! It is as if in these healthy islands the Muscovite mosquito were either harmless or could not exist.

The fact that the doctrines of Moscow, whether in their past or in their constantly changing form, have no chance of being accepted or imposed here, has not, however, deterred those who believe that in treating with Russia we are doing an unclean thing from urging the Government to clear out the Soviet agents from this country, to break off diplomatic relations with the Reds, and, in short, to go back to the pre-MacDonald régime and to treat Russia as if she did not exist. This the Government has refused to do, counting that material considerations are of greater importance than ethical reasons. In this decision it has sadly disappointed those to whom the iniquities of Soviet Russia are an ineffaceable memory, and, too, those who regard as an unforgivable insult the Russians' recent attempt to interfere in British domestic matters. The disappointment of those who see in any and every industrial and political disturbance the red hand of Moscow does not, on the other hand, matter in the least.

For myself, I cannot help feeling that there is a certain equivocation in the Government's attitude in this affair. For it does appear that what has weighed with the Government is the fear of losing the increasing trade of this country with Russia; the mere general anxiety of "disastrous consequences" is rather mysterious. The government that is really against Bolshevism is the

government that supports Poland as against Soviet Russia, not the government which attempts each day, by promoting its own trade, to increase the prosperity of Poland's neighbours, Germany and Russia. The picture of Europe which statesmen like Lord Balfour and Sir Austen Chamberlain painted for the *beaux yeux* of Parliament was not easily recognisable; no doubt it was difficult enough to defend a case all the ethical values of which you began by admitting were against you.

The Press, as might have been expected, has for the most part supported the Government in its professed loathing of all the Soviet's political actions and in its determination to retain the existing Trade Agreement with the Soviets. But one has the greatest regard for two sets of thinkers:—those who, knowing at first hand the nature of Bolshevism, shun it and would for ever abhor it, no matter what material advantages recognition of it might imply; and those who regard Bolshevism as a philosophy held by a foreign people who have a natural right to hold it and a human right to its being universally recognised. On grounds of sentiment there is much to be said for the first; but on the historical argument the second category would probably have the honours.

Reactions of the Strike.

Now that the General Strike is over and that an Eight Hours Day is to be permitted by the House of Commons, the time is being deemed ripe by certain eminent men for the declaration of what may be assumed to be no mere thoughts on the spur of the moment but long considered judgments. We have, for example, a hitherto somewhat obscure but now rather notorious Lord (who, for the sake of the Conservative Party which he was representing, shall not be named) delivering himself of the strange sentiment that, since during the War we did not feed our enemies the Germans, so now we should not be feeding our enemies the miners. One need not have any memories such as I happen to have of how miners during the War dug, better than anyone else, trenches against the Germans—besides, of course, doing all the other things that distinguished those who practised and did not prattle patriotism—to realise not only the fatuity but the danger of statements like these. And we have on the other hand whirling words from notable politicians who, though of Mr. Baldwin's party, certainly do not share his spirit. In particular, two inseparable roysterers have recently forsaken the subject of India and of Finance to plunge headlong and with considerable splash into the muddy waters of domestic politics.

It is as if the feelings pent up during the Strike were now coming out. One hears dark talk of the repeal of the Trades Disputes Act, and there seems little doubt that the Premier will have a harder fight than was at one time imagined in restraining the political mouthpieces of those who believe that Trade Unionism is the curse of the industrial life of this country.

Coal.

In such a darkening atmosphere as this it is not easy to see the clouds lifting over the coal dispute. They may be dispersing, it is true; Mr. A. J. Cook has recently talked of negotiations in a way that may be taken as you find it; and the Government still hopes for a great rush of miners to the pits, there to make agreements with the masters, once the Eight Hour Day has been permitted. But it seems that the miners and the T.U.C. have come together again in face of the Eight Hour Day contingency; the belief appears to be growing that, once the miners are crushed, the general position of Trades Unionism will be attacked.

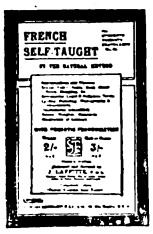
Unless something quite unforeseen happens, therefore, the inevitable defeat of the miners will be achieved in the worst possible circumstances. Tempers will be embittered, and distrust will have been transferred from the sphere of suspicion to that of confirmation.

The trouble is that there is no authority anywhere. The Government has gone away from the Royal Commission (and one wonders, incidentally, who, in view of this fact, will care to sit on future Royal Commissions) and it now has no authority other than its political authority. Nor in the miners' camp is there anyone, to all appearances, qualified to speak or negotiate in a practical way. Mr. Vernon Hartshorn, it is true, is considerably impressing the House of Commons with his conciliatory pleas for unification, but he speaks on behalf of no one but himself.

But, as I have said, there may be much going on behind the scenes, and I am even told by one possessed of some knowledge in these things that important developments, comprising a modification of the miners' attitude and the Government's welcoming of it, may be looked for very shortly. If that be so, no one will rejoice so much as the nation, to which the idea of an ending by the process of exhaustion is extremely repugnant.

Peeresses in the Lords.

It was an incident of little public importance, but sufficiently picturesque to be fully reported, the refusal of the Lords last week to admit peeresses into the Upper Chamber. No argument that could be called an argument was brought against Viscount Astor's Bill, but the general feeling in the Lords was similar to that entertained by Tom Hood towards Dr. Fell. There is, patently, no logical reason why women should be regarded of lesser importance when they become peeresses and desire to sit in a less democratic, if more plutocratic, House than the Commons. All the same, one admires the honesty of the prejudice which makes the Lords wish to conserve their ancient home inviolate. They have in recent years so sadly fallen away from their high reactionary standard that this bold front to the whims of modern democracy is to be regarded almost as a sign of character.



Sporting Sensations.

The worst feature of the prize contests in cricket and tennis is the sensationalism which the Press invariably extracts from them. An incredible amount of nonsense has been written about the Test Match and about the championship at Wimbledon. Personalities are, apparently, the things that matter nowadays; one is, in particular, grieved to find a Wimbledon crowd booing and hissing as if there were a professional Soccer match being watched.

To Mlle. Suzanne Lenglen, whose queenliness in tennis at least cannot be disputed, the Press should be profoundly grateful, for she provided it, for days on end, with sensational columns on whether she was or was not fit to play. How the sporting journalists will nibble their pens in loss for words now that she has definitely resigned from the Singles!

In cricket it is glorious to see England retrieving the reputation which has been so dismally lost in other forms of sport. Her play against the Australians has been creditable in every way; such a contest as is now being waged at Lord's under the sky and in the air of June would delight even the Immortals. If, under English direction, the willowy king and the leathery duke be made to perform their proper functions, what does it matter how other nations assail us with tennis racquets and golf clubs?

THE TURCO-IRAQI TREATY.

The text of the Treaty between the United Kingdom and Iraq and Turkey regarding the settlement of the frontier between Turkey and Iraq, together with the notes exchanged, has been issued as a White Paper (Cmd. 2679, price 9d.). This Treaty was signed at Angora on June 5 by Sir Ronald Lindsay, British Ambassador to the Turkish Republic, Colonel Nouri Said, Acting Minister of National Defence of Iraq, and Dr. Tewfik Rushdi Bey, Minister for Foreign Affairs of the Turkish Republic. It consists of eighteen articles and an annex. The test is as follows:—

CHAPTER I.
Frontier between Turkey and Iraq.

ARTICLE 1.

The frontier line between Turkey and Iraq is definitely laid down following the line adopted by the Council of the League of Nations at its sessions on October 29, 1924 (that is, the Brussels Line): nevertheless the above-mentioned line is modified to the south of Alamun and Ashuta so as to include in Turkish Territory that part of the road which connects these two places and which crosses Iraq territory.

ARTICLE 2.

Subject to the last paragraph of article 1, the frontier line described in the above-mentioned article constitutes the frontier between Turkey and Iraq, and is traced on the map (scale 1/250,000) annexed to the present Treaty. (A reduced map is annexed.) In case of divergence between the text and the map the text will prevail.

ARTICLE 3.

A boundary commission shall be appointed to trace on the ground the frontier defined in article 1. This commission shall be composed of two representatives appointed by the Turkish Government, two representatives appointed jointly by His Majesty's Government and the Government of Iraq, and a president, who shall be a Swiss national, to be nominated by the President of the Swiss Confederation, if he is willing to do so.

The commission shall meet as soon as possible, and in any case within six months from the coming into force of the present Treaty.

The decisions of the commission shall be taken by a majority and shall be binding on all the High Contracting Parties.

The boundary commission shall endeavour in all cases to follow as nearly as may be possible the definitions given in the present Treaty.

The expenses of the commission shall be divided equally between Turkey and Iraq.

The States concerned undertake to give assistance to the boundary commission, either directly or through local authorities, in everything that concerns the accommodation, labour, materials (sign posts, boundary marks) necessary for the accomplishment of its task.

They undertake further to safeguard the trigonometrical points, signs, posts or frontier marks erected by the commission.

The boundary marks shall be placed so as to be visible from each other. They shall be numbered, and their position and their number shall be noted on a cartographic document.

The definite record of the boundary laid down, and the maps and documents attached thereto shall be made out in triplicate, of which two copies shall be forwarded to the Governments of the two interested States, and the third to the Government of the French Republic, in order that authentic copies may be delivered to the Powers signatory of the Treaty of Lausanne.

ARTICLE 4.

The nationality of the inhabitants of the territories ceded to Iraq in virtue of the provision of article 1 is regulated by articles 30-36 of the Treaty of Lausanne. The High Contracting Parties agree that the right of option provided for in articles 31, 42 and 34 of the said Treaty may be exercised during a period of 12 months from the coming into force of the present Treaty.

Turkey reserves nevertheless her liberty of action in so far as concerns the recognition of the option of such of the above-mentioned inhabitants as may opt for Turkish nationality.

ARTICLE 5.

Each of the High Contracting Parties accepts as definite and inviolable the frontier line fixed by article 1 and undertakes to make no attempt to alter it.

CHAPTER II.
Neighbourly Relations.

ARTICLE 6.

The High Contracting Parties undertake reciprocally to oppose by all means in their power any preparations made by one or more armed individuals with the object of committing acts of pillage or brigandage in the neighbouring frontier zone and to prevent them from crossing the frontier.

ARTICLE 7.

Whenever the competent authorities designated in article 11 learn that preparations are being made by one or more armed individuals with the object of committing acts of pillage or brigandage in the neighbouring frontier zone they shall reciprocally inform each other without delay.

ARTICLE 8.

The competent authorities designated in article 11 shall reciprocally inform each other as quickly as possible of any act of pillage or brigandage which may have been perpetrated on their territory. The authorities of the party receiving the notice shall make every effort in their power to prevent the authors of such acts from crossing the frontier.

ARTICLE 9.

In the event of one or more armed individuals, guilty of a crime or misdemeanour in the neighbouring frontier zone, succeeding in taking refuge in the other frontier zone, the authorities of the latter zone are bound to arrest such individuals in order to deliver them, in conformity with the law, to the authorities of the other party whose nationals they are, together with their booty and their arms.

ARTICLE 10.

The frontier zone to which this chapter of the present Treaty shall apply is the whole of the frontier which separates Turkey from Iraq and a zone 75 kilometres in width on each side of that frontier.

ARTICLE 11.

The competent authorities to whom the execution of this chapter of the Treaty is entrusted are the following:—

For the organisation of general co-operation and responsibility for the measures to be taken:—

On the Turkish side: the military commandant of the frontier;

On the Iraq side: the mutessarifs of Mosul and of Arbil.

For the exchange of local information and urgent communications:—

On the Turkish side: the authorities appointed with the consent of the Valis:

On the Iraq side: the kaimakams of Zahko, Amadia, Zibar, and Rowanduz.

The Turkish and Iraq Governments may, for administrative reasons, modify the list of their competent authorities, giving notice of such modification either through the permanent frontier commission provided for in article 13 or through the diplomatic channel.

ARTICLE 12.

The Turkish and Iraq authorities shall refrain from all correspondence of an official or political nature with the chiefs, sheikhs, or other members of tribes which are nationals of the other State and which are actually in the territory of that State.

They shall not permit in the frontier zone any organisation for propaganda or meeting directed against either State.

Digitized by Google

ARTICLE 13.

In order to facilitate the execution of the provisions of the present chapter of this Treaty, and, in general, the frontier, there shall be set up a permanent Frontier Commission composed of an equal number of officials appointed from time to time for this purpose by the Turkish and Iraq Governments respectively. This commission shall meet at least once every six months, or oftener if circumstances require it.

It shall be the duty of this commission, which shall meet alternately in Turkey and in Iraq, to endeavour to settle amicably all questions concerning the execution of the provisions of this chapter of the Treaty, and any other frontier question on which an agreement shall not have been reached between the local frontier officials concerned.

The commission shall meet for the first time at Zakho within two months from the coming into force of the present Treaty.

CHAPTER III.

General Provisions.

ARTICLE 14.

With the object of enlarging the field of common interests between the two countries, the Iraq Government shall pay to the Turkish Government for a period of twenty-five years from the coming into force of the present Treaty 10 per cent. on all royalties which it shall receive:—

(a) from the Turkish Petroleum Company under article 10 of its concession of the 14th March, 1925;
(b) from such companies or persons as may exploit oil under the provisions of article 6 of the above-mentioned concession;
(c) from such subsidiary companies as may be constituted under the provisions of article 33 of the above-mentioned concession.

ARTICLE 15.

The Turkish and Iraq Governments agree to enter into negotiations as soon as possible for the purpose of concluding an extradition treaty in accordance with the usages prevailing among friendly States.

ARTICLE 16.

The Iraq Government undertakes not to disturb or molest any persons established on its territory on account of their political opinions or conduct in favour of Turkey up to the time of the signature of the present Treaty, and to grant them full and complete amnesty.

All sentences pronounced under the above heading shall be annulled, and all proceedings already instituted shall be stayed.

ARTICLE 17.

The present Treaty shall come into force on the date of exchange of ratifications.

Chapter II. of the present Treaty shall remain in force for a period of ten years from the date of the coming into force of the present Treaty.

After the termination of a period of two years from the coming into force of the present Treaty each of the Contracting Parties shall have the right to denounce this chapter in so far as its provisions concern that party, the denunciation taking effect one year after the date on which notice thereof shall have been given.

ARTICLE 18.

The present Treaty shall be ratified by each of the High Contracting Parties, and the ratifications shall be exchanged at Angora as soon as possible. Certified copies of the Treaty shall be communicated to each of the States signatory of the Treaties of Lausanne.

The annex contains a detailed description of the Brussels Line, and the following Note, written by Sir Ronald Lindsay and Nouri Said to Tewfik Rushdi Bey:—

With reference to article 14 of the Treaty signed by us to-day, we have the honour to declare that if, within twelve months from the coming into force of this Treaty, the Turkish Government desires to capitalise its share of the royalties mentioned in the said article, it shall notify the Iraq Government of its desire, and the latter, within thirty days after the receipt of this notice, shall pay to the Turkish Government in full satisfaction on account of this article the sum of £500,000 sterling.

On the other hand, it is understood that the Turkish Government undertakes not to divest itself of its interests in the said royalties without previously giving the Iraq Government the opportunity of acquiring those interests at a price not higher than that which any third party may be ready to pay.

It is agreed that the present exchange of Notes constitutes an integral part of the Treaty signed to-day.

A second Note contains the Turkish reply acknowledging the receipt of the offer.

NOTES OF THE WEEK.

(Continued from page 744.)

veto on the rendering of the usual musical honours to the *Mahmal* procession between Jeddah and Mecca. As all music is tabu in Nejd, the blare of trumpets caused some outraged Wahhabis to open fire on the Egyptians, whose armed escort immediately replied, with unfortunate results for the aggressors. The good sense of the Hejaz authorities enabled the incident to be closed at once, without further dislocation of the harmony suitable to the occasion. So far no decision of the Islamic Conference that met recently in Mecca has been reported to this country with regard to the future administration of the Holy Places. Nor is it known whether the negative decision on the subject of the Caliphate that was recorded at the Cairo Conference has been accepted in the Hejaz, or whether the pilgrims will be persuaded to invite King Ibn Saoud as *de facto* ruler and guardian of the Holy Places to become *de jure* Caliph.

Yugoslavia and Italy.

Much of the opposition in Yugoslavia to the ratification of the "Belgrade Conventions" with Italy must, no doubt, be attributed to a desire to embarrass the Government. At the same time it is inevitable that Croats and Slovenes should regard themselves as more exposed than their Serb fellow-countrymen to Italian penetration, if there is to be any. The Belgrade Government, however, can point to the general advantage to the Kingdom of friendly relations with Italy. The Conventions, which have been subjected to so much criticism and have given rise to demonstrations and collisions in the streets of Zagreb, are a necessary corollary to the Pact of Friendship and Cordial Co-operation between the two countries that was signed in Rome in January, 1924. That understanding may be said to have removed, at least for the time being, the menace that the Adriatic question with its numerous ramifications had previously been to good relations between Italy and Yugoslavia. Critics of the Conventions complain that their economic character conceals political designs on the part of Italy; but the outside world will reflect that in this sphere Yugoslavia will always be able to hold her own, and the freedom of action left to her people, if they care to take advantage of it, will enable them to meet far more effectually the economic rivalry that is sure to manifest itself in Balkan and other markets.

Mrs. Maude Howe Elliott, daughter of the American Philhellene, Samuel Bridley Howe, presented Byron's helmet, which was found by Mr. Howe at Missolonghi in 1824, to the Ethnological Museum at Athens on June 23.

It is reported, says the *Morning Post*, that Sir Geoffrey Archer, who has just left Egypt, intends to resign the Governor-Generalship of the Sudan for health reasons, and that he will not return to Khartoum.

The Mayor of Mosul has sent the following telegram to the Secretary of State for the Colonies: "Upon the occasion of the ratification by the Iraq Parliament of the Treaty between Great Britain, Turkey, and Iraq, the inhabitants of Mosul wish to repeat their deep gratitude to you for your great battles which have finally brought about an agreement which will allow Iraq people to put all their energies to the development of their State."

PERSONAL AND GENERAL

TO-DAY

June 30, 1926 (New Style).
June 17, 1926 (Old Style).
Dulheggia 20, 1344 A.H., of the Moslem Calendar.
Tammuz 19, 5685, of the Jewish Calendar.

The Earl of Lytton, Governor of Bengal, and Viscount Knebworth, arrived on June 26 at 32, Upper Brook Street, from India.

Mr. Sheldon Leavitt Crosby, Counsellor of the United States Embassy at Constantinople, arrived in London last week.

Mr. C. T. Allen, C.I.E., arrived last week from India and will stay at 9, Basil Street, S.W.1, for a few weeks before going to Freechase in Sussex.

The Prince of Wales will open the Ross Institute and Hospital for Tropical Diseases, at Putney Heath, at 3 p.m., on July 15.

Field-Marshal Viscount Allenby has consented to receive an Address from the English Zionist Federation. The presentation will be made at the Mile End Empire, Mile End Road, E.1, on July 4, at 2.30 p.m. Mr. Philip Guedalla, President, of the Federation, will be in the Chair. The Address will be in English and Hebrew.

Professor J. C. Coyajee and Mr. Coyajee entertained the following at luncheon on June 25 at the Savoy Hotel: Mr. and Mrs. E. Hilton Young, Sir Rajendranath and Lady Mookerjee, Sir Norcot and Lady Warren, Sir Maneckji and Lady Dadabhoy, Sir Alexander and Lady Murray, Sir Purshotamdas and Lady Thakurdas, Mr. and Mrs. W. E. Preston, Sir Campbell Rhodes, Sir Reginald Mant, Sir Henry Strakosch, Mr. G. H. Baxter, Mr. A. Ayangar, Mr. G. E. Franey, and Mr. E. Batchelor.

The 7th annual dinner of the Central India Horse was held at the Cavalry Club on June 23. Colonel Sir Neville Chamberlain, K.C.B., K.C.V.O., presided, and others present were Major-Generals Douglas and Watson; Brigadier-General Birdwood; Colonel-Commandant Giles; Colonels Bannerman, Cameron, Grant, and the Hon. H. D. Napier; Lieutenant-Colonels Daunt, Hewlett, Kettlewell, and McCowan; Majors Pinney and Sir T. Lawson-Tancred; Captains Alington and Kelly: and Surgeon-Captain Townshend Shaw.

Major-General Sir Matthew H. G. Fell, K.C.B., C.M.G., has been appointed Director-General Army Medical Services, in succession to the late Lieutenant-General Sir William B. Leishman, K.C.B., K.C.M.G. During the Great War Major-General Fell served in France and Mesopotamia. In 1922 he was appointed Deputy Director, Medical Services, serving in Turkey, in the Northern Command and in Egypt. He returned from Egypt this year to take up the appointment of Deputy Director-General Army Medical Services in succession to Major-General Pollock on June 1, the day before Sir William Leishman died.

Viscount and Viscountess Erleigh were at home at 65, Rutland Gate to members of the British Indian Union on June 24, when Sir Denison Ross spoke on Indian fables and their migration. The guests included the Maharaja of Alwar, the Maharaj-Kumar of Vizianagram, the Hon. Mrs. Ronald Neville, the Dowager Lady Boyle, Sir Maneckjee and Lady Dadabhoy, Captain Freeman-Thomas, Sir Alfred and Lady Mond, Sir Atul and Lady Chatterjee, Sir Purshotamdas and Lady Thakurdas, Sir Sidney Sitwell, Sir R. N. and Lady Mookerjee, Sir Montague Barlow, Sir Neville and Lady Pearson, Sir Rustom Vakil, Dr. Gilbert Slater, Professor and Mrs. Coyajee, Sir Thomas and Lady Carey-Evans, Sir M. Rafique, Sir Montagu Turner, Lady Hope-Simpson, Mr. and Mrs. N. C. Sen, and Mr. Cloudesley Brereton.

OBITUARY.

The death has occurred at New York, at the age of 66, of Mr. Cleveland H. Dodge. Among various honorary positions to which he was appointed may be mentioned that of President of the board of trustees for the Robert College, Constantinople. During the War he was made treasurer of the American committee in connexion with the Near East Relief Fund.

Captain William McGregor Spence, 4th Battalion, 11th Sikh Regiment, elder son of Mr. and Mrs. W. G. Spence, of 4, Woodside, Sunderland, was killed at Aden on June 26 through the collapse of a mess building. He served in Palestine and Syria from 1917 to 1919 with the 53rd Sikh Regiment, and after the War was in Asia Minor and on the North-West Frontier. At the time of his death he was serving with his battalion, which is a unit of the Aden garrison.

The death occurred in May at Brummana, Syria, of Dr. Beshara J. Manasseh, who for 49 years was a doctor in the Lebanon area. Born at Beyrout in 1854, a member of a leading family belonging to the Greek Orthodox Church, he graduated at the Syrian Protestant College, now the American University, and worked for some time as a teacher in the English Mission School for Jews in Damascus. For many years Dr. Manasseh was the appointed representative of the Protestant Community of Mount Lebanon to the Government.

PERSIAN GULF SLOOP.

A change in the command of the Lupin, one of the four vessels now stationed in the Persian Gulf, took place on June 24, when Commander R. N. Suter, D.S.O., on completing two years, was succeeded by Commander H. F. Curry, D.S.O., who was promoted at the New Year, after commanding the Newark in the First Mine-sweeping Flotilla. Commander Curry is the officer decorated for his service in command of the stern-wheel steamer Muzaffri on July 24, 1915, when he landed a supply of ammunition for the troops on the right bank of the Euphrates under a heavy fire from the Turkish guns.

The Prince of Wales received His Highness The Maharaja of Alwar at St. James's Palace on June 22.

RESPONSIBILITY.

If one were asked to name the quality most conspicuously absent among the Indian intelligence of the present day, the correct answer would almost certainly be, the power of taking and exercising responsibility. Intellectual eminence, even brilliance, exists in plenty: the ability is there, the power of arriving at correct decision is not wanting—what is wanting, and very conspicuously wanting, is readiness to accept responsibility. It may very justly be argued that this defect is one of our own creation; that Englishmen have for so many years past monopolised the direction of affairs in India, that it has become second nature to Indians to leave action, and all that it implies, to the governing race. We have taken a long step towards making it possible for Indians to look forward to the time when they will be able to govern themselves: and it may reasonably be expected that, when the Royal Commission takes up its work in, or perhaps before, 1929, it will do so in the hope, if not in the expectation, of being able to devise means of taking further steps in the same direction. For the achievement of such an object, the first necessity is to recreate the power that is now lacking—whether owing to our own fault or not, it is beside the question to inquire: it is enough to say, as one can beyond fear of contradiction, that it does not exist at present. When Englishmen write or speak of the difficulty of obtaining "the right stamp" of young Indian to fill the officer ranks of the Indian Army, it is this particular qualification that they have specially in mind. The same may be said, with even more force, about the officering of the infant Indian Navy; for, if the ability to arrive at a quick decision, and to act upon it instantly and without flinching, is one that is a necessary part of the equipment of a military officer, it is even more so in the case of a naval officer. The man who acts must often make mistakes, but the man who is constitutionally unable to act will always be a far greater danger to the safety of those whose lives are placed in his charge, and to that of the State, whose servant he is, than the man who is ready to act, even on a wrong decision. It is not so difficult to train the young Indian to think for himself: what we have to do is to train him to translate his thoughts into action. This is likely to be a long process, and, indeed, to lead to a number of unpleasant experiences on the part of those on whose ultimate behalf the experiment is being made: the detached observer will be in a position to watch it with interest, but the rank and file immediately concerned are likely to take a less philosophical view.

But the position has to be faced: and, though the initial experiments in the Army, and still more in the Navy, will almost certainly produce disquieting results to begin with, the authorities responsible for the training of the Indian officer have at least this advantage, that they are able to begin it while he is still in his first youth. The results of a failure on the part of a civil official may not be so spectacular, but may well have an effect quite as immediately disastrous and even more far-reaching: and, in his case, the position is complicated by the fact that use has to be made of the man who is already there—usually not by any means in his first youth. To anyone who has had experience of the Indians who, at any rate in recent years, have held high office in the Government of India, it is a self-evident proposition that, in almost every case, their only possible claim to appointment has been the fact that they were Indians: and that, if the selection had to be made on merit or real qualifications alone, hardly a single one of them would have been considered for a moment, let alone appointed. Those Englishmen whose fate it has been to serve them, have generally found them charming people to work with; but they have, with very few exceptions indeed, fallen into one or other of two classes. In the first, and the commoner, of these are the men who, when their titularly subordinate Englishman has indicated the dotted line along which their signature is desired, have been content to sign without inquiry or protest. In the second, fortunately less common, are those who decline to sign at all—not along the dotted line for the single reason that this is the one that has been suggested by their titular subordinates: and not along any other, because they are entirely incapable of evolving one for themselves. One who has recent knowledge of several of the former class, and of one or two of the second, can only think of a single one belonging to neither—a really thoroughly capable Indian of the highest official position who arrives at his own conclusion, marks out his own line and signs along it.

How is this difficulty to be met? To one observer at least, it appears that it is due to the original scheme of the Reforms having been begun from the top instead of from the bottom: and that the next move ought to start from an entirely different basis. If the Royal Commission of 1929 should decide to vary the existing arrangement and to recommend the constitution of a Central Government all of whose members should, without exception, be selected on grounds of fitness and merit alone, this would, in practice, amount to confining its membership to Europeans. If it should allow a certain laxity in the selection of the members of Provincial Governments, whereby a member of each of the two great Indian communities should be chosen by selection, on fitness and merit *inter se*, this, while amounting to the constitution of a permanent European majority, would ensure that Indian opinion was properly represented in Provincial, as distinct from Imperial, concerns. And, finally, if it should decide on such a measure of decentralisation, in the Provinces, as would allow of their subdivision into a number of much smaller sub-Provinces constituted, so far as possible, on racial, religious and linguistic bases, there ought not to be any serious difficulty in finding, at least in the great majority of cases, Indians of the required race, religion and speech who, with the assistance of a suitable European adviser, would soon learn, in a comparatively minor and restricted sphere, the art of government and its most important requirement—the power to accept responsibility. Once this foundation had been truly laid, it would become a simple matter to build on it. If the Reforms have not, so far, achieved the success that was hoped from them, it is at least a reasonable

Digitized by Google

explanation to suggest that this is due to the fact that an attempt has been made to build wihout going through the laborious and unspectacular work of providing a firm foundation. In one of his farewell speeches in India, Lord Reading spoke of the impatience of the Indian politician, who desired to erect the dome before the framework of the edifice was in place. May not the same criticism be levelled, with equal justice, at the architects of the Reformed Constitution? It is the fashion to complain that the Indian "leaders" wish to run before they have learned to walk. It is not unfair to say that we have abetted them in this desire, and have made but the smallest effort to teach them to walk; nor to suggest that, if this duty has been neglected in the past, it should be neglected no longer.

CURRENT TOPICS.

The Viceroy's Rains Tour.

The announcement that Lord Irwin contemplates making a tour, during the rains, to include Nagpur and Poona, has given special satisfaction in Bombay, whose inhabitants have been inclined to complain of the neglect of their Presidency by recent Viceroys and see, in the present announcement, an intention on the part of Lord Irwin to atone for past indifference. As the Bombay newspapers point out, Lord Irwin, on his first arrival, spent more time in Bombay than many of his predecessors had done during their entire terms of office: and so early a decision to visit Poona is hailed as a special indication of interest. A special word of praise is due to the courage of Lady Irwin, who has decided to accompany the Viceroy; for, though Nagpur is not an unpleasant place during the rains, and Poona a very pleasant one, the journey from Simla and back again is likely to be a trying one. The Bombay Governor's Poona residence at Ganeshkind is quite exceptionally attractice: and, once Lord and Lady Irwin are safely housed there, it is certain that they will greatly enjoy their visit and will be very sorry when it is over; for Ganeshkind is a beautiful house. with lovely gardens and grounds and with what must be one of the finest open-air swimming pools in India. Later in the year, the temperature gets a bit cold for outdoor bathing; but, at the end of July, the Ganeshkind bath is usually in great request: and, if Lord and Lady Irwin sample it, as they are sure to do, they will perhaps be the first Viceregal pair to do so.

The Governor of Bengal.

The cables quote some acid comments on Lord Lytton's departure on leave, in the issue of *Capital* of June 17. The paper specially represents European financial interests in Calcutta; but it is permissible to suppose that, in this instance, it voices opinions very widely held among Englishmen—at any rate, unofficial Englishmen—in Bengal. It says that, as the Governor has gone on urgent private affairs, this fact disarms the natural criticism that the skipper has left the bridge in dirty weather: but asks whether, since he has departed from the scene of action at a crisis almost unprecedented in the history of Bengal, there is any reason for Lord Lytton to return to complete his term of office. This is very straight speaking, but it voices the grave dissatisfaction felt by the European community in Calcutta at Lord Lytton's failure to leave Darjeeling while the riots were at their height—a feeling that has been acentuated by his selction of this particular moment for the fulfilment of his previously declared intention of taking leave. As a pointed comment on the former of these two causes for dissatisfaction comes the news that, in view of the effect likely to be caused by the Mohammedan feast of the Bakr Id—when the ceremonies always include the slaughter of kine—on the strained communal situation, the Governor of the Punjab has left Simla for Lahore, and Lord Lytton's locum tenens has returned to Calcutta from Darljeeling. The latest cables say that the festival on the whole passed off quietly, though the position in Calcutta is still one of considerable tension and is by no means yet free from anxiety. As regards the latter, it is reasonable to suppose that *Capital's* suggestion reflects the views not only of the European community of Calcutta but of Lord Lytton himself. It may be surmised that he would have deferred his leave to a more favourable opportunity if he had desired to return: and that his decision to adhere to his programme amounts to a declaration that he has no such desire. Lord Lytton achieved wide popularity in Simla during his acting Viceroyalty and there were many there who hoped and expected that it would result in his succeeding to the permanent vacancy. There is reason to believe that Lord Lytton would have welcomed such a result: and that the Governorship of Bengal has, since Lord Irwin's appointment, been less to his taste than it was before he acted for Lord Reading. If this belief is well founded, it provides an additional reason for supposing that this leave is preliminary to resignation; but, whatever the cause, the conclusion is one that may be drawn with some confidence.

The Indian Currency Commission.

It is stated that the Indian Currency Commission has now reached the stage of drawing up its report, a task which is expected to last for several weeks. One may, with some confidence, guess that it will decide against the proposal to introduce an effective gold standard into India: not because it believes that this is not the ideally best solution, but because it does not believe it to be a feasible one. If, then, the Commission reports in favour of a gold exchange standard, the important question is, what sterling value it will recommend for the rupee. One ventures to prophesy that it will not fix a definite value, but will lay down limits within which the repuee should be permitted to fluctuate without interference: and that these will range between a little over 1s. 5d. and a little under 1s. 6d.—say from 1s. 5 1/8d. to 1s. 5 29-32d. Should the rupee display a tendency to go outside these limits, the Government of India would enter the market, to support it or to hold it as the case might be.

Afghan Currency Reform.

Indian enthusiasts for currency reform will note with interest the action taken by Afghanistan, which has recently adopted the metric system in weights, measures and money. The currency is said to be based on the "Amani," the standard gold coin; though one may be excused for doubting whether there are more than a negligible number of these in actual circulation, or whether Afghanistan is, in fact, in anything like real enjoyment of the effective gold standard which has so many adherents among Indian economists to-day. According to the *Statesman's Year-Book*, there are three other gold coins, besides the Amani, in existence, of the respective value of half, two and five Amanis: and, up to the time of the recent change, one gold Amani was equivalent to 15 Kabuli rupees. In fact, the exchange value of the latter coin depended on its relation to the Indian rupee, and has been subject to frequent variations ranging from rather more than half to rather less than three-quarters of the value of the Indian coin. In the reorganisation of the currency now announced, the Kabuli rupee has been replaced by a new coin, the Afghani, of slightly higher silver content: ten Afghanis being equal to 11 Kabulis: and the relation between silver and gold has been drastically altered. Twenty Afghanis (equivalent to 22 Kabulis) now go to one gold Amani, in place of the old ratio of 15 Kabulis; so that the gold standard value of the current silver coin has been reduced to three-fourths of what it previously professed to be. The Afghani is divided into 100 pals, and coins have been issued of the value of 2, 5 and 10 pals—the metal is not stated, but it is presumably copper. Afghanistan has thus started a decimal coinage of the kind that has often been advocated for England: ten pence to the shilling, twenty shillings to the pound. If it is ever decided to start a decimal coinage in India, it may be supposed that this would follow some-

Digitized by Google

what similar lines. Ceylon and Mauritius, which both use the Indian rupee, have subdivided it into 100 cents; though, in the latter island, Mauritius cents and Indian annas are in concurrent use This, after all, is a matter that would present no special difficulty in adjustment: the crux lies in the gold value of the rupee and the method by which it should be determined in practice: and it is certainly interesting to find that the problem has been solved in Afghanistan, even if only on the basis of a theoretical gold standard—one that is certainly not practically effective at present and is, indeed, unlikely ever to become so.

Co-operative Societies.

A report received from India by the last mail gives figures that show the great advance that has been made of late years by the co-operative movement. At the end of the financial year 1914-15 there were altogether in India 16,000 co-operative societies, with a membership of 750,000 and a working capital of 850 lakhs of rupees. For the year ending March 31, 1925, the figures were 63,000 societies, with a membership of 2½ millions and a working capital of 4450 lakhs. The most advanced Province in this respect is the Punjab which, with a population less than half that of Bengal, the United Provinces, or Madras yet has more societies—11,500—than any other Province in India. The report says that the agricultural co-operative societies are already doing good work in the encouragement of the use of manures and of improved implements and methods of cultivation: and that it is through them that the satisfaction of India's chief agricultural need—that of still closer connexion between the scientist and the farmer—is to be looked for. No doubt the Agricultural Commission will give the fullest attention not only to the fulfilment of this need, but to the encouragement of the co-operative system that has already done so much valuable work in the same direction.

REVIEW OF BENGAL IN 1925.

The distortion of facts to suit party ideals is a very ancient phenomenon, but is probably more practised now than at any other time of the world's history. Here in London one lives all the time in an atmosphere of distorted facts. Not only do the newspapers which work under the banner of one or other of the political parties of the land distort facts daily in order to further their own objects and to defeat the objects of their opponents but a number of newspapers habitually practise the distortion of trivial facts and happenings in order to make the public take an interest in them far beyond their real merits. Two days ago the posters and the evening newspaper articles might have created an impression that the unpunctuality of Mademoiselle Suzanne Lenglen was the most important matter of the time. Of course many people are not really taken in by all this distortion. Many have adapted themselves to apply a very heavy discount to the face value of newspaper stunts of all kinds. Many would as soon think of accepting the newspaper sensations without immediate dilution as they would believe that all advertisements really mean what they say. The House of Commons, sad to relate, is very often the stage for wonderful stunts of distortion and illusion. Take, for instance, the recent General Strike and what has been said about it by the speech-makers of the various parties. How very differently the facts have been painted by the debates. Is it possible our intelligent elected legislators really view the causes, events and consequences of the General Strike in such opposite and contradictory lights? No, of course it is not possible. Otherwise the human brain would stand convicted of being the most unreliable machine in the world. Then why do they pretend to take the views they expound? The answer is for the sake of party gain, personal advantage and through these, but perhaps at a distance, greater in some cases than in others, the advantage of the country.

The above reflections are by way of introduction to a few notes on the recently-published "Review of Bengal in 1924-25" and on the comments on that Review by the Press in India. The Review deals in some detail with the revolutionary conspiracies of that period, with their results and with the special measures taken to deal with the conspirators and their helpers The Review claims that the Government of Bengal adduced irrefutable proofs of the existence of a highly organised, well-armed and well-financed conspiracy but that all the weight of argument and array of facts produced no effect on the stolid front of the Swarajist Opposition, in whose eyes the issue was but another contest between the Legislative Council and the Government. Now a year has passed and the Swarajists claim to be as unconvinced as ever of the realities of the conspiracy. In its article of May 31 last the Swarajist paper, the Bombay Chronicle, cuts the Review to pieces. The Review said that the preventive action taken by the Bengal Government under the special ordinance achieved its object in so far as it removed the known leaders of the conspiracy from the sphere of their activities and the cessation of overt revolutionary crime which followed in the wake of this action was a true measure of the urgency of the need for suppression. This statement the *Bombay Chronicle* criticises as being characteristic of the familiar bureaucratic controversial method of *suppressio veri* and *suggestio falsi* and goes on to demolish the Review writer and all people, high and low, who have shown an inclination to accept similar views by explaining that there was no outbreak of overt revolutionary crime, that the real intention of Government was to remove some of the energetic but inconvenient members of the Swaraj Party from the field of their peaceful and legitimate activities, but in so far as any revolutionary movement existed, the action of Government merely forced it underground. Thus we see that the *Bombay Chronicle* presents the facts in a very different light from the Review and one cannot but wonder what the real explanation is of this vast difference. Must one choose between the facts set forth by the Review and the facts set forth by the *Chronicle?* Is there a more correct set of facts somewhere between the two views? Have both the Review and the *Chronicle* distorted the facts or has only one party done it and, if so, which?

There can really be only one answer to this question and it is that the distortion is deliberately done by the *Chronicle*. It is incredible that the writer in the *Chronicle* with all imaginable bias and prejudice can so tamper with his brain as to make it conceive and express the distorted view of the facts which it serves up to its readers But unfortunately it is not at all incredible or unlikely that the distorted views will be accepted by the readers of the *Chronicle* and by the poorly educated public behind them, the strength of the acceptance increasing as the quality of the education decreases. The *Chronicle* means as many of these people as possible to accept its distortions even though it does not believe in them itself. This with his brain as to make it conceive and express the distortion for the sake of propaganda and sale which we experience in London we can really not feel aggrieved or surprised that in the East the same political and commercial weapon should be used. So far as the ordinary layman can determine, at the present moment here in England the miners are being just as much misled and misinformed as are the public in India at the back of the Swarajists. Truth is unable to emerge from her well because of the polluted hot air above her.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 10.

The Congress Split.

The Bengal Provincial Congress meets in Calcutta at the coming week-end and not only is the "cat out of the bag" but the "fat is in fire," to quote two of the Extremist papers. Mr. J. M. Sen Gupta has issued a statement preparing the way for a strategic retirement in case of his defeat, which in the opinion of the majority of the Indian papers is almost certain. He has been making frantic efforts to avoid discussion of the Hindu-Moslem Pact, which is now on all hands admitted to have been cemented solely by the personality of the late leader, Mr. C. R. Das. Some of the less discreet organs have revealed the fact that it never had any real existence from the beginning and, if this is so, the suppression of normal antagonisms between the two communities for five years is a fully sufficient explanation of the intensity of the present communal outburst. The fortunes of the Swaraj Party have never been at so low an ebb as at present and it is impossible to form any idea as to what is likely to be the result of the next general election. Will another C. R. Das arise and stop the present mad rush down the steep slope of anarchy?

To Band or Not to Band.

The communal question is still the daily obsession of the politically-minded Indian in Bengal and discussion at the moment is centred upon the Government regulations as to the conditions under which processions will be licensed. It has always been the practice to license such processions under rules laid down for the guidance of the Police, but in view of the recent riots, in which the first outbreak occurred owing to the playing of music outside a mosque, an increasing amount of attention has been drawn to this question and, after an abortive official conference between the communal leaders, Government has issued these rules as an Order. The question of music before mosques has become the principal open cause of quarrel between the two communities. The Hindus maintain that they have the right to conduct their processions with music through the streets and that they have enjoyed such right immemorially, music being a part of their worship. They point to the fact that Government declares that it respects the religious observances of all communities and they therefore claim the right to play music in processions. On the other hand, the Mohammedans claim that music during the time of prayer is strictly forbidden by their religion and further that it has been invariably the practice in the past for processionists who are passing mosques to stop playing music while prayers are in progress; unfortunately they are now making the additional claim that the whole of the twenty-four hours are hours of prayer. It is beyond question that in the past music has been played in processions passing certain minor mosques and it is equally certain that in the great majority of mosques prayers are not in progress throughout the whole of the twenty-four hours. Neither party states the whole truth; in the past the Hindus have in fact refrained from playing in front of certain mosques, and have ignored the existence of others. The fact is that neither community desires that the matter should be settled except at the expense of the other and in the present state of communal feeling neither is likely to give way

The Hindus Protest.

The Hindus held their mass meeting at the Town Hall on the evening of last mail day and an enormous crowd gathered to be moved in head and heart; for Government had failed to protect the processionists who desired to take their images to the river for immersion. The speeches were more conspicuous for ingenuity than for sincerity and it is patent that the intention was to endeavour to force Government to curb the growing assertiveness of the Moslem community. At the week-end an official statement was issued that Government fully supported the action of the Commissioner of Police in changing the route for the procession and though the result of the Town Hall meeting had probably not reached Darjeeling before the statement was issued, it was a very clear answer to the demand made there that Government should repudiate the action of the Commissioner. Strangely enough, it is the moderate papers that are most pressing on this point; but *Forward* cannot resist the temptation to have another fling at Government and it concludes its leading article by saying that the Hindus will not tamely submit to any infringement of their religious and civil rights. It is an interesting situation and that ingenuity is not confined to the Hindus is shown by the action of the Mohammedans who organised the prayer meeting in the street through which the procession was to have passed. What a howl there would have been if the police had attempted to disperse these four thousand pious bodies by force! Who would be a policeman?

Politics Generally.

Most of the general political items this week concern the communal question in one way or another. The Maharajadhiraj of Burdwan, who is one of the most distinguished Hindus in India, has written an open letter to Mr. A. K. Ghuznavi, who has been leading the Mohammedans in their objections to music outside musjids. The Maharajadhiraj pertinently observes that "unless we devise means to put an immediate stop to this ridiculous Hindu-Moslem quarrel which is going on all over India at the present moment, it will undoubtedly mean, if not putting a stop to, very greatly retarding any further political progress in the country." The extent to which communal feeling has spread is shown by the appearance of Mr. N. N. Sircar as Chairman of the Hindu demonstration on Thursday last. It has been previously remarked in this column that this shrewd and wealthy barrister is not given to wasting his time on politics, and his presence on this occasion lent considerable weight to the proceedings in the eyes of his countrymen.

The Viceroy has made his first public speech and on the whole it has been well received; it dealt with the agricultural classes, the conditions under which they live and their methods of working and there was nothing in the speech which could in any way be fastened on to as referring to Indian politics.

A further demonstration of Mohammedans was held at the Town Hall on Sunday last to protest against the resolution passed by the Corporation for the appointment of a Committee of Inquiry into the Deputy Major's conduct and it was resolved that the Mohammedan members of the Comporation should resign as a protest. The Mohammedan Councillors, however, have failed to comply with the resolution and some of them are pertinently

LONDON CITY MISSION.

AYAHS AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and to introduce them (if disengaged) to families about to travel to the East.

For Terms and Conditions apply to the

LADY SUPERINTENDENT, 4, King Edward Road, London, E.9.; or to

J. NEWCOMBE GOAD, Secretary, Foreigners' Branch, Mission House, 3, Bridewell Place, London, England.

asking why they should be sacrified in lieu of the Deputy Mayor, when there is no complaint in regard to their conduct!

Babu Bepin Chandra Pal's weekly article deals with the question of music in processions and it is in effect a strong attack upon Government for showing partiality when confirming rules which have been in force for so many years past. Government is finding out by experience the fate of those who interfere in family quarrels!

The cases against the editors of the extremist Press in respect of their publications during the riots have now been disposed of and two of them have received sentences of imprisonment. The Editor of *Forward*, who was bound down to find sureties for his good behaviour for six months, is making strenuous efforts to get the High Court to reverse this decision.

Men and Things.

A report is published showing that as the result of the introduction of mass production in the East Indian Railway workshops at Lilloah, the cost of building coaches there has been greatly reduced. This should be of interest to railway carriage manufacturers at Home and should lead to increased orders for work from these workshops.

Lord Lytton leaves for four months' leave at Home by this mail and on the same steamer Sir Surendra Nath Mullick will be travelling to take up his post at Whitehall. Mr. T. J. Y. Roxburgh leaves for Switzerland for a years' sick leave. As Chief Presidency Magistrate he has been a remarkable success in clearing up a situation which would have defeated any but a most determined and capable man. The Bar regards him with something like affection and all his friends wish him a speedy return.

The list for the new 4 per cent. loan at 88 was closed to ordinary subscribers on the date it was opened, the issue being remarkably successful.

The Trivial Round.

Great interest is taken here in the composition of the English team to meet the Australians on Saturday next. The reports of the tourists' matches are given prominence in our papers and Root's feats lead us to hope that the visitors will not spring all the surprises. We are still awaiting full accounts of the Derby, but the Cable Companies excelled themselves in getting the news through in the first instance and at a dinner at Tollygunge Club that night the result was announced there, making the usual allowance for the sun, before the race was run; fortunately for our sanity, some remembered summer time! The differences in times are also called to mind by the formation of a new Wirless Company in Bombay which promises us a high power station at Calcutta from which it is hoped to broadcast programmes from abroad, but we have yet to hear how it is proposed to deal with the point that most of the attractive items will be coming through at 3 or 4 in the morning.

There is enormous enthusiasm for Soccer this year; Calcutta have started the second half of the season with two draws and a number of injured players, but their position seems fairly secure. It is too hot to take much interest in anything else at present; we are promised a normal monsoon, but at present we are gasping pending its arrival.

Markets.

Quiet conditions have again prevailed in the jute and gunny markets during the past week; prices have been irregular for the most part, but, on the lower level, the tone closes rather steadier. The new crop reports continue to be good, but no material change in the position is expected in the very near future. The re-opening of the piece-goods market saw little business except for replacement purposes; the demand for up-country has been disappointing and forward business is still hampered by the coal strike at hime. Although the statistical position is very satisfactory, there has been a slightly easier tendency in the tea market both here and in London. The sale in Calcutta this week indicated a strong demand for all good descriptions but commons displayed weakness. So far as the figures to hand for the May outturn can be relied upon as a guide, the position at the beginning of this month may be taken as almost identical with that at the same time last year, the increase for the two previous months having been wiped out by the lower May outturn. Prospects for the present month are said to be normal.

Apart from the success of the New Loan, the lists for which were closed within two hours, Government Securities have had a considerable quieter week and prices have receded all round, the main reason for this being the heavy buying of the New Loan by Bombay speculators. Jutes have remained very firm with prices inclined to harden, while tea shares have been in increasing demand until the close, when fewer transactions were being put through. Almost all the best shares, however, have registered substantial rises on the week and are expected to go higher. There are no signs of a revival in coals and cottons, and rubbers have been neglected, though the few transactions which have been concluded have been at higher rates.

The Exchange market has been featureless but very steady with Ready T.T. at 1s. 5 29-32d. There was rather more demand for money at the beginning of the week, due to loan operations, and up to 2½ per cent. was paid for Call money.

AORNOS.

(BY AMATEUR.)

The announcement that Sir Aurel Stein has finally discovered the site of Aornos reopens a chapter of history full of extraordinary interest from the human as well as from the historical point of view. In the autumn of 327 B.C., and winter season of 327-326 B.C., Alexander the Great led a portion of his far-travelled army from somewhere near the present city of Kabul through the mountains to the North of the Kabul River, intending to join up with the rest of his forces at some place on the Indus, whence he proposed to start out on the conquest of India. Alexander spent five months between Kabul and the Indus, and it was towards the end of this period that he captured the rock fortress Aornos by an exploit which has always been handed down as the greatest glory of his Indian campaign. Until recently the greater part of the route traversed by Alexander during these five months could not be explored owing partly to the great physical difficulties of the mountainous country through which it lay, but mainly owing to the extremely fanatical and inhospitable character of the inhabitants. An exploration of several parts of the country would inevitably have invited savage attacks upon the exploring party, which would have led to further trouble incommensurate even with the important historical and geographical discoveries that might have been expected. For the last fifty years or more, Alexander's route from Kabul to the Indus has been the subject of much conjecture and discussion, while the site of Aornos has been looked upon as the very focus of the whole question. In 1906 Sir Aurel Stein regretfully wrote that the extant accounts of Alexander's campaign failed to furnish conclusive topographical evidence of his route and of Aornos. In 1921 the Cambridge history of India was published and the question of Aornos is mentioned in the following passage: "The reduction of a certain mountain citadel which crowned Alexander's work during that winter (327-326 B.C.) always seemed to the Greeks the great glory of the campaign. The Greek books described the siege and storming at greater length than any other episode in this region. The story was started that Heracles had attempted to storm that very rock and failed. Unfortunately it has been so far impossible to fit the Greek description of Aornos to any rocky height noted in the country to-day. Aornos, we are told, was not far from the modern Amb: it was a great isolated mass of rock 6,670 feet high, flat

Digitized by Google

on the top with precipitous sides, which on the south went straight down to the Indus. On the summit were woods and watersprings and fields whose cultivation could keep a thousand men employed. It seems plain that an object of this kind can hardly have escaped modern geographers in search of it. The inference is that some particulars in the Greek account are due to imagination." Thus until Sir Aurel Stein recently found Aornos the attitude of modern historians had gradually come to be that as it had not been found therefore it could not exist in the guise in which the Greek writers had painted it. It is of interest to turn to the latter and to see exactly what they said about Aornos.

There is a complete consensus of opinion that the author most to be relied on in every way in connexion with the Indian campaign of Alexander the Great is Flavius Arrianus, a Greek who lived in the second century A.D. He was a military general as well as a high administrative official under the Romans, and, in his retirement, wrote many works distinguished for clear and simple style, impartiality and accuracy. Arrian himself tells us that, in compiling his history of the Indian campaign, which had taken place over 400 years before he wrote, he studied the accounts of that campaign written by Aristobulus and Ptolemy, both generals of Alexander who themselves had been with the latter on that very campaign. Their accounts are lost to us but there is no reason to doubt that Arrian had them before him when he wrote and that he used them properly and carefully as an impartial and critical historian. If therefore we want to know what happened at Aornos and what sort of a place it was we should turn to Arrian and practically to him alone. This is what Arrian has to say on the subject (ch. XXVII).

"The Bizareans hearing that Ora was taken by storm, distrusting their strength, fled out of the city in the dead of night and betook themselves to a rock called Aornos for safety; and many of the neighbouring Barbarians followed their example, for they forsook their villages and escaped thither. The rock, the most stupendous piece of natural strength in all that country, was by the Barbarians deemed impregnable and there was a report that even Heracles, though he was the son of Jove, was unable to reduce it. But whether any Heracles, either the Theban, the Tyrian or the Egyptian, ever penetrated so far as India, I cannot affirm for truth, but am rather inclined to believe the contrary . . . . The circuit of this rock is said to be 200 furlongs; its height, where it is lowest, eleven; it is only accessible by one dangerous path cut out by hand, and has a fine spring of pure water on the very summit, which sends a plentiful stream down the side of the hill, as also a wood with as much arable and fertile land as to supply a thousand men with provisions."

Arrian's description was based on the accounts given by two of Alexander's generals who themselves had been at the taking of this wonderful rock: and it is remarkable that such a place has escaped discovery until now. For Sir Aurel Stein has now told us that prolonged examination has proved that all topographical features of the remarkable rock-girt plateau he has now discovered agree very closely with whatever definite details are furnished by the Greek accounts of the natural stronghold which the great Macedonian captured in the face of formidable difficulties: and that he believes that the long sought-for site of the famous "rock of Aornos" has been found at last.

It is indeed interesting to find that the accounts given by Alexander's generals have been verified after 2,250 years: and not the least interesting point is the name Bizareans, in which one at once recognises "inhabitants of Bajaur"—the modern name of the country. Sir Aurel Stein's fuller account will be awaited with great expectation. Apparently the search for the site of Aornos has hitherto been handicapped by a wrong impression that it was a good deal further south than now appears to be the case. Its discovery will no doubt lead to the location of many other places mentioned in the accounts of Alexander's wonderful march to the Indus and perhaps even to the finding of old coins or weapons on sites hitherto almost inaccessible as well as unexamined because they were thought to be beyond the range of Alexander's troops. An old but ever fascinating chapter of history has been reopened, and it is very satisfactory that its exploitation is at this important stage in the competent hands of Sir Aurel Stein. Aornos, as now located, seems to be within 30 or 40 miles of British territory and posts, but on the North-West Frontier of India such a distance may and does often mean inaccessibility.

It is, however, curious that neither the Government maps, whether civil or military, nor the information obtainable from visitors to India from the Aornos neighbourhood, should until now have given reliable indication that such a remarkable natural feature as the "Rock of Aornos" was to be found within a few miles of where it had been looked for ever since British soldiers and administrators had come into touch with that forbidding but interesting region.

THE INDIAN MAIL.

Trade Returns for April.

The returns of India's sea-borne trade for April show a heavy fall in value, both of imports and exports, from the figures of the previous month. The imports of private merchandise fell from 2230 to 2005 lakhs, and the exports from 3702 to 2678 lakhs. The net import of treasure was 379 lakhs, and the visible balance of trade in India's favour 389 lakhs.

Under the main heads in imports, manufactured articles fell in value from 1695 to 1564 lakhs, food drink and tobacco from 321 to 267 lakhs, and raw materials from 185 to 153 lakhs: and, in exports, raw materials and produce fell from 1918 to 1333 lakhs, food, drink and tobacco from 989 to 612 lakhs, and manufactured goods from 759 to 705 lakhs. The export of raw cotton amounted to 68,800 tons, out of which Japan and China between them took 45,700 tons. The return, as received, gives no detailed figures regarding jute exports, either raw or manufactured, or of piece-goods imports—not even the total yardage or value of April's imports.

The share of the United Kingdom in India's trade showed a further fall, from 54 to 53 per cent. in imports and from 14 to 11 per cent. in exports. The share of Japan rose, in imports, from 6 to 8 per cent., but fell in exports from 19 to 16 per cent.: those of the United States and Germany were 7 and 8 in imports, against 6 and 7 in March, and 11 and 6 in exports, against 10 and 6 in March.

European Non-Official Legislation.

In a speech delivered at Delhi on May 26 at a meeting of the Calcutta Branch of the European Association, Colonel Crawford, the General Secretary of the Association, referred to the policy of the small European group of ten members in the Legislative Assembly. He said that, if they desired to get any measure of their own through the House, they had to secure Indian support: and that, during the first Session of the Assembly, they were able to obtain a good deal of this. In the second Session, however, the formation of the disciplined Swaraj and Independent Parties, whose members voted in acordance with the instructions of their whips, had greatly changed the position: and, though they had not so far joined hands with any particular Indian group, the time was certainly coming when they would have to do so. As to their policy in the future, their interests were commercial and their policy must be one that would produce those conditions under which commerce would flourish: that is to say, conditions of stability and peace. The present acute communal dissensions made it necessary that there should be a strong Government, as a weak one would be unable to cope with them: and it should be the policy of the non-official European group in the Assembly to regulate their parliamentary alliances accordingly.

The probability of the appearance of a Mohammedan

Digitized by Google

Party in all the Indian Legislatures, including the Central Legislature, has already been mentioned in these notes: and it is not unlikely that Colonel Crawford's remarks were meant to suggest a working arrangement beween he European and Mohammedan groups, should the latter take the form expected. The Mohammedans have definitely broken with the Indian National Congress, which is now only the Swaraj Party under another name: and those Swarajists members who secure election to the next Assembly will return there still pledged to the old uncompromising policy of obstruction; so that any alliance with them, in the interests of strong government, is impossible. The Independents and "responsive co-operators" are likely to enter the Assembly less as supporters of their declared political creeds than as adherents of their own particular communities: and the general division of the House is likely to be into Hindus on one side and Mohammedans on the other—the policy of the former leaning towards that of the National Congress, and of the latter towards Government: not from any special love for Government, but from dislike of the Hindus. It is not unlikely, therefore, that the new Session will see a "cartel" of Mohammedans and non-official Europeans, in general, if not invariable, support of the Government: and a solid die-hard Opposition of Hindus.

Bicameral Legislatures.

In Colonel Crawford's speech at the meeting of the European Association at Delhi, mentioned elsewhere in these notes, he remarked that the Council of State had successfully performed its functions of acting as a check on the occasional aberrations of the Legislative Assembly. The Council, he said, had been free from communal tension: the men belonging to it had a very definite stake in the country, and they recognised that their interests were seriously affected by the existence of communal differences. When Lord Reading made his farewell speech to the Central Legislatures, though he did not specially mention the communal question in this particular connexion, he said very much the same thing about the value of the services of the Council of State: and an increasing number of observers in India are beginning to recognise it. Indeed, there are many people, Indian as well as European, who would like to see the extension to the great Provinces of the bicameral system . If, for instance, a Second Chamber had existed in Bengal, it is certain that the Legislative Council of that Province would have been unable to bring about the mischievous deadlock that it actually did accomplish. A Second Chamber, on the lines of the Council of State, would contain a majority of men with a real stake in the country, in all the great Provinces: and nowhere more so than in Bengal, where I would include representatives of the great landholders and the shrewd Indian leaders of industry. The practical effect of the escapes of gas that appear to be inseparable from the existence of a "popular" Chamber in India would be very healthily minimised by a local Second Chamber: the "representatives of the people" could indulge in them to their heart's content, and no one would be likely to be much the worse. Among the points for consideration by the Royal Commission of 1929, it would appear worth while to include this one.

Attracting the Tourist.

The Great Indian Peninsula Railway has organised cinema shows with the object of stimulating travel among the public in India: and these, if properly exploited, should also have a good effect on the cold-weather tourist "industry." The railways in India have, indeed, lately been at particular pains to attract overseas tourists: and, thought the present is a day of small beginnings, the effect of their efforts is beginning to be seen. In the last pre-War year the estimated number of tourists who came to India from Europe and America was about 3,000: and this figure was again reached in 1922, since when it has risen to 5,000. The expenditure by tourists, last cold weather, on railways, transport agencies and hotels in India, is put at 75 lakhs of rupees: and they are credited with having spent altogether nearly twice as much more, in addition, in the country. It is evident that large developments are possible: and, to quote the *Times of India*, "the country will have only itself to blame if they are not realised." The art of catering for tourists is only in its infancy in India, but the excellent lead given by the railways ought to inspire hotel-keepers and others to make great efforts to cultivate it. A time may even come when municipalities will lay aside their political squabbles and try to assist in fostering this traffic.

The Crown Prince of Persia is making good progress towards recovery from his recent illness.

Sir Rabindranath Tagore has arrived at Villeneuve, on Lake Geneva, where he intends to make a prolonged stay.

Colonel Zeky Bey, who was accused of the assassination of Reshad Pasha, doctor to the late Sultan Mahommed of Turkey, has been released by the examining magistrate, who has declared his innocence to be established.

Sir Herbert Samuel, Prof. Albert Einstein and Sir Wyndham Deedes have consented to serve as members of the committee which is to have charge of the building of the Sol Rosenbloom Memorial at the Hebrew University on Mount Scopus.

The Commission appointed by the League of Nations to make investigations in Persia in regard to poppy cultivation and the possibility of finding some substitute industry for it has returned to Geneva and has drafted its report for the Council.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning,

Sudan Trade Expansion.

The figures of the trade of the Sudan for the first quarter of this year make a very promising showing, the volume of trade amounting in value to £E3,192,573, which represents an increase of £E802,429 on the total for the corresponding period of the previous year. Imports and exports both show notable increases, but the expansion of trade is naturally more marked in the latter case as the development of cotton growing is now beginning to have its effect on the trade returns. The total value of the imports was £E1,479,480, an increase of £E214,284, while the exports amounted to £E1,608,359 at which they are £E605,263 up. It will be noted that for the period the balance of trade is in favour of the Sudan, and while the latter months will doubtless modify the position, it is evident that the Sudan is now progressing on the right economic road.

Sudan Cotton Production.

I briefly referred last week to the announcement that the 1925-26 Gezira crop has been exceptionally good. It actually totalled 383,000 kantars as against an official estimate of 368,000 kantars. The variety grown in this region is, of course, Sakellaridis, and including the estimates for the districts the output of this variety may be put at 424,341 kantars. Compared with this total the estimated output of American cotton is small, amounting only to 86,274 kantars, and Lancashire is naturally interested in the increase of the output of this variety in order to lessen her dependence on the American crop. At present about half the yield of American cotton comes from irrigated land, but the long list of provinces that contribute their quota to the rain-grown product is an indication of the possibilities that exist in this direction, and, as I have pointed out, it is held that there is very great scope for the development of rain-grown cotton.

Sudan Sakel and Egypt.

I suppose if the output of Sakellarides cotton in the Sudan in the past season is put at about 106,000 bales the estimate will be fairly correct. Excellent as this result is, the total does not bulk large when viewed in relation to the world's cotton production. Egypt's output of Sakellarides and other varieties has reached a total of roughly 1,600,000 bales, while the world output of all types is in the neighbourhood of thirty million bales. I mention these facts to show that some time must yet elapse before the Sudan can be reckoned a vital factor in cotton production. The increase in the irrigated area in the Gezira from 300,000 to 450,000 feddans which seems likely to take place in the near future will mean an additional production of something like 30 thousand bales. The development of the rain-grown cotton depends on the expansion of facilities and will march along with the advance of communications, but in the best circumstances a long period must elapse before the great hopes entertained in this direction are realised.

A Yugoslav Problem.

In an article on another page our Liubliana Correspondent gives the gist of a debate in the Skupshtina on the position of agriculture in Yugoslavia. What was said merits considerable attention, for the difficulties with which Yugoslavia is confronted are not confined to that country but apply in a greater or lesser degree to all young countries which depend on agriculture as their basic industry. The gradual return of Russia into the world's grain markets is now a factor which has a very direct influence on agriculture, for the additional supples of grain mean lower prices and this naturally affects agriculture in those districts where it is difficult to get a living from the land. Yugoslavia, it may be noted, has now the problem of a surplus population to cope with —a problem rendered more difficult owing to the policy of America in regard to immigrants. So far France has provided an outlet, but Yugoslavia is naturally loath to lose her citizens, and if they must go prefers that it should be single men who by their remittances will help the exchange.

The Rubber Average.

It is quite impossible at the moment to forecast whether there will or will not be a reduction of 20 per cent. in the rubber production on August 1. At the present time the average for the quarter is about 1s. 9½d., while the price of the raw commodity is 1s. 8¼d. Obviously everything will depend on what happens in July. It has been maintained that even if there is a reduction it is not likely to have very pronounced results, but I do not share that view, though it need not be inferred from that that I anticipate the high prices that obtained last autumn. If there should be a reduction, which, as my readers are aware, I hold would be disadvantageous for the future of the industry, the Americans will have no one to blame but themselves, for it will be due solely to the fact that they have continued to keep aloof from the market.

THE ECONOMIC POSITION OF AGRICULTURE IN YUGOSLAVIA.

(From Our Own Correspondent.)

Liubliana, June 24.

Not long ago the economic position in the Kingdom of Serbs, Croats, and Slovenes was the subject of a very lively and interesting debate in the Skupshtina. It was started by a question put by M. Slavko Secer, a Democratc Deputy, to the Ministers of Agriculture, Finance, and Transport, concerning tariff and customs facilities which would improve the economic welfare of the agricultural class in Yugoslavia. All three Ministers replied to the question, albeit seven months after the question had been put. Their replies and the debate which arose on that occasion, revealed a very interesting picture of the present-day economic position of the Yugoslav peasant farmer.

First of all, the deputies all admitted that the position of the Yugoslav cultivator is not favourable to-day. The days of exceptional opportunity for them are past. Prices of agricultural produce have latterly undergone a considerable slump, out of proportion in comparison with the drop in the prices of industrial products. So the agricultural class is plunged into an economic crisis which is becoming more and more acute, and worst of all in the provinces which are the most heavily taxed. The lion's share of the Yugoslav estimates has to be provided by the farmer, who is taxed to the limit of his capacity. Every one of the speakers pointed out this disproportion which must be rectified before long to avoid serious consequences.

The agrarian crisis in Yugoslavia is unquestionably a very important problem in national economics in view of the fact that the agricultural class amounts to some 84 per cent. of the entire population. So the debate in the Skupshtina roused great interest, and the Press of all shades and parties devoted the greatest attention to it. Dr. Pucelj, Minister of Agriculture, pointed out in his reply to the interpellation that the country must be prepared to reckon with a yet further drop in the price of agricultural produce, because Russia, who was before the War the chief granary of Europe, is slowly resuming her old place on the European market, and sooner or later her agricultural export will once more cover the greater part of the demand. In equal proportion to the revival of Russian economical prosperity the prices of the products of agriculture and stock-raising will fall. No country will have to take this fact more into account than Yugoslavia, whose economic importance still consists in her being an exporter of agricultural produce and an importer of industrial products. M. Pucelj dwelt upon the fact that the economic policy of the Kingdom of Serbs, Croats, and Slovenes must reckon with this as inevitable, and adapt itself to circumstances beforehand. They were asking for favourable tariffs on the railway, for customs facilities; but here it must be pointed out that the bulk of agricultural produce goes by waterways. The agrarian credits, however, were provided with a view to placing Yugoslav farming on an up-to-date footing, and this would greatly help to improve the economical position— not at once, perhaps, but within a reasonable time.

Owing to the growing economic crisis, the question of unemployment has also become an urgent problem. During the early years after the War, there was practically no unemployment in Yugoslavia. Latterly it has become noticeable. Yugoslavia has had to conclude commercial treaties with neighbouring states, whereby the young industries of the country are insufficiently protected. The struggle between Yugoslav industry and the vigorous old-established industries of other countries is becoming more and more difficult; and this problem is more important than might be deduced from the fact that Yugoslavia is in the main an agricultural state. There are districts in the kingdom which are not at all rich either as regards natural fertility or the area under cultivation, but where the density of the population is considerable. This applies particularly to the greater part of Slovenia, the Croatian Kras (Carso) districts, and parts of Bosnia and Herzegovina. In these regions even the cultivator has to import foodstuffs largely from other districts, and it is very difficult to make a living from the land. The increase in population is relatively great, so that there is a big surplus which is obliged to seek a livelihood either in industry or by emigration. As the industrialisation of the country proceeds very slowly, owing to the inadequacy of native capital and other reasons, and the colonisation of less populous districts, such as South Serbia and the Vojvodina, cannot absorb the whole of the available surplus, there is nothing left but emigration. And emigration is a problem with which Yugoslavia will have to deal in increasing measure. The United States has practically closed her doors against immigrants from the South-Eastern States of Europe. A substitute must be found to which the workers of Yugoslavia may turn. France has latterly come increasingly to the fore as a potential outlet. So far she has already absorbed several thousands of immigrants from the Kingdom of Serbs, Croats, and Slovenes, and seems prepared to receive yet further contingents of workers from that State. But the Yugoslav authorities are not in favour of emigration, especially in the case of entire families. They would prefer to see single men go abroad, who remain in touch with their people and make a point of sending home their savings, which has a desirable effect upon the currency.

In any case, the emigration question is an important one among the economic problems of the young State, and the authorities will have to devote more and more attention to it.

This debate upon agrarian difficulties has also confirmed the contention that over here we take too much interest in political struggles, instead of devoting the best part of our attention to economic problems. The country desires that greater prominence be henceforth given to these.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 29.

The Stock Exchange fortnightly account which was settled on Thursday turned out to be a fairly heavy one, and a fair amount of business has been done this week for the Mid-July account. The approach of the holiday period means as a rule a general falling off in business in Stock Exchange markets, but at present there is no sign of any waning in public interest, and it is quite possible that a settlement of the coal dispute might be followed by an outburst of bullishness in many markets. Whether such optimism would be justified is another matter, for it rather looks as though the effects of a resumption of work by the miners have already been discounted in many markets—home rails and the iron and steel sections being prominent exceptions—and when the cost of the long stoppage of the mines (which is likely to prove itself much heavier than is realised by many), becomes more obvious there will possibly be a marked swing-over to pessimism.

In the mantime, the Stock Exchange still talks of the possibility of a reduction in Bank Rate in the near future. Such a contingency was unlikely this week in view of the approach of the half-year and the normal stringency associated therewith, but the possibility of a reduction is stimulating the markets for gilt-edged and other investment securities, especially those in the Colonial list. British Government securities, however, have been inclined to weaken, for they come into direct competition with recent Colonial issues, which return a round 5 per cent., whereas 3½ per cent. Conversion can only be bought to yield about £4 13s. per cent. The supply of stock in the Colonial market has lately been increased by four new large Australian issues, but this addition has had little effect upon the prices of the older securities of the same class. The large volume of money which continues to offer itself for investment is, indeed, a subject of much comment, but it is to be explained, unfortunately, by the fact that the industrial channels into which it ought to be flowing are closed owing to the coal stoppage.

Argentine Railway Prospects.

The latest traffic returns of the four great Argentine railways, in which a large amount of British capital is invested make a mixed showing. In two cases—the Buenos Ayres Great Southern and the Buenos Ayres Western—a substantial increase in gross receipts is recorded, but those of the Buenos Ayres and Pacific and of the Central Argentine show a decline. The figures for the last two weeks of the financial year have yet to come, and while it is not possible to judge, without the figures of expenses, how the companies have fared financially during the past year, it seems probable that the final dividends, which will be announced in the autumn will make the distribution for the year equal to last year's payment. Business conditions in Argentina have fluctuated somewhat during the past twelve months. There was considerable optimism at the beginning of 1926 in regard to the outlook, crop prospects being favourable, but in February and March damage to crops caused estimates to be reduced and there was a sharp change-over to pessimism. The latter seems to have been considerably overdone and recent reports indicate that while the wheat crop is likely to prove some 600,000 tons lower than that of the previous year, maize and linseed will be higher. The prosperity of the railway companies depends, of course, to a large extent upon the prosperity of the agricultural industry, and the latter appears to be by no means in such a bad way as was talked of three months ago. Moreover, the rate of exchange which in the past has been a bugbear to the companies in the matter of remittances to London, has been much more stable during the past twelve months. Fairly satisfactory accounts may therefore be looked for next autumn.

Reflections on the Rand Dividends.

As a whole the declarations of the Witwatersrand Gold Mining Companies for the first half of 1926 have scarcely come up to expectations. Having regard to the increased earnings reported by several companies, and the improved outlook as regards labour, the hope had been entertained that the distributions would make a good showing. It is true that several examples of increases occur, but these are out-weighed both in number and extent, by the decreases. One of the latter—the cut in the rate of the City Deep from 15 per cent. to 10 per cent. occasioned no surprise. For some time past the developments in the mine have been less favourable than formerly, and such a change must sooner or later be reflected in the dividends. The other two examples—the reduction in the rate of the Meyer and Charlton from 35 per cent. to 25 per cent. and in that of the Van Ryn Gold from 5 per cent. to 2½ per cent. (tax free) come in the nature of a shock to the shareholders. So far as could be judged from the declared monthly profits, both companies appeared likely to maintain their December announcements. Both undertakings, however, have extended their "lives" by the acquisition of additional grounds, and earnings have needed to be drawn upon to meet the necessary outlay, the reward whereof will be reaped later on. The lesson, doubtless, will not be lost.

M. Bouroff, the Bulgarian Foreign Minister, returned to Sofia on June 24 from Belgrade.

Sir Herbert and Lady Samuel are presenting a Scroll of the Law to the Yeshurun Synagogue, Jerusalem.

The Egyptian Delta Light Railways propose a dividend of 4½ per cent., less tax, for the year ended March 31, 1926, on the Preference shares.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

INSURANCE NOTES.

(From a Correspondent.)

Endowment Assurance.

Recently published figures show that the tendency in the post-War years for would-be insurers has been to turn to endowment assurance in favour of life policies, and it is not difficult to realise why this change is taking place. Of all types of policies those on life are surely the most unselfish, for, except in so far as they provide as time goes on an increasingly good security to which resort can be had in an emergency, they cannot be held to provide any promise of direct benefit to the holder. With the endowment policy the case is far otherwise. A person takes a policy providing for the payment of a sum at a fixed period, and thus in normal circumstances is in a position to reap the full fruits of the assurance, and while the premiums are being paid there is the satisfaction of knowing that if death should ensue before the period fixed has elapsed the dependents will have their interests fully safeguarded. It is very natural that this type of assurance should make a special appeal to the official and other classes who retire on pensions at certain ages and who will naturally desire to ensure that their retirement shall be as pleasant as possible. That is why endowment assurances make a special appeal to British subjects scattered throughout the area covered by this journal. With few exceptions it may be assumed that they come under this category, and throughout their career they have in view the question of retirement to a suburb or to one of the great resorts of "Indiamen" and others from the East such as Cheltenham, Bath, and Clifton.

Insurance and the House Problem.

The house or housing problem these days is to be met with in every country, and for most of those who are called upon to change their place of residence often presents embarrassing difficulties. Outside London proper the "To be Let" notice has practically disappeared. To obtain a roof over one's head, a house must generally be purchased or built. Among the measures introduced to meet this modern problem a distinctly interesting one is the scheme of combining the purchase of a house with a life insurance policy. This scheme is a special feature of the Equitable Life Assurance Society; its details may interest British readers abroad with the prospect before them of transferring their residence ultimately to this country. The "Old Equitable" (the oldest mutual life office in the world) is prepared to help a person to buy the house in which he proposes to live by lending about two-thirds of the cost, provided that an assurance is effected on the life of the purchaser on certain terms. The rate of interest is four-and-a-half per cent.; the assurance is taken out and the loan is repaid by it at the end of sixteen years or on the earlier death of the borrower. The annual premium for a loan of £1,000 is £62 10s., with an additional benefit on a specified scale at the end of sixteen years. Other advantages, such as liberal surrender values, are also offered.

ANCHOR LINE

TURKISH COASTAL TRADE MONOPOLY.

(From Our Own Correspondent.)

Constantinople, June 22.

In accordance with the Treaty of Lausanne the Minister of Commerce has notified all shipping companies engaged in cabotage in Turkish waters that from July 1 this service will be continued by the Turkish merchant service. The Seir Sefain Company, which is the principal company interested in this cabotage, is considering the purchase of one or two additional boats in order to assure a competent service.

LARGE OIL ENGINES.

Messrs. Vickers Limited, announce that they have recently completed an agreement under which the patents and designs of Messrs. M.A.N. (Maschinenfabrik-Augsburg-Nürnberg A.G.) covering two-stroke heavy oil engines, both single and double acting, will be available for their use in the British Empire and Colonies for both marine and stationary purposes.

British built Vickers-M.A.N. engines embodying the joint experience of the two firms thus become available for installations of the largest powers. For medium powers Vickers four-stroke engines of proved reliability remain available to users who may find that type of engine more suited to their needs. Messrs. Vickers Limited, will also continue to develop on independent lines the light-weight fast-running type of oil engine with which, from its first development in this country, they have been connected.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Massilia for Bombay (Liverpool, July 22). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Anchoria for Port Said, Colombo, Madras, and Calcutta (London, July 10).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (London, July 14).

British India Line.—S.s. Matiana for Colombo, Madras, and Calcutta (London, July 3); s.s. Treloske for Bombay and Karachi (London, July 17).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, Trieste also Algiers, Corfu, and Gruz if inducement offers (Liverpool July 1, Swansea July 6); s.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, also Algiers and Volo if inducement offers (Swansea July 10, Glasgow July 10, Liverpool July 10).

Johnston Line.—S.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 17); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 24.)

P. and O. Line.—S.s. China for Bombay (London, July 9); s.s. Nellore for Colombo, Madras, and Calcutta (London, July 24).

Ellerman and Papayanni Lines.—S.s. Maronian for Malta, Alexandria, Jaffa,* and Haifa* (Liverpool, July 13); s.s. Gerano for Algiers,* Malta, Piræus, Volo,* Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 3); s.s. Motors and Motoring.

By G. B. B.

Presumably every motorist knows that care, and great care at that, should be taken of the battery throughout the year. There may, however, be some new owner-drivers who have a vague idea that an accumulator will look after itself during the summer months, but that is precisely the season in which special attention should be paid to this particular accessory. Regular inspection is necessary; not only must the electrolyte be kept at the proper level but frequent ammeter readings should be taken. It is true that ammeter readings are not to be considered as giving a clue to the actual condition of the plates, but they do indicate when the battery has run down or is becoming exhausted, and consequently are of value.

Current is being passed into the battery when the ammeter needle is pointing to "charge" and, correspondingly, current is being taken from it when the indicating needle is at "discharge." Careful attention should always be paid to the ammeter needle when driving, or otherwise a good deal of trouble may be piling up for the future.

Provided the dynamo is running above its minimum speed, which is usually when the car is doing about 8 m.p.h. on top, current should be passing into the battery, unless all lights are alight, when charge and discharge will balance, so to speak. If the car is running at normal speed the battery should be charging: if it is not, there is something not as it should be. If the car is standing with with all lights on and the engine stopped, the ammeter needle should be at "discharge." If the engine is stopped and no lights are in use, the needle should be at "zero." If, under such conditions, "discharge" is revealed, there is a short-circuit, as electricians call it, somewhere, and the wires should be traced throughout until the fault is found and rectified. It will generally be found, in such case, that the ignition switch has been left in an "on" position, but it may be the same wire has had its insulation damaged, causing a leakage of current.

"The Generator."

This is another part of the electrical system of the car which requires attention. Whilst it is true that no electrical part should be over-oiled, yet care must be taken to see that the bearings of the armature shaft of the generator are kept well supplied with oil. Otherwise the bearings, running dry, will wear badly, and the shaft will begin to run out of truth. In such event, the armature will begin to rub against the pole pieces of the field magnet, and, as soon as this happens, there is a certainty that the armature windings will have their insulation rubbed off and current will leak to "earth" through the metal of the pole pieces, and will eventually short-circuit and burn out. This should never happen if the bearings in which the armature shaft runs are kept well lubricated, but if by chance an armature does burn out, needless to say it is a task for the expert and not for the amateur. Whilst on this part of the subject it may be mentioned that it is as well to keep an eye on the condition of the commutator, as should one or more of the segments get bridged over with particles of copper, short circuiting will occur, with serious results. Another fault which may occur is the breaking-away of one of the armature coils from the segment of the commutator to which it is normally connected. This causes what is known as an open circuit or idle coil, and should be repaired only by some one who understands the work.

A Petrol Tax.

Everyone seems confident of the return—and that at no far distant date—to the petrol tax. The Automobile Association is waging a compaign in favour of this tax in place of that at present based on the horsepower of a car.

The private motorist is apt to wax enthusiastic in favour of a petrol tax, in which case he unthinkingly is merely echoing ideas of other people who have so repeated the cry that motorists are beginning to think that what is said over and over again must be true if it is said frequently enough. Personally, I am not at all sure about this petrol tax being of any benefit. I am getting old enough to mistrust the enemy bearing gifts, and remember that we had the petrol tax. Then in order to raise more money the authorities scrapped it and put on a horse power tax. If they revert, after that, to the old tax, I shall suspect it is because they have decided that the h.p. tax does not yield as much as the petrol tax, and are going back to the old love in order to screw more money out of our pockets.

Besides, when the change was first made, a good many of us worked it out in all its bearings, and we decided that on the motorist who really motors the h.p. tax fell much more lightly than did the petrol tax. At any rate there seemed to us to be very little in it except for those who only covered very short distances in the year. I see that a writer in an evening paper anticipates that there will be great opposition on the part of the Treasury to a return to the petrol tax on the ground that it will be more difficult to collect. Of course, it is not more difficult to collect a petrol tax than to collect a tax on beer, but it is a good card to play, this form of opposition. This writer also states, categorically, that "the greater fairness of the petrol tax is indisputable." So far from being indisputable, it is actually very open to question!

A New Bomber.

Mr. Basil Johnson, who is now the managing director of Rolls Royce, Ltd., has just written to tell me that the new Bristol "Berkeley" day-bombing machine which is being adopted by the Royal Air Force, is driven by a 650 h.p. Rolls Royce engine. I note the machine is of all metal construction, and Mr. Johnson tells me that the view of his course which can be obtained by the pilot is

almost unique, by reason of his seat being set so well forward of the wings. By the way, talking of the Bristol aeroplanes, I have been able to give a fairly close inspection and rather arduous test to some Bristol engines lately, as used on their heavy passenger vehicles and can testify to their remarkable pulling power and hill climbing capabilities.

The Turkish Chamber of Commerce has been allocated 12,000 Liras for the purpose of sending a certain number of students abroad to take up special commercial courses.

The Turkish Minister of Public Works has made arrangements with the Compagnie Internationale des Wagons-Lits for the introduction of sleeping cars on the Smyrna Line.

A recent official notification prohibits the exportation of lei from Roumania and limits the amount of foreign currency which can be carried out by travellers to the equivalent of 5,000 lei. For sums exceeding this amount a permit must be obtained from the Ministry of Finance. To avoid the necessity of obtaining this permit commercial travellers and others visiting Roumania should have a note made on their passports by the Customs officials of the amount of money they carry in, when a similar amount may be carried out of the country without permit.

ELECTRICAL HOUSEHOLD APPLIANCES IN SYRIA.

Electrical power is not generally available in Syria, the only cities having any considerable electrical development being Damascus and Beyrout (says an American Consular report). The purchasing power of the people is not sufficient to create a general demand for electrical conveniences.

Electric fans have become popular. Desk fans, particularly the 12-inch size, are common, while ceiling fans are found only in the large stores, theatres, and restaurants, and exhaust fans are rarely used. Most fans are of French make.

Vacuum cleaners are not popular, the Syrian believing them injurious to rugs. A few French electric cleaners have been introduced, but without much success. Hand vacuum cleaners are unknown. The only power washing machines are steam-driven ones in commercial laundries. Ironing machines have not been introduced, but a few electric irons are in use.

Electrical cooking equipment is practically unknown. Ranges have never been introduced, and only a few of the smaller utensils have been imported. Two electrical refrigerators have been imported, the power for them being generated by self-contained units driven by gasoline engines. The market for heaters is very limited.

Company Meetings

EGYPTIAN HOTELS.

Strong Financial Position.

The twenty-ninth annual general meeting of the Egyptian Hotels, Ltd., was held on June 22 at the registered offices of the company, 11, Iremonger Lane, E.C. Sir William B. Peat, C.V.O. (Chairman of the company), presided.

The representative of the Secretaries (Messrs. Peat Marwick Mitchell and Co.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: The directors' report and accounts for the year to April 30, 1926, have been circulated, and I presume you will agree to take them as read. The company has experienced a successful year. The profit is £107,481 19s. 9d., and not only shows a considerable increase as compared with the preceding year, but is the highest figure recorded in the history of the company. The Semiramis Hotel continues to show satisfactory results, and the profits of the past year, when compared with those of the preceding year, also reveal a considerable increase.

The Leased Hotels.

In the director's report reference is made to the hotels which have been leased from the Societe Grands Hotels d'Egypte for 25 years as from May 1, 1925. The managing director reports that the centralisation of the administration of these hotels has rendered possible many economies, which, combined with an excellent season, have produced profitable results. Assuming the steady flow of visitors to Egypt continues, in the opinion of the local Board, there is no reason why these good results should not be maintained, but it has been considered prudent to recommend that a sum of £30,000 should be set aside out of the profits to special reserve. The company must be prepared to make expenditure if, as seems probable, its business continues to expand.

It is proposed to pay a preference dividend of 5 per cent. and to declare an ordinary dividend of 35 per cent., plus a bonus of 4s. per share. These appropriations, including the allocation of £30,000 to special reserve, will absorb £104,500, leaving a balance of £6,770 1s. 10d. to be carried forward into next year's accounts.

The capital of the company for many years—including £280,000 debentures since paid off—has been £520,000, to which has been added in recent years considerable reserves appearing in the balance-sheet. By the careful finance and administration of the managing director and the Board in Egypt the company has now attained a position in which the whole of its profits, subject to the payment of the preference dividend, are available to the ordinary shareholders. The present shareholders are now profiting by the fact that a conservative policy has been pursued in past years in dealing with the company's finances, and in this connexion it may be desirable to note that for a good many years in the history of the company no dividend at all was paid on the ordinary shares.

The Balance-sheet.

I now propose to deal with such of the items in the balance-sheet as require comment. It will be noted that during the year additions have been made to plant, fixtures and furniture of £104,564 2s. Apart from small items totalling £2,000, these additions comprise the furniture and effects of the hotels leased from the Societe Grands Hotels d'Egypte, which furniture was acquired under the terms of the agreement with them for a sum of £102,564 2s. One-half of the purchase consideration has already been discharged, and the remaining half, which is payable in equal instalments with interest over the next four years, is shown in the balance-sheet as remaining due to the Grands Hotels d'Egypte.

The items of "Stock-in-hand," "Sundry debtors" and "Sundry creditors," when compared with the figures of the preceding year, show increases in amount, which are the normal result of the expansion of our business. The "Cash at bankers and in hand" of £122,118 approximates closely to the cash held at the date of the last balance-sheet. The balance-sheet shows a strong financial position.

In conclusion, I wish to express to the local Board in Egypt our appreciation of their services and to record our indebtedness to Mr. Baehler, whose administrative ability has so largely contributed to the excellent results we have been able to place before you.

I now beg to move: "That the directors' report and accounts for the year ended April 30, 1926, as submitted to the shareholders, be received and adopted."

Mr. Charles Baehler (Managing Director) seconded the resolution, which was carried unanimously.

The dividends recommended were approved, the retiring director (Sir William B. Peat, C.V.O.) was re-elected, the auditors (Messrs. Turquand Youngs and Co.) were reappointed, and the proceedings terminated with a hearty vote of thanks to the Chairman.

BANK OF BRITISH WEST AFRICA.

Dividend of 5 per cent.

The thirty-second annual general meeting of the Bank of British West Africa, Limited, was held on June 24 at the office of the company, 37, Gracechurch Street, E.C. The Rt. Hon. the Earl of Selborne, K.G., G.C.M.G., the chairman, presided

The Secretary (Mr. G. B. Bennett having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech in moving the adoption of the report and accounts, said:—Gentlemen, the balance-sheet before you shows a profit for the year of £114,368, or £2,000 more than last year. A year ago I expressed myself cautiously about the future, and, while the results of our work during the intervening period justify my caution, I have every confidence in British West Africa and the ultimate prosperity of its trade.

On the liabilities side of the accounts we present, the capital and reserve remain the same. Current, deposit, and other accounts at £6,068,000 show a decrease on the year of £658,000, but I desire to remind you that this reduction was anticipated in my remarks to you last year. As you will remember, a year ago we handed over our Egyptian business to Lloyds Bank, Limited, and that naturally involved our handing over the deposits of our Egyptian customers. Allowing for that deduction, our current and deposit accounts have increased, and not decreased. The same factor affects other items and, therefore, a comparison between the figures in our present balance-sheet and those of a year ago is hardly a fair one. On the assets side our cash in hand and in transit shows an increase of £140,000; our investments, which are almost entirely British Government securities, are increased by £247,000; while our trade bills, loans, etc., show a reduction of £1,155,000. Here, again, if the Egyptian bills and loans of a year ago are deducted, there is an actual increase.

To come to the appropriation, we have followed exactly our proceeding of a year ago by applying £25,000 to contingency fund, and £25,000 to writing down the cost of premises and furniture. The dividend of 5 per cent. is identical with that paid in each of the last three years.

Before speaking of West Africa I would like to say a word or two in regard to our interests elsewhere. Our interest in the Egyptian business of Lloyds Bank, Limited, arranged, as I explained, a year ago, will, I hope, prove reasonably profitable, although it may be another year or two before the benefits of the combination are fully experienced.

In the early part of this year two of your directors, Sir Frederick Eley and Mr. Dickinson, with our general manager, Mr. Cooper, paid a visit to the branches of your bank in Morocco and Gibraltar. At our last meeting I had something to say about the disadvantages of the unstable franc exchange as affecting trade in Morocco. Then the franc stood at 103 to the £, while to-day it is 170. I need not take up your time by referring in any detail to the many difficulties brought about by instability, although I have ventured to con-

gratulate those engaged in trade with British West Africa on the blessings of a sound currency system and the absence of exchange problems. We all desire to see the great French Republic place her "house in order" so that she and her Colonies and Protectorates may be relieved of their present financial anxieties. Our bank in Morocco is establishing a secure and satisfactory position in the commercial community, and, given stability in exchange values and freedom from political interference, our business there should develop on sound lines.

With regard to our main field of operation, West Africa, I must preface my remarks by congratulating Mr. Ormsby-Gore and the other members of his mission on their visit to the four West African Colonies. Mr. Ormsby-Gore has spoken in public since his return, and his report will, doubtless, be available before long; but I think it is no exaggeration to say that the visit of the Under-Secretary of State, following so closely upon that of the Prince of Wales, must greatly contribute to the general knowledge of the potentialities of British West Africa.

I would like to mention a few statistics, and I will take Nigeria first. Cotton lint exported from Nigeria in 1925 was 132,724 cwt., as against 114,426 cwt. in 1921, the previous best year. The export of tin concentrates in 1925 reached 9,293 tons, which is a record figure, with the exception of one year. The export of palm oil at 128,113 tons also represents a record quantity shipped from Nigeria in any one year. A record was also established in the shipment of palm kernels, which reached the figure of 272,025 tons. The highest figures of the export of cocoa from Nigeria, 44,705 tons, were also reached in 1925, and it is interesting to note that these figures approximate to those of the export of cocoa from the Gold Coast Colony in the year 1911. Groundnuts at 127,226 tons from Nigeria represent yet another record in exports for any one year. There are other signs of progress in Nigeria; some railway extensions have been decided upon and others are under consideration, while early next year coal from Udi should be obtainable on the Bauchi Plateau at about £2 per ton, by the completion of the Eastern Railway extension, as against the present price of £4 9s. per ton.

The export of cocoa from the Gold Coast Colony in 1925 amounted to 218,151 tons. The world's supply in 1924 was nearly 500,000 tons, as compared with about 265,000 in 1913, but consumption has, to a remarkable degree, kept pace with these figures. The world's consumption in 1913 was some 260,000 tons, and in 1924 this had reached 475,000 tons.

Mr. R. Hugh Tennant (deputy-chairman) seconded the motion, and it was carried unanimously.

Cotton and Cotton Good .

LIVERPOOL COTTON MARKET.

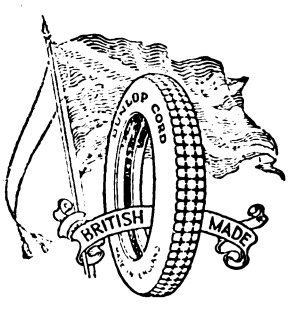
Messrs. Reynolds and Gibson report as follows for the week ending June 23:—

Egyptian Futures.—Sakel Contract.—Generally speaking, the outlook in this market has shown little change during the past week, continual profit-taking at every few points decline has furnished the main, if not sole, support, and to this is due the fact that the decline witnessed has been restricted to 24 to 25 points for near and 32 to 39 points for new crop options. In view of the series of adverse factors facing the market at the moment the tone has been remarkably steady, but, when consideration is given to the fact that we are running level, or at a slight discount (including shipping charges) with new crop positions in Alexandria, no weight of fresh selling can be anticipated and contracts are bound to be comparatively scarce from time to time. As only to be expected under present circumstances, trade reports are the reverse of stimulating, spinners' operations are becoming more and more restricted as a result of the coal strike, and there is increasing pressure to sell yarns. This position is accurately reflected in the recent business in "actual," where the offtake for either spot or forward cotton has latterly been on the smallest scale witnessed for several months.

Straddle differences with the American market show little change on the week, November/October still running round 610 points. We continue of the opinion, in the event of our premium widening out again to the neighbour of 650 points, that sales against purchases of an equivalent quantity in the other market are to be recommended. Apart from reports that the crop is a little late

Across Africa on DUNLOP TYRES

The cable herewith from Mr. Frank Gray conclusively proves the superiority of British Dunlop Tyres under all conditions.



CABLE

From Frank Gray,
Khartoum.

Dated 4th May.
Received 5th May, 1926.

"Both Jowett cars driven into Khartoum yesterday. These cars have been driven for more than three thousand miles through a trackless country of sand, rock, bush and camel thorn. These cars were forced through bush, raced into banks of sand and bumped over rock, and yet only one tyre was destroyed in the process. You may safely challenge the manufacturers of the world to supply an equal record, and claim this as a triumph for the British car and tyre industry."

Frank Gray.

DUNLOP — THE STANDARD by which ALL TYRES are JUDGED

Digitized by Google

in some of the Northern Districts of the Delta all news of the coming yield is satisfactory in character. On statistical and trade grounds we are still against the market, consumption figures laterly show a marked falling off and cotton continues to arrive in Alexandria in appreciable quantity for this period of the season, estimates of the carry over there on the 31st August being 1¾ million kantars.

Upper Contract.—We have again to report only isolated transactions in this contract and under the influence of small orders prices have declined 25 to 40 points. Apart from a few hundred bales purchased on Russian account the spot demand has ruled distinctly on the moderate side. New crop reports are entirely satisfactory.

Egyptian Spot.—Some falling off in the daily inquiry has been noticeable during the past week; in fact, on one or two days the spot market presented an almost lifeless appearance, and it is becoming increasingly obvious that the results of the present disastrous coal stoppage are being felt more acutely in the spinning trade of Lancashire. Prices have eased slightly, more especially for Upper Egyptian, but apart from this the market has been singularly void of features.

Sakel cotton has been in only moderate request, chiefly for Fully Good Fair at about 150 on. Very few inquiries have been received for the better grades. Uppers at from 11½d. to 12d. have been in improved request, but, as most of the inquiry has resulted merely in "averaging," it is somewhat difficult to gauge the result. We have obtained the impression, however, that rather more business has been done in this growth latterly. Low cotton, of all descriptions, has continued in demand, but only in a retail way, and very little business appears to have resulted.

Trading in Sudan Sakellaridis has been on the quiet side, but the basis remains very firm at from 400 on July (Sakel Liverpool) downwards. A good inquiry continues for the American Seed Sudan cotton, principally at from 150 to 250 on July, American futures. Here, again, business has been more restricted.

C.i.f. has been very quiet and forwardings to spinners for the week ending 18th instant were returned as 5,795 bales. Estimated sales 1,300 bales Egyptians and 3,700 Sudan, the latter being principally old business. Quotations of Sakel have been reduced 20 points, those of Upper 30 points. F.G.F. Sakel, to-day, 16.30d. F.G.F. to-day 12.0d.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended June 17, state:—

Since our last report the futures market has been active, but the tone at the close to-day was rather undecided. The week's summary of price movements is as follows:—Sakellaridis, July, 30.55 dollars, 1.65 dollars down; November, 30.08 dollars, 1.97 dollars down; January, 29.68 dollars, 2.12 dollars down; March, 29.43 dollars, 2.27 dollars down. Ashmouni, June, 21.40 dollars, 0.58 dollars down; August 21.30 dollars, 0.90 dollars down; October, 21.35 dollars, 0.99 dollars down; December, 21.47 dollars, 0.97 dollars down.

The trade has not been much in the futures market this week, whilst Liverpool also has not been operating to any extent. The demand from abroad has been spasmodic, but perhaps rather better than last week. A certain number of sales seem to have been put through at the lowest point touched. Conditions in the consuming centres are not, however, reassuring. The continuation of the coal strike in England precludes any possibility of much improvement in the near future in the offtake there, for even with a settlement of the strike, some time must elapse before things can become normal. The further fall of the French exchange has made business very difficult with that country and, although there has been inquiry, little business has resulted.

The week's receipts amount to 75,457 krs. against exports 107,093 krs.; the stock stands at 1,820,332 krs.

Spot:—A good steady business has been done throughout the week and total sales amount to about 8,600 bales, of which we estimate 4,100 bales Sakellaridis, 3,400 bales Ashmouni, 900 bales Zagora, 100 bales Pilion and 100 bales White.

Sakellaridis:—The demand for better grades mentioned in our last report appears to have been satisfied as very little business has been done in these grades during this week. The medium grades are still much in favour but with the drop in contracts sellers appear a little more reasonable in their ideas, and spot differences have eased somewhat all round.

Ashmouni and Zagora:—There has been a better demand for these varieties from Fully Good Fair to Good but spot differences remain unchanged. Very little business has been done in the lower grades.

Pilion:—A few lots of Fully Good Fair have changed hands at about last week's differences.

Brown:—No transactions have been reported.

White:—A small business has been done in Good Casulli without change in the premiums paid.

Crop 1926:—Crop news continues to be quite satisfactory. Temperature this week has been lower and fresh attacks of leaf worm are reported from some districts; we think, however, that it can safely be asserted that the plants have suffered no damage from this pest. Flowering has commenced in the Zagora plantations of the South Delta and buds are plentiful. The water supply is ample everywhere.

COMPANY NOTES AND REPORTS.

AFRICAN AND EASTERN.

The African and Eastern Trade Corporation Ltd., officially announce that at a board meeting held on June 24 it was decided to recommend the payment on August 6 of a final dividend on the ordinary shares of 4 per cent., less income-tax, making with the 4 per cent. interim paid on April 24, a total dividend of 8 per cent., less income-tax, for the year ended December 31, 1925. The annual meeting will be held on July 9.

TEXTILES.

IF you wish to obtain your Textile goods from England at the lowest possible prices, communicate with K. JEBARA 26, Princess Street, Manchester. (Established 1887).
