Grand Hotel, Khartoum.

SUDAN

A PERFECT WINTER RESORT

KHARTOUM, a modern town, at 1,200 feet above sea-level, enjoys an ideal winter climate, constant sunshine tempered by invigorating breezes. The Grand Hotel is under the management of the Sudan Government Railways and Steamers.

OMDURMAN, the wonderful African Metropolis, lies near by, stretching for seven miles along the shores of the Nile.

BIG GAME SHOOTING.
The Sudan is one of the most easily accessible countries in which Big Game abounds, and its large territory offers a most varied choice of shooting grounds.

A Street in Omdurman.

Express Steamer and Dining and Sleeping Car Services between Cairo and Khartoum.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

A New Year Slogan.

The passing of the old year finds Europe in a much better frame of mind than did its arrival. For want of another term it is the fashion to speak of the Locarno spirit in describing the improved conditions. Before the expression dies, it is well that it should be realised that the Locarno spirit is none other than the triumph of common sense. For once in a way that fundamental British characteristic was allowed, through the personality of the Secretary of State for Foreign Affairs, to have full play in the counsels of Europe, and the world is all the better for it. The year on which we are now embarked will be a memorable one indeed, if common sense is given wider scope among the nations. It was common sense that straightened the political tangle in Yugoslavia last summer; it is equally able to settle the whole Balkan question and to bring lasting peace and material prosperity to the Peninsula. A modicum of it will solve most of Turkey's troubles, and will bring the Republic into no mean place within the comity of nations. For common sense requires things to be seen and to be taken as they are, and not to be regarded through the spectacles of pride, prejudice, fear or fantasy. Let us hope that Angora will not prove to be the last stronghold of blindness and make-believe to hold out against the panacea for a surprisingly large number of human ills.

Turkey and the Soviet.

The treaty between Turkey and the Soviet Government, which was signed in Paris on December 17, derives much more significance from the date of its signature than from its contents. It was concluded on the morrow of the decision given by the Council of the League of Nations in regard to the Mosul frontier, and was intended, no doubt, as an offset to that decision for the benefit of public opinion in Turkey. Neither on this account nor in regard to its terms can any exception be taken to the treaty. The two contracting parties bind themselves not to attack one another, and each to remain neutral in the event of a military movement on the part of one or more Powers against the other, and not to take part in any alliance or agreement of a political, financial or economic nature directed against the other. As Russia can hardly have been expecting circumstances to arise in the near future which would lead to an attack by Turkey upon her, it must be inferred that the greater benefit from the agreement falls upon Turkey, who could never have indulged in a sense of security without a formal assurance on the part of the Soviet Government. The treaty is entirely in keeping with the spirit of the times, and the only criticism that it calls for is that, inasmuch as Turkey might easily have a similar treaty with almost any country which she cared to approach, it is a thousand pities that she should find herself, entirely through her own fault, in the position of being obliged to make so much of a colourless agreement with Soviet Russia. As far as other countries are concerned, the Turks have no need to fear any rupture of peaceful relations, if they are themselves careful to keep the peace. A little less insistence on their readiness to fight the world, when no one is thinking of attacking them, would argue the possession of a greater measure of common sense.

The Aftermath of Mosul.

So far the Soviet-Turkish treaty represents the worst that has happened as a result of the League of Nations' decision in regard to Mosul. A section of the London daily Press and its Sunday echoes are, no doubt, nursing their disappointment at the absence of news of a million Turks marching on Baghdad, while disconsolate war correspondents may be sitting on their luggage; but the Angora Government seems minded only to give them a much-needed lesson in keeping one's head. It is true that there

Digitized by Google

has been up to the present no response to Mr. Baldwin's offer to open negotiations for a friendly understanding. There was, however, every reason to expect that Angora would proceed cautiously in this matter. The Cabinet of necessity feels obliged to avoid a sudden *volte face*, and it could hardly respond to the British invitation before it had heard Rushdi Bey's personal account of the Geneva meeting. It is significant of Angora's capacity for level-headedness that the utterances in the Press and elsewhere for which it is responsible have been far less provocative since the Mosul award than they were before the event. A statement published in *The Times* of January 1, purporting to give the Turkish official view, was obviously a belated communication, which had not taken into account the changed policy of Angora. The Turkish Embassy in London hastened to repudiate any responsibility for it, thus justifying the inference that the bellicose nature of the communication was regarded as carrying credibility on the face of it, but no longer represented the Turkish policy. We imagine that Turkey would be well satisfied to exchange the narrow strip of territory between the frontier claimed by Iraq and the line actually awarded to her for much-needed ready money.

The Roumanian Succession.

All family differences are regrettable; when they occur in a Royal House they become a tragedy. The renunciation of his rights of succession by Prince Carol of Roumania is, therefore, whatever may be the cause, a grave blow to the country and must be bitter grief to his Royal parents. If the cause be a worthy one, Roumania loses as a potential ruler a man of character, who knows his own mind; if the motive be base and spring from selfishness and lack of self-control, both country and family must suffer from the knowledge that such a thing has been possible in their midst. Only those who know all the facts can pass judgment. For the outside world rumour—a truly sorry jade in this instance—has been too active to allow any other opinion to have value. The facts that are known are that Prince Carol made a love-match and was forced to consent to his morganatic marriage being annulled. Thereafter he married Princess Helena of Greece. That he should consider it necessary to renounce his right to the Throne of Roumania merely because he had had differences of opinion with the Prime Minister of the day on the eve of the latter's resigning office is, at least, unlikely, and for this reason, if for no other, the official announcement that the renunciation is entirely due to private reasons bears the stamp of probability. As Crown Prince of Roumania, Prince Michael, the son of Prince Carol and Princess Helena, has been formally proclaimed. Those who are friends of Roumania and wish her well will hope that the young boy on whom Roumanian expectations are now centred may, for his own sake and for the honour of his country, grow to man's estate in the midst of a healthy family life, where neither scandal nor the cause for scandal will ever come.

Goverment Changes in Bulgaria.

The resignation of M. Tsankoff, Bulgaria's Prime Minister since the *coup d'état* of June, 1923, has long been expected, and, now that it has hapepend, we can accept the accuracy of the reports that have represented his Government as being out of touch with the sentiments of the nation as a whole. Yet the inwardness of the agitation and of the proposed changes is not altogether clear. At the time of the *coup d'état* it was taken for granted that M. Tsankoff had been chosen as head of the Government as a non-party man, under whom the military element responsible for the change could continue to control the country. The stern measures taken against Communism and the presence of General Vulkoff in the Cabinet were held to confirm this view. Whether M. Tsankoff became more military than the soldiers in his Cabinet has not been stated; but dissatisfaction in the ranks of the Democratic Entente, to which the Government belongs, has been directed mainly against him, and it is noticeable that the new Cabinet will still include General Vulkoff. M. Tsankoff's successor is M. Liaptcheff. If, as is supposed, the new Government will inaugurate a policy of national reconciliation, it has to be inferred that, with the withdrawal of M. Tsankoff, the military element offers no further opposition to a policy that ought to have been introduced a long time ago and for which King Boris has so earnestly pleaded.. It would have been a masterly stroke if M. Liaptcheff had included one or more Agrarians in his new Ministry.

A Greek Dictatorship.

A declaration by General Pangolos that he intended to assume entire responsibility for the government of the country and would rely solely upon the power of the Army and the national conscience in order to save Greece, coupled with the indefinite postponement of the elections for the Senate, suggests that Greece is now to have a dictatorship in name as well as in fact. Politics run riot have long been the curse of the country, and if the evil cannot be exorcised otherwise than by the suppression of constitutional government, General Panpalos's remedy may have somthing to be said for it. Much, if not everything, depends on the Dictator. General Pangalos, by common consent, means well and has hitherto been wonderfully successful. The worst fault attributed to him is impulsiveness, which, if unchecked, may sooner or later land him in difficulties. It is to be hoped that he has not made a mistake in proclaiming a dictatorship. He is apparently satisfied that his political opponents are not capable of playing the game according to his rules; in other words, that they mean to indulge in political opposition instead of giving him their whole-hearted support. The comment of most unprejudiced observers on General Pangalos's new move will be, we imagine: "All right, but do not do it for too long."

THE BALKANS IN 1925.

(Continued from page 3.)

frontier incident occurred on October 19. Bulgarian territory was immediately invaded without any of the prescribed formalities; but the League of Nations stepped in, and the Greek Government was able to rehabilitate itself in the eyes of the world by its tacit admission of a mistake and prompt acceptance of the League's ruling. The incident helped to a certain extent the improvement which, in spite of occasional lapses, has characterised Yugoslav-Bulgarian relations during the year. Finally Yugoslavia, by receiving the coveted St. Naum territory, has prepared the way for an understanding with Albania, which also appears to have found political salvation for the moment in a well-intentioned dictator, Ahmed Bey Zogu.

THURSDAY, JANUARY 7, 1926.

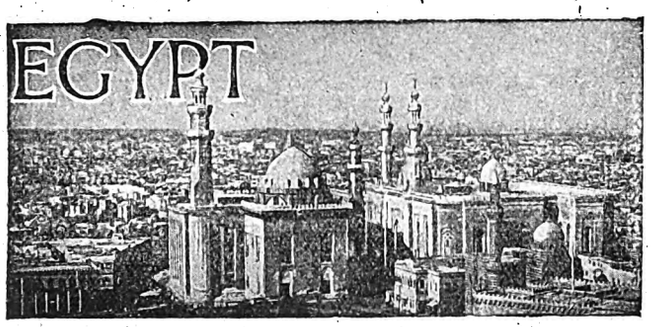
THE BALKANS IN 1925.

For the countries of South-Eastern Europe the past year has entailed varying experiences, for neither geographical proximity nor an underlying identity of interests has yet cast any two of them in the same mould. Each has its own external problems, which differ considerably from those of its neighbours; even the danger which at first sight would seem common to them all in their domestic politics—Communism—has developed local characteristics which hinder even in this matter the spread of mutual sympathy. A review of Balkan affairs in 1925, therefore, of necessity falls largely into watertight compartments, and if the onlooker is conscious that some progress, however slight, has been made in the development of a better spirit in the Peninsula as a whole, he will be inclined to attribute it to causes more or less outside the control of the separate units rather than to look for signs of constructive statesmanship tending in this direction. In fairness to the countries concerned, however, it must be stated that the year has been marked by an almost unrelieved stress of urgent problems, whether domestic or foreign or both, which have left little time for long-sighted policies. Sufficient for the day has been the trouble thereof.

Of all the Balkan States Yugoslavia has, perhaps, most reason to be satisfied with its record during the last twelve months. A difficulty experienced by all new States, however severe may have been the struggle for freedom or unity, is to apply in actual practice the axiom that the only sound basis of government is the consent of the governed. Too often one section, which may be as large as a political party or as small as merely a Cabinet, without any considerable backing, is content to set itself up in opposition to the national will and to believe that confidence in its own cause is sufficient justification for coercing the rest of the nation to its way of thinking. The art of government by the people for the people has in such cases not yet been learned. In the *rapprochement* between the Raditchists and Radicals, followed by the formation of a Coalition Government containing both M. Pashitch and M. Stefan Raditch, Yugoslavia has gone farther than any other Balkan State at the present time in achieving an administration which has some claim to being more or less broadly based on popular sanction. Ministerial changes there may be, but the foundations on which the new Kingdom of the Serbs, Croats and Slovenes has been built appear to have been accepted by the nation as a whole. On February 28, the provincial administrative body in Croatia was abolished and a uniform central administration, as laid down in the Constitution, was established. It marked the formal victory of Serbia in the long political war with Croatia, and in conjunction with the strong measures adopted against the personnel of the Croat Peasant Party, in the rejection of their parliamentary mandates and the imprisonment of their leaders, brought about the abandonment by M. Raditch of his feud with the Serbs. On March 27 M. Pavle Raditch made his famous statement in the Skupshtina, forswearing on behalf of his uncle and his party Croatian republicanism; within three months the Raditchist mandates had been "verified," by July 18 the reconciliation was completed with the formation of a Radical Raditchist Cabinet under M. Pashitch, and in November M. Stefan Raditch himself had become Minister of Education in a reconstructed Ministry. Equally satisfactory for the Yugoslavs is the steady economic progress that the country has made during the year; an enlightened policy of railway and road construction is being followed, and a recent report suggests that the mistake made in the original scheme for the Blair loan of spending a large sum of money on a single expensive line will be corrected in favour of a smaller loan for a more general programme of railway construction.

In contrast to Yugoslavia, Roumania can point only to a clearer line of cleavage between Government and governed. Considerable allowance has to be made in South-Eastern Europe for the fierceness of political rivalries, and it does not always follow that a Ministry is in the wrong, merely because it is roundly denounced by the Opposition. In the case of Roumania, however, the impression is conveyed by the events of the last year that no real progress has been made in welding the new Kingdom into a united nation. The dividing lines are still territorial; the Transylvanians hold themselves apart; Bessarabia seems to think more of its grievances than of the advantages that it hoped to derive from union with Roumania. It is true that the Government has been confronted with a formidable problem in its attempt to place the country on a sound financial and economic basis; but the longer the process promised to last, the greater the need for conciliating the people as a whole, in order to provide for continuity of policy. As things are, there is a danger in the event of any change of Government that the new Cabinet will reverse the National Liberal policy, not because it has a better one to introduce in its place, but because it will feel obliged to make a complete break with the past. In Greece too the Prime Minister, General Pangalos, who carried through his bloodless *coup d'état* on June 25 and found sufficient justification in the popular weariness with political squabbling for directing the government of the country with a tight rein, seems to have difficulty in deciding when that rein can be with advantage loosened again. His policy, however, has so far been consistent. He decided that the country wanted straightforward government and no political wrangling. Accordingly he dissolved the National Assembly, and now, when politicians and their Press show a disposition still to talk of politics, he takes effective measures to silence both. Yet he paid homage to parliamentary institutions, until the end of the year; but he was dissatisfied with the measure of good behaviour shown by his political opponents, and now has placed himself above the Constitution.

From April 14 when an attempt was made to assassinate King Boris, followed a few days later by the outrage in the Sveta Nedelia Cathedral in Sofia, Bulgaria's preoccupations have been divided between the Communist menace and the legitimacy of the Government's policy in dealing with it. Clearly if the country is living on the edge of a volcano that stands for the possibility of a Cathedral outrage every day of the week, then hardly any measures can be too extreme to insure the public safety. On the other hand, if the outrage represented the last despairing outburst of a lost cause, then the national horror ought to have been turned to good use in the securing of national unity. The Tsankoff Government, however, has shown less skill in convincing Bulgarians that its domestic policy is the right one than in satisfying opinion abroad in the correctness of its foreign policy. With the turn of the year it has resigned.



In the matter of inter-State relations the past year has been one pre-eminently of light and shade. Yugoslavia had formally denounced her treaty with Greece in 1924, and the negotiations for its renewal during 1925 convinced Greece of the hopelessness of reconciling Yugoslav aspirations in regard to Salonika with her own *amour propre*. In these circumstances it is inevitable that the process of bargaining should be warm and lengthy. Greece's disappointment in this direction may have been partly responsible for the apparent viciousness with which she fell upon Bulgaria when an ordinary

The Near and Middle East*

From Our Own Correspondents.

Cairo, December 20.

The Royal Cabinet.

Appointments to fill the double vacancy caused by the departure of Hassan Nashaat Pasha from the Palace, where he was at the same time Sub-Director and Acting Director of the Royal Cabinet, seem to have given general satisfaction. Mohammed Tewfik Nessim Pasha, who returns to the senior appointment, is no longer the idol of one political party and the *bête noire* of others. Time has mellowed opinions, and Nessim Pasha is now regarded with friendly tolerance by nearly all sections. His assistant, Amin Bey Anis, has been previously best known as Secretary-General of the Presidency of the Council of Ministers, and if he holds strong political views one way or another he has never let them be apparent to the general public. It looks as though the future of the Royal Cabinet would be rather less exciting than the recent past.

The Native Bar Association.

Much political importance is annually attached to the general assembly of the Native Bar Association and its election of a *batonnier* and of councillors for the ensuing twelve months. The elections are based exclusively upon political considerations, and the result is taken as being in some sort an indication of the way public opinion is moving. Last year, when the Zaghloulist candidate, who was also the retiring *batonnier*, Morcos Pasha Hanna, was defeated by the Nationalist barrister, Ahmed Bey Loutfy, in an election the legality of which was hotly but unsuccessfully contested by the Zaghloulist lawyers, the discomfiture of Hanna Pasha was considered to be one of many indications of the lessening of Zaghloulism's grip upon the country. It is only natural, therefore, that this year, when Hanna Pasha has been re-elected with a handsome majority over the victor of last year, the Zaghloulists should exult. They are equally delighted with the further activities of the meeting which held a debate on the present political situation and passed resolutions very heartily condemning Ziwar Pasha and all his works.

Strike at the State University.

Medical students at the State University are on strike, their grievance being that the course of study which they must carry out before they can qualify as practitioners is a year longer than the course in British medical schools. This seems to be the first actual strike the University has had during its two months of existence, but there have been continual rumblings and mutterings of an approaching storm. The University, indeed, is going through an extremely difficult period. In its anxiety not to rely upon British assistance to any large extent, the Egyptian Government secured the services, at very high remuneration, of many Belgian and French professors, several of them men of eminence, but, for the most part, at present wasted here, because the students, who have until now worked in English and have been hard put to it to acquire a sufficient knowledge of that tongue for secondary school purposes, know no French and are quite unable to understand what the professors are talking about. For similar reasons, the learned professors of Greek and Latin find only empty benches to lecture to, since no Egyptian schoolboy learns either ancient tongue. British influence in the University is practically nil. Until last week there had been a British Acting Secretary-General, but his presence did not seem to please some of the professors, who made representations in very high quarters that it was essential that there should be a Secretary-General who would be *sous nos ordres*. So there was appointed an Egyptian, who shares with the Rector the distinction of not being a University graduate. It may be that the State University will pull through in the end, but at present it is to be feared that there is as yet very little result for the large amount of money being spent.

December 27.

Lord Lloyd's Welcome.

The gathering at the Continental-Savoy Hotel last Thursday afternoon, when Lord Lloyd was entertained by over two thousand Egyptian notables, will be long remembered by all those who were present. In Egypt during the last few years one has grown accustomed to all manner of cries, every variation in "Long live's" and "Down with's." But the shout of "Long Live Britain, the Mother of Justice," that was raised by an excited Pasha who could not restrain his delight at the remarks made by the High Commissioner, was a complete novelty. It is, indeed, doubtful whether any British representative has ever received such applause as was given Lord Lloyd by Thursday's assembly. Loud cheers punctuated his speech, both when delivered in English and when, later, translated into Arabic by an Egyptian official of the Residency staff, who, at one point, where the High Commissioner had affirmed Great Britain's belief in constitutional forms of Government, had to go back and repeat the passage, so insistent were the shouts of "Read that bit again." In every way it was a very remarkable occasion, as gratifying to every Englishman present as it must have been to Lord Lloyd himself.

What conclusions may safely be drawn from the fact that the British Representative has received such an unprecedented welcome at his first appearance in such company, it is hard to say. There is no doubt that the two thousand hosts of Thursday were very much impressed by Lord Lloyd's personality, and still more so by the sentiments to which, in his capacity as High Commissioner, he gave expression. On the other hand, it must not be forgotten that the gathering represented practically

Digitized by Google

only one political camp, and that by no means the most numerous. The Zaghloulists and Nationalists were absent, which means that the great majority of the nation was not represented. On the other hand, and to leave aside for the moment the question of party politics, there is no doubt that the majority of those who attended the tea-party, being countryfolk, provincial pashas, beys, omdas and the like, were a very typical collection, and in applauding the High Commissioner's remarks regarding the importance of caring for the interests of the fallaheen and the prime importance of keeping the Administration clean and efficient they were showing their agreement with the speaker on fundamental principles which transcend questions of party affiliation. Even after making every allowance for the fact that the Egyptians who cheered Lord Lloyd on Thursday would not have been present at all had they not been, from the outset, well disposed to their guest and the country he personifies, it remains no less a fact that the frenzied applause given his speech marked one of the most noteworthy events in Egyptian political life during recent years.

Christmas in Cairo.

Christmas in Cairo has passed off as Christmas in Cairo always does—which is chiefly in hotels. There is little enough family life among foreign residents in this country at the best of times, and at Christmas that little becomes much less. For everyone who can find the time and the money required goes off to Upper Egypt, or to nearer centres of festivity such as Mena or Helouan, while those who do not actually stay away from home yet contrive to do most of their revelling in company with hundreds of others who, like themselves, seem obsessed by the fear of not being in a crowd. The hardest thing to find in Cairo to-day is an Englishman or Englishwoman who will confess to having spent Christmas at home.

School Riots.

Two schools have been closed during the past week, on account of a rather ugly little riot which at one time seemed likely to become serious. Twenty-nine boys of Saidia Secondary School were dismissed on Tuesday for having, despite repeated warnings, continually incited their schoolfellows to politically motived strikes. Next day the whole school went on strike, besieged the headmaster in his room, smashed windows and doors, and did much damage to the buildings. A strong force of police had to be called in before order could be restored, and meanwhile the boys from the nearby Giza Secondary School had joined in the affair. The schools have been closed pending inquiry and are guarded by detachments of Egyptian cavalry.

A New English Cathedral.

A vigorous campaign is shortly to be opened for the raising of the £E30,000 needed to complete the fund raised for building a new English Cathedral in Cairo. The fund already possesses approximately £E80,000, most of which is the proceeds of the sale of the site of All Saints' Church, but this amount is not sufficient to build a worthy Cathedral and to endow it sufficiently to ensure that in the future it shall not be a white elephant to the British community in Cairo. The High Commissioner is interesting himself very actively in the plans for the Cathedral, and will address a public meeting in favour of the fund when he returns from inaugurating Sennar Dam on January 21.

GREECE.

Athens, December 18.

The Refugees' Commission.

The quarterly Report of the Commission for the Installation of Refugees, which has just appeared, makes interesting reading, and affords striking evidence of the progress which the work of the Commission and the efforts of the refugees themselves have made. During the last year one million more *stremmata* have been brought under cultivation: among various kinds of production, almost all of which show a large increase, that of wheat has increased 70 per cent., of tobacco 146 per cent., and perhaps most remarkable of all, of wine by 130 per cent. When one remembers what Macedonia was like before the War, with its rare patches of cultivation in the neighbourhood of the scattered villages, and its lonely *chifliks* standing in the middle of bare wastes, over which one might roam a whole day, and meet not a soul except a nomad shepherd with his flocks, one is now amazed to see the signs of cultivation and industry on every hand. It has become evident that, in finding a home for the refugees, the Greeks have not received a parasitic and useless population, but a type more hard-working and intelligent than perhaps they are themselves. It is unfortunate that the dispute between the Commission and the Government has had the result of delaying the work of installation.

Greece and Bulgaria.

The sequel to the Florina incident, mentioned in the last letter, has been that, of the persons tried by court-martial in connexion with the affair, three were condemned to death (and executed), five to varying terms of imprisonment. Although this may have some effect in intimidating others, it is not likely to improve Græco-Bulgar relations, as the condemned, although Greek subjects, are presumably Bulgar-Macedonians, and reprisals on Greeks living in Bulgaria may be indulged in. The only safeguard against the recurrence of these incidents would be that the voluntary exchange permitted in Article 3 of the Treaty concerning minorities should be made compulsory, and Article 4 revised so that Bulgarians who have emigrated to Bulgaria before the convention should not be allowed to return. The latter suggestion has, indeed, been made in the recent decision on the frontier incident.

Greece has accepted that decision with dignity and good sense, but the papers reflect with a certain bitterness, not unjustifiable, that Greece has had to pay in the Corfu incident, when she was the aggrieved party, as well as in the present, when she is the aggressor. This bitterness is somewhat assuaged by the assurance that her attitude will stand her in good stead, in the event of her territory being invaded at any future time: the blow to her prestige also is softened by the recognition that she acted in good faith, and that it is an indemnity and not a fine that is being paid; while the discovery that the indemnity can be set off against Bulgarian war debts makes the pecuniary loss easier to bear.

Elections for the Senate.

Elections for the Senate are to take place on January 10. For this purpose the country is divided into forty districts, corresponding partly to the *nomoi* or provinces, partly to the larger *demes*, and partly to the groups of smaller *demes*. The average number of senators in each

electoral district is two, but the *demes* of Athens and Salonika are to have nine and seven respectively. The leaders of the three republican parties, after prolonged manœvring, have at length agreed to combine and, if possible, secure a Government defeat. The Government, while denying that the elections will have any political colour, except in the electoral districts of Patras, Acarnania and Arcadia, to which the three opposition leaders belong, admits that, in the event of an overwhelming number of opposition candidates being returned, it will "regard the situation seriously." As all the parties, except the anti-Venizelists, are republican of various shades, the only plank in the opposition platform is that the present Government is unconstitutional. This does not arouse much interest among the electorate, whose chief concern is with the rise of prices, which is as likely to be checked under the present Government as under any other. Politics, in fact, as such, are losing their zest, now that they are no longer dominated by the clear-cut issues of Royalism or Venezelism, when a man's occupation and career depended on whether his party was in power or not. The Greeks profess to detest militarism, but they realise that, in default of a monarchy, a mild dictatorship is the form of Government best suited for the country, and General Pangalos, though no politician, seems to have good advisers, who are often able to correct, before it is too late, the mistakes which his impulsive temperament may lead him to commit. A strong point in his favour is that he travels about the country, and thus gets into personal touch with the requirements of the provinces—hitherto shamefully neglected by the politicians of Athens.

IRAQ.

Baghdad, December 16.

King Faisal.

King Faisal gave a special audience to a representative of the *Baghdad Times* on his return from Europe. He said that he had returned to Iraq more firmly convinced than ever that there could be no better alliance for his country than her present one with Great Britain, and certain that a great future awaits her if the support and sympathy of England are continued. He was glad of the opportunity of studying British institutions, and hoped that in future many of them might be incorporated in Iraq's system of government. He was especially impressed by the national system of education; if more money could be spared for educational purposes, he would be strongly in favour of sending a number of Iraqi students every year to London, to give them a real insight into British methods and British thought. His Majesty spoke of the very warm reception given him in London, and referred in the most friendly terms to his visit to Paris and his conversations with the French President. He then said how greatly encouraged he had been to find that, among those chiefly responsible for England's foreign policy, a firm conviction remained that the honour of the Empire was at stake in the completion of its task in Iraq; and he felt sure that the British people would support their Government in upholding Iraq against aggressors and against those who were trying to deprive her of her birthright.

Mosul.

General Laidoner and his colleagues have left Baghdad and returned to Geneva, to report to the Council of the League of Nations on the conditions which they found on Iraq's northern frontier. In an interview granted to a representative of the vernacular Press, General Laidoner stated that in the Zakho area he had seen more than 3,000 refugees, all of whom said that the Turks had driven them from their homes after taking away all their possessions. His information was collected from the refugees themselves, whose stories all tallied. He could not explain the real cause of the exodus, as he had not visited their villages, which lie north of the Brussels Line; but it was indubitable that they had been driven from their homes and are now in a state of abject poverty. The refugees informed the Commission that a far greater number had been sent to Turkey, more than 8,000 having been deported during the spring and summer of this year. General Laidoner then said that the question of the frontier was considered of the first importance by the Council of the League, which was anxious to reach a settlement as early as possible.

The High Commissioner has telegraphed to the Archbishop of Canterbury acknowledging the receipt of £2,000, the first instalment of the fund raised in England for the Assyrian Christians. It is hoped that at least £100,000 may be raised, so that not only the immediate necessity of the people may be relieved, but seed provided and self-supporting settlements instituted. In the meantime, in order to provide clothing, bedding, and so on, as some protection against the bitter cold which has already set in in these regions, a collection has been instituted by the President of the British Chamber of Commerce, the Iraq Railways offering to deliver free at Mosul everything collected by a certain date.

General News.

Sir Gilbert Clayton arrived in Baghdad on November 30, having travelled by air from Amman, to explain to the High Commissioner and the Iraq Government the arrangements reached between himself and Sultan Ibn Saoud at their recent meeting. It is hoped that this conference will result in closer friendship between Iraq and Nejd, and a cessation of inter-tribal raiding across the border. Sir Gilbert attended a meeting of the Cabinet, and was thanked for his successful work on behalf of the peace of Iraq.

The British Cotton Growing Association has taken advantage of the extension of the Iraq Railways to Kirkuk to extend its activities in the northern liwas. Experiments in cotton-growing have been made and seed distributed by the political authorities in these regions since 1921, but owing to the difficulties of transport no branch of the B.C.G.A. has hitherto been established. An agency has now been opened at Mosul, and in spite of the recurring menace of locusts, excellent results are expected for next year's crops.

Constantinople, December 29.

Rushdi Bey's Return.

The return to Angora of Tewfik Bey makes the Turkish capital doubly interesting to all who are following the different phases of the Mosul question. Since the pronouncement of the League's decision, attention has, constrainedly, been divided between Angora and whatever place the Turkish Foreign Minister has happened to be in, but now that the Turkish official circle is complete in the capital all eyes are turned in that direction in the hope that the next move will soon become evident. The return of the Turkish Principal Delegate has been awaited with great impatience by the Grand National Assembly, which has been promised explanations on his arrival constituting a complete appreciation of the present situation concerning Mosul and some indication of the attitude to be adopted by the Government. That the liaison between the official circles and the local Press leaves something to be desired would appear to be proved by the striking difference between the spirit of Tewfik Bey's declarations since arrival here and that which the daily publications invariably exude. The statement "the deliberations on the Mosul question which have recently taken place at Geneva form only one phrase in the negotiations concerning this vital question," which the Turkish Minister for Foreign Affairs made yesterday, indicates a point of view diametrically opposed to the scornful and stigmatic appreciations given by most newspapers here on Mr. Baldwin's first move in the question of arranging compensation as it apparently points to the likelihood of some other remedy being suggested from Turkey's end. The Turko-Russian Accord is prominently mentioned in all articles, and it is evidently considered to wield a great influence in any argument on Mosul. The *Hakimietti Millie* describes the recently signed neutrality treaty as the basis of a measure destined to defend the existence of the Orient and expects that in the near future all the nations of the Near East will assemble in order to realise an Oriental "Locarno" pact.

Russian Activity in Turkey.

Russian commercial activities in Anatolia are increasing by leaps and bounds, and Comrade Bournif, the official representative of the Soviet Foreign Trade Department, is now devoting himself to a series of inquiries in Mersina Tarsus, Adana, Jihan and Deurt Yol with a view to opening branches of the Arcos Company in these places in the very near future. The Russian intention, which is to place at each branch one specialist only, and to select the remainder of the staff from Turks only, is one which the Turkish Authorities naturally regard with great favour, and every facility is consequently granted for the opening up of Russian trade with Turkey. The Arcos Company has, in view of its competitive prices, already secured a firm footing in the Turkish petroleum market—a fact which is causing some anxiety on the part of other oil companies operating in Turkey. Comrade Bournif is expected to resume the negotiations at Angora on the subject of a Turko-Russian commercial agreement immediately on the completion of his tour of inspection.

PERSIA.

Teheran, December 7.

Opening of the Constituent Assembly.

When the Mejliss on October 31 last voted the deposition of Ahmed Mirza and the fall of the Kajar dynasty the Deputies recommended the immediate convening of a Constituent Assembly, to be elected without delay throughout the country, to decide on the future form of Government, as the Parliament itself had not the power to do this. The constitution of this Assembly was drawn up, the number of members being placed at double that of the Deputies to the ordinary Mejliss, or some 270; and the elections were proceeded with as rapidly as possible. As more than 200 members were in Teheran, it was decided to open the Assembly at once, and the ceremony was performed yesterday by the Head of the Provisional Government, Riza Khan Pehlevi, who has taken the title of His Royal Highness. Crowds had collected along the route from Riza Khan's house to the Tekieh-Dowlat (Royal Theatre) where the Assembly will hold its sessions, and the roads were lined with troops and police. Riza Khan, wearing a field-grey military coat over his uniform, drove in a closed state carriage with his own coat-of-arms on the door, escorted by his Staff of six generals, three riding on either side of his carriage, and immediately followed by a horseman bearing his banner. The coach, which was drawn by six English horses belonging to the chestnut team of the battery of R.H.A. taken over by the Persian Cossack Division on the withdrawal of the British troops from Kazvin in 1921, was preceded and followed by mounted troops in all their parade finery, and a salvo of guns fired a salute on Riza Khan's arrival at the Royal Theatre at 2.30 p.m. and continued firing during his reading of the opening speech. The ceremony was attended by some 1,700 people, including the deputies of the two Houses, the high clergy, notables, diplomatic corps and other prominent Europeans and H.R.H. made the following speech:—"You are all aware of the causes which have led to the creation of the Constituent Assembly, and you know also that the Mejliss which is, according to the Constitution, the mouth-piece of the people, in order to carry out the wish expressed by the whole nation, deposed the Shah and the Kajar dynasty, with a view to establishing a government more in accordance with national aspirations, and placed me at the head of the Provisional Government, recommending the convening of a Constituent Assembly to decide upon the definite future form of government. The country having been invited to choose its representatives, you have been elected, and I now therefore entrust to you the task of fulfilling this great duty, with God's help, acting in accordance with the dictates of your conscience. As at such a moment any delay is naturally prejudicial to the interests of the country, I request you to decide this highly important question as rapidly as possible."

The Assembly will now be busy for a week or two inquiring into the credentials of the deputies. There seems no doubt that Riza Khan will be asked to ascend the

Throne and to found a new Pehlevi dynasty (he assumed this as his family name some months ago), his reported opposition to the principle of a hereditary monarchy having apparently now been overcome.

New Stamps.

To commemorate this *coup d'état* and the deposition of the Shah a restricted issue of stamps, printed locally at the Mejliss Printing Press, and surcharged in gold "Provisional Pehlevi Government" and the Persian date for October 31, was put on sale here and in the provinces for a few days. As the values of the six denominations were not in Latin numerals this series is not available for foreign postage, and owing to the small quantity printed the set is already being sold in the bazaars at a heavy premium. I hear that the Post Office also proposes to surcharge the large stocks of the regular issue on hand before preparing a fresh issue.

Queen Alexandra's Death.

A memorial service for the late Queen Alexandra was held on Friday, November 27, in the American Mission Chapel, which was filled to its utmost capacity, the impressive service being attended by the entire Diplomatic Corps, members of the European community and Persian notables.

PERSIAN NOTES.

(From a Correspondent.)

Hamadan, November.

Elections for the Constituent Assembly are now in course all over the country, and the results are far enough known to enable a reasonable estimate to be made of the eventual decision to be made thereby. The Assembly will meet within the next three weks, and is expected to offer the throne to Riza Khan Pehlevi to avoid the danger of a Republican régime which would be universally unpopular. Public interest in the Provincial Elections can be gauged from the figures recorded of voting in the principal towns. In one of the leading towns, from a population of 450,000, which registers 18,000 voters, only 2,000 odd votes were recorded. The public outside the big towns is singularly ill-informed, and confused on the issue at stake. Many in country districts think the recent change to be a revival of the Republican movement of last year, and that the election is for the purpose of electing the first President. The merits and claims of the Head of the Provisional Government are generally recognised, and any opposition is merely based on the natural conservatism of the country and especially of country districts.

The main subject of concern in the country to-day is that of food supplies. Failure of the crops in Varamin district deprived Teheran of its wheat supplies for winter. A shortage was suddenly apparent and, though partially concealed from the public, created a panic. Every effort was made, and is being made, to bring in supplies from the Provinces, but the mistake was made of attempting to maintain previous prices. Wheat was commandeered arbitrarily in the country at these prices, with the result that landowners and peasants were antagonised, much grain was concealed, and much put back into the ground for next year.

All transport was commandeered to bring in Government grain urgently to Teheran, with consequent dislocation of trade. Not only is grain scarce and dear everywhere outside Teheran, but the increased price of transport has raised the cost of living everywhere.

The outlook for this winter is far from reassuring and the economic situation one of depression. Internal trade is poor, money is scarce, and poverty is increasing.

Energetic measures have been taken to import wheat from abroad, to increase motor transport by purchases abroad, and to open up and improve road communications. These measures will, however, take time to mature, and affect Teheran only.

Persia's prosperity depends on agriculture, and any damage thereto is quickly reflected in trade statistics.

TITLES IN PERSIA.

By Mirza Firooz Khan.

In the time of Cambyses and earlier there were no family names in Persia. A man was known by his own name and that of his father. Thus Hasan was called either simply Hasan or Hasan the son of Abdullah; or he was known by some personal deformity or by his trade, as for instance, Hasan the blind or Hasan the lame, Hasan the shoemaker or Hasan the water-carrier, Hasan the beggar or Hasan the rag-collector, and so forth. The great conqueror Taymoor was known as Taymoor Lang, Taymoor the lame, which in English is often misspelt as "Tamerlane." As the people advanced in intellect and dignity and increased in prosperity, titles came into use. This occurred during the time of Nasr-ed-Din Shah. Titles were a warrant of the high standing of the owner and a source of cheap income to the King (if not to the Treasury).

Originally titles were bestowed upon persons whom the King delighted to honour as a mark of special favour and grace. At a later date they were granted for valuable service to the State, for bravery, for personal beauty or for writing poetry. As it was found that titles gave their owners a special standing and an advantage in dealing with other people, those who had no titles but plenty of money began to purchase titles. At first these titles were only civil titles, but later military titles were added, and later still religious and medical titles also became common. From a single word four or more different titles were created and sold to buyers of the corresponding different kinds. Thus from the word *Shuja*, meaning "high" or "glorious," were formed the civil titles *Shuja-ed-Dowleh*, *Shuja-el-Mulk*; the military titles *Shuja-i-Nizam*, *Shuja-i-Liashgar*; the religious titles *Shuja-i-Islam*, *Shuja-el-Ulema*; and the medical titles *Shuja-el-Hukema*, *Shuja-el-Atibba*.

An illiterate but well-to-do shopkeeper who sold black pepper, strychnine, magnesium sulphate and the usual medical stores would pay a certain sum to the Crown Prince of the day and buy the medical title of *Shams-el-Atibba*, "the Sum of those who practise medicine," or *Nasr-el-Hukema*, "the Column of Physicians," or *Seeraj-el-Hukema*, "the Lamp of Physicians," or other such titles. The effect of these titles was to push the smart quacks to the front of the stage, while honest, intelligent, and duly qualified doctors were forced into the background. A Major who, though poor, was an excellent soldier would remain a Major for years, whereas a lieutenant with money to spare would purchase title after title until by sheer use of cash he became a Colonel and left the poor Major still toiling in the sweat of his brow!

A halt had to be called and the Sirdar-Sipah, the present ruler of Persia, Riza Pehlevi, came in time to take the necessary action. As a first step the Sirdar-Sipah gave up his own title and by telegraphic notices posted all over the land informed the people that titles of every kind and style, including his own, were hereafter abolished, and that in future he was to be known simply as "Riza Pehlevi." At the same time the Government issued an order making it compulsory for every person who had no family name or surname to adopt one. The example was again set by the War Minister and Prime Minister, who chose for himself the surname "Pehlevi," which is the name of a dynasty as old as Persia itself.

In this selection of family names amusing incidents took place. The telegraphic address of the Imperial Bank of Persia was "Pehlevi." When the War Minister chose this as his surname the Bank was left without its telegraphic address, or put in a position which almost amounted to this. Telegrams of the Bank were delivered to the War Minister, while telegrams of the War Minister were taken to the Bank where they were opened. At length the Imperial Bank had to part with its old address and assume the new address of "Bactria," which is quite as old a name as "Pehlevi."

Another amusing incident was the adoption by a certain postmaster, who had made a business of picking the unused stamps off envelopes, burning the letters, and then selling the stamps, of the compound surname of *Hak-Shinas*, "One who knows righteousness."

Some title owners proved to be more modest. As they had been known for many years by their titles—only a few intimate friends being aware of their real names—they preferred to convert the first word of their titles into surnames. Mojir-el-Mulk, for instance, simply dropped the "Mulk" and became Mohammed Khan Mojiri; "Adl-el-Mulk" removed the last word of his title and signed himself "Mirjar Mosin Khan Adly," and others acted similarly. But my bosom friend X., who has the title "Cigar-es-Saltaneh" and loves his title dearly, has refused to give it up unless the price he paid for it is returned to him, or unless he is forced to choose between his title and going to gaol.

A SHILLING A MONTH.

By "MUFETISH."

A shilling a month, not large pay, but then we hardly earned it! Es Salif, the salt mines on the Yemen coast, opposite the island of Camaran and not far north of Mocha, is not a place to choose for a prolonged or enforced residence unless you are temporarily disgusted with the world in general. The company was good, four of us, one who was remaining at Salif pursuing his lawful occasions, and three of us, two engineers and myself, very anxious to leave. Our desire to depart was not lessened by the fact that owing to the hostilities then between Italy and Turkey the only steamer service in that part of the coast via Aden had been captured by the Italians. The land route to Aden was impracticable for us owing to local warfare between two powerful Yemen factions, and the port of Salif itself was visited by an Italian destroyer which threatened blockade within twenty-four hours. There happened to be an English tramp steamer loading salt for Calcutta direct, and this ship was warned to leave within that period. This, then, seemed our only logical way of leaving Salif, but Calcutta was in exactly the opposite direction to which we intended to go.

After some talk, however, the worthy skipper, Scroggie, by name, agreed that as he was, on paper, short-handed to the extent of three stokers he would take us on, at the munificent wage of one shilling a month. We warned him that we intended to desert at the first opportunity—that opportunity being Aden, where he was not suposed to call. When we assured him that we would make all the necessary arrangements for deserting at Aden and would assume all responsibility, his reluctance was overcome, and we set the wires in motion to arrange for our agents, a worthy Parsee firm, to meet the Farringford with a launch in the outer harbour at Aden and take off the deserting stokers. Whilst making these plans the agent's son, a Cambridge graduate, arrived by land from Hodeidah and was most anxious to proceed to Aden in our company; so a Parsee assistant cook was added to the ship's crew. The next morning our friend the enemy arrived in a destroyer to blockade Salif. The captain went over the Farringford's paper, inspecting the 39 names of the crew, noting their respective duties and warning the captain to clear before sunset. The three stokers and the cook lost no time in reporting on board and being assigned to their quarters.

It was then, I think, all of us realised what life on an average tramp steamer meant, even under improved modern conditions. The Captain, a worthy, hospitable Scot, put two us in his dining-room, the chief engineer housed another, and the fourth slept in the chart room. The skipper's accommodation was aft where you get the full benefit of any motion and vibration of the propeller; the decks were all iron, which in the tropical blaze of sun in the south end of the Red Sea was a great trial to all concerned. The food, though plentiful, was decidedly rough, unvaried and unattractive even at the captain's table; but in this connexion I may say to the credit of the crew, that a fat-tailed sheep, bought at Salif for the men, made himself so friendly that no one wanted to eat him, and I believe he survived the voyage to Calcutta. Our boat was slow, and head winds further delayed us, so that it was dark by the time we reached the outer harbour at Aden; there was no sign of our launch and the sea was running rather high.

Our good captain was very reluctant to push further into the harbour which was unknown to him, but a pilot

Digitized by Google

accosted us and came aboard. This much distressed our skipper, who had visions of pilotage fees and explanations at Calcutta; but, the situation being explained, the pilot kindly agreed that he knew nothing about our boat officially, and arranged to take us off.

We hastily collected our few belongings, and bidding goodbye to our friend the captain we made a somewhat perilous descent into the pilot's launch—"deserted"—much, I think, to the secret relief of Captain Scroggie, who was glad to be relieved of three stokers and a Parsee assistant cook who had contributed little but trouble to him; and he then pursued his lawful voyage in the direction of Calcutta.

The next morning the Aden authorities were apprised of the arrival of four travellers, apparently from nowhere, whose whereabouts had been the cause of a certain amount of misgiving both at Aden and in Cairo.

A day later we donned the cloak of respectability again and travelled up the Red Sea to Suez as honoured passengers—though we all had, I think, happy memories of Red Sea travel under less favourable conditions, even if we did not earn our shilling a month.

THE WEEK AT HOME.

London, Tuesday Morning.

The Old Year's Passing.

The Old Year passed out with a great to-do, blustering, falling over itself, and tearing itself out in its anxiety to make way for 1926. It snorted monstrously, groaned petulantly, and shed such copious tears that even huge tracks of the island it loved best in the world are quite submerged. Like "the Captain" in "Juno and the Paycock," it "blew and it blew and it blew," what time we gazed up into the heavens, under which cloud upon cloud was hurrying to the same destiny as was to greet 1925, and asked ourselves: "What *is* the moon? What *is* the stars?"

It was a curious fact, but never, in spite of the hurricane which caused chimneys to be swept from houses in London and the Thames to shiver the base of Cleopatra's Needle, has the full moon looked more beautiful than it did at the end of the Old Year. It seemed as if that Queen was saying that, whatever flurrying and anxieties might be being indulged here below, there was, and hers was, could we but find it, a serenity that overrode the world. Certainly one will as long remember how 1925 was shone out as how it was blown out of our reach.

Christmas: and After.

The Christmas of 1925 was a full but a quiet Christmas, largely and gratefully observed. To most men it was a real holiday, and still to a few a religious one. The newspapers were most considerate, leaving us alone for three whole days—in spite of which subjects for conversation did not fail, nor was anyone the poorer. This complete dispensability of news-sheets is indeed an encouraging thought. Of course there are always some folk who like to read exactly how they have spent Christmas, just as some are concerned to know what they spent on Christmas; but for the most part this joyous season was worthily observed.

After Christmas the year commonly falls in decent reflection to its close. But in London at any rate the "sales" of the great shops made reflection almost impossible, for the city was invaded by hordes of women, avid for bargains, that is, for things that they had for a year done successfully without. Yet the great game goes on, presumably with the connivance of the perplexed husbands. On which is the inferior quality, the strength of the Amazons in forcing their way from shop to shop, or the weakness of the man in acquiescing in this annual orgy, I hesitate to write. It is quite certain, however, that, at the instigation of drapers' advertisements (which, as we have it on the authority of Lord Beaverbrook, are increasingly one of the signs of the times) more and more women look breathlessly on the Christmas season as the necessary prelude to the real fun of the year.

The New Year.

And what of 1926? Is it, as is said by the wise men who know, the politicians, the industrialists, the merchants, and an odd ecclesiastic or two, to be so much better than 1925? Has that turn of the commercial tide towards which, it would seem, half the nation's mind has been directed since the War, really been reached? Will an industrial peace be attained, or will the Coal Subsidy prove to have been the futile staving off of an inevitable clash?

These are questions serious enough in all conscience, upon the answer to which Britain's future depends: but there are others.

The problems informing our foreign policy, for instance, are no less considerable. One seems to observe a tendency, for prominent example, to ignore or to acquiesce in the growth of an indifference to the claims of an Anglo-French *entente*—an indifference based, apparently, on the low state of French finance. Similarly, one observes a tendency to relinquish the effort to understand Russia. Thus both in the West and in the East the future is obscure indeed: for no one but the most superficial observer (or the observer with some particular *idée fixe)* of whom there are in this country unfortunately a dominating number, would dream of asserting that the present condition of two of the strongest Powers in the West and East respectively is anything but temporary.

It would be stupid, in consideration of the fact that the criterion of almost everyone, in discussing the prospects of 1926, is in terms of prosperity, to mention the religious issue; so that one may conclude this short note by saying that the main feeling of the time, at least, is one of hope, both in the business and in the political world.

Intrigues Against the Premier.

Those political doves who fly from cote to cote upon the least provocation were highly fluttered last week, when a report, issued in no less responsible an organ than the *Glasgow Herald*, was published that an intrigue was in being among the Conservative Party to depose Mr. Baldwin from the Premiership and to reinstate that Centre Party, which was once the dream of Messrs. Lloyd George and Churchill and of Lord Birkenhead and of Sir Austen

Chamberlain. It was even hinted that in the construction of such a party sections of the Liberal and Labour Parties might be involved. Particularly, the phrase that was used —"the knife of the assassin"—struck horror or amazement into the spectator.

Personally, I think the prospects of a section of the Conservatives being able to depose Mr. Baldwin extremely small. Look at the position. The Conservative Party has a majority of 200 and four more years to enjoy that majority. It is quite certain that that majority will not again be risked, as it was in 1923. Nor is it possible to suppose that Mr. Baldwin's Cabinet colleagues would themselves intrigue against him—whatever one may think of the personal qualifications of some of them. The Premier has, it is true, been attacked by Conservatives on the question of the Coal Subsidy, but that subsidy was, it must be remembered, not an individual but a Cabinet decision. And finally, there is, quite plainly, no one in the Conservative Party who could succeed Mr. Baldwin as Premier. Sir William Joynson-Hicks is held to lack something, the brothers Chamberlain to be too Liberal; and outside them there is no one who would have the least chance with the Tories.

The Food Commission.

The domestic historian of Mr. Baldwin's régime will certainly accord a high place to the Premier's Food Commission, the findings of which will surely increase his popularity. One is not amazed at the amount of fraud that has been practised, and is now so happily being exposed, by shop-keepers, but one is amazed that we should have so long endured it. The matter that has been given to the Press—and publicity will kill all fraud, *provided* the offenders are small enough men—reminds one of nothing so much as of mediaeval edicts in England. There is an old "Assize of Measures" of the twelfth century that might apply to the present exposure of retailers, who immemorially, it seems, have been a class of deceivers. It was decreed in 1197 that every measure should have a mark on it, "lest by guile it should be falsified"—the jolly old trick that is still being indulged, for of all the ills that the Food Commission has exposed, that of short weight is the worst.

It may be difficult by Parliament alone to cleanse the land of these frauds—in mediaeval times the Church implicitly helped the State—but even if a beginning is made, Mr. Baldwin will live in the minds of the poor as an Englishman who relieved them of some of their burdens. For in England, as in many other countries, the cost of living largely determines the attitude of the public to any particular political régime.

The Honours List.

If no great expectations were aroused by the New Year Honours List, certainly none was realised. If (and for this alone perhaps one should be grateful) there is no suspicion that negotiations of a financial nature had preceded any particular award, certainly there is little out of the ordinary in the selection of the recipients. County councils and party organisations have, it would appear, urged their utility to the Conservative Party too appealingly for the Prime Minister to resist them; honest and humdrum party work seems at any rate to have been more highly valued than distinguished contribution to our national life. To this criticism there are, of course, a few exceptions, upon which everyone is agreed.

America and Rubber.

As readers of "Commentator's" notes will have known, the success attending British speculation in the rubber market has caused the utmost gratification here. But one great country, America, is profoundly dissatisfied (one says profoundly, but it is perhaps questionable whether American commercial emotions are not all on the surface) with the far-sightedness and consequent awards of Britons in the rubber market. It is the queerest of all things, this hullaballoo in America over the monopoly that Britain has obtained in the rubber market. If it proceeded from a land in which the words restrictions and tariffs and trusts and rings and Tammany Hall were unknown, one could possibly begin to understand the indignation of this foreign but friendly nation: in the circumstances, however, one can but blandly gasp at the audacity of the man who insists that the door of every country but his own shall be opened.

One cannot, as I have said, treat all this indignation seriously. More probably it is the inevitable result of a cinematised education, which leaps at the opportunity of dramatic ebullience. The situation also contains the piquant element of surprise, for were not these money-grabbing Englishmen the very men who were after the War (war of all wars!) described as down-an-out?

It is not necessary to reproach all the Americans. There are some, known at least to every reader of THE NEAR EAST AND INDIA, who genuinely hold and attempt to realise ideals; these are largely they who have kept America's name high in the Near East. But there are others who, while prating of ideals, deliberately set out to profit by Europe's temporary difficulties, the men who "won the War," and who "wonna win the Peace." With these latter there is in this country not the slightest sympathy, and if for once they have been beaten at their own game, so much the better. As a matter of fact, one believes that they are few in number, and are probably disowned by Americans with a sense of humour.

ALTER EGO.

At Cawnpore on December 29 the Khilafat Congress adopted a resolution expressing full confidence in the policy of Ibn Saoud, the Sultan of Nejd, in regard to the future of the Hejaz.

According to newspaper reports, the Greek Government has decided to set up an "Under-Secretaryship of State for Social Defence," in order to facilitate the suppression of Communist intrigues.

CAMBRIDGE BOOKS

A FLYING VISIT TO THE MIDDLE EAST

By the Rt Hon. SIR SAMUEL HOARE, BART., C.M.G., M.P., *Secretary of State for Air.*

Cr. 8*vo.* 8 plates and map. 3s 6d net

"Reads rather like a chapter out of the *Arabian Nights.*"
The Westminster Gazette.

NEW YEAR HONOURS.

Among the recipients of the New Year Honours, a considerable number have earned distinction in the Near or Middle East. In the absence of British Empire Honours it is natural that most of the present awards should have been made for Government services, but it is pleasant to note that banking in the Near East has met with recognition. The Ottoman Bank receives a double honour, in that Lord Oranmore and Browne, hitherto an Irish Peer, becomes a Peer of the United Kingdom; and General Sir Herbert Alexander Lawrence has been awarded the G.C.B. (Military). The Governor of the National Bank of Egypt, Mr. Bertram Hornsby, C.B.E., becomes a Knight.

Other honours include:—

TO BE VISCOUNT.

Right Hon. Edgar, Baron D'Abernon, G.C.M.G. His Majesty's Ambassador since 1920. Lord D'Abernon has been President of the Council of the Ottoman Public Debt and Financial Adviser to the Egyptian Government.

K.C.B. (Military).

Air Vice-Marshal Sir William Geoffrey Hanson Salmond, K.C.M.G., C.B., D.S.O., p.s.c., Royal Air Force. Sir Geoffrey Salmond was born in 1878, passed through the Royal Military Academy at Woolwich, and joined the Royal Artillery in 1898. He served with distinction in the South African War and in China in 1900. In the Great War he first commanded No. 1 Squadron of the Royal Flying Corps, and subsequently the 5th Wing. He served with the Royal Air Force in the Middle East from 1916 to 1921. During this period he was created K.C.M.G. and C.B.; the D.S.O. was conferred upon him, he was mentioned in dispatches and granted foreign Orders. Since 1922 he has been Director-General of Supply and Research at the Air Ministry.

FOREIGN OFFICE LIST.

G.C.M.G.

Sir Cecil James Barrington Hurst, K.C., K.C.B., K.C.M.G., Legal Adviser to the Foreign Office. Sir C. J. B. Hurst, who was born in October, 1870, was educated at Westminster and Trinity College, Cambridge. He was called to the Bar, Middle Temple, in 1893, was Junior Counsel to the Post Office on S.E. Circuit from 1901-2, when he became Assistant Legal Adviser to the Foreign Office, being appointed Legal Adviser in 1918.

K.C.M.G.

Henry Hamond Dawson Beaumont. A Minister in his Majesty's Diplomatic Service. Mr. Beaumont entered the service at the Foreign Office in 1892. He was appointed Chargé d'Affaires at Montenegro in 1910. Twelve months later he became British delegate on the International Financial Commission at Athens and Acting First Secretary to his Majesty's Legation at Athens until 1914. He was Envoy Extraordinary and Minister Plenipotentiary to Venezuela from 1916-23.

The Hon. William Augustus Forbes Erskine, M.V.O. His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Sofia. Mr. Erskine is the second son of the Earl of Mar and Kellie, and was born in 1871. He entered the Foreign Office in 1894, his first service abroad being at Buenos Aires from 1897-8. He became Minister to Cuba in 1919, which post he filled for two years. He is at present at the British Legation, Sofia.

Harry Charles Augustus Eyres. His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Durazzo, until last year, when he retired. Mr. Eyres was born in 1856 and became Vice-Consul at Beyrout in 1885. He was appointed to the post of Acting Consul-General a year later, and in 1896 he became Consul-General at Constantinople, which post he held until 1914.

Lieut.-Col. George Ernest Schuster, C.B.E., M.C. Financial Secretary to the Sudan Government. Lieutenant-Colonel G. E. Schuster was educated at Charterhouse and at New College, Oxford. He was called to the Bar in 1905. He served in the European War in North Russia (1919), and was mentioned in dispatches while with the Murmansk Force. He became a member of the Advisory Committee to the Treasury under the Trade Facilities Act, and was subsequently appointed Financial Secretary to the Sudan Government in 1922.

C.M.G.

John Cecil Sterndale Bennett, M.C. A Second Secretary in his Majesty's Diplomatic Service.

Alexander Gordon Ingram. Commandant of the Alexandria City Police.

Thomas Wentworth Russell. Commandant of the Cairo City Police.

The Hon. Thomas Aubrey Spring Rice, M.V.O. A First Secretary in his Majesty's Diplomatic Service.

COLONIAL OFFICE LIST.

C.M.G.

Colonel Kinahan Cornwallis, C.B.E., D.S.O. Adviser to the Minister of the Interior, Iraq.

Harold Baxter Kittermaster, O.B.E. Secretary to the Administration, Somaliland Protectorate.

Harry Charles Luke. Colonial Secretary, Sierra Leone.

BOOK REVIEW.

A SYMPATHETIC TRAVELLER.

"ALONG THE WINDING ROAD." By Mary Augusta Poynter (London: Fleming H. Revell Company. 1.00 dol.)

The work of Lady Poynter needs little introduction to readers of THE NEAR EAST AND INDIA; for her prose sketches of places on the fringe of Asia are, indeed, well and deservedly known. She has a notable sympathy with the external beauties of Nature, and displays a pretty fancy with the more poetical attributes of the Orient. And here in her latest volume she exhibits many of the same pleasant qualities which had been evident in her prose.

It would be extravagant, however, to pretend that there is anything profound in the thought or anything particularly skilful in the form of her verse—these are attainments, indeed, which are expressly disclaimed for her. For the most part she writes of the simple, or at any rate, of the more obvious, things in life—of birds and of babies, of weather and of wistfulness, of flowers and of friends. Opinions may vary on the merits of the several categories of her verse, but for our own part we infinitely prefer her tender Eastern pictures to her somewhat naïve moralisings, which assume too often the optimistic lilt of one who is perhaps more revered across the Atlantic than here—Ella Wheeler Wilcox; and we prefer them, again, to those over facile "Nature" rhymes which occasionally resemble the "ballad" of the modern concert-hall. We would willingly give all such were we allowed to retain "The Hodja's Tale," which is incomparably the best thing in the book. This last poem will, one may be sure, appeal very markedly to her many friends in the Turkey that was, and possibly also in the Turkey that is to be. But the manifest sincerity and straightforwardness of the verses should make them attractive to readers of numerous climes.

That Book you Want!

Foyles can supply it. Immense stock (second-hand and new) on every conceivable subject, including Commerce, Industries, Oriental Languages, Sport, Tropical Medicine, etc., etc.

PERSONAL AND GENERAL.

TO-DAY

January 7, 1926 (New Style).
December 25, 1925 (Old Style).
Jumada II., 22, 1344 A.H., of the Moslem Calendar.
Tebet 21, 5686, of the Jewish Calendar.

The Hon. Mrs. Montagu has left London for India.

Sir John Power, M.P., has left England for India.

Sir Frederick and Lady Hopkinson have left London for the Sudan.

The Hon .Mrs. Ronald Greville has left London for the South of France, *en route* for Egypt.

Viscount and Viscountess Portman have left London for Eygpt, and will be away until April.

Sir H. N. and Lady Bolton have arrived in London from Peshawar, India, and are staying at Bailey's Hotel.

Sir Richard Leighton has left England for East Africa and the Sudan and will be away until the end of April.

Mrs. M. Crompton-Roberts and Miss Lettice Crompton-Roberts have left Egypt and expect to be away until Easter.

Major-General Sir Charles Callwell has returned to England from Marseilles. He arrived at Plymouth last week in the Naldera.

Sir Hardman and Lady Lever, who are *en route* to the East, left London last Thursday by the P. and O. special train to join the Kaisar-i-Hind at Marseilles.

Major-General Lord Edward Gleichen and Lady Edward Gleichen arrived last week at 25. Catherine Street from Court-in-Holmes, Forest Row, Sussex.

Among the passengers by the P. and O. special train which left London last Thursday to connect at Marseilles with the Kairsar-i-Hind were Sir Archibald and Lady Birkmyre, Sir William Bull, and Sir Edward Worthington.

PROMOTIONS, APPOINTMENTS, ETC.

The following are among Consular appointments notified recently in the *London Gazette*:—Mr. George Evelyn Arthur Cheyne Monck-Mason, to be Vice-Consul at Mazagan; Mr. Ralph Henry Tottenham Smith, to be Vice-Consul at Cettigne.

Prince Shappur Mohamed Riza, eldest son of the new Shah, has been appointed Valiahd (Crown Prince) of Persia.

Mr. Edwin Haward has been appointed to succeed Mr. J. E. Woolacoot as editor of the *Pioneer* of Allahabad in March next. Mr. Haward has been since 1921 the *Pioneer's* correspondent at Delhi and Simla, and was formerly on the staff of the *Civil and Military Gazette*, which he managed for four years.

Mr. Jean Louis Rieu has been appointed a member of the Executive Council of the Governor of Bombay, in succession to Sir Maurice Henry Weston Hayward, whose term of office expired on January 4.

Hamdullah Subhi Bey, the Turkish Minister for Education, has resigned owing to ill-health, and it is expected that Nejati Bey, one of the deputies for Smyrna, will succeed him.

NEWS IN BRIEF.

The pilgrimage to Mecca, which was forbidden in 1925 by the Egyptian Government, will be allowed this year, following the restoration of peace in the Hejaz.

According to the Belgrade *Pravda*, the Conference of the Little Entente has been postponed to the spring, and will be held at Bled.

The Conference of Ambassadors has decided to recall the Inter-Allied Military Commission from Bulgaria, as she has carried out all the military clauses of the Peace Treaty.

Ex-King Ali of the Hejaz arrived in Bombay last Friday from Aden, leaving the following day for Basra, *en route* for Baghdad.

Sir Frederick Halliday's corps of British trained police, says the *Morning Post's* Athens correspondent, has been requested by the Greek Government to take over the policing of Kalamata (Peloponnese) in addition to Corfu, Patras, the Piræus, and a large part of Athens, already under its control.

The Civil List voted by the Mejliss for the new Shah of Persia amounts to 600,000 dollars. The Heir to the Throne is to be granted a Civil List of about half that amount.

Tutankhamen's coffin of solid gold arrived in Cairo on New Year's Day from Luxor under a strong guard. It was taken to the Museum, where it is to be exhibited to the public on Tuesdays, Thursdays, and Saturdays from January 15.

THE NEW YEAR IN INDIA.

(By Sir Valentine Chirol.)

With the year which has just drawn to a close India entered on the second half of the decade contemplated under the Government of India Act of 1919 as the first stage of that great constitutional experiment, and it is presumably under the Viceroyalty of Lord Reading's successor-designate that Parliament will take further action in accordance with the measure of its success or failure. There are some in this country who will tell us that India has gone to the dogs under her new constitution and must already be counted a lost dominion, and there are many more in India who angrily contend that the new constitution has altered nothing and that India is still, as Mr. C. R. Das expressed it in a death-bed message, a British prison in which her soul is tortured and stifled. It is difficult to say in which case the language of passion departs further from the facts.

That since the end of the Great War India has passed through a very severe storm everyone knows, but many are apt to forget that it has been largely—and with perhaps something of the added fury which a tropical climate lends to Indian storms—a repercussion of the world-storm unloosed by a world-war. Save for a few frontier wars and such oversea expeditions as Indian troops took part in, India under British rule had led until 1914 a sheltered existence rarely brought into contact with the outer world through any other channels than those provided by her connexion with Great Britain. Impatience with some of the rigid forms of foreign tutelage which we called a paternal government and the growth of a Nationalist movement expressed originally in terms which the Western educated classes had derived from increased opportunities of intellectual and material intercourse with England, had been indeed forcibly quickened by the emergence of Japan as a great Asiatic Power capable of humbling one of the most formidable European powers of the time, and the relations, always difficult, between a ruling and a subject race had been embittered by the disabilities and hardships inflicted upon Indian settlers in some of the British Dominions, and notably in South Africa. But all this was forgotten and the voice of political faction was hushed in a great outburst of loyalty to the Empire when it was suddenly plunged into a desperate struggle in which its own existence and the freedom of the world were equally at stake. India's contribution to the common struggle and the common victory was a fine one, more than a million altogether of her sons having fought shoulder to shoulder with British troops on the different fronts, including the Western front which they helped substantially to hold against the German hosts during the very critical winter 1914-1915 before Kitchener's Armies and the Dominion contingents were trained and equipped to take the field. It was in recognition of the part she was playing in the War that Mr. Asquith promised India "a new angle of vision." Fulfilment, however, was unhappily delayed, mainly owing to the grave preoccupations of the War itself. A fresh wave of political agitation swept over India again before the promise was redeemed by the British Declaration of Policy of 1917, and when it was translated into the great Act of 1919, the War was over, but its lurid aftermath had set in. Many Indians had been impressed much less by the final triumph of the Allied arms than by the spectacle of a Europe in ruins, which seemed to spell the bankruptcy of Western civilisation. Bad harvests, the renewed ravages of the bubonic plague, two appalling outbreaks of influenza which carried off within a year nearly twelve millions of people, the huge rise in the cost of living, a sudden blast of intense economic depression reaching across from Europe, the disastrous antics of currency and exchange, the queer stories brought home by a million native troops thrown for the first time during the War into close contact with Western life—all these were enough to produce a dangerous and unprecedented ferment which spread even to the silent masses. Then came Amritzar, and, in the Duke of Connaught's own phrase, its shadow lengthened over the face of India, whilst the strange figure of Gandhi, surrounded with the halo of ascetic saintliness which has from times immemorial appealed to the religious emotionalism of India, concentrated every popular grievance, real or imaginary, into a comprehensive denunciation of British rule and of Western civilisation as "Satanic." Swaraj or "self-rule"—a nebulous term which he never defined and which implies sometimes complete independence and sometimes full Dominion self-government or even on occasion something rather less—was the magic formula for the release of India from alien thraldom, not by violence but by her own "soul force." All co-operation with a "Satanic" Government had to cease forthwith. He proclaimed a rigid boycott of "Satanic" law courts and "Satanic" schools and colleges, and above all of the new Indian constitution, and later on of the Prince of Wales' visit. He succeeded even for a time in bringing Mohammedans into line with Hindus by linking up a frenzied pro-Turkish Caliphate movement with his own equally frenzied non-co-operation movement. Never under British rule had such a spell been cast over the whole country. Indians of all classes wore his livery—the white Gandhi cap and clothes of home-spun cotton. Peasants tramped for miles to hear him speak and take the vow of Satyagraha. His name was one to conjure with amongst the urban agglomerations of workers. An epidemic of often tumultuous strikes ran through all the congested centres that had grown up with the modern industrialisation of India. Gandhi himself never ceased to preach non-violence, but his followers did not always shrink from it. There were riots and arson and bloodshed. For some five years Gandhiism was a formidable power in the land, but it never prevailed. Gandhi himself had in the end to surrender a leadership which had failed politically into the hands of one of his disciples, the late C. R. Das, who disregarded his boycott of the new Legislatures and entered them at the head of a Swarajist party, prepared to use against them the weapons of Western Parliamentarism which Gandhi had declared Satanic.

Digitized by Google

Several factors continued to make for general discontent, and thus to favour the Swaraj agitation. There was an unprecedented succession of budget deficits, largely due to the heavy burden of military expenditure, necessitating increased taxation. The Legislative Assembly grew restive, and the Viceroy was sometimes driven to exercise his exceptional powers to override it. When it rejected the salt duties, admittedly a most unpopular impost and repeatedly condemned by British authorities on economic questions, Lord Reading enacted them over its head, almost on the eve of a general election, and as even a less experienced Parliamentarian might well have foreseen, his action materially helped the Swarajists on the polling day to the undoing of the more moderate parties who had braved the reproach of a servile mentality by standing more or less consistently for co-operation with the Government. The new Swarajist party entered the Assembly and dominated it. There was a renewal of racial bitterness in the face of fresh anti-Asiatic legislation in South Africa, and it was still further intensified by anti-Indian measures in Kenia, a Crown Colony for whose policy the Imperial Government could not divest itself of responsibility. There was the damage inflicted on the prestige of the Crown by the heavy rioting and bloodshed when the Prince of Wales landed at Bombay and other if less disastrous incidents of the boycott which marred the Royal tour. There was the ceaseless pressure, not of the Swarajists alone, for the Indianisation of the Public Services and the Army and for the acceleration of the constitutional stages of responsible Government. There was the contagion of unrest over almost the whole world, and, closer at hand, the spread of Bolshevism throughout Central Asia up to the very gates of India if not inside them. There was last, but not least, the indecision, or so it seemed, of the Viceroy himself in which many Englishmen as well as most Indians were inclined to see the lack of any definite policy rather than, as official apologists prefer to put it, the calculated patience and circumspection of a great judicial mind.

Yet in all the din and tumult of the last five years what have the Swarajists achieved? The solid structure of British rule remains intact and the new machinery of Government and administration has on the whole successfully withstood not only the severe strain almost unavoidable in a process of sudden transition, but the more unexpected assaults of those who were intent upon wrecking it even before it had begun to work. Only in Bengal and in the Central Provinces, where they captured the Provincial Councils at the last elections, have the Swarajists seriously hampered the reforms. But they have hampered them at the cost of the "nation-building" departments on which the bulk of the people had built its most sanguine expectations. They have raised a cloud of prejudice against the delicately poised system of Dyarchy—the only system under which Parliament deemed it possible to devolve a large administrative sphere of powers and responsibilities on to Indian shoulders. But Dyarchy has in fact suffered far more from a succession of lean years in which the "transferred" departments have been almost starved by financial stringency and the undiminished contributions levied by the Central Government on the Provincial Exchequers. Dyarchy from this point of view has never been given a fair chance, nor in some provinces has it yet been given a proper trial, as, in the absence of any definite lead from the Viceroy, to whom the Provincial Governors are still responsible, not a few of them have gone their own way, ignoring dyarchy in their ministerial councils and helping to blur the sense of separate responsibility which, in the expressed opinion of the joint Committee of both Houses of Parliament, it was essential to preserve and strengthen in both wings of every provincial Government as constituted by the Act of 1919. To talk in these circumstances of the failure of dyarchy is absurd—the more so as the only substitute so far proposed for it is its abolition in the provinces in favour of full provincial self-government, which will not satisfy even the Swarajists, and its introduction into the Central Government where it would be open to far graver objections than those urged against it in the Provinces. All that the Swarajists have really accomplished is this. By their endeavour to bring Swaraj within the range of practical politics, they have revived the jealousies and apprehensions of rival creeds and communities who began to measure up the sacrifices which it would involve for each and sundry, and they have created fresh occasions of conflict between the old forces of Indian civilisation and the modern forces of Western civilisation by identifying Swaraj with Hindu philosophic concepts which widen the gulf between the two and, if carried to their logical consequences, would constitute an almost insurmountable obstacle to India's ultimate partnership on a basis of equal freedom, as contemplated by Parliament, in a commonwealth of British nations founded on common principles and ideals which are incompatible with those professed by the extreme exponents of Swaraj.

On balance, the main result is a widespread reaction against Swaraj. It shed much of its wild but genuine idealism when Gandhi was driven into the background, and it has now lost the greater tactical ability of his successor in the leadership, whose place Mr. Sen Gupta does not appear at all likely to fill. There are manifest fissures in the rank and file of the Swarajist party, and the tension, more acute than ever, between Hindus and Mohammedans since the Caliphate movement collapsed ingloriously after Turkey had herself knocked the bottom out of it, has brought home to many Indians the need of the strong arm of England for the communal peace of India as well as for her security against external aggression to which her North-West frontier lays her open, as Indians who know their history and hear to-day of the Red Armies abroad in Central Asia, are well aware. The grant of fiscal autonomy has induced many Indians to turn their attention as never before to the economic development of their country, and whilst protection has not yet solved the problem of enabling its young manufacturing industries to hold their own in the competitive markets of the world, agriculture, which is the greatest of Indian industries, claims that it too has a right to look for the "uplift" which it is still waiting for under British rule. Education is another problem which also still awaits a solution if higher education is ever to be given the solid substructure it has hitherto lacked of a national system of elementary education.

It is surely more than a happy coincidence that just in regard to these vital problems the Viceroy-Designate will take out with him not only an honourable administrative record at Home, but family traditions of Indian statesmanship inherited from his grandfather, Sir Charles Wood, whose great education dispatch of 1854 laid down broad principles never yet unfortunately carried into consistent practice. Mrs. Besant may describe the selection of Mr. Wood as "an insult to India," though such language hardly consorts with her professed devotion to constitutional methods of agitation, and the Swarajists may affect to regard the Viceroyalty as an institution already so obsolete that self-respecting Indians can treat the arrival of a new Viceroy as a matter of complete indifference. But there is no longer so much substance behind all this sound and fury. If it has taken Europe six years to reach Locarno, we need not be surprised that India has not yet wholly recovered from the shell-shock of the Great War. Appeasement rather than Swaraj is now in the air. That there may be room for amendment of India's new Constitution at the end of the first decennial period scarcely anyone will deny, and some other form of parliamentary representation than one so closely modelled on our own institutions may be found to give truer expression to the many voices with which the Indian peoples with their infinite subdivisions of caste and race and creed must continue to speak until they are fused into real democratic unity such as Gandhi himself admits to be a condition precedent to Swaraj. Mr. Wood may be trusted to bring a dispassionate mind to these questions, but he will require breathing time to study them and, with only three more years to run before the Parliamentary inquiry provided for in the Act of 1919, the preparatory

Digitized by Google

work for it will be one of the chief tasks of his Viceroyalty. It can be accomplished only if he restores confidence amongst Indians and Europeans alike without whose co-operation nothing can nowadays be accomplished in India, and to this pressing need he will supply the type of British character and the great Christian ideals which always command Indian respect and have been specially associated with the moral advancement of India in the most fruitful periods of the Raj when the British rulers of India regarded England's mission in the light of a great trust providentially committed to her.

CURRENT TOPICS.

New Year's Honours.

The Indian Honours List presents few features of interest, as it follows conventional lines. Indeed, it would not be easy to diverge from them, nowadays, if only because, since the introduction of the Reforms, the distribution of honours has, to a great extent, become stereotyped. The number of high officials whose claims have, sooner or later, to be satisfied, has so greatly increased that the "limited" orders of chivalry find it difficult to bear the strain.

The Star of India.

Every Governor of a Province—and there are nine of them—is automatically created K.C.S.I. on appointment: if there are any over, they go to Indian Princes or Members of the Viceroy's Council. The C.S.I. is being more and more strictly reserved for members of the Indian Civil Service on their way to higher honours—Secretaries to Government and the like.

The Indian Empire.

Similarly, the K.C.I.E. has become a preserve for the highest officials outside the Government of India, such as Chief Commissioners and members of Provincial Governments: about half the C.I.E.'s usually go to members of the I.C.S. below the rank of Secretary to Government, while the remainder is available for more general distribution. This time they are 27 in number, ten of which go to the Indian Civil Service—among whose names one is glad to see that of Mr. Lindsay, the Indian Trade Commissioner in London—three to Indian officials, two to the Political Department, and two to colleagues of the Calcutta surgeon who received a knighthood: the Indian Army, Railways and Police each claim one—the latter being Mr. Kelly, Commissioner of Police, Bombay, whose conduct of a difficult job has been uniformly and eminently successful: the Public Works Department two, and the Education Department the gratifying number of four, one of whom is an Indian: while an Indian journalist is similarly honoured.

LONDON CITY MISSION.

AYAHS' AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and to introduce them (if disengaged) to families about to travel to the East.

For Terms and Conditions apply to the

LADY SUPERINTENDENT, 4, King Edward Road, London, E.9.; or to

J. NEWCOMBE GOAD, Secretary, Foreigners' Branch, Mission House, 3, Bridewell Place, London, England.

Knights Bachelor.

Not many years ago, this distinction was the prerogative of the commercial, legal and medical professions: merchant princes, judges and members of the Legislative Department, with a sprinkling of doctors generally of the Personal Staff. It is now necessary to add Provincial Ministers and Members of the Central Legislatures to the list; but, with rare exceptions, it avoids members of the Indian Civil Service, and is used, considerably more freely than was formerly the case, to reward officials of less fortunate Services for work for which, a few years ago, they might have expected a "K." It is here, if anywhere, that one must look for items of interest, rather than among the appointments to, or promotions in, the orders of chivalry, so many of which merely accrue to exponents of "passive resistance"—those who are able to hold important positions long enough to fill an eventual vacancy. Of the sixteen knighthoods bestowed in the present list, six go to Judges of various High Courts, three to Ministers, two to members of the Central Legislatures and one to a successful Calcutta surgeon, a member of the Indian Medical Service: the four that remain are all of special interest. Two of them fall to the Police—Mr. Tomkins, the Inspector-General in the Punjab, and Mr. Charles Tegart, Commissioner of Police in Calcutta. The latter's honour will not only be a matter of the greatest pleasure to his many friends, but will be hailed by the general public as a fitting recognition of the ability and pluck with which he has carried on his duties at the constant and imminent risk of his life: it will be remembered that the assassin, who shot Mr. Day in Calcutta in 1924, openly stated that he had done so because he mistook him for Mr. Tegart: and that he was leaving others behind him who would not make a similar mistake. The third is that very distinguished educationalist, Dr. Hartog, Vice-Chancellor of the University of Dacca in (Eastern) Bengal: and the fourth is an almost equally distinguished railway expert, Mr. F. A. Hadow, of the Indian Railway Board.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 10.

Obstruction Again.

The winter session of the Legislative Council of Bengal, which is now in progress, shows no change in the attitude of the Swaraj party: and, in the absence of some of the wabblers, they have been in possession of affairs from the beginning. They have defeated Government in three major motions, and their showing in the lobby was increased by a number of Liberals. There was no attempt at discussion, although in each case the proposals were of great importance and the legislation indicated was long overdue in one case at least. The Bengal Municipal Act has not been amended for forty years and, in that period, there has been a complete change in conditions of living in the Province; but the Swarajists would not allow the new bill a first reading. They have defeated Government's resolution that Sylhet should not be incorporated in Bengal because the Province could not afford it: and, in the next moment, they declined in principle to contribute to the construction of roadways on the new Bally railway bridge just north of Calcutta. We are back again to the days of blind obstruction.

The Coalition Movement.

The miscarriage of the promising proposals, made by Bepin Chandra Pal in Bengal, is a matter upon which the Swarajists congratulate themselves; but in Bombay and the Central Provinces the kindred movement appears to have given the extremists furiously to think. In Bombay, a conference between the Swarajist leaders and the leaders of the responsive co-operation movement has taken place and was attended by Pandit Motilal Nehru. As a result,

Digitized by Google

an arrangement has been made whereby all controversy and propaganda on the policy of the Swaraj party will cease on both sides until the Cawnpore Congress has met; after the Congress, tongues will be loosened until the party decides its policy for the next general election. In the present political disorganisation, it is difficult to know whether this is anything more than a curtain behind which it is hoped to patch up some sort of an agreement, which the Swaraj party hope will cover up their failure to achieve anything with the overwhelming voting power they obtained at the last election. This, at least, in the rest of India; but in Bengal the Liberals are in the position of the young lady of Niger who went for a ride on a tiger; at the moment the tiger in Bengal is both swollen and smiling, and Bepin Chandra Pal appears almost in despair at the obvious political incapacity of his countrymen.

Irresponsibility.

We seem to remember that Arthur Roberts was in command of "H.M.S. Irresponsible" in the 1900's; ship and captain could fitly lead the Swarajist navy when it comes. Mr. Sen Gupta moved the adjournment of the Council this week to consider the cruelties of Government to three detenus in making them travel at night "without clothing." He would certainly have had the support of the European party in asking for a full inquiry, if he could have shown cause; he did not, however, attempt to deal with the statement of facts given by Sir Hugh Stephenson, who reported that the detenus had thrown away the clothes given to them when they were about to leave, and that they were afterwards given four blankets and four sheets each for their journey. In reply the Swarajist leader abused everybody, and finally acused Government of deliberately setting out to wreck the health of the detenus so as to make it impossible for them ever to earn their living again: and on this note the Council divided and Government was defeated by 58 to 50. The farce gets ever more pitiful.

The Cotton Excise Duty.

Apparently the extremist press has been warned to be a little less frank in its comments in regard to the reasons underlying the suspension of the cotton excise, for there has been a curious and almost unbroken silence since the first outburst. A day's thinking divided the European Press into two groups: one holding that the suspension was the result of a deliberately organised campaign on the part of the mill owners, and the other, that it is a long overdue squaring up of the position between Lancashire and Bombay. Hopes are being expressed that it will now be clear to the home millowners that they should concentrate their attention on the class of goods with which India cannot compete, leaving the Bombay mills the cheaper lines in which, owing to the limitation of child-labour and the enforcement of the Factory Acts, they have been at a great disadvantage in facing Japanese competition.

The Trivial Round.

The influx of visitors steadily grows and, although everybody is complaining that there is no money about, people still seem to be able to race and dance to "capacity,"—both of the individual and of the facilities provided for their enjoyment. Apparently the cables have been speaking in regard to the strict orders which were given in the first instance as to Court mourning, for both the Viceroy and the Governor are now to attend the dinner of the European Association, and it appears possible they may also attend some other functions of a public or charitable nature. Meantime the cold weather round is in full swing, and the only difficulty is to find time to go to bed! Sterner souls have not been idle either: and the efforts of the last two or three years have resulted in Calcutta having a full size symphony orchestra of its own for the first time. Some hundreds of subscribers have guaranteed the expenses for the season, and the series opens on Sunday night. A worthy effort, and a reminder that there are other sets in India besides the racing and dancing crowd.

Orange William.

This magnificent personage gave the thrill of a century to a crowded race course last Saturday. His jockey apparently had not noticed that one horse had been sent away from the beginning with orders to "get there and be damned to the rest." The result was that, on coming into the straight, Orange William had a field to pass that looked impossible, with a pair of heels ten lengths in front of all the others. He was given his head and once again, with that electrifying rush through which is peculiarly his own, he duly landed the odds. Mr. Galstaun will never be able to forgive the vet. who certified Orange William as unsound, and his Ceylon owner must be proud of the judgment he exercised in spite of the expert's report.

Markets.

Both jute and gunnies close quiet through lack of support, in spite of holders showing a tendency to sell at slightly below previous rates. The piece goods market remains idle. Despite the strength of the London Tea Market, the prices obtained at the sales here have been irregular and easier for most descriptions; opinions indicate an inevitable increase in prices as soon as the crop shortage is felt; but at present many buyers are delaying their purchases in the hope of a reaction in the market. For November the output figures show a decline of eleven million maunds on those of the same month last year; this brings the position, up to the end of November, of a net decrease over last year's crop up to the end of the same month, of nine and one half million maunds. The industry may therefore be considered in a healthy position.

The Stock Markets have displayed no features during the past week, and business generally has been on a smaller scale than formerly; jute shares have firmed up to a small degree in spite of fewer dealings, and cottons have been the subject of considerable activity on the news of the remission of the Excise duty; speculators came in at first and a large business has been completed, but at the close there was a distinct tendency towards profit-taking. According to advices from Bombay, no appreciable permanent rise is considered likely. Both coal and tea shares have suffered from a scarcity of buyers, but the general impression here is that, as soon as tea buyers appreciate that a short crop is an accomplished fact, rates for the commodity itself are bound to rise and, with them, share prices. Rubbers are, with few exceptions, the turn easier, although the raw material remains very steady. The demand for investment securities has been well maintained, with buyers willing to pay full rates for their requirements; coal, jute and cotton preference shares have participated to a large extent in this connexion, but Government Stocks have been stagnant.

Money rates have responded to the rise in the Bank Rate, call and short notice being quoted at 3¼ to 3½ per cent. Exchange remains steady, but forward rates tend easier.

Calcutta, December 17.

Futility.

The Swarajists succeeded in reducing to a farce the session of the Bengal Legislative Council which has just closed. The land of paradoxes again—a measure of democracy is used to show that democratic government is not wanted: the opportunity of learning the art of government is utilised to prove a complete incapacity for responsibility: blind obstruction has been the order of the day: and all Government measures, many of them of a routine character, have been thrown out. The "fake" case of the ill-treatment of political prisoners was pushed so far, that even an extremist organ beseeches Mr. Sen Gupta and his friends "to spare us the agony of these futile and humiliating demonstrations." The Ministers whom the Swarajists would not have at any price are to be paid for the terms they served, and the session concluded with a Swarajist victory on a resolution calling

Digitized by Google

upon Government to abolish the "Black Act." The extremists have used their opportunity to prove the futility of its grant: and, finally, the session has shown a complete collapse of the Liberals and of their recent attempt to form a centre party.

A Change of Heart?

The first item of the Swaraj programme was to capture the local bodies, and they succeeded almost universally. In the elections which are now taking place they are reaping the reward of their stewardship. In Lucknow they have had undisputed power throughout their term; but the electors have refused to give them a second trial, and there will be no elected Hindu Swarajist in the new municipality. It is easy to attach too much importance to cases of this kind, but it is interesting to notice Gandhi's change of heart operating in a quarter that did not occur to him. The Indian, like the Irishman, when he thinks politically, is always "agin the Government," and this accounts for a difficulty that the organisers of a centre party can never overcome: for every new leader is promoted at the expense of a large body of rivals, with a common jealousy. India is a country of autocrats, from the rajah to the coolie, and it is only where the Westerner interferes that the spoils are not to the strong.

Pagett Johnson, M.P.

The pilgrim from Dundee is true to tradition. He has been interviewed in Bombay, and has freely offered samples of the cargo of half-truths that he is taking back for the delectation of the Labour Party. His Swarajist friends are hurt: not only because he finds no use for them as politicians or saviours of their country, but because he has had the courage to say so before he leaves their shores. The cotton and jute industries are particularly interested in his comment, that the housing conditions of their operatives are a disgrace to any Government, imperial or municipal, that has anything to do with them. He goes on to say that, in the mill compounds, where the companies provide the buildings, there is no lighting, no fireplaces for cooking, and a minimum of sanitation; partly correct, Mr. Johnson, but such conditions are in competition with those obtaining in villages and are infinitely superior to them. When the Indian coolie can afford what Mr. Johnson regards as necessities, he does not buy them; he spends the money on marriage feasts. The Dundee Member's greatest complaint, however, is in regard to the conditions outside the mills: and here he is fully justified. Unfortunately these areas are controlled by municipalities, and they are owned entirely by the Indian landlords who control the municipalities. The European industrialist has for years been agitating for the right to acquire these festering areas, and to erect thereon decent housing accommodation; but, with the arrival of the Reforms, the prospect of being able to dispossess the slum owners of their unsavoury profits is indeed remote. Lastly, Mr. Johnson has seen through the alleged Trade Union and Labour Party movements in India. He says, correctly, that they do not exist!

Europeans in Conference.

This week has seen the annual Conference of the European Association in India, when representatives of all branches meet and discuss their affairs. The annual meeting of the Associated Chambers of Commerce has also taken place: and the Viceroy and the Governor attended the annual dinner of the European Association. Lord Reading rightly congratulates himself upon the improvement in the condition of trade in India during his term of office: and he points with pride to the atmosphere of comparative tranquillity which now prevails. Little that was new has been heard at the meetings; a strong appeal has been made for more men to take part in political life: and, if the present system is to continue, this is a necessity. At present those who are prepared to give up their leisure are greatly overworked, and it is universally admitted that the voluntary system has almost broken down. The idea of political partners, however, is not popular: and there would be an objection to them, in that they would not be the heads of firms, and so would lack authority and also be out of touch with many of its aspects. It is a difficult problem. For the rest, the Viceroy was eloquent in his thanks to the unofficial European community for the loyal way in which they have endeavoured to work the Reforms, and he rightly said that Government knew they could always expect such help from a community which has grown up with the high traditions of service prevailing in the East.

Bounties and Backwash.

At the Conference of the Chambers of Commerce, the Bombay representative moved a resolution calling upon Government to abolish the convention with Japan which, he claimed, affects the Bombay cotton industry. This resolution was strongly opposed by the Calcutta representatives of the pig-iron industry, on the ground that Japan would probably retaliate by refusing to purchase Indian pig. The resolution was defeated: and the discussion throws a side light on the backwash of a protective policy. Steel bounties have enable Tata's to sell their surplus pig in Japan at rates which have closed down the Bengal Ironworks and have badly shaken the open market of other Indian pig sellers. The Bombay resolution could therefore not be considered on its merits, but was thrown out in the interests of the iron trade. It would be interesting to know if the shareholders of the Bengal Iron Company have any real idea as to the relationship between their own unhappy position and the power given under the Reforms to settle Fiscal Policy, which has resulted in the steel bounties.

The Trivial Round.

The weather is delightful, there being at the moment a complete absence of morning mists. Racing on Saturday was excellent, Orange William again showing what an exceptional horse he is by winning another classic event. He started at 33 to 1 on, and one board actually had him at 100 to 1. The only practical method of backing him now is to lay odds on that he will win the five classics! The European Association dinner was a pronounced success, especially as it was followed by a dance and so conformed to the prevailing craze. The restaurants have started Christmas favours on Western lines, and this side of life is becoming more Western than ever. Paperchasing starts this week, and the Salt Lake country is ablaze of a morning with bloods in yellow waistcoats. The symphony concerts opened on Sunday with a record house and a brilliant performance of Mozart's "Jupiter" symphony, after which the audience would not go home until the last movement had been played again. And what with Members of Council, staffs, polo and Princes, the atmosphere is more than ever that of the days before Lord Hardinge waved his wand towards the City of the Tombs.

Markets.

Owing to continued lack of support both from the mills and shippers, jute and gunnies have been easier during the past week, and the position at the close points towards still lower prices; the business that has been put through has been limited to small lots. The piece-goods market remains stagnant, with buyers showing no inclination to operate. The tea sales here have been satisfactory, without displaying any feature; but the present state of the market indicates a higher level of prices in the early months of next year, by which time the shortness of the crop should be felt. It is anticipated that the final figures will show a decrease on last year's crop of between fifteen and seventeen million pounds.

In the share market, the steady demand for investment stocks has been well maintained; but, apart from this, only a moderate business has been put through. Jute

Digitized by Google

shares have been quieter, and a few of the higher priced denominations have registered an appreciable drop in price, on rumours of lower dividends next year; cotton shares are a stronger market, with sellers somewhat reserved. Coal shares remain unchanged; but teas have been the subject of a better inquiry, and prices have in many cases been marked up in sympathy with the well-maintained demand for the commodity. There has been a good turnover in rubber shares, where profit taking has enabled investors to pick up shares at what appeared to be very reasonable prices in the present state of the market. According to advices from the Straits, a substantial improvement in prices is considered likely in the near future.

Money has been in rather better demand. Exchange remains steady, with a quieter undertone for the forward positions.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, December 18.

Events since the strike ended on the first of December have gone far to justify the views that have been throughout put forward in these letters. Labour, which, according to the Labour Party in the Municipality and elsewhere, has been suffering the extremes of distress, has, to say the least of it, not rushed back to its source of livelihood with the desperate speed of starvation. In point of fact, it took at least a week before most of the mills had enough labour to re-open at all; and now, after a fortnight, it is doubtful if more than seventy per cent. of the workmen are back at their jobs.

Meanwhile, a member of the British Labour Party has been congratulating his Indian confreres on their magnificent stand against capital, and has urged them to institute strong Trades Unions: and to this Mr. C. N. Wadia has made a rather devastating reply in the *Times of India*.

Mr. Wadia is quite definitely a man who knows what he is talking about. His business activities are confined entirely to the Century Mill, which is actually one of the biggest groups of mills in Bombay. Mr. Wadia has devoted his energies very largely to the improvement of conditions of life among his operatives, with whom he has complete sympathy: and it may be assumed that his statistics are absolutely above reproach.

Mr. Wadia in his letter confines himself to the following terse statements:—

(1) That on an average only sixty per cent. of the hands are found at the end of any one year of those that started at the beginning of the year.

(2) That the forty per cent. of operatives who have departed have gone to their native country for periods of three to six months' holiday.

(3) That the average daily absenteeism exceeds twelve per cent., which grows at pay time, with singular regularity, to twenty-five per cent.

(4) That, with every increase in pay or emoluments, the daily absenteeism has been correspondingly increased.

(5) If labour "leaders" can find a cure for such irregularities, they will deserve the gratitude of the cotton trade.

These authoritative statements seem to me fully to confirm the view, so often put forward in these letters, that the Indian millhand is nothing but an agricultural labourer who earns extra money by occasional spells in the mills: a fact which is so remote from the habits of Europeans, as to be almost inconceivable to the Labour Party at Home.

The same difficulty of comprehension pervades all Indian affairs. In the matter of finance and exchange it seems almost impossible to persuade European financiers that India's balance of trade is adjusted by gold which passes direct into the hands of the poorest classes, and disappears for ever. India last year imported gold to the extent of over fifty million pounds sterling. I am not sure what the United States took; but I assume that, apart from New York, Bombay absorbed more gold than the whole of the rest of the world: and this gold is lost for ever. In America, the gold lying in the banks, as a backing for currency and an absolute guarantee of the stability of exchange. In India it lies *irrepertum et sic melius situm dum terra celat*, which is no doubt all very well in its way, but does not help on the finances of the country. And all the time the Indian talks of the ceaseless drain on the resources of his country: and it is difficult to argue with him, because the effective hoarding of this enormous mass of gold, by a million poverty-stricken peasants, is so utterly inconceivable to Western ideas.

And, finally, comes a letter to the *Times of India*, stating that a family of four persons working in the Bombay mills can normally earn forty rupees each, or 160 rupees a month between them: and that, their normal expenditure being only 58 rupees, they have a balance of over sixty per cent of their pay which is of no use to them in present conditions, and which can only be used to provide holidays. This seems to me to be a serious exaggeration; but there is a certain basis of truth in it: and the moral is, not that these people should receive less pay, but that the country cannot be prosperous until they have been taught in some way or other to make a proper use of their money.

THE INDIAN MAIL.

Cotton Statistics.

The recently published Statistical Abstract for British India contains figures, regarding the Indian cotton mill industry, that are of special interest at the present moment. In 1923-24 there were, in British India, 269 large cotton factories, employing about 323,000 hands, with a paid up capital of 3870 lakhs of rupees and debentures for nearly 500 lakhs: the number of spindles was well over seven millions, and of looms 133,000. The value of the cotton goods woven in the mills of British India was just over 5000 lakhs: and the net yield of the cotton excise duty was 138½ lakhs, a figure to which it had grown from less than fifty lakhs in 1914-15. Bombay's share of the mills was 192, and of the hands employed 237,000. Production of mills situated in Indian States was valued at rather more than 287 lakhs.

Returns under the Cess Act show that the amount of home-grown cotton consumed in India in 1923-24 was 1,846,000 bales, of which the Bombay Presidency consumed 1,180,000. Last year (the cotton year ends in August, and the Bombay strike began in September, so that the returns are not affected by it) these figures rose to 2,174,000 and 1,423,000 respectively.

In the six months April to September 1925 the exports of raw cotton from India amounted to 1,941,000 bales, or approximately 400,000 tons, valued at 4800 lakhs of rupees. The shares of the principal buying nations were, in thousands of tons, Japan 159, Italy 40, China 39, United Kingdom and Germany each 24.

The bulk of the exports of Indian cotton is shipped from Bombay, but Karachi is beginning to become a serious competitor. The East India Cotton Association, whose annual meeting was recently held in Bombay, referred to this fact as being due to higher port and fire insurance charges in Bombay than in Karachi, and to the fact that there is a duty of one rupee on every bale of cotton brought into Bombay: and, in the interests of the port, no less than in their own, recommended that the matter should receive attention.

The normal monthly production of the Bombay cotton mills is 46,000 bales (of 360 lb.) of cloth, and 73,000 bales (of 400 lb.) of yarn. The stocks in hand, which were, at the end of July, 185,000 bales of cloth and 55,000 bales of yarn, had fallen by the end of October to 112,000 and 31,000 respectively. The reduction of stocks of cloth in the month of October amounted to 47,000 bales: and, if

Digitized by Google

this rate of decrease has contiued at anything like the same ratio, it seems probable that, by the time the mills start work again, the stocks on hand will have been practically cleared. The strike does not seem to have done any particular harm to the strikers, for the great majority of whom it merely provided an unusually extended holiday at their homes: and, to judge by the figures given, it appears to have been actually beneficial to the millowners.

INDIAN COMMERCIAL NOTES.

Detailed figures of India's trade during the month of October show that exports of Indian produce are well maintained at 29 crores of rupees. Exports of food grains have naturally fallen off owing to the short wheat crop in India and the higher level of grain prices ruling there in comparison with world prices. For this reason the export of grain which was valued at 3½ crores in August, was less than 2½ crores in October. Exports of raw cotton were also reduced in value, partly as a result of the usual seasonal decline which occurs during August, September and October, but also as a result of diminished prices. Thus exports of raw cotton were valued at 11½ crores for the month of June; 7½ for July; a little over 5 for August; a little over 3 for September; and less than 2¼ crores for October. Exports of hides and skins, raw and tanned, have been more or less stationary during the past few months; also oil-seeds and shellac. In view of these facts it is surprising to find so high an export figure as 29 crores for the month of October. The explanation lies solely in the rise of jute values. Thus the exports of raw jute, which amounted only to half a crore in July, increased to nearly 2 crores in August; to 4¼ crores in September and nearly 7 crores in October. These high prices for the raw material have had their effect on the trade in manufactured jute, which has shown but little advance during the same four months; from 4½ crores in July and 5¾ in August to just under 5 crores in September and just over 5½ crores in October.

In these days when India's export trade so far exceeds her imports in value, it is consoling to find that her total import trade has advanced during the past four months from 17¾ crores in July and less than 19 in August to 18½ in September and 19½ in October. The increase has not occurred in cotton piece-goods, which remain fairly stationary at values between 4½ and 5 crores a month. Sugar imports also are steady at between 1½ and 2 crores a month. The chief increase has taken place in iron and steel and machinery, which have improved from 2 crores in July to 2¾ crores in October.

In the bullion market there has been some revival in India's demand for gold. The value of her imports of gold has increased from 2½ crores in July to nearly 4½ crores in October. It will be remembered that gold imports into India reached very high values during the first three months of the calendar year January to March, 1925. Since then, they have declined considerably and the recent revival is probably due as much as anything else to confidence in the future level of exchange induced by the statement of the Finance Member that he would, by his purchases of sterling for remittance to the India Office, hold exchange at 1s. 6 3-16d. until the Currency Commission now sitting in India had time to complete its report. This announcement has naturally had a quietening influence on India's trade; for it is now known that whatever fluctuations may occur in world prices, they will not, at any rate, be magnified by any serious fluctuation in the relations of the rupee and sterling.

The statistics of India's trade during November show a slight increase in exports to just over 30 crores, while imports stood at 18¾ crores and purchases of gold and silver at 4½ crores. The total visible balance of trade amounted to nearly 7½ crores as against 5½ crores remitted during the month on account of the home charges. India's trade position has thus gone strongly in her favour during the month.

INDIAN EXCHANGE.

London, January 4.

A fair amount of business in rupee exchange was transacted in the London market before the holidays, round about 1s. 6 7-32d. T.T. for ready and near delivery; since re-opening the tone has been quieter. Some transfers were effected at 1s. 6 13-64d., and a trifling amount at 1s. 6 3-16d.; but there were always more buyers than sellers at the lower rate, which was difficult to obtain. In Calcutta and Bombay, the quotation for T.T. has been 1s. 6 5-32d.; with very little inquiry except at 1s. 6 3-16d. We understand that the only buyer of any consequence has been the Government, whose purchases up to the end of the year were fairly heavy, as they have been operating in all the principal markets.

Money is harder on both sides of India, and in Bombay it has been flowing out freely to the cotton districts.

So far as we can gather, the pressure on the Imperial Bank and others has been less acute than usual for the end of the year requirements.

A further drain on the Bank's resources will make itself felt very shortly for financing Burmah rice, so that there is every prospect of dearer money in India for the next two months. On the other hand, although a larger cotton crop is in sight, less finance will be required owing to the lower prices now ruling. The latest Government forecast is said to err on the low side, and private reports from reliable sources put the total crop at 6¼ to 6½ million bales, which would be even better than last year's record of fully 6 million bales.

Shippers' requirements in India have been moderate and the relative bills have been placed at 1s. 6 15-32d., 3 m/sight, which has been the best rate available for delivery up to the end of February. Forward remittance rates are steady and unchanged at 1s. 6 5-32d. T.T. to the middle of March.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

The Sudan.

The Supplement which we publish this week in connexion with the official opening this month of the Makwar Dam should help to direct attention to what is undoubtedly one of the most promising fields of the Empire. Conditions in Great Britain since the War have given pessimism full rein, and it is well that due emphasis should be laid on the fact that in other parts of the Empire where the position has not been so affected by the trade depression progress has been almost continuous since the Armistice. The Sudan is rapidly becoming, of course, almost a one-crop country, wherein lies its strength and also its weakness, for all products of the soil are subject to variations in prices. In its dependence on cotton the Sudan is, however, on very safe ground, for cotton is a commodity of which the Empire requires ever-increasing supplies. At the moment Lancashire is to all intents and purposes dependent on America for the supply of the necessary raw material, though as a result of developments in Uganda, the Sudan, Rhodesia and elsewhere the dependence is gradually ceasing to be as complete as it was. It has long ago been realised here, however, that the only real security for Lancashire lies in absolute independence of America, and it is because the potentialities of the Sudan as a cotton-growing region are so pronounced that special efforts have been concentrated on the extension of the cotton areas there, since it is realised that in the Sudan if anywhere in the Empire it is possible within a short space of time to increase the production of this commodity to an extent that will really count in the world's cotton production.

Greek Exchange.

At the meeting of the Ionian Bank the chairman, Sir John Stavridi, dealt in detail with the Greek financial position. He quoted the revenue figures for recent years, and pointed out that there has been no hesitation in taxing the country, and that the 1925-26 Budget represents a courageous attempt to attain financial equilibrium and to cope with the floating debt. Dealing with the question of the drachma Sir John Stavridi stated that the exchange had depreciated by 30 per cent. between the dates of the bank's last two balance sheets, but he stressed the point that during the past twelve months sterling had appreciated in terms of gold by some 15 per cent so that if the drachma had stood still it would still have depreciated by 15 per cent in relation to sterling. Three things, in his view, are required to bring about the stabilisation of the exchange, a balanced Budget, the extinction or very material reduction of the floating debt, and the realisation of an economic balance. The figures suggest, he points out, that the first aim has been accomplished, while the floating debt is being rapidly reduced, and as regards the economic balance he thinks that "with the improving harvests, the increasing exports due to the labours of the refugees, the remittances from emigrants, and the returns of the mercantile marine, we can look forward to the day, not perhaps far distant, when this also may be an accomplished fact."

The Coming Fair.

In a very few weeks now the British Industries Fair will be with us, and accounts so far suggest that it is going to be a great success. The London Fair might have been handicapped by the fact that this section was not held last year, but, just as has been the case at Birmingham, there has been quite a rush on the part of manufacturers to take advantage of this opportunity for trade development. Hitherto the Fair has been confined solely to buyers, but this time the general public is to be admitted at certain times, and this innovation is to be recommended as it will help to popularise the goods that are displayed. But the Fair is designed essentially for the trade buyer and, in particular, for the buyer abroad, and its results will be judged simply and solely by the extent to which these buyers attend and, be it added, place orders. A feature of particular interest this time will be the Empire section of the London Fair. This is an attempt to carry on the work of the British Empire Exhibition, and while on this occasion the section may be rather restricted it promises to become of considerable importance. It cannot be too strongly emphasised that the work done at the Exhibition must be followed up if it is to have the fullest effect. One useful step in that direction is the opening of the East African Dependencies Trade and Information Office in London. But while permanent offices are an essential part of trade development, the Fair provides an opportunity for coming into touch with buyers once a year of a quite unique nature. It is in a sense the spearhead of British trade endeavour, and it is possible for it to develop into an Imperial market.

Possible Loans.

The removal of the embargo on foreign loans is too recent to have had much of an effect as yet, and indeed, as I pointed out recently, conditions here are at present adverse to such financial operations. But there are a number of loans on the tapis, notably for the Near East. At least two of the Balkan countries are possible borrowers, while Persia is another country that may try to float a loan in the near future.

Rubber Restriction.

The question is inevitably being raised as to what will happen to the restriction scheme after the end of this month. While there is as yet no official indication as to the intentions of the authorities, it may, I think, be taken for granted that February 1 will not see the suspension of the scheme but that an arrangement will be made for additional releases every quarter according to the price of the commodity. Certain it is that the scheme must be kept in being to provide against any possible contingencies.

THE RECLAMATION OF THE SALONIKA PLAIN.

The scheme for the drainage and irrigation of the Salonika plain, the contract for which has been awarded to an American company, is the subject of an interesting article in the American *Commerce Reports* in which it is pointed out that one of the great economic problems for Greece has always been the vital one of self-support as regards food supply. The grain grown in the plains of Thessaly and Macedonia never met the needs of the population of 5,000,000, even before the large addition of the refugees from Asia Minor. In spite of the great value of the tobacco and currant crops, Greece's imports of grains (by far the largest import item) and coal have resulted in a constantly unfavourable balance of trade, and this already serious problem was aggravated by the increase of 20 per cent in the country's population within a period of only a few months. Refugee settlement and increased grain production through an increase of arable land is still the essential economic problem in Greece to-day. The article continues:—

It is scarcely an exaggeration to say that the solution of this problem of housing Greece's refugees, feeding her augmented population, balancing her foreign trade, and so restoring her economic stability lies in the drainage and reclamation of the Salonika plain. The "Vardar concession," as the Salonika drainage project is frequently called, involves the drainage and irrigation of the Salonika plain, approximately 800 square miles in extent, lying west of the city of Salonika and formed by alluvial deposits brought down by the rivers Galikos, Vardar, Loudias and Bistritza, which now traverse it from the mountains to the bay. By the flooding of these rivers, chiefly the Vardar, villages are frequently wiped out and crops ruined, and life is made so insecure and unsatisfactory on the plain that only a small part of it is cultivated. Moreover, approximately 300 square miles consist entirely of swamps and great shallow lakes that are wholly uncultivable. It is the reclamation of the whole Salonika plain that is contemplated in the present project.

This is to be accomplished first by the drainage of Lakes Amatovo and Ardzan by means of a channel to be excavated connecting Lake Amatovo with the Vardar River, and further channels to be dredged through the centre of each lake, with subsidiary and network drains. It is estimated that 10,000 hectares of cultivable land will be reclaimed by this section of the work alone.

The second part of the project is the control and regulation of (1) the turbulent Vardar River, from the point where it bursts through a gorge in the northern mountain wall, across the plain, by the villages of Boemitza and Bozetch, the Mendesheli bridge, and the Monastir railway, to the estuary and the river's mouth on the Bay of Salonika; (2) its tributary, the Loudias River, up to the town of Yenitze; (3) the Bistritza River, from the mountains to the bay; (4) the Galikos River, between the Vardar and the city of Salonika.

This river control is to be accomplished by means of side embankments, groins, and spurs, the embankments to be turfed and planted with trees and high enough to prevent a maximum flood from spreading over the land, and to have flooding sluices so that the water may be utilised for irrigation purposes. The bridges over the Galikos, Vardar, and Bistritza, particularly the Monastir railway bridge over the Vardar, are to be strengthened by additional girders and renewed foundations.

At the same time the great Yenitze swamp, between the Vardar and the Loudias, is to be drained. For this work great pumping dredges, similar to those used on the Panama Canal, will dredge out a central basin, into which all the small streams may be drained, and also a deep channel from this basin to the sea, by which flood waters may be carried away in a few days. It is expected that by this scheme even the central area will be cultivable during the summer months.

The third section of the project is the complete alteration of the channel of the Vardar River from 3 kilometres below the Monastir railway bridge to the mouth. Fifteen years ago the river cut its present channel, which is close to the harbour of Salonika and threatens the existence of that harbour with the enormous deposits of silt that are washed down annually. The present proposal is to do away with this danger by turning the river back to its old channel and dredging a new mouth.

In addition to these strictly engineering activities, the company, in return for 20-year concessionary privileges, proposes to build various warehouses for handling products of the plain, to establish model agricultural and cattle breeding stations and a stud farm, and to encourage the production of beetroot.

It is estimated that the entire Vardar, or Salonika, drainage project will require five and one-half years' time, the removal of 31,000,000 yards of earth, and the employment of a daily average of 5,000 men. Its cost is estimated at £5,330,000, to be covered by a tax-exempt bond issue protected by first mortgages on the land reclaimed (estimated at about 64,000 hectares, or approximately 160,000 acres). It is expected that taxes on the new land will meet the interest and amortization charges on the loan many times over, and that the proceeds from its sale will be used as an additional sinking fund to provide for the redemption of the bonds.

The land to be reclaimed is rich delta soil that would produce bumper crops of wheat, corn, cotton, beets, or tobacco. If sown to wheat and corn alone, it is estimated that the Salonika plain could produce 550,000 tons annually—nearly enough to balance the present deficit in cereals. Furthermore, this new and fertile area would eventually provide the opportunity for prosperous settlement of at least 25,000 families of the refugees from Anatolia who, being agricultural peasants, will become a national asset instead of a liability.

Mr. Ramsay MacDonald and his daughter arrived at Port Said on December 30 in the Maloja on their way to Colombo.

Sir J. Chandra Bose has received a cabled invitation to attend the plenary session of the Committee of Intellectual Co-operation of the League of Nations, and will leave for Europe shortly.

The Netherlands Government have withdrawn the decrees declaring: (a) Turkey to be infected with smallpox; (b) the territory of European Russia to be infected with Asiatic cholera; and (c) Greece to be infected with Asiatic cholera, spotted typhus, and smallpox.

A decree for the partial reconstruction of the Yugoslav Cabinet was signed in Belgrade on December 24. M. Miletich, Minister of Agriculture, goes to the Ministry of Communications, and is replaced at the Ministry of Agriculture by M. Vasa Yovanovitch, who, like him, is a member of the Radical Party.

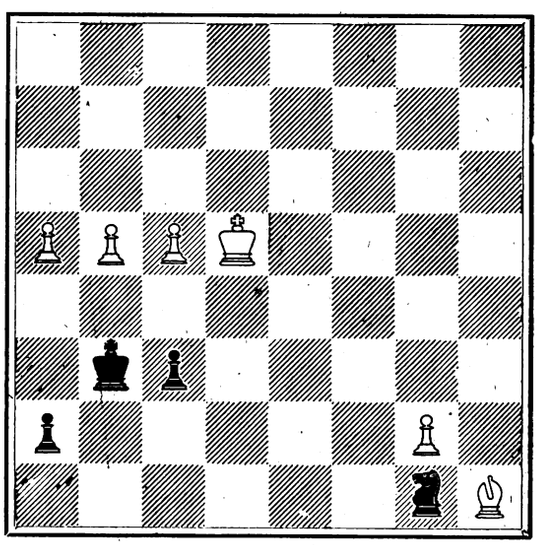
THE DEVELOPMENT OF EMPIRE AIR ROUTES.

Among the many things that people considered in those hectic years that preceded the outbreak of the War it cannot seriously be maintained that the possibility of the establishment in the immediate future of regular air services occupied a very prominent place. Suffragettes and their outrages, the eternal Irish question and kindred subjects were sufficient to monopolise public attention; and when from time to time aviation came to the forefront as on the occasions of the periodical contests, the results merely served to emphasise the view that there was indeed a long way to go before aviation passed from the experimental stage to that of practical business.



Destiny intervened to change that outlook, and when the War ended the expectation was general that the prodigious development of the aeroplane during the struggle would be followed by its speedly application to commercial pursuits, and that before long the traveller would have at his or her disposal a new and much more satisfactory means of communication. Just as the pre-War view was two unimaginative so the later outlook was rather too optimistic, for it failed to take into account and give full weight to the immense work of organisation necessary before an air service can be inaugurated. But the last few years have seen the establishment of quite a network of lines on the Continent, particularly in Germany, while the regular services to France and Belgium and Germany is an indication that this country has not been idle, though there is no gainsaying the fact that our competitors have rather gone ahead in the race for air supremacy. What has been happening in the Near East exemplifies this. Thus the French have established a service to Constantinople, while in the Middle East, at least in Turkey and Persia, the German Junker Aviation Company is to the fore. This concern is said to have a thirty years' monopoly for the establishment of air services in Turkey, and it will have secured a monopoly in Persia unless France succeeds in checkmating it. A third competitor who is showing extreme activity in the Eastern Mediterranean is Italy, and in view of the enterprise that these countries are displaying it is incumbent on Great Britain to safeguard her interests and prestige in the East by the rapid development of flying services.

The main air services that the Empire requires as lines between Great Britain and the East and South Africa present problems in their establishment of a very different character from those with which other countries are faced in the initiation of air communications. That explains why superficially it might appear that we are somewhat late in the field. Actually we have only now approached the period when rapid progress has been made possible, and in another twelve months when Imperial Airways, Ltd., will have commenced its Egypt-India service we shall have a concrete achievement to our credit which will compare with the best performances that other countries can show. Imperial Airways Ltd., which was formed to develop civil aviation from a national standpoint, had as its basis the air routes formerly operated by four distinct companies, and the first year of the company's history, as Sir Eric Geddes indicated at the recent meeting, was largely an experimental period, as four organisations had to be welded into one. First among the company's services is the London-Paris service, and it is noteworthy as showing the demand for accommodation on this particular route that sometimes as many as four flights a day are made in each direction. In July, 1924, the service was extended on alternate days to Basle and Zurich, and during the spring and summer of 1925 a daily service was flown to these places. The London-Ostend-Brussels-Cologne service has also proved very popular, while the company also runs one to Berlin calling at Amsterdam and Hanover and connecting at Amsterdam with air routes to Scandinavia and some towns in Germany.

As previously indicated the Egypt-India service will have started next year—January 1 being the date given—and the route will be Cairo, Baghdad, Basrah, Karachi. This service will mean a saving of five days on the way to India, but even so is merely a link in the full service which when completed will join up this country with Bombay and Calcutta and thence ultimately with Rangoon, Singapore and Australia. Basle is so far the "air-head" at this end of the journey, but it is hoped that a fast connexion between that centre and Cairo will be possible which of course will make a further great difference in the length of the journey between Great Britain and India. While London-Cairo-India-Australia is destined to be the main Empire air route another only second to it in importance is that which will run from Cairo via Khartoum to the Cape. That route is now being surveyed by Mr. Alan Cobham, and it is satisfactory to know that the valley of the Nile provides almost ideal conditions for flight both by night and day, for it will render the establishment of the service so much easier, and no doubt before long Cairo will be linked up with Khartoum, just as Khartoum itself will be brought into closer touch with East Africa and beyond. Looking far into the future it is possible to envisage these two great services in full operation with subsidiary services radiating from them at various important points, but that vision lies far ahead. One thing stands out very prominently and that is the importance that is going to attach in the future to Cairo as an air junction. It is now the terminus of the Baghdad route operated by the R.A.F. and promises to be a hive of aerial activity when the Imperial air routes are really developed.

THE P. & O. s.s. RAJPUTANA,

New India Mail Steamer.

The twin screw steamer Rajputana, built by Messrs Harland and Wolff, Limited, Greenock, to the order of the Peninsular and Oriental Steam Navigation Company, was delivered after running very satisfactory trials. The vessel is a sister ship of the Rawalpindi, which was recently completed by the builders for the P. and O., and which a short time ago concluded a most successful maiden voyage to Bombay and back.

This latest acquisition to the P. and O. fleet is a magnificent vessel of 16,000 tons gross and of imposing dimensions—570 feet by 71 feet by 47 feet 6 inches—and is intended for the mail and passenger service between London and Bombay. She has been built with cruiser stern, and to Lloyd's highest class, and complies in all respects with the requirements of the International Convention for Lifesaving at Sea. The Rajputana is the ninety-first vessel delivered to the P. and O. Company from the builders' Greenock yard, a record which is a striking testimony to the community of interests existing between the two concerns.

Accommodation is provided in lofty and spacious staterooms for 370 first saloon, and 288 second saloon passengers. The first saloon accommodation is arranged in one, two and three-berth rooms on the promenade, bridge, shelter and upper decks, a prominent feature being the relatively large number of single-berth rooms. Much thought has been given by owners and builders to the design and arrangement of the furniture in this accommodation with the result that a maximum of comfort and convenience has been secured in combination with a tasteful appearance. Six special two-berth cabins (with private bathroom attached) have been provided at the bridge front. These are very spacious rooms, panelled in hardwood, painted with gilt and silver enrichments, giving a quiet, refined appearance. On the bridge deck, abaft the special cabins, there are ten private single-berth rooms each with its own bathroom. Four cabines-de-luxe, each with two berths, have been arranged on the bridge deck near the first saloon entrance and main stairway, two being on the port and two on the starboard side. These beautiful rooms have been specially designed, the treatment being carried out respectively in satinwood, sycamore, greywood, and light oak and silver, with finely figured panels.

The second saloon accommodation is situated on the shelter and upper decks aft, and is arranged in two, three and four berth cabins, the two berth rooms predominating. Here again the comfort of the passengers has been a primary consideration, all the fittings being of a most up-to-date character, and carried out on somewhat similar lines to those for the first saloon accommodation. Wash basins with fresh water laid on are provided in each room. The first and second saloon staterooms are arranged in every case with direct access to the ship's side, so providing natural light and ventilation. The floors of all rooms and corridors are laid with ruboleum in self-colour or parquetry style. The public rooms in connexion with both first and second saloon accommodation have received special attention, the treatment being on different lines from that of the sister Rawalpindi, and have been executed under the direction of Viscountess Inchcape and her daughter, the Hon. Elsie Mackay.

The first saloon lounge is situated on the promenade deck forward of the main stairway, and is decorated in the style of the French Regency period. The walls are panelled in oak with fine quartered panels and gilt enrichments, the details being taken from famous old Chateaux. The sculptured mantelpiece in Breche Violette marble is copied from an old example of the period. The first saloon entrance on the promenade deck is in the Georgian style, the walls in hardwood, painted with walnut finishings. The first saloon library is on the promenade deck, abaft the first saloon entrance and main stairway, and is carried out in an Elizabethan scheme, the walls panelled in oak and scumbled with an antique effect. The decorated geometric plaster ceiling is adapted from the famous Museum fragment preserved from Sir Paul Pindar's house.

The first saloon smoking room is a spacious apartment on the promenade deck, with treatment carried out in the early Spanish Renaissance style, which retained details of Moorish architecture styled by the Spanish "Mudejah." The walls are panelled in chestnut with plaster frieze above, a feature of the room being the dome, which has a beautiful laylight of painted glass, the motifs being Coats of Arms of Spanish Provinces. The dome is supported by two arches with soffits of fine old Spanish polychrome tiles. Similar tiles have been embodied in the hooded chimneypiece, and around the seats which flank the hearth. The furniture has been faithfully copied from old Spanish models and contains several genuine old examples; such as a beautiful Vargueno or cabinet of the 16th century, a centre table of the same period, and distinctive chairs with the original Spanish leather covering. Whilst attention has been given that the details of the furniture should harmonise with the period, the essence of comfort has not been overlooked. Appropriate accessories complete this room, comprising reproductions of four famous portraits after Velasquez, typical Andalusian Pole Lanterns, a magnificent twelve-sided lantern hung in the centre of the dome, and a handsome panel of embroidered velvet.

The first dining saloon is a handsome room on the shelter deck decorated in an early Georgian style. The walls are panelled in hardwood with carton pierre enrichments, and painted in tints of light mulberry and old ivory with silver enrichments. The centre of the saloon is graced by Scagliola Columns reproducing Cornish marble. The chairs are copied from a genuine old Chippendale model of the period 1750, whilst particular attention has been given to the lighting and other appointments. The tables are arranged for small parties in restaurant style.

Special consideration has been given to the means of ventilation in view of the trying conditions obtaining at some periods of the Bombay run. Mechanical ventilation on the Punkah Louvre system with fans giving an ample supply of fresh air is fitted to all the public rooms, and passenger accommodation, officers and crew spaces, galleys, pantries and other offices, store rooms, baggage rooms and laundry. By this system passengers and crew can regulate the incoming air at will. Great attention has been paid to the dining saloons, the supply of air to which is on an extremely generous scale.

The cargo handling appliances consist of fourteen hydraulic cranes of the latest type and capable of lifting loads of from two to five tons. For handling specially heavy cargo a large tube derrick is fitted on the shelter deck forward, and this is capable of dealing with thirty-

ton loads. So far as the steering gear is concerned, the main gear is of the steam tiller type. An auxiliary gear is provided which actuates the rudder head by hydraulic rams taking power from the same source as the hydraulic cranes. Cargo is carried in 'tween decks and holds below the main deck forward and below the upper deck aft, a portion of the 'tween deck space on the main deck aft being specially constructed to take refrigerated cargo. The electrical installation is of a very complete and extensive character, the supply of current being obtained from four 150 kilowatt steam-driven generating sets located in the engine room, and a 25 kilowatt paraffin emergency generating set situated at the boat deck level. Over three thousand lights are fitted, including the emergency lighting which is available in case of necessity.

The Rajputana has been built from the designs of Mr. C. G. Deane, the P. and O. Company's Naval Architect, and like her sister vessel, the Rawalpindi, exhibits unusually graceful lines.

The propelling machinery, which has been constructed at the builders' Belfast Works, consists of two sets of quadruple expansion engines of the balanced type, developing about 15,000 I.H.P., supplied with steam at 215 lbs. pressure by 6 double-ended cylindrical boilers fitted with forced draught and arranged for burning oil fuel.

The christening ceremony was performed by the Hon. Elsie Mackay, daughter of the Chairman of the P. and O. Company. Among those present were Lord and Lady Inchcape, the Countess of Eglinton and her daughter, the Hon. Jean Dalrymple, Mr. Islay Kerr, of Messrs. Wm. Mackinnon and Co., Mr. Chas. G. Deane, the company's naval architect, and Captain Sweny, the company's dock superintendent, Capt F. G. Cadiz, D.S.C., the Commander of the vessel, Mr. G. Denholm and Mr. R. T. Clarke, also Mrs. Kempster and the Misses Kempster, Mrs. Dunlop, and Mr. J. W. Kempster and Mr. F. E. Rebbeck, directors of the builders' firm, and also representatives of the Board of Trade and Lloyds.

Solar oil, diesel oil, and mazout have been added to the list of goods which are duty-free on importation into Palestine.

The Customs duty leviable on timber and wood, including firewood, imported into Cyprus has been reduced from 25 to 20 per cent. *ad valorem*.

Motors and Motoring

By G. B. B.

Amongst many queries which writers on motoring subjects receive with astonishing regularity are certain to be several asking for information as to which make of light car will prove to be most popular, by reason of its all-round superiority or partial excellence, during the coming season. Three correspondents write this week to ask what car, in my opinion, will be the best value, all things considered, to buy during 1926, and to these friends I have replid, in practically as few words, "Morris Cowleys." There is no doubt as to the value of the Morris Cowley, and although there are a few motorists who are already beginning to make disparaging remarks about the car and its brakes, the great bulk of our motoring public realise that Mr. Morris has beaten Henry Ford hollow at his own game and, if for no other reason, deserves every possible encouragement in order that he may turn out eventually a still cheaper and better car. It is pure snobbishness—a vice which many motorists suffer from—which leads anyone to sneer at a car on account of its low price. The Morris Cowley—and I say it advisedly, with over thirty years' engineering experience behind me—is a very excellent car, made of the best possible materials with as much care as though it cost twice the price.

The New Model.

I hear great things of the new 1926 four-seater Morris Cowley, which has been improved in many respects, although few outward changes are visible. Amongst the improvements may be mentioned front wheel braking, which can be fitted if desired at a small additional price. There is also an improved throttle control which enables slower running to be obtained, and there is a further improvement in connexion with the arrangement by which the carburetter can be adjusted, or rather the strength of the mixture varied, from the steering wheel. Trying out one of the new models a few days ago, during the cold spell, I was surprised at the ease with which the engine started up from cold. In last year's model I thought the starting motor was hardly powerful enough on really cold mornings, but either some marked improvement has been effected in the new model or I was unusually fortunate. The starter, I may add, is of the combined dynamo and motor type. The Cowley is not an expensive car to run, as it is very light on oil and fuel. Everything about the car, from the gears to the arrangement of the petrol tank and oil filling opening and gauge is as simple and efficient

(Continued on page 26.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Liverpool, January 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahout for Port Said, Colombo, Madras, and Calcutta (London, January 9.)

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, January 13).

British India Line.— S.s. Sirdhana for Bombay and Karachi (London, January 15); s.s. Mandala for Colombo, Madras, and Calcutta (London, January 16).

Cunard Line.—S.s. Phrygia for Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Glasgow, January 21.)

Ellerman "City" Line.—S.s. City of Canterbury for Calcutta (Birkenhead, January 12.)

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna ,Constantza, Sulina, Galatz, and Braila (Liverpool, January 30). (First steamer of the season for the Danube.)

P. and O. Line.—S.s. Ranpura for Bombay (London, January 8); s.s. Nagoya for Colombo, Madras, and Calcutta (Liverpool, January 9).

Digitized by Google

as possible. The front wheel brakes, by the way, are easily adjustable, and cause no tendency to skid even should they be applied too suddenly or with undue force.

Bodywork and Finish.

It used to be said that no cheap British car could be fitted with good bodywork, well finished, the underlying idea being that good bodywork is expensive, finish requires skilled and highly paid labour, and that the expense of those two items alone would prevent any car, which claimed those two features being sold at a low price. The 1926 Morris Cowley is a striking denial of the assertion, for on it the bodywork is as good as could be desired and the finish is excellent. No one could imagine, from looking at the coach work or examining the finish that they were looking at what is, for its power, the cheapest car obtainable.

Electric Cars.

The electric vehicle is a most useful proposition for heavy loads and comparatively short ranges. It is eminently suitable, for example, for town work, where batteries can be recharged with ease and at a low rate. A fairly good market for vehicles of this class, with light lorry bodies, or preferably bodies of a convertible type, should be found in India, especially in the Calcutta district. The Continental makes of electric car have sold fairly well, or so I have been told, in Sofia, Bucharest, and other cities of the Near East, but British makes are conspicuous by their absence as no one in that part of the globe knows anything about them..

Accuracy.

There is one point in which the British makers of commercial vehicles excel, and that is in the accuracy with which the various parts of the engine and chassis are manufactured. To begin with, as the *Commercial Motor* once pointed out, strict interchangeability is essential if spare parts are to be fitted without undue trouble, but in addition the durability of the chassis as a whole depends upon the accuracy with which mating parts fit together. The War was responsible for a great advance in accurate methods in the machine tool shop and the use of gauges, and the principles underlying production within standard limits are now thoroughly well understood. It is clear, however, that the finer the limits the greater the cost of the part concerned, so that any method whereby the tolerance permitted in the machine shop can be increased without affecting the quality of the product is to be welcomed.

Obviously, if a part is to be made and passed in accordance with set gauges, then the accuracy of the gauges largely controls the machine shop limits. Thus, if a finished part must be within one-thousandth of an inch above or below a certain size and the gauge can only be guaranteed to be within half a thousandth, then only half a thousandth is left as the grinder's allowance for the part. With dead-accurate gauges, his allowance would be doubled and the cost of the work materially reduced. Absolute accuracy is, of course, unobtainable commercially, but the British tool maker has so improved his methods that British gauges are now of a greater average accuracy than those used in either Continental or American shops, and it is to this fact that the excellence, in comparison with their price, of our British commercial cars is due.

Motor Circles Optimistic.

It would be exaggerating to say that there is an unusual amount of optimism prevailing in motor circles regarding trade prospects for this year as the motor trade always has been and probably always will be optimistic, no matter what happens. I well remember how when the "boom" year was almost exhausted and there was a red light as big as Vesuvius ahead some of us motor journalists arranged for a dinner at a leading hotel and invited the British motor manufacturers to come and talk matters over with us. Well, they came b it they point-blank refused to admit there was any sign of an approaching slump. Trade was still good and to them apparently it always would seem good. It was a curious bluntness which resulted, as everyone knows, in several shutters being put up but all the same one cannot help admiring the gay spirit which pervades the trade.

But this year there seems something to justify the optimism. For one thing there are no trade disputes in existence other than one or two of a very minor character. For another, the admirable policy which has been pursued with regard to British roads is having its anticipated result and the ranks of motorists are being recruited at an extraordinary rate. For another thing British car makers have proved their superiority to those of other nations, and all over the world the British car is known to be supreme. All that remains to be done, as I have said before is for our British manufacturers to let people abroad, in our colonies and dependences, as well as in those foreign countries, as Roumania, Greece and Yugoslavia, that are so well disposed to us, know just what we can supply them with, at what prices and under what conditions, for our export trade to increase by leaps and bounds.

Decarbonising.

I have been asked when the cylinders of an ordinary water-cooled engine should be decarbonised, and in reply, would say that as soon as an engine, which has hitherto run quietly and easily, begins to knock more or less vigorously on hills that previously it had taken without effort, or when the engine falls off in power when the spark is retarded and the throttle suddenly thrown wide open, it is time to take down the engine and clean out the carbon deposit from the cylinder heads and the valve pockets, and also from the tops of the pistons, from the piston ring grooves and from the inside of the pistons themselves, this last place being one that is sometimes forgotten. A heavy deposit of carbon becomes heated to incandescence and so causes marked pre-ignition which is the cause of the loss of power. Taking everything else as equal engines with a low compression will run longer than those where compression is high before needing decarbonisation, but sooner or later their turn will come, and they also will have to be dealt with. It goes without saying that advantage should be taken of the decarbonising to see that all rings are sound, gudgeon pins tight, bearings free from wear and valves properly ground in.

Replacing.

Before replacing the cylinder head see that both it and the cylinder head itself are thoroughly clean and free from fragments of packing that may adhere in parts. Probably a new copper asbestos gasket will be required, and, if so, it should be wiped carefully with a clean rag and in spite of any advice that may have been received to the contrary, do not use shellac, gold size, fish glue, white lead or any similar abomination when fitting the gasket. If, however, both the faces of the head and the cylinder block and both sides of the gasket are dusted with finely powdered blacklead, the work of removing the gasket, when again necessary, will be made an easy matter. All bolts should be tightened down gradually, and in no case should one be screwed down tightly before the others. Starting at the centre all nuts should be screwed down by the fingers, and when this has been done then a slight turn of the spanner should be given to each in order, and by the time the spanner has given a tweak to each nut in succession for about three circuits of the head, then the bolts can be screwed home one by one. After that, the engine should be run for two or three minutes and then the nuts gone over finally with the spanner.

The Athens *Official Gazette* publishes a decree ratifying the Convention between Greece and Great Britain regarding Greece's war debt to Great Britain, which was fixed on March 31, 1925, at £20,710,312.

Near East Markets.

THE DRIED FRUIT MARKET IN 1925.

Messrs J. C. Houghton and Co., of Liverpool, in their annual report state:—

Currants.—A review of the past season's trade suggests the thought that perhaps too much stress has been laid on the fluctuations of the Greek exchange as the chief contributory cause of the disappointment so generally felt with the results of the past four months' working. Economic conditions have perhaps been overlooked to some extent as a prime factor in the unsatisfactory situation, and it has been extremely difficult for anybody to see far enough into the future to justify any other policy than that of buying from hand to mouth. Prices were not too high, but the outlook was most uncertain, and the conviction was ever present that values might decline at any moment.

The season opened with the arrival of the Erato on September 16, followed by the Kantara. Quality and general appearance were quite satisfactory, but trade never developed as we are accustomed to see at the inauguration. Cleaned varieties were in most request at 37s. to 40s. October found us well supplied with an excellent assortment of all growths, Gulf standing out for colour, but unfortunately the response from the trade was most disappointing, opening at 42s. 6d. to 44s., and quickly declining to 36s., at which figure fair sales were possible. The first samples of Vostizza growth were actively competed for, realizing 52s. to 60s. for bold fruit, and 52s. to 56s. for smalls, but values dropped rapidly as stocks increased, showing a decline of 10s. per cwt. by the end of the month.

In the early days of November a certain nervousness was apparent, but the action of the Greek Government in introducing a scheme to purchase the surplus of the crop on a sterling basis instead of in Greek currency produced a beneficial effect in stabilising prices. Trading centred mostly in the cleaned varieties, Pyrgos and Amalias moving at 31s. to 33s. 6d., cleaned Patras 34s. to 36s., cleaned Gulf 35s. to 38s. Vostizza ranged from 40s. to 45s. for sundried, 42s. 6d. to 46s. for shade dried, and 48s. to 51s. for fine.

December followed on lines similar to those of previous months. The Bavarian and Roumelian discharged a few parcels of Vostizza fruit of outstanding merit, and these attracted some attention from buyers, selling at 58s. to 60s. Closing quotations:—Pyrgos and Amalias 31s. to 33s., Patras 34s. to 36s., Zante 32s. to 35s. Gulf and Panariti 34s. to 40s., Vostizza 40s. to 60s.

Australian.—The season must be characterised as one of disappointment to shippers. The new crop commenced to arrive during May per Aeneas and Ceramic, and unfortunately quality and colour left much to be desired. Sales were made at 50s. to 52s., a few special lots realizing 54s. to 58s. Later arrivals during June and July showed no improvement in quality, and only parcels of exceptional merit as regards colour and condition were saleable at 48s. to 53s., other grades being neglected. This state of affairs continued until sellers realised that prices demanded were impossible against those asked for Greek fruit. A reappraisement was decided upon, and at the reduced figures of 35s. to 42s. slightly better progress was possible, but even then, only parcels of attractive appearance were saleable, those of inferior grade and colour being difficult to move. As the season progressed, and Greek fruit continued to decline, it was found difficult to make progress, and only insignificant sales at 30s. to 34s. were recorded.

The advertising campaign initiated by the Commonwealth focussed the attention of the consumer on this fruit, and with holders reducing their prices in order to meet buyers, a considerable clearance of stocks was effected at 27s. to 30s., a few special lots making up to 34s.

Sultanas.—Stocks were practically exhausted upon the arrival of the new crop. Owing to the drought, estimates of the 1925 crop were given as 25,000 tons, against 52,000 tons last season, and the high prices ruling in Smyrna, 68s. to 80s. c.i.f., presaged a season of high figures. This prophecy proved to be true, and upon the arrival in September of the Etrib, which inaugurated the season with 5,000 boxes, opening prices were considered highly satisfactory, as the quality was thought to be below the average of a normal crop. Prices ruled from 80s. to 90s., and fine fruit was scarce. The high range of prices at the opening checked consumption, fair to good selling at 68s. to 75s. A good deal of pressure was felt during the early part of November, attributable to the existence of lower values in the producing district, but immediately reports were received of advancing markets in Smyrna, a change for the better quickly developed here. We close the year with a firm tone, and more interest taken in the article.

Cretans.—The scarcity of fine Smyrna fruit had a stimulating effect on these, and business was done on a forward basis at 82s. c.i.f. First arrivals via the Continent were disposed of at 95s. to 100s. During October prices were from 75s. to 90s. while November saw a lower range of values, due to anxiety on the part of sellers to unload. At the reduced figures a fair trade passed at 6s. to 72s. for medium, 75s. to 80s. for good, and up to 86s. for fine.

Greeks.—Opened at 80s. to 83s., fine bleached 100s., but holders were unable to maintain these values in face of pressure, and concessions had to be submitted to, medium qualities selling at 70s. to 75s., best bleached 95s. to 97s. 6d. As the season progressed prices gave way further and medium qualities sold at 68s. to 70s., fine bleached 90s. to 92s. 6d.

Australian.—The first new crop arrivals which landed ex Aeneas and Ceramic gave evidence of a welcome improvement in quality and grading, and opening sales were made at 70s. to 76s. During June sales were distinctly disappointing considering the quality of the fruit, and the fact that prices were subject to the deduction of duty, which would cease on July 1. In July, it was realised that the trade would have to rely upon Australia for a big proportion of their supply, owing to the Smyrna shortage, and values ranging from 65s. to 75s. showed an advance of several shillings during the month. The strong news from Smyrna during August gave further assistance to the rise, which continued, 70s. to 75s. being made, and for choice, 80s. This state of affairs kept up until the end of the season, quotations finishing at 68s. to 80s., while a few choice hand-picked lots made 95s. to 100s.

Californian.—The shortage of the Smyrna crop gave Californian sultanas an innings on this market, and a fair amount of business was transacted on a forward basis, principally in soda and oil bleached varieties.

Figs.—Bags—Some business was put through for new crop genuine natural, September shipment, at 24s. to 27s. c.i.f. S.s. Etrib brought the first arrival, which was disposed of at 85s. to 95s. for large boxes, 90s. to 110s. for small boxes, 115s to 130s. for Locoums, 36s. for bags naturals. Prices held their own nearly all the season, although during October a slightly lower range of values was accepted, i.e., 75s. to 97s. 6d. for large boxes, 85s. to 105s. for small boxes, 115s. to 130s. for Locoums. Bags, in short supply, advanced in price, selling at 38s. to 40s. for good average and 43s. to 45s. for genuine. Towards Christmas small boxes were pressed for sale, and were gradually disposed of at 85s. to 90s.

It is reported that the Greek Government has placed an order for 2,000 machine guns with a French firm.

Severe earthquake shocks have been felt near Bushire (Persia). One village, Ahrem, 20 miles away from that city, was severely damaged. The people had to leave their houses, and are now living in tents.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended December 24, state:—

Since our last report the futures market has been rather erratic, but at the close to-day it was fairly firm. Prices on the week are generally up for Sakel and down for Ashmouni as follows:—Sakellaridis: January, 0.45 dollars up; March, 0.15 dollars up; May, 0.10 dollars up; July, 0.25 dollars down; November, 0.15 dollars down. Ashmouni: February, 0.83 dollars down; April, 0.80 dollars down; October, 0.55 dollars down.

The position on the whole remains unchanged. The downward course of prices was somewhat restrained by Liverpool operators continuing to reverse their straddles, buying heavily in this market and selling in Liverpool or New York; we understand that the remaining open positions against such straddles are now rather small. The export houses have not shown much interest in the market; whenever they did intervene it was to buy. The demand from abroad has been a shade better for Sakel, whereas Ashmouni has been rather neglected.

On the third tender day on this month, 10,500 kantars dockets were issued; these tenders affected the Ashmouni market very unfavourably and prices receded heavily. The difference betwen March New York and February Ashmouni is at present only 4.05 dollars (without calculating exchange) whereas it was 7.80 dollars a month ago. Present prices of Ashmouni compare favourably with those of the competing foreign growths and this may cause a substantial improvement in the near future in the demand for Ashmouni.

The Decree restricting the acreage to be planted under cotton during the coming season was finally published on the 21st inst. This publication did not affect the market at all as it was discounted. The Government has again this week interrupted its purchases of spot cotton; the total quantity they have bought so far is about 5,000 kantars. In the interior dull markets still persist; very little business is being transacted. We do not see any reason to alter our opinion on the market as expressed in last week's report. Present levels of prices seem to us very reasonable and we think that a moderate improvement in the trade demand will be sufficient to produce a sharp recovery. The week's receipts amount to 292,115 krs. against exports 247,905 krs.; the stock stands at 2,125,766 krs.

Spot: With the approach of the holidays the demand has slackened somewhat and Minet-el-Bassal has not been so busy this week. Sales amounted to about 21,000 bales, of which we estimate 12,000 bales Sakellaridis, 7,300 bales Uppers, 1,000 bales Zagora, 300 bales Pilion, 400 bales White and a few bales of Brown. There has been more tendency to sell on the part of holders of spot cotton and offerings have been more free, especially in Uppers.

Sakellaridis: A fair business has been done and all styles have been dealt in. Spot differences are generally without change.

Ashmouni and Zagora: Have met with only a moderate demand and holders have offered their cotton freely. Spot differences are quotably unchanged but cotton is easier to buy than for some time past, with the exception of the low grades which are fairly well held.

Pilion: Has been in moderate request at about last week's differences.

Brown: A retail business has been done, without change from last week's spot differences.

White: Has been in improved request and a good business has been done. Spot differences are a little easier than last week.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for December states:—

December has been an unsatisfactory month for the cotton trade. With the exception of a good demand from India for dhooties business for all markets has been on a small scale. The low prices now ruling have not yet brought about the increased demand which could reasonably be expected and the explanation which finds most favour is that before committing themselves further dealers are desirous of clearing the goods bought at higher prices.

There have been complaints on all hands of the depressed state of the yarn market. There is a great amount of discussion of ways and means of securing an improvement and in particular criticism is very strong of firms who accept prices which apparently bear no relation to the cost of production. The Short Time Committee of the Federation of Master Cotton Spinners has recommended that the mills using American cotton should be closed for a full week prior to January 9 in addition to the usual Christmas and New Year holidays; it is hoped that this stoppage will relieve the market of the surplus stocks which are now weighing upon it. For neither American nor Egyptian spinnings can the demand be described as other than poor.

As mentioned above, the most encouraging feature of the month has been the renewed demand from India for dhooties. Makers of this class of goods are now engaged well into the New Year. For other kinds of cloth there has been no special inquiry and business has been very dull. There appear to be grounds for hope that conditions in China will shortly become more settled, but for the time being demand is of small dimensions. The Near East has not contributed its usual quota of orders and other outlets also have been below normal.

On the 8th of the month the American Agricultural Bureau issued its final estimate of the yield of the new crop. The figure given was 15,600,000 bales and from a ginning report which was published on the 21st of the month it would appear that up to the 12th no less than 14,826,000 bales had been ginned. Both these sets of figures were larger than had been expected but, on the month, quotations are little changed. Egyptian cotton has again suffered a substantial fall in spite of a certain amount of Government buying. Closing quotations for American Middling and Egyptian Fully Good Fair Sakellarides are 10.27d. and 17.65d. as compared with 10.47d. and 19.45d. respectively at the end of November.

A Belgrade message says that a meeting, attended by about 15,000 people, was held at Bitolj on December 27 to protest against the attitude of the Greek authorities towards the Yugoslav minorities in Greece.

Lord Fairfax, presiding at the recent meeting of the Amalgamated Cotton Mills Trust, Ltd., at Preston, said that those who were interested in the cotton industry felt they owed a debt of gratitude to the Empire Cotton Growing Corporation and the British Cotton Growing Association for the magnificent work they were doing in developing cotton growing within the Empire. Empire grown cotton was becoming an ever-increasing factor in the world's supplies, and it was interesting to note that the quality of the product produced was of a very high character.

TEXTILES.

Company Meeting.

IONIAN BANK.

Stabilisation of Greek Exchange.

The annual general meeting of the Ionian Bank, Ltd., was held on January 5, at the offices of the company, Basildon House, Moorgate, E.C.2, the Chairman, Sir John Stavridi, presiding.

The Secretary (Mr. W. A. Shaw, Litt.D.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: I referred last year to that great potential asset of Greece, the refugees; and before considering the economic and financial conditions of that country, I again revert to this question of primary importance to its future in the light of facts that have occurred since we last met. It must not be forgotten that Greece has had to deal with the largest colonisation scheme ever undertaken. The Government and local organisations, so well seconded by the Refugee Settlement Commission appointed by the League of Nations, have done everything within their power to alleviate the terrible sufferings of this uprooted population. The Greek people have given proof of an admirable spirit in coping with the appalling problem with which they were faced, and the qualities they have shown is a token that they will, within a very few years, have converted this overwhelming burden into an asset which may well solve all the financial difficulties with which the country is faced. The minimum number of refugees who have entered Greece is reckoned by the Refugee Settlement Commission at 1,300,000. It is considered that of these about 200,000 are of independent means. The minimum number of destitute refugees was therefore 1,100,000, and the Refugee Settlement Commission have already dealt approximately with 600,000 of whom 500,000 were of the agricultural class. To June 30, 1925, the Refugee Settlement Commission had established 70,360 agricultural families, whilst the Greek Government had established 72, 581., a total of 142,941 families, say about 650,000 persons. 27,100 houses had been built and 15,176 were building. 30,000 rooms had also been built for refugees in the towns. Cattle, horses, ploughs, carts, and tools had been distributed in enormous quantities, as well as 7,000,000 vines, vine shoots and grafts, several hundred thousands of mulberry trees and 67,283,286 okes of food, seed and fodder. Drs.252,494,191 had been granted as loans to the refugees and 6,578,483 stremmas of land had been allotted to them. Independently of the above figures, the Greek Government had spent, since 1922-23, Drs.1,400,000,000 on repatriating, transporting, settling and providing for them. The Refugee Settlement Commission testifies to the desire for work and to the moral energy of the refugees. They have already firmly introduced into Greece the carpet industry and pottery. Carpets to the value of about Drs.16,000,000 were manufactured in 1924, and exported. The cultivation of tobacco, cereals, vines and mulberry trees for silk has already been intensified, and from this year the crops of Greece should be greatly increased through the work of the refugees, and I should not be astonished if within less than ten years they have succeeded in bringing about a balance of trade in her favour.

The ordinary revenue of the country was, in round figures:—In 1914, Drs.208,000,000; in 1921-22, Drs.700,000,000; in 1924 it had reached Drs.3,100,000,000. The official returns for the 13 months from April 1, 1924, to April 30, 1925, show that during that period the Government collected from ordinary revenue, Drs.4,600,000,000. This was more than the budget estimate. The budget estimate for ordinary revenue for 1925-26 is Drs.6,500,000,000. The estimates for the last few years have been realised; there is therefore reason to hope that the one for 1925-26 may be reached. The above figures prove conclusively that there has been no hesitation in taxing the country. In drachmæ the estimated ordinary revenue for 1925-26 is over thirty times that for 1914, and almost ten times larger than the 1921-22 figures, and this during a period of unparalleled political and economic crises of the country covering the disaster in Asia Minor and the consequent influx of refugees. If we take the 1914 revenue at par of exchange, say Drs.26 per £, this was equivalent to £8,320,000. Reckoning the estimated ordinary revenue for 1925-26, say Drs.6,476,440,118 at the approximate present rate of exchange of Drs.370 per £, it is equivalent to about £17,500,000, or just about double the pre-War ordinary revenue. The 1925-26 budget is another courageous effort to attain financial equilibrium and to cope with the floating debt of about Drs.2,500,000,000, because about Drs. 850,000,000 of the ordinary revenue are earmarked for the amortisation of about one-third of this debt, which should therefore be extinguished by the end of 1928.

These are undoubtedly steps in the right direction, which should materially assist in stabilising the Greek currency, and bringing the country back to normal life. Between the dates of our last two balance-sheets the drachma has depreciated by more than 30 per cent. and some anxiety has been shown in the Press and by British investors as to the future course of the exchange. The fear has been expressed lest Greece, by continuing the expansion of the note issue, which has grown steadily throughout the year, should bring about such a state of inflation as will completely demoralise her currency. I think it has been proved by the correspondence that has taken place recently that so far as the Government's policy is concerned, those in control took all necessary steps to avoid inflation for Government purposes, but the writers have laid the blame at the door of the National Bank for having issued notes for financial, industrial and commercial purposes without sufficient foreign exchange or proper cover to maintain the external value of the currency. It must, however, be borne in mind, as has already been pointed out by one expert writer on this matter, that, within the last 12 months, sterling has appreciated in terms of gold by some 15 per cent., so that even if the drachma had stood still and not depreciated at all in relation to gold, it would still have depreciated by 15 per cent. when compared with sterling.

Unluckily, there does not exist a panacea for the ills of a weak exchange and unsound currency, and the greatest experts in the financial world have each a different pet theory which, according to them, if properly applied, would bring about an economic millennium. I am not, however, going to enter the lists in this controversy of experts. I have always been of opnion and have already expressed myself on the subject, that a country with a fiduciary currency should establish a seperate, independent and untramelled body, whether a bank or a committee of bankers and experts, whose sole duties would be to manage and control the currency and act as bankers to all other bank in the country, and that it is not in the best interests of a country that the management and control of its note issue should be in the hands of an institution carrying on general banking and commercial business on a vast scale, in fierce competition with the other banking institutions and outbidding them at every turn.

It appears to me that, with a view to bringing about stabilisation of the exchange, three things are required:—(1) That the Budget should balance; and from the figures published it would appear that this goal has already been reached. (2) That the floating debt should be extinguished or very materially reduced; and this, as I have already explained, is being rapidly done. And (3) That an economic balance should be realised; and I am of opinion that, with the improving harvests, the increasing exports due to the labours of the refugees, the remittances from emigrants and the returns of the mercantile marine, we can look forward to the day, not perhaps far distant, when this also may be an accomplished fact. Continuous foresight and specialised attention are doubtless needed in handling the exchange of the country to give time to the increasing returns to make their full weight felt, but it is in the teeming fields and humming factories, and not through artificial measures, that the real stability in exchange will be attained.

The motion was carried unanimously, and after the usual formal business, the meeting terminated.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Printing Plates.—The Survey of Egypt, Giza (Mudiriya), Egypt, invites tenders for the supply of 1,400 aluminium lithographic printing plates of very fine grain and also of 150 zinc lithographic printing plates. March 10. (D.O.T.)

Photographic Material.—The Minister of Interior invites tenders for the supply for the year ending March 31, 1927, of various photographic materials. March 16. (D.O.T.)

ROUMANIA.

Porcelain Insulators.—The Roumanian State Railways invite tenders for the supply of porcelain insulators, sleeves and plates. February 4. (D.O.T.)

TURKEY.

Sacks.—The Turkish Public Debt Administration at Angora invites tenders for the supply of 800,000 to 1,200,000 hemp sacks. February 15. (D.O.T.)

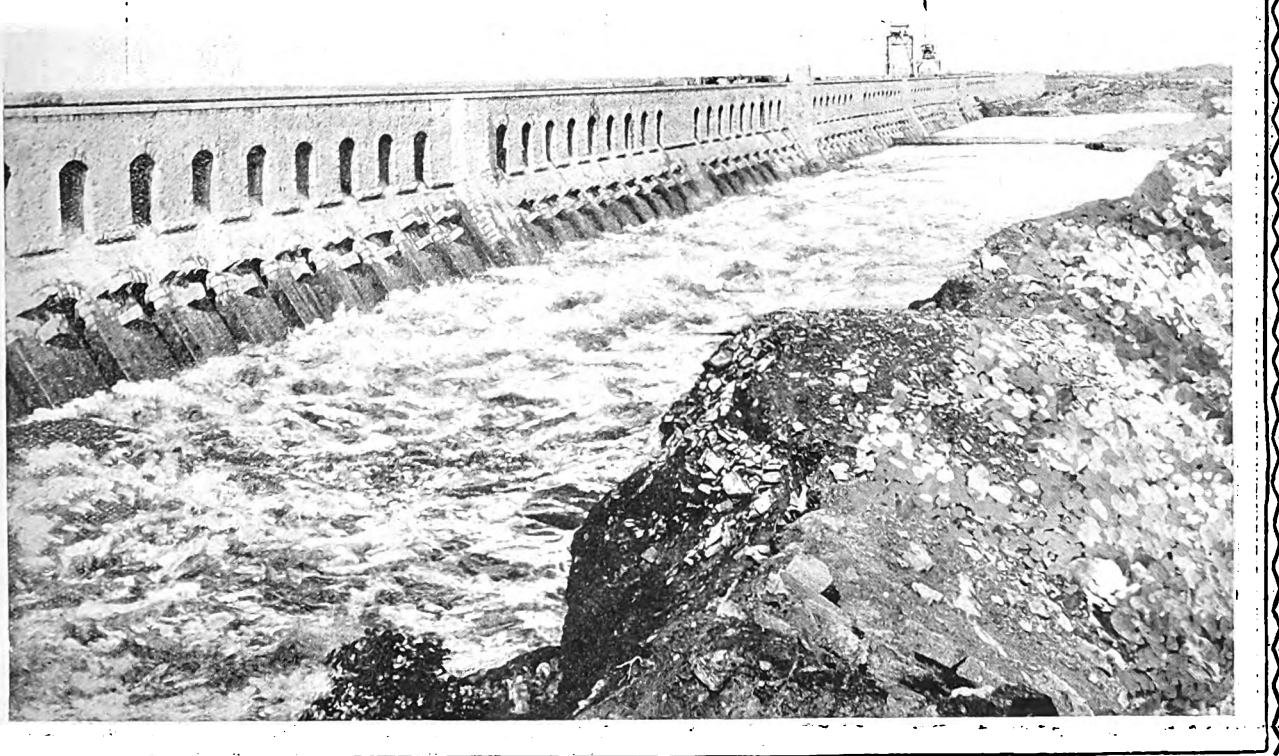
The SUDAN AS IT IS TO-DAY



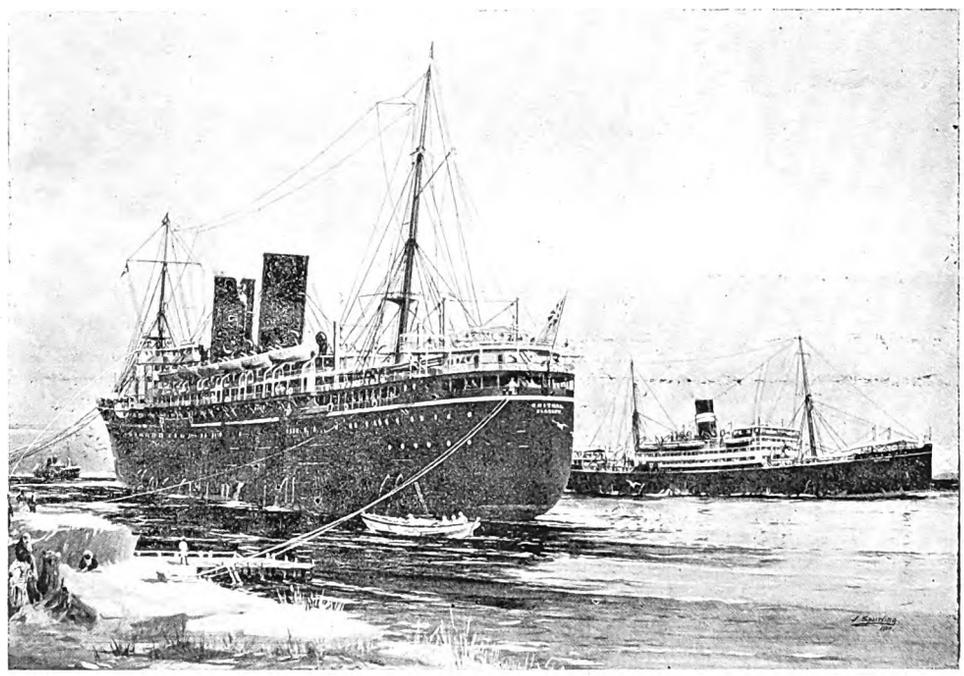
JANUARY 7, 1926. THE NEAR EAST AND INDIA [Sudan Supplement]

LORD LLOYD OF DOLOBRAN

Published on the occasion of the Official Opening of the MAKWAR DAM

January 1926

SIR GEOFFREY ARCHER K.C.M.G.



Digitized by Google

P. & O. and B. I. LINES

PORT SUDAN (for KHARTOUM)

The P. & O. Australia Mail Steamers, 16,000 tons, convey passengers at four-weekly intervals between London and Port Sudan (via Port Said) and vice versa, the homeward vessel calling at Plymouth. The journey occupies from 13 to 15 days. Khartoum is reached by rail from Port Sudan in 34 hours by Restaurant and Sleeping Car train of the Sudan Government Railways.

Frequent and regular P. & O. services between London, Marseilles, and Egypt, India, Ceylon, the Straits Settlements, China, Japan, and Australia in each direction by modern mail and passenger steamer of from 9,000 to to 21,000 tons. For Sailing dates and cabin plans, apply P. & O. House as below.

P. & O. S.S. CHITRAL, 15,000 tons. London-Australia Line, with four-weekly calls at Port Sudan.

B. I. S.S. MATIANA, 9,000 tons, East Africa-Marseilles-London service.

BRITISH INDIA LINE TO PORT SUDAN & EAST AFRICA

Modern Steamers of the British India Company's M. and N. Classes, of 8,000 to 9,000 tons, with superior first and second saloon appointments, maintain a four weekly service between London, Port Sudan, and East African Ports in each direction, calling homewards at Marseilles

E. AFRICAN SERVICE *via* BOMBAY

This service usually connects fortnightly at Bombay with the homeward P. and O. London—Marseilles Mail Steamer. Transit: Mombasa—Marseilles and *vice versa*, 24 days; Mombasa—London, 30 days. Outwards there is an interval of three days in Bombay.

BOMBAY—AFRICAN SERVICE

Fortnightly Mail and Passenger service from Mombasa to Bombay and *vice versa*, by the new "Khandalla" Class (7,000 tons), also to and from Durban *via* Zanzibar, *Dar-es-Salaam, *Mozambique, Beira, and Delagoa Bay.

*Alternate Steamers call.

EAST AFRICAN COAST SERVICE

The motor vessels "Dumra" and "Dwarka" (2,300 tons) maintain a regular 1st and 2nd saloon passenger service between Delagoa Bay and Kismayu, calling at Inhambame, Beira, Chindi Quilimane, Mozambique, Port Amelia, Pemba, Pangani, Tanga, Lindi, Mafia, Dar-es-Salaam, Zanzibar, Ibo, Mikindani, Mombasa, Lamu, and other Coastal Ports, as circumstances permit.

B.I. FORTNIGHTLY SERVICES

London—Bombay; London—Calcutta; and *vice versa*.

Four-weekly to Queensland Ports.

For further information apply:

CHIEF PASSENGER OFFICE:

(F. H. Grosvenor, Manager), P. & O. HOUSE, 14, COCKSPUR STREET, S.W.I.

The SUDAN

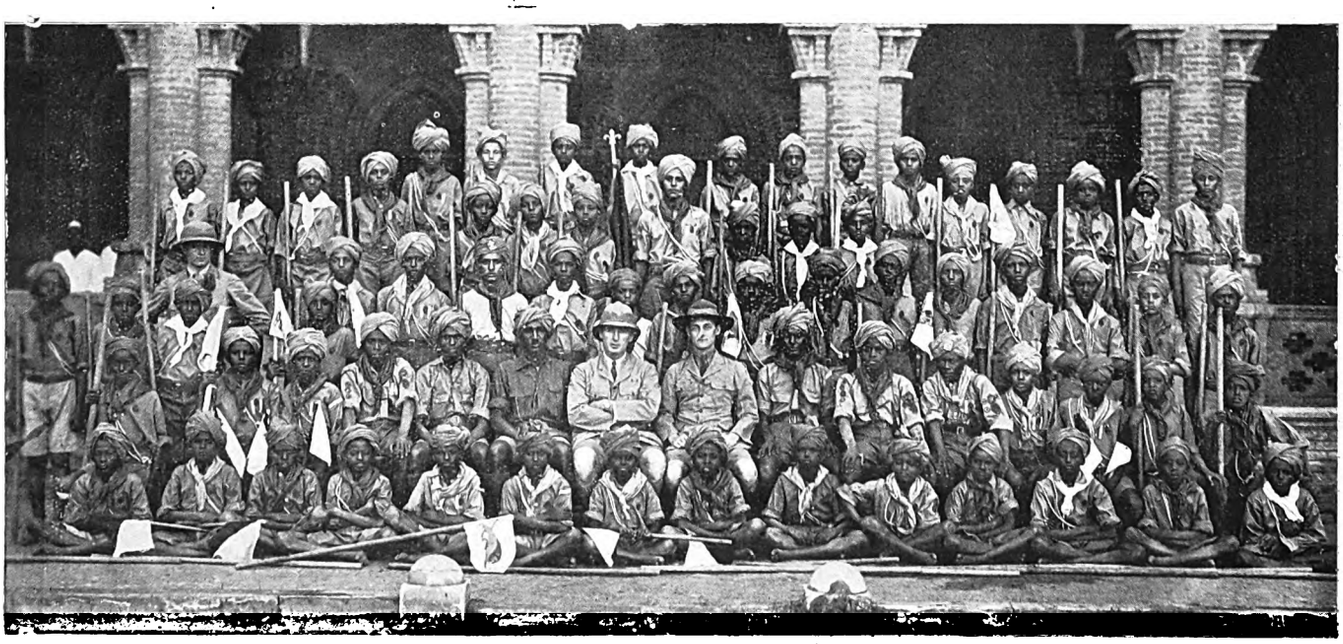
A Brief Survey of its PROGRESS.

In the careers of nations as of men there are landmarks which sharply divide what has gone before from what is to follow. It would be surprising, were a history of the Sudan to be written half a century hence, if the writer failed to emphasise the overwhelming importance to the country of the year that has passed. With the completion of the Makwar Dam the Sudan has passed from an era of quiet and steady development to a position in which a rapid and immediate economic advance is possible, the effects of which will have their repercussion on the varied activities of the country. That is, in short, the meaning to the Sudan of 1925. But it must be emphasised that this event which promises to leave so indelible an impress on the history of the Sudan is no isolated episode, but is merely the culminating point of the economic policy which has been pursued under the British Administration since the Occupation with consistent success. Only those who have personal knowledge of the deplorable state of the Sudan not three decades ago, when the people were in a destitute condition and trade was negligible, can fully appreciate the painstaking work that has been accomplished under British rule. Order has replaced disorder, the people are no longer poverty-stricken but prosperous and well contented, commerce has rapidly increased, the amount of shipping calling at Port Sudan has developed remarkably, while the country's revenue has risen from practically nothing to a total of about £E4,000,000. These are no mean results, and they are specially significant when read in the light of the future. If the Makwar Dam had not been constructed, the Sudan would have continued to make progress; as it is, what would normally have been the work of years will be compressed into a short space of time. There is no exact parallel to be found for what is taking place in the Sudan, and as a matter of fact nowhere else in the Empire have our administrators been faced with problems similar to those with which they have been confronted in the Sudan, where it has literally been a case of building from the beginning.

The nature of the problem to be solved made the establishment of the fabric of government the main preoccupation at first, and then the gradual improvement of the material welfare of the people. It was not long before the effects of the Occupation were apparent in the revival of trade, dormant for so many years until then, production having been limited by the existing insecurity. The realisation by the Sudanese that the British authority implied the protection of their interests led to the speedy development of cultivation, for the natives were ready enough to devote themselves to the land, given the certainty that they would reap the fruit of their labours, and in a very few years the commerce returns began to make quite a promising showing. Thus the basis of economic improvement was set up, on which it has been possible to build, until to-day the Sudan, with its modern postal and telegraphic facilities, with its great public works that

Map of the Sudan (Northern Section).

will stand through the centuries as a testimony to the value of British civilisation, its thriving population reflected in the ever-increasing commerce, bears not the slightest resemblance to the country as it was in 1899. Every department of the social services has received due attention, and considering the conditions and the relatively short period of time that has elapsed the record of progress



Digitized by Google

in many directions must be accounted distinctly satisfactory. Thus a few years after the Occupation a suitable judicial system was introduced, and in 1915 a Sudan High Court of Justice was established, while among the necessary legal changes that have been made may be mentioned the reform of the Bankruptcy Laws, which has had a most salutary effect on the improvement of the country's credit. Education has naturally been a fruitful field of enterprise, and the educational system of the Sudan now includes elementary schools, higher primary schools, and instructional workshops. In 1899 Lord Kitchener established the Gordon Memorial College at Khartoum, and this institution, whose influence on the progress of the country has been considerable, has come to occupy the position of a University for the Sudan. In the sphere of public health invaluable work has been accomplished, and here reference must be made to the Wellcome Tropical Research Laboratories which form a department of the Gordon Memorial College and have proved one of the most useful endowments that a nation can receive. Of course social services have to be paid for, but taxation has weighed lightly on the Sudan, and the natives as a whole appreciate that in protection, in the judicial system, in health and education and other services they receive full measure for their contributions.

The Economic Record.

At this moment of transition it is opportune to glance back at the economic record of the Sudan during the last few years, for the story that it has to tell merely emphasises and brings into clearer relief the prospects of the future. The trade figures are very significant. For 1907 the value of the total volume of trade was no more than £E2,237,000 of which public and Government imports accounted for £E1,604,000 and exports for £E449,000, and even if these figures are translated into their post-War equivalents the result is far from impressive. In 1922 the total trade amounted to £E6,777,000, and by 1924 it had expanded to £E9,562,000 of which exports were responsible for £E3,542,000. The steady advance shown in these figures has continued in the past year. For the first nine months the volume of trade amounted to £E7,481,540, or an increase of £E539,973 on the figures for the corresponding period of 1924, and it is not unreasonable to anticipate that the year's trade will exceed £10,000,000. Last year's figures are of particular interest, because the increase has taken place despite a decline in Government imports of £E259,116. Exports at £E3,349,151 show an increase of £E461,666, and of this total it may be noted that ginned cotton accounts for £E1,598,557. From that fact it is easy to deduce the expansion of trade that may be looked for when a larger area is under cotton; on the other hand, cotton is liable to fluctuations in price, and as the world's output increases, the Sudan will not always be able to depend on the highly satisfactory returns so far received. There was a continued expansion in general imports, which at £E2,634,198 show an increase of £E143,106. This is not the least interesting feature of the returns, for it points to the growing prosperity of the country, reflected in an expansion of requirements, and gives promise of the useful market that the Sudan may be expected to provide in the future. Just as cotton does in the export trade so, as might be expected, cotton piece-goods form the bulk of the imports, with a total value of £E944,299; but the remainder of the exports cover a fairly wide range, which will be expanded as the standard of living rises. Both as regards exports and imports the trade of the Sudan is to all intents and purposes confined to the Empire, and in future expansion it is to be hoped that this aspect will be maintained; for, while Great Britain can take all the cotton the Sudan can produce, the Empire can equally supply all the Sudan's requirements. Mention is made elsewhere of the growth of trade at Port Sudan as a result of the steady development of the Sudan, and a few figures will serve to bring out the astonishing rise in the tonnage of shipping using that port in recent years. For 1913 the total was 721,870, by 1923 it had increased to 2,265,375 tons, while for 1924 the total was 2,523,229, and in the year just closed it is probable that a total of 3,000,000 tons will have been reached. The fact that cotton looms so large on the Sudan's horizon is rather liable to obscure the fact that the Sudan has a number of

THE MAKWAR DAM

What It Means To The Sudan

The official opening of the Makwar Dam, which was completed and informally opened in July, is an event of great interest and importance and marks the beginning of what it is confidently anticipated will be a new stage in the prosperity of the Sudan. The utilisation of the waters of the Blue Nile for the benefit of the Gezira Plain was first suggested by a German who travelled in those regions before the middle years of the last century. Nothing was done, however, until Sir William Garstin, in the present century, probably *de novo*, made the same suggestion for a dam in the region of Sennar, from which a canal would take off, whereby as much of the waters of the Blue Nile as might be spared could be directed on to the Gezira. The object of both Sir William Garstin and his German predecessor was to cultivate wheat and other grain crops. Experiment, however, showed that this was impracticable, first, because the land was not capable of bearing heavy wheat crops, and, secondly, because even if wheat was grown, the return on the expenditure could hardly be remunerative. For a number of years the project languished until, by a fortunate accident, Lord Lovat traversed the plain and saw its possibilities for cotton production. He suggested to Mr. D. P. McGillivray, who was at that time interested with him in the Zeidab Cotton Plantation, some distance down stream from Khartoum, that they should experiment with cotton in the Gezira as a better proposition than even Zeidab. Experiments were duly carried out, but, whereas from Khartoum to the sea cotton is sown in early spring and reaped in late autumn, it was found that the summer months in the Gezira were too hot for the proper growth of cotton. The brilliant idea struck them of sowing in late autumn and winter, and reaping in early spring. This was found to be extraordinarily successful, and from that moment it was obvious that the Gezira scheme should become an accomplished fact. Nature has further contributed marvellously to the possible extent of the scheme in that, while the climate is too hot in spring and early summer, and there is nothing like a sufficiency of water in the river, there is in late summer, autumn, and winter an abundance of water.

Mr. C. E. Dupuis was deputed by Sir William Garstin to investigate whether the better method of bringing water to the Gezira was to build a dam high up the river at Roseires or at Sennar. Mr. P. M. Tottenham under him studied the volume available for the Sudan in spring when both Egypt and the Gezira might be requiring water, and found that an area of 500,000 feddans could be put under cultivation. Lord Kitchener, on becoming High Commissioner in Egypt, took up the scheme, saw that the experimental stations fully warranted its prosecution, and asked Sir Murdoch MacDonald to design a dam and irrigation system. Sir Murdoch studied the problem and designed a suitable dam. He found 300,000 feddans ought to be brought into cultivation to make a commercial concern of the undertaking. Of these 100,000 feddans could annually be put under cotton—an area that happens to be about the maximum which it is possible to cultivate in a year of very short supply of water in the river. It is these designs which have now been completed.

The Gezira plain lies south of Khartoum on the tongue of land formed by the confluence of the Blue and White Niles, and it is the purpose of the Makwar Dam to provide water for the irrigation, ultimately, of 1,000,000 feddans of this land. To begin with, 300,000 feddans are to be put under cultivation, this area being divided into twenty self-contained stations of about 15,000 feddans each. The dam itself is 3,308 yards in length and forms a reservoir about 50 miles long, the capacity of which is 140,000 million gallons. The dam stands 26 metres above the bed of the river, and its height from its lowest foundations is 36 metres. It contains 550,000 cubic feet of masonry and its total weight is nearly 1,000,000 tons. Along the whole length of the dam there is a roadway which varies in width according to the sections of the work. Along the roadway runs a 3 ft. 6 in. railway line to be used by the Sudan Government Railways. The line will later be extended to Kassala. The canalisation system comprises in all 3,697 miles of canals and 5,509 miles of field channels.

Enough has been said to give some idea of the scope and magnitude of the Makwar dam and Gezira irrigation scheme, which represent an immense triumph for British engineering. Actual construction work on the dam itself was not begun until April, 1921, the contract having been entrusted in 1919 to the Sudan Construction Company —Messrs. Alessandrini and Perry—on a percentage basis. The only part of the scheme that was not in abeyance during the War was the carrying out of a small amount of the excavation of the main canal, the average depth of digging being nearly 20 ft. This work was performed entirely by hand labour, for it was not until some time after the War that mechanical excavators could be

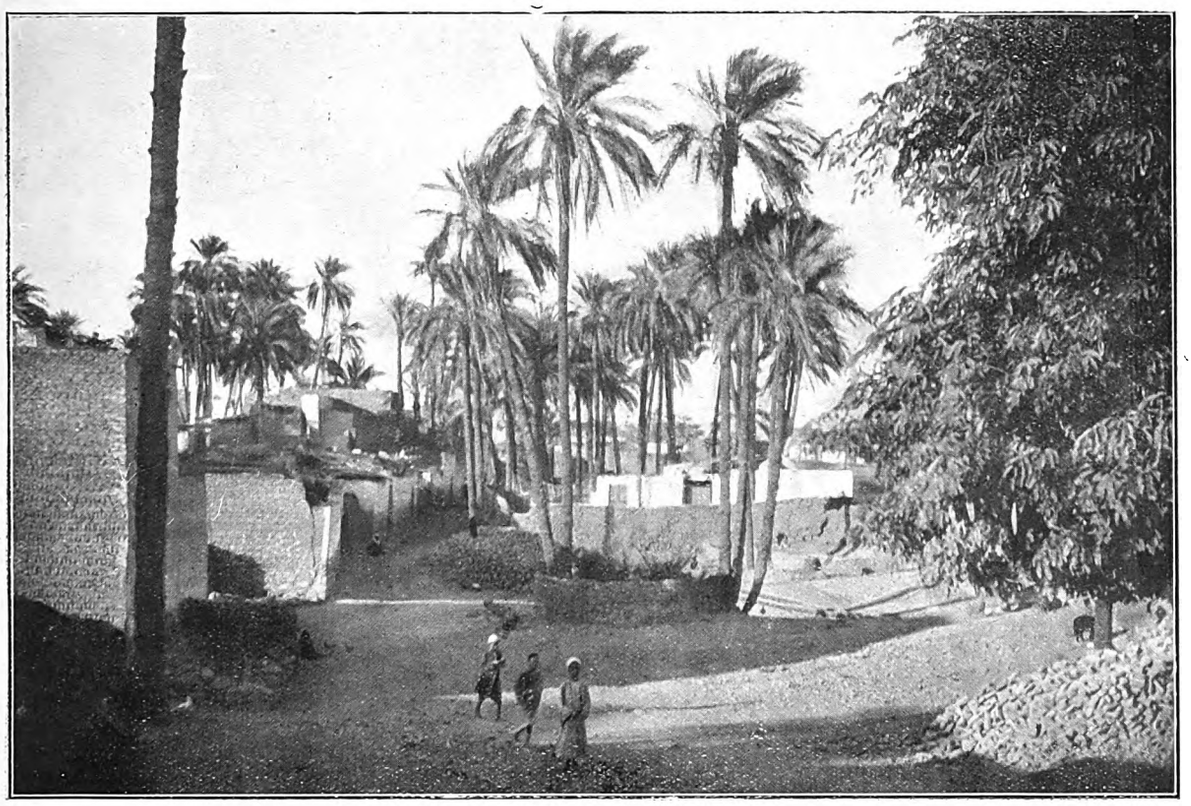
procured. The Sudan Construction Company began work on the western end of the dam and completed the lower hatched portion. The company also built a village for the workmen and staff, erected a complete cement factory, dug canals, opened quarries, and carried out a great deal of other preliminary work. For various reasons the arrangement with this firm was terminated in 1922, and another contract entered into with Messrs. S. Pearson and Son, Ltd., to complete the work on a fixed rate basis, the order being obtained after competition with other British firms. At the same time Messrs. Code, Fitzmaurice, Wilson and Mitchell were appointed consulting engineers to the undertaking. In December, 1922, Mr. (afterwards Sir) Frederick Hopkinson took charge of the work on behalf of Messrs. Pearson and Son.



The difficulties that have had to be overcome have been of a serious character, the problem of transporting the necessary tools and machinery to the spot being in itself no light task. Moreover, the granite used in the dam has had to be brought from a hill 35 miles distant. The labour question, too, has presented difficulties, involving the necessity not merely of collecting an adequate staff but also of housing them and providing the facilities of life in a region where they were not to be found. In this connexion it is interesting to note that Makwar, hitherto a small and obscure village, has developed into a town of attractive little houses and pleasant gardens with a population of several thousand inhabitants. But the organisation of the work and the labour, difficult as they have been, have been small compared with the actual task of construction, which involved, at one period, an exciting race against time. Flooding in the Blue Nile, it should be explained, begins in May, reaches it climax about the end of August, and does not fall sufficiently for any work to be done until the middle of October. Thus it is possible for construction on the dam to take place during only some nine months of the year. To have completed the dam, therefore, in time for this year's (1925's) cotton crop, which entailed raising it to a sufficient height to withstand the 1924 floods, is an engineering achievement on which Messrs. Pearson and Sons, Ltd., are entitled to congratulation.

It is impossible to exaggerate the benefit that this achievement will confer upon the cotton-growers of the Gezira or its importance to the welfare of the Sudan as a whole. Prior to the present year (1925) the situation in the Gezira was roughly as follows:—Cotton was first grown on some 800, later 1,700 feddans at Tayiba, a few miles north of the provincial capital of Wad Medani. A second station was started in 1913 at Barakat, a little south of Medani, after which development was checked by the War. Both stations were supplied with water by pumps on the Blue Nile, and after the War another pumping station was installed at Hag Abdallah considerably farther south, capable of irrigating about 7,000 feddans. This was the first large scale scheme and was indeed an integral portion of the greater plan as opposed to the experimental nature of the earlier stations. 1923 saw the opening of the Wad el Nau pumping station, irrigating about 10,000 feddans and bringing the grand total up to 20,000 feddans, at which figure it stood until the arrival of the water from the Makwar dam.

Of the 300,000 feddans now made irrigable it is proposed that 100,000 shall be placed under cotton, 100,000 devoted to a green crop, such as the lubia, a bean which is used for food for cattle, while the third 100,000 will be allowed to lie fallow. The crops will be sown in a three-year rotation, so that only in every third year will cotton be grown on the same soil. The soil is of what is known as the "black cotton" variety and it has proved to be admirably suited to cotton growing, it being estimated that with careful cultivation it will produce as much as 350 lb. per feddan. It is proposed that the water shall be distributed and the cotton disposed of in the following manner:—The Government will maintain the main canals in good condition and will keep them charged to a specific level with water. The distribution will be in the experienced hands of the Sudan Plantations Syndicate, which will cut field irrigation ditches, superintend the growth of the cotton, and do all that is necessary to the material before it is marketed, including ginning and baling, and will finally sell it. The Government for its part will receive 35 per cent. of the total proceeds: the cultivator will receive 40 per cent., and the Syndicate will take the remainder, i.e., 25 per cent.

Difficulties there still are, which will doubtless be overcome as time passes. For instance, many of the new areas have been sparsely populated since Mahdist times.

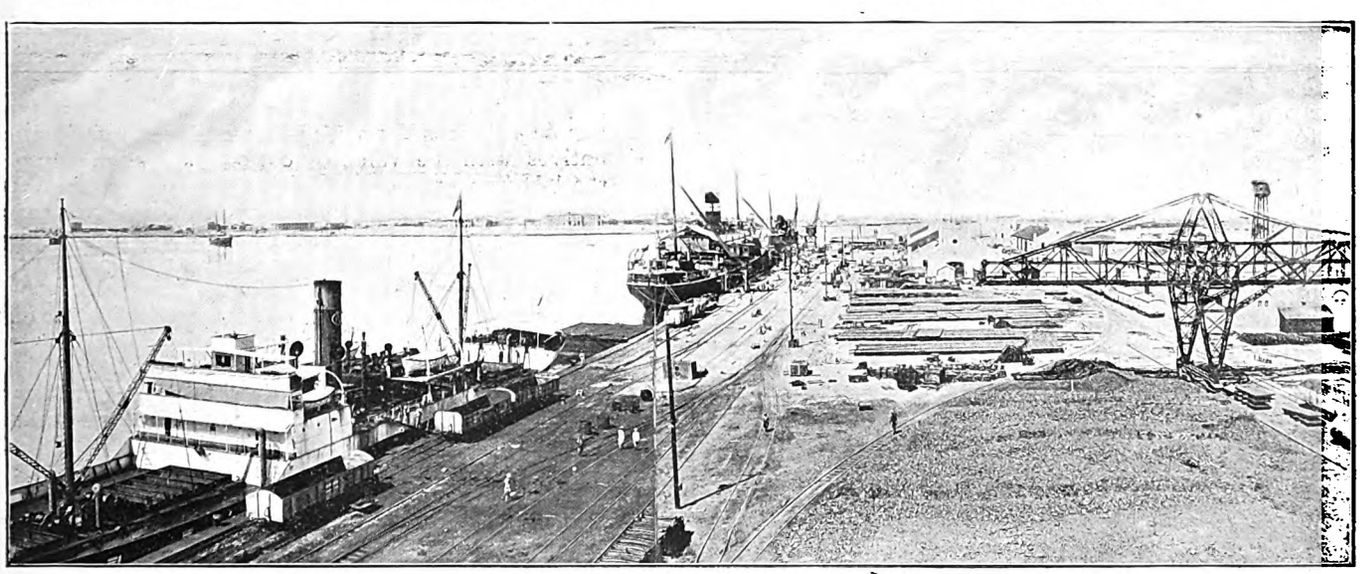
The Rapid Growth of PORT SUDAN

Twenty-five years ago the inlet or cleft in the coral littoral of the Red Sea which is now the harbour of Port Sudan was marked only by the rough whitewashed dome of the tomb of a pious Arab Sheikh, named appropriately for that place Sheikh El Barghut, or "Saint Shrimp." The shrine of this humble and rather comical tutelary saint stood on a sandy hummock of the foreshore and performed the kindly function of showing to Arab mariners who wanted refuge in stormy weather the way into the haven.

At that time the Sudan had just been reclaimed for civilisation from the Dervishes (in 1898). A slender but growing stream of commerce was beginning to trickle in and out along the first railway that had carried Kitchener's expedition up the Nile to Khartoum and those in authority had to make their dispositions to prepare for trade on a much larger scale. It was evident that, if the channel of the trade was confined to the Nile route through Egypt, it would soon become choked by the narrowness of the passage and the obstacles of transhipment between river and train. So one of the earliest decisions made was to build a railway from the Nile, the central artery of the country, to the Red Sea on the East. The decision was criticised at the time on the ground that it would divert from Egypt much of the trade which was hers by right, but the event has upheld the counter argument that there would be enough trade for both routes. The port of the Sudan was then Suakin, a small town built in very ancient times on an island at the head of another creek some 40 miles south of the creek of Sheikh Barghut, connected with or rather separated from the rest of the Sudan by a camel track 250 miles across the desert to Berber.



The experience of the early years showed that by reason of its small size and the extremely dangerous approaches from the sea through miles of coral reefs, Suakin could never be made fit to cope with traffic of the dimensions and scope anticipated. It did not take long to discover in the haven of Sheikh Barghut a place excellently suited for development as a port of considerable size. Accordingly, it was decided that the terminus of the Red Sea Railway should be here and that a port should be made and named Port Sudan. This decision was not made without much reluctance and regret that it was impossible to give the pride of place to the town of Suakin, celebrated not only for its antiquity, but among Englishmen for the memories, both tragic and glorious, of the Dervish wars. Time has brought its compensations, however, and those who happen to visit Suakin now are apt to be grateful that the quiet gravity of the old Arab town has not been spoiled by the bustle, confusion and vulgarity of a modern port.

From the shipping point of view Port Sudan at once took the place of Suakin. Nearly £1,000,000 was spent in fitting the harbour with good quays and modern appliances for handling cargo and coal and in putting up the necessary buildings. It was wisely seen at the time that the supply of labour would be for a long time difficult, and as much as possible was done to save the need for manual labour by providing electrically-driven machinery.

An account of Port Sudan, to give a true picture, would involve a survey of the whole of the Sudan trade, and must inevitably overlap an article dealing with the general progress of the country. Here, therefore, need be given only a few salient points showing the function that is performed by the port at present.

In the first year the port was used, it was recorded that the total tonnage of vessels calling was 245,000. In 1913 the tonnage was 721,870; in 1920, after the set-back of the War, 308 vessels called, with a total tonnage of 737,202. In 1924 699 vessels called, and the tonnage figure was 2,523,229. Of these 699 vessels, 513 were British. Twenty-three shipping companies of all nation-

THE SUDAN'S PART IN EMP

In these days the Sudan has become for Great Britain almost a synonym for cotton. It is, perhaps, rather anomalous that this should be so, for the Sudan, as will be seen from the table given below, still plays only a small part in Empire cotton production, and the rate of increase in output has not been very marked. But it is because of its potentialities that the Sudan has come to loom so large in the cotton world, and because there this country has made, and is making, special efforts to promote the growing of the cotton plant. Unfortunately it is impossible to bring about a great extension of cotton cultivation within a short period. It is actually a question of years of patient endeavour, particularly in a region like the Sudan, where, while the conditions in general are favourable, great irrigation schemes are necessary before the soil will give forth an adequate response. It is only now after years of development work that the Sudan is about to make her mark as a cotton producer as a result of the completion of the Makwar Dam.

EMPIRE COTTON CROPS.

The Sudan Plantations Syndicate.

Cotton has apparently been grown in the Sudan from very early times, but it was not until the present century when the Zeidab estate was opened up that an attempt was made to cultivate it as a commercial crop. In 1904 came the formation of the Sudan Plantations Syndicate, and from that time onwards the history of the development of cotton cultivation in the Sudan has very largely revolved round the work of this company. The Syndicate commenced operations by cultivating a few hundred acres at Zeidab, and subsequently by degrees acquired a number of cotton areas in the Gezira as a prelude to the main scheme which is now being put into operation. The development of the project of the Gezira scheme may be briefly outlined. In 1904 there was published a report by Sir William Garstin in which attention was drawn to the possibility of irrigating the Gezira plan, and the end of that year saw the first step taken in the direction of transforming the region into a great cotton area. The preparatory work before the scheme could be launched was, of course, great. A railway extension was essential, and in 1909 a beginning was made with the necessary construction, and in the following year the railway had reached Sennar. An essential preliminary to cotton growing on a vast scale was a trial area, and the Government decided on an experimental test at Tayiba, where in 1911 a pump was set up and an area of about 3,000 acres was canalised. The Syndicate was given the management of this scheme, which, as was soon to be apparent, was a great success. It was now found requisite to determine a definite basis on which the Government, the Syndicate and the cultivators could co-operate, and it was finally arranged that the Government's share of the cotton crop should be 35 per cent., that of the Syndicate 25 per cent., while 40 per cent. should go to the tenants, who would also have the other crops. The advantages of this scheme scarcely need emphasis; it may indeed be said that no other conceivable plan would have served the desired end so well. In 1913 the Sudan Loan Act was passed, and the following year saw the beginning of work on the Dam, but the outbreak of the War put an end for the time being to its construction. Meanwhile the Syndicate had established a second pumping station in the Gezira at Barakat, canalising some 6,000 acres, and during the War work at the two stations and at Zeidab was steadily carried on, though under serious difficulties, and much invaluable experience was gained. It was realised, however, that further experimental schemes were necessary in order to have as many trained workers as possible in readiness for the launching of the great scheme, and the Syndicate, therefore, arranged for two further pumping stations, one at Hosh of 19,500 acres, and the other at Wad-el-Nau of 30,000 acres, one third of the area in each case being under cotton. The last of the four pumping stations, that of Wad-el-Nau, was completed in 1923 and by means of these areas and the Zeidab estate the output of cotton has gradually been increased, while the stations have been invaluable both as

Picking Cotton in

training centres for cultivators and for familiarising the natives with the value of cotton as a staple crop. For the last two years or more the activities of the Syndicate have been concentrated on the work of development on the area now irrigated by the Dam, and when at long last the time arrived this summer for the period of rapid development all was in readiness for the expansion of operations. Whereas last year the Syndicate had under cotton on its pumping stations and the Zeidab estate about 25,000 acres, this season, including the Kassala Cotton Company (reference to which will be made later), in which the Syndicate is largely interested, the total area under cotton is nearly 100,000 acres, and next year it is hoped to add a further 20,000 acres in the Gezira alone. But even with 100,000 acres, which would be what that addition will make, the Gezira total represents only a very small segment of that potential cotton region, though it is all that it is intended to utilise at present pending further Nile storage facilities. There are actually three million acres available in the Gezira, while it is possible

Digitized by Google

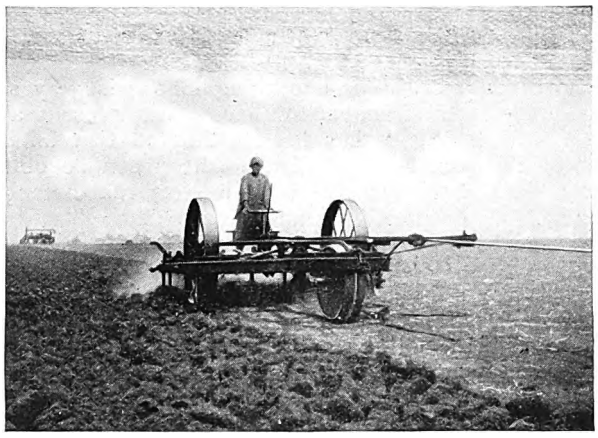
PIRE COTTON PRODUCTION

that a further million acres might be brought under cultivation. But the Gezira, great though its potentialities are, is only one of the regions of the Sudan that promise to increase Lancashire's resources in the future.

Methods of Cultivation.

Cotton is grown in the Sudan under three different sets of conditions, either by artificial irrigation, under natural flood, or under rain. The main area under artificial irrigation is, of course, the Gezira plain. Other small areas include the Zeidab estate and the Berber and Dongola pumping schemes. There are two natural flood regions —Tokar and Kassala. Tokar, which comprises the Baraka delta, is said to have the best climate for cotton growing in the Sudan. The land is Government property, and 40,000 to 50,000 acres are sown yearly, but a satisfactory crop is usually obtained on not more than half the area. The flood region of Kassala is the Gash Delta, served by a mountain stream which, like the Baraka, rises

the Sudan.



in Abyssinia. The Kassala Cotton Company was formed for the development of this district, where the area annually flooded has been four to five times that at Tokar, and the transport question, which has been one of the principal problems, has been largely solved by the construction of the railway from Thamiam on the Port Sudan line to Kassala. Last year 15,000 acres were placed under cotton, and it had been intended to double that amount this season; but unfortunately there was a poor flood, and it is stated that it is not expected that more than 10,000 acres will be cultivated next year. Last, and least as regards the present, but very important potentially is the rain-grown crop. Cotton has hitherto been mainly grown under rain in Kassala Province—in the Gedaref and Mefaza districts—in the Blue Nile Province along the river, and in the Fung Province, the White Nile Province, and the Upper Nile Province. It is in the southern areas, where the rainfall is heaviest, that there is a real prospect of the development of cultivation on a large scale. There are, however, many difficulties that will tend to hamper progress. For one thing labour is very scarce, for another the transport difficulty will present a most serious obstacle. It has been estimated that an output of 500,000 bales of rain-grown cotton can be obtained, but while that is conceivable, it is clear that a long time must elapse before this total is reached.

Types of Cotton.

The Sudan divides her affections between Sakellaridis and American cotton. The former is grown in the Gezira, and the Baraka and Gash Deltas, and to a minor extent elsewhere. American is grown on the Zeidab estate, and in the Berber and Dongola Provinces, while the rain-grown cotton is also American. How the two types are divided may be gathered from an estimate of the crop for the past season, giving 117,450 kantars of Sakellaridis and 78,800 kantars of American. In the immediate future the proportion promises to be materially modified in favour of Sakellaridis. From the Gezira alone, given satisfactory conditions, a minimum output of 240,000 kantars should be forthcoming and, if expectations are borne out, the yield by 1927 may be 450,000 kantars or even more. But cotton is a precarious commodity to prophesy about; there are so many contingencies to be taken into consideration that it is rash to suggest any definite output for a given year. While events are developing so satisfactorily in regard to the Gezira, it is impossible to write with equal confidence about the Kassala region. A yield of from 150,000 to 180,000 kantars is looked for from the Gash Delta, but it remains to be seen how far estimates may have to be modified as a result of the use to a certain extent of the Gash water in Eritrea. Taking a broad view it seems that the Sudan may now be expected to provide at least a minimum of 80,000 bales of Sakellaridis alone in the next year or so, and with the Gezira scheme still in its infancy it can well be realised what assistance the Sudan is likely to render to the Empire in the supply of cotton in the relatively near future. The Sudan already counts in Empire cotton production; when the present area being utilised in the Gezira has been trebled it will become a factor for Lancashire, always having regard to the quality and staple of the cotton. The output of rain-grown cotton is at present relatively small, though by no means a negligible factor in the Sudan's cotton production. Every effort is being made to encourage the extension of the rain crop, and it is interesting to note that the cultivators are taking an increasing interest in it. While the rise in output will be small at any rate at first, compared with that on the irrigation scheme, it promises to be steady, and, as stated, an output of 500,000 bales of rain-grown cotton is held to be feasible. Further it is estimated that in due course a minimum of 1,000,000 bales of irrigation and flood-grown cotton will be available. These totals seem startling in relation to the present output of the Sudan, though they represent by no means the full capacity of the region. When these expectations are realised, the Sudan will loom fairly prominently in the world's cotton production, and, while even 1,500,000 bales may seem small in relation to the total production, it would suffice, with the production from other parts of the Empire that may be looked for by that time, to go far to safeguard Lancashire against any vicissitudes of the American crop. Memory is traditionally short; but it may be hoped that when the Sudan is fulfilling her destiny as a cotton region there will always be due remembrance of the part played in that great development by the Sudan Plantations Syndicate, whose work has been an Empire asset, and may not inaptly be compared to the pioneer task of John Company in opening up another great country.

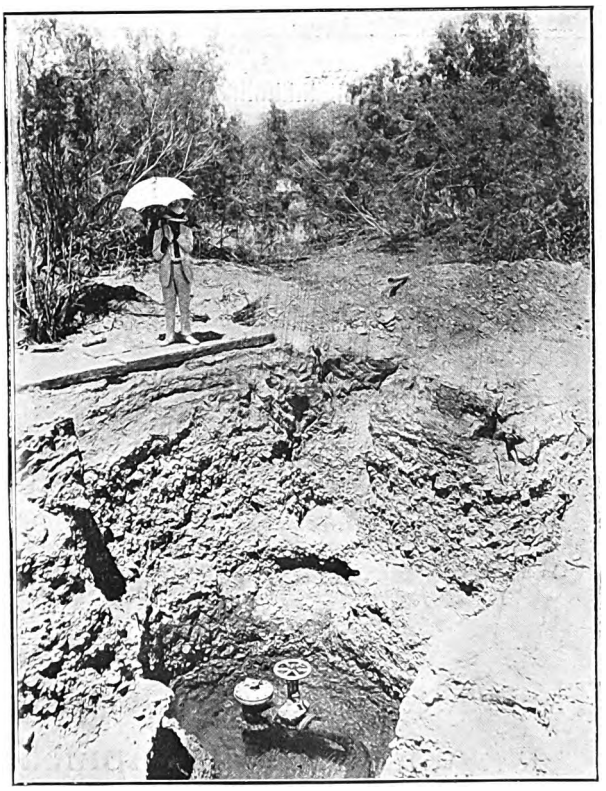
alities use Port Sudan as a regular port of call, and twenty other companies pay intermittent visits.

Of the commodities in which Port Sudan deals, cotton is probably the one which attracts the greatest public interest. Of this, 8,364 tons (46,074 bales) were exported in 1924 as against 2,318 in 1913. The export is almost

SHEIKH BARGHUT'S TOMB.
The original white landmark of Port Sudan, with coal transporters in the background.

entirely confined to England. The cotton comes principally from five different sources in the Sudan, mostly at a great distance. The great and growing source of cotton is the Gezira plain south of Khartoum, now watered by the off-take of the Nile from above the Sennar Dam, on the Blue Nile, which was completed last July. Another important cotton area is the delta of the River Gash in the Kassala Province, an inland torrent which flows violently down in the autumn rains from the hills of the Italian colony of Eritrea, and, striving to reach the Nile, spreads over and fertilises a great triangle of flat land north of Kassala town. Several estates, on the banks of the Nile north of Khartoum, irrigated by pumps, provide a fair quantity, and great tracts of land watered by tropical rains far south of Khartoum are beginning to give promising indications. None of these is less than 250 miles from Port Sudan, and most of them are very much further.

There are two cotton areas near Port Sudan, one at Tokar, about 100 miles to the south, and a smaller one at Khor Arbaat, about 20 miles north. Both of these are the deltas of seasonal torrents which pour out of the hills and spread themselves over the littoral plain before they reach the sea.



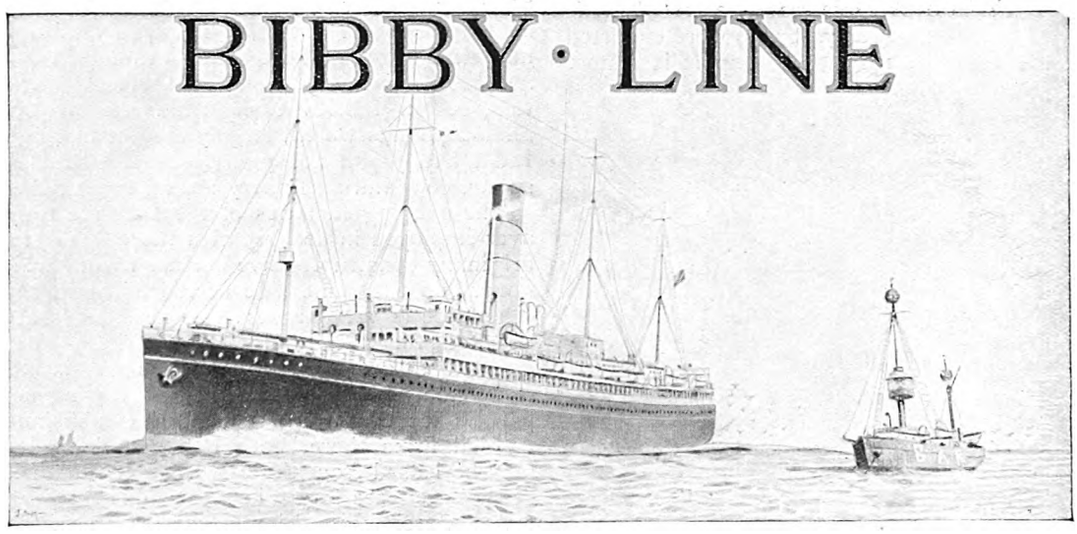
There are warehouses for storing cotton in the port, there is a ginning factory, and there is an increasing cotton market. This last is the most interesting of the developments. If the cultivation of cotton spreads, as there is every indication that it will, over great areas of now unproductive territory, it seems likely that Port Sudan will become an important buying centre.

Gum is the next most important thing which goes through Port Sudan, but it is only shipped from there. The productive area and the market are up country, principally in Kordofan, to the south-west of Khartoum. The Sudan exported over 20,000 tons of gum last year, in value about £850,000. Great Britain, the United States, France, Germany and Italy are the principal buyers, in that order. Other merchandise is millet, sesame, hides, live sheep and cattle (though the export of the latter is chiefly direct to Egypt by land). We must not forget to mention gold and ivory, of which about £40,000 and £50,000 worth respectively were exported last year. The ivory comes chiefly from the Central African Provinces of Mongalla and the Bahr el Ghazal, and the gold from the Red Sea Hills. Dates, senna, ground nuts and beeswax are other less important products, all increasing by degrees as the populations grows and the communications improve.

There is a considerable production of salt quite close to Port Sudan, and though at the moment this supply is consumed inside the Sudan, it is hoped that an export trade may develop. The Port handled in import trade a total of 481,226 tons in 1924. Of the commodities composing this, cotton fabrics easily head the list with nearly a million pounds worth, largely bought in England, though India and Japan are pressing this trade hard. Coffee, sugar, coal and machinery are all large items.

The existing facilities of the Port are fully and indeed over-employed in dealing with the shipping. There were originally constructed five berths, two of which were coal quays, on the same side of the harbour. Now, on the other side of the harbour, two new quays are being constructed for coal, and all five original berths can be devoted to ordinary shipping. There is still room for expansion when necessary. The growing activity of the port is leading to an increased establishment of commercial firms there, both native and foreign. Ground may be leased from the Government for business or residential premises for periods extending to 80 years.

An interesting and important feature of the Port is the new water supply, which is drawn by a pipeline from a catchment area in the hills 25 miles away. This scheme was mooted at the time the Port was founded, but thought too expensive, and a source nearer the town, though far less plentiful and less pure, was utilised for ordinary purposes and a condenser supply was established for drinking purposes in the town and for supply to ships. Last year the money was found for the better scheme and before the end of April a six-inch pipe over 20 miles long was discharging 200,000 gallons of water a day into Port Sudan. This supply puts the Port at a great advantage compared with other ports in this region which can only



PORT SUDAN'S NEW WATER SUPPLY.
The headworks at Khor Arbaat, whence 200,000 gallons of water reach Port Sudan every day through a 20-mile pipeline.

supply condenser water, at a much higher price, to ships calling. The distinctness of the submerged pipe in the photograph which accompanies this text shows that in limpidity at least this water leaves nothing to be desired. It is also, in fact, extremely good drinking water.

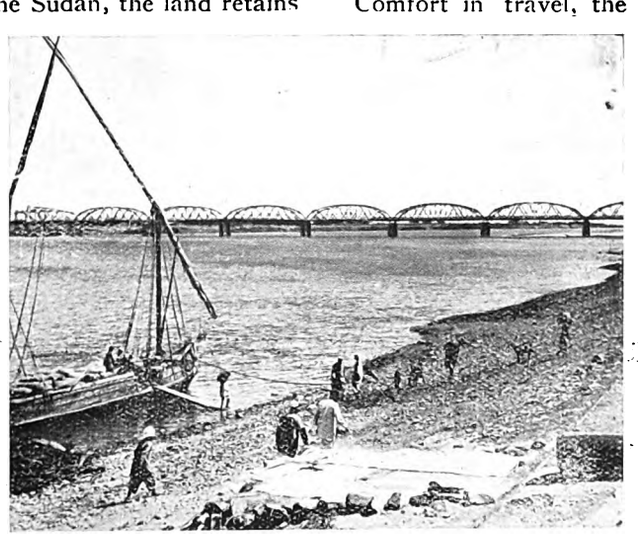
The SUDAN As A Winter Resort



View of the Palace, Khartoum.

To those who travel for pleasure or for sport there are few countries in the world that offer attractions greater than those of the Sudan during the winter months. The climate is excellent and the tourist may be certain of constant sunshine tempered by invigorating breezes, rendered still more bracing at Khartoum by the altitude of some 1,200 feet at which the town stands above sea-level. The air, warm and dry, acts as a rapidly effective tonic on those in search of health, and the town, thanks to the abundant sunshine and the care of the Department of Public Health, enjoys perfect hygienic conditions. During December, and especially during January, the country is at its best; the Nile is still high and shows to its greatest advantage. But the call of the Sudan is not only to those in search of pleasure-trip or the finest big-game shooting in the world. The Sudan appeals to many interests besides these. The appeal to the artist will be in the wonderful colouring of the desert and the river and in the panorama of native life which is unfolded in the bazaars of Omdurman and the grain markets of the South. Those interested in economic development may see for themselves the methods by which, in the short space of a quarter of a century, the Sudan has been transferred from a state of bankruptcy to one of prosperity. The archæologist may read in the ruins of Nepata and Meroe the story of a civilisation twenty-seven centuries old. The ethnologist may study at first hand the manners and customs of the many diverse races of Northern Africa.

No visitor to the Sudan can fail to be impressed by the immense change that has been wrought during the period of British government. An old traveller, writing in 1803, described the Sudan as a "miserable country inhabited by a miserable people." Barely 37 years have passed since the overthrow of the Dervish power at Omdurman, but the results that have been achieved by good government and justice within that brief period compel the admiration of the traveller, for whom, despite all the changes in the moral and material welfare of the Sudan, the land retains the old magic of its appeal. The marvellous rapidity of its social and economic development; the vast extent of its territory: the historic associations of Khartoum; Omdurman, instinct with all that is characteristic of native life, combine to make the Sudan a country of perennial interest.

The completion in December, 1899, of the railway from Halfa to Khartoum and the placing on the Nile between Shellal and Halfa of the comfortable express mail steamers of the Sudan Government have made the journey a rapid and easy one. The tourist from London can reach Khartoum in nine days. If he arrives by way of Cairo he does not actually enter Sudan territory until the steamer is within a few hours' distance of Halfa, but he is nevertheless conscious of a change as he leaves Shellal behind him and steams past the half-submerged pylons of the great Temple of Philae. From Luxor to Assuan everything still speaks of Egypt. Beyond the First Cataract he enters on a new land. Here, where the Nile flows through the Nubian Desert, sand drifts and naked rock slope to the very edge of the water, and, except for the narrow strips of cultivation near the villages, the brink of the great river is also the edge of the desert. At Korosko the traveller again touches the Sudan, for this tiny village was once the northern gateway of the great desert caravan road that led by the wells of Murat to Abu Hamed and Khartoum. To this spot came the caravans from the South, bringing down to Egypt the ivory and gum, ostrich feathers and gold along this desert road, which is as old as history. Here Gordon landed from his steamer on his last journey to Khartoum, and the curtain rose on the final act of the tragedy of the old Sudan. Then, having passed the Rock Temple of Abu Simbel, the steamer draws up at last at the landing-stage of Halfa. From the train, on the journey from Halfa to Khartoum, the traveller sees the limitless expanse of the Nubian Desert studded with rock islands rising sheer from the plain and reflecting their massive heights in the mirage that plays continually beneath them. The desert crossed, the banks of the Nile again come into view with villages and cultivated lands and, away from the river, stretches of scrub-land, and here and there great heaps of boulders swirled into pyramids by the sea currents of past ages. The journey is made in the most modern type of trains designed to ensure the maximum of comfort, smooth running, and freedom from dust and fitted with smoked-glass windows, electric fans and lights and also the latest improvements in coach construction.

The Blue Nile Bridge, Khartoum.

Comfort in travel, the certainty of perfect weather, social life as strenuous as individual taste desires, surroundings new and interesting—all these the Sudan offers in full measure, while Khartoum, with its wide streets, its shady gardens and avenues of trees, is a model of what a town in the tropics should be. The embankment road, which runs the whole length of the town and is shaded by magnificent trees, is in its proportions one of the finest thoroughfares in the world, and the Palace of the Governor-General, with its delightful gardens laid out by Lord Kitchener himself, takes

PORT SUDAN - KHARTOUM MAIL TRAIN AT THAMIAM

high rank among the buildings of its kind. In order to see the native side of life the tourist must cross the river and visit Omdurman. Khartoum is an English town with native inhabitants, Omdurman is a typical African city. To the north lies the long low ridge of Kereri hills, the scene of the final struggle against the Dervishes. The town itself stretches for some six miles along the river, approaching at times nearly two miles in width. Records of Dervish times still remain in a number of houses, including the Beit-el-Amana, or Mahdi's storehouse. The Mahdi's tomb was destroyed and is now a ruin.

The traveller who comes to the Sudan for big-game shooting will be well advised to make all the preliminary arrangements with the Government Agency in London before leaving England. He will then find the way smooth for him when he reaches Khartoum and will receive every help from the officials of the Game Preservation and Steamers Departments. As a big-game country the Southern Sudan has no equal in the world, nor is there any place where the sport can be pursued under better or more agreeable conditions. For the sportsman the Upper Nile is a paradise, but the journey by steamer southwards from Khartoum is such as to appeal no less strongly to those who visit the Sudan with interests other than those of sport. In so large a territory the sportsman has a highly varied choice of shooting grounds open to him. He may visit the swamps and jungles of the White Nile, travelling by steamer or sailing boat, or, using camel transport, he may journey through the drier country of the Blue Nile tributaries and, on either of these expeditions, he will meet with a large variety of game. About fifty species occur in the Sudan, of which no fewer than eight are not found elsewhere. The list of big-game comprises the elephant and hippopotamus (both these are as abundant in the Southern Sudan as anywhere else in Africa) and both the black and white rhinoceros. Of the antelope tribe some thirty-five species are recorded, of which six are peculiar to the Sudan. In Southern Sudan the giraffe abounds locally, and, in the extreme south, the zebra. Buffalo and wart-hog are fairly plentiful in forest regions. The lion and leopard are ubiquitous south of the desert areas; also the cheetah, besides hyenas and jackals, with crocodiles in thousands. Within the forest regions of Kordofan and southward—throughout all the vast country of bush, steppe, and marsh that stretches for hundreds of miles to the borders of Uganda, an uninterrupted succession of charming pictures of wild life—great and small, furred and feathered—will be seen. The heavier bush shelters elephant and buffalo; the open prairies teem with tiangs, and white-eared and Uganda cob: the adjacent swamps form the home of the rare saddle-backed lechur, while the amphibious silutunga confines itself to the extreme unpleasantness of the "Sudd"—practically impenetrable by man. Add to all these an abundance of leopards, hyenas, crocodiles, and numerous other creatures and the sportsman can surely wish for nothing better than what the Sudan offers in such fruitful abundance.

S.S. "OMDURMAN" ON THE WHITE NILE.

EXCAVATING WORK IN THE GEZIRA.

An immense amount of work has been entailed in the excavation of the canals to distribute the water from the Makwar Dam. In digging the main canal 9,700,000 cubic metres of earthwork had to be excavated, while altogether 15,300,000 cubic metres of earthwork were dealt with in excavating the canals. Mechanical excavators were utilised for the main canal and branches, the type utilised being steam-driven drag-line machines, which were found most suitable for the work. Altogether 24 excavators were employed, including ten Class 10 Rustons, three Class 60 Rustons, and one constructed by Messrs. Lobnitz, of Renfrew. The Class 10 Rustons were principally used for the branch canals. The Ruston excavators worked on oil fuel, as wood was not available in the north part of the main canal area where they were employed, but in the southern section wood was burnt.

THE RAPID GROWTH OF PORT SUDAN.

(Continued from page xv.)

It is interesting to indulge in prophecy as to the future of the port. Its future mainly depends on the growth of production in the Sudan and in Central Africa generaly. The growth of production depends greatly on the improvement of communications. Railways are commonly spoken of as links between places which can be forged at will. This is true of military and strategic railways, but not of those of commerce. The latter resemble rather ground creepers finding their way irregularly and slowly wherever they can find soil fruitful enough to sustain them. Point gets joined to point not with any main idea of direction, but because there is something worth carrying between these two points. An unproductive area cannot carry a railway, but if a military necessity arises the unproductive area will be crossed, or if something is done to make it productive the railway will go to it. The latter we hope will be the case in the Southern Sudan—the great fertile spaces of the Bahr el Ghazal now unproductive (largely because they cannot be got at through the belt of Nile marshes) will be opened and the Sudan Railway system will be linked to systems to the south of it. If this happens we may look to see Port Sudan as the northern terminus of a great African system of lines, and a centre of commerce extending far beyond the limits of the country it now serves.

These notes are indebted for the photographs which illustrate them to Mr. G. W. Grabham, Geologist to the Sudan Government.

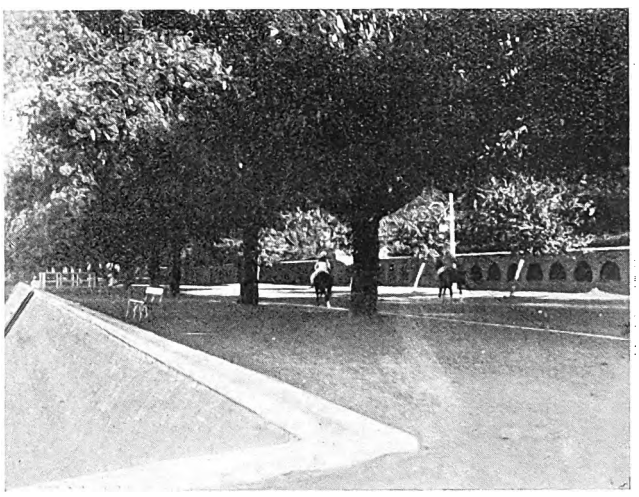
other products which play a prominent part in the export trade at present such as gum, dura and sesame. The average export of gum since the War has been roughly 16,000 tons. The high-water mark was reached in 1923 with 22,425 tons, while in 1924 the total was 20,363. During the first nine months of 1925 16,121 tons were exported of the value of £E636,678, this item being second to cotton in the list of exports. For the same period dura figures at £E211,960, while the value of the exports of sesame was £E175,819. But, while these and other items in the Sudan's exports are by no means negligible, their totals rather serve to bring out the overwhelming importance to the country of cotton and how essential it is in the best interests of the Sudan to make increasing efforts to extend the area under this vital crop.



The Problem of Communications.

In the administration of the Sudan Great Britain has aimed high, but comparing the condition of the Sudan now and as it was before the Occupation, and taking into consideration the destiny now opened out for the country, it is at least permissible to argue that the aim has been surpassed in the achievement. Certain it is that in no other part of the Empire has the civilising mission of this country been so pre-eminently fruitful. If it is success to transform waste places into rich plains, to change poverty into well-being, and to bring a country within measurable distance of being an important factor in world economics, then Great Britain has been successful in the Sudan. But great though the advance has been (the full fruits of which will soon be apparent), much more remains to be done, before it can be contended that all that administration and enterprise can do in making smooth the economic path of the Sudan has been accomplished. The main obstacle to progress is summed up in the word communications. Much has already been achieved in this direction, notably in railway construction, but the Sudan is a vast country, and railway extensions must bear some relation to population or, as in the case of the line to Kassala, to the existence of a definite immediate object to be served. In any adequate solution of the transport question the motor must play its part. The motor car has been seen in nearly every part of the Sudan, but

Physical Drill at Gordon College, Khartoum.

commercial motor services are not yet fully developed. Motor transport is an essential factor in the increase of rain-grown cotton, and it may be hoped that in the near future its use in the opening up of new areas will be by which an increasing quantity of goods is being carried. extended. Judging from the work that has been, and is being done in the extension of services and in the construction of roads, this will soon be the case. Of the existing services mention must be made of that from Rejaf in Mongolla Province to Aba in the Belgian Congo, Last year saw the initiation of a service from Mongalla south-eastwards to Torit, which is being used to some extent by passengers from Uganda and Kenya, and is designed as a stage in the opening up of a route between Mongalla and Nairobi. This development of communications between the frontier provinces and other British possessions south of the Sudan should have its influence on trade developments in the future. In the interior provinces the same activity in road making is to be noted. Thus the most recent report on the Nuba Mountains Province, covering the month of October, shows great

Khartoum : Embankment Street.

progress in the construction of motor routes. By the end of that month the El Obeid road was open for cars as far as Kadugli, while it was anticipated that the Kadugli-Talodi section would be completed by the end of November. Then a road from Talodi to Rahad was almost ready for traffic, while work was proceeding on the following roads, all of which it was expected would be available for motors by the middle of December at the latest:—Dilling-Rahad road *via* Sungikai, Dilling-Abu Talodi Kaka road *via* Gedir and Shegg and Id-el-Haluf, TalodiKaka road *via* Gedir and Shegg. These developments should be of considerable interest to the British motor manufacturer.

Finally, in the question of communications we have now, of course, also to take into consideration the influence of the aeroplane. In the course of the survey for an air route from Cairo to Capetown, Mr. Alan Cobham has flown along the Nile Valley, and he testifies to the fact that this section is ideal for flying, so that we can now look forward to the time when regular services will ply between Khartoum and this country, entailing an enormous saving of time, for Cairo can be reached from Khartoum in a day. The influence of more rapid communications on the commercial relations of Great Britain and the Sudan is bound to be most pronounced; for not only will it be possible to fulfil orders for a large variety of commodities very speedily, but it will also enable the close personal contact which is so desirable in business, and will assist in promoting a wider knowledge of the country and its needs. Distance is indeed becoming annihilated when an Inspector of the Sudan Plantations Syndicate in the Blue Nile Province can hear by means of wireless a concert that is being given in London!

THE MAKWAR DAM.

(Continued from page ix.)

and their inhabitants are insufficient to cope with the needs of the busiest periods of cultivation. Much of the labour, indeed, is carried out by a nomad population of Nigerian tribesmen on their way to and from Mecca. As the average Sudani, so long as his money lasts, will employ labour rather than work hard himself, it is not uncommon to see the labourers forcing up prices above their fair level and making full use of the economic truth of supply and demand, until some control is applied to ease the situation.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Greek Dictatorship.

General Pangalos's experiment in Greece deserves to be followed abroad with an open mind and with some sympathy. It is not necessary to think quite as harshly as he would have us do of the three political leaders whom he pillories in particular; but the fact remains that an over-riding necessity for Greece, if she is to prove equal to her new opportunities, is to rise above the type of rabid politics that has been her curse in the past. There were probably not many olive-branches held out to the Opposition leaders; they may have been urged often enough to "play the game," but it was not made easy for them to do this. They certainly misjudged General Pangalos and most likely failed to give him credit for motives which had nothing to do with self-interest or love of power. Their wisest course, therefore, now, both in their own interests and in those of the country, is to step down from their political platforms and, identifying themselves with the people of Greece rather than with any political section of them, to offer what contributions they can to the well-being of the country, which General Pangalos clearly has in view. The postponement of elections will worry few people in Greece, if a Council of State is formed of "all the talents" to act as a legislative and administrative body in virtual control of public affairs. General Pangalos may look to the Army to uphold the security of the State and to preserve it from internal chaos; but he will be well advised to look outside military circles for some of the brains and statecraft required for the successful administration of a modern State. Greece appears to have one foot on the threshold of remarkable prosperity, but the other foot is embedded in the quagmire of a depreciated exchange and she is unable to move forward. This difficulty is very largely of her own contriving, and it is unlikely that she will find the remedy by taking counsel with herself alone. She can have the advice for the asking; but to act upon it may entail just that measure of self-discipline for General Pangalos that he has determined to impose on his political opponents.

The New Government in Bulgaria.

M. Liaptcheff, the new Bulgarian Prime Minister, has not gone outside the ranks of the Democratic Entente for his Cabinet; but he has made it as representative as possible of the different units of that body. The harmony of the Entente seems to be assured by the fact that M. Tsankoff, the late Prime Minister, has accepted nomination as President of the Sobranye. The New Ministers are all men of experience and of foreign education. M. Atanas Buroff, Minister for Foreign Affairs, who is head of the National Party, in succession to the late M. Gueshoff, has had a business training; Professor Vladimir Molloff, Minister for Finance, who acquired his education in no fewer than six countries, is, on the other hand, a University Professor. The only Ministers to survive the change are General Vulkoff, generally credited with being the "power behind the throne," M. Christoff, who exchanges the Ministry of Commerce and Industry for that of Agriculture, and M. Boboshevski, who, having been in charge of Commerce and of Justice in the late Cabinet, reverts to the former. As an earnest of the new policy of reconciliation that M. Liaptcheff proposes to inaugurate, King Boris has exercised his prerogative of pardon in the case of a large number of prisoners, and it is to be hoped that no time will be lost in enrolling in the service of the State what talent there may be in the moderate wing of the Agrarian Party. There could be no more useful preliminary to negotiations for a foreign loan, which is so essential to the rehabilitation of Bulgaria. Until better relations are established between the Agrarians and the so-called Bourgeois parties, it will be hard to disabuse foreign capital of the idea that the

Digitized by Google

country remains exposed to the risk of a domestic upheaval, with the possible danger of a repudiation by a new Government of the acts and commitments of its predecessors. Those who know Bulgaria well can hold these fears to be altogether groundless, but it is well that the fact of their existence should be appreciated by those in authority in the country.

Anglo-Turkish Relations.

As was anticipated by those who know anything about Turkey and the Turks, there has been a steady improvement in the relations between the Republic and Great Britain ever since the declaration of the Mosul award. With the stunt-mongering section of the British Press routed into silence on the subject, the Turks are now setting themselves to try to understand the anomaly to them of a Government that can remain unalterably firm on vital matters, while showing the utmost good will and readiness to meet Turkish susceptibilities and requirements in any other direction. It is not to be wondered at, in view of certain Press utterances, that the Turks expected Great Britain to yield all along the line; but the campaign has miscarried, and a large number of sensible Turks are beginning to realise that the Republic, having fared quite well for seven years without Mosul, may possibly be able to dispense with the vilayet for all time. In any case, they, and the Angora Government as well, seem minded to explore the possibilities that present themselves on the basis of giving the Mosul question the go-by and of seeking a general settlement with Great Britain. It is much to the credit of Mr. Baldwin's Government that it has been able to convince Angora so quickly of its good faith and reasonableness. Next week Sir Ronald Lindsay, British Ambassador to Turkey, is expected to proceed to Angora, where in personal touch with the Turkish Government he will be in a position—possibly no one better, for he has long since compelled the respect and esteem of the Turks to a degree that we must go back many years in the history of British representation in Constantinople for a precedent—to prepare the way for an understanding with Turkey that will ensure the peaceful and rapid development not only of that country, but also of the whole of the Middle East.

A Balkan Pact.

Having compelled Greece to repudiate her Minorities Pact with Bulgaria and then having dismissed rather brusquely Greek overtures for a Balkan Pact, Yugoslavia has taken an heroic step in suggesting, so soon afterwards, her desire to see a Balkan understanding established. When M. Rendis, the late Greek Foreign Minister, broadcast his proposal for a Pact, the reply of the Belgrade Government was to the effect that, before the matter could be usefully discussed, there were a number of outstanding questions in the Balkans that required to be liquidated. The hint, in view of the state of the Salonika controversy, was sufficient to make the Greek Government drop the subject, and it will not be lost upon Athens that the present suggestion of Yugoslavia takes the form of an invitation to Greece to settle questions in suspense between the two countries as a preliminary to the possible arrangement of a Balkan Pact. It is to be hoped that Greece will meet the proposal in an accommodating mood. Both countries are clearly on the threshold of big economic developments, if they choose to remove internal and external political obstacles. In this respect Yugoslavia is more favourably placed than Greece; but even she can benefit from the certainty, if she can acquire it, of complete freedom from anxiety regarding the risk of international complications.

Gladstone and the Balkans.

The respect and affection with which Gladstone's memory is still cherished in the Balkans may seem not to fit in well with dictatorships; but the fact argues a welcome sense of gratitude for favours received. For Gladstone is remembered in Greece for the return of the Ionian Islands and in Bulgaria for his denunciation of the Turkish atrocities which preceded the liberation of the country from the Ottoman Empire. Some thirty years ago Greece resolved to set up a statue in Gladstone's honour, but before the formal ceremony took place, the blockade of Greece in connexion with troubles in Crete occurred and Gladstone's statue was unceremoniously relegated to a cellar, until Great Britain should cease from offending Greek susceptibilities. It has now come into its own. At the end of December Bulgaria did honour to Gladstone's memory on the occasion of the presentation by Mr. W. H. Gladstone and Lord Gladstone of a framed portrait of the late W. E. Gladstone to the school at Sofia that has been named after him. It was significant that a simple incident of this nature should have been given the status of a public ceremony attended by the Prime Minister and members of his Government.

King of the Arabs.

The attempt of the Shereef of Mecca to proclaim himself King of the Arabs in 1915 contributed to his subsequent undoing, and the title has passed to his successful rival, and, it has to be admitted, a worthier holder, Sultan Ibn Saoud of Nejd. According to a message from Jeddah Sultan Ibn Saoud has been proclaimed King in Mecca, and, unless he prefers a cumbersome title enumerating the different portions of his Kingdom, he is likely to be known briefly as King of Arabia or of the Arabs. Although there was no room in the Peninsula for both King Hussein and Sultan Ibn Saoud, there is no reason why the Arab world should not now accept as a permanent settlement the division of its territory between Central Arabia, under King Ibn Saoud, Iraq, Transjordan and the Yemen, with such other minor coastal divisions as can claim to represent an established state of affairs. In this connexion a tribute of commendation may be paid both to ex-King Hussein and ex-King Ali for having accepted quietly the logic of events. The Emir Ali has withdrawn to Iraq, a very natural refuge, and no exception need be taken to the cordial welcome extended to King Faisal's brother. The presence of Great Britain as Mandatory Power in regard to Iraq and Transjordan and British friendship of long standing with the Sultan of Nejd are sufficient guarantees that no intrigue will be allowed, still less encouraged. Nor need it be feared that the Emir Ali aspires to the rôle of Pretender. Nowhere are the obligations of honour imposed on hosts and guests better understood than among the Arabs.

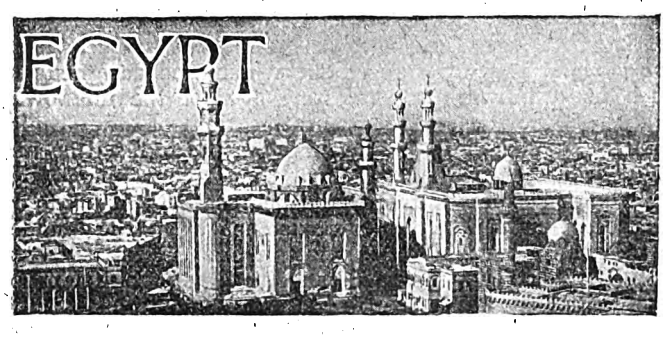
THURSDAY, JANUARY 14, 1926.

ARABIA FELIX IN PACE.

The turn of that Arabian wheel whose gyrations no one has ever been able to forecast, much less to determine, has of late been gratifyingly in favour of that Power which is responsible for Iraq and Transjordan, the mandated territories to the north of the immemorially unstable Peninsula. For, as far as is humanly possible, the desert States of Iraq and Transjordan are now defined, if not delimited in an easily observable sense; and in the White Paper that has just been published (Cmd. 2,566) may be studied exactly the nature of the compromise that was reached, last November, on the part of the ruler of Nejd and of a British Representative of the two mandated States, between the traditional desert or tribal law, and the new international law. The two Agreements which Sir Gilbert Clayton and Sultan Ibn Saoud made on the subject of Iraq and Nejd and of Transjordan and Nejd are known as the Bahra and the Hadda Agreements, and they are, we think, likely for long to be regarded as models of their kind. One hardly knows whom to congratulate the more, Sir Gilbert or the Sultan, for both acted in the highest spirit of statesmanship. The great Wahhabi chieftain has recognised facts—a thing which, when it signifies the respecting of privileges of a neighbour who might easily be overcome in battle, comes to an Arab ruler not quite as second nature; and Sir Gilbert has most happily completed the task which Colonel Knox, building on Sir Percy Cox's sapient foundations, began at Koweit about two years ago and which unfortunately, but inevitably, in consideration of the fact that the general situation in the Arabian Peninsula was not then sufficiently clarified, he had to relinquish. The ex-Chief Secretary of the Palestine Government has accomplished something of really imperial importance. For so long as Iraq enjoys the guidance of Great Britain—a period which, by the way, it is impossible to indicate—the proprieties of its southern frontier will be loyally observed by Nejd. The trouble that comes from tribal raiding, from peaceful migration, or from moves prompted by sheer economic necessity, is, of course, one of old standing: the urge northwards from Nejd to Iraq has been a constant one with the Arabs. Nor have the Wahhabis of Central Arabia, when arrived in Iraq, always forsaken their allegiance (except as taxpayers!) to the Sultans of Riyadh. Now for some years after the creation of King Faisal's State, the presence in Iraq of Ibn Saoud's subjects was a matter of concern both to the Nejd and to the Baghdad Government, and it would, perhaps, be foolish to suppose that the tribes will at once and scrupulously respect a frontier which experts in remote capitals have pleased themselves to draw. But a definite beginning has been made, and it was a wise conception which prompted Sir Gilbert Clayton and Sultan Ibn Saoud to agree that violations by bedouin of the terms of their Treaties should be punished in accordance with tribal custom. This was in effect the happiest compromise between the notions of the desert and the ideas of the sown. Similarly with the Hadda Agreement, which included a definition of Transjordan's frontiers as well as a description of the rights relating to the passage of tribes from Nejd to Syria and *vice versa*. That strange edifice which was designed as much as a bulwark to Palestine against the unknown forces of the desert as a gratification of the Emir Abdullah's aspirations is now implicitly recognised as an entity (albeit more mathematical than geographical) by the wild tribesmen of Nejd, the nearest of whom knew something of its inconvenient existence when they made that disastrous dash for Amman in 1923. The success of Sir Gilbert Clayton in persuading the Wahhabis to regard Transjordan in so friendly a light could have been brought about only by one who had at once the deepest insight into imperial problems and into the Arab mind.



It should not be supposed, however, that in thus getting stabilised, or at least respected, the frontiers of Iraq and of Transjordan, the British Representative was dealing with a declared enemy of the mandated States. For students of the Arabian problem, who, incidentally, are not necessarily to be confused with sympathisers with the Hashimite family, have all along recognised the loyalty towards Great Britain of Sultan Ibn Saoud of Nejd and its dependencies; the patience in spite of extreme provocation, the love of Great Britain in face of an occasional uncharacteristic action on the part of individual Englishmen, the practice of considered statesmanship when precedent and follower alike called for impetuous deed—all these, and more, are to be credited to the Sultan of Nejd. Quite patently he is, as he deserves to be, master of the Arabian Peninsula, and this country, with its vital interests in Islam and particularly in the welfare of the *hajjis*, may account itself fortunate that it has him as its friend. The fact that Arabia is now enjoying an unwonted peace is due entirely to his greatness: there are those, even, who would put his work for the Peninsula as ranking next to that of the Prophet himself. For Wahhabism as it is to-day practised is not only an inspiring call to thousands of poor bedouin: it is an example to all of that devouter section of Islam who may care to see it in its finest flowering. It is impossible yet to forecast the extent of this year's *haj*, for which pilgrims from the Far East, particularly the Javanese, will already be making arrangements; but the facts that Egypt has signified her intention to send again to Mecca the Holy Carpet, and that the Shiah centres of Islam are by now convinced that it was through no fault of the Wahhabis that Medina was damaged, point to the making of such a pilgrimage as will redound long and wide to the glory of Ibn Saoud.

But in one corner of Arabia, the Yemen, there is a ruler, the Imam Yehia, whose relations with the Sultan Ibn Saoud are still a little obscure. Here, again, is a chieftain whose friendship towards Great Britain is being but belatedly rewarded. It is gratifying, however, to record that the indifference of the past has now been worthily compensated for by the presence in Sanaa of Sir Gilbert Clayton, who, there is every reason to expect, will return thence once more with peace and honour. Upon Sir Gilbert's actual negotiations with the Imam it is too early to speak, but it is anticipated that the questions of Aden and of a commercial Treaty with the richest province in the Peninsula will have been regularised. It is not extravagant to presuppose a success similar to that which he had with Sultan Ibn Saoud, for the Imam is no intransigent puppet, but a shrewd and far-sighted friend of this country. Prophecy upon the future of the Peninsula is notoriously an idle amusement, but it does appear that Arabia is, for a time at least, to be happy in peace—which very convenient state of affairs one has to attribute to the fact that the country is now virtually governed by two loyal and communicable men, the Sultan of Nejd and the Imam of the Yemen, and, perhaps not less, to the timely intuition and the broad grasp of the situation shown by Sir Gilbert Clayton.

The Near and Middle East*

From Our Own Correspondents.

Cairo, January 3.

The Old and New Years.

Cairo saw the old year out and the new year in, as Cairo now has grown accustomed to celebrating any and every occasion, from Armistice Day to Shem el Nessim. Hotels were packed to the doors with crowds frantically seeking to be allowed to buy champagne at P.T.120 or more a bottle from staffs of waiters who, though greatly augmented for the night, struggled in vain to cope with the seasonal thirsts of unprecedented hordes of merry-makers. Normally staid men and women romped riotously, rending garments—not of their own possession, out of contrition for their misdeeds of the past year, but of other people, from sheer *joie de vivre*—and bashing hats in Dionysian delight. Contemplating the wild throngs, it was difficult to see any signs of the depression which is supposed to have accompanied the fall in the prices of cotton, or, indeed, signs of anything other than the spirit that bids us

". . . fill the cup, what bodes it to repeat
How time is slipping underneath our feet?"

Scottish Celebrations.

The Scots of Cairo, together with a considerable number of guests, spent the evening in the celebrations that, but for the death of Queen Alexandra, would have marked St. Andrew's Day. Lord and Lady Lloyd, General Sir Richard and Lady Haking and Princess Bibesco, who is a guest at the Residency, were present, and an exceedingly pleasant time was spent. The gathering was essentially an intimate one, where the speakers expressed themselves with a greater freedom than would have been possible had the Press been present in professional capacity, and the oratory was of an unusually high standard. Lord Lloyd's speech was particularly appreciated, and it was the general opinion that the new High Commissioner had added one more to the many excellent impressions he has made during the few short weeks since his arrival.

The High Commissioner and the Sudan.

Nothing has yet been announced regarding the date of Lord Lloyd's departure for the Sudan, to perform the official opening ceremony at Sennar Dam on January 21, but it is believed that he will leave Cairo on January 14 and will be accompanied by Lady Lloyd, Mr. Wiggin, First Secretary at the Residency, two Aides-de-camp, and possibly another lady member of the party. During Lord Lloyd's absence, Mr. Henderson, who is expected back from leave next week, will be Acting High Commissioner.

Political Issues.

The meeting, on Monday of last week, of Adly Pasha Yeghen and Saad Pasha Zaghloul at the house of Mohammed Pasha Mahmoud, and the subsequent issuing of an obviously inspired statement that the two political leaders "had found themselves in complete agreement on all important questions," fluttered the local coffee houses not a little, but have so far had no other visible result. The Opposition Press of all shades of opinion, Zaghloulist, Liberal Constitutional and Nationalist, continues to proclaim daily that it is impossible that the Ziwar Ministry should remain another forty-eight hours in office—but the Ministry remains and its leader, to all outward seeming, is as full of good humour and *Je m'en fiche*-ism as ever. Perhaps the real reason for the complete calm of the country and the lack of any apparent reaction to all the violently earnest clamourings is the fact that, underlying all the seeming preoccupation with what may be called the froth of Egyptian politics, is a realisation that this shouting and tumult are concerned only with comparative trifles, while underneath, as yet unseen and—by many of the noisy politicians—as yet uncomprehended, are the really big and vital issues, that the next few years must decide. First among these is the fundamental question, "Is Egypt to be governed for the benefit of the great, inarticulate, hard-working, Spartan-living mass of the people, or is it to be treated as a private property, to be enjoyed, administered, or even squandered, at the pleasure of a few fortunate individuals who by virtue of advantages of birth, quicker wits, or more elastic consciences are able to impose themselves upon their fellow countrymen?"

Neglect of the People.

During the last three or four years the welfare of the mass of the people has had little to do with framing public policy. The administration has been carried on for the benefit of individuals or of groups, now for the personal advantages of Ministers, now for the furtherance of party aims, now for the private advantage of others whose circumstances has enabled to exercise temporary control of the machinery of government. To say that such a condition of affairs, the existence of which nobody, Egyptian or foreigner, will honestly deny, is repugnant to British ideas, is to state an obvious fact. To leave aside for the moment the question of how quickly Egypt is likely to advance towards attainment of the democratic ideal of government by the people, there remains the fact that the institution of government for the people is now the country's most pressing need, a need felt by most and realised by many. If the administration can be infused with a new and now nearly totally absent spirit of zeal for the country's welfare, the majority of Egyptians will probably continue to care as little for forms and formalities as they appear now to do.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Egypt and Honours.

New Year's Honours have not usually rained thickly upon Anglo-Egyptians, and for that reason the Knighthood conferred upon Mr. Bertram Hornsby, Governor of the National Bank, and the Companionships of the Order of St. Michael and St. George bestowed upon Russell Pasha and Ingram Bey, the respective commandants of police of Cairo and Alexandria, have given all the greater pleasure. Few people outside of this country, and not everybody in it, realise the vast amount of work, often heart-breaking, discouraging work, that the British commandants of the country's two principal police forces have done during the last few years. But at least everyone here knows that these two officers enjoy remarkable popularity with British and Egyptians alike, and with nobody more than with their subordinates, and for that reason shares the pleasure which the recipients of the honours must themselves feel.

The Quartermaster-General's Visit.

Lieutenant-General Sir Walter Campbell, Quartermaster-General to the Forces, is shortly to pay a visit to Egypt, the first since 1919, when he left his appointment as Deputy Quartermaster-General of the Egyptian Expeditionary Force to become Major-General in Charge of Administration, Aldershot Command. Sir Walter Campbell will meet many of his old subordinates in Cairo, and is sure of a warm welcome, for during the three and a half years that he was "Q" of the E.E.F. he made a tremendous impression upon all who came into contact with him as a man who worked like a horse himself and expected everyone about him to do the same, but who did not sacrifice affection in earning esteem. His magnificent organisation, in face of tremendous difficulties, of the supply services of Lord Allenby's Army in Palestine was one of the outstanding administrative feats of the War.

Liubliana, December 24.

The Internal Political Situation.

It is almost six months ago since, in July, the Government of Yugoslavia passed into the hands of a Radical-Raditch Coalition commanding a more than two-thirds majority in the Skupshtina. In numerical proportion, therefore, the "RR" Government, as it is usually called, stands on a very firm foundation, and has no need to fear the Opposition. At the same time, the internal situation is still judged differently in different quarters. The opponents of the present régime of National Understanding, as the Raditch partisans above all like to call the present Government—does it not furnish the outward and visible sign of understanding betwen Serbs and Croats?—complain that the "RR" Government does too little positive work. This reproach is perhaps in some degree merited; for the present Government really cannot boast as yet of new laws passed or other work accomplished. But this apparent lack of activity should be appreciated at its just value and without bias. It must not be forgotten that the "RR" Coalition is an alliance of two parties which, up to March, 1925, pursued totally divergent policies, and were locked in deadly struggle with one another, and that their political aims up to that moment were mutually exclusive.

The Radical Party, predominantly Serbian, always centralistic and monarchistic, is the most vigorous political organisation in the young State, and with its 144 mandates out of a total of 315 is represented by almost one-half of the national deputies. In M. Nikola Pashitch, who on December 19 attained his eightieth year, it has an astute and in every respect tried and experienced leader.

The Raditchists are in the very opposite position, a young Croatian party, federalistic and republican until last March, whose leader, M. Stefan Raditch, was at one time fain to seek support abroad, in London, Vienna, and even Moscow. As from last March, the Raditch Party has certainly veered round completely towards the Radical platform; but it is only natural that such contrasting pasts cannot be effaced and forgotten overnight. It is but logical that an almost seven years' divergency of policy should entail a legacy of mutual distrust which every now and again will come to the surface, at one time over personal, at another over party questions. And that is the reason why rumours of a projected reconstruction of the Government, or even of the "RR" régime, will persist.

Meanwhile the Skupshtina was prorogued on December 16 until January 29. The inordinate length of this recess is determined by the Christmas and New Year holidays, which in Yugoslavia cover both Catholic and Orthodox festivals.

The peculiar relations between the two parties in power also complicate the difficulties within the Radical Party, where divergent currents of opinion are noticeable in the various groups which differ from one another over questions of political tactics, economic, and social questions. However, the aged Premier, the official celebration of whose eightieth birthday is not to take place until the spring, is still absolute master of the situation, and so long as he holds the reins of the party there can be no question of any changes of importance.

The Opposition.

The Opposition is limited to exercising its strength in criticism only. The most active of the Opposition parties is that of the Independent Democrats under the leadership of M. Svetozar Pribitchevitch. Until July this party was associated with the Radicals in the National Bloc Government, but it had to make a hurried exit in favour of the Raditch Party. M. Pribitchevitch is now trying to undermine the Radical influence in Bosnia, Croatia-Slavonia, and Srem, the Voivodina and Dalmatia, wherever the "RR" Understanding is not specially popular. Similarly, the Slovene Clerical leader, Dr. Koroshets, is trying to extend his influence at the expense of that of M. Raditch in Catholic Dalmatia, Herzegovina and Croatia, also in the Voivodina. M. Stefan Raditch, in return, thinks he has a chance to score in Slovenia at the expense of Dr. Koroshets. This activity shows that the various parties are not sure of the durability of the present state of affairs, but are counting upon the possibility of general elections at which each of them hopes to better its position. Nevertheless, there is at present not much prospect of their hopes

being realised, and the "RR" régime will probably last much longer than its opponents are predicting. Meanwhile this new tendency to extend parties beyond their particular region and over the whole of the Kingdom, is in itself a fresh symptom of the consolidation of Yugoslavia.

ALBANIA.

Tirana, January 4.

Parliament Adjourned.

Parliament is to remain adjourned until March. This entails a postponement of the work of the Parliamentary Commission which is inquiring into the alleged malpractices of the late Foreign Minister, Mufid Bey Libohova, in connexion with the negotiations with the Credito Italiano for the establishment of a National Bank of Issue in Albania.

Diplomatic Appointments.

The new Italian Minister, Commendatore G. Cora, has not yet presented his credentials, his arrival at Durazzo having been delayed in the hope that the above inquiry would have been concluded before the close of the year, and thus enable him to assume his new position with the ground cleared of any disagreeable issues. In the meantime he is remaining at his villa in Florence.

Sir Harry Eyres, who, on his retirement, has been deservedly honoured by the King with a K.C.M.G., is to leave this week. His successor, Mr. O'Reilly, is expected to reach Durazzo before the close of the month.

A Loan from the L.O.N.?

The Albanian Government has formally requested the League of Nations to accord it a loan of 3,000,000 gold francs in order to enable it to deal with the refugee question.

A large number of refugees (numbering from 15,000 to 30,000) are gradually making their way to Albania from Turkey, whence they have been deported after being exchanged as Turks resident in Greek Macedonia. The lot of these wretched people is particularly sad, driven as they have been from pillar to post without finding any permanent resting place. Nearly 6,000 families have already arrived at Valona, and are causing considerable embarrassment to the Albanian Government, whose financial resources are limited.

The vast proportion of these refugees is composed of excellent and experienced agriculturists; and the Albanian Government owns an abundance of good land on which to settle them. The object of the proposed loan is to enable this to be done. Lt.-Colonel Stirling, British Adviser to the Ministry of the Interior, has drawn up a carefully considered scheme, which has been laid before the League. The Albanian Government will provide the land for the refugees, while the proceeds of the loan will be expended under the direction of the League on providing the settlers with houses, stock, seed, equipment and the wherewithal to carry on until the following year's harvest. The Government has offered the land itself, as security for the loan—while it is estimated that after three years the Government will be able, without unduly burdening the settlers, to exact the usual taxes and rent (a tithe, plus one-third of the value of the crops), and this on a conservative basis of calculation should be sufficient to provide an adequate interest on the sums advanced, together with a percentage for a sinking fund.

It is sincerely to be hoped that the League will favourably consider this scheme, not only by reason of its urgent humanitarian appeal, but because it is only right that Albania should receive, on the smaller scale required by her case, the same facilities that have been or may be accorded to other Balkan States for a similar problem. The scheme, too, appears, a perfectly sound financial proposition. There is every reason to expect that these refugees will prove a hard-working and productive element. In spite of the burdens imposed, the Greek refugees from Turkey are already proving in Greece a source of new wealth and prosperity—and there is no reason to expect that a similar experiment of land settlement in Albania will not prove equally successful; while the risk to the lenders should in the Albanian case be very considerably less, owing to the excellent security offered.

CYPRUS.

Nicosia, December 15.

Proposed Excavations.

Some years have passed since exploration on any large scale was carried out at any of the numerous ruined cities, or temples, or the burial grounds of Cyprus. It is said that the Governor, Sir Malcolm Stevenson, is favourable to the undertaking of excavation on the northern coast, at the ruins of Lampousa, about seven miles, as the crow flies, west of Kyrenia. The remains cover a considerable area near the Monastery of Akheropietos, below the important villages of Karavas and Lapithos. Since the British occupation various classical sites have been preferred as more likely to yield results of interest, and have been successfully explored. At Lampousa the field has been laid open for illicit digging, but so too have all other ancient sites. There is no reason why many interesting discoveries should not be made at this site also, for the benefit of research and of the Cyprus Museum.

It was near the Monastery referred to that a treasure of silver plate, and other objects, of the Byzantine period (about the sixth or seventh century A.D.) was unearthed in 1897, and acquired by the British Museum. And again in 1902 another treasure, part of which is in the Cyprus Museum at Nicosia; but most of the find was smuggled out of the island, and bought by the late Mr. Pierpoint Morgan from an Armenian dealer in Paris. In order to carry out the proposed excavations the grant of a vote by the Legislative Council would be necessary.

Agricultural Outlook.

The weather has been extraordinarily mild. Autumn has been prolonged into December, especially on the coasts, and people sit in the open in gardens and cafés as if it were summer. The rainfall has been very unevenly distributed, the central districts having been more fortunate than others; in many of which the shortage has been serious, and agriculturists are consequently despondent. In the last week, however, there have been abundant showers, and hopes are proportionately raised. The crops may yet do well and yield a good harvest.

Signs of Development.

Good progress is being made in respect of various promising undertakings. The new silk factory at Papho should be completed in the early spring. The machinery has arrived from Italy, as well as engineers to carry out the installation. The new wine manufactory—mainly a Greek undertaking—at Perapedhi promises to become a flourishing concern, and its working in 1926 is looked forward to with great interest at Limassol and in many vine-growing villages. A factory has been built outside Limassol by Mr. H. Williamson for grinding and pressing caroubs (locust beans). The crushing of caroubs before

GEORGE J. KAYAT
Howard Str., Jaffa, Palestine,
Estate and Land Agent. Commission Agent, Import and Export,
Wishes to represent British Firms and Shipping Companies in Palestine at reasonable rates, giving entire satisfaction

Digitized by Google

exportation was advocated by Sir Samuel Baker when here, in 1879; and some years later Mr. J. W. Williamson (and Co.), who with his brother was here in the "early years," established a factory for grinding: but it was burnt down, and work ceased. Sumach also will be ground. The factory should do well. The awakening of a new spirit in the island is evident in many districts. The development of co-operative credit societies in rural districts, to whom the Agricultural Bank would grant loans of more than £100, proceeds but slowly.

December 28.

The Legislative Council.

The Budget has been discussed at considerable length. An attack was made on the police by one member, chiefly with reference to matters arising out of the elections, during which the police were alleged to have shown partiality to one of the opposing parties in one constituency. Inquiry seemed to show that the police did their duty remarkably well, in preserving order, and giving protection where needed at times and places where there was considerable apprehension of serious disturbance or perhaps breaches of the peace. The attack amounted to a charge against the police in general and not against individuals, and Members generally did not concur in attributing blame. In any police force in any country there must of course be occasional errors of judgment. But it may be truly said that it would be hard to find any body of men who, having a very great variety of duties to perform, have done, or do, better work—often under considerable difficulty—than the police of Cyprus.

Cyprus in the British Press.

Cyprus is so seldom mentioned in the British Press apart from THE NEAR EAST AND INDIA, that some articles in *Truth*, especially one of December 2, last, have received considerable attention. The writer regards Cyprus as a "sanctuary of officialdom," and suggests that the administration requires looking into, chiefly, it would seem, on the ground of extravagance, but also in respect of other grievances. "Incompetence," it is said, "seems to be the dominating note in the carrying out of public works in Cyprus." The article contains a good many inaccuracies, and a great deal more must of course be taken into account by anyone who would have a true picture of Cyprus to-day. Nicosia, the capital, is described as an ideal official sanctuary secure against outside observation. It is certainly true that Colonies should receive more attention than they do, and personal visits from Government officials at home should do much good. The Greek Press welcomes the article, and hopes that it will lead to a better realisation in England of island conditions.

General News.

As regards the mail steamers, dissatisfaction is expressed over what is known as the new agreement with the Khedivial S.S. Company. There is to be no return to a weekly service, but the steamers will connect with the Syrian ports.

Vessels of the Italian Fleet have just visited Cyprus, including the Dreadnought *Andreas Doria* (24,200 tons) and several smaller ships. Entertainments took place at Larnaca.

Exportation of caroubs has continued. The price recently paid has been 19 shillings the (Aleppo) kantar.

PERSIA.

Teheran, December 20.

The New Shah.

Since I wrote my last letter events have moved rapidly in Persia and the past week has been full of interest, historic and spectacular. Most of it was observed as a general holiday, all the Government offices and business institutions being closed for two or three days. The Constituent Assembly did not waste much time over the examination of the credentials of the deputies, and less than a week after the opening ceremony it passed its momentous decision, for on Saturday, December 12, it amended Articles 36 to 40 of the Constitutional Law and bestowed the Crown of Persia on His Imperial Majesty Riza Shah Pehlevi and his male descendants, born of a Persian mother, his eldest son, who is at present a young boy, taking the title of Valiahd (Crown Prince), and in the event of his succeeding to the throne before the age of twenty a Regent (in no circumstances one of the Kajar dynasty) to be appointed by the Mejliss. The duty for which it was convened being accomplished, the Constituent Assembly was thereupon dissolved.

As soon as the decision was made known, preparations were immediately taken in hand for the decoration of the town, and the effect produced was highly creditable. On Tuesday the new Shah drove in state from his house in a Royal coach drawn by six horses to the Palace and thence, along streets gay with bunting and lavishly decorated, to the Parliament, where he took the oath on the Quran, required of all rulers on assuming office, to safeguard, to the best of his interests, the integrity and independence of his country and to uphold the Constitution.

The next day His Majesty again went to the Palace, where he held his first Court, receiving in audience the High Clergy and Ulema, then the members of the Mejliss and of the Constituent Assembly, and lastly the Corps Diplomatique, as doyen of which the British Minister, Sir Percy Loraine, read the speech of congratulation.

Sir Percy Loraine's Speech.

After expressing his pleasure at the honour of being the mouthpiece of the foreign representatives and the interpreter of their respective and cordial congratulations, he remarked that His Majesty's accession to the 3,000-year-old throne of Persia, in accordance with the wish of the nation as expressed by its representatives in the Constituent Assembly, marked a notable date in the long and glorious history of the country, which opened a new page and presaged a new and brilliant era in the life of this ancient kingdom and of its inhabitants. He went on to say that the acceptance of His Majesty of the sovereign power, with its heavy burden of responsibilities, had given birth to ardent hopes of a better future and of all that could contribute to the progress and prosperity of the Persian Nation, and His Majesty's distinguished services, his indefatigable energy, and his whole-hearted devotion to the best interests of his country and his thorough grip of the affairs of state, were the best augury for the realisation of these hopes, which were shared by the Diplomatic Corps. On behalf of his distinguished colleagues and himself he expressed the fervent wish that His Majesty might long be spared for the accomplishment of his noble task and enjoy a long, prosperous and glorious reign for the welfare of the country.

The Shah's Reply.

In his reply His Majesty expressed his great pleasure at the eloquent words uttered by Sir Percy in his name and that of the Corps Diplomatique and at their visit to him on this historic day. He also was convinced that the high aspirations of the nation, as realised by the vote

Digitized by Google

of the Constituent Assembly, would lead to a new era, and it was in this hope that he had assumed the heavy burden of responsibility by taking in hand the destinies of the country, in which he would introduce all the reforms of which she stood so sorely in need. He hoped the Great Powers would lend him their assistance in this task, and he affirmed his ardent desire to maintain and strengthen the good relations existing with all foreign nations, especially those whose representatives were then present. He concluded by invoking the aid of the Almighty in helping him to succeed in the difficult task which he had undertaken.

Everyone then proceeded to the spacious garden in front of the marble throne, beneath which the Diplomatic Corps and officials in the Persian Government service, including the American Financial Advisers, all in their Court dress of cashmere cloaks, assembled, and shortly afterwards His Majesty, in military uniform and wearing the famous *Darya Nur* (sea of light) diamond in his *kepi*, beneath the royal aigrette, appeared, preceded by the Cabinet Ministers, who stood on either side while the Shah ascended the throne and took his seat on the bejewelled chair placed on it. Addresses of welcome were then delivered by Sardar Moazzam, Minister of Public Instruction, and the Court Poet, after which His Majesty, standing on the throne, saluted the assembled throng and retired, thus terminating the proceedings. Fireworks in the evening brought a memorable day to a close, and the Artillery Square (now called the Maidani Sepah) presented a dazzling spectacle, the Municipality building and the Imperial Bank being a blaze of brilliant illuminations.

The Coronation.

Since the new Shah has ascended the throne, the next thing, naturally, is the Coronation, but this, I understand, is not likely to take place until February 21, as His Majesty has expressed the wish that it should take place on the fifth anniversary of his *coup d'état* in 1921, which first brought him into power and placed him, a simple Colonel of infantry, on the first rung of the ladder which has eventually led him to the throne of the Shahs itself.

General News.

The British Legation were among the first to tender their Government's congratulations to the new monarch, and King George addressed a personal telegram to Riza Shah, to which the latter sent an appropriate reply.

With the change of régime the Cabinet automatically tendered their resignations, and the new Ministry will probably be formed within the next day or two, the choice of Premiership resting between Zoka ul Mulk, who has been acting as Prime Minister, and Moshar ul Mulk, the ex-Minister for Foreign Affairs.

Last Sunday three French military aeroplanes arrived here, having flown from Baghdad, a distance of over 500 flying miles, in the record time of less than 3¾ hours. They left Paris about a month ago, and their object is to examine the possibilities of a direct aerial route from Paris to Teheran in three days. There is also in Teheran at present the representative of a French aerial navigation company, who, I understand, has made proposals to the Persian Government with regard to the establishment of an aerial postal service between the two countries. The German Junkers Company, who have been flying in Persia for the past two or three years, have renewed their attempts to obtain a contract for an air mail service to Russia and on to England, and their proposals will be considered by the new Government, when this is formed.

THE PERSIA SOCIETY.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor St., W.1.

CORRESPONDENCE

***The columns of* THE NEAR EAST AND INDIA *are open orth discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.**

THE PROBLEM OF THE DERVISHES.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In the paper on the above subject read to the Near and Middle East Association by Mrs. Margaret Hasluck on December 3, as reported in your issue of December 17, it is stated (1) that the worship of buried saints provided almost the only outlet permitted by Islam to religious emotion, and (2) that the suppression of the Dervish Orders was tantamount to attacking the Mohammedan religion itself.

I trust you will grant me a little space in your columns to reply to the above statements. The first is quite inaccurate, and the second entirely misleading.

Islam does not permit the worship of saints or any other creature or object, and to saddle Islam with responsibility for the un-Islamic practices of ignorant or transgressing Moslems is as unjust as to blame true Christianity for the un-Christian actions of its adherents. The worship of God alone is the only worship allowed and enjoined by Islam. As a matter of fact, Islam claims the privilege of being the greatest champion of pure worship and unity of the Godhead. The Quran, Hadith and History of Islam all combine in the refutation of these charges. For the benefit of the reader who is not acquainted with these sources of information, one representative quotation from the Quran may be cited: "Say, I am only a mortal like you: it is revealed to me that your god is one God, therefore, whoever hopes to meet his Lord, he should do good deeds, and not join any one in the service of his Lord."

Again, there is no priesthood in Islam. The authority enjoyed by Moslem divines or any Sufi Orders is self-assumed or willingly bestowed by admirers. It does not rest on the authority of a church that does not exist. The suppression of the Dervish Orders cannot, therefore, be equivalent to an attack on Islam. It is simply an attack on the religious liberty and sentiment of the Turk, who resents the tremendous zeal with which his new masters are introducing so-called modern ideas.—I am, etc.,

CHARLES G. HANSON.

Yorkshire, January 7.

Viscount Allenby arrived at Adelaide last Saturday, and proceeded along well-lined streets to the Town Hall, where he was given a civic reception. Afterwards he was entertained at lunch by the Government.

M. Pashitch, the Yugoslav Prime Minister, arrived last Friday at Monte Carlo, where he will remain from two to four weeks. M. Juritchitch will act as Prime Minister during M. Pashitch's absence.

Sir William Schlich, K.C.I.E., F.R.S., Ph.D., of Banbury Road, Oxford, one of the leading authorities on Forestry, formerly Inspector-General of Forests in India, and later Professor of Forestry at Oxford, who died on September 28, aged 85, a native of Germany but a naturalized British subject, left estate of the gross value of £2,626, with net personality nil.

The *Morning Post* Athens correspondent states that a further decree is issued, allowing ladies' skirts to be 35 centimetres (14 inches), instead of 30 centimetres (12 inches), from the ground. This concession of "5 points," as it is called, on the part of General Pangalos arouses much interest in the feminine world of Athens. The modified decree against short skirts will come into force on January 15; but the head of the police has informed the Government that he must have female police to enforce it, as measuring the skirts of ladies is not a suitable employment for men.

THE WEEK AT HOME.

London, Tuesday Morning.

The Floods.

The floods which during the last week have been menacing the Thames Valley would, I suppose, be denied the word by anyone who has seen real floods in Holland or in Belgium, or even in France; for there has yet been little danger from the amount of water that has been pouring down the London river. To riverside inhabitants, however, the time has been inconvenient or exciting enough—the point of view depended on the age of the inhabitant.

It is the district between Shepperton and Chertsey which always suffers worst from the floods, but this year they are not so bad as they were last January. Still, the water is bad enough to prevent the running of motor-buses. Bungalows, which are built on concrete piles, have to be reached by boat, and tenants in some of them have not been outside their doors for days. Swans are enjoying unaccustomed adventures over what is really distant inland; and gulls are roving in their hundreds over what were once and will shortly be again gardens and meadows.

People have often wondered whether it would not be possible to avoid these floods. Apparently it would be possible, and a scheme was published for doing it by the Thames Conservancy Board just before the War. But it would cost about £6,000,000, and would involve the destruction of many fine old bridges. It was decided, therefore, that on the whole it was not worth it.

The Premier on Classics.

There is hardly a thing which Mr. Baldwin touches that he does not adorn, but surely in all his career he has never been more felicitous than in the considered and sensitive address which he delivered last week before the Classical Association. The Premier has often enough shown his sympathy with the present age, with its sacrifices, its shortcomings, its difficulties, and one knows now that this compassion and insight are as much the products of intellectual emotion as of instinctive pity. For he realises that, he, an Englishman of an English shire, is also one of the Romans; those Romans who penetrated and informed this far island, he said in pride and in reverence, were the forbears of our own race, which shares many of their qualities and which may, if it is wise, he spared some of their mistakes. The poetry of Housman and of Hardy was implicit in this utterance, for Mr. Baldwin has in fine degree a notion of the excellent virtues of the British soldier, whether of the present-day or of nearly two thousand years ago.

But not only in his width of vision---a vision that, born of the love of England, embraces past and present and future England—is the Premier seen to be so easily more than the peer of his fellow politicians: he has the unusual gift of generosity. Which other Conservative statesman could be named who would go out of his way to praise (or rather, would find going along the same truthward way as himself) such Liberals as Lord Oxford and Professor Gilbert Murray? His references to these two men were such as might bring a blush to a Conservative Whip's cheek. But is not that the keynote of Mr. Baldwin's national policy: to bring to bear upon our common ills the best intelligences which the nation can produce? Quite certainly Mr. Baldwin will not be remembered for his Conservatism: but even more certainly he will be remembered as the ideal English politician, who knew that the Roman virtues of *pietas* and of *gravitas* were eternal virtues, only known to the Romans' descendants as love of truth and solid worth.

Liberals and Labour Again.

The opportunists and the idealists in the Liberal Party are at it again---on the perennial subject of fusing with the Right wing of Labour. The view which Professor Gilbert Murray and Mr. J. M. Keynes advocate is shared in the main by the Liberal Press, with the remarkable exception of the *Westminster Gazette*, which favours the keeping absolutely unsullied of the remnant of the great Liberal Party. For this faithful organ the conception of the Party's being buried under the Labour programme is altogether too much: it would rather it be starved than suffocated.

But the Party itself is badly divided on what should be its future tactics. Sir Alfred Mond has come out boldly (which means that the newspapers think they know what he is driving at) against Mr. Lloyd George's Land Scheme; particularly is he against the proposal to make adhesion to the land scheme a test of loyalty to Liberalism.

Obviously there is going to be what to persons outside the Liberal camp (or camps) will seem a little fun. That Sir Alfred Mond, of whom it would hardly be claimed that politics are his first and abiding interest, should in so public and categorical a manner tilt up against Mr. Lloyd George, of whom it would hardly be claimed that he has any other interest than politics, is an event which is going to shake the Liberal Party very seriously. If the wire-pullers call "Come" and the moneyed men say "No," inevitably the wires will rust and eventually snap. Then Mr. Lloyd George will fall back with a bang. And then the regeneration of the Liberal Party may begin.

The Civil Service.

A strong rumour that the Civil Service working day is to be brought up to eight hours appears to be agitating Whitehall, where indeed many "cuts" are being made in the interests of economy. A number of long-service men (with 30 to 35 years' service) who are under notice of dismissal are protesting to Mr. Churchill that whatever economies may be secured in Government administration, it is not through the dismissal of such men as they that economy should come.

On the question of the working day, however, the Chancellor of the Exchequer is on stronger ground. If he intends to introduce an eight-hour day, he can quote in support of him the recommendations of the Anderson Committee on Civil Service Conditions and those of the Cabinet Committee on Economy. The Treasury states that if longer hours are worked fewer men need be employed, to which it is replied that longer hours would mean more money, and therefore the idea of economy would be negatived.

How it will all end, no one knows, but the Civil Service are immemorially doughty opponents. Yet Mr. Churchill must start saving somewhere.

Clothes and the Woman.

There is, unhappily, no Carlyle living to write what he might call "Sartor Resarta." For, since there is little and diminishing chance of distinguishing the male from the female, he would have to write of the greater number of clothed creatures. Consider the position. What are

women nowadays wearing? To take the more obvious things:—short skirts, low-heeled shoes, Oxford trouser garments (in the home), Russian boots (such as the Roundheads and Cavaliers wore), woollen pull-overs or cardigans such as men wear, thick golf stockings with turn-downed tops, Eton crops, pull-on hats like flat-topped Hamburgs, man-tailored double-breasted coats, skirts and silk jumpers with links, mannish collars and ties, loose washleather gloves, three buttons on the coat cuff, and the fascinating rest of it.

Is it not obvious that male and female clothes are quite interchangeable now? One forsees the day when men and women, having the same outlines, will be dressed alike, and when the craze in raiment of the moment will be equally adopted by both sexes. But when one says men and women, one means, of course, those women who, asserting their complete independence of men, approach daily more nearly to their external appearance, and those men who are sunk deep into the slough of effeminacy. A pathetic but all too prolific a tribe!

Art Exhibitions.

One of those quiet artistic institutions, whose exhibitions do not arouse great public interest but to which, nevertheless, the public is annually faithful, is the Pastel Society (with which is incorporated the Pencil Society). The annual exhibition has just been opened at the Galleries of the Royal Institute, 195, Piccadilly.

The show contains nothing of very prominent interest, but there is in it enough merit to explain why the medium of pastel is so popular among sensitive artists. It really does provide such opportunities for toning as do not occur in other media except in the hands of great masters. Work by such men as Sheringham, Squirrell, Baldry, Rankin, Terrick Williams, and so on, show here admirably to what various and quite legitimate uses pastel can be put. And, on a lesser scale, there is the popular *genre* to be seen here of artists like Ernest Shephard, Lewis Baumer, G. L. Stampa, and the like. In short, the Galleries are a good place now to spend a pleasant, if not a reflective, hour or so.

Another and very different exhibition is being held at the Goupil Gallery, where a Dutch artist, Mr. F. M. Melchers, has attempted to represent Music in Form and Colour. This inter-relation between Sound and Colour and Form is, of course, one of the most fascinating of all subjects of artistic research, but whether Mr. Melchers, who endeavours to reproduce the essence of a composer by representing his rhythm in form and his harmonisations in colour, has advanced our knowledge of it, is problematical. Rhythm he represents by a particular attitude of a nude woman; technical equipment by back and side-ground splashes or drops of colour. It is curious that this works out very well in the case of those composers who really have little to say—little, that is, compared with the masters. Men such as Stravinsky, Lulli, Mendelssohn, and so on are faithfully and adequately suggested, but to suppose that men like Beethoven or Bach, or even Chopin or Wagner, can be summarised in this way is unwarrantably ambitious. Nevertheless, the idea is novel and stimulating.

At the Leicester Galleries there is one of the pleasantest exhibitions that has been held there for some time. The work of Mr. Purvis Flint is almost my ideal of water-colour work, so beautifully capable is the drawing, so reticent the colouring. Mr. Flint draws very nearly perfectly; he has, particularly, some charming sketches of Morocco and the seaside.

In another room of these Galleries the Society of "Les Peintres-Graveurs Indépendants" are holding their first show in England, and a very jolly and versatile show it is. Here again are a choice etching or two of Morocco.

PROFESSOR E. G. BROWNE.

We regret to have to announce the death of Professor Edward Granville Browne, who was, among other things, Sir Thomas Adams Professor of Arabic at Cambridge University. Professor Browne's services in the advancement of Oriental learning are widely known and widely acknowledged; there was indeed little about the literary history of Arabia, Persia, and Turkey that he did not know. Nor did his immense learning detract from his sympathy with the peoples whose works he so much admired. Thus both in an academical and in a human sense he was beloved of Orientals. It was a fitting testimony to his services that, three years ago, forty-three scholars, belonging to eleven nationalities, should present him with a combined work on Oriental Studies. Among his better known publications were "A Year Among the Persians," "The New History of Mirza Ali Muhammad the Bab," "A Literary History of Persia until the Time of Firdawsi," and "The Press and Poetry in Modern Persia." His death is to the cause of Orientalism almost an irreparable loss.

NEWS IN BRIEF.

Sir Henry and Lady Ledgard are among the recent arrivals at Shepheard's Hotel, Cairo.

M. Kaftanzoglou, the Director-General of the Greek Ministry of Foreign Affairs, has resigned.

Three passengers were killed and 25 were injured as a result of the derailing of a train on the Panderma-Soma line near Balikesri, Anatolia.

The Soviet Central Executive Committee has ratified the Treaty between the Soviet Government and Turkey, which was concluded in Paris on December 17, 1925.

According to information received in Cairo, Major Court Treatt, who is engaged on a motor expedition from the Cape to Cairo, left Wady Halfa on December 8 for Assouan.

Tewfik Rushdy Bey, the Turkish Foreign Minister, made a statement on the Mosul question at last Saturday afternoon's session of the Angora Assembly. Mustapha Kemal Pasha was present, as well as Staff Generals and the entire Cabinet. Details of the statement are not yet available. At the end of the statement the Assembly expressed its approval of the attitude of the Government.

Tebet 28, 5686, of the Jewish Calendar.

Princess Marie of Greece left London last Sunday for Rome.

Sir William Murison joined the P. and O. s.s. Mantua last Friday at Marseilles.

Sir Frank and Lady Newnes will return to London at the end of January from India.

Lady Emily Lutyens is expected to return to London from India about the end of next month.

The Hon. Mrs. Harold Nicolson will leave England next week for the British Legation at Teheran.

The High Commissioner for India and Lady Chatterjee have returned to London from the South of France.

Lady Wormald and her niece, Miss Else Wormald, sailed in the Ranpura last Friday for Egypt, and will be away for three months.

The Rev. F. Cowburn, curate at St. Andrew's, Ashton-on-Ribble, Preston, has accepted a chaplaincy in India, and will sail in March.

Lady Storrs left London last Friday with her daughter, Miss Clowes, for Palestine to rejoin Sir Ronald Storrs, Governor of Jerusalem.

Mr. and Mrs. Raoul Foà left last week for the Sudan, Egypt, and Palestine, and will return to 45, Hans Mansions at the end of April.

Madame Yovanovitch, wife of the Yugoslav Consul-General in London, has returned to her residence, 37, Gloucester Place, from the Continent.

Lady Hogg, who is making a visit to India, left London last Thursday by the P. and O. special train for Marseilles. She will be away until the end of March.

Sir Robert and Lady Watson-Smyth, with Miss Mary Watson-Smyth, will sail from Marseilles in the P. and O. s.s. Ranpura for Egypt to-morrow (Friday) and will be away for three months.

Sir Howard D'Egville left London last Thursday by the P. and O. special train for Marseilles on his way to Bombay. Other passengers included Mr. W. Foot Mitchell, M.P., and Mrs. Mitchell for Egypt.

Sir Charles McLeod left London last Friday by the P. and O. ss. Ranpura for a short visit to India. He was accompanied as far as Marseilles by Lady McLeod, who will spend a few weeks at the Riviera.

To meet Colonel Nawab Hamidullah Khan, the surviving son of the Begum of Bhopal, Colonel and Mrs. Amir Ahmad gave a luncheon on January 6 at Claridge's Hotel. The guests included the Marquess of Northampton, Lord and Lady Carmichael, Miss Carmichael, Lieutenant-General Sir George and Miss MacMunn, Brigadier-General Sir William Horwood, Colonel and Mrs. Sarel, Lady and Miss Strangman, Mr. and Mrs. W. E. Rootes, Mr. F. H. Brown, and Mr. Syed Liakat Ahmad.

Canon J. T. Parfitt, who spent many years in Mesopotamia, lectured on "Marvellous Mesopotamia: The Key to the World's Future," before members of St. Bride Institute, Bride Lane, Ludgate Circus, E.C.4, last Thursday.

The Earl and Countess of Leitrim left London on January 4 for Egypt.

M. N. Mishu, late Secretary to the Roumanian Legation in London, arrived at Berlin last week from Bucharest, and has taken up his new duties at the Roumanian Legation, Berlin.

Sir Lancelot Sanderson, Chief Justice of Bengal, is on his way home from India on account of the serious illness of Lady Sanderson, who is at her residence, Ward House, Ellel, near Lancaster. During his absence Justice Chatterpee will act as Chief Justice of Bengal.

Mr. A. G. M. Fletcher, C.M.G., C.B.E., Assistant Colonial Secretary, Hong-Kong, has been appointed Colonial Secretary, Ceylon, in succession to Sir C. Clementi, K.C.M.G., who was recently promoted to the Governorship of Hong-Kong.

ANGLO-HELLENIC RELATIONS.

Dr. Andrew Andreades, C.B.E., Dean of the Faculty of Law in the University of Athens, has arrived in London and will deliver the first of his course of three public lectures on "The History of Anglo-Hellenic Relations during the second half of the Nineteenth Century" at the University of London (King's College) to-morrow, Friday, at 5.30 p.m. At the first lecture, which is entitled "Gladstone, the Ionian Islands and Greece," the chair will be taken by M. Gennadius. The titles of the subsequent lectures are: January 22, "Disraeli and Greece" (Chairman: Professor E. A. Gardner); January 29, "Lord Salisbury and Greece" (Chairman: Professor Spenser Wilkinson).

Book Reviews and Notes.

THE SECRETS OF THE LIBYAN DESERT.

"THE LOST OASIS," by A. M. Hassanein Bey, F.R.G.S. With an Introduction by Sir Rennell Rodd (London: Thornton Butterworth, 21s.)

This is a distinguished book. Its distinction is largely due to the unusually interesting character of the writer. It is not given to many men to be at once a poet and a severely practical traveller, able to think out beforehand all he wants for himself and his party over two thousand miles of desert and able to control his men with unfailing tact and good example. It is given to fewer to combine the best blood of the Bedouin with an English University education which has sunk intimately into his nature. If you add to this a keen spiritual sensitiveness which is at once Eastern and Western, you get some idea of the author, Hassanein Bey; at the same time a cultured gentleman of the type traditional and prized in this country, and an Egyptian patriot justly proud of his ancient Arab ancestry. Very much, indeed, of the charm of the book lies, to a lay reader at least, in the gradual and unconscious revelation of the personality of a very remarkable man.

This was not his first expedition into the deserts well to the west of Egypt. But, as he says little of his former courageous exploit, the story of which was not chronicled by himself, perhaps we had better imitate his modest reticence. The experience gained then and the acquaintance made certainly contributed largely to the success of this great desert trek of 2,200 miles. His route lay in an area where waterless sand and rock were hardly varied by rare so-called oases where life is terribly hard. One learns from these pages how literally water is life in those lands, a life too which, to us, would seem hardly to be desired. Our author knows better and makes us see these inhabitants of the incredibly remote desert as they are, manly, vigorous, brave fellows adapted to their surroundings; fatalistic and mystic as well as practical, and withal humorous. The existence of the two oases of Arkenu and Ouenat was a vague tradition with the desert Arabs and no more. On yielding to Hassanein Bey's deliberate search, they turned out to be mountainous groups standing out of the desert, weathered and uninviting, but supporting some trees and vegetation in their valleys. This discovery was in itself a very considerable feat, with importance not only to geographers but perhaps also to traders. The account of the Jaghbub (Jarabub) and Kufra oases is specially interesting in the light of the recent agreement between Egypt and Italy.

We realise sadly that, though we have written at some length, we have utterly failed to convey even the slightest idea of the wonderful individual atmosphere of this book. Indeed we have found it impossible to do so. Quotation will not help. No mere extract torn from its content would be fair to the author. His virtue consists, not in springing "purple patches" on the reader, but in being able to clothe his whole narrative in a dress of beauty and clarity, and in combining spiritual with physical observation. We can only hope that this very inadequate appreciation may at least induce some to read the book themselves.

C. S.-W.

JARABUB.

"La Questione di Giarabub" By Francesco Marian (Bologna: Zannichelli. Lire 15).

Signor Meriano has evidently studied the Senussi question very thoroughly. The first and by far the longest part of his book is a careful and very interesting sketch of the growth and history of this remarkable sect, well documented and free from prejudice. It is a pity that he was not able to confine himself to this part of his subject. As, however, his object in writing the book was to convince the public that the possession of Jarabub is essential to Italy and that Egypt has not a shred of claim to it, his latter chapters were inevitable. Unfortunately he makes in them the very common mistake of spoiling a good case by over-assertion. That his case is a good one is proved by the recent results of diplomatic conversations between Italy and Egypt. It is, therefore, to be regretted that the author should have considered it to be necessary to impute all manner of ridiculous and underhand intrigues to England and France on nothing but the most flimsy evidence read by him into extracts from the "semi-official" Press among which he solemnly puts *The Times*. Quaintly enough he quotes a report in THE NEAR EAST AND INDIA of July last of an address by Captain Dixon-Johnson to the Near and Middle East Association in order to prove the complicity of the English Government in unworthy intriguing against Italy. This sort of thing leaves a bad taste, which is specially to be deplored at the end of a meal, the first courses of which were so good.

C. S.-W.

BOOKS RECEIVED.

"Slavonic Nations of Yesterday and To-day." By Milivoy S. Stanoywich. (The Handbook Series.) (New York: The H. W. Wilson Company. 2.40 dollars net.)

"A Wayfarer in Egypt." By Annie A. Quibell. (London: Methuen and Co., Ltd. 7s. 6d. net.)

THE GOVERNOR OF RHODES.

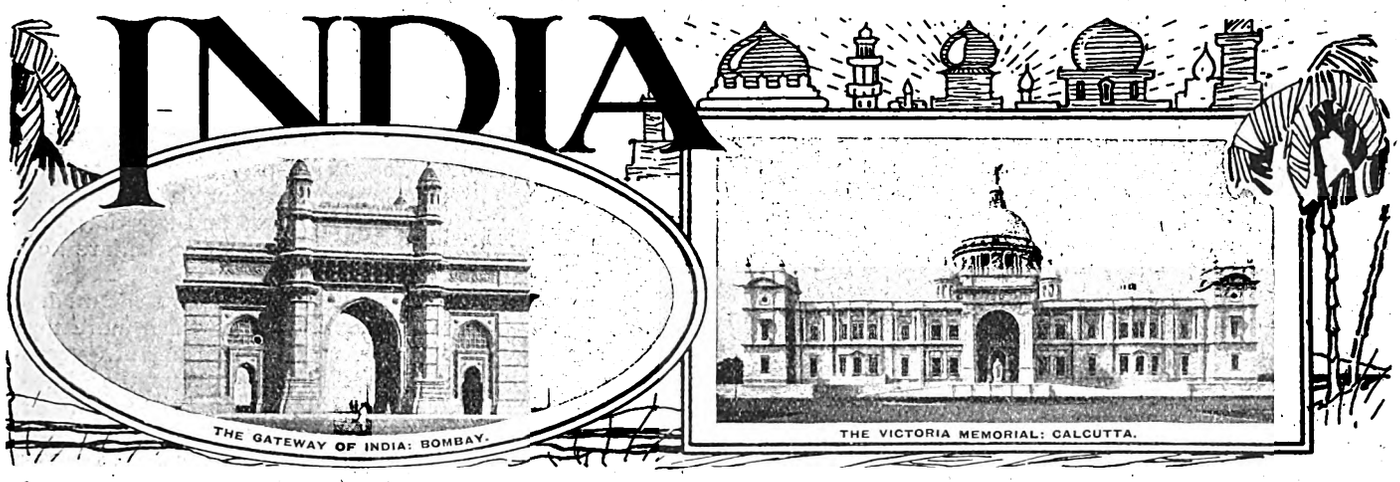
The King has been pleased to appoint Signor Mario Lago, the Italian Governor of Rhodes, to be an Honorary Knight of Grace of the Order of the Hospital of St. John of Jerusalem in England.

Arrangements are being made in virtue of which his Excellency will be invested as such by the Earl of Scarbrough, the Sub-Prior of England, on behalf of the Grand Prior, the Duke of Connaught, at Rhodes, in March. On that occasion the Sub-Prior will be supported by a delegation from the Chapter-General of the English Grand Priory and by the other Knights of the Order who will be taking part in the coming pilgrimage to Jerusalem and other places associated with the history of the Hospitallers in the Levant and the Ægean.

THE CENTRAL ASIAN SOCIETY.

Under the auspices of the Central Asian Society, Mr. F. W. Chardin will lecture on January 14, on "Mosul," and on January 21 Mr. Edwin Haward will lecture on "Some Thoughts on India's Defence." Both these lectures are to be given at 5 o'clock, but the first one takes place at the Royal United Service Institution, Whitehall, and the second at 74, Grosvenor Street.

"THE BLUE PETER."



The January issue of the *Blue Peter* is remarkable for the inclusion of a vivid and superbly illustrated article called "Dalmatian Hours—I.," by V. C. Scott O'Connor. Mr. O'Connor's description of such places as the Cathedral at Sibenico, the Lacroma Cloisters, and Zara is worthy of the reality.

The Hadda and Bahra Agreements with the Sultan of Nejd, regarding certain questions relating to the Nejd—Transjordan and Nejd—Iraq frontiers, have been published in a White Paper (Cmd. 2566).

Ex-King Ali of the Hejaz arrived in Baghdad last Friday. In spite of the inclement weather, a big crowd was at the station for his arrival. Ex-King Ali expects now to live a retired life.

INDIA

THE CAWNPORE CONFERENCES.

The Indian National Congress held its fortieth annual session at Cawnpore, during the Christmas holidays. Several minor conferences were also held at the same time and place: the Indian Khilafat Conference, the Native States Congress, and the Indian Communist Conference—the latter, no doubt, eagerly accepting the chance of holding their first meeting at the place where the protagonists of their creed were tried and convicted in 1924. It is hard to say which of the Conferences was the most futile; all of them seemed to be conscious that they were gathered together for the purpose of discussing matters which, if they ever had any practical meaning, had long since lost it: and, after the manner of those who champion causes that are not only lost but dead, thought it necessary to make up, by the violence of their suggestions, for the absence of reality. Thus, the presidential address of the poetess, Mrs. Sarojini Naidu, explained that if, in response to the united demand of the Indian people for the immediate grant of Dominion Status as an initial form of self-government, the bureaucracy were to make "a sincere and magnanimous gesture, with ample guarantees of good will and good faith on its part," the present policy of non-co-operation and obstruction would at once be revised; but, failing such a gesture, the Swarajists must vacate their seats in all the Indian Legislatures and "inaugurate a dynamic campaign" as a means of preparing the people of India for mass civil disobedience. It has long ago been admitted by Indian extremist politicians that mass civil disobedience—the ultimate form of which is to be concerted refusal to pay taxes—is tantamount to rebellion; but Mr. Gandhi's followers have always heretofore stressed the necessity of "non-violence," and have explained that the rebellion, when it came, would be a "peaceful" one. It was upon this idea that the Indian agent of the Communist International, when addressing his disciples who were afterwards convicted in the Cawnpore "Bolshevik" trial, poured special contempt: "it is ridiculous" he wrote "to talk about a non-violent revolutionary: you might as well speak of a vegetarian tiger." Perhaps it was the propinquity of the "Indian Communist Party's" meeting that induced Mrs. Naidu to suggest practical steps to meet the anomaly: which she did by recommending "a complete course of military training as an integral part of national education" and the formation of "a national militia by voluntary conscription." The contradiction in terms of the final suggestion will be more apparent to English than to Indian observers: for it recalls the classic answer of an Indian who, when congratulated by an Englishman on his courage in volunteering for a dangerous duty, replied "Main Bulumteer hun, lekin main jane nahin chahta"—"Yes, I am a volunteer, but I don't want to go." The Congress, by a large majority, approved the policy of continued obstruction: and resolved that, in case Government does not "respond satisfactorily to their demands, the Swaraj members will leave the Councils, only attending in order to throw out the Budgets and to prevent their seats being declared vacant." This modification of the proposal for wholesale resignation achieves the double object of relieving the Swarajists from the necessity of fighting bye elections, and of enabling them to retain their travelling allowances as members of the various Legislatures. But the victory is a Pyrrhic one: the voting was in favour of the Die-hards, but the honours go to the "responsive co-operators," who will pursue the even tenour of their way undisturbed by it.

In the subsidiary Conferences, that of the "Khilafat" sympathisers so far departed from the attitude that their title implies, as to pass a resolution that, if the Turks—the destroyers of the Khilafat—should be "driven to war" by the evil machinations of Great Britain, working through her "henchmen," the League of Nations, Indian Moslems would help them; and should refuse assistance to the Government, with men or money, if hostilities broke out. They also resolved that the League's decision in the Mosul dispute "conflicted with the terms of the Treaty of Lausanne": this resolution being explained, by their chief supporter in the Anglo-vernacular Press of India, as due to Lord Curzon's assurance to the Turks at Lausanne that, if they would confide the settlement of the Mosul dispute to the League, they would have not only a seat on the Council but a vote: and that, as the Council's decision must be unanimous, they could, in effect, veto any settlement of which they disapproved. "It was only on this assurance that the Turks stopped the war against Britain's protégés, the routed Greeks, and refrained from further hostilities against them": and Britain's failure to "remain true to her word of honour" is due to the fact that "she wants the oil of Mosul and to retain her stranglehold on Mesopotamia for another twenty-five years." The Communist meeting was presided over by a Mr. Singaravelu, who was one of the persons indicted at the Cawnpore "Bolshevik" trial, and who, in all reasonable probability, was only saved from sharing the fate of his associates by the timely intervention of a medical certificate which enabled him to avoid attendance at Cawnpore until after the trial was over, when it was not thought worth while to proceed separately against one whose chief object, in common with that of the others, in purporting to support a propaganda that does not in reality appeal to any Indian, seemed to be to get his share of the large amount of money allotted for Indian propaganda by the Communist International to their chief agent; though the latter, rightly arguing that charity begins at home, could only be induced to part with it, to the actual "workers," very sparingly. This meeting passed a resolution explaining that the object of the Party was "to achieve complete independence by all fair means, but that Swaraj must take the form of a Soviet Republic." It also condemned, in a leaflet widely circulated during the Congress Session, the "time-worn constitutional methods" and the "beggarly programme of Dominion status" adopted by the latter body: and recommended the capture of all Labour organisations, the boycott of

Digitized by Google

all things British, and the education of the "Workers and Peasants" for mass civil disobedience, without any pretence of keeping it "non-violent." But, of all the fatuous conferences, perhaps the most fatuous was that calling itself the "Native States Subjects Conference": which consists of a few professional agitators and a sprinkling of delegates, none of whom have any pretence to a right to speak for the inhabitants of the Native States, and few of them any connexion with the States beyond the doubtful honour of having suffered expulsion from them as mischief makers. This conference, after a few insulting remarks about the extravagance of Indian Princes, and their neglect of the interests of their subjects, called upon them to restrict their personal expenditure and to introduce such reforms into their States as would "give the advantages of complete democracy with its evils." It only remains to be added that the Indian National Congress was the recipient of a telegram of "fraternal greeting" from the British Independent Labour Party, which included a pledge of "continued and uncompromising support for India's freedom": and of a blessing from a representative of the American Federation of Labour, who assured them of American sympathy and support for the movement towards freedom in India, and added that the West was "looking to Mr. Gandhi for his gospel"—a gentleman described as "Professor" Holmes, but perhaps identical with the "Pastor" of the same name who, a few years ago, momentarily obtained the attention of the crowd of cranks and busybodies who seem specially to flourish in the United States, by his pulpit comparisons of Gandhi with Christ, by no means to the disadvantage of the former.

Meanwhile, though everything (or almost everything) in the Cawnpore garden was lovely, there were a few other meetings, held at or about the same time, that seem to suggest that, after all, there are a number of people in India who do not contemplate without alarm a disappearance of the impartial British official. Such, for instance, as the Non-Brahmin Conference held in Berar, the Indian Moslem Conference at Aligarh, and the Hindu Mahasabha meeting at Bombay. These not only voiced the communal bitterness between Hindu and Mohammedan but, in the case of the first, the fear of the non-Brahmin at the prospect of a re-establishment of Brahmin supremacy. The President of the Moslem Conference, while expressing sympathy with the Druses and Riffs, and disapproval of the Mosul award, devoted the major part of his address to a defence of the Moslem attitude towards Hindus, and to complaints against the action of a section of Hindu politicians who "had publicly threatened to drive the Mussulmans from India and were carrying out a provocative and aggressive propaganda." The President of the Hindu Mahasabha—oddly enough not himself an orthodox Hindu, but a member of the reforming party called the Arya Samaj, which sets its face against caste distinctions—complained that a responsible Moslem newspaper had openly advocated a Mohammedan "Raj" for India: declared that a class of people who claimed a separate political entity by reason of religion constituted a danger to the national life of a country: and said that he felt sure that, in spite of the Mohammedans, if they would all organise, Swaraj was not far distant, and that 240 millions of Hindus, clever, able and well organised, could themselves achieve the liberation of their country. At the same time he deplored the mentality that showed itself in the speech of one of the members, who made what he described as a "challenge," that the Moslems of India loved their religion but not their country; but admitted that, unless and until the Moslems changed their own narrow mentality, such opinions, as those put forward by the speaker in question, were bound to grow. The Anglo-vernacular newspaper, already referred to, prints this speech under large headings, one of which is "Swaraj possible without Muslims" and another "A Counsel of Despair." One may be excused for suggesting that the latter description applies to all the Cawnpore conferences as well: and for believing that nobody is more keenly alive to the fact than those who directed and took part in them.

CURRENT TOPICS.

The New Viceroy's Title.

In announcing the assumption, by the Viceroy Designate, of the title of Baron Irwin of Kirkby-under-Dale, the papers note that he becomes a peer during the lifetime of his father, Viscount Halifax: and say that "the only parallel case in modern times is that of the late Lord Curzon."

It depends what is meant by the phrase "modern times": for one seems to remember that, rather more than thirty years ago, the eldest son of the Marquis of Queensberry (Lord Drumlanrig) was made a peer of the United Kingdom on the recommendation of the Prime Minister, Lord Rosebery. It was said that Lord Queensberry, who himself had no seat in the House of Lords, as he was a Scottish Marquis and not one of the representative peers for Scotland, was so incensed at this that he followed Lord Rosebery to a foreign resort, at which he was taking a holiday, with the declared intention of "punching his head": and that it was only with the greatest difficulty that his friends prevented the sporting old fighter from putting his threat into execution. It is permissible also to quote the curious, though of course not parallel, case of the first Viscount Tarbat; whose mother, the Duchess of Sutherland, was created Countess of Cromartie in her own right, with remainder to her second son; so that, when she pre-deceased the Duke, her younger son sat in the House of Lords not only during the lifetime of his father, but also while his elder brother was still only the holder of a courtesy title.

Lord Reading in Assam.

Lord Reading has reserved to the last his visit to one of the most attractive places in India. There is never any lack of leisure in Shillong: and it is to be hoped that its inhabitants succeeded in inducing the Viceroy to find enough of it to enable him to admire the beautiful surrounding scenery. The traveller to Shillong crosses the Brahmaputra at Gauhati and proceeds thence by motor: the first part of the road passing through what is, to a great extent, literally virgin forest, where it has several times happened that a motor car and a tiger have found themselves occupying the same stretch of road. Such an experience is not, indeed, confined to the traveller through the forest; for it is not many years ago that the Gauhati ferry steamer was boarded by a swimming tiger, which established itself on one of the paddle boxes, where it was shot.

The Transfer of Sylhet.

The cabled report mentions the transfer of Sylhet as "the chief political question that is agitating Assam at present"; though that is, perhaps, too strong a term, at any rate if it is intended to apply to Shillong. It is not easy to imagine any political question that could agitate Shillong—that charming, dreamy spot which forms the Headquarters of a Government whose members should, even in these degenerate days, find it easy to appreciate the force of the dictum of a distinguished Indian administrator of a past generation, who said that, in India, there are three kinds of work—the work that doesn't need to be done at all: the work that somebody else does for you: after which, there only remains the work that you don't do yourself. The Legislative Council were engaged in discussing the matter of the transfer, when Lord Reading arrived: and were doubtless pleased to learn, from him, that it could not be examined by his own Council, or by the Secretary of State, until full reports had been received from the Bengal and Assam Governments; since this, no doubt, suggested to them that they could discuss the question in the proper Shillong spirit—at leisure.

A Governor's Province.

The cable provides an apposite comment on the note on the proposed transfer which appears elsewhere in this issue of THE NEAR EAST AND INDIA; for it quite accurately

Digitized by Google

describes one of the Ministers as having "hit the right nail on the head from the point of view of (the Government of) Assam" when he said that, if Sylhet were cut off, Assam would lose all chance of remaining a Governor's Province. It has been said, of recent years, that there are only two really soft jobs now remaining for officials in India—President of the Council of State, and Governor of Assam. To these should, in fairness, be added those of the two Executive Councillors, and the two Ministers, of the Assam Government; so that it is only natural that this particular argument should appeal, to the speaker and to his colleagues, with such force as to seem conclusive.

Indians in South Africa.

There have lately been several pronouncements on the "burning" question of Indians in South Africa, varying from grave to gay. Among the latter may be classed two speeches made at the Indian National Congress, where Mr. Gandhi asked why should not the British Government declare war on the Union of South Africa, when the life and honour of 150,000 Indians were involved: and Dr. Abdul Rahman, a member of the South African deputation to India, said that, if the Empire meant protection only for whites, the earlier it ended the better: and that, if India had her own Army and her own battleships, the whites would not dare to trouble Indians in the Dominions and Colonies. Among the former was Lord Reading's reply to the deputation headed by Dr. Abdul Rahman: in the course of which he said that the Government of India attached great importance to the deputation which it had itself recently despatched to South Africa: that it "reserved the right to take appropriate action" in the event of the Union Government's failure to listen to its representations: and that, "whatever other political differences existed, there was unanimity of opinion with regard to the position of Indians in Africa."

It is curious to find the apostle of non-violence advocating brute force in the place of "soul-force": and one may assume that he only did so as a reductio ad absurdum of the arguments of Dr. Abdul Rahman. Lord Reading gave no hint as to the nature of the "appropriate action" that his Government might eventually have to take—anything more than what is officially known as a "dignified protest" does not seem practicable. It is permissible to add one's firm conviction that, among all parties in India, there is not only unanimity of (expressed) opinion in the matter, but also unanimity of feeling, though not by any means of the same nature: and that the real attitude of Indians in India, towards the position of Indians outside India, is one of complete indifference.

Railway Matters.

It is announced that, subject to the approval of the stock holders, an agreement has been reached between the Secretary of State and the Delhi-Umballa-Kalka Railway Company, by which the Government of India will buy the line for three million pounds. The Government had previously declined to exercise its option on the railway, on the terms laid down in the original contract, on the ground that these were too onerous, and would represent a return of over 400 per cent. to the holders of the ordinary stock. As, however, the present arrangement is estimated to pay £340 for every £100 of ordinary stock held, and the last recorded transaction in the stock took place at 278, it may be expected that the stock holders will approve of the offer. In recommending them to do so, the directors have drawn attention to the possibility that the recent regrouping of railways in India may adversely affect the D.U.K. Railway's traffic in the future: and to the belief that a general reduction in rates and fares is imminent. In the case of this particular railway, such a reduction may not improbably be drastic; for, since it was opened in 1891, it has always charged appreciably higher fares than those of the ordinary Indian railways: to which its rates will presumably be assimilated when it becomes part of the existing Government line formed by the amalgamation of the East Indian and Oudh and Rohilkund Railways.

Rate-Making Tribunal.

The reduction in fares and rates, mentioned above, is expected to result from the appointment of a rate-making Tribunal, which formed one of the recommendations of the Acworth Committee of several years ago. Inquiries on the matter have several times been addressed to the Indian Commerce Member, whose reply has never been anything except the stereotyped one that it was "under correspondence with the Secretary of State": but it seems that affairs are really progressing. The stock complaint against existing rates has always been that they have been so adjusted as to differentiate in favour of the import trade and to the prejudice of indigenous manufactures. It is certainly the fact that anomalies do exist between internal traffic and that to and from the great ports and specific complaints have, so far, been met by the reply that they must await consideration by the Rate-making Tribunal. A complaint of this nature has, according to *Commerce* (Calcutta) just been put up to the Government of India by the merchants of Sholapur, a town in the Bombay Presidency about 150 miles south-east of Poona, which contains five large cotton mills and whose annual output is about 18 million pounds of cloth and 10½ million pounds of yarn; while, as its population is only just over 100,000 and local consumption is negligible, practically the whole of this is exported by rail, chiefly to Bombay, Calcutta, Delhi, Madras, Cawnpore and Amritsar. Calcutta is the same distance by rail from Bombay and Sholapur, and Delhi only 100 miles further from Sholapur than from Bombay: yet the freight from Sholapur to Calcutta is nearly three times, and to Delhi more than 1½ times, as much as it is from Bombay: while, though Sholapur is on the main line from Bombay to Madras, and 250 miles nearer, it actually costs more to send goods by rail from Sholapur to Madras than from Bombay. This is, no doubt, an extreme example; but it certainly shows that the appointment of the Rate-making Tribunal, when it does take place, will not have come too soon.

Trains de Luxe.

The assumption by the Government of India of direct control over the Great Indian Peninsula and East Indian Railways has been signalised by the announcement that, next winter, mail-boat trains will be run between Bombay and Calcutta along those lines, which "will embody the latest developments to ensure more comfortable travelling." They will be corridor trains, with a shower bath to each compartment, and restaurant cars will be attached. As a matter of fact, except for the corridor arrangement, this is no novelty: the existing Bombay-Calcutta expresses include restaurant cars and shower baths—strictly speaking, what are known as "needle baths": and most comfortable trains they are. Probably the announcement is intended as an advertisement to attract tourists, and as the first move in the campaign, in that direction, recommended by the Commerce Member in his address to the Indian Railway Conference at Simla last October.

A Fascinating Fi'm.

"INDIA TO-DAY"

POLYTECHNIC CINEMA,
REGENT STREET, W.1.

JANUARY 4th—30th. Daily at 2.30, 5.30, 8.

A THREE-PART PROGRAMME.

1. General Lecture. 2. North India. 3. Ceylon and South India.

January	Part 1	Part 2	Part 3

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 24.

The South African Indians.

The deputation from South Africa in connexion with the proposed Anti-Asiatic legislation has arrived in Calcutta and has been received by the Viceroy. Lord Reading in reply gave his assurance that everything possible was being done by Government to secure just treatment for Indians overseas, and pointed out that, when representations had been made to the Union Government on previous occasions, these had met with a large measure of success. He accented the fact that compulsion did not enter into the question; South Africa is a self-governing Dominion with full powers over all internal questions. If the Union chose to exclude Indians as residents, India would have the right to retaliate, but the question arose as to what effective retaliation India could offer; they must endeavour to prove to South Africa the injustice of the proposed legislation. Lord Reading concluded by saying that he had never known a good cause suffer by sober presentment. The extremist press uses the arrival of the Deputation as the signal for discussions of the matter in terms which are both as offensive and as mischievous as possible. Nothing is to be gained by affording a wider publicity to expressions born in spite and tipped with the venom of naked racial hatred; what does the extremist hope to get from being as offensive as possible to the colonies and what useful purpose is served by "Calcutta" taking up the "cause of the South African native?"

A New Nationalism?

Bepin Chandra Pal has recently been the leader in an attempt to form a Nationalist co-operating party, but his attempts have failed. He now turns round and points out that two new parties are appearing at the next Congress, the Communist outside, but in the same town, and the Republican within. "Bogey, bogey!" says Bepin Babu. In 1918 the British Parliament made an experiment in self-government "regardless of our fitness or unfitness for it." To-day there is another crisis and the only thing to do is to administer another dose of experiment, equally regardless of everything under the sun. Responsible Government indeed!

Politicians and Soldiers.

Much was made recently of the fact that certain Extremist politicians had agreed to serve on the Skeen Commission, which is sitting to consider the Indianisation of the Army and the desirability of an Indian Sandhurst. It begins to look as if some of them, at least, did so merely in order to secure an additional advertisement for themselves and the racial poison they continually exude, an opportunity they would never have had but for the decision to allow the Commission to sit in public. Already this has been modified; but real mischief has inevitably been done, and Government should either extend the sittings in camera to all the proceedings, or cease to publish the opinions of junior Indian officers, extracted from them by the cross-examination of keen lawyer-politicians, on their men, their fellow-officers, their units, and the military system generally. A fitting accompaniment to this deserves a wide publicity amongst those who would appreciate the mentality of the extremist Indian politician. Mr. Jinnah, the Bombay leader, suggested to a witness that the complete Indianisation of eight units had been designed deliberately by Government in order that these regiments might be sent to unhealthy stations and, when war broke out, placed in a position where they would be bound to fail, and so bring discredit on Indian troops and officers; he capped this by saying that the same thing had been done in the case of Indian members of the Civil Service.

Pagett Johnston Again.

Mr. Thomas Johnston, M.P. is finishing up his visit to India in a manner which is strongly reminiscent of the street corner orator whose motto was "Down with everything." He and Mr. Sime, his Boswell, attended an extremist meeting in Bombay to illuminate their hearers on "Labour's next struggle"; before the meeting ended, the most pressing question was Labour's present struggle to force its views down the throats of an unwilling meeting. Amongst the gems put over was one that India was the only country which honoured its pledges, "Great Britain, France, Germany and all the others never kept their pledges." It was ungrateful of Mr. Baptista, the Chairman, to accuse the Labour Party of not having carried a resolution to give India self-government, but it was probably equally unfortunate that Mr. Johnston replied to the Chairman's assertion, that India could do nothing without political power, by saying that "to speak of political power to gain economic freedom was absurd, and it was an excuse for inaction and apathy." Further proceedings descended to the level of music hall cross-talk, in which Mr. Johnston is reported as saying loudly, "You do not know how to be Chairman." Mr. Johnston is in the habit of saying most things loudly; empty vessels, etc. No recent politician has given such universal offence, and the *Englishman* tritely remarks that the reason the Indian politicans ceased to try to fool Mr. Johnston was "probably because they found it unnecessary."

Catto, Coal and Common Sense.

There was a rumour during the week that the Tariff Board had accepted the Indian Mining Association's recommendation of Rs. 1/8/- per ton duty on coal. Even had it been true the Board, which is at the moment in Calcutta, would have probably thought again after the cold bath of Sir Thomas Catto's common-sense summary of the coal situation. Speaking at the annual general meeting of the Bengal Coal Company, he derided the suggestion that a duty would be of any benefit to the industry: and pointed out that its only permanent effect would be to raise the price of coal generally, and so encourage the growing competition of oil fuel and hydro-electric power. His slogan was economy in all directions, but particularly in production and railway freights: and he proceeded to develop the coal-owners' replies to the latest arguments of the Railway Board. The feeling is acute that it is time that this contest of wits should be diverted into a sincere endeavour to devise a system of freight rebates which will be good business for both parties.

The Co-ordination of Charities.

The depression which has weighed heavily on all classes of the community, and particularly on their pockets, has not been the only reason for the question of the co-ordination of charities coming very definitely to the front within the last year. The War left a large number of people with an appreciation of the fact that useful industry is more amusing than idleness: and there may possibly be some connexion between this and the many charitable activities which have since been started, many at the expense of older and tried institutions. The demand for subscriptions has become more than even the prosperous can stand, and the time for sorting out has clearly arrived; no one, however, is seeking the task of discriminating between usefulness and tufthunting, and the complications of the situation will be readily realised by those who have lived in the limited social coteries of the East.

The Hospital Crisis.

Another phase of this matter appears in a statement by the Calcutta Hospital Nurses' Institution issued this week.

In Calcutta, Government provides the hospitals, but no nursing: and the whole of the nursing staff has hitherto been provided by this Institution, Government making a grant to cover the annual deficiency. With representative Government, it is becoming increasingly difficult to secure the necessary grants: and the Corporation, which is entirely Swaraj, has surrounded its reduced grant with conditions which are impossible in working. Something has to "go," seeing that the corporation now makes grants to numbers of indigenous institutions and dispensaries whose friends are now in power; but it is a little unfortunate that the Nurses' Institution contribution should have been selected for trimming. The Corporation receives Rs. 1,64,164 in rates from the hospitals; its offered contribution is Rs. 18,000. The European subscriptions last year amounted to one hundred times the total of the Indian donations, which are not sufficient to maintain even one nurse. The Government grant was one lakh of rupees. The whole of this, the subscription of the Corporation, and a large portion of the European contributions, go to hospitals for the nursing of Indian patients; neither the Corporation nor the Indian community should be surprised if the obvious course is taken in view of the facts of the case; certain it is that to make a further demand on the overtaxed pockets of the European would, in the circumstances, be grotesque.

The Trivial Round.

A week ago Calcutta was full, but room has still been found for Sir Edwin Lutyens and Mr. Kermit Roosevelt and a few others. Sir John Simon is staying with the Viceroy as he passes through. The Viceregal Levee was a brilliant affair and it seemed to suffer less than the races from the order as to Court mourning. The combination of racing and Court mourning has been a poser to those who cannot obtain a Paris frock under six weeks: and the usual butterfly aspect of the enclosures has suffered consequently. Orange William "walked off" with the King Emperor's Cup and looks certain for the Viceroy's. He is in a class by himself in the East. The pantomime starts on Boxing night; the restaurants are in full swing and, of course, everybody's dancing. It ought to be a happy Christmas.

Markets.

Business in the jute and gunny markets has dwindled to a very low ebb during the past week; this has been due mostly to absence of inquiry from the mills, and the disinclination generally to operate on the approach of the Christmas holidays. Prices have, in consequence, shown a further drop which is more pronounced in the case of jute; gunnies displayed a slightly better tendency towards the close. It is anticipated that the middle of January will see a better market for heavy goods, a factor which should reflect beneficially upon the jute market. Piecegoods remain stagnant; the tea market is closed here.

A holiday feeling has prevailed in the stock markets, with the result that the volume of business passing has been small. Jute shares have suffered through lack of support, and almost all prices have been marked down. The position is causing holders a certain amount of anxiety; reports from the mills are to the effect that they are holding out for cheap jute, which will mean lower dividends until the stock is exhausted, and lower returns will be preceded by a lower level of prices. From this, there appears to be little likelihood of an appreciation in share values for some time to come. Interest in the cotton section continues to be fairly well maintained, and coal shares have been in good demand. With the tea market closed, dealings in the shares have been on a small scale, but the tendency is distinctly towards higher prices; the position of the industry points to a revival in the share market, and the general opinion is that this is probable during the next month or two. After a steady advance for the last six months, rubbers have reacted; this has been due mainly to profit-taking and the fall in the price of the commodity; but, with the price at its present level, it is not likely that shares will fall much further, and this reaction may be considered a healthy stake out, which may have the effect of ridding the market of weak holders. Apart from Government securities, investment stocks have been in keen demand. The Stock Exchange remains closed until January 3.

Money is in slightly better demand, short notice and three months call being quoted at four and five per cent. respectively. Exchange closed unchanged.

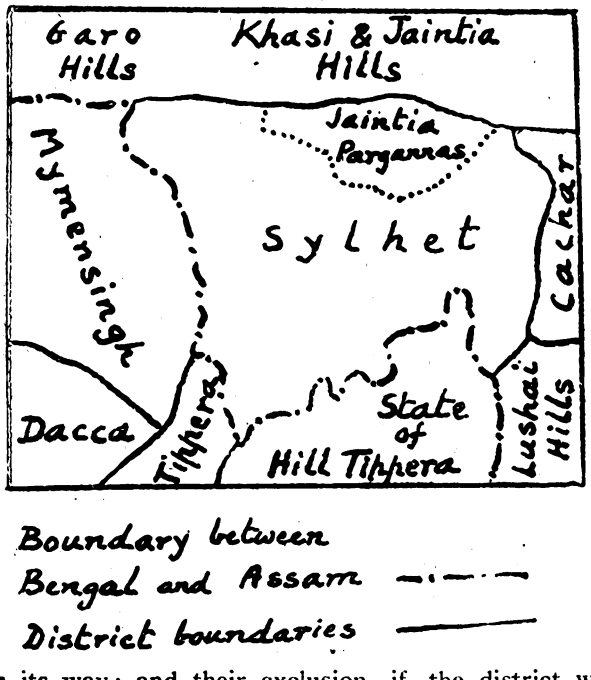
EDMUND CANDLER.

My acquaintance with the late Mr. Candler was but slight, and ended in circumstances that were not the most favourable. It is perhaps egotistic to claim that, as Chief Censor in India throughout practically the whole of the War, I was the most unpopular man in the country; but I do not think that I can have fallen far short of that distinction. As a sincere admirer of "Siri Ram"—as I was, later, of "Abdication"—it was particularly distasteful to me to have to cut about Mr. Candler's despatches from Mesopotamia: and the process was equally distasteful to him—indeed, he complained on one occasion, with considerable justice, that an important letter from the front was reduced by the Censor to "a description of a flight of sand-grouse crossing the setting sun." The last time I met him was when, on his return from Mesopotamia, he came to see me, and expressed his dissatisfaction rather forcibly; but, at the same time, recognied that allowances must be made for one "under authority," whose excisions were, more often than not, dictated by his superiors: and I was glad to find that the vials of his natural wrath were poured out upon them, rather than upon me, their instrument. It cannot be denied that not only the Mesopotamia "Eyewitness," but a good many other people in India, had cause of complaint against the censorship, though perhaps not in nearly so many cases as they believed: anl it was only reasonable that they should hold the Censor personally responsible. But Mr. Candler, besides being a skilled journalist, was a thoroughly good fellow: and I have always been glad to remember that we parted on very friendly terms. I did not meet him again, though I saw a good deal of his work as Publicity Officer in the Punjab: an apointment whose abolition he must, I think, have welcomed, as his particular gifts hardly found expression in an officially controlled job of such a nature. From my limited acquaintance with Mr. Candler, I should be inclined to class him as a man rather impatient of authority, with its red-tape restrictions and occasional stupidity, which he was rather inclined to magnify; but he was a delightful companion and a man of sterling worth, for whose loss not only India, but the English-speaking world, will be the poorer.

C. K.

THE INDIAN MAIL.

The Transfer of Sylhet.



The Nationalists in the Bengal Legislative Council have been actively engaged in inflicting defeats on the Government: and one of these was in the matter of the proposed transfer of the district of Sylhet from Assam to Bengal. There has been, for some time past, an insistent demand by the Bengal Nationalists for the inclusion of Sylhet in the Bengal Presidency, on the grounds of language, race and creed: it is already included in the "Congress Province" of Bengal: and this demand had been put before the Government of India, who had asked for "a reasoned decision" by the Bengal Legislative Council before deciding the matter. In submitting the question to the Council, the Bengal Government spokesman expressed the opinion that the proposal offered no administrative difficulties or conveniences; but that, while its acceptance would result in "certain sentimental and social advantages," it would also result in heavy additional expenditure to Bengal, since the administration of the district was carried on at an annual loss estimated at nearly six lakhs of rupees. He therefore moved a resolu-

Digitized by Google

tion that the Government of India should be asked to abstain from taking any measures for the inclusion of the district of Sylhet in the Presidency of Bengal, on the ground that the financial results would be injurious to Bengal. This resolution was defeated by 64 votes to 46.

Ties of Creed and Language.

The total population of Assam is estimated at a little over six millions: and, of this total, the district of Sylhet is responsible for considerably over a third—approximately 2¼ millions. Bengali is spoken by about half the population of Assam: and, out of Sylhet's 2¼ millions, nearly two million people speak Bengali. Also, the total Mohammedan population of Assam is about 1,600,000: and nearly three quarters of them are found in Sylhet. Included in the administrative district of Sylhet is a tract of country known as the Jaintia Pargannas—the lowland portion of what used to be the Native State of the Jaintia Hills. The population of the Jaintia Pargannas is about 125,000: so that, excluding them—they do not speak Bengali and are not Mohammedans—Sylhet proper is considerably more than half Mohammedan in religion and almost entirely Bengali in language. Its affinity to the neighbouring Bengal districts of Mymensingh, Dacca and Tippera is therefore obvious. But it so happens, that the Jaintia Pargannas are the only part of Sylhet that

pays its way: and their exclusion, if the district were transferred to Bengal, would add nearly three lakhs of rupees more to the deficit that Bengal would then have to take over, and would bring the total loss up to nearly nine lakhs of rupees. Bengal finds it difficult enough to make both ends meet, as it is: and the Council has recently thrown out several Government demands, for expenditure considered to be urgent, on the ground that the Presidency cannot afford them. In this case, however, they have allowed sentiment to override finance, so far as they themselves are concerned; though the final decision, of course, does not rest with them, but with the Government of India.

A Commissioner in Assam.

It may also be observed that, in comparison with the other Provinces of India, Assam is so light a charge as hardly to justify a separate existence as a Governor's Province: and the subtraction of more than a third of its present population, by the transfer of Sylhet to Bengal, would make its already rather anomalous position even more apparent. Nor, indeed, if considerations of language and creed should carry the day in the matter of Sylhet, ought the process to stop there; for there is another district of Assam, Goalpara, lying north of the Garo Hills and contiguous with the Bengal district of Jalpaiguri, with a population of approximately half a million, that reproduces, to a somewhat less marked extent, the conditions obtaining in Sylhet. If, therefore, the Bengal Nationalists are sincere in their desire to "reunite the Bengali Nation," their proper procedure would seem to be to move the Government of India to transfer the whole of Assam to the Bengal Presidency and to create, for the Assamese districts, a "Commissioner in Assam," on the model of the Commissioner in Sind: thereby getting over the financial difficulty through the abolition of the present expensive and top-heavy administration by a Governor with Executive Councillors and Ministers, and the swollen Secretariat that their existence necessarily connotes.

The Coal Trade.

The Indian coal-mining industry is described nowadays as "the sick trade of India": and it has lately put forward a claim, before the Tariff Board, for protection. Strong exception to this claim has been taken by Sir Thomas Catto, Chairman of the Bengal Coal Company (which paid a dividend of 50 per cent. for 1924, and 40 per cent. for 1925): on the ground that the only certain effect of protection would be to force up the price of foreign coal to the mills and industrial establishments of Bombay, which were already fighting against keen competition, especially from Japan. A coal duty, the main burden of which would fall on the Bombay cotton industry, was indefensible. The only way to regain lost markets was to economise, reduce costs, and cheapen prices. The coal industry of India must be able to compete in the home markets, particularly in Bombay and Karachi, without inflicting on its customers the hardship of dearer coal.

Coal Dividends.

The sickness of the Indian coal trade is not very apparent to the uninstructed observer; for a scrutiny of the latest list of Indian coal companies, published in *Commerce* (Calcutta), shows that it contains the names of 109 coal mining companies, with an aggregate paid up capital of about 680 lakhs of rupees, figures regarding the dividends declared by which, in 1924 and for the first half of 1925, were available to the compilers for one or both of the periods stated. Of these companies, in 1924, 44 declared no dividend, and the return of one is blank: of the remaining 64, the following were the declared dividends:—110, 90, 80, 70, 65, 60, 57, two of 50, 45, 42½, two of 35, four of 30, three of 25, six of 20, twenty-one of between 10 and 17½, and seventeen of between 2½ and 9½. For the first half of 1925, out of the same 109 companies, 33 declared no dividend, and the return of 30 is blank: of the remaining 46, the following were the declared dividends:—50, 45, two of 40 (one of which—the Bengal Coal Company—for the full year), 35, 30, 28½, 22½, 22, three of 20, fifteen of between 10 and 17½, eighteen of between 2½ and 7½, and one of 1½.

Coal Raising Statistics.

According to the Chief Inspector of Mines' report for 1924, the total output was 20¼ million tons, an increase of 1½ million over that of the previous year, though 1½ million less than that of the record year of 1919. The collieries consumed rather more than 2¼ million tons, and despatched 17½ million, while 560,000 tons were used for coking at the collieries. The stocks in hand amounted to about 3 million tons, a reduction of nearly 80,000 tons from those of the previous year. The average output for each person employed below ground varied from 57 tons in Baluchistan to 179 tons in Bengal and Behar. Two coal-fields, both in the latter area, produced approximately 84 per cent. of all the coal raised in India—Jharia, nearly 11 million tons, and Raniganj, just over 6 million. The number of coal cutting machines in use was 114, out of which no less than 103 were working on the two coal fields mentioned. This fact supplies some explanation of the wide variation in individual output mentioned above: though, as the amount of coal got by machines only amounted to 9 per cent. of the total raisings, the explana-

Digitized by Google

tion is a very partial one, and the figures point to a great divergence in individual capacity—between the moderately skilful, and the almost entirely unskilled, worker.

The Jute Industry.

Raw and manufactured jute represent about a quarter of the total exports of India: their value, in 1924-25, was 81 crores of rupees, over sixty millions sterling at the existing rate of exchange. At the end of the War, there were about seventy jute mills in Calcutta, all, except one American mill, owned by British firms. Since the War, eight more have been started, two of which by Americans and two by Indians, the last in 1921: in which year, owing to persistent over-production of jute manufactures, the mills adopted short-time working of four days a week. This arrangement was, however, nullified to a large extent by the installation of new looms, some 8,000 in number, by existing mills: the number of looms now operating being approximately 50,000. In 1924 the Jute Mills Association agreed to stop further extensions; but the stagnation, caused by over-production, still continues.

In the case of raw jute, the position is very different. World requirements are estimated at about ten million bales, the estimated consumption of India being about six million, of the continent 2¼ million, of the United Kingdom a million, and of America 650,000. The yield in the current year is expected to be only about eight million bales—that of 1925 is reported as 7,586,000, and the stocks in hand amount to less than 400,000. It is estimated that the present acreage of approximately three million could produce the required ten million bales if the whole of it produced a full crop; which, of course, it does not and never can do. The remedy is more acreage, or a better yield. More acreage cannot be found in Bengal, and attempts to grow jute elsewhere have, so far, been a failure. Government and subsidised farms already supply a small quantity of seed, but not nearly as much as is required: and the only possible means of improving the position seems to be an arrangement for supplying a better and more reliable supply of seed. Here is a matter to which the Indian Agricultural Institute might well turn its attention: it has already done wonders in the improvement of wheat and cotton and it is not unnatural to suppose that, given the opportunity, it would prove equal to doing the same for jute.

Trade Returns for October.

The returns of India's sea-borne trade in October showed an increase both in imports and exports over the preceding month. The value of her imports of private merchandise rose from 1853 to 1956 lakhs, and of her exports of products and manufactures from 2719 to 2825 lakhs. India's net imports of treasure rose from 462 to 574 lakhs: and the visible balance of trade in her favour was 388 lakhs, compared with 514 in September. Her imports of raw materials and of food, drink and tobacco, remained very much the same as in the preceding month, though showing a small decrease; but there was a notable rise in her imports of manufactured goods, the value of which was 1408 lakhs, against 1295 lakhs in September. The variations in cotton goods were, in quantity, grey, white and coloured goods, September 43, 37, 37 million yards, October 51, 31, 35: and in value, September 135, 124, 159 lakhs, October 157, 106, 152.

For the seven months ending October 1925, India's net imports of gold and silver were 2038 and 960 lakhs respectively, compared with 2739 and 1074 lakhs in the same period of 1924.

India's Land Trade.

Commerce (Calcutta), in commenting on the prospects of improved trade likely to follow on the opening of the Khyber Railway, draws attention to the fact that there has been, from time immemorial, a large traffic between Central Asia and India: and remarks that, when the trade of India is considered, attention is apt to be confined to the sea-borne trade. There is, in fact, a steady growth in the volume of India's land trade, the value of which rose, in 1924-25, to 2309 lakhs of rupees from 1996 lakhs in the previous year. As an avenue of trade, the Khyber route does not compare with the wide land frontiers on the east of India and Burma: and the trade returns lump together the trade of Sind, Baluchistan and the Frontier Province: but, of these, the Khyber route undoubtedly carries by far the greatest share. This section of the Indian land trade amounts in yearly value to 1000 lakhs of rupees, mostly consisting of piece goods exported by India and food, fruit, hides and skins imported from Afghanistan; exports representing about 55 per cent. of the total.

During the fiscal year 1924-25, India exported to Afghanistan piece goods to the value of 143 lakhs of rupees, about forty per cent. of which were goods of Indian origin: and yarn to the value of 26 lakhs, about twenty per cent. of which was of her own manufacture. India also exported over 12½ million hundredweight of tea: and, as less than eight million hundredweight of this was Indian, it would appear that a good opportunity exists for pushing the sale of Indian tea in Afghanistan. In return for hides and skins imported, India exported finished leather to the value of eleven lakhs. The most important articles imported from Afghanistan were fruit and vegetables, and raw wool, to the value of 64 and 51 lakhs respectively.

If the civilising influence of the railway has the result that may be hoped, it will not only be the Afghan market that traders in India will have to consider, but that of the tribesmen also. Their purchasing power is, at present, negligible; but, if the railway gives an impetus to trade, it will, at the same time, bring more money into the pockets of the tribesmen and will introduce them to the amenities of settled life; so that it ought to stimulate not only their purchasing power, but their desire to use it.

Insulted Legislators.

The following letter from a member of the Bengal Legislative Council to the Leader of the House was read out in the Council shortly before the last mail left India:

"My complaint is Messrs. Cook and French, the Commissioner of the Burdwan Division and the District Magistrate of Bankura respectively, came to visit the town of Vishnupur on January 28, 1925. They know I am a resident of this town. I presume this, because they are officially bound to know it and if it be the fact that they do not know it, in that case they are incompetent officers and they should be taken to task for that.

"Be that as it may, my present purpose is to intimate to you, they failed in their duty in that they did not pay me a visit of respect, which they were bound to do as official etiquette. Their salaries are subject to the vote of the Council and I am an elected member of the same. So they owe their maintenance to my vote and are bound to pay me respect.

"If you hold otherwise, I will hold the Government of India Act is nothing if not a farce. I must provide against the surmise, I am an ardent lover of honour. What I want is discipline. I therefore request if you are of the same view with me in this matter you will deal with them accordingly. If you hold any adverse view, kindly let me know that as early as possible so that I may disillusion the self-respecting members of the Council to which I belong.

"I know what I am. I know I am a native of the Dependency of India and this demand on my part will raise a contemptuous feeling in you and the members of your race. Yet, if I demand a reply it is because I want to prove to the world that no amount of Government of India Act will raise the status of the Indians, who must learn to stand on their own legs if they want the status of equality with the free nations of the world."

It is distressing to have to add that this serious matter raised "smiles from the Right": while the Left—the Swarajists—so far from being suitably impressed, are reported to have "assumed an attitude of unconcern."

About the same time, it happened that a member of the Punjab Legislative Council was visiting the central jail

Digitized by Google

at Lahore as a non-official visitor and as a member of the Jails Standing Committee. While he was inspecting the solitary cells two prisoners asked him to hear their complaints. He was approaching them when one threw mud at him and the other subjected him to grosser indignity.

The report continues: "His indignation knows no bounds. He says a dozen convict warders were standing near, and no effort was made to prevent the insult, although afterwards the prisoners were seized. He thinks that the insult was committed at the instance of a jail official, and has demanded of the Punjab Government the suspension and punishment of the jailor; otherwise he fears that he will no longer be able to perform his duties as a jail visitor."

Here again, though the Punjab Government has expressed its sympathy and has promised an inquiry, the incident does not seem to have been treated with the seriousness that it deserved; for we are told that "unofficial India is chuckling with glee over the affair, regarding it as a piquant relief to the pompous solemnity of Indian politics."

INDIAN COMMERCIAL NOTES.

The best news we have had for some time past from India is that rain has fallen in the wheat districts. The official forecast of the acreage and yield of the new crop has not yet been received, but the figures are awaited with interest. Last year's crop was distinctly on the short side at 8,696,000 tons, a total which roughly corresponds to requirements for local consumption in India at present prices, and leaves but little over for export. The effect of this shortage on Karachi's trade may be seen from a comparison of consignments to foreign countries during the period April 1 to December 5 1925, namely 155,822 tons as compared with 717,797 tons during the corresponding period of 1924. Wheat is now quoted at six rupees a maund f.o.r. Lyallpur, as compared with less than five rupees in September. These prices are sufficiently high to justify the conclusion that the area under wheat this year will have been normal or slightly in advance of normal; but it is useless speculating until the official estimate is published.

The estimate of the Indian cotton crop has just been received and gives a total yield of 5,569,000 bales, a distinct drop on last season's final estimate of 6,058,000 bales, although the acreage is practically the same, slightly over 26 million acres. Although the 1925 monsoon was, on the whole, fairly well distributed, two important cotton areas seem to have been left out, namely Gujarat and Kathiawar, and the result has been a decrease of half a million bales in production as compared with 1924-25.

Adverse weather conditions have reduced the season's tea crop, though definite figures are not yet available. There are signs that Russia is increasing her purchases: and, if this is really the case, existing stocks are not by any means too high. The market at present is in some suspense, awaiting clearer indications of the adjustment of output to demand.

The jute position is interesting. The 1925 crop was estimated at 7,850,000 bales, whereas the world's demand cannot be much short of ten million. In face of the resulting high prices of jute, inferior fibres, such as sisal, tow and even esparto grass, are being freely used. There is no doubt, however, that the existing high prices will have their reaction on the acreage under jute, which is at present a more profitable crop to cultivate than its keenest competitor, rice.

At their present meeting in Calcutta the Associated Chambers of Commerce have endorsed the Viceroy's announcement that an active policy of propaganda in regard to Indian agriculture is to be pursued. This is a most hopeful piece of news. Measures which can improve India's agricultural output, and place more capital at the disposal of the cultivator, are bound to have their effect on his profits and, ultimately, on his purchasing power and his demand for manufactured goods.

INDIAN EXCHANGE.

London, January 1.

There has been a lull in business both here and in India, but rupee rates have been well maintained, and there are no signs of any weakness.

In Calcutta and Bombay the quotation has been steady at 1s. 6 5-32d. T.T. with occasional sales at 1s. 6 3-16d. to merchants, but there has been very little demand from importers, and the principal buyer has again been the Government. Their purchases, however, since the beginning of the year have been unimportant and rupee exchange in India may be called quiet but steady. Forward rates are the same as ready for delivery to the middle of March; but there is little inquiry for business beyond ready and near positions.

Good commercial paper is still quoted at 1s. 6 15-32d. three months sight, for delivery within the next two months; but very little appears to be going on in exports.

The London market has been quiet with a small business passing for cash and near at 1s. 6 7-32d. T.T. with an occasional transaction at 1-64th lower.

The last report issued by the Imperial Bank of India shows a slackening off in the demand for money for trade purposes; but Government have invested a further amount of 2 crores of rupees in securities held here, bringing their total holdings in London up to 29 crores.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

Air Competition.

Attention was drawn in an article in these columns last week on "The Development of Empire Air Routes" to the activity of foreign countries in the establishment of air communications in the Near East. France, it may be noted, is now particularly prominent in this connexion. She anticipates that Syria will become the highway of the air between Europe and the East, and to further this a race is to be promoted shortly across this territory. Very possibly France may be right as regards some air lines, though the fact that a country lies in a direct line with a desired destination does not necessarily means as regards air routes that it is the most desirable way. The British air routes to the East have naturally been designed to follow British territory as far as possible. It is unfortunate that an all-red route to India is out of the question, but the proposed route is the next best substitute for it.

Cotton-Growing in the Sudan.

The Near East in some aspect or other usually enters into discussions of the learned associations that are held at this time of the year, and before the Geographical Association last week Sir John Russell, Director of the Rothamsted Experimental Station, gave an address on "Cotton and the Nile," dealing with a journey he made through the Sudan and the regions south of the Nile for the purpose of investigating the conditions of cotton cultivation. Rain-grown cotton naturally came in for attention. As he remarked, the area of rain-grown cotton is the smallest of the three methods utilised in the Sudan, but very naturally the cost is least. While he pays a tribute to the suitability of the country for cotton growing far southward, he pointed out that the natives are hunters and fishers rather than cultivators, with little or no conception of money, and dealing mainly in cattle, and said that it was not certain yet whether cotton could be cultivated to any great extent there. While the output of rain-grown cotton at present is, if not negligible, at any rate very small, the most persistent efforts are being made to extend the area under cultivation, and by providing means of transport and by vast schemes of road construction to make conditions favourable for the rapid extension of the crop. As to the possible development of production, it is interesting to recall that Mr. A. J. C. Huddleston, in an article on rain cotton development in the Sudan some twelve months ago, said that he was convinced that if rain cotton cultivation is pushed as a consistent policy in the Blue Nile Province, Kassala Province, the Fung Province, and the White Nile Province, the seed distribution in these provinces should reach 10,000 bags within three years, enabling 200,000 acres to be sown. "I look forward," he added, "to a production in the immediate future in these provinces of anything from 100,000 to 200,000 kantars, giving 20,000 to 40,000 bales. There are good prospects of still further expansion in these four provinces apart from probable development in other provinces." For 1924-25 the output of rain-grown cotton was estimated at 48,000 kantars, comprised as follows:—Blue Nile and Fung 40,000, Upper Nile 1,300, Um Ruaba and Nuba Mountains 3,000, Bahr-el-Ghazal and Mongalla 500. Recent reports suggest that there has been a great advance in rain-grown cultivation, though the figures I have quoted show very plainly the progress that is necessary before anything like the half a million bales which is held to be the possible output of rain-grown cotton looms in sight. A very great deal depends, of course, on the price of cotton. If it is sufficiently remunerative, then the advance in output should be rapid, but a low price is bound to retard developments to some extent.

An Irrigation Problem.

Sir John Russell went on to discuss the question of crops grown under irrigation, and pointed out that experience in Egypt has shown that while the crops raised by means of irrigation were at first very good, they showed a disposition to fall off in quality. Thus the yield of cotton in Egypt fell from 5.6 kantars per feddan in 1896 to 2.6 kantars in 1921. All modern irrigation projects, he states, are liable to this deterioration, which he very rightly regards as one of the most serious problems of the day. The deterioration is stated to be due to some extent to sodium salts deposited by the irrigation waters which makes the soil barren, and Sir John Russell makes the suggestion that the British Empire should give a lead towards a co-operative investigation by the countries affected as to the causes of the falling off in the yield of crops by irrigation and the finding of a remedy.

British Films.

It is eminently satisfactory to know that at long last action is contemplated by the Government to further the production of British films by ordaining that a certain proportion of the films shown in this country must be British. I should like to see them go farther, and provide for the definite exclusion of films that give a most misleading view of British life. Some of the films now coming over give a perfectly appalling idea of our social conditions, and one is left to marvel how they ever came to be produced. These choice samples of the American export trade would not matter if everyone were able to appraise them at their true value, but that is unfortunately not the case, and the harm that can be done by wholly erroneous views of British society at the present time can well be imagined. The obvious remedy lies in a stricter censorship.

Yugoslavia's Progress.

It is not without significance that the Press here is devoting increasing attention to Yugoslavia, and I think it may possibly not be going too far to attribute this new-

found interest in the most important Balkan country to-day to the pioneer work of THE NEAR EAST AND INDIA in bringing before the public the potentialities of this country and emphasising the way in which it has steadily developed since the War. Yugoslavia has certainly set an example to the other Balkan countries as regards reconstruction, and from whatever angle one views the country, whether as regards trade, finance, or that barometer of a nation's well-being—the exchange—one finds the same story of improvement. Nothing is more symptomatic of Yugoslavia's determination to develop the country's resources to the full than the efforts that have been, and are being, made to improve the communications, and to fashion out of a number of disconnected systems an instrument of transport that will efficiently serve the needs of the country's growing commerce.

America and Rubber.

One gets very weary of the American wailings over the price of rubber. Really it might almost be thought, from what has been said, that the Stevenson scheme represented the most outrageous "corner" since Adam. If the protests emanated from another country than the United States one would take them more seriously, but with the recollections that one has of pre-War economic history it is difficult to feel otherwise than that one is in the presence of a gigantic bluff. After all, as I have pointed out before in these columns, the rubber situation is of America's own making. When the commodity was a few pence per lb. the manufacturers abstained from buying, and but for the scheme a great industry would have been lost to Great Britain. They are playing exactly the same game now. For more than a month America has been out of the market, with the result that the price is down to 3s. 7½d. per lb. as against 4s. 8d., and the manufacturers will no doubt abstain from buying as long as they can. Then when they are forced to come in we shall have further extreme fluctuations in prices—6s. is regarded as quite a possible price level—and there will be a further outburst against our so-called "monopoly" in rubber. I am told on good authority that a sharp upward movement is anticipated in the market in February, and I assume that to mean that we shall be having buying orders from the other side by then.

Other Commodities.

When America takes up a question it is dealt with very thoroughly, and so we find Mr. Hoover, in giving evidence before the House of Representatives Committee which is investigating rubber prices, citing a long list of raw materials in regard to which according to him Government controlled combination exists. It is worth while giving a list of the commodities in question. They are Egyptian long staple cotton, camphor, coffee, iodine, nitrates, potash, and mercury. There are also, he states, other virtual monopolies, such as quinine and silk. Of this long and imposing array of "monopolies" I only propose to refer to the first-named. I can only assume with regard to Egyptian cotton that Mr. Hoover is taking exception to the action of the Egyptian Government in entering the market with a view to keeping up the price. He certainly can have no cause for grievance against this country in regard to cotton, for our only aim is to further its production in the Empire as rapidly as possible so that we may be independent of America as regards this commodity. How essential it is that we should be so is made clear by the movement to restrict the production of cotton in America because the price is too low for the

Leadership!

IN the world of Tyres, Dunlop has always been the recognised leader—ever since those epoch-making days of the first practicable pneumatic, invented by J. B. Dunlop.

farmers. I have read no complaints here with regard to this proposed move, but it would be interesting to hear Mr. Hoover's condemnation of it.

Oil From Tobacco.

The tobacco plant is being put to a novel use, I learn, in Bulgaria, where the tobacco seeds are now being utilised on a considerable scale for the extraction of oil. It is said that the oil may be compared with olive oil as regards its nutritive qualities. So far three factories have been established for this new industry, the chief one being at Philippopolis. Tobacco production has progressed apace in the Balkans, and in recent years, from one cause or another, both Bulgaria and Greece have found it difficult to dispose of their crops. If the new industry proves anything of a success it should prove a very useful sideline for the planters.

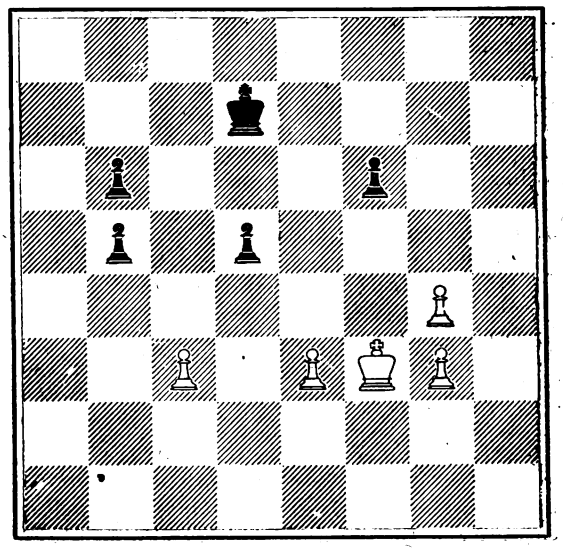
Danube Navigation.

Recent climatic vicissitudes which have been general over Europe had their effect, as might have been expected, on Danube navigation. During the very severe weather the river was frozen over for some distance above and below the Tulcea bend, and over twenty steamers were held up at Galatz and Braila while a few were actually caught in the ice at Tulcea. Increasing efforts were made to open the river, and with the sudden development of mild weather towards the end of December it was found possible to declare navigation open as from January 1.

COMMENTATOR.

INDIA TO-DAY.

The big film "India To-day," which was described in our issue of September 24, 1925, is back again in London after a tour of the provinces and is showing at the Polytechnic Cinema, Theatre, Regent Street, until the end of the month. As the chief purpose of the film is to give to a British audience some idea of the work that has been acomplished in India by Christian missions, it would be unfair to charge the producers with having laid too much stress on missionary effort. In spite of the number of pictures of school children, an attempt has been made to maintain a balance between missionary work and the general interest attaching to the teaching populations, the wonderful buildings and the grand scenery of India. At Cawnpore something is shown of the Cooper, Allen Boot Factory and labour conditions. The lecturer mentions that it takes twenty minutes to make a pair of boots, and he might add that on the occasion of a visit to the factory Lord Kitchener was asked to cut his name on two pieces of leather, which were presented to him on leaving less than half an hour later in the form of a pair of boots. For its educational value the film deserves to attract very large audiences, and it is satisfactory to know that it is to be shown until the end of this month. Arrangements should be made for all schools within a wide radius of London to visit the Polytechnic cinema..



NEW COMPANY.

ALLIED MAGNESITE INDUSTRIES (EUBOEA).

Allied Magnesite Industries (Euboea) has been registered as a private company with a capital of £200,000 in £1 shares. The objects are to acquire magnesite mines and deposits in the Island of Euboea, Greece, and elsewhere, to adopt an agreement with Louis Napoleon Schoenfeld, to acquire shares in Terrano, Ltd., to crush and prepare for market ores, metals and mineral substances, to carry out chemical and other metallurgical operations, to manufacture floorings of all descriptions. The first directors are:—A. E. B. Rose, L. N. Schonfeld, A M. Harris, H. W. Young, M.I.E.E., H. L. de Caux, J. H. Infield, and T. E. Comins.

Any other move for White than 2, PxP (ch) leads to the same result. It is interesting to note that White would win with the first move.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

COMPANY NOTES AND REPORTS.

SOUTH BEHAR RAILWAY.

The report of the South Behar Railway Company for the year 1925 shows that after paying a dividend at the rate of 5 per cent. per annum for the half-year ended December 31, 1924, a balance remained in hand of £9,287, which, with the amount received from the Secretary of State for India for the half-year to June 30, 1925, and other receipts, less interest on Debenture stock, corporation tax and sundry other outgoings, left £13,396. An interim dividend at the rate of 5 per cent. per annum was paid on July 15 leaving £3,906 to carry forward. Adding £15,000 received from the Secretary of State for India for the half-year to December 31, 1925, and other receipts, less interest on debenture stock and sundry outgoings, there remains £13,467. The directors recommend a dividend at the rate of 5 per cent. per annum for the half-year, leaving £3,977 to be carried forward.

ROHILKUND AND KUMAON RAILWAY.

The report for the year ended September 30, 1925, states that the net earnings of the whole system amount to Rs.29,98,106, against Rs.33,74,522. The company's share is Rs.13,63,865, against Rs.15,06,259. The actual rates of exchange during the period to which the accounts relate were above the book rate, viz., 1s. 4d., and after adding gain in remittance, viz., £11,085, and other miscellaneous receipts, the net receipts are £108,522, against £113,871. An ad interim dividend for the half-year ended March 31, 1925, of 4 per cent., plus a bonus of 1 per cent., was declared on the ordinary stock and paid on July 27, 1925. After bringing forward the balance from last year of £33,038, providing for income-tax, interest on debenture and preference stocks, interim dividend and bonus, contribution to provident fund, and making other adjustments, including £5,500 on account of the Secretary of State's share of surplus profits, the amount to be dealt with is £64,951. The directors recommend a final dividend of £5 per cent., together with a bonus of 3 per cent., on the ordinary stock, subject to income-tax at 2s. 3d. in the £, absorbing £28,400, and that £36,551 be carried forward.

CENTRAL TRAVANCORE.

The directors of the Central Travancore Rubber Company state that for 1925 the total crops harvested were as follows: Rubber, 312,074 lbs; tea, 294,509 lbs. In both cases the estimate has been slightly exceeded. The figures are subject to slight adjustment in respect of loss of weight in transit. Estimated crops for 1926 are: Rubber, 298,100 lbs; tea, 300,000 lbs. The total sales of rubber to date (including 94,080 lbs. delivered under forward contract at 1s. 6d. per pound c.i.f. New York) amount to 211,054 lbs. at a gross average price of 2s. 5.95d., leaving a balance of approximately 100,000 lbs. still to be realised. The whole of the year's tea crop (except a small proportion of the dust) is being delivered in London under forward contract. The average price for the crop will be about 1s. 4¼d. per pound landed London. Both the rubber and tea estates have been economically worked and the "all-in" cost of production (including loss on exchange—a fairly substantial item) should not exceed 9½ per pound for both products. Forward sales of rubber have been made as follows:—For shipment during 1926: 124,400 lbs. at average price of 1s. 9⅜d. c.i.f. New York. For shipment during 1927: 80,640 lbs. at price of 2s. 10½d. c.i.f. New York. The whole of the 1926 tea crop has been sold forward at price of 1s. 4d. per pound landed London. Interim dividends on the Ordinary and Preference shares on account of 1925 have been declared as follows:—Ordinary: 5 per cent., less tax. Preference: 17½ per cent., less tax (being 5 per cent. balance of fixed rate and 12½ per cent to account of participating rights).

NEW ANDREW WEIR MOTOR VESSEL.

The motor vessel Myrtlebank, which has been built by Harland and Wolff, Ltd., Govan, for Messrs. Andrew Weir and Co. (Bank Line, Ltd.), was delivered on December 29. The Myrtlebank is the ninth motor vessel completed by Harland and Wolff for the Bank Line during the past year. The vessel, which has a gross tonnage of 5,200, is 434 ft. by 53.9 ft. by 37 ft., is of the shelter-deck type, and is classed 100 A 1 at Lloyd's. Harland and Wolff have in hand four further vessels for the Bank Line.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Liverpool, January 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Holywell for Port Said, Colombo, Madras, and Calcutta (London, January 23).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, January 27).

British India Line.— S.s. Sirdhana for Bombay and Karachi (London, January 15); s.s. Mandala for Colombo, Madras, and Calcutta (London, January 16).

Cunard Line.—S.s. Phrygia for Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Glasgow, January 21.)

Ellerman "City" Line.—S.s. City of Leicester for Calcutta (Birkenhead, January 23).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, January 30). (FIRST STEAMER OF THE SEASON FOR THE DANUBE.)

P. and O. Line.—S.s. Rajputana for Bombay (London, January 22); s.s. Novara for Colombo, Madras, and Calcutta (Liverpool, January 23).

Prince Line.—S.s. Glencastrian for Malta, Alexandria, and Syrian Coast (London, January 30).

The Egyptian Government has not yet decided to accept an invitation to take part in the Philadelphia International Exhibition which will be held in June.

To provide for the new milling plant which has been installed and further development work, the directors of the Cyprus Asbestos Company have decided to issue 92,500 preferred ten per cent. participating shares of £1 each at par to holders.

Dr. Zimmerman, League of Nations Commissioner for Austrian Financial Reform, has announced the appointment of Mr. Robert Charles Kay as adviser to the National Bank, in succession to M. Van Gyns. Mr. Kay was formerly London Manager of the National Bank of Turkey.

Motors and Motoring.

By G. B. B.

I am disposed to agree with those who consider that some improvement in design might be made with advantage, which would prevent so much dirt adhering to body and chassis during bad weather. Just lately, we have had an unusually varied selection of climate, and as a result it has been impossible to keep a car clean, or even, except after great labour, to get it clean. Owner-drivers have been almost at their wits ends lately. A fellow journalist gave me a hint regarding this matter of car cleaning which I gladly pass on. It came originally from an ostler in one of the old coaching inns, and he had had it from his father. It was this. Never mind about cleaning bright work more than every now and then but, whenever it has got wet, wipe it over with a damp leather, and it will dry evenly, cleanly and without spots. I do not know the reason of this unless it be that the wiping spreads the damp film so that it dries evenly. Anyway, it does what it is claimed to do, that I can testify.

The Small Car Trial.

Trials, particularly those of a more than usually strenuous character are of distinct value to the trade and we owe the present position of the British light car largely to the knowledge we have gained in light car trials, reliability tests, hill climbs and track performances. It is regrettable, therefore, that there is a possibility that the principal small car trial of the year may be abandoned, largely on account of some inability on the part of the authorities to agree on some matter of size limit, and even the Society of Motor Manufacturers and Traders does not seem to be particularly interested in the matter. The annual small car trial was to have been organised this year by the Scottish Automobile Club and that body wished to allow, amongst the entrants, cars of the two-litre class. The Royal Automobile Club says that the former limit of 1,600 cubic centimetre engine capacity should be retained. As if it really mattered whether the competition were restricted to 1,600 c.c. engined cars or whether cars with rather larger engines should be allowed to compete. If some of our ruling bodies had fewer gnat strainers and camel swallowers on their councils, the industry would be less "pestered to death" with rulings, decisions and arbitrary pronouncements.

An American Innovation.

The British Commissioner of Police for the Metropolis is never above accepting a hint and he has boldly and bodily borrowed from America the one-way traffic scheme put into operation in the neighbourhood of Parliament Square. This has been done with a view to reducing the congestion caused by the crossing of so many lines of traffic. The general idea is that all the traffic entering the Square must now proceed round it in a clockwise direction and under no circumstances may any driver travel in an opposite direction. The Square is now a one-way traffic area, and the whole width of the street is available for vehicles instead of only one-half as in the old arrangement. The scheme should now be adopted in the case of all London Squares, and gradually extended in as many directions as is possible.

Four Wheel Brakes.

When four wheel brakes were first introduced, I was motoring editor of *The Financier*, and those who used to read that now-defunct daily will remember that I was by no means impressed with the idea, with certain reservations. I had no criticism of the methods and means adopted by the big makers; I did criticise and that somewhat freely, the arrangements offered in some of the smaller cars, produced by makers whose products are by no means as well known as those makers would wish.

Several friends and a good many strangers have told me recently that they do not think their cars, fitted with four wheel brakes, possess as much braking power as did the old two wheel brake models they owned. They also add that a distinctly greater effort is need to apply them. To some extent I do not think their criticisms are altogether justified. I believe they are speaking of brake blocks which have not yet bedded down to their work. If a greater effort is needed, however, to put on the brakes than was previously the case, there is something which needs adjustment and the attention of the maker should be called to the matter.

A New Thermostat.

A new thermostatic control, known as the Thermet, and which can be fitted to any engine, has been placed on the market by Messrs S. Smith and Sons (M.A.), Ltd., of Cricklewood. The device consists of a casting, the centre portion of which contains a flat disc valve which normally prevents water flowing through, but which under the influence of heat moves from its seat and allows the water to pass. The mere fact that with this device there is no need to set the carburetter to a rich mixture in cold weather shows the economy in petrol that its use effects. I note, by the way that Messrs. Smith and Sons (M.A.). Ltd., have been doing very well lately, the increased business in speedometers and carburetters being very encouraging.

Motoring in Ceylon.

The *Times of Ceylon* has made an analysis of the official statistics relating to motor vehicle registration in Ceylon and shows that on June 30 last there were 5,720 cars, 2,261 motor cycles, and 1,268 motor omnibuses in use, the total, including lorries, vans, and miscellaneous vehicles, being 10,240. The private cars of British make that figure in the list are as follows: Standard, 138; Austin, 105; Morris Cowley, 100; Rover, 92; Wolseley, 73; Star, 49; Morris Oxford, 38; Sunbeam, 36; Bean, 31; Albion, 29; Singer, 27; Swift, 25; Armstrong Siddeley, 24; Vulcan, 24; Arrol Johnston, 23; Humber, 22; Clyno, 21; Trojan, 20; Argyll, 19; Belsize, 16; Crossley, 16;

A NEW GAME OF PATIENCE.

"Linaludo." By Archibald Sharpe (London: E. Marlborough and Co., Ltd., 3s. Sketchbooks, 1 and 2, 9d. each.

A cross-word puzzle involves two people, the author and the victim, to say nothing of intermediaries in the way of newspapers and books of reference. There is much to be said, therefore, for a patience game with pencil and paper which requires no more than one person, wherever may be the land of blessedness which provides the necessary spare time for these indulgences. "Linaludo" reduces to a science the attempt often made by those who handle chessmen and chessboards to march a knight over as many squares as possible without touching any square twice. By depicting chessboard squares on a piece of paper as dots or circles, alternately large and small, and by joining two circles with a line representing the angle of a knight's move, one can keep a record of the moves and so avoid touching a "square" more than once. Now comes Mr. Archibald Sharp to show that not only is the number of ways by which 63 or 64 "squares" can be visited once, and once only, "inexhaustible," but that the resultant diagrams are of great diversity of form, capable of being designed with different kinds of symmetry. Rules and regulations follow, and it has to be admitted that the pastime has a considerable amount of fascination. We strongly recommend anyone, on whose hands time hangs heavily, whether in the overtaxed land of Britain, on board ship, or in the wider spaces of the East, to "have a shot" at it. In drawing rooms and nurseries where they play games we may yet be called upon to indulge in competitive Linaludo, with the additional attraction of a silver pencil or a box of chocolates by way of prize.

The traffic receipts of the South Indian Railway Company for the week ended December 12 amounted to Rs.8,24,471, making the total from April 1 Rs.3,65,75,269.

The production of crude oil by the Phœnix Oil and Transport Company for December was 22,027 tons (gross) and the throughput of the refineries was 21,620 tons. For the year 1925 the production of crude was 267,380 tons (gross) as against 187,904 tons for the previous year.

NEWS FROM ALL SOURCES.

H.H. the Aga Khan was enthusiastically welcomed on his return to Bombay last Friday by thousands of Mohammedans.

Calcutta bade a final and ceremonious farewell to Lord Reading, the retiring Viceroy, and Lady Reading last Saturday.

The East Indian Coal Company recommends a dividend of 10 per cent., less tax, for the half year ended October 31, 1925.

Lieutenant-Colonel William George Wolfe Macbay, late Indian Army, of the Isthmian Club, Piccadilly, W., left £14,353.

The Imperial Airways expresses have flown over 1,500,000 miles between London and the Continent since the start of the service.

The traffic receipts of the Suez Canal from December 26 to January 3 amounted to 4,560,000 francs, against 4,580,000 francs for the corresponding period of 1924-25.

The European experts who have been invited by the Egyptian Government to study the plans for improvement works at Alexandria harbour, are expected to arrive in Egypt on January 15.

Mr. Rushbrook Williams, Director of Public Information with the Government of India, has accepted the invitation of the Maharajah of Patiala to be the Foreign Minister of the State.

Sir A. Henry McMahon has accepted the invitation of the directors of the Oriental Telephone and Electric Company to join the board as director and chairman in the place of the late Sir George S. Gibb.

The Great Indian Peninsula Railway announces large reductions in passenger fares, particularly in the third class. The loss on third class passenger traffic alone will, it is estimated, be Rs.21 lakhs (about £140,000).

The Royal Exchange Assurance announce that the amount of net new life business completed and paid for during the twelve months ended December 31 last amounted to £1,971,553 being an increase of £109,746 over that completed during the preceding year.

Following a discussion on the Ministerial statement the Bulgarian Sobranje on January 6 passed a vote of confidence in the Government and proceeded to the election of its officers, says a Sofia message. The outgoing Prime Minister, M. Zankoff, was elected President.

The directors of Westminister Bank, Limited, have declared a final dividend of 10 per cent. in respect of the £20 shares, making 20 per cent. for the year; and a final dividend of 6¼ per cent. on the £1 shares making the maximum of 12½ per cent for the year. The dividends will be payable (less income tax) on February 1.

M. Briand has received from Lord Crewe, the British Ambassador in Paris, a letter enclosing a cheque for 100,000 francs (£1,000) to be employed for charitable purposes. The drawer of the cheque is the Maharani of Gwalior, who was desirous of thus testifying her gratitude for the kindness extended to her husband, the Maharajah of Gwalior, prior to his demise in Paris last year.

On behalf of the Anglo-Indian Community of India, Burma, and England, a wreath was placed on January 1 at the foot of the Cenotaph by Colonel H. Gidney, president-in-chief of the Anglo-Indian Association in India. Colonel Gidney was accompanied by Mr. A. B. Kunning, president of the London Anglo-Indian Association, Mr. H. A. Gibbon, vice-president, Mr. R. Pound, secretary, and the Council of the London Association.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended December 31, state:—

Since our last report the futures market has shown a better disposition and prices on the week have registered fairly substantial advances as follows:—Sakellaridis, January, 2.02 dollars up; March, 2.10 dollars up; May, 1.85 dollars up; July 2.20 dollars up; November, 1.95 dollars up; Ashomuni, February, 1.43 dollars up; April, 1.50 dollars up; October, 1.55 dollars up.

The better tone this week must be attributed principally to the rise of New York by about 2 cents which gave a certain amount of strength to our market and stopped the short selling which has been the feature of the market during the past two weeks. Bear speculators have somewhat reduced their commitments, but the open positions must still be fairly big. The commercial houses have not taken a great deal of interest in the market, whenever they did intervene however it was to buy, as was the case last week.

The demand from abroad may be characterised as a shade better; when the market was at its lowest point America came in and bought fair lines of Ashmouni whilst Lancashire also has been regularly buying Sakel in moderate quantities. For the time being, the Continent appears to be disinterested.

The serious falling off in the demand from abroad since the beginning of the season is reflected in the export figures, the total to date being about 3,030,000 kantars against 3,720,000 kantars for the corresponding period last year.

Receipts from the villages have been on a freer scale this week, and the stock in Alexandria to-day stands at 2,250,000 kantars as aginst 1,965,000 kantars a year ago. The cotton remaining up country must amount to about 3,000,000 kantars whereas a year ago it was only about 1,800,000 kantars.

The Agricultural Syndicate has approached the Government insisting on a more efficacious intervention, and we understand that the question of Governmental intervention in the futures market has been discussed. In the mean time no purchases have this week been effected by the Government on the spot market.

Despite the reaction which has lifted Sakel prices from 30 dollars to 32.$\frac{3}{4}$ dollars and Ashmouni prices from 22$\frac{1}{2}$ dollars to 24$\frac{1}{2}$ dollars, we still consider present levels fairly reasonable but think that the demand from abroad must show substantial improvement if prices are to rise any further.

The week's receipts amount to 284,462 kantars against exports 158,820 kantars; the stock stands at 2,251,408 kantars.

Spot: Owing to holidays, Minet el Bassal has only been open four days this week. There has been a fair demand and sales amount to about 15,500 bales of which we estimate 9,700 bales Sakellaridis, 5,200 bales Uppers, 400 bales Zagora and 200 bales other varieties.

Sakellaridis: has been in slightly improved demand and all styles have been dealt in. With the exception of Fully Fair and below, which have weakened appreciably owing to fairly substantial offerings of these grades, spot differences are unchanged.

Ashmouni and Zagora: continue in moderat request. All qualities have changed hands but the medium styles have absorbed most of the demand. Spot differences are generally unchanged.

Brown and Pillion: have been in retail request. Spot differences are generally a little easier.

White: has met with a moderate demand and spot differences have generally eased a little.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended July 9 states:—

The market re-opened after the Christmas and New Year holidays with a rather hesitant tone but an improvement became manifest as the week progressed. Taking it as a whole inquiry has been on a good scale, and even if the results in actual contracts have not been proportionate, the evidence given of a substantial latent demand has imparted a more cheerful feeling to spinners and manufacturers.

Yarn.—There has been a considerable expansion in the inquiry for American counts and some improvement in the turnover. In addition to the better state of the cloth market it seems that the change of tendency in raw cotton markets is inducing manufacturers to cover commitments which had been left open, and, of course, the recent additional stoppages of the mills have reduced the stocks available. Business in Egyptian counts has not been brisk but is a little better than recently.

Cloth.—A more encouraging week has been experienced; a broadening inquiry has been met with from various foreign markets without, however, there being any individual lines of special note. More enterprise has been shown by buyers in India, and for China there has been a slightly better inquiry. The result of the effort to revise the auction sales in Shanghai next week is awaited with considerable interest. Several minor markets have also contributed rather more to the general total of business, Egypt and the Near East being exceptions. As usual at this time of the year the Home trade is quiet.

Raw Cotton.—Only minor fluctuations have taken place during the past week. The tendency, however, has been for prices to rise. Closing quotations yesterday were as follows: American Middling, 10.54; Egyptian Fully Good Fair, 17.95.

It is understood that the Syrian Government will participate in the Agricultural and Industrial Exhibition to be held in Cairo in February.

Near East Markets.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended December 31:—

Sultanas.—The arrivals are estimated at 21,990 tons and the sales to date are put at 20,615 tons. Closing prices Smyrna, per cwt. c.i.f London/Liverpool: Type 12, 52s.; type 13, 54s.; type 14, 56s.; type 15, 58s.; type 16, 61s.; type 17, 65s.

A steady demand has developed during the past three weeks as reflected in the shipments which have been made for the U.K. and Continental markets. A fair extent of business has also been undertaken for January and February shipment. The market is lightly stocked, and is firm with an upward tendency. Prices in local currency have advanced, but higher foreign exchange rates have counteracted to some extent the equivalent costs in foreign currencies. Estimates of stocks remaining available for export vary between 5,000 to 6,500 tons. Inferior grades are becoming scarce, and fine outstanding fruit is running out. Prospects generally point to a strong and advancing market.

Figs.—The arrivals are estimated at 190,832 sacks and the sales to date are put at 189,416 sacks.

IVORY IN 1925.

Messrs. Hale and Son, in their annual Ivory report for 1925, state:—

During the past year only moderate quantities have again been catalogued. The demand has been good for large and medium tusks, both soft and hard, and prices for these descriptions have been well maintained, but ball ivory, both points and scrivelloes, have been disappointing, values generally declining at each sale. Prices, however, for these descriptions were very high at the end of the previous year. Competition throughout has been good; American and the Continent have bought freely, whilst the Home trade have taken their usual quantity. During the year the quantities catalogued for public sale have been less than that offered the previous year, chiefly owing to the decreased supply from Egypt. The deliveries from the warehouse after each sale continue good. The market continues in a strong position; imports come in steadily, but not in excessive quantities, and we anticipate in the coming year a continuance of the demand, and do not look for any material change in prices in the near future.

The imports of Abyssinian during the year have been larger. It has met a good demand, the fluctuations being as in other soft grain descriptions. The quantities of Egyptian catalogued have been small, being 33½ tons against 46½ tons the preceding year. A good demand has prevailed. In January, soft, large and medium tusks were steady to £2 to £4 per cwt. dearer, whilst hard was steady to £2 to £3 per cwt. lower, scrivelloes firm to rather dearer, ball scrivelloes £5 to £15 per cwt. lower. In April, soft tusks were £4 to £8 per cwt. higher, hard steady to rather dearer. Ball scrivelloes were steady to rather lower, scrivelloes £2 to £3 per cwt. easier. In July, soft large and medium tusks were steady to rather higher, hard about steady, soft scrivelloes steady. Hard scrivelloes £3 to £4 per cwt. lower Ball scrivelloes sold rather in buyers' favour. In October, prices for soft were steady, and hard firm to rather higher. Ball scrivelloes were unchanged, soft scrivelloes steady, hard rather lower.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Drugs, Etc.—The Egyptian Department of Public Health invites tenders for the supply of drugs, etc., required during the year 1926-7. (D.O.T.)

Surgical Instruments, Etc.—The Department of Public Health, Cairo, invites tenders for the supply of surgical instruments, appliances and sundries. February 15. (D.O.T.)

Calico, Nainsooks, Etc.—The War Department of the Egyptian Government invites tenders for: Calico, grey, G.S. 140,600 yards; calico, khaki, G.S. 10,770 yards; calico, blue, G.S. 7,500 yards; calico, red, 6,600 yards; calico, yellow, 3,300 yards; calico, bleached, heavy, 1,000 yards; nainsook, blue, 560 yards. January 29. (D.O.T.)

Hides, Etc.—The War Department of the Egyptian Government invites tenders for: Hides, collar brown, 4,300 lb.; hides, brindle brown, 1,250 lb.; hides, collar black, 250 lb.; hides, bag black, 440 lb.; hides, collar black enamelled, 80 lb.; hides, brindle black enamelled, 50 lb.; leather, sole butts, 700 lb.; chamois leather, 110 each. February 16. (D.O.T.)

Canvas Hose.—The War Department of the Egyptian Government invites tenders for hose, canvas, 2¾ in., 4,200 feet. February 16. (D.O.T.)

Printing Plates.—The Survey of Egypt, Giza (Mudiriya), Egypt, invites tenders for the supply of 1,400 aluminium lithographic printing plates of very fine grain and also of 150 zinc lithographic printing plates. March 10. (D.O.T.)

ROUMANIA.

Porcelain Insulators.—The Roumanian State Railways invite tenders for the supply of porcelain insulators, sleeves and plates. February 4. (D.O.T.)

TURKEY.

Sacks.—The Turkish Public Debt Administration at Angora invites tenders for the supply of 800,000 to 1,200,000 hemp sacks. February 15. (D.O.T.)

Company Meeting.

LAND BANK OF EGYPT.

A Satisfactory Year.

The following is a translation of the report of the Land Bank of Egypt for the year ended September 30 last, which was presented at the annual meeting at Alexandria on December 1:—

Th directors have the honour of presenting, in conformity with Articles 42 and 48 of the company's statutes, the financial results of the year ended September 30 last. After the two previous years marked by special operations, of which you have had knowledge, and which you unanimously approved at the meeting of December 2, 1924, the business activity of the Land Bank of Egypt has been applied to maintaining the level of its mortgage loans while retaining the clientele which has remained faithful to it. From this point of view, essential for the good progress of the bank's business, the position has varied little since last year, and the total of the mortgage investments stands at £E3,787,514.028 as against £E3,787,234.661 in 1924. In this amount are included 28 sales and 151 new loans standing at £E478,757.882, a sum to which there has to be added £E102,097.239 due by the purchasers on expropriation, and deposited in the banks of various courts pending the termination of the legal formalities for distribution.

The cotton season of 1924-1925 having been favourable for the landed proprietors, the annuities in arrears of our debtors have been reduced from £E365,578.895 to £E324,175.822, of which £E105,132.032 applies to previous years and £E219,043.780 to the past year. An important improvement has equally taken place in our estate account. As a result of sales of 29 rural properties and some parcels of building land for a total sum of £E55,031.244 this heading has been reduced from £E127,212.759 to £E97,976.037.

The amortisations deemed necessary having been carried out, the amortisations stand at £E6,105.244, allocated to the following heads:—brokerage on mortagage loans on personal property, expenses of the estate, writing off book debts; the net profit which we propose for distribution stands at £E199,634.627. That distribution will be carried out in the manner conforming to the resolution voted by the meeting of December 2, 1924, and will operate as follows:—When the statutory deduction of 5 per cent., £E47,531.505, is effected, each of the categories having rights will receive 5 per cent. on the amounts carried to their credit, sums accruing from the profits on the purchase of our 4 per cent. bonds. After that payment will be made of the dividends and ordinary percentages of the year. Adding the interests above-mentioned to the ordinary profits, each of the ordinary shares will be entitled to 9s., making with the statutory 5 per cent. an amount of 14s. As regards the founders' shares, they will receive £7 12s. These two totals are the same as those of last year. By the application of the system of amortisation adopted, of one-fortieth per year, raised on the capital returned from our mortgage loans, there will be further allocated to the ordinary shares 1s. 3d., and £1 2s. to the founders' shares, so that the total amount received for the year 1924-1925 will stand at 15s. 3d. for the ordinary shares and £8 14s. for the founders' shares. These propositions, which the directors submit for your approval, will enable us, while maintaining the distribution, to conserve the funds necessary for the satisfactory working of our mortgage investments. We do not doubt that they will obtain your complete assent.

Profit and Loss Account.

The receipts of the year arising from interest on mortgage loans, short term advances, deferred interests, etc., have been £E363,758.835. The service of the bonds, general expenses, fiscal taxes paid or due to the French Government, and various amortisations we propose to you, which stand at £E6,105.234, absorb a total sum of £E164,124.208. The profits to be distributed amount to £E199,634.627. From that sum there has first to be deducted the statutory 5 per cent. in favour of our 195,000 shares, £E47,531.250, and there remains to be divided £E152,103.377. On that balance there has to be deducted, in conformity with the decisions of the general meeting of December 2, the interest at 5 per cent. on £E503,509.754, profits carried forward on the 4 per cent. bonds. The interest falls to the various categories as follows:—Reserve £E4,495.623, the directors £E4,495.622, ordinary shares £E25,175.488, founders' shares £E10,789.495, £E44,956.228, £E107,147.149. In accordance with our statutes, 10 per cent. is placed to the statutory reserve £10,714.715, and 10 per cent. goes to the board of directors £10,714.715, £21,429.430. Of the balance £E85,717.719, 70 per cent. to the ordinary shares, £E60,002.403, to which has to be added the amount brought forward from the year 1923-24 £E2,887.251. In addition the share accruing from interest on profits carried forward £E25,175.488, making £E88,065.142. We propose to you to give out of this sum to the 195,000 shares 9s. per share, £E85,556.250, which, added to the statutory interest of 5 per cent. already mentioned, will represent a total dividend of 14s. per share. The carry forwad fo the shares will thus be £E2,508.892. An interim dividend of 5s. having been paid on June 15, it will remain to pay a dividend of 9s. per share. The 30 per cent. belonging to the founders' shares represents £E25,715.316. Further, their share of the interests arising on the profits carried forward £E10,789.495, to which has to be added the amount brought forward from the year 1923-24, £E1,903.457. We propose to distribute a dividend of £7 12s. on each founders' share, and to carry forward £E1,358.268.

The Resolutions.

The general meeting unimously (1) approved the accounts and balance-sheet for the year ended September 30, 1925, and gave the directors their discharge for their administration. (2) Approved the division of profits proposed by the directors and fixed the dividends as follows:—(A) A distribution of 14s. for each ordinary share: that distribution, in conformity with the decisions of the general meeting of December 2, 1924, includes, besides the ordinary dividend of the year, interest at 5 per cent. on £E503,509.754, profits carried forward, realised on the 4 per cent. bonds. An interim dividend of 5s. per ordinary share having been paid on June 15, it will remain to pay as a final settlement for the year 1924-25 9s. per share. (B) A distribution of £7 12s. on each founders' share: that distribution, in conformity with the decisions of the general meeting of December 2, 1924, includes, in addition to the ordinary dividend of the year, interest at 5 per cent. on £E215,789.894, profits carried forward, realised on the 4 per cent. bonds. It was resolved to carry forward £E2,508.892 for the ordinary shares and £E1,358.268 for the founders' shares. (3) By deduction on the capital recovered on mortgage loans, the meeting decided to amortise, up to one-fortieth, the profits carried forward realised on the 4 per cent. bonds, which will result in a supplementary distribution of 1s. 3d. for each ordinary share, with, on that fortieth, a carry forward of £E1,251.807, and of £1 2s. on each founders' share with a carry forward of £E144.747. (4) Re-elected MM. Salvago, Labruyere and Ismalun, the retiring directors. (5) Elected as director M. le Comte Charles de Lasteyrie. (6) Nominated as auditors, MM. Charles Mazet, Franz Sofio, and Henri Pougin.

STEAUA ROMANA PRODUCTION.

Steaua Romana (British) Limited are advised that the production of the Steaua Romana Company, Bucharest, for December was 27,430 tons, the decline for the month being due to the continued shortage of transport facilities and to interruption of traffic and work on the fields owing to heavy snowfalls. The production for the year 1925, including 14,000 tons royalty oil was approximately 333,736 tons, compared with 285,438 tons for 1924, an increase of 48,298 tons. This is the highest production obtained by the company from its own fields since 1915.

The first meeting of the Commission engaged in the preliminary negotiations for a trade agreement between Great Britain and Yugoslavia was held in Belgrade on January 5. The principal British representative is Mr. Kennard, the British Minister.

The Egyptian Ministry of Finance has submitted a note to the Council of Ministers asking for sanction for a credit of £E72,000 in this year's budget of the Ministry of Communications for the purchase of two steamers for the carriage of Government purchases between Egypt and Europe.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Position in Syria.

So far the Druse insurgents have displayed no alacrity to help M. de Jouvenel in his task of pacifying Syria. The period of time fixed for the laying down of arms has expired, without producing any general surrender. Negotiations are in progress with the Syrian Nationalists, and it would appear as if the Druses were waiting to see how much the townsmen can extract from the French before they commit themselves to an abandonment of the struggle. This attitude must be disappointing to the new High Commissioner, who has given ample evidence of his sincerity in offering to meet the grievances of the Druses. It suggests that there may yet prove to be no alternative for France to complete victory in the field as an essential preliminary to a political settlement. The slowness with which French reinforcements are reaching the country indicates the difficulties in this method of procedure. Riots in Aleppo and Homs are significant of the agitated condition of the country, but they do not affect the obvious fact that there is less inclination to-day on the part of the Druses to risk a trial of strength with the French forces in the open.

Greece and General Pangalos.

There are a good many people in Great Britain to whom anything in the nature of a dictatorship is anathema. Accordingly, current comments on Greek affairs are inclined to be tinged with the conviction that nothing good can be expected of a régime which openly overrides the Constitution. Yet so far, since General Pangalos assumed the reins of government, the balance of good over bad, as far as his political actions are concerned, is in his favour. If it cannot be said of him, as was said of a British Sovereign, he never did a foolish thing, he goes a long way towards fulfilling the rest of the description: he never said a wise one. It would seem that Greece would have much less cause for fault-finding, if General Pangalos made fewer speeches, and refrained from announcing the Government's intentions until they had been considered and approved by his Cabinet. The two great achievements for which the country is indebted to him are the reconciliation, or at least the first steps towards a reconciliation, between Royalists and Venizelists, and Army reform. In regard to the latter he has rehabilitated the country in its own eyes by restoring efficiency to the army; unfortunately it cannot be said that he has carried through an equally essential reform in separating the Army from politics. For a Government that aims at efficiency it is strange that the apparently retrograde step of curtailing the powers of the foreign-trained police in favour of a politically-tinged gendarmerie should have been taken. The inequalities of General Pangalos's record point to a tendency to indulge in over-hasty legislation. An impression of stability would more probably be conveyed, both at home and abroad, by a régime that recognised the wisdom of interfering as little as possible with the everyday affairs of the nation and concentrated on the essentials of good government. With the drachma above 350 to the pound, it is better that the exchange figure rather than ladies' skirts should be lowered by Government action.

Bank Note Forgeries.

If a dog has a bad name, there are always plenty of people ready to hang him. With forgers trying their hands indifferently on the bank-notes of half-a-dozen countries, it is difficult to be impressed with the attempt to fasten political responsibility on Hungary and to believe in some vague conspiracy for achieving by means of forged notes what popular conviction is unlikely to endorse. When railway thefts were of daily occurrence in certain countries of Europe, it was usual to attribute them

Digitized by Google

to syndicates of ex-military officers, who found it difficult to make an honest living under post-Armistice conditions. That sooner or later people who ought to be above such a thing should conceive the idea of forgery on a grand scale in order to relieve financial stringency is less to be wondered at than that anybody should become associated with the plot in the belief that, whether for political or for pecuniary ends, the forged notes could be distributed to the extent contemplated before being detected. As far as Hungary is concerned, her responsibility or innocence can best be gauged by the measures taken to deal with those who can be shown to be guilty of, or have connived at, the wholesale forgeries. In this connexion the Budapest's Government's sincerity appears to have impressed its most critical neighbours, and there is less talk now of the political aspect of the matter. No one cares much whether a highly-placed individual chooses to make a fool or a criminal of himself, but it would be a serious thing for Europe if a Government were to develop the degree of folly or insanity required for identifying itself with the alleged plot behind the forgeries.

The Makwar Dam.

There is a happy appropriateness in the fact that the man who has given his name to the great Sukkur Barrage in India should be called upon, in virtue of his new office in Egypt, to perform the ceremony associated with the official opening of the Makwar Dam. Lord Lloyd, as High Commissioner for Egypt and the Sudan, to-day puts into operation the dam across the Blue Nile at Makwar, which was actually completed last July. The events that have led up to this ceremony were fully described in a special Sudan Supplement in our issue of January 7. Cotton, it is interesting to note, has been associated with the Sennar country for many centuries. The Gezira was under the government of the Fung Sultans of Sennar from the end of the fifteenth century; in 1699 French travellers found at Sennar a population of a hundred thousand people and a very considerable trade, of which the most important item was cotton. In 1814 Burkhardt considered that the cotton manufactures of Sennar and Bagermi, on the west of Darfur, furnished the greater part of North Africa with articles of dress. Subsequently, as we know, the trade languished when the growers of cotton became the victims of the slave trade. Peace and political stability have been established there now for a quarter of a century: but the Gezira region has had to wait for the Makwar Dam, before it can do justice to its vast potentialities as a cotton growing centre.

The New Order in Bulgaria.

The change of Government in Bulgaria brings to an end an anomalous state of affairs that has long puzzled many onlookers. As the *coup d'état* of June 1923 brought M. Tsankoff into office and the Democratic Entente into being, it was taken for granted that, as long as they held together, their policies were identical. The Democratic Entente, however, was by no means anxious to perpetuate the unconstitutionalism of the Stambolisky régime by a fresh exercise of arbitrary power, and for some time past it has stood for a more generous policy of reconciliation towards the Agrarian Party. M. Tsankoff could not bring himself, or was not allowed by the military group to which he owed his preferment, to adopt such a policy, and it was not until he realised that his following in the Sobranye was melting away that he consented to consider the proposal for a political amnesty. By this time what was at first a question of policy had become in the opinion of the whole country a matter of such political and economic urgency that the Democratic Entente under its President, M. Liaptcheff, could insist that the man who had had to undertake the work of repression was not the best person to carry through with the necessary success a policy of reconciliation. Accordingly, M. Liaptcheff has become Prime Minister, and one of the first acts of his Ministry is to draft a comprehensive scheme of amnesty which will include all but those who directly instigated the Communist revolt or were responsible for murder or have identified themselves publicly with subversive propaganda. There can be little doubt that those who stand to benefit by this measure will feel more inclined to allow the past to bury the past under a Government presided over by M. Liaptcheff than they would with a Ministry still in power which had been responsible for their imprisonment or exile. If the good sense of the Bulgarian people helps them at this stage to realize that the future of the country depends on the whole-hearted acceptance by all sections of the community of the spirit which has prompted the amnesty, they will thereby strengthen the hands of the new Government in regard to the foreign loan that is indispensable to the recuperation of Bulgaria.

ANGLO-HELLENIC RELATIONS.

"Gladstone, the Ionian Islands and Greece," was the subject of the first of the three public lectures to be given at the University of London (King's College) by Dr. Andrew Andreades, C.B.E., Dean of the Faculty of Law in the University of Athens. These lectures, given in connexion with the Koraes Chair of Modern Greek History, cover the history of Anglo-Hellenic relations during the second half of the nineteenth century. In the first lecture last Friday, Dr. Andreades dealt with the period of British occupation of the Ionian Islands and the different schools of thought in England represented by Palmerston and Gladstone. He gave a profoundly interesting interpretation of the relations between Greece and Great Britain, impressing his audience both with his mastery of his subject and of the English language, and as a lecturer who knows how to make his subject live.

The second lecture will be given to-morrow (Friday) at King's College, Strand, at 5.30 p.m.

A schoolmaster, M. Karajitch, of Vranya, in Yugoslavia, is being prosecuted by the local clergy for having committed an offence against religion, morality, and the State by teaching Darwinism in public.

The first battalion of the Green Howards has arrived at Strensall from Khartoum, having reached home via Port Sudan in the transport Derbyshire. Since the Armistice the battalion has been quartered in Palestine, India, and Egypt and the Sudan, and at Strensall the unit relieves the 2nd battalion Cheshire Regiment, which will put in two training seasons at Tidworth with the 7th Infantry Brigade.

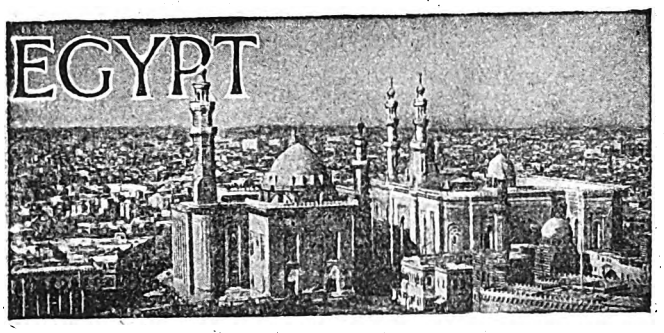
IRAQ'S OPPORTUNITY.

Exactly four weeks after the ruling of the Council of the League of Nations was given to the effect that negotiations for the extension of the Anglo-Iraqi Treaty must be begun within six months, the necessary agreement has been drafted and signed by representatives of Great Britain and Iraq. It may be inferred that this agreement, which is still subject to ratification, next month, by the British Parliament, is restricted to the points at issue, namely, that Great Britain undertakes to prolong the relationship now existing between her and Iraq beyond the period of four years laid down in the present Anglo-Iraqi Treaty, as amended by the subsequent Protocol, until the time when Iraq shall enter the League of Nations, but in any case not beyond twenty-five years; and Iraq on her part binds herself to accept this prolongation, subject to such modifications as experience or altered conditions may from time to time suggest. Any discussion in Parliament, therefore, on the new Treaty is likely to turn on the provisions of the existing one, which it is proposed to prolong. This earlier document, however, supplies little for the unreasoning and unreasonable opponents of Great Britain's presence in Iraq to challenge in detail. In all important matters affecting the international and financial obligations of the British Government Iraq agrees to be guided by the advice of the British High Commissioner. As Mr. Baldwin recently explained: "It is not an undertaking to spend money on or to keep troops in Iraq either for the maintenance of internal power or for its defence against external aggression, but to continue our co-operation and advice in maintaining a stable system of government." In these circumstances there is no reason to anticipate that the British Government will encounter any difficulty in securing the ratification by Parliament of the new agreement with Iraq. The debate last month in the House of Commons revealed the poverty in argument of those who have constituted themselves the opponents of the policy adopted in regard to Iraq by successive British Governments. Nor was the opposition notable, last Monday, to the Treaty's ratification in the Baghdad Mejliss. In this connexion, moreover, it will be remembered that there is a tendency in Eastern parliaments to regard a vote as a marketable possession, and the first indication of the Government's special interest in any given measure is likely to produce an unexpected crop of potential dissidents, who are anxious to lose no opportunity of promoting measures in which they may have an equally special interest, and who may consider that one good turn deserves another. It is a situation with which the Baghdad Government no doubt, knew how to deal, and it should also be able to allay any genuine fears of the Nationalists in regard to possible restrictions on Iraq's independence.



For Iraq the ratification of the new agreement should prove a notable landmark. The question of the northern frontier is settled; the difficult problem of placing relations with Nejd on a satisfactory basis has at last been solved, insofar as a way has been found that should provide an amicable adjustment of all disputes that may arise in the future. For the first time, therefore, the young State of Iraq can claim a sense of reasonable security and can abandon a hand-to-mouth existence for one that enables her to look ahead and to plan for the future. At this stage it will be well for the Iraqis and for all who have the interests of the country at heart to turn to the Report of the Mission which inquired last year into the financial position and prospects of the Government of Iraq. This document at the time of its publication was overshadowed by the Mosul question. The Mission, indeed, found itself obliged to take for granted that there would be no considerable change in the boundaries of Iraq, for the areas involved in the Mosul controversy were "of great economic importance to the welfare of the State, and their exclusion from Iraq would alter the whole strategic problem of defence." Given, however, this territorial integrity, together with a continuance of internal order and freedom from external troubles, the Mission anticipated an improvement in the matter of the development of the resources of the country, although it must be gradual. No one, with the experience of Egypt before him, will be inclined to decry Iraq because its development promises to be a slow process. The business and official worlds are accustoming themselves to look far ahead; the earth's resources may be unlimited, but the stock in any individual country may become exhausted or may prove inadequate to the needs of steadily increasing markets. The best hopes for the economic future of Iraq are in oil and cotton; these resources will prove none the less valuable, if their exploitation should not be in time to provide relief for the Budgets of the next few years. Behind cotton and, in a lesser degree, cereals lies the question of irrigation. With it is linked up the problem of the salting of the soil, which may entail drainage schemes side by side with irrigation projects. All these questions, the proper handling of which is essential to the economic development of Iraq, call for more experience and greater resources than the Iraqis can be expected to command at present, and are a further argument for the continuance of relations between Great Britain and Iraq which, in the terms of the Treaty, enable His Britannic Majesty, at the request of His Majesty the King of Iraq, to provide the State of Iraq with such advice and assistance as may be required.

A common mistake made by the opponents of British policy in regard to Iraq is to depict the country as it presented itself to the sorely-tried troops engaged in its conquest, or as it appeared to others caught in the toils of the rebellion of 1920. They will not realise that Iraq has been making steady progress in many directions during the last few years. First and foremost, there is the very noticeable improvement in King Faisal's own position. It would be affectation to ignore the fact that King Faisal came to the country as a stranger, although the scion of an Arab Royal House. He had been chosen by the Iraqis as their Sovereign, but it would have been contrary to the Arabs' character to display any marked enthusiasm for the object of their choice until he had proved himself. To-day it can be said that King Faisal has reached this stage, and has won for himself a position in the popular estimation that might be associated with one who had forced his way to the throne rather than with an elected monarch. Secondly, the feeling of unity or a national feeling is growing among the Iraqis, in a way that was hardly to be expected of Arabs in such a short space of time. It is not suggested that the country has left all its troubles behind it; but it is showing signs of progress that must be as gratifying to the Iraqis as it is to the Mandatory Power, and in particular to those British officials who at one stage or another have played their part there as administrators or advisers. In these circumstances it is not to be wondered at that successive British Governments have refused to be deflected from the policy of helping Iraq until the time comes when the Iraqis can walk alone, with the momentum provided by the prosperity that a scientifically developed country can command.

Cairo, January 10.

Political Crimes.

Publication of the charges against the seven men accused in the new political crimes case has caused a profound sensation here. The fact that no charge had been brought against Ahmed Maher and Mahmoud Nakrashy during the year that they have spent in prison had led to a belief that, in the end, they might be released without being brought to trial. But now both are accused of complicity in a whole series of murders and attempted murders. Both were so closely connected with Zaghloulist political headquarters, where Ahmed Maher, in particular, had been a very prominent figure, that the framing of such grave charges against them naturally has important bearing upon the political situation. Abdel Halim el Biali, too, although he was expelled by the Wafd in December, 1924 on the grounds that he had acted as a spy for other political interests, to whom he was alleged to have carried the Wafd's secrets, was a fairly prominent member of the Zaghloulist organisation during the period in which he is alleged to have been helping in political murder. It is impossible, therefore, that the political situation should not be considerably affected by these latest developments in the political crimes investigation. It will not be possible for a normal political life to be resumed until the last of the political crimes trials has been concluded and the men upon whom suspicion now rests have been either punished or proved to be innocent.

The Sennar Dam.

On Thursday evening the High Commissioner, Lady Lloyd, Mrs. E. R. D. Maclagan (a sister of Lady Lloyd, who will arrive in Cairo from England on Wednesday), Mr. A. F. H. Wiggin (First Secretary at the Residency), the Sudan Agent in Cairo and two Aides-de-Camp will leave by special train for Shellal, *en route* for Khartoum and Sennar, where Lord Lloyd will perform the official inaugural ceremony on January 21. A party of journalists invited by the Sudan Government to attend the ceremony will leave on Tuesday evening. During the High Commissioner's absence, he will be replaced by Mr. Nevile Henderson, who returns to Cairo to-morrow from leave in England.

The Government's Alleged Misdeeds.

In some quarters surprise has been expressed that the High Commissioner should be able to get away from Cairo for so long a period as three weeks at the least—and possibly more—at a time when the country's political life is obviously far from normal and when, according to some of the Opposition newspapers, the misdeeds of the Government are likely to provoke forcible public reaction. On the other hand, there is a tendency not to take very seriously the gloomy prophecies of interested politicians. The present Ministry is certainly far from being a strong one, and the tale of its political blunders is long. The most recent was the decision to prosecute Omdas who resigned their posts rather than carry out the Ministry of the Interior's instructions to apply the new Electoral Law. The decision was taken in a great hurry, and without any apparent sufficient reason, for the movement has shown no signs of spreading to any great extent. Now that the prosecuted omdas have all been either acquitted or else fined paltry sums like ten shillings a head, the Government has been made to appear unwise in prosecuting at all, while, had it been the case that the non-co-operation movement needed only a little encouragement to become general, the judgments of the Courts which have tried the omdas' cases would have afforded just the stimulus needed. But, although the Ziwar Ministry enjoys practically no prestige in any part of the country, the majority of Egyptians just now are more concerned with the depressed state of the cotton market, than with political questions. So far as can be foreseen, there is no great likelihood of political complications of a serious nature occuring during the next few weeks.

Tutankhamen.

The placing on public view of Tutankhamen's golden coffin and mask in the Cairo Museum has resulted in visits being paid to that institution by Cairo residents who had not set foot inside its doors since the first few days of their residence in this country. At present the latest exhibits are displayed in a small, somewhat inadequate room, which hardly suffices for the Museum's wonderful new treasures, but soon they will be housed in the wing which is to be reserved for objects from the Boy Pharaoh's tomb.

Archæological Activity.

This is a period of great activity in Egyptological excavation. Although some of the American interests, notably the Metropolitan Museum of Art of New York, have expressed great dissatisfaction with the Egyptian Government's refusal to return to the half-share system inaugurated by Sir Gaston Maspero and terminated two years ago, it was stated the other day by a member of the staff of the Department of Antiquities that there is now more archæological work going on in the country than at any previous period for many years. The Department itself is doing much with its decidedly limited staff. The clearing up of the Pyramid area, with the added effectiveness thereby given the Sphinx and the Pyramid of Cheops is the part of the Department's work most noticeable to lay eyes, but elsewhere, and particularly at Sakkara, under the direction of Mr. C. M. Firth, noteworthy work is being carried on. The examination of the area around the Step Pyramid has already resulted in most interesting discoveries dating from the Third Dynasty and as only a comparatively small part of the site has yet been cleared, there is the possibility of further important finds.

Dr. Reisner has not yet re-opened the Seneferu period

tomb which he discovered last year at Giza, but this is a task which will shortly be taken in hand and may provide very interesting discoveries, while the tomb of Tutankhamen, with its two Chambers still uncleared, may yet attract much popular interest before the last is heard of it.

ROUMANIA.

Bucharest, January 6.

The Crown Prince's Renunciation.

The year 1926 has not had a happy beginning for Roumania, especially not for the Royal Family. The renunciation by the Crown Prince of his right to the throne and his departure from Roumania under a certain veil of mystery, and apparently on bad terms with his family — for both the King and Queen refused to allow any steps to be taken to persuade him to alter his decision—have thrown a cloud of sadness over the whole country. The lack of any avowed reason for this sudden decision of Prince Carol, has, of course, given rise to many false rumours of a more or less scandalous character, but although the truth is not known except to a small and intimate circle, it is clear that the reason must be a grave one to produce so uncompromising an attitude in the King and Queen. Prince Michael, the son of Prince Carol and Princess Helena of Greece, has now been officially declared Heir Apparent, and a Regency Committee has been appointed. This was confirmed by Act of Parliament to-day, and Princess Helena has been made a Princess of Roumania.

Prince Nicholas, who has for some time been serving in the British Navy, has been recalled and has taken up his residence in this country.

This is the third time that Prince Carol has declared his wish to abdicate, and in the writer's opinion it would have been much wiser to have let him have his way the first time, as much less ill-feeling and sadness would have been caused. Royalties are only human beings, after all, and it is always dangerous to the happiness of all concerned to interfere with strong natural inclinations so long as there is nothing morally wrong in them.

Prince Carol is said to hold very democratic views and to believe that republics will before long replace all kingdoms in the Balkan States; so he probably prefers to abdicate before being forced to do so. However that may be, he does not appear to have behaved very well to his family.

A great many visitors obtained tickets for the meeting of the Chamber on Monday when the law was passed confirming the changes above indicated.

The debate was long, and the Opposition party of M. Maniu objected to the appointment of a Regency Committee while the King was still alive, interpreting this as a slight on His Majesty. They refused to vote one way or the other on this Bill. It is difficult, however, to find any serious arguments behind these objections, and whatever may be the weaknesses of the Liberal Party, it is the last that is likely to do anything to weaken the prestige of the Crown on to offend the Royal Family in any way.

Floods in Transylvania.

The floods that have done such enormous damage in other parts of Europe have reached proportions in Transylvania hitherto unknown in that country. Between Hia and Hunadeoara 40 km. of land are completely under water, and in the neighbourhood of Cluj important railway bridges are down, and goods traffic on certain lines is completely stopped, while passenger traffic is being carried on by means of ferries. Thousands of villagers have been rendered homeless and penniless and hundreds of cattle are said to have perished. There have also been human victims, according to the daily Press, but happily not very many. A credit of 10 million lei (£10,000) has been granted by the Government for the succour of the ruined families, and it is to be hoped that public subscription lists will soon be opened to add to this fund. The Orient Express runs normally, however, and traffic on other lines is gradually being re-established. On the Danube the broken ice floating down formed complete dams at two points, and the river froze between these, imprisoning several ships awaiting cargo. By January 1, however, the dams had been exploded and the ice broken by an ice-breaker, and the river from Galatz to the mouth was officially declared open to traffic. Owing, however, to the interruption of railway traffic up country, and perhaps partly to the destruction and damaging of large quantities of grain by the floods, cargoes have been hard to procure and freights fell to a very low price.

Railway Tickets.

It is announced this week that from January 15 direct first and second class tickets will be issued by the Roumanian State Railways and luggage will be registered direct to London from Bucharest by the Ostend-Vienna Express, either through Belgium (Ostend) or the Hook of Holland. A parcels service by the same route is to be undertaken, also from January 15, by the International Sleeping Car Service, the usual restrictions being made as to the kind of goods to be carried.

GREECE.

Athens, January 7.

General Pangalos and Greece.

The antagonism between General Pangalos and the party leaders has been growing rapidly during the last fortnight. The intrigues of the latter were no doubt partly responsible for the re-election, by an increased majority, of the Socialist Mayor of Salonika, M. Patrikios (whose former election had been annulled) at the moment when the General himself was actually on a visit to the city. The General is unpopular in Macedonia, to which he is believed to be hostile. It is complained that Macedonian Greeks are not appointed to posts on the various Refugee Commissions, and his recent attitude towards the Commission for the Installation of Refugees is greatly resented, while there is much impatience at the way local affairs are mismanaged at Athens. The re-election of the Socialist Mayor may, therefore, be regarded partly as a mark of personal hostility, and partly as an expression of that demand for Home Rule for Macedonia (to be distinguished from the autonomist programme of the *Komitajis*), which finds growing support among all classes there.

The election has, however, had the immediate result of playing into General Pangalos's hands, and providing him with a pretext for strengthening his own position, or, at any rate, of revealing its true character.

On the grounds that the country is in danger from Communism and other lawless elements, a rain of edicts, directed against the party leaders, marked his return to Athens. A rumour had preceded him, that he had been kidnapped in the neighbourhood of Mt. Olympus (with

a similar device Peisistratus once began his dictatorship in Athens), and two days after his return a Government decree announced that voting would be compulsory on all electors: on the 29th a further decree was published obliging all candidates for the Senate to sign a document stating that they held republican principles and that they attached no political significance to the elections; a third decree followed on the 30th, forbidding the publication by any newspaper, on pain of suspension, of any article or manifesto from the pen of MM. Kafandaris, Papanastasiou, or Michalokopoulos. However, on January 3 a communication appeared in the Press from the above three politicians, in which they stated that they intended to take part in the elections, and to regard them as a test of public political feeling. This presumably is what General Pangalos wanted. He now had the necessary excuse, and on the following day announced that the senatorial elections would be indefinitely postponed and all power concentrated in the hands of the Government. The ground had no doubt been prepared during his visit to Salonika, and the consent of the Army there secured, but the announcement was first made at a lunch of officers of the Republican Guard (a recently formed corps who wear French uniforms), at the conclusion of a parade of that body with armoured cars etc., just outside Athens.

So the dictatorship of General Pangalos has come into being, resting for its support on part of the Army, the Republican Guard, and the "Regular" Police, who have simultaneously been restored, in new uniforms, to Athens. The duties of the British-trained police, or "City" police, as they are called, are restricted in future to traffic-control, and similar work.

The uncertain element in the situation is Admiral Hajikyriakos, late Minister of Marine, between whom and General Pangalos friction has slowly been growing, aggravated by disagreement over the frontier incident. Though the units of the fleet have been temporarily scattered, there are indications that it is from that quarter that trouble is likely to come. In Macedonia, a military Governor-General takes the place of a civilian, and General Othonaios is removed from the command of the Army there. The idea of Home Rule for Macedonia is clearly not going to be encouraged.

The Dictator's Position.

The position of General Pangalos is not an enviable one. He has lost Admiral Hajikyriakos, perhaps the toughest of his supporters; and whether M. Rouphos, the experienced Minister of Foreign Affairs, will remain at his post under the new régime remains to be seen. The Governor of the National Bank, M. Diomedes, is absent, and the date of his return is uncertain. Should the Commission for the Installation of Refugees decide to remove the unspent two-and-a-half millions, now lodged in the National Bank, which they are expected to spend before the end of this year the effect on exchange (for the moment kept up by force), may well be serious, and in Greece, no Government, constitutional or otherwise, can survive for long a complete collapse of the drachma.

Regular Irregularities.

Friends of Greece who have continued to cherish hopes that her political life will one day "return to normal," (an expression frequently heard on the lips of Greek politicians), must recognise that the normal is a series of *coup d'états*, stability the abnormal. The unsuitability of the party system to the Greek character has become obvious, monarchy has failed, only a dictatorship remains to be tried. It is to be hoped that the dictator, whoever he may be, will have that combination of intelligence, character and education, which alone can guide his country through the difficult times ahead.

IRAQ.

Baghdad, January 6.

Mosul.

The news of the League of Nations' decision on the Mosul question was received in Baghdad with general rejoicing. The flag of Iraq was flown from houses and buildings, and by the next morning, when King Faisal motored slowly through the city, the principal streets were gaily decorated. Business is said already to have improved, and the general feeling is one of joy and relief. This is not to say that everyone is satisfied. The extremists were not slow to remark, in the vernacular papers, that the cost of Mosul is to be a heavy one for Iraq, and to deplore the League's condition of a Mandate for twenty-five years. King Faisal, on the contrary, in an interview granted to a representative of the *Baghdad Times*, expressed great satisfaction with the decision, and gratitude to Great Britain for her endeavours to secure justice for Iraq. "I see no reason," His Majesty said, "why Iraq should not have an amicable alliance with England, not only for twenty-five years, but for any length of time which may be necessary, provided always that the dignity of the nation is preserved, and that there are no stipulations which would retard the progress of the Iraq people. In the past our experience of the British Government has always been that it has shown a readiness to help us in every possible way, and to guide us through our difficulties." The King intends very shortly to pay a visit to Mosul.

The Prime Minister of Iraq telegraphed to Mr. Baldwin expressing the Iraq Government's joy at the decision, and its hearty thanks to the British Government.

Parliament.

The Parliament of Iraq reassembled on December 22. The two chief parties are the Hizb al Taqadum, or Progressives, who are supporters of the present Government, and the Hizb al Shaab, or Nationalists, who, under the leadership of Yassin Pasha al Hashimi, constitute the Opposition. The recent arrival in Baghdad of Saiyid Talib Pasha caused some wavering among the adherents of Yassin Pasha; but he showed no inclination to re-enter the political arena, and returned to Basrah without making any move.

Rainfall.

Exceptionally heavy rain fell during the night of December 28, causing considerable damage to the railway line between Baghdad and Shargat. A bridge was washed away, and the earthwork damaged over long stretches of the embankment. Another bridge was partly destroyed, and the line between Qaragan and Kirkuk has also been breached in several places. At Baghdad the river rose with great suddenness, damaging the submarine telephone cable connecting the right and left banks. The wet spell is none the less extremely welcome to the cultivators,

whose crops are now out of danger of dying for want of water before the flood season.

General.

Baghdad citizens are showing considerable interest in the official film of the signing of the Locarno Treaty, which, to the accompaniment of loud strains of Oriental music, is now being shown at the Central Cinema. Another film lately shown is one of the King's cotton farm near Khaniqin. His Majesty is seen inspecting the estate and picking the cotton. King Faisal is deeply interested in agriculture, and the farm which only a year ago he inaugurated at Khaniqin is his chief hobby. The district, which lies at the foot of the Persian hills, is an extremely fertile one. In 1917 it was overrun and laid waste by the Russian army from Kermanshah, and remained desolate and unpopulated until it was chosen by King Faisal for his first agricultural enterprise. The King is interested in modern methods, and has installed a number of motor tractors.

Colonel W. S. Fergusson, late King's Dragoon Guards, has passed through Baghdad on his way to Mosul, where he has been appointed by the London committtee to administer the fund collected in England for the relief of the Assyrian refugees.

Ex-King Ali is reported to be coming to Baghdad as the guest of his brother, King Faisal.

Mr. S. H. Langdon, Professor of Assyriology at Oxford, has returned to Kish, where he will direct the excavations during the winter digging season.

The establishment of a joint Customs post on the frontier between Iraq and Persia is now under discussion. Goods for Persia are at present taken by road from Khaniqin to Qasr-i-Shirin, but it is hoped that before long it may be possible to extend the Iraq railway system from Khaniqin to the frontier.

Three French aviators, each with a different type of aeroplane have just passed Baghdad on their way to Teheran. The journey is being undertaken as a trial in reliability and efficiency of the French aeroplanes.

The Nairn Transport Company is still using the long and arduous trans-desert route by Amman, but it is hoped that a better state of affairs in Syria may soon make the old Ramadi-Damascus route once more practicable. The Company recently succeeded in bringing across the desert a convoy of thirty 4-ton Leyland lorries, which have been bought by the Persian Government for the transport of grain to the famine-stricken acreas of Central Persia.

MOSUL.

A lecture delivered at the Royal United Service Institution, before the Central Asian Society, on January 15, by Mr. F. W. Chardin on "Mosul," Sir George MacMunn being in the Chair. The lecturer, who made use of abundant lantern slides, gave a comprehensive survey of the general position of Mosul in its relation to the Arab and the Kurdish worlds, stressing, incidentally, the point that the Turkish claim to it was baseless, both geographically and ethnographically. He described both the town of Mosul and its neighbourhood, commenting on the proportion and the characteristics of the various inhabitants, Kurds, Arabs, Christians, and Yezidis.

The claim of the Turks to Mosul town, he said, was particuarly preposterous, for whatever might be said of the mountainous district of Southern Kurdistan, Mosul, which belonged to the Jezireh, was indisputably Arab. Politically, the influence of the Arab was predominant, and he strongly supported the attitude adopted by the British Government towards the problem of Iraq's northermost vilayet.

Economically, the local Christians were the most stable element in the country, their one vice being their addiction to strong drink. Economically, again, the future of the Mosul vilayet, as of the rest of Iraq, was undoubtedly agricultural—the problem of oil was in any case a quite uncertain one. The Mosul vilayet, unlike the other two vilayets of Baghdad and Basra, was even now extremely fertile, and he evidenced as example of its fecundity the plain of Erbil. The recent growth of Iraq had been retarded because of the fear engendered by the possibility of a Turkish invasion, but now that security had been established, the agricultural and horticultural possibilities of the land should reap for the Arab kingdom a rich harvest. Mr. Chardin concluded his address by affirming his belief in the righteousness of Britain's mission in Iraq—in his view British honour demanded that the hand placed upon the plough be not withdrawn until the work had been accomplished.

Sir Arnold Wilson, who had recently returned from Iraq, remarked on the fact that a predecessor of the lecturer had written what was still one of the best books on Persia: so that there was something in heredity. He then proceeded to confirm Mr. Chardin's belief that Britain's honour was at stake. But for the antics of the Beaverbrook Press, he said, the Turks would long ago have realised that the British Government, which was still the best government in the world, meant what it said. After long thought he had come to the conclusion that the British Empire was always safe from its enemies; it was the national habit of self-depreciation and of self-examination, which, however admirable from the point of view of the individual, was a mistake when applied to decisions that affected the whole country. The officers and men of the Home and Indian Armies who had been killed in fighting for the occupation of the vilayet were not to be forgotten—if we relinquished our honour in Iraq we should relinquish the only thing that we had left. The British Government was not and had never been (whatever other Governments might think) in Iraq for its oil, for, as he realised months before the actual occupation of the Mosul vilayet, and as he had always held since, the northern vilayet was essential to Iraq's existence. If there was oil there, so much the better: it would accrue to the benefit of the Baghdad Government. The future of the country, however, was obviously agricultural. Again, Britain was a trustee not only for the Arabs in this matter of Iraq: there was involved in it a conflict of world ideas. At the present the world was governed, roughly, either by the Russian or by the British ideal. He believed that countries such as Japan, China, India, and Arabia were too individualistic ever to accept the Communistic doctrines. But if there were not a strong Iraq—and a feeling of Iraqi unity was becoming stronger every day, for King Faisal had done extraordinarily well in fostering a national sentiment—the Russians or the Turks would soon be down into Arabia. Commenting on the position of Turkey *vis-à-vis* Moscow, Sir Arnold said that Turkey was governed not by the Bolshevists, but by a set of hard-drinking, hard-swearing free-thingers. It was most improbable that the Russians would gain any more converts to their creed.

The meeting was concluded by Major Bovill's showing some excellent photographs of the country north of Mosul, especially of Zakho. Many of these photographs were taken from the air, and it was particularly obvious, as Major Bovill remarked, that the Iraqi-Turkish frontier did not provide exactly suitable landing grounds. Nor were the communications, as instanced by bridges over the Khabur river, quite reliable.

In connexion with the celebrations of the jubilee of the Gaekwar of Baroda's accession, the Gaekwar has laid the foundation-stone of a "Temple of Celebrities," commemorating the great personages of Baroda.

HISTORICAL MONASTERIES IN SERBIA.

By L. YOVITCHITCH.

The dust of centuries, burying the Past in remoteness and unreality, is lifted from our eyes when an opportunity occurs to visit some shrine, or we tread the ground hallowed by footsteps of the great ones of the earth long since departed; and History becomes a living thing. Who, when thus brought face to face with places associated with days of long ago, has not tried to visualise the scenes of former glory—to reconstruct, however vaguely, the facts brought down to us through History?

Studenitza, which ranks first among the historical monasteries of Serbia, and is the most ornamental and beautiful in architecture, plunges one back to the time of

Zicha, with the ruins of the original church.

Stefan Nemanya, seven centuries ago. Like nearly all monasteries in this country, Studenitza lies buried in the hills and is particularly difficult to approach. The road leading thereto is the chief thoroughfare between Kralyevo and Novi-Pazar and is in course of reconstruction. However, it will take some years to finish, and meanwhile travellers have to make up their minds to bump and rattle over the merest apology of a road. But what one pays for in bodily discomfort, is compensated for by the beauty and romantic aspect of the country in these regions.

In the midst of a narrow pass, on the summit of a rocky wall, the ruins of an old fort, called Miglitch, still holds watch over the road. Its high towers, linked together by formidable walls, make a chain right round the unassailable looking crag which blocks the way in this wild glen. Mountains rise on every hand, while below is the bed of the river Ibar.

At Ushtze (a tiny hamlet boasting of an inn where travellers halt to rest) the main road is left behind, and some eleven kilometres further on lies the monastery of Studenitza.

Founded in 1196 by Stefan Nemanya, it is among the best-preserved monuments of the 12th century. An old engraving reveals the various buildings originally included within the monastic walls, which also comprised a palace of vast proportions. There is, however, no trace of anything but the churches left.

Studenitza was intended for the burial place of Stefan Nemanya, and his bones are there to this day. Owing to the influence of his son Sava—afterwards canonised—Nemanya gave up the throne and became a monk at Hilendar. He died there in 1200, but his body was brought to Studenitza, where it rests in a double coffin. The outer one is magnificently wrought in silver, the gift of Persida Kara-george, mother of King Peter of Serbia.

The fall of the Serbian State after the Battle of Kossovo, in the 15th century, did not affect Studenitza much, and although the Turks pillaged the monastery, it soon recovered. However, the turbulent events of the end of the 18th century left their trace on Studenitza. In 1790 the church was set fire to, but the body of Stefan Nemanya was rescued and removed by the monks, two years later being carried back again to its original resting place. Once again the Turks did much damage to the church, in 1805, burning, pillaging and putting the monks to death. Nevertheless, the old monastery still remains a fine piece of architecture, despite the many vicissitudes it has been through, and its beautiful ornamentations are witness to the art of seven centuries ago. Important restorations were made towards the end of the 19th century, when the chief tower was rebuilt and the church roofed in.

The architecture of Studenitza reveals the influence of the Oriental combined with the Byzantine. White marble slabs cover the entire facade of the main portion of the church, and all the pillars and ornamentations are likewise wrought in marble. Incidentally, it may be mentioned that this part of the country is rich in quarries of marble and stone.

A frieze ornamented with sculptured heads of man and beast, likewise flowers, goes round the outside of the edifice. The windows are arched and have either two or three wings, slender columns being placed between the spaces. They have suffered considerable damge, but the altar window, which is the best preserved, is a fine specimen of ornamental carving. Various beasts and figures are entwined in the stone carving of a vine which frames the window—the one half differing from the other, which is characteristic of all the ornamentation at Studenitza.

The chief portal at the western entrance of the church also shows some remarkably fine sculpturing in marble. Traces of pillars guarding the entrance are still visible, the mutilated lions supporting them and the richly ornamented capitals being all that is left. Surrounding the portal is a relief carving of a vine, half of which is in bud, while the other half is in flower. Figures, evidently of the apostles, adorn the side pillars, and in the centre is a prostrate figure of the Virgin.

Studenitza is rich in frescoes, the inside walls of the church being entirely covered with paintings. The colouring is still wonderfully fresh, and they also bear witness to the high development of art in those days. According to one authority Serbia was the cradle of Church art in the 12th, 13th, and 14th centuries, likewise the birthplace of the Italian renaissance.

The monastery of Zicha is in the same district as Studenitza and was founded by Stefan, the son of Nemanya, known as the first crowned King of Serbia. Zicha differs from other monasteries in its position. It is not hidden from sight, but its white walls can be seen from afar, forming a picturesque landmark.

The Church belongs to the 13th century, and was appointed for the coronation of the Kings of Serbia, Stefan being the first to be crowned there by his brother Sava. According to History the coronation of seven kings has taken place at Zicha, and after each event a new door is opened in the Church, which goes by the name of "The Church of the Seven Doors."

During Turkish rule, the monastery shared the same fate as Studenitza and was set fire to; its towers and

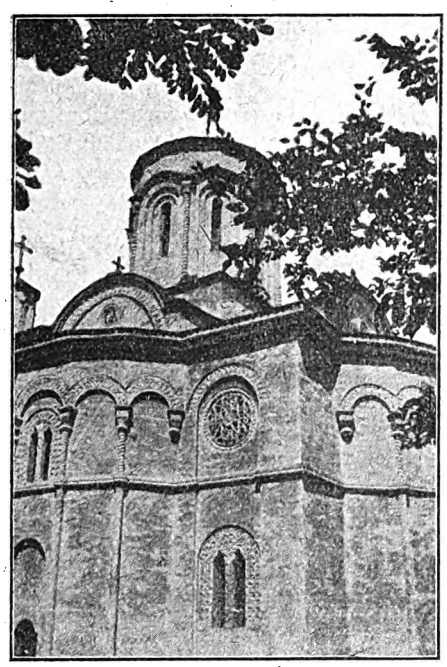
arches were destroyed, but there is still sufficient of the original architecture to show that it must have been one of the finest churches of that period.



Liubostinya is another historical monastery belonging to this part of the country. The approach to it is very difficult, there being no road but the bed of a river! When the water is low, the courageous can reach this secluded spot, but what happens when the river is in flood is somewhat of a riddle.

The Church is very ornate, but as the sculpture is in soft stone, past centuries have worn away the sharp outlines of the beautiful mouldings, the product of pure Serbian art.

After the battle of Kossovo, Tsaritza Militza fled from Krushevatz, the capital of Serbia, and founded the monastery of Liubostinya. Here she dwelt and ended her days as a nun in 1405, her remains being laid to rest in the Church erected by her.

The Church of Tsar Lazar at Krushevatz is an interesting example of architecture designed in red and white stone. It is in a wonderful state of preservation, probably owing to the fact that it was plastered over by the Turks, and therefore neither atmospheric conditions nor the stress of time have done it any harm.

Nothing but a fragment of Tsar Lazar's ancient palace remains at Krushevatz. A great gaunt wall and the gate-

Church at Liubostinya.

way through which he and his armies went forth on the great day of Kossovo are all that is left of the former glory of that royal residence, but there is no trace of the white tower sung of in the ballads.

An epic poem, much beloved by the Serbs, relates how after the battle of Kossovo two black ravens alighted on the white tower where Tsaritza Militza sat, and told her of the bloody fray. They told her how her husband Tsar Lazar had been betrayed and had met his death, and how her father, the old Youg Bogdan, and her brothers, the nine Yugovitchs, had fallen in battle. This disastrous defeat closed a chapter of one of the finest pages in Serbian history.

Piety, which was a great factor in the lives of the ruling monarchs in the early centuries, has left its trace in stone. The monasteries erected in the past still survive to-day, while all other structures have vanished. And so History lives on through the churches, built by those whose religion was something more than a name.

The railway between Damascus and Beyrout which was cut by insurgents, is being repaired under military protection.

RUSSIAN ART.

The Russian Church in Buckingham Palace Road, to which, of course, the Yugoslav and Bulgarian communities in London subscribe, is in need of funds, and there has been arranged on behalf of it a collection of Russian art at the Claridge Gallery, Brook Street, W. At this exhibition are to be seen some pictures by M. Leonard Brailovsky, threatre-designs by M. Komisarjevsky, and a very rare loan-collection of Russian ikons.

This show of ikons, which came mainly from the collection of Captain Anrep, Lord Wavertree, and Messrs. C. Ricketts, W. A. Propert, Clifford Smith, Cecil Higgins, and Glyn Philpot, is one of the most fascinating exhibitions ever to have been made in London. The religious content, the fantastic painting, the varied linear tendencies (showing the influence upon Russian ecclesiastical art of countries other than Slav), produce a notable impression. Particularly, a representation of the Archangel Michael, belonging to Central Russia of the early fifteenth century, two South Russian ikons of the fifteenth century, called "Transfiguration" and "Descent into Hell," and two remarkable wooden figures of monks (for Donation Table) which, luckily, survived the general ikonoclastic orgy in Russia in the sixteenth century, conjure up an emotion that is not wholly artistic, but something vaguer and deeper, something, perhaps, that calls across the centuries to those who wrought thus well in the far outposts of Christendom. But the strange genius of the Russian people, whether touched by Byzantium or Europe or even Eastern Asia, is instinct in all these ikons.

Of M. Brailovsky's drawings it is possibly unfortunate that they remind one, in their intention, of Mr. William Walcot, and in their execution, of the great Russian, Roerich. M. Brailovsky is primarily an architect, but he has chosen, in his exile enforced by the Revolution, to recreate buildings and scenes of the Russian past. This he does with considerable certainty and poetry, though also with a deliberate and occasionally monotonous conventionality. When he is at his best, however, he is very pleasing indeed, and as examples of this success may be mentioned three religious subjects. "Thursday in Passion Week," "The Entrance to the Church of St. Basil," and "Epiphany, Blessing of the Waters," and two studies called "The Kremlin by Night," and "The Kremlin of Moscow." M. Brailovsky knows finely how to exploit that sense of monstrous, unearthly loveliness and splendour which are somewhere near the root of the Russian soul: his domes, for instance, have a bulbous unreality yet unfailing significance that might stand for the eternal contrast which the Slav character presents.

The stage settings and costume designs of M. Theodore Komisarjevsky are too well known to all intelligent lovers of the theatre in this country to need description. One must content oneself with emphasising the fact that the poetical, apart from the better-known realistic or fantastic side of his notions is abundantly manifested in this exhibition. His imagination has played with especial beauty in some designs that he has made for Rimsky-Korsakoff and Wagner.

It is stated that the Viceroy has disallowed a proposed resolution by Sir P. S. Sivaswamy Aiyar, a Moderate member of the Indian Legislative Assembly, urging the Government of India not to signify acceptance of the of the Locarno Security Pact without approval of the Assembly, on the ground that it deals with his Majesty's relations with foreign States.

The Decree prohibiting the wearing of short skirts was enforced last Friday in Athens. The police confined themselves to a simple warning, but from to-day offenders will be prosecuted. A special service of policewomen is entrusted with the enforcement of the Decree.

The trial of Abdul Pasha Maher, Mahmud Effendi Nekrashi, and other Egyptians charged with complicity in various political murders in 1922, has been adjourned by the Cairo Court until January 23.

ARABIA.

[The following is the text, which retains the official spelling, of the Agreements which Sir Gilbert Clayton recently made with Sultan Ibn Saoud. It is published by H.M. Stationery Office as Cmd. 2,566, at 3d.—ED.]

Agreements with the Sultan of Nejd regarding certain questions relating to the Nejd—Trans-Jordan and Nejd-'Iraq frontiers.

The Hadda Agreement.

The High British Government on its own part and His Highness 'Abdu'l-'Aziz ibn 'Abdu'r-Rahman al-Faisal Al Sa'ud, Sultan of Nejd and its Dependencies on behalf of the Government of Nejd, on his part, in view of the friendly relations which exist between them, being desirous of fixing the frontier between Nejd and Trans-Jordan and of settling certain questions connected therewith, The High British Government have named and appointed Sir Gilbert Clayton, K.B.E., C.B., C.M.G., as their Commissioner and Plenipotentiary, to conclude an Agreement for this purpose with Sultan 'Abdu'l-'Aziz ibn 'Abdu'r-Rahman al-Faisal Al Sa'ud on behalf of Nejd.

In virtue of which the said Sultan 'Abdu'l-'Aziz ibn 'Abdu'r-Rahman al-Faisal Al Sa'ud and the said Sir Gilbert Clayton, have agreed upon and concluded the following Articles:—

Article 1.

The frontier between Nejd and Trans-Jordan starts in the north-east from the point of intersection of meridian 39°E and parallel 32°N, which marks the termination of the frontier between Nejd and 'Iraq, and proceeds in a straight line to the point of intersection of meridian 37°E and parallel 31°30'N, and thence along meridian 37°E to the point of its intersection with parallel 31°25'N. From this point, it proceeds in a straight line to the point of intersection of meridian 38°E and parallel 30°N, leaving all projecting edges of the Wadi Sirhan in Nejd territory; and thence proceeds along meridian 38°E to the point of its intersection with parallel 29°35'N.

The Map referred to in this Agreement is that known as the "International" Asia Map, 1:1,000,000.

Article 2.

The Government of Nejd undertake not to establish any fortified post at Kaf or utilise Kaf or the district in its neighbourhood as a military centre; and should they at any time consider it necessary to take exceptional measures in the neighbourhood of the frontier with a view to the maintenance of order or for any other purpose, involving the concentration of armed forces, they engage to notify His Majesty's Government without delay.

The Government of Nejd undertake to prevent, by all the means at their disposal, any incursions by their forces into the territory of Trans-Jordan.

Article 3.

In order to avoid misunderstanding over incidents which may arise in the neighbourhood of the frontier, and to promote mutual confidence and full co-operation between His Majesty's Government and the Government of Nejd, the two parties agree to maintain constant communication between the Chief British Representative in Trans-Jordan or his delegate and the Governor of the Wadi Sirhan.

Article 4.

The Government of Nejd undertake to maintain all established rights that may be enjoyed in the Wadi Sirhan by tribes not under their jurisdiction, whether such rights appertain to grazing or to habitation, or to ownership, or the like; it being understood that those tribes, so long as they reside within Nejd territory, will be subject to such internal laws as do not infringe those rights.

The Government of Trans-Jordan undertake to extend identical treatment to Nejd subjects who may enjoy similar established rights in Trans-Jordan territory.

Article 5.

The Governments of Nejd and Trans-Jordan severally recognise that raiding by tribes settled in their territories into the territory of the other State is an aggression which necessitates the severe punishment of the perpetrators by the Government to which they are subject, and that the chief of the tribe committing such aggression is to be held responsible.

Article 6.

(*a*) A special tribunal shall be set up, by agreement between the two Governments of Nejd and Trans-Jordan, which shall meet from time to time to enquire into the particulars of any aggression committed across the frontier between the two States, to assess the damages and losses and to fix the responsibility. This tribunal shall be composed of an equal number of representatives of the Governments of Nejd and Trans-Jordan, and its presidency shall be entrusted to an additional person, other than the aforesaid representatives, to be selected by the two Governments in agreement. The decision of this tribunal shall be final and executory.

(*b*) When the tribunal has fixed the responsibility, assessed the damages and losses resulting from the raid, and issued its decision in that respect, the Government to whom those found guilty are subject shall execute the aforesaid decision in accordance with tribal customs, and shall punish the guilty party in accordance with Article 5 of the present Agreement.

Article 7.

Tribes subject to one of the two Governments may not cross the frontier into the territory of the other Government except after obtaining a permit from their own Government and after the concurrence of the other Government; it being stipulated, however, in accordance with the principle of the freedom of grazing, that neither Government shall have the right to withhold such permit or concurrence if the migration of the tribe is due to grazing necessities.

Article 8.

The two Governments of Nejd and Trans-Jordan undertake to stand in the way, by all the means at their disposal other than expulsion and the use of force, of the emigration of any tribe or section of a tribe from one of the two countries into the other unless its emigration takes place with the knowledge and consent of its Government. The two Governments undertake to abstain from offering any present of whatsoever kind to refugees from the territories of the other Government, and to look with disfavour on any of their subjects who may seek to entice tribes belonging to the other Government or to encourage them to emigrate from their country into the other country.

Article 9.

The Government of Nejd and Trans-Jordan may not correspond with the Chiefs or Sheikhs of tribes subject to the other State on official or political matters.

Article 10.

The forces of Nejd and Trans-Jordan may not cross the common frontier in the pursuit of offenders, except with the consent of both Governments.

Article 11.

Sheikhs of tribes who hold an official position or who have flags showing that they are the leaders of armed forces may not display their flags in the territory of the other State.

Article 12.

Free passage will be granted by the Governments of

Digitized by Google

Nejd and Trans-Jordan to travellers and pilgrims, provided they conform to those regulations affecting travel and pilgrimage which may be in force in Nejd and Trans-Jordan. Each Government will inform the other of any regulation issued by it in this matter.

Article 13.

His Britannic Majesty's Government undertake to secure freedom of transit at all times to merchants who are subjects of Nejd for the prosecution of their trade between Nejd and Syria in both directions: and to secure exemption from Customs and other duty for all merchandise in transit which may cross the Mandated Territory on its way from Nejd to Syria or from Syria to Nejd, on condition that such merchants and their caravans shall submit to whatever Customs inspection may be necessary, and that they shall be in possession of a document from their Government certifying that they are *bona fide* merchants; and provided that trading caravans carrying merchandise will follow established routes, to be agreed upon hereafter, for their entry into and their exit from the Mandated Territory; it being understood that the above restrictions will not apply to trading caravans whose trade is confined to camels and other animals, or to tribes migrating in accordance with the preceding Articles of the present Agreement.

His Britannic Majesty's Government further undertake to secure such other facilities as may be possible to merchants who are subjects of Nejd and who may cross the area under British Mandate.

Article 14.

This Agreement will remain in force for so long as His Britannic Majesty's Government are entrusted with the Mandate for Trans-Jordan.

Article 15.

The present Agreement has been drawn up in the two languages, English and Arabic, and each of the high contracting parties shall sign two English copies and two Arabic copies. Both texts shall have the same validity, but in case of divergence between the two in the interpretation of one or other of the Articles of the present Agreement, the English text shall prevail.

Article 16.

The present Agreement will be known as the HADDA Agreement.

Signed at Bahra Camp on the 2nd November, 1925 (corresponding to the 15th Rabi' Thani 1344).

(Signed) GILBERT CLAYTON.
'ABDU'L-'AZIZ.

Correspondence relating to the Hadda Agreement.

His Highness 'Abdu'l-Aziz ibn 'Abdu'r-Rahman al-Faisal Al Sa'ud, Sultan of Nejd and its Dependencies, to Sir Gilbert Clayton, K.B.E., etc., His Britannic Majesty's Commissioner and Plenipotentiary.

TRANSLATION.

Bahra,
14th Rabi' Thani 1344
(1st November, 1925).

Your Excellency,

In the Agreement relating to Trans-Jordan and Nejd provision is made for an undertaking on our part not to fortify Kaf or to make it a military centre. In one of our conversations, I asked Your Excellency to elucidate the meaning of "fortifications," and you explained that the construction of a wall round the villages concerned, according to the custom prevailing in the desert for the prevention of thefts and raids, as well as the construction of a military barracks for the housing of Public Security troops and the placing of a gun or a few machine-guns according to the requirements of public security, would not be considered as being fortifications of the kind which we undertook to abstain from erecting; but that such works would be considered as necessary for the preservation of order. The object of the present letter is to obtain clear confirmation of that from Your Excellency so that we should be perfectly explicit about our undertakings and leave no room for such misconstructions as might arise from the intrigues of mischief-makers. Respects.

'ABDU'L-'AZIZ IBN 'ABDU'R-RAHMAN IBN SA'UD.

Sir Gilbert Clayton, K.B.E., etc., His Britannic Majesty's Commissioner and Plenipotentiary, to His Highness 'Abdu'l-'Aziz ibn 'Abdu'r-Rahman al-Faisal Al Sa'ud, Sultan of Nejd and its Dependencies.

Bahra Camp,
2nd November, 1925.

Your Highness,

I have the honour to acknowledge receipt of your letter of the 14th Rabi' Thani 1344 (1st November, 1925) relating to the interpretation of Article 2 of the Hadda Agreement.

In reply to Your Highness' enquiry, I would confirm the verbal statement I made in a recent conversation with Your Highness, namely, that it is difficult for anyone to define, fully and in detail, what is to be understood by the word "fortification" in such a manner as to cover all possible eventualities; and that the best interpretation of that Article would be that which conforms to the spirit as to the letter of the Agreement, and rests on a sincere execution of its terms. For instance, if you desire to erect a wall, as is usual, or barracks for Public Security men other than military forces, or a small gun or a few machine-guns intended to repel brigands and aggressors, it will undoubtedly be open to you to do so, provided such preparations do not exceed the bounds of what is required for the maintance of order, and do not constitute, in the judgment of the British military authorities, a menace to Trans-Jordan.

I have, etc.,
GILBERT CLAYTON.

His Highness Sultan 'Abdu'l-'Aziz ibn 'Abdu'r-Rahman al-Faisal Al Sa'ud, Sultan of Nejd and its Dependencies, to Sir Gilbert Clayton, K.B.E., etc., His Britannic Majesty's Commissioner and Plenipotentiary.

TRANSLATION.

Bahra Camp,
15th Rabi' Thani 1344
(2nd November, 1925).

Your Excellency,

With reference to the discussions which have taken place concerning traders who are subjects of Trans-Jordan, I am not aware of an established and customary road used for passage through the Wadi Sirhan by traders from Trans-Jordan. Should it appear, however, that subjects of Trans-Jordan have an established and acknowledged right, recognised by those who are expert in such matters, to ply their trade from Syria and Trans-Jordan to the southern portions of Trans-Jordan by way of the Wadi Sirhan, then we hereby undertake to extend to them the same treatment as is extended to subjects of Nejd by the Government of Trans-Jordan in their transit to and from Syria.

(Sealed) 'ABDU'L-'AZIZ IBN 'ABDU'R-RAHMAN IBN SA'UD.

[We hope to publish the remainder of this White Paper next week.—ED.]

Sir Geoffrey de Montmorency, who meanwhile will continue to serve as Private Secretary to the Viceroy, has been selected to succeed Sir John Maynard on the conclusion of his extended tenure of office.

THE WEEK AT HOME.

London, Tuesday Morning.

The Mining Problem.

The interest created by the public sittings of the Coal Commission grew more intense towards their close last week, for the climax, so to speak, of the investigation, the respective proposals of the mine-owners and of the miners, was reserved until the end. Now it is all over; the Commission has retired to draw up its report; and the public is in a state of rather ghastly anxiety, for there was in these rival proposals, at least from the immediate point of view, no hope whatsoever.

The mine-owners' proposals, as interpreted by Mr. Evan Williams, were as pitiable as they were pitiless; so patently one-sided were they, in fact, that the readiest comment upon them has been that the owners obviously wanted Nationalisation. What men, it was argued, would not willingly sell a bankrupt industry to a foolish State? Nor were the miners' proposals much more comforting. On their own admission their plan of nationalisation would only be realised after a considerable period, and it is precisely that intervening period which it is the business of the Commission to smoothe over.

Briefly, the mine-owners proposed (1) the dismissal of 100,000 miners, who might or might not be re-absorbed later on into the industry, (2) a reduction in the miners' wages of anything from 6d. to 15s., (3) railway rates to be lowered by 25 per cent., and (4) the seven-hour day be substituted by an eight-hour day. All these things were vitally necessary: yet upon their installation there would be a loss of 3d per ton! Surely no anti-capitalist ever produced so damning an indictment of a capitalist industry as these managers themselves!

The miners brought forward, with a certain amount of skill, their known plan of nationalisation. The mines themselves, mining royalties, the by-products of the mines, and, to some extent, electrical power development —all these were to be nationalised. Now there is a boldness in this which is refreshing, and there is justice in the plea of Mr. R. H. Tawney that History, which shows only what was done, is not necessarily against the success of this scheme. (As a matter of fact, it is the opinion of many historians that great changes were imposed upon, or proceeded from, the people in a short, not in a long, space of time.) But even the Socialist miners confessed to having no plan which should be adopted upon the expiry of the subsidy next May.

The only comfort that one can derive from the whole affair is, therefore, to thank Heaven (or Mr. Baldwin) that a conflict was not allow to break out last year between such obviously irreconcilable forces, for the victory that either side might have gained thereby might well have been the greatest industrial disaster that this country had ever suffered.

The Commission's Proposals.

Speculation upon what the Commission will propose is profitless, but it is not widely imagined that anything very radical will be recommended. Royalties, which though of minor actual importance, have a definite psychological influence upon the conversations between mine-owner and miner, may well be nationalised; and it would seem probable that uneconomic pits—the parallel to which in any other industry would certainly not be tolerated—will be closed down. That comprehensive nationalisation will be recommended is hardly likely, seeing that the Commission is composed of Liberals, who, whatever else may be their shortcomings, do know that State Capitalism is no better than Private Capitalism, and would easily realise that the miners would probably not remain patient whilst the scheme of State control was being enforced. Whether they will be able to touch the essential problem, that of transport and of the middleman, remains to be seen.

Sargent at the Academy.

The six hundred works of Sargent that are now to be seen at Burlington House compose the biggest one-man show that I have ever seen. It is curious to think that almost all these have been collected in England, for if there ever was a cosmopolitan artist, Sargent was one; there is, except of course in the technical sense, nothing distinctly English about him, and, in fact, he found very little stimulation in English landscape. His flair for English aristocracy (particularly for Anglo-Jewish aristocracy) is a very different thing.

How great an artist Sargent was everybody is now discussing, and no two people seem to agree. But on his greatness as a painter there are no two opinions. Nor was his technical skill in water-colours, in sculpture, and in decorative design, less considerable than that with which he did his famous portraits. He had the energy and the versatility that were common enough to the artists of the Renaissance, but which have since been a rare combination in the history of Art.

Personally, I found his pictures of the War more interesting than all but a few of his portraits and of his water-colours of Venice and Palestine (these studies of the Holy Land, by the way, are amazingly vital and beautiful). It so happened that I saw, in 1918, a certain amount of Sargent at work in France, so that his representations of places like Berles au Bois, Ransart, Ficheux, and, particularly, of that ghastly scene which he calls "Gassed" (on the Arras-Doullens road), made a very deep impression. Nor was the impression confined to those who knew the subject of the pictures. It really seemed as though Sargent then had been moved to cease playing with tones and colours, to desist from his detached attitude, and to "get inside" the object of his representation.

In sum, however, it is rather admiration than enthusiasm that Sargent produces. His art was so often but a superb gesture, his originality so shy a direction. In music he would perhaps be ranked with Liszt or Paganini.

Snow.

Almost everyone in England woke up last Friday morning to find the land covered with snow. In the country the fall was not particularly heavy, although the snow was good enough for tobogganing. But in London it was of particular beauty. Churches and trees and railways and all the things that every other day we take for granted took on a strange, remote beauty. One looked at St. Paul's and thought of the Kremlin, and the Thames, with barges and banks covered in snow, seemed as deep and as icy and as impenetrable as the Volga. Nor were these sentiments produced by the appropriate sight of Russian boots, whose wearers indeed had the advantage of the conservative female whose self-imposed duty it is still to wear light-coloured stockings. For in the major streets of London, which everyone in this kind of weather tries to avoid, the slush and dirt were rather abonimable.

The City seems to be rather proud of itself for the way in which it got rid of the snow, but I believe the supply of casual labour was not so large as the occasion demanded. Many unemployed men, imagining that if they took a day's work they would forfeit the dole, refused the offer of 1s. 4d. an hour; and others, it seems, declined to work at such a rate. However, the situation was more or less overcome by means of throwing down tons of salt and turning the hose-pipes on, and then sweeping the slush into the drains.

PERSONAL AND GENERAL.

TO-DAY

January 21, 1926 (New Style).
January 8, 1926 (Old Style).
Rajab 7, 1344 A.H., of the Moslem Calendar.
Shebat 6, 5686, of the Jewish Calendar.

The Queen of Yugoslavia arrived in Bucharest last week.

Prince Nicholas of Roumania left London last Friday for Paris, on his way to Bucharest.

The Hon. Mrs. Harold Nicolson left Knole, Sevenoaks, yesterday, for the British Legation, Teheran.

The Afghan Minister in London, on behalf of his Government, has taken 31, Prince's Gate, as the Afghan Legation.

Mme. Titulesco, wife of the Roumanian Minister, arrived in London last Saturday on her return from the United States.

Sir Robert Horne, M.P., left London last Thursday for Egypt. After going to the Suez Canal he is proceeding to the Sudan.

Lord Irwin, Viceroy-Elect of India, was presented with the Freedom of Harrogate last Friday, when a banquet was given in his honour.

Viscount and Viscountess Inchcape left London last Thursday for Marseilles, where they joined the Ranpura for a brief visit to India.

Captain and Mrs. Gerard Montagu will join the s.s. Rajputana at Marseilles for India on January 29. Until then their address will be Hôtel Mont Fleury, Cannes.

The Rev. E. G. Brownrigg, formerly a chaplain on the Indian Ecclesiastical Establishment, has been nominated by the Archbishop of Canterbury to the rectory of Chevening, Kent.

Sir John and Lady Simon, who have been on a visit to the Viceroy of India, sailed from Bombay last Saturday. They will reach London at the end of this month, in time for the new Parliamentary Session.

At the evening meeting of the Roval Geographical Society on January 25, at the Æolian Hall, at 8.30 p.m., Mr. H. J. L. Beadnell will read a paper on recent travels in Central Sinai, the paper on the Mount Logan Expedition announced for that date being postponed.

M. G. Mélas, Secretary to the Greek Legation, has returned to London after his wedding with Julia, the only daughter of M. and Madame Michel Salvaga, of Alexandria. M. and Madame Mélas have taken up their residence at 1, Duchess Street, Portland Place.

A meeting in aid of Assyrian and Iraqi Christians, who were on the Allied side in the War, will be held at the Mansion House on February 1 at 3 o'clock. The Bishop of London will preside, and the Duchess of Atholl, M.P., the Lady Surma, Mr. G. K. Chesterton, and others will speak.

Among the passengers by the P. and O. special train which left London last Thursday to connect at Marseilles with the s.s. Ranpura were Sir Albert Watson and Lady Smyth, General Sir H. Gillman, Vice-Admiral H. W. Grant, and Sir Chartres Biron for Port Said; and Lady A. MacLeod and Sir Leslie Hudson for Bombay. Sir Ian Malcolm and the Raja Sahib and Rani Sahiba of Vizianagram also embarked in the Ranpura at Marseilles.

The Roumanian *Official Gazette* has published a decree recalling Prince Antoine Bibesco, the Roumanian Minister at Washington.

Sir Percival Marling, V.C., and Lady Marling have left Stanley Park, Gloucestershire, for Egypt and Palestine and do not expect to be home again until March. They sailed last Saturday in the P. and O. Naldera from Tilbury.

Mr. L. S. Amery, the Secretary for Dominion Affairs and the Colonies, will be presented with his portrait, which has been painted by Sir Luke Fildes, R.A., at a luncheon at the Mansion House on February 3. The portrait is the gift of members of the British Empire Producers' Organisation. Lord Kylsant, the Vice-President, will be in the chair.

Book Reviews and Notes.

AMONG SLAV AND MONGOL.

"PEOPLE OF THE STEPPES." By Ralph Fox. (London: Constable 8s. 6d.)

This book is written by a young man who, after serving in the British Army, went out to South-East Russia in 1922 to work with a Relief Mission. Much of his tale lies outside the scope of THE NEAR EAST AND INDIA, but, seeing that of the two policies that may approximately be said now to be appealing for support in Asia, one comes from the Bolshevist Moscow, the indirect bearing of this commentary upon and exposition of Soviet principles is very considerable. Moreover, the experiences of Mr. Fox were for the most part around the Sea of Aral, that wild region which may be said to be neither Europe nor Asia; he was, therefore, in a particularly good position to see the effect of Russian thought upon non-Russian peoples.

It is true that he expressly warns the reader against taking the book politically; that, however, is impossible. First, because the author writes enchantingly, enthusiastically, and, indeed, memorably, that one is forced to consider as much his commentaries as his descriptions; and secondly, because it is precisely the spread of Communistic ideas throughout Central Asia, and among such peoples as those Kazaks whom Mr. Fox came so much to admire that is causing a certain perturbation in students, particularly British students, of world-movements. But we will take him at his warning, and content ourselves with saying that, although Mr. Fox is not unfair, setting down indeed much that is against the agents of the Soviet system, he is persuaded that Bolshevism is adding to the sum of the happiness of the Russian people and the people under Russian tutelage.

The author's command of language and of pictorial visualisation is notable. One gets the distinctive note in his opening paragraph, in which he speaks of the "men and women of the Russian plain where it reaches towards Asia, dark-minded, stubborn of frame and spirit, lazy and primitive, the black earth of the steppe mingled with their clay, their blood shot with the dark stain of Mongol conquerors and Finnish aborigines. Visible in them were the jutting cheek-bones and narrow eyes of ancient ravishments, but there was also the true Russian type, tall and fair-bearded, with blue eyes of wandering loveliness."

Of all Mr. Fox's fascinating chapters—and we know of no book in which the strange life and the dark brooding mystery of the Slav-Mongol type are more vividly portrayed—that called "A Dream of Great Conquerors" is, to our mind at least, the most suggestive and the profoundest. He was out one day on the Iron Hill, dominating the water of Lake Kamishli Bash and of the Jaxartes (Syr Daria) and dreamed of a conversation between Timour the Lame, and Chengiz Khan, and himself. Chengiz Khan says: "I gave peace to Asia, I gave strength to her trade and commerce, I brought East into contact with West, and had there been those in the West saw as far as I, they had never parted again. Timour said:—"I too did the work of God. The Champion of Islam, the Sword of the Faith, I made Islam supreme in Asia. All her beauty since is my child, for only those despise her who know her least. I ask you, friend, is not Islam a lovely thing? Did I not do well when I established her over Asia?" Upon them broke the voice of Ivan the Terrible, with the boast:—"I made Russia a nation and I carried her frontier into Asia. I brought the West farthest to the East since Alexander . . . ." And finally Lenin ("his Tatar face lit with fire") stepped into the group:—"We are one to-day. Russia is Russia no longer, but the work started by Ivan is completed. East and West meet to-day in Moscow. The steppe is free to the Hindu Kush and the Great Wall, and the East is awake again. Not in vain have we four lived."

An author who could thus link up the lives and accomplishments of Central Asiatics with pre-War and post-War Russians must have had much to console him among the miseries which inevitably attended his lot among the starving Russians. He has a rare pen and a rare vision, and he has written, as we have already said, an enchanting book. At such a price who would not buy, even for months on end, horses of Turkestan?

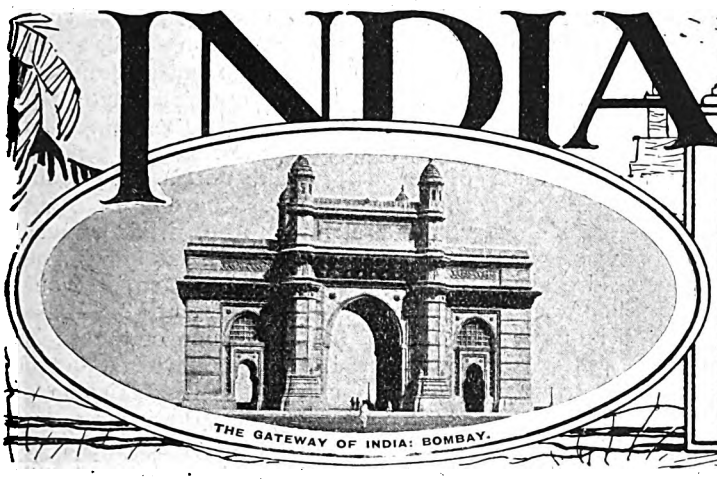
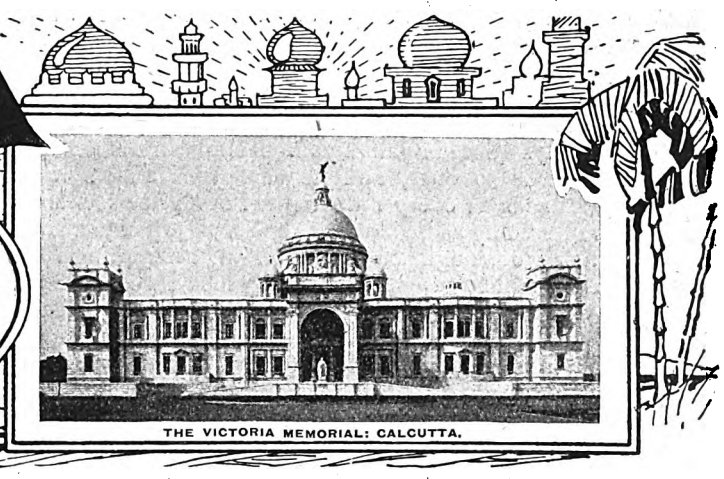
"THE MENORAH JOURNAL."

The December issue of the *Menorah Journal* contains two articles which should profoundly interest students of the Zionist experiment in Palestine. They are, respectively "Marrying the Land," by Marvin Lowenthal, and "Arab and Jew," by Reuben Levy. The first is a vivid sketch of the *Halutzim* at work in the colonies, and contains the following significant passage on the religion of the new colonists:—"Where religion is dying out as religion, it is being reborn as life. The same fate is overtaking its forms as overtook its language. In ceasing to be a language of prayer, it has become a language."



Mr. Levy's article is mainly historical, showing the great part played by Jews in the first flowering of Islam. That such an Arab-Jewish co-operation should once more be witnessed he thinks rather improbable, if only on account of the aversion of the Jew from the quietest conception of life. "The differences in the outlook on life of Jew and Arab will sooner or later lead to their becoming master and man; a relationship which means only a one-sided form of co-operation."

The *Morning Post* Teheran correspondent states that the Persian nation and Press are mourning the late Professor E. G. Browne. The Persian Government has telegraphed to Professor Browne's family expressing the nation's sorrow. Arrangements were made to hold an official Memorial Service last Friday.



Mr. Benjamin Horniman, the former editor of the *Bombay Chronicle*, who was deported from India in 1919, and recently received permission to return, arrived in Bombay on January 12 and was escorted in procession to the National Congress headquarters, where a reception was held in his honour. He has resumed the editorship of the *Bombay Chronicle*.

THE GATEWAY OF INDIA: BOMBAY.

THE VICTORIA MEMORIAL: CALCUTTA.

JAPANESE COMPETITION.

There are two separate aspects of Japanese competition in the cotton trade of India: and the discussion, at the annual meeting of the Associated Chambers of Commerce of India and Ceylon, held at Calcutta in December, seems to suggest that they are in danger of being confused. One of these is Japanese competition with Lancashire, in the matter of piece-goods and yarn imported into India: the other is Japanese competition with the indigenous Indian industry. The two proposals that have been put forward to deal with this competition, on the ground that it is unfair, appear to have been represented as alternative: although, in fact, they are not so. The first is, that action should be taken, on behalf of the cotton trade of India, on the analogy of that provided for by the English Safeguarding of Industries Act: the second, that the import duty on cotton goods entering India should be substantially raised, to restore the loss to the Indian budget caused by the removal of the excise duty on Indian cotton manufactures, the yield of which amounted to approximately 1½ millions sterling per annum, and that a preferential reduction should be allowed on British cotton goods. The assertion was made, at Calcutta, that denunciation of the Indo-Japanese Trade Convention of 1905 with the consequent initiation of a tariff war between India and Japan, is open to objections which do not apply to the imposition of preferential duties by which "without offending against the spirit or the letter of the Convention, the object in view could be attained." This, of course, is not a correct statement of the position: a system of preferential duties would assist Lancashire to meet the competition of Japan, but would leave the Indian mill industry in the same position, as regards Japanese competition, in which she at present finds herself; whereas the proposal for a special discriminating duty against Japanese cotton goods imported into India would act in favour of Lancashire as well as of India. The recent suspension of the cotton excise has elicited what appears to be a fairly general consensus of opinion that Lancashire and India are, for all practical purposes, not in competition with each other. Lancashire produces a higher class of goods than India is able to manufacture: and, if each concentrates, in the future, on its own special class of product, the only reason why they should not practically divide the Indian market between them is the competition of Japan, which is the factor disturbing to both. For the class of goods imported from Japan comes, generally speaking, about mid-way between the productions of Lancashire and India: inferior to the former, superior to the latter: but they are sold at a price that has not only compelled the Indian mills to work at a loss in order to retain their business, but has also enabled them to make serious inroads into the Lancashire trade.

A recent issue of *Commerce* (Calcutta) points out that the main conditions precedent to the institution of an inquiry under the English Safeguarding of Industries Act are, that unfair competition shall have arisen from one or more of the following causes:

1. Depreciation of currency operating so as to create an export bounty:
2. Subsidies, bounties, or other artificial advantages:
3. Inferior conditions of employment of labour, whether as regards wages, hours of employment, or otherwise, obtaining among the persons employed in the production of the imported goods in question, as compared with those obtaining in Britain in the particular trade in question:

and that it is contended that all of these conditions apply to Japanese competition in the Indian cotton market. Owing to the appreciation of the sterling value of the rupee to over 1s. 6d. and the depreciation of the yen to approximately 1s. 8d., rupee-yen exchange is now 110/100, compared with the pre-War ratio of 150/100, or a difference of 27 per cent. Though the Japanese importer has to pay proportionately more for the raw cotton that he purchases in India, the value of the raw material represents only 55 per cent. of that of the finished product of cloth. Proof of rebates or subsidies is obviously difficult to obtain; but the ten per cent. consumption tax, levied on all textile manufactures in Japan, is exempted on all goods exported, while some of the Japanese shipping companies are certainly subsidised, and there is reason to believe that these lines pass on part of their subsidy to the exporter of cotton goods to India, in the form of rebate on freight. Japan has not ratified the International Labour Convention adopted at Washington in 1919, and her cotton mills continue to work 22 hours a day, in double shifts, while in India, who has ratified the Convention, the weekly hours are restricted by law to a maximum of sixty. The effect of this disparity is to be seen from the fact that Japan, with 4,800,000 spindles, consumes as much cotton as India with eight million spindles. Though Japan is able to purchase raw cotton in India, pay freight both ways, meet an import duty of eleven per cent., and yet undersell Indian cloth in the Indian market, it would seem that even these handicaps do not prevent her from trading at a profit; for, immediately on the announcement of the suspension of the excise duty, Japanese rates were again cut, so as to neutralise the effect of the suspension, and Japan is again underselling the Indian market; while, in 1924, in spite of the low prices asked in India, Japanese cotton and spinning mills had a prosperous year, paying dividends ranging from 16 to 48 per cent. These facts appear to disprove the charge of "dumping" put forward by Indian millowners: and it would seem that the combined effect of the advantages reaped by Japan from exchange, shipping subsidies and long hours of labour really is to enable her to undersell India as a commercial proposition. The actual percentage of Japanese imports of cotton piece-goods into India is, at present, small: in 1924-25 it was 8½ against 88½ from Great Britain; but its growth is to be seen by comparison with the percentages in 1913-14, which were 0.3 and 97 respectively. Similarly, Japan only supplies 7 per cent. of the cloth in which she is in competition with the indigenous product of the Indian mills:

Digitized by Google

but that small percentage regulates the price that the Indian millowners can get for all their productions. A recent report from Rangoon says that Japanese cloth has not only driven out Indian-made cloth, but is fast driving out British cloth also—"whatever you try to sell, Japanese prices are always quoted against you. Their work is little, if at all, inferior to ours, and its cheapness makes its popularity inevitable: every reduction in our price has so far been countered by a reduction in theirs." Japan is also preparing a new onslaught on Lancashire by attempting to monopolise the supply of cotton from Uganda through the institution of a direct shipping service between East Africa and Japan, the result of which is expected to be that "Lancashire interests, which have done so much to promote the development of cotton growing in that area, will have the humiliating experience of watching the fruits of their labour prove the most important single factor in the success of their most dangerous competitors." A similar attempt is being made to paralyse the Chinese cotton industry: for the Japanese Company that carries raw cotton from Bombay to Japan has announced an increase in freights to Shanghai, with the purpose of "making Indian cotton dear in China, while the steamers will carry any quantity of it to Japan at specially low freights. In this way the cotton industry in China is to be hampered, and Japan is to be in a better position to compete at cutting prices with the Indian industry." In 1924-25 India exported over 343,000 tons of raw cotton to Japan, and over 50,000 tons to China: and it is reasonable to suppose that the effect of this latest move on the part of Japan will be to reduce the latter amount to a rapidly disappearing quantity.

The Bombay proposal, before the meeting of the Associated Chambers of Commerce, in favour of recommending the denunciation of the Indo-Japanese Trade Convention of 1905 and the subsequent imposition of discriminating duties against Japanese cotton manufacturers, was lost: mainly, it would appear, owing to the opposition of the Bengal Chamber, whose arguments, as to the danger of a tariff war, somewhat naturally appealed to all the members of the meeting except those who voiced the view of the Indian cotton industry, almost exclusively that of Bombay. The Bombay representative said that Japanese imports into India consisted entirely of manufactured goods, sixty per cent. of which were cotton goods. The bulk of India's exports to Japan consisted of raw materials, and eighty per cent. of these were raw cotton: the only two exported manufactures of importance were gunny bags and pig-iron: and, as the former was an Indian monopoly, the only one that needed consideration was the latter, the exports of which amounted in value to about a crore of rupees annually. The spokesman of the Bengal Chamber said that lac, pig-iron, oilcakes and jute manufacturers made up a total of 70½ per cent. of Bengal's exports to Japan, and that all of these were likely to be affected in the event of a tariff war. In particular, the loss of trade that would be represented by that of the 150,000 tons of pig-iron now exported annually to Japan would not be confined to that article itself: the reaction of this loss on the coal trade and the railways would be very severe. He calculated that 250,000 tons of coal would be thrown on the market, about 90 million ton-miles of traffic would be lost to the railways, and Calcutta port dues for other exports, such as tea and jute, would probably have to be raised to make good the deficiency. The Japanese were quick to notice this argument, and took characteristic steps to rub it in: for a cable from Tokio announces that a meeting of the Cabinet was to have been held on January 15 "to discuss the question of raising the tariff on pig-iron from India. The Government, however, are bearing in mind the possibility of retaliation on the part of Indian cotton interests." It may be hoped that the Government of India will not be deterred, by this transparent piece of bluff, from examining the question of penalising Japanese cotton imports into India. The question of Imperial Preference, however important and desirable, is one quite distinct: and the effect of a move in that direction—which, in the present state of vocal opinion among Indians, would be strongly resented and fiercely resisted—would, so far from being of advantage to the Indian cotton industry, almost certainly be disadvantageous to it: in that, if it should make Japanese competition with Lancashire impossible, it would only intensify Japanese competition with India, the basis of which it would not affect at all; whereas action on the lines of the Safeguarding of Industries Act, if inquiry should show it to be justified, would be advantageous to what is the key industry of both Lancashire and India. As a preliminary step, it would seem appropriate to undertake the inquiry into the Indian cotton industry which, until the suspension of the excise duty, was consistently refused by the millowners, on the plausible pretext that the findings of a Commission of Inquiry might be made use of to perpetuate an unjust impost. That pretext exists no longer: and the charges of venality and of extravagance in management, that have been freely made against the Indian mill industry, need thorough investigation before the case for discrimination against Japanese cotton products can properly be examined.

CURRENT TOPICS.

The Calcutta Bomb Factory.

The trial of the nine young Bengalis, arrested in November in connexion with the discovery of a bomb factory in a Calcutta suburb, ended on January 9 in the conviction of all the accused, who received sentences of imprisonment ranging from three to ten years. When the discovery was first announced, the leading extremist newspapers affected to treat it as a police invention—if the incriminating materials had really been discovered at all, they must have been "planted" by the police, or introduced by agents provocateurs. The defence was conducted on these lines, the accused one and all declaring that they had no knowledge of the articles alleged to have been found in the house of which they were inmates.

Ordinarily, a judicial pronouncement carries great weight in India, even with that class of newspaper that invariably questions both the accuracy and the good faith of any Government statement; but, in this case, the trial was held before a special tribunal, set up under the provisions of the recent Bengal Ordinance, locally known as the "Black Act." One of the chief objections, voiced by the extremist politicians against the Ordinance is that "innocent patriots" were detained under it without being brought to trial. It would appear, to the uninstructed, that the result of the present trial should go far to discount that objection; but it may safely be prophesied that it will not do so. The arguments put forward will doubtless be "you refuse a trial on the ground that witnesses are afraid to come forward; here is proof to the contrary, for you have got a conviction. But you have only succeeded in doing so by bringing the accused before a special tribunal, which has found them guilty on evidence on which no Bengali jury would have convicted. If, even with such special machinery, you still refuse to bring the internees to trial, this amounts to an admission, not only that you have no case against them at all, but that the whole story of revolutionary activity is a pretence that you are deliberately using in order to stifle a legitimate political movement of which you disapprove."

After experience of several trials before Bengali juries, that took place shortly before the introduction of the Ordinance, one can but admit that it is, unfortunately, only too true that, no matter how complete and convincing the evidence, a conviction in a "revolutionary" case in the ordinary courts in Bengal was impossible; the perversity of jury verdicts, in such cases, was so flagrant as to be almost unbelievable by anyone who did not realise the state of terrorism produced in the mind of the ordinary peaceful citizen by the notorious exploits, and the equally notorious threats, of the followers of anarchism. The Bengal Legislative Council recently carried, against the Government, a resolution demanding the repeal of the

Digitized by Google

Ordinance; and they will, no doubt, adduce the result of the present trial as a further argument in favour of its repeal; but, to every unprejudiced person, the result of the trial must constitute the strongest possible argument for its retention.

The Transfer of Sylhet.

In the notes on this subject in last week's issue of THE NEAR EAST AND INDIA, it was mentioned that the Government of India, before deciding the question, had asked for "a reasoned decision" from the Legislative Council of Bengal; whose decision—whether "reasoned" or otherwise—was in favour of the transfer, by a vote of 64 to 46 carried against the Government. The Assam Council has now reached the same conclusion, by 26 votes to 12. The cable does not say whether this vote was also opposed by the Government or not; but, as the Assam Council contains twelve nominated and thirty-nine elected members, the number that voted in the minority makes it look as if it was. But the decision of the Assam Council contains a rider that will probably strike the observer as humorous—for it was coupled with an expression of the desire that "Assam should continue to have the status of a Governor's Province." It only now remains for a similar vote, with a similar proviso, to be passed about the district of Goalpara, to make the joke complete; for the Assam Council evidently wants a variant of the familiar desire to eat the cake and keep it—it is prepared to surrender half its cake to Bengal, and yet wishes to retain what amounts to the whole of it—the salaries and allowances that would cease if the "Governor's Province," and with it the Council itself, were to disappear.

By Air to India.

India will receive with mild disappointment the news that the starting of the proposed air-ship line has been postponed indefinitely: and that she will have to possess her soul in patience until the promised aeroplane service materialises. Meanwhile, it will doubtless interest people at Home, as well as in India, to know that an Afghan newspaper (published, as are all the newspapers in that country, under official supervision if not inspiration) has discovered, in the proposed air line, a fresh example of "Britain's political devices for the enslavement of India." The paper explains that Britain, realising that she cannot further strengthen her hold on India by land, has decided to connect all the British possessions by air. As that amusing writer "E. H. A." says in one of his books, in reference to some more than usually extravagant story retailed to him by an Indian, "facts like these are becoming increasingly rare" in a workaday world, and it is a pity to pass them by without record. It would appear that the Afghan imagination is no less active than that of the unlettered Indian, when it comes to the concoction of a fairy tale: and it is not unlikely that the lettered Indian—the extremist Editor—will appreciate the inventive genius of his Afghan competitor, and try to improve upon it himself.

A Punjab Appointment.

When the appointment of the new Viceroy of India was announced, it was stated that Sir Geoffrey de Montmorency would, to begin with, continue as Private Secretary; but the overlap will, it seems, be only a short one, since it has been decided that Sir Geoffrey will succeed Sir John Maynard as a Member of the Executive Council of the Punjab at the beginning of July. Sir John's tenure of this appointment would, in the ordinary course, have expired in January: and the fact that he has been granted an extension of six months—which, if it had stood alone, might have occasioned some surprise—is explained by the necessity for bridging the interval (which has been made a very brief one) before Sir Geoffrey de Montmorency can hand over his present post and enter upon his new duties. It is safe to say that the appointment will be received with great satisfaction not only in the Punjab, but in other parts of India as well.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 31.

Congress and Consistency.

A careful examination of the presidential address of Mrs. Naidu at the Cawnpore Congress fails to disclose any progress on the part of the Indian extremist politician towards consistency, responsible thinking, or constructive capacity. Time does not modify the infinite sameness of the eloquence that has always been the principal product of these gatherings; poetic and emotional, it is also nebulous and leads nowhere. The proceedings of the General Council of the Congress reveal fundamental divisions of opinion in regard to Council entry; Mrs. Naidu eulogises Gandhi's "noble and exacting creed" as she relegates him and his ideals to outer darkness; and she weeps tears of blood when she sees the gulf between Hindu and Moslem, the "atmosphere so tense and dark and bitter with increasing communal jealousy, suspicion, fear, distress and hatred." This is the united party, and the united country, which she calls upon to rise up in the Spring and dictate terms to the British Government, if it does not make a responsive gesture in the meantime and so save itself. Mrs. Naidu wants to save everybody else; even the Frontier States are to receive the "normal civic and social amenities which are so abundantly enjoyed by their sister Provinces." So abundantly enjoyed! So much for bondage. But Gandhi is not altogether done with, for he was the principal attraction at the opening of the Swadeshi Exhibition at Cawnpore, and this was his contribution to practical politics. "I am mad after Khaddar. I dream of it and I have no taste for anything else in the world. I once more declare that, if only the people discard foreign and mill-made clothes, they will achieve Swaraj within one year, even if Hindus and Muslims do not unite; but I believe they will not quarrel if they wear Khaddar." And these are the leaders of "Nationalist" political thought.

The Corporation and the Nurses' Institution.

The publicity given to the statement issued by the Calcutta Hospital Nurses' Institution, in regard to the Corporation grant, has brought out references to other institutions which are worthy of support from public funds in their endeavour to help the suffering. Dispensaries, wholly or partly supported by public funds, are rapidly growing in size and numbers, and they give employment to an ever-increasing body of Indian medical men; it is impossible to ignore the opportunities thus afforded for patronage, and little care is taken to conceal its exercise. In a neighbouring Province, the Swarajists celebrated their access to power by preparing a scheme to close down public dispensaries and utilise the money thus available to make monthly payments to local medical men, so as to enable them to give undefined assistance to the poor: the proposal matters less than the fact that it was regarded as being an ordinary and natural exercise of political power. It is the same spirit which underlies the attempt to divert the grant to the Nurses' Institution.

Fat in the Fire.

Mahatma Gandhi told the world that he could not find a Mohammedan worthy of the honour of the Mayoralty of Calcutta; it was a brick thrown into the placid lake of Mohammedan indifference, and there is still more than a ripple on the waters. Sir Abdur Rahim, lately the Senior Member of the Executive Council of Bengal and now the President of the All India Muslim League, declared in his Presidential address that "the Moslems would be a big mouthful for their Hindu friends to swallow." He insisted that the formation of an independent Moslem party must be taken in hand in the face of the most serious challenge to their religion which they have ever had to meet, not even excepting the Christian crusades. He is referring to what he called the venomous propaganda of Hindu poli-

Digitized by Google

ticians which aims at driving the Moslem out of India, where "the respective attitudes of Hindus and Moslems towards life, their distinctive culture, civilisation and social habits, their traditions and history no less than their religion, divide them so completely that the fact that they have lived in the same country for nearly a thousand years has contributed hardly anything to their fusion as a nation." Sir Abdur Rahim spoke openly of the conspiracies with foreign Governments which are being indulged in by certain Hindu politicians: and there is little doubt that the whole speech has let in light on some of the differences which can no longer be hidden within the Congress. The soreness is not all on one side; an announcement has recently been made that in future 45 per cent. of Government appointments will go to Mohammedans. The late Mr. C. R. Das promised a higher percentage until inequality was reduced, but now Government have taken the matter seriously and have acted; even the Mohammedans are surprised.

"Darkness, Destruction and Despair."

It is possibly all too easy to take the short cut of leaving the Indian politicians, Nationalists, Liberals, Swarajists, Communists and what not, to settle their differences amongst themselves. Certain it is that it would be a good many years before an honest and satisfactory agreement can be reached which would be just to the claims of all parties; in fact, it is doubtful whether such a thing is possible, having regard to the conflicting interests and the necessity of protecting minorities in a land where the prizes go to the strong. The Reforms have pleased nobody, and it is beyond question that they have produced a sense of disappointment and irritation amongst the thinking Indians. It is still very doubtful whether the great masses of India, the agriculturists, know or care anything about politics; but the extremists have planted mischievous seeds under the cover of political activity, and it cannot be denied that the whole atmosphere is charged with antipathy to authority. The ignorant have been taught to believe that all their economic troubles following the War are due to the hated Government. The politicians and intellectuals, for various reasons, have declared open war on the "Bureaucracy"; and now even Moderates are saying that Government is no longer attempting to support them in their efforts to maintain the constitution. Bepin Chandra Pal asserts this week that throughout India there is an almost universal atmosphere, not merely of mistrust but of positive antipathy towards British rule. Competent observers are agreed that no one who does not stand for mending or ending "the satanic British Empire" has any chance at the coming elections. A fresh outburst of paper hatred appears inevitable: and the clearest heads can see little light beyond the necessity of just carrying on and watching events.

The Currency Commission.

The Commissioners have arrived in Calcutta, and have been sitting and taking evidence. The Bengal Chamber has thrown its weight in favour of the existing currency system, but with the rupee fixed at 1s. 6d. The Indian public bodies are urging the adoption of the gold standard for India; but it is doubtful whether their action arises from a clear understanding of the functions of money or from the national instinct for hoarding the precious metals. The bazar has it that the 1s. 6d. rupee is certain to be fixed and that, beyond this, there probably will be little change, except that the paper currency may be increased.

The Trivial Round.

The glories of the Calcutta season, which generally culminates in a brilliant display on Viceroy's Cup Day, were considerably shorn this year by the order as to mourning. It was an unsual and drab sight and, by contrast, the brilliance of the Bodyguards of the Viceroy and the Governor was more than ever in evidence. Lady Reading had a particularly warm reception on her first public appearance after her recent operation. On the other side of the course there was admittedly the biggest crowd ever seen at the races. This, by the way, is a good sign politically. Orange William won again, but this time was seriously challenged by the placed horses, and he only managed to win by a neck. It remains to be seen whether he will win the fifth classic, and so bring home the heavy money that has been laid upon him by his supporters. He is a king of horses and he will be much regretted on his retirement after the season. The Pantomime has suceeded in spite of a very poor book; the brilliant dancing is a sign of the times and, as is usual in Calcutta, the general *ensemble* is remarkable. The Golf Championship has again been won by G. D. Forrester, who seems almost unbeatable; polo has not been so good, but the crowd has been larger than ever. The Horse Show to-day promises well: and every seat is booked at the restaurants for to-night. The Flag Ship and cruiser are in the river, and the Proclamation Parade to-morrow morning will be particularly impressive. Altogether a very good season.

Markets.

With the Christmas holidays intervening, the volume of business passing in the jute and gunny markets has been on a small scale, but compares very favourably with the turnover during the previous week: and, on the appearance of a mild inquiry, prices have displayed an upward tendency. In spite of the prediction of a revival in the piece-goods market, there appears to be nothing in the present state of the market to justify such a happening, at any rate in the near future: and, on the contrary, sales have contracted to an almost negligible quantity. No tea sales have taken place here, and the market is nominally closed.

Trade returns for November show, in comparison with the preceding month, a decline in imports from Rs.708 lakhs to Rs.675 lakhs, but an improvement in exports from Rs.1626 lakhs to Rs. 1641 lakhs. All these figures make a poor showing compared with those of the corresponding periods last year; the falling off being accounted for, as to imports, mostly by smaller deliveries of cotton goods and sugar, and, as to exports, by smaller shipments of jute, although the higher prices prevailing this year have counteracted this in part, and the actual value has fallen only by a matter of about Rs.21 lakhs. Tea has also played a large part in the reduction; in spite of an advance of a million pounds in shipments, the value has fallen by Rs.53 lakhs owing to the lower level of prices.

The Stock Exchange remains closed until the end of the week. The money market has been steady for the near position, but inclined to be quiet forward. Sterling continues steady.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, January 1.

Among the innumerable committees and commissions that are now sitting to decide on the future of India, there is one to discuss the question of the Indianisation of the army: and successful Mohammedan barristers and Parsi members of council are arguing solemnly as to what constitute the fighting races of India.

The spirit of democracy has forced upon India the system of competitive examination, the success of which in England has been one of the most remarkable proofs of the English character. What it amounts to is this. We are pretty sure that everyone who deliberately elects to take upon himself certain responsibilities, whether they be the command of soldiers, the administration of foreign provinces, or the clerical duties of government, is not disqualified by character or temperament: and, rather

Digitized by Google

than allow the dangers of influence to corrupt public life, we have adopted the almost arbitrary test of success in certain examinations to be the method of selection. The scope of education is so wide that this success is now within the grasp of all classes: but it is not in practice abused, because tradition is so strong that Englishmen have learnt to know almost instinctively their own qualities and their own limitations: and a man who is admirably suited for the Indian Civil Service seldom makes a wrong choice by electing to be a soldier.

We have attempted to make this principle of competitive examination the test in India without any of the conditions that obtain in England. To begin with, the real ruling classes of India, the younger sons of the chiefs and landowners, have not got and do not desire to have education on the lines that are likely to bring success of that kind: that is the monopoly of the town bred clerk or pleader. Secondly, there is so far from being any tradition likely to guide the footsteps of young men into the paths for which the yare suited, that the present atmosphere of India is leading them in exactly the contrary direction. A quite natural desire to find their feet, and to display their true capabilities is pushing young men into positions for which any wise man can see that they are obviously unsuited.

Any attempt to introduce government, or the command of the Forces, by competitive examination will merely put the power into the hands of an insignificant minority which is no more representative of India than the present class of Englishmen in that country, and which is certainly less in touch with the really dominant races. The minority is what would ten or fifteen years ago have been described as the intelligentsia: the class, that is to say, which is spreading Bolshevism throughout the countries East of the Danube.

That we are comparatively speaking free from Bolshevism in England is due to the adaptability of the social ladder, by which all those numerous and successful men who have pushed their way up in public and commercial life, are absorbed quite automatically into the governing and, in the true spirit of the word, conservative classes. But there is no chance whatever of this happening in India: and an attempt to introduce democracy on English lines into India will merely transfer the power to the hands of a small narrow-minded and unrepresentative body.

The great lawyers who rule the House of Commons and thereby govern England—on the whole wisely and well—failed to see the distinction: and the great drawback of the Montagu-Chelmsford scheme is, that it places too much power in the hands of the intelligentsia and far too little with the real ruling classes of India. The agriculturists are the backbone of India, and they ought to be ruled by their natural leaders, the landowners, and not by a party of lawyers from the great cities.

How far it is possible to put the clock back and to restore the balance of power, it is difficult to say. To a strong Government, capable of resisting the attacks of a violent native Press, which represents the true feelings of much less than one per cent. of the population, it ought not to be impossible. But it would be far easier to check, as soon as we can, our tendency to select the governing classes by competitive examination. One Englishman may be as good as another; but that is very far indeed from being the case with Indians, either now or, so far as one can see, for a hundred years to come.

Nobody who has any wide acquaintance with leading Indians can fail to realise that there are plenty of Indians who are entirely qualified both to administer the country and to lead troops: the history of the Native States is sufficient evidence of that. But the right type of Indian will not come, in bulk, from the ranks of the intelligentsia, nor will he be found by competitive examination. If we want to build up a strong Indian administration and a strong Indianised army, we must do it by careful selection of the right men on their actual merits; and for many years to come they will need the guidance of Englishmen, owing to the sad fact that this admirable body of natural leaders has been for so long discouraged and hampered in favour of the lawyers.

THE DAY OF THE CHATTEL.

By JANUS.

Glancing over the obituary notices of the year 1925, one finds a widespread recognition of the fact that, in India, economic interests have at last successfully asserted themselves: and, as things stand at present, they seem likely to dominate the sphere of intellect for some time to come. The change must be rather a shock to the ardent spirits who have been calling on the East to counteract the materialism of the West; but, speaking for myself, it is as welcome as it has long been inevitable: and it is not altogether unseasonable that, just when Europe has got a bad attack of spooks and psycho-analysts, educated India should discard non-co-operaton and mahatmas for such serviceable commodities as flour or sugar. It is worth while, however, to point out that the change affects only a tiny fraction of the population. Indian peasants have been economists in a small way as far back as we can follow their history. As in all peasant countries, their thoughts have been busy mostly with the crops and the weather, with prices and the rate of interest: and, to my mind, the chief reason for welcoming the recent change is that it may well be the first step in what I am afraid is going to be rather a tedious process—the synthesis of town and country into an effective nationality. The distance that has to be traversed will be apparent to anyone who glances over a selection of Indian newspapers, and tries to plumb the depths of ignorance which they display. It is all to the good that the Press should realise the importance of economic progress, but it has a very long way to go before it can help its readers to realise that ideal.

To take just one instance, I read the other day, in one of the foremost journals, that the development of India's resources "will result in raising the standard of living of the masses." Now everyone wants to develop those resources, and to raise that standard; but to present the two processes as cause and effect is a throw-back to the delightfully simple, and desperately misleading, doctrines of the middle of the last century, while the thesis is definitely disproved by the facts of India of to-day. You cannot raise the standard of living merely by putting more things within people's reach. You raise a man's wages, and he does less work, besides frequently taking to drink or drugs. You give a peasant new facilities for making money, and the result is, as Mr. Darling has shown so clearly in his recent book, that he plunges more heavily into debt: and, speaking generally, it is quite certain that any temporary improvement resulting only from increased supplies will work itself out very quickly, and probably leave the standard lower than before. The falsity of the doctrine is perhaps most easily seen in the fact that it can be inverted with advantage. If you say that a rise in the standard of living will result in the development of India's resources, you are much nearer the truth, "getting warm" as the children say; but it is better to go direct to the

facts, and say that the two processes must be carried on side by side, so that each may help the other. New wants are better than new facilities, because wants have a real dynamic force which facilities lack; but to get permanent results of value you need co-ordination of effort along the two lines.

This is the point which I wish to press on the attention of Indians just now. It is reasonable to say that the process of economic development is fairly started. It has been a lengthy business, for the gospel was being preached nearly fifty years ago by that true mahatma, Sir Edward Buck: and, while people paid very little attention to his efforts at the time, it is easy to trace their working as they influenced by slow degrees first, the official outlook and, some time later, a small but increasing bank of Indian public men. At any rate, most of the spade-work needed in that direction has now been done, and it is high time to start digging on the parallel line, and bring it abreast of the other as soon as possible. The essence of the task is to create new wants among the people, wants whose satisfaction will mean a real improvement in life. It is by no means easy, and experience seems to justify the statement that it can be effected only by practice and example. In the book I have just referred to, Mr. Darling shows that the recent rise in the standard of living in the Punjab has been due mainly to men who have lived in other countries where the standard is higher, and who have brought something of the new standard back to their homes, setting an example which their neighbours learn by degrees to follow. That is a big sociological fact on which Indians may meditate with advantage; but it does not point directly to a solution of the problem, because emigration is beset with so many difficulties, real as well as factitious. For India generally the problem must be tackled in the home, and that means among the women, who do most of the spending. This is the core of the matter, and there is here a clear line for division of labour among the Indians who care for the future of their country: let the men attend mainly to economic development, while the women exert themselves for wiser spending. Unfortunately, the few Indian women who are active in such matters have mostly taken the wrong track. I see that in the North they have been preaching, happily with little result, the doctrine of worse clothes for the men. I say happily, because the clothes they preach irritate an ordinary man's skin, and from the skin to the temper is a very short journey. Suppose, for a change, they were to organise a practical movement for warm clothes for the children, and try to make the Northern winter a delight instead of a misery for the younger generation. That is a concrete example of the kind of work which is most wanted in India just now. The workers will have something to go on in the strength of a mother's love, and the result of their work will be manifested by and by in a great development of the woollen industry, leading in its turn to an improvement in sheep-breeding, and so spreading outwards throughout the country. After all, a warm jersey suit need not cost more than the silver anklets and bangles which at present constitute the little boy's winter outfit.

Another asset for the worker on these lines is pride of possession. That it exists in India needs no demonstration, for the peasant woman's attitude to her *batterie de cuisine* is precisely the same as one can observe in France; but, cooking-pots apart, she has at present no durable possessions to be proud of. One of the most striking features of the Report on Working Class Budgets, published two years ago by Mr. Findlay Shirras, was the absence of any reference to furniture, even in the case of Bombay mill-hands, who, if they worked regularly, would always have money to spare. Now the growth of the desire for durable goods has been one of the outstanding factors in economic progress all over the world: it means not merely wise spending, which is the first step, but also saving now to spend wisely later on; and that carries one a long way on the road. To encourage this desire, then, is one of India's most urgent needs. The particular things to be bought must of course vary with the individual, and it is no good trying for too much all at once; in fact, one is almost tempted to say that the nature of the thing matters very little, provided that it is durable, and that it gives harmless satisfaction. Whatever it may be—a perambulator or a clock, a gramophone, if you like, or a wireless set—one can be quite certain that, if the average woman sets her heart on it, she will make her husband work hard and steadily until she gets it: and it is not going too far to say that a wide extension of such desires would definitely solve the labour difficulty which at present threatens to cripple factory development in many parts of India.

Very much more might be written on this topic, but for the present I must content myself with these two examples. Development of Resources is a worthy slogan, but not of very great potency by itself; it must be accompanied and reinforced, first by Wise Spending, and then by Saving to Spend, if the secular poverty of India is to be attacked with any hope of permanent success. The Day of the Chattel has dawned late in India, chiefly because, until quite recently, chattels were dangerous to their owner, and the old inhibition has outlived its utility. Time has been lost, and the loss must now be made good; not merely, or even mainly, by State activity in the development of resources, but by the efforts of the leaders of the people, by "men with cool heads but warm hearts, willing to give some at least of their best powers to grappling with the social suffering around them: resolved not to rest content till they have done what in them lies to discover how far it is possible to open up to all the material means of a refined and noble life." That was the ideal which Alfred Marshall put before his students forty years ago: and it seems to me to be exactly what is most wanted in the India of to-day, and among women even more than men.

CORRESPONDENCE.

THE ANGLO-INDIAN QUESTION.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The memorandum on the present position and prospects of the Anglo-Indian and Domiciled European communities, lately submitted to Lord Birkenhead by a deputation from India, headed by Col. Gidney, suggests the following questions:—

1. Is there in India any field of employment open for these communities other than Government service and the railways?

2. Is their employment in these services, in comparatively large numbers, desirable in the interests of the Government and of the illiterate masses of the people?

3. Is it desirable to enlist men in sufficient numbers to form complete military units, or in the auxiliary military departments?

India being essentially an agricultural country, the possibility of forming self-supporting Anglo-Indian colonies on the land, somewhat on the lines now being tried elsewhere with British emigrants, might be considered. But every acre ordinarily available is already taken up and, owing to tenant rights and deep objections to voluntary alienation, large blocks are not obtainable. There remain sparsely populated dry areas, Government forest reserves and jungle-clad or hilly country occupied by groups of semi-wild tribes. Here may be found room for fair-sized colonies; but, at the outset, jungles must be cleared, marshes drained, and a sufficient supply of water secured from canals, wells or reservoirs. Such work could only be done if supervised and financed by Government: and land so prepared would be of little use unless the settlers had meanwhile gained some knowledge of agriculture and various handicrafts, of which the present generation of Anglo-Indians is wholly ignorant.

Digitized by Google

It would therefore be necessary first to establish agricultural and industrial free schools, in healthy localities, where growing boys and girls could be trained. In such schools India is lamentably deficient. Education, for Indians and Anglo-Indians alike, has hitherto had for its main object the passing of examinations required for appointments in Government services and mercantile offices. The clearing and preparation of land for settlement might form part of the training. Industrial establishments and factories are few, and generally in or near large towns: and those financed by European companies prefer men trained in Europe to fill all posts of responsibility. But few Anglo-Indian parents can afford to send their sons to England. Firms financed by Indians often employ European managers, but all other lucrative posts are reserved for relatives or caste-fellows, efficient or otherwise. The factory hands are almost entirely agricultural labourers, content to work on low wages during the intervals between the sowing and reaping of the spring and autumn crops. It follows that, for the present generation of Anglo-Indians, there are only two alternatives: either to find employment in the Government services or railways to which, as statutary natives of India, they have equal rights with other Indians, or to join the ranks of the unemployed.

During the consolidation of British India, the increasing armies and constant wars filled the hospitals with sick and wounded. To meet requirements, a sub-medical department was organised, in which a large number of Anglo-Indians were employed as apothecaries, apprentices, etc., who did their full share of work on the battlefields and in the hospitals. When at last, after forty centuries of strife, India had peace, several of these subordinates, at their own expense, came to England and qualified as doctors. These, on return to India, were often posted to outlying districts as Civil or Assistant Surgeons, where, owing to their skill and sympathetic treatment of all classes whether Hindu or Moslem, Brahmin or outcaste, they soon gained the respect and confidence of the peasantry; as, later, did the lady doctors those of the native women: and this to a degree seldom, if ever, accorded to the Indian practitioner, whether he had qualified in Europe or not. Presumably Anglo-Indians will continue to fill all subordinate posts in British hospitals for troops in India, otherwise their places must be taken by men from England at considerable expense to the State. Medical aid must also be supplied for the families of British Civil Servants of all grades, for those of British officers with Indian regiments, railway employees, and the commercial and planting communities, whose feelings and even prejudices must be considered. Naturally English women of all classes prefer to be attended medically by their own countrymen, even if they have not much knowledge of Oriental ideas regarding women in general. These ideas, imbibed in childhood by Moslem and Hindu alike, are not eradicated by a few years of residence in cheap lodgings in European towns. As for the bulk of the peasantry, if an unbiassed referendum could be obtained, there is little doubt that the English doctor would head the polls in every province; and, to the peasant, "English" includes the Anglo-Indian medical officers.

The extension of the Empire entailed the formation of a great Public Works Department for roads, canals, barracks, etc. While the upper ranks were reserved for commissioned officers of the Sappers, and for civil engineers trained at Rurki, the lower grades were filled by British N.C. officers and Anglo-Indians trained in the second class at Rurki. How the Department did its work is known to all. Now, if these and other Departments of the Government service are completely Indianised, the results to the Government may not be serious; but any officer who has camped near a forest reserve, a canal or a customs station for a few days, must know what the peasantry think of their countrymen in office. Men whose ancestors for generations have considered the acceptance of "dastoori" (bribes) as legitimate, are not likely to work as economically or efficiently as men of English descent.

There are, however, three public services in which any false move may have fatal results; the posts, the telegraphs and the railways. In all three, large numbers of Anglo-Indians have served with distinction. In the postal service there must necessarily be a large purely Indian element: and, so long as there is competent European supervision, little harm can be done.

The first Director of Telegraphs brought to India with him three experts as Superintendents. From the English schools in the hill-stations he chose several boys who were soon working as signallers, etc. And, when the Mutiny of 1857 started, it was well for India, and for thousands of English women and children, that faithful and loyal Anglo-Indian lads were the signallers. Again in 1863 and, indeed, whenever wars on the frontier or in Afghanistan were in progress, it was well that the Government could depend absolutely on the Anglo-Indian staff. If these are replaced by avowedly disloyal students from Indian colleges, none can foresee the consequences.

When railways were under construction, large numbers of British mechanics and other employees were recruited in England. These constructed and worked the first railways. When they died or retired, their places were taken by their sons and grandsons, who almost to a man joined the Volunteer Corps (now the Auxiliary Defence Force), and again and again did good service during religious and inter-caste riots, or saved the police from being overwhelmed by gangs of trans-frontier fanatics or dacoit bands. More than once has the Anglo-Indian staff averted or rendered ineffectual strikes by Indian employees. No Government can afford to trust the working of the railways to any but loyal men.

The memorandum mentions the absurd regulations regarding the right of Anglo-Indians to trial by jury. These, it is to be hoped, need only to be brought to notice to be at once abrogated.

There remains to be considered the important question of the employment of Anglo-Indians in the military services. There are, of course, serious difficulties in the way of the proposals made in the memorandum. One of the first questions raised is, whether the men who may be employed are to be considered and paid as British or Indian soldiers? To this there can be but one answer. The men, fitted by physique, education and manner of living for enlistment, are to all intents and purposes British. The sepoy is better clothed, fed, and housed in the regiment than in his home, and may afterwards return to his home and his ancestral fields with the enhanced prestige accorded to a soldier by the peasantry. And there are as many recruits available for Indian regiments as are required. Military units, composed of the right sort of Anglo-Indians, could set free an equal number of units of the Imperial Army for service elsewhere. Their employment in the several auxiliary branches of the service, in addition to the saving of the cost of transport from and to England, should tend to improve relations between the British and Indian employees. The Anglo-Indian knows the vernaculars, habits and customs of all classes of the Indian population. He would presumably enlist for long service, as the Company's troops did for two centuries; he would make an experienced soldier and, on retirement, could join one of the colonies contemplated above. The same considerations apply also to the formation of Anglo-Indian batteries of artillery. As to the Regular Army, it may be doubted whether at present a sufficient number of young Anglo-Indians, of the stamp required, could be enlisted to form regiments of infantry without detriment to the supply of the railway, postal, telegraph and other civil services. If, however, a sufficient number were forthcoming, there is much in their past history to show that, in the field or in quarters, in war or in peace, they would equal almost any other troops in efficiency, discipline and courage: and the saving to the Indian exchequer would be considerable. It only remains to be stipulated that, in all branches, the commissioned ranks should be open to men of exceptional ability.—I am, etc.,

G. B. SCOTT.

THE INDIAN MAIL.

Indian Journalism.

An Indian journalist delivered a lecture in Bombay, last month, on this subject. He deplored the fact that Indian newspapers neglect everything except politics, and that their contents are "lugubrious" and totally lacking in humour; indeed, one might almost imagine that "our journalists are the hired mourners of our national life." In the discussion that followed, the Chairman of the meeting said that a subject nation was like a diseased person who could think of nothing except his disease, until he was cured; therefore it was not surprising that Indian journalism devoted itself almost wholly to politics. But, as regards nationalist papers, the more serviceable they were to the public, the greater were their financial difficulties; because they could not do true service without coming constantly into conflict with official and capitalist vested interests—the people who controlled the advertisements without which no newspaper could live, and who would not extend their patronage, in this respect, to papers that declined to "determine their editorial policy or manipulate their news" to suit their interests. If, however, Indian newspapers were to copy the example of the West, and try to become money making concerns, journalism would cease to attract men of vision and character and would become a public danger. Besides "the canker of commercialism" that was already beginning to eat into the vernacular Press, where lay the future of Indian journalism, there was another and, if possible, a greater danger—that of communalism. Nothing saddened him more than the conviction that the existing tension between Hindus and Mussulmans was largely, indeed mainly, the creation of communal journalism: and it was impossible to exaggerate the immensity of the peril to the national cause of India that it constituted.

As the Chairman was the Editor of the leading extremist Anglo-vernacular newspaper of Bombay, which persistently devotes itself, in the intervals of scurrilous abuse of everything British, to intemperate support of the claim of the Khilafat Committee to voice the sentiments of Indian Mohammedans, it is of distinct interest to find this particular Saul also among the prophets; though it would be too much to hope that his remarks foreshadow a much-needed improvement in the tone of his journal.

Reduced Railway Fares.

A beginning was made, in December, in the matter of reduction of fares, by the East Indian Railway: and the Bengal Nagpur Railway (which is in competition with it in long-distance traffic) was expected to follow suit with effect from the New Year. The reduction only operates in the case of journeys of over 300 miles, and only—at present—in the two lowest classes, "intermediate" and third. As is well known, the economic rate of third-class travel in India depends on its relation to the daily expenditure of one who travels by road: it is reckoned that it costs a man about four annas a day to march ten miles: and, if the railway does not carry him as cheaply as that, the Indian, to whom time is no object, prefers to walk. The present third-class rate, by "ordinary" trains—mail trains are nearly fifty per cent. more expensive—works out at a trifle under three annas for a journey of ten miles: and the reduction that has now been made allows the traveller, once he has passed the 300 mile mark, to continue his journey at a cost of just over two annas for every ten miles. As the average length of third-class journeys in India is small, it is unlikely that the reduction will much affect the earnings of the passenger traffic.

The question of a reduction in goods rates is, however, even more important than that of passenger fares: and there is, so far, no indication that this is being attended to. Doubtless it awaits the consideration of the Rate-making Tribunal, whose appointment, after several years spent in "consideration" and "correspondence," is now stated to be imminent.

INDIAN EXCHANGE.

London, January 18.

Rupee Exchange has remained perfectly steady round about previous quotations, with a little more business reported for some distance ahead at lower levels.

In the London market the inquiry for telegraphic remittances has been trifling, and buyers have had to pay 1s. 6 7-32d. as a rule, although some transfers have been effected at 1-64 better. In Calcutta and Bombay, no change has been recorded from 1s. 6 5-32d. T.T., but no business has taken place at this rate, as buyers will not look at anything under 1s. 6 3-16d. Merchants have been able to settle their moderate requirements at this figure for delivery within a month, and Government has also been called upon to buy for immediate delivery to a small extent. Less activity is apparent in exports. Good commercial paper has been done at 1s. 6 15-32d. 3 m-st. for delivery within a month; but merchants are not keen to settle exchange beyond their immediate requirements. According to last week's Imperial Bank of India statement, the trade demand shows a shrinkage of 140 lakhs of rupees, due no doubt to the quieter tendency in markets after the holidays.

Forward rates remain steady at 1s. 6 5-32d. T.T. up to the end of March, with no operations reported, but some business has been fixed for June at 1s. 6 3-32d.

The Government of India have announced that £37,567,000 has been remitted to the Secretary of State for India from April 1 to December 31, 1925, by means of purchases of sterling in India. Of this amount £9,000,000 has been remitted on account of the paper currency reserve.

Recent news about the cotton crop does not appear to be so optimistic. According to the third cotton forecast issued by Government, the yield is not now expected to come up to last year's total owing to recent unfavourable weather, which has affected most of the cotton districts.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

British Industries Fair.

As indicating the increasing importance of the British Industries Fair, it is interesting to note that the Near East promises to be well represented this year in the list of visitors from overseas. These will be buyers from Egypt, Persia, Greece, Syria, and, I believe, Yugoslavia, and no doubt when the time comes it will be found that other regions in the Near and Middle East will have their representatives. There will also be buyers from India and even from as far afield as Australia. This goes to show very plainly how firmly this annual fair is now established as a medium for trade development. Apart from the labour outlook here, which it is impossible to regard as other than uncertain, the position generally is certainly more favourable than on the occasion of any previous fair, and it will be surprising if the orders placed are not a record.

Egyptian Government and Cotton.

The fact that the Egyptian Government's purchases of cotton this season have so far been small rather suggested that the view was being taken that the present cotton position did not justify Government intervention. It is now announced, however, that owing to the low price of cotton it has been decided to purchase up to half a million kantars if necessary in order to maintain a reasonable relationship between American and Egyptian prices. What this relationship should be will naturally be a matter of opinion. The Government's view is that as Ashmouni is equal in quality to American then Sakellaridis should be 35 dollars when American is 20 dollars. Unfortunately for Egypt, as I have pointed out before, that country is not in the position to enable it effectively to rule cotton prices in the long run. At the moment it is predominant as regards the supply of Sakellaridis, but that situation promises to be altered in the course of a few years as a result of developments in the Sudan, and as that is the case it is surely a short-sighted policy to attempt to interfere with the level of prices seeing that it is bound to react upon the country in the future. And it is by no means certain that the Government action will have the desired effect, for it is not as if cotton was scarce this season, and it may well be that buyers will endeavour to fill their requirements as much as possible by other growths.

Westminster Bank Profits.

The dividend statement of Westminster Bank, which will be found on another page, shows a further marked increase in net profits, which amounted last year to £2,205,393 as against £2,013,502 in 1924 and £1,804,782 in 1923. There was thus an increase last year of £191,891 in net profits, and the total available balance is this time £2,799,488 as against £2,581,982 for 1924 and £2,341,367 for 1923. It is proposed to maintain the dividend on the £20 shares at 20 per cent. and that on the £1 shares at 12½ per cent., which is the maximum, and it is further proposed to allot to holders of the £20 shares one £1 share for every five held. Provision is made for this distribution out of the profits of the year. The total amount of the shares to be allotted is £268,439, and an amount equal to this is to be added to the reserve fund. As regards fractions, 10s. free of income tax will be paid for each fraction of one-fifth of a £1 share. Altogether £572,878 is appropriated to provide for this bonus. The amount required for the dividends will be £1,319,045, and the allocations are £150,000 to bank premises account as against £100,000, £100,000 to the contingent fund as against £200,000, and £200,000 to the officers pension fund as against £100,000, leaving £457,565 to be carried forward as against £594,095 brought in. It will be noted that this time the rebuilding account receives nothing, and presumably this is accounted for by the fact that previous allocations have sufficed to meet the expense of the new head office which is under construction.

Cotton and Irrigation.

I mentioned in these columns last week what Sir John Russell said in his address to the Geographical Association as to soil deterioration following on modern irrigation apropos of the decline in the yield of the Egyptian crop. His view has not been allowed to go unchallenged, for in a letter to *The Times* this week Mr. E. McKenzie Taylor maintains that it is more probably due to an alteration in the system of agriculture consequent on a change in the method of using the summer water supply. He points out until 1896 increases in the summer water supply of Egypt were followed by increases in the yield of cotton per feddan, and maintains that this fact sets aside the possibility that the quality of the irrigation water is a factor in the reduction in the yield. "Sir John Russell mentions," he continues, "that there is no evidence of a reduction in crop yield under basin irrigation. A comparison of the characteristics of the basin system of irrigation and of the present-day perennial system of irrigation shows that there is one essential difference between the two systems. Under basin irrigation the land is subjected

to a long fallow during the hot portion of the year. Under present-day perennial irrigation there is no summer fallow. Until 1897, the fallow period was a recognised portion of the agricultural system associated with perennial irrigation. Since 1897, the method of using the summer water supply has changed so that it has now become impossible to sow cotton on land that has been fallow during the previous summer. Before the change in the method of using the summer water was introduced, maize was sown in August; since the change it has become customary to sow the maize in June and July, the result being the almost complete elimination of the summer fallow. . . . 'Investigations which I have conducted in Egypt have shown that the important part of the fallow period is July 1 to August 15, owing to the partial sterilisation of the soil which takes place at this time. It has also been shown that the effect of sowing maize early is to reduce the yield of the following cotton crop. It seems probable, therefore, that the present method of using the summer water, which has for its object the early sowing of maize, is agriculturally unsound so far as cotton production is concerned. Paradoxical as it may appear, the most important part of the system of agriculture associated with perennial irrigation seems to be the fallow period."

The Makwar Dam.

To-day is a fateful day in the history of the Sudan since it witnesses the formal opening of the Makwar Dam. The Dam has been in operation ever since last summer, of course, but a development so pregnant with possibilities for the future of the country could not be allowed to pass without formal recognition, and so to-day we have the official inauguration by Lord Lloyd. In these days we are perhaps much too apt to take things for granted, and to permit events to go by without due appreciation of their significance, and it is well therefore that the importance of the Makwar Dam to the Sudan should thus be brought into clear relief. Without any exaggeration it represents a landmark in the history of the country. The development of cotton growing has been the keynote of our economic policy in the Sudan for many years—it is actually now over 21 years since the Sudan Plantations Syndicate first commenced its activities—and the completion of the Dam represents an advanced milestone on the way towards that goal.

Development of Cotton Production.

The position of the Sudan with regard to cotton production was dealt with very fully in our recent Sudan Supplement, but there are a few aspects to which some further reference may not be out of place on this occasion. So far, of course, measured in terms of the world's cotton production, the Sudan's output is very small; it has also, as is to be expected in the case of a commodity like cotton, varied very much from year to year. In 1911 it was 22,823 bales, in 1921 15,000 bales, and in 1913 12,830 bales. 1921 saw a substantial rise to 27,670 bales, while for 1924 the figure was 46,074 bales, and for last year the total has been estimated at 55,280 bales. Until the completion of the Dam any rapid expansion of output was impossible, but from this year onwards the output will show a great improvement on the previous figures. Up to the present, of course, only the fringe of the Gezira scheme has been touched, for out of the three million acres available in that region only 300,000 are at present being utilised, one-third being under cotton, and it is clear that the full development of the scheme will be a long process. The output from all sources for the current season should be substantially over 100,000 bales, which will be emphatically a most satisfactory result, and will prove a most helpful contribution to Lancashire.

Cotton's Meaning to the Sudan.

The importance of cotton to the Sudan scarcely needs any emphasis. It means for the natives a new and most valuable source of wealth, and promises to do for the country as a whole, from the economic point of view, in a short space of time what could not have been done for it by any other agency. The export figures illustrate this point very clearly. In 1911 the value of the exports of cotton was £E267,429, while for 1924 it was £E1,617,660, and this on a small output of cotton though admittedly with prices at a high level. With the output rising to several hundred thousand bales it can well be imagined what effect it will have on the trade returns. The Sudan will have a large favourable trade balance which will be reflected by internal well-being, and with the rapid growth of purchasing power that may be looked for from now onwards it follows that a constantly widening demand for commodities may be anticipated. I have laid stress on this point in these columns on more than one occasion recently, but it is impossible to pay too much attention to it, for the Sudan in the future is going to be a very important market, and it behoves our traders to take an increasing interest in it so that the predominance of British trade which is so satisfactory a feature at present shall be maintained.

Barclays' Balance-sheet.

The balance-sheet of Barclays Bank throws a most interesting light on the question whether or not there is really an improvement in trade. The balance-sheet totals at £348,278,110 as compared with £336,177,499 for 1924, and the main features are an increase of over £5,000,000 in deposits, and one of almost £6,000,000 in acceptances on the liabilities side, while on the assets side advances at £153,028,485 as aginst £140,078,877 are nearly £13,000,000 up. This increase in advances and that in acceptances are alike indicative of reviving commerce.

The Rubber Position.

The past week has seen a further decline in rubber, and, as might have been expected, the share market has followed suit. There has been a further increase in the London stocks, which now stand at over 8,000 tons, a total which compares strangely with the low record reached only some seven or eight weeks ago. Of course, 8,000 tons is nothing as it stands, but it is the tendency that it represents that is influencing the market, and the fact is not overlooked that the end of another three months is near at hand when there will be a further increase in the percentage of standard production. It is usually the "bear" factors that seem to count in the markets, and the favourable factors are invariably, if not overlooked, at any rate not fully appreciated. And the position to-day, broadly speaking, is at least as favourable as it has been at any time during the past twelve months. I explained last week the reason for the relative weakness of the commodity. For a considerable time the Americans have restricted their purchases to the lowest possible level, and as long as they are able to do this the price is likely to continue to decline as they are the principal consumers. The reason for their attitude is open to various interpretations. They may be under the impression that when the additional supplies, released on February 1, are available they will be able to obtain their supplies at a much lower rate than they can at present. If that is so it is more than probable that they are labouring under an illusion. Very few of the estates will be able for some time to come to produce up to 100 per cen.t of their standard capacity, so that an increase in the permitted output may be very much less than it seems to be on paper.

The Outlook.

Sooner or later, as I have pointed out, there must be a resumption of American buying on a large scale, and when that begins we shall see a reversal of the price process. It is anticipated that this is likely to happen in the course of next month, and once stocks commence to decline again the position will undergo a vital alteration. The absurdity of the present situation is that the share market should have followed the commodity market. If a share was worth £3 a month ago it is assuredly still worth that amount for the companies are in a position to pay large dividends this year, and so far as can be seen are likely to go on paying them for some years to come. In this connexion it may be pointed out that the Americans anticipate a definite and substantial shortage of rubber by 1930, and if their calculations are accurate it follows that the shares should see some high levels up to the end of that year at any rate. The important point to bear in mind is that even if rubber stands considerably lower than it does at present the companies can earn enormous profits on their capital. At the time of writing rubber stands at 3s. 2½d. per lb., but if it went down to 2s. 6d. this year, which is anticipated in some quarters, that would still represent a profit of from 300 to 400 per cent. for the cost of production in the case of some companies is as low as 6d. per lb. and even at 2s. it would mean a profit of from 1s. to 1s. 6d. per lb. It scarcely needs to be pointed out that profits of that character spell large dividends, and that fact makes the decline in prices the more surprising. To sell now is extremely imprudent, and suggests a total lack of appreciation of the realities of the situation.

Monsignor Monnay, Spiritual Director of the American College in Rome, has been nominated Pontifical Delegate in India.

The production of the Dacia Romano Petroleum Syndicate for December was 1,326 tons. During the year 1925, 6,000 metres were drilled, as against 1,400 metres during 1924.

Lord Lloyd, Lady Lloyd, Mrs. Eric Maclagan, Mr. A. F. H. Wiggin (First Secretary), Mr. R. E. More (Sudan Agent) and wife, and two Aides-de-Camp left Cairo last Thursday by special train for Luxor, on a journey to Khartoum and Sennar for the opening of the new dam which takes place to-day.

After a six months' stay in England, Colonel H. A. Gidney, late of the Indian Medical Service, the leader of the Anglo-Indian deputation to the Secretary for India, left London on January 13, for Bombay. He sailed last Friday in the Ranpura, and on reaching Bombay at the end of January will proceed to Delhi.

CEMENT PRODUCTION IN PALESTINE.

The demand for cement has been steadily growing since the British occupation of Palestine, and especially since the Civil Administration was set up in 1921 (says an article in the current issue of the *Bulletin of the Imperial Institute*). The imports have been as follows (in tons):—1921, 15,782; 1922, 31,876; 1923, 29,362; 1924, 38,256. The quantities imported during the first nine months of 1925 amounted probably to over 40,000 tons.

The mountains of Judea and Samaria and the Carmel consist of limestone, which varies in quality and appearance. The soft white variety yields a good fat building lime. The grey and yellowish dolomitic limestone is interstratified with bands of soft marl.

While only quite small quantities of cement were used for structural purposes during the year 1921-1923, increasing quantities have been used since 1924. Monolite buildings are now being erected all over the country, especially in the new Jewish villages in the Valley of Ezdraelon. This growing demand, and the prospects of a still heavier demand in the near future, have led to the erection of a modern factory for the manufacture of Portland cement. This is situated about four miles to the east of Haifa, on the Haifa-Samakh railway and on the high road running from Haifa to Tiberias through Nazareth. A sum of over £300,000 has so far been invested. The property of the new company, called the Portland Cement Co., "Nesher," Ltd., runs from the Mount Carmel outcrops for a considerable distance to the north. The quarries from which the limestone will be obtained for the cement are situated near the factory, and the clay pits are also in the vicinity. The transport of the material to the plant will, therefore, not involve undue expenditure. The limestone contains from 80 to 90 per cent. of calcium carbonate with only traces of magnesia. The clay is of a plastic nature and contains from 20 to 30 per cent. of calcium carbonate. The cement will be burnt in vertical kilns, having automatic feeding arrangements and revolving grates. The plant will produce about 250 tons of cement daily, and its power station will generate over 3,000 K.W. The works are being built in such a manner that further extension would be possible if considered advisable.

The local limestone finds another important application by the Palestine Silicate Co., Ltd., of Tel-Aviv, which was founded about four years ago. This undertaking manufactures white building bricks by combining lime with seashore sand. An attempt is now being made to utilise clay in the vicinity of Haifa, where a company styled the Kishon Clay Works, Ltd., recently started operations.

It is hoped that the extensive deposits of limestone and clay found all over the country will provide raw material for a variety of industries in the near future.

NEWS FROM ALL SOURCES.

A provisional commercial treaty has been signed between Greece and Egypt.

Sir Alfred Yarrow, founder of the famous shipbuilding firm, was 84 on January 13.

The total production of attar of roses in Bulgaria in 1925 was about 1,000 kilograms.

A contract has been obtained by the Vienna Rumpel Works for the construction of water works and electricity works at Samsoun.

The traffic receipts of the South Indian Railway for the week ended December 19 amounted to Rs.9,02,926, making the total from April 1 Rs.3,74,78,195.

The December production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Co., Ltd., amounted to 5,974 barrels.

The Greek tobacco crop of 1925 is estimated at 50,650,000 okes, or 142,803,000 lbs., as compared with an output of 110,440,000 lbs. for 1924.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended December 20 amounted to £E12,264, making the total from April 1 £E253,002.

The output of the Anglo-Egyptian Oilfields for the week ended January 15 was Gemsah, 8 tons (previous week 15 tons); Hurghada, 3,282 tons (previous week 3,211 tons).

The list of applications of the Cyprus Asbestos Company for the offer to shareholders of preferred shares was closed on January 13, the shares having been applied for many times over.

The output of the Anglo-Egyptian Oilfields for the week ended January 8 was:—Gemsah, 15 tons (previous week 14 tons); Hurghada, 3,211 tons (previous week 3,217 tons).

The Treasury announce the appointment, in succession to Mr. H. Garle resigned, of Sir Elliot Graham Colvin, K.C.S.I., to be British delegate on the Inter-Allied Commission for the Assessment of Damage Suffered in Turkey as from January 15, 1926.

The production of cereals in Bulgaria last year is reported to have been as follows (in cwts.):—Wheat 13,510,754; rye, 2,257,520; maslin, 1,187,152; barley, 3,190,073; oats, 1,484,564; millet, 91,172; maize, about 6,800,000.

As a special measure of relief, the Customs duty on all wheat and flour imported into Syria has been reduced by 50 per cent. In addition, wheat which has been bought for military consumption and ground in Syria will benefit at once by a refund of the Customs duty paid.

The court of directors of the Royal Exchance Assurance has declared a compound reversionary bonus at the rate of £1 15s. per cent. per annum in respect of the quinquennium that ended on December 31 last. This will be allotted to all participating life policies in force on that date and will be calculated on the sum assured and any existing bonus.

The Turkish Customs Authorities have been instructed to apply a "coefficient of increase" of 8 to those articles in the Turkish Customs Tariff which have hitherto been subjected to a "coefficient" of 5. This increase does not apply in respect of imports from countries signatory to the Commercial Convention annexed to the Lausanne Settlement or countries which have subsequently concluded treaties with Turkey on a similar basis. Goods of United Kingdom origin exported from this country to Turkey will not therefore be affected by this increase.

COMMERCIAL BOOKSHELF.

Empire Forestry.

"EMPIRE FORESTRY JOURNAL," Vol. 4, No. 2. (The Empire Forestry Association, Imperial Institute, London. 4s. net.)

The current issue of this journal contains, as usual, a number of most valuable articles on forestry in different parts of the Empire. Two of the articles are of special interest to readers of THE NEAR EAST AND INDIA: "The Forests of Cyprus," and "Forest Development in Burma." In the former article, Mr. Douglas J. W. Hamilton, after briefly describing conditions in Cyprus, sketches the position since the British occupation. He points out that the principal forest tree is the Aleppo pine, which grows in Cyprus up to a level of about 5,000 feet. "Above the Aleppo pine," he adds, "the zone of the Corsican pine is reached, where a very sparse forest of old trees exists, with little natural reproduction. These trees are from 300 to 400 years old, and most date from a time when the climate was much more favourable." The picture Mr. Hamilton gives of the present position is not promising. During the War, he points out that whole blocks of forest were cut to supply the troops, while two years ago a disastrous fire destroyed about 13 square miles of forest. While little has been done to repair this destruction he says:—

> It is encouraging to note that the Government has recognised the needs of the Island, and has included in its budget a sum to be spent on planting and sowing . . . . Besides the native trees, it is quite possible that the quick-growing Montery pine and Cupressum Macrocerpa would do well in some localities in Cyprus . . . . If some plan could be evolved by which the villages could could be induced to plant and take an interest in trees, much might be done to restore the forests of Cyprus to their ancient glory.

BRITISH AIR MAILS.

Cairo-Baghdad Service.

The Postmaster-General has issued the following statement regarding outgoing British Air Mail traffic during 1925:—There has been an increase in the total weight of letter mail during the year, and the total weight dispatched by air has now risen to 15,520 lb. The increase has been most marked in the mails to Paris and to Morocco and Algeria, which have increased by 19 per cent. and 33 per cent. respectively. By the latter service 2,500 lb. of letters was dispatched during the year. One of the heaviest of the latter mails is that for unoccupied Germany (Hanover, Berlin and Hamburg). This increased by over 10 per cent., and the mails for Belgium and for Denmark, Norway and Sweden also showed an increase.

Considerable use was made of the air services established in continental countries to supplement the service afforded by Imperial Airways where necessary and new letter air mails were instituted to the East Baltic countries and Russia, the latter of these attracting as much as 680 lb. of letters in the four months of 1925 during which it was in operation. This service has occasionally been used in the inward direction for mails from the East brought by the Trans-Siberian Railway; the course of post from Shanghai to London has thus been reduced to about fifteen days. Facilities for using the New York-San Francisco Air Mail Service were also made available in May last, but hitherto little use has been made of this service.

The Cairo-Baghdad service has worked with marked regularity. It continues to carry a considerable volume of mails, in spite of the competition of the trans-desert motor service between Haifa and Baghdad.

The Air Parcel service continues to carry a substantially greater volume of mails than the letter service. The total weight of the parcel air mails on the whole of the Continental services in operation was 50,000 lb., apportioned among the several services as follows: Paris, express 13,600 lb. non-express 10,200 lb., Holland 13,200 lb.; Germany, including the Rhine Army 13,000 lb.

BRITISH INDUSTRIES FAIR.

Preparations for the forthcoming British Industries Fair to be held in London and Birmingham from February 15 to 26 are now well advanced. Nearly 250,000 square feet of space have been booked, a large number of overseas buyers have already intimated their intention of visiting the Fair, and there is little doubt that the Fair will be one of the most successful of the series.

To celebrate the opening of the Fair, a banquet will be given by the Government on the opening day. The Prince of Wales will be the principal guest, the Lord Mayor of London is lending the Mansion House for the occasion, and Sir P. Cunliffe-Lister, M.P., President of the Board of Trade, has promised to preside. The guests, numbering about 250, will include the Lord Mayor, the Sheriffs and Members of the Corporation, the Ambassadors and Ministers accredited to the Court of St. James', leading representatives of banking, industry and commerce, and also a representative gathering of exhibitors at the Fair and of important buyers from abroad. An important feature of the banquet will be the fact that only British foodstuffs will be served.

The annual banquet of the Birmingham Chamber of Commerce, always an event of the first importance in the commercial world has been fixed to take place during the first week of the Fair. Advantage is being taken of the presence in the City of a large number of prominent overseas and home buyers and many of these will be invited to the function.

It is expected that as on former occasions the Fair will be visited by members of the Royal Family. The King and Queen will probably visit the White City during the first week of the Fair. It is already officially announced that the Duke of York will visit the Birmingham section of the Fair on or about February 18.

Messrs. Watson and Youell, have received the following telegram from Sulina, dated January 13:—"Bar depth confirmed officially only 19 feet."

It is reported that the European-American Utilities Company of New York is contemplating the establishment of large electrical works and the distribution of the electrical energy thus manufactured over long distances and at cheap rates in the countries of Central and South Eastern Europe.

Messrs. Allen-Liversidge Ltd., announce that they have just registered a company in Bombay under the name of Allen-Liversidge (India) Ltd., for the purpose of carrying on, in India, their business of dissolved acetylene manufacturers, carbide merchants, and lighting and heating engineers.

BULGARIAN 6 Per CENT. LOAN of 1892.
NOTICE to BRITISH, FRENCH, DUTCH, ITALIAN, BELGIAN, SWISS, SPANISH, and AMERICAN BONDHOLDERS.

Bondholders of the above Nationalities whose Bonds were held by any of such Nationals before 8th July, 1922, and the numbers of whose Bonds do not appear on any of the lists of numbers of Bonds the Coupons of which were paid in 1916 in Bulgaria, Germany, or Austria, are advised that, in accordance with instructions received from the Bulgarian Government, COUPONS due 15th January, 1926 (detached from the new coupon sheets *commencing* with this coupon), may now and until further notice be deposited at the Ottoman Bank, Coupon Office, 25, Austin Friars, E.C.2, for PAYMENT at the rate of 32 per cent. of their nominal value in the most appreciated currency mentioned on the Bonds.

Coupons which are the property of other holders may also be deposited, but are subject to special conditions, particulars of which may be obtained at the Ottoman Bank, as above

Shipping Intelligence.

YUGOSLAV PORT TRAFFIC.

Nothing could indicate more plainly the success of the efforts that are being made in Yugoslavia to develop the country's resources than the rapid increase of navigation at the principal ports. The figures for 1923 and 1924 are as follows:—

	1923		1924	
	Vessels	Tonnage	Vessels	Tonnage
Split*	11,600	2,432,000	13,300	3,68000
Gruzh†	5,000	1,686,000	6,500	1,834,000
Shibenik	4,100	909,000	4,000	1,036,000
Sushak	2,900	345,000	4,200	701,000
Kotor‡	2,100	336,000	2,900	503,000

* or Spalato. † The port for Ragusa. ‡ or Cattaro.

The figures for navigation for the past year are not yet available, but the trade statistics for the first half of the year for the principal ports suggest that the movement has been accelerated. They are as follows:—

	Import	Export	Total
Split	60,556	192,099	252,655
Sushak	20,177	78,470	98,647
Shibenik	19,578	61,796	81,374
Gruzh	25,057	49,576	74,633

In 1925 two important new lines were opened—early in the year the Uziche-Varishte line linking the Serbian narrow gauge system with the Adriatic, and in July the Lika Railway, a normal gauge line, linking the hinterland with Split—and these developments will naturally have their effect on the traffic at the Adriatic ports.

SMALL CRAFT FOR EGYPT.

The Egyptian market, for small craft, has been prominent during the past few years, and British firms have mainly participated in these orders. The first of two high-speed, triple-screw, patrol vessels of a rather interesting type was completed recently at the Hampton Yard of Messrs John I. Thornycroft and Co., Ltd. Built to the order of the Customs authorities, the craft is of the V bottom design, 56 feet in length with a beam of 11 feet 2½ inches, and a load draft of well under 3 feet.

The propelling machinery, which is installed in an engine-room amidships consists of three six cylinder 110 b.h.p. Thornycroft engines, of a new type and similar to that which was shown by the firm at the recent exhibition at Olympia. The engines have cylinders of 4¾ inch bore by 6½ stroke and develop full power at 1,500 r.p.m.

Accommodation is provided in the engine room for two engineers, whilst at the aft-end of this compartment are the accumulators required for the lighting of the boat and operating a searchlight. Electric current is generated by a small petrol-engined lighting set which is also installed in the engine-room. Fuel to the extent of 300 gallons is carried in a tank under a short deck aft, and 150 gallons in a supplementary supply tank situated forward of amidships.

The wireless aerial is carried on two masts, which are also used for flag signalling. On official trials, carried out on the Thames, the craft attained the highly satisfactory main speed of 20 knots.

Anchor Brocklebank Line.—S.s. Holywell for Port Said, Colombo, Madras, and Calcutta (London, January 23).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, January 27).

British India Line.—S.s. Domala for Bombay and Karachi (London, January 29); s.s. Madura for Colombo, Madras, and Calcutta (London, January 30).

Cunard Line.—S.s. Phrygia for Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, January 23).

Ellerman "City" Line.—S.s. City of Leicester for Calcutta (Birkenhead, January 23).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, January 30). (FIRST STEAMER OF THE SEASON FOR THE DANUBE.)

P. and O. Line.—S.s. Rajputana for Bombay (London, January 22); s.s. Novara for Colombo, Madras, and Calcutta (Liverpool, January 23).

Prince Line.—S.s. Glencastrian for Malta, Alexandria, and Syrian Coast (London, January 30).

NEWS IN BRIEF.

The Greek Government has decided to abolish as from April 1 the Police School at Corfu, which was established by the British Police Mission for training policemen, as it is considered superfluous following the limitation of the Metropolitan Police in Athens. This is not taken as cancelling the contract with the Mission.

A Committee of Corfiotes, headed by Mgr. Athenagoras, the Bishop of Corfu, has waited upon General Pangalos, the Greek Prime Minister, to submit an offer on behalf of the town of Corfu to undertake the duty of removing the Serbians buried in various parts of the island of Corfu for re-interment in a mausoleum on the islet of Vido, off the town, at its own expense.

The Third Official Anglo-Catholic Pilgrimage will leave London on Tuesday, April 6, and will be led by the Bishop of Plymouth. The Pilgrims will travel overland to Marseilles, and thence by sea to Alexandria. They will land at Jaffa and will proceed to Jerusalem, where they will be welcomed by His Beatitude Damianos, the Patriarch of Jerusalem, who visited England last summer, by Dr. MacInnes, Anglican Bishop in Jerusalem, and by Sir Ronald Storrs, Governor of the City. While in Palestine the pilgrims will pay ceremonial visits to the heads of the various Eastern Churches, and will go to Galilee, Nazareth, Haifa, and Mt. Carmel. Further information can be obtained from the assistant secretary, Anglo-Catholic Pilgrimage, 2, Albany Courtyard, Piccadilly, W.1.

Motors and Motoring.

By G. B. B.

I am glad to see that my recent remarks on motoring in India and on the quality and extent of the roads in that country suitable for motoring have received unexpected confirmation from a writer in one of the trade papers. He says, as I have said, that it is possible to tour practically all over India on metalled roads, and that whatever inconvenience may be met with will be amply compensated for by the interest and beauty of the country. That is, and has been for some time, a contention of mine, just as I contend that the Indian market has great potentialities and that a big demand would be experienced in the Far East generally for lorries and light delivery vans did our makers but let the Indian and other buyers know what they have to offer. It astounds me to think that, with the urgent need that exists for improving our export trade, British manufacturers should so persistently neglect the possibilities of a market which is in extent and prospective value more than equal to any we possess at present.

Medium Pressure Tyres.

Mr. W. Bond, who is the technical advisory manager of the world's most famous tyre makers, the Dunlop Rubber Co., Ltd., has been giving some excellent advice in regard to the use of medium pressure tyres, together with a short history of the events which led to the adoption of this middle course between the low and the high pressure types. He says that when the "balloon" type of wired tyre was introduced to chassis makers their experiments showed at once that for the smaller types of cars it was going to be of particular and peculiar value. It gave so much added comfort to the driver and passengers, added such liveliness to the car and introduced so little in the way of counter difficulties that there was comparatively little hesitation on the part of small car manufacturers to adopt the balloon tyre. He adds: For the larger classes of cars, such as those using 4½ in. and 5 in. tyres, or their equivalent millimetre sizes, there was some hesitation in adopting balloon tyres in the sizes offered. This arose because the larger cars were, speaking generally, relatively better tyred originally than small cars, and in addition, they were usually better sprung, had larger wheel bases and more luxurious upholstery. It therefore became apparent that the advantages of balloon tyres from the point of view of increased comfort to the driver and passengers were not of so important a nature. This comparative lack of advantage in comfort tended to throw any disadvantage which the larger balloon tyres might have, into more prominent relief, and amongst the disadvantages mentioned by various makers of big cars were stated to be such things as increased difficulty of steering and the production of wheel wobble. Also mentioned were the difficulties of providing side clearance for big car bodies, some side sway in the tyres under heavy loads and some vulnerability of the tyres themselves to road damage due to their large size and increasing flexibility. For these reasons, therefore, the adoption of balloon tyres for the larger cars was by no means so prompt and universal as it was amongst the cars of smaller power. In an article in the *Autocar*, Mr. Bond says after a time the general tendency in the motoring world showed a willingness to adopt a wired tyre in conjunction with a well-base rim. From the tyre makers' point of view there were no technical difficulties in meeting the situation. It could obviously be done by providing tyres which were larger in section than the high pressure tyres whilst not so large as those of the balloon type. This would involve the use of higher pressures than those in vogue in connexion with the latter pattern, and consequently the substance of the tyre would have to be increased. The Dunlop Company has been acting in conjunction with a number of other tyre makers and has now produced a wide and comprehensive range of the new tyres which fully meet any and every possible requirement.

The Ceylon Market.

I said something a little while ago regarding the Ceylon market, and a correspondent writes me pointing out that I might have added a good deal about the excellent prospects that exist for the sale of commercial vehicles in that country. He says that, whilst in 1923 only 300 lorries were imported, in 1924 the figure was 800, and that for the first ten months of 1925 a total of 951 motor vehicles were imported. He adds: Of this total, 528 came from the United States and only 137 from Great Britain. These are official figures, and I think nothing could speak more eloquently than they do as to the need for advertising British commercial vehicles. It seems incredible that in Ceylon the United States should sell four motor vehicles to every one we sell—sell them, too, not because they are better, for they are not: and not because they are cheaper, but simply and solely because the American lets the Ceylonese know what he has to sell and our makers do not!

Standardisation.

There has been a good deal of talk recently about international standardisation of private and commercial vehicles, and it must be said that at first sight there seems no real objection to the idea. By international standardisation it is not meant, of course, that all cars of a certain power should have precisely similar engines of the same bore and stroke and taking the same sized piston rings; the same size, to a thousandth part of an inch, in all other parts, and the same sized wheels and tyres, but what is meant is the standardisation of general design. There are many and grave difficulties in the way, however, as can be seen when one considers for how much individual taste counts when selecting a car. Some prefer a central position for the change speed lever, but other prefer, and

feel they must have, the change speed lever at their right hand. The same argument will apply to practically every other part of a car, such as the position of the accelerator pedal, the size of the steering wheel, the position and type of the controls, the rake of the steering column and even the position and size of the entrance doors. International standardisation may be a desirable thing, but it would seem that a good deal of time is likely to elapse before it can be brought about.

All-Metal Bodies.

Buyers abroad will welcome the movement of British motor car body builders towards the all-metal body. Steel bodies both of the open and saloon type are certain to be popular in India, and if American makers reach the market first with their metal coach work they will secure a lead which will probably never be overtaken. It must be remembered that the American has a slight advantage over us in that he has made these bodies for some little time now and, having proved their advantages and general utility, is about to export. Now India in particular wants metal coachwork, and the danger is that our makers will be content to look after the British home market alone and leave India, and the Middle East, where cars with metal bodies would sell briskly, to take care of themselves.

NEW F.B.I. PRESIDENT.

At a meeting of the Grand Council of the Federation of British Industries held last week, it was unanimously decided to recommend to the general meeting the election of Sir Max Muspratt, Bart, J.P., as President of the Federation in succession to Colonel the Hon. Vernon Willey.

Sir Max Muspratt is one of the most distinguished figures in the British chemical trade and Chairman of the United Alkali Company, which was founded some 103 years ago by his grandfather. Apart from industry, he is well known as one of the most prominent and energetic figures in the public life of Liverpool, with which his family has been connected for so long.

A PROPOSED ROUMANIAN CANAL.

A professor at the Bucharest Technical High School, M. Alexander Davidescu, has submitted to the Association of Roumanian Engineers a project for a new canal to connect Bucharest with the Danube, so as to prevent the transhipment at Giurgiu of goods destined for the capital. M. Davidescu, who has been working on his project since 1913, recommends a network of canals which would link Craiova, in the South-West, Adjud, half-way to Jassy, and Oltenitsa, to the S.E. on the Danube, with Bucharest. Failing this scheme, M. Davidescu proposes a direct canal from the capital to the Danube in the neighbourhood of Giurgiu, which would meet all immediate requirements. He points out that no considerable difference in levels exists to make such a canal difficult to construct; and incidentally the water could be used for irrigation purposes.

NEW ROUMANIAN GOODS TARIFF.

On January 15 a new railway tariff on goods came into force in Roumania, representing an increase of 15 per cent. It is expected to produce 3,000 million lei as against 2,100 million from this source last year. On the same day the supplementary export tax was reduced from 50 to 30 per cent.

WAR DAMAGE IN TURKEY.

Mr. Stanley Machin, President of the Association of British Chambers of Commerce, has received the following letter from the Treasury with reference to the position of British traders in Turkey who have not yet received payment of their claims for War damage:—"I am directed to inform you that my Lords fully realise the importance of all possible steps being taken to expedite the work of the Inter-Allied Commission for the assessment of damage suffered in Turkey, and His Majesty's Government have repeatedly made representations to this end both to the Commission itself and to the French and Italian Governments, who, in common with His Majesty's Government are represented on the Commission. My Lords understand that the Commission is not yet in a position to distribute a dividend on claims, but that it has the matter under consideration. A copy of your letter has been sent to the British delegate on the Commission for his information."

NEW COMPANIES.

BULGARIAN OIL SYNDICATE.

The Bulgarian Oil Syndicate has been registered as a private company with a capital of £20,000, in £1 shares. The objects are to acquire a concession relating to production and refining of mineral oils and certain option rights over another concession in Bulgaria, etc. Solicitors: Slaughter and May, 18, Austin Friars, E.C.

Samuel Baker and Co. (East Africa), Ltd., has been registered as a private company with a capital of £20,000 in £1 shares (14,000 7½ per cent. cum. pref. and 6,000 ord.), to carry on the business of merchants, etc. The registered office is at 20-21 Laurence Pountney Lane, E.C. 4.

It is stated that the total quantities of crude oil treated at the refineries in Roumania in October amounted to 182,289 tons. From this total there were obtained 41,804 tons of motor spirit, 29,952 tons of petroleum distillate, 18,189 tons of refined oils and 88,681 tons of residues. Stocks at the end of the month amounted to 50,005 tons of motor spirit, 26,262 tons of distillate, refined oils, etc., 126,501 tons, and residuals 133,917 tons.

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended January 16 states:—

The more cheerful feeling noted last week has continued. There is still considerable difficulty on the question of prices, offers in general being on too low a basis, but inquiry is of large dimensions and persistent.

Yarn.—The outstanding event of the week has been the decision of the Federation of the Master Cotton Spinners to recommend that from the 25th inst. the mills spinning Egyptian cotton should reduce their hours of working from 39¼ to 30½ per week. In view of the somewhat brighter outlook this decision is regarded in certain quarters as somewhat drastic, and it would appear to have been prompted by the unsatisfactory state of affairs since October rather than by the immediate outlook. There has been a slightly freer movement of yarns spun from Egyptian cotton.

Shipments of yarn last month amounted to 17,947,000 lb. as compared with 13,908,000 lb. in November and 13,526,000 lb. in December, 1924. The total for the whole of last year was 189,532,100 lb., the figure for 1924 being 165,056,400 lb.

Cloth.—Inquiry has been of large dimension and spread over a wide range of goods. Quite a fair business has been done for India, chiefly again in dhooties and other light goods. The market has been specially interested to learn that after an interval of over seven months the auctions have been resumed in Shanghai with a measure of success both as regards prices realised and the quantities of goods cleared. Needless to say, this is a matter of considerable importance to Lancashire, and it is hoped that the auctions will be continued successfully. A moderate business has been on offer from the Continent, and also for South America, but there is very little transpiring in respect of the Near East or for the Home trade.

Shipments of cloth last month amounted to 382,185,000 sq. yards as compared with 325,912,000 sq. yards in November and 409,566,000 sq. yards in December, 1924. The total shipments last year amounted to 4,433,745,300 sq. vards, the figures for 1924 being 4,443,959,500 sq. yards.

Raw Cotton.—The Liverpool market for American cotton has again been very steady with a rising tendency. There has been a considerable increase in the "spot" sales. In Egyptian there has been a rise of over ½d. per lb. It is reported that the Egyptian Government has the intention of purchasing, if need be, up to half a million kantars. Closing quotations yesterday were as follows:—American Middling, 10.84d.; Egyptian Fully Good Fair, 18.55d.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended January 6, state:—

Since out last report, the futures market has been quiet, the undertone remaining firm. The week's summary of price movements is as follows:—Sakellarides: January, 0.18 dollars up; March, 0.22 dollars up; May, 0.30 dollars up: July, 0.25 dollars up; November, 0.20 dollars up. Ashmouni: February, 0.50 dollars up; April, 0.50 dollars up; October, 0.25 dollars up.

There is very little fresh to report, the holiday feeling not having yet subsided. The turnover of business done has been rather limited and the greater part of it has been of a professional character. The demand from abroad has been fairly active, but quantities have been, in general, small. Lancashire spinners have been the most important buyers; America has shown some interest in Uppers, but we do not think much actual business has resulted. Business with the Continent continues negligible. It is generally expected that the demand from spinners will develop substantially with the turn of the year; there are good grounds for this—Sakel prices have got down to a very reasonable basis and cases are reported where mills are reverting to the use of this variety, whilst Uppers at present levels can, we understand, compete with other growths used for the same purpose.

The interference of the Government in the market has less influence on prices. One decision follows another but none is seriously carried out, and it is now generally admitted that it would have been much better for all concerned for the Government not to have intervened at all. It now appears that the project of buying in the futures market has been dropped altogether. To-day the Government bought about 500 bales Fully Good Fair Sakel on the spot market; whether they will continue buying is rather problematical, for they do not seem to have decided on any definite programme.

In the interior, business is very dull; the majority of the small merchants have lost practically all their capital and are keeping out of the market, whilst those growers who still have unsold crops, being mostly people of means, absolutely refuse to do anything at present prices. Our opinion on the market is unchanged; we consider present prices reasonable and look for firmer markets as soon as the demand from consuming centres improves. The week's receipts amount to 210,423 krs. against exports 95,869 krs.; the stock stands at 2,365,962 krs.

Spot: Minet el Bassal has only been open three days this week, due to New Year holidays. There has been a fair demand and sales amount to about 12,300 bales, of which we estimate 6,200 bales Sakellaridis, 5,400 bales Uppers, 300 bales Zagora, 100 bales Pilion, and 300 bales White. The Government has bought about 500 bales of Fully Good Fair Sakel this week.

Sakellaridis: Has been in moderate demand and all styles have been dealt in. Spot differences are generally without much change. Medium qualities have attracted much attention.

Ashmouni and Zabora: A fair business has been done covering all grades. Spot differences are generally a little easier, with the exception of Good and better, which have maintained their parities.

Brown and Pilion: A small demand has been met with for Pilion, but in Brown no business has been reported. Spot differences are unchanged for both growths.

White: A good business has been done, both in Casulli and other White varieties, at about last week's rates.

The Orient Company's new steamship Otranto, of 20,000 tons, is to sail from London in April on a pleasure cruise to the Mediterranean. It is intended, weather permitting, to give her passengers the opportunity of seeing the battlefields of the Gallipoli Peninsula and of visiting the graves of the officers and men of the Imperial Forces who died there during the war. Passengers wishing to visit any particular grave should apply in good time for information as to the position of the grave and the cemetery in which it is situated to the Secretary, Imperial War Graves Commission, 82 Baker Street, W. 1. They are asked to communicate this information to the managers of the Orient Line, Anderson, Green, and Co., Limited, 5, Fenchurch Avenue, E.C. 3, at least a month before sailing.

Near East Markets.

TOBACCO GROWING IN SMYRNA DISTRICT.

A recent Greek Consular report gives an interesting account of the tobacco industry in the Smyrna district. It is pointed out that the geological conformation of the country has a very favourable effect on the quality of the tobacco produced. The soil contains an amount of lime as well as potassium and phosphates of lime, furthering the growth of the plants for which soil and the geographical position of the district are alike suitable. The tobacco region is near the sea, the terrain consisting of small hills and declivities, and the district enjoys westerly breezes, which are very favourable for the plant. The climate is moderate as far as temperature is concerned, and from the middle of June until September there is a period of drought which helps the drying of the leaf and enables it to be baled without fear of subsequent damage. A special value is given to the tobacco by the continuance of the heat during the time when the breaking up of the leaf begins.

The cost of production in the district varies between 30 and 150 piastres per oke (2.8 lb.), and to this indefinite amount has to be added the cost per oke from the arrival of the tobacco at the dealer's until its export, which is 42.50 piastres. There also must be added the cost of transport from the place of production to the warehouse of the dealer, 8 to 10 piastres; agents' commission, 5; and other charges, 3; making a total additional charge of 59 to 61 piastres per oke. The tobacco crop of 1925 is estimated at from 12,750,000 okes to 14,000,000 okes, as against a crop for 1924 of 20,000,000 okes. The total production of tobacco in Turkey in 1924 was 63,400,000 okes, of which Smyrna was responsible for 20 million, Broussa for 6 milion, and Adrianople for 3½ million.

TURKEY'S TRADE IN APRIL.

The value of Turkey's imports during April, 1925, was £T18,076,105 as compared with £T13,801,216 during the corresponding month of 1924, while exports were valued at £T12,316,515 and £T7,794,464 respectively. The value of imports from the United Kingdom during March last (says the British Commercial Secretary at Constantinople) was affected by the application of a new consumption tax on textiles. Once the basis of this tax was definitely determined, large clearances of cotton goods previously held up at the Customs were effected, and in consequence the imports from the United Kingdom during April showed a marked increase over those for the previous month. The United Kingdom, after having dropped to fifth on the list during the month of March, headed the countries exporting to Turkey during the month under survey.

The values of the principal imports during April were as follows:—Cotton and cotton goods, £T4,561,369; grain and flour, £T3,000,968; metals, £T1,566,115; Colonial goods, £T1,533,796; wool and woollen goods, £T1,377,152; machinery, etc., £T810,035.

The shares of the chief countries of origin during April were: — United Kingdom, £T3,063,950; Italy, £T2,754,458; Germany, £T2,089,017; United States, £T2,077,802; France, £T2,067,059.

The principal exports during April were as follows:— tobacco, £T3,117,078; vegetable oils, £T1,659,764; fruit and vegetables, £T1,432,768; cotton, £T1,219,666; colours, dyes, chemicals and drugs (including opium), £T874,179.

Italy imported nearly 40 per cent. of Turkey's total exports, her share being valued at £T4,711,836; the other principal importers were France £T1,725,602, Germany £T1,286,902, and the United Kingdom £T1,109,995.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Paper.—The Egyptian State Railways Administration invites tenders for the supply of a considerable quantity of paper, mostly for printing, required for the year 1926-27. February 26.

Thread and Yarn.—The War Department of the Egyptian Government invites tenders for thread and yarn; thread, cotton, black, white, green and olive, about 11,438 reels; thread, silk, machine, 300 reels; thread, flax, sewing, white and khaki, 31,060 skeins; wool yarn, about 7,900 lb.; cotton yarn, 40 lb. February 16.

Webbing, Etc.—The War Department of the Egyptian Government invites tenders for webbing, etc.; webbing, flax and wool, about 500 yards; bunting, various colours, about 5,000 yards; rope, hemp and cotton, about 800 lb.; felts, about 540 yards. February 16.

Loose Leaf Binders.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of loose leaf post binders for 1926-1927. April 5.

Army Badges.—The Under-Secretary of State, War Office, Cairo, invites tenders for the manufacture of the Egyptian Army Badges, for the Department of Ordnance Services, E.A., Citadel, Cairo. March 10.

Caps, Etc.—The Under-Secretary of State, War Office, Cairo, invites tenders for the supply of caps, felt; tassels for tarbouches; iron, laundry; scissors, tailors; etc., to the Department of Ordnance Services, E.A., Stores, Citadel, Cairo. March 13.

Lock Bridge.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for the construction of the new lock bridge over the Mahmoudia Canal at Alexandria. This bridge is designed with a superstructure for two railway tracks and a road bridge. It will be built on the existing masonry which will have to be modified in consequence. Tenderers may submit such offer as they deem best according to the information they may obtain from the general drawings of the Administration, suggesting three solutions of swing bridges and a solution of a lift bridge. February 16.

Clothing, Etc.—The Director of the Police Stores Department of the Egyptian Ministry of the Interior, Cairo, invites tenders for the supply of clothing and necessaries required for the police and ghafir services during the year 1926-27. The following is a summary of the principal stores required:—17,820 pairs of ankle boots, with laces; 11,500 brown woollen blankets; 32,000 non-inflammable shirt collars; 30,000 cotton drawers; 28,500 cotton shirts; 11,000 pairs cotton and woollen socks; 33,000 tarbushes and tassels; 40,000 brown woollen libdas (for ghafir service); 20,000 blue drill drawers and belts (for ghafir service); 15,000 pairs of cotton gloves; 6,920 woollen jerseys; 6,700 khaki drill uniforms; 3,000 khaki serge uniforms; 5,500 pairs of black cloth trousers; 6,950 pairs of breeches (Bedford and khaki cord and drill); 7,860 greatcoats; 17,460 chevrons; 90,000 tins of boot blacking; 100,000 heel-balls; 105,000 pieces of palm-oil soap. February 20. (D.O.T.)

Hides, Etc.—The War Department of the Egyptian Government invites tenders for: Hides, collar brown, 4,300 lb.; hides, brindle brown, 1,250 lb.; hides, collar black, 250 lb.; hides, bag black, 440 lb.; hides, collar black enamelled, 80 lb.; hides, brindle black enamelled, 50 lb.; leather, sole butts, 700 lb.; chamois leather, 110 each. February 16. (D.O.T.)

Canvas Hose.—The War Department of the Egyptian Government invites tenders for hose, canvas, 2¾ in., 4,200 feet. February 16. (D.O.T.)

Printing Plates.—The Survey of Egypt, Giza (Mudiriya), Egypt, invites tenders for the supply of 1,400 aluminium lithographic printing plates of very fine grain and also of 150 zinc lithographic printing plates. March 10. (D.O.T.)

It is proposed to increase the actual customs duty on hemp, Manila hemp and other textiles imported to Bulgaria in order to encourage the cultivation of hemp.

Bulgaria's imports of sugar from October 1, 1924, to October 1, 1925 amounted to 6,951,162 kilos of a value of 92,479,591 leva. During October, 1925, 1,110,672 kilos were imported for a sum of more than 13 million leva.

A group of Greek financiers are stated to be in negotiation with Hungarian industrialists for the transfer to Greece of about twenty Hungarian undertakings, textile and chemical factories.

COMPANY NOTES AND REPORTS.

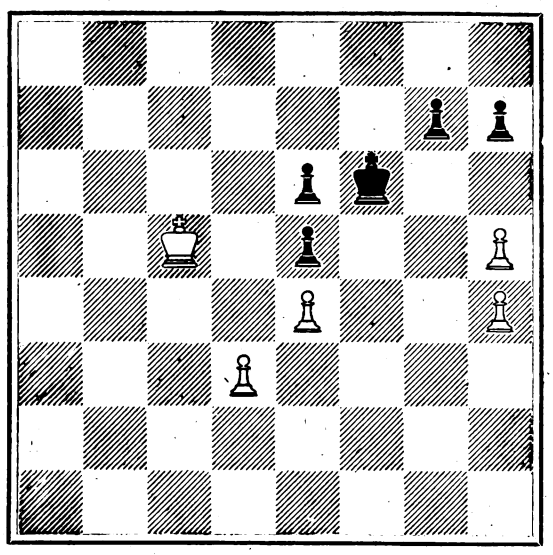
SHAHDARA LIGHT RAILWAY.

The report of the Shahdara (Delhi)-Saharanpur Light Railway for the half-year ended September 30, 1925, states that the earnings were: Coaching Rs.3,53,188, goods Rs.1,16,908, sundries Rs.1,678, making a total of Rs.4,71,774, as compared with a total of Rs.5,14,181 in the corresponding period of 1924-25. The working expenses were Rs. 2,89,402, or 59.64 per cent. of the gross earnings, against Rs.2,17,199 and a percentage of 42.24 in the corresponding previous half-year, the increase being due to the inclusion in the accounts of cost of repairing damages caused by floods in the previous half-year and the allocation of Rs.25,000 to ballast renewals. The net revenue was Rs.1,82,372, against Rs.2,96,982. Interest on sterling debentures at the rate of 4½ per cent. per annum, amounting to Rs.60,000, and London agency charges, etc., Rs. 2,000, have been paid. The United Provinces Government moiety of surplus profits amounts to Rs.45,697, income-tax accounts for Rs.13,321 and loss by exchange for Rs.53, a total debit of Rs.1,21,071. The balance Rs. 61,301, plus interest on investments Rs14,065, and Rs. 4,95,350 carried forward from previous half-year amounts to Rs.5,70,716, from which the directors recommend payment of a dividend (free of tax) of Rs.5 per share at the rate of 10 per cent. per annum which will absorb Rs. 75,000, the balance of Rs. 4,95,716 being carried forward.

BENGAL AND NORTH WESTERN RAILWAY.

The report of the Bengal and North Western Railway Company for the year ended Septmber 30 last, shows net earnings of the joint undertaking amounting to Rs.1,86,97,748, against Rs.1,77,69,475 for the corresponding period of 1924. The company's share is Rs.1,05,91,019, against Rs.1,04,96,764. The rates of exchange were above that of 1s. 4d., the book rate, and adding the gain in remittance—namely, £82,210—the net earnings are £788,278, against £734,250 in 1924. After bringing forward the balance of £157,127, providing for income-tax, interest on Debenture and Preference stocks, interim dividend and bonus, contribution to provident fund, £35,000 for sinking fund for redemption of capital, £75,000 to reserve, and making other adjustments, the amount to be dealt with is £364,078. The directors recommend a final dividend of £6 per cent. together with bonus of 2 per cent., on the Ordinary stock, subject to tax at 2s. 2d. in the £, carrying £150,078 forward.

WESTMINSTER BANK.



The net profits of Westminster Bank, Limited, for the past year, after providing for bad and doubtful debts and all expenses, amount to £2,205,393. This sum added to £594,095 brought forward from 1924, makes available the sum of £2,799,488. The dividends, 20 per cent. on the £20 shares, and 12½ per cent. on the £1 shares, absorb £1,319,045. £150,000 has been transferred to bank premises account, £100,000 to contingent fund, and £200,000 to officers' pension fund. It is proposed, when the necessary powers have been obtained, to allot to holders of £20 shares on the register on February 11 next, one fully-paid £1 share (ranking for dividend with the existing £1 shares as from December 31, 1925), in respect of every five £20 shares held, and to make in the case of fractions a payment of 10s. (free of income tax) in respect of each fraction of one-fifth of a £1 share, also to add to the reserve fund a sum equal to the nominal capital of the shares to be allotted, say £268,439. For this purpose a sum of £572,878 has been set aside. A balance of £457,565 will remain to be carried forward.

IMPERIAL BANK OF INDIA.

The following is the statement for the half-year ended December 31, the figures for the corresponding half-year in 1924 being given in parentheses:—Net profits for the past half year, Rs.38,25,100 (Rs.49,05,800); brought forward from previous half-year, Rs.21,97,900 (Rs.21,52,800); Rs.60,23,000 (Rs.70,58,600). The governors have declared a dividend of 16 per cent. per annum free of income tax, absorbing Rs.45,00,000 (the same as before), and have allocated Rs. 5,00,000 to the reserve fund (as against allocations of Rs.10,00,000 to the reserve fund and Rs.3,00,000 to the pension fund), leaving to be carried forward Rs.10,23,000, as against Rs.12,58,600.

CHESS.

PROBLEM No. 30.
Black to play. What result?

Solution to Problem No. 29:—1, K—K2, K—Q3; 2, K—Q2, K—Q3; 3, K—B2, K—B3; 4, K—Kt2, K—Q3; 5, K—R3, K—B4; 6, K—Kt3, K—Q3; 7, K—Kt4, K—B3; 8, P—Kt4, PxP; 9, P—Kt4, K—Q3; 10, KxP, K—K4; 11, KxP, K—K5; 12, K—B5, KxP; 13, KxP, K—Q6; 14, P—B4 and wins.

This is a notable year for University chess as the match between Oxford and Cambridge which will be played at the City of London Chess Club on Friday, March 19, will be the fiftieth of the series. The following day, March 20, the match between Oxford "Past," and Cambridge "Past" will be played, and in the evening a dinner is to be held at the Trocadero at which Mr. H. E. Atkins, nine times British champion, and the most distinguished player either University has yet produced, and Mr. J. Walter Russell, the honorary secretary of the City of London Chess Club, will be the guests of the combined Universities.

Should Oxford win the match this year they will, I believe, draw level with Cambridge in the score. Twenty years ago it was Cambridge first and Oxford nowhere, and most people imagined that Cambridge as primarily a mathematical and scientific University would always hold pride of place at the principal indoor games. But for what reason I have never been able to discover Oxford since 1904 have been able, with amazing consistence, to turn out teams who either win or draw, and, as a matter of fact, they have only lost twice since that year—in 1910, by 4½ to 2½, when Cambridge were fortunate in having four fourth year men, and on the occasion of the resumption of the series after the War, when, to do Oxford full justice, they were scarcely ready for the match.

With a view to improving and developing the cultivation of cotton in Bulgaria, the Ministry of Agriculture of the State has decided to bring seeds from Egypt and America, and to distribute them at a reduced price to cultivators.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Anglo-Iraqi Treaty.

The smooth passage through the Iraq Assembly of the new Anglo-Iraqi Treaty prepares the way for its ratification by the House of Commons. Until it had been ratified in Iraq, it would have been open to anyone in this country to suggest that the prospect of the present treaty between the two countries being extended for a possible twenty-five years was distasteful to Iraq and that it was being imposed upon both parties merely for the satisfaction of the League of Nations. For political ends the Iraq Nationalists left the Assembly before the voting took place, some of them being careful to state first that they did not necessarily disapprove of the Treaty; but their action was as ineffective as that of the Labour Party in the House of Commons last December—action which, indeed, they seem to have taken as a model. The Iraqis, no less than the British Government, are confident that there will be no question of the Treaty's prolongation for twenty-five years; and there are those in both countries who ask why in these circumstances there should be any need to commit the two peoples to an unnecessary undertaking. The answer is that it was, in the wisdom of the Council of the League of Nations, the only alternative to the abandonment of Iraq to Turkey. That latter course was unthinkable, and it was equally impossible that Great Britain should take upon herself in the circumstances to challenge the League's ruling. The only serious argument advanced against the British policy in regard to Iraq is that it exposes the British taxpayer to unprofitable and possibly heavy financial burdens in an unattractive country. The statement is refuted by those who alone are in a position to gauge accurately the future expenditure in Iraq, and it is a point in regard to which the future alone can decide where accuracy lies.

The New Commitments.

The new Treaty does little more than give effect to the stipulation made by the Council of the League of Nations. The provisions in Article XVIII. of the Treaty of October, 1922, and in the Protocol of April 30, 1923, so far as they relate to the duration of the Treaty are abrogated, and the Treaty is to remain in force for a period of twenty-five years from December 16, 1925, unless before the expiration of that period Iraq shall have become a Member of the League of Nations. Various agreements between the two parties subsidiary to the 1922 Treaty, in so far as their duration is dependent on that of the Treaty, will remain in force for the period laid down in the new Treaty. The two Governments agree to continue active consideration of the questions which have already been under discussion between them in regard to the revision of the Agreements arising out of Articles VII. and XV. of the 1922 Treaty. A further undertaking is to the effect that at the time when the 1922 Treaty would have expired under the Protocol of April, 1923, and at subsequent successive intervals of four years until the expiry of the period of twenty-five years or until the admission of Iraq into the League of Nations the British Government will take into active consideration (1) the question whether it is possible to press for admission of Iraq into the League of Nations; (2) if it is not so possible, the question of the amendment, on account of the progress made by Iraq or for any other reason, of the Agreements referred to in Article XVIII. of the 1922 Treaty. In other words, both Iraq and Great Britain testify to an equal interest in obtaining for the former admission into the League of Nations, while recognising that for the present the existing relationship is necessary.

The Makwar Dam.

The ceremony of the formal opening of the great Makwar Dam was performed on January 21 by Lord Lloyd under the brightest auspices. It was very much in the nature of a happy family party, that gathering which assembled at the centre of that massive two-mile wall of concrete—Lord Lloyd, whose every utterance seems to gain him more friends in Egypt and to enhance his prestige, Sir Geoffrey Archer, Lady Lloyd and Lady Archer, present and past officials of the Sudan, representatives of the Egyptian Government, the Chairman of the Sudan Plantations Syndicate, representatives of the contractors and engineers, and then at vantage points round about the natives in their thousands. The only possibility of any misgiving for those at a distance was linked with the thought whether Egypt would officially dissociate herself from the ceremony from any mistaken idea regarding the possible effect on the Egyptian water supply or by way of protest against Great Britain's position in the Sudan. These surmises were effectually laid to rest by the presence of Ismail Pasha Sirry, Egyptian Minister of Public Works, and Abdul Hamid Pasha Soliman, General Manager of the Egyptian State Railways and Egyptian Member of the Nile Water Committee, the more so as the former made a speech at the ceremony. The fact is that the Makwar Dam stands to benefit Egypt as well as the Sudan, and that under Britain's guiding hand there will be ample water for both when the Nile waters have been properly conserved and fairly distributed.

Frontiers in Arabia.

The statement attributed to King Ibn Saoud's representative in Damascus that a Wahhabi force had taken up a position at Kasr el Azrak, in accordance with the terms of the treaty recently signed by King Ibn Saoud and Sir Gilbert Clayton on behalf of the British Government, was calculated to cause misgivings among those acquainted with the geography of this part of Arabia. Kasr el Azrak, a Roman outpost and later a Crusader station, lies some sixty miles east of Amman; with its ruined buildings and sheets of water, stocked with carp, it affords a conspicuous object for pilots of the Cairo-Baghdad Air Service to "pick up" as marking the end of the inhospitable lava country and the beginning of the furrow that traces the route to Baghdad. If Kasr el Azrak had been ceded to Nejd, it would mean that the Air Service would no longer be flying all the way over mandated territory, and the Desert Mail Service, now temporarily diverted from Damascus and going by way of Jerusalem and Amman, would have to pass the scrutiny of Wahhabi tribesmen. It is evident, however, that King Ibn Saoud's representative at Damascus has been misinformed. The Hadda Agreement marks the frontier between King Ibn Saoud's territory and Transjordan with a wedge-like projection that just takes in Kaf, but which leaves the boundary at a distance of thirty miles from Kasr el Azrak. If, therefore, a Wahhabi force should have arrived at Kasr el Azrak, it will be necessary to make sure that they are withdrawn at once, and that any Nejd garrison at Kaf clearly understands that there is to be no advance from that post in a northerly or north-westerly direction.

The Position in Syria.

It appears as if France was going to find that the attempted short cut in Syria will prove, after all, the longest way home. M. de Jouvenel's overtures for an amicable settlement based on promises of administrative reform have been rejected, and he does not seem to be ready to apply the argument of force, which alone the Druses are likely to appreciate. If in the interval France has been preparing to send strong reinforcements of white troops to Syria, no harm will have been done by the attempt to win the insurgents over to reasonableness; but if the Druses see that the High Commissioner is unable to follow up his rejected overtures with immediate military action, the effect on the country is likely to be bad. The statement of policy issued in the form of a personal letter to the French delegate for the Jebel Druse is unexceptional in theory, but must fall short of its aim, unless a serious defeat is inflicted on those who are in revolt against France's authority. The trouble in Syria goes deeper than academic dislike of a mandate; owing to certain traits in French administration, of a political as well as of a personal character, it took the form of hostility to France and her ways. M. de Jouvenel has undertaken to mend France's political ways, but he has not as yet dealt with the personal hatred of the Syrians towards the French. For this reason his political overtures are rejected. Only when he is in a position to say: "I cannot make you like us, but you shall respect us," can he hope by meeting political grievances to establish a better relationship. The sentence in his letter expressing pity for "those who imagine that the Syrians or Druses can by force or by craft triumph over the determination of France, who is everywhere victorious since she became a Republic" is calculated rather to prolong the conflict than to end it, for France should not be aiming at "victory" in Syria but a friendly *modus vivendi*.

Greece's Housekeeaing.

Drastic diseases call for drastic remedies. According to the Greek Minister of Finance the Government is confronted with the problem of finding, in case of necessity, a sum of over five thousand million drachmæ. The full significance of the country's financial needs at the present moment can be better appreciated when it is remembered that an average Budget deals with a revenue in the neighbourhood of four thousand million drachmæ. In these circumstances it is not to be wondered at that recourse has again been had, as in 1922, to a forced loan by means of the device of cutting the paper money in two, and making the larger portion legal tender for three-quarters of its face value, while the other quarter becomes a loan to the State. This loan is anticipated to supply the Government with a quarter of the total amount of which it stands in need; other raids on the public purse, therefore, are to be expected. Faced with such a formidable problem, General Pangalos may well have argued that the less criticism the better, while the unpleasant process of swallowing the pill lasts for Greece. The public attitude will depend largely on the extent to which the Government takes the people into its confidence and allows them

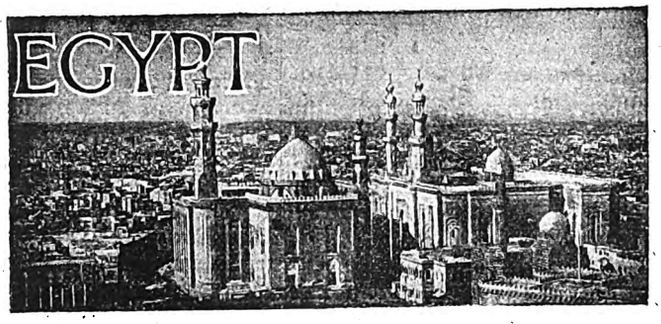
FACTS OR MAKE-BELIEVE AT ANGORA.

Although Western diplomacy is not wholly guiltless of indulgence in make-believe, it is in the East that the practice is reduced to a fine art and has become second nature. For any Eastern country that wishes to claim equality with the West one of the hardest changes to make will be that of thinking and dealing with things as they are instead of as one might wish them to be. To this weakness of the East is attributable in large measure the sense of superiority that comes to Westerners when in contact with Eastern peoples. It is difficult not to patronise a man who displays the mentality of a child and seems to wish you to credit him with believing something that is demonstrably untrue. Yet in large measure this make-believe springs originally from an innate observance of rules of courtesy. As between Eastern peoples there may be no harm done, to whatever extremes the practice is carried; it is only when the more matter-of-fact Westerner, who cannot bring himself to imagine that there must not necessarily be a limit to make-believe, determines in his own mind where the make-believe has ended and the realities have begun, that the gulf between the two mentalities widens. The sense of superiority, however, is not confined to one side. The Westerner's blundering efforts to come to close grips with a subject that the Easterner wishes to keep at arm's length excite the contempt of the latter, and he is tempted to pile up the make-believe still higher. So long as there is no genuine desire on both sides to meet on common ground the play can be continued. Turkey to-day, it is very widely recognised, is serious in her resolve to be regarded as conforming with Western standards: yet she would seem to have made no effort to abandon the practice of deliberate make-believe. Until the Mosul decision was given, bluff and bluster represented a legitimate, although a mistaken, policy; to continue these now is to squander time that is of extreme value to Turkey. Immediately after the Council of the League of Nations had given its verdict, the British Government quite frankly expressed the hope that a friendly arrangement might be reached between itself and the Turks on the basis of the Mosul decision. That was over a month ago. Yet so far nothing practical has been done, because the Angora Government, indulging in a childish game of make-believe, is trying to persuade itself that it can go behind the League's decision by distorting the meaning of the British overture. At the same time Greece is being invited to rescind the agreements with Turkey that were made under the auspices of the League of Nations from some vague idea on the part of Angora that Turkey stands to gain from any slight she can administer to the League.



According to Turkish standards these manœuvres may be all-important; from the Western point of view they are foolish and exasperating. Yet the Angora Government is not inviting Europe to become Easternised and to wear the fez; it claims to have Westernised itself, and in proof of the fact has ostentatiously discarded a picturesque feature of the East and imposed upon its obedient countrymen the most nondescript types of ill-made headgear, in a belief that Turkey has thus taken another step towards Western standards. Europe may legitimately point out that she must be the better, if not the sole judge of what constitute Western standards, and she is not likely to place dress regulations before rules of conduct. It is self-deception in a crude form for the Turkish Government to persuade itself that Great Britain is in any way hostile to Turkey's interests, or that the goal which it claims to have set before itself can really be reached by Soviet help. It would be interesting to know on what evidence of the success of its policy in the world's scheme of things the Moscow Government has been able to convince the Angora authorities that it constitutes a much more experienced guide to material prosperity than any of the Governments of the West. The attempt to represent Great Britain as the chief enemy would be comprehensible, if she had entered the War against Turkey; yet it was the Turks who for no reason capable of being stated sided with Britain's enemies, and all that has happened since has been part of the liquidation of that act of base ingratitude. With the closure of the Mosul controversy the liquidation can be regarded at an end, provided that the Turks adopt an honourable attitude in all financial matters. As soon as they abandon their practice of make-believe, therefore, they will find that all the help which they need for the building-up of the Republic will be available for them.

This week the British Ambassador to Turkey is in Angora for the purpose of trying to make Mustapha Kemal Pasha and the Turkish Government understand the matter-of-fact way in which Great Britain looks at things of common interest to the two countries. It is not to be expected that Sir Ronald Lindsay will submit any formal proposal for an agreement between the British and Turkish Governments. There is probably too much ground to be cleared away first, and, unless the Turks make a very sudden change in their methods of diplomacy, the work of negotiating an agreement would devolve on someone who has no other duties on hand and could remain indefinitely in Angora until the negotiations were terminated. Sir Ronald Lindsay will resume in the Turkish capital the work already begun by the British Prime Minister when, on the morrow of the delivery of the Mosul decision, he asked the Turkish Ambassador in London to visit him. That work is to persuade the Turks that there is no foundation for their foolish belief that enmity of Turkey is the leading *motif* of British policy. It is in keeping with the Oriental weakness for make-believe that the Soviet Government should try to make Angora imagine that no other country is so important to Russia as Turkey is; that if the two hold closely together, they will ultimately have the world at their feet. Sir Ronald Lindsay's message to the Turkish Government, we imagine, will be a very different one. Its main line of argument might well be that Turkey plays a very insignificant part in the scheme of the British Empire. The Turks might be asked to explain how it comes about that Great Britain, whose one aim to-day has been proved to be peace throughout the world, in order that economic prosperity may be restored, should, as they pretend, wish to make enemies of them and so to break the chain of peaceful relationships. If Iraq is a stumbling block, the Turks can be reminded that what Great Britain is doing to-day for Iraq is nothing compared with what she did for Turkey seventy years ago. For the Turks in 1854 she declared war and demolished Russian fortifications; at Geneva on Iraq's behalf she has merely had to knock holes in Turkey's specious arguments, that a wiser Government would never have put forward. The best thing that can happen at Angora is that the veil of Oriental make-believe should be torn away and that, after some straight speaking, the Turkish Government should be given time to reconsider in which direction its real interests lie.

The Near and Middle East*

From Our Own Correspondents.

Cairo, January 17.

Government and Elections.

"The Government," declared Ziwar Pasha to a meeting of Mudirs last Tuesday, "is determined to speed up the electoral preparations to the utmost possible extent, so that elections may be held in March or April and Parliament meet at the end of April or early in May." This statement has come as something of a surprise, for hitherto it seemed that the prospect of Parliament's meeting before next November or December was remote. Even if the authorities had been determined to do their best to make possible the holding of elections at the earliest feasible date, the length of time that would inevitably be required to decide precisely who is entitled to vote under the new law seemed likely to run into many months. Nevertheless the Prime Minister has lately been declaring, with a manner of perfect conviction, that the elections will be held within four months at the outside. If this optimistic estimate proves to be correct many people will be surprised, but pleasantly surprised, for it is generally agreed that the sooner the elections can be carried through the better.

The Opposition's Attitude.

Upon the attitude of the Opposition Parties will depend whether the elections are to be an expression of popular opinion or a farce. If there is rigid adherence to the boycott decision taken by all three parties soon after the meeting of "Parliament" at the Continental-Savoy Hotel on November 21 the holding of elections will be a mockery, and it is difficult to believe that a Chamber elected in such circumstances could work. But now the Opposition is talking of a kind of semi-boycott, in which it would, where it felt sufficiently strong to do so, keep away from the poll the majority of voters in a constituency, while yet sending enough to vote to ensure the return of the Opposition candidate. In this way, the return of the Opposition candidate would be secured. Details of such proposals as this are now being considered by a joint committee of the three Opposition Parties, which was formed last week and whose probable length of life as a harmonious, single-minded body is one of the things about which speculation is unsafe.

Governmental Purchase of Cotton.

If the present Ministry has not scored any great popular successes with its political policy it has satisfied most of the critics by its latest decision in the economic field, namely, to buy up half a million kantars of Egyptian cotton in order to lend support to a market which has lately been causing grave disquiet in the minds of the agricultural community. Even the Government's most merciless critics have applauded its new policy, which, in point of fact, is not quite new, for Egyptian Governments have been buying cotton, with the object of bolstering up the market, for the past five years, but none has hitherto gone into the business in so whole-hearted a manner.

Alexandria's Administration.

The suspension of the Alexandria Municipal Commission and the appointment of a special committee to carry on the administration of the city until the election, six months hence, of a new commission has surprised nobody. For weeks past there had been rumours that something of the kind was going to happen, and it had even been hinted that the Government had the intention of abolishing the Municipality entirely. Alexandria is singularly unfortunate in its civic government. At comparatively frequent intervals during the past twenty years there have been serious scandals nearly all connected with finance matters, in the administration, into which Government commissions of inquiry have delved producing recommendations for the better conduct of affairs in future which have palpably not achieved their purpose. Apart from these periodical revelations of corruption and mismanagement, there has for several years been a continuing and increasing lack of discipline among the officials of the Municipality, just as there has been a ceaseless bickering and squabbling among the Municipal Councillors. Of late, especially, politics have been allowed to have far too large an influence upon the affairs of the city. There is no doubt that the Government is right in deciding that a fresh start must be made. In view of past experience, the citizens of Alexandria, if the specially nominated committee acquits itself well during the coming months, are not likely to exhibit any great impatience for a return to the former system of administration.

Tourists and Guides.

Few things cause more surprise to visitors to this country than the manner in which dragomans and guides at popular places of resort, such as the Pyramids, are allowed to spoil entirely the tourist's pleasure by their ceaseless importuning. The Pyramids area has always had a bad reputation of this kind of pest, but this year matters seem to be worse than ever. For residents, who can suitably express their mind in the Arabic language, the nuisance is bad enough, but for overseas visitors it is ten times worse. There is literally no way of shaking off the guides, who ruin completely the pleasure of a visit to the Pyramids, by their persistent offering both of their services and of entirely unwanted information regarding the "sights." Hitherto the police have seemed unwilling

to interfere effectively, but this season tourists have expressed themselves so forcibly on the subject that the Egypt Promotion Society is, somewhat tardily, taking the matter up, with a view to getting some really effective action taken.

Jerusalem, January 8.

Economic Problems.

Palestine has long ceased to be a source of news of more than local importance. And in the interests of the country this is a matter for congratulation. The one subject for disquiet at the moment seems to be the possibility of severe economic stress before the winter is over. In the main this is a Jewish problem, arising from the too generous measure of immigration allowed during the past year. There is a growing fear of far-reaching unemployment, and in the past weeks there have been a few bankruptcies of comparatively large and useful Jewish industrial efforts. The main cause appears to be the high wages exacted by Jewish organised labour—three and even four times greater than the scale current in unorganised labour in Palestine and the neighbouring countries.

"Labour" and Zionism.

The truth seems to be that while the Zionist experiment is wholly successful so long as it confines itself to capital expenditure towards improving agricultural and health conditions among the new and older immigrants, it promises to be less successful (as things are now) on the social side. "Labour," now the predominant political colour in local Jewish politics, is going too fast and too far. There is no truth in the common cry that the Zionist immigration is flooding the country with the worst elements of Communism (the recent elections to the Jewish Elective Assembly show that these elements represent about one per cent. of the electorate, which comprises all males and females above 20), but even "moderate Labour" can be dangerous if over-stressed in the primitive conditions of Palestine.

One recent significant episode is the resignation of M. M. Dizengoff from the position of Mayor of Tel-Aviv, the Jewish township which he created and which he has since fashioned and guided. At the last municipal elections Labour secured a majority, and now its Mayor has found himself compelled to wash his hands of all responsibility for the reckless financial policies pursued by the Tel-Aviv Labour Council, culminating in a measure providing free education.

The Unavailing Bourgeois.

Even what might have been supposed the antidote to unmitigated Labour—the large immigration of bourgeois, middle-class Jews of "independent means," which was so marked a feature in the first half of last year—has not served to improve the economic conditions. This class has clung about the main town centres, helped to raise rents, encouraged a fever of building activity and of land speculation; but they have lacked the means to "dig themselves in" (as was at first hoped) as self-sufficing units in industries and manufactures. It is realised that the definition of "independent means" as the possession of five hundred pounds was a ridiculous under-estimate.

The Arab Press Strike.

The whole of the Arab Press has gone "on strike" as a protest against the rise in the charges for newspaper postage within Palestine. The charge was previously one millieme; it has now been raised to two (1 millieme equals 1 farthing). The Arab papers protest that this increase will ruin them since their distribution is entirely conducted by post, that it is unjustified since Palestine Posts and Telegraphs make a heavy profit and that it is a pro-Zionist measure since the Jewish newspapers have circulations large enough to enable them to employ men to carry out the distribution by hand.

MR. C. M. DOUGHTY.

We announce with regret the death, at the age of eighty-two, of Mr. Charles Montagu Doughty. The late explorer began his travels in Arabia, made famous, even immortal, in his "Travels in Arabia Deserta," in 1876. It was after roaming more or less purposelessly over several parts of Europe, particularly Greece, that Doughty turned to the Arab lands with which and, indeed, in which, he was to make his name. His wanderings over Sinai, Western, Northern, and part of Central Arabia are well-known to all students of Arabia, his particular devotees having greatly increased as a result of British participation, under Colonel T. E. Lawrence, in the fighting during the War in the Hejaz. To this day recollections are carried in Arabian deserts of the Nazarene doctor who fearlessly lived among the bedouin for two and a half years.

For all that Doughty did to combat oblivion, he might have died in obscurity. A year or two ago, however, his classic work was re-published with a foreword by Colonel T. E. Lawrence, his fame being thereby considerably widened. Upon his considerable achievements as a poet, this is not the place to speak, but it is certain that he will be reckoned for all time among the great Arabists.

The Belgrade police recently searched the homes of over 50 Communists and arrested about 20 former Deputies and others. No explanations were issued.

It is officially announced at Belgrade that the Little Entente Conference will be held at Bled on February 20, providing that the preliminary disarmament conference at Geneva is not held then.

The death occurred towards the end of last year of Mr. G. L. Scansie, Consul for New Zealand of the Kingdom of the Serbs, Croats, and Slovenes. Mr. Scansie, who was forty-nine years of age, was born in one of the Dalmatian islands, and went over twenty years ago from America, to which he had emigrated, to New Zealand, where he was appointed Consul in 1923.

A BALKAN SECURITY AND ARBITRATION PACT.

(From Our Liubliana Correspondent.)

For some months past it has been repeatedly reported that the Balkan States are on the verge of entering into a Security and Arbitration Pact with each other, on lines similar to that concluded recently by the Western States at the pleasant mountain resort of Locarno.

The suggestion for the conclusion of a Balkan Pact emanated first of all from the Greek Government. But the fatal mistake about this suggestion was its being put forward at the very moment when negotiations between Greece and the Kingdom of Serbs, Croats, and Slovenes had just come to an unsuccessful stop. Yugoslav public opinion received the impression that the Greek Government wished to get out of the difficulties which had arisen over the negotiations with Belgrade by forcing the conclusion of a general Balkan Agreement. Hence Belgrade's reply to the Greek suggestion was extremely reserved. The proposition was by no means turned down; but it was pointed out that Yugoslavia would first wish to see her relations with Greece absolutely defined in regard to the questions left open at the negotiations; and that only then, and not before, would she see her way to entering into further negotiations for the conclusion of a general Balkan pact. And Yugoslavia's reserve decided the matter. The Greek proposal fell through.

Not long afterwards the idea of a Balkan Pact cropped up again, this time from a Turkish source. One was told of a definite proposal to call a Conference of all the Balkan States in the Balkans. This proposal was unofficially put forward, but had no more practical success than its Greek forerunner. Although the Balkan States are all in favour of a pact, not even the preliminaries for drafting one were reached.

It was clear that the whole matter depended in the first place upon Yugoslavia. She is undoubtedly the principal State in the Balkans; her territory includes the very heart of the south-eastern peninsula of Europe, and her population is almost as large as that of the rest of the Balkan States, excepting Roumania. It is obvious, therefore, to anybody that when it comes to concluding a Balkan pact, the initiative must come from the Kingdom of Serbs, Croats, and Slovenes, and that only then there can be hope of success for it.

Yugoslavia realises the responsible nature of her position. This shows very clearly in the statement made at the New Year by Dr. Nintchitch, Minister for Foreign Affairs, to the Belgrade Press, when he incidentally expressed himself in regard to the projected Balkan Pact. Dr. Nintchitch said that the pact was in the highest degree desirable, and desired also by the Kingdom of Serbs, Croats, and Slovenes. But as a first step towards its realisation it was necessary that all points at issue between Yugoslavia and the various Balkan neighbour States upon whom the pact would be binding should be dealt with. Failing this, the past would be illusory, nor would it yield the hoped-for results.

In diplomatic circles the statement of Dr. Nintchitch is regarded as an intimation that Yugoslavia intends to take the initiative in negotiations for the conclusion of a Balkan Security Treaty. Hence it naturally gave great satisfaction, especially in Czecho-Slovakia, a State which has a vital interest in the maintenance of peace in the Balkans.

And indeed, a week later there was a report that Yugoslavia had proposed at Athens the opening of negotiations for a Balkan Security Pact. A *démenti* of the news in this form was issued from Belgrade, but it is nevertheless clear that some conversations regarding the matter took place between the Yugoslav Minister in Athens, M. Gavrilovitch, and the Greek Government. Of course, Yugoslavia sticks to the point that all points at issue between Balkan neighbours must be settled first, and the Treaty concluded afterwards. On this condition alone will Belgrade negotiate.

The States to come into consideration are Greece and Bulgaria, whose relations with Yugoslavia have not yet been satisfactorily aranged. Ever since the Græco-Yugoslav Alliance Treaty came to an end, all negotiations for its renewal have been unsuccessful. The main difficulty is provided by the Salonika question, i.e., the problem of the Yugoslav zone in the Salonika harbour, and the question of the railway line and traffic from the Yugoslav frontier at Ghevgheli to Salonika. To these points, for which so far no settlement satisfactory to both parties has been found, must be added irritation over the treatment accorded to the Yugoslav minority in Greek Macedonia, which has already given rise to much acrimonious controversy in the Press.

Were an agreement once achieved with the Athens Government, Yugoslavia would only have to straighten out her relations with Bulgaria. Bulgaria is the only country with which Yugoslavia has so far not been able to conclude any treaty since the War. Latterly there have been indications of a somewhat more friendly feeling between Sofia and Belgrade. One thing, however, must not be forgotten. Bulgaro-Yugoslav relations may easily be embroiled again unexpectedly, overnight, one might say, so long as the bands of *komitajis* dispatched by the Macedonian revolutionary organisations of the Bulgarian *makedonstvuyushtsi* continue their activities in the territory of South Serbia. For a long time past, the Yugoslav Government has demanded of the Sofia Government that the latter should prevent these incursions of armed bands as a first step towards a sincere improvement of mutual relations between the two neighbouring States. The evils and peril of the *komitaji* movement have been pointed out also by the International Commission sent to the Balkans by the Council of the League of Nations at the time of the Græco-Bulgarian frontier incident. Liquidation of the *komitaji* problem would mean the elimination of the main obstacle to co-operation between Bulgaria and Yugoslavia.

With Turkey, Yugoslavia established normal and even friendly relations. A treaty between the two has been recently signed, and there are no points at issue between them: the few outstanding questions will shortly be settled. Relations with Albania are very good. With the settlement of the dispute over the frontier in Vermosh and Sveti Naum the last misunderstanding has disappeared. To Roumania Yugoslavia is bound by a Treaty of Alliance.

Thus might be summarised the stage in which the Balkan Pact is to-day. Several difficulties will have to be removed, but an optimistic view is justified. There were handicaps and obstacles enough at Locarno. If they could be overcome there, they will not prove insurmountable in the Balkans.

FORTUNE'S FAVOURS IN EASTERN WATERS.

By Lt.-Colonel F. Cunliffe-Owen.

I.—Capsized.

Prior to the advent of that horrid modern invention, the aeroplane—an unsportsmanlike device in the eyes of the "fuzzy-wuzzy" or other habitual petty warfare-monger—Somaliland offered a never-ending field for the exercise of the British Empire's small war cult.

Our dear old antagonist, the delightfully "Mad" Mullah, was always ready to provide a show up for annual excursions, and when one such excursion completed its itinerary, another could surely always be counted upon after a proper and decent interval.

And so it happened that in the early years of the present century I found myself in the very good company of His Majesty's Navy, touching up various danger spots on the Somali coast. This was a glorious change after weary months spent inland in a country of which, in later times, I was much reminded by Mespot. It was, in fact, very much the same type, barring the Mespot rivers. But I must confess that in Mespot one's comforts, as provided by the huge machinery of the Great War, far exceeded those of the small war periods. I recollect that in Somaliland, far from "sumpshus" three-meal days with good beer, *and* ice *and* soda-water, one saw no glimpse of such good things. Vegetables, fruit, or butter, for example, simply did not exist; and as for drink, well, there was tea brewed from a murky liquid known as sulphuretted water.

But to return to His Majesty's Navy. This was better business than the land column. Perhaps a little descent upon the coast with the chance of a scrap, and then back to the clean bed, nice warm bath, hot dinner, and just a pleasant game of bridge to finish. Not so bad after the desert.

Yet I had not counted upon the perils of the sea; no torpedoes, submarines, enemy craft or anything of that sort, but merely the perils of old Nature.

Well, we had made a most successful (to use the present-day jargon) "push," and had scattered very nicely a long-standing trading centre of the Mullah's adherents (to be really accurate, this was in Italian Somaliland, but, no matter, we hoisted the Italian flag all right!); the Admiral had landed a quite grand assembly of seamen and marines, to which a small party of His Majesty's Hampshire regiment were added, to provide the military touch, and, most imposing of all, the Admiral himself had honoured the company by landing in person. After scaling the cliffs, during which numerous slight mishaps occurred—one of these more important than the rest, when the Commander-in-Chief made the acquaintance of Mother Earth and caused the whole battle array to cease its progress—the Brigade was formed on the top and the "Advance" sounded. At first the array swept majestically forward, then less majestically, then, by jingo, we ran like tigers, up to and over the mud walls, in and out of the mud huts like rabbits, and the Mullah's men turned tail. Such a shouting and such firing! My own style was a little cramped in climbing over the walls, because the exertion caused something to "give" in my scallywag get-up, and I had to continue with one hand holding up breeches and the other fiercely brandishing my revolver. Of course there were in those days no stern A.P.M.'s, no coats and scanty clothing, and I think that, horror of horrors, I actually went to war in tennis shoes.

However, there we were with the Mullah's men gone and in "possess." A nice hearty lunch followed, and then the bailiffs were put in, in the shape of the poor old military, the Jack Tars departing for their ships in time for tea.

Now the fun began in earnest. It was the intention to leave us just for the week-end, to clear up a few odd jobs in the way of collecting camels (nothing else matters to a Somali except camels), do a little demolishing, and so forth.

We did our week-end and then made ready for a happy departure, but it was here that Nature stepped in and ordained that the Monsoon should begin its seasonal programme rather earlier than usual. And looking over the coast, there lo and behold, enormous, and, to us landlubbers, very enormous, breakers were rolling in like the devil.

Nevertheless, we hoped for the best, and trundled down to the shore with all our belongings; I remember that included in mine were an old manuscript Koran (looted) and a rifle belonging to poor Plunkett's party, which had been done in at Gumburru. Our packing up, however, was wasted, as a signal was made telling us to wait till the weather moderated. So back we went and again installed ourselves in the little *zareba* which had been constructed. The next day was the same, but on the one following there was a break and operations began quite gaily. But as the day wore on, the wind increased and a small party were left over unembarked to return again to the *zareba* alone. The situation was not happy, because the detachment, originally none too numerous, was now reduced to about twenty, and, with time getting on, it was quite possible that some parties of dervishes, learning our weakness, would return; and then there might be a bit of scuppering on hand. So the next day it was decided that we had to get off somehow, and the *zareba* was quitted in the early morning with the hope that the dervishes would not get wind of what was happening. The difficulty was that, where we were then, some miles from the original landing-place, the shore shelved very gradually, and it meant wading a long way to reach the boats. This wading was, with the big monsoon rollers thundering in, not altogether an inspiriting game, whether one was a swimmer or non-swimmer.

However, boats were sent in as far as possible, and eventually we did manage to scramble in; but the boats had unfortunately come in too far on the shelving beach and got broadside on, with the result that they capsized and we were flung into the water in a welter of rifles, ammunition boxes and other very hard substances most distasteful to limbs and bodies.

Floundering to the beach, we wondered "What next?" because we knew from the experiences of the last two days that the wind increased in force and the sea got worse as the day wore on. We wondered, too, whether anything was happening up above, and whether we should suddenly hear the noise of some nice expanding or other monstrosity of a bullet which the dervishes were accustomed to use, humming about our ears.

Yet we had large confidence in the Navy's resources, and, after some hours more, we saw something fresh was on foot. This time the ships' boats stood by only as far as the deep water, and to our amazement two officers were seen making their way through the heavy seas with a line by which, after making fast on shore, we poor soldiers might hang on to, and make our way hand over hand through the breakers to the boats. Even with this line to hold on to, though, it seemed not all joy to us, because we knew, when we were upset before, how these breakers could buffet one about and almost knock the breath out of one's body. And then it had only been scrambling ashore with the less violent morning wind. Now it meant going further and further seawards, perhaps a quarter of a mile, to the boats.

Nevertheless, the procession began and a string of miserable, almost lifeless wretches, grimly clinging, passed hand over hand, into, under, over, or through the waters, and, quite exhausted, finally knocked up against a boat and were hauled over the side and into the bottom, panting like caught fishes. And there we lay perfectly inanimate till the cruiser was reached.

But after all we did like our war with the Navy. Three hours afterwards, after a jolly bath, there we were, quietly smoking, peacefully blinking and hearing the gun fire destroying the two abandoned capsized boats and, just as a precautionary measure, putting a few shells up on the hills to greet any inquisitive returning dervishes.

Bahra Agreement.

TRANSLATION.

WHEREAS with a view to securing good relations between the two Governments of 'Iraq and Nejd, a Treaty known as the Muhammara Convention was agreed upon between those two Governments and signed on the 7th Ramadan 1340 (corresponding to the 5th May, 1922), and

WHEREAS the aforesaid Treaty was supplemented by two Protocols, known respectively as Protocol Number I and Protocol Number II of the Muhammara Convention, which were signed at 'Uqair on the 12th Rabi' Thani 1341 (corresponding to the 2nd December, 1922), and

WHEREAS the aforesaid Treaty and Protocols have been duly ratified by the two Governments of 'Iraq and Nejd, and

WHEREAS in Article I of the aforesaid Muhammara Convention the Governments of 'Iraq and of Nejd have guaranteed mutually that they will prevent aggression by their tribes on the tribes of the other and will punish their tribes for any such aggression and, should the circumstances not admit of such punishment, the two Governments will discuss the question of taking combined action according to the good relations prevailing between them, and

WHEREAS it is considered advisable by His Britannic Majesty's Government and by the two Governments aforementioned, in the interests of friendship and good relations between the two countries of 'Iraq and Nejd to come to an agreement regarding certain matters which are outsanding between those two countries,

WE the undersigned, His Highness 'Abdu'l-'Aziz ibn 'Abdu'r-Rahman al-Faisal Al Sa'ud, Sultan of Nejd and its Dependencies, and Sir Gilbert Clayton, K.B.E., C.B., C.M.G., the duly accredited Commissioner and Plenipotentiary of His Britannic Majesty's Government, who has been empowered to come to an agreement and sign on behalf of the 'Iraq Government, have agreed upon the following articles:—

Article 1.

The States of 'Iraq and Nejd severally recognise that raiding by tribes settled in their territories into the territory of the other State is an aggression which necessitates the severe punishment of the perpetrators by the Government to which they are subject and that the chief of the tribe committing such aggression is to be held responsible.

Article 2.

(*a*) A special tribunal shall be set up, by agreement between the two Governments of 'Iraq and Nejd, which shall meet from time to time to enquire into the particulars of any aggression committed across the frontier between the two States, to assess the damages and losses and to fix the responsibility. This tribunal shall be composed of an equal number of representatives of the Governments of 'Iraq and Nejd, and its presidency shall be entrusted to an additional person, other than the aforesaid representatives, to be selected by the two Governments in agreement. The decisions of this tribunal shall be final and executory.

(*b*) When the tribunal has fixed the responsibility, assessed the damages and losses resulting from the raid, and issued its decision in that respect, the Government to whom those found guilty are subject shall execute the aforesaid decision in accordance with Article I of the present Agreement.

Article 3.

Tribes subject to one of the two Governments may not cross the frontier into the territory of the other Government except after obtaining a permit from their own Government; it being stipulated, however, in accordance with the principle of the freedom of grazing, that neither Government shall have the right to withhold such permit or concurrence if the migration of the tribe is due to grazing necessities.

Article 4.

The two Governments of 'Iraq and Nejd undertake to stand in the way, by all the means at their disposal other than expulsion and the use of force, of the emigration of any tribe or section of a tribe from one of the two countries into the other unless its emigration takes place with the knowledge and consent of its Government. The two Governments undertake to abstain from offering any present of whatsoever kind to refugees from the territories of the other Government, and to look with disfavour on any of their subjects who may seek to entice tribes belonging to the other Government or to encourage them to emigrate from their country into the other country.

Article 5.

The Governments of 'Iraq and Nejd may not correspond with the Chiefs and Sheikhs of tribes subject to the other State on official or political matters.

Article 6.

The forces of 'Iraq and Nejd may not cross the common frontier in the pursuit of offenders except with the consent of both Governments.

Article 7.

Sheikhs of tribes who hold an official position or who have flags showing that they are the leaders of armed forces may not display their flags in the territory of the other State.

Article 8.

In case one of the two Governments were to call upon tribes residing in the territory of the other State to furnish armed contingents, the said tribes will be free to respond to the call of their Government on condition that they betake themselves with their families and belongings in complete tranquillity.

Article 9.

In case a tribe were to emigrate from the territory of one of the two Governments into the territory of the other Government and were subsequently to commit raids into the territory in which it formerly resided, it will be open to the Government into whose territory this tribe has immigrated to take from it adequate guarantees on the understanding that, if a similar aggression were to be repeated by the tribe, those guarantees would be liable to confiscation, without prejudice to the punishment to be inflicted by the Government as provided in Article I, and without prejudice to whatever impositions may be decreed by the tribunal specified in Article 2 of the present Agreement.

Article 10.

The Governments of 'Iraq and Nejd undertake to initiate friendly discussions with a view to concluding a special agreement in respect of the extradition of criminals in accordance with the usage prevailing among friendly States, within a period not exceeding one year from the date of the ratification of the present Agreement by the Government of 'Iraq.

Article 11.

The Arabic version is the official text to be referred to in the interpretation of the Articles of the present Agreement.

Article 12.

The present Agreement shall be known as "The Bahra Agreement."

Signed at Bahra Camp this fourteenth day of Rabi' Thani 1344, corresponding to the first day of November, 1925.

(Signed) GILBERT CLAYTON.
(Signed and Sealed) 'ABDU'L-'AZIZ.

Correspondence relating to the Bahra Agreement.

MEMORANDUM

Presented by His Highness the Sultan of Nejd after the sixth meeting to Sir Gilbert Clayton, K.B.E., etc., His Britannic Majesty's Commissioner and Plentipotentiary.

TRANSLATION.

1st Rabi' Thani 1344
(19th October, 1925).

I have the honour to inform Your Excellency that the Government of Nejd are still of opinion that it is necessary to examine the possibility of extraditing criminals, in the hope of ensuring peace on the frontier and of preventing all disturbers of the peace effectively. My insistence in this matter is due to the particular experience I have, and to my knowledge of desert conditions. My first object is to prevent any rivalry or friction from arising between the two Governments, and in this I am actuated by three main motives:—

(*a*) religion and honour, which compel us to act truthfully and in keeping with our pledges;

(*b*) our special ties of friendship with His Majesty's Government, which make it incumbent upon us to take a far-sighted view;

(*c*) our desire to live in peace, quiet and amity with our neighbours the State of 'Iraq.

2. I am of opinion that the Agreement which you presented for discussion this morning, although it may achieve some of the purposes for which we strive, does yet leave the door open to a great number of troublesome incidents of a kind of which we have had cause to complain in the past. In particular, I have submitted to you the following incidents as being of the kind which habitually occur in life in the desert:—

(*a*) what should the attitude of the Nejd Government be if an 'Iraqi tribe, having committed a reprehensible crime involving killing and plunder, were to take refuge in Nejd; and what would the same Government's attitude be if that refugee tribe were to commit the same crime, notwithstanding guarantees being given from it;

(*b*) what should the attitude of each of the Governments of 'Iraq and of Nejd be if a Nejd tribe, having been punished by the Nejd Government for a raid into 'Iraq, were to take refuge into 'Iraq and then to raid Nejd from 'Iraq, as was done by those tribes who had taken refuge with Nejd and then gone over to 'Iraq, after the well-known incidents connected with Yusuf Sa'dun?

I beg that you will examine these questions carefully. After considerable experience, I see no effective way of circumventing the trouble other than that Nejd and 'Iraq should both admit the principle of the surrender of criminals, and that criminals having perpetrated a crime in their country should be prevented from seeking refuge into the other country. Measures based on any other principle would not, in my opinion, shut the door on the discussions of which we all complain; and I ask that this statement of mine should be put on record so that it may be referred to in the future, and so as to set my conscience at rest in case such incidents, of the kind which we deplore and would prevent with all our efforts, were to recur.

Usual respects.

(Sealed) 'ABDU'L-'AZIZ IBN 'ABDU'R-RAHMAN IBN SA'UD.

Sir Gilbert Clayton, K.B.E., etc., His Britannic Majesty's Commissioner and Plenipotentiary, to His Highness 'Abdu'l-Aziz ibn 'Abdu'r-Rahman al-Faisal Al Sa'ud, Sultan of Nejd and its Dependencies.

Bahra Camp,
20th October, 1925.

Your Highness,

I have the honour to acknowledge receipt of Your Highness' communication of 1st Rabi' Thani (19th October, 1925), and I note that Your Highness is of opinion that no agreement is likely to establish security on the frontier and put a stop to raiding which is not based on the principle that either Government at the request of the other Government should return, if necessary by force, any tribes or portions of tribes which may cross over into its territory.

2. As I have repeatedly informed Your Highness in our conversations, the 'Iraq Government is unable to subscribe to this principle, which it deems contrary to Arab traditions and impracticable of execution. I have also informed Your Highness that His Majesty's Government, after careful consideration of the fact and of the views put forward by Your Highness and on your behalf in the past, have reached the same conclusion. That being so, I regret that I am unable to adopt the principle which you recommend.

3. On the other hand, I would point out to Your Highness that the draft Agreement which I presented to you recently goes far towards meeting your own views in the matter, and that in drafting it I have endeavoured as far as possible to reconcile conflicting opinions. It is based on what, in the view of His Majesty's Government, is just and fair to 'Iraq and Nejd and to the tribes concerned; and I feel sure that, provided it is loyally carried out, peace and stability on the border ought to prevail, and that any disputes arising from the aggressions of tribes, even in such complicated instances as those mentioned by Your Highness, will be capable of settlement without real difficulty by the two Governments of 'Iraq and Nejd acting in sincere co-operation.

4. With regard to Your Highness' misgivings as to the efficacy of an agreement such as I have proposed, I rely with full confidence on Your Highness' repeated assurances of good-will and sincere desire for peace and order on the frontier.

I have, etc.,
GILBERT CLAYTON.

Bahra,
31st October, 1925.

Sir Gilbert Clayton, K.B.E., etc., His Britannic Majesty's Commissioner and Plenipotentiary, to His Highness 'Abdu'l-Aziz ibn 'Abdu'r-Rahman al-Faisal Al Sa'ud, Sultan of Nejd and its Dependencies.

Your Excellency,

I have the honour to recall that in one of our recent conversations I spoke to Your Highness about the necessity of settling the question of loot and losses resulting from past raids by tribes from 'Iraq and Nejd, and we agreed that it would be necessary to lay down general principles and formulate a procedure for the satisfactory settlement of this question.

2. In accordance with our agreement, Taufiq Bey Suwaidi, the 'Iraq representative, has discussed the question with Sheikh Hafiz and Sheikh Yusuf, and they have come to a preliminary agreement on the subject. I have the honour, therefore, to request that Your Highness may, if you see fit, signify to me your concurrence in the following proposals:—

(*a*) That the 'Uqair Conference should be taken as the starting point for reckoning the losses claimed respectively by 'Iraq and Nejd on account of the raids which have taken place between that Conference and the date of ratification by the 'Iraq Government of the Bahra Agreement.

خالجي WM. P. CUTLER,

(*b*) That the tribunal provided for in Article 2 of the Bahra Agreement should be charged with the task of enquiring into the claims of both sides and of assessing compensation due for the losses resulting from raids taking place during the above-mentioned periods, without prejudice to the other duties which this tribunal will have to perform in the future.

(*c*) That this tribunal should be assembled and should meet within a period not exceeding six months from the date of the ratification of the Bahra Agreement by the Government of 'Iraq in accordance with their constitutional laws.

I have, etc.,
GILBERT CLAYTON.

His Highness 'Abdu'l-'Aziz ibn 'Abdu'r-Rahman al-Faisal Al Sa'ud, Sultan of Nejd and its Dependencies, to Sir Gilbert Clayton, K.B.E., etc., His Britannic Majesty's Commissioner and Plenipotentiary.

TRANSLATION.
14th Rabi' Thani 1344
(1st November, 1925).

Respects.

I have the honour to acknowledge receipt of your letter dated the 31st October, 1925, relating to losses and loot. I fully endorse the agreement arrived at between Sheikh Hafiz Wahba and Sheikh Yusuf Yasin and Taufiq Bey Suwaidi. Compliments.

(Sealed) 'ABDU'L-'AZIZ IBN 'ABDU'R-RAHMAN IBN SA'UD.

Sir Gilbert Clayton, K.B.E., etc., His Britannic Majesty's Commissioner and Plenipotentiary, to His Highness 'Abdu'l-Aziz ibn 'Abdu'r-Rahman al-Faisal Al Sa'ud, Sultan of Nejd and its Dependencies.

Bahra Camp,
1st November, 1925.

Your Highness,

I have the honour to inform Your Highness that I am instructed by His Majesty's Government that the Agreement which has been concluded between Your Highness and myself in regard to certain frontier questions which were outstanding between the Governments of Nejd and of 'Iraq, and which was duly signed on the 1st November, 1925, cannot become operative until it has been formally ratified by the Government of 'Iraq.

The Agreement will be transmitted without delay by His Majesty's Government to the Government of 'Iraq with a request for early ratification, and the date of that ratification will be notified in due course by His Majesty's Government to Your Highness as the date on which the aforesaid Agreement will come into operation.

I shall be grateful if Your Highness will kindly acknowledge receipt of this letter.

I have, etc.,
GILBERT CLAYTON.

His Highness Sultan 'Abdu'l-'Aziz ibn 'Abdu'r-Rahman al-Faisal Al Sa'ud, Sultan of Nejd and its Dependencies, to Sir Gilbert Clayton, K.B.E., etc., His Britannic Majesty's Commissioner and Plenipotentiary.

TRANSLATION.
15th Rabi' Thani 1344
(2nd November, 1925).

Your Excellency,

Respects.

I beg to acknowledge your letter dated 1st November, 1925, relating to the date on which the 'Iraq-Nejd Agreement is to come into force, and to say that this has been noted. Respects.

It is announced in the *Izvestia* that the first sports "Octobriad" of the peoples of the Orient will be held in Tiflis this spring. Over 1,000 athletes are expected to irrive from Turkey, China, Persia, and Afghanistan.

THE WEEK AT HOME.

London, Tuesday Morning.

The Crisis in the Railways.

Yet another crisis: we are, it seems, no sooner out of one wood than we are plunged headlong into another. It is now the railwaymen who are disturbing the peace which the normal citizen appears to think should be the inevitable product of our industrial system. As is well known, a compromise between the extreme views of the railway-managers and the railwaymen was not long ago reached through the medium of a National Wages Board, the recommendation being that although wages of existing employees should not be reduced, those of future employees could be so reduced. That recommendation was agreed to by representatives both of the managers and of the men.

Now, however, the men have repudiated this principle of the reduction in wages of future employees. They base their repudiation, it seems, on two grounds:—(1) That it is unjust to have two men, one an old, and the other a new employee, doing exactly the same work but for different money; and (2) that the introduction of lower-paid employees would mean inevitably (according to their reading of capitalist methods) the ultimate dismissal of the higher-paid class.

That there is justice in this argument is scarcely to be denied, and appeals to what is being done elsewhere—the Army, and Navy, and so on—do not really affect the question. Unfortunately, however, the men have badly overstepped the mark by claiming that their present wages are an irreducible minimum. Here they manifestly put themselves in the wrong, according to the opinion of the public, who hope for nothing so much as a reduction in the cost of living, which would in patent fairness be accompanied by a reduction in wages. The public is very well aware now that it is purchasing power, and purchasing power alone, that is the true criterion of wages, and it is quite certain that it will not tolerate this last proposal of the men.

But the representatives of the men who agreed to the recommendations of the National Wages Board have been able finally to carry the day, for last night, although by the narrowest of margins, the railwaymen's delegates accepted the proposed reductions. So that we breathe again.

Liberalism and Labour.

As the knees of official Liberalism sag more and more pathetically, so the self-constituted doctors who stand around its once revered frame mutter advice, if not consolation. At times the old figure appears inclined to listen; at others it resolutely pulls itself up and proclaims its independence. But it is all seeming: and of what actually is going on I confess that I have the haziest of ideas.

The trouble seems to arise from Mr. Lloyd George's habit of individually interpreting something that did not happen and from Lord Oxford's neglect of something that did. Mr. Lloyd George, for instance, to whom is ascribed the suggestion, promptly refused, of linking Liberalism with Right Labour, has stated that the placing by the Liberals of the Labour Party in power in 1924 was a profound blunder; but what Lord Oxford thinks about that fateful step we "simply don't know."

Whither Liberalism is now tending it is difficult indeed to say. The majority of Liberal papers are still in favour of a discriminating alliance with Labour, but since Lord Oxford and the Labour Party are not, that suggestion would seem to be futile. There is next month to be a great Conference (to which, however, poor Liberals cannot go, because their expenses are not being paid), and it may then be possible to gauge whether an obstetrician or an undertaker is the more suitable person to supervise the next movements of the Liberal Party.

Digitized by Google

The seceding to the Conservatives of Sir Alfred Mond, whose antagonism to the Liberal Land Scheme is made more bitter by the fact that he "represents" Welsh freeholders, is to the Liberals one of those blessings whose disguise is more apparent than its essence.

Judicial Pleasantries.

Of all official jokes, those made from the Bench are indubitably the most ponderous. I do not know which judge it was who first started the fashion of parading flippant nescience, but the habit has now grown to such dimensions that it threatens to warp the sense of humour in our newspapers. Last week, for instance, the chief item in the news was represented as being the fact that a Judge—I think it was Mr. Justice Eve—had been asking in the Courts for a definition of a saxophone and of a piccolo.

One can only suppose that judges really are human beings, and that what with the different witnesses and lawyers and rest of it, they do sometimes come to their wits' end: in which case it is open to the modern satirist (following in the wake of one a hundred years ago, James Smith) to remark on the littleness of their journey.

Medical Research.

Although there is probably little in the Annual Report of the Medical Research Council, just published, that would astonish any intelligent lay student of the human body, the newspapers profess considerable amazement at the nature of the discoveries that come under review. The newest thing described in this Report appears to be the discovery of a new army of hostile germs, an army in the ranks of which are thought to lurk those notorious rebels, colds, measles, sleepy sickness, smallpox, and also cancer. These germs have been sought out with ultra-violet rays, and it is hoped soon to illuminate them with X-rays. This, of course, is real progress, the improvement of the world in a non-material sense.

Yet I have never seen worked out the proportion of civilisation-induced diseases to eradicated barbarian diseases, a proportion which is, of course, the real criterion of the world's improvement in health.

Lost Property.

The list of lost properties which the Underground Railway have made in their annual report makes amusing reading; it was hardly credible that such absent-minded people exist in these islands. For instance, one can, perhaps, understand a doctor's assistant's leaving some human bones in a tube, but what sort of person was it who abandoned a cask of champagne? (One would have thought that such a treasure was, like the waters of Grantchester, "unforgettable, unforgotten.") It is rather charming, moreover, to discover that women stand to men as property-losers as sixty stands to forty: this is, indeed, a curiosity, for it has always been a general assumption that men are more absent-minded than women.

A Lob Bowler.

A man who represented one of the most picturesque phases of Cricket—the bowling of "lobs"—is now gone from us in the person of D. L. A. Jephson. It is curious indeed to think how the lob survived into our more *mouvementé* time, yet no one can forget the names of Jephson, Simpson-Hayward, Humphreys, or Lyttleton. Jephson was a great figure in his day, though it is not possible to think that his stuff would have any terrors for the modern professional, whose patience would surely break a lob-bowler's heart. From lesser batsmen, of course, "underhands," particularly spinning things with an occasional "sneak," can extract such contempt as soon to ensure the bowler's success, but hardly any batsman really feels himself beaten by an underhand—he has merely capitulated to a rather despicable foe.

Birmingham and the Anglo-Catholics.

The dispute between the Anglo-Catholics and what is called the main stream of thought in the Church of England has broken out locally at Birmingham, where Bishop Barnes is fighting a number of Anglican priests on a legal issue. From the outsider's point of view it would seem that Bishop Barnes, who, unfortunately, has obscured, if not the issue, at least the general affair, by his description of certain traditionally Christian (Catholic) practices as "magic," has the better case. The Anglo-Catholics are in an extremely difficult, not to say illogical, position. The conviction is growing that no State Church can properly retain such men, although, admittedly, there is an equal suspicion creeping up that the question of the retention of such preachers as Bishop Barnes and the Dean of St. Paul's is becoming very delicate.

British Art.

It is impossible to stir the public on the question of British Art, so ingrained is the national belief that such things as Painting and Music were better left to that strange breed of men known as foreigners. No great hopes, therefore, can be held out for the success of the campaign which was begun last week with a public letter from Sir Joseph Duveen, written to the Premier on the subject, and with the Premier's subsequent enthusiastic support of the proposal to encourage British support for British pictures. It is indeed pitiable that a nation which at the moment is second only to France in the art it is producing should suffer the sight of some of its most original artists going in penury.

English art, unlike French art, receives practically no official support, and the big dealers for the most part trade in old masters. Private patrons do, of course, still exist, but they are too few for the growing number of worthy artists. Yet the present state of affairs is, according to Professor Henry Tonks, head of the Slade School, not so bad as it was in the 'nineties. This artist states that there really is a larger public interest in art, evidenced by the increase in the numbers not only of those wishing information on artistic matters, but also of those eager to exploit that desire. But in the crucial test, the growth of the numbers of buyers, the outlook is not so hopeful. It had been thought at one time that the influx of young women into the new art schools of our time would have meant a gradual conversion of their relatives into purchasers of pictures, but this, again according to the head of the Slade, is not so.

BOOK REVIEW.

THE LAND OF THE BOOK.

"TRAVEL TALKS ON THE HOLY LAND." By Mary A. Hatch. Illustrated by Ella K. Crossley. (London: Marshall Bros., Ltd., 5s.)

This book, slight though it is, being but the impressions of a traveller through Palestine, evidently proceeds from a sincere affection for the Holy Land. For this one can pardon faults that would otherwise grate upon readers more familiar with Palestine. Though the writer's mind "leaps" backward through time without difficulty, ("nearly two thousand years" when visiting one site, and "a thousand years" somewhere else), the book shows interest but no imagination. The whole essence of Palestine, with its amazing vitality, the fragrance of its mystical appeal, its challenge to every aspect of the human mind, affects and stimulates the imagination in an extraordinary degree. In these "Travel Talks" we miss any hint of such impression accepted and absorbed from Palestine. The Biblical associations excite her ardent comment, but little else. It is a pity that a book so slight as this should have ventured on such debatable ground as the site of Calvary or the Sepulchre of Christ. It is not *only* "the Greeks and Roman Catholics" who "have a great church in the city in which they claim to enclose Mount Calvary and the tomb of Christ" (p. 18). All the Eastern Churches, and, indeed, a large proportion of the Western believe in the authenticity of this venerable site; and the shrine that has lighted the devotion of Christendom through many centuries, that inspired the Crusades, and is still the dearest and most sacred spot on earth to many million souls, should at least excite in us feelings of reverence and sympathy. Miss Hatch proceeds, "But we remember that Jesus 'suffered without the gate,' that the place where they crucified Him was 'nigh unto the City,' not in it; so we look elsewhere for the site of Calvary." She finds it in the "rocky little hill" near the Dominican Convent of St. Etienne. The large hollowed out places in its rocky side, in which some have traced a resemblance to the eyeholes of a skull, were made by blasting, so we were told by an old resident, an expert in Palestinian lore, who remembered the hill before the "sockets" were there. We think that Miss Hatch should have named some of the "many learned men" who "agree in believing this to be the actual site of Calvary."

This may seem too severe criticism of mere "Travel Talks," but the questions concerned are big ones, and to treat of them without due sympathy is a blot upon an otherwise pleasant little book. It ends on the right note. "We have heard grumbling tourists declare themselves disappointed with Palestine . . . For ourselves the weeks spent in the Holy Land have been among the most wonderful of our lives, and we find ourselves immeasurably enriched by the sacred memories we have carried away with us." The illustrations are excellent, well chosen, and very artistic, and bear out the text very well. The book is admirably produced, paper, print, and binding leaving nothing to be desired. E. M. E. B.

NEWS IN BRIEF.

The Court-Treatt Motor Expedition arrived at Luxor on January 19.

Viscount and Viscountess Allenby left Sydney, New South Wales for New Zealand last Friday.

Signor Mussolini and the Albanian representative in Rome have exchanged ratifications of the Italo-Albanian Treaty of Commerce and Navigation.

The Times states that a Greek representative will shortly go to Sofia to negotiate for a railway convention between Greece and Bulgaria providing for the linking up of certain lines.

At the annual dinner of the Mining and Geological Institute of India, Mr. Robertson, president, predicted that the annual output of Indian coal would be 50,000,000 tons in twenty years' time and 100,000,000 sixty years hence.

The Belgian Government has telegraphed its agreement to proposals dispatched to Brussels by the Turkish Government for the abrogation of the existing discrimination where Belgium is converned in the matter of customs duties.

Arriving in Angora last Thursday morning and installing himself in the villa residence at Chankaya assigned for his stay, Sir Ronald Lindsay later in the day visited the Foreign Ministry and met Rushdy Bey as a preliminary to proceeding with conversations on the Mosul question.

A life-size bronze statue of Athena has been found at Soudena, the site of the ancient Lousoi, where once stood the famous temple of Artemis Hemera or Hemerasia. Excavations have been made at Soudena for some years by the Austrian School of Archæology at Athens.

In accordance with an agreement between the Egyptian Government and Ibn Saoud's representative, Egypt will participate in the pilgrimage this year, and the Government has nominated Mohammed Azmi Pasha to conduct the Holy Carpet to Mecca.

The *Morning Post* Athens correspondent states that in an interview with Sir Frederick Halliday and the British Minister on January 20 General Pangalos denied having any intention of abolishing the British police mission, adding that he had not decided on the abolition of the Police School at Corfu.

The Commission appointed by the late Greek National Assembly to investigate the responsibility for the *débâcle* in Asia Minor in 1922 has commissioned the Greek Consul-General in Paris to invite General Plastiras, who lives there, to make a declaration on oath regarding his action during the Turkish attack, and to reply to a series of questions drawn up by the Commission.

NOTES OF THE WEEK.

(Continued from page 96.)

to understand the need for these drastic actions. It is part of the anomaly of the situation that the general condition, commercially and industrially, of Greece is, for the present, very favourable. The State finances, however, are all at sixes and sevens. Some inconsistency has been discovered by the British Press in the fact that General Pangalos should have chosen this moment tor abolishing the so-called Ministry of National Economy. The Ministry, of course, has nothing to do with effecting economies in national expenditure; its concern is, or was, matters of national housekeeping *(oikonomeia)* in which was included the spending of money on public health, tourist propaganda, the upkeep of roads, etc.

PERSONAL AND GENERAL.

TO-DAY

January 28, 1926 (New Style).
January 15, 1926 (Old Style).
Rajab 14, 1344 A.H., of the Moslem Calendar.
Shebat 13, 5686, of the Jewish Calendar.

The Roumanian Minister has returned to London from Paris.

Sir Frank and Lady Newnes have returned to 1, The Boltons, Kensington, W., from India.

Baroness Zouche of Haryngworth and Sir Frederick Frankland, Bt., leave England to-day for Egypt.

Air Vice-Marshall Sir Vyell and Lady Vyvyan sailed from Tilbury last Friday for the East in the P. and O. steamship Rajputana.

The Indian Empire Club will hold dances on February 13, February 27, March 13, and March 27 at the Hyde Park Hotel.

Mrs. Willoughby Pemberton and Miss Camilla Pemberton left London last Friday for Egypt, and expect to be away till April.

The Hon. Mrs. Joicey and Mrs. Ralph Eustace-Smith have left for Egypt, embarking in the P. and O. steamship Naldera at Marseilles.

Mr. and Mrs. Arthur Colegate left for India last week in the s.s. Ranpura, and expect to be away for three months.

The Marquess and Marchioness of Linlithgow left London last Friday for Egypt. They will be away for two months.

Lord Denman left London last Thursday by the P. and O. special train on his way to Port Said. Other passengers were Major-General Sir Neill Malcolm and Sir John and Lady Davies.

Lady (Henry) Sharp left London last Friday for Mentone. Her daughter, Mrs. Ely Eliott Palmer, wife of the American Consul-General to Bucharest, who recently visited her, has returned to Bucharest.

M. Colban, head of the Minorities Section of the League of Nations, arrived in Athens last week and visited the Foreign Minister. It is stated that M. Colban is also interested in the question of the settlement of the refugees.

Sir James and Lady Baird, Lady Spielman, Sir James Crockett, and Sir John and Lady Byford were among the passengers in the Arcadian, which left Southampton last Friday for a six weeks' cruise to the Mediterranean and Egypt.

Lord Irwin, Lieutenant-Colonel commanding the Queen's Own Yorkshire Dragoons, was the guest of "B" Squadron of that regiment at a farewell dinner at the Mansion House, Doncaster, last Saturday evening.

A farewell dinner to the Viceroy-Designate of India, Lord Irwin, will be held on March 11, organised by the East Indian Section of the London Chamber of Commerce. Tickets (25s.) can be had of the Secretary of the London Chamber of Commerce, 1-3, Oxford Court, Cannon Street, E.C.4.

Appointment Wanted.

ADVERTISER, having exceptional knowledge of various Treaties of Peace and experience in the preparation and presentation of claims for compensation thereunder, is open to accept engagement, full or part time.—Write Box 1739 Sells, Fleet Street, E.C.4

PROMOTIONS, APPOINTMENTS, ETC.

Mr. Robert Graves has been appointed Professor of English Literature at the Egyptian State University, and has already left for Cairo.

The appointment of Mr. Robert William Lyall Grant (Attorney-General, Kenya) to be a Puisne Justice of the Supreme Court of Ceylon has been gazetted.

Colonel C. C. Palmer, C.B.E., has been appointed to officiate as Master-General of Supply at Army Headquarters in Delhi, during the absence on leave of Major-General Sir Edwin H. de V. Atkinson, K.B.E., C.B., C.M.G., C.I.E. Colonel Palmer has been filling the dual positions of Deputy Master-General and Director Artillery in the new Supply Branch.

The King has given orders, among others, for the following promotions in, and appointments to, the Order of the British Empire, on the occasion of the ending of the British Empire Exhibition:—

K.B.E. (Civil Division).

Theodore Charles Owen, Esq. (Ceylon).
M. R. Ry. Diwan Bahadur Tiruvalangudi Vijiaraghava Acharya Avargal, M.B.E. (India).

C.B.E. (Civil Division).

Frank Arthur Money Hampe Vincent, Esq., C.I.E., M.V.O. (India).

M.B.E. (Civil Division).

Major R. T. Little (Palestine).
Louis J. Randon, Esq. (Malta).

INDIA

THE GATEWAY OF INDIA: BOMBAY.

THE VICTORIA MEMORIAL: CALCUTTA.

"ONE VICEROY RESIGNS."

If Lord Irwin and Lord Reading happen to be students of Rudyard Kipling's verses, they will both remember the lines written under the above title, some of which are still curiously applicable; to take one instance of many:—

"The Congress doesn't purr. I think it swears
You're young—you'll swear too ere you've reached the end."

In opening the Legislative Assembly for the last time, Lord Reading passed another milestone on the road of farewells that began last October in Simla. Neglecting minor matters, his speech dealt with three subjects of prime importance—Agriculture, Trade and the Reforms; as well as with the position of Indians in South Africa. The latter bulks large in public prints and public speeches, but no Indian is, in private, really interested in it at all. One has said it before, but it is worth repeating—as the German prisoner of War in England had ceased to be potential cannon fodder, and was of no value except as a subject for propaganda about "prison atrocities," so the Indian outside India has lost all practical importance to the Indian politician inside India: who has not, and never has had, the slightest intention of following in his footsteps: except as a subject for propaganda about "racial discrimination." This, of course, does not obviate the necessity for the use of weighty phrases such as the statement that "the proposed measures are not, in our view, in accordance with those principles which bind the Empire together in a community of sentiment." It is a serious game, at which no one laughs—in public. In fact, the (apparent) divergence of opinion is radical, and no amount of argument can obscure the fact. Dr. Malan says that the measure "was based on the general proposition that the Indian is an alien element in the population of the Union, and that no solution of the question can be acceptable unless it results in a very considerable reduction of the Indian population." Lord Reading says: "We fully sympathise with the sentiment which all (vocal) classes in India have (publicly) expressed on the question"—the words in brackets being necessary to complete the real sense. "We could not accept a conference whose main object would be to reduce considerably the number of Indians in South Africa." And that's that.

In the matter of agriculture, Lord Reading paid a tribute to the striking progress made in recent years by the Central and Provincial Agricultural organisations; but expressed the opinion that, "in view of the great importance of agriculture, there is room for even greater and more extensive co-ordination of effort towards agricultural improvement." For the furtherance of this result, he announced the appointment of a Royal Commission the terms of whose reference are given elsewhere in this issue. He mentioned that all Provincial Governments had been consulted, and proved to be in general agreement, before the appointment of a Commission was recommended. In the face of this unanimous opinion, it would be presumptious to suggest that the Commission is instructed to inquire into facts that are not only perfectly well known already to the men on the spot, but easily accessible to all less fortunately situated: and to make recommendations on a similar basis. One result of their deliberations will certainly be, that things will "mark time" until they have reported: and it appears not unlikely that another may be to intensify jealousy between the Central and Provincial organisations, the existence of which seems to be hinted at in the terms of reference. In the matter of trade, Lord Reading said that this was improving: and reiterated the opinion, already expressed in one of his previous farewell speeches, delivered at Calcutta, that this pleasing result was largely due to the activity of his Government: in particular, to the reorganisation of the Railway Department and the separation of railway from general finance. These remarks, perhaps, hardly do justice to the European mercantile community; though it is probable that they do not resent them—if the combination of official and non-official effort results in improved trade, those who reap the material benefits do not mind how the theoretical credit is apportioned between them, even if the correct percentages should be as 90 to 10, and become reversed in the telling. The speech went on to say that the railways "have been able satisfactorily to consolidate their financial position"—presumably a reference to the recent grouping arrangements—"and it is now possible to make a beginning in the direction of reducing rates and fares, and concrete proposals are now under consideration." A rather characteristic Government of India perversion of one of the most important recommendations of the Acworth Committee is, in this connexion, worth notice. The Acworth recommendation was for a Rate Tribunal "to adjudicate between the railways and the public on the questions of the rates and fares levied." The Government of India have decided to set up "a Rate Advisory Committee, to report to Government." While on the subject of trade, Lord Reading referred to the suspension of the cotton excise duty, as to the permanent abolition of which he invited the Legislative Assembly to decide. This invitation was accompanied by the reminder that the Assembly "is understood to have already approved of the principle that abolition should take precedence over remissions of Provincial contributions." This, no doubt, was not intended as a suggestion that the representatives of Provinces other than Bombay should vote against it: but merely as a notification that, if the other Provinces should complain that the millowners of Bombay had been subsidised at their expense, they must remember that this was the choice of their own representatives, not an arbitrary one of the Government. As regards the Reforms, Lord Reading referred with regret to the poor response that had been accorded to Lord Birkenhead's call for co-operation. He said that "he thought he had detected in the Legislative Assembly, though Government had been defeated on various occasions, a greater disposition to consider problems on their merits and to discard purely obstructive tactics." It is evident that the Swarajist "rebels" have noticed the same tendency, and that this has emboldened them to put forward the suggestion

Digitized by Google

that it should become the rule rather than the exception, and should be adopted as the policy of the party, under the name of "responsive co-operation." But, added Lord Reading, the Assembly's amendment to the resolution on the Muddiman Committee Report showed no evidence of a desire to accept Lord Birkenhead's invitation, nor any promise of greater co-operation and good will.

In the debate that followed, it at once became evident that the Swaraj Party still adhere to their uncompromising attitude. Their leader, Pandit Motilal Nehru, reiterated the argument that the call for co-operation amounted to a demand for unconditional surrender on the part of the Swarajists: and countered Lord Reading's remarks about the Assembly Amendment, by describing it as a "gesture" to which the Viceroy had not responded. He declared his suspicion that the object of the appointment of a Royal Commission on Agriculture was "to establish Dyarchy permanently and to put the agricultural population in such a condition of dependence on the bureaucracy as to alienate them from the political class and deflect them from the pursuit of Swaraj." Here no doubt—though we are told that he sat impassive during the whole of Lord Reading's speech, and that one of his less well-mannered colleagues ostentatiously pretended to sleep through it—Motilal Nehru spoke from the heart. To the professional agitator, burning to rouse the peasant to a realisation of the disabilities of his present lot, it is intolerable that the authorities should seriously set themselves to try to improve it. This is an offence that disgusts the Swarajist politician no less than the professional Communist, who characterises it as "a sinister Reformist conspiracy" which must be defeated by every possible means. Probably the Pandit is not sufficiently familiar with the phraseology of the Communist International to describe the Government proposal in those exact terms; but his denunciation of it comes to precisely the same thing: and he burns with indignation, that is truly Bolshevik, at the dastardly attempt of the agricultural Short to offer a form of friendliness superior to that of the political Codlin. The appointment of the Royal Commission will, at least, give Codlin a longer breathing space, in which to continue undisturbed his disparagement of Short, than he could, a few weeks ago, have reasonably expected.

CURRENT TOPICS.

The Anglo-Indian Question.

The letter of Mr. G. B. Scott, which appeared in the last issue of THE NEAR EAST AND INDIA, discusses a matter of very real importance, that demands the serious consideration of those engaged in settling the scheme of the political future of India. Anglo-Indians are, at present, recognised as forming a separate community—witness their "communal" representation in the Legislative Assembly, in the person of a nominated member. Mr. Scott evidently envisages the continuance of this separation; but the suggestion has been made, by certain Indian politicians, that the Anglo-Indian, who is already a "statutory native" of India, should drop the qualifying appellation and class himself as an Indian pure and simple. The desire of the great majority, at any rate, would certainly be in the opposite direction—that they should be included in the European community. Mr. Scott says that, if Anglo-Indians are to be enlisted in the Regular Army, they should be considered as British soldiers; for "the men fitted by physique, education and manner of living for enlistment are, to all intents and purposes, British." In this lies the crux of the matter. The community undoubtedly includes many members who are "to all intents and purposes British"; but it contains even more, perhaps, who are to all intents and purposes Indian. Even among the former class, there are many whose outlook on affairs is, in some essential matters, more Indian than British. The writer of these notes was a member of a Committee which sat, shortly after the conclusion of the War, to consider applications for direct appointment to the commissioned ranks of the Indian Police. Among the applicants there were a large number of Anglo-Indians. One of the questions asked from all of the candidates was, "What did you do in the War?" It is no exaggeration to say that the reply of three out of four Anglo-Indians, to this question, was "I applied for a commission in the Indian Army Reserve of Officers." To no single one of them did it appear to have occurred, after failing to obtain a commission, to try to enlist—if in no other unit, then in one of the various Anglo-Indian units raised for service in Mesopotamia. Taken in the mass—there are, of course, many honourable exceptions—Anglo-Indians seem particularly prone to expect things to be done for them, and to let things go by default if this is not done. Even in Mr. Scott's letter, it is not difficult to trace the same idea; Anglo-Indian colonies can only succeed "if supervised *and financed* by Government," and the right stamp of settler can only be secured by the establishment of "agricultural and industrial *free* schools," in healthy localities.

In years to come, it may be hoped that the Anglo-Indian will recognise the obligation that lies on him to work out his own salvation; but, as things are at present, he is, more often than not, quite incapable of doing this. It is a matter of temperament and environment, which may be deplored, but must be recognised. Mr. Scott makes out a good case for the actual, and even more for the potential, value of the Anglo-Indian: it remains for those, who speak for the community, to press this point of view upon Government, and to urge it, in its own interests, to come to their rescue before it is too late, and to endeavour, with parental care, to train a hitherto neglected community to become a body of highly useful citizens; a result which, if it could be achieved, would amply repay the successors of those who made it, and which is, at any rate, worth a vigorous attempt at achievement.

EDMUND CANDLER'S

Brilliant Indian Novels:

SIRI RAM

A Transcript from Life.

7/6 net.

and

ABDICATION

7/6 net.

The Times in its obituary notice of Mr. Edmund Candler, whose untimely death took place a few days ago, says of *Siri Ram*:

"A most striking contribution to the study of Indian revolutionary psychology. It shows with wonderful insight the ferment produced in the young Indian mind by a highly artificial system of alien education."

And of his much-discussed novel *Abdication*:

"A brilliant study of the psychology of the Indian masses stirred to discontent against a "Satanic" Government by the teachings of a Hindu saint, in alliance with Mohammedan fanatics."

Mr. Horniman.

It is announced that Mr. Benjamin Horniman, who was deported from India in 1919, has resumed the editorship of the *Bombay Chronicle*. The refusal to him of permission to return to India has, for a long time past, been one of the (very minor) grievances of extremist politicians, particularly in Bombay: and it is only within the last few months that a demand for his return was refused by the Secretary of State. It does not appear that this decision has actually been rescinded; it would seem that his return to India has been winked at rather than sanctioned; for it is stated that he obtained a passport for Ceylon in Paris, and that it was only when he had landed in Ceylon, and applied for permission to proceed to India (no passport is required between India and Ceylon) that his request was granted. The cables state that, on his arrival in Bombay on January 12, he was escorted in procession to the local National Congress headquarters, where a reception was held in his honour: and that he has resumed the editorship of the *Bombay Chronicle*.

The circumstances of Mr. Horniman's deportation were peculiar. There were, in 1919, a number of British soldiers in India awaiting demobilisation and repatriation, when the retention of their services became necessary owing to the outbreak of war with Afghanistan, following on the troubles in the Punjab. Among them there was a malcontent section which argued that, if it had been desired to defer their demobilisation on account of anything connected with the Great War, for which they had enlisted, they would have raised no objecton; but that the Afghan War was a matter that affected India alone, and had no connexion with the Great War; so that it was not fair that they should be retained in the service in order to help India to settle her local quarrels. In the attempt to placate the malcontents, the mistake was made of asking them to agree to stay on for a very limited period—three months, if one's memory is correct: and this they agreed to do. But, when the time expired, it was still not possible to let them go: and discontent again became vocal. It was considered that some of the contents of the *Bombay Chronicle*, and the method of its distribution, were exercising an undesirable influence on the soldiers in question—a charge that has always been strenuously denied by Mr. Horniman; and it was for this reason that his deportation was decided on.

It is unlikely that anyone who has met Mr. Horniman personally, whatever he may think of his political ideas and of his methods of expressing them, would deny that he is a clever man and an able journalist. During the War the writer of these notes, as Chief Censor in India, had an interview with Mr. Horniman, of which he retains lively and pleasant recollections; for the Editor of the *Bombay Chronicle*, though—like all journalists in India—a strong opponent of the restrictions imposed, met his attempts to smooth matters over in a reasonable and friendly spirit which was much appreciated by his visitor, who, to tell the truth, had been rather alarmed at the prospect of the interview. During Mr. Horniman's absence from India, the editorship of the *Bombay Chronicle* has passed through a number of hands, good, bad and indifferent. It cannot be denied that it is an important organ of Indian political opinion: and it may be hoped, with some confidence, that it will, under Mr. Horniman's editorship, now resume its proper place as a responsible "opposition journal," and will discard the abusive attitude which, under much less competent guidance, it has lately thought it politic to adopt.

The Charka in Egypt.

According to a Chicago newspaper Mr. Gandhi's cult of the "charka" (spinning wheel) is extending to Egypt. One of the leading lights of the Indian Central Khilafat Committee, Dr. Ansari, is represented to have convinced the Egyptian fellaheen of the advantages that will follow on the adoption of the Indian type of spinning wheel, and to have promised that Mr. Gandhi will send a number of experts from India, to instruct them in its use. As in India, a necessary adjunct of the campaign in Egypt is to be a boycott of foreign goods: and it is asserted that several influential Egyptian Nationalists, owning large tracts of cotton growing land, have decided to take up hand-spinning "as a method of economic and political propaganda for the regeneration of their country." Mr. Gandhi will doubtless be pleased to know that his charka campaign, that is now so markedly languishing in India, is to receive a new lease of life in Egypt. It is not so long ago that he announced his willingness to proceed to the North West Frontier of India, there to wean the Pathans from their truculence by instruction in hand-spinning: a suggestion that he, probably wisely, afterwards though better of. Perhaps he may now think it advisable to visit Egypt himself to give a practical demonstration to his new disciples; that is, of course, if the claims of his ex-compatriots in South Africa do not appeal to him more strongly. It seems evident, at least, that the year's rest which, as he has lately announced, he intended to take after the conclusion of the Cawnpore session of the Congress, can, if he so desires, be spent in some place more likely to appeal to a man of his spirit than the "Himalayan retreat" which is popularly expected to be its scene.

Somehow it always seems to be the American newspapers that get hold of these exclusive tit-bits of news about India. This was particularly noticeable in the earlier days of the War; when a number of American newspapers stated—on the unimpeachable evidence of "a returned missionary"—that the whole of Northern India was in open revolt: that England had called on Australia to help: and that 80,000 Australian troops had landed in Ceylon and had been sent straight up-country where they vanished into the blue—presumably destroyed, to a man, by the victorious revolutionaries. Also, on the same evidence, that an Indian regiment at Jhelum had mutinied: other Indian regiments had been called in, to disarm the mutineers, but had fraternised with them and turned their rifles against the Englishmen; whereupon the officer commanding the station had taken refuge in the Fort, along with a handful of Europeans and a large number of women and children, there to sustain a fortnight's siege: at the end of which time the mutineers stormed the fort and massacred everyone in it.

It is only fair to say that purveyors of this kind of "war correspondence" were not exclusively American. In the course of his duties in the censorship, the writer of these notes himself saw a letter from a private in an English territorial battalion, obviously written to his "best girl," with the idea of impressing her with his prowess, recounting his adventures on the march up to Rawal Pindi. The last part of his trek was made in face of hordes of Indian rebels, and culminated in the capture of Rawal Pindi by assault, in the course of which engagement the writer stated that "I killed fourteen of them black ——s myself, with my bayonet."

India and the Persian Gulf.

A writer in the *Japan Times* has discovered that India was the real cause of the Great War: and will, unless the problem is tackled in the proper manner, soon become the cause of another. England's possession of the vast Empire of India had roused the envy of other nations, and Germany had put this into practical form by her attempts to extend her influence to the Persian Gulf. England countered this move by so arranging matters as to bring about the Great War and the defeat of Germany; but it is at the Persian Gulf that British interests in India are vulnerably threatened: and, to keep India and communications to India intact and unchallenged, "Britain is carrying on a series of aggressions on countries bordering on the Persian Gulf, aggressions that will ultimately wreck the British Empire as surely as they did the Roman Empire." Iraq and Mosul: "the establishment of an Arabian Empire under British suzerainty: the attempt to reduce Egyptian independence to a mere shadow: penetration, by fair means or foul, even into far-off Tibet; the virtual robbery of Persian independence by the Anglo-Persian Treaty, happily repudiated by the strong nation-

Digitized by Google

alistic spirit of the Persians"—all these are but parts of the same policy, that is now "concentrated at Bahrein, a place vital for England as a pathway to India." It is interesting to learn that, in 1922, "a National Congress of the people of Bahrein "assembled and demanded that the administration of the island should be carried on by their titular ruler instead of being usurped by the British consul: and that, in case of refusal "the unfortunate people declared that they would rather migrate than submit to an intolerable state of servitude." All the talk about the shifting of the centre of gravity from the North Sea to the Pacific is mere propaganda, skilfully designed to cover British activities in the Near East: and it is time for people to recognise this fact, unless they want to be "bamboozled as they were in 1914 and made to dance to the tune of the drum diplomatic." England has stimulated the growth of modern armies by her conquest of India: and even now England's army is "maintained at double the strength of those of other European nations, counting both British and Indian troops, for the sake of India."

And what is the remedy? "Unless India becomes free, on terms of perfect equality with other nations, there will be no end to intrigues, bickerings and wars. World opinion should demand the discontinuance of an evil that has been allowed to fester too long. The Indian problem is a problem of world politics."

There are indications, in the phraseology of this article, that the writer of it is an Indian. If so, he is probably one of the two or three prominent Indian revolutionaries who have taken refuge in Japan after making India too hot to hold them; so that the value of his opinions is on a par with his knowledge of geography. Perhaps the most interesting revelation is that of the hitherto unsuspected existence of a "National Congress" in the Island of Bahrein, and the fact that it is evidently in need of expert guidance. Its attempt to copy the Khilafat Committee's nostrum of "hijrat" (mass migration) shows that it is on the right path: and perhaps the redoubtable Shaukat Ali, whose missionary efforts have so far not extended beyond Ceylon, might think it worth while to pay Bahrein a visit and there combine the business of propaganda with the pleasure of collecting "funds" for his usual worthy object. If Mr. Gandhi, at the same time, should decide (as suggested in another of these notes) to visit Egypt or South Africa, India would doubtless view the departure of both without regret; though the countries of their pilgrimage might perhaps echo the sentiments of the man who wrote, on a tombstone recording the fact that Mary Ann Smith had left this world and was now reclining on Abraham's bosom,

"It's all very well for Mary Ann;
But it's rather rough on Abraham."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 7.

The Moslem League Speech.

Sir Abdur Rahim's speech as President of the Moslem League has received every kind of criticism, and he to-day seeks to explain his motives in a letter to the *Statesman*. My speech was not intended for a bombshell, he says, but a Verey light; "don't you think that, this being the state of things, I was doing a real service to the country by giving unambiguous expression to the Mahommedan feeling so as to bring the whole matter under the light of public discussion instead of letting the situation go on degenerating into a widespread communal conflagration?" He claims that, throughout his speech, he insisted that in spite of past failures, the two communities should still work for unity; he adds that Hindu-Moslem fires are far from subsiding to embers, and that his speech received the warm approval of from six to seven thousand representative Moslems, with only half-a-dozen dissentients. His letter is not likely to modify the Hindu-Swarajist view that the speech was a deliberate attempt, by an ex-Government Minister, to stir up communal differences.

More Confusion.

This has been a week of conferences and feelers; but, of achievement, nothing. Bepin Chandra Pal had to intervene to secure a hearing for the Liberal President from Bombay at a North Calcutta meeting. An attempt to find a common basis between the Liberals and Independents was abandoned as hopeless. Bepin Babu devotes his weekly *Englishman* article to lecturing the latter on the folly of trying to make progress except through the Councils; but he has put back his Communist and Republican bogeys into the box since nothing was heard of either at Cawnpore. Meanwhile no party appears to be able to make a serious contribution towards practical politics. The Extremists are the "have-nots," and they want the spoils which have hitherto been the monopoly of the "haves," the Liberals. The Hindus have held the reins of actual power ever since they absorbed their Moslem conquerors; but, when a minority of seventy millions is given political rights by the counting of heads, it is too strong to be allowed to drift into an opposition. Hence the Mohammedans have found many benefits from the new state of affairs, far exceeding the board and lodging and creature comforts that the Swaraj party gave them on their first Council entry; but the Moslem League has shown that it has no intention of being swallowed: and it is pulling its too complacent section of Extremists back from the Swarajist embrace. Meanwhile the Independents sit on the fence. And the crowds at the races and the Proclamation Parade were undoubtedly larger than ever!

Bread and Butter Politics.

One thing is clear; the politically-minded classes have never been so puzzled as they are to-day. No one knows who is his friend, or to whom he should "play up" as the coming possessor of power; and this removes the very foundation of life in a country where politics mean position, place and patronage. Apart from this being inevitable where the first rule of life is the prize to the strong, and every man takes what he can get, the situation here is that Government employment is the only one for the great majority of the educated classes: and, even now, not one fifth of the graduates churned out yearly can find posts. The family and not the parish vestry, is the unit of local organisation; brothers cousins and "-in-laws" live together in dozens in large houses or groups, and an increase in political influence means the power to lessen unemployment in the family and the drain on the common purse. The lower rungs of the educational ladder are widening every year, thanks to Western notions of democracy imposed by an alien government; at a stroke of the pen the posts open to Hindus in Bengal have been reduced by more than one-third, as these are now to go to Mohammedans; and the population is steadily increasing, with a lowering of the death rate thanks to Western ideas of sanitation, medicine, public health administration and famine relief. Before the War the economic problem was acute everywhere; now it is openly menacing to the middle classes who supply, almost exclusively, the politically minded. Hence the intimate connexion between politics and patronage in this country, which has by no means been introduced by the new type of politician; it is universal, in Native States as well as in British India. A return, prepared under the old régime in the Calcutta Corporation, showed an astute member to have nearly fifty direct and near relatives on the staff: and his prudence, in joining the Swaraj Party when it came into power, excited no comment whatever; it was regarded as a normal political act.

The Common Task.

The Currency Commission is continuing its sittings until the end of the month when, after a spell at Delhi, the members are going to England to settle their report. The Tariff Board has been sitting to hear the claims of the shipbuilders for protection; shipbuilding is rather a large word for the construction of the small units which is all that the local industry can claim to be able to do, and their application appears to be largely for assistance to enable them to quote sufficiently attractive prices to the Government Stores Departments to induce them to place orders in this country. Clive Street is settling down to work again after the Christmas holidays in an atmosphere tinged with optimism which, although it may have been affected by the rubber boom, probably originates in the expectation of a rising jute market.

The Trival Round.

On her previous visits to Calcutta, Lady Reading has been a keen visitor to the hospitals and that she has again resumed this practice is a pleasing sign of her restoration to health. Col. F. P. Connor, I.M.S., upon whom fell the responsibility of her recent operation, receives a knighthood in the New Year list which, contrary to expectation, was smaller than usual. Calcutta's Commissioner of Police becomes Sir Charles Tegart, an honour which has been truly earned by his efficiency and courage in a difficult and dangerous post; his knighthood has given real pleasure to all the best elements in the City. The Viceroy and Lady Reading have been making their first acquaintance with Darjeeling and Shillong both of which are particularly charming at this time of the year. An increasing number of Ditchers spent Christmas away from the City and the facilities for doing so both by the sea and in the hills are increasing every year. The Proclamation Parade was enormously attended, and included sailors and marines from the Effingham and Cairo, which have been lying in the river over the holidays. Judging by the Navy's generous hospitality, they have been as pleased to see us as we have been to see them. Polo has finished with the Scouts unexpectedly beating a powerful Army team in the final of the Championship, and the Poona Horse and the Governor's Staff winning the other events. The Race Course looked very different on New Year's Day, the mourning period having concluded: and at last Mr. Galstaun's Gaurisanker gave him a win in the Cooch Behar Cup which justified his looks and his price. The Symphony Orchestra improved on its first performance in the second concert, and attracted a crowded house: the Pantomime has been doing the same nightly and finishes this evening.

Markets.

Quiet but steady conditions have prevailed in the jute and gunny markets since their opening after the Christmas holidays. Only a small business in jute has been negotiated, partly owing to sellers holding off for better prices and also on account of the lower quality being offered, which buyers were not prepared to accept.

The piece-goods market has remained lifeless. Tea, on the other hand, has made a fair showing; the market here is not as steady as in London, but leaf and dusts were both better at the sale this week, though brokens were down slightly. The official figures are not yet to hand but it is anticipated that the crop for the year will fall short of that of the previous year by something between fifteen and seventeen million pounds.

With only three business days since the holidays, there has been but a small turnover generally in the share market, and prices in most cases have ranged at round about previous quotations. The better class of tea shares came in for a fair amount of attention; but rubbers, on the other hand, were inclined to sag.

The money market has continued dull and business in exchange has been on a very small scale, though rates have kept steady.

THE POWER OF SPEECH.

BY MUSAFIR.

The Professor and the Planter occupied the armchairs, while the Boy, back from India on his first short leave, sprawled, not ungracefully, on the sofa, and related with all the gusto of a neophyte the secret history of the latest teacup-storm. The story concerned one of the smaller reformed provinces, where the new hierarchy of Councillors and Ministers have so little work that there is plenty of time to spare for bickering. An Indian Collector, goaded by a long series of secretariat pin-pricks, had used unbecoming, or even "inconvenient," language regarding a Minister, the Minister had retaliated in kind, a regular slanging match had developed, and finally the heaven-born official had appealed to the Governor for the protection he was constitutionally bound to afford against a democratic tyranny that was of the earth earthy. "So Sir Pontius," the Boy went on, "had them both up, and told them exactly what he thought of them. They call him the Silent Governor, but the A.D.C. told me the language that came through the door beat anything he'd ever got from his first Colonel, and at the end of the jobation the two of them crawled out looking just like schoolboys who'd been birched by the headmaster. Anyway, the Minister resigned and went on a pilgrimage; and, when I left, the Collector was moving heaven and earth to get a transfer to Burma, because he said he'd lost his *izzat* in India."

"Ponty's a good, solid Victorian," the Planter observed thoughtfully. "I once played billiards with him from dinner till six the next morning, with the relieving marker snoring under the table, and we only stopped then because his train left at 6.25. But that was before the Reforms."

"He's none the worse Governor for that," the Professor answered. "If I had the choosing, I'd send out a real Victorian tough as Governor every time. At heart, Indians really think more of tan riding-boots than grey suède gloves."

"Then why do they make such a fuss about a few hard words?' the Boy asked. "I've been wigged myself once or twice, and I guess it did me good, though I didn't enjoy it at the time; but anyway it's nothing to fuss over."

"Go straight back to India, Boy," the Planted answered, "and get the facts. When you've got the facts, the reasons of things will come of themselves. The country was ruled mostly by strong language for a good few centuries before we went there, and naturally the classes that ruled it can't stand a dose of their own medicine. It's a sort of *tu quoque* for them, you see."

The Professor knocked out his pipe. "Talking of *tu quoque*," he remarked, "reminds me of the row between van Vliet and the Collector of—I forget whether it was Surat or Hooghly, or perhaps it was Masulipatam."

"What van Vliet was that?" the Planter asked. "There was a chap of that name in Tirhoot, I remember. Fine shot he was, too."

"That was another man altogether. The one I'm speaking of was the head of the Dutch factory, just about three hundred years ago, a solid fellow, but with no sort of tact. He was a new arrival: and, when he started to check the stock of goods on hand, he found that a parcel of pictures had disappeared in the custom-house."

"Do you mean to say they sold pictures in India in those days?"

"They were presents for the connoisseurs at Court, who had a mania for anything that came from abroad. This particular parcel was invoiced as studies from the nude, and it was a special order, so van Vliet was furious at its loss, and, rushing off to the cutcherry, where the Collector was sitting with his Kazi and the Kotwal, dealing out summary justice, he lodged a formal complaint against the customs people. It was an utterly tactless thing to do, because of course all the officials held together against outsiders, even if some of them occasionally bickered among themselves in private: and, with a parcel of that kind, it was tolerably certain the Collector had taken it

Digitized by Google

for himself; but, to make matters worse, he was in a vile temper just then, as he had been bilked by a highway robber."

"How do you mean bilked? Robbers don't usually do that."

"This chap had been let out on bail, on his promise to bring the loot into court, and now he'd come with a long story of how his partners had cleared out while he was in the lock-up, and he hadn't a single pice to offer. It was a petty case, a matter of eighty rupees or so; but in criminal work the occasional big windfalls are far less important than the steady flow of small sums, and the Collector had been counting on that eighty rupees, or most of it, for his own kitchen. So, when van Vliet arrived, he found the cutcherry in an uproar. The Collector was calling the culprit all the names he could think of, the Kazi, and the Kotwal, and the assessors, all joined in whenever the Collector stopped for breath, and the very peon who was hammering the prisoner with an old shoe answered every howl with a new epithet. At last, however, the inevitable sentence came, the sweepers dragged the condemned man out by the heels, and, while they were cutting his head off in the courtyard, the Collector, turning to van Vliet, asked his business. A wiser man would have put the business off, and merely paid a few compliments, but the Dutchman had no tact, as I said before, and he must needs unfold his grievance at length, prosing away in his clumsy Persian till he got everybody's back up, and at last the Collector let fly at him with a torrent of abuse. Van Vliet had to guess what most of it meant, and in fact the only thing he really understood was the phrase *sagmada bacha*, which recurred more than once."

"What does that stand for?" the Boy asked, while the Planter chuckled.

"Etymologically," the Professor replied, "it means no more than Puppy, but conventionally it is regarded as casting a grave slur on the pedigree of the person to whom it is addressed. Anyway, it was more than van Vliet could stand, and, roaring out '*Sagmada bacha* yourself!' he bolted from the cutcherry before the amazed peons could stop him, galloped back to the factory, and prepared for an attack. There wasn't much to do, because in those days people were usually on the look-out for accidents, and in a very few minutes he had the factory doors barricaded, the loopholes manned, and above the main gateway the handy little gun they called a 'murtherer' charged and ready. Presently down the street came a crowd of the Collector's peons, yelling Burn! Kill! Loot! and firing their muskets at random more or less in the direction of the factory. Van Vliet let them come well into range, then he discharged the murtherer, which amply justified its name, and the survivors turned hastily into the side streets, caling for water and tobacco.

"The rout of his peons set the Collector thinking. He was in the main a decent fellow, with some failings, like a good many Collectors I have known, and he felt that the demonstration already made had gone far to salve the injury to his honour. It would have been more satisfactory of course if the Dutch house had been rushed and looted, but the enterprise was obviously fraught with danger to the citizens whom it was his duty to protect: and so, after breakfast, he mentioned to one or two respectable merchants that he was not absolutely implacable. Van Vliet's temper lasted a little longer; but in those days the Dutch audit was very strict, the murtherer took a lot of powder, and he reflected that a surcharge of the cost of the war would make a very big hole in his exiguous salary. So, as neither of the belligerents had much stomach for the fight, the merchants found it a comparatively simple matter to negotiate the peace they wanted so much. Inside of twenty-four hours, an entirely innocent shopkeeper had confessed, under torture, to embezzling the parcel of pictures, and had paid twice the value to the Collector as a sort of honorarium, so that its restoration could be effected without loss of credit: and, in the cool of the evening, there was a friendly and quite unofficial gathering in the Dutch factory, where the memory of the unfortunate *tu quoque* was finally drowned in copious libations of the strong waters of Amsterdam. The moral of all which is simply that, if van Vliet had had the tact to defer his complaint to a suitable time, and then preface it with the gift of a bottle or two, the matter could have been adjusted without any trouble whatever."

"What about the peons who were killed?" the Boy asked. "I mean, was anything done for their widows, or that sort of thing?"

"If there's one thing I loathe," the Professor answered, "it's anachronism. Why on earth should anyone worry about dead peons, when there were plenty of live ones, as there certainly were three hundred years ago?"

INDIA OFFICE COMMUNIQUE.

The King has approved the constitution of a Royal Commission with the following terms of reference, "Generally to examine and report on the present conditions of agricultural and rural economy in British India, and to make recommendations for the improvement of agriculture and to promote the welfare and prosperity of the rural population: in particular, to investigate:—(a) the measures now being taken for the promotion of agricultural and veterinary research, experimental demonstration and education: for the compilation of agricultural statistics: for the introduction of new or better crops and for improvement in agricultural practice dairy farming and breeding of stock; (b) the existing methods of transport and marketing of agricultural produce and stock; (c) the methods by which agricultural operations are financed and credit afforded to agriculturists; (d) the main factors affecting the rural prosperity and welfare of the agricultural population; and to make recommendations. It will not be within the scope of the Commission's duties to make recommendations regarding the existing systems of land ownership and tenancy, or of assessment of land revenue and irrigation charges, or the existing division of funds between the Government of India and local Governments; but the Commission shall be at liberty to suggest means whereby the activities of the Governments in India may best be co-ordinated and to indicate directions in which the Government of India may usefully supplement the activities of the local Governments."

THE INDIAN MAIL.

Celebrations in Gondal.

A rather belated account of celebrations in honour of the sixtieth birthday of the Thakur of Gondal, which took place at the end of October, gives a detailed history of the progress of the State since the present ruler succeeded his father as a child of four, nearly 57 years ago. Gondal, though officially a first-class State, is a small principality in Kathiawar, with an area of just over 1,000 square miles and a population of 170,000; but, as a "model" Indian State, its importance is out of all proportion to its size. According to the speech of the Agent to the Governor-General, on the occasion of the birthday celebrations, Gondal is a Utopia among States: for he mentioned, as the last item in a list of the Thakur's measures for the advancement and prosperity of his people, "the total abolition of all taxation." The only parallel that occurs to one is that of the Principality of Monaco, whose population enjoys a similar immunity, though for a very different reason: anyone who, attracted by the absence of taxes, should propose to settle in Gondal, would not find a Casino there. On the contrary, he would be confronted with the sternest evidences of modern progress of a material kind: schools, hospitals, factories, etc., in which this small State has set an example that many of its much larger rivals might follow with advantage.

There are two great clans of blue-blooded Rajputs, the Surajbansi and the Chandrabansi, who claim descent respectively from the Sun and the Moon. The Thakur

Digitized by Google

of Gondal belongs to the "lunar branch": and claims to be able to trace his pedigree for 182 generations direct to a mythical ancestor named Chandra Raja. He has had a distinguished and varied career. He toured in Europe in 1883, and was granted ruling powers in the next year; but, so great was his thirst for modern knowledge, that he was a science student at Edinburgh University for fifteen months in 1886-87, and returned there in 1890, when he took up medicine and eventually took his degree as M.D. He made a voyage round the world in 1893, attended the coronation of Nicholas II. of Russia in 1896, and the Diamond Jubilee in 1897: having been previously present at the 1887 Jubilee, on which occasion his State was raised to the first class and he himself put in the list of "eleven gun" Princes. All his seven children —four sons and three daughters—received part of their education in England or Scotland: and his Rani, who accompanied him in his tour round the world, was the first consort of an Indian Chief to set aside the prejudices of her caste so far as to cross "the Black Water."

INDIAN COMMERCIAL NOTES.

The place occupied by Indian cotton in the Manchester market is of considerable interest at the moment. By this time last year 79,000 bales of Indian cotton had been sold to Lancashire spinners; and exactly the same quantity has been sold up to date during the current season. The price obtained naturally is nothing like what it was. On January 20 1925, Middling American was selling in Liverpool at 13.09d. and F.G.F. Tinnevelly at 12d., a margin of 109 points. By July 1 1925, the margin had increased to 181 points, and from that level prices declined gradually until early in November Middling American was selling at 9.93d. and F.G.F. Tinnevelly at 9.30d., a margin of 63 points only. By January 20, 1926, the comparative figures are 10.79d. for American and 9.55d. for Tinnevelly, showing a margin of 124 points. In view of the satisfactory output of the American crop, and the lower range of prices now secured, Indian cotton can only secure the business at its present margin of about 1¼d. "off" Middling American. Fortunately, the quality is good and, at this margin, the demand appears to be reviving. Scind-Americans are particularly popular just now.

In the London market there is nothing doing in Indian wheat, which is quoted at levels considerably above those ruling here. The Indian crop was short, but, in any case, exchange at over 1s. 6d. militates against business. In fact, India has become an importer of wheat, and it is reported that 8,600 tons were shipped from Australia to India during the second week of the current month.

The report of the Railway Board on Indian railways for the year 1924-25 has just been received. The general review naturally includes a reference to the acceptance, by the Indian Legislature, of the scheme for the separation of railway finance from the general finances of the country. During the year it is remarked that, although only 233 miles of new railway have been opened for traffic, at the close of the year there were 1,201 miles under construction; representing a programme which, when completed, will result in an addition of 2,285 miles to the existing system. The total number of passengers carried increased from 537 million in 1923-24 to nearly 544 million in 1924-25, and the net profit from less than 6½ to over 13 crores. It is interesting to note that first, second and intermediate class passengers together contributed only 4½ crores of rupees towards railway earnings during the year, as compared with over 34 crores from third-class passengers.

INDIAN EXCHANGE.

London, January 25.

We have had a quiet week in rupee exchange, with a moderate business going on at previous quotations. In Calcutta and Bombay the market has been steady at 1s. 6 5-32d. T.T., but merchants have had no difficulty in obtaining 1s. 6 3-16d. for ready and near delivery for all they had to buy. Importers' requirements, however, have not been sufficient to counterbalance exports, which have shown more activity, and Government has again had to bridge the gap. Its purchases during the week are close upon one million pounds.

Little interest has been taken in forward T.T. rates, which are 1s. 6 5-32d. up to the end of March, 1s. 6⅛d. April, 1s. 6 3-32d. May to October. No business has transpired at these quotations, but merchants would probably settle small amounts at 1-32nd higher.

Three months credits have been very steady at 1s. 6 15-32d. for delivery up to the end of February, but few commercial bills have been on offer and only for delivery within a few mails.

The last return of the Imperial Bank of India indicated that the trade demand had increased by Rs.460 lakhs, probably on account of the movement of the cotton crop on the Bombay side.

The London market has been quiet, with buyers unable to get much under 1s. 6 7-32d. T.T., although a month ahead has been done at 1-64th lower. Rates may be called perfectly steady at the above quotations, which are not likely to show any alteration for some time.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

Sudan Cotton.

The official opening of the Makwar Dam by Lord Lloyd on January 21 has helped to concentrate attention on what may justly be described as one of the most promising regions in the Empire. At the moment the Sudan means cotton, but later it will also mean trade, for, as I have indicated, the development of the cotton areas will have a steady effect on the purchasing power of the inhabitants. I have just received a report on the progress of the current season's cotton crop up to the middle of last month, and I think it will be of interest to set out the salient figures. The output of Sakellarides is estimated at 307,259 kantars, 260,000 of them being from the Gezira, while that of American is put at 112,349 kantars, of which 63,990 represent rain-grown cotton. The total estimated crop is therefore 419,608 kantars, and one may thus look for a crop of from 70,000 to 100,000 bales. The actual figures are as follows:—

IRRIGATED COTTON.

	Area (Feddans).	Total Estimated Crop. Kantars.
Gezira	80,022 ...	260,000
Tokar	14,000 ...	19,000
Kassala Cotton Co.	10,000 ...	18,000
Kamlin and Shambat	761 ...	2,463
Private Estates	2,284 ...	7,296
Miscellaneous. Khor Arbaat ...	800 ...	500

Near Eastern Fairs.

My remarks as to the growing importance of fairs in the Near East and the need for adequate British representation at them gain point from the results recorded at the two fairs held at Gorna Orekhovitza in Bulgaria last year. At the spring fair 177 firms participated, but this number increased to 420 at the autumn fair, and while in the case of the former event the value of the transaction recorded was £39,000, in the case of the latter it was £150,000. The Germans, as was to be expected, have been much to the fore at this fair, and while the only British exhibit was a small oil engine, the German exhibits, the British Vice-Consul at Sofia states, included threshing machines, motor ploughs and tractors running on crude oil, stationary crude oil engines, hydraulic oil presses, wood working, flour milling and other classes of small machinery, weaving looms—hand and electrical drive—ploughs, harrows, reapers and mowers, separators, wine presses, etc. It is the view of the British Vice-Consul that this fair undoubtedly presents great possibilities, and is likely to develop into an additional central mart of great importance to the manufacturer in search of markets. The spring fair will be held from March 27 to April 6, and this time it may be hoped that the British representation will be more substantial.

Drastic Financial Measures.

The latest development in Greece will not surprise anyone who has followed the unsatisfactory financial situation in that country. Once it was clear that the anticipation of the late Minister of Finance that the Budget would show a balance and that the exchange would be stabilised was not realised it needed no prevision that drastic steps would have to be taken if the position was not to go from bad to worse. The Minister of Finance, M. Tantalides, has taken the course of electing for a forced loan in preference to further inflation which, of course, would simply have meant a further step on the downward path. It is not a new expedient, for it was adopted in 1922, and on more onerous lines than are now proposed. Then all notes were cut in half, one half being converted into a six per cent. loan. The problem before M. Tantalides was that in due course an amount of 5,500,000,000 drachmæ had to be found, 300,000,000 drachmæ being required to cover the Budget deficiet, 1,200,000,000 for the repayment to the National Bank of floating debt advances, 1,500,000,000 drachmæ to redeem outstanding Treasury bonds, and 2,500,000,000 for the fiduciary note issue. It is being met by the compulsory conversion of one-quarter of each note into scrip of a six per cent. loan (notes of a value of 24 drachmæ and under being exempted), and by way of solution to the holders there will be drawings each year with prizes. Further, half of the Treasury loans outstanding that fall due next March are to be funded into eight per cent. ten year bonds. These measures will not provide more than a part of the sum required, but it is hoped that they will suffice to tide over the immediate crisis.

A Forced Loan.

Opinions will differ as to the merits of the expedient of the forced loan. One can understand that something can be said in an emergency for a forced loan, and as it has been successfully accomplished once in Greece, there is no reason why it should not be equally efficacious on this occasion. I am told by one who was there at the time that the process worked very smoothly in 1922, and Greece is certainly entitled to every credit for discovering a new financial resource.

THE BULLION MARKET IN 1925.

Events during the past year, such as the return of this country to an effective gold standard, lend a special interest to the annual bullion review of Messrs. Samuel Montagu and Co. We give the following extracts:—

The year 1925 has been noteworthy for several acts of successful diplomacy by the League of Nations, and for a distinct reduction of the fears and animosities left behind by the Great War. The success of the Conference at Locarno, followed by the signing of the Pact of London, cannot but lead to more cordial relations between erstwhile combatant countries, and, doubtless, to the solution of further problems, and to a lessening of the international distrust which has in recent years hindered finance and restricted trade.

In view of the expiry of the Gold and Silver Export Control Act of 1920 on December 31, 1925, a general licence was given to the Bank of England on April 28 for the export of gold coin and bullion, and it was officially announced that a Bill would be introduced dealing with the Bank of England obligations as to encashment of notes in gold and other details relating to the resumption of an effective gold standard at the end of the year. The Act received the Royal assent on May 13, 1925, and became immediately effective.

At the same time it was announced that export licences would be granted for gold bought from the Bank of England, and that, subject to the discretion of the Bank of England, sovereigns could be withdrawn for export. An interesting condition was imposed as to gold obtained from the Bank for export, namely, that it should be packed at the Bank of England by the bank's bullion porters, and that Bank of England officials should witness actual delivery to the steamship companies, air services, or forwarding agents concerned. This condition remains in force with regard to sovereigns withdrawn from the Bank of England for export, although all restrictions have now been removed upon the export of gold.

Psychology and Gold.

When the historian of the future makes his dispassionate review of the Great War and its aftermath, psychology will be observed to occupy an important place. For, in the disturbance of mental equilibrium during that momentous period, lies the key to many problems in the social, economic and financial life of mankind that now confront us, including those relating to gold and currency. The Great War spurred individuals to the utmost degree of effort and self abnegation, and then imposed a long and strenuous test of endurance. What wonder that overstrained and unbalanced mankind fell back upon a philosophy old as the hills! "Let us eat and drink for to-morrow we die." To this materialistic view can be attributed much of the present unrest, whether between nations or between employers and employed. The return by the United Kingdom to an effective gold standard was dictated by the hope that it would impart an atmosphere of confidence at home and abroad, and have a stabilising and favourable effect upon prices.

The importance of low prices to the United Kingdom as compared with those ruling throughout the world is obvious, for the population of this country mainly depends upon other countries for the necessities of life. It would be a mistake, however, to imagine that low or high prices are the basis of happiness. To the mass of the population a favourable ratio between food, housing, and clothing and wages, is necessary for contentment. In other words, the balancing of the working man's budget described so aptly by Micawber. The more complex our needs, the more provocative to disquietude does this question become. The simple wants of Diogenes saved him much of the present-day anxiety, and it mattered little to the labourer of the 16th century that he earned but a few pence a day when he could obtain a fat sheep for half-a crown, and other food, together with house rent and clothing, at equally cheap rates.

Labour and Capital.

In the revival of world trade and the cessation of strife between labour and capital lies the solution to our present troubles. Antagonism ought not to exist between capital and labour, for their relation is like that of electric energy to an accumulator. Capital is stored labour. Capital is vital to the prosperity of highly industrial and closely populated countries. Not so to that of the aborigine of Australia or Africa who gains his subsistence day by day and has little thought for the morrow. The mine, steel or cotton worker of this country cannot find employment without the provision of capital for his machinery, and for the finance of his products until they are brought to market, and usually for some time after. There are welcome signs that these facts are becoming more widely known, although extremists still call for the destruction of the "capitalist system" and ignore the disasters which have hitherto attended such attempts.

Artificial manipulation of gold movements in order to control prices is transitory in effect, and dangerous in use, because it interferes arbitrarily with economic law. Such action may prove successful for a time, but in the end must fail. The natural regulator of the flow or ebb of gold is the Official Bank Rate of Discount; judicious movements of this factor prevent over-production of goods by an excess of currency with too much ease in borrowing, or under-production through lack of currency and consequent difficulty in obtaining credit. To wield currency for the purpose of gaining an advantage over foreign commercial competition is alien to the ethics of a sound monetary system which should act as a fair exchange medium between nations and also between individuals. This applies particularly to the case of highly industrialised nations dependent upon external trade.

The readiness with which funds were obtained for the prosecution of the Great War on State Credit has led to a widespread impression that means should be obtained in like fashion for schemes of social betterment. The cases are quite distinct, for the salvation of the nation from destruction during the War called for desperate and reckless measures—the very fact that the State demanded that citizens should hazard their lives is proof enough of that. There is a wide difference between capital furnished by the State and capital loaned by individuals of the community in their private capacity. The former is the pawning of future labour, the latter is borrowing from the till—the labour of the past; hence the employment of the State's Credit for unproductive schemes demands the utmost caution.

Indian Gold Imports.

It was only to be expected that a prosperous India should absorb gold more readily when supplies became available, in order to make up the deficiency caused by abnormal monetary conditions during and subsequent to the Great War. The present series of good monsoons has therefore placed India in the happy position of manifesting its customary predilection for the precious metals, and Indian imports of gold during the *calendar year* 1925 constitute a fresh record. For the first eleven months of the year the net imports exceeded 55 crores, or say £41,500,000. The Union of South Africa contributed heavily to this large total. It officially reported gold shipments to Bombay during the whole twelve months of the year of £13,500,000, of which £1,800,000 was in sovereigns.

The large importation of gold into India has assisted the Indian money market and prevented the pressure for money—largely seasonable—which in former times has hindered freedom in financing Indian trade. The Controller of the Indian Currency stated in a recent report that "Bullion replaced considerable quantities of currency as a store of value, and the currency thus returned to circulation helped to prevent undue monetary stringency during the busy season."

Coincident with the imports of precious metal, most of which becomes part of the savings of the Indian people,

Digitized by Google

is a welcome improvement in their financial customs, namely, their ready use of bank notes and of the facilities granted by the Government for deposit of funds in the National Savings Banks. By the latter method thrift is encouraged and their wealth fructifies instead of being buried like a talent in the ground.

Silver.

Compared with preceding years the history of silver during 1925 has been drab and uninteresting, and movements of the price far less vigorous. With the exception of 25 days in September and October the cash price remained between 31 1-16d. and 32 15-16d. The total fluctuation, including the spurt to 33d. and over in those two months, was 2⅞d. The price for two months' delivery exceeded 32 15-16d. on only eleven days in September.

The reason of the greater uniformity in quotations has been the gradual withdrawal of the abnormal factors arising out of the Great War, such as the forcing upon silver alone the burden of providing remittances to India, the temptation to demonetise coin owing to its intrinsic exceeding its nominal value, and almost universal realisation of stocks, manufactured or otherwise, as a consequence of high silver prices. On the whole there has been little speculative interest, but, almost continuously, substantial silver positions have been held against China exchange, some on the bull and some on the bear side, which have been a steadying influence when prices showed a tendency to vacillate. The constancy of the Indian demand (encouraged by continued favourable crops) has been of important assistance to the steadiness of the market.

On the first of January the cash price was 31¾dd. Supported by persistent Indian inquiry, the quotation rose, and was maintained at 32d., or over that figure, from January 8 until March 11, exceeding 32½d. on only one day. The absence of keen competition, fairly continuous sales of Continental silver, weakening China exchanges, and the fact that the stocks in Shanghai had risen in three months about 25 per cent., were responsible for the easier tendency.

The lowest quotation of the year, 31 1-16d. cash and 31d. two months, were reached on April 24. The market remained listless for more than two months, but strengthened early in June, owing to the disquieting events at Shanghai. These were met by military action, much resented in native quarters. As usually happens when a sense of insecurity is awakened in China, a demand set in for silver, carrying the cash price again over 32d. The news from China continuing grave, bears hastened to close their commitments, with the result that on June 23 the price rose suddenly 7-16 (from 32d. to 32 7-16d.), a movement remarkable after so pulseless a period as had been experienced during the first half-year. During July the desire to prolong delivery of bought contracts carried the quotation for two months' delivery to a slight premium.

Like most events connected with China, the unexpected, so far as human foresight is concerned, often happens. During the disturbances to which we refer, which were directed against foreigners, instead of native money being drawn away from foreign control the contrary happened, and cash flowed into foreign coffers *for security*. Internal trouble might spell higher silver prices owing to the need of silver for payment of troops and purchase of food supplies, but this might be nullified by the stoppage of trade imports and the continuance of trade exports. Hence, no clear decision could be formed as to what might be the outcome of the Chinese crisis upon silver, and the various Japanese and Chinese Banks continued to hold divergent views. Meanwhile, business in silver was usually restricted to immediate and necessary wants, and prices fluctuated closely round 32d. till the middle of August.

Owing to the prospect of good crops following the seasonal rains in India, Indian inquiry broadened in the latter part of August, and silver for spot delivery went to a premium early in September. Continental supplies having fallen off, China being indisposed to feed the market, and America having largely sold in advance, the trend of prices was upward, and in September, owing to some competitive buying from China, quotations rose considerably. On September 5 the highest quotations for cash and two months' delivery were recorded, namely 33 7-16d. and 33⅜d. respectively.

Considerable fluctuations ensued in the latter part of September owing to erratic action on the part of China—one day a seller, another a buyer—but, on the whole, the tendency was toward easier prices. About the middle of October orders from China to prolong bear contracts accentuated the demand for immediate delivery, and raised the premium for prompt delivery on October 19 to 5-16d., and on the 27th ⅜d.; a record for the year; the premiums having varied from day to day. This demand raised the spot price again well over 33d., though the rate for forward delivery represented more fairly the real market level. Persistent selling on China account in the early part of November brought about easier prices, and in the middle of that month the cash price again went below 32d. From that date to the end of the year quotations remained about this figure. On December 30 the price dipped to 31½d., but rallied to 31 11-16d. on December 31, only 1-16d. below the opening quotation of the year.

The future of China, the methods by which it must work out its own salvation, are just as intriguing as ever. The influence of that great silver-using country upon silver is impossible to be divined. The Peking correspondent of *The Times* touched the gist of the matter when he said, "To guess the result of the wars now proceeding is impossible, for everything depends upon what troops remain loyal and what troops desert to the other side."

Production.

The world production for 1925 is not likely to differ much from that in 1924. Australasia may possibly contribute 1,500,000 ounces more. On the other hand, the Burma mines may be found to have extracted about 500,000 ounces less.

Taking into account factors that seem certain, and weighing the chances of those that appear uncertain, no reason for any important permanent upward movement in the price of silver is now apparent. The trend of prices on the whole is toward an easy level, for the causes which led to the wide fluctuations of prices in recent years no longer operate, and the abnormal impetus imparted to the price pendulum in 1920 seems, from the experience of the year under review, to have spent itself, and quotations may now be expected to swing to and fro within a moderate compass.

Considering the rise in the index number of commodities since the Great War, and the dependence of the world upon India and China for food and raw material, a level of about 4d. above the pre-War price can hardly be described as unreasonable.

The Turkish Government has postponed until February 20 the proposed eight-fold increase of Customs dues.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended December 31, amounted to £E14,195, making the total from April 1 £E267,197.

TURKISH MARKET FOR MACHINERY.

The gradual improvement of the agricultural and economic situation in Turkey during the last two years has been very encouraging to the trade in agricultural implements and farm equipment (says Mr. J. R. Mood, American Assistant Trade Commissioner at Constantinople in a recent report). Economic conditions in general, and the agricultural position in particular, during the current year may be regarded as favourable. This year's crops were the best since the War and farmers, as a whole, have realised satisfactory profits. However, the debts of many of them, resulting from previous unsatisfactory crops, have absorbed a considerable part of the returns from this year's crops and, while the condition of this class is improved, they are unable to set aside any considerable funds for new expenditures.

The use of modern power farm machinery and implements in Turkey is increasing steadily but somewhat slowly, which is owing mainly to the lack of money and the reduced purchasing power of most farmers. However, the Government and the agricultural schools are making strong and successful efforts toward acquainting farmers with the use of modern farm machinery and equipment and making known the advantages of modern implements and, while there still exists a strong conservative tendency among a great many farmers in the remote districts, a further improvement will contribute in a large measure to an increased use of modern implements.

The lack of adequate draft animals and labour in numerous districts, as a result of losses incurred during the War and the subsequent Græco-Turkish war, is very seriously felt and makes a larger use of farm machinery and equipment necessary. To overcome a lack of mechanical knowledge, the Government has opened several schools for the training of agricultural engineers and mechanics, as in many instances the absence of repair shops and skilled mechanical labour constitutes a serious handicap to a better introduction and a larger sale of modern farm machinery and equipment. It is hoped that the Government will gradually succeed in providing such skilled labour and that the newly established farm engineering schools will provide a number of trained mechanics in the near future.

Total imports of tractors this year amount to about 750 American machines. Some German tractors were also imported, but about 90 per cent. of all the machines imported into Turkey at present are of one American make of wheel tractors. The Turkish market gives decided preference to American power farm and harvesting machinery. Many power harvesting units are imported from France and Germany, but these are for the most part American products imported from those countries. By far the greater part of tractors and tractor ploughs used in Turkey to-day are of American make, 80 per cent. of the tractor ploughs being of one American make.

Hand and horse ploughs and old-fashioned reaping machinery are the most important items among the horse and hand-drawn implements imported into Turkey. Next in importance are binders and threshing machines. All these implements comprise about 90 per cent. of the total imports of farm implements. Other types imported are used to a minor extent at present.

Certain dealers state that if long credit terms could be extended in a more general and extensive manner, sales of all implements could be increased, inasmuch as such a procedure would enable most of the poor farmers to acquire modern implements, which, on account of their reduced purchasing power they are not able to do as yet. The Agricultural Bank and the Ministry of Agriculture are extending a certain amount of assistance to farmers in the way of loans. The extension of long-term credits to farmers in general would undoubtedly involve many risks in the case of bad crops, but it is stated that most Turkish farmers would endeavour to meet their obligations, and in the event of poor crops they would probably find it necessary to obtain an extension to their terms.

In view of the gradual and satisfactory improvement in the economic and agricultural position of the country, there are good prospects for a larger demand and increased sale of agricultural machinery and farm equipment in 1926. Old stocks of harvesting machinery which were available on the market have been large disposed of, and this would have a favourable effect upon the demand for new equipment. However, the most important factor in an increased demand and larger sales of farm equipment would be good crops, whereas unsatisfactory crops would have the opposite effect upon the trade. The great interest shown by the Ministry of Agriculture by agricultural schools, and the Agricultural Bank in increasing the use of modern farm equipment is very encouraging for the traed in farm machinery and implements. The serious efforts made by them to extend agricultural activity, on which Turkey is primarily dependent for its revenues and a more favourable trade balance, should largely contribute to a more important development in the trade in agricultural implements in coming years.

Motors and Motoring.

By G. B. B.

In every respect the modern car is much more reliable than that of a few years, ago and the carrying of spares is a custom which appears to be dying out. As a writer in the *Light Car* put it, a few days ago, at one time one never left the garage without two spare sparking plugs, a valve assembly complete, an assortment of nuts and bolts, and a well-stocked tool bag. Motorists then did not grumble, and they honestly believed that the trouble-free plug and the unbreakable valve would never be produced. They were wrong. Is it not quite likely, then, that those who believe the unpuncturable tyre to be impossible to produce are also wrong? A tyre which cannot accidentally leave the wheel, and which is not damaged by being run for a mile or so deflated, is now being produced, and is proving invaluable for aeroplane wheels. The inventor of it has solved problems hitherto believed to be insolvable, so let us hope that sooner or later something will be discovered which will for ever lay the puncture bogey. The carrying of a spare wheel should surely be unnecessary; it is ugly, heavy, and expensive, and it may be said, without fear of contradiction, that the more we eliminate the need for carrying spare parts, the more popular will motoring become.

A New Karrier.

It is barely a year ago since Messrs Karrier Motors, Ltd., of Huddersfield, put their first 6-wheeled chassis on the market, designed for loads of two tons, and intended for use in undeveloped countries where roads are either bad or non-existent, and where such conditions prevail as frequently make it advisable or necessary that the load should be carried on more than four wheels. A new and slightly larger model has now been produced by the firm which, whilst broadly speaking, on similar lines, will carry a gross load of 3 tons 5 cwt., and a net load of 2 tons 10 cwt. The engine is more powerful than that of the previous model, and is rated at 24-7 h.p., and the transmission is by a single-plate clutch and a four-speed gear box. There is a subsidiary gear box and a twin worm-driven rear axle to which power is transmitted by a propeller shaft with double universal joints. The sliding sleeve type of torgue member is retained between the axle worm housings, and the axles, which are jointed together by a pair of ball-ended radius rods connected to the spring brackets, are prevented from rocking, but can move independently in the vertical plane. The wheelbase of the new model is 12 ft. 6 in., and the load platform length is 12 ft. 3½ in. All wheels are of the detachable steel disc pattern, and the standard tyres are 32 x 6 in. single pneumatics.

The Commer Car.

I am now able to give the news that the old-established firm of Commercial Cars, Ltd., the well-known builders of lorries and commercial vehicles, and also of a very fine range of motor coaches and omnibuses, whose huge works are a familiar sight to all visitors to Luton, has been acquired by a subsidiary company of Messrs. Humber, Ltd., of Coventry. The new company, which will be known as Commer Cars, Ltd., will continue, with possible slight modifications, the commercial vehicle programme which was pursued by the old company. This association with the organised resources of Humber's will naturally result in an expansion of activities, and the high reputation which Commer vehicles have always enjoyed will be, if possible, enhanced. The general trading policy of the firm will be reinforced and strengthened, and wherever necessary the large and up-to-date plant at the Luton works will be increased.

British Cars Overseas.

For some time past a tendency to belittle British light cars, from the standpoint of their suitability for overseas use has been manifest. It has been sedulously fostered by the representatives of such Continental and American firms as hoped to secure the overseas markets for the products of their own manufacturers, and quite a number of potential buyers have been impressed with the statements made, and, in default of contradiction, have come to accept them as being true. The general tenor of the assertions is that the British made car is too light for its work, is made in too flimsy a manner, that its springing is bad, that its braking system is inefficent, and that its ground clearance is altogether inadequate for all except "billiard table" roads. Of course, those overseas buyers who have had experience in the behaviour of British vehicles know their sterling quality, and are unimpressed by these genially uttered fictions, but as the British manufacturer for some inexplicable reason seems altogether averse from advertising his productions to overseas buyers, and seldom or never troubles to contradict the statements made, there are a large number of potential buyers, especially in the Near, Middle, and Far East who accept them at their face value, and believe exactly what they are meant to believe, which is that for their particular work and in their particular country the British light car is not at all suitable. Nothing could possibly be further from the truth.

For many years past British makers have been learning all that hard experience could teach them as to bad roads, steep gradients, water splashes and atrocious surfaces. It has been said that it was impossible for that experience to be acquired in this country because we had not the necessary conditions. That is untrue; we have the conditions necessary for testing our cars, we have made the fullest possible use of those conditions, and we have profited by the lessons taught us in overcoming those conditions.

Let me impress upon my overseas friends that our cars have been given long and enduring trials, under the most severe competitive conditions, on roads, surfaces, and gradients which are so intolerably bad that they parallel

the worst obtainable in any overseas country where cars are likely to be bought. In the English and the Scottish "Six Days'" trials the routes to be followed are deliberately chosen for their general vileness; gradients of one in two and a half are deliberately chosen, the worst of sheep and mountain tracks are selected, and the most difficult of water splashes are included. The cars in the trials have to maintain a high average speed over 1,000 miles or more of the worst possible road conditions, and the lessons which have been learned during over a quarter of a century of such trials and tests have resulted in the British light car being at once the lightest, strongest and most durable vehicle anywhere obtainable and the one that is best suited for any and every overseas market.

A New Chassis.

I have been afforded an opportunity of studying the plans and specifications of a new chassis which has just been introduced by a British firm and whch is intended for passenger work. It has an exceptionally low loading line, a feature with which I am not in agreement to the full extent, but which many engineers claim to be an improvement, and the portion of the frame in the rear of tht back axle is unusually long, so that it can be cut down, if considered necessary, to meet the purchaser's requirements. The wheelbase can also be of any desired length, within reason, that of the chassis to which I am refrring being 16 ft. 9 in. The frame of the chassis is very carefully braced by deep pressed steel members and there is no question but that the chassis is a model of rugged strength combined with lightness and accuracy of design. The engine forms a single unit with the clutch and gearbox, has 3-point suspension, and is rated at 25.6 h.p., but is capable of giving out 40 or more. The clutch is of the fabric-faced multi-plate type and the gear-box gives four ratios suitable for use on the worst gradients and in the worst conditions. The wheels are detachable, of the steel disc type, on adjustable roller bearing hubs and shod with pneumatic tyres. The makers are Messrs. E. B. Horne and Co., Gilford Works, Holloway Road, London.

The Ceylon Market.

At the risk of appearing too insistent I must once again call attention to the possibilities and value of the Ceylon market. In every part of the country motor transport services are being established for the transport of provisions and other supplies and for the handling of estate produce. In 1923 only 318 lorries came into the island; in 1924 over 800 were imported, and during the first ten months of last year 951 motor lorries were sold in Ceylon, only 137 of which came from England. I do not think any words of mine could speak more eloquently than those bare bald figures. There is the market; there are the vast possibilities of trade, and—the makers of the finest commercial vehicles in the world do not trouble to let the potential and prospective buyers know what they have to sell. My Ceylon readers know the truth of my remarks. At every moment the "good points and advantages" which Continental and American lorries are claimed to possess are being flaunted before the notice of the people of Ceylon, of India, and of the Near and Middle East, yet the British manufacturers take no adequate steps either to combat these false statements or to bring their own productions before the buying publis. To me that state of things is extraordinary, not to say inexplicable.

THE BESSARABIA VEGETABLE OIL INDUSTRY.

The chief centre for the production of vegetable oils in Roumania is the Province of Bessarabia, which possesses 139 vegetable oil factories or refineries and 200 small peasant factories using primitive methods (says the British Commercial Secretary at Bucharest in a recent report). The vegetable oil industry in this region dates from before the war, but its development was greatly favoured by various circumstances resulting from war conditions, notably the closing of the Straits of the Dardannelles, which cut off all importation of vegetable oils from Mediterranean ports. The fall in the value of the Roumanian currency after the war gave a further impetus to the industry, as it prolonged the elimination of foreign competition owing to the comparatively high price of oils imported from countries whose currency had remained at a more normal level. This long freedom from foreign competition has created so encouraging a market both for peasant growers of oleaginous plants and for the oil refiners that the industry has greatly extended and its progress continues to be marked. In 1921 the production of vegetable oils amounted to 2,938 metric tons, while in 1922, 1923 and 1924 the output amounted to 3,970 tons, 9,596 tons and 12,146 tons respectively.

The production of the three northern districts of Hotin, Soroca and Balti is the most important, and their oil is mostly extracted from sunflower seed. The six southern districts of Orhei, Chisinau, Tighina, Cetatea-Alba, Ismail and Cahul produce smaller quantities, and chiefly from rapeseed, which thrives better in the south.

From the sunflower-seed grown for this purpose there is usually produced 16 per cent. of oil, 24 per cent. of oilcake, and 60 per cent. of husk, which is used as fuel by the industry. With regard to linseed, hempseed and rapeseed, it is estimated that 80 kilogs. of seed give 16 kilogs. of oil, 60 kilogs. of oilcake and 4 kilogs. of waste. About 75 per cent. of the vegetable oil producing works are situated in the villages and only about 25 per cent. in the towns. The industry is stated to be a very remunerative one, and its yearly extension appears to corroborate this statement, although its wider develop-ment is doubtless hindered by the lack of capital and general money stringency from which all the industries in Roumania are suffering at the present time.

Exports of vegetable oil products, oilcakes and meal have grown from 8,779 tons in 1920 to nearly 49,000 tons in 1924. The latter figures, however, shows a considerable reduction as compared with the 1923 figures, namely, 57,791 tons. The exports go chiefly to Poland, Germany, the United Kingdom, France, Czecho-Slovakia, Austria and Hungary.

The sanitary dues at Constantza have been increased from 0.50 lei to 1.50 lei per register ton (net) as from January last.

New branches have been opened by the Bank of Athens at Aliwerion and Nicholas-Castri in Greece, and at St. Nicholas in Crete.

Company Meetings.

ASSOCIATED COTTON GINNERS OF EGYPT.

The following is the report of the directors, with statement of accounts as at August 31, 1925, submitted to the shareholders at the twentieth ordinary general meeting, held at Alexandria on December 22:—

We have pleasure in placing before the shareholders for their approval our twentieth annual report together with the audited accounts to August 31, 1925. The quantity of cotton ginned in our factories during the year 1924-25 was 711,475.89 kantars against 659,664.37 kantars in 1923-24. During the season ending August 31, 1925, we did not steam press. The following are the results to August 31, 1925:—

	£E	£E
Factories profit		47,918
Less: Sundry repairs and renewals in the factories		2,761
		45,157
Add: Interest earned and rents	1,386	
Profit on sale of £30,000 Unified Debt	4,716	6,102
		51,259
Less: Expenses and management at head office ...	4,926	
Insurance premiums	3,229	
Sundry expenses	2,225	
Commissions	44	10,424
		40,835
Less: Depreciation on buildings and machinery		8,302
		32,533
Less: Statutory reserve 10 per cent.	3,253	
Dvidend, as per statutes, 6 per cent. to the shareholders	15,795	19,048
		13,485
Less: 10 per cent. to the Board		1,349
Leaving a balance of		12,136
We have therefore to deal with the following amounts:—		
Statutory dividend 6 per cent.	15,795	
Above mentioned balance of	12,136	
Amount brought forward from last year	16,813	
		44,744
Of which your board propose to distribute as dividend to the shareholders one shilling six pence per share, making ...		26,325
And to carry forward		18,419

Your board decided to sell the £30,000 Egyptian Unified Debt 4 per cent. It also decided on the demolition and reconstruction of the engine house at the ex Carver Factory at Mehalla Kebir and the acquisition and installation of a Diesel motor, the old steam engine not being economical. The new motor has been working since December, 1924, and the satisfactory results justify the expenditure incurred.

The new agreement concluded this year with the founder firms entitles each of the founder firms to nominate a director on the board of your company, consequently your board propose Mr. C. J. Choremi, Mr. H. B. Carver and Mr. F. Allemann for re-election as directors in pursuance of article 102 of the articles of association. Mr. T. S. Richmond retires from office by rotation and is eligible for re-election. You are now asked to approve and adopt the report and balance-sheet for the year ending August 31, 1925, as presented. You have also to appoint auditors for the ensuing year and to fix their remuneration. Messrs. Russell and Co. offer themselves for re-election.

BENGAL AND NORTH WESTERN RAILWAY.

The ordinary general meeting of the Bengal and North Western Railway was held on January 26 at the offices of the company, Gresham House, Old Broad Street, E.C., Sir Henry P. Burt, K.C.I.E., C.B.E. (the Chairman), presiding.

The Chairman, in the course of his speech, in moving the adoption of the report and accounts, sad:—I need not occupy much of your time in dealing with the accounts and the results of working for the year under review, as our gross receipts show a further increase compared with the previous year, which, you will remember, was a record one of 1.2 per cent. This result has been secured in spite of a heavy decrease in our earnings under sugar and molasses, one of our principal items of traffic, owing to a partial failure of the cane crop. While this was counterbalanced to some extent by small increases under other heads of merchandise traffic, the improvement in our gross earnings is mainly brought about by a very satisfactory increase in the third-class passenger traffic both as regards numbers carried and the earnings therefrom. It is particularly gratifying to note this, as it again justifies the policy which the Board has always followed of keeping our third-class fares as low as possible. As I have told you before, our third-class fares are the lowest in India, and at present, taking exchange at 1s. 6d., a third-class passenger pays only about one-fifth of a penny for every mile he travels.

Our working expenses show a decrease of about 3.5 per cent., and in consequence the percentage of working expenses to gross earnings has fallen from 45.53 to 43.39, and this result again reflects great credit on our staff in India. The main decrease in the working charges is due to a reduction of some Rs.4.50 lakhs in the cost of renewals of vehicles. During the last few years we have spent a considerable amount on renewing our goods stock, which is now in very good order, so that the reduced expenditure under this head was to be expected. There has also been a saving in the cost of fuel owing to a fall in the contract price of coal. The other variations in our expenditure do not call for any remarks.

The company's net earnings amounted to Rs.105.9 lakhs, which converted at 1s. 4d. represents £706,067, and, after making adjustments on account of income tax, allowing for gain by exchange (£82,210, against £34,466 last year), and the payment for interim dividend, and carrying £75,000 to reserve, the amount to be dealt with to-day is £364,078. Of this amount we recommend a final dividend of 6 per cent., together with a bonus of 2 per cent., which will make a total dividend and bonus for the year of 14 per cent., or 1 per cent. higher than has ever been paid in the past. I have every confidence that the proprietors will regard these results as satisfactory.

I drew the proprietors' attention last year to the serious damage which was caused to the Bagaha Bridge in August, 1924, and to the very difficult engineering problem which the restoraton of the bridge involved. Last September a further westward sweep of the Gundak during heavy floods caused serious damage to the west up-stream guide bank. Owing to the further divergence of the river from its previous course it seemed doubtful whether it would be possible to retain the bridge at its present site, and at the request of the Board an expert committee was appointed by the Railway Board to report on the situation. Their report has just been received, and they recommend the retention of the existing bridge site, which they think

will be possible, if the training works are effectively restored. We hope that this will prove to be the case. We are now proceeding as rapidly as may be possible with the necessary works of restoration, and I am glad to say that the revenue expenditure involved has already for the most part been provided for in our accounts.

The proprietors will notice from paragraph 15 of the report that the purchase price of the company's lines has at last been settled after prolonged negotiations. The agreed figure, Rs.10.17 crores, will become payable only if the Secretary of State elects to acquire our property in 1932. Should he not so elect, then the property remains with us for another 50 years until 1982, when the Secretary of State would take over the whole of the company's property on paying only for the value of the rolling stock and movable plant. But the actual capital expenditure incurred on the company's lines since January 1, 1912, other than that on rolling stick and movable plant, less £433,333 already provided by the company, would be refunded. As you know, since 1912 an annual sinking fund has been established to meet the position if our property is not taken over in 1932. It is to be regretted that in spite of the very clear statement made in paragraph 15 of the report, rumours have recently been in circulation to the effect that the Secretary of State has already decided to acquire our property. I desire to take this opportunity emphatically to contradict these rumours for which there was no foundation whatever. In my opinion it will be some years yet before there is any likelihood that the Secretary of State will make any announcement on the subject. I am not in a position to make any accurate forecast as to what the proprietors would receive if our railway is taken over in 1932, a matter on which it is impossible to make any prophecy, as so much will depend on the rate of exchange and the position at the time of the reserve funds but, apart from the reserves of the company, in my opinion it would work out to about £200 for every £100 of stock.

I would mention in conclusion, gentlemen, that our prospects for the current year are satisfactory, according to latest advices received from India.

The report and accounts were unanimously adopted.

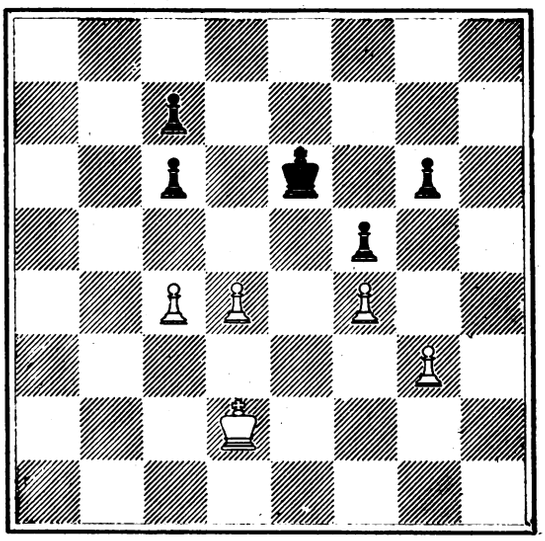
TENDERS INVITED.

Tenders are invited for the following contract and must be made by the date mentioned.

THE SUDAN.

Steamer.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply of a new inspection steamer for the Upper Nile. April 15.

IMPORTS & EXPORTS



The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

BUILDING THE BRITISH INDUSTRIES FAIR.

Work is now well advanced at the White City on the actual erection of this year's British Industries Fair which, as in the past, is being organised by the Department of Overseas Trade. The London and Birmingham sections of the Fair will be open on February 15 until February 26.

A special feature of this Fair will be the admission of the public from 5 p.m. to 8 p.m. each evening and from 1 p.m. to 8 p.m. on Saturday, February 20.

Preparations at the Exhibition Buildings, Castle Bromwich, Birmingham, where the Birmingham section will be housed are also now well advanced and at both sections the actual exhibits of many firms have already arrived.

In connexion with the forthcoming Fair both the Uxbridge Road and Wood Lane entrances to the White City are being re-decorated as are several of the eight restaurants and bars.

A walk completely round the London section will measure about four and a half miles and some idea of the size of the Fair may be gathered from the fact that at the White City 200 tons of timber and 15 tons of nails will be used in the construction of the exhibitors stands which cover nearly 150,000 square feet of actual exhibition space.

These stands, which are being painted to suit the requirements of individual exhibitors, will absorb 20 tons of paints and distempers. In addition to the floor coverings, which amount to 20,000 square yards, 25 miles of electrical cable have been installed to convey the current to 8,000 lamps.

During the course of the next few weeks the exhibitors themselves will be busy making the final preparations for the record number of buyers who are expected.

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended January 23 states:—

General.—Not much actual alteration is to be noted in the conditions reported last week, though the general tone is firmer. In addition to the resumption of the auctions in Shanghai which continue to have a cheering effect sentiment is probably influenced to some extent by the approaching reduction in the working hours of spinners of American cotton.

Yarn.—The freer movement in yarns spun from Egyptian cotton, as reported in our last review, has continued. The actual turnover has probably been about the same, but the general feeling that the cotton trade has seen the worst of its troubles has induced a firmer attitude on the part of spinners and slightly better prices are being obtained. Coupled with the approaching reduction in output is the important factor that stocks on hand show an appreciable reduction.

Cloth.—More active conditions have prevailed during the last few days, particularly as regards goods for India and China. Certain markets, and especially South America, are placing very acceptable orders. The trade situation in Egypt and the Levant, however, is not encouraging. The Home trade continues fairly satisfactory without any features to which special attention can be called.

Raw cotton.—Very little change has taken place in the price of American raw cotton during the past week. There has been slightly less demand for "spot," probably due to buyers waiting for the publication of the ginning report which is due to-morrow and which is expected to show a further increase in the number of bales ginned. A fair business has been done in Egyptian varieties with a fractional increase in prices. Closing quotations yesterday were as follows:—American Middling, 10.76; Egyptian Fully Good Fair, 18.60.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended January 13, state:—

Since our last report the futures market has been quiet, prices closing somewhat easier; the week's summary of price movements is as follows:—Sakellaridis: January, 0.55 dollars down; March, 0.50 dollars down; May, 0.45 dollars down; July, 0.55 dollars down; November, 0.60 dollars down. Ashmouni: February, 0.55 dollars down; April, 0.55 dollars down; October, 0.40 dollars down.

We have had a week of quiet sessions, both exporters and speculators taking but little interest in the market. The demand from abroad has been moderate, but spinners have been showing more interest. There is but little doubt that should the market stabilise at about 32 to 33 dollars a good business would result. The Government has not bought any cotton at all this week, but rumours are again persistent that it will intervene shortly. Despite the fact that the stock in Alexandria is at present more than 2½ million kantars it connot be said that there is any pressure to sell; this is explained by the fact that part of this stock is held by export houses against forward sales, whilst the rest is either covered by futures or is in the hands of merchants financially able to hold the cotton.

Some very exaggerated crop estimates are being circulated on the market and even 9 million kantars has been mentioned. We do not think that these extravagant rumours are more than guesses, and maintain our estimate of about 8,000,000 kantars. The market for the moment seems likely to remain steady at about present levels but a substantial and maintained increase in the demand from abroad is necessary before one can look for any important improvement in prices. The week's receipts amount to 153,665 krs. against export 88,954 krs.; the stock stands at 2,430,763 krs.

Spot: Minet-el-Bassal has only been open 5 days this week and fair business has been done. Sales amount to about 19,300 bales of which we estimate 11,400 bales Sakel, 7,000 bales Uppers, 400 bales Zagora, 200 bales Pilion, 200 bales White and about 100 bales Maarad. The Government has not intervened in the spot market this week.

Sakellaridis: has met with a fair inquiry and all styles have changed hands. Spot differences are without much change but inclined to ease a little.

Ashmouni and Zagora: A moderate business has been done covering all qualities. Spot differences are generally without much change.

Pilion and Brown: A fair business has been done in Pilion, but Brown is neglected and no business has been reported. Spot differences are unchanged for both growths.

White: A fair business has been done at about last week's parities.

Under date January 14, the Alexandria Commercial Company report:—The Government has this morning issued the following communique: In view of the serious decline in Egyptian cotton prices, which is prejudicial to the interests of the growers the Council of Ministers, after very careful examination of the cotton situation, has decided: (1) To increase the Government purchase at Minet-el-Bassal to 500,000 kantars; (2) To maintain a reasonable proportion between the price of Egyptian cotton and that of American by fixing as a buying basis the premium of Egyptian over American at 75 per cent. for Fully Good Fair Sakel. The Governments hopes by this intervention that prices will reach a level satisfactory to producers. The Council of Ministers judges that its object will have been attained when prices have reached 36 dollars for Fully Good Fair Sakel.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Politics in Roumania.

Ministries and Parliaments are sufficiently short-lived in the Balkans to invest with considerable interest and importance the end of a Parliament's life by the mere effluxion of time, the more so when the outgoing Government has been, with only minor changes, continuously in office for the full period. Between October, 1918, and January, 1922, Roumania had six Prime Ministers. On January 19, 1922, M. Ian Bratianu, who had been one of the six for less than a year, returned to power and has retained office until the present time. The circumstance of itself might be held to entail almost divine sanction for a change, even apart from any definite indications that the electorate has arrived at the conclusion that another political party ought to have an innings. After having relied in vain for nearly two years on the mere contention that it was their "turn," while doing nothing to qualify for office, the Opposition has at last bestirred itself. A working agreement was reached last week between the National Party—itself a coalition of previously uncoordinated groups—and the Peasant or Tsaranist Party to oppose a common front to the Liberals at the approaching communal elections, with a view to forming a Government when M. Bratianu has to resign. In the meantime the Liberals are by no means minded to let the Opposition have things all its own way. They can be excused for reasoning that, as they have most of the economic life of the country in their hands and have the advantage of a definite policy, in the working out of which Roumania has been engaged during the last four years, whereas their opponents lack both administrative experience and a policy, they are really far more useful to the country than the Opposition can be. In support of this contention the Liberals are putting up a stiff fight.

A Political Tug-of-War.

Custom in Roumania prescribes that when the life of a Parliament has come to an end the Ministry resigns and the King invites the leader whose party has some claim to be regarded as the most likely to succeed to power to take office for the purpose of holding elections. In normal circumstances the advantages accruing to the party that "holds" the elections secure for it the necessary majority, and in due course the new Government, with possible modifications that the elections may have indicated as desirable, is confirmed in office. Consequently during the lifetime of any Government considerable importance attaches to the rôle of political "heir-apparent." During the last four years in Roumania the solidarity of the Liberal Party and the heterogeneity of its opponents have resulted in the question of the succession remaining an open one. General Averescu, at the head of the People's Party, has kept himself aloof from the other parties on the Opposition side of the Chamber, and M. Bratianu has been credited with the intention of recommending King Ferdinand to call upon General Averescu to form the next Cabinet. M. Bratianu's opponents were not slow to point out that, as even the advantage of holding the elections would mean very little to the People's Party, General Averescu would be unable to remain in office and would retire, according to plan, in favour of M. Bratianu again. Whether this be the policy of the Liberal Cabinet or not, it has increased the anxiety of its opponents still further by arranging to hold the communal elections, under the terms of the new Constitution, before it goes out of office. To appreciate the alleged subtlety of this move, it has to be borne in mind that in all Balkan States local officials and, by inference, local councillors where they exist are useful assets to a party for electioneering purposes. M. Bratianu's decision in this matter provided the last straw to break the hump or whatever it was that kept the Opposition parties apart. They have now come together, and a lively period in Roumanian politics is promised.

Digitized by Google

Turkey and Great Britain.

Sir Ronald Lindsay's visit to Angora has passed very much on the lines suggested as being probable in these pages last week. He has seen the Turkish President and the Prime Minister, and it may be supposed that he has left them, after the various conversations, to reflect on the suitability of the allegations that they have hitherto been pleased to make regarding Great Britain's attitude towards Turkey. The Constantinople Press affects disappointment because no official *communiqué* was issued at once on the details of the negotiations. In the interests of Turkey it is to be hoped that this reticence will be maintained for the present. Sudden conversions may be valuable in certain phases of life; in the political sphere more reliance is to be placed on those that are deliberate and result from careful reasoning and conviction. Moreover, in Turkey's case, as her aim should be to maintain correct relationships with all foreign Powers, she should do nothing to lead the Soviet Government to suppose that a new orientation in her policy entails antagonism to Russia. The Constantinople Press is bound to be disappointed, because it is on the look-out for a sign that Great Britain has abandoned active enmity to Turkey and will have to make amends before qualifying for Turkish friendship. No such sign, however, can be forthcoming, for the simple reason that Great Britain, after securing the suitable defeat of Turkey in the Great War, has had no special feelings of enmity against her. She has been annoyed by the foolish action of the Turkish Government in regard to the Mosul frontier; but now that that matter also is liquidated, she is merely anxious that Turkey should fall into line with the rest of the world in devoting her attention to material reconstruction, instead of stirring up international enmity, and for the reconstruction of Turkey Great Britain is prepared to listen to any proper overtures for financial help.

Education in Yugoslavia.

Whatever may be the ultimate verdict of the Yugoslav people regarding the Radical-Raditch Coalition, it will not be possible to charge the present Ministry of M. Pashitch with having been content to mark time in office. Relying on the substantial character of its majority in the Skupshtina, the Government has embarked on a vigorous campaign of reform in a variety of directions. At a recent meeting of the Finance Committee, M. Stefan Raditch, as Minister of Public Instruction, presented an outline of his educational policy for the Kingdom, which is calculated to give those in Yugoslavia interested in the subject food for thought, if not for violent discussion. In analysing the present position, M. Raditch pointed out that the actual number of elementary schools was wholly inadequate to the needs of the country. He estimated that some four hundred thousand children of school age were not at school, and that to provide for all these it might be necessary to have four thousand more schools. The present rate of increase annually in the number of schools was between a hundred and a hundred and fifty. To meet the situation, therefore, the local authorities would have to become much more energetic and provision would have to be made for loans. He found that there were too many secondary schools with a teaching staff lacking the requisite qualifications, and he proposed, therefore, to reduce the number of these schools. Teachers would be called upon to work longer hours and there would be a reduction in pay for overtime. The Russian language was to be made an obligatory subject in the secondary schools. In regard to the Universities, about which M. Raditch was reported to have said some harsh things a short while ago, he was concerned to prevent one University from being favoured at the expense of another; the professional staff would be called upon to work more hours in a week, and he indicated that he was resolved to render impossible that "barbarous development"—a University strike. M. Raditch's lively programme will, no doubt, derive considerable support from the fact that he claims to be able to reduce his Education Budget by exactly one-third of the amount asked for by his predecessor at the Ministry, who was, of course, M. Pribitchevitch, the leader of the present Opposition.

Minorities in the East.

The information now reaching London from Iraq by mail confirms the satisfactory impression that the telegraphic reports conveyed of the reception accorded to the new Anglo-Iraqi Treaty. In the Chamber the demonstration by Yassin Pasha al Hashimi lacked nothing from the point of view of melodrama, but does not appear to have impressed the Chamber or the public at large, and it is a matter for regret that a man of Yassin Pasha's parts should have lowered his political prestige in this way. At an official banquet in celebration of the Treaty reference was made to the problems of minorities in Iraq. The British Chargé d'Affaires pointed out that a Kurd could not be made a good Iraqi citizen by being forced to adopt the Arab speech and Arab language, but by being given every opportunity and encouragement to become a good Kurd. King Faisal in his reply declared that the Kurds would be encouraged to cultivate their own nationality, language and traditions under the protection of the flag of Iraq. If these high statesmanlike intentions are carried out in practice, Iraq will be setting an example which might be imitated with advantage in many countries of the Near and Middle East. There is hardly a single Government in this part of the world which has appreciated the truth of the statement made by Mr. Bourdillon, Acting High Commissioner in Baghdad, regarding the question of the language and traditions of a minority in a country. Every attempt to suppress these helps to keep them alive in the most aggressive form. If they are given free scope, they find their own level; economic necessity compels the minority to speak the language of the majority, and the absence of all discrimination between the two peoples removes any incentive to indulge in propaganda on behalf of the minority.

MANDATES IN THE MIDDLE EAST.

Under the auspices of the Near and Middle East Association, Mr. J. L. Garvin, Mr. H. Wilson Harris, and Professor Arnold Toynbee will, on February 10, speak on "The Present Mandatory System in the Middle East." The meeting, over which Captain E. N. Bennett will preside, will take place at 8.30, and, by kind permission of Mrs. R. A. Workman, at 3, Seamore Place, Park Lane, W.

LECTURES FOR HOSPITAL.

Under the auspices of the Scottish Women's Hospitals Association of the Royal Free Hospital, three lectures have been arranged in aid of the Endowment of the Duchess of York Maternity Bed. The first, to be given at 5 p.m. on February 11, at The Red Lodge, 51, Palace Court, W.2. is to be delivered by Mrs. Beauchamp Tufnell, on "Ruthenia"; the second, at 5.30 p.m., on February 16, at 14, Queensberry Place, S.W.7., is to be given by Lt.-Col. P. T. Etherton on "In the Heart of Asia": and the third, at 5 p.m., on February 25, by Major "Ian Hay," on "Reading from my Books," at 25, Park Lane. The respective Chairmen are to be Sir Anthony Hope, Sir Edward Denison Ross, and Lt.-Gen. Sir William Furse. Tickets, three for £1 or singly 7s. 6d., are obtainable from the Organising Secretary of the Association, 24, Mecklenburgh Square, or from any member of the Committee.

On behalf of the French Government, Count Robert de Caix will attend the next meeting of the Permanent Mandates Commission of the League of Nations, in Rome on February 16, and will present a report on the French mandate in Syria.

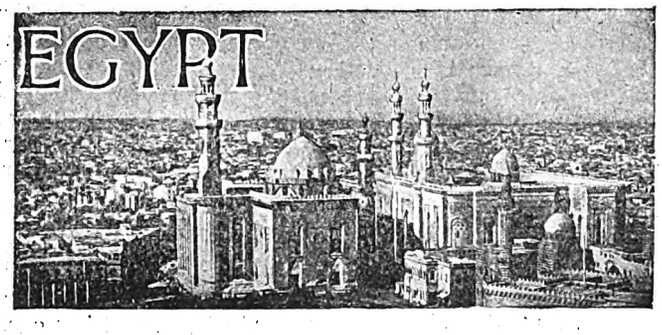
CONSTITUTIONALISM IN EGYPT.

Egypt seems bent upon putting constitutionalism to as severe a test as it has been called upon to undergo in any country. If it emerges from the ordeal with greater success than it has experienced in Spain, Italy, Greece, Turkey and Persia, the Egyptians will have had yet another service rendered to them by Great Britain, which they will fail entirely to appreciate. For there can be little doubt that, were it not for the restraint that the presence of the British in the country imposes, the nominal violence that is being done to the strict letter of constitutionalism would have given place to as pronounced a dictatorship, one way or the other, as there is anywhere on the other side of the Mediterranean. It is difficult, indeed, to see how it could be otherwise, if the Egyptians as a whole are to be judged by the more vocal elements among them and in particular by that most tragic of institutions, a half-baked Press. The sole contribution that the vernacular newspapers appear to make to an admittedly complicated situation is to act the part of the café windbag who imagines that the wisdom of the ages is concentrated in him, because no one considers it worth while to challenge his ineptitudes. There are certain fundamental facts in the present position of Anglo-Egyptian relations with which a few words such as the Sudan, the Suez Canal, and others are associated; for a settlement satisfactory to both parties in regard to these questions patience, good will and clear thinking on each side are essential. If the least attention were to be paid to the foolish lucubrations that make up most of the references which the Egyptian Press contribute to a difficult subject, an end could at once be put to any desire on Great Britain's part to seek a solution of the questions still outstanding between the two countries. The great stick that is used to beat the Government of Ziwar Pasha is that it is administering the country unconstitutionally. Yet in the same breath members of a Parliament that has been constitutionally dissolved are urged to resume unconstitutional meetings, in spite of the fact that it is recognised that they could carry out none of the proper functions of Parliament, nor accomplish anything practical. The duty of an Opposition is, no doubt, to oppose; but there may well be times in a country's history, when captious criticism ought to give place to a united effort in the national interests. It has been forgotten that Ziwar Pasha's position is not of his own seeking: he took office only when Zaghloul Pasha admitted the bankruptcy of his own policy, as far as Egypt was concerned, and refused to make any attempt to extricate the country from the quagmire into which he had led it. That the same man should still command the suffrages of the greater part of the nation, as in all probability he does, is a more damning reflexion on Egypt's political sense than any strictures that can be passed on it by foreigners.



It may be taken for granted that the whole weight of Great Britain's influence in Egypt will be placed in the scale of constitutionalism, Not only has the High Commissioner declared his determination himself to play a constitutional part, but the most striking of his official acts in the short time during which he has been in the country has been to insist that the unconstitutional interference of a Palace official in public affairs should be abruptly terminated. As Egypt has admittedly departed from the narrow path of constitutional procedure, her problem is to return to it. To this end the holding of parliamentary elections at the earliest possible opportunity seems the necessary preliminary. Ziwar Pasha has declared his intention of following this course, and has even announced his determination to hold the elections in April, a date at which in the opinion of many the new electoral machinery can hardly be in working order. In less than two months, then, may begin a real testing for constitutionalism in Egypt. The Opposition parties are reported to have decided to boycott the elections and so to reduce them to a farce; the alternative in their opinion was to join hands in an effort to secure an overwhelming defeat of the Government. In the latter case the presumption would have been that the Wafd could secure a majority at the elections, so that according to constitutional procedure it would be called upon to conduct the affairs of the country. In these circumstances, whether Zaghloul Pasha were to become Prime Minister or delegated the nominal position to someone else, there would be the danger of a fresh administrative deadlock, if the Zaghloulists adhere to their former policy and refuse to face the facts of Great Britain's special relationship to Egypt. Thus, equally if the elections are boycotted and if they result in a large Zaghloulist majority—the attitude of the Wafd is not likely to be determined by any higher motive than their electoral chances—the first step in Egypt's return to strict constitutionalism may well bring the country face to face with the decision whether, in view of the mentality of the nation and its lack of political instinct, constitutional government is a practical possibility.

There for the present the whole question must be left, until it is seen what actually happens when the elections take place. Great Britain cannot fail to be impressed by the courage and capacity shown by Ziwar Pasha in a difficult position, but she will not fall into the error of imagining that any one man is essential to the salvation of a country. From the handful of level-headed unselfish men who threw themselves into the breach when Zaghloul Pasha deserted his post we may hope that it is to be inferred that Egypt yet has it in her to work out her own salvation. How she will do it remains to be seen; but it will have to be despite the unrelieved inadequacy of a Press that ought to be training up the nation in political sense and self-respect, instead of being content with the mere ringing of changes on catch-words after the manner associated with parrots and street mobs. It will also have to be by means of men who will lead instead of waiting to be led. The Government of Ziwar Pasha may not have succeeded in avoiding mistakes during its tenure of office, but it has carried on the administration in the face of much provocation without recourse to the repressive measures to which opposition of no more intensive a character has driven the Government of the day in other countries. That Great Britain is responsible for this relative moderation may be taken for granted; whether such moderation be in the best interests of the Egyptians is another matter. The verdict of the West is wholly against dictators and despots; but experience has shown that the East cannot last very long without them. If the great body of Egyptians could see politically beyond the distance of their coffee cups, they would be urging Great Britain not to relax her hold on Egypt until they had learned in the stern school of practical politics how to live up to and to profit by constitutionalism.

The Near and Middle East*

From Our Own Correspondents.

Cairo, January 23.

Comment on the Sennar Dam.

Comment on the official inauguration of the Sennar Dam—which event has naturally been the principal feature in the columns of the local Arabic Press during the past week—has been remarkably varied. The organ of the Nationalist Party—whose war-cry is "Complete independence for Egypt, the Sudan, and the whole of the Nile Valley"—has raged in the furious manner that was expected of it. To a certain extent the Zaghloulist papers have followed their more extreme contemporary's example, but in some of the other local journals, including the independent *Mokattam* and the Liberal Constitutional *Siyassa*, there has been some attempt to discuss the subject from its economic viewpoint and to forget for a moment political partisanship in recognition of the great benefits which the Sudan will reap from the splendid engineering work which Lord Lloyd has just formally declared to be opened for service to the Sudan and its people.

The Communist Trial.

Some surprise was occasioned by the sentences in the Communist trial which ended during the week, for although the hearing, at the request of the prosecution, had been conducted *in camera*, it had been thought by many of those who heard the proceedings that there would not only have been more convictions than the six out of thirteen prosecutions, but that also in some cases the maximum punishment of five years would have been awarded. In the event the longest sentence was three years, and this was given to three Russians, the only Egyptian to continue in prison as a result of the trial receiving sentence of one year. It is understood that the police are not resting on their laurels where the Communists are concerned, but, acting on the official opinion that the only way to prevent a dangerous spread of the Communist doctrine is to deal severely with it in its present early stages, are carrying on continuous investigations with a view to bringing to trial others who, like those just convicted, are known to have been sowing the seeds of unrest and discontent in the minds of the fellaheen.

The Court-Treatt Expedition.

Major Court-Treatt and his expedition are due here to-morrow morning, though at the moment of writing it seems possible that the reception arranged in the official programme for 11 a.m. at the Continental-Savoy Hotel may have to be postponed for a few hours, for the party left Sohag only at 5 a.m. this morning, intending to reach Badrashein, 15 miles out of Cairo, by nightfall. This would mean covering 260 miles, or thereabouts, in the day, a distance which is by no means impossible, even over Egyptian roads, with a suitable car in good condition, but which might conceivably prove a little too much for cars which have just completed 10,000 miles of the roughest going and which are built and equipped for consistent slogging over tracks, rather than maintaining a high average speed over a long day's run.

British Cars in Egypt.

An excellent amount of publicity in this country has already been secured for the Court-Treatt expedition, and it is to be hoped that to-morrow's arrival will secure still more. That this event will lend a splendid fillip to the sales of British motor-cars in this country cannot be denied, and it is the more satisfactory that it should occur just at the present time, because British motor manufacturers, after years of neglecting the Egyptian market, are now at last making a bid for the business which, hitherto, Americans, French, and Italians have been left to share amongst themselves. A few years ago Rolls-Royce, Daimler, Wolseley, Crossley and a very occasional model of some other make were practically the only British cars known here, and it goes without saying that the market for cars of the class and cost of the makes just mentioned is strictly limited, even in a land famed for the quality of its long-staple cotton. Morris-Cowleys and Oxfords made a somewhat belated appearance and are now very popular here, and recently many other British cars, Standard, Clyno, Trojan, Jowett, Rover, B.S.A., Singer, Armstrong-Siddeley, Austin, and Bean, among others, have begun to appear on the streets of Cairo and Alexandria. In the provinces the Ford, especially the Ford truck chassis fitted with a light omnibus body, is ubiquitous and almost alone, and is likely to remain so until very comprehensive schemes of road improvement are carried out. But in the cities and for occasional country use the British light car is unsurpassed, and has only been so little bought in Egypt hitherto because the British manufacturer has appeared not to have been interested in sales potentialities here. Happily this frame of mind seems to have passed, and, although competition, especially from F.I.A.T.'s, Citroens and several American makes which offer such large and luxurious-looking models for such comparatively low prices, is very keen, there are signs that the Egyptian buyer is beginning to realise that the British light car, with its low upkeep and its wonderful reliability, is one of the most attractive propositions in the motor world to-day. The situation can be advantageously utilised if British firms will display a forward spirit where publicity and sales promotion are concerned, and occasions such as the arrival of the Court-Treatt expedition furnish excellent opportunities for driving home the excellence of British products in general and British motor-cars in particular.

Sofia, January 26.

The Liaptcheff Government.

The newly-formed Liaptcheff Government has been in office for three weeks, but owing to the holidays the Sobranye has been closed. To-day the session reopens, and the Government will have to face a House which, although outwardly friendly, may contain some unexpected pitfalls. The most important matter down for discussion is the Amnesty Bill, which was drawn up by the Tsankoff Government, but which M. Liaptcheff has decided considerably to enlarge. If carried, this Bill will have the effect of pardoning all Agrarians and Communists who have taken part in illegal conspiracies during the past few years. The only persons excepted are the Agrarians and Communist *emigré* leaders still abroad and Agrarians and Communists who are known to have incited others to revolution, murder, and similar deeds—in other words, the chiefs. There is no question that such an Amnesty is overdue, and if M. Liaptcheff succeeds in passing it through the Sobranye, and—what is much more important—succeeds in its being properly put into execution, he will have gone a long way towards calming Bulgaria.

With regard to the actual position of the Government in the Sobrayne there is a certain "obscureness." When the change of Government took place there was a regular orgy of mutual compliments paid by incoming Ministers to outgoing Ministers and *vice versa*. Indeed, if one was not acquainted with Bulgarian politics, one might have imagined that Dr. Tsankoff had begged M. Liaptcheff to come into power while M. Liaptcheff had begged Dr. Tsankoff to stay where he was! As a matter of fact there has been, and there still is, a great deal of hostility between the partisans of the two above-mentioned politicians. It now remains to be seen how events will shape themselves.

The Democratic Entente.

It cannot be definitely stated that the Democratic Entente Party is still a solid unit. There is first of all the party framework which undoubtedly supports M. Liaptcheff. There is secondly a group of deputies who remain faithful to Dr. Tsankoff, while there is also a small group of dissatisfied deputies who for the present are "sitting on the fence." Outside the Democratic Entente, but not very far away, are MM. Malinoff, Kostourkoff, and their Democratic and Radical friends. Hitherto Dr. Tsankoff and M. Malinoff have been bitter political opponents, but it may be that necessity will pave the way to a reconcilation. In fact, there may ultimately spring up a so to speak "second" Democratic Entente, whose aim will be to displace M. Liaptcheff.

The Military as a Political Factor.

Naturally all the above is more or less political speculation, and no mention has been made of the rôle of the Military and the Military League. Despite assurances to the contrary it is undeniable that the Military still play, and still must play, an important rôle in Bulgarian affairs. It is true that the Communist danger has greatly diminished, but it is not yet entirely banished, and for this reason alone the Military have to keep a careful watch on the situation. It would, of course, be disastrous if the Military tried to meddle actively in political events which do not concern them, but fortunately up to the present they have shown no signs of doing this.

Prospects of the Administration.

In *résumé*, it can be said that during the coming session the Liaptcheff Administration will be on its test. The Cabinet contains one or two men who have already won their reputation, put it also contains several unknown quantities. It remains to be seen how the different members of this Bourgeois Cabinet will pull together. The two most important political parties in Bulgaria to-day, namely, the Democrats and the Narodniaks (Nationalists) are represented by their foremost politicians in MM. Liaptcheff and Bouroff. Provided that these two men pull together—and there is no reason at all to believe the contrary—then Bulgaria should benefit by a tenure of sane Government.

Relations with Turkey.

The Treaty of Amity which Bulgaria concluded with Turkey in the late autumn of 1925 has not yet been brought up for ratification before the Sobrayne. One of the reasons for this long delay is that the former Bulgarian inhabitants of Eastern Thrace, through their Organisations, are strongly opposed to several of the clauses contained in the supplementary agreements attached to the Treaty of Amity. The Thracians consider that their rights have not been properly safeguarded, and it is understood that a number of Governmental deputies hold the same view. This matter becomes rather interesting in view of the dispute between Great Britain and Turkey regarding Mosul. A good deal of "loose" matter has been written in the European Press concerning Bulgaria's attitude towards this dispute. It has been said that a secret Protocol was attached to the Turkish Bulgarian Treaty of Amity which provided for Bulgaria's benevolent neutrality in the event of Turko-British hostilities. As far as is known there is no truth in such a statement; nevertheless the fact remains that the terms of the Treaty have been sedulously guarded by Bulgaria. Probably the best way to put a stop to such allegations would be to make the terms of the Treaty known.

In exact contradiction to the above, it has been said that Bulgaria has not proceeded with the ratification of the Treaty on account of suggestions emanating from London. As far as is known, this is quite untrue. However, if England and Turkey eventually found themselves unable to settle their differences amicably, then the position and attitude of Bulgaria might well become both interesting and important.

IRAQ.

Baghdad, January 21.

The New Treaty.

Within five weeks of the League of Nations' decision on the question of Mosul, the new Treaty between Great Britain and Iraq has been signed and ratified. To the country, which was expecting an altogether new treaty, it is something of a disappointment to find in the new agreement merely a protocol added to the old one; and the Nationalist minority in Parliament has not failed to make the most of this. The Treaty was signed on January 13 by the Acting High Commissioner (Mr. B. H. Bourdillon, C.M.G.) and the Prime Minister of Iraq (Abdul Muhsin Beg as Sa'dun). It had then to be submitted to both House of Parliament for approval and ratification.

The Government Party, with all more responsible Iraqis, saw clearly that Iraq must show no hesitation in accepting the Treaty, but must do her utmost to waste no time in setting out on the road of political and economic development which the League's decision has opened for her. In view of Mr. Baldwin's promise to put the matter before the British Parliament on February 2, it was thought of the greatest importance that Iraq's decision should be communicated to the League of Nations before that date; and the question was therefore treated by the Prime Minister of Iraq as an urgent one. The Opposition, led by Yassin Pasha al Hashimi, seized upon this, and disputed the urgency of the matter; at least fifteen days, it was argued, should be devoted to careful consideration of the terms of the Treaty, before so important a matter could be settled. A heated discussion followed, at the end of which the members of the Opposition, twenty in number, rose and walked in dudgeon out of the House, some of them even tearing up their printed copies of the Treaty and scattering the pieces on the floor. Gibes and recriminations were exchanged as they went. The fifty-eight remaining members then voted unanimously for the passing of the Treaty. An inquiry is to be held shortly into the unparliamentary behaviour of the Opposition.

In the Senate, or Upper House, the Treaty was passed by a majority of 17 to one. A comparison of the prompt passage through Parliament of this new Treaty, with the delay and difficulty with which, in the teeth of prolonged and bitter opposition, the ratification of the earlier one was achieved in the summer of 1924, is encouraging to all who wish well to Iraq. That the country must still for many years go in leading-strings is, of course, distasteful to the hot-heads and wounding to their pride; but the large majority by which, in both Houses, the new Treaty was passed shows that on the whole Iraq is beginning to appreciate her true position in the scheme of things, and to realise that the helping hand held out by England is one well worth the taking.

The Christian Refugees.

Capt. Gracey, D.S.O., who went to Mosul in October on behalf of the Friends of Armenia Society, which has been doing relief work among the Assyrian and Chaldean refugees from the northern frontier, has reported in strong terms of indignation to his Society. He went to Mosul alone, with no connexion with the British authorities, so that all his conclusions were uninfluenced by the official point of view. In going from village to village in the Zakho area, Capt. Gracey was accompanied only by a Muslim police official. His report included a number of witnessed sworn statements taken down from leading Christians among the refugees; names and numbers of victims are given, with details of abominable cruelty to men and women. Capt. Gracey sums up the Turks' motives in deporting these people as (a) to remove a possible source of information as to the movements of Turkish troops, and (b) to secure for their soldiers the plentiful harvest of the Christian villagers.

Ex-King Ali.

Ex-King Ali of the Hejaz arrived in Baghdad on January 9, travelling in a special train from Basra, where the Senate had deputed one of its members to welcome him. At Baghdad the station platform was carpeted, a guard of honour with band was provided by the Iraq Army, and the Royal body-guard was in attendance. King Faisal and his son, th Emir Ghazi, met the train, and a number of local and British officials were also present to welcome the ex-King. The Acting High Commissioner, the Air Officer Commanding, and the President of both Houses of Parliament were presented, and a short reception was held in King Faisal's special railway saloon before the Royal party went on to the palace.

Archæology.

The winter's digging at Ur of the Chaldees has begun well with the discovery of the site of the palace of Dungi, king in 2250 B.C. Copper statues of the king himself, bearing on his head a basket of mortar for laying the first brick of the building, have been found, enclosed in brick boxes and buried in the foundations. This lines up with the modern custom of burying beneath the foundations of a building relics typical of the age.

At Kish also important discoveries have been made this season, the chief being that of a number of small clay tablets bearing the oldest pictographic writing and linear script so far brought to light. A number of painted pots have also been found—a complete series, both spouted and plain, in "geometric" pottery, much of it in perfect condition. The chief energies of the excavators at Kish are being bent on the temple of the Earth Goddess, where a number of early Sumerian graves have been unearthed. Professor Langdon, who is in charge of the operations, is led by the discoveries at Kish to conclude that the Sumerian civilisation of Accad is as old as, or older than, any Sumerian civilisation further south, thus supporting the view of some archæologists that this people reached Mesopotamia from the north.

General News Item.

Sir Harry Brittain, M.P., returning by way of Iraq from the Empire Press Conference in Australia, was granted an audience by King Faisal.

CYPRUS.

Nicosia, January 19.

A Review of the Year.

Looking back on the past year, most of the papers and many "Nationalist" politicians have had but little of interest to say of the year which has seen Cyprus created a British Colony. They have regarded the New Constitution as altering but little the situation and outlook. The gain of three new seats by the Greeks in the Legislative Council is counterbalanced, they say, by an equal increase in the number of official members. Let money by all means be voted for island improvements, and various economies effected. The "Hellenic" element nevertheless must continue to work by all lawful means towards the one and only goal of their aspirations, union with Greece. The bulk of the people, who are not politically minded, are hoping that the year will be one of "progressive development," such as it was the aim of Mr. Joseph Chamberlain to bring about throughout the Empire. Some of the principal efforts should be those indicated in the opening speech of Sir Malcom Stevenson to the new Legislative Council.

The Water Problem.

Foremost in interest stands the question of increased water supplies for irrigation purposes, which calls loudly for prompt solution. Sir Malcolm stated that experiments had been commenced for ascertaining whether artesian water can be made available. If the machinery which had been ordered were found satisfactory, it would be duplicated. It is probable that work may be necessary in several parts of the island, and, if so, it cannot be doubted that the necessary funds would be willingly voted, for there is a unanimous desire throughout the island that there should be no further delay nor half-measures. It is to be hoped that the matter will not be allowed to rest until a decisive answer can be given to the all-important points which have to be settled.

Re-afforestation.

That a considerable sum should be voted for re-afforestation is unquestionably right. The excessive cutting of timber for the needs of our troops in the Levant, and the very serious fires which occurred in the Troodos forest a few years ago render energetic work under this head more than ever necessary. If there is one point which is indisputable it is that goats are the deadly enemies of forest growth, and that consequently their exclusion from the delimited State Forests is essential. Unfortunately many Cypriots of all classes are again urging that greater facilities for grazing in all forests should be granted, on the ground that by such a policy the Government would enlist the goodwill of flock owners and shepherds in place of their hostility. Acts of retaliation for restrictions would then, they say, cease and much wilful damage and incendiarism would be avoided. It is always to be remembered that there are large tracts of undelimited forest land, where grazing is permitted.

Transfer of Mr. Ellis.

Mr. J. M. Ellis, First Assistant to the Colonial Secretary, is leaving the island on January 21, having been called to the Colonial office. This, though a change may not be unwelcome to Mr. Ellis hmself, means a serious loss to the Administration, following closely as it does on the arrival of a new Colonial Secretary. Mr. Ellis has gained great experience of island affairs and conditions during a time which has brought about important changes, and the opening of what may perhaps be regarded as a new chapter of Cyprus annals. His duties have been carried out with zeal and ability, and he has acted for considerable periods as Colonial Secretary.

Lord Inchcape landed in Bombay last Friday and left by train for Calcutta.

THE SINAI PENINSULA.

Under the auspices of the Royal Geographical Society, Mr. H. J. L. Beadnell, of the Egyptian Survey, lectured, on January 25 at the Æolian Hall on "Recent Travels in Central Sinai," Dr. D. G. Hogarth being in the Chair. The President, in introducing the lecturer, referred to the appalling nature of the Sinai Peninsula. He had, he said, looked on it from Aqaba when the sun's rays were upon it, so that its blood-red, barren rocks were as of Hell.

Mr. Beadnell, who described two journeys which he had taken to the Peninsula on behalf of the Egyptian Government, made light of the hardships which he had to endure in mapping out the country from the Suez Canal to the Gulf of Aqaba. He dealt in some detail with the geological aspect of the country, the very remarkable nature of which he demonstrated with lantern slides. Of the bedouin in the country he had little to say that was not good, much as this poverty-stricken wanderer had been reviled by other travellers.

Subsequently, after the Egyptian Chargé d'Affaires had thanked the lecturer, Sir Ernest Dowson pointed out the extreme value of the work in which Mr. Beadnell and his colleagues (notably Dr. John Ball) were engaged. Egypt was a country in which a fertile part in the centre, the Delta, which was about the size of Belgium, was surrounded on either side by deserts the size of Germany and France. Hence it was vital to know the potentialities of these deserts. It was through the work of such men as the lecturer that, for instance, searches for petroleum could be made in the Sinai Peninsula. This latter point, the question of petroleum in Egypt, was developed by Mr. Bowman, who pointed out that much petroleum had been allowed to escape from Sinai, but that between the western central portion and Ras Mohammed in the south there were prospects of its discovery. In conclusion, Sir William Flinders Petrie paid his tribute to the admirable work of the Geological Survey in Egypt.

The recent Syrian elections passed off without further incident in the Alexandretta and Aleppo districts.

The Egyptian Cabinet has approved the draft of a Note recognising the position of Great Britain in Palestine and Iraq, while making reservations regarding Egyptian rights on the subject of the delimitation of the Sinai frontier.

Mr. B. H. Bourdillon, the Acting High Commissioner in Iraq, gave a banquet last week at the British Residency, Baghdad, in celebration of the passing of the Anglo-Iraqi Treaty, which was attended by King Faisal and his Ministers.

All the Yugoslav schools solemnly celebrated St. Sava Day last Thursday. The King informed the Rector of the University that, besides the usual five prizes for students, he had decided to build a home for poor students, which will be ready before the autumn.

FORTUNE'S FAVOURS IN EASTERN WATERS.

By Lt.-Colonel F. Cunliffe-Owen.

II.—The Collision.

Barka, Barka—this cry from the Greek sailors in excited tones and a terrific crash roused me out of a heavy sleep one night in the Ionian Sea in the winter of 1912-13.

After some tedious weeks spent in Epirus, waiting for the fall of Yanina, I had determined to give it a miss for a time and wallow for a short while among the flesh-pots (such flesh-pots, that is to say, as there were) of Athens.

All of us Military Attachés had congregated in Epirus, but the Greeks at that period were not making much progress against the fortress. They were still hammering away at Bizani with inadequate means, and Bizani well covered Yanina. Hence the dining members of the Attachés' mess (N.B. the mess was in a stable at Philippiada) were gradually getting fewer in number.

The Spaniard found the conditions of life not good enough, but might as well have stayed on, as he got weather-bound in Prevesa harbour and provisions gave out on his coasting boat. The German found he was learning nothing and longed for his nice garrison town of Stuttgart, and as he was only provisionally in Greece, thought he might go; and went. The Italian had some attraction just then passing through Athens I think, and one *beau jour* he vanished. The Frenchman got homesick and, after pacing up and down all day *sous les oliviers*, just bolted. Nothing would budge the Austro-Hungarian for reasons of intricate "policy"; and there remained myself and the Russian.

The latter hated to leave the Austro-Hungarian in sole possession of the field, but he was longing to go to get back to life, and said that if I would decide to go with him for a short while, he could fix up a sufficient reason to advance to "his Government."

I did not wish to miss the fall of Yanina (and was in all right at the death eventually), but felt I was quite safe in leaving Epirus for a while at the moment, so agreed to go with my Russian.

The usual break-neck journey on the motor road down to Prevesa we had, and then we were happily saved the delights of a stay in that place by finding a small transport ready to push off back to Piræus. The outlook regarding food was well known to us, but my companion had generally something up his sleeve in that respect, and regarding drink, certainly something up both sleeves.

We passed Santa Maura (where my companion commented on the old days of the British occupation with the band playing in the *platea* and the British soldiers walking out with the demure Greek girls of the period), and after food, settled down to occupations. He, having finished his customary whole bottle of liqueur, engaged himself with voluminous and complicated code telegrams to "his Government" and I wrestled with my beloved overdue *Morning Posts*. Turning in, I made the invariable and necessary search for, and preparations against, the minor occupants of bunk and cabin, and then slept, to be aroused by the crash and uproar alluded to at the beginning of this little tale.

No accident upon a Greek coasting ship, as everyone acquainted with these waters knows, is to be regarded lightly. For, all clear space below, between and above decks is crammed with cargo, three or more times the proper number of passengers allowed for, is taken, and first or second class is all one to them.

Fortunately the night, though pitch dark and cold, was perfectly calm on the water, but the shock flung me out of the bunk, the lights had all gone out and excited cries and the clattering of people tearing here, there and everywhere filled the air.

My friend wanted to do *something*, to get into a boat or heaven knows what, but, as is probably the best thing to do in all such cases, *I* decided to do nothing. I looked over the side, and there was another craft with her stem firmly embedded in our quarter and we were practically cut down to the water's edge. No doubt as it was a fine night, everybody, steersman, look-out man (if there was one), watch and all on both boats had been peacefully sleeping. Such a fracas went on, but the other ship gradually edged away and we were left in no immediate danger for the moment, but with the water just lapping an enormous hole in our side.

Now began the recriminations on where the blame for the collision lay. These discussions, with gesticulations, went on interminably as the most important business on hand, until finally old chance was trusted to; it was hoped the weather would remain fine, and we just steamed away with the water awash in our side, coming and going in the good old hole as it felt disposed.

Being safe for the moment, nobody troubled about such trifles as temporary repairs or what *might* happen, and so we fetched the Piræus towards midnight of that day and went snugly to bed, just in time to hear a tornado of rain, wind and thunder.

But it is the custom of these people to take chances rather than bother, so no one cast their mind back in the least to the "might have beens."

The resignation of Dr. Emin Bey as Prefect of Constantinople has been accepted by the Turkish Government.

An express train between Spalato and Zagreb, which was delayed for 12 hours by snow, ran into a train near Ogulin, in Croatia, and did much damage, but no one was killed or serious injured.

The Postmaster-General announces that on and after February 1 telegraph money orders will be obtainable for payment in Baghdad and Basra (but not at other places) in Iraq.

It is reported from Cairo that a Customs Agreement has been arranged between the French, for their mandatory territories in Syria, and the Wahhabi King, to whom the document is being taken for signature in Mecca.

Lieutenant-General Sir Walter Campbell, Quartermaster-General to the Forces, Lieutenant-General Sir Noel Birch, Master-General of the Ordnance, and Major-General H. F. Thuillier, Director of Fortifications and Works, who are making a tour of inspection, landed at Port Said on January 27.

A Quiet Day was held in St. Mary's Pro-Cathedral, Cairo, on January 22, in support of the London Convention to consider the world-wide situation in the Church's oversea work and opportunities to which representatives from Heliopolis, Heluan, and other outlying districts were invited. The service was conducted and the addresses given by the Rev. Dr. Bickersteth, Chairman of the Canterbury Diocesan Board of Missions, who is now on a visit to Bishop Gwynne.

PERSONAL AND GENERAL.

TO-DAY

February 4, 1926 (New Style).
January 22, 1926 (Old Style).
Rajab 21, 1344 A.H., of the Moslem Calendar.
Shebat 20, 5686, of the Jewish Calendar.

Sir Robert and Lady Bruce left England last Friday for Colombo.

Lord Meston has returned to 38, Parkside, Knightsbridge, from India.

The Earl of Morley sailed in the P. and O. s.s. Comorin last Friday for Port Said.

Sir John Simon, K.C., M.P., and Lady Simon returned last Saturday to 59, Cadogan Gardens from India.

Sir Montague Barlow has returned to London after a prolonged tour in Ceylon, Malaya, India, and Egypt.

Lady Sheila Scott has returned to 28, Gloucester Place from India, where she has been on a visit to her aunt.

Lord Woolavington has left Lavington Park for Khartoum, and will be away from England until late in April.

Sir Herbert and Lady Vernon and Miss Nina Vernon last week left Eastham House, Cheshire, for Egypt in the s.s. Rajputana.

Sir John and Lady Stavridi, with their two daughters, left London for Greece on Jan. 26, and will be away until the middle of March.

Annie Lady Brocklehurst and Lady Brocklehurst were among the passengers who left London last Thursday by the P. and O. special train to connect at Marseilles with the s.s. Rajputana for Egypt.

Sir John Archer, who, with Lady Archer, left in the autumn for a six months' tour in India, has been taken seriously ill, and is lying in the hospital at Colombo, having had to undergo a severe operation.

Among the passengers leaving London last Friday in the P. and O. s.s. Comorin were Sir Arthur and Lady Lowes Dickinson for Port Sudan, the Hon. Sir Gervase Beckett, Bt. and Miss Prunella Beckett for Colombo.

Our Liubliana Correspondent writes:—"On January 28, Mr. G. H. Maclean, for nearly six years H.B.M. Consul in Zagreb, left for London, whence he will in due course proceed to his new post at Addis Ababa in Abyssinia. Mr. Maclean was very much liked by the British colony throughout Croatia and Slovenia and no less by the Yugoslavs. His going will be sincerely regretted by all who knew him in this country. He was one of the first and most generous friends of the Yugoslav Society for the Study of English in Liubliana."

PROMOTIONS, APPOINTMENTS, ETC.

The King has approved the appointment of Mr. Harold Baxter Kittermaster, C.M.G., O.B.E., Secretary to the Administration in Somaliland, to be Governor and Commander-in-Chief of the Protectorate, in succession to the late Colonel Sir G. H. Summers, K.C.M.G.

M. Radu T. Djuvara, Counsellor of Legation and formerly Secretary of Legation in London, where he acted at various times as Chargé d'Affaires, has been designated by the Roumanian Foreign Office as Chargé d'Affaires in Washington, in the room of Prince Antoine Bibesco. An official appointment, says *The Times* Bucharest correspondent, is expected to be made shortly.

Sir John Donald, formerly Chief Commissioner and Agent in the North-West Frontier Province of India, is staying at the Hotel Victoria, Dinard.

The King has been graciously pleased to approve the appointment of Mr. Robert Hyde Greg as his Majesty's Minister Plenipotentiary in Roumania, in succession to Sir Herbert Dering. Mr. Greg entered the Foreign Office in 1899, and in 1911 obtained his first appointment abroad as Acting Second Secretary in Cairo. In 1915 he went as First Secretary to Lisbon. Two years later he was seconded for service under the Egyptian Government, in which his knowledge of Arabic proved useful, and at the end of 1921 he returned to the Diplomatic Service, on being appointed Minister to the Court of the late King of Siam.

According to the *Morning Post*, the King of Egypt has presented Ibn Saoud, the King of the Hejaz, with a handsome motor-car, which he is dispatching to Jeddah.

Owing to the renovations at present being carried out in Trafalgar Square, the general public were precluded from witnessing the ceremony of placing wreaths upon General Gordon's memorial on January 26, in commemoration of the 41st anniversary of his death at Khartoum. At eight o'clock that morning, with the workmen as the only spectators, wreaths were placed upon the base of the Gordon statue from the council of the Shaftesbury Society, the Ragged School Union, and the Gordon Boys' Home.

Book Reviews and Notes.

THE PROBLEM OF INDIA.

"THE MODERN WORLD: INDIA." By Sir Valentine Chirol. (London: Benn. 15s. net.)

I confess that I opened this book with some little trepidation, for the broad black border on the "jacket" struck me as unpleasantly suggestive of mourning for a lost Dominion. Let me then make it clear at the outset that the book is no obituary notice, nor can it be classed as a pathological memoir: it is a study of a living organism at a critical stage of its development, an organism which has of late displayed some disquieting symptoms, but which, so far as can be judged at present, is not suffering from any incurable disease, and is at any rate very much alive. Stated in the author's words, the purpose of the book is "to trace the growth and the reactions of the great forces, spiritual and material, ancient and modern, which have made India what she is to-day," a nation indeed, but a nation "with a vision rather than the reality of common nationhood, towards which she is groping her way out of a welter of different races and creeds and languages." To the achievement of that purpose the author brings wide knowledge of his subject, exceptional skill in the presentation of fact, and a remarkable power of sympathy with conflicting ideals; and the result may be described as a definite success. The "general reader," for whom, I take it, this series is primarily intended, will find here a precise statement of the nature of the forces now in operation, and will be able to form a good idea of their relative magnitude; if he is also intelligent, he will be able even to get a glimpse of probable changes in magnitude in the near future, and this is at least as much as he has any right to expect. At the same time, he will not find himself hampered by over-elaboration of detail, or by an apparatus of references and bibliographies such as the modern historian revels in; and he will, if he is wise, offer a heartfelt thanksgiving for the deliberate exclusion of Burma, which enables the author to dispense with saving clauses or qualifications on almost every page.

I must now turn to the very few points I have noted where the book seems to me to fall a little below its own high standard. One of these is the treatment of the caste system in Ch. II. The statement of the evils of the system is, unhappily, not overdrawn, but, divorced as it is from the good, it seems to me likely to give an idea of the institution as a whole which is somewhat less than just. One of the good features is mentioned in a later chapter, where it is pointed out that caste offers a strong barrier against the danger of a Marxian class-war, a danger which in a casteless India would be very real indeed: but of greater importance to my mind is the function of the institution as the policeman, and the only policeman, of the moral law. The law itself may be far from perfect, and the policeman is subject to rather frequent lapses; but all the same the conduct of the masses in the villages is definitely influenced for good, and if, *per impossibile*, the moral policeman was suddenly withdrawn, his colleague of the criminal law would promptly break down from overwork. India, like the rest of the world, is still a long way from realising the poet's vision of the serene days

"When love is an unerring light,
And joy its own security";

and it is well to recognise that the caste system is something more than merely a social order, and that it stands in India where the pulpit, the Sunday-school, and the confessional stand in Christendom, machinery which, however imperfectly, does in fact make for righteousness. Eventually it must be either transformed or eliminated as the result of forces now in operation; but at the moment it stands as a factor to be reckoned with in all its aspects, good as well as evil.

Another point calling for criticism seems to me to be the blame attributed in Ch. VIII. to the Governments of the last century for failure to develop a widespread system of primary education. It is admitted that no demand existed, and consequently the boon would have had to be administered by force, but I think the author scarcely realises what this would have meant in the 'sixties, or even later. I look back to my own experience in the early 'nineties as a heart-breaking business. There was not much money, it is true, but lack of funds was not the practical difficulty: it was the disposal of derelict buildings, the placing of unemployed teachers, the search for exceptional villages which could be persuaded to give the school a chance of showing what it could do, the simulated enthusiasm of a few toadies, and the stubborn refusal of the peasants as a whole to have anything to do with the venture. Things are different now, and the difference is one of the brightest features in the prospect, but, instead of blaming the past generation, it would, I think, be more fruitful, as well as more accurate to exhibit the present top-heaviness of Indian education as the result of the cleavage between town and country, which is one of the big facts of the situation to-day. The existence of this cleavage is recognised in Ch. IX., but in my opinion it deserves more prominence than it receives. The Crown took over from the Company a vast rural population which would have nothing to do with schools, and a minute urban population which wanted schools very badly. In the actual circumstances, a scientifically co-ordinated system could have been attained only by keeping back the aspirants until the recalcitrants could be brought into line, but that would not have been the English way: looking back, we can wish that the conditions had been different, but I think we are bound to recognise that they were the inevitable outcome of the centuries that went before.

And now I have come to the end of the points which I marked for criticism as I read, and pass on to the conclusion of the book. The author declines to prophesy regarding the future, and I have no intention of rushing in where he fears to tread, but something of his attitude can perhaps be gathered from three metaphors which he employs in describing the position in the latter portion of last year. The Swarajist movement is characterised as possibly one of those "tropical storms which, fiercely as they rage, subside and pass away after clearing the atmosphere, and restoring fertility to the sun-scorched soil": in another context, we have a patient recovering from shell-shock, and, in another, one who has consumed a rather large quantity of ardent spirits. I take the metaphors to carry the suggestion that facts are now getting the mastery over the mists of theory which have of late obscured the landscape, and that seems to me to be the actual position. The change is noticeable, in particular, in the revival of interest in economic questions, and in the growing recognition that India cannot yet afford the life which she aspires to lead; she must set to work to increase the national income in order to meet increasing calls on it, and the effort to do so will be entirely beneficial, not merely in the economic sphere, but in every department of the national life. The last sentence of the book insists that it is in India, if anywhere, that the synthesis between East and West must be achieved, and the author looks confidently to England to contribute what she can, the old courage and tenacity, the old righteousness of purpose and rational adaptability, but on a higher plane of endeavour, and also with a greater amount of clear thinking in advance. He is less explicit regarding India's contribution, but I do not think I shall wrong him if I suggest

tribution, but I do not thing I shall wrong him if I suggest that he hopes to see on that side an increasing steadiness of purpose, a tendency to concentrate on the future rather than the past, and a growing determination to direct activity towards satisfying immediate needs, not sacrificing the distant vision, but driving the road towards it more laboriously, perhaps more patiently, than has been the fashion of late. One reader at least lays down this admirable book with the feeling that synthesis is possible along these lines. W. H. MORELAND.

OBITUARY.

Admiral Sir Ernest Troubridge.

We have to record with regret the sudden death of Admiral Sir Ernest Troubridge, which occurred at Biarritz on January 28. While present at a *thé dansant* that afternoon, Admiral Troubridge complained of feeling unwell; he was assisted to a couch in a neighbouring room, but died immediately. Admiral Troubridge's name since the outbreak of the Great War has been linked with the escape of the Goeben and Breslau, which he had been ordered to watch. A court-martial entirely exonerated him from all blame and upheld his contention that he had acted in accordance with his instructions in avoiding action; but the incident marked a distinct check in the distinguished career which he had had up to that point. Born in July, 1862, the son of an Army officer, grandson and great-grandson of high naval officers, Ernest Charles Thomas Troubridge came of fighting stock. He joined the Navy at the age of thirteen, and much of his service at sea was spent in Mediterranean waters. In 1884 he earned the Royal Humane Society's silver medal for saving life in Suda Bay; in 1895 he was Commander in the Revenge, and took part in the operations at Crete in 1897 and 1898. After four years as Naval Attaché, in which capacity he was present in naval actions in the Russo-Japanese War, he returned to the Mediterranean, and subsequently was appointed Commodore of the Royal Naval Barracks, Chatham. From 1910 to the end of 1912 Captain Troubridge was at the Admiralty, receiving his first flag command in January, 1913. Early in 1915 he was placed in command of the British Naval Contingent on the Danube, and he remained in those waters after the Armistice, commanding the British Danube flotilla and as British representative on the Inter-Allied Danube Commission. While at Belgrade he brought into being Yugoslavia's shipping service on the Danube and was able to hand it over to the Government when he left as a going concern.

Wherever he went Admiral Troubridge was a popular character, his vigorous temperament and geniality making him a general favourite in many European capitals.

Maharajah Jagadindra Nath Roy, of Natore, has died at Calcutta, at the age of 56, as a result of injuries received in being knocked down by a taxicab. He was well known both for his literary attainments and his accomplishments as a musician. He was the editor of two Bengali periodicals and twice presided over the Bengal Literary Conference. Before its capture by the Extremists he was a supporter of the Indian National Congress, and was chairman of the Reception Committee when the annual session was held in Calcutta in 1911.

It is stated from Bucharest that the President of the Roumanian Senate and former Prime Minister, M. Michael Pherekyde, died there on January 24. M. Pherekyde, who was 84 years of age, played a prominent part in political life for many years. He was accorded a State funeral.

Prince Antoine Bibesco sailed in the Olympic on January 27 on his return to the United States.

Sir Malcolm Hailey, Governor of the Punjab, flew on January 25 from Lahore to Rawal Pindi in a D.H.9 A. biplane to begin a tour in that district. This is the first occasion on which an Indian Provincial Governor has used an aeroplane in the course of his official duties.

THE WEEK AT HOME.

London, Tuesday Morning.

The New Parliamentary Session.

Journalists, who better than anyone else are aware of the growing public dislike of or distrust in politics, are making a notable effort to stage the Parliamentary session which opens to-day, representing it as one of the most momentous in the history of modern England. Whether they will succeed, however, in their attempt to re-introduce into the British people its old respect for a "representative" institution is a little doubtful. But these gallant fellows of the Press, led, perhaps, by Mr. Garvin, are painting in the most dramatic colours the possibilities of the new session.

As far as one can see, the sitting will be concerned much more with finance and economy than with legislation. It is commonly supposed that the King's Speech will mention the Economy Bill, the Electricity Bill, and the Merchandise Marks Bill. Upon the Italian Debt Settlement, which is happily a thing of the past, not much can be said; nor upon the mining crisis, which is, or unhappily may be, a thing of the future. In one respect, however, we may have something new—Agriculture. It is said that the Conservatives, perceiving that, however false at bottom Mr. Lloyd George's theories of the Land Question may be, they have to some extent stirred the countryside, have stolen some of the ex-Premier's thunder, or at least have tried to cut a little more ground from under his feet. The Government propose to extend to farmers generous credits, so that these essential men may not only farm on a larger scale, but that they may also be enabled to purchase the freehold of their farms. (This plan is, of course, infinitely more in keeping with the British and, I think, Roman traditions, than Mr. Lloyd George's Teutonic notion of State ownership of the land would be.) The Banks are to make a specialised service for agriculture, although whether they can assist the miserable farmers (who unfortunately exist in considerable numbers) who bought their farms at "boom" prices a few years ago and who now are helpless under their load of mortgage interest, is not clear. But it is quite certain that Mr. Baldwin, who is a man of the land, with few theories but plenty of facts, will make a very strong bid to get the agricultural problem in some way of solution.

The Plight of Liberalism.

The report which is being spread that the party of thirty-nine Liberals is now divided into four parts is denied by those in closest touch with the centre of the party, wherever that may be: possibly its divisions are only of Gaul-like dimensions. In any case it is obvious that the Liberals are a most unhappy family party. One need only think of the meeting the other day at Hull, when Lord Oxford spoke so eloquently on the necessity and the desirability of preserving the independence and unity of the Liberal Party. That meeting was presided over by Commander Kenworthy, whom I have heard speak in public of Mr. Lloyd George in terms which no son, however modern, would usually speak of his father!

Nor is this main division of the Liberal Party—the division into anti-Lloyd Georgeites and pro-Lloyd Georgeites—the result of the publication of the Land Proposals. It is true that those proposals have further accentuated and have augmented the existing division, but they are not the cause of the present pitiable plight of the Party. The real trouble is that Liberalism stands only for existing Liberals; it can make no converts. Like a section of the Church of England, it appeals for union with a wider party: and is rejected. The very fact that it is itself a compromise denies it the possibility of wide conversion, and for the next few years its business will be rather the salvaging of votes than the salvation of souls.

Co-operation with Liberals.

Not that I think a return to the two-party system is imminent, as so many people apparently do think: I do not. To my mind, the total disappearance of Liberalism is likely to came later than a division in the Conservative Party itself into what may roughly be called the reactionary and the progressive camps. At the moment the Conservative Party is led by a statesman, who though seeming to the superficial observer the most ordinary of men, has the unusual faculty of planting his feet firmly, so to speak, in two soils—the soil of the past and the soil of the future. It is incredible that so wise a man will be indefinitely tolerated. Then may come a split, and Parliament again become, what it is actually though not confessedly in this period of transition—a body of men who dream alternately of the past, the present, and the future.

Of Sir Alfred Mond, whose departure from a sinking ship was hailed with such objurgation by the captain and at least some of his crew, it is not unfair to say that his mind is wholly in the present. Palestine apart, it can hardly be said that this ex-Cabinet Minister owns or runs anything except on business, as opposed to idealistic, lines. That the Land Proposals, which of course are anathema to the small freeholders in Carmarthen by whom he was sent to Westminster, have hastened his decision to transfer what may perhaps be called rather allegiance than loyalty, is possible: yet surely they were not the sole cause. If there is one motto which is above all sacred to the industrialists of this country it is "Business is Business"; and it is notorious and indeed patent that the Liberal Party is not carried on in a business-like manner. One might perhaps describe the world inhabited by such men as Sir Alfred and his son as that half-world in which facts are more than theories, technique more than interpretation, policy more than principle—the demi-monde, in derivative fact.

As a matter of truth, and as I hinted last week, it is precisely in the shedding of such half-Liberals as these deserters (and as some who are still in prominent positions in the Party) that the greatest hopes of the Party lie as an influential factor in our national politics. Nor have certain intelligent opponents of Liberalism been slow to recognise this. Mr. Phillip Snowden, who, when Labour was in office, was, I believe, as rude as any other Labour Minister to the Liberals, has recently forecast the possibility of the Liberals' holding the balance of power between Tories and Labour. It is true that he also sketched, what I have shadowed above, the formation of a Centre Party composed of Tories and Liberal-Tories. There is plenty of reason, therefore, for supposing that the end of the three-party system is not yet.

Scotland and Politics.

The most remarkable thing about modern politics is that nobody seems to derive very great satisfaction from them. Take, for instance, the two by-elections which were held last week in East Renfrew and Dumbartonshire. In each case the Conservative candidate was elected, but with respective decreases in the number of the votes he polled of about 2,000 and 3,500; in each case the Socialist candidate held but did not advance upon the ground he had won at the last election; and in the one case where a Liberal candidate contested the seat, he had to forfeit £150!

Yet these particular things are really insignificant. Much more interesting is the fact that, despite the love of these two places for politics—the percentage of the polling being 76 and 75—the number of people interested enough to vote decreased. The anti-Parliamentary germ still needs watching.

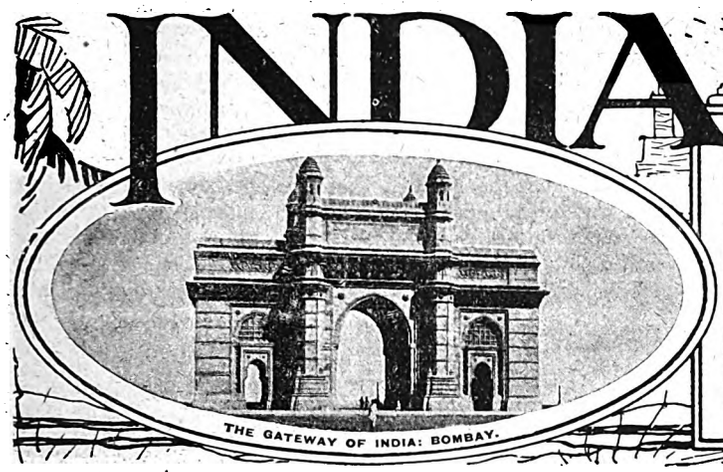
A Nation's Expenditure.

By many of those who realise to what an enormous extent modern England depends on her great Banks (in the opinion of some observers, our Banks are now more important than our Parliament), the annual speeches of the Chairmen of Banks are treated almost as Encyclicals. It so happened that last week two surveys were issued, from the Westminster and the National and Provincial respectively, which have caused at once a certain consolation and jollity. Both Mr. Walter Leaf and Sir Felix Schuster were in the main optimistic, but whereas the former took pains to point out that internal trade had been on so profitable a basis precisely because the standard of living had improved, Sir Felix sermonised eloquently on the fact that we were not saving enough, but were regarding as necessities what in fact were luxuries.

This contrast is exceedingly interesting, and it difficult to see which view is more correct. It is, of course, a mark of our present civilisation that so many people live on what other people persuade them is essential to them: hence the majority of advertisements. The appearance of a Sir Charles Higham in the "saving" Victorian era would have been an impossibility. But, it is argued, it is just this discontent with bare "necessities" that distinguishes the civilised from the uncivilised.

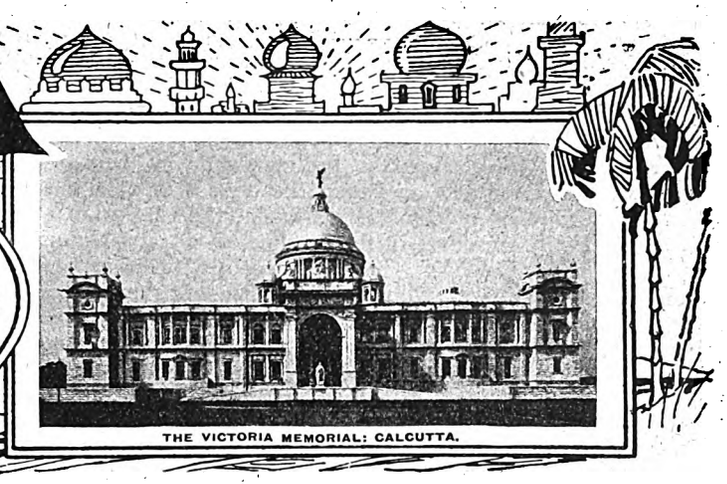
Yet that is not wholly the truth, for it is a fact that Puritan systems, for example, which, whether "uncivilised" or not, have indubitably left their mark on civilisations (one might mention the Roundheads or the Wahhabis), have always been opposed to luxury-spending. It seems that the over-spending nation collapses while the under-spending nation endures.

The Royal Martyr.



It seems doubtful whether the virtues of King Charles the First will ever appeal to more than a select, if very intelligent few. Tolerance towards rather than interest in the annual commemoration around his statue at Charing Cross was the prevailing sentiment last Saturday, when a faithful band held a service round the memorial. Down the Strand and up Whitehall ("his own Whitehall") the busses and people streamed unheeding of the solemn act of remembrance. Yet King Charles I. was the best of the Stuarts, and better than many English Sovereigns whose heads have not been severed from their necks in death.

ALTER EGO.



Lord Lloyd, High Commissioner in Egypt and the Sudan, returned to Khartoum last Thursday, having visited the Gebel Aulia, the site of the proposed new White Nile dam and irrigation works, on his return journey from Makwar. The following day his Excellency visited Gordon College and attended a display by the college boys.

INDIA

THE GATEWAY OF INDIA: BOMBAY.

THE VICTORIA MEMORIAL: CALCUTTA.

POLITICAL PRISONERS.

On January 26 the Legislative Assembly passed, by a narrow majority, a resolution recommending the trial, under the ordinary law, of all those political prisoners against whom the Government had sufficient evidence to put into Court, and the release of all the others: and, secondly, the removal of difficulties in the way of the return to India of Indian exiles in foreign countries.

There is, at first sight, a great deal of force in the first part of this resolution; though practically none in the second. The idea of "imprisonment without trial" is repugnant to every Englishman—much more so, in fact, than to Indians; but the circumstances are peculiar in India, where there still exists a law, over a hundred years old, authorising what practically amounts to *lettres de cachet*, known as Regulation III. of 1818. To be exact, "Regulation III." applies to the whole of India except the Madras and Bombay Presidencies, each of which has an analogous law of its own. Under these Regulations the Government of India can intern, for such period as they deem necessary, any individual whose activities appear to them to be dangerous to the State. The internee is not imprisoned, though his place of detention may, if no more convenient location offers, be a jail—it is not infrequently a fort: readers of Kipling's "In Black and White" will probably remember the story, "On the City Wall" about the Sikh internee, Khem Sing, in "Fort Amara." A subsistence allowance is given by Government to each internee, and also to his dependents, if any; during the period of his internment: and he is officially visited, at frequent intervals, in the interests of his health and comfort. In practice, "Regulation III." is only used in the case of important persons, the charge against whom, with the whole of the evidence supporting it, is nowadays examined by a Board of three judges and reviewed by the Viceroy himself. The Bengal Ordinance extended the liability to internment to lesser fry, the charge and evidence against whom are also judicially examined, but not ordinarily reviewed by the Viceroy. In the case of the men interned in connexion with the revolutionary outbreak of 1924 in Bengal, a comparatively small number of "leaders" were interned under the Regulation, before the passing of the Ordinance: and, though it was considered that the driving force of the movement had been successfully removed under the former, there still remained at large a number of youths, known to have been infected by revolutionary ideas, from among whom the perpetrators of intended assassinations were believed to have been already selected: and it was against these youths, against whom the available evidence was necessarily more slender, that the internment clause of the latter was specially directed. If, for instance, the Bengal Ordinance had been in force before the murder of Mr. Day, not only his assassin, but the murderer of the Indian police officer at Chittagong and one of the two young men responsible for the murder, by a bomb, of a Calcutta shopkeeper, all of whom were definitely suspect, would have been proceeded against under it. As has been often explained, the difficulty, in such cases, does not lie in the actual evidence, which is invariably complete: it lies in the proportion of it that it is possible to produce in open court, in a trial "under the ordinary law," owing to the confidential nature of many of the statements on which it is founded, and the notorious terrorism of witnesses; to say nothing of the difficulty of procuring a conviction by equally terrorised jurymen. The fact is that, in India, the authorities have a power that does not exist in England—the restraint of persons known to be actively dangerous on evidence which, however convincing, only amounts to what is known, in police parlance in this country, as "information received": and, being armed with this power, it is not unreasonable that they should exercise it on critical occasions, when neglect or refusal to do so would imperil the lives, not only of officials, but of harmless members of the general public, both European and Indian.

But the demand, for the removal of obstacles placed in the way of the return of Indian political exiles to India, has no substance, even on the surface. During the Great War, a number of these men took a leading part in the various "Indo-German plots" that were organised by our enemies: some of the most notorious among them being already refugees from India in consequence of grave charges, including capital charges, which they had evaded by flight. The Government of India fully recognises the obligation on it to "consume its own smoke," and to agree to the return of any Indian, whether firebrand, renegade, traitor, or murderer, who demands repatriation to his own country. The only "obstacle" that they oppose to such return is a refusal to guarantee amnesty for past misdeeds—the way is open for every Indian "exile," so long as he is prepared to take it, and to run the risk of thoroughly earned prosecution. In fact, a number of "exiles" have already returned, the case of each one being examined on its merits: and in no instance, hitherto, has a prosecution been instituted. Those who still remain outside India are the men who, on counting the cost, have arrived at the conclusion that they are better off where they are, and that the "difficulties in the way of their return" can only be removed by a definite amnesty. This is what the Government of India—quite reasonably, as most people will agree—refuse to give: they say, in effect, "Come back, by all means; but come at your own risk." Except in a few very extreme cases, the risk is not great: lapse of time, difficulty in tracing witnesses, even the change of view that has taken place in ten or more years, particularly since the end of the War—all these combine to make return fairly safe. But there does remain a small residue for whom it would certainly not be safe: it is they who have pulled the strings, and it is on their behalf that the Assembly Nationalists have pressed this part of their resolution.

THE LEAGUE OF NATIONS.

It has lately been announced that a special effort is to be made to start League of Nations Societies in India. Dr. Pillai, the Indian member of the League Secretariat, arrived in Bombay at the end of December, charged with the mission of interesting the Indian public in the work that is being done at Geneva, in the hope that this may further the desired object. Mr. Marvin, the Chairman of the Education Committee of the League of Nations Union, has brought to Calcutta a film illustrating the work and aims of the League, which has already been exhibited with considerable success in Ceylon and at Madras: and Lord Meston lectured, during the first week of January, before the Rotary Club of Calcutta, on "the application of League of Nations principles to business life." He said that the chief criticisms levelled at the League are, that it is too talkative, too fond of side-shows, and too full of "Dagos." He admitted that there was a good deal of truth in the first; as to the second, he asked "who shall say that the by-products of the hive of industry at Geneva are not worth while?": as to the third—which is specially voiced by American critics—he said that, from the very nature of its being, the League has to be a varied and cosmopolitan body. Admittedly, the League has been unable to devise machinery whereby the influence, or rather the votes, of member nations should be proportionate to their importance; but, just as it takes all sorts to make a world, so it takes all sorts to make a League: and it does the Great Powers, obsessed by their larger problems, not harm but good to discover what the smaller peoples think about them. Lord Meston coined a striking phrase when he referred to the value of the opinion, never before obtainable but now to be found from the discussions of the League of Nations, of "the Nation in the Street."

Presumably as a counterblast to this campaign, the leading extremist newspaper of Bombay printed, at the beginning of January, an appreciative article on M. Chicherin's pronouncements about the League and Locarno. M. Chicherin said that Britain had persisted in the ostracism of the Union of Soviet Republics on the ground of inadequate recognition of pre-War Russian debts; but that, "as soon as it became evident that we were ready to meet our creditors in a reasonable spirit," she shifted her ground, and "it is our attitude towards the League of Nations that is now made the acid test." The *Bombay Chronicle* gives whole-hearted approval to these arguments. It says that, according to the Imperialists, Russia is an outcast nation because of her practice of communism; but asks whether she is, in truth, "such a felon nation as to deserve the vile propaganda of Britain?" It describes as "a fair and honourable probability" the deserved loss of its loans by any nation that lends money for "usurping despots" to use against the interests and liberties of their subjects, which the latter have every moral right to repudiate. As to the Soviet attitude towards the League of Nations, it is British statesmen "who have degraded the League into a rubber-stamp of aggrandising imperialism, and, in the true British spirit, expect their cant to be swallowed by the world." The League has become "a dread instrument of hypocrisy, an Anglo-French caucus that is looked upon as a snare by nations like Russia and America." In the matter of Locarno "the Locarno fake," the "chicanery of Locarno"—the paper says that, when the Treaty was signed, "the church bells rang forth victory, but it was a peal of desecration, since independent nations forswearing conquest could not exult in the plot."

It seems that the campaign in favour of popularising the League in India will have to reckon with extremist opposition, which evidently proposes to take its stand on the familiar "racial" grounds that appear to be inevitably imported into every form of Indian political discussion nowadays. In a Western country it would of course, be true that polemics of this kind would defeat themselves by their obvious bias and folly; but, in India, this is unfortunately not the case. The *Bombay Chronicle* has made itself the champion of Russia and Turkey who, in other circumstances, would doubtless pray to be delivered from such a friend. As things are at present, it may be supposed that they welcome extravagances of this sort, which are of a piece with their own methods of propaganda. One of the first duties of the restored Editor of the paper should be—and, one may hope, will be—to purge it, for good and all, of the poisonous bombast for which it has recently been distinguished, that constitutes a positive disgrace to journalism: and to lead it back into paths of sanity where it can once again take the position that all, who value the freedom of the Press, must heartily wish to see occupied by so potentially weighty an organ of advanced Indan political opinion, in so important a centre as Bombay.

CURRENT TOPICS.

Farewell Dinner to Lord Irwin.

A farewell dinner to Lord Irwin, the Viceroy Designate of India, has been arranged to take place on March 11. The dinner is being organised by the East India section of the London Chamber of Commerce, but men prominent in the civil and military, as well as the commercial, life of India have already intimated their desire to be present, and those with past or present Indian associations, whether members or not, can obtain tickets on application to the Secretary of the London Chamber of Commerce, 1-3 Oxford Court, Cannon Street, E.C.4.

Sir George Forrest.

The death of Sir George Forrest, at the age of 81, took place on January 28. He served in India from 1872 to 1899, first in the Education Department in the Bombay Presidency, and latterly as officer in charge of the Records of the Government of India and of the Imperial Library at Calcutta. As the son of a man who won the Victoria Cross in the Indian Mutiny, it was natural that the material regarding that great event, existing in the Government of India records, should have been the subject that appealed to him most: and, among his numerous historical publications, that on which his literary reputation mainly rests is his "History of the Indian Mutiny," published in 1904. *The Times* (of which, for part of his service in India, he acted as a correspondent) concludes a long and sympathetic notice of Sir George Forrest's career by saying that his chief claim to remembrance rests upon the leading part that he took in the movement for the adequate preservation and publication of the Indian records: and that his work, taken as a whole, remains a solid and creditable achievement.

State Shooting Parties.

One cannot but admire the candour of Lord Reading when, in speaking at a dinner recently given in his honour by a number of Indian Princes assembled at Delhi for the session of the Chamber of Princes, he reminded his hosts that one reason why his first shooting trips in India had not been an unqualified personal success was that he had never handled a gun before his arrival in India. It is related of a by-gone Prime Minister that, when one of his colleagues asked whether a certain nobleman, whose claims to a vacant Viceroyalty of India were then under consideration, could ride, he replied: "Ride? He's an English gentleman—of course he can ride." (This particular candidate may perhaps be identified with the Viceroy of whom the story is told that, when a member of the Council met him riding on the Simla Mall, and wished to stop and speak to him, he angrily called out, "Leave me alone, man—can't you see I'm busy riding?") Lord Reading has, throughout his Viceroyalty, been a regular rider and a persevering shot: and the number of trophies that he will bring back with him is no mean tribute to the success of his perseverance.

It is certain that a Viceroy labouring under Lord Reading's initial disability must have found his early experiences at State shooting parties very trying. At all such shoots, the guest of honour necessarily has the best

Digitized by Google

stance: at which the driving of every sort of game, from sand-grouse to tigers, is carefully and accurately aimed, so that the success or failure of the day depends almost entirely upon his personal prowess with gun or rifle. There is, of course, the well-known tale of the great man who was taken out to shoot bears, and whose ill success was explained by his *shikari* as due to the fact that, though the Sahib shot splendidly, "God was very merciful to the bears." But, in fact, there are methods, fully recognised in India and not unknown elsewhere, by which shortcomings on the part of the star performer can be rectified —at any rate in the matter of big game: it is not so easy with birds.

The writer of these notes remembers a conversation, shortly before he left India, with an Indian gentleman who had been in personal attendance on a very exalted British guest at a State shoot in Kashmir. The sport was varied: consisting, on different days, of pursuit of "bara singh—the local variant of the red deer—bear, and duck: all of which were driven. On the first day, a great herd of deer appeared; and, as soon as they came in sight, the noble sportsman, who was armed with two double-barrelled rifles, discharged them both much as the men of Devon discharged their culverin in the attack on the Doone Valley—"fettling it anyhow on the slope, pointing in a general direction and trusting in God for aimworthiness"—with no observable result except the multitudinous flight of the deer. On the second day, exactly the same scene was re-enacted with a large concourse of bears: and, on the third, the great man fired over six hundred cartridges at duck, the chief effect being a sorely bruised shoulder and a cut and much swollen lip. The bag of duck, which amounted, if one remembers aright, to thirteen, could not well be doctored, but the *shikaris* announced that the finest of the stags, and the largest and woolliest of the bears, had got away sorely wounded, and that they were confident of being able to find the corpses and bring them in: which, a day or two later, they did, to the satisfaction of all concerned.

The Bombay Reclamation Scheme.

At the south-west corner of the Island of Bombay there is a large but shallow indentation, known as "Back Bay," the entrance to which lies between two sharply pointed horns of land: Malabar Point, on which stands the Bombay Government House, and Colaba Point, where is situated the terminus of the Bombay, Baroda and Central India Railway. The total area of the Bay is approximately 3,500 acres, and a series of rock ledges runs, though they are not continuous, across the mouth of the Bay between these two horns. In the sixties of last century a suggestion for the reclamation of the whole of the Bay was put forward, the idea being to build a wall following the line of the existing rocks; but this came to nothing. Shortly before the War, the scheme was revived, and definite proposals were laid before the Government of India for partial reclamation; but these, which involved a large expenditure of money, were naturally not proceeded with when the War broke out. In 1920, however, they were again put forward, and accepted: the final scheme provided for the reclamation of 1,145 acres in Back Bay, or approximately a third of its total area, and an additional smaller reclamation of 132 acres from Bombay Harbour, along the eastern shore of Colaba Point.

It would seem, however, that the estimates prepared in 1914 were used as the basis for calculating the cost of the work begun in 1920: however this may be, its total cost was estimated at 367 lakhs of rupees, and it was expected to be completed in five years. According to the report of a Committee appointed to inquire into the working of the scheme, which was published on January 26, the total cost of the scheme, if completed according to plan, will be at least three times the estimate, and the reclamation will not be completed until 1945—twenty-five years instead of the expected five. This enormous discrepancy appears to be due partly to the great post-War rise in the cost of machinery, material and labour, and partly to disappointing performances on the part of the dredgers employed to pump silt into the reclamation area: though it is perhaps not unnatural to believe that some of it, at least, may be due to the loss of the remarkable driving force exercised by the late Governor who inaugurated the reclamation, as an important part of his great schemes for the development of Bombay. The Committee have presented a majority report in favour, as it would appear from the cabled information, of the completion of the Back Bay reclamation and the suspension, at any rate for the present, of the work in Bombay Harbour. They seem to have unanimously rejected the possibility of completing the whole project as originally proposed: the minority consisting of one member who recommended the immediate closing down of the work and the writing off of the money already expended—nearly 500 lakhs of rupees—as a bad debt.

It is reported that Sir Alexander Gibb has been asked to examine the state of affairs and to give expert advice on the matter, with special reference to the terms of the Committee's report. A point demanding special attention, apart from the greatly increased cost of the scheme, is the financial aspect that it will assume, if and when completed; for this was calculated on the land values prevailing in Bombay at the time the estimates were framed, which were approximately double what they now are. It appears to be expected in Bombay that the expert examination of Sir Alexander Gibb will show that things are not so bad as they seem; but, even should this expectation be justified, the position is evidently very serious. Meantime, the work will presumably continue.

Trade Union Legislation.

The Government of India Trade Union Bill, which was introduced in the Legislative Assembly on January 25, with the result that Government were defeated on one of its crucial clauses, may quite possibly have to be withdrawn in consequence of this defeat. Under the Bill, registration of a Union is voluntary, but no Union that refuses to submit to registration will be officially recognised: and registration entails a considerable measure of Government supervision and control. For instance, the accounts of a registered Union will be audited by Government, and the salaries of Union officials will be fixed by Government. It was on the latter point that Government were defeated on the day of the introduction of the Bill: an amendment, to delete this clause, being carried on the motion of a member who has himself, for some time past, been an official of the so-called "All India Trades Union Congress"—a body which, so far, has practically entirely consisted of professional "labour politicians," without any backing from the rank and file of Indian Labour: and to which, a few weeks ago, the Russian "Profintern" (Red International of Labour Unions) addressed a message of congratulation and advice, recommending open affiliation to the R.I.L.U.

The *Daily Herald*, referring to the possible withdrawal of the Bill, expresses the opinion that such action will be "a new blow struck at the pseudo-constitutionalism of the present Indian régime," inasmuch as it will amount to "denial of the right of the Assembly to amend Bills in any important respect": and declares that audit of accounts by Government finds a place in the Bill "on the pretext of safeguarding members against the possible dishonesty of officials," and the fixing of the salaries of Union officials "on the characteristic plea that otherwise officials might vote to themselves any salaries they chose."

The word "characteristic" is, unfortunately, only too well chosen. In India, an attempt to safeguard the interests of subscribers must always be a necessary characteristic of Government legislation dealing with any organisation part of whose duties lie in the collection and disbursement of money. A non-official speaker on the Government side is reported to have "raised a storm" in the Assembly by asserting that there had been numerous instances of Indian officials and funds disappearing simultaneously. Quite commonly, Indian "officials," who have the handling of funds subscribed by the public, do not take the trouble to disappear, when the funds

Digitized by Google

have done so: a correction that might well have been made in the Assembly; though, no doubt, it was not one that would have commended itself to those affected by the "storm." It is so simple, merely to refrain from issuing accounts, and then, at the proper moment, calmly to announce, as the Nagpur Swarajists did on a recent occasion mentioned elsewhere in this issue, that there is "no more money": and Indian public opinion accepts the fact that a good proportion of money collected from the public, for political or charitable purposes, invariably sticks to the palms of the collectors—the only occasion for complaint is when it appears that some one individual has had more than his proper share, and has not allowed his friends a reasonable slice of his adventitious profits. This was the case in the most notorious instance of recent years, that of the "Angora" (political) and "Smyrna" (charitable) funds collected by the Central Khilafat Committee from the Mohammedan public of India; in which it was at last discovered that the responsible "official" was no less than nineteen lakhs of rupees shy, having lost the whole of that sum (rather more than £125,000) in a speculation in which his friends and colleagues had been allowed no part. The failure of the business in which these funds had been embarked was explained to be due to a series of accidents for which, when the facts were finally thrashed out, the "bailee" received a good deal of public sympathy; and, though no longer the rich man that he once was—or, at any rate, was reputed to be—he is still accepted as a perfectly respectable and honest member of society, who has "met with misfortune."

The Indian Forest Department.

It is announced that the Standing Finance Committee of the Government of India has sanctioned expenditure, that will ultimately amount to something over 110 lakhs of rupees, on the Forest Research Institute at Dehra Dun. This decision is notable for two reasons; first, because it advertises the fact that Government fully recognise the immensely valuable asset that they own in their forests, and the great work done by the Institute in helping them to turn it to the best advantage; and secondly, because an important part of the work of the Institute is scientific education in forestry. Hitherto it has been necessary to recruit for the superior posts in the Department almost entirely in England, since the required standard was unattainable in India, and could only be reached by those who had undergone the most important part of their training in Europe. As forests are already a "transferred" subject in several Provinces, and likely soon to become so in others, it has been felt, for some time past, to be anomalous that Indianisation of the Department should lag behind that of the other Provincial services solely owing to the impossibility of Indians obtaining the required training in their own country. This disability is now in course of being removed: and it is not unnatural to suppose that, should the facilities for higher education in forestry at Dehra Dun prove to be as good as is expected, there will be no dearth of properly qualified Indian candidates in the future.

Indian Stores.

The report of the Indian Stores Department in London for 1924-25, which has just been issued, contains figures that constitute a remarkable certificate to the British manufacturer; who, as is well known, obtains no preference against his Continental competitors, so many of whom start with the great initial advantage of a heavily depreciated currency. Contracts placed by the Government of India through the Department are, without any exception, allotted solely on grounds of exact compliance with specification, cheapness, reliability and punctuality of execution: and, in view of the handicaps under which the British manufacturer suffers at present, when competing with his foreign rivals, it is encouraging to learn that, excluding those Government stores which must be obtained through other Government Departments, out of a total of £4,160,000 expended by the India Stores Department on goods purchased in the open market, more than 87 per cent. went to British firms.

Blind Relief in Bombay.

A report of the Blind Relief Association of Bombay for the year 1924—the fifth year of its activities—draws a moving picture of the necessities of the blind in that Province and, inferentially, of the position obtaining in India in general. The report says that, according to the Census of 1921, the Bombay Presidency then contained 50,000 totally blind persons; and adds that, out of 26,700 towns and villages in the Presidency, 25,500 have a population of less than two thousand persons. Owing to the tendency of Indian medical men to collect in large towns, partly because of the amenities offered by large centres of population and partly because practice in the smaller towns is generally unremunerative, the medical profession, though overcrowded in the large towns, is non-existent in the small towns and villages. Diseases of the eye are specially prevalent in India, particularly among young children, due to the absence of preventive work in the matter of diseases such as smallpox and ophthalmia neonatorum: and the Association, which supports a travelling dispensary that tours through the villages, has a staff of trained "field-workers" whose special duties are preventive. In the various hospitals and dispensaries supported by the Association, the report states that over 17,000 cases of eye disease were treated, and nearly 10,000 operations performed during 1924: while the "field-workers" gave simple treatment to nearly 50,000 people in villages, and about 15,000 babies were inspected, during the first ten days after birth, for ophthalmia neonatorum. The Headquarters of the Blind Relief Association are at 65, Kalbadevi Road, Bombay: and the report appeals, apparently with full justification, for subscriptions in aid of the work now being carried on, and of its much to be desired extension.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 14.

The Viceroy's Last Visit.

The presumption is that Lord Reading will not return to Calcutta, as his term of office is drawing to an end and his time is likely to be fully occupied until he goes. He has undoubtedly an affection for the city: and, as a cosmopolitan, he must find it a refreshing change from the limited atmosphere of Delhi, which by the way has been literally almost deserted this Christmas. Those who had to stay on till the holidays promptly fled into the real jungle the moment they could, and left the new capital to its tombs and its empty spaciousness. No one pretends any longer that its dry bones will ever really live. Calcutta likes Lord Reading in return; for, in spite of its weakness in the matter of snobbery, it contains a very large number of self-made men who see in him a brother and a very human one. As a Viceroy he has been a remarkable success: and it is daily becoming clearer that his methods of dealing with the serious difficulties of the last few years are being justified in the event. He has never worked with a flourish of trumpets, but has been content to bide his time and trust to sanity and sympathy, combined with no little subtlety, to prevail in the end. They are doing so. Saturday was a working day, and this made the gathering at Belvedere, to say good-bye, the more significant; Europeans and Indians alike who respect a man, acknowledge law and order, and recognise a fine achievement, congratulate Lord Reading and are sorry he has left us.

The State Departure.

Congratulations are due to whoever was responsible for the decision that the departure of the Viceroy should be a State one, for the function was a success from every point of view. Not only was the route crowded, and mostly with Indians, throughout its length, but there was even a disposition to cheer, a most unusual thing. The mere

Digitized by Google

presence of such crowds is a sign of greater tranquillity and of the dying down of the turbulence of the last few years: and, coupled with the attendances at the races and the Proclamation Parade, it makes the Congress thunder sound very hollow. Things are better amongst the masses without any question, and once again the fact stands out that the great body of Indians takes no interest in politics and political agitation and only wants to be left alone in peace. Unfortunately, in these days of clamour and advertisement, this fact attracts less attention than the discontent, disappointment and bewilderment of the politically minded, who are nothing if they are not vocal, and who control the whole of the Indian Press.

U.S. India?

Sir Frederick Whyte, on his retirement from the Chair of the Assembly, was requested by the Government of India to prepare a monograph on the principal Federal Constitutions of the world, with particular reference of course to India; the book is ready for publication and a foreword by Government indicates that it will outline possible Federal schemes for India and the factors which constitute them. 1929 is only three years off, and Government's action is a pleasant contrast to the contributions of the extremists towards making a constitution. Babu Bepin Chandra Pal, the "Moderate" politician, generously admits that "it is certainly something" to the credit of Government: but he ingenuously shows how much that something is, by going on to point out that "Swaraj" is still undefined and that no party in Indian politics has yet clearly defined its aims. He claims that there is one point on which there is agreement between all of them. "The one meaning in which the populace have understood this word Swaraj, during the last five or six years, is that, with the advent of this Swaraj, there will be an end to the present British Raj. As to what kind of Raj will replace it, practically no one cares to think seriously. Sufficient unto the day is the evil thereof: this seems to be the prevailing political sentiment among Indian Nationalists just now. All that they desire is, the ending of the present British bureaucracy. As to the future, they are content to leave it upon the knees of the gods." After this, will anyone but an Indian politician talk of responsible self-government?

Men and Things.

The Calcutta Corporation passed a resolution yesterday boycotting South Africans and South African goods: nobody has ever heard of either in the city. The Skeen Committee on Army Indianisation is listening to the "evidence" of politicians; later the Commissioners will tour the world to see military training establishments. The Burmese River Steamers Company has been explaining to the Tariff Board something of the reverse aspects of steel bounties. The Governor has suggested, at a Rotarian lunch, that criminals should be treated as invalids. Sir Abdur Rahim's Moslem League speech is still being discussed. Lord Meston, the Chairman of the Electric Supply Company, has been radiating universal beneficence, and hoping for lower charges for current. His views, in a recent speech here, on excessive competition, are accepted as completely unbiassed, as his Company has an absolute monopoly. The Currency Commission go home this week to write their report; Mr. H. C. Edmondson becomes the new local President of the Imperial Bank.

The Trivial Round.

At the time of last writing it almost seemed as if the stoking up was beginning; as the week-end approached, heavy rain made an appearance and, by the time the Light Horse turned out on Saturday to escort the Viceroy, things were pretty steamy. More than one member showed signs of other discomforts than those normally caused by riding a *multum in parvo* steed in troop over granite setts and tramlines; but fortunately Howrah was reached with nothing more than a few diversions. The races were well attended; but Orange William failed at last, and it was obvious he should not have been started. It is to be hoped that this will not be his last appearance, in spite of the previous announcement to this effect; it was pathetic to see his puzzled refusal to be pulled up until he had run through the other horses after the finish. A touch of cold weather has returned this week, and this helps the transition from the Christmas season to working days; the paperchasers are hard at it weekly, and the old-timers say that our thrusters go as hard as ever Bill Beresford and Co. did, or even harder; certainly the horses are a fine lot this year. The Denishawn Dancers are with us, giving a beautiful show which has even attracted some of the eternal jazzers from Firpo's, to see what dancing can be when it rises above foot level; the music is remarkable, much being of the modern American school which seems to have escaped notice in England. Charity demands and charity shows are increasing daily, but the co-ordination proposals have still to be published; meantime we work, dine, dance and play, and sometimes get a little sleep.

Markets.

The jute market closes with a rather more cheerful aspect; a renewed demand from the mills has steadied the position, and prices have already risen. The impression here is that the time has now arrived for a further advance in rates, especially for the better qualities: and this is expected in the near future. The gunny market, on the other hand, has been dull and rates have dropped. A small amount of business has been done in piece-goods, but the market generally shows little signs of creating any serious interest. In spite of a strong and active tea market in London, the position here has been irregular; buyers are still holding off, with the result that there has been little or no competition at the sales. The figures for December indicate a decline of between 5½ to 6 million pounds on the crop for the same month in the previous year; this means that the total crop fell short of that of the previous twelve months by about 16 million pounds. These figures speak for themselves; but it would appear that the general opinion expressed here, that the market is in a very sound and hopeful position, is not without its justification.

Apart from a fair inquiry for coal shares, the share market has produced little to report upon during the past week. Jutes opened dull, and scarcely any interest is at present being shown in this market; prices, in spite of this, have closed at round about previous levels. The cotton section improved at first, and a little more activity was apparent; but later developed weakness, and prices have since been on the downward grade. The feeling that the worst has now been seen in coal, has been responsible for a renewal of interest in the shares, and quite a considerable amount of business has been carried through; most of this has been done for holding purposes, as it is not anticipated that the companies will make a very good showing for 1926. Teas and rubbers remain unchanged and incline quieter, but the undertone in both markets has kept very firm; the smaller demand for rubber shares may chiefly be attributed to the irregularity of the raw material.

Government stocks have maintained their previous levels, and investment issues generally have found ready buyers, jute debentures being particularly favoured in this respect.

The money market has inclined easier, but rates continue as before. Sterling shows no change.

THE INDIAN MAIL.

Fitness for Self-government.

Hardly a mail passes without bringing some evidence to confound the claim of the Nationalists that India is already ripe for self-government: evidence that is enough to make sane believers in the policy, that will eventually lead to Home Rule, despair of its accomplishment. Of such is the picture, drawn at the recent non-Brahmin Conference, of the "untouchables" of India, of whom

Digitized by Google

there are said to be approximately sixty millions. It was said that in the Madras Presidency, there exists a system of man-mortgage, indistinguishable from serfdom, which binds not only the labourer himself, but frequently his heirs also. That the "untouchable"—who conveys pollution to caste Hindus not merely by touch, but even by coming within a certain defined distance—reaches this state of practical slavery owing to the fact that he is tied up by debt largely because he is unable to enter a shop, or even to pass along public roads, or streets where shopkeepers live, in order to sell the produce of his fields or to buy the necessaries of life; so that he is obliged to do both through a middle man, who fleeces him unmercifully in both transactions. That it is no uncommon sight to see the pitchers of "untouchables" placed at a distance from a public well, in the hope that they will be filled, out of charity, by those entitled to draw water from it. The state of affairs is worst in the Madras Presidency, whose population includes about ten million "untouchables": no one of whom is permitted to come within a certain number of "cubits"—if memory serves, the number is twenty—of a caste Hindu. In the outskirts of Madras City, there are a number of small creeks, spanned by rather narrow wooden bridges: and the writer of these notes remembers how once, on starting to cross such a bridge, he was surprised to notice a quite respectable looking old man, walking in front of him, suddenly turn tail and scuttle off the bridge on to the broad roadway that led up to it. The reason for this action was the appearance of a portly Indian with his forehead decorated with red and white caste marks, at the other end of the bridge, which he slowly passed over while the old man cowered on the side of the road, waiting until the coast was clear before making another attempt to cross. To a visitor from Northern India on a temporary visit to Madras, this appeared to be an experience remarkable enough to warrant mention to his host; but, to the latter, it was such an everyday occurrence as to pass almost without notice.

Another piece of evidence is to be found in the latest report on municipalities in the United Provinces. The report deals with 89 municipalities, and says that the accounts of only 41 were in a satisfactory or fair condition: those of all the rest were either unsatisfactory or bad, and embezzlement was rife. This latter stricture applied to the municipal accounts of great cities like Agra, Benares, Cawnpore (where a loss of 70,000 rupees had been caused by embezzlement over the supply of road metal), Allahabad and Bareilly. In the last-mentioned place, a member of the Board had received advances from municipal funds for the starting of a dairy, which shortly became insolvent, and for the building of a proprietary school, which the Board afterwards took over on rent; thus paying municipal money for the possession of a building that had been erected from municipal funds which, it is almost needless to say, had not been paid back. The report declares that the prominent causes of this almost universally unsatisfactory state of affairs are "the intrusion of politics into purely local affairs, the existence of petty factions among members, lack of supervision, and a generally inefficient and badly paid staff."

Yet another is to be found in the reports of the All India National Congress session at Cawnpore; where the Treasurer reported that the Nagpur Congress Reception Committee had collected 150,000 rupees, but had only paid over 39,000: and had declared that "it was impossible to pay the balance, as there was no money left." Mr. Gandhi expressed the opinion that this state of affairs called for inquiry; but it is unlikely to receive it, as it would certainly be useless, and everyone concerned recognises its exact meaning perfectly well, without the need for any inquiry.

The "Indian Communist Party."

The mail brings a more detailed report of the speech of Hasrat Mohani, the President of the Communist Conference at Cawnpore, whose dictum that "Swaraj must take the form of a Soviet Republic" was mentioned in our issue of January 14. The present report shows that this was not exactly what he said: and the difference is one of some importance. His words were, that their aim was "to establish Swaraj or complete independence by all fair means and, after establishing Swaraj, to see that it takes the form of a Soviet republic." This is exactly what was urged upon his Indian adherents by M. N. Roy, the Indian agent of the Russian "Third International," in documents that formed part of the evidence at the "Bolshevik" trial of 1924 at Cawnpore. It was represented that, in India, it was useless to try and inculcate Communist principles in the masses, because such things were beyond their understanding: the Communists should ally themselves with the "national" movement, but should try so to arrange matters that the real driving power remained in their own hands; so that, when the proper time came, they could set up a "dictatorship of the Proletariat" on the same lines as those followed in Russia. In other words, that the "national" object was to replace the British bureaucracy by an Indian "bourgeois" government: that the Communists, sinking for the time being their true principles, should assist in this endeavour: and that, when it was successfully accomplished, they would find the Indian bureaucracy an easy prey, whose overthrow, and supersession by an "international" Communist dictatorship, would present the minimum of difficulty. Just as in Russia the real crux had been to get rid of Tsardom, but, when this had once been accomplished, the Government of Kerensky was easily overthrown by the Bolsheviks, so the object of Communists in India should be to oust the British, entering into any compact, however unnatural, with any other political party, for that purpose: and, when this had once been accomplished, the way would be clear before them; for an Indian bourgeois Government would be a paper one, conducted by men of straw, which determined revolutionaries could clear away as easily as a knife goes through butter.

It is also of interest to note that the speaker denied that Communism "necessarily stands for bloodshed and terrorism." The Indian Communists' policy was to "sanction non-violence only as an expedient, but not to accept it, like Mahatma Gandhi, as a fixed principle for all time." They had divided property into two classes—personal, such as a watch, an umbrella or a house: and private, such as land and factories. Though they declared war against the latter, they had no intention of interfering with the former. Their organisation was purely Indian—"at least for the present, the work of our party will be restricted to India alone. Our relation with similar parties in other countries will be only that of sympathy and mental affinity to all of them in general and to the Third International in particular. We are only fellow travellers on their paths, and not their subordinates. Neither do we give them any practical help, nor do they extend any financial aid to us."

The most encouraging item in these remarks is the last nine words—if they are true. In that case, in the absence of financial aid from the Third International, it is quite safe to prophesy that the "Communist Party of India" will share the fate of so many of India's recent "stunts," whose invariable concomitant has been the collection of money: and will come to grief, doubtless much sooner than later, owing to the lack of what has always been the primary object of promoters—"funds."

The Khilafat Conference.

The mail also brings a fairly detailed account of the Khilafat Conference held at Cawnpore simultaneously with the meeting of the All India National Congress. The Chairman of the Reception Committee, Hasrat Mohani—the same person as the chief speaker at the "Communist Conference"—carried his republican ideas into the Khilafat question. He said that the Turks had no power to abolish the Khilafat: all that they had done was to express their inability to assume its duties while engaged

Digitized by Google

in the more important task of setting their national house in order; but they insisted that it must be democratised—that the Khalifa must be elected, and be helped by a Council whose opinion he should voice. This being so, the speaker declared that the Khilafat must go either to the King of the Hedjaz or to the President of the Hedjaz Republic. In his opinion, Ibn Saoud had put himself out of court by signing the Clayton Agreement: in which particular he had fallen below the standard set by King Hussain, "the only silver lining to whose career was his refusal to sign the agreement with Britain." The Central Khilafat Committee ought, therefore, to cease to support Ibn Saoud, since, if the latter once established himself as King, a republican form of government would be impossible. Indian Moslems should stand for a Hedjaz Republic, after the establishment of which its President should be declared "Khalifa-in-Council," India being directly represented on the Council.

This speech caused "some excitement," which ultimately led to the passing of a resolution expunging it from the record of the proceedings: the Conference expressing its confidence in Ibn Saoud and its gratitude to him for having purged the Hedjaz of the Sheriffian family. Mahomed Ali (the younger brother of Shaukat Ali) made a fighting speech. He said that the Clayton Agreement, said to have been entered into by Ibn Saoud, was only, up to the present, a newspaper report, and should therefore not be accepted. The Indian Khilafatists had assisted the Turks in winning their independence by carrying on the agitation that it was a sin for one Moslem to kill another, and had thus prevented the British Government from sending Indian troops to fight the Turks. He prayed that the Turks might "remain in possession of Mosul"; but, if any attempt were made to enforce the decision of the League of Nations, the Khilafat Committee's activities would again be required, to prevent India being again used "to turn the Turks out of it." He concluded his speech with the customary appeal for "funds": which is reported to have realised Rs.337 and "promises of more."

The Indian Khilafat organisation (which, in the course of the proceedings, was quite untruly claimed to be "representative of Moslems in India") is thus committed to the championship of Ibn Saoud: and it is apparently in his favour that the Conference pledged itself to "efforts to rid Syria, Palestine and Iraq from foreign controls so as to consolidate the Khilafat." The Committee's claim to have exercised the decisive influence in the achievement of Turkish independence is interesting: as is also its apparent belief that the Turks are now actually in possession of Mosul. This state of ignorance on the part of the leaders is a true indicator of the state of indifference on the part of those whom they claim to lead: and this meeting of the Conference proves once again the fact that is patent to all except the "leaders," and is even being forced on them also—that the Indian Khilafat agitation is practically dead: there is very little money left in it now, and very soon there will be none at all; so that it is time, for those who have lived on it in comfort for the past ten years or so, to look out for a new and more lucrative variant.

The Kakori Dacoity Case.

Two of the accused in what is known as the Kakori dacoity case—the sensational hold-up of a train near Lucknow last August, when an armed gang got away with a large sum of money after a good deal of promiscuous shooting resulting in the death of at least one of the passengers—have turned King's evidence and have received a conditional pardon. Their statements are to the effect that an extensive revolutionary organisation exists in the United Provinces, divided into several departments; to one of which, described as the "militant" section, was detailed the particular duty of raising money for the organisation, by means of robbery and dacoity. As the case is *sub judice*, this is not the occasion to say more about it; though it is permissable to quote the remarks made, in the course of his speech of welcome to the delegates, by the Chairman of the Reception Committee at the recent session of the All-India National Congress at Cawnpore. He is reported to have said that "their opponents had not grasped the full significance of their peaceful methods of work. Their workers were handicapped by want of adequate financial aid. The Kakori dacoity trial had snatched away many of their ardent and sincere workers, many of whom had not even been admitted to bail." The connexion of people accused, on evidence sufficiently strong to deny them release on bail, of complicity in highway robbery accompanied by murder, with "peaceful" methods of supplying "financial aid" to the "workers'" is decidedly good.

Rubber Production in India.

The production of rubber in India is comparatively small, though there are considerable tracts of land in Burma and Madras—in the latter, particularly in Malabar—that are well suited for its growth: and it is not unnatural to suppose that the recent boom in prices will turn the attention of Indian investors to the possibilities of the crop. The present mail brings figures of Indian production, contained in a note issued by the Department of Commercial Intelligence and Statistics, for the year 1924. In that year there were in India 998 rubber plantations with a total planted area of 130,000 acres: an increase from the previous year, of 26 plantations and 1,500 acres. Half of this acreage was in Burma, and the rest in the Madras Presidency and the Indian States situated in it—the State of Travancore accounting for 32 per cent., while British Madras, Cochin, Coorg and Mysore made up the balance, with 8, 7, 2 and 1 per cent. respectively. The average yield per acre of the tapped area varied considerably; being 202 lb. in Burma (against 193 in 1923) and 178 (against 202 in 1923) in Travancore; while in the remaining areas it was respectively 208, 193, 140 and 101 lb. against 193, 222, 156 and 100 in 1923. The total production of raw rubber in 1924 was a little more than 15½ million pounds, against a little less than 14½ million in 1923. The year's exports by sea amounted to 18 million pounds, against rather less than 15½ million in 1923. Fifty-two per cent. of this quantity was exported from Madras, and the remainder from Burma: and it went to the United Kingdom, Ceylon, the Strait Settlements and the United States, whose respective shares, in millions of pounds, were 8¾, 4, 3½ and 1¾. A Madras report gives a list of rubber shares in which transactions have been recently carried out at prices varying from two to five times the issue price of the shares: and adds that there have been more sellers than buyers in the rubber market; which seems to suggest that investors do not expect the present high price of rubber to continue, or that they are nervous about the proposed American measures for "retaliation."

Trade Returns for November.

The returns of India's sea-borne trade for November 1925 show a further decrease in imports and a further increase in exports. Compared with the previous month,

LONDON CITY MISSION.
AYAHS' AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and to introduce them (if disengaged) to families about to travel to the East.

the value of the imports of private merchandise fell from 1956 to 1873 lakhs, and that of the exports (excluding re-exports, which amounted to 88 lakhs) rose from 2825 to 2963 lakhs. The value of the net imports of treasure fell from 574 to 459 lakhs: and the visible balance of trade in favour of India was 729 lakhs, against 388 lakhs in October.

The imports of food, drink and tobacco fell in value, compared with the previous month, from 339 to 267 lakhs; while those of raw materials appreciated from 177 to 186 lakhs. Manufactured articles fell from 1408 to 1381 lakhs, but the fall in the imports of cotton piece-goods was comparatively small, amounting to 5 million yards in quantity and 26 lakhs in value. Compared with the October figures, the imports of grey goods rose from 51 to 53 million yards in quantity and from 157 to 161 lakhs in value: those of white goods remained steady at 31 million yards, though the value appreciated slightly, from 106 to 108 lakhs: but coloured goods fell from 35 to 28 million yards, and in value from 152 to 120 lakhs.

The exports of raw cotton amounted to 21,500 tons, of which Japan took 10,000, Italy 3300, China 2500, and the United Kingdom and Germany each 1200 tons. The shares of the United Kingdom, Japan, Germany and the United States were, in imports, 51, 8, 5 and 8 and, in exports 30, 6, 5 and 3 per cent. respectively.

The Indian Honours List.

It would seem that some of the names appearing in the New Year's Indian honours list have been received with anything but satisfaction by influential commercial circles in Calcutta: where *Commerce* indulges in unusually severe criticism of the list. It quotes the well-known lines on Baron Grant—"Kings can a title give; honour they can't A title without honour is a barren grant:" and says that the innuendo seems particularly appropriate to some of those whose names appear in the latest list. "If it were possible to make a Government look like an ass, our own benign and highly revered Government has been palpably placed in that unenviable position this time. The truth is that the Government, in more than one instance, has, to use a vulgarism, had its leg pulled. The list, moreover, is seditious. This is a strange statement, no doubt; but the Indian Penal Code tells us that anything is seditious that is calculated to bring into contempt the Government as by law established." The paper commends the bestowal of a title on a leading Indian merchant of Calcutta, as a reward for princely benefactions to charities; but says that, to those Indians who cannot afford to seek titles on these terms, the best method is to earn notoriety as a violent opponent of Government, and then suddenly change sides. If, after obtaining the desired reward, the title-holder returns to his previous activities—"well, that is precisely where the laugh comes in." But, to be a consistently loyal supporter of Government does not count: and the one essential is, to devise a means of "speaking through an amplifier from the house-tops. Silent service gains no recognition, no reward."

One is not (as the local readers of the paper doubtless are) able to identify the most obnoxious individual name —"one who does not, never did and never will occupy the exalted position ascribed to him"—nor to do more than guess at the several others of whom it is said that "the label is bigger than the package": but it is certainly a fact that the Government of India is not infrequently bluffed—or, as *Commerce* puts it, has its leg pulled—in the matter of honours. One remembers a case, that happened a good many years ago, which caused general amusement throughout India, combined with exasperation on the part of the acquaintances (one cannot say the friends) of the recipient of a knighthood. This was bestowed on an official who adopted a form of charitable benefaction that must have been peculiar to himself, as his avenue to a title: he wrote to the Government of India announcing that he had left, in his will, the sum of £20,000 that would accrue to them, for a worthy object, after his death!

INDIAN EXCHANGE.

London, February 1.

Rates have been perfectly steady at last week's quotations. In Bombay and Calcutta, although no change has been recorded in the T.T. rate, which still stands at 1s. 6 5-32d., business has been done daily at 1s. 6 3-16d. There appears to be more inclination on the part of importers to take this rate a little further ahead, as some business has been reported into early April, otherwise forward rates are unchanged, with April-May deliveries nominal at 1s. 6⅛d. T.T.

First-class commercial paper is 1s. 6 15-32d. three months' sight, with a probability of 1s. 6 7-16d. from the latter part of this month; but exports are far from brisk, and, as far as we can gather, fixtures have been on quite a small scale.

Money in India for this time of the year is comparatively easy. Short deposits for a month or two are quoted 4 to 4½ per cent. per annum, and there does not appear to be any prospect of pressure for funds.

We ventured an opinion about two months ago, shortly after the Imperial Bank rate was raised, that dear money was unlikely in India this shipping season, and there does not appear to be any prospect at the moment of a further advance in the Bank rate.

On the Bombay side arrivals of cotton have been accumulating, but holders are in no hurry to part at present prices.

The London market has been quiet. T.T. is quoted at 1s. 6 7-32d. with occasional settlements at 1s. 6 13-64d. for immediate delivery, in special cases. We have heard of a few fixtures for cash at 1s. 6 3-16d., and remitters are unsatisfied; but the rate is very difficult to obtain.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

Greek Currants.

For some time the position of the Greek currant industry has been unsatisfactory, and various articles in the Greek Press recently reflect the anxiety that is felt as to the outlook for this staple branch of the country's agriculture. Two causes have brought about the present situation. In 1924 there was overproduction, and this coincided with a sharp decline in exports which is attributed to the growing competition of Australian and Californian currants, the one affecting the trade with Great Britain, the other the United States market. A comparison of the figures for 1923 and 1924 certainly bears out the view of the effect of competition. In the case of Great Britain there was a very sharp decline in imports while those of the United States were less by 25 per cent. On the other hand Germany's imports rose sharply, and this is of interest in view of the suggestion that a remedy may be found for the existing depression by the development of new markets. The need is again urged for an advertising campaign for the British market, and it may be that we shall hear something of this when the next season approaches. I do not see, personally, why Greece should have any great anxiety as to the future of her currant trade. If there is increasing competition it is no less certain that the demand will tend constantly to develop for the currant is firmly established as an essential article of diet.

Roumanian Finance and Exchange.

No more anomalous feature is presented by the foreign exchanges than the present quotation of the leu. Roumania is fortunate in having at her disposal great potential resources, and, as the figures for the country's oil production last year suggest (the output was a record), they are now in process of being utilised, but this factor appears to have not the slightest effect on the exchange which continues to display marked weakness. For the explanation of the position one has to look at the record of the country's finances since the War and the obstacles that have been put in the way of trade in the shape of prohibitions and restrictions of one kind and another. The financial record of the country, as pointed out in a recent article in a Roumanian journal, has been one of excessive taxation. The Budget of 1922-23 balanced at roughly 15 milliard lei, the 1924 total was 28 milliards, that for 1925 was 32 milliards, on which a balance of two milliards is anticipated, while the estimates for 1926 have gone up to 40 milliards. These growing estimates, while reflecting the praiseworthy determination of the Government to have a balanced Budget, indicate very plainly the continued course of depreciation. In the case of Roumania a fundamentally sound though misguided financial policy has been of no avail because the economic policy generally has been framed on wrong lines.

Sudan Trade Expansion.

The figures for the trade of the Sudan for the ten months ended October 31, present a most encouraging picture. The value of the total trade was £E8,109,564 as compared with £E7,506,743 for the corresponding period of 1924, there being thus an increase of £E602,821. The value of the imports was slightly less than in 1924 at £E4,224,878 as against £E4,258,656. This was due to a decrease of £E278,143 in Government imports, public imports at £E2,994,735 showing an increase of £E244,365. The value of the exports was £E3,488,183, an increase of £E433,332, re-exports showed a gain of £E68,352 at £E212,202, while transit trade rose by £E134,915 to £E184,301, this total including specie of the value of £E76,900. As regards the share of countries in the trade Great Britain was first in the import trade with £E1,422,571 or 33.7 per cent., Egypt being second with £E1,350,073, or 32 per cent. while 60.1 per cent. of the export trade was with Great Britain.

A Rubber Landmark.

It is impossible to avoid dealing with rubber this week, even if one wished to do so, for February 1 marked the increase in the exportable quota to 100 per cent., this being the first time since the initiation of the restriction scheme that the maximum has been reached. It has happened at a time when the commodity market and the share market are both on the downward path, and though there was a slight decrease in the London stocks last week the influence of this new factor tended to depress the commodity still further, and yesterday both markets made a very dull showing. In reality, however, the position is anything but depressing, as will rapidly be realised when the Americans begin to buy rubber again. Ultimately, but not for several years, we shall see rubber stabilised at between 1s. 6d. and 2s., but before that, unless all the estimates are wrong, we are likely to see it considerably higher than it stood in November last. I gave an opinion I received recently to the effect that there would be a recovery this month. While that is very probable it is even more likely that the autumn will see sustained activity in the commodity market.

New Companies in 1925.

The improvement in conditions generally last year was reflected in a notable increase in the number of companies registered. The annual review of Messrs. Jordan and Sons, Limited, shows that the registrations number 8,028 the total capital being £122,901,464. These figures compare with 7,964 registrations in 1924 and a total capital of £108,517,372. The increase in both respects was in the "public" company section. "Private" companies, despite their great popularity, showed a decrease of 51 in number and of £2,427,806 in capital, but "public" companies are up by 115 in number and by £16,811,898 in capital. The number of "public" companies was 544 with a capital of £59,908,155 while that of "private" companies was 7,484, the capital being

£62,000,000. A classification of the businesses concerned shows that "Textiles" lead with 13½ millions, "Rubbers" being a very close second with 12¾ milions. "Mines" are third with 11 millions. As the pages of THE NEAR EAST AND INDIA have testified, quite a number of companies concerned with the Near and Middle East have been established during the year, but there has been no recrudescence of the activity that characterised the year or two after the War. That is due to the fact that while considerable progress has been made towards the normal, conditions in many countries still leave much to be desired.

COMMENTATOR.

BULGARIA'S FINANCIAL PROBLEM.

(From Our Own Correspondent.)

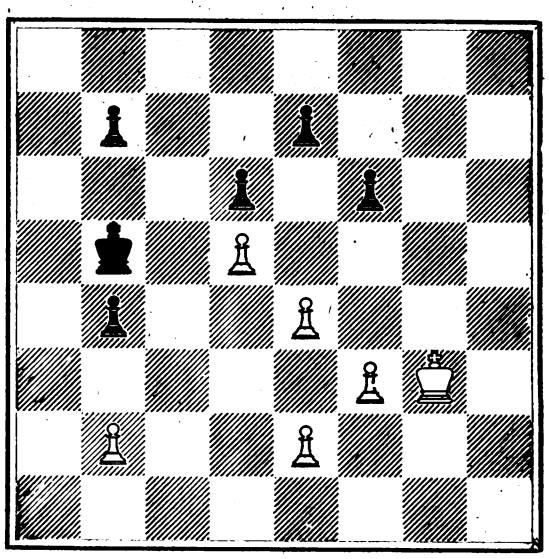
Sofia, January 26.

1926 cannot be said to have opened very favourably in so far as Bulgaria is concerned. The country finds itself saddled with huge debts, the burden of which is becoming increasing harder to bear. In MM. Liaptcheff and Bouroff the new Government possesses two men whose economic and financial experience carry some weight in Western Europe, and it is to be expected that in a short time Bulgaria will take steps to acquaint the Allied Powers with her financial situation in the hope either that some alleviation may be accorded, or that some external help may be granted.

ECONOMIC CONDITIONS IN PALESTINE.

The Palestine Press has been lately paying considerable attention to the economic crisis which the country is passing through at present. According to certain papers the crisis is very serious and a disaster was predicted.

As a matter of fact, however (says the *Commercial Bulletin* of Palestine), the "crisis" in question is only a tightness in liquid funds now prevailing in the local markets. Dwellings for the large numbers of Western immigrants of independent means that entered the country during the year had to be provided; land buying for speculation purposes reached very high proportions; traders in all articles and particularly building materials have indulged in extensive forward buyings abroad in order to meet the increasing demand of the local markets. Thus considerably large amounts of money were invested in buildings, land buying, and forward buyings abroad in a relatively short period, causing the present stringency in liquid capital, which is now more or less reflected in all commercial activities of the country, creating the so-called "crisis."



The depression is more acute in Tel-Aviv and Jaffa, whereas it is not appreciable in the other districts, Tel-Aviv and Jaffa being at present the building and commercial centres of Palestine. Though a small number of failures occurred, the total amount of liabilities is relatively small.

Measures to prevent speculation were taken by the credit institutions, the Chambers of Commerce and trade unions; and as a result the traders are now restricting their buying abroad to a minimum. Further, it is understood that the local banks have undertaken to help traders in granting credits to those who deserve it.

From reliable reports received it appears that the local industries, with very few exceptions, did not suffer much from the general depression. It is therefore considered that the crisis is only momentary and a complete recovery will soon follow provided traders refrain from speculation on a large scale and credits are controlled.

Monthly Supplement of "The Near East and India" : No. 13.

YUGOSLAV RAILWAYS IN 1925.

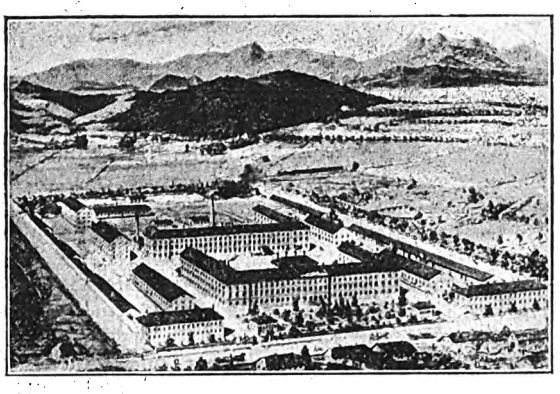
One of the most difficult problems that Yugoslavia had to deal with in 1925 was undoubtedly that of communications. Having been almost totally destroyed during the War the railways could not be restored in a short time. Nevertheless, the Ministry of Communications has done most praiseworthy work in the last few years. To construct so many lines, to build numbers of bridges and viaducts, to open up all the tunnels which had been filled in, to increase a few locomotives and several hundred trucks to the present quantity of rolling stock and to make the country's communications what they are today, all this, moreover, within the limits of the ordinary Budget, was no light task.

The Ministers of Communications have had the daily responsibility of such complicated problems as the following:—the reconstruction of the destroyed lines, parallel with the economic and social reconstruction of the country, the solution of all technical and commercial problems which arose from the growth of the country, and finally the policy of communications, which suffered from disconnexion and the traditional policy of Austria-Hungary in regard to railway construction in the Dual Monarchy. One question that had to be decided was whether the railways should run transversally or horizontally in view of the union of the S.H.S. Kingdom, and the acquisition of its own sea coast after so many centuries. Again, a matter of no little importance, was whether the inherited lines should be of first or of secondary rank. The status of the lines had to be determined by the new position of the Kingdom, its interests and aims. The line Zagreb-Belgrade could not remain a secondary line, nor could Belgrade remain without direct connexion with the sea. The whole railway system had to be organised on a unified economic and national principle, taking into account the existence of poorer districts that were not ready for development. If larger sums had been available, if the Blair Loan had been more favourable, the Government's railway policy would have had still greater success to record than was actually the case at the end of 1925.

In spite of all the drawbacks, however, the year has proved a landmark in the history of Yugoslavia's communications. During 1925:—(1) work was continued on the unification of the railway system, in order to bring the provinces into better touch with one another; (2) the normal line Grachatz-Knin-Split was opened, thus giving the whole country more direct connexion with the sea; (3) Serbia gained connexion with Bosnia by the new line Uzhitze-Vardishte; (4) the line Nish-Prokuplye was constructed and opened. This means the completion of another stage in the long-planned Adriatic Railway from Prahovo to one of the Dalmatian or Montenegrin ports.

At the end of 1925, the total length of the railway system was 9,989.1 kilometres, made up as follows:—

Normal gauge line	6,734.7 kms.
Narrow gauge line (0.76 m.)	2,525 kms.
Narrow gauge line (0.60 m.)	545.9 kms.
Narrow gauge line (1.00 m.)	183.5 kms.
	9,989.1 kms.



In addition to the above there are 275.6 kilometres of private lines, making a total for the Kingdom of 10,264.7 kilometres. Rolling stock included 1,127 serviceable locomotives, 422 of them on the narrow-gauge lines. During the year there were under repair 950 normal-gauge and 288 narrow-gauge engines. The number of serviceable trucks was:— on the normal-gauge lines, 27,394, on the narrow-gauge lines, 3,112.

THE SHIPPING SYNDICATE.

Since 1919 shipping on the Sava and Danube has been entrusted to the Shipping Syndicate, which is a corporation authorised by the State to employ under certain conditions the shipping material obtained by capture during the War or by way of reparations, for the maintenance of navigation on those two important highways. The year in which the Syndicate was founded was a favourable one for such a solution of the shipping

State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes

State Tobacco Factory in Liubliana.

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration, — BELGRADE —

problem. The State, occupied in every direction with reconstruction, gladly undertook to leave at least shipping matters in private hands. It handed over its own vessels and equipment and formed the Serbian and foreign companies into a syndicate subject to certain supervision on its own part and reserving to itself a certain share in the profit.

However practical and appropriate the idea of the Syndicate was at the beginning, its work has given occasion to numerous criticisms, and ever since 1923 considerable discussion has taken place as to whether the Syndicate should be broken up or should acquire a purely State character. One suggestion made was that the State should have only a priority share in the exploitation, while the balance of the profits should go to the holders of War reparation bonds. There were many reasons against this solution. The Ministerial Council, on the proposal of the Minister of Communications, in the meantime broke off all relations with the Syndicate then existing. From January 1, 1926, there came into existence a State Management of River Shipping and all traffic on State vessels passes under State management. All the companies which formed the old Syndicate are left free to act for themselves.

The new scheme in regard to river shipping will not in any way affect the interests of the recently syndicated companies, for it only dissolves those obligations which were not carried out in accordance with the spirit of the original arrangement with the Syndicate or with the State regulations. Among the reasons leading to the step now taken by the Government were that:—(1) shipping freights were higher than railway freights; (2) the Syndicate ignored State interests and did not pay the State its share of the profit: (3) the redemption fund was not deposited at the State Mortgage Bank. In 1923, the State's share in the Syndicate was valued at 138,065,900 dinars.

COAL PRODUCTION.

Although Yugoslavia does not possess coal of older formations, it has widely distributed brown coal and lignite of younger geological periods. During the tertiary period to which these belong, this country was raised above the sea and the abundant marshy lands became full of plants which flourished in the warm and damp climate of that time. Enormous forests of lime, chestnut, myrtle, fir, and other trees stretched through the length and breadth of the country, and the vegetable material rotted and formed peat in the watery ground beneath the forests. Great floods brought about a conglomeration of organic material in the depressions and valleys. When, later on, these peaty formations were raised above sea level, stony material was deposited on them, and the peat, being pressed down beneath the layers of marsh, became carbonised. Still later, the sea receded, and beneath the layers of marsh, sandstone and limestone there formed the strata of brown coal in which the country now abounds.

Sea coal of tertiary formation is found practically all over Serbia, and specially along the Drina, Sava, Morava and Timok, where there is also lignite of the same period. The coal of the Seniski, Resava and Sisevatz mines is of this kind. Exploitation has hitherto been poorly organised, but it was sufficient for the pre-War needs of the country, while a little was even exported. As far as research hitherto can ascertain, South Serbia has also a fair quantity of lignite as well as of the older coal already mentioned.

Bosnia is well supplied with brown coal. Its extensive coal seams, which are estimated at milliards of tons, give promise of production sufficient not only for home needs, but also for export. Exploitation is mainly in the hands of the State, as in the case of the Zenitza, Kakanye and Kreka mines. Only a few mines of less importance are in private hands.

Croatia and Slavonia, though among the most favoured of the provinces as regards other forms of wealth, are poor in coal. Most is found in the Frushka Gora moun-

Digitized by Google

tains (Brdnik), around Ivanchitza and Kalnik, and in Banya.

Slovenia is the richest Yugoslav province in younger formations of coal. There are the mines of Trbovlye, Kochevlye, Krasnik and others. Of these, the mines of the Trbovlye Mining Company represent the chief mineral wealth of Slovenia, and the most extensive mining operations in the Kingdom.

Dalmatia also possesses coal at Alyetritch, Volushitch, etc. But, probably as a result of the position of the province beside the sea, which made overseas coal cheap, the mining industry is least developed here.

It is estimated that the deposits of brown coal in Yugoslavia amount to about 4,500,000,000 tons. Statistics of production supplied by the General Mining Management give the output for 1924 as follows:—

Hard Coal:—Serbia, 128,904 tons; Bosnia, 1,887 tons; Slovenia, 842 tons; Total, 131,633 tons.

Brown coal:—Serbia, 346,944 tons; Croatia and Slavonia, 172,705 tons; Bosnia, 747,045 tons; Slovenia, 1,729,773 tons; Dalmatia, 124,509; Total, 3,121,087 tons.

Lignite:—Serbia, 214,436 tons; Bosnia, 370,488 tons; Slovenia, 166,952 tons; Dalmatia, 4,639 tons; Croatia and Slovenia, 176,478 tons; total, 932,993 tons.

TOURISM IN THE S.H.S. KINGDOM.

The number of foreigners visiting the seaside resorts and watering places of Yugoslavia is increasing every year. In 1925 the number of visitors to the Yugoslav Riviera was double what it was in 1924, the chief nationalities represented being as follows:—Czechs, 3,164; Austrian 1,405; Hungarians 487; Germans 136; Poles 122; Italians 267; Roumanians 61; British 49; Americans 23; French 22; Swiss 27; others 90. Crikvenitza had the busiest season, with 6,466 visitors as compared with 5,872 in 1924. After it came Bashka with 1,896 foreigners of whom 929 were Czech. For the largest number of visitors, foreign and Yugoslav, to a single resort, Split (Spalato) heads the list with 32,152 registered by November 25; of these 17,693 came from Dalmatia and 10,363 from other parts of the S.H.S. Kingdom. The number of foreigners at Split was as follows:—Italians 1,314; Czechs 831; Austrians 814; Germans 540; British 209; Russians 58; Hungarians 50; Poles 45; Roumanians 12; Bulgarians 3, and 78 from other European countries. In the 1925 season Dubrovnik (Ragusa) was less busy in this respect than Split.

BELGRADE.

In 1925 the number of inhabitants in Belgrade rose to 250,000, of whom 210,000 were residents, and 40,000 temporary residents or travellers. The city has an area of 12 square kilometres and is divided into six quarters. It has 430 streets, with a total length of 280 kilometres. In 1921 the number of houses was 11,550. The monthly birth rate is 280, as compared with death rate of 200. There are 12 hospitals and sanatoria, 15 dispensing chemists, 230 doctors and 70 midwives.

The social and educational sides of the City's life are looked after by 107 various associations and institutions, six scientific, 15 sports and nine choral societies. There are 12 daily papers, with a total daily sale of 150,000 copies. Visitors arriving by the 100 trains that reach Belgrade daily have at their disposal 33 hotels, with 1,754 beds, and 452 restaurants or cafés. There are three theatres and eight variety theatres.

The trams convey 70,000 persons daily, and there are about 1,200 motor-cars and 300 carriages. Public instruction is catered for by 24 elementary schools with 7,000 scholars, 72 male and 92 female teachers. Four boys' secondary schools and one "Gymnasium" and three girls' secondary schools have between them 7,400 scholars. The University has 6,000 students and 177 professors.

AGRICULTURAL STATISTICS FOR 1924.

Cultivable Land.

The total area of the S.H.S. Kingdom is 24,898,700 hectares. Of this area 11,028,202 hectares were cultivable, or 323,052 less than in 1923. The following table shows the classification of cultivable land:—

	Hectares.	Percentage.	Comparison with 1923 (hect).
Arable land	5,916,978	53.65	less 359,213
Gardens, etc.	120,457	1.09	,, 33,575
Meadow land	1,595,699	14.47	,, 11,854

7.—Meadow and Pasture.

Meadow	1,595,698	33,427,712	20.94	more 2,724,366
Pasture	2,811,460	—	—	—

Vineyards.

The area under vineyards in 1924 was 165,419 hectares as compared with 166,785 hectares in 1923. This was divided as follows:—

American vines ... 121,538 hectares, or 605 more than in 1923;
Home vines ... 43,880 hectares, or 1,972 less than in 1923.

Consequently the area of vineyards fell off by 1,366 hectares as compared with the preceding year.

The production of wine was 2,918,156 hectolitres with an average of 17.64 hectolitres per hectare, showing a falling off of 1,496,066 hectolitres as compared with the 4,414,222 hectolitres produced in 1923.

Orchards.

Kind of tree	No. of trees	Total yield Quintals	Comparison with 1923 in number trees	/quint/ in yield

THE MONOPOLY ADMINISTRATION.

The Yugoslav Monopoly Administration reports considerable increase in its revenue for the first seven months of the financial year, which runs from April 1 to March 31. Receipts for the month of October amounted to 239,397,874 dinars as compared with 217,315,999 in October 1924 and a Budget estimate of 192,966,666 dinars. The total revenue for the seven months, April-October, was 1,479,085,258 dinars as compared with 1,408,899,532 for the same period in 1924. The larger part of this revenue is received from the Tobacco Monopoly, which contributed 1,005,292,928 dinars, salt coming second with 222,947,579 dinars. The other Monopoly articles are cigarette paper, 85,028,632 dinars; matches, 84,438,848 dinars, kerosone 76,800,363 dinars. Sundry receipts made up the balance 4,576,908 dinars.

The statement of revenue and expenditure issued by the Administration for the period ending October 31, 1925, was as follows:—

REVENUE.	Dinars.
Monopolies (October) ...	239 397 874
,, (Apr.-Sept.) ...	1,239,687 384
Customs (October)	197,235 016
,, (Apr.-Sept.) ...	906,870.179

EXPORTS DURING NOVEMBER.

The Customs statistics of the S.H.S. Kingdom give the amount of exports as follows:—

	Tons	Gold dinars (Sw. Francs)
November 1924 ...	397,989	69,164,153
November 1925 ...	376,820	63,152,174
1st 11 months 1924	3,508,864	600,139,335
1st 11 months 1925	4,043,727	722,018,911
Increase in 1925 ...	534,863 (15.24 %)	121,879,576 (20.30%)

The decrease in November 1925 as compared with the returns a year previously is explained by the rise in the dinar and a subsequent fall in prices. Producers, moreover, were the more inclined to refrain from selling as a reduction, or even abolition, of the Customs duties was expected. This actually happened on December 1, 1925, when practically all export duties were abolished, except on some articles of little importance.

The chief articles of export during November were:—

Article	Unit	Amount	Mill. Gold dinars
Wood: a/for building ...	Tons	84,647	6.5
b/for fuel ...	,,	38,182	0.8
Corn: a/wheat ...	,,	24,084	5.8
b/other ...	,,	5,555	0.9
Maize	,,	42,578	6.6
Prunes	,,	8,399	4.1
Eggs	,,	1,213	3.5
Meat: a/fresh ...	,,	1,972	2.8
b/meat products ...	,,	88	0.2
Crude copper	,,	1,380	2.9
Hops ...	,,	350	2.7
Live cattle ...	Head	8,073	2.5
Wheat flour	Kgs.	5,904	2.4
Small cattle ...	Head	115,377	1.9
Hemp	Tons	1,459	1.5
Live pigs .. .	Head	10,577	1.5
Cement	Tons	36,284	1.4
Haricots ...	,,	4,645	1.1
Fruit: fresh	,,	2,389	0.8
Live horses	Head	2,254	0.7
Cheese/Kachkavalye ...	Tons	234	0.6
Lamb & Kid Skins ...	,,	176	0.5
Opium	,,	7	9.5
All other	,,	110,360	11.0
Total	Tons	376,820	63.2

Of these exports the most important were sent to the following countries (the figures represent millions of dinars):—

Wood (a) for building, to Italy 5.1, Hungary 0.3, France 0.2; (b) for fuel, Italy 0.6, Hungary 0.2.

Cereals (a) *wheat*, down Danube and *via* Braila 4.2, Greece 0.6, Austria 0.4; (b) *other kinds*, Austria 0.3, Italy 0.3, Greece 0.2.

Maize, down Danube and *via* Braila, 2.4, Italy 1.6, Austria 1.3.

Prunes, Germany 1.1, Italy 0.9, Czecho-Slovakia 0.5.

Eggs, Switzerland 1.2, Austria 0.9, Germany 0.8.

Meat (a) *fresh*, Austria 1.2, Germany, 0.9, Czecho-Slovakia 0.4; *meat products* Italy 0.1.

Crude copper, Germany 2.9.

Hops, Germany 1.5, Czecho-Slovakia 1.0, Austria 0.1.

Live cattle, Italy 1.1, Austria 0.8, Greece 0.3.

Wheat flour, Austria 1.4, Czecho-Slovakia 0.9.

THE STEINBEISS INDUSTRY.

The Dobrlyin-Drvar saw-mills, which are the largest timber industry in the country, and known as Steinbeiss, have undergone considerable transformation. The State as the sole owner of this great industry, came to the conclusion that it would give better results in private hands, and consequently the Ministerial Council adopted the proposals of the Minister of Forests and Mines to put it up for tenders for hire. All the installations for the manufacture of wood and wood products, the forest railway, the saw-mills at Dobrlyin and Drvar, the timber yard at Shibenik with storehouses, the furniture, cranes, buildings, locomotives and rolling stock, and the exploitation of the whole forest complete are to be leased. The only reservation from the lease will be the Priyebor-Knin and Srnetitza-Yayitze lines which must be open for public traffic.

The obligation of the industry to the State will be liquidated by the transference to the State of 40 per cent. of the shares of the ironworks at Zebitza and by the increase of the capital in shares to 20,000,000 dinars (£75,000). The State will retain ownership of the industry.

M. Pashitch, the Yugoslav Prime Minister, returned to Belgrade on January 29 from Monte Carlo to attend the resumption of the sittings of the Skupshtina after the long Christmas recess.

The special envoy of the Turkish Government, Professor Yehya Jemal Bey, arrived in Belgrade last week in order to exchange the ratifications of the recent Turko-Yugoslav treaty of peace and friendship. Jemal Bey, who is an historian, will make use of his present visit to investigate some historical facts, relating to the period of Turkish rule in Serbia.

Shipping Intelligence.

SHIPPING AT PIRÆUS IN 1925.

Last year witnessed a further expansion in the volume of shipping using the port of Piræus. Altogether 15,580 vessels entered the port, their aggregate tonnage being 5,241,947. Of these vessels 7,915 were steamers and 7,665 were sailing vessels. The following table gives details of steamers calling at the port since the War :—

	Number of vessels.	Tonnage (1,000 tons).
1919	3,436	1,946
1920	4,720	2,879
1921	5,431	3,547
1922	5,878	4,312
1923	6,079	4,119
1924	7,142	4,651
1925	7,915	5,241

It is pointed out by the *Oikonomologos Athenon*, in a review of the past year, that the progress of the port has been more marked after the economic collapse of Turkey. While business at Constantinople and Smyrna has been stagnant, the traffic at Piræus and other Greek ports has tended to increase continuously.

The receipts of the Piræus customs house in 1925 amounted to 855,715,354 drachmæ paper and 37,179 drachmæ gold. The merchandise handled totalled 1,438,928 tons, of which 51,483 represented exports. It is noteworthy that Great Britain headed the import list with 435,157 tons, America being second with 185,175 tons. The substantial imports from this country were due, of course, to coal, of which 645,892 tons were imported through the Piræus.

LAUNCH OF S.S. NOVA SCOTIA.

The s.s. Nova Scotia, building for the Warren Line (Liverpool), Ltd., was launched on January 29 at Vickers' Naval Construction Works, Barrow-in-Burness, by Mrs. Burnett, the wife of the vice-chairman of Furness, Withy and Co., Ltd. This is the second vessel ordered from Vickers, Ltd., by the Warren Line since the War, the previous vessel, the s.s. Newfoundland, being launched on January 24 last year. She was completed in the following June and has since given every satisfaction to her owners. Those present at the ceremony included Mr. and Mrs. R. E. Burnett, Mrs. Mendl, Commander and Mrs. C. W. Craven, Messrs. R. Sargeant, W. McGuinness, E. W. Harvey, and A. Winspear, Mr. and Mrs. G. W. Barr, Mr. and Mrs. J. Callander, Mr. and Mrs. G. W. Jackson, Mr. W. E. Prichard, Captain J. Fisher, Mrs. Roberts, Miss Fisher, and Messrs. W. Whyte, W. Cowie, J. H. Ferguson, C. E. Rawbone, D. McB. McLachlan, J. S. Redshaw, W. Taylor, W. Johnson, and G. W. Johnson.

The vessel has been constructed to Lloyds latest rules to receive Class 100 A 1, and the following are the principal dimensions:—Length between perpendiculars, 405 ft. 9 in.; breadth moulded, 55 ft. 3 in.; depth moulded, 34 ft. 4 in.; draft (maximum, 25 ft. 4 in.; tonnage, under deck, 5,388 tons; tonnage, net, 4,150 tons; speed on service, 14 knots.

The vessel will be propelled by one set of four crank inverted, vertical direct acting surface condensing quadruple expansion engines, the diameter of the H.P. cylinder being 31 in., first I.P. 43 in., second I.P. 62 in., and L.P. 90 in. by 57 in. stroke, and capable of developing 5,560 indicated horse power when running at about 80 revolutions per minute.

THE MAURETANIA'S MEDITERRANEAN TOUR.

The Cunarder Mauretania is carrying out a 10,000 miles voyage in the Mediterranean before resuming her regular Atlantic sailings. She left Southampton on February 3 for New York, from which port she will set out for the Mediterranean. She will call at Madeira, and then Gilbraltar, Algiers, Villefranche, Naples, Athens, Haifa, and Alexandria. She is due at Haifa on March 7, where a number of her passengers will land for special tours to Jerusalem, Damascus, Tiberias, and other parts of the Holy Land. She will arrive at Alexandria at the height of the Egyptian season, and will stay there for nearly a week, enabling her passengers to make numerous sightseeing tours. She will leave the Mediterranean on March 20, sailing from Villefranche for Southampton. Including the vessels making cruises round the world, the Mauretania is the seventh Cunarder to be engaged in the Mediterranean this season.

STATUS OF PORT FUAD.

The Board of Trade have received the text of a Convention signed between the Egyptian Government and the Suez Canal Company in regard to Port Fuad. Port Fuad, the status of which the Convention regularises, is the new town now in course of creation on the Asiatic shore of the Suez Canal, opposite Port Said. Its administrative authority will be a Mixed Commission of Egyptian and French officials known as the Domaine Commun.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Assyria for Bombay (Liverpool, February 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Magdapur for Port Said, Colombo, Madras, and Calcutta (London, February 6).

Bibby Line.—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, February 10.)

British India Line.—S.s. Domala for Bombay and Karachi (London, February 5); s.s. Mantola for Colombo, Madras, and Calcutta (London, February 13).

Ellerman "City" Line.—S.s. City of Venice for Calcutta (Birkenhead, February 5).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 27).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, February 5); s.s. Nyanza for Colombo, Madras, and Calcutta (Liverpool, February 6).

Prince Line.—Stuart Prince for Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, February 13); s.s. Soldier Prince for Malta, Alexandria, Syrian Coast, and Cyprus (London, February 20.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT

Motors and Motoring.

By G. B. B.

In his recent address on "Road Transport in General," Sir Henry Maybury gave some interesting figures relative to the number of vehicles in service on British roads. These have recently been made available, and it appears that at the end of last August over 1,600,000 licences were in use. Taxation receipts for the 12 months ended August 31 amounted to £15,000,000, and it is estimated that for the 12 months ended December 31 of last year the total would be in excess of £17,500,000. These figures are illuminating in view of the number of "kites" which have been flown of late relative to a proposed raid on the Road Fund monies, and of these kites perhaps the latest to take the air is that sent up by those who say that the cost of road maintenance is much higher than it need be. The cost of maintaining the roads of this country is lower per road mile than that of the maintenance of any similar roads in any country and no saving can be anticipated in that direction. As a matter of fact, more and more money must be spent each year in maintaining our present highways in good condition. Extensions of existing roads are also necessary, and a number of important new road schemes have not yet been commenced owing to the inability of the authorities to find the necessary money. The Chancellor of the Exchequer now announces that he has arranged that a further £750,000 should be allotted, out of the Road Fund, through the Ministry of Transport, towards the cost of road repairs which are badly needed, and whilst motorists generally will feel relieved at the news that there is some prospect of getting some of the potholes filled in the near future not a few will wonder what the Chancellor of the Exchequer has to do with the matter and how he obtained power to dictate to the Ministry of Transport as to how much of the motorists' money, at any given time, may be used for the purpose for which it was intended. When Parliament assembles it would be as well were some Member to get it made quite clear that the Road Fund is to be used legitimately, that it is not to be controlled in any way by the Chancellor or the Treasury, but that it is to be solely at the disposal of the Ministry of Transport for allocation, according to their needs, to the different road making and road repairing local authorities.

Rear Number Plates.

For some time past I have criticised adversely the fatuous way in which some motorists drive about with obscured number plates or with number plates inadequately lighted at night. Now I see the Council of the Society of Motor Manufacturers and Traders has had its attention drawn to the matter by the police authorities, which to my mind is a prelude to a marked "offensive" on the part of Scotland Yard and the police force generally. Observation on any frequented road at night time will show that not 40 per cent. of motorists actually conform in every way with the regulations, and it would be as well for certain shortcomings to be put right as soon as possible or shoals of summonses will inevitably become manifest.

The Taxation Problem.

The persistent rumours of increased taxation to be levied on vehicles used for commercial purposes is causing more than a little apprehension in motor manufacturing circles, as it is feared that new burdens will be imposed which will have the effect of so increasing overhead expenses for transport firms that freight rates would have to be increased, the volume of road transport reduced, and the railways benefited at the expense of the motor industry. The proposal is made that all bodies representive of motor transport should be asked to join with manufacturers in first of all preparing a sound, closely reasoned statement of the position to lay before the Chancellor and, secondly, in engaging in a definite business-like and dignified propaganda campaign to show the public generally how harmful any increased burden of taxation would be to the internal trade of this country. Whatever is done there is no time to be wasted, any more than cyclists can afford to waste time in resisting the threatened and, in my view, entirely unjustifiable attempt to compel them to carry unnecessary red rear lights. Things nowadays move so quickly that it seems that no sooner is a danger threatened than we are face to face with it. Fortunately the prompt indignation shown generally at the piratical proposals to raid the Road Fund appears to have had a beneficial effect and no doubt sufficient backbone shown in other directions would have a similar result.

An Explanation.

Perhaps what I have said above regarding rear lights requires a little amplification. I am a firm believer in the advantages of a cyclist carrying a red rear lamp or a reflector, as a matter of road courtesy and of ensuring to an extent his own safety. But I would make it clear that it is only so long as the carrying of rear warning devices is not compulsory that his safety is ensured, and that is the point most motorists and writers miss. The moment rear red lights or reflectors are made compulsory, that moment the road becomes full of danger to the cyclist, and any cyclist venturing on the road at night would be in as much danger as if he started smoking cigarettes in a cellar full of open powder kegs. The motorist will be looking not for cyclists but for red lights, and as a red lamp may bump out at any moment or the red glass of a reflector drop out without warning, the risk to the cyclist will be absolutely appalling. Every motorist knows that there is no need for the red light, and that if he drives within the power of his own headlights he can see any and every object. We know that perfectly well, and I am sure that as soon as motorists realise, what they have not realised up to the present, that the compulsory red light will bring them serious risks of running down other road users, they will drop, altogether, this mistaken agitation.

Cotton and Cotton Goods.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended, January 27:—

Egyptian Spot.—The general inquiry continues to show, if anything, a slight broadening tendency, but, unfortunately, fresh business develops very slowly and spinners still find it more profitable to wire bids to Alexandria than to attempt to fill their requirements in any weight here. A feature of the week has been the consistently encouraging reports received from Manchester.

Alexandria appears to have lost heart for the time being, and the Government's efforts to bolster up prices have met with scant success up to date. In fact, their ideas as to what constitute the correct level of values for Sakellaridis cotton have already been modified to the extent of three-quarters of a dollar.

The bulk of the Sakel inquiry here has been for cotton between F.G.F. and Good, at prices ranging from about 80 to 150 on, and a very fair business appears to be doing in this quality. There has also been a slight tendency towards improvement in the demand for the better cotton.

In Uppers, the demand still neglects the better grades and is centred for the most part on F.G.F. cotton at about 13.50d. to 13.75d., in which class a fair business has been done. Brown, White and Pilion have been in poor request, and a good style of Pilion cotton can be purchased here at the price of Fine Upper.

The small local stock of Sudan Sakel has been further depleted by the sale of another 200 bales at about 18.00d. C.i.f. business is reported to have been of only moderate extent. Forwardings to spinners for the week ending 22nd. instant were returned as 10,964 bales. Estimated sales, 1,700 bales Egyptian and 200 bales Sudans. Quotations of Sakel have been reduced from 30 to 55 points. Uppers and Brown show a reduction of 15 points all round. F.G.F. Sakel to-day 18.25d. F.G.F. Upper to-day 13.95d.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended January 21, state:—

Since our last report the futures market his been rather active and at the close to-day prices show substantial advances; the week's summary of price movements is as follows:—Sakellaridis: January, 2.65 dollars up; March, 2.45 dollars up; May, 2.10 dollars up; July, 1.8 dollars up; November, 1.47 dollars up. Ashmouni: February, 0.83 dollars up; April 0.88 dollars up; October 0.63 dollars up.

The feature of the week has been the intervention of the Government in the spot market; since last Friday their delegates have been buying daily a fair quantity of cotton, the total for the week being about 3,700 bales Sakel. The bulk purchases have consisted of Fully Good Fair to Good for which about 36 dollars has been paid.

It appears that this time the effort of the Government to support the market is serious, and there is no doubt that if 500,000 kantars of pure Sakel, of tenderable grades, are taken out of the market, it will favourably affect the future course of prices.

The demand from abroad has been rather erratic; we have had days with good sized orders and others with hardly any inquiries; in general, we think that the rapid rise has somewhat upset prospective buyers' ideas of prices. However we expect that this lull in business will only be of a temporary character, provided the Government maintain 36 dollars as its maximum price for Fully Good Fair Sakel. The purchases of the Government will steady the market and we do not think the trade will persist in holding off.

We have had exceptionally good export figures during the week, but they must have been against old sales; the stock in Alexandria has decreased considerably.

The week's receipts amount to 154,166 krs. against exports 320,208 krs.; the stock stands at 2,264,631 krs.

Spot: We have had a fairly active week at Minet el Bassal and sales amount to about 20,600 bales, of which we estimate 11,300 bales Sakel, 8,000 bales Uppers, 500 bales Zagora, 200 bales White and 600 bales Pilion and Brown. Apart from this, the Government have bought about 3,700 bales Sakel, grading Fully Good Fair and better.

Sakellaridis: A fair business has been done and all styles have been in request. With the exception of Fully Fair and below, which are a little easier, spot differences show no change from last week.

Ashmouni and Zagora: continue in fair demand, with medium qualities in most favour. Spot differences are generally a little easier for Fully Good Fair which maintains its parity.

Brown and Pilion: Brown has been in very poor request and only a few bales have been done, but Pilion has met with an improved demand and a good business has been done. Spot differences are without much change in both varieties.

White: A fair business has been done at slightly easier parities than last week.

COMPANY NOTES AND REPORTS.

Company Meetings.

WESTMINSTER BANK LIMITED.

The Currency System.

Mr. Walter Leaf's Address.

The annual general meeting of the shareholders of the Westminster Bank, Ltd., was held on January 28 at the head office, Lothbury, E.C. Mr. Walter Leaf (the Chairman) presided.

The Chairman said the year under review had seen the return of their financial system to the gold standard and the removal of the embargo upon the issue of foreign loans in London. The return to the gold standard did not seem to have produced any of the disastrous effects prophesied by the opponents of it. The deflationary effect had been very slight, if any. In particular, it had been followed, not by the great increase of unemployment predicted, but by a steady and marked decrease. It had undoubtedly steadied trade, and had given confidence in all cases where the forward course of exchange formed an important element in the placing of trade contracts. The return to gold had made possible the removal of the embargo on foreign loans, for the course of exchanges now controlled, or was controlled by, the course of the Bank Rate. The return to circumstances they used to consider normal, when the Bank Rate automatically controlled the market, was linked with the whole foundation of their currency system, and it was certain that some fundamental changes must be made in this before the financial position of the country could be considered satisfactory. The problem of the note issue, on which all their banking was founded, was now acute and had to be solved within the next two years.

Proceeding, the Chairman gave a review of the country's monetary system since the passing of the Bank Charter Act in 1844, under which the country had been financially controlled, leading up to the position in August, 1914, when, he explained, by another Act of Parliament the whole foundation of their currency and banking system was revolutionised at a stroke. The monopoly of the issue of notes was abolished, the power of inflation or deflation was placed without any limit whatever in the hands of the Treasury—in other words, in the hands of the Chancellor of the Exchequer for the time being. Parliament had surrendered all control to him. Parliament had, in fact, deliberately created a dictator and must stand by the consequences of its action. Such a dictatorship, however laudably expressed, could only be justified by the exigencies of a state of war. It was high time that Parliament should resume command, and so legislate as to bring the control of the currency under some recognised system. Indeed, it was officially and publicly recognised that the time was at hand when the issue of currency notes ought to be handed over, under conditions to be agreed, to the Bank of England. The date at which the present system ought to be wound up had been provisionally fixed at the end of 1927. He urged that there should be no hard and fast limit for the fiduciary issue. This had been tried and had proved a failure.

Elasticity of Note Issue.

Referring in detail to the Federal Reserve system in America, and to the provisions for the gold reserve by the Reichsbank—these and other established, or remodelled, central banks of issue having systems permitting of elasticity in times of stress—the Chairman went on to say that if, then, their Central banking system was to be brought up to date, it would, no doubt, follow similar lines. In the first place, the whole issue of Treasury notes would be transferred to the Bank of England. The fiduciary part of it, the part which was not at present covered by gold and silver, would be added to the item of "Government Debt" which already stood in the balance-sheet of the Issue Department of the Bank. The securities, including notes, at present shown in the Treasury notes statement, would be handed over to the Bank, as part cover. The "Government Debt" would, of course, not carry interest, though provision would be made for remunerating the Bank for the expense and labour incurred in maintaining a large issue of notes. The nation would still retain the advantage of the large national loan, free of interest, which the Treasury notes represented. The Bank would be required to hold gold to a normal percentage of the total amount of notes in circulation—a proportion which would, presumably, be fixed at something between 30 and 40 per cent. It would be empowered to issue notes, not only against gold and Government debt, but against approved securities, including trade bills bearing three names—that was to say, those of the drawer, of the acceptor, and of the bank which rediscounted them—on condition that if the demands for such advances were so great as to cause the proportion of gold held to be less than the normal percentage of notes in circulation, it would be able to obtain a licence so to reduce the proportion on paying a tax on the deficiency, a tax which would rapidly increase in rate as the deficiency grew. They would thus have a system which would combine elasticity and severity.

Credit and the Banks.

The Chairman went on to refer to certain glaring fallacies which had been given wide currency of late for political ends. He had seen the phrase "the banks are the arbiters of commerce" made the text of some fantastic theorising. He was amused that it had been attributed to himself, but no chapter and text were given. He not only disavowed the statement, but added that, in the sense in which it was meant to be taken, it was pernicious nonsense. The only arbiter of commerce, in the financial sense, was the power which controlled the issue of currency. The only creator of credit was the Government which had the power of issuing legal tender. The banks had no power whatever in the fixing of the Bank Rate of interest and to be the "arbiter of commerce" was a duty too high for any but the responsible Government of the country. The whole function of credit—creation, restriction, of inflation was in the hands of the Government. All that was left to the banks was the function of distributing the credit thus created and placed in their hands by their customers who obtained it from the Government. The banks were not the engine which drove the car, but the lubricating system engaged in seeing that each member of the complicated machine had its proper supply of oil which enabled it to run smoothly.

Banking Profits.

Finally, the Chairman said that the past year had been a good one for banking profits. The affiliated Ulster bank had shown the largest profits it had ever made. He could not refrain from congratulating them, and the Westminster Bank itself, on the relaxation of political tension between the Free State and Northern Ireland.

Generally speaking, the deposits in the large banks had been very steady. Their own differed only by about one-half per cent. of the total from those of twelve months ago. On the other hand, their advances to customers, the most profitable employment of their funds, were about £4.5 larger, and the percentage of deposits had risen to 46.3, the money for the purpose having been found by the sale of over £6 millions of their investments. This was clear evidence of increased activity on the part of their customers, who had applied for this increase in their banking facilities. It proved that, in spite of all the evidence they had had of depression in various most important branches of industry and commerce, there was still a very large area in which trade had been both active and profitable. Indeed, it would seem that, owing mainly to the general improvement of the standard of living among the workers, especially in the "sheltered industries," the general spending power of the community had been materially enhanced, and their internal trade had been throughout the year on a sound and profitable basis. The same could not, of course, be said of their export trade. There had been little or no improvement in shipping and shipbuildng, the wool trade had been through a severe crsis, the cotton trade had not recovered the ground it had lost, and the coal trade was a source of continual anxiety—though it might be noted with satisfaction that the latest reports were more hopeful—and one could not foresee what the position might be when the subsidy came to an end in the spring. Yet in spite of all this it was necessary to protest against the outcry that British trade was doomed, and to point out once more that they were holding their pre-War proportion of world trade; their own export trade had fallen off in rather less ratio than world trade as a whole. The most profitable direction for their energies was towards the removal of the barriers to international trade which were set up or strengthened from time to time by the exaggerated spirit of

nationalism which had taken hold of all the nations of the world, and expressed itself in hampering in every way the free interchange of commodities which was the breath of life to international commerce.

There were, however, signs of a rebellion of public opinion all over Europe, and even in the United States, against this maintenance of what was to all intents and purposes a bitter economic warfare.

He then referred in detail to the allocation of the bank's profits, specially referring to the £200,000 placed to the pension fund—not more, he added, than was required in the bank's progressive effort to support in an actuarial sense the additional burden they were laying on their successors.

In conclusion, the Chairman made reference to the proposal (subject to the necessary powers being given) to allot to holders of £20 shares on the register on February 11 next one fully paid £1 share (ranking for dividend with the existing £1 shares as from December 31, 1925) in respect of every five £20 shares held; and to make in the case of fractions a payment of 10s. (free of income tax) in respect of each fraction of one-fifth of a £1 share; also to add to the reserve fund a sum equal to the nominal capital of the shares to be allotted.

The report was unanimously adopted and other formal business transacted.

At the close of the above meeting an extraordinary general meeting was held to pass a resolution enabling the directors to make the proposed distribution of shares.

The resolution was carried.

A cordial vote of thanks to the Chairman terminated the proceedings.

GREEK REFUGEE LOAN.

Hambros Bank state that the revenues for the eleven months ended November 30, 1925, assigned to the service of the Greek Government 7 per Cent. Refugee Loan, 1924, are as follows:—

	1925. January to November. Drachmæ.	1924. For whole year. Drachmæ.
New revenues (a)	860,891,625	... 541,397,112
Old revenues	1,572,305,773	... 1,428,671,881 and £19,482
Old revenues surplus (b)	(c)	... 735,819,000
Average approximate exchange, drachmæ per £1	307·35	... 248.17
Eleven months service of loan at above exchange requires	259,902,844	... —

(a) and (b) The loan has a first charge on these revenues and surplus.

(c) No actual figure can be given until after the end of the year.

The National Assembly at Angora has passed laws making petroleum and sugar State monopolies.

During the week ended January 10, 99 steamers passed through the Suez Canal, of which 53 were British. The transits included three steamers of over 10,000 tons, all of which were British.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated January 30, state:—

Currants.—A generally firm tone has prevailed during the month, although the actual trading failed to expand to any appreciable extent, and can only be described as extremely disappointing. Considering the statistical position—the stock in brokers' hands on December 31 being 3,595 tons against 5,637 tons in the previous year—a larger volume of business should be passing, and it is becoming more and more evident that high taxation is crippling the purchasing power of the country, compelling traders here to pursue a hand-to-mouth policy. Interest centres mainly around Vostizza growth, of shade dried qualities, ordinary 40s. to 42s., good to fine 44s. to 48s., a few parcels of outstanding merit realising 55s. to 56s., small Vostizza 38s. 6d. to 46s. Other sales were:—Pyrgos, cleaned, 31s. to 31s. 6d.; Amalias, cleaned, 32s. to 32s. 6d.; Gulf, 34s. to 36s.; Zante, smalls, 31s. to 32s. The Sea Serpent and Phrygia brought further supplies. Quotations are:—Pyrgos and Amalias 31s. to 33s.; Zante and Patras 32s. to 34s.; Gulf and Panariti 34s. to 38s.; Vostizza 38s. to 50s.

The action of the Greek Government in deciding to raise a compulsory loan of about £3,500,000, by a 25 per cent. cut of all bank notes in circulation, should have the effect of improving the Greek exchange and raising the values of currants in Greece.

Sultanas.—The firm market experienced is not surprising when stocks are examined and compared with those held a year earlier—December 31, 1925, 30,000 boxes from all sources, against December 31, 1924, 88,000 boxes. With strong news from Smyrna of advancing prices and reports that less than 5,000 tons remain in hand, more interest was taken in the medium and good qualities, which realised 66s. to 70s. Some transactions were also possible on a forward basis for prompt shipment at 55s. 6d. to 59s., c.i.f., fair to good quality, and 60s. quay terms. It was expected that the arrival of Estrellano and Phrygia with further supplies to replenish our depleted stocks would have created an active inquiry, but unfortunately a period of quietness set in, though sellers are quite content to await the re-awakening of demand.

Greeks have been a slow sale, although medium qualities have appreciated a little selling at 69s. to 70s., Fine sulphured declined, latest sales 87s.

Figs.—Consignments of poor quality bags per Tasso are selling slowly at 35s., bags genuine 44s. to 45s. 6d., boxes Naturals 45s. to 50s., packets Calamata, 55s.

Near East Markets.

IVORY PRICES IRREGULAR.

Messrs. Hale and Son's report on the quarterly ivory sales which commenced on January 26 and concluded on January 27, states that they comprised 54¾ tons (against 56¼ tons same time last year), viz.: 24 tons Zanzibar, Bombay, Mozambique, East African and Siam, 1¾ tons Abyssinian, 10¾ tons Egyptian (Alexandrian description) 15 tons West Coast and Central African, 3½ tons land carriage; also 1¾ tons sea horse tusks and boars' tusks, ½ ton rhinoceros horns, and a few mammoth tusks; total 57 tons. Of the above quantities 5¾ tons consisted of lots previously offered or indirect import, viz.: 1 ton East Indian and Abyssinian, ¾ ton Egyptian, ¾ ton West Coast African and Congo, and 3¼ tons land carriage.

The following was the assortment of the East Indian description: 15 tons soft tusks, ¾ tons Hard and few Siam, 1 ton billiard ball pieces, ¾ ton bagatelle pieces, ¾ ton cut points for balls, ¾ ton cut points off large tusks, ½ ton under-size and defective points, etc., ¾ ton billiard ball scrivelloes, ¼ ton bagatelle scrivelloes, 2 tons cut hollows, and ¼ ton cores and mixed pieces, and 1¼ tons scrivelloes.

During the progress of the sales 7¼ tons were brought in, viz.: 2¾ tons East Indian, ¾ ton Abyssinian, 1¼ tons Egyptian, 1¼ tons West Coast African, and 1¼ tons land carriage.

The quantity brought forward was rather in excess of that offered at the previous sales, owing to there being a larger supply from Zanzibar and East Africa. There was a good attendance of buyers, America, the Continent and Home trade competing. There was a good demand, but prices showed some irregularity, and in some instances were in buyers favour.

Soft, large and medium Abyssinian tusks were steady to rather easier. Ball scrivelloes were steady to rather lower. Soft scrivelloes were firm; soft bangle tusks were steady to £4 to £6 per cwt. lower for the smaller sizes.

Egyptian.—Alexandrian description. Hard and soft tusks were steady to rather easier. Ball scrivelloes were steady to £3 to £5 per cwt. lower. Soft scrivelloes firm. Hard scrivelloes £3 to £5 per cwt. lower.

THE BULGARIAN HARVEST.

Vegetable Oil Industry.

The following extracts are taken from the monthly report of the Bulgarska Banka:—

According to information from the Statistical Department, last year's harvest in Bulgaria was as follows (in quintals):—Wheat, 13,510,754; rye, 2,257,520; meslin (mixture of wheat and rye), 1,187,152; barley, 3,190,073; oats, 1,484,564; millet, 91,172; German wheat, 120,263; maize, about 6,800,000; total, 28,641,898.

The National Bank of Bulgaria has just published some interesting details regarding the activities of the 19 principle factories for vegetable oils in Bulgaria during 1924.

This is a relatively recent industry which developed in Bulgaria particularly after the Great War. The capital invested in these 19 enterprises amounted to over 71,000,000 leva (paper), equivalent to about 2,500,000 gold leva. Of this sum 7 per cent. represented the purchase of land, 42 per cent. buildings, and 51 per cent. machinery.

In 1924 each factory had on an average 290 employees per day, 270 men and 20 women, who worked altogether 53,668 days and received a total salary of 3,789,000 leva, bringing the average daily salary to about 71 paper leva, i.e., 2.64 gold leva.

The raw materials used in this manufacture cost in 1924 over 38,000,000 leva, 82 per cent. of the material being Bulgarian and 18 per cent. coming from abroad. Besides raw materials auxiliaries cost about 3,500,000 leva, 69 per cent. of these latter materials coming from abroad and 31 per cent. from Bulgaria.

The 19 factories during 1924 consumed fuel to the value of 1,600,000 leva, 94 per cent. of which was Bulgarian and only 6 per cent. had to be imported from abroad.

Altogether these factories spent, for the acquisition of raw material and fuel, 43,500,000 leva in 1924. As raw materials, sunflower seeds were specially used, then sesame, tobacco and citron, etc.

Products.	Weight in tons.	Value in thousand leva.
Sunflower oil	804	31,135
Sesame oil	124	5,445
Other oils	50	1,468
Sesame residues	174	5,449
Oil cake	1,664	4,761
	2,819	48,266

Haji Husni Bey, Chief Civil Inspector in Constantinople, has been appointed Vali of Diarbekir, in Turkish Kurdistan.

The Maharajah of Patiala has been elected Chancellor of the Indian Chamber of Princes in succession to the Maharajah of Bikaner, who has not sought re-election.

The Egyptian Government has fixed at 30,000,000 the quantity of eggs to be allowed to be exported from Egypt during the months of January, February and March, at the rate of 10,000,000 each month.

As from the beginning of this month telegraph money orders may be obtained for payment at Baghdad and Basrah (but not at other places) in Iraq. The telegrams of advice may be sent at the ordinary, the deferred or the triple (urgent) rate at the option of the remitters. As in the case of ordinary orders, the limit of amount for a single telegraph order is £40.

Mr. John Henderson, C.I.E., M.B., C.M., of Murrayfield Avenue, Edinburgh, formerly Professor of Zoology in Madras Christian College, and later Superintendent of the Government Museum and Aquarium, Madras, who died on October 26, left personal property in Great Britain valued at £21,865.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Little Entente.

The practice of holding regular meetings has its disadvantages no less than its advantages for the Little Entente. If the understanding between the three countries had arisen as a result of the necessity for regulating their relations with one another, frequent meetings would constitute a useful safety valve. The basis of the Little Entente, however, is that each country is to be free to go its own way without reference to the others, save such as ordinary courtesy requires, provided only that they hold together in keeping a watchful eye on Hungary. Consequently, these periodical meetings, as a rule, merely serve to register the fact that the three States remain good friends and that their Governments see eye to eye on all the points that they bring up for discussion. The meeting which takes place this week at Temesvar has a special significance, as it follows hard upon the discovery of the Hungarian forgeries, which at first were supposed to be connected with a wide political plot of Continent-shaking importance. In less experienced hands than those of the present Foreign Ministers of Czecho-Slovakia, Yugoslavia and Roumania there might be a danger of the Little Entente's seeking to invest a meeting with some glamour, after a series of unimportant gatherings, by a spectacular resolution regarding Hungary and the forgeries. This temptation, we are confident, will be resisted at Temesvar. There are, without doubt, many ugly features connected with the forgeries, but the time to pass judgment on the incident will be when the results of the Hungarian official inquiries have been made known. Among other subjects for discussion it is anticipated in Bucharest that the suggestion for a Balkan Pact will also figure on the agenda, but as the Conference is to last for one day only, the extent of ground covered will necessarily be limited.

Albania in the Making.

The League of Nations will shortly be dealing with the request that it should grant a loan of three million gold francs to the Albanian Government for the purpose of making provision for the refugees who are still entering the country from other parts of the Balkan Peninsula and Turkey. These unfortunate people are the victims of the compulsory exchange of Greek and Turkish populations; they have been uprooted from Macedonia on the score of being "Turks" because they are Moslems, and on arrival in Turkey are subjected to the uncomfortable process of being de-Albanianised. Consequently, they are making their way back to Albania, where they arrive more or less destitute, and the Government is hard put to it to know how to deal with them. There can be no question that Albania is entitled to League help in this matter. What is more problematical is whether the Albanian Government has been well advised in making such a modest request, as the refugees continue to reach the country, and their needs may entail a larger outlay than the sum asked for. On the other hand, Albania has not much in the way of security to offer for a loan. Most of her liquid resources seem to have been mortgaged already to Italians—the Customs, and the cigarette paper and match monopolies; but the Government naturally hopes that the land to be settled on by the refugees will be regarded as sufficient security, on the lines of the Greek Refugee Settlement scheme, and in addition offers a poll tax on cattle. It might be well if advantage were taken of the opportunity afforded the League to inquire into Albania's financial affairs. For reasons that can be described only as petty and unsatisfactory, the League would not appoint an English financial adviser when

Digitized by Google

Albania asked for one, but sent her a Dutchman, who did not prove a success. Since his departure the Albanians seem to have been carrying on in the light of their own financial knowledge, which is presumably limited, and the experiment cannot be regarded as successful. The country deserves to be assisted in its difficult task of making good; but help, to be effective, should be given without delay.

The Coalition in Yugoslavia.

According to reports from Belgrade differences of opinion between the Radical and the Raditchist Ministers in the Yugoslav Cabinet have already begun to manifest themselves. A circumstantial statement is given of the intention of M. Simonovitch, Minister for Social Policy, to resign his portfolio on the ground that he does not care to accept responsibility for a state of affairs which is in direct conflict with the understanding that led to the Coalition Government. It is to be hoped that the publicity thus given to the subject will prevent the differences from coming to a head, as it would be most unfortunate for the country, if the coalition were to break up at this early stage. The view of M. Simonovitch is reported to be that the essence of the Coalition was that M. Stefan Raditch should accept loyally the Vidovdan Constitution and work for national and political unity and unification; that his presence in the Cabinet should be a guarantee for the whole-hearted co-operation of Croatia and Serbia in the interests of the Kingdom as a whole. The whole burden of M. Raditch's speeches, however, according to M. Simonovitch, has been to inveigh against national unity and the unification of the country's laws and economic systems. It is not the first time that M. Raditch's speeches have led him into trouble, and we imagine that a certain uneasiness possesses his colleagues whenever he speaks in public. By now, however, it would be thought that both the Cabinet and the country had made up their minds not to pay undue attention to anything the leader of the Croat Peasant Party says outside the immediate purview of his Ministry of Education. When M. Raditch, with a longer tenure of office and with the experience of his mistakes, has acquired a livelier sense of the responsibility attaching to Ministerial utterances, his personality and vigour should prove valuable acquisitions to the State; but to take his public speeches as seriously as M. Simonovitch does is to court trouble for Yugoslavia.

Egyptian Politics.

The squabbles of political parties in Egypt would matter as little outside the country as those of other nations, if it were not for the fact that in the past they have been attended with tragic results. A congress of the Opposition groups has now been fixed for February 19, and the intention seems to be to pass a formal resolution of abstention from the parliamentary elections which the Government propose to hold some time in April. In this case there is another clear deadlock ahead for Egypt, whether the elections are held or not, and the question arises as to the best time for facing the problem. If the country had not had its ugly record for political murders in recent years, the line of least resistance would be to allow what passes as the expression of the popular will to prevail and for King Fuad to invite Zaghloul Pasha to form a Ministry. The immediate result of the return of the Wafd to power, either under Zaghloul Pasha or his nominee, would probably be threefold: public security would go by the board, there would be a vindictive persecution or prosecution of the members of the present Government and their followers, and the new Ministry would adopt an aggressively hostile attitude towards Great Britain. Sooner or later the limit in one direction or another would be overstepped, and Great Britain would have to take action. Egypt would then be back where it was in 1924, waiting for a Ziwar Pasha to extricate it out of its troubles. This in outline appears to be the probable course of events, from a dispassionate point of view. It is open to the Opposition parties to deny the accuracy of the forecast; but then they must produce proof that the Wafd has modified its outlook, has profited by its experience and is prepared to be practical in its management of public affairs. So far its conduct does not suggest any one of these things as being in the least degree likely.

The Syrian Rising.

M. de. Jouvenel, High Commissioner for Syria, is sufficiently satisfied with the improvement in the situation in the country to undertake a journey to Angora. He would seem to have chosen for his departure the moment when the first real overtures for peace are being made by the Druses; but he has probably not been unmindful of the psychological effect of leaving to subordinates the task of negotiating the preliminaries for a general surrender. Reports from Syria are still contradictory; but it may well be that the French authorities themselves are not quite clear when they are dealing with the real rising and when they are engaged with a larger band than usual of brigands. The initiative remains with the insurgents and the brigands, and the French appear to be still on the defensive; but further reinforcements are arriving and the Druses have clearly lost their zest for fighting. No exception can be taken to the terms that M. de Jouvenel is offering. He stipulates that the Druses must first lay down their arms; they will then be given an opportunity for discussing the French terms.

Jarabub.

One of the final touches to the remapping of the world that has followed the Great War has just been added by the hoisting of the Italian flag over Jarabub, the oasis on the frontier between Cyrenaica and Egypt which has just been added to Italian territory as a result of an amicable agreement with Egypt. The formal occupation by Italy, which was effected without incident on February 7, should prove a landmark in the pacification of this part of Africa, where the Italians have not yet been able to adjust satisfactorily their relations with the Senussi. The Egyptian Government, which has played a highly creditable part in coming to an agreement with Italy over its western frontier, in the face of much opposition at home, is to be congratulated on its dramatic discovery that when the Firman appointing Mohamed Ali Khedive of Egypt was issued in 1841 Jarabub, Siwa and Sollum were all outside Egyptian territory. It was only subsequently that, as a result of British action, these places were included within Egypt. Not only, therefore, had Egypt no traditional interests in Jarabub, but the arrangement with Italy has even added 200 square miles to Egyptian territory.

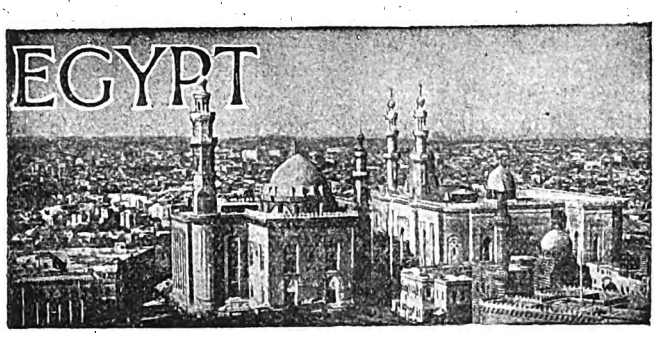
THURSDAY, FEBRUARY 11, 1926.

TOWARDS A BALKAN PACT.

Watchman, what of the night? Watchman, what of the night? The watchman said, "The morning cometh, and also the night."

The inquiry from Seir in Isaiah's time has its counterpart to-day in the question put sooner or later to every inhabitant of the Balkan Peninsula who visits England. Night has so long brooded over the storm-centre of Europe that it seems incredible as well as intolerable that daylight should still be delayed seven years or more after the close of the Great War. At last, however, the ominous mutterings of trouble in the spring have given place to soft murmurs of a Pact. "Watchman, what of the night?" The frequency of the inquiry betrays the anxiety behind it. Bitter experience has shown that the smallest spark can produce a stupendous conflagration, and there is a keen desire now throughout Western Europe to have all possible causes of friction eliminated. "The morning cometh, and also the night." The ambiguity of the answer also has its modern application. The morning that is breaking for some may only be the prelude of night for others; or there may be the reminder that the day is indeed breaking, but unless full advantage is taken of it, it will pass, to be swallowed up in the night that follows. It is all to the good that the Balkan peoples are familiarising themselves with the idea that they have interests in common as a single geographical unit. On the other hand it will remove occasion for disappointment, if the actual facts of the present situation are recognised. The first suggestion that a Security Pact should be concluded among themselves by the Balkan States was made by Greece at a time when she was unable to come to an agreement with Yugoslavia regarding the claims of the latter on Salonika and the railway leading to the port from the Yugoslav frontier. A brief reminder from Belgrade that any Balkan Pact would have to be preceded by a settlement of all outstanding questions between the two States was enough to cause the proposal to be dropped, and with it the negotiations for an agreement between Yugoslavia and Greece. For the former, however, an improvement in the conditions under which her goods can reach the shipboard on the Ægean Sea and Yugoslav imports can pass from Salonika harbour to Yugoslav territory is a vital and pressing matter. The Belgrade Government held that it could not allow the question to be shelved indefinitely, and, accordingly, it reminded the Athens Government that a Balkan Pact remained a desirable goal and that in order to reach it the sooner their two countries had better lose no time in settling the questions outstanding between them. It is not difficult to understand that in this communication the reference to the Pact was in the nature of a diplomatic courtesy, while the main purpose of the message was to impress upon Greece the necessity for an early resumption of the negotiations regarding the Free Zone at Salonika and the Ghevgeli-Salonika railway.



It is impossible to understand the problem of the Balkans, unless the attitude of the peoples towards one another is appreciated. The relations between the different States, at least between Yugoslavia, Greece and Bulgaria, are inevitably coloured by the fears of the section of each nation that lives near a common frontier. Even wher a central Government may be inclined to take a long-sighted view of the situation and to consider that its territorial integrity is safe in the hands of the League of Nations, the feelings of the electorate as a whole can easily be stirred by those who are persuaded that their proximity to the frontier exposes them to the ever-present menace of invasion. Greece is afraid for Salonika, Bulgaria considers that she may wake up any day to find her territory invaded under one pretext or another, Yugoslavia is convinced that all *komitaji* movements in South Serbia have their origin outside the frontier. The resultant atmosphere in the Peninsula is hardly conducive to a Pact. The Yugoslav Government, therefore, only propounds an axiom when it insists that such a Pact must be preceded by a settlement of outstanding questions. It is thinking at the moment of matters awaiting agreement between itself and Greece; but there are others equally vital, from their point of view, to its neighbours. If, therefore, a Pact is seriously desired by all, there must be a readiness on the part of each to work for a simultaneous agreement. To none is the present position satisfactory: if, then, it is to be modified in any one direction, the theoretical justice of a claim for modification in another direction must be recognised, and that claim is as much entitled to careful and friendly consideration as the other. The essence of a Pact is that it is concluded as between equals and not imposed by victors on the conquered, or by the strong on the weak; it must represent a certain measure of ready agreement on the part of all concerned.

Everyone acquainted with present-day conditions in the Balkans will realise that there is still much ground to be covered before an exclusively Balkan conference could meet under the conditions required for the conclusion of a satisfactory pact. For this reason we could wish that the Governments concerned would candidly face this fact and invite a neutral chairman to preside at preliminary deliberations, which would aim at exploring the ground for an ultimate federation of South-Eastern Europe. It would not be necessary that the representatives of the different States at the conference should be Ministers or have plenipotentiary powers; it would be better if they could be non-party men of note. Their object would be to exchange views and to discover to what extent there was common ground among them. To-day Yugoslavia is opposed to the idea of a pact which might tie her hands in regard to a demand for better trade facilities on the Ægean Sea. Greece, on the other hand, is aware that any concessions that she makes to Yugoslavia will be cited as a precedent for concessions to Bulgaria. At a round-table conference of all the States the different claims could be pooled and an opportunity would be afforded of bringing them all into a common perspective. The conference would not be expected to draft a formal agreement; it would be better if the different representatives merely undertook to report progress to their respective Governments. A pact would be possible only if each country could bring itself to make some sacrifice for the common good. Such a policy is not popular in any Balkan State, and each Government must be given time to familiarise itself with the nature of the sacrifice that will have to be made and to win over popular opinion to the step. A meeting such as that suggested by the Greek Government, which would be expected to frame at least the outline of a pact before it separated, would be almost certainly doomed to failure in present circumstances. Instead of a pact there might well be an accession of mutual bitterness. Each Government would attend such a meeting with half its attention given to the matter in hand, the other half to the probable attitude of its political opponents. A Balkan Pact, to achieve its object, must be a pact between the Balkan peoples and not merely between certain sections of them that happen to be in power at the moment.

The Near and Middle East*

From Our Own Correspondents.

Cairo, January 30.

Activity of the Opposition.

After a fairly long period of almost complete inaction, the political Opposition seems now to be bestirring itself to further activity. For some time past there have been rumours that complete unanimity of view did not prevail within the tripartite anti-Governmental combination, and that disagreement was manifest not only in divergence between the parties, but also in differences of opinion within the parties, some of whose members were stated not to approve of the formation of a Coalition from which, presumably, somebody or some group will benefit, though who or what it will be is not yet clear. It was doubtless with a view to stopping the spreading of these reports that Saad Zaghloul Pasha gave an interview to the organ of his party in which, after condemning the present Ministry in the terms to which one has by long use grown accustomed, he went on to assert emphatically that his party could on no account participate in elections to be held under the new Electoral Law, which was "repugnant alike to the nation and the Constitution."

On the following day the Executive Committee, representative of Zaghloulists, Nationalists and Liberal Constitutionals, which forms the link between the constituent parts of the Opposition Coalition, followed up the Wafd leader's declaration with a "manifesto" to the nation, in which the united determination of the signatories to boycott the election was restated, while it was announced that a national congress, including ex-deputies, senators and other persons of note, would be called to consider the present political situation and to find a way out of it.

No date was mentioned for the meeting of the congress, but it is understood that the promoters have some time about the middle of February in mind. In the meantime, therefore, one may hope for a continuance of the recent political tranquillity, and that, even if a solution of present difficulties is not to be expected within the next fortnight, there may be something more definite to go upon regarding the probable date of the elections and other questions now chiefly interesting the politicians. For the present situation is certainly a peculiar one, and unless the Government can offer the public something regarding elections, it is probable that the Congress, as so often happens at such gatherings in this country, will lose its sense of proportion and pass abundant resolutions which may go much farther than the various leaders would wish, were they able to consider the matter from a calmer and more dispassionate standpoint than is possible when two or three hundred zealous patriots are gathered together, all bubbling over with fervour and each anxious to outdo the rest in protestations of devotion to the common cause. That is more or less what happened at the meeting at the Continental-Savoy Hotel, on November 21, of members of the late Parliament, and, as a result, decisions were taken which many of those present have since realised were a good deal too sweeping and uncompromising, with the result that subsequent freedom of action has been embarrassed.

Elections in May?

As for the elections, nothing definite is ascertainable regarding their probable date. Ziwar Pasha has been urging mudirs and governors to speed up electoral preparations to the utmost possible extent, but, on the other hand, several of the mudirias have reported that the compilation of the new lists of voters will take longer than had originally been anticipated, and have asked for extensions of the time limits previously fixed. It is stated that April 22 is about the earliest possible date on which the second stage of the voting can take place, but that it is most improbable that so early a date will be fixed, as difficulties and delays at present unforeseen are almost certain to crop up, and that, therefore, it is not likely that the country will select its deputies before the first week in May, which would bring the meeting of Parliament somewhere towards the end of the month or the beginning of June. But between this time and that, many things may happen to change the political outlook, especially if the Opposition can succeed in carrying out its boycott threat, and any attempt to forecast the near future is mere waste of time.

The Court-Treatt Expedition.

The Court-Treatt expedition has come and gone, leaving behind it pleasant memories and some excellent propaganda on behalf of the British motor industry. Cairo is on several world routes, and many explorers and travellers make brief halts here, setting out upon or returning from journeys into the lesser known regions of the earth, but not all are so pleasantly unassuming and so obviously pleased with a warm welcome as have been the members of the Cape to Cairo motor expedition. Not only the British community, but all sections of Egypt's European population took pleasure in showing Major and Mrs. Court-Treatt that residents in this country are as quick as people anywhere else to show their recognition and appreciation of a fine sporting feat. The members of the expedition, on their part, were wise and tactful in expressing, on every possible occasion, their appreciation of the kindly helpfulness of Egyptian officials and private individuals, who had everywhere done everything in their power to assist the travellers on their way.

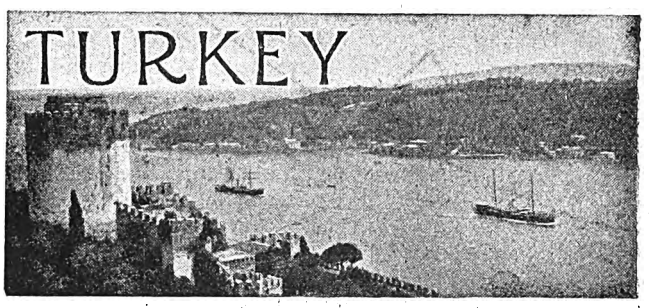
"Madame Butterfly."

For the first time, I suppose, since Italian opera was first given in Cairo, there are to-night two performances, in different theatres, of the same work. The opera in question is "Madame Butterfly," and music-lovers who have retained a love of Puccini's tuneful lyric drama may take their choice of hearing and seeing it presented by the Royal Opera House company, or of patronising the rather more attractive offering at the Kursaal, where Signor Pietro Mascagni will conduct and a very clever lady from the Philippines, Miss Isang Tapales, will play the title role. Signor Mascagni, by the way, was received in audience by the King on Thursday, and presented with the Second Class of the Order of Ismail.

ROUMANIA.

Bucharest, January 21.



Prince Carol's Renunciation.

The renunciation by Prince Carol of his rights as heir to the Throne of Roumania has made a profound impression, stirring up violent emotions and apprehensions in this country. Hitherto the security of the Throne and of the Dynasty has been regarded as assured, and the idea of a Republic was never mentioned unless within limited Socialist circles. The withdrawal of Prince Carol, however, leaving his little son four years old as heir to the Throne, has changed the aspect of this stable and comforting feature in Roumania's economy, and afforded a new object of party strife. Considerable dissatisfaction is expressed in Opposition circles with the choice of the Regency as the Regents have not been appointed *ex officio*, but personally named, and they all belong to the Liberal Party, with the exception of Prince Nicholas, whom no party can claim. It is not even known yet definitely whether the Prince is willing to accept responsibility in this connexion. He has just arrived in Bucharest and, no doubt, his decision will shortly be made known.

The vague but general feeling of apprehension has been unnecessarily enhanced by the fact that the Government imposed a military censorship upon the Press. Not only could telegrams be neither received from abroad nor sent out of this country without the approval of the Government, but all home and foreign newspapers were placed under censorship. This raised a storm of indignation and at a meeting of Press representatives held at the offices of the *Argus* last week the following resolution was passed, that: "The directors and authorised representatives of the Press of the capital . . . . decide to protest against the establishment of the censorship, because it is contrary to the express provisions of the Constitution; (b) to protest against the non-distribution of foreign newspapers even those dealing with special subjects, because they consider the measures taken by the Government as dangerous, and calculated needlessly to alarm public opinion both at home and abroad; (c) to request the President of the Council of Ministers and the Minister of the Interior to revoke these exceptional and unconstitutional measures against the Press. In the event of this step being taken, the directors and representatives of the Bucharest Press declare that they will suspend publication of their newspapers." As a result of this action the censorship on the home Press was raised almost immediately.

M. Pherekyde.

The funeral is taking place to-day with military honours, of M. Michael Pherekyde, ex-President of the Chamber of Deputies, who died on Sunday last at an advanced age. M. Pherekyde was the last surviving member of the famous Cabinet of the first M. Ian Bratianu, which included, amongst others, M. C. A. Rosetti, and M. Kogalniceanu.

Constantinople, February 2.

Foreigners Harassed by Angora.

Further arbitrary methods, which will have exceedingly grave consequences, have been adopted against foreigners in Turkey. The business circles of every description in Constantinople are at present in a state of great concern owing to the application of an order from Angora which demands the dismissal of the majority of employees of foreign nationality from their posts in banks, business houses, warehouses, shops, and so on, and their replacement by Turks. Apart from the humane side of the question, such measures, if applied without delay, threaten many businesses with extinction because of the impossibility of employers' being able to continue their activities with untrained staffs. While it must be admitted that Turkish nationals are, at the present time, devoting themselves to a far more serious attempt at justifying their existence in the commercial world than has yet been recorded, it remains indisputable that their adaptability still leaves much to be desired, and in these circumstances it is impossible to conceive what profit the authorities can hope to derive from this latest exaction. This procedure will doubtless result in a joint protest from the representatives of countries whose subjects are affected, but, to judge from the extent of effectiveness of previous protests, it is difficult to entertain anything but apprehension.

Even at the moment it is exceedingly difficult for foreign nationals to obtain employment, and it is impossible to imagine what their situation will be if the Government persists in this attitude, which is directly opposed to any spirit of that friendship which is pretended for all nations. Under this new measure all door and hall-porters (there are many thousands in Constantinople) must be Turkish subjects, and by the end of this month the streets are to be cleared of chauffeurs of other nationalities, and non-Turkish bargees will not be allowed to follow their occupation.

When one considers that approximately half of the population of Constantinople is non-Turkish, and when one realises to what extent business depends on foreigners, it is easy to foresee the regrettable effect that will be caused.

The Resignation of Emine Bey.

Dr. Emine Bey, the much-criticised prefect of Constantinople, resigned his post some fifteen days ago. On the whole Press comment on this event signifies great satisfaction, as many of the latest achievements of Emine Bey produced violent objection and opposition and resulted in increasing his already considerable number of enemies. While many of the improvements introduced by the ex-prefect would, if conscientiously carried out, have done much to better the living conditions in Constantinople, most of these schemes did not bring about the desired results. For instance, a municipal law requiring taxis to

TO BE SOLD, a large Agricultural Estate in Turkey, having an area of over twenty thousand hectares (approx. 50,000 acres), first-rate arable land, water power, close to railway station on the Baghdad line, 700 kil. from Smyrna and Constantinople, 400 kil. from Alexandretta. Title deeds in perfect order and official plan. Moderate price would be accepted for this unique property.—Box 50,080, Agence Havas Ltd., 6, Bream's Buildings, London, E.C.4.

Digitized by Google

be furnished with meters was passed some considerable time ago. By the end of March every taxi not having complied was to be prohibited from working. It is reported that up to the present moment there are only forty taxis with meters, and as the drivers of these consider it detrimental to their income to run at meter rates they simply continue to demand (and receive) the former fares. Public gain is, therefore, a minus quantity. Yildiz Palace was, according to another project of Emine Bey, to be transformed into an Oriental Monte Carlo. After the concession had already been given and work commenced, it was found that there had been some hitch between the municipal and Government authorities, and Yildiz Palace still continues to give no public pleasure. It cannot be denied that Constantinople has benefited to some extent from the feverish activities of Dr. Emine Bey, but not as much as was expected from his promises and schemes.

There is a certain amount of speculation here on how the newly appointed Prefect Mouhieddine Bey will compare with his predecessor. It is to be hoped that he will enjoy the necessary support of the authorities to execute any scheme for public benefit, and that the latter will take priority, as there is much room for improvement here.

CYPRUS.

Nicosia, January 26.

The Harbours of Cyprus.

In five of the six administrative divisions of Cyprus the headquarters are situate on the coast. Improvements are needed, and would be welcomed, at every one of the five "ports," but obviously much cannot be undertaken simultaneously at all. Provision, however, is made for work at some. At Famagusta only is there a harbour worthy of the name, and when its reconstruction was carried out some years ago, it was on a small scale, and the lesser of two widely different estimates. Consequently "congestion is often experienced." Expert advice has been obtained regarding the "ports," and presumably work will be carried out in order of importance. At Kyrenia, in the north coast, there is a small "harbour," if such it can be called, which claims early attention, for this "parody of a port," as it is very reasonably regarded, gives no adequate protection to its modest shipping in stormy weather; and it happens that a violent storm, which occurred on January 17, very nearly caused—not for the first time—serious havoc. This "port," it must be confessed, far from being a credit to British engineering, has been a standing source of reproach. As regards Larnaca, which has been important as the "port of Nicosia," and seat of the foreign Consuls, the Governor referred recently to a serious silting up of the sea floor behind an arm of the pier. This again claims attention when it can be given. Unfortunately the sea is very shallow at this roadstead, and vessels have to drop anchor at a considerable distance from the shore.

Agricultural Outlook.

The indebtedness of the peasantry continues to be a cause of bitter complaint, and of articles and letters in the Greek papers, especially the *Phoné tes Kyprou*, which has made interesting suggestions. There is a strong feeling, reflected in its columns, that special measures are needed, not dissimilar to the *seisáchtheia*, or disburdening ordinances of Solon, when called upon to relieve acute distress in Attica. A cancellation of certain debts and reduction and limitation of interest seem to be imperative. It should be to the interest of moneylenders themselves that some of the existing burdens should be removed. Many of them have acquired great wealth. Meanwhile the outlook in some directions is encouraging. The establishment of a silk filature at Papho promises good results. Mr. Breton, who is in charge, has returned to Cyprus. When purely Cyprus silk is on the market, it cannot fail to be in demand owing to its excellent quality. Hitherto, as is well known, island cocoons have been almost entirely sent to foreign countries, where "admixture takes place." Another product, to which Sir Malcolm Stevenson alluded, and which should now repay cultivation, is flax, the output of which under conditions lately introduced should mark an important development.

Climatic conditions so far have continued to be for the most part favourable.

THE ARAB HORSE SOCIETY.

At the Council Meeting held at the Grosvenor Hotel, London, on January 27, the following new members were elected:—Henry J. Bell, Baker's Farm, Shipley, Sussex; Capt. R. W. Brierley, Cavalry Club, Piccadilly, W.; J. Talbot Clifton, Kildalton Castle, Kildalton, Islay, Scotland; Guilherme, Echenique, jun., Pelotas, Rio Grande do Sul, Brazil, S. America; Arthur Hámorszky, Bâbolno Stud, Bâbolnapuszta, Hungaria; Maj.-Gen. H. P. Leader, The Old Rectory, Boscome, Salisbury; Mrs. J. Hamilton Leigh, Bindon House, Wellington; Miss Mary K. Robertson, Miteside, Holmrook, Cumberland; and E. Schmit-Jensen, care of The Chee Hsin Cement Co., Ltd., Tangshan Works, near Tientsin, N. China.

HOSPITAL LECTURE.

The third lecture of the series of three which, as we announced in our last issue, are being given in aid of the Endowment of the Duchess of York Maternity Bed at the Royal Free Hospital, has been altered. In place of Major Beith, who is leaving for the United States, Mr. E. F. Benson is lecturing on February 25, on "Robert Browning."

Mrs. Euphrosyne Basil Basiliades, of Castella, Piræus, wife of Basil George Basiliades left £1,217 (estate in this country).

Queen Marie of Roumania has, it is stated, signed a contract to write scenarios for Mr. Louis Mayer, the film magnate of Los Angeles.

Officers of the Indian Army or British Army in India who attend courses of instruction while home on leave will be eligible for the allowances given to home Army officers, and leave pay will be additional. Officers sent from India on tour in Ceylon will draw travelling and detention allowances on the War Office scale.

As a result of four days' continuous rain, the Nairn mail convoy due to arrive at Baghdad last Sunday was bogged for five days 50 miles east of Ramadi. The mails were taken on by aeroplanes, but various cars sent out from Ramadi were unable to reach the marooned passengers. Eventually, however, the bogged mail cars were dug out, and arrived safely at Baghdad.

THE MUSIC OF THE ORIENT.—I.

Preliminary Attitude Towards Orientalism.

By K. W.

Readers of THE NEAR EAST AND INDIA will remember the recitals of Oriental music which an Armenian musician, M. Haig Gudenian, gave in London last year. I did not then disguise my high opinion of the ability of this composer and executant, and it has occurred to me than an outline of his attitude towards and explanation of Oriental music might be of interest. I hope to be able, in three articles, to show that M. Gudenian has something new to say about the fundamental relations between East and West; and I have endeavoured, as far as possible, to give his own words.

With this Armenian musician (who, incidentally, chose for the place of writing many of his compositions Biddenden, Kent's loveliest village, and who is shortly to seek to impress upon the Continent, notably France, Czecho-Slovakia, and Germany, the importance of his Oriental music,) I have had the advantage of an interview. I was considerably impressed by M. Gudenian's knowledge of general philosophy and literature, a knowledge indeed that is such as must be possessed by one who believes that Oriental philosophy is the basis of Oriental music.

It would be difficult for anyone to resist the force of M. Gudenian's arguments. For it is obvious that fully to comprehend the nature of any people's music one must know something of the religion, the philosophy, the literature of that people. Just as the student of Beethoven, or Bach, for instance, is the better equipped for his task through being steeped in Goethe, so those who are familiar with Milton and Dryden can more readily appreciate Purcell. One does not go the extreme length of asserting the absolute interdependence in the West of the arts and philosophy; in the East, however, it seems imperative to take up this position. No man can properly sympathise with really Oriental music unless he know the fundamentals, say, of Islam and of Hinduism.

These observations are, of course, common-place, but it is necessary to re-affirm them at the outset, if my object is to be attained of explaining the complete purpose of one whom I, at least, consider to be not only a distinguished but also an important Oriental artist.

It is M. Gudenian's conviction that there is an essential oneness in East and West, and against Kipling's so often quoted lines he gave me Goethe's:—

> On the Divan
> He who knows himself and others
> Here will also see
> That the East and West like brothers
> Parted ne'er shall be.

He even demanded whether we Westerners had properly understood our great philosophers, our poets, and such of our composers as Handel and Bach. "If you claim," said he, "that you do fully understand them, then you must understand the Oriental music presented in their compositions, because to understand their genius and yet to pretend not to understand Oriental music is sheer hypocrisy. The essence and the profundity of these masters are in complete harmony with the ideals of the Orient. You cannot very well proclaim your love for the flowers which your grandmother grew in her garden and yet, when I show you Oriental flowers, or the palm or the olive tree, protest that you are unable to understand them. He who understands the speech and beauty of the first naturally understands the others."

I suggested the difficulty which the different musical presentation on the part of Orientals might present to Westerners, but this enthusiastic artist replied that the different ways of tuning the violin, the different forms and scales and the rest of it were so insignificant when compared with the similarity in the roots of the matter that this point could but lead to superficial discussion.

"As long as twenty years ago," he said (he left Turkey in which he was born, at the age of seventeen) "I was so possessed of this conviction that, in order to be sure that I was not mistaken, I experimented for two or three years in this way. Taking Bach and Handel together I put them on my programme with some of the insipidities with which the violinist's repertory is infested, and I played in such remote towns as Adrianople (where it was even said that I was the first to give a recital) and in villages of Turkey, Egypt, and the Caucasus. In Bulgaria I spent a whole year playing in the most distant villages where the farmers had not, at least then, even the beginnings of a hypocritical civilisation. To them I played this music with the same sincerity as I played it to the great classical masters during the time of Joachim. The result was that the trashy repertory of the violin could never obscure or cloud Bach and Handel, who, in fact, were even preferred, and I was actually paid money by those villagers to play in the schools for their children.

"You ask why I think these two classical masters appealed to an audience unable to distinguish one note from another? The reason is not difficult. The music of these two geniuses is highly metaphysical, and it contains not a few passages which really give the impression that comes from the preaching of the Prophets of old. Their immense depth, suggested with apparent simplicity, and their gift in raising a temple from but a few notes and harmonies is a purely Oriental ideal, and could not but make a strong appeal to the real Oriental if some Western performers, imagining the Oriental uncivilised, did not go to the East and play these compositions as if they were cheap pieces of fireworks.

"Then, on the other hand, I played Oriental music in small American villages, and there the people responded and even yielded their dollars! If geographical separation had any meaning in music, could the uneducated villagers of the New Continent have understood the music? But they did understand, precisely because no barriers had been raised between them and the appreciation of music.

"Speaking accurately, therefore, the cultured Westerner should have no difficulty in understanding Oriental music if he rids his mind of preconceived notions. After all there is nothing new under the sun. Man sings the same melody over and over again with very little variation for those who have ears to hear. Pull the strings of the violin up and let them down: it matters little. The same heart is playing behind vanished dreams, or strivings and infinite ambitions, or joys of fulfilment. God may talk to the Westerners through thirty-six trombones and to the Orientals through the thin tinkling of the camel's bell: He is the same God preaching the same Gospel. Under a Western hat or a Mohammedan turban the same man is facing Destiny. To-day you are up; to-morrow you may be down—that is the eternal whirl of the dervishes."

Next week I hope to reproduce some of M. Gudenian's sentiments upon the spiritual or philosophic bases of Oriental music.

In conformity with the decision of the League of Nations, agreements have been signed at Stockholm by representatives of Sweden, Bulgaria, and Greece by which Sweden places at the disposal of the Greek and Bulgarian Governments two Swedish officers to act as supervisors of the Græco-Bulgar frontier, Lieutenant-Colonel Sievert acting for Bulgaria and Lieutenant-Colonel Lindh for Greece.

GREAT BRITAIN AND GREECE.

The striking series of lectures delivered at the London University by Professor Andreas Andreades, C.B.E., Dean of the Faculty of Law at the University of Athens, was concluded in the last week of January. Below we publish a brief summary of the three lectures, which were followed with very close interest by those who heard them. Dr. Andreades, who as a Corfiote has a scholar's mastery of the English language, is an admirable lecturer. Dispensing with any kind of note, he is able to give a freshness and vigour to his handling of his subject that are so often lacking when a really valuable contribution to history is being made. His purpose was not to give a synopsis of events in a special period, but to examine the psychology of the main protagonists and to see how far this factor was responsible for the course of events. Eloquent testimony to the appreciation by his audience of this method of treatment was borne by the chairmen and other speakers at the lectures. At the second lecture the chair was taken by Professor E. A. Gardner and at the third by Lord Ernle.

The first lecture dealt with Anglo-Hellenic relations during the years 1850 to 1864, and was divided into two parts, the first concerning the relations between King Otho of Greece and England, the second on the Ionian Islands and Greece. The years 1850 to 1864, said the lecturer, were marked by two unfortunate incidents, the Pacifico affair and the occupation of the Piræus in 1855. Professor Andreades explained that these incidents, painful as they were, did not constitute a conflict between the two nations, but a quarrel between two men—King Otho and Lord Palmerston, and he gave a psychological sketch of both the King and the statesman, showing how widely different and conflicting were their views, both from the point of view of internal politics and foreign affairs.

Turning to the Ionian Islands and Greece, the lecturer explained how the fortunes of the Napoleonic war brought these islands into the hands of the British and how they were administered. Until 1850 the power of the High Commissioner was absolute, and constitutional liberties existed only in name. After 1850 a certain degree of liberty was granted, but the High Commissioner kept in his hand rights wide enough to jeopardise the concessions that he had made. The first régime was described by Mr. Gladstone as despotic but coherent, while the second was neither really liberal nor coherent. Mr. Gladstone drafted plans which, if agreed upon, would have given to the Islands real liberty and possibly good administration. But what the islanders wanted was not good administration, but union with Greece. In 1859 this seemed impossible, although three years later union was realised. The lecturer's appreciation of the English protectorate can be summed up in a few words. It was as good as a foreign rule can be, but foreign rule can never be good—at least in territory which wants to be united with its mother country. In such a case foreign administration has either to be despotic or to go, because, if real liberties are granted, the subject people will take advantage to try to realise their union with their mother country.

The second lecture concerned Disraeli and Greece, covering the years 1864 to 1881, and comprising the Cretan revolution of 1866 to 1868 and the Eastern crisis of 1876 to 1881. The lecture, however, consisted less in the summing up of well-known events than in an attempt to find the key to Disraeli's Turcophilism. Professor Andreades, quoting one of Disraeli's biographers, showed that Lord Beaconsfield's policy could be explained by young Disraeli's ideas. Most valuable for his Eastern policy of 1876 to 1880 were the letters he wrote from the East during his great journey of 1830-1831. It had been said by his opponents that Disraeli's policy could be explained by his Semitic origin. The lecturer thought that this might explain his antipathy for the Russians, who always persecuted the Jews, but not his antipathy for the Greeks, who had always treated the Jews much better than had the Turks. The fact was recognised generally on the Continent; and many of the most eminent English, German, French and Italian Philhellenes were leaders of Jewish thought. The Greeks counted also many good friends among the English and American Jews. Disraeli, on the contrary, hated the Greeks more than the other Eastern Christians. By a careful detailed analysis of his Eastern letters of 1830-31, Professor Andreades sought to prove that Disraeli's Turcophilism was of an artistic and literary character—in short, that he was a predecessor of Pierri Loti, the leader of the modern French school of Turcophilism. Certainly some of the pages which he had read, if written in French, would have been mistaken for those of Pierre Loti. In 1830 the chief danger for the Turkish Empire seemed to be the Greeks. In his first letter, November, 1830, Disraeli said that he detested them heartily. He never changed. But, notwithstanding the disappointments which Disraeli's feelings brought to the Greeks, it was still England who proved the most useful friend to Greece during the Eastern crisis. It was the return of Mr. Gladstone to power that brought at least a partial execution of the 13th Protocol of the Berlin Congress, and that gave freedom to a large part of Thessaly.

The third lecture covered Lord Salisbury's Eastern policy in general and the years 1882 to 1898 in particular. In his two preceding lectures Professor Andreades devoted great attention to the psychology of the principal actor. He laid stress on the fact that Lord Salisbury was a great Christian, and without showing the ardent and eloquent sympathy that Mr. Gladstone had shown to the Montenegrins, the Greeks and the Bulgarians, he nevertheless exhibited in all the Christians a permanent interest. As a young Member of Parliament he pleaded in 1858 for the union of the two Roumanian principalities. In 1885, as Prime Minister, he supported the union of Northern and Southern Bulgaria. In 1898 it was under his Premiership that a British Admiral drove off the Turkish troops from Crete. Lord Salisbury denounced also most strongly the Armenian massacres. Not limiting himself to helping the Christian nationalities whenever an opportunity offered, Lord Salisbury devised a plan for the solution of the Eastern question. This plan, which was shown clearly in his correspondence and from his action at the Constantinople Conference of 1876, was neither the Crimean policy, which had had Disraeli's sympathies, nor the "bag and baggage" policy devised by Gladstone. Between the two courses Lord Salisbury showed a third. He wanted the maintenance of Turkey in Europe, but with a genuine autonomy for the Christians and serious European control. This plan, which presented advantages on which the lecturer laid great stress, Lord Salisbury was, however, not able to carry into effect. When he became Prime Minister in 1878 he had to limit himself, according to his own words, "to repair the china broken by others." Professor Andreades closed his lecture by explaining British policy during the Eastern crisis of 1885 to 1886, and by paying homage to the services rendered by Lord Salisbury during the 1897 and 1898 crisis. In the last part of his lecture he described how the British Admiral forcibly drove away the last Turkish troops from Candia. It was, he said, a small Navarino, and a fitting conclusion to a history which had some cloudy moments, but to which both nations could look with gratification, Greece because she found in England a powerful and sympathetic supporter, England because she found in Greece a faithful and grateful friend.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor Street, W.1.

THE WEEK AT HOME.

London, Tuesday Morning.

Liberalism and Labour.

In the world of pure politics there is at present little happening; so that the doves who have hovered expectantly round the cotes are reduced to resorting to *petit scandale* for the subject of their chatterings. The latest fancy is the "gesture," as it is called (will our national political life ever become clear-headed again until it drops these fatuous terms of "gesture," "formula," "Locarno spirit," and the like?) which Mr. Philip Snowden last week made in the House towards the Land proposals of Mr. Lloyd George. Every conceivable interpretation of Mr. Snowden's moderate speech and of Mr. Lloyd George's moderate recognition of its moderation has been made, and there are those who are disposed to rank the two men's words as more important than their subsequent actions—Mr. Lloyd George voted against the Labour amendment!

If it were left to the politicians themselves, I have little doubt that such men as Messrs. MacDonald, Thomas and Snowden could easily accommodate Mr. Lloyd George, but the Labour Party and, indeed, the Liberal Party still contain men whose first conception of their national duty is not political opportunism, and these are probably sufficiently numerous to present a "successful" outcome to whatever intrigues their masters in the parties might care to conduct.

It is true, of course, that even in that section of the Liberal Party which does not acknowledge the suzerainty of Mr. Lloyd George there is very considerable sympathy with Labour: such men as Captain Wedgwood Benn and Commander Kenworthy are, in fact, only in Parliament because of the support that they enjoy from local Labour. But to suggest, as has been suggested in certain Conservative and cynical quarters, that the time is ripe for a fusion or at least a co-operation of Liberalism and Labour seems to me the most premature kind of folly. It is apparently the wish of some Conservatives that they may be able uncontradictedly to identify Liberalism with Labour, but that is a simpleton's wish. Equally simple-minded is the desire of some honest men, who, remembering Mr. Lloyd George's efforts in the War, would like to see him once more at the helm of affairs, no matter under what colours his vessel might be sailing.

The Coal Subsidy.

More and more the sentiment has been gaining ground that the Coal Subsidy will have to be continued beyond May, when it was originally supposed to come to an end. It was pleasing, therefore, if not finally convincing, to read last week the statement of the Home Secretary that a continuance of the subsidy beyond May was quite out of the question. Sir William Joynson-Hicks was pointing out how, owing to the mining subsidy, the Chancellor of the Exchequer would inevitably be plunged into a deficit at the end of the financial year. He also stated that the Government had not yet provided for this deficit.

The Government and Agriculture.

There is no problem in our national life in which one would rather see the Government of Mr. Baldwin making a satisfactory solution than Agriculture. But in this regard it appears to be having no luck. Its proposals for the provision of short-term credits, an extension of small holdings and cottage holdings, afforestation and drainage, have been promptly condemned by the Farmers' Union as mere "palliatives," which, though useful, cannot radically touch the position. The Government say that at the present level of agricultural prices only two methods exist of securing a considerable increase in the arable area and increased production—protective duties and direct or indirect subsidies, both of which they are debarred from adopting.

It is indeed bad luck for the farmers that certain industries can be "safeguarded" and others "subsidised" while their occupation can be but partially assisted. But if the Government, and, perhaps, the country, will not sanction Protection, the farmers, it seems, will continue for some time to be in an unhappy plight.

The Retailing of Foodstuffs.

"God made the wicked Grocer.
For a mystery and a sign."

If any convinced believer in the progressive morality of our civilisation were to read the White Paper issued last week on the retailing of foodstuffs, which, of course, the Food Council has been investigating for some months, he might be induced to change his opinion. Even the pessimist would have deemed incredible the knaveries of all kinds indulged in by grocers, milkmen, bakers and so on. It is the fashion when exposing these rascals to explain that naturally they are a minority of their community, but on what grounds such explanation is made is not too clear. That the small retailer is honest may be taken for granted; he personally knows his customers, and they know him. It is into the larger concerns that roguery has crept.

We have learned of sellers of milk who actually and habitually used bottles too small to hold the legal measure, and of others whose roundsmen underfill the containers they deliver in order to gain for themselves acknowledged perquisites. The Food Council has also discovered the existence of grocery wrappings which absorb 10 per cent. of the weight for which payment is made. But the most amazing case of all is that of a firm of greengrocers which ordered its successive assistants to give short weight, this illegality being worked out on a precise system. Of the bakers it is hardly necessary to speak, for not even yet have they agreed to reduce the price of the loaf in accordance with the scale to which their own representatives agreed last year.

It is obvious, therefore, that publicity is not enough: the recommendations of the Food Council must be given statutory authority. The absurdity of trying to check the people's demand for higher wages when they are actually being cheated in the matter of their bread, meat, and milk, to take the most important items in the domestic budget, is quite manifest. Fortunately, and bravely, the Government has already given it to be understood that it will intervene to prevent the Council's recommendations being

made a mockery. To quote G. K. Chesterton on the Grocer again:—

"But now the sands are running out
From sugar of a sort,
The Grocer trembles; for his time,
Just like his weight, is short."

Falling Birth Rate.

During 1925 the birth rate of England and Wales, as a whole, was the lowest recorded except during the years 1917 and 1918, and the death and infantile mortality rates were equal to those recorded in the previous years. To those journalists whose speciality is social jabberwocky this official news has provided a temporary subject of "stunting"; to such Eugenists as Dean Inge and to the invisible optimists it has afforded, presumably, a certain tempered or easily sustained joy; and to the unprejudiced observer a certain wonderment.

From the moral and social standpoint it is not easy to read the correct interpretation of this unprecedented state of affairs. One may totally disagree with the theory, very common in students of the Continental situation, that a falling birth rate denotes a failing nation, and yet be at a loss to explain England's present plight. Is it that the production of offspring is now more strictly subject to economic conditions; or is that the doctrines inculcated by such "reformers" as Dr. Marie Stopes have at last got their hold on the country?

It is probably too early to diagnose the position very closely, for there is no evidence, as far as I know, to support either of the rival theses, that what we are losing in quantity we are gaining in quality, or that the reduction in the number of children is occurring solely among the more prosperous classes.

London's Forum.

The Near East and India are not the only places where important archæological relics are increasingly being excavated. Recently the remains were uncovered of an arcaded portico in the angle of Lombard Street and Gracechurch Street, and it is suggested that this find has determined the site of the forum of Roman London. In the 'eighties strong evidence was discovered for supposing that the basilica of Londinium was under Leadenhall Market, and the ruins that have now been found are thought to constitute part of the covered arcade that surrounded the forum.

Changing Coasts.

But not only through archæological discoveries are we enabled to see how greatly our land has changed during the centuries. Take, for example, the changing nature of our coast. Everyone knows that it is the tendency of the sea to fill up our inlets and to erode our headlands, that is, to straighten out our coastline. On the East and South Coasts there are a score of harbours, once well known, that have silted up.

Kent and Sussex, for instance, were once deeply indented. Steyning, now five miles inland, was a port at the time of Edward the Confessor, just as when St. Wilfrid came to England Selsey Bill was a much larger headland than it is now. All round our coast, too, are submerged forests and houses and Churches—think of Dunwich, Cromer, of St. Wilfrid's own monastery and the Saxon cathedral.

In a fascinating paper read last week by Mr. G. O. Case to the Society of Engineers it was remarked that the ancient bay of Shoreham, Portus Adurni of the Romans, had been silting up for a thousand years. Yet the sea has come back in the last fifty years, for the high-water line has advanced more than 100 feet. One thinks of shipping once more at such places as Blakeney and Lympne and Winchelsea, and corn again on the Goodwin Sands.

An Inter-reigning Season.

A dark, dismal and very drear time is this time of February for those who live in towns. Winter is going and spring is not yet come, in which *tempus non* the elements revel in brief but unwelcome chaos. Here in the South of England it has been one long week of soddenness, each day and night having had their monotonous but increasing drips of misery. But the birds and the flowers are astir. Starlings hold innumerable chatterings, and for those who know of these things there are primroses,' snowdrops' and crocuses' greetings, while hazel catkins and palm abound. Little jollity, it is true, but infinite promise is to be obtained from this very English dankness.

A Cairo Appointment.

I was interested to see that a Professorship in English at Cairo University had fallen to Mr. Robert Graves, whom I last saw in a Mess-room of the Royal Welch Fusiliers at Kinmel Park towards the end of 1917. Mr. Graves was then a very young captain and a very young poet, but he has since considerably intensified if he has not widened his range. How deep he fell into the psycho-analytical marshes which were so fashionable a haunt just after the War I am not quite sure, but I am certain that nothing will ever becloud his very real poetical ability. It will be fascinating to watch the reaction of one who knows much about the super-natural world to the magic of another civilisation.

A Classic Etcher.

One could not help thinking of the career of Flecker when visiting the Memorial Exhibition of Francis Unwin that was last week opened at the St. George's Gallery in Hanover Square, W. For both the poet and the craftsman in line had a passion for classic purity, being both and always student-creators; and to both came an early end from consumption. To Unwin, however, who, by-the-by worked in Egypt in his earlier days, drawing tombs for American archæologists, the customary visit of such invalids to Switzerland proved a magnificent tonic, so that he has left drawings of the Alps which are likely to be much more highly treasured than they are at present. For those who persist in regarding our younger generation of artists as slap-dash and neglectful of the masters' technique, this Exhibition should usefully occasion a surprise.

ALTER EGO.

PICTURES OF PALESTINE.

The exhibition of water-colours and oil paintings of Palestine which Miss A. F. Wood is now holding at Walker's Galleries, New Bond Street, will considerably interest the casual visitor to the Holy Land, even if it fails to stir very profoundly the student intimate with the magic and mystery of Palestine. Miss Wood draws capably and has a reticent sense of colour. In such works, for example, as "Chapel of the Agony of the Virgin—Church of the Holy Sepulchre," or "Birket Ramadan," or "Via Dolorosa," or "Damascus Gate" she is very pleasing indeed. In others, however, such as "The Dome of the Rock," or "The Dead Sea," or "The Bay of Acre, from Mount Carmel" the magnificence of the subject is inadequately represented. But it may be that some scenes in the Holy Land, particularly of those looking over the Jordan, can be fitly represented by no brush: not even that of a Sargent.

For the most part Miss Wood keeps to Jaffa and to Jerusalem, in which she did a really considerable amount of charming work.

PERSONAL AND GENERAL.

TO-DAY

February 11, 1926 (New Style).
January 29, 1926 (Old Style).
Rajab 28, 1344 A.H., of the Moslem Calendar.
Shebat 27, 5686, of the Jewish Calendar.

Cora Countess of Strafford has left 30, Grosvenor Square, for Egypt.

Lord and Lady Erskine and the Hon. Victoria Erskine have left Spratton Hall for Gezireh House, Cairo.

Lady Sassoon has left London for Egypt, and will be away until the end of April.

The Countess of Kinnoull, who is at present in Egypt, will remain abroad until the end of March.

Mr. Rudyard Kipling left Bateman's, Burwash, Sussex, last Friday for a sea voyage to the Mediterranean.

At the Working Men's College, St. Pancras, on February 6, Sir Maurice Amos spoke on "The Situation in Egypt."

Sir Otto and Lady Beit, with their daughters and Miss Carter, have left for Egypt, and will be away until some time in April.

Muhi-ed-Din Bey has been appointed Prefect of Constantinople in succession to Dr. Emin Bey, who resigned lately for reasons of health.

The following have been appointed chairmen of examiners for Cambridge:—Classical Tripos Part I.—Mr. H. H. Sills; Oriental Languages Tripos—Professor Rapson.

Lord Lloyd, the High Commissioner in Egypt and the Sudan, left Khartoum by special train last Friday for Cairo. He had been in the doctor's hand during the last few days owing to throat trouble.

As a result of the reduction made in the *personnel* of the Inter-Allied Reparations Commission in Bulgaria, the British representative, Mr. Bruce, and his wife (Mme. Karsavina), left Sofia on January 31.

The Kaiti Sultan of Mokalla, who has just subdued the insurgent tribes of Du'an and is about to operate against the Hamumis above Shihair in the Hadramaut, arrived in Aden last month to confer with the British Resident.

Colonel Gibbs, the Acting Chief Whip, and Lord Stanley are organising a non-party dinner to Lord Irwin, the Viceroy-designate of India, at the House of Commons on February 24. The Prime Minister has promised to preside.

The Rev. E. W. G. Hudgell, one of the district secretaries of the British and Foreign Bible Society, left London last Saturday for India, where he will undertake the duties of the Rev. A. W. Young, the Bible Society's secretary at Calcutta, who is now due home on furlough. It is expected that Mr. Hudgell will remain in India for about a year.

Mme. Stancioff held an afternoon reception at the Ritz Hotel on February 3, at which many members of the Diplomatic Corps and other friends were present. The guests included the Italian Ambassadress; the Danish Minister and Countess Achlefeldt Laurvig; the Polish Minister, the Hungarian Minister and Baroness Zichy; Colonel and Mme. de Lagarenne; Lady Cory; Mrs. James Campbell; Count Rovasenda; Lady Boyle; Mrs. Cobham; Mrs. Parsons; Sir Henry and Lady Beaumont; Mme. Wolkoff; Mr. Petrow-Tchomakoff; Miss Stancioff; Lady Muir; Mr. and Mrs. Ivan Stancioff; Mr. and Mme Felix Guepin; Hon. Mrs. Fielden; Mrs. de Rentyens, and others.

Mr. Sydney Alexander Boddam-Whetham, D.S.O., M.C. (40), late Royal Artillery, of Nazirabad, India, left property in this country £6,272.

Sir Harry Eyres, who received the insignia of Knighthood from the King's hands this week, was entertained to luncheon, together with Lady Eyres, by a large gathering of friends at the Criterion Restaurant yesterday. Sir Maurice de Bunsen was in the Chair.

OBITUARY.

We regret to learn from Aden of the death on February 3 of Dr. John Cameron Young, the head for many years of the Keith-Falconer Mission in Sheikh Othman, Aden. Dr. Young had worked strenuously at his post both in the Arab hospital and as Scots chaplain for some 25 to 30 years, and his fame had spread through the entire Peninsula. The Keith-Falconer Medical Mission, founded in the 'eighties, contributed largely to the spread of British influence in Arabia.

THE MODERN WORLD.

The volume on "India," by Sir Valentine Chirol, which was reviewed in our issue of last week, is one of a series, called "The Modern World," which Messrs. Ernest Benn are publishing under the Editorship of the Right Hon. H. A. L. Fisher. Other volumes in preparation are "Turkey," by Professor Arnold Toynbee, and "Iraq," by Miss Gertrude Lowthian Bell.

INDIA

THE GATEWAY OF INDIA: BOMBAY.

THE VICTORIA MEMORIAL: CALCUTTA.

THE BARODA JUBILEE.

The fiftieth anniversary of the accession of the Gaekwar of Baroda was celebrated during the second week of January. The Gaekwar's speech, in closing the Durbar, was hampered by a premature order (to quote the local reporter) "to fire batteries and perform the closing guns' roaring performance. So, when he rose to speak, simultaneously commenced the gun-roars which at times drowned the speaker's voice." He devoted the major portion of his speech to an expression of his satisfaction at finding "uniformity" among the different communities resident in the State, all of whom had presented addresses "animated by the same aim." From this he deduced proof of the existence of a State nationality in Baroda, which would form an excellent basis for the "moulding of India into a nation." It was, in fact, wrong to say that India is not a nation already: she had assimilated Greeks and Mohammedans, and had gone a long way towards adopting the language, the dress, and some of the practices of the British. There was no reason why India should not be a power in the world, commanding universal respect.

It appears to have been generally expected that the Gaekwar would signalise the occasion of his jubilee by announcing the inception of representative institutions in the government of his State: and some disappointment has been felt that he did not do so. On the contrary, he is reported to have said that, though he knew that his people wanted reforms, they must begin by reforming themselves, by improving their physique and discarding detrimental social customs. The giving of privileges or rights was of no value unless the recipients had moral strength to utilise them with wisdom and courage. "A mere cry was not a test of fitness": mere talk or desire for reform was not sufficient—they must learn to shoulder responsibility and to teach their children to do the same. Electorates should be educated, for "mere votes in numbers meant very little." It was useless to make provision for things unsuited to the people's requirements, or which the people were not fitted to enjoy.

So far as one is able to judge from the published reports, the celebrations were confined to the natives of the State, and no representative of the Government of India took part in them. This is not so remarkable in the case of Baroda State as it would be in most others: since its ruler, perhaps more than any of the Indian Princes with one possible exception, is a firm believer in the theory of complete internal State independence, unaffected by the existence of the Paramount Power, whose concern should be limited to external relations. It will be remembered that, at the King's Durbar in 1911, the Gaekwar was considered to have borne himself with considerable nonchalance in the presence of his Emperor, though the imputation of such an attitude was somewhat haltingly denied. If, in fact, it did exist, it is not improbable that it was strengthened by the remembrance that his predecessor was deposed by the Government of India: though that action was, in truth, a very fortunate one for him. The deposition left the State without a ruler: and search among distant collaterals ended in the selection of the son of a humble herdsman, who would have stood small chance of succeeding but for the abrupt termination of his predecessor's reign, when he had no son of his own and had not yet felt the necessity of adopting one. Baroda is one of the most important States in India, covering an area of 8,000 square miles, with a population of over 2¼ millions: and its ruler is one of the five Princes who enjoy the hereditary right to receive the maximum salute of 21 guns anywhere in India—not only within their own dominions. In one particular respect, it has long borne a rather superficial reputation for leading the rest of India, since its inhabitants are supposed to receive free and compulsory elementary education; though, here, in actual fact, practice hardly squares with theory. It is evident that the present Gaekwar does not propose to give a lead in the matter of representative institutions: in fact, on this point, his speech might well have been made by some "die-hard bureaucrat" of seven years ago, in British India. The last mail brought an announcement of the impending appearance of a brochure compiled, at the request of the Government of India, by Sir Frederick Whyte, late President of the Legislative Assembly, which contains a survey of the existing Federal constitutions of the world with special reference to their bearing on the future government of India. The idea of a United States of India, discussion of which this brochure has stimulated, contemplates the eventual adherence of the Indian States, though the exact process is admittedly a most difficult problem. It is therefore specially interesting to note the attitude towards the political future of his State and of India, disclosed in the speech of so important a ruler as the Gaekwar of Baroda.

A NEW MESSIAH.

It has been known, for a long time past, that Mrs. Besant was preparing to announce the appearance of a Theosophist Messiah, in the person of a Hindu youth of the name of Krishnamurti: and it appears that the announcement has now been made. There was, originally, some doubt whether Krishnamurti or his brother would be selected: but the latter solved the problem by dying. It appears that Krishnamurti is now on his way to England, and that his official residence will ultimately be "a great mansion in a remote part of the Highlands," now nearing completion. Around it are being erected twelve "pavilions" for the accommodation of the new Messiah's twelve "apostles": seven of whom, we are told have already been selected, among them Mrs. Besant herself and a man named Leadbetter. This latter individual was nearly the cause of a grave split among the Theosophists, when the American section, some years before the War, threatened to secede unless he were removed, on the ground that his ideas and practices, regarding the moral training of the boys committed to his care as a teacher,

Digitized by Google

were peculiarly and revoltingly his own. Mrs. Besant bowed before the storm, and Leadbetter retreated to Australia, where he started a "Liberal Catholic Church" of which he consecrated himself as "Bishop." Later, Mrs. Besant became obsessed with the desire to record the facts of her "previous existences," and summoned Leadbetter to her centre at Adyar, near Madras, apparently to act as a medium: and, between them, the pair produced a record which was subsequently published. The present writer did not see the book, and therefore only speaks about it from hearsay; but he understands that it recorded a number of previous lives of Mrs. Besant (and of other more or less known people) beginning with that of a partially human creature on the Moon, and including a series of incarnations on earth, sometimes as a man and sometimes as a woman, but always in the limelight: one of them, for instance, was Hercules, if memory serves aright. It would seem that Krishnamurti must have appeared in the book also, as the report says that he is credited with 33 previous lives.

The proclamation of Krishnamurti seems likely to lead to a far more serious schism than that which occurred over Leadbetter. The Theosophists of Czecho-Slovakia are reported to have announced their severance from Adyar in consequence of what they, very reasonably, consider the blasphemous announcement of the advent of the Messiah and his twelve apostles: and the English Theosophists have made public a protest against the "disastrous policy" of allowing "Bishop" Leadbetter to have anything to do with Theosophy. It appears that Krishnamurti's official title is to be "The Head"—apparently of the Inner Order, started by Mrs. Besant, and named by her "The Star in the East." Presumably, the disciples of "The Head" will affect Oriental clothing: if so, this will deprive them of a simple and easy sign of membership of the Order—one that would, in particular, be specially appropriate to "Bishop" Leadbetter.

CURRENT TOPICS.

Communist Undergraduates.

It is officially announced that neither of the two undergraduates, against whom disciplinary action was recently taken by the University authorities on the ground of attempts to start a Red propaganda centre at Oxford, was an Indian. It was stated, at the time, that the intention of this University "cell" was to undertake Communist propaganda among Indian students at Oxford; but it is now asserted, on behalf of the "Communist Headquarters"—whether in London or Moscow is not clear—that no such propaganda was actually undertaken. Two characteristic reasons are given for this: the first, the suspected existence of "spies" among the Indian students: the second, that any who took part in the work "would probably be subjected to Government victimisation on their return to India." One is not surprised to learn that the "Headquarters" profess to believe that the authorities' action in "muzzling the Communists" is "rather widely resented," by other undergraduates, as an "attack on the right of free speech." The youth of Oxford must have altered a good deal, of late years, if there were any foundation for this latter assertion; but it is, of course, quite certain that there is none whatever. Doubtless the idea commended itself to Moscow, on realisation of the opportunity presented by the increased Indianisation of the Government and technical services that is now in progress. A return, just issued from the Office of the High Commissioner for India, shows that there are no fewer than 920 Indian students in British Universities, as well as a large number of young Indians undergoing vocational training in London outside the University. There were, for instance, 583 Indian students on the books of the Inns of Court on March 31 last, and this by no means exhausts the number that are studying in London independently of the University. The highest individual numbers returned by the Universities are, London 360, Edinburgh 166 (besides 58 others, not members of the University), Cambridge 117, Oxford 86, Glasgow 62 and Manchester 51. Though the "red" propaganda has received a set-back at Oxford, it is evident that this by no means exhausts the field of endeavour: and one may be sure that Moscow, and its adherents in this country, are fully alive to the fact.

Meanwhile, it would appear that, for the moment, the campaign in favour of Russian methods of primary education is to be pressed. Mr. Saklatvala, for instance, in a recent speech at Woolwich, contrasted the failure of the British, after 150 years' rule in India, to spread "mass education" there, with the alleged fact that, in Soviet Russia, 85 per cent. of the population are receiving education: and went on to say that "child welfare had made ten times as much progress in Russia as it had in Great Britain." He did not include, among the evidences of progress, the recently reported progress to Siberia of 300 unfortunate children deported in cattle-trucks, all of whom are said to have been frozen to death on the way. But, if he had not himself in mind this, and other almost equally appalling incidents, it may be expected that some, at least, of his audience remembered them: and that they will not pass unnoticed in India, even among the fervid pro-Bolsheviks of a section of the extremist Press.

Indian Maps.

A paper on Indian maps and surveys was read before the Indian section of the Royal Society of Arts on January 22, by Colonel W. M. Coldstream, R.E. He said that one of the special difficulties that Indian map-makers had to contend with was the great variety of maps, and of scales of reproduction, demanded by varying interests in the country—the soldier, the civil official, the forest, railway, canal and road officer, the geologist, the engineer, the municipal or cantonment authority, the agriculturist and the commercial man: among the latter, particularly those engaged in the development of mining areas. To the harassed cartographer, everyone seemed to desire a special map, on a scale convenient to himself, showing every detail of his personal requirements and as little as possible of anybody's else: printed on a single sheet, of a size to fit his own writing table, and with his own pet area plumb in the middle of it. It was necessary to make the cadastral surveys, in which the boundaries and areas of every field had to be accurately ascertained and recorded, on a very large scale: usually sixteen inches to a mile, though, in some parts of Bengal and the United Provinces, where the fields are so small—some of them no larger than an ordinary dining-table—an even larger scale had to be used.

The main duty of the Survey of India is the preparation of up-to-date and reliable topographical maps: and this is proceeding on a definite plan. The basis is the map on the scale of one inch to one mile, which is printed in sheets of 15 by 15 minutes: from these are made the quarter-inch series, or degree sheets, and from these again the sheets of 4 degrees, on the "one million" scale, approximately 16 miles to the inch: this being the scale decided on, for the international map of the world, by the International Committee that met in London in 1909. To cover the whole of India, about six thousand 1 inch sheets are needed; but, of these, about one third cover inaccessible or sparsely inhabited regions, for which, in many cases, the quarter-inch series will suffice, while a special series of half-inch maps is being prepared for the rest. The Survey of India is, at present, about half way through its work, having published more than two thousand one-inch sheets; progress having been necessarily

much delayed by the War, which claimed the services of practically the whole of the Royal Engineer officers employed in the Survey.

The lecturer did not specifically mention the demand for adequate maps for motorists, which has become increasingly insistent of late. The modern 1 inch map admirably fills their requirements: and, when the series is complete, they will need nothing more except that it should be kept severely up-to-date. It not infrequently happens that the motorist, bent on a journey of reasonable length, finds at present that one or more of his chain of maps is of the old series, dating from the sixties or sometimes even earlier; since when the class of roads has altered greatly, while, in India, rivers have a disconcerting habit of changing their courses. It is not so very many years ago that the initial phase of some military manoeuvres in Northern India was disturbed by the fact that the maps showed an important bridge crossing a blue expanse of river about half-way between the opposing forces. At the zero hour, both sides sent out a cavalry detachment to make a full-speed dash and capture the bridge before the other side could get there. They both arrived practically simultaneously, to find the bridge an abandoned, tumble-down ruin professing to span a cultivated area that had once been the bed of a river.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 21.

Lord Reading's Speech.

The opening of the session of the I egislative Assembly is marked by the Indian "King's Speech," and yesterday the Viceroy delivered the last he will make. After outlining the Legislative programme, which includes the appointment of an Agricultural Commission and the creation of a Rates Advisory Committee for railways, he made a strong appeal for even a belated response to the invitation extended by Lord Birkenhead to Indian politicians. The extremist Press this morning again declines to co-operate with a "Satanic Government"; but, as against this, the Viceroy was able in his speceh to point to the undoubted change for the better in the tone and temper of politicians towards the Government that actually exists.

Lord Carmichael's Passing.

The passing of the first Governor of Bengal has been sympathetically referred to in all quarters, and few rulers who have had to govern in such difficult circumstances can hope to leave behind them more friends than he did. In happier times he might have established a lasting name; for his detachment and patience recalled those of great Indian rulers of other days, and they made a peculiar appeal to Bengal. He will be remembered as a Scot who tried to be kind to everyone, and was content to watch events in the firm belief that, in the end, commonsense prevails.

Lord Ronaldshay's Trilogy.

The last of the three books, in which Lord Ronaldshay seeks to explain the nature of the problem of present-day Indian government, gives further evidence of the thoroughness with which he set out to discover the heart of a people; and the brilliant success of his Governorship is a cogent answer to those who would challenge his views. He holds that the problem is fundamentally one of a clash of civilisations: and that, if between the "two extremes there exists a golden mean, it must be the offspring of a reconciliation between these two forces." A piquant commentary on the thesis has appeared in the *Statesman*, where the writer suggests that, although the problem exists, it is being transformed into a sort of civil war between the progressive and the static Indian, as the former inevitably and unconsciously assimilates western civilisation in every department of life. The mixture of politics, religion and idealism, which forms so much of the speeches of political leaders in India, equally ignores this fact and the economic situation which forces India with its growing population to trade if she would live.

Lord Lytton's Lecture.

Lord Ronaldshay comments at length on the remarkable capacity of the Indian for idealism, particularly when thinking of the history of India; Babu Bepin Chandra Pal's weekly article gives point to this when he enlarges upon Lord Lytton's lecture on crime as a disease. Bepin Babu at once jumps to a contrast between Christianity and Hinduism, claiming that the latter has no code of punishment for crime as such, and suggesting that, before the blighting influence of Westernism spread over India, Hindu thought regarded sin as only a disease and crime as merely a falling away from a true conception of the oneness of man with the Eternal. Has he altogether forgotten the mutilations and tortures which were the common caprices of his rulers, infanticide and *Sati*, the thugs, the swords of invaders, and the cutting off of the noses of faithless women? Or were these merely incidents of convalescence?

Cruelty to Animals.

One of the less pleasing evidences of the recent trend of events is the fact that there are few signs, if any, of a diminution in the useless cruelty to animals which is openly practised in the streets of Calcutta. This is in spite of considerable improvements in the efficiency of the organisation of the Society for the Prevention of Cruelty to Animals since the appointment of Mrs. F. Stanley, formerly Superintendent of Women Police at Scotland Yard, as Secretary. Nothing seems to make any impression upon the "national" attitude to this problem, and this at least is a direction in which Indianisation is retrogression. On the other side, the increasing activities of the Agricultural Department in organising cattle shows, and the holding of the first of a series of "Cart-Horse" shows in Calcutta this week by the S.P.C.A. (where, however, the horses were mostly buffaloes or bullocks) are signs of progress along the right lines.

Indianisation.

For once the Liberals, the Moderates, the Independents and the Extremists have successfully combined, for their policy and their Press comments are all in agreement in regard to the recent appointment of a European barrister as Standing Counsel. It is only in the last few years that Indian barristers have been appointed to the Government legal posts, but this is sufficient to produce a unanimous agreement that, if a European is ever appointed again, it must be a "job"; and the indigenous Press has said this in quite a number of different ways.

The Japanese Convention.

The answer to the resolution proposed in the recent Conference of the Chambers of Commerce, in regard to the abolition of the Japanese convention for the benefit of the cotton trade, has not waited for long, and prominence has been given this week to the consideration by the Japanese Cabinet of the proposed import duty on pig iron, which was said to be at the instance of the indigenous industry. The cables were followed within two days by an obviously inspired statement that the proposal had been turned down in view of the Japanese cotton interests in the Indian market. It is a useful reminder to the Indian protectionist that there are two sides to a question; it is also a warning to the pig-iron companies of the uncertain nature of their principal market.

Men and Things.

The Corporation are still discussing the question whether they will make a grant to the Nursing Institution for the year of which ten months have passed. The Tea industry is being warned of the dangers of coarse plucking, the moral of the recent slump being that this is not only unwise; it does not pay. Mr. J. A. Spender has arrived in

Digitized by Google

Calcutta and, in pleasing contrast with the average publicist from Home, declines to be interviewed. The Skeen Committee is still taking evidence on Army training, and is now listening to schoolmasters. The Viceroy has announced that he hopes that the South African Government will agree to a discussion before the Asiatic Bill is accepted. The "Pir" who is buried in the New Market still rests there, in spite of the resolution of the Corporation that the body should be removed. The regulars and the territorials are hard at work practising for the tatto at Fort William in early February.

The Trivial Round.

The Cricket season which is drawing to an end has been an exceptionally brilliant one with the return of Alec Hosie to Calcutta and the arrival of Guise, the Oxford Captain. We could do with more cricket in Calcutta, but the claims of other sports for the grounds have to be considered. The Tennis Championships have started and have attracted the best players in India. The Races continue, but the attendances are slightly less with the departure of Christmas visitors. Week-ends and holidays are fully occupied with Athletic Meetings, and the Olympic Association have no success in their attempts to induce competitors to run for certificates instead of pots. The Denishawn Dancers are still drawing full houses to their beautiful show; the third Symphony Concert takes place on Sunday with an Orchestra of eighty; the private dance season is beginning, and the bands are getting little rest.

Markets.

Following the improvement reported at the close of last week, the jute market has acquired a very firm tone; a strong demand has prevailed but, owing to the scarcity of jute on offer, the amount of business transacted has been small. Gunnies, however, have dropped further, the market being almost dead; for heavy goods, prices have declined to the extent of between six and eight rupees per hundred bags within the last fortnight. The opinion here is that the market has almost touched bottom, and an improvement is looked for shortly. Piece-goods remain stagnant. The tea market in London is reported as very strong and prices advancing; but, owing to the poor quality of tea at the sales in Calcutta, prices have eased; this is usual at this time of the year when the last of the crop is on offer.

Conditions somewhat similar to the previous week have prevailed on the Stock Exchange; jutes generally are quiet, but at the close operators have been paying a little attention to the more speculative counters. The recent renewal of interest in cotton shares is rapidly waning and the volume of business put through has been very small; coal shares, on the other hand, have continued to create quite a fair amount of interest, and one or two specialities have been dealt in at rates well above previous levels. With more buyers in evidence, the tea market has been rsponsible for a good business; rubbers continue to weaken on the reaction in the price of the commodity and, although there is little buying going on, there is no pressure to sell.

Investment stocks have continued to find ready buyers, with debentures in particularly keen demand; one or two rises in the prices of Government stocks have been recorded.

Money has been in better demand, with a good amount of borrowing of call money at four per cent. Sterling remains steady.

THE YOUNGER GENERATION.

(By Our Bombay Correspondent.)

In the present political situation of India, one cannot but feel that too little work is being done by the younger Englishmen.

Senior men are getting nearer and nearer to sympathy though it is not so apparent as it might be, because of the very wide gulf in social customs. I have myself heard Mr. Gandhi bring up the very common but rather childish complaint that certain clubs still exclude Indians from membership. But, after all, clubs are places where men meet on terms not only of equal social standing, but also of equal social customs: and, as neither Mr. Gandhi nor his friends would in any circumstances accept a drink from me, it is not clear that we can bridge the gulf of custom by any simple formula. But it is a fact that, in Bombay at any rate, where the leading English and Indian merchants have been in partnership for a hundred years, relations are now better than they have ever been, and that there is a genuine feeling of mutual trust and respect.

It is no doubt easy to criticise others, but it seems a pity that the tendency of the younger Englishmen in India is to devote themselves more and more to the games that bring them into contact with each other and less and less to the sports that take them into the villages among the Indian population. It is to me perfectly clear that the cause of Britain in India is enormously helped by the wanderings of young Englishmen in the jungles, and the gradual decay of the pursuit of sport is all against us.

The civilian who used to be the Father of his district is now comparatively speaking a slave to his office files. The army subaltern seems to prefer his motor-bike and his club to the jungle and the jheel: and the young merchant plays tennis and golf instead of going among the villages to look for sport and to make friends with the lower classes of Indians, who are in many respects an extremely attractive and pleasant people.

Here again we have a problem for which there is no obvious solution. Marriage no doubt, which must inevitably curtail the days available for solitary sport, comes earlier now than it did twenty or thirty years ago. But it is remarkable that, among the bachelors, there should be so much more marked a preference for tennis and golf than there used to be: and this reluctance to go into the jungles is a more serious menace to the standing of the Englishman in India than may be apparent at first sight.

THE BUSINESS SIDE OF THE INDIAN ARMY.

(By Lieut.-General Sir George Macmunn, K.C.B., K.C.S.I., D.S.O., late Quartermaster-General in India.)

The business aspect of an army is very often overlooked, even by those in high places, and still more so by the general public, in spite of the fact that they have to foot the bill. Yet an army in peace and war is an eminently business concern. In war time the business results are efficiency and availability, in peace time they are rigid economy and the conduct of the housekeeping of several hundred thousand individuals on modern principles. An army of say a couple of hundred thousand men has the same general requirements as a large city, or of several towns and villages. Housing, clothing, feeding, equipping are all matters of trading and storekeeping, and also of hotel-keeping.

It is one of the accepted principles that an army should not do for itself anything that can be done for it by the same sort of agency that caters for the public. For instance, an army should not make its own boots, or make its own cloth, breed its own horses, build its own buildings, so long as a civilian business can do the work for it. Nor should it make its own military equipments entirely. The reason is that no Government Service, by the very nature of things, can carry on these rôles of civil life so well as those whose very existence depends on their knowledge of their business. Government, however, does make a proportion of its equipments and its guns, in order that, in so vital a business (which is not of necessity part of the civil needs of a country), it can depend on being able to get what it wants, and also because, by having a factory of its own, alone can it train inspectors to watch the manufacture in detail of orders carried out by private firms. The efficiency of a steel gun, for instance, can only be judged by an inspector who watches it in the making, and such inspec-

Digitized by Google

tors must be very highly trained. The only occasion in which a government may have to manufacture what it wants for its army, other than military technical equipment, is when conditions are such that it cannot get what it wants from private commercial sources. In India, which in many ways is industrially so backward, Government has to do for itself what the War Office would not think of doing. For instance, in India the Army Authority has to grow its own hay for its horses, to produce its own dairy supplies and to breed its own horses—or rather take a very leading part in inducing others to do so. That is because these industries do not exist. No one grows hay as a business, though contractors will cut and collect hay grown wild in uncultivated *rukhs* (forest areas); no one, except in one or two fortunate places, will produce good and sanitary dairy supplies by private agency. Again, no one will take the trouble to breed horses fit for army purposes.

On first thoughts it seems absurd that Government should have to grow fodder for its horses, but so it is. The growing of hay as a crop is done by no farmers in India. The land is too poor and the price too low, or the rainfall too uncertain to make it a business proposition. The contractor will, as has been said, cut grass that has grown of itself in jungle tracts, but without the least regard to the essential and precise condition of "saving" which is the secret of nutritive hay. That is to say, the cutting of the hay between the moment when the grass is in seed and the sap in the stalk and when the seeds are beginning to fall. Contractors' grass is little but stalk and, in years of little rain, there is no grass for them to harvest. So, some years ago, Government decided that it would pay them to create an Army Farms Department, which should grow grass on all available army land and should also take over the cutting of hay on Government lands and hired lands, stacking the surplus of good years in reserve for the inevitable years of drought. The result has been a constant supply of good fodder at a much less cost than in the contractors' days, and the avoidance of the costly years when fodder was only to be had at great cost and high transit charges. In fact, it has happened that Army reserves of hay have been able to come to the help of civil supplies in years of drought, to the great advantage of all concerned.

The manufacture of good butter and the production of sound milk is again one of the businesses in which private venture fails. The Army Farms Department has therefore started dairies on a large scale to supply the British soldier and his family. The herds consist of two or three good local breeds such as Sindhi Saini, and buffaloes, or else are half-bred from these stocks with Ayrshire bulls, which experience has shown to suit India best. The herds are improved by selection each year, the calves of the good milkers only being kept, till the average yield is a large one. During the War, when the demand for cheese for Mesopotamia and India was very great, the Army Farms Department started large cheese factories and produced an excellent cheddar. But, as soon as peace came, the disabilities of India were clearly shown. The cheese could not be produced at anything like the price at which New Zealand cheese could be bought, because the want of pasture in India compelled the feeding of cattle on grain and stored or farmed fodder, while New Zealand cattle feed almost entirely on rich pasture for the greater part of the year. The cheese factories were therefore closed, though complete and efficient in themselves, in all save the peace-time cost.

Prior to the War the Indian Army fed and clothed itself from any source it pleased. During the War Government decided that in future it would feed the Indian troops as it fed the British, by a daily ration in cantonments, as it always did in the field. It also decided that it would keep this on as a peace as well as a war-time measure: and that it would clothe the Indian troops on the same principle as it clothed the British soldier. When it came to the purchase of food in large quantities, it soon learned a good deal about the food market which it did not realise before. It had previously relied on a system of local contracts for such supplies as it required before the War. But the Quartermaster-General now discovered that the major portion of the food staples for Indians were only produced in certain areas, and that a local contractor had to buy his food in the markets of those areas and transport it and store it and bear the usual trade losses, all of which were included in the contract rates. The Q.M.G. then decided that he would buy at the markets himself, would grind his flour at controlled mills where Government grain could not be changed for inferior grain, and that he would employ the usual trade methods of sampling and inspection. Wheat would be bought in bulk at Lucknow, Delhi or Lahore, rice in Rangoon, tea at the Calcutta tea market through a broker, sugar ditto, and so forth. Thus, though having to face the same losses as a local contractor, Government would only have one commission charge to bear. It was found that the trade in India had many curious facts about it that the public did not wot of. That the rice grown in Poona and Bombay would be sold to Africa and the local inhabitants would have none of it, eating Burma rice themselves, and so forth. That sugar grown in India was not nearly enough for Indian requirements, and that it could be bought better and cheaper from Java without in any way affecting Indian trade. In times of scarcity it would pay to buy wheat in America and keep off the Indian market. But to get good supplies, to see that samples were complied with, and to see that stocks did not deteriorate, required a food laboratory, which was duly instituted at Kasauli, there being no public institution as in England at the disposal of the Quartermaster-General. Stocks of ghee (clarified butter), tinned meat, tinned milk and hospital stores deteriorate very quickly in India; but, by sampling these at the laboratory, it could be ascertained which dates of manufacture were approaching unfitness and could be saved by early use. By this action the laboratory had saved Government many lakhs of rupees, for stores which, in earlier days, would have been lost and written off from deterioration.

Cloth Government does not make for itself, but the making up of clothing it does undertake, partly because it ensures a good cut of uniform and partly, as in gun making, in order to train its own inspectors so that they may be able to pass into service the large amount of work which is sewn, as distinct from cut, by contractors. A good deal of the work is done outside, after the cutting has been done inside. For instance, the army shirt is cut out in all its components and then passed out in pieces for a contractor to sew. The clothing factories are also places in which the commercial system of management pays well to adopt. From the foregoing some conception will be obtained of the commercial proposition that any Quartermaster General, and especially he of the Indian Army, has to cope with, as well as what a difference there must be between a businesslike and unbusinesslike method of handling the work.

CORRESPONDENCE.

THE ANGLO-INDIAN QUESTION.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In the paragraph on the "Anglo-Indian Question" in your issue of January 28, your contributor calls attention to my letter on the same subject in the issue of January 21. I trust that you will permit me to make the following comments on his article. He says that, though the Anglo-Indian community undoubtedly includes many members who are to all intents and purposes British, it contains perhaps even more who are to all intents and purposes Indian. He does not, I presume, include the Goanese of Portuguese descent. Apart from these, I doubt if many Anglo-Indians but the degraded occupants of the slums of Calcutta, Bombay, Madras, and some other large cities, would not, if they had the means, at least try to live as English men and women, and do so to the best of their ability. That there are any who would not care to do so, and so many that cannot, is a great blot

Digitized by Google

on our administration of the country: and, it may be added, on all the Christian missionary societies, which, the Roman Catholics alone excepted, while showing the utmost zeal in the conversion of the "Heathen," have entirely neglected the Anglo-Indians.

Commenting on my letter referred to, your contributor quotes that "Anglo-Indian Colonies can only succeed if supervised and *financed* by the Government." As all lands possibly available for such colonies are Government lands, it is evident that only by Government permission can they be occupied: and all who know India are aware that, without Government support, they would all be boycotted. Few Anglo-Indians, if any, are wealthy enough to finance such undertakings, even by co-operation. Have not our Government and those of the Dominions found it necessary to assist the projected emigrant colonies in every way? The circumstance mentioned by your contributor, that "of the applicants for commissions in the Indian Police, not one Anglo-Indian had thought of trying to enlist in the ranks during the War" is very deplorable, but to some extent excusable.

As mentioned in my previous letter, all schoolboys in India had been encouraged, above all else, to pass examinations that would make them eligible for appointments in the Government Civil Services. They were mostly sons and grandsons of British soldiers, many were debarred from the Army by the colour bar, further, at least before the Boer War, the life of the British private soldier in barracks in India, and his future prospects, which in the case of the Anglo-Indian were less assured as he had neither home nor trade to fall back on, either after short or long service in the ranks, were not such as to induce soldiers or civilians to encourage their sons to enlist.

There is little hope of altering the views of the present generation of Anglo-Indians on self-help, manual labour and soldiering; but there seems to be no reason to despair of the rising generation being brought up with more healthy ideals, if honest endeavours are made now to inaugurate a new era for the community, by their parents, *schoolmasters* and the clergy of all denominations, with Government assistance. Surely so much is due to the descendants of those who helped so largely to establish the great British-Indian Empire.—I am, etc.,

G. B. SCOTT.

THE INDIAN MAIL.

The Transfer of Sylhet.

Our last reference to this question suggested that the Assam Council had passed the resolution, in favour of the transfer of the District to Bengal, in opposition to the Government; but the mail papers show that this was not so. The resolution was divided into two parts: the first of which was the question of the transfer, and the second that of the future status of Assam. On the first, the official members remained neutral and did not vote, so that it was a non-official majority of 26 that recommended the transfer, against a non-official minority of 12. The eight European non-official members were equally divided, four voting each way. The second part of the resolution, demanding the continued status of Assam as a Governor's Province, whatever happened, was carried by a unanimous vote, including that of the officials.

Several members pointed out that, if Sylhet were to go to Bengal, the next thing might be that Goalpara would follow, and perhaps Cachar and Kamrup; but even those most strongly in favour of the transfer insisted on the necessity for the retention by Assam of its status as a Governor's Province: one member declaring that any reduction would cause "a great agitation in the country," while another went so far as to assert that "the people of Assam would rise and fight if it were so."

The Minister for Education advised the Council, and especially its Mohammedan members, to vote against the resolution. He is reported as saying that, if Sylhet were transferred, there would remain in Assam only two million Moslems compared with twenty million Hindus. As the entire population of Assam, including Sylhet, is only about eight millions, it may be supposed that he was mis-reported rather than surprisingly ill-informed: and this, apart from the fact that the religion of the tribal tracts of Assam is not Hindu, but "animist." This is an example of the tendency of Indian Mohammedans to lump together all the inhabitants of the country, who are neither Moslem nor Christian, under the name of "Hindus"—a tendency encouraged by the Hindus, who like to make out their majority in India to be much larger than it really is.

The two great divisions of Assam are the Surma and Brahmaputra Valleys. The former consists of the districts of Sylhet, which is almost entirely Bengali, and of Cachar, which is only partly so. Sylhet has a population of over 2¼ millions, Cachar of about half a million. The Brahmaputra Valley includes two partly Bengali districts, Goalpara and Kamrup, with a population of something over a million between them, in the proportion of about four to five. It is, no doubt, important to the Government of India to know, when considering their final decision, that, even if all these districts were cut off from Assam, and the Province left with a residue of population amounting to about 4¼millions—rather more than 3¾ millions in British (including tribal) territory and about 400,000 in Manipur State—this residue of die-hards would "rise and fight" rather than lose the status of subjects of a Governor's Province.

Passports.

It now appears that Mr. Horniman did not, as at first supposed, get a passport in Paris for Ceylon, which would have necessitated a British visa; but a French passport for Pondicherry; and broke his journey at Colombo, where he was at first refused, and later obtained, permission to land. If the refusal had been upheld, he would, no doubt, have gone on to Pondicherry: and thence, possibly, to Chandernagore (which destination would have been equally covered by a French passport) where he would only have been just over the border from Calcutta. He had, it appears, also taken the precaution to provide himself with a passport for Portuguese, as well as French, India: so that he could, without hindrance, have gone to Goa, which is of, though not in, the Bombay Presidency. It has not infrequently happened that undesirables, to whom a passport to British India has been refused, have gone to French or Portuguese India instead: and have then quietly slipped across the frontier, a by no means difficult feat. It would have been quite easy for Mr. Horniman to have done the same, and made an appearance in Bombay, leaving the authorities to choose between leaving him there and incurring the odium of a fresh deportation: and he probably counted on doing this, if his permission to land in Ceylon, and to proceed thence to India, had been refused. During the War, the passport system was certainly both necessary and useful: as things are at present, it seems to be designed to give the maximum of trouble and annoyance to the *bona fide* traveller, and the minimum of either to the undesirable. It is surely time that it was scrapped, as one of the last, and by no means the least vexatious, legacies of the Great War.

Reduced Railway Fares.

It was mentioned, in a recent issue, that the East Indian Railway had made a reduction in fares for long distance journeys by the two lowest classes—intermediate and third. The Great Indian Peninsula Railway has now followed suit, but has gone at least one better in the process, for they have reduced first and second class fares for the shorter journeys, and third class fares for all journeys, besides abolishing the previously existing extra charge for third class travel by mail trains. First and second class fares, which have hitherto been at the rate of two annas and one anna a mile for the first 300 miles, and 1½ and ¾ annas thereafter, have now been reduced to a flat rate of the latter charges, irrespective of distance: and a new "zone" has been introduced in the case of third class fares, the rate, which starts at ⅓ anna per mile, being reduced by one-twentyfourth of an anna after 150

Digitized by Google

miles and again, by the same amount, after 300 miles. The Railway authorities hope to attract increased traffic by these reductions: and calculate that the effect of the reduction in third class fares, if no such increase takes place, will be a loss of over 21 lakhs of rupees a year; so that the experiment is not without risk.

No mention is made of a reduction in "intermediate" class fares, which are ordinarily about half-way between second and third class. Travelling by "intermediate" class, which is usually done by the poor Anglo-Indian and the "clerkly" class of Indian, reached its maximum about 1917, and the returns from it have been slowly falling, on most railways, ever since. It is an acquired taste, and one that does not appeal to the ordinary Indian. The writer of these notes once gave his servant an intermediate ticket on a specially crowded mail train, explaining its advantages in the matter of space and comfort, and the man was pleased and proud to accept it; but, at a fairly early stop, his master, taking the air on the platform, was surprised to see his servant squashed up in what, to a European, would have been the acme of discomfort, in a third class compartment. Asked why so, the man replied that he had found the intermediate carriage dull, and that he preferred to return to the cheery society and conversation of his brother "thirds."

INDIAN COMMERCIAL NOTES.

The first forecast of the Indian wheat crop has just been received, and shows a total of 29,151,000 acres, as compared with 31,773,000 acres last year. It remains to be seen how the yield is estimated to work out. Last year, it will be remembered, the weather conditions were poor and the result was a crop of only 8,696,000 tons. So far, the Punjab, the most important producing province, has been short of rain, but recent advices are better, showing that timely rain has fallen. Good rains at the present juncture would put many lakhs of rupees into the Indian cultivator's pocket.

The jute season runs from the first of July. The 1925 crop was estimated at only 7,851,000 bales, and it is interesting to see that, by the end of January 1926, that is to say after the expiry of seven months of the season, this quantity had arrived in Calcutta from up-country. Arrivals naturally include not merely jute of the current season, but also the carry-over from the previous season. All the same, the figure reached so far, namely $7\frac{3}{4}$ million bales, points to a heavier crop than was estimated. It exceeds arrivals during the same period of the previous year, namely June 1 1924 to January 31 1925.

India's rubber statistics for 1924 have already been noticed in these columns. It is interesting to compare exports nowadays with the quantities and values recorded before the War. During the five years preceding the War, India exported on average 1,120,000 lb. of rubber annually, valued at $38\frac{3}{4}$ lakhs of rupees, giving an average declared value of $3\frac{1}{2}$ rupees per lb. The latest published statistics show that, during the eight months April 1 to November 30 1925, exports amounted to 13 million lb., valued at $1\frac{1}{2}$ crores of rupees. This gives a declared value of only a little over one rupee per lb. Of the 13 million lb., 5 million came to the United Kingdom, 3 million were shipped to Ceylon, and $2\frac{1}{4}$ million to the Straits Settlements, besides $1\frac{1}{2}$ million to the United States of America. Madras was the chief exporting port and accounted for $7\frac{1}{2}$ million lb. as compared with $5\frac{1}{2}$ million from Burma.

During the same eight months, April to November 1925, Indian tea exports amounted to 239,712,000 lb., of which 208,702,000 were consigned to the United Kingdom. It is interesting to compare these figures with those obtaining before the War when, out of 266 million lb. exported, 194 million were consigned to the United Kingdom. That is to say, partly as a result of the preferential duty allowed by the British Government, and partly owing to developments in the re-export trade, the British share of India's exports of tea has increased from 73 to nearly 88 per cent.

INDIAN EXCHANGE.

London, February 8.

Although Rupee Exchange shows no alteration, signs are manifest in both Calcutta and Bombay that the absence of business is causing a feeling of uncertainty. This is indicated in the slightly easier tendency for commercial paper which exporters have been able to place during the past week at 1s. 6 7-16d. 3 m/s. for delivery within a month.

We learn, however, that bills have been far from plentiful, and it is possible that the temporary weakness may be due to some anxiety on the part of the banks to secure cover.

T.T. rates remain steady at 1s. 6 5-32d., and this rate is now quoted to the end of April. At the same time, no business has been done except at 1s. 6 3-16d., which can be obtained without difficulty from most of the Banks for cash and near delivery.

Government has again had to meet a moderate demand, and its purchases during the past eight days are said to be more than half a million pounds.

The market here has been featureless. Brokers complain that they find remitters disinclined to accept T.T. at 1s. 6 7-32d., and some fixtures for immediate delivery have been made at 1s. 6 13-64d.; but business is almost at a standstill.

The outlook is steady for near delivery and easier for forward.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

The Position in Palestine.

Like young children, countries in the early years of their development are apt to suffer from what may best be described as growing pains. That not inaptly sums up the present situation in Palestine where for some time there has been very marked depression which has given rise in some quarters to an anxiety that would appear to be quite uncalled for by the facts. The main causes of the trouble in Palestine lie outside the country. Among the immigrants into Palestine have been large numbers of Polish Jews, who have brought with them considerable wealth. There was a steady stream of these people, and, of course, they all required houses, and the result was undue speculation in land. Unfortunately the immigration was brought to a standstill by the crisis that developed in Poland last year, and this had its immediate reaction in Palestine. Another cause, less important, it is true, but not without considerable bearing on the situation generally, has been the partial closing of the Syrian market. A ountry well established would have been able to meet these knocks of fortune without revealing any notable effects, but it has to be remembered that Palestine is still at the commencement of its development, that its progress has perhaps been over forced, and that for some time to come this young country will need unceasing care if it is to reach a stout maturity.

A Jerusalem Contract.

The announcement is made that Sir John Jackson, Ltd., have obtained a contract for the supply of water and electric light to Jerusalem. In view of the fact that the concession for these services has been held by M. Mavromatis, a Greek subject, the validity of whose concession was established by a judgment of the International Court of Justice at The Hague last year, it must be inferred that the news means that M. Mavromatis has sought the assistance of Sir John Jackson, Ltd., in the exploitation of the concession. The news is of special interest in view of the chronic shortage of water from which Jerusalem suffers. Such is the position that the Palestine Government, feeling that it was impossible to wait for the development of the concession, has prepared a scheme for a water supply from a well at Ain Sahle in the neighbourhood of Bethlehem at an estimated cost of £85,000. Whereas they would have had to negotiate with M. Mavromatis it is to be assumed that they will now have to do so with Sir John Jackson, Ltd. In any case it may be hoped that the outcome will be that Jerusalem will speedily get the water supply that it so badly needs.

Possible Near Eastern Loans.

Rumour has been so busy of late with regard to possible—I will not say pending—Near Eastern loans that the question demands some reference in these columns. Two countries have come in for special mention in this connexion of late—Albania and Bulgaria. Our Tirana correspondent, writing a few weeks ago, stated that the League of Nations has been approached in regard to a loan for Albania of three million gold francs. The League, which has given practical evidence of its desire to do all that it can for Albania will no doubt give the matter the most sympathetic consideration. The difficulty with regard to this loan, however, rests on the question of the provision of adequate security. No one who is acquainted with conditions in Albania can fail to realise the difficulty that this matter must present, but the League has been successful in overcoming some very awkward obstacles in recent years, and it may well be that a solution will be found. Bulgaria desires a loan for the same purpose as Greece—refugee settlement—but in this case it is apparently not intended to approach the League, but to negotiate through direct channels. The country has met her obligations since the War in a satisfactory manner, and while, owing to accidental circumstances, the Bulgarian exchange has tended to depreciate of late the country's credit stands fairly high, and there is no reason why if and when pourparlers are commenced these should not go to a satisfactory issue. Bulgaria's problem in regard to the refugees is fortunately nothing like that with which Greece has been faced for the refugees with which she is concerned only number some 200,000.

Free Zones at Roumanian Ports.

A Bill is now in an advanced stage of preparation and should be laid before the Roumanian Parliament shortly, for the creation of free zones at the ports of Braila, Galatz and Constantza. When these free zones are properly established and equipped they will greatly facilitate the import trade and will enable foreign exporters to hold stocks out of bond in the free zone ports, so that immediate deliveries will be possible and many agency charges saved, besides much litigation over the re-export of goods not taken up by the consignees.

Keymer, Son & Co,

After being 82 years at 1, Whitefriars Street, London, E.C.4., Messrs. Keymer, Son and Co., have removed to Imperial House, Kingsway, W.C.2. The London offices of their allied firms, Keymer, Bagshaw and Co., Ltd., of Calcutta and the Sudan Mercantile Co., Ltd., Khartoum, Port Sudan, and Wad Medani, are also transferred to Imperial House. The Wad Medani branch of the Sudan Mercantile Co., Ltd., was opened last month. It is in the centre of the district irrigated by the Makwar Dam.

Brighter Rubber Outlook.

At the moment of writing it looks very much as if the forecast I gave some weeks ago that February would see a revival in the rubber market is going to be justified to some extent. For two weeks in succession now the London stocks of rubber have declined, and while the price of the commodity has so far not responded to any great extent the market has a distinctly firmer appearance and the same can be said for the share market. But I do not look now for any marked upward movement immediately, for there are too many uncertain factors to be taken into consideration. Before the autumn, however, those who were disappointed because they did not sell their shares in December should have possibly an even better opportunity of taking their profits.

The Trade Position.

At the meeting of Lloyds Bank, the chairman, Mr. Beaumont Pease, naturally devoted a good deal of attention to the trade position, and what he had to say was distinctly encouraging. He pointed out that last year the advances by loans to their customers were considerably greater, and this is generally accepted as an indication of improving trade. "I was so struck by the fact six months ago, when pessimism was in the air, and the dark places in our industrial outlook were especially in evidence," he added, "that I had an analysis taken of our advances. Between June, 1924, and June, 1925, we made new loans to our customers to the extent of £44,000,000. The analysis showed that these loans were granted to every kind of industry, composed of 32 different varieties. All these loans were divided into two columns, headed A. and B. Those under A. were for the purpose of financing extended trade; those under B. were granted to companies or individuals that required assistance to tide them over bad times and to cover trading losses. Out of the £44,000,000 lent, over £41,000,000 were placed in column A., and only £2,800,000 appeared in column B., and in no single instance, not even in the manifestly depressed coal trade, was the amount lent under category B. even half that advanced under A. I do not want to exaggerate the inference to be drawn from these figures, and it is obvious that an analysis of this kind, made by a single bank, must be far from furnishing a precise and accurate test; but I think it does show that trade, on the whole, throughout the country was active, in spite of some notable exceptions."

On the Road to Recovery.

Mr. Beaumont Pease went on to point out that the same problems which we have to face confronted our ancestors a century ago. Reparations, international obligations, excessive taxation, closed or partially closed markets, ineffective demand for our exportable commodities, currency depreciation, fluctuations in exchange, the resumption of the gold standard all these questions had to be dealt with and solutions found. "All the arguments, good and bad, and the quack remedies which have cropped up again in our time," he continued, "found their advocates last century. It is a hopeful sign that many of these problems have already in our case been satisfactorily settled, and with much less social disturbance than in former times." They were entitled to hope, he added, that the ultimate solution would be found for the problems as yet unanswered. As markets broaden out," he proceeded, "and our old customers increase their capacity to place orders, as the temporary stimulants of depreciated currencies to our foreign competitors disappear, as the cost of living continues to come down here and to increase in those countries where it has not yet risen in proportion to the fall in exchange, it is not unreasonable to expect that our competitive capacity will continue gradually to improve, and we have recently had proof that, as far as the quality of our goods is concerned, we are admittedly equal or superior to our competitors. My conclusion, therefore, is that our feet are now on the road to recovery, and that the measure of our progress will depend upon ourselves and our united efforts."

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, January 21.

Railway Developments.

An official notice was published in the *Argus* last week that from January 15 tickets would be issued and luggage registered direct from Bucharest to Brussels, Ostend, Liège, Amsterdam, Rotterdam, The Hague and London, via Budapest, Vienna, Passau, Frankfort and Cologne. The German mark fares will be converted into and paid in lei, at the rate of exchange fixed by the Roumanian Railway Administration.

As from the same date the internal railway tariffs are raised by 15 per cent. According to the *Argus* this means that the railway tariffs have been increased by 250 per cent. in the last two years.

Improving Revenues.

The official figures by the Ministry of Finance show that the revenues collected up to the end of December, for the 1925 Budget, gave a surplus over the estimates of over one milliard lei. It is expected that in the course of the next six months a further sum of approximately three milliards will be collected under the Budget of last year, making a total surplus of four milliards.

The Exchange.

This week the lei has reached the lowest level it has attained for many months, having touched 1,120 to the £. This may be due to a variety of causes, e.g., stagnancy of trade at the ports, and political excitement. It is to be hoped, however, that this is only a temporary phase.

The Oilfields.

A new well, No. 209, belonging to the Romano Americana, started last week with a violent eruption, and caught fire. A tunnel is being made to tap the pipe 15 metres below the level of the mouth of the well, as was done at Moreni with well No. 1, which burned for weeks in the autumn of last year. Unfortunately well No. 2, belonging to the Phœnix Oil and Transport Co., has been destroyed by the flames from No. 209.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended January 20, amounted to £E10,707, making the total from April 1, £E289,240.

The death occurred at Constantinople on February 3, of M. Huguenin, the Director-General of the Anatolian Railway Company.

The production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Company for December was 56,281 barrels.

BUDGET PROBLEMS IN YUGOSLAVIA.

(From Our Own Correspondent.)

Liubliana, January 27.

Something of stagnation prevails in the inner political life of Yugoslavia at the moment—the result of the Parliamentary recess. The Skupshtina was prorogued in the middle of December until January 29, and the aged Premier, M. Nikola Pashitch, took advantage of the holiday from parliamentary labours and went to the French Riviera.

Meantime, the financial question has become extremely pressing. Immediately after reassembling, the Skupshtina will be called upon to pass the regular annual Budget. Hence the political centre of gravity has for the time being shifted very definitely to the financial problem and economic problems in general which are forced upon public notice by the preliminary discussions of the Budget, because this matter of the Budget touches upon many sensitive points in Yugoslav national economy. The Financial Committee, whose task it is to submit the draft of the Budget to the Skupshtina, has latterly been very hard at work discussing the individual budgets of the various Ministries.

Yugoslav's currency is now completely stabilised. Passing through a period of fluctuations, the dinar has during the last three years gradually risen to a perfectly sound rate of exchange. But this comparatively favourable state of affairs has somehow failed to produce the effect that it ought to have had upon Yugoslavia's internal economic life. Whereas the value of the dinar abroad has increased considerably, its price at home has remained relatively high. The blame for this is usually thrown upon the merchants, and they make the excuse that the cause of the abnormally high prices must be sought in the high rate of taxation with which they are burdened by the State. On the other hand, it is true that an Englishman or American coming to the country for a short time, and not compelled to buy articles specially affected by taxation or duties, would still find the necessaries of life cheap enough, particularly if he were shown the ropes a little. The price of imported clothing has also decreased considerably with the rise of the dinar. This is noticeable in the case of British hosiery, to quote but one instance of goods in daily demand.

And herewith we come to the crux of the financial *cum* economic problems of Yugoslavia. In order to balance the Budget, the State imposes exceptionally heavy taxes and super-taxes, which weigh very heavily on the economically productive classes in the Kingdom. Thus Yugoslavia makes a good impression abroad with her well-balanced Budget; but one is apt to forget that this otherwise desirable consummation is attained only by burdening the population with very heavy taxes.

In the Budget for the year 1926-27 the total expenditure of the State is estimated, roughly speaking, at thirteen milliard dinars. To raise this enormous sum by ordinary taxation would be no easy matter, and so the Financial Committee is now busily investigating, in order to cut out of the estimates of every individual Ministry everything that it not absolutely indispensable. Thoroughgoing economy is the leading note of these Budget discussions. But the young State at its constitution took over many regions which, owing to their having been until recently under Turkish rule, are still exceedingly backward as regards both education and economic development. Much capital will have to be sunk in the building of railways, roads, harbours and schools, especially elementary and technical training schools.

In this connexion the statement made in the Financial Committee by the Minister of Education, M. S. Raditch, in regard to the financial needs of public instruction in Yugoslavia, is very instructive. According to his statistics, there are in Yugoslavia at present four hundred thousand children who do not receive even elementary school instruction, although they are of an age to attend school. Four thousand elementary schools or eight thousand additional school departments is the minimum required for them. So far there are on an average between two and three hundred new school departments opened every year. But to build enough elementary schools to cope with the most urgent needs would, in the opinion of the Minister of Education, require a special loan.

A great flaw in the tax policy of Yugoslavia is that equal taxation for all parts of the country is not yet a fact. Taxes are, for the most part, still levied in accordance with laws and regulations in force before the Liberation, and these differ in different provinces. Chief sufferers under this unequal system are the western and northern regions, in the first place the Vojvodina (Danubian region) and Slovenia, where the high rate of taxation is causing considerable dissatisfaction among the taxpayers. The discussions in the Budget Committee are once more clearly demonstrating the need for introducing a system of equal taxation throughout the Kingdom.

Last month Yugoslavia also began to grapple with the task of settling the question of the war debts of pre-War Serbia. To this end the Minister of Finance, M. Stojadinovitch, with a special Commission, has gone abroad to arrange this matter. His first stop was in Paris, where he conferred with the financial experts of the French Government who are dealing with the problem of France's war debts. From Paris, M. Stojadinovitch proceeded on his journey to America. The result of his negotiations there will be looked for with the keenest interest, because this question of the war debts and the way in which they are to be settled is of the utmost importance. To increase the present burden of taxation upon the population yet further is impossible, for the country is taxed up to the hilt already. In order to meet her obligations, Yugoslavia will have to tap other resources.

The output of the Indo-Burma Oilfields for December was 2,835 barrels, being 1,831 barrels from Yenanma field and 1,004 barrels from Padaukpin field.

Revised postage rates, as under, on parcels for Albania are now in force:—Weight not exceeding 2 lb., 2s. 9d.; over 2 lb. but not over 7 lb., 3s. 6d.; 7 lb. to 11 lb., 4s.; 11 lb. to 22 lb., 6s. 3d.

Shipping Intelligence.

THE DALMATIAN FISHING INDUSTRY.

An interesting article on the Dalmatian fishing industry by M. Pilja appears in the current issue of the *Economic and Financial Review* of Belgrade. We give the following extracts :—

A considerable part of the population of Dalmatia is engaged in fishing and earns its living in this way, even though the methods employed are primitive enough so that the yield is not as satisfactory as it might be. During 1910 12.5 million kgs. of fish were caught by 14,770 fishermen employing 2,792 fishing boats. On the other hand, the 1909 season yielded about 32 million kgs. of fish. Since the War, however, owing to the mobilisation of the fishermen, the lack of fishing implements, etc., the yield has considerably diminished. Thus, in 1921, there were only 2.4 million kgs. caught by 12,186 fishermen using 4,832 boats.

During 1924, on the whole of our coast, both Croatian and Dalmatian (although the contribution of the former was almost insignificant) 4,153,735 kgs. of fish, worth 38.4 million dinars, were caught. Of this quantity, 153,301 kgs. were preserved in oil and 958,732 in salt. Two million kgs. were sold on our own coast, while one million were exported abroad. The number of fishing boats this year was 4,066, valued at 21.9 million dinars, while the value of the fishing implements amounted to 26 million dinars.

It is owing to the lack of good equipment and to the bad conservation in general and inefficient breeding of the fish, that the yield of sardines and tunny fish has fallen off. Whereas before the Dalmatian fisheries yielded 5 million kgs. of sardines a year and about the same amount of tunny, in 1921 the total yield amounted to only 2 million kgs. of fish. During the first six months of 1925, on the whole coast, 1,058,309 kgs. of sardines were caught. These were valued at nearly 7 million dinars.

Fishing in Dalmatia is carried on during two seasons, in summer, from April to October, and in winter, from November to March. For purposes of statistics and control the coast is divided into sections which correspond to the sections controlled by the captains of the ports, Shibenik, Split, Ragusa, Meljine, of which the first two are the most important.

The pre-War development of the fisheries in Dalmatia had led to the creation of many fish-preserving factories. Of the 32 factories which were working before the War, only 9 exist to-day, and even these do not work to their full extent.

The Dalmatian fish are preserved in salt or in oil. In a good season and when the market has been good, up to 20 million tins have been preserved in oil alone, as will be seen from M. Lakatosh's book, "Dalmatian Industries." In normal years such as 1910-111, up to 2.4 million tins of sardines were produced and 1.5 million kgs. were salted, etc. The greater part of this produce is exported to Italy. In 1924, 190,000 kgs. of preserved fish, worth 6.2 million dinars, were exported to Italy (4.5 million dinars worth), Poland, the United States, etc.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Olympia for Bombay (Liverpool, February 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—M.v. Dorsetshire for Port Said, Colombo, Madras, and Calcutta (London, February 20).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, February 24.)

British India Line.—S.s. Margha for Bombay and Karachi (London, February 19); s.s. Matiana for Colombo, Madras, and Calcutta (London, February 27).

Cunard Line.—S.s. Cypria for Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, February 27).

Ellerman "City" Line.—S.s. City of Nagpur for Calcutta (Birkenhead, February 17).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 27).

P. and O. Line.—S.s. Ranchi for Bombay (London, February 19), s.s. Dongola for Colombo, Madras, and Calcutta (Liverpool, February 20).

Prince Line.—S.s. Stuart Prince for Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, February 13); s.s. Soldier Prince for Malta, Alexandria, Syrian Coast, and Cyprus (London, February 20).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Paper.—The Egyptian Government Press invites tenders for the supply of paper for covers and drawing books. March 1. (D.O.T.)

Various Goods.—The Frontier Districts Administration invites tenders for a large variety of goods, mostly in small quantities. The principal requirements consist of oils, paints, leathers, soap, canvas, sacks, and miscellaneous items of general hardware. March 23. (D.O.T.)

Bolts and Nuts, Etc.—The Egyptian Ministry of Communications, Ports and Lighthouses Administration invites tenders for the supply of iron and steel and non-ferrous materials including bolts and nuts required during the financial year 1926-27. March 25. (D.O.T.)

Drugs, Etc.—The Egyptian Department of Public Health invites tenders for the supply of drugs, etc., required during the year 1926-7. (D.O.T.)

General Pangalos has sanctioned a decree amnestying 70,000 persons.

The congress of Egyptian Opposition parties will open in Cairo on February 19.

The Rector of the University of El Azhar will preside over the Caliphate Congress which is to meet in Cairo on May 13, and for which invitations have already been sent to all Moslem countries to send delegates.

About seven thousand persons who have been condemned for various political offences from the time of the Balkan War up to December last have been pardoned under the new Bulgarian Amnesty Law.

It is announced that the Directors of Public Security of Palestine, Syria and Egypt have drawn up a draft of passport regulations for the purpose of preventing the entrance of Communists into these countries, and that the draft regulations are being submitted for approval to the respective Governments.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.

Motors and Motoring.

By G. B. B.

I have recently had an opportunity of trying out on the road, under rather adverse conditions and over an exceptionally rough stretch of country, one of the newest 12-25 h.p. Humbers, a car which according to the makers has been designed for ease and comfort rather than for speed. The ease and comfort is certainly there; the springing is admirable, and the seating rather luxurious as a matter of fact, but the speed is there as well, or at any rate as much of it as I wanted. The curious will be interested in the route we took. We left Hull by way of Hessle; went on through Newbald and Market Wrighton to York, along the main road to Darlington, Durham, and Newcastle, along by the Roman Wall over the Nine Nicks of Thirlwall to Gilsland, on to Carlisle and Pooley Bridge, by Ulleswater, over Kirkstone Pass to Windermere and Kendal and home by Preston, Liverpool, and Manchester. A good give-and-take journey with very few easy spots in it, and the good little Humber never caused us a moment's thought throughout the run.

The steering is light, the running is smooth, there is little if any vibration on even such rough pieces of road as that between Cawfield Gap and Greenhead, and the only thing that needed a little special care at first was the gear changing, as one has to handle it rather quickly and decisively. But it is easy enough as soon as one has got used to it. The seats are sufficiently large to meet any requirements, being 39 in. wide in front and 42 in. at the back, and there is plenty of room for one's legs. The doors are also on the generous side, and the only point that might be mentioned regarding them is that the front door on the driver's side is rather close to the spare wheel. But that is merely a detail. The wheel is not appreciably in the way.

The weather-proofing arrangement is admirable. The side shields are excellently designed and made, do not develop rattle, and are in every way all that could be desired. We had a good deal of rain after leaving Carlisle, and were able to judge of them as I found them: all that could be desired in every respect. There is no difficulty in bringing the side shields into use, and the junction they make with the hood is as weathertight as the rest of the protection.

The owner of the car told me that when he took delivery he could get 45 m.p.h. on top gear, and about 40, 25, and 15 m.p.h. on the third, second, and first respectively. On the fine stretch of road between Heddon on the Wall and Wallhouses we did much better, touching 50 on top and being able to get 46, 31, and 22 on the other speeds. The car accelerates quickly; the engine is powerful and seems to have plenty of reserve and the brakes are large, strong, and easily applied to all four wheels.

The Index Indicator.

I have just seen a neat little indicator and rear lamp combined, which consists of a cylindrical casing in which are the necessary lamps to illuminate the indicators which consist of a right and left-hand arrow, a red hand, and a a rear light. The wiring, which is simple, goes to a miniature distribution board and from there to a two-way press button. This causes whichever arrow is needed to be shown when the car is about to turn left or right. The red hand device is wired to a foot switch, which is operated by a brake pedal, so that the moment this is depressed and before the brake has come into action the red warning hand is shown at the rear of the car. The red rear light is controlled by a switch on the dashboard or other convenient position in the ordinary way.

A New Material.

Of more than usual interest is the announcement that a new material for bushes has been evolved by the efforts of the research staff of Messrs. Ferodo, Ltd., the makers of the well-known brake material. This new metal, or rather alloy, for bushes and bearings, is in many respects claimed to be superior to white metal or bronze, and one of its greatest advantages is said to be the fact that it is self lubricating and so allows of an oil-less bush being made. The makers do not speak of the material as one which is, as yet at any rate, intended to take the place of bronze or white metal for heavy service bearings such as crank-shaft and big end bearings, but for minor chassis bearings which, as a rule, work under far more adverse conditions than engine bearings, it is said to be admirable. The list of bearings for which it is said to be suitable is fairly extensive and includes torque rods, suspension, steering gear and break gear, and, as far as I can gather, it is impossible for suddenly-applied loads to damage the bearings in any way either by causing the metal to extrude or seize up. Messrs. Ferodo say that as regards friction and frictional resistance the drag set up by the new material under conditions of adequate lubrication is no greater than that which takes place where ordinary white metal is used for the bearings. The metal is, however, self-lubricating to a remarkable extent, and when no outside lubricant is used the co-efficient of friction against any other smooth dry metallic surface is very low: sufficiently low to eliminate any risk of seizing under ordinary working conditions. The alloy has undergone exhaustive tests, and has emerged satisfactorily from all tests, and I am informed that it is now being used in the bearings of motor lorries.

The New Swift.

Messrs. Swift, of Coventry, Ltd., have on the market a very fine little production, the 12-35 h.p. car, five-seater, with a two-litre capacity, four cylinder engine. This model develops its 35 h.p. at 3,000 revs., and consequently the owner of one of these need not be afraid of any hill he is likely to meet anywhere. I have not yet tried this car on the road, but I am informed that it should be just the thing for service in the Near East and India. I have had the pleasure of trying out other Swift models and have

always found them satisfactory, and as this new type is supposed to be an improvement on anything the works have turned out previously, it should certainly be worth while sending to the makers for full particulars of price, chassis construction, body work and equipment.

Licences and Visibility.

It is the duty of the owners of all motor vehicles to display the licence in the proper place in the proper manner. I have said nothing in these notes as yet regarding motor cycling—my favourite pastime, by the way—but feel impelled to do so in connexion with licences, as I see, day after day, motor cyclists rendering themselves liable to penalties merely through their own carelssness and default. A motor cyclist should see that his licence is protected adequately from the weather, as an illegible licence constitutes an offence punishable by a heavy fine. Why should road users neglect in so many respects laws made for the general good? I see repeatedly dozens of cars at night with inadequately illuminated number plates; I see cars with white lights behind—to me an incomprehensible offence, and also with one headlamp alight, and that on the near side. Now, all these are stupid, needless and careless offences, and when one sees a motorist guilty of any of them one feels like knocking his silly head against a wall!

BRITISH CHAMBER OF COMMERCE OF TURKEY.

The report of the British Chamber of Commerce of Turkey (Inc.) for 1925, presented at the annual meeting of the Chamber held at Constantinople on February 2, states:—

The attention of the Council was drawn to the fact that vessels flying the British flag without any British officers or crew call at Constantinople. After communicating with the Consulate General in the matter, the Council addressed a letter to the Board of Trade suggesting that, in view of the large numbers of British mercantile marine officers who are without employment, a rule should be laid down that all ships flying the British flag employ at least a British Master and a British Chief Engineer. An acknowledgment has been received promising consideration of the matter.

Delayed Telegrams.

This question continues to have the attention of the Council. During the greater part of the year there was little or nothing of which to complain. In November and December following violent storms unprecedented delays were experienced. At no previous period during the last thirty years has this city been cut off telegraphically for a whole week from the trade centres of the world. It is much to be regretted that the difference between the Eastern Telegraph Company and the Turkish Government has not been settled. So long as we are dependent upon land lines, delays owing to storms may be expected.

The delays in the arrival of parcels from England has been the subject of considerable investigation by the Council. Deputations which called on the Turkish Post Office were received with sympathy and all inquiries with respect to routes available and time taken have been attended to promptly. The Council has also been in correspondence with the British Postal Authorities. As a result there has been an improvement in the service, the maximum weight has been doubled, and the Marseilles route is now available.

Several cases of undelivered letters having been reported to the Council, the question was taken up with the Turkish Postal Authorities. Assurances have been given that the losses do not occur while letters are in the care of the Turkish Post. The Council recommends that on every occasion when a letter is lost the fact be reported to the Post Office. It is only by continually calling attention to such occurrences that improvement will result.

During the year a law was promulgated obliging every town in Turkey over a certain size to have its Chamber of Commerce and every trader in these towns to become a member. Arrangements were made for a delegation from several of the foreign Chambers to call on the Constantinople Chamber of Commerce and Industry for the purpose of obtaining an extension of the period for registration and some modification in the scale of fees. The delegation was unsuccessful in obtaining any prolongation. Although the scale of fees does not seem to have been modified, applicants for membership have been put in categories commensurate with their financial standing.

Arbitration Clause.

This question has moved a step further forward during the year. The Constantinople Chamber of Commerce and Industry took up the question with interest and reported that as soon as the status of Chambers of Commerce in Turkey is decided upon by the Government, they intend to become affiliated to the International Chamber and to adopt the Arbitration Rules of that body. The law with respect to Chambers of Commerce was passed, but too late in the year for the Council to be able to report on the matter. It is hoped, however, that the intention expressed early last year will be put into effect before long.

The practice of false marking of goods would seem to be increasing and even extending to articles hitherto correctly marked. A draft law (with respect to cotton goods only however) is to be considered by the National Assembly, and it is hoped, will be passed during the present session.

The question of uniform bills of lading was brought up during the year by the Manchester Association of Importers and Exporters. The Council communicated with the Constantinople Chamber of Commerce and Industry and also the Turkish National Commercial Union with a view of inducing the Government to adopt the suggestion put forward, that Turkey subscribe to a general agreement in the matter. The Council felt that the details of the proposal would best be dealt with by the International Maritime Chamber to which all documents were sent. After studying the question, the Maritime Chamber replied that, in view of the fact that the recommendation of the International Maritime Conference of Brussels had only been adopted by the British Empire and Dominions, it was premature to press the matter further at present.

The Council has had considerable correspondence with respect to differences in fares between Constantinople and London and vice versa. The cost of the outward is about £4 greater than the homeward journey. The difference still remains and has never been satisfactorily explained. Experience shows that by booking in Paris instead of London the excess can be saved.

The serious increase of taxation has had the attention of the Council throughout the year. Meetings with representatives of other Chambers have been held and various sub-committees have been appointed to study and report to the Council. The records of the Chamber are available to those who wish to make themselves familiar with the work done. The Council particularly calls attention to the report of the sub-committee appointed in connexion with the proposed taxation on profits, on turnover, and on the petrol and sugar monopolies.

At the Council meeting held on April 22, it was proposed and carried by acclamation that Mr. A. C. Sillev should be appointed an honorary vice-president in recognition of his great interest in the work of the Chamber and the constant help he has rendered it.

A Decision of the Roumanian Minister of Industry and Commerce provides that the proportional taxes of 2 per cent. and 4 per cent. of the gross production of crude oil, as well as the royalties due to the State by enterprises holding concession of State oil lands, shall be collected in kind during the year 1926 and not in cash.

Company Meetings.

LLOYDS BANK LIMITED.

Mr. Beaumont Pease on the Trade Position.

The sixty-eighth ordinary general meeting of the shareholders of Lloyds Bank, Ltd., was held on February 5, at the Cannon Street Hotel, E.C. Mr. J. Beaumont Pease (Chairman of the bank) presided.

The Cairman, in moving the adoption of the report, said:—Before we discuss our yearly report and balance-sheet, I have to refer with the greatest regret to the recent loss we have sustained owing to the death of our colleague, Mr. Kenneth Mathieson. He came to us from the River Plate Bank when we entered into our purchase arrangement with that institution in 1918, and was a director of Lloyds Bank since that date. The courteous kindliness of his character endeared him to all his friends and acquaintances, and inspired in his colleagues an affection which was still further enforced by their appreciation of the value to the bank of his ripe experience in business matters and his knowledge of South American conditions. Both on personal and business grounds we shall miss him very sincerely.

By resignation we lost the services of Sir George Lloyd, who, with the title of Lord Lloyd of Dolobran, has gone to Egypt as High Commissioner. We can hardly grudge to the country the continuation of his distinguished services, so ably given in India and elsewhere, but I am sorry to think that on the Board we shall be deprived of the assistance of his alert and capable co-operation. (Hear, hear.)

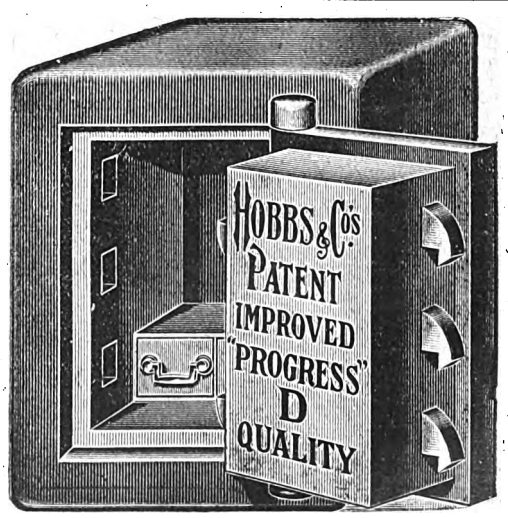
It is with pleasure that I am able to announce that Mr. Cyril E. Lloyd, the son of our first general manager, has been elected a director, and that we shall continue to have on the Board a member of the family which has had so much to do with our inauguration and whose name is embodied in our title.

The Balance-sheet.

If you will now turn to the report and balance-sheet, copies of which you have all received, and which I have no doubt you are agreeable to take as read, you will not find any startling change in the figures as compared with last year, but there are one or two points to which I should like to call your attention. Our current, deposit and other liabilities to the public are £2,800,000 less than a year ago, and our acceptances are also £2,000,000 less. A similar reduction has taken place on the asset side in our cash, and the percentage of this item to our deposits stands at 1.7. Our advances have increased by £18,000,000, and the money to provide this further accommodation to our customers has been obtained in the main by selling investments to the extent of £16,000,000, while a further £2,000,000 of bills have been allowed to run off.

Our associated banks, the shares in which appear separately in our balance-sheet, continue to progress and give satisfactory results. You may have noticed that the Bank of London and South America recently increased its dividend. In the case of the other two the dividends have been maintained and their positions further strengthened.

Our profit and loss figures stand at £2,569,366, which, after making allowance for the allocation last year of £100,000 to the widows and orphans fund, represents an increase of £200,000 as compared with a year ago.



We propose, as you see from the report, to place £250,000 to premises account, £400,000 to the staff superannuation fund, and to pay the same dividend as previously, carrying forward a slightly larger balance than the one brought in. The allocation to the staff superannuation fund may seem to you rather larger than necessary. You will realise, however, that this sum is still retained in the bank, and the more we can build up a fund which will render our pension scheme self-supporting, the better it will be for our shareholders, since the present yearly charge on our profits for pension purposes will pro tanto tend to disappear and shareholders will reap the benefit by increased profits. There is a substantial advantage also from the point of view of income-tax in making the allocation in this way.

Now, I think anyone would agree that, from the point of view of our company, this is a very satisfactory balance-sheet. (Hear, hear.) It shows a profit-earning capacity sufficient not only for the payment of satisfactory dividends—though comparatively modest when calculated on the combined total of capital plus reserves—but it leaves an ample balance for writing down assets and providing for any possible contingency. When we come to consider the general commercial and financial position in the country, it is not possible to say that the condition is equally satisfactory. Doubtless there are some encouraging signs. Among the most prominent of these, though possibly rather vague and incapable of exact measurement, I place the psychological change which appears to be going on in men's minds and outlook. People generally think trade is on the up grade, and in these matters the thought is often father to the actual fact. If it is generally believed that business is going to be better, there is a tendency to place orders in anticipation of prices commencing to rise, and the belief becomes infectious and the process increases on the snowball principle. This general anticipation is not without some justification.

The Return to Gold.

The year 1925 has marked a very distinct step forward on the

march to more prosperous and normal times. The removal of the embargo on gold was one of the most momentous events of the year. This has been referred to at all the recent bank meetings and in very similar terms. I do not propose to add to what already has been said on this subject, except to associate myself with the expressions of congratulation which have been made on all sides that the forebodings entertained in some quarters of the dangers attending such a momentous step have not been realised. Though undoubtedly it had a temporarily depressing effect upon our export trade, the most difficult period seems to have been successfully passed without an unduly high Bank rate, and we are reaping the benefit of enhanced credit, a steadier exchange and lower prices. The working man pays less for his necessaries, the country less for its raw material, and our currency, in the words of the Chancellor of the Exchequer, has been "shackled to realities." It is not for selfish reasons that bankers have advocated the taking of this step.

Other nations are following our example of returning to gold, with similar beneficial results. Currencies are being stabilised, budgets balanced and debts settled. International relations have been improved and a much greater sense of security obtained by the Pact of Locarno. Artificial restrictions are being slowly removed. At home we have abolished the embargo on foreign loans, and international trade would be greatly assisted if many further restrictions which greatly hamper trade between various Continental countries were removed. Conditions in Europe have certainly made some progress, and I think we are all beginning to realise more clearly the truth that it is to our interests that our neghbours should be rich and prosperous. What good can it do us, who desire all the outlets possible for our trade, if our neighbours are too poor to buy from us?

The Crisis in the Heavy Industries.

The grave crisis in the coal trade and the depression in the heavy industries, such as shipbuilding and iron and steel, tended to obscure the fact that internally the country might almost be described as having been prosperous. The spending power of the population generally was considerable, and the trades which catered for the personal needs and necessities, and even in some cases for the luxuries and amusements, of the people enjoyed no slight measure of prosperity. It would appear from the information available to me that the standard of living of the great mass of the people has undoubtedly been raised. There is, however, another and much more gloomy side to the picture. The heavy trades to which I have alluded and to which we chiefly look to supply us by way of export with the means of buying the necessities of life, and of meeting our heavy obligations, have been passing through a period of depression rarely equalled. It will require all our optimism, all the hard work we can give, all the self-denying and close thinking of which we are capable if we are successfully to surmount these difficulties.

In contemplating the difficulties of the present time, I find much consolation and encouragement in studying the conditions at the beginning of last century. The same problems confronted our ancestors as those with which we have to deal. Reparations, international obligations, excessive taxation, closed or partially closed markets, ineffective demand for our exportable commodities, currency depreciation, fluctuations in exchange, the resumption of the gold standard, all these questions had to be dealt with and solutions found. All the arguments, good and bad, and the quack remedies which have cropped up again in our time, found their advocates last century. Capital levies, repudiation, either open or disguised, inflation, tariffs, the use of index numbers for controlling the vagaries of money, none of these suggestions were without their supporters. It is a hopeful sign that any of these problems have already in our case been satisfactorily settled, and with much less social disturbance than in former times. We have seen nothing, I am glad to say, to compare with the insurrectionary meeting at Spa Fields, the "Battle of Bonnymuir," or Peterloo.

The history of the last ten or twenty years does not suggest to me that inventive faculty is dead in our day, or that our capacity to compete in the world's markets is dying. If it is true, as has been authoritatively stated, that we have been holding our own in the proportion of the world's trade which we have obtained, even under present handicaps, it is an encouraging feature. As markets broaden out and our old customers increase their capacity to place orders, as the temporary stimulants of depreciated currencies to our foreign competitors disappear, as the cost of living continues to come down here and to increase in those countries where it has not yet risen in proportion to the fall in exchange, it is not unreasonable to expect that our competitive capacity will continue gradually to improve, and we have recently had proof that, as far as the quality of our goods is concerned, we are admittedly equal or superior to our competitors.

My conclusion, therefore, is that our feet are now on the road to recovery, and that the measure of our progress will depend upon ourselves and our united efforts. (Applause.)

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

Issue of Bonus Shares.

Before I sit down there is a matter of some domestic interest to which I should like to refer. Judging from letters and other communications which I have received during the last few years, our shareholders have been tempted sometimes to think that, although undoubtedly they have benefited indirectly from the increasing strength of the bank, something more might have been done for them. (Hear, hear.) For a long sequence of years, both before and during the War, a large part of our profits had each year to be applied to meeting the depreciation in the market value of our investments, and it is only in recent years that the reverse operation has been experienced. Our investments have increased in value, and we have sold a considerable portion, realising substantial profits. These have not arisen out of the ordinary day-to-day operations of the bank: still less can they be said to have been made at the expense of the public from unduly heavy charges to our customers. In fact, I think it is true to say that banks are freer from the charge of profiteering than any other business. (Hear, hear.) Our charges are practically identical with those ruling before the War, whereas the facilities we give and the expenses we bear are very much greater. Although, to some extent, we may be justified in claiming that these profits are partly due to our procedure in the past, yet in the main they appear to have descended like manna from a beneficient heaven, and I think no one has a more legitimate right to participate in them than the shareholders. (Hear, hear.)

The Board's Proposal.

We propose, therefore, to capitalise a portion of these realised profits on the sale of investments, and to the holder of every ten of our existing shares give one new share of £1 fully paid—(applause)—making an addition to our present issued capital of £1,437,296. These new shares will rank pari passu with the existing shares for the first 5 per cent. dividend in any year, and for the first £1 on the repayment of capital. They will be limited in dividend to 5 per cent. In regard to fractions, the new shares representing these will be sold by the bank and the proceeds distributed in cash among the holders of such fractions. This will involve an increase to our authorised capital, and a notice will be sent out to every shareholder, with the report of to-day's meeting, of an extra-ordinary general meeting to be held on February 24, for the purpose of passing the necessary resolutions. I hope shareholders will appreciate the fact that I have thought fit to reserve this piece of news until to-day—(hear, hear)—in order that I might explain our proposals first to them personally at this meeting, rather than to make a general public announcement. (Applause.)

Digitized by Google

Sir Austin E. Harris, K.B.E., seconded the resolution, which was carried unanimously.

The retiring directors were re-elected, and Messrs. Price Waterhouse and Co. were reappointed auditors for the year 1926.

Votes of thanks to the directors for their services during the past year, to the joint general managers and staff for their excellent work and to the Chairman for presiding, were carried unanimously, and the proceedings then terminated.

CREDIT FONCIER EGYPTIEN.

Egypt's Prosperity.

The following is a translation of the report of the Credit Foncier Egyptien, which was presented to the shareholders at the annual general meeting, held at Cairo on January 16:—

The Cotton Crop.

The cotton crop of the 1924 season yielded more than seven million kantars, which have been sold without difficulty at satisfactory prices, ranging from 42 to 70 talaris per kantar for Sakellaridis and for Ashmouni from 30 to 38. The profits thus realised being added to those of an already long series of fortunate years have maintained and accentuated the impression of prosperity which made itself evident in our last report. The rate of yield on the Detta Egyptienne and securities of the first class has fallen swiftly to below 5 per cent. Transactions in cultivable land (which is jealously preserved by those who hold it) have remained rare and of little importance. Activity has been concentrated on city property. Large sums, arising to a great extent from economies or from disposable profits, have been devoted to the construction of large work-yards which are being built at this time in most of the towns of Egypt, notably in Cairo and Alexandria.

The crop of cotton of 1925 appears, however, in less favourable conditions. The extension of the acreage has brought it to about eight million kantars as against seven millions for the previous year. The similar development in the American production has resulted in a fall in prices which has brought the rate for Sakellaridis from 50 talaris in September to 35 on November 30 and that of Ashmouni from 32 to 27.

The Government finances have benefited again this year from the important increase in values. As regards the Budget of 36 million pounds, the funds of the general reserve or the accumulation of annual surpluses stood at March 31, 1925, at £E25,557,175. It has enabled the elaboration of a notable economic programme, which ought to improve the means of communication and transport as well as the conditions of irrigation and drainage in accordance with a desire long since expressed.

The Balance-sheet.

The balance of our mortgage loans account shows a decrease on the previous year. The decrease amounts to £E598,584. The realisations have risen from £E1,170,562 to £E1,321,806, but the redemptions have gone up to ¼E1,920,390 against £E1,615,163 in 1924. The balance of the account for annual and half-yearly payments and interest due was at October 31, 1924, £E1,210,603. Adding the maturities of the year £E2,038,882, we obtain a total sum of £E3,249,485. At October 31, 1925, we had collected £E2,141,076. The amount of our arrears was thus reduced to £E1,108,409, an improvement of £E102,194 on the corresponding total of the previous year which showed a decrease of £E116,159 on the preceding period. The account third party purchasers of real estate stands at £E113,685. As regards the account of real estate acquired following expropriations, it shows at October 31, 1925, a negligible balance of £E6,706.

Investments.

The composition of our portfolio has undergone various modifications during the year, arising from the re-employment which we have had to make of £E1,000,000 which the French Treasury repaid us on April 1, 1925, as well as of our other disposable funds. The English securities have risen from £E4,732,760 to £E5,192,171, an increase of £E459,411. The Egyptian securities have advanced by £E2,433,558 (£E8,149,363 in 1925 against £E5,715,805 in 1924), the purchases of the year having been 51,413 bonds of the Credit Foncier Egyptien, 7,914 bonds of the Suez Canal Company, £231,360 of Egyptian 3½ per cents., and £471,960 of Egyptian 4 per cents. The French securities have been reduced from £3,725,273 to £E1,105,667. The latter figure was reduced in December, 1925, to the total of £E1,000,000, which represents the last part of the loan of £E4,000,000 falling due in 1926. The profit realised on our purchases of bonds has enabled us to liquidate our depreciated French securities and to present to you a balance-sheet in which all our activities are drawn up in Egyptian pounds or pounds sterling.

Profit and Loss Account.

The profit and loss account shows only a few unimportant changes, certain extraordinary receipts having balanced the decreased value attributable to the decrease of mortgage loans and the overdue interest on annuities in arrears.

The question of taxes still remains a delicate problem for us, since the regulations are constantly changing. The right of transmission which is reckoned on the average rate of the shares has been successively raised from 0.25 to 0.30 per cent. by the law of March 29, 1914, to 0.50 per cent. by that of June 25, 1920, to 0.60 per cent. by that of July 30, 1923, to 0.72 per cent. by that of March 22, 1924, and to 0.84 per cent. by that of July 17, 1925. The revenue tax which was raised from 4 to 5 per cent. by the law of December 30, 1916, was brought to 10 per cent. by that of June 25, 1920, and to 12 per cent. by March 22, 1924.

If we have been able to meet such increases of taxation without bending under their heavy burden, it is due to the reduction of taxable quota that the withdrawal from France of our shares and our policy of redeeming bonds has allowed us to obtain.

Subsequently at the close of the year the law of December 4, 1925, provided for an exceptional contribution of 50 per cent. of the sums paid in 1925.

Net Profits.

The net profits of the year stand at £E2,022,808. The corresponding expenditure was £E1,322,118. The amount of distributable profit stands thus at £E700,690, enabling the allocation of P.T. 140 to the ordinary shares and £E35 to the founders' shares, subject to deduction of French taxes, or P.T. 48 for the shares which circulate in France, or on which the coupon No. 51 has been paid in France. The founders' shares presented in France will be subject to the retention of the tax affecting uncompounded shares.

If you agree to these proposals the position of the various reserve and provision accounts will stand as follows on November 1, 1925:— Statutory reserve, £E852,471.610, or 22,099,069.60 frs.; extraordinary reserve, £E970,773.067, or 25,165,860.45 frs.; provision for the reduction of the premium on bonds, £E574,416.580, or 14,890,902.92 frs.; provision and reserve for sundry contingencies, £E1,352,269.011, or 35,055,580.32 frs.; provision for dividend on shares, £E254,698.985, or 6,602,695.66 frs.; total, £E4,004,629.253, or 103,814,108.95 frs.; loan account for drawings of the 1911 issue, £E159,121.349, or 4,124,986.37 frs.; total, £E4,163,750.602, or 107,939,095.32 frs.; for the account "Provision for the amortisation of bonds, £E1,092,319.905, or 28,316,783.02 frs. We ask you to join us in thanking our staff for the zeal and devotion with which they have carried out their work.

Resolutions of Meeting.

The general meeting (1) approved the accounts for the year ended October 31, 1925; (2) adopted the division of profits proposed by the board of directors, and decided in consequence on (a) the distribution for the year on the 400,000 shares of a dividend of P.T. 140 per share, £E560,000, or 14,517,174.34 frs.; on the 2,000 founders' shares of P.T. 3,500 per share, £E70,000, or 1,814,646.79 frs.; (b) the allocation to the statutory reserve of £E46,924.014, or 1,216,435.88 frs.; to the board of directors, £E23,462.007, or 608,217.94 frs.; (c) to carry forward for the account of the ordinary shares £E13,905.739, or 360,485.77 frs.; for the account of the founders' shares, £E1,118.234, or 28,988.57 frs.; total, £E715,409.994 or 18,545,949.29 frs., representing the amounts of the profits of the year and the sums brought forward from the previous year; (3) decided that the dividend on the ordinary shares and on the founders' shares should be payable at the date fixed by the board. The dividend on the ordinary shares will be payable in Paris and in London in sterling at the rates of exchange fixed by the board, less French taxes, which correspond to 9s. 10d. per coupon; in Cairo in piastres tarif less the same French taxes or P.T. 48 per coupon. There will be exempted from this retention coupons on shares which have not circulated in France since November 1, 1924, and of which the previous coupon has been paid out of France. The dividend on the founders' shares will be payable under deduction, for the shares liable to French taxes, of the tax on the revenues from uncompounded securities. (4) Re-elected in accordance with Articles 15 and 26 of the statutes as directors for five years, MM. Naus Bey, Le Baron Brincard, and Sir Bertram Hornsby; (5) confirmed in accordance with Article 77 of the statutes the appointment as director provisionally made by the board of M. J. Simon; (6) re-elected as auditor for one year, M. E. Papasian; (7) elected auditor for one year, M. H. Boinet, previously chosen as provisional auditor for the year's audit, in accordance with Article 25 of the statutes. These resolutions were carried unanimously.

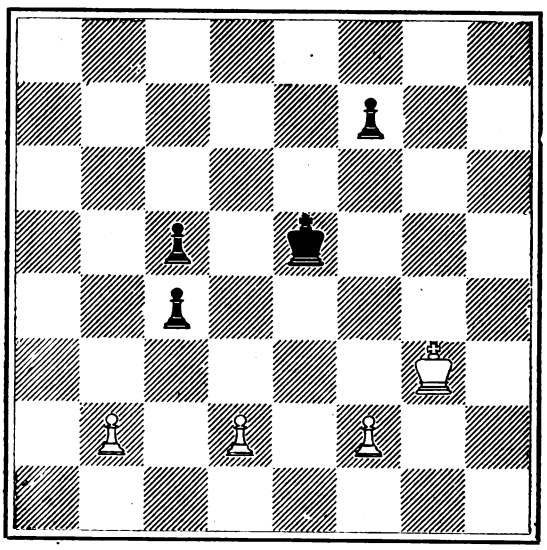
BRITISH INDUSTRIES FAIR BANQUET.

On the occasion of the banquet which the Government is giving at the Mansion House on February 15 to celebrate the opening of this year's British Industries Fair, the speech of the Prince of Wales, the principal guest, will be simultaneously broadcast from the London Station of the British Broadcasting Company at approximately 9.30 p.m. The Prince of Wales will propose the toast of "The British Industries Fair," and is expected to make an important speech. Other speakers will include Sir Philip Cunliffe-Lister, M.P., President of the Board of Trade, who is to preside, and Sir Austen Chamberlain, the Foreign Secretary.

Unusual interest in the forthcoming Fair has been aroused both at home and abroad and an exceptionally large number of inquiries regarding the Fair have been received by the Department of Overseas Trade. Buyers from no fewer than 30 different countries have intimated their intention of visiting the Fair.

TURKISH METRIC SYSTEM.

The Commercial Secretary at Constantinople (Colonel H. Woods, O.B.E.) has forwarded to the Department of Overseas Trade a copy of a draft law, recently submitted to the National Assembly, governing the adoption of the metric system in Turkey.



This draft law provides for the monopoly, if found to be necessary, of the manufacture of weights and weighing machines, and the prohibition of the use of all weights and measures other than those to be adopted. There is also a clause prohibiting the Courts and official departments from recognising any documents in which reference is made to weights and measures other than those officially approved.

The draft law, if sanctioned, will come into effect two years from the date of its publication.

The Southern Punjab Railway Company recommends a final dividend on the ordinary stock of £7 per cent., together with a bonus of £2 per cent. (less English tax at 2s. 2d. in the £), making £14 per cent. for the year ended September 30, 1925.

NEWS IN BRIEF.

Ratifications of the Yugoslav-Turkish Treaty of peace and amity were exchanged in Belgrade on February 1.

M. de Jouvenel, the French High Commissioner in Syria, has informed the Turkish Government at Angora of his intended visit to settle with the Turkish Government differences concerning Syria.

It is stated that Dr. Tajer, Chief Rabbi of Syria, has been appointed Political Adviser to M. Pierre Alibes, representative of the French High Commissioner, M. de Jouvenel, for the State of Syria.

Khan Bahadur Sir Mian Fazl-i-Hussain has been appointed a Member of the Executive Council of the Governor of the Punjab, in succession to Sardar Bahadur Sardar Sir Surdar Singh, Majithia, C.I.E.

By a decree issued in Athens on January 31, the metre is to take the place of the Turkish pik of 27 in. and the kilo and litre are to supersede the Turkish oke of 2.8 lb. throughout Greece. These measures had lingered in popular use in spite of the compulsory introduction of the metric system in 1922.

The Soviet Government has decided to erect a 26 ft. statue of Lenin in the Dariel gorge, in the Caucasian Mountains. A Leningrad foundry has already been instructed to do the work of casting. The statue, it is officially stated, is intended to impress caravans coming from the East.

The Vice-Chancellor of Cambridge University announces that the election of a Sir Thomas Adams's Professor of Arabic will take place early in March. The present stipend of the professor is £1,200. Candidates are requested to communicate with the Vice-Chancellor on or before Saturday, February 27. No testimonials or references need be sent. If a candidate desires to submit any, they should not exceed four in all, and in the case of testimonials ten copies of each should be sent to the Vice-Chancellor.

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended February 6, states:—

The better tone of markets continues, but there are still many individual firms who claim to have had no share in the improvement up to the present.

The event of the week has been the invitation to Lord Emmott by the Short Time Organisation of the Federation of Master Cotton Spinners to join in a discussion regarding suggestions for effecting permanent improvements in the cotton industry.

Quotations have not been quite so well maintained as recently, owing to weak sellers here and there having been forced to make price concessions in order to reduce stocks Spinners in the American section have been in a more favourable position in this respect than those handling Egyptian Cotton; the latter report rather less business than recently. The demand for yarns for India keeps fairly active, but other export varieties are rather dull.

Cloth.—Buying for India reported last week remains fairly active, and, although individual orders are rather smaller, the aggregate is by no means unsatisfactory. China has placed some very acceptable orders in certain lines of cloth and continues to be the quarter from which most improvement is expected. Orders for South America have been few and far between, and the demand from Egypt is practically nil owing to the large stocks now held in Alexandria as compared with this time last year. Colonial orders are coming to hand fairly regularly, and the Home Trade remains in a healthy state.

Raw cotton.—Rates are slightly up on the week, probably owing to the increase in Continental demand. Arrivals in Liverpool and Manchester have been small and stocks show moderate reduction. Generally speaking, the market has been dull and uninteresting. Closing quotations yesterday were as follows:—American Middling 10.80; Egyptian Fully Good Fair 18.50.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended January 28, state:—

Since our last report the futures market has been rather quiet, the tendency of prices being somewhat weak; the week's summary of price movements is as follows:—Sakellaridis: March, 1.38 dollars down; May, 1.35 dollars down; July, 1.32 dollars down; November, 1.37 dollars down. Ashmouni: February, 1.16 dollars down; April, 1.02 dollars down; June, 1.03 dollars down; August, 1.10 dollars down; October, 0.88 dollars down.

The drop is due to the poorness of the demand from abroad which has induced some speculative selling and has brought about some hedging by the banks against cotton financed by them for which no market could be found. The Government so far has concentrated its purchases on Sakel qualities from Fully Good Fair to Good, for which they have paid very full prices; the object of this policy is to strengthen the Sakel futures market by causing a scarcity of the tenderable qualities. On the 25th instant, an American Ginners' report was published, the figure given being 15,488,000 bales; this figure was within the expectations of the market and it did not have much effect on prices.

Transactions in new crop have been more numerous as a result of straddling, operators selling October and November Alexandria and buying October New York. Sakels in Liverpool have shown a rather poor tone and the premium of March Liverpool over March Alexandria has further narrowed; this weakness may be due, to a certain extent, to the fact that the marketing of the Sudan crops has just commenced and, as is well known, the bulk of the Sudan crop is destined for the Liverpool market.

On the third tender day of January, 6,000 kantar dockets were issued, making a total of 9,000 kantars for the month. The position looks to be somewhat heavy just at present, but we do not think that a drop in prices is very likely, seeing that the bulk of the stock, both in Alexandria and up-country, is in strong hands, whilst also the daily purchases by the Government are a factor which cannot be ignored.

The week's receipts amount to 184,100 krs. against exports 181,360 krs.; the stock stands at 2,267,371 krs.

Spot: Minet el Bassal has been fairly active this week and sales amount to about 20,100 bales, of which we estimate 10,350 bales Sakellaridis, 8,700 bales Uppers, 400 bales Zagora, 500 bales Brown and Pilion and 150 bales White. The Government have also bought about 5,900 bales from Fully Good Fair up to Good Sakel.

Sakellaridis: have been in fair demand for all grades, and rather more interest has been shown in very low cotton than for some time past. With the exception of Fully Good Fair, which is rather dearer, spot differences are without much change.

Ashmouni and Zagora: have met with rather more demand and all styles have been dealt in. Spot differences are without much change excepting Fully Fair and below which have hardened somewhat.

Brown and Pilion: Brown has met with only a small demand but Pilion has been in fairly good request. Spot differences for both varieties are unchanged.

White: has met with a moderate inquiry at about last week's differences.

THE CENTRAL ASIAN SOCIETY.

To-day, February 11, at 5 p.m., Squadron-Leader A. R. C. Cooper will lecture to the Central Asian Society upon "A Visit to the Anglo-Persian Oil Fields." The meeting will take place at the Royal United Services Institution, Whitehall.

It has been announced at a meeting of the Egyptian Liberal Party that a National Congress is to be held on February 19 to consider the political situation.

Roumania and Switzerland have signed in Berne a treaty of conciliation and compulsory arbitration referring all disputes except territorial disputes to a mixed commission of five members. If the commission should not settle the dispute it will be referred either to the Permanent Court of International Justice or to a mixed arbitration court.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Little Entente.

The tendency that won for William II. of Germany the nickname of the Travel Emperor, in rhyming contrast with his predecessors, the Old and Wise Emperors (*Reise, Greise, Weise*), may yet earn for the agreement between Czecho-Slovakia, Yugoslavia and Roumania the title of the Peripatetic Entente if the members ring the changes on their national health resorts for meeting places. As was to be expected from the hurried circumstances of the latest session, the day's proceedings at Temesvar on February 10 did not allow for more than a cursory examination of two or three matters of common interest. On the subject of the Hungarian forgeries it was decided to await events, probably with the idea of associating the Little Entente with any action taken by France. In regard to a Balkan Pact, the standpoint of Yugoslavia, that her differences with Greece must be settled before any definite steps in this direction can be taken, was naturally endorsed. It seems probable that Dr. Benesh was able to reassure his colleagues on the subject of the negotiations between his Government and Soviet Russia, by undertaking that Czecho-Slovakia would not lightly commit herself to an agreement that would in any way compromise her partners in the Entente. If, as is stated, the question of Germany's admission to a seat on the Council of the League of Nations was raised by Dr. Benesh, it would be natural that he should be able to bespeak without much difficulty the support of the two States in a matter which is much closer to Czecho-Slovakia than to either Yugoslavia or Roumania.

M. Raditch and his Critics.

M. Raditch, Minister for Education in the Yugoslav Government and leader of the Croat Peasant Party, has returned to Belgrade from a tour through Bosnia, Herzegovina and Dalmatia, in the course of which he was reported to have delivered himself of many heterodox doctrines. Considerable excitement has prevailed in Belgrade as a result of the reports of his speeches that reached the capital; there have been talks of a Ministerial crisis, one Minister's resignation was to be a matter of hours only, and M. Pashitch was being advised in many quarters to dismiss without more ado his Minister for Education. M. Raditch has met the storm by a denial of the statements attributed to him, and his critics appear to be for the moment rather non-plussed. Few people who have listened to M. Raditch's torrents of ill-assorted eloquence will be inclined to be severe on the reporters who misreport him, or on M. Raditch himself or anyone who heard him for a hazy recollection of what he actually did say. In the present instance readiness to believe the worst of the Croat leader has possibly tinged some of the reports. M. Pashitch appears to have been satisfied with his lieutenant's explanations, and the threatened Cabinet crisis, it is to be hoped in Yugoslavia's interests, will be avoided. M. Raditch takes up the position that those who wish him out of the Government are merely those who wish to be rid of the Croats. With a charming ingenuousness he adds that, even if the rumours of a crisis were true, the Government would simply come to an agreement among themselves, and there would be no question of a crisis. If he had confined himself to words, the trouble arising from M. Raditch's indiscretions might blow over once more, but his recent tour is said to have left a string of dismissals

Digitized by Google

of education officials behind it, which must sooner or later react on the Government's political following.

Politics in Bulgaria.

When M. Liaptcheff formed his Cabinet the hope was expressed in many quarters friendly disposed towards Bulgaria that the new Prime Minister would be able to include in his Government representatives of the Agrarian Party. The reason given for the non-inclusion of Agrarians in the Cabinet was that the Stambolisky party was still in a state of confusion, which rendered it impossible to distinguish "between the really moderate and sincere elements and the corrupt and violent ones." The relations with the political exiles Oboff and Kosta Todoroff, it was pointed out, were not clear. As if in reply to these charges, the Central Committee of the Agrarian Party has issued a manifesto which promises to carry the work of political reconciliation inaugurated by M. Liaptcheff still further. This manifesto records the Party's opinion that the political situation of the country is chaotic and its financial and economic situation critical; and that a Coalition based on free elections is essential to a return to normal conditions. It takes note of the amnesty and appeals to all those who benefit by its provisions to suppress their feelings, to return home to peaceful work and thus to set an example of pacification in the country. Convinced that the complete success of the work of reconciliation depends on the attitude of the Government and its Press organs, the Manifesto appeals to these organs to work sincerely and loyally to this end. In regard to the pitiable condition of the refugees, it urges an understanding with Bulgaria's neighbours with a view to the refugees being allowed to return under guarantees of freedom in respect of education and religious belief. The Committee of the Agrarian Party repudiates the insinuations spread abroad that the Party stands outside the laws and has abandoned its political traditions; and it urges that no credence should be given to the fantastic reports that the Agrarian Party has made common cause with the Communists. The opponents of the Agrarians can hardly look for a more correct attitude than is reflected in this Manifesto, and it will be of interest to note whether M. Liaptcheff is able to win his followers over to the idea of a complete burying of the hatchet in the interests of the country as a whole.

Albania and Italy.

Although Albania does not attract much attention in Great Britain, it would be a mistake to suppose that the country plays no part in European politics. Left to themselves, the Albanians could find much to keep their attention occupied during the arduous period of development; but unfortunately their country is in danger of playing on a small scale in the Balkans the rôle that the Balkans formerly played in Europe. In other words, the activities of other States may cause Albania to play a part which is neither in her own interests nor conducive to the maintenance of peace in Europe. It is most unfortunate that Italy should regard it as her mission to participate in the development of Albania; her motives may be entirely altruistic, but there is little chance of their being so considered in the Balkans. Consequently there is the risk that the point may one day be reached when the Balkan States will decide that Italian penetration has been carried far enough, and will call upon Italy to withdraw. The result will be either war or humiliation for Italy. In these circumstances it would be much better for the peace of Europe, if both Albania and Italy stipulated for British co-operation in any enterprises that the Italians may undertake in the country. Great Britain is above suspicion in the matter of territorial ambitions in the Balkan Peninsula, and her co-operation in Albania would probably suffice to remove the sting from the part played by Italy. If the Albanians are beginning to feel that they are slipping into the economic and financial stranglehold of Italy, it is certain that this aspect of the situation will not be lost sight of in the Balkan capitals. The fact that there is no immediate risk of Italy's action being challenged does not make it the less dangerous; it may possibly hasten the day when the Peninsula can speak as a united whole and feel itself strong enough to fling a peremptory "Hands off!" across the Adriatic.

Egypt's Good Fortune.

The gift of two million pounds by Mr. John D. Rockefeller, Junior, for the purpose of founding an institute for archæological research in connexion with the new Cairo Museum will, it is to be hoped, prove a very beneficial windfall to Egypt. No development in the country is likely to become more reproductive in the long run than the impetus thus given to archæological study and excavation. The Museum itself promises to be a focus of interest that the present building could never have aspired to become, and at the same time the gift opens out prospects for intellectual Egypt that it has not had in the past. The source of the gift should also open Egyptian eyes to the fact that there are still sentiments prevailing in the world which rise superior to the selfishness of a narrow nationalism. There has been a tendency among the Egyptians since the acquisition of independence to resent the concentration in foreign hands of archæological interest in Egypt, as though the phase were on a level with the worst form of commercial exploitation. Mr. Rockefeller's gift, if properly appreciated, should remind the people of Egypt that knowledge is still cultivated and pursued for its own sake and refuses to be circumscribed within petty national limits. Later reports speak of a hitch in the negotiations regarding the gift, but it is hardly likely that the Egyptian Government will throw away such a windfall by insisting upon conditions that the donor cannot accept.

M. de Jouvenel in Angora.

M. de Jouvenel is not going to content himself with restoring French prestige in Syria; he is bent on re-establishing France's name in a wider sphere. "Toujours la politesse" is a motto that has been in danger of dropping out of the French vocabulary in the Near and Middle East. M. de Jouvenel is determined to see that it is firmly reinstated. On his way to Angora he informed the representative of an Adana newspaper that Ghazi Mustapha Kemal Pasha is the outstanding genius of the present day. Little wonder that, armed with such a visiting card, which he must be careful not to present in Rome, the French High Commissioner in Syria has created an optimistic atmosphere in Turkey. His visit is to be welcomed, if only because the closer the touch that Angora obtains with the outside world, the sooner will the Turkish Republic find itself. At present the Government is more concerned with the quantity of legislation that it turns out than with its quality. Laws and enactments are multiplied week by week, but there appears to be no one in the capital who is able to convey to the Turkish authorities the impression that these ill-digested measures convey to the intelligent world outside Turkey. No one grudges the Turks the right to recover hold of their own country; but they are in danger of waking up one day to find that what they have secured hold of its not a living organism, but a carcase.

ECHOES OF TURKEY.

(Concluded from the opposite page.)

ing factor; the process will become intensified as the economic distress increases. Yet in the face of this life and death problem, the Angora Government is so wholly obsessed with its own interpretation of what has been Great Britain's attitude to Turkey in recent years, that it is unable to realise that the Republic's interests call for oblivion for the past, and concentration on the urgent needs of the present. It is more concerned to penalise the foreigners who still remain in Turkey than to move a finger to help its own Turkish subjects.

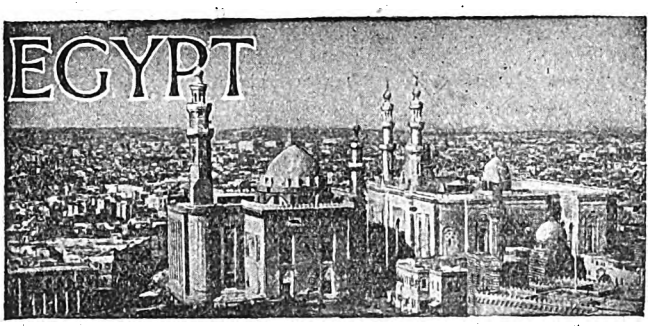
Telephone : CENTRAL 4108.
Telegrams : "EASTAPROX, ESTRAND, LONDON."

THURSDAY, FEBRUARY 18, 1926.

ECHOES OF TURKEY.

A number of Turkish echoes are reaching Great Britain these days; their variety affords many striking contrasts. On the one hand an English newspaper has published with a wealth of horror and nauseating detail a "close-up" picture of what happens in the East when national passions are given full rein for vengeance on hapless victims in their power, as on a recent occasion when Turkish soldiers were ordered to clear the Christian population from the Mosul frontier. On the other hand a second newspaper makes itself responsible for the announcement that Mustapha Kemal Pasha is shortly to pay an unofficial visit to London. As to the latter report, in the interest of friendly relations with Turkey and the peaceful development of the Middle East, we can only wish that it may prove true. So long as official Turkey considers that she has her back against a wall and is confronted with a hostile world, opportunities will be found for those senseless barbarities which are prompted by a sense of fear and blind impotence. In the course of a tour, whether official or unofficial, in Western Europe the President of the Turkish Republic will be able to satisfy himself that the Great Powers have other things to occupy their attention than their relations with Turkey, and that they do not invest these relations with the importance that they assume in Angora. This, not from any lack of good will for Turkey, but merely as a result of the cultivation of a sense of proportion. Mustapha Kemal Pasha will also be able to learn that the standard of civilisation reached in the West, which he is rightly anxious to introduce into Turkey, has been reached only by means of hard work, considerable expenditure and skilled organisation. It has never been conjured into existence by pious wishes or dictatorial decrees. It is a plant of slow growth, entailing painstaking preparation of the ground, the careful sowing of selected seed and expert attention before the harvest can be gathered. Turkey to-day is trying to persuade herself that the ground requires no tilling, that the nature of the seed is immaterial and that the plant will have reached maturity as soon as it shows its head above the ground. Shut off from all avenues of knowledge and wholly lacking practical experience, a handful of men in Angora may tell one another that this is so, but their confidence does not make it a fact.

Possibly a more useful "echo of Turkey" is contained in a newspaper published in Angora that bears that name, of which a recent copy has reached us. An article entitled "Notes on the Economic Situation of the Anatolian Littoral" describes the country on the southern coast of Asia Minor. The name of the author is not given, but from internal evidence it is an official document and, from references to "my department," would appear to have been written by the Minister either of Commerce or of Agriculture. In these circumstances the candid admissions acquire added interest, and the foreign reader is left wondering whether the Turkish Government has appreciated their full significance. The ports of Kulluk, Boudroum, Fenike, Fethie, Adalia and Selefke are described in turn. This coast as a whole, we learn, is well endowed by nature, but present conditions leave much to be desired. The port of Kulluk "has a great future." Its installations, however, are rudimentary, the wharf is in ruins and it has no lighthouse. A mile and a half away from the port is a famous fishing ground, but in a state of rapid decline as a result of the system of leasing it and of years of official neglect. Among the many products of the neighbourhood is olive oil, but the local presses are antiquated and the oil has to be clarified in Italy. Milass, the chief town of the immediate interior, has as its only bank a branch of the Agricultural Bank, which will make no advances on commercial goods, and merchants have, therefore, to pay fifty or sixty per cent. to Jewish middlemen who obtain their capital from Italian banks in Rhodes. There is only one mill in Milass, but it works no longer. Boudroum, the next port, has suffered badly from phylloxera, and has lost many lemon and orange trees; the vallonea crop has dropped in one year from six million to two million kantars; its fisheries are entirely idle and its sponge industry neglected, because these were in the hands of Greeks, who have had to leave the country; it has fifteen oil presses, but as these do not filter the oil, the process has to be done in Italy and the oil sells as Italian. At Fenike, which is mentioned as a potential centre for the best Sakellarides cotton, the population is fever-ridden as a result of undrained marshes, and we are left to infer that the place is moribund. There is not even a road leading to the interior; the port has no landing stage; nearly all the houses belong to the category of "abandoned properties," and the report adds: "Immigrants must be brought and forced to settle here." As no Customs office has been established, "importation by sea is prohibited; goods arrive via Andikli, and smuggling is particularly rife." Corn has to be sent to Andikli to be ground in order that Fenike may obtain flour, on which it has to pay double duty. The population of Fethie, "a second Smyrna," is 31,174; in ancient times it is credited with having supported two hundred thousand inhabitants. There are six islands in the Gulf, one of which, seven or eight years ago, had a Greek village of a hundred families. To-day "there is no sign of modern activity; the situation is primitive and everything has a desolate appearance." The silt of the river has partly filled the east and north-east of the port. The town is "entirely dead"; winter torrents have destroyed the bridges and even cut off communication with the outlying parts of the town. Adalia is particularly favoured by nature; its actual condition "causes real sorrow"; its population for lack of communications exists "in great misery"; without a breakwater it is impossible that ships should load or unload in the harbour. Selefke, the ancient Seleucia, is a centre for vallonea, of which Turkey used to supply seventy per cent. of the world's production. The country has only just been able to dispose of the stocks accumulated during the War, but the quantity now harvested is inconsiderable on account of vexatious conditions imposed on the peasants. The neighbourhood is a granary, but the one mill is shut for want of capital. Here too the fisheries are abandoned, in spite of the "whole banks of fish."



It is certainly to the credit of the Turkish Government that publicity should be given in this way to the actual state of things in the country; but it is not to its credit that, with such a problem before it, it should be squandering its opportunity in senseless antagonism with the one country in a position to help Turkey. For what is the full significance of the report? It implies in the first place that the expulsion of the Greeks from Asia Minor is not having the anticipated result. The Turks, in the view of the Angora Government, would at once rise to the occasion, step into the shoes of the departing Greeks and begin to build up the prosperity of Turkey for the benefit of Turks. The report shows a very different picture. Abandoned fisheries, empty houses, moribund towns: a Government that impedes what trade there might be, that remains indifferent to the health of its people and their economic needs. The stagnation and misery that the report reveals spell ultimately depopulation. The purely Turkish population of Turkey has long been a diminish-

(Concluded on the previous page.)

The Near and Middle East*

From Our Own Correspondents.

Cairo, February 7.

Political Activity.

It is to be hoped that by the time Lord Lloyd reaches Cairo on Tuesday morning, returning from the Sudan, he will have recovered completely from his illness at Khartoum, for an exceedingly busy and difficult time lies ahead of him, to cope with which he will need to be feeling his best. During the High Commissioner's absence in the Sudan, Egyptian politics and politicians have been remarkably quiet, but a long continuance of this tranquil state cannot be looked for. The "National Congress" being promoted by the Tripartite Opposition is to begin its sessions on February 19, and in readiness for its gathering there is already very much coming and going in the Opposition camps, leaders of one party being invited to attend and speak at meetings of one of the other parties, and so on.

The Opposition's "Solidarity."

Since it is impossible to believe in the sincerity of this sudden apparent friendship between Liberal Constitutionals, Zaghloulists and Nationalists, there is something at the same time comic and rather saddening in the spectacle of men who have for years abused each other in terms unheard of in the public life of most countries, and who will almost certainly, within the course of a few months, again be engaged in mutual revilement, now, in order to impress the inarticulate ninety-eight per cent., going through carefully arranged but rather unconvincing demonstrations of solidarity. Thus Fathallah Pasha Barakat has addressed a meeting of Liberal Constitutionals at the Party's headquarters, the offices of *Al Siyassa*, which newspaper has ever since its foundation until a month or two back printed the most grossly abusive statements regarding Barakat Pasha and his associates. Zaghloul Pasha has during the last few days exchanged visits with Sarwat Pasha, whom the Wafd leader has repeatedly held up to public execration. Less than two years ago Zaghloul Pasha expressed his conviction that Sarwat Pasha should be made to stand his trial for treason to his country.

If it were possible to believe that this sudden frenzied burying of hatchets could be inspired by a genuine zeal for the country's welfare and a realisation that the old abusive methods of carying on party rivalry have disserved Egypt's interests, it might be welcomed, notwithstanding the fact that the present unity is being promoted with the purpose of embarrassing what the Opposition conceives to be present British policy in this country. But so certain is it that all the hand-shaking and forgetting of old scores is quite insincere and will at no distant date give place to a renewal of the old feuds and hates, that the whole business is simply rather nauseating. It makes one more proof of the truth of the allegation constantly brought against Egyptian politicians—that they gladly subordinate principles, past professions and everything else to the desire for office at any cost.

Conference on the Caliphate.

Another congress date has just been announced, the meeting of the representatives of Moslem nations in Cairo to discuss the future of the Caliphate having been fixed for May 14 next. This gathering was proposed immediately after the deposition of the last Turkish Caliph, and plans were made for the assembly to be held twelve months ago. But partly owing to the then unsettled state of Arabia and to the impossibility of foreseeing into whose hand the custodianship of the Holy Cities would eventually fall, and partly on account of the rather lukewarm response received from other Moslem countries to which invitations to attend the congress were sent, the organising committee, of which the Rector of Al Azhar is President, postponed the gathering for a year. Since that time, little has been heard of the matter, and most people had supposed that the proposal to hold a congress at all had been allowed to die a quiet and natural death. That this was not the case is now proved by the organising committee's announcement, though nothing has yet been made public regarding the number of countries which will be represented, nor whether—and this is of cardinal importance—King Ibn Saoud has agreed to send a delegate.

The Trooping Season.

The trooping season is now here and Egypt this week is bidding good-bye to two regiments which during the past four years have been very prominent in the social and sporting life of the Capital. The 16/5th Lancers entrain to-day for embarkation, with Tidworth as their eventual destination, being replaced in Cairo by the 9th Lancers, who come back to us from Palestine as a result of the reduction of the number of British troops in that country. On Thursday the 2nd Bn. Duke of Wellington's Regiment march out of Kasr el Nil Barracks, en route for Singapore, taking with them a very fine record of achievement in local sport. At Rugby football, Soccer, Boxing, Athletics, Hockey, Cross-country running and in almost every other sporting direction the Duke of Wellington's have distinguished themselves, while as a battalion they are one of the smartest and best-turned-out bodies of men that Cairo has seen since the War. At their farewell inspection last week General Haking told them that he had never seen a better parade since he came to Egypt.

Pleasant Weather.

The weather does not often form the subject of discussion in Egypt, but it is impossible to let the present winter

completely pass out without remarking on what an extraordinarily pleasant time it has been. Egypt's winters can provide us with biting winds and raw, "rafty" days, but the present winter has ben uniformly pleasant, with scarcely a single cold day, and although most of us carry overcoats after sundown at this time of year, as a matter of precaution, there has practically never been a time when it has been necessary to wear them, even over thin evening clothes. And during the whole winter we have not had enough rain to wash the dust off the leaves of the trees. The pessimists say that we shall suffer later on for present blessings, because our blood, lacking the thickening effect of cold weather, will by the end of the summer be thinner and more anæmic than ever. But for the present we are content to enjoy this wonderful winter and leave the summer's cares till summer comes.

Khartoum, January 25.

Arrival of the High Commissioner.

The High Commissioner and Lady Lloyd arrived in Khartoum a week ago, on the day succeeding the anniversary of the visit of their Majesties the King and Queen in 1911, and a Reception and a Garden Party were held at the Palace in the afternoon, at which honours conferred by His Majesty were presented, the Robes of Honour confered by H.E. the Governor-General having been presented by him to the recipients on January 17. Noteworthy amongst the former of these were the Knighthoods of the Civil Division of the Most Excellent Order of the British Empire conferred upon Sayed Abd el Rahman el Mahdi, C.V.O., and Sheikh Ali Tom, M.V.O., O.B.E.

On the next day an official visit to the Gordon College in the morning was followed by an Official Dinner and Reception at the Palace.

The Opening of the Sennar Dam.

There are a few spectacles in this world that remain in the mind without diminution of brightness or detail during a whole lifetime.

Your correspondent was privileged to see the Grand Fleet and the Battle Cruiser Force leave Scapa Flow on a spring afternoon—six battle squadrons, two battle cruiser squadrons, and destroyers and light cruisers innumerable, passing one after another, so close that one was able to recognise friends on the bridges of the passing ships. It was an unforgettable sight.

As unforgettable were the events of January 21, with one immense difference. The Sennar Dam is to bring prosperity and cultivation to an area of 1,000,000 feddans. The Grand Fleet was seeking prosperity in the most oblique manner that man has yet invented.

The High Commissioner and the Governor-General arrived at 9 a.m. and, after the unveiling of two commemorative tablets and a brief exposition of the history of the Dam from Mr. O. L. Prowde, the Resident Engineer, proceeded to the stand where the guests of the Government were already assembled. Speeches were made by Sir Geoffrey Archer, Lord Lloyd, and Sir Ismail Sirri Pasha, and the Dam was consecrated by the Right Reverend Bishop Gwynne and the Grand Mufti of the Sudan. The High Commissioner then turned the handle, fashioned after the form of a statuette of Amenemhat III., the traditional founder of Nile irrigation, which opened the sluice gates and released the waters from which so much is anticipated, and the Dam was declared open. There followed a presentation of notables. The whole scene must have been indelibly impressed upon the minds of those who were present, from the aeroplanes circling overhead to the brilliant robes of the notables, from the waters swirling through the sluice gates to the vast gathering of white clad natives on the farther bank. It was something to ponder and to remember, and then to ponder again.

Their Excellencies next proceeded upon a tour of the irrigation area, while the guests of the Government were taken across the Dam, shown the commemorative tablets which had just been unveiled, and given a closer view of the water rushing through the sluice gates. They were then taken on a tour of inspection of the ginning factory of the Sudan Plantations Syndicate at Barrakat—a most enlightening tour.

Another vast concourse was awaiting their arrival at Barrakat, where, after visiting the factory, Lord Lloyd delivered a speech in which he paid a most deserved tribute to Mr. Eckstein of the Sudan Plantations Syndicate. Afterwards, he was entertained to tea by the Syndicate.

It is impossible to conclude without some comment on the excellent organisation of the whole proceedings. It would be invidious to select any individual point for mention, but it was, I imagine, the first occasion on which loud speakers have been used in the Sudan for the broadcasting of speeches.

IRAQ.

Baghdad, January 28.

The New Treaty.

The text of the new Treaty, which was signed on January 13 and later ratified by both Iraqi Houses of Parliament, is as follows: *Article I.* The provisions contained in Art. XVIII. of the Treaty between the High Contracting Parties signed at Baghdad on October 10, 1922, of the Christian Era, corresponding with Safar 19, 1340, Hijrah, and in the Protocol signed on April 30, 1923, of the Christian Era corresponding with Ramazan 14, 1341, Hijrah, in so far as they relate to the duration of the said treaty are hereby abrogated, and the said Treaty shall remain in force for a period of 25 years from December, 1925, unless before the expiration of that period Iraq shall have become a member of the League of Nations.

The various agreements between the High Contracting Parties subsidiary to the said Treaty of October 10, 1922, shall, in so far as their duration is made dependent on

that of the said Treaty, likewise remain in force for the period laid down in the present Treaty, but in other respects their provisions shall not be affected.

Article II. The High Contracting Parties agree, immediately after the ratification of the present Treaty and its approval by the League of Nations, to continue active consideration of the questions which have already been under discussion between them in regard to the revision of the agreements arising out of Articles VII. and XV. of the Treaty of October 10, 1922.

Article III. Without prejudice to the provisions of Article VI. of the Treaty of October 10, 1922, in regard to the admission of Iraq into the League of Nations, or the provisions of Article XVIII. of the said Treaty, which permit the revision at any time, subject to the consent of the Council of the League of Nations, of the provisions of the said Treaty or of certain of the agreements subsidiary thereto, His Britannic Majesty undertakes that, at the time when the Treaty of October 10, 1922, would have expired under the Protocol of April 30, 1923, and at subsequent successive intervals of four years until the expiry of the period of twenty-five years mentioned in the present Treaty or until the admission of Iraq into the League of Nations, he will take into active consideration the following two questions, namely:

(1) the question whether it is possible for him to press for the admission of Iraq into the League of Nations:

(2) If it is not so possible, the question of the amendment, on account of the progress made by the kingdom of Iraq, or for any other reason, of the agreements refered to in Article XVIII. of the Treaty of October 10, 1922.

The members of the Opposition, who walked out of the House without voting when the Treaty was under discussion, are severely censured by the vernacular paper, *Al Iraq*, which says:—"We were surprised by the attitude which the Opposition were pleased to take up. They left the Chamber without making it clear whether they were in favour of the ratification of the Treaty or not. We cannot but regard them as a two-faced party, and their action as a mere pre-arranged political manœuvre. They are like acrobats trying to jump from one wall to another. Knowing as we do that the majority of them are young men who require more exercise to strengthen their muscles, we can appreciate their desire to give acrobatic performances, which we are more likely to get from them than reasonable behaviour." *Al Istaqlal*, on the other hand, the Opposition organ, takes its usual line: "Is it wisdom, is it common-sense, that an important Treaty which binds the future of Iraq for a quarter of a century should be ratified in half-an-hour? How far these deputies have departed from logic and reasonableness! How far they have strayed from regard for the interests of their country! But the People's Party has played so historic a part that its deeds will be recorded in history in letters of fire—deeds which will be recalled with praise by our grandchildren and by their children for centuries to come"!

Financial Position.

The financial outlook for Iraq is much brighter—far brighter than the Financial Commissioners of last year thought it could become for many a long day. Their report anticipated a possible surplus of five lakhs at the end of the financial year—if all their recommendations were put into effect. The complete policy of retrenchment outlined by them has not, in the event, proved practicable, but an energetic policy of collecting in full the country's land revenues has been adopted, and has resulted in the collection, during the first nine months of the year, of more than the total of the whole of last year. By the end of the financial year, a surplus of no less than 26 lakhs of rupees is anticipated. It must be remembered that several unforeseen charges, such as the care of the Christian refugees, and grants to the cultivators left destitute by failure of harvests, have fallen upon the Iraq Government. Nor has it repudiated its share of the Ottoman Public Debt—a debt of honour which falls heavily upon the struggling young State. That twenty-six lakhs can be set aside for this purpose alone, and still leave a surplus of another twenty-six, is surely encouraging.

Sofia, February 9.

The Amnesty.

On February 4 the Sobranye voted an Amnesty for various political and civil crimes which have been committed during the last seven years. Over 6,000 persons, of whom the majority belong to the Agrarian and Communist parties, benefit by this measure. Approximately 1,000 persons charged under the Defence of the Realm Act are not included in the Amnesty; 500 because they have already been condemned, and 500 because their cases are at present under examination. It is, however, probable that the King will exercise his prerogative and pardon many of the latter class.

The general opinion is that this Amnesty is very wide-sweeping. Previously it had not been supposed that more than three or four thousand persons would be pardoned, but it is said that M. Liaptcheff, the Prime Minister, wished to show the country at large that he wants to make a fresh start and to forget all previous disputes. Only time can show whether the Government's action is right or not. Still, from the point of view of a foreign observer, it would appear that it was high time for such a measure to be passed. Bulgaria has been the scene of many fierce political feuds since the War, and it is necessary that the country should be allowed to pursue a peaceful path. This Amnesty should enable internal tranquillity to be achieved unless the Agrarian and Communist *émigrés* wilfully provoke fresh disorders. It may be added that the chief of these *émigrés*, notably the ex-

Ministers Kosta Todoroff, Nedelko Atanassoff, Stayanoff, and Oboff, are not included in the terms of this Amnesty. Nor are the well-known Bulgarian Guorguy Dimitroff and Stephan Kolaroff, who live in Moscow, and who are prominent in all matters pertaining to the Balkan activities of the Third (Red) International.

The Municipal Elections.

During February Municipal Elections will be held throughout Bulgaria, and the various political parties are manifesting great activity. These elections will be especially interesting owing to the fact that the Agrarian Party will be taking part in them. For some time previously the Agrarians had been outlawed—if not in theory, at least in actual practice. Now the Party will have its lists, and the extent of its success will be closely watched by all politicians. It is said that the Agrarians expect to poll about 20 per cent. of the total votes cast. The Governing Party, the Democratic Entente, have been making a great effort, but it is notable that M. Liaptcheff has declared that he considers it is more important for the elections to be "free" than it is for his Party to secure a majority. This point of view is a notable departure in current Bulgarian politics, but none the less a welcome one for all that.

The Petritch Incident.

In the course of the next few days Greece is due to pay Bulgaria the sum of 30 million levas (£48,000) which the League of Nations fixed as an indemnity for the moral and material damage wrought by Greek troops during the invasion of South-Western Bulgaria last October. There has been some talk of Greece's wishing to set off the above-mentioned sum against certain payments due by Bulgaria to Greece under the Peace Treaty. But the League of Nations vetoed this suggestion, and within two months from the date of the League's Council Meeting, that is to say by February 14, Greece should pay. A certain amount of interest is felt here as to whether the Greeks will be punctual in meeting their obligation. In general, it is thought that they will, as they cannot very well justify any other attitude.

It has just been announced that the Swedish Government have consented to allow two of their Regular Army Officers to be attached to the Bulgarian and Greek respective frontier guards. The task of these two officers will be to settle any disputes that occur in conjunction with another neutral Officer who has still to be appointed.

Loan Negotiations.

In a recent speech M. Liaptcheff, the Prime Minister, mentioned that he had received information regarding the possibility of the grant of a foreign loan to Bulgaria. It is, however, not yet clear whether the Government envisages a purely refugee loan or a bigger loan which will be used for reconstruction purposes. It is felt that the refugee situation is bad and requires instant attention. On the other hand, it is believed that financial circles in London are rather shy of supporting another refugee loan under the auspices of the League of Nations. In any case the present Government is anxious to secure a loan, and it is in London, and possibly in New York, that negotiations will be begun.

News in Brief.

After voting the Amnesty Bill, the Bulgarian Sobranye adjourned till February 25.

Notes have been exchanged between Bulgaria and Belgium concluding a provisional Commercial Agreement on the base of the most favoured Nations clause.

PERSIA.

Teheran, January 18.

The New Regime.

The excitement over the election of the new Shah and his accession to the Throne has subsided, and things have been very quiet throughout the country the last week or two. The Cabinet having automatically resigned, Zoka ul Mulk (Mohamed Ali Khan Foroughi) who had been acting as Prime Minister during the time the late Premier (now Reza Shah) was entrusted with the provisional government of the country, was summoned by the latter and formed the following Ministry:—Mirza Hassan Khan Moshar (Moshar ul Mulk), Minister for Foreign Affairs; Mirza Morteza Khan Bayat (Saham us Sultan), Minister of Finance, Mirza Hussein Khan Dadgar (Adl ul Mulk), Minister of the Interior; General Abdollah Khan Tahmasp, Minister of War; Davar, Minister of Public Works; Fatemi, Minister of Justice; Sardar Assad, Minister of Posts and Telegraphs; Mirza Yusef Khan (Moshar Azam), Acting Minister of Public Instruction. The Foreign Minister, Moshar ul Mulk, has since resigned, and Mizra Davoud Khan (Meftah es Saltaneh) late Persian Minister in London is acting Minister for the present.

The recent abolition of titles makes Persian names at present rather confusing, many of the new ones adopted in place of the much more familiar titles being at first sight almost unrecognisable. Taymoor Tash (who will be more readily recognised under his former title of Sardar Moazzam Khorassani, Minister of Public Instruction in the last Cabinet) has been appointed Minster of the new Court, and it is reported that he intends to revive the former splendours and ceremonials of the Persian Court. He was attached to the Imperial Russian Court before the War, so this should stand him in good stead.

The new Shah has signed the decree nominating his eldest son, a boy of 7 or years old, Valiahd (Crown Prince) with the title of Shahpoor Mohamed Rezai Pehlevi, the prefix, meaning "Son of the Shah," taking the place of "Shahzadeh" (born of the Shah) which has hitherto been used to denote Princes of the Royal blood, and the suffix "Mirza," also denoting a Prince, is now omitted in the Valiahd's title.

The Weather and the Food Question.

The winter has this year been exceptionally mild and dry, and considerable anxiety was beginning to be felt a short time ago with regard to the crops. A plentiful and welcome fall of snow and rain during the past week, however, has done much to dispel this anxiety, and it is now hoped that this year's supply of wheat is assured, as bread is the staple food of the majority of the population, and it can therefore easily be imagined how disastrous is a shortage of rain and snow in the winter months, on which the failure or success of the crops is entirely dependent. The famine in the winter of 1917 and spring of 1918, due to this cause will long be remembered, and it is believed (statistics are never very trustworthy in Persia!) that some 40,000 people died of starvation in Teheran alone, out of a population of a quarter of a million. Last winter was comparatively dry, as the riots during the summer,

owing to the dearness of bread, testified, but thanks to the energetic measures taken by the American Advisers who have been placed in charge of the Alimentation Service, the food supply of the Capital this winter seems to have been assured, and by purchasing wheat in India and Russia and rushing it up in motor-lorries, of which the Persian Government have bought a great number, the grim spectre of famine, which at one time seemed to hang over Teheran, has apparently now vanished.

Professor Browne.

All the local papers eulogise the late Professor Browne in obituary notices, and the Acting Minister of Public Instruction has sent a telegram of condolence to the Vice-Chancellor of Cambridge University, adding that the death of this illustrious professor, who had rendered incalculable services to Persian literature, was an irreparable loss.

General News.

The present term of the Mejliss expires next month, and the decree for the election for the sixth Mejliss has been signed by the Shah.

The Russian Legation here has been raised to the rank and dignity of an Embassy, and the Minister, "Comrade" Yureneff (as the Persian papers delight in calling him) now becomes an Ambassador, and incidentally the doyen of the diplomatic corps, having been in his present post longer than the only other Ambassador, the Turkish, who arrived only a short time ago.

The new American Minister, Mr. Hoffmann Philip, arrived here recently and presented his credentials to the Shah last week.

The German Minister had an audience of His Majesty a short time ago and presented him with the portrait which President Marshal Hindenburg specially sent out to him on the occasion of the Shah's accession to the Throne.

THE DRUSE AT HOME.

BY A. SEFI.

In Mount Lebanon, that part of the ancient East where liberty of religion permits every religious community to rule itself, except in what relates to public order, lives that peculiar sect of Druses. They take their name from Sheikh Mohammed Durz, first exponent of their faith in the divinity of the Fatimite Caliph of Egypt Al Hakem who succeeded his father towards the end of the tenth century.

This Hakem was first styled *Al-Hakem bi-amri-Llah*, i.e., ruler by God's command, who soon after, took to himself the title of *Al-Hakem bi-amrihi*, i.e., ruler by his own command in whose power were life and death.

At his death he was secretly murdered and hidden by the Moslems his followers, claiming that he had ascended into heaven, were persecuted by the Cairo Moslems, and emigrated to Syria, where two parties, Caisites and Yemenites, were fighting each other for supremacy. The Druses joined the Caisites, who ended by being the victors, annihilating the other party, and in time, through marriage alliances with the Druses left them masters in their turn of the Lebanon.

Their most noble chiefs were the Shehab Emirs, who about 120 years ago became Christians, and their descendants are still living privately in that Mountain. There were other minor Emirs under the Shehabs, these also became Christians, with the exception of the Arslans, who remain Druses.

Since those early days the Druses took to farming, but they retained their love of weapons and fighting, especially of looting, when they saw a chance. They do not engage in any craft whatsoever, and since they have no public worship, very little is known of their religious belief except that they do not believe in anything that Christians and Mohammedans value. For all that the ethics of their Elders *Occal*, wisemen, are of very high order notably in sobriety, clean living and probity. Especially the ethics of their "*Monazzahin*" who fast a great deal, do not marry, and never accept money from any ruler, nor eat at his table, nor his servants' table, nor even eat flour ground in his mills, considering his wealth ill-acquired. Nor would they eat at a Christian priest's table, but would eat at a monk's because he derives his income from his hand labour. But no Druse has ever been known to show any talent whatever for art, literature, poetry or music. Those who are not in the category of *Occal* are called *Johhal:* ignorant, and they know nothing of their religion, except to obey. The women are also divided in similar order, in *Jwedat* and *Jahilat*.

Astrology and white magic apart, the Druses believe this world to be 343 million years old, and that when a person dies, his soul goes at the same time into another newborn of his own sect, whereas their neighbours, the *nuseries* (Ismaelites) believe in metempsychosis, which is the going of the soul to a body it deserves, human or animal, and even metal, like iron, which is exposed to fire heat and beating. The woman of these *nuseries*, contrary to Druses, are not required to observe chastity within the fold.

Another most interesting feature of their religious tenets is that, to wear or use anything in gold or silver is unlawful, these metals being legitimately required for currency!

The Druses, unlike the Moslems, can have only one wife at a time, who must be a born Druse, but divorce with them is so easy that if a woman says to her husband, "I am going to the field," and he does not say to her, "Come back," she is thereby divorced. But a Druse will never expose an unfaithful woman; he will simply divorce her, taking care that her infidelity be not divulged, considering it a disgrace to himself, should it be known, that his wife has preferred another to him! Also, unlike the Moslems, once a man divorces a wife, he cannot remarry her. Betrothals are sometimes made in infancy and once a little girl is promised to a little boy, she must veil her face in his presence.

All men and women dress in blue calico robes, the men to the knee under a woollen striped coat, and white turban, the women to the heel with a veil covering their head and face except one eye. They are seldom good-looking. The young men dress mostly with baggy white trousers to the knee and white kerchief round their fez. They make good manual servants and soldiers.

The character of the Druses in general, is, if they are left to themselves, good. They are chivalrous and faithful friends, so much so, that Druses living in a Christian village have been known to die in the defence of their Christian neighbours, even when attacked by other Druses.

If a Druse is seeking to fight another man, and sees him fall incapacitated in running away, he ceases his pursuit, despising the striking of a fallen foe.

M. Henry de Jouvenel, the French High Commissioner in Syria, arrived in Angora last Friday.

The Turkish National Assembly last Friday ratified the Turko-Russian Convention, which was signed in Paris on December 17, for mutual neutrality between the two Governments in the case of war with a third party.

Sir Thomas Arnold gave the Sunday lecture at the British Museum last Sunday, his subject being "Persian Paintings." He described the art of Persian painters in illustrating manuscripts of various works of Persian literature and by means of lantern slides showed many pictures taken from manuscripts in the British Museum.

THE MUSIC OF THE ORIENT.--II.

Spiritual or Philosophical Bases.

BY K. W.

I asked M. Gudenian to define more particularly some of the spiritual affinities which he believed to exist between East and West, and to elucidate those good properties of the East which he believed to be misrepresented in the West. He readily complied.

"Take Oriental pessimism, for example," he said. "You remember Goethe's lines, 'Man would not be the finest creature in the world if he were not too fine for it.' This sentence goes to the depth of the matter, and seems to be a polite rendering of the Arabian proverb: 'The world is a corpse, and those who seek it are dogs.' Christianity and Buddhism want us to concentrate our efforts on the inner voice which bids us forge our individuality, and merge in that indefinite beauty which symbolises itself in the perfume of the flowers and in Heaven-destined sounds. 'Dust unto dust': realistically all is dust. It is only the florescence of the spirit that comes from dust, takes us up so as to make us see God face to face, thus constituting that unfathomable miracle by which a creature of earth, disgusted of all earthly things, aspires to nothing less than Heaven.

"So it is that the depths of pessimism culminate in unshakable optimism, and certain Oriental songs, which fall so sadly on our ears, rejoice the inmost depths of our hearts.

"Look at a beast in its struggle for existence: its devouring another beast (which it can neither help nor be blamed for) disgusts and revolts us. Yet the same beast in motherhood charms and captivates us with its love and devotion. What does all this mean if not that the necessary pessimism to realise the beastly struggle for existence culminates in the convincing optimism which teaches us with conscious self-sacrifice to attain the *real* style of super-humanity in which the human being comes nearer to God than to the beast?" And M. Gudenian clinched his argument with quotations from Jesus Christ, the Buddha, and Goethe.

"Take, again, Pity, the existence of which in the world of Islam has been woefully misunderstood in the West. Even Schopenhauer, who in my opinion was the greatest exponent of the Christian and Buddhist religions, pretends that he could not find one thought worth mentioning in Mohammedanism. It is incredible to think that Schopenhauer, who had such a tremendous admiration for Pity, calling it not only the highest but almost the only morality, overlooked the sentiment of Pity which the Prophet taught in so masterful a fashion to his followers. That Pity abounds in Moslem peoples has been testified by such men as Lamartine and Byron, and I myself, who lived in Constantinople from earliest childhood until the age of seventeen, can state that I never knew nor heard of anyone, of whatever creed or nationality, starving to death. No one could have eaten his piece of bread while knowing that his neighbour lacked it. Is it always thus in Christian Europe?

"Those who have learned the language of Music will find in some passges of Oriental music the genuine hand of Pity stretched out so full that this music is turned into soothing balm."

Another subject that M. Gudenian was greatly concerned to illuminate was that of Oriental fatalism, the fatalism which is imagined in the West to consist of indolent, possibly luxuriant, resignation to the will of Allah. He holds that the fatalism of the East is but a phase of the Western belief in the omnipotence of God.

"Fatalism, reflected in Oriental music, is not," he said, "a brutal force sweeping over us, but is rather a friendly inward voice showing the way, here to the right, there to the left, to fulfil our mission in the world. When experience in life teaches us how subject to error our reason is, we cannot but be grateful that there has not been granted to us the presumptuous freedom that could have hurled us to our doom. For those who possess little imagination, Kant, Schopenhauer, Voltaire, Spinoza, Hume, Mill, and other philosophers have written abundantly and convincingly on this subject, and for those to whom a few words are sufficient Goethe has written: 'What is predestination? It is this. God is mightier and wiser than we are and so He does with us as He pleases.'"

The well-known affinities between the Calvinist and the Moslem opened up the prospect of too long a discussion, and I did not pursue the subject. M. Gudenian finished his remarks on this head with these words:—"When some Westerners lend a sympathetic ear to some paltry Orientals who bend the wisdom of their forefathers to childish perversions, they should recognise that if they can make a miserable foreigner talk according to their taste, they still have no power to silence so many great-minded Westerners who affirmed the old Oriental wisdom. Because to be born in the Orient does not necessarily enable a man to understand Oriental wisdom. It was Goethe who wrote:—

> If the ass that bore the Saviour
> Were to Mecca driven; he
> Would not alter, but would be
> Still an ass in his behaviour."

It was on the theme of universality of Music that M. Gudenian went on to explain his peculiar standpoint. He recalled to me that Gluck had said that there are those who have their hearts in their ears, and that Wagner fulfilled what Gluck began, although the composer of "The Ring" stated that Beethoven, especially in his Ninth Symphony, had already done this.

"All composers at all times," said M. Gudenian, "have endeavoured to give to Music more meaning than an agreeable tickling of the ear. This endeavour consisted of taking Music out of its own narrow realms and making of it a universal art. Schopenhauer was right in stating that metaphysical philosophy can go deepest through Music. Poetry never attains the height that Music can reach, and as for Painting, Music often forces the sight of more vivid pictures than any painting could represent.

"Music and Religion need no argument. A sincere muezzin possessed of a good voice will, calling the Believers to prayer from the top of a minaret, convert the most hard-shelled materialist into a believer.

"So Wagner sought most logically to unite all the fine arts, and most of his music, even without the drama, contains all those elements in itself.

"Real Oriental music at all times contained in itself all the fine arts, because the prophets, troubadours, and musicians who sang in the open air could never know the composition of their audience. To be successful, therefore, this music had to contain all the fine arts in order that the philosophers, poets and so on, could find in it what they were able to understand—a picture of the Universe from which every sentient being gets what he is able."

The concluding article of this series will deal more precisely with the Music of the Orient, its composition and performance.

A special train conveying the managing director and some high officials of the Greek State Railway went off the rails near Lamia on the track between Athens and Larissa on February 9. The traffic superintendent was killed; another official and two firemen were injured.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

IRAQ AND GREAT BRITAIN.

[The following is a text of a White Paper Cmd. 2587 (price 2d.), recently issued by H.M. Stationery Office. The official spelling is retained.—ED.]

Treaty Between His Britannic Majesty and His Majesty the King of 'Iraq.

His Majesty the King of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, Emperor of India, of the one part; and His Majesty the King of 'Iraq, of the other part:

Anxious to give full effect to the stipulations in the decision of the Council of the League of Nations dated the 16th day of December, 1925, fixing the frontier between Turkey and 'Iraq in pursuance of Article III. of the Peace Treaty signed at Lausanne on the 24th day of July, 1923, to the effect that the relations between the High Contracting Parties now defined by the Treaty of Alliance and by the undertaking of His Britannic Majesty's Government approved by the Council of the League of Nations on the 27th day of September, 1924, should be continued for a period of twenty-five years, unless 'Iraq is, in conformity with Article 1 of the Covenant of the League of Nations, admitted as a member of the League before the expiration of that period:

Bearing in mind the intention which the High Contracting Parties have mutually expressed in the Protocol of the 30th day of April, 1923, to conclude a fresh agreement regulating subsequent relations between them:

Have decided by means of a new treaty to ensure due fulfilment of the said stipulations and have for this purpose named as their plenipotentaries:

His Majesty the King of the United Kingdom of Great Britian and Ireland and of the British Dominions beyond the Seas, Emperor of India, Bernard Henry Bourdillon, Esquire, C.M.G., Acting High Commissioner of His Britannic Majesty in 'Iraq:

His Majesty the King of 'Iraq, 'Abdul Muhsin Beg al-Sa'dun, Prime Minister of the 'Iraq Government and Minister for Foreign Affairs:

Who, having communicated their full powers, found in good and due form, have agreed as follows:—

ARTICLE I.

The provisions contained in Article XVIII of the Treaty between the High Contracting Parties signed at Baghdad on the 10th day of October, 1922, of the Christian Era, corresponding with the 19th day of Safar, 1340, Hijrah, and in the Protocol signed on the 30th day of April, 1923, of the Christian Era corresponding with the 14th day of Ramazan, 1341, Hijrah, in so far as they relate to the duration of the said Treaty are hereby abrogated, and the said Treaty shall remain in force for a period of twenty-five years from the 16th day of December, 1925, unless before the expiration of that period 'Iraq shall have become a member of the League of Nations.

The various agreements between the High Contracting Parties subsidiary to the said Treaty of the 10th day of October, 1922, shall, in so far as their duration is made dependent on that of the said Treaty, likewise remain in force for the period laid down in the present Treaty, but in other respects their provisions shall not be affected.

ARTICLE II.

The High Contracting Parties agree, immediately after the ratification of the present Treaty and its approval by the Council of the League of Nations, to continue active consideration of the questions which have already been under discussion between them in regard to the revision of the agreements arising out of Articles VII and XV of the Treaty of October 10th, 1922.

ARTICLE III.

Without prejudice to the provisions of Article VI of the Treaty of October 10th, 1922, in regard to the admission of 'Iraq into the League of Nations or the provisions of Article XVIII of the said Treaty which permit the revision at any time, subject to the consent of the Council of the League of Nations, of the provisions of the said Treaty or of certain of the agreements subsidiary thereto, His Britannic Majesty undertakes that, at the time when the Treaty of October 10th, 1922, would have expired under the Protocol of April 30th, 1923, and at subsequent successive intervals of four years until expiry of the period of twenty-five years mentioned in the present Treaty or until the admission of 'Iraq into the League of Nations, he will take into active consideration the following two questions, namely:—

(1) the question whether it is possible for him to press for the admission of 'Iraq into the League of Nations;

(2) if it is not so possible, the question of the amendment, on account of the progress made by the Kingdom of 'Iraq or for any reason, of the agreements referred to in Article XVIII of the Treaty of October 10th, 1922.

The present Treaty, in English and Arabic, of which in case of divergence the English text will prevail, shall be ratified and ratifications shall be exchanged as soon as possible.

In Witness whereof the above-named Plenipotentiaries have signed the present Treaty and have affixed thereunto their seals.

Done at Baghdad the Thirteenth day of January, one thousand nine hundred and twenty-six of the Christian Era, corresponding to the Twenty-eighth day of Jamadi al Ukhra, one thousand three hundred and forty-four, Hijrah, in three copies of which one shall be deposited in the

B. H. BOURDILLON,
His Britannic Majesty's Acting High Commissioner in 'Iraq.

'ABDUL MUHSIN al-SA'DUN,
Prime Minister of the 'Iraq Government and Minister for Foreign Affairs.

Explanatory Note.

1. In their decision of the 16th December, 1925,* the Council of the League of Nations attached the following condition to their award on the Turco-'Iraq Frontier question:—

"The British Government is invited to submit to the Council a new Treaty with 'Iraq, ensuring the continuance for twenty-five years of the mandatory regime defined by the Treaty of Alliance between Great Britain and 'Iraq† and by the British Government's undertaking approved by the Council on the 27th September, 1924,‡ unless 'Iraq is, in conformity with Article 1 of the Covenant, admitted as a Member of League before the expiration of this period.

"As soon as, within a period of six months from the present date, the execution of this stipulation has been brought to the knowledge of the Council, the Council shall declare that the present decision has become definitive and shall indicate the measures required to insure the delimitation on the ground of the frontier line."

2. In pursuance of this invitation of the Council of the League of Nations His Majesty's Government have concluded with the 'Iraq Government the new Treaty which is printed above. It has been accepted by both Chambers of the 'Iraq Parliament.

3. The effect of Article 1 of the new Treaty is to extend the operation of the Anglo-'Iraq Treaty of October, 1922, and of the subsidiary agreements concluded in March, 1924,† in so far as their duration depended upon that of the Treaty, for a period of twenty-five years, or for such shorter period as may elapse before 'Iraq obtains admission to the League of Nations. In so far as the duration of the subsidiary Agreements was not dependent upon that of the main Treaty, their provisions are not affected. Consequently, the principle enunciated in Articles 1 and 3 of the Military and Financial Agreements respectively, viz., that 'Iraq shall accept as soon as possible, and in any case not later than the year 1928, full military and financial responsibility for the preservation of internal order and for the defence of 'Iraq against foreign aggression, remains in force.

4. The discussions referred to in Article II of the new Treaty relate to various points of detail and do not affect the question of principle mentioned in the foregoing paragraph.

5. The undertaking given by His Majesty's Government in Article VI of the Treaty of 1922, to use their good offices to secure the admission of 'Iraq to membership of the League of Nations as soon as possible, remains in force. The provisions of Article III of the new Treaty expressly provide for periodic consideration of the situation with this object is view. On the admission of 'Iraq to membership of the League of Nations the operation of the Treaty will come to an end.

6. The decision of the Council of the League of Nations of the 27th September, 1924,‡ included their acceptance of an undertaking by His Majesty's Government to agree to no modifications of the terms of the Treaty of Alliance (i.e. the Treaty of 1922, the Protocol of 1923, and the subsidiary Agreements†) without the consent of the Council. A similar undertaking in regard to the new Treaty will be given to the Council.

NEAR AND MIDDLE EAST ASSOCIATION.

Mr. Wilson Harris and Professor Arnold Toynbee were the principal speakers at the meeting which, by the courtesy of Mrs. R. A. Workman, the Near and Middle East Association arranged on February 10 at 3, Seamore Place, Park Lane. The subject of the evening was "The Present Mandatory System in the Middle East." Captain E. N. Bennett, who presided, first read a letter from Mr. J. L. Garvin, who had hoped to be able to speak. The Editor of the *Observer* reaffirmed his well-known view that the adhesion of the Mosul vilayet to Iraq may be disastrous to the British Empire, stressed the necessity of cultivating the closest relations with Turkey, and ended by praising the work of those who are attempting to keep open to the British public the question of England's evacuating Iraq.

Mr. Wilson Harris dealt mainly with the conception and the working of the Mandates from the point of view of the League of Nations. In sketching the history of the mandatory idea, he incidentally said that Lord Balfour had actually recommended in 1917 some such substitute for the traditional annexation by the conquering Power. He explained how the Middle Eastern mandates, which were described as being two and a half in number—the Lebanon and Syria being under the French mandatory, Palestine and Transjordan under the British mandatory, and Iraq, which was not really a mandated State at all, but was allied by treaty with Great Britain—came into being at the Conference of San Remo. In a particularly lucid way he gave an exposition of the relations between Great Britain and France, the mandatory Powers, and the League of Nations. It was the business of the Permanent Mandates Commission, which was composed of disinterested representatives, or rather members, of various countries, who, generally speaking, had no first-hand knowledge of the working of all three, "A," "B," and "C," kinds of mandates, to see that the mandatories were treating their respective *protégés* according to the wording, rather flamboyant though it was, of Article XXII. of the League of Nations Covenant (that clause referring to the duty of those countries in an advanced state of culture in preparing the less advanced peoples for membership of the League as a sacred trust of civilisation). The Mandates Commission was doing its work searchingly and conscientiously. For example, it requested, in view of the fact that the last report on Syria did not take into account the recent troubles in that country, that a later report be drawn up; and this was being done for the February meeting at Rome. Upon the future of the mandatory system in the Middle East, Mr. Harris spoke guardedly. Of Palestine he said that co-operation between Arab and Jew was a possible eventuality, though the processes by which such a consummation might be brought about had so far failed to manifest themselves. Of Iraq he said that, now that the future of Mosul had been settled by the League, the outlook for an independent Arab nation was at least hopeful.

Professor Toynbee, in discussing the origin of the mandates, interestingly developed the contrast between the fate of those mandated territories whose suzerainty began, so to speak, in unworthy motives, and of those territories whose overlords had at first the best intentions. He showed how the whole problem of these Middle Eastern mandates was complicated by three conflicting, or incompatible factors: (1) The rise of Arab nationalism, and British promises, indefinite and actual, to ex-King Hussein on the subject of Arab independence; (2) British promises to the French on the subject of Syria, negotiations in regard to which were begun two days after the receipt in Whitehall of the offers by the secret Arab committee in Damascus of a rising against the Turks in the Allied cause; and (3) British promises to the Zionists in respect of Palestine. It was easy, he said, in the light of subsequent events, to blame the British Government for behaving in this contradictory manner, but, in view of the circumstances of the War and the necessity, first of countering the *Jehad* proclaimed by the Caliph at

Digitized by Google

Constantinople on the Allied Powers, and secondly, of countering the pro-Jewish and anti-Russian propaganda which was being conducted by Germany in America as a consequence of the ill-treatment of Jews by the Russian troops in the retirement of 1915, such harsh criticism was scarcely fair. Turning to Iraq, Professor Toynbee claimed that two opposite policies strove in our official quarters for mastery, the policy of Indianisation—he said that from the beginning of the War the Government of India had looked desiringly upon Iraq as another province of India, and that up to 1920 Iraq was in fact Indianised—and the policy of Arab independence, as subsequently enunciated by the Colonial Office. Apropos of this, he instanced the simultaneous subsidising of Sultan Ibn Saoud and ex-King Hussein. One thing was at any rate certain: the wishes of the people in these Middle Eastern States were not originally consulted. In this connexion, he laid great stress on the findings of the King-Crane Mission to Syria, the Mission which was told by the Arabs that they wanted no mandatory Power, but if there had to be one, it should be first America and then Great Britain. Of the three mandated territories, he said that Iraq was the most advanced to its goal. Palestine represented an attempt to reconcile two irreconcilable things, but into Syria M. de Jouvenel would probably introduce a much greater share of liberty.

The Chairman then stated that he could find no difference between the old-fashioned annexation and the new mandatory system. There was little adhesion to the idea of the "sacred trust of civilisation" mentioned in Article XXII. in imposing a Zionist minority in Palestine upon an Arab majority, or in bombarding Damascus. Nor could he, any more than any other close student of the problem, discover the slightest right whereby the League of Nations severed Mosul from Turkey.

In subsequent discussion the question of the possibility of revocation of a Mandate was raised. It was at first suggested, by Mr. Harris, that a decision so to revoke must be arrived at unanimously by the League, but a subsequent speaker stated that if such a question were put before the League, the votes of the defending parties, so to speak, would, in accordance with the recent decision of The Hague Tribunal, not be counted. Objection was taken to Professor Toynbee's statement that Iraq had been Indianised, and to his implication that Sir Arnold Wilson was an "Indian," the facts being that from 1916 to 1921 Iraq was under the War Office, not under the Government of India (in other words, the supreme control was in the hands of the G.O.C., a British Army officer), and that officials from India constituted but a fraction of those responsible for the civil administration. In justice, therefore, to the officials who had to carry on in Mesopotamia during and after the War, this baseless charge of Indianising Iraq should be dropped.

The following were among those present: The Hungarian Minister, the Serbian Chargé d'Affaires, Mme. Ferid Bey, M. Nelky, Kemal Bey, M. and Madame Stancioff, Mr. A. H. Meftah (Persian Legation), Viscountess Combermere, Sir Edward and Lady Boyle, Sir William Clark, Lady Mackinnon, Lady Hewitt, Lady Sprigge, Hon. Mrs. E. C. Fielden, Mr. S. Leader, Mrs. L. Cobham, Col. and Mrs. Fitzmaurice of Orkney, Mr. and Mrs. Leland Buxton, Mr. and Mrs. James Conchie, Mr. and Mrs. Walter Reid, Dr. E. H. Griffin, Mrs. de Bunsen, Mrs. Charles Hancock, and Mme. Wolkoff.

Mr. T. A. V. Best, who was appointed Lieutenant-Governor of Malta last November, arrived in Malta last Saturday.

The Postmaster-General has announced that as from February 15 the Imperial rate of postage of 1½d. for the first ounce and 1d. per ounce will apply to letters for Palestine. The full international rate of 2½d. for the first ounce and 1½d. per ounce thereafter will still be applicable to letters for Iraq, which are at present frequently posted in error at the Imperial rate.

THE ANGLO-PERSIAN OIL FIELDS.

An illustrated lecture on "A Visit to the Anglo-Persian Oil Fields" was given on February 11, at the Royal United Services Institution, by Squadron-Leader A. R. C. Cooper to the Central Asian Society, Sir Michael O'Dwyer being in the Chair.

The lecturer explained that he derived his information from a ten days' visit which, in company with a fellow R.A.F. officer, he paid to the South Western Persian fields last year. With the help of abundant photographs he sketched the extent of the Anglo-Persian Oil Company's property from Tembe down the Karun river to the refinery at Abadan. The immense feat accomplished by British engineering in constructing roads over mountains, the laying of the pipe line, and so on, were dwelt upon, and the lecturer went into a certain amount of technical detail in his description of the various instruments connected with the extraction of oil, derricks, rocker arms, controls, storage tanks, and the rest. For the whole of the engineering establishments along the course of the 140 miles from the fields of Maidan-i-Naftun (which incidentally were known in Zoroastrian times), he had the greatest admiration. One of the most striking things he saw (and these did not include any oil) were the huge gas flares, which were lighted as a means of dispersing safely the dangerous gases, and which were so tremendous, being seen as far as 100 miles away, as to be quite awe-inspiring. The progress of the whole concern could be seen from the fact that, whereas in 1912-13, 83,000 tons of crude oil were extracted, in 1922-23 3,000,000 tons were gained. Nor was the business point of view the only one on which the A.P.O.C. could be congratulated. Hospitals had been established for the use of the 30,000 Persian employees, with 20 white doctors, 15 white nurses, and a complete dental surgery; wireless had been installed for the benefit of the British employees who were living out in the desolate waste; and, in fact, the comfort of the Company's servants, who must above all be workers, was studied in every way. The two main impressions gained from his visit were, first the amount of work done, and secondly the overpowering smell of gas.

In the subsequent discussion, Captain R. A. Eden, M.P., emphasised not only the national importance of the work of the A.P.O.C., but the humanitarian aspect of its development of S.W. Persia. Sir Louis Dane gave an interesting sidelight on the history of the Company. In 1903, he said, he was with Lord Curzon on a visit to Consular stations in the Gulf, and while at Koweit a Mr. Reynolds called to see him. Mr. D'Arcy's mining engineer (he died last year in Spain) had just relinquished hope of finding oil in Persia, but on persuasion by Lord Curzon and Sir Louis he proceeded to Maidan-i-Naftun, where he finally realised his hopes. That the matter was subsequently taken up was to the credit of Sir Charles Greenway and of the Burma Oil Company. Sir Charles Greenway contrasted the discomforts of a visit to the fields which he had paid in 1910-11 with the ease with which a visit could now be made. Sir Harry Brittain who has recently returned from an Imperial voyage, which included Persia and Iraq, spoke of the A.P.O.C. as one of the finest all-British institutions in the world. He paid tribute to the services of Sir Charles Greenway, who had resisted the attempt to get the possession of the fields out of British hands, and also to the spirit of enterprise among the workers in S.W. Persia, who found relaxation in race-meetings and in all kinds of sport. Wing Commander Wing spoke of the necessity of looking upon Iraq and S.W. Persia as a link between the Mediterranean and India. Admiral Richmond stressed the imperial aspect of the oil-fields. Finally, Sir John Cadman stated that the success of the A.P.O.C. was due not to luck, but to exceptional skill. Improvement followed improvement; now, for instance, the gas flares, from the waste oil, which had so impressed the lecturer, had been done away with, and a visitor to the fields now saw no oil and smelt no gas.

February 5, 1926 (Old Style).
Shaabau 5, 1344 A.H., of the Moslem Calendar.
Adar 4, 5686, of the Jewish Calendar.

Sir Milsom Rees has returned to London from the Sudan.

Mr. Charles Whibley left for Egypt on February 11, and will be away for six weeks.

Sir Ernest and Lady Dowson left London last Thursday for Marseilles, on their way to Egypt.

The Hon. Michael and Lady Doreen Knatchbull left 11, Eaton Place last Thursday for Egypt.

The Dowager Countess of Airlie last Friday left London for Egypt, and will be absent for about six weeks.

Lord and Lady Plunkett left 38, Upper Brook Street last Friday for Egypt. They will be away about six weeks.

Viscount and Viscountess Devonport will sail from Bombay for England on February 23 in the P. and O. s.s. Ranpura.

Lord Brabourne left London last Thursday to join the P. and O. steamship Rawalpindi at Marseilles, on his way to Port Said.

Sir Otto and Lady Beit and the Misses Angela and Muriel Beit, who have gone to Egypt, are not expected back in town until the middle of April.

Major F. J. Ney, executive secretary of the Canadian Council of Education, and Mrs. Ney, who have been visiting Egypt, Palestine, and Cyprus have arrived at the Hotel Victoria, London.

Madame Yovanovitch, wife of the Serbian Consul-General in London, has disposed of her residence in Gloucester Place, and her address for the present is 71, Knightsbridge.

Jafar Pasha al Askari, Diplomatic Representative of Iraq in London, entertained to dinner at the Hyde Park Hotel on February 11, Sir Henry and Lady Dobbs, Sir Henry and Lady MacMahon, Sir John and Lady Shuckburgh, and Mr. H. I. Lloyd.

Sir Launcelot Sanderson, K.C., Chief Justice of the High Court of Judicature, Calcutta, who had the honour of being received by the King at Buckingham Palace on February 10, left London last Thursday on his return to India.

Baroness Zouche and Sir Frederick Frankland are on a visit to their son, Captain the Hon. T. W. Frankland, A.D.C. to Lord Lloyd, the High Commissioner for Egypt. The Hon. Barbara Frankland has accompanied her parents to Cairo.

The Right Hon. Sir Robert Horne, K.C., M.P., and Miss Horne, who have been touring in Upper Egypt, returned to Cairo last Friday. They are staying at Shepheard's Hotel where Sir Herbert and Lady Vernon have also arrived.

Mr. Charles Woods entertained the Bulgarian Minister and Miss Hajji-Mischeff at tea at 171, Victoria Street, on February 9. Among his other guests were the Hon. Mrs. Bovil, Lady Hart, Mr. A. C. Wratislaw, Mrs. Ameer Ali, Mr. John Mavrogordato and Mrs. T. E. Stephenson.

Sir Samuel Hoare, Secretary of State for Air, will address the City of London Debating Club on "Iraq and its Future," at the offices of the City Conservative Association (36, Bucklersbury, E.C., next Thursday (February 25) at 5.30 p.m. Application for tickets should be made to the hon. secretary of the club, Copthall House, Copthall Avenue, E.C.2.

The Turkish Ambassador in London and Mme. Ferid Bey entertained at dinner at the Embassy last Thursday evening the Spanish Ambassador and the Marquise de Merry del Val, the Belgian Ambassador and Baroness Moncheur, the Brazilian Ambassador, the Lithuanian Minister and Mme Galvanauskas, the Hungarian Minister and Baroness Rubido-Zichy, and the Staff of the Embassy.

Book Reviews and Notes.

IRAQ: 1500-1900.

"FOUR CENTURIES OF MODERN IRAQ." By Stephen Hemsley Longrigg. (Oxford University Press. 21s.)

Most of us who read books relating to the East fall into one of two classes: those who live or have lived in the East and read with eyes that know the country and its people, and those who, turning to the East for colour, incident, strangeness, or faith seek to be exalted or entertained by Oriental mysteries or splendour. Students of present-day Oriental politics, we regret to say, do not search in books for their argument. Otherwise the cross-word puzzle expert of the *Evening Standard* would not give as a clue to Mosul—"A Turkish town on the Tigris."

Although the sources of this book, as its jacket tells us, "range from the quaint narratives of Early European travellers to the Court histories of Stamboul," it is not a book of excerpts, and the searcher after romance and travel-lore will be grievously disappointed. Not that romance and adventure are absent. The book is full of adventure, but it is not dealt with lovingly. Our historian has no time for sentiment. He gives us a narrative clear, judicious, and cold of events that in the hands of a novelist would thrill us with wonder, horror and pity. The history will appeal to the seriously minded residents and ex-residents of Iraq as the first attempt to give a continuous narrative of Iraq history since its conquest by the Turks in the sixteenth century.

And what is this history when unfolded before us? "Wars of the kites and crows"—so Milton dismissed Anglo-Saxon history, and so must we describe most of the period dealt with Mr. Longrigg. In spite of the gorgeousness of pashas, sultans, shahs, kahyas, and janissaries their history is shown to be a succession of campaigns, intrigues, rebellions, chastisements and treachery. Mr. Longrigg spares us the gruesome details, but perhaps in so doing removes most of the life of the picture. A more generous padding of vivid extracts from contemporary narratives and a lifting of the decorous veil of horrors and vices, while securing the interest of the general reader, would have lightened the task of the serious student. Besides, all serious historians nowadays parade their sources in full dress and make them speak for themselves.

But it is unfair to carp. The book has great merits. It shows us what happened to Iraq after it fell to the Turks—how they treated it as a number of provinces to be bled, how neither they nor their slave successors had any conception of government. It is true that they struggled to keep the semblance of law and order, but merely to retain the profits that ensued to them from peaceful trade. It shows how the Persians were able to occupy the country and how the Mamluk dynasty in Baghdad, the Jalilis in Mosul and the Babans in Kurdistan maintained practical independence of Stamboul.

But through lack of either sources or space the author deals only with political events. We are not told how the Government touched the people in those everyday relations of tax gatherer and payer which make up the whole life of European agriculturists.

When we do see the governed and the governors face to face in the conflicts between the tribes and the pashas it seems incredible that the same old treachery succeeds every time. Not only the ignorant tribesman falls a victim, the most astute town intriguer and the wiliest courtier each in his turn accept the lavish gifts, swagger in the robes of honour, swallow the honeyed words, and come to the same swift treacherous end. Few important people in Iraq died in any retirement save that of a prison, and there very suddenly.

How was a people so cautious and suspicious always taken in so easily? This is one of the problems which the book has raised and left unsettled.

Another is why was there no racial or national sentiment displayed throughout this period? The question is unanswered. The author has a singular quality of detachment. His purpose is to tell the story. He does so, and though he spends his life in the country as the employee of a nationalist Arab State, he tells it without bias or heat. If the Turkish rule was an abomination, the author does not say it. He gives the facts. If the Arab and Kurdish leaders were animated by no sentiment save rapacity and hate, he does not hide their weakness. But he gives no explanation.

The Persians have a saying, "Kill your enemy with his own sword." They explain it by pointing to Arab history. "The Arabs" (the Persians say) "conquered the world with the sword of religion. We have killed the Arabs with their own sword by creating the Jafar creed." Was this the explanation of the failure of the Arabs to unite when the Turks were weak and only a handful of Mamluks held the country with ease by playing off sheikh against sheikh, and notable against notable. It is true they relied on the Kurds, but the Kurds did not love them too much and played the same game against them by uniting with the Persians whenever attacked by the rulers of Baghdad.

Not that the Arab was easy to govern. There seem always to have been campaigns against the Muntafiq or the Beni Lam or the Obeid or later on the Shammar. But no national spirit animated these risings or emerged out of them. To the end of the nineteenth century the Arab spirit was sleeping. Perhaps the real explanation lies in the hostility of the towns to the tribes. Not until the townsman joined with the tribesman in hostility to the Turk did Arab nationalism arise. Possibly the old Turkish rule before the reformers was so light that it did not affect the lives of the mass of the people. It was the reformer with their Turkish language and land law who created the Arab spirit. But our author cares for none of these themes.

Some interesting personalities are revealed in this history and the episode of the Mamluks is very fully treated. The Jalilis of Mosul and the Babans of Kurdistan are dealt with rather scrappily, owing rather to the scheme of the work than to the paucity of the information.

The author shows how throughout most of his period Mardin belonged to the pashalic of Baghdad, while the plain of Mosul was, except for brief periods, always an independent province though much shrunken in size.

One last criticism. This book is sound, sober, history, a model of brilliant compression and lucid narrative. It is engagingly written and deals well with its purpose, the political history of Iraq in these centures. It does not attempt to deal exhaustively with economic and administrative history. Nor does it treat of the present dispute over the Mosul vilayet as a separate problem. The Oxford Press were unfortunate in writing on the jacket: "in particular the Mosul question can be judged for the first time in its full bearings." It is unfair to the book to represent it however vaguely as an authority on this burning problem, whose roots may lie deep in the past but which must be judged by its other than historical considerations.

This book, though opportune, is not propaganda. Turkish maladministration in Iraq during four centuries is revealed but not dwelt on. When it is remembered that at the present day, as a legacy of Turkish lack of rule, the Shammar tribe exact *khowa* (blackmail or tribute) from every village between Shargat, Mosul and Sinjar, as well as from every sheep that crosses the northern Jezirah, a little of the anarchy which existed below the thin veneer of Turkish law and order will be understood.

The people accustomed to the treachery and greed of their rulers for three centuries have little faith in the protestations of any Government, and see only new pretexts for further taxation in all their undertakings.

The history traced by Mr. Longrigg is a sad and shameful one in spite of all the tinsel of the pasha's courts and all the trapping of his janissaries. Let us hope that the next four centuries will bring happiness and prosperity to this ancient habitation of man.

MISS PARLOW'S RECITAL.

Miss Kathleen Parlow, the Canadian violinist, has allowed herself to become almost better known on the Continent than she is in London. Her appearance at the Æolian Hall last week was her first in England after an absence of nearly six years, in the course of which she has given recitals in many parts of Europe. In Bucharest, where she was in the autumn of 1924, she achieved a very striking success among a highly musical people; since then she has been in Scandinavia and Central Europe. Miss Parlow combines an obviously finished musicianship and intellectual appreciation with a personality and charm rarely combined in so high a degree. The Tartini Sonata in G. minor made a pleasantly old-world introduction, Miss Parlow's control of her tone both in forte and piano passages being excellent. Lalo's "Symphonie Espagnole," although musically a little slight for the principal place in the programme was in some ways the achievement of the evening. All the fire, grace and charm of the South were so pre-eminently there that one forgot to wish for a deeper musical philosophy and almost forgot—that one had heard the piece many times before. The first movement in particular was given a curiously appealing charm. Chausson's "Poème" was sensitive and thoughtful, proving that Miss Parlow does not depend on showiness of style for her appeal. Two more Spanish pieces and the beautiful "Notturno Adriatico" completed the programme. Miss Parlow was enthusiastically encored. Her next recital is fixed for March 11.

The new National Picture Gallery in Athens was formally opened last Saturday.

According to *The Times* Jerusalem correspondent the local Press reports that an Arab, aged 105, named Salah Mustapha Salah Abu Musa, of the village of Ajur, near Hebron, has begun to serve a sentence of ten years' penal servitude in the Jerusalem gaol for having murdered his daughter, whom he had accused of loose living. The old man is said to be acquiring a third set of teeth.

THE WEEK AT HOME.

London, Tuesday Morning.

On the Steel House.

For a few hours last week the House of Commons experienced a quite remarkable thing—contact with reality. It was over the question of the Government's subsidy to the building of steel houses in Scotland. The appalling condition of housing in Scotland had genuinely touched Mr. Baldwin, and it may be assumed that whoever the contractor might be and whatever the type of house might be, the Prime Minister had determined that something should be done for the homeless Scots. And his attempts to help to solve the problem commanded, from this angle, the assent of the majority of the House.

But a complete vindication of the Government's attitude and a complete justification of the Labour Party's policy of not opposing the Government were not provided last Thursday. The debate, as a matter of fact, was made memorable, not by Government supporters, but by the speeches of three Labour members: Mr. Rosslyn Mitchell, who supported the Weir houses, and Mr. Kirkwood and Mr. Maxton, who denounced them. Such a supporting and such a denouncing have scarcely been heard in a Parliament of our day. They recalled the time of Cobbett and even the memoirs of the eighteenth century.

The fundamental sincerity of all three men is not to be questioned, quite apart from the fact that all three were in effect speaking in opposition to the policy dictated by the politicians at the head of their Party. The difference between them lay in this. Mr. Mitchell, whose speech so delighted the Conservatives as to cause him embarrassment and to ask them to desist, gave a magnificent oration on the housing conditions in Scotland, depicting the present misery and the joyful longing for even a steel house of many of its poverty-stricken inhabitants. Both Mr. Kirkwood and Mr. Maxton, whose lives have been spent in advocacy of those industrial principles which Lord Weir has publicly denounced, were chiefly concerned with the effect that the Government's support of an anti-Trade Unionist like Lord Weir might have on the rank and file of the country. To steel houses in themselves they had no objection: it was merely the Lord Weir scheme which was causing all the ill-feeling.

Any summary of these men's eloquence must sound bald and trivial, but their speeches, made in deadly earnest, profoundly moved or silenced the House. It is excellent that these things should be so; after the make-believe

disputes between Conservative and Liberals to which generation after generation had become accustomed, the wind of reality, blowing so rudely and cleansingly from the unofficial Labour quarter, nearly took one's breath away.

That this debate will become historical I have little doubt, but it is really extremely doubtful whether history will judge Messrs. Kirkwood and Maxton to be so utterly wrong in their estimate of the potentialities of this contracting as the majority of the House seem to have imagined them. That judgment, however, will depend upon how the remainder of Scotland's enormous housing problem (2,000,000 out of a total of less than 5,000,000 cannot get even a three-roomed house) is tackled.

Changing the Constitution.

But to historians last week will be memorable not only for the debate on steel houses, but for another thing, over which the constitutionalists are already wrangling. A second reading was given to a private member's Bill, which would abolish the practice, first made necessary or at least first indulged, in the reign of Queen Anne, by which no member of Parliament can accept an office of profit under the Crown without submitting to re-election. Those who supported this measure—they included the Prime Minister—pointed out that the rule was an obsolete survival from the time when it was thought necessary to check the power of the Royal arm, that it imposed inconvenience both upon members seeking re-election and upon constituencies which were so asked to re-elect them, and that the new Bill would enable a Government to appoint members of every degree of wealth and of poverty.

The present position, which dates from 1919, is that for nine months after a General Election the Prime Minister can appoint whom he likes to paid positions under the Government without the trouble of a by-election, but that, if appointed after nine months, his nominees must seek re-election. In defence of this compromise, as against the departure proposed by Mr. Clayton, there were found to be plenty of members, including the Conservative, Sir John Marriott. These stressed the point that necessitated by-elections were in themselves some sort of check upon the Government (one thinks of Sir Arthur Griffith-Boscawen's defeat at Mitcham in 1921, though that was almost wholly due to Lord Beaverbrook's antagonism), and that in general it was wise not to increase the authority of the Cabinet as against the Commons.

It is amusing, in this connexion, to wonder how far members allow their party feelings to govern their votes upon constitutional questions. Liberals, who are obviously disinterested in the matter of "offices of profit," voted for Mr. Clayton's Bill: all the Labour members present voted against it. But Sir John Simon has put down an amendment for the Committee stage—an amendment which it is said the Government will accept—that this new measure should not come into operation until the end of the present Parliament. It will be interesting to watch the fate of this amendment.

Mr. H. A. L. Fisher.

It has been carefully explained by Mr. H. A. L. Fisher that his duties in connexion with Oxford University make it no longer possible for him to remain an active member of the Liberal Party, but he will hardly complain if a cruel world attributes his departure at this time to somewhat other motives than a returned passion for academic work. Rather will the world connect this loss to the political arena to the present unhappy state of the Liberal Party, a state, which, incidentally, has recently been made even worse by the uncompromising stand which the Radical Party has taken against the possibility of any co-operation with the Labour Party. It is said that Mr. Fisher will always be remembered by his Education policy, a policy which subsequent pressure of more important things has caused to be abandoned, or at least to be indefinitely postponed. One feels, however, that he will be more in his element at New College, whither he is taking with him yet one more "lost cause."

Ireland and England.

Once more, it seems, the older habits of Ireland in its treatment of England and its attitude towards England, are reasserting themselves. For an Irish Fifteen beat England at Dublin on Saturday, their forwards being inspired, apparently, with pre-War skill and enthusiasm. And it is a grand thing for Rugby that it should be so. If the time be coming again when Irish forwards shall be the terror of the football world, that world will be the better for it. And if Ireland this year gains the Triple Crown, that also will be no bad affair.

The other recrudescence of sentiments that one had hoped were dead was shown during the playing at the Abbey Theatre of O'Casey's "Easter Week" play. As one who greets "Juno and the Paycock" as one of the few modern plays that one can see again and again, I find it rather sad that a section of the Irish people should thus attempt to boycott and destroy so fine an Irish playwright. Not that it ultimately matters; for Synge's "Playboy of the Western World," booed in Ireland and in America in 1908, is now everywhere applauded. So, one imagines, when the bitter memories of that Easter week of 1916 in Ireland are died out, this representation of the essential facts of that time, a representation favouring no one in particular, and certainly not designed to secure recognition from the Sassenachs, will come into its own, and be cheered of the descendants of those Republicans who in Ireland now regard it as propangada against the Irish.

THE INDIAN NAVY.

The decision to create an Indian Navy, simultaneously announced by the Viceroy in the Council of State and by the Commander-in-Chief in the Legislative Assembly, came as a surprise to the members of both; for the secret had evidently been unusually well kept. The exact terms of the official announcement are printed elsewhere in this issue. The phrase used in the *communiqué*—"to reconstruct the Royal Indian Marine as a combatant force"—is, of course, technically exact; for, when the old Indian Navy ceased to exist in 1863, its combatant duties were taken over by the Royal Navy and its own functions were confined to transport and survey work and the like. Indian Marine vessels were employed in the South African War and the Boxer Rebellion, but on transport work only: and, though a number of them were used in the Great War as armed auxiliary cruisers, they sailed under the White Ensign and were commanded by officers of the Royal Navy, either permanent, Reserve or temporary. In the days of John Company, what is now the Royal Indian Marine was a fighting service which won distinction in many campaigns. It started life more than 300 years ago as the Honourable East India Company's Marine, a title changed, 75 years later, to that of the Bombay Marine, which it retained until 1829: it then became the Indian Navy until its abolition as a combatant force in 1863, when it reverted to its previous title of the Bombay Marine. In 1877 it became the Indian Marine and finally, in 1892, the Royal Indian Marine.

Thus the latest change of title, though a significant one, is really only a reversion: far more significant, to those who understand what it means—among whom the Indian legislators, who heard the announcement, were certainly not to be reckoned at the time, though no doubt they are wiser now—is the fact that it is in future to sail under the White Ensign. At first, its assumption of combatant duties will be little more than nominal, as can be seen from the enumeration of the units that will constitute "the fleet," given in the *communiqué;* which, so far as one can judge, are all already in being. Indeed, what is by far the most important of the existing ships of the Indian Marine—the Dufferin, of 8,000 tons and 10,000 horse power—seems to have no place in the new fleet. There are already two sloops and two "station ships" (Clive and Minto), and the latter will presumably now be reckoned as sloops also: two patrol vessels, a number of trawlers, two survey ships and a depot ship (Dalhousie); besides a Light House tender (Lawrence), and about 30 minor craft, such as tugs, launches, etc. Of the vessels named, all except the Clive had guns mounted on them, and served as auxiliary cruisers, during the War. The Indian Marine keep up a dockyard at Bombay, with a wet basin and five graving docks: there was, until recently, one at Calcutta also, but this has been closed for some years past. The existing personnel is 133 British officers, 14 British warrant officers, and rather more than 3,000 Indian "other ranks."

The new departure will certainly give great satisfaction to Nationalist politicians, at any rate until they come to examine it more closely. In 1923 a Committee sat to examine the possibility of starting and developing an Indian Mercantile Marine: and, though their conclusions on the named subject were, in the main, quite impracticable, they also formulated the opinion that the reorganisation of the Royal Indian Marine into an Indian Navy was necessary as a preliminary step towards enabling India to undertake the defence of her own coasts, harbours and shipping, and recommended the establishment at Bombay of a training ship, on the lines of the Worcester or the Conway, for the fitting of young Indians for a naval career in the officer ranks. The Government of India, finding itself in agreement with this part of the Report, appointed a small Committee, under the Presidency of the late Lord Rawlinson, to examine it: and it is on their conclusions that the present action has been based. It is obvious, of course, that India, if it is to be truly self-governing, must have her own Navy as well as her own Army: and the insistent demand for the Indianisation of the higher ranks of the latter must necessarily apply to the former also. But there is, at present, no indication that a naval career will be attractive to young Indian gentlemen: and the detailed proposals take obvious note of this fact, since they suggest that one vacancy a year should be reserved to Indians, if suitable candidates should be forthcoming. For the present it is apparently proposed that the existing (military) College at Dehra Dun should provide the naval cadets of the future; but the idea of a training ship has not been dropped, and it is said that the recent visit to India of an officer of the Worcester was made in this connexion. This may perhaps explain the apparent omission of the Dufferin from the "fleet." The existing officers of the Royal Indian Marine were practically all trained on the Worcester or the Conway: but the transition to the Royal Indian Navy, sailing under the White Ensign, seems to postulate regular Royal Navy officers to man it; so that one may expect that its superior personnel will, in future, be recruited from Dartmouth: and a demand for the establishment of an Indian Dartmouth may be expected to follow on that already put forward for an Indian Sandhurst which is obviously only preliminary to further demands for an Indian Woolwich and an Indian Cranwell. Discontent will certainly be expressed at the small initial provision made for the Indianisation of the officer ranks of the new Navy, and this without any reference to the probable supply of candidates: doubtless someone will arise to declare, as Mr. Jinnah did in the case of the Army, that, if the conditions were made "acceptable"—in some quite unspecified way—he could himself produce numberless satisfactory aspirants. To the Swarajists, in particular, the announcement cannot be wholly palatable, though they will be careful not to admit it; for the new departure will cause special satisfaction in Bombay, which will necessarily be the Headquarters of the Indian Navy while practically all of the "other ranks" are recruited from that Presidency—mostly from Ratnagiri, about 150 miles south of Bombay: and it is specially in Bombay that the recent revolt against the Swarajists, by the exponents of "responsive co-operation," has been

Digitized by Google

carried out; so that the orthodox Swarajist is likely to feel that the rebels have stolen a march on him, and that the Government has unfairly assisted them to do so. Leading Indian politicians have long been asking that Lord Reading should mark the approaching end of his Viceroyalty by announcing some spectacular "boon." He has now done so; and it remains to be seen what "the country" will do with it.

CURRENT TOPICS.

Opium.

Lord Reading's announcement, in his speech at the opening of the Council of State on February 9, of the intention of the Government of India "progressively to reduce the exports of opium from India, except for medical purposes, so as to extinguish them altogether within a definite period, and to discontinue altogether the system of auction sales of opium," will give great satisfaction to the large body of opinion that, particularly in Great Britain and America, has always strongly opposed what it looks upon as an immoral traffic. Lord Reading explained that it was not at present possible to fix the "definite period"; but his reference to the time limit laid down by the Opium Conference at Geneva, within which the smuggling of opium should be "completely prevented from constituting a serious obstacle to the effective suppression of the use of prepared opium"—five years—may reasonably be held to give an indication of its probable duration.

The preparation of opium in India is a Government monopoly, from which it derives a considerable revenue: and the cessation of its exportation to several British possessions—notably the Straits Settlements and Hongkong—will cause a dislocation of their budgets which will not be easily rectified. The summary of the speech, as cabled, contains no direct reference to attempts to reduce, and eventually to abolish, the consumption of opium in India itself; but this is certainly what is meant by the undertaking to discontinue auction sales. The number of chests offered at these sales is regulated to meet the known requirements of export and internal consumption; and a certain percentage only, at each sale, is "certified" for export. Opium smoking is not a prevalent vice in India: there the great bulk of the drug is consumed in the form of pills, or mixed with water and drunk. It is generally believed, by Indians, to be a preventive of malaria, and is mostly used as a tonic, or "pick-me-up," much as alcohol is used by moderate drinkers in the West; though it is true that, as time goes on, the dose has to be progressively increased to produce the desired effect, so that an "addict" can assimilate a surprisingly large quantity without being apparently any the worse for it. Many honest observers in India would certainly oppose any attempt at total prohibition of the use of opium as a stimulant, on the same grounds as the ordinary man, who is not a teetotal fanatic, opposes the idea of total prohibition of alcohol. The chief rivals of opium—the preparations of hemp, known in India as "charas" and "bhang"—are very much more noxious and infinitely more dangerous; and any attempt to prohibit the taking of opium would almost certainly lead to an increased use of hemp. The opium poppy forms a most conspicuous crop, and it is easy to ensure that it is only grown in accordance with the law; but this is not by any means the case with hemp. In the case of poppy growing, the usual procedure is that the opium agent receives applications from peasants who wish to grow it. In the case of those whose application is accepted, he selects the land on which the poppy is to be grown, and gives the cultivator an advance in cash, as well as a supply of seed. If the crop is a total failure, repayment is not required; if it succeeds, the produce is bought by Government at an agreed rate, which varies according as the crop is a partial or complete success; so that its results remain entirely in the hands of Government, and illicit poppy growing is practically impossible. Broadly speaking, it may be said that the eating or drinking of opium is nothing more than a failing, and no worse than the consumption of alcohol in Western countries: but opium smoking is a vice that should certainly be abolished, when possible, wherever it exists.

Lord Reading announced that resolutions would shortly be moved, in both Chambers of the Central Legislature, "to give the members an opportunity of expressing their views on this important subject." It may confidently be expected that prohibition of export will be approved; but the position, as regards the cessation of auction sales, is not so certain. For one reason, the Assembly has recently expressed a strong desire for prohibition of the consumption of alcohol in India; and it is likely to argue that both prohibitions should go hand in hand—if the Indian is to be deprived of his opium, the European must also be deprived of his alcohol. For another, the opium auctions give an opportunity for the Indian to indulge in another of the little failings that are not peculiar to himself—gambling. At the time of the opium sales, an incredible number of telegrams, couched in what is, to the European, cryptic language, will be found to be flooding the telegraph offices. Their meaning is "put me on (so many) rupees on (such and such) a number": and the number is the last figure of the official average price per chest. The "brokers"—what we should call "bookies"—who receive the telegrams will, if challenged, assert that they represent speculations in the price of opium; but this is not the case—they represent a gamble, pure and simple, on the last figure of the official quotation: the speculators do not care how many figures precede it, nor what they are. The "brokers'" odds are usually about eight to one: so that they reckon on auctions bringing them in a handsome profit, while enabling their clients to indulge in a pleasant little flutter. Perhaps the members of the Assembly, most of whom have probably taken a hand, in one or other capacity, in some at least of the opium gambles, will be loth to deprive their constituents—if not themselves—of so innocent a pleasure.

State Commercialism.

The article by Sir George MacMunn on "The Business Side of the Indian Army," which appeared in the last issue of THE NEAR EAST AND INDIA, deals with a matter closely affecting all those who are interested in the commercial development of India. "Though it is an accepted principle that an Army should not do for itself anything than can be done for it by the same sort of agency that caters for the public, yet the industrial backwardness of India is, in many respects, so great that Indian Army Headquarters have to arrange to do for themselves many things that the War Office would not think of doing." It would, however, probably be wrong to draw the conclusion that, in the cases instanced by Sir George MacMunn, as well as in others not specifically mentioned in his article, there is a good opening for the employment of Indian or British capital in the organisation of commercial concerns to meet existing deficiencies. It was in compliance with articulate Indian opinion, as expressed by the Legislative Assembly, that Government agreed to take over the East Indian and Great Indian Peninsula railways from the Companies that were managing them: and there is every reason to suppose that any proposal to replace State undertakings, such as those mentioned by Sir George MacMunn, by private industry, would be stoutly opposed by the Legislatures; at any rate if it should be intended to employ British capital, or British management, in connexion with them. As for the possibility of Indian capital and Indian management, Sir George's article effectively disposes of that, as things are at present—no one will grow hay as a business, no one will produce good and sanitary dairy supplies, no one will take the trouble to breed horses fit for army purposes. It is, of course, true that, in the resolution of the Legislative Assembly for the assumption by Government of the working of the railways, there was a reservation that a return to Company management might be possible if Indian capital, and Indian directors, alone were employed; but this possibility was not really taken seri-

Digitized by Google

ously. What the Assembly really looked forward to was the time when they themselves should provide the personnel of the Government, and with it the personnel that should manage the railways. And this is likely to remain their ideal, in other comercial concerns at present operated by Government, rather than any effort to replace them by private indigenous industry.

The Anglo-Indian Question.

Messrs. Scott and Gibbon, in their letters published in the last and present issues of THE NEAR EAST AND INDIA respectively, seem both to have drawn a wrong conclusion from the present writer's remarks about the enlistment of Anglo-Indians in the Army: and to have credited him with opinions that he does not hold and that he would be very sorry to see prevail. One's statement was that, out of a large number of Anglo-Indians applying for direct appointment to the commissioned ranks of the Indian Police, the great majority appeared to consider that an unsuccessful attempt to obtain a commission in the Indian Army Reserve of Officers was all that could reasonably have been expected of them in the Great War having failed in this endeavour, these particular individuals had, on their own showing, made no effort to serve in any other capacity.

Mr. Scott's comment on this is to show that, for some years before the Great War, the life in India, and the prospects, of the British private soldier were not such as to induce fathers to encourage their sons to enlist; particularly in the case of the Anglo-Indians "who had neither home nor trade to fall back on." The present writer's point was, that it did not seem to have occurred, to young Anglo-Indians of the "officer class," that it was possible to serve, even in such an overwhelming catastrophe as the Great War, in any capacity other than that of a commissioned officer. In his thoughts, he contrasted this attitude with that of Englishmen of a similar, or even perhaps superior, class, who entered the ranks in thousands, content with the humblest position if only they could help in the greatest and most righteous adventure of all time. The Anglo-Indian who, as Mr. Scott says, desires to try to live as an Englishman, can hardly complain if his willingness to serve, and if need be die, as an Englishman is looked upon as even more important. In the mass, English gentlefolk rose nobly to the occasion in the World War. The writer's experience was quoted as some evidence that the same proud boast could not be made on behalf of Anglo-Indian gentlefolk. Incidentally, one confessedly does not know why the Anglo-Indian should not, as the British soldier does, learn a trade in the ranks: nor why he is said to have "no home"; though that, of course, has nothing to do with the point at issue.

Mr. Gibbon credits one with "the remark that no attempt was made by the community to enlist in the War": and proceeds to show that such a statement, if it had been made, would have been entirely unjustified. In view of the foregoing remarks, it is unnecessary again to point out that no such statement was made, or even suggested. What the present writer thought, and what he still thinks, is that, in an unprecedented crisis like the Great War, it was pre-eminently the duty of those, best equipped by intellect and training to offer a lead, to give of their best. That the young Anglo-Indians, who were so equipped, so largely failed to do so, is no reflection on the community as a whole; but it does, in the present writer's opinion, show a distinct lack, in the very place where it is most to be regretted, of the true meaning of the words "They also serve who only stand and wait."

Anglo-Indians and the Navy.

In connexion with the announcement of the establishment of an Indian Navy, comments on which appear elsewhere in this issue, it is of interest to recall that, among the suggestions put forward to the Secretary of State, by the Deputation of the Anglo-Indian and Domiciled Community, last year, was one that Anglo-Indian boys should be accepted for enlistment in the Royal Navy, that a special training ship should be sent to India for the purpose, and that "in any future scheme for the creation of an Indian Navy, Anglo-Indian lads should be eligible for service therein, and the Admiraity encouraged to enlist them." This suggestion was specially based on the fact that, since 1906, Anglo-Indian boys have been eligible for enlistment, on the same footing as British apprentices, into the Mercantile Marine: and that, from among those who thus entered that service, several served with marked distinction during the Great War. It was originally proposed that a special training ship should be stationed in the Hoogly; but this was found to be impracticable, and the boys were sent to be trained in England. The memorandum of the Deputation gives no details from which it is possible to deduce the individual success of the experiment, though its general success appears to be proved; so that it is not easy to say whether any of the lads showed qualities that would be likely to fit them for employment in the higher ranks of the Indian Navy. The assumption is, indeed, rather against this; since one may suppose that, otherwise, a movement would have been undertaken for their reception into the warrant ranks, at least, of the Royal Indian Marine: and the memorandum gives no hint of any such effort. But the suggestion certainly merits attention; for, however meritorious may have been successful membership of the British Mercantile Marine in times of peace, it was certainly enormously more so in the War. Among the multitudinous claims to have "won the War," that of the British Mercantile Marine if they had ever put it forward—would assuredly deserve the highest place: and if, as the memorandum asserts, Anglo-Indians did their share in that magnificent achievement, their claim to recognition from the Royal Indian Navy cannot but be a strong one.

"Bad Livelihood."

In September of last year, a paragraph in these notes mentioned a passage in the Bengal Jail Report for 1924, in which complaint was made of the provisions of the law regarding persons convicted of "bad livelihood," who could only be sent to prison without hard labour. As a result, the Report said, these men, who usually consist of the very dregs of society, are "provided with free board and lodging, have congenial companions to plan mischief for the future, and generally have a pleasant time." A bill was brought in, in the Legislative Assembly, to rectify this defect, by giving the Courts power to inflict sentences of imprisonment with hard labour, in cases where they considered this to be called for; but was defeated, by a single vote. The usually imperturbable Leader of the House surprised his hearers by angrily declaring that, if the Assembly proposed to reject every measure providing for the maintenance of law and order, it had better say so at once.

In the present Session, the Government have tried again, with rather remarkable results. The measure was re-submitted, but was opposed by Nationalist speakers, who declared that the "bad livelihood" charge had been brought against political agitators in the past, and that the clause might be so used again; and once more the Leader of the House allowed himself to indulge in plain speaking. He asked whether the Assembly would always persist in rejecting any measure, framed in the interests of the public at large, merely because the entire Executive of the country were unanimously of opinion that it ought to be passed: and whether the House was entirely unmindful of the fact that it is not only criminals who have rights, but ordinary citizens also. In a rather thinly attended House, the second reading was carried by seven votes: and this would ordinarily have been immediately succeeded by the motion that the Bill should become law: but, to the general surprise, the President then adjourned the House. There is much speculation as to the meaning of his action. The suggestion is not wanting that it was taken in the interests of the Swaraj Party, to which he himself still belongs, though no longer bound by its political and tactical decisions. Another suggestion is, that he desired to give time for the clearing up of misunderstanding, between the Government and the Nation-

Digitized by Google

alists, as to the exact effects of the clause as drafted, on which the opposition of the latter is based: in the hope that, during the four days that must now intervene before the Bill is again discussed, a settlement by consent—perhaps including a verbal redrafting of the clause—may be arrived at. Be this as it may, the Nationalists are taking advantage of the interval to summon absentees by telegraph, in order to bring their voting strength up to the number requisite to put the decision into their own hands.

A Border Tragedy.

The cabled announcement of the murder, by a trans-border "fanatic," of a British officer of the Indian police near Peshawar seemed, at first sight, to indicate a recrudescence of the religious assassinations that used, a good many years ago, to be a regular feature of life on the frontier. But later details show that the gallant but imprudent officer was really "asking for it" when, himself unarmed, he pursued a Pathan who had crossed the border with a rifle which the officer, doubtless correctly, presumed to be unlicensed. The man appears to have done his best to get away until, as his pursuer was rapidly gaining on him, he shot him and escaped across the border.

What were known as "ghazi" murders—the ghazi being one who gained Paradise by killing an infidel—used to occur in Peshawar regularly every year. The murderer seldom attempted to escape: having gained Paradise, he wished to enjoy it is soon as possible. The present writer was in Peshawar for three years 25 years ago. In the first of these years, a young officer engaged in boxing a pony at the railway station was killed with a knife, the murderer afterwards explaining that the first European he met was the stationmaster, but, as he was white-headed, he passed him by in search of a younger victim. The next year, the officer commanding a British regiment was shot with a pistol when attending the regimental sports: and, the year after, two young officers out shooting fell in with a friendly Pathan who showed them some good shooting ground: and, when the day's sport was over, offered to cary their guns. Directly they had handed them over, he produced a pistol and a knife, shot one of the officers, stabbed the other (who closed with him) and then sat down besides their bodies to await arrest. In all three cases, the "ghazi" was hanged; though there was, perhaps, some doubt whether, in the case of the Colonel, the man arrested was the actual murderer or only an accomplice.

Simla Past and Present.

A Reuter message announces the appearance of a new edition of the book by Mr. E. Buck, which, under the above title, has for the last twenty years been an Indian—or, at any rate, a Simla—classic. The publishers are the Times Press, Bombay. Apart from its intrinsic historical interest as a narrative of the rise of the Summer Capital of India from a tiny Indian village to its present high estate, the book makes a wider appeal by its inclusion of many entertaining anecdotes about persons in high authority. One may, with considerable confidence, expect that its contents, in this particular respect, will have received a large addition in the last twenty years; for, from one's own personal observation, one knows how many of the great of the Indian earth have, during that period, been responsible for humorous anecdotes—sometimes intentionally, much more often unintentionally. The genial author, universally known as "Buckie," has been a Simla institution for more years than one likes to think about; and has known everybody worth knowing, and heard everything worth hearing, from a time that is now almost prehistoric. As a distinguished journalist—and, incidentally, Reuter's Simla correspondent—he may be trusted to clothe his anecdotes, no less than his history, in an attractive garb: and one awaits the receipt of his book with some impatience. Will it, one wonders, include the story of the little girl who, as a newcomer to Simla, was asked who she was by a lover of children, and replied, "My name is Margaret, my daddy works very hard, and my mummy is the Viceroy": or that of the Commander-in-Chief who, in disposing of a stately note, which included some phrases in Latin, written by one of the Secretaries to the Government, wrote, "Though I don't know much Latin, I know enough to say that this proposal is *nullum sanguineum bonum*."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 28.

The Legislative Assembly.

Delhi is full of legislators at the moment and the Assembly has been very busy. The Trade Union Bill, which seeks to apply to this country somewhat similar legislation to that obtaining at Home, has been debated, and all sides have evinced a desire to make the best of what appears to be a very doubtful piece of wisdom. A happy sign of the better feelings that are prevailing was the agreement of all parties to postpone public debates on the South African question pending the receipt of further information as to the intentions of the Union Government. The standing dish, the debates upon the release of political prisoners, duly appeared with the usual result; but the majority in favour was a diminished one on this occasion.

Meanwhile the Chamber of Princes has been meeting for the first time behind closed doors; but they opened them when they gave a dinner to the Viceroy at which Lord Reading's services were eulogised in no uncertain manner. It is understood that the ruling princes hold strong views in regard to the possibility of interference with their States when the 1929 Commission sits. Possibly the point has obtained a greater prominence since a recent announcement; the Viceroy has decided to appoint a Commission to inquire into the circumstances attending the murder, in Bombay, of a dancing girl formerly attached to the establishment of one of the ruling princes.

Extremist Mentality.

Not the least difficulty, that confronts those who would understand the present position in India, is the tone of the extremist Press. It would be easy to give examples of what appears to be an outlook permanently dominated by a mixture of bitterness and yapping, but this would not help matters. When will the Indian politician learn that nothing is to be gained by stirring up mud except a turgid outlook? *Forward*, amongst other papers, devotes a long leader to the proposed Commission on Agriculture: and the following is a summary of it. "The announcement of a Royal Commission on Agriculture has set many to wonder at the sudden solicitude of Government for the Indian agricultural classes. Several explanations are put forward by those who have an insight into the minds of our rulers. A gentleman recently returned from England has it that the sinister motive behind the Commission is to increase prosperity amongst the *ryots* and thus provide an extended market for British goods: the view will commend itself to many. Pandit Motilal Nehru advances the opinion that the main object appears to be to place the agriculturist in such a position of dependence upon the bureaucracy as will alienate him from the political classes of India, and deflect him from the pursuit of Swaraj to which he now pins his faith. If diplomacy and not a sincere desire to benefit the people is at the back of their minds, Government may rest assured the 'stunt' will not be successful."

This may be taken as one way of saving that the Swarajist hardly seems how he can avoid voting with Government in regard to the appointment of the Commission.

The Clash of Civilisations.

The interest aroused by Lord Ronaldshay's last book does not abate and, in the current week, one or two

Digitized by Google

events have illuminated other facets of the subject. A Bengalee writes to the Press and comments both on the book and on the recent article in the *Statesman* to which reference was made in these columns; his view is that, so far from there being any danger of the sort of civil war that the article suggested, the Bengalee at least is disillusioned in regard to all civilisations, and that he has no use for either that of the East or the West; in short, he is becoming a complete cynic of life. In the meantime Sir Ewart Greaves, Vice-Chancellor of the Calcutta University, has been calling attention to the intellectual degeneration that has set in in Bengal in the last few years, and Babu Bepin Chandra Pal makes this the subject of his weekly article. He asserts that the research work of the Calcutta University, which seemed to Lord Ronaldshay to be so promising, has produced such very indifferent results as to discredit the whole of modern culture. There seems to be little left in regard to which further disillusionment is possible on this side of the weary world.

Jute and Slow Music.

Mr. R. N. Band, the Chairman of the Indian Jute Mills Association, has made the annual report an occasion for reading to everybody concerned a serious warning of the dangers of dear jute; the principal one being that, unless prices fall from the present high level, it is possible that a substitute will be found which will undersell jute bags. He wishes the *ryot* to cultivate more jute and to reduce its price to the members of his Association: and he is sorry to see that other countries are increasing the number of their looms, and so intensifying the demand for jute. The picture has caused a universal smile; the jute interests keep a sharp eye upon all possibilities of a substitute, but they refuse to overlook the fact that they so dug themselves in during the War that any attempt to disturb their monopoly will be a long and costly process. The jute market has always followed a cycle, and high prices this year should mean increased acreage next and, presumably, a more cheerful tune from Mr. Band.

Turner Morrison's New Home.

On Monday, everybody gathered at the imposing block of new offices which has been erected by Martins for Messrs. Turner Morrison and Co., Ltd., at No. 6, Lyons Range, when the ceremony was performed by Mr. H. C. Edmondson, the present senior partner of the firm. He made a short and simple speech on a note which has become rare in these days. "The history of Lyons Range—first a mud flat by the Hooghly, then small houses standing in gardens, then ordinary looking offices, and now great buildings—is typical of the history of Calcutta and of British Rule in India. It is said by some that the mission of the British merchant is, and has been, to exploit India. It is not exploitation to make two blades of grass grow where only one blade grew before. It is not exploitation to convert a patch of mud and jungle into a stately city, or to establish great industries giving employment and wealth to millions, where there was only poverty and ignorance before, to bring peace and security where there was only disorder and oppression. The British merchant has nothing to be ashamed of, but has everything to be proud of in the last 150 years of Indian History."

"Some say that British Rule is passing, and speculation is rife as to what the result will be. The fact, that we and others have put millions of money into these great buildings that have transformed Clive Street and its surroundings, goes to prove that some of us, at any rate, are not pessimists, but believe that Britain's guiding and protecting hand will be with India and behind India, in some form or another, indefinitely." Well and wisely said.

Lady Sanderson.

In spite of the fact that it was known that Lady Sanderson had been seriously ill for some time past, the cable which announced her death on January 24 came as a real shock to all who had had the privilege of knowing her. The breadth and quality of her public work, throughout the War and since, have made a mark upon the life of the city which will be permanent; she was a great lady and a generous and warm-hearted woman, and there is universal sympathy for the Chief Justice in his bereavement.

Men and Things.

The confidence underlying the recent speeches of the heads of British Banking organisations is observed with much satisfaction here, where everyone feels that things are looking up; but no one has any money. Sir Henry Wheeler, the Governor of Bihar and Orissa, has been in Calcutta this week making a cheerful speech to the Mining and Geological Institute at their annual dinner. Major Graham Pole, "of the British Labour Party," is busy talking in north Calcutta. The Corporation has at last agreed to make a grant to the Nursing Institution of Rs.18,000, being Rs.5,000 less than their previous contributions. A purchaser of War stores, who invested in Wills' Gold Flake Cigarettes, has just obtained a judgment carrying heavy damages against the Imperial Tobacco Company, who tried to stop him selling them in India. Lastly, the dangers of existence are seriously increasing; with hundreds of new motor buses, mostly driven by Sikhs, now added to the mixture, the streets are almost impassable on the surface: now we learn they are equally so underneath; for the Drainage Engineer announces that the sewers are hopelessly overloaded, and there is no money to reconstruct them; a cheerful prospect!

The Trivial Round.

The Turf Club Winter Meeting has closed and, on the whole, the season has been a brilliant one; but it seems that the Betting Tax has hit the Club more than a little. A statement has been issued denying that the construction of the new course at Barrackpore means leaving the Maidan, and no one will be more pleased at this than the Indian spectator, to whom the Races are always a *tamasha*. The racing fraternity has gone to Lucknow this week for the Civil Service Cup. The preliminary accounts of the Pantomime are issued, and Rs.10,000 is distributed to charity; well up to a high standard. Almost as many people came off at the paperchases last Friday as went on; with the population steadily going outwards, it becomes more and more difficult to find a "decent" course. The Tennis Championships have seen some excellent play, and nearly all the previous holders have already lost their titles; the finals are just beginning. The third Symphony Concert took place on Sunday and the crowded house was very satisfied with the work of the orchestra, which is settling down to really serious achievements. Salisbury and his Quaints are at the Theatre and putting up a very good show. More cold weather has returned; there is many a worse place than The Ditch.

Markets.

The jute market during the past week has not maintained the strength obtaining previously; but, in spite of this, which has been brought about mainly by the absence of inquiry, rates have not changed materially; gunnies have dropped still further and the same remark may be made as regards heavy goods. The piece-goods market, on the other hand, has shown a slight improvement, buying having been of a more general character, in which the up-country markets have participated; the position has created a better feeling of confidence in the market, which has been dead for so long. The tea market continues to command advancing prices in London and, with more competition at the sale here, prices have risen for most qualities. It is anticipated that about three more sales in Calcutta will see the end of the crop.

Calcutta's trade in December 1925 does not compare favourably with the trade in the previous month, both imports and exports showing a decline, the former from

Digitized by Google

574 to 599 lakhs and the latter from 1641 to 1541 lakhs. On the other hand, compared with the figures for the corresponding period last year, imports record an increase of 47 lakhs and exports a decrease of 46 lakhs.

Little of interest is reported from the stock markets. Jutes opened very weak; but the suggestion, that the output be further reduced, temporarily created a steadier market. This proposal came up at a meeting of the Indian Jute Mills Association, at which it was decided that the situation did not justify such action; jute shares have reacted in consequence. Little or no interest is being taken in the cotton section, but a certain number of coal shares continue in demand; there is a feeling here that there is no justification for the recent improvement in this market, and the rather less general inquiry for the shares may be due to this cause. The tea share market has reflected the improvement in the commodity and has come in for considerably more attention; rubbers have been neglected on the further reaction in the raw material. Government securities and investment stocks have continued to attract buyers; but, with little scrip on offer, the volume of business has been small.

The demand for money has not been so noticeable this week, but rates remain unchanged. Exchange continues steady.

THE INDIAN CIVIL SERVICE.

(By Our Bombay Correspondent.)

The sudden alteration in the value of money has hit the man with the fixed income hard all over the world, but nowhere harder than in the Government services in India. Twenty-five years ago it was universally recognised that the Indian Civil Service offered a clever young man his best chance of a comfortable competence. Half a dozen men who had founded the great industries of India were immensely wealthy men; but, as compared with ordinarily succesful men in the Civil Service, their equals and contemporaries in commercial life had no advantage, either in income during their period of service in India or in the amount on which they could expect to retire. "Good pay, but exile," was the definition of the Indian Civil Service given in a novel of about that date by Mr. C. B. Fry; and that no doubt represents the view of Mr. Fry's generation at Oxford—the generation which is now about at the top of the Indian services.

The inducement in those days was that a civilian had a reasonable chance of becoming a collector in ten years. In that capacity he drew, with pay and allowances, something over Rs. 2,500 a month, and live up-country in extremely comfortable circumstances. He had the option of staying on in the service for twenty or twenty-five years longer, with ample means to educate his children, and then retire on his pension of £1,000 a year. Even if he was stationed in one of the Presidency towns, his income was at least as good as that of any but four or five of the senior merchants, and he had no difficulty whatever in keeping up his position. The change that has come over the civilian's outlook on life is not solely due to the change in the value of money, and to the general adoption of a higher scale of expenditure. There is, of course, an increase of income all down the scale of the commercial community: the few wealthy men have become milionailres. The seniors earn and spend two or three times as much as they used to do, and even the assistants on first joining draw double the salary that they used to do. But the trouble is that the prospects of the Civil Service have grown worse not only relatively but actually. At one time or another, a very serious block in promotion has occurred; and, speaking generally and without reference to any particular cases, I should say that, in most cases, it takes nearly twice as long to reach the grade and pay of a Collector as it might have been expected to take twenty years ago. A man of ten years' service would still be very comfortably off as a Collector up-country on Rs. 2,500 a month; but, instead of that position, he is at present probably drawing a good deal less than that at fifteen years, in a Presidency Town: and that barely constitutes a living wage.

In days when economy in the public services is rightly and urgently demanded, it is impossible to adjust matters properly: nor is it clear what scale of increase would be adequate to the present situation. The block in promotion has been recognised by the adoption of a time scale which provides to some extent for those who are obviously underpaid by the salary of their appointment: certain concessions have been made in the way of free passages and, although the contribution of four per cent. of salary to Pension Fund is still compulsory, it is to operate as a provident fund, returnable with interest on retirement: which will work out at something like a capital sum of £4,000 to those who serve full time.

But it must be admitted that, even with these concessions, the prospects of the Indian Civil Service are not attractive, either to those who are thinking of joining it now, or, more especially, to the men of fifteen or twenty years' service, to whom a pension of £1,000 a year now presents itself in a very different light to what it did when they first came out to India: and it is a most unfortunate thing that this great Service should now involve a life by no means free from financial struggles.

All that can be said is, that it is not at all certain that present financial conditions will be permanent. Twenty-five years ago £1,000 a year was an adequate, if not a splendid, retiring annuity: and nobody can say whether it will not be adequate once again in twenty-five years' time. Estimates of the value of money twenty-five years or even ten years ahead, which seemed so safe and easy in the quiet times of the Victorians, have been upset by the inflation and deflation of war and peace: and few can be bold enough to say whether the merchant or the civilian will be the richer man in the India of the next generation.

INDIA OFFICE COMMUNIQUE.

Subject to the necessary legislation, it has been decided to reconstruct the Royal Indian Marine as a combatant force, to enable India to enter upon the first stage of her naval development, and ultimately to understake her own naval defence. Subject to his Majesty's approval the service will be known as the Royal Indian Navy and will fly the White Ensign.

Its functions in peace time will be as follows:—

(a) The training of *personnel* for service in war.

(b) The services required by the Indian Government in the Indian Ocean and Persian Gulf.

(c) The organisation of the Naval Defences at ports which are under the control of the Indian Government.

(d) Survey work in the Indian Ocean.

(e) Marine transport work for the Government of India.

The fleet will consist in its first stage of development of four sloops, two patrol craft vessels, four trawlers, and two survey ships, together with one depot ship. The inauguration of the Royal Indian Navy will be entrusted to the *personnel* of the existing Service, subject to any necessary readjustment of cadres. Indians will be eligible for commissioned rank, and the changes which this policy involves will be carried out as soon as agreement has been reached in consultation with the Admiralty on the details of administration, organisation, and finance.

CORRESPONDENCE.

THE ANGLO-INDIAN QUESTION.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I read, with interest, your critique on Mr. G. B. Scott's letter, in your issue of January 28, on the Anglo-Indian question, and fully agree with the conclusions arrived at. I should, however, like to point out (with reference to the remark that no attempt was made by the community to enlist as soldiers) that no less than 10,000

Digitized by Google

men and women of the domiciled community went on active service in all the arenas of the War: and, besides this, over 20,000 Anglo-Indians were enrolled in the Indian Defence Force, thus giving over half of its male population. In fact the only class of His Majesty's subjects in India to whom conscription was applied were the Europeans and Anglo-Indians (known collectively as the Domiciled Community), so that every able-bodied Anglo-Indian was already an enlisted soldier. If they had been sent, in a body, overseas, a much larger force of British soldiers would have been necessary for the internal defence of India. Anglo-Indians not only guarded the lines of communications (such as Railways and Telegraphs) but also maintained them at a critical stage of British history in India.

They undoubtedly have their faults (like all other communities) but their chief drawback is the want of higher education, and the apathy of Government to assist them to hold their own as a minority community, under the changed conditions in India.

"The leaders of the community" (to quote from the eighth Quinquennial Review on Education) "increasingly realise that the future of the Anglo-Indian youth lies in India and that, if Anglo-Indians are to compete on equal terms with other Indian communities, they must avail themselves of the opportunities for higher education afforded by Indian Universities." There is, however, reason to believe that the community are realising this as the same report refer to "the increasing tendency of Anglo-Indian youths to proceed to Indian Universities." But, after all, it is not the "gifted few" that we are troubled about, but the "less fortunate" (who form the majority in every community) who either have not the desire for, or whose parents have not the means to give them, more than a Secondary education. Out of a total of 22,000 lads, less than a thousand are studying for various professions in training colleges, etc., while over 7,000 are in the middle and primary schools, and the remainder, nearly 14,000, are in High schools. What are the prospects for these boys? They are debarred from emigration to the Colonies owing to the colour prejudice; they are unable to take to agriculture in India owing to the low pay of Indian labour, and climatic conditions. To enter into business needs capital which, as a community, they do not possess. Hitherto they have had their "preserves" such as the railways, telegraph, customs, clerical and other subordinate services; but the adoption of a policy of Indianisation of the services renders it necessary for them to share these careers with their Indian compatriots. These are the bare facts which must be faced: and it is the duty of the British Government (as you rightly point out) "to come to their rescue before it is too late." In the matter of higher education the Government can materially assist, by the grant of more scholarships to youths of proved ability and by temporary advances to parents (under certain safeguards) who cannot afford to pay for the higher education of their children. Such advances could be given from the general and provident funds of the employees. (Indians would of course be entitled to the same privileges).

For the "less fortunate" the Army should be thrown open to them as is the case elsewhere. It has been argued, and perhaps with some foundation, that the right stamp of Anglo-Indians would not be forthcoming to enlist as ordinary soldiers. If that is the case, there are ancillary branches of the Army, such as the Indian Army Service Corps, the Indian Ordnance, Military Works Service, Grass Farms, etc., which require certain educational qualifications above that of an ordinary soldier, and for which Anglo-Indian lads from High Schools would be well fitted. Before the War, recruitment for these services was made mainly, if not entirely, from the non-commissioned ranks of British Regiments; but, under the policy of Indianisation, Indians are now being admitted freely. Why not Anglo-Indians, who save the State over 3¼ crores of rupees annually by their voluntary military service in the European Auxiliary Force? Such a scheme has the support of no less an authority than General Sir George MacMunn, late Quarter-Master General in India, whose views on the subject are well worth the serious consideration of the British Government.—I am, etc.,

H. A. GIBBON.
Vice-President, Anglo-Indian Association,
Chiswick, February 9. London.

THE INDIAN MAIL.

Reduced Railway Fares.

A third great railway has now announced a reduction in fares—the North Western. The new first and second class fares are the same as those introduced by the East Indian Railway, announced in last week's issue: with the addition—possibly existing in that case also, though not mentioned—of the restoration of the pre-War concession of return tickets at one and a half fares. The North Western Railway has fixed on a new short-distance "zone" for third class journeys, of 50 miles against 150 decided on by the Great Indian Peninsula, and 300 by the East Indian. The fares have been reduced from 3½ to 3⅓ pies per miles up to 50 miles, and to 3 pies per mile thereafter. (Twelve pies go to an anna, which, at the present rate of exchange, is worth a little over a penny.) These three important railways have now, therefore, fixed on three different rates for third-class fares: the N.W.R. 3⅓ pies per mile for the first 50 miles and 3 thereafter: the G.I.P. 4 pies for the first 150 miles, 3½ for the next 150, and 3 thereafter: the E.I.R. 3⅓ pies for the first 300 miles and 2½ thereafter. There does not seem to be any really valid reason why these rates should not be assimilated to one another, and a universal rate arrived at to cover all the railways of India except those which, by reason of special expense in construction, such as the hill railways for instance, have a recognisable right to charge exceptional fares. When the new Rate Tribunal comes into existence, one of the first questions to which it might most usefully turn its attention will be the standardisation of fares on the great railways of India. No doubt, everyone of them will demand a perfectly free hand in the matter; but, in the interests of Indian travel as a whole, it does not appear proper that any such demand should be listened to. It is, however, noteworthy that the three railways mentioned are now all Government lines: and the absence of uniformity, just where one might most reasonably have expected it, makes the outlook, in this respect, unpromising.

The official announcement says that, if travelling on the N.W.R. is not stimulated by the reduction, its result will be a decrease in earnings of about 33 lakhs of rupees a year; more than half as much again as that predicted, in similar circumstances, for the G.I.P.

Non-co-operation Again.

Mrs. Besant, not content with her attempt to disrupt the Theosophist movement, has now decided to introduce a fresh disturbing element into the politics of India. It is, perhaps, only fitting that she should appear as the champion of a lost cause, and desire to revert to Non-co-operation. She has announced that, if the House of Commons throws out her Commonwealth of India Bill, she will advise all the Legislatures of India, Provincial as well as Central, to reject their Budgets. In order that such a procedure should produce a proper effect on Great Britain which, by a rejection of her Bill, will have placed India under the "intolerable grievance of formally refusing her formal and precise demand for freedom," she will also call upon "the people of India to support their representatives by a wide-spread, peaceful and universal agitation which can have but one ending." Considering that, when a resolution in favour of Mrs. Besant's Bill was proposed in the All India Congress, it was impossible to find a seconder, these ideas read rather strangely; but it is certainly true that, if it were possible to start the agitation that Mrs. Besant demands—which, of course, it is not—it could have but one ending, and that a very early one; ignominious collapse.

School Discipline.

Among the cases that came before the Calcutta Law Courts in mail week was one, stated to have "created a great deal of sensation," in which the Headmaster of a local High school prosecuted one of his pupils for assault. It appears that, owing to concerted insubordination in the senior class, the Headmaster had fined them eight annas each: and that one of the assistant masters had declared that a boy of the name of Ray was the ringleader, characterising him as "the worst boy of the class and a blacksheep." On hearing this, the boy went to the Headmaster and "demanded explanation." The Headmaster retorted by asking the boy for his explanation and announced that he fined him fifty rupees. The account proceeds: "The boy pushed a chair which knocked the Headmaster on the ground, whereupon, it is alleged, the boy caught hold of his neck and gave him kicks and blows. On hearing the row the other teachers appeared on the scene and rescued the Headmaster."

Perhaps some of those who read the report of the case may have remembered the daily fight that Gilead P. Beck, when he kept a village school, used to have with the boy named Pete. "Any little thing set us off. He might heave a desk at me, or I might go for him first. Sometimes it took me half an hour, and sometimes the whole morning, to wallop that boy. I was fond of Pete, and he was fond of me. Ways like his kinder creep round the heart of the lonely teacher." The parallel does not hold, beyond the "pushing of the chair"; for it was the boy that walloped the master, and his way of doing so does not seem to have crept round the heart of the teacher. But the case throws an unexpected light on the difficulties of education in India, the lack of fuller facilities for which provides a constant theme for complaint against the Government. One of the chief difficulties has always been the provision of an efficient teaching staff: and it is not easy to imagine any Western schoolmaster enforcing discipline in his school by a system of fines, or resorting to the law courts when the system was forcibly broken down. The publicity given to the case is not likely to improve matters, at any rate in Bengal: it is more probable that it will encourage indiscipline among unruly scholars, and will impel Bengali Headmasters, when faced with insubordination, to indiscriminate "leniency," or even perhaps to resignation, lest a worse thing should happen.

Some Charm.

An Indian paper advertises a charm at the price of two rupees for six months or five rupees ("five times more powerful and gives immediate effect") for a year. It is unnecessary to give the advertiser's name, for he specifically disclaims any attempt to make a profit—"the cause of selling this most highly beneficial and invaluable object at such a low price is only to do good to the public both rich and poor for the sole object of doing divine good at this critical time": also because he explains that "it cannot be prepared at any time but only when the sun comes at its original place when during a short time it is prepared at the cost of great trouble and sacrifice": not only that, indeed, but "at the risk of one's life—so that the less he sells, the less danger will there be to his philanthropic existence.

"If shop-keepers keep it in their cash boxes they will find nine in one on the very day, i.e., they will find an increase in the cash on the very day.

"Just as an iron bar shelters the big building offices against the electric storms and thunders, this Charm saves one against many diseases, i.e., plague, cholera, consumption, convulsions or sudden deaths, difficulties, misfortunes and miseries.

"Man or woman will easily and quickly unite into marriages by its possession.

"This Talisman will help to pass in all sorts of examinations.

"In races and lotteries, there is nothing equal to it."

INDIAN EXCHANGE.

London, February 15.

Markets in India have shown little signs of animation during the past week, but rupee exchange for ready and near delivery is still maintained at 1s. 6 5-32d. T.T.

Reports received indicate that a very trifling amount has been done at this figure, as buyers are still holding out for 3-16ths, at which a small business has been done, and some near forward transactions are also reported by merchants at 1-64th lower. Other remitters with larger amounts to settle have had recourse to Government, who have been buying moderately for immediate delivery at 1s. 6 3-16d. Forward rates are inclined to be easier and are quoted 1s. 6 5-32d. T.T. to the end of March, 1s. 6⅛d. April, and 1s. 6d 3-32d. for the monsoon months. In Calcutta some fixtures were reported at 1s. 6⅛d. for delivery in May.

With every prospect of a dragging cotton season in Bombay, it would be imprudent to anticipate any pronounced downward tendency for a month or two, and present conditions may be expected to run on until the end of March.

First-class commercial bills cannot be placed under 1s. 6 7-16d. three months' sight, and owing to inactivity in exports, merchants have had less to offer.

The London market remains quite steady and some business has ben done at 1s. 6 7-32d. T.T. and a little way ahead 1s. 6 11-64d. has been obtainable.

There are sellers for the end of March at 1s. 6 5-32d. but at the moment there are few buyers at this rate. The market is steady with very little doing.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

The Future of Salonika.

I have just had a most interesting interview with a prominent member of the British Colony at Salonika. He is most impressed with the future before that city, which in his view is destined ultimately to become the greatest port in the Mediterranean, and he lays great stress on the prospects for British enterprise there, given that our business men can put aside their traditional conservatism. "Salonika," he pointed out, "has a natural and large harbour, and during the War as many as 60 to 70 ships were in the harbour at one time, but navigation is at present handicapped owing to silting. The great Vardar scheme which the Foundation Company is to carry out will materialy affect conditions in the harbour, for the course of the Vardar is to be altered so that that river will have its outlet away from the harbour which in consequence will be free from silting. Apart from its wonderful harbour the situation of Salonika is all in its favour. Actually the mail service from this country to Salonika takes three days, less five hours, which is appreciably quicker than to Constantinople. I think that eventually the British mail service to the Far East will go by way of Salonika."

The Promise of Macedonia.

Turning from the port to the hinterland he emphasised the enormous influence that the influx of refugees is going to exert in Macedonia and indirectly on the port itself and on the prosperity of Greece generally. "Macedonia," he said, " is one of the richest agricultural regions in the world. For centuries the land has been practically unexploited, and all that time the rivers have been fertilising the country. Anything will grow in Macedonia—grain, rice, tobacco, cotton, what you will—and the result of its development will be a yield of hundreds of thousands of tons of grain annually. This grain, or the bulk of it, will have to be exported through Salonika, and there alone one has a factor which is going to make the port a very important trade centre, though it would be that in any case for its position makes it undeniably a gateway to some of the Balkan markets."

Salonika To-Day.

He went on to discuss business prospects in Salonika to-day, and declared that most people here have a totally erroneous view of the place. "It is now a wonderful city," he said, "with large and imposing buildings and a population of 400,000. The inhabitants are very go-ahead, for they have to make a living, and as the city develops, as it will, the trade opportunities presented there will be very important. Unfortunately, it is impossible to feel any great confidence that British manufacturers will take advantage of the outlets owing to their absurd conservatism. Their attitude is that they have the Empire markets, and therefore there is no need for them to go to the Balkans for trade. As illustrating this I would mention that it is practically impossible to get an English car in Greece. But there is great scope for the sale of motors in Greece, and surprising as it may seem the traffic in some parts of Athens is not unlike London. As an instance of a possible opening, I would point out that the Greek Government will be requiring a very large number of motor vehicles. Their stocks are completely depleted, and they have never replaced what they lost in the War."

The British Industries Fair.

I paid my first visit to the Fair at the White City yesterday morning, too early to be able to judge whether the expectations with regard to business will be justified or not. One Fair at the White City is very much like another, but I noticed that several of the sections are much larger than they were a year ago. This is particularly the case in regard to sports goods, which make a very fine showing. This is as it should be for Great Britain has always led the world in the production of games equipment, and it may be hoped that this newly aroused interest in the Fair presages a determined attempt to obtain some of the increasing trade abroad, particularly in outlets like the Near East. As usual the china, earthenware and glass section makes a brave display. I always think this is one of the most attractive sections owing to the outstanding beauty and grace of the glass and pottery. Another section which is larger than before is that devoted to fancy goods and brushware, while the wireless section and that devoted to musical instruments are well worth the closest inspection. A detailed review of the exhibits wil appealr in these columns next week.

Cable Facilities to Iraq.

I note with interest the introduction by the Indo-European Telegraph Company of a daily letter telegram service between the United Kingdom and Iraq at the rate of 6d. per word, which, as in the case of similar services, involves a minimum of 20 words. The Indo Company already provides an excellent service between the United Kingdom and Persia, Persian Gulf and Iraq, as well as India and the Far East, telegrams being carried without any intermediate re-transmission from the United Kingdom to Teheran for Persia and Iraq, and from the United Kingdom to Karachi for India and the Far East. The daily letter telegram system, judging by its popularity, has come to stay, and the service "Via Indo" now instituted will be a welcome accession to existing facilities.

America and Rubber.

"Withington" writes to me with reference to a note I wrote last month in which I quoted a view that had reached me to the effect that February might see a "sharp upward movement," and draws my attention to a letter in a contemporary, the tenour of which is that America has satisfied her demands for the first half of this year. The prospect of an upward movement was, of course, dependent on American buying, and it was not imagined that America would have been able to abstain so long. The publication of the December figures of American stocks, however, threw new light on the position, showing as they did, that consumption has been cut down to a remarkable extent. As there is no doubt as to the large purchases of America for forward delivery it may well be that they will be able to abstain from buying for a considerable further period. On the other side of the account is the factor of prospective activity in the American motor industry, and if the output of cars develops as appears to be expected, no efforts by America to curtail her consumption of rubber will be of avail. We must wait and see. *En passant* I have just received the London rubber market review of Messrs. Charles Hope and Son, who point out that after the somewhat phenomenal increase in consumption in 1925 it is rather more difficult than usual to give an estimate of production and consumption for the current year. They state that they do not think there can be any doubt that at present the production of raw rubber is in excess of immediate consumption. Their estimate of consumption for this year is about 605,000 tons, and they say that they would not be surprised if this proved a too liberal estimate. World production, on the other hand, is put at about 660,000 tons, this provided the price of the commodity does not fall below 2s. for any length of time. This would give a possible surplus of 55,000 tons which would have the effect of stabilising the market. As to the outlook after 1926, it is interesting to note the statement that "the general and accepted opinion is that for the next few years there will not be sufficient raw rubber available to satisfy manufacturers' requirements." That contingency hanging over the market will help to correct any undue decline in the price of the commodity in the event of America's purchases being lower than expected. The share market later in the year will be influenced by a factor other than the price of the commodity the substantial dividends that will be declared—and that is why I am of the opinion that in a few months, holders of good shares will see them stand at a higher figure than they do at present.

MOTOR ROADS IN EGYPT.

The Egyptian Government has been paying considerable attention during the past year or so to the development of good roads. Eventually, through the combined efforts of the Tanzim (roads and streets) department of the principal municipalities and the department of main roads and bridges of the Ministry of Communications, a network of first-class roads is planned to connect all the important cities of the Delta and extend along both sides of the Nile from Cairo to the villages of Upper Egypt and westward to Fayoum (says an American Consular report).

A splendid motor road, most of which was macadamised within the last year, stretches from Cairo southward to Luxor. Forty miles of macadam highway extend up the right bank of the Nile, via Maadi, to Heluan-les-Bains. Shorter roads, with excellent roadbeds, run to the Pyramids at Giza and to Heliopolis on the western extremity of the Arabian Desert.

Alexandria and Port Said have only a few short roads suitable for motor touring. There is practically no good road leading from the narrow peninsula on which Port Said stands at the northern extremity of the Suez Canal. A good motor road extending eastward from Alexandria to Abukir, about 15 miles, has been in existence for several years. Branching off the Alexandria-Abukir road about midway is a new macadamised road leading to within a few miles of Rosetta at the western mouth of the Nile, about 60 miles from Alexandria.

The roads mentioned mark the practical limit of passenger motor travel in Egypt to-day, apart from desert touring, which is engaged in by many Egyptians. The Desert Touring Club was organised some years ago and, with the recently established Royal Automobile Club of Egypt, makes regular scheduled trips from Alexandria and Cairo to oases in the western desert. The trip from Suez to Cairo (90 miles) over the Arabian Desert can be made in four to six hours, depending upon the condition of the stream beds and the power of the car. This route is being greatly improved.

The roads from Port Said to Cairo (150 miles), Alexandria to Cairo (130 miles), from Cairo northward to the Delta barrage (15 miles), and from Cairo westward to the Fayoum Oasis (70 miles) are being constantly improved, and within the next few years should be thoroughly macadamised and suitable for touring and motor transport. At present these roads, which for the greater part are mere country dirt roads, are very dangerous and almost impassable in wet weather because of the deep mud and the heavy pedestrian and animal traffic. Additional danger lies in the fact that long stretches of these roads run parallel to canals, with no safeguards to prevent travellers from falling in.

The macadam roads improved during the last year were surfaced with local bitumen, a mineral oil similar to the road preservatives and surface preparations used in the United States. The bitumen is hauled to the scene of the work in steel drums and applied after heating. The newly surfaced roads are about 18 feet wide, with a very slight crown. The dry climate and almost uniformly level topography offer little difficulty in the way of grades and drainage. The nature of the traffic is not such as to damage a well macadamised road, as camels and donkeys carry the bulk of the load, and few vehicles except automobiles are in use. The narrow-tyred heavy carts used in southern European countries, and which are so destructive to roads, are not found in Egypt.

The total foreign trade of Bulgaria in September reached a record level. The exports were 33,622 tons, valued at 656,675,000 leva, and the imports 35,079 tons valued at 669,746,000 leva. For the first nine months of 1925 the value of the exports was 4,238 milion leva, and that of the imports, 5,572 millions leaving an adverse balance of 1,334 milions.

MOTOR TRANSPORT IN GREECE.

(From a Correspondent.)

The use of the motor in Greece has greatly increased during the past few years. So much so is this the case that in certain squares in Athens one could almost compare the motor traffic with London. This increase is bound to continue, as horsed vehicles are ceasing to be used. The present official number of motor vehicles in Greece is over the 10,000 mark. This includes lorries, cars, etc.

With the recent influx of refugees into Greece the traffic problem in Greece has become serious. There is no doubt that, as in large centres in other countries, the trams in certain congested thoroughfares will have to give way to buses. Whereas in 1923 the bus was practically unknown in Athens, to-day there are about 700 of various types. New suburbs are being continually built in the outskirts of Athens to provide residences for the refugees and all these places will have to be linked up by buses. The present population of Athens and Piræus is over one million.

The 700 buses are owned by some 500 to 600 individuals, all owning one or two buses. The principal owner is the Omnibus Company, which has some 30 ex-London General Omnibus Company buses, including double deckers.

The bus and motor traffic in Athens will be greatly increased, as the Government are giving special attention to the asphalting of roads the widening of streets, etc.,

Motor traffic in Salonika, Kavalla and Drama has greatly increased and may claim 20 per cent. of the above-mentioned official number of 10,000 vehicles. The population in Salonika is now over 400,000, and this increased population is still being served by the same tramways as in 1912 during the Turkish occupation. Notwithstanding the appalling state of the roads in Salonika, there are several buses at work and a large number of taxis, cars, etc.

Drama and Kavalla are the tobacco centres, and most of the tobacco is brought in to Drama from the outskirts and is transported to Kavalla, the port of shipment, by lorries, as no railways exist.

Macedonia is now being opened up, and with the Foundation Company at work on extensive irrigation, motor transport will be required not only for the work but for the new lands that are to be developed. Greece is poorly supplied with railways and it will be many years before the necessary lines will be laid. Hence the need for motor transport to fill the gap.

In Macedonia and Thrace transport to a great extent is still being carried on by horse carts and buffalo carts. Of course, as the roads are improved these will disappear and be replaced by motors. It may be said that 95 per cent. of the lorries used in Greece to-day are ex-Allied stocks. These stocks are practically exhausted or should be in the course of a few months. As regards motor cars, apart from a few cars left from the Allies the majority are new—imported mostly from America, France, and Italy. In the case of new imports an English make is practically unknown.

On the whole, the introduction of motor cars and lorries has not been profitable so far in Greece, except perhaps in individual cases where the owner of a vehicle has also been the driver and thus has been able to look after his interest as regards driving, repairs, etc. Paradoxical as it may seem, one of the principal causes of this has been the sudden and quite unexpected increase in motor traffic and transport. Very few properly trained chauffeurs were available, and consequently owners had to take what they could get. The Government were naturally bound to issue chauffeurs' licences hurriedly to cope with the demand, and thus it happened that inexperienced drivers caused no end of damage and the repair bills were appalling.

Another cause has been the price of benzine. As already stated, no really large company exists, and the owner of one car or more without much capital was bound to buy his benzine, tyres, etc., at retail prices. Very few possessed their own garages or workshops, and in consequence had to pay heavy bills for repairs. In addition to all this came the keen competition caused through the sudden increase in the number of vehicles in opposition to one another.

But this much can be said, that despite these drawbacks the motor vehicle has been established in Greece for good. It will replace trams and undoubtedly the horse carriage, horse cart and buffalo cart. But the future is with the large concern. The individual owner has had such a bad experience that he will not be much of a competitor in the future.

Apart from the few British cars left by the Army, such as Vauxhall, Sunbeam, Wolseley, Daimler, etc., British cars imported have been so insignificant that they need not be mentioned. The fact is the British car has not had a chance to compete. This is because firstly the British manufacturer has refused to tackle the Greek market seriously and to depart from his hard and fast rule of business terms. Secondly, the exchange has been against the British article as compared with the French and Italian currency.

The American cars, which have had to compete against the exchange, hold the lead, then come the French and Italian cars. German cars are very much in the minority, probably less than the British.

The American gives a good-looking car, plenty of show, fancy upholstering, etc. This splendour suits the Greek market as it attracts attention, for the average Greek has gone in for looks in the past and not for material. But this is now passing, and the Greek finds that the upkeep of his fancy car in repairs, tyres, etc., coupled with its short life, is not a paying game.

The American idea of giving a cheap and fancy article with a short life is, I am afraid, not going to suit the Greek market and the bad roads. A further drawback to the American, French, and Italian makes is that there is such a variety of cars imported that no spares are available. The question of spares plays an important part, and the Greeks are now realising this, and will not purchase a vehicle unless fully assured of spares.

The novelty and rush has passed, and the owners and drivers have gained experience. That is exactly where the Ford scores there is an abundance of spares available all over Greece.

In the writer's opinion, and he speaks with some experience, the British car is the best and the cheapest in the long run. The Sunbeams, for instance, left by the Army in Salonika have done wonderful work. The owners using them, without exception, speak highly of them in every way. The Army gave them plenty of work, and after five years they are still to be seen doing admirable performances in Salonika. They are strong, economical, and easily repaired.

The Ford is a cheap car, and can be obtained all over Greece, but is the present-day Ford what it was? For Greece it is found that it is much easier to put a British car right during repairs than a Ford. The mass production car does not pay in Greece, for the roads are too bad for them.

There is not the least doubt that there is a great opening in Greece for any British motor company that will go carefully into the requirements of the country. There is a vast field, and lorries especially will be required. The light car for the market must be constructed to suit the

local requirements. The question of omnibus traffic will repay careful investigation.

All this can only be done on a large scale and by a strong company, for it is absolutely useless tackling the question otherwise. The omnibus business will finally be taken over perhaps for the whole of Greece by a strong combination. The Greek Government would welcome this, as they are very dissatisfied at the present state of affairs.

If a big concern takes over the omnibus business it will have its own benzine stocks, tyres, garages, etc., so that the single man will stand no chance.

COMPANY NOTES AND REPORTS.

BRITISH TRADE CORPORATION.

The report of the British Trade Corporation for 1925 states that some improvement has been apparent in general business, the effect of which is represented by the increase in acceptances, which now amount to £1,553,697, an increase over the corresponding period of 1924 of £328,432. At the last meeing of the shareholders the difficulty of carrying on banking operations in Turkey was pointed out, and an opportunity having presented itself the Corporation has parted with its interests in the National Bank of Turkey. The accounts, after meeting all expenses, show a profit of £77,112, plus £21,192 brought forward. £40,000 has been provided for contingencies and the directors recommend the fixed dividend of 6 per cent. per annum upon the "A" shares, £28,304 remaining to be carried forward, subject to income-tax.

In October, Bulgaria imported 1,100 tons of sugar, valued at 13,120,000 leva.

When Lord Irwin leaves for India he will be accompanied by Major C. O. Harvey, I.A., who will be his military secretary, and two or more officers as newly-appointed A.D.C.'s.

The directors of the Sudan Plantations Syndicate announce that if the resolution for the capitalisation of a portion of the share premium account is duly passed at the meeting on March 3 letters of allotment for the new shares will be posted on or about March 9 to shareholders registered at the close of March 1.

The production of the Dacia Romano Petroleum Company for January totalled 1,764 tons. Eight wells are producing, 8 wells are in drilling and 4 are being fitted up. Moreni wells Nos. 9 and 11 have been drilled into oil, and by swabbing are giving a production which is gradually increasing.

ROUMANIA'S RISING OIL EXPORTS.

Inadequate Railway Transport.

(From Our Own Correspondent.)

Bucharest, February 8.

The following table shows the quantity of petroleum products exported during the first 11 months of 1925 as compared with the 11 months of 1924. It will be seen that nearly double the quantity was exported in 1925. The production of petroleum is increasing very rapidly, as the export figures go to show, and a crisis has already arisen owing to the lack of sufficient railway or pipeline transport, to carry the products to the ports. A fifth petroleum train to Constantza has indeed been put on by the railway administration, but this is far from being sufficient to meet the requirements of the industry, which is faced with the possibility of having to diminish production owing to lack of storage and transport. The pipelines to Constantza for the lighter oils have never been restored since the Germans took them up during their occupation of Roumania to lay the line to Siurgiu, and it is expected that the companies will shortly make a united petition to the Government to have the pipelines restored and the transport increased without delay.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Olympia for Bombay (Liverpool, February 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—M.v. Dorsetshire for Port Said, Colombo, Madras, and Calcutta (London, February 20).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, February 24.)

British India Line.—S.s. Margha for Bombay and Karachi (London, February 19); s.s. Matiana for Colombo, Madras, and Calcutta (London, February 27).

Cunard Line.—S.s. Cypria for Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, February 27).

Ellerman "City" Line.—S.s. City of Madras for Calcutta (Birkenhead, February 22.)

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 27); s.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 6.)

P. and O. Line.—S.s. Ranchi for Bombay (London, February 19), s.s. Dongola for Colombo, Madras, and Calcutta (Liverpool, February 20).

Prince Line.—S.s. Stuart Prince for Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, February 13); s.s. Soldier Prince for Malta, Alexandria, Syrian Coast, and Cyprus (London, February 20).

The death took place on February 9, at Bexhill-on-Sea, of Colonel James William Sherrard, late of the Indian Army. Colonel Sherrard took part in the Mohmand and Buner operations on the North-West Frontier in 1915-16, afterwards serving in Mesopotamia and Palestine. He was in the Razmak operations on the North-West Frontier in 1922 and the following year.

Motors and Motoring.

By G. B. B.

Judging by some advance models and designs which I have been able to see, some interesting developments in connexion with passenger carrying vehicles are likely to become standard practice this year. There is to be, for instance, an almost extraordinary craze for the low-level frame, and although I have no wish to play the rôle of a modern Mrs. Partington, I do not view this extension with very much favour, feeling, as I do, that as so much of our future prosperity depends on our overseas trade, we should do all in our power to standardise vehicles that are suitable for overseas' use. I doubt very much whether the low-level frame is so suitable, and I am disposed to view the present tendency as the result of one of those plague-like fads which seize our manufacturers at times. Probably in a little while we shall be hearing no more about low-level frames. I may say that in many of the new models I have been privileged to view, the mania for low-level frames has led to an actual sacrifice of accessibility. In other models this sacrifice has either not been made or has not been made to a similar extent, but when it comes to having to adopt special means to render some of the units more accessable, where low-level frame construction has been adopted, one is tempted to ask where the particular advantages are to be found.

Brooklands.

It would be little short of a disaster to the British motor trade were Brooklands to be closed, for although the track is small and old fashioned and, in my opinion, unsafe for any speeds over about 100 m.p.h., it is, nevertheless, the only track of its kind which the country possesses, and consequently is the only place in England where manufacturers can test their engines and chassis to anything like the extent to which they should be tested. The rumours regarding the forthcoming closing of the track appear to be unfounded. They arose, of course, through the death of Mr. H. F. Locke King, its founder, but from what I can ascertain Dame Ethel Locke King, his widow, who has always taken a great interest in motor racing and the development of the British motor industry, has no intention of departing, in any way, from the policy of her late husband. I cannot say, definitely and from personal knowledge that Brooklands will not be closed: I can say that I consider it extremely unlikely that anything of the kind will happen and, by way of confirmation, I may mention that Col. F. Lindsay Lloyd is of the same opinion as myself.

Oil Service.

There has been more truth and more rubbish spoken and written regarding oil than about anything else connected with motors. We have had oils that "gave increased power" to the engine, presumably by functioning in the manner of the feed of a Diesel; we have had oils that performed miracles when added in small quantities to petrol; we have had oils in plain drums and in highly coloured drums; in barrels, in vats, in tanks, and in pint cans. We have had people who told us that the grading of oils was a matter of microscopic delicacy and that unless the utmost care was taken and the most abstruse knowledge shown, something would go wrong, and we have had people who, scoffingly, told us that all thick oils came out of the same tank and were merely given different names in order to assist in the task of taking money from the reluctant hands of buyers. But, be all that as it may be, every motorist knows that it is necessary to drain the oil, at periodical intervals, from the engine crank case, and to replace it with a new supply. All instruction books contain this advice, but it is not always as strictly observed as it should be, and the reason is not easy to discover. It is one of those jobs that the owner-driver is inclined to postpone because in the case of most cars it is one of the least pleasant of tasks. The majority of our petrol filling stations, as the *Motor* pointed out recently, have neglected a great opportunity of rendering their services to owner-drivers more complete and efficient, and the question may be asked: "Why cannot more of these stations be so arranged that the process of emptying and filling the crankcase is performed at one end of the car at the same time as, and almost as quickly as, motor spirit is being put in at the other?

It may be taken, as a general rule, that it is advisable to change the oil in the crankcase about every 5,000 miles. By that time it has been thinned by petrol vapour; and some of the loading, if any, has disappeared; fine particles of foreign matter have been taken up in the solution, and a change, though perhaps not absolutely necessary, is certainly advisable. In these days 5,000 miles quickly mount up on the speedometer, and even if a little short of that distance, the careful motorist, finding himself at a station equipped as suggested, should, one would think, be only too glad to avail himself of such service. In the United States, the petrol filling stations invariably are equipped for rapidly emptying, scavenging and refilling oil tanks and sumps, and the sale of lubricating oil constitutes accordingly a very important source of revenue. On the face of it, it seems so natural that a service station should be as prepared for the supply of oil and the filling of oil reservoirs as for the supply of petrol and the replenishing of petrol tanks. It seems evident, however, that the motorist has not yet grasped the convenience of a system which is general in the States, where probably 90 per cent. of the cars in use avail themselves of the garage facilities at least once a week.

Celluloid Painting.

Though the process of covering body work with a coating of pure celluloid is generally called celluloid painting. I am informed that this particular finish has to be sprayed and that any attempt to apply it by means of a brush is fatal. The finish, when properly applied, is far in advance of anything I have seen previously, and it should make a special appeal, not only to the purchaser of vehicles, either passenger or pleasure, for the Near East and India—for which countries the finish is peculiarly suitable—but

INDIAN AFRICAN SERVICE

also for this country. It is claimed for this process that it is more durable than any ordinary paint, varnish or enamel, and that it is next to impossible for it to be stained or discoloured by oil, dirt or grease. It does not present so highly polished an appearance as a well varnished surface, but it lasts and that is, after all, an important consideration.

I am asked to announce that the annual London parade of commercial motor vehicles organised by the Commercial Motor Users' Association will take place on March 27, in Lincoln's Inn Fields.

THE MODERNISATION OF ATHENS.

A recent issue of the Greek *Government Gazette* contains details of the contract made between the Government and an Anglo-Hellenic group comprising the Power and Traction Finance Company, Ltd., and the Syndicate of Studies and Enterprises. The group has obtained for a period of sixty years—

(a) The sole right in respect of the area within a radius of 20 kilometres of the Place de la Concorde in Athens to generate, transmit, transform and distribute electricity for sale.

(b) The right but not the sole right to supply electricity by agreement with any local authority, company, or person in Greece outside the said area.

(c) The sole right to establish and operate tramway services and the right as defined in the concession to establish and operate omnibus services on any method or system of traction whatever, within a radius of 20 kilometres from the Place de la Concorde in Athens.

(d) The sole right to operate the Athens-Kephissia Railway, and

(e) The sole right to operate the Athens-Piræus Railway.

For the carrying out of the contract the concessionaires will form a company to be known as the Société Générale Hellenique, which will create subsidiary companies for production, distribution, and transport.

The Transport Co. should be entitled to take over from the Athens-Piræus Railway the Société Hellenique des Tramways d'Athènes, Pirée et Extensions and the Attic Railway Co., and those companies are hereby authorised to transfer to the Transport Co. on such terms as may be arranged between them, the fixed and movable property, including tracks, rolling stock, overhead equipment, buildings, plant and stores required by the Transport Co. for the operation of the Athens-Piræus Railway, the tramway services, and the Athens-Kephissia Railway respectively.

For a period of three years from the date of this concession no authority, whether by licence or otherwise, shall be given to any person other than the Transport Co. for new omnibuses or the replacement of existing omnibuses in the area defined in the concession. This restriction shall remain in force after the expiration of the said period of three years unless and until the remaining provisions of the relative clause have been applied and enforced by the State.

A schedule to the contract gives particulars of the works to be completed and the time allotted for completion. They include the following:—

Installation of a 3,750 k.w. 50 cycle, Turbo- alternator set at Phaleron, with the necessary boilers, frequency changer, cables, sub-station plant and auxiliary apparatus. Estimated period for completion, nine months.

Construction of a new Central Station at St. George's Bay (capacity 45,000 k.w.) with the necessary high tension transmission lines to Athens, Piræus, Phaleron and Kephissia District. Distributing centres and sub-stations. Two and a half years for completion.

The Electricity Co. will provide the necessary high tension mains and sub-stations to enable an efficient supply of electrical energy (alternating current 50 cycles) to be given in the area indicated. They will also provide not less than 145 kilometres of low tension distribution mains, partly cable and partly overhead, for service of the same area. The whole of these works will be carried out by the company without any avoidable delay but in any event within five years, and not less than one-half of the work will be completed within two and a half years. The adaptation and extention of the low tension distribution system of Piræus, Phaleron and the Kephissia District will proceed concurrently.

Fifty new tramcars (motor cars or trailers) and fifty omnibuses and the necessary improvements on the system to enable them to be put into service. Estimated period for completion, nine months.

All work necessary for the electrification of the railway line from Omonoia to Kephissia to carry 1,500 passengers per hour in each direction, including the construction of an underground station under Omonoia Square for the Athens-Piræus and Athens-Kephissia lines, of a tunnel with a double line of standard gauge from the present terminus of the Athens-Piræus Railway to Attike, and of a single line of standard gauge with the necessary crossings between Attike and Kephissia. Estimated period for completion, two and a half years.

CONSTANTINOPLE IN LONDON.

Luncheon to Sir Harry Eyres, K.C.M.G.

A luncheon in honour of Sir Harry Eyres, K.C.M.G., until recently His Majesty's Minister to Albania, and of Lady Eyres, was given on February 10 at the Criterion Restaurant by a large number of friends formerly of Constantinople, where Mr. Eyres served for many years as Consul-General before he went to Albania. Sir Maurice de Bunsen presided over a gathering of fifty representatives of Pera, Candilli, Beleck and Moda, including, in addition to Sir Harry and Lady Eyres, Lady de Bunsen, Lady Lowther, Lady Neave, Sir Harry Lamb, Rev. Canon Douglas, Rev. and Mrs. M. R. Swabey, Miss Swabey, Mr. Stephen Gaselee, Mrs. Arthur Baker, Mr. and Mrs. A. Herbert Barker, Miss K. Bond, Mr. and Mrs. C. B. Charnoud, Mr. and Mrs. Percy Charnoud, Mr. and Mrs. F. W. Comber, Mr. Ernest Clifton, Mr. Maurice Eyres, Mr. C. F. M. Holmes and Miss Holmes, Mr. Charles Heap, Mr F. J. Lias, Mr. A. J. Lyster, Mr. James Morgan, Mr. Montague Bell, Mr. Robert S. Rowell and Miss Rowell, Mr. E. Seager, jun., Mrs. Neville Stack, Mr. Alfred C. Silley and Miss Silley, Mr. A. H. Scaife, Mr. Alan Stack, Mr. Harold H. Thompson, Mr. W. Tristram, Mr. H. A. Whittall.

Lady O'Conor was prevented by indisposition from being present, and a large number of former residents had written expressing regret at their inability to attend the luncheon.

Sir Maurice de Bunsen proposed the health of Sir Harry and Lady Eyres, in a happy speech reminiscent of experiences in Constantinople. In his reply, Sir Harry Eyres expressed the gratitude that he and Lady Eyres felt for the kindness shown them by so many friends. After references to the old Turkish days, he turned to Albania, where the last years of his service had been spent, and gave an interesting account of present conditions in that country, laying emphasis on the desire of the present Government to work in with Great Britain, if its overtures were reciprocated. The health of the Chairman was proposed by Mr. A. H. Scaife, and in his reply Sir Maurice de Bunsen referred to the services of Mr. A. C. Silley in arranging for the luncheon. Mr. Silley expressed the hope that, in response to the requests that he had received, it would be possible to arrange for regular luncheon fixtures among those associated with the Near East.

THE YUGOSLAV BUDGET.

(From Our Own Correspondent.)

Liubliana, February 11.

On January 27 the Financial Committee of the Skupshtina concluded its debate upon the Financial Law. The draft Budget as submitted to the Committee by the Government was discussed with exceptional haste. The Government majority did not introduce any essential amendments, merely cutting down a few items in the receipts as well as in the expenses. The Budget was passed by the Financial Committee, and has already been laid before the assembled Skupshtina.

Parliament was adjourned until January 29. It has now reassembled, and the first legislative work to be dealt with is the passing of the Budget, which the Government would like to get over as soon as possible. All the same, it is said that the Budget debates will last all through February and well into March. The new financial year begins on April 1.

According to the Government estimates which are now under discussion, the Budget for 1926-27 embodies the following figures. The total expenses of the State are estimated at 12,279,899,632 dinars. The total revenues of the State, both ordinary and extraordinary, are estimated at 12,504,303,616 dinars. There is, therefore, a surplus of 224,403,984 dinars. During the course of the debates, the Financial Committee cut down sundry items in the Government draft—the expenses by about 620 millions and the revenue by about 366 million dinars. There is, however, a strong feeling in the Skupshtina that the estimates ought to be cut down still further. We are told that on the one hand taxation has already reached the limit of the country's capacity for paying and that the taxes must be lowered; and that on the other hand expenses simply must be cut down, and the most rigid economy practised in every department of the State.

In comparison with previous years, the Budget has grown considerably. For the financial year 1925-26 it amounted to 12,321,366,220 dinars; for the year 1924-25 it amounted to 11,766,588,204 dinars.

For the purpose of learning something about the economic management of the young State, it is interesting and very instructive to examine in detail how it is proposed to employ the vast sum of twelve and a quarter milliard dinars for State expenses. Expressed in percentages, the various Departments are provided for as follows:—Supreme State Administration, 1.03; Pensions, 3.86; National Debt, 4.42; Justice, 2.44; Education, 6.20; Religion, 1.00; Internal Affairs, 5.23; Public Health, 2.46; Foreign Affairs, 1.42; Finance, 10.01; War and the Navy, 18.06; Public Works, 3.380; Transport, 24.56; Posts and Telegraph, 3.77; Agriculture and Water, 1.83; Woods and Mines, 3.58; Commerce and Industry, 0.74; Public Welfare (Social Policy), 3.65; Agrarian Reform, 0.54; Constituent, 0.04; Credits Reserve Fund, 0.78.

The revenue is derived as follows:—Direct taxation, 14.29; indirect taxation, 28.26; monopolies, 18.81; State revenues as such, 37.53; revenue from various sources, 1.

The Kingdom of Serbs, Croats, and Slovenes has a superficial area of 249,000 square kilometres and a population of twelve millions. If we consider the proportion between these figures and those in the estimates, we must admit that the latter are very, very high. During the coming financial year the burden of taxation per head of the population will be 620 dinars gross and 567 dinars net.

The deputies in the Skupshtina declare that they will do their best, during the course of the Budget debates, to get the various items cut down. Attacks upon M. Stoyadinovitch, Minister of Finance, are becoming more frequent. We are told that his Budget is too large: that his position is becoming insecure. M. Stoyadinovitch has now been Minister of Finance for several years. He succeeded in stabilising the dinar, after first raising its exchange value considerably. But the further prospects of his career now depend largely upon what he will achieve in Washington, whither he has gone to negotiate satisfactory conditions for the settlement of Yugoslavia's war debts.

ROUMANIAN CROP STATISTICS.

A Poor Year.

(From Our Own Correspondent.)

Bucharest, February 8.

The provisional figures of the autumn sowings in 1925 (for the 1926 harvest) are now available, but they are not particularly encouraging as there is a falling off in the area sown of nearly one hundred thousand hectares as compared with the previous year. The following are the figures:—1924, 3,302,765 hectares and 1925, 3,219,576 hectares. The wheat sowings are 2,813,597 in 1925 as against 2,928,417 in 1924; barley 110,858 in 1925 and 111,440 in 1924; rye 256,703 in 1925 and 237,070 in 1924; and rapeseed 38,418 in 1925 and 25,838 in 1924.

It is, of course, just possible what when the final returns are received, it will be found that the deficit shown above is partly or wholly made up.

At the present time the grain crops in most parts of the country are said to be looking well, although, of course, in the inundated districts of Transylvania, they have suffered or been completely destroyed. On the whole, however, conditions have been favourable.

BULGARIAN 1907 LOAN.

Messrs. Stern Bros. announce that they have received the following advice from the Banque de Paris et des Pays-Bas, in Paris:—"The Bulgarian Government has advised the different agents of the above loan (Bulgarian Four and a-Half per Cent., 1907) that the payment of coupon due February 1, 1926, for which the necesary funds are already provided, will be made against the coupon detached from the new coupon sheets which will replace the existing ones, in conformity with the Convention of June 23, 1925. The replacement of the coupon sheets, which should have taken place during the month of January, has not been carried out on acount of delay in forwarding the coupon sheets. A further notice will be published indicating the exact date and form to be complied with. The payment of the coupon is to be made as and when the new coupon sheets become available, which is expected to take place shortly."

Equipment, supplies, appliances, instruments, etc., imported by educational, scientific and charitable institutions may be imported into Palestine free from Customs duty, provided that the articles are consigned and invoiced direct to such institutions or to authorised representatives thereof and not to an agent; and that the representatives shall, before the articles are delivered, give a written declaration to the Director of Customs, Excise and Trade that the articles are for the sole use of the institutions and will not be used for the purpose of trade.

The figures for Roumania's revenue show that up to the end of December last the collections, apart from railway revenues, amounted to 29,199,162,687.94 lei. The railway revenues, including estimates for the month of December, amounted to 3,691,693,905.59 lei. Thus, the total revenue up to the end of December reached a figure including the provisional December estimates for the railways of 32,890,857,593.53 lei. This represents a surplus of 1,141,857,593.53 lei over the estimated revenues in the Budget for 1925, and it is expected that a further 3 milliards will be added to this surplus by delayed encashments for the 1925 Budget during the next six months.

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended February 13 states:—

Business has not been so good as in recent weeks. There has been a considerable volume of inquiry, spread over many different qualities of goods, but much of it has been on the basis of prices which producers find unacceptable. Subsequent revision has enabled a fair proportion to be brought to the order book but not sufficient to give satisfaction to spinners and manufacturers.

Yarn.—Spinners of American cotton complain that the past week compares very unfavourably with its predecessors this year. It would appear that the production from the shorter hours now being worked can satisfy current demand. Spinners of Egyptian cotton seem able to clear their output without achieving anything special in the way of price or large orders.

Exports of yarn last month amounted to 16,791,100 lb. as compared with 17,947,100 lb. in December, 1925, and 15,904,900 lb. in January, 1925.

Cloth.—Demand this week has been quieter. The bulk of the orders for India have again been in light fabrics but shirtings have shown signs of moving more freely. There has been a lull in business for China, probably due to the fact that that country is on the eve of celebrating its New Year. There is nothing of interest to report with regard to the Near East or South American markets; the Home trade has been a little more active.

Exports of cloth last month amounted to 356,096,900 sq. yards as compared with 382,184,700 sq. yards in December, 1925, and 402,808,400 sq. yards in January, 1925.

Raw Cotton.—Very uninteresting markets have again been experienced. The tendency, owing to the restriction of business, has been downwards. Closing quotations yesterday were as follows:—American Middling, 10.52; Egyptian Fully Good Fair, 18.35.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended February 4, state:—

Since our last report the futures market has again been rather weak, Sakel prices fluctuating but little and Ashmouni showing a somewhat weaker tendency; the week's summary of price movements is as follows: Sakellaridis: March, 0.01 dollars up; May, 0.15 dollars down: July, 0.33 dollars down; November, 0.50 dollars down. Ashmouni: February, 0.45 dollars down; April, 0.48 dollars down; June, 0.27 dollars down; August, 0.20 dollars down; October, 0.35 dollars down.

There is not very much fresh to report. The demand from abroad has continued to be poor, and as a consequence the commercial houses have taken little active part in the market; the large proportion of the business done has consisted of jobbing operations and some straddling between the Alexandria market and those of Liverpool and New York. We do not think that the professionals hold any position of size; they were favouring the bear side, but since the intervention of Government they have liquidated their positions and are adopting a waiting policy.

The Government has bought during the week about 4,300 bales Sakel from Fully Good Fair to Good, for which about 35 dollars to 36 dollars has been paid. The total Government purchases to date amount to about 20,300 bales.

The weak tone of Ashmouni may be attributed to the existing heavy stocks, especially of good grade cotton, due to this year's large and successful crop coinciding with a poor offtake. There is little likelihood that the Government will intervene in the Ashmouni market but, on the other hand, we hear that spinners look upon present prices of Ashmouni as comparing favourably with competing American staples and accordingly, should a commercial demand spring up for this sort of cotton, Ashmouni will naturally be the first to reap the benefit.

At the first tender day of February, 15,000 kantars dockets were issued. Heavy dockets are expected at the next two tender days of this month, but in view of the large discount of February as compared with April, exporters will be ready receivers.

Up country business has been somewhat brisker but holders continue to be extremely difficult to deal with. It is estimated that there is still in the villages about 2¼ million kantars, but whether this quantity will be sent down to Alexandria before the new season is rather problematical. It is much cheaper to carry cotton in the interior than in Alexandria, and therefore if the present paucity in the demand continues and prices do not improve holders will probably keep a good deal of cotton up-country. The stock consists of average crop qualities and a large proportion is firmly held.

We are of the opinion that as long as the Government continues to buy, Sakel prices will probably remain round about present levels. As regards Ashmouni, we consider present prices very reasonable and, unless there is a break in New York, we look for a slight rise rather than for a continuation of the decline.

The week's receipts amount to 184,876 krs. against exports 192,787 krs.; the stocks stands at 2,259,460 krs.

Spot: Minet el Bassal has been rather quieter this week and the demand from abroad has fallen away somewhat. Sales amounted to about 18,200 bales, of which we estimate 9,100 bales Sakel, 7,900 bales Uppers, 800 bales Zagora, 200 bales Brown and Pilion and 200 bales White. The Government has bought during the week about 4,300 bales of Sakel from Fully Good Fair up to Good.

Sakellaridis: Has met with a rather smaller demand than last week. All styles have been dealt in. Spot differences have hardened for Fully Good Fair and Good but for the other qualities they are unchanged.

Ashomuni and Zagora: Have been in fair demand for all qualities. With the exception of Good, which is without much change, spot differences are generally rather dearer.

Brown and Pilion: Brown has only been in retail demand, and the demand for Pilion has fallen away considerably from last week. Spot differences are generally a little dearer.

White: A fair business has been done at about last week's rates.

A branch of the Eastern Bank has been opened at Kirkuk, Iraq.

The Imperial Bank of Persia, as bankers to the Royal Air Force in Iraq, have opened a branch at Kirkuk.

Production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Company for January was 55,689 barels.

The Persian Mejliss has approved an agreement with the Junkers Company for the establishment of air mail services between Bushire, Teheran, Enzeli, and Khanikin.

The production of the Anglo-Egyptian Oilfields for the week ended February 5 was: Gemsah, 16 tons (previous week 16 tons); Hurghada, 2,939 tons (previous week, 3,087 tons).

The Turkish Assembly has voted within the last week the petroleum and sugar monopolies, the extension for four years of the tobacco monopoly, the tax on profits, which is a modified form of income-tax, the so-called fixed tax, which is a surtax on the profits tax, and finally the consumption tax of 2½ per cent. on all shop purchases (says a Reuter message from Constantinople, dated February 9).

THE WEEK'S FINANCE.

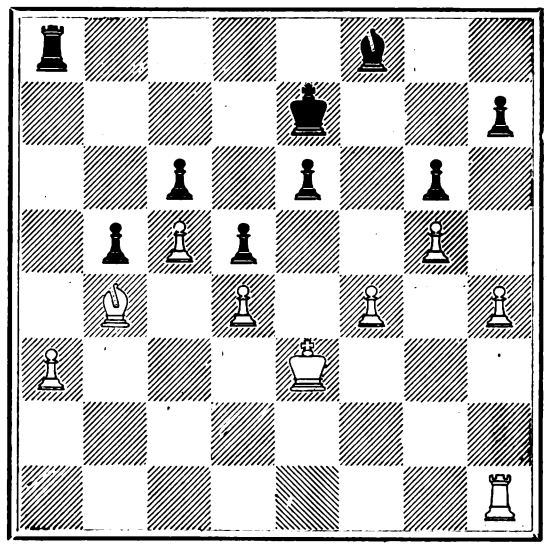
(By Our Financial Expert.)

London, February 16.

The past week has brought no revival in the stock markets, where dullness and paucity of business are almost general. Instead of the buoyant activity which was confidently expected when the year opened, conditions are such that brokers complain of unremunerative idleness. In no section is the public showing any lively interest, although tea shares are improving and some amount of investment buying has taken place in Home and Foreign Rails. The renewed fall of the franc and the long-continued failure of the French politicians to put their nation's finances on a sound basis is causing growing uneasiness and a real slump in the franc exchange would not cause much surprise. Nor is sentiment improved by the January trade returns which are frankly disappointing and fail to reflect in the export figures any sign of the improvement in manufacturers' order books, of which there has been continuous talk since October.

In spite of the apathy of the public, the small amount of business passing, and the competition of new issues, gilt edged stocks pretty well maintain the gains which they have recorded since the year began. One of the most surprising features of the Stock Exchange at the moment is the continued weakness of the rubber market and the refusal of the public to taken any interest in a section where boom conditions so recently prevailed. The share market seems to be over-obsessed with the importance of day to day movements in the price of raw rubber. These movements do not alter the fact that the companies are doing exceedingly well, and it seems to be forgotten that American buyers of the raw commodity cannot hold back indefinitely. The time is at hand when a carefully selected purchase of good rubber shares should yield good results.

The Home Railway Dividends.



The reduced dividends announced by the London, Midland and Scottish and the Great Western Railway Companies were very much in accordance with expectations. The former company reduced its rate for the year from 7 to 6 per cent. and the latter from 7½ to 7 per cent. The market was disappointed, however, with the L.M.S. announcement which showed not only that £1,000,000 was withdrawn from reserve, but also that the profits were strengthened by £625,000 previously held in suspense against a contingency which has now passed. A year ago £1,300,000 was withdrawn from reserve. The Great Western, on the other hand, makes a slightly smaller withdrawal from reserve than a year ago—£800,000 against £850,000—and on the publication of this announcement the Home Railway market was inclined to rally. The dividend on Southern Deferred stock which is maintained at the same rate of 3½ per cent. was also in accordance with anticipations. For this company was the only one of the four able to show a slight increase in traffics as compared with 1924. The same amount, namely £200,000 is withdrawn from reserve. At their present prices the yield obtainable on the ordinary stocks of the L.M.S. and Great Western companies is over 8 per cent. This seems to be a very attractive figure, and indicates a lack of confidence engendered by the uncertain outlook in the coal dispute and the severe depression in the iron and steel trades. Should the difficulties in the coal trade be satisfactorily settled the railways will soon benefit from the revival in trade which may be expected to ensue. Indeed, the railway traffics for the past week show a welcome increase, and it is not unreasonable to assume that the companies have now left behind them one of the worst years with which they are likely to be confronted. The economies which the grouping system was designed to effect are now beginning to make themselves felt and in the absence of labour troubles the companies should be able to show better results at the close of the current year.

Control of Copper Production.

Much has been heard during the past few days as to the possibility of an agreement amongst the leading copper producers for control of the world's output. On the face of it the idea is attractive from the producer's standpoint. The current quotation of the metal is below the average of the four immediate pre-War years—£63 13s. per ton. Supplies of the metal have substantially declined during the past year or so: at the end of 1925 the stocks in America amounted to only 73,000 tons as against 156,000 tons two years previously. Stocks here have also shrunk. Conditions, therefore, appear propitious for an arrangement of the kind. Whether it will prove practicable is quite another story. Directly or indirectly, the United States controls fully two-thirds of the world's copper. Many of the undertakings, although not working to full capacity, are doing fairly well even with the metal at its current price, and an advance would constitute a great temptation to turn out more stuff. There is the further point as to how any arrangement in the nature of a combine in restriction of trade would fare under the United States legislation—which is very tender on the question of trusts and monopolies. Of course, the yield in the Congo is increasing, but still represents only a comparatively small proportion of the world's total.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

France and Turkey.

Both M. de Jouvenel and the Turkish Government are to be congratulated on the unusually rapid conclusion of a further agreement between the two countries. Within a week of the French High Commissioner's arrival in Angora the necessary document was drafted and signed. This Convention deals for the most part with non-contentious questions. There has been, apparently, a slight rectification of the Turkish-Syrian frontier in Turkey's favour; but for the rest the Convention deals with such subjects as the maintenance of neutrality, military and commercial transport, the exchange of criminals and the prevention of smuggling. As British relations with Turkey are passing through a difficult stage, at a time when the Turks are inclined to imagine that their interests are best served by indulging in pinpricks against foreigners in general, it is all to the good that one of the Great Powers should have found the Angora Government in the right frame of mind for the conclusion even of a matter-of-fact agreement on matters of joint concern, but of minor importance, to both countries. None of the objections that could be raised against the Angora Agreement of 1921 can be urged against M. de Jouvenel's Convention; for in the former case it was mainly the time and the secrecy of the negotiations to which exception had to be taken. The rectification of the frontier, it may be presumed, will still leave a section of the Baghdad Railway in Syria, so that the French authorities will be able to exercise control on the military use to which the line is put by the Turks. The Angora Government, having made up its mind that Great Britain was trying to draw a ring fence round Turkey (for what particular purpose it is not stated) is inclined to regard the new Convention as a diplomatic triumph over the British Government. The mistake made in Angora is to imagine that Great Britain's interest in Turkey is political; she regards the political situation in the Middle East as crystallised, and her interest is confined to the economic sphere. She is anxious to see Turkey settle down within her fixed borders to a period of peaceful development; but there is little chance of the new Republic's doing this so long as it indulges in pinpricks against foreigners. These pinpricks have annoyed the French as much as anyone else, and if France can inspire a more wholesome frame of mind in Angora, all foreign interests in Turkey stand to benefit. It will be of interest to see whether the new Angora Convention is followed by a more amenable attitude in Turkey towards the subject of Turkish indebtedness.

The Syrian Mandate.

While the French High Commissioner has been negotiating with the Turkish Government, the Permanent Mandates Commission of the League of Nations has been holding its examination of the deferred Report presented by the French on the working of the Mandate in Syria. Mention has already been made in these columns of the fact that this Commission takes itself very seriously and subjects the representatives of Mandatory Powers to a rigorous cross-examination based on a close study of the subject. Piquancy is added to this meeting of the Commission by the presence in Rome at the same time of a Syrian delegation by no means favourably disposed towards the French Mandate. The delegation has not the right of access to the Commission, but is able to submit a petition in writing. This it has done, and in the meantime has given free expression to alleged opinion regarding the French administration held by Syria as a whole, which it claims to represent. In these circumstances the Commission's inquiry may be expected to be even more searching than usual; and if it finds nothing to criticise in French administration up to the outbreak of the Druse revolt, both

Digitized by Google

Syrian and foreign opinion will have to undergo considerable modification. As so often happens, the Syrian emissaries prejudice their case by their extremist views. It is patent that M. de Jouvenel's attitude cannot be compared with his predecessor's régime: yet the Syrian delegation appears to give him no credit for better intentions, and in so doing will inevitably put an impartial body on its guard.

Political Arrests in Greece.

General Pangalos, the Greek Prime Minister, is determined to run no unnecessary risks. According to his own official statement, various alarming rumours had been in circulation for a few days, involving the names of M. Papanastasiou, a former Prime Minister, and General Kondylis. He did not himself give credence to these rumours, but, as a precautionary measure, he considered it necessary to have the two politicians and a dozen others arrested and deported to one of the islands of the Cyclades. If it should be proved that these politicians really intend to disturb public order and the work of the Government, they are to be exemplarily punished; but General Pangalos sees no danger for public order. The Western mind will find it difficult to follow the Greek Prime Minister's line of reasoning. "Rumours," as a rule, do not concern a Government, whose sources of information should anticipate general knowledge. As the rumours had been current for a few days, it would be thought that their accuracy or inaccuracy could have been established with sufficient closeness to justify either summary arrest or no action at all. M. Papanastasiou, however, was shown the warrant for his arrest one afternoon and elected to hold himself at the disposal of the authorities the next morning. If there had been adequate reason for the arrest, we should have expected the conspiracy to have declared itself between the moment when the most prominent "conspirator" was warned that he had been found out and his leisurely departure for exile fifteen hours later. Nothing happened, however. The deportations are carried out, and an official statement is issued virtually assuring the public that there is no foundation for the rumours on the strength of which the deportations are being made. When Paul Kruger imagined that he had to deal with a conspiracy, he said that he preferred to allow the tortoise to put out its head before he attempted to cut it off. General Pangalos is more humane, if a little less constitutional; he turns the unhappy beast over on its back, and threatens to kill it if it puts its head out.

Elections in Roumania.

To understand the excitement that attaches to elections in Roumania it is necessary to bear in mind that they are far more a contest of wits than of rival policies. In the first place the advantage to the party in power of supervising the elections is greater than winning the toss at a cricket match or in the University Boat Race. An extract counterpart would be that the winning of the toss at an athletic contest should compel the loser to take the field or the water several men short. In the case of the communal elections just held in Roumania it rested entirely with the Government whether they should take place at all at this time or be postponed until the new Constitution, on which they are based, had been given a longer trial. Elections to the Agricultural Chambers last August had entailed a setback to the National Liberal Party, and it was commonly supposed that they would not risk a further appeal to the electorate before the parliamentary elections due to be held within the next two or three months. It was, therefore, a distinct "score" on the part of the Government when these communal elections were hurriedly fixed to take place at a moment when the collaboration that the Opposition had long been aiming at was still incomplete. No doubt, other motives weighed with the Liberals. These communal bodies are elected for eight years, and if they could be given a marked Liberal complexion, they would be likely to be of some use to the party if the parliamentary elections should go against it. Whatever the motive, however, the fixing a few weeks ago of the communal elections came as a surprise to Roumania, and the country has been all agog ever since; so much so, indeed, that the regular meeting of the Little Entente which was to have been held at Bled in Yugoslavia was cancelled, and an extraordinary session, restricted to a single day, was summoned in Roumania in order that the Roumanian Foreign Minister should not be absent from the country during the electoral contest.

The Wooing of Minorities.

The result of the Roumanian communal elections are incomplete at the moment of writing; but it is stated that the Government has been defeated in most of the larger towns and smaller provincial towns. It was successful, on the other hand, in the rural communes, especially in Transylvania. At all elections in the Balkans accusations of malpractice are freely bandied between the parties after the event. In this instance the Opposition appear to have been able to call attention before the election to the circumstance that the voting cards of their followers were being withheld and that the Opposition lists of candidates had been summarily rejected. The main battle-ground appears to have been in Transylvania, where the Liberals were admittedly weak before the elections. In order to strengthen its position with disaffected minorities the Government entered into some spirited bidding with the Opposition parties. Its success, however, appears to have been restricted to the Magyars, who are stated to have driven so hard a bargain that the Pact between them and the Government becomes a document of considerable national importance. According to the version published, the Magyars obtain various privileges, for which the minorities have hitherto striven in vain, such as the use of their own language in Government offices and courts of justice in towns where they form a majority, unrestricted recognition of the autonomy of the Hungarian Church, entailing an alteration of the Law to this effect, the assurance of free development for Magyar theatrical and cultural associations, the restoration of school buildings and churchyards, the publication of Ministerial Orders in the Magyar language and the appointment of Magyar judges. As might be expected, the Opposition, while not challenging the concessions, points out that the pact goes beyond a party understanding for electoral purposes and constitutes an infringement on State policy, which comes within the province of Parliament. Whether the Government accepts the published version of the Pact is not yet known.

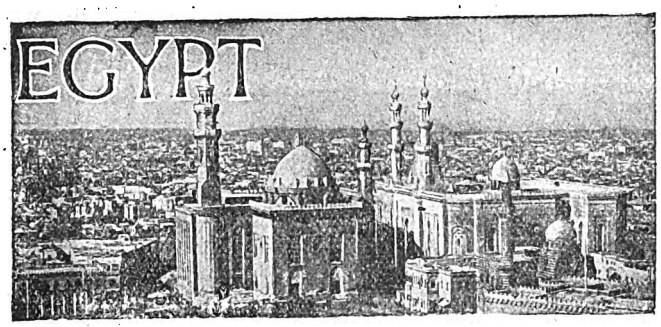
THE FUTURE OF IRAQ.

Into the domestic dispute which arose unnecessarily last week in the House of Commons between those members who supported the Government's policy upon the question of Britain's relations with Iraq and those who may be said rather to have opposed it than to be opposed to it, we have no wish to enter: suffice it to say that the Treaty, composed in accordance with the decision of the League of Nations last December and ratified by the Baghdad Mejliss last January, was approved by the House of Commons by 260 votes to 116. We would add, however, that the attitude of the Labour Opposition, whose Middle Eastern policy during its term of office we wholeheartedly supported, precisely because it was the only policy consistent with our honourable obligations and our imperial interest—a phrase which, however hackneyed, is literally and demonstrably true—must have caused serious misgivings to those who assumed that in all our great parties principles of national importance transcended matters of party interest. "Whiggism," said Samuel Johnson, "is the negation of all principles." Those who believe that Socialism implied the upholding, whether in or out of power, of eternal principles, and who study the record of the Labour Party in respect of Iraq, may well wonder whether the Doctor's aphorism may not apply to the modern opponent of Toryism. As a matter of fact, however, the antagonism in London of such an ex-Colonial Secretary as Mr. J. L. Thomas, had precisely the same significance as had the antagonism in Baghdad of such an ex-Premier as Yassin Pasha. Both men are probably equally content that the right thing has been finally done. Over such an Opposition, triumph for those who supported the Government had but little meaning, and the debate inaugurated by Mr. Amery was (*qua* debate) in sad truth of scant quality. More intimate knowledge of Anglo-Iraqi relations had brought about a timely change in the former hostility of certain Conservatives, who this time did not refuse the Government's enterprising prospect on Iraq; and of the few Liberals who voted against the motion, there was not one, we believe, that had any first-hand knowledge of conditions in the Middle East who counselled non-ratification of the new Treaty. Politically the dispute over Iraq—a dispute concerning which historians of the future may well shake their heads in denial of the statement that in the early twentieth century British democracy was educated and British journals were honest—is at last at an end. The first phase—the providing of security for Iraq—is over. Quite surely and hopefully the era of consolidation in Iraq, a consolidation the degree of which is to be marked by Iraq's entry into the League of Nations, may now begin. Britain's supporting arm is, thanks to the common sense of the League and of the Iraq and British Governments, to be henceforth rather a guiding hand.

Before turning to the future of Iraq, however, to which subject, incidentally, the Dominions Secretary has latterly been devoting some enthusiastic and optimistic speeches, we should like to look gratefully back to the work of British pioneers in Iraq. We refer more particularly to that devoted band of servants who during and after the War stuck to their unpleasant task of obeying largely non-existent orders. The history of Iraq between the third year of the War and the Cairo Conference has yet to be written; and when it is written, the British people will find that many of the foundations in the Arab State on which such full hopes are now being raised, and which have popularly been supposed to derive from the inauguration of "constitutional" government in Mesopotamia, were shrewdly and truly laid by the Civil Administration in Iraq before 1921. For what one did in laying, and for what the other did in building upon, those foundations, Sir Arnold Wilson and Sir Percy Cox respectively bear names which, when the Arab State is at last become a recognised, civilised Power, on an equal footing with Western States, may be proudly remembered. Nor should it be forgotten that during the time of highest crisis regarding the possibility of Turkish invasion and of the actual and delicate completion of eight years' work, this country and Iraq had the benefit of the firm sagacity of the present High Commissioner, Sir Henry Dobbs. Had these men been of lesser resolution and vision, as well they might, in face of a certain ignorant hostility both in Iraq and at home, the future of Iraq would have been vague indeed. As it is, the prospects are certainly good, if not so rosy as some enthusiasts who dream of "doing up," in a day, so to speak, the work of six centuries' stagnation, appear to imagine. For the development of the country, both in the commercial and in the political sense, many things are yet necessary. It is true that during the last year or so there has been a marked improvement in Iraq. There is now, for example, some sort of national feeling as well as a pro-British feeling, in the creation of which it is gratifying to record that King Faisal has had some share; and the Budget, as our Baghdad Correspondent has pointed out, is expected to show a surplus of 26 lakhs, and this after another 26 lakhs have been set aside for repayment of the Ottoman Debt. The country now awaits the introduction of foreign capital and of the nomad population on its borders, so that its ancient possibilities may be once more exploited. Adequate research into the properties of the soil and of the waters has already been made, and, now that security of the frontiers is to be enjoyed, it should be the part of British business men to help to construct on a firm, economic basis this great agricultural country. Iraq is, we verily believe, ultimately capable of bearing such abundant crops of wheat and cotton that if not a single drop of oil be found in the Mosul fields, and if, therefore, the pipe line and the railway to the Mediterranean be never built, it is probable that the land of the rivers has still before it one of the most comfortable futures imaginable. But the process must be gradual: no fools rushed in to build Nineveh and Babylon within a League of Nations' time-limit.



From the political point of view there is a variety of problems to engage the attention of the Baghdad Parliament. Pre-eminently there is, of course, the problem of Iraq's relations with Turkey. In this matter it is, naturally, Great Britain who can do more than Iraq herself. The cultivation of friendlier relations with Angora cannot be achieved in a week, and one need not be prepared for any sudden recognition on the part of Turkey of the *fait accompli*. In passing, however, we would like to reiterate the desirability of direct British representation at the Turkish capital, both in the interests of Iraq and in our own wider interests. There is, moreover (or perhaps it is the same thing), the problem of the Kurds in Iraq, the relations of whom with the Baghdad Government were made a special point of comment by the League. On this score, however, there is every reason for optimism. The Arab Government is fully aware of its duties towards the Kurds, and, indeed, was in the habit, long before the recommendations of the League in this respect were made, of seeking British advice upon the subject. The Kurds are already allowed extensive privileges, and in fact very markedly showed their gratitude for these to the British Advisers and to the Arab Government at the time of the League of Nations Commissioners' visit to the northern frontier. That there exists the remotest possibility of an autonomous Kurdistan—the bogey of Angora—is most improbable; that there exists no intention on the part of

The Near and Middle East*

From Our Own Correspondents.

Cairo, February 13.

The High Commissioner.

Lord Lloyd returned from his Sudan trip on Wednesday morning and forthwith resumed his duties as High Commissioner. He is said still to be feeling the effects of his indisposition while at Khartoum, but it appears, unfortunately, that he will not be able to obtain the rest he should have for complete and rapid recovery, for the situation will for some time need his very close attention.

The National Congress.

The Tripartite Opposition has now sent out invitations for a National Congress to be held on the 19th instant. So far it is not known where it will be held or who will preside over it, but although both these are points of no interest, to those who are directly concerned in the holding of this Congress the question of the moment is whether the Government will exercise its powers and prohibit this political meeting. There are indications that the Government will follow what is undoubtedly the wise course of not doing anything to prevent this meeting, and thereby escape from any accusations of undue interference with the free expression of opinion, while at the same time leaving to the organisers full responsibility for any untoward incidents which may result therefrom.

At the same time it were well to bear in mind that, although this meeting is being termed a "National Congress," it has no mandate to speak on behalf of the nation. A considerable proportion of the Congress will comprise members of Provincial and Municipal Councils and of Syndicate Committees, none of whom has ever held any political mandate from those whom they represent, and, who, therefore, can merely speak in their own name. At best, the views of the National Congress can be regarded as those of an important element of the population, and for this reason there would seem little prospect of their decisions affecting the position of the present Cabinet, which until the country has registered its views in this respect at the forthcoming elections should, and has every right to, remain in office.

In the meantime about 70 members of the Senate have met and publicly signified their adherence to the Tripartite Opposition, though in much more diplomatic and rational language. By contrast with the Deputies who now have no legal mandate the Senators have claim to some attention as they still hold their mandate, which is merely in abeyance during the time that the Chamber of Deputies does not exist. And it would not be surprising if in a spirit of conciliation some change were accordingly made with regard to the electoral law under which the new elections are to be held. But, their views are not likely to have influence in regard to the existence of the present Cabinet.

The Anti-British Outrage Trial.

The committal to the Assize Court of the various Egyptians accused of complicity in anti-British outrages was not unexpected after Morcos Pasha Hanna and Moustapha Pasha Nahas, particularly the latter, had developed their defence. These two ex-colleagues of Zaghloul Pasha showed in their pleading the same lack of judgment and the fanaticism that characterised their conduct of affairs while in office, and the Committing Magistrate, no matter how much he might have wanted to file the case regarding anyone of the accused, would have been compelled by the very line followed by these two Wafd lawyers to leave the responsibility to the Court of Assize. Both Ahmed Maher and Nekrashi Effendi may well exclaim "save me from my friends," for their case has certainly not been improved by the intervention of Nahas and Morcos Pashas, who seem to have had more regard for their own reputation as patriots, and the effect of their pleadings on their electors before whom they expect to have to go shortly than for the fate of the men they were defending. As things stand at present the case will come before the April Assizes, but it is quite possible that it may be heard in the early part of next month.

GREECE.

Athens, February 11.

Governmental Expedients.

There is very little news to report from Athens. The dictatorship of General Pangalos, while it has eliminated the usual desultory interest attaching to the politics of parties, has added a zest to life by introducing a feeling of uncertainty as to what is going to happen next, so quickly are his lightning decisions followed by action. The raising of another internal loan by the device of cutting the notes came, as was intended, as a surprise, and has been accepted philosophically. Many of the peasants throughout Greece have large hoards of notes, which they are unable or unwilling to touch, and the cutting of notes is the only device hitherto discovered by which these hoards can be tapped for revenue purposes. A tax of £1 per head on tourists will also produce a substantial sum for the exchequer. At the same time Government services are being ruthlessly cut down. The temporary improvement in the drachma, however, has been too sudden to be a true reflection of the improvement in the financial position, which is slowly taking place, and it must be attributed to other causes.

Minorities in Macedonia.

The question of the so-called Serbian minorities in Macedonia continues to fill columns in the papers, which

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

point out that there are no Serbian minorities. The people in question, it is maintained, are Slav-speaking Macedonians, whose sympathies are Yugoslav or Bulgar according to the amount of pressure or persuasion which has been put upon them from time to time. The whole business, it is stated, is a political agitation, and intimately connected with the Yugoslav demand to control the Ghevgheli-Salonika railway. From the Greek side it would appear, therefore, that the question does not admit of discussion.

The Police Force.

Fears were entertained at one time that the admirable police force, known as the "City Police," which has a training-school under British management at Corfu, was to be disbanded, or that its powers were to be so restricted as to make it valueless. As these reports are now denied, one may hope that General Pangalos has changed his mind and that this service, hitherto one of the most efficient in Greece, will continue. In the supposed interests of economy its numbers, it seems, are to be reduced.

The Anglo-Hellenic League.

The Anglo-Hellenic League is promoting a series of lectures on subjects of common interest to the two countries. Mr. William Miller, the celebrated historian of mediaeval and modern Greece, gave a lecture on February 10 on "The English in Athens before 1821," which was attended by a large audience.

The Refugee Commission.

The return of M. Karamános to his duties as head of the Refugee Commission is an indication that better relations between the Commission and the Government have been established. It is expected that the work of the Commission will be finished at the end of the year, when the balance of the loan will have been spent, and the remainder of the houses erected.

That the whole refugee population will immediately become self-supporting is improbable. In the out-of-the-way parts of Macedonia, in East Chalcidice for example, the country is mostly mountain and scrub; only in the narrow valleys is there cultivable land. The fishing is poor, and the markets are distant. There is only one small piece of metalled road in the whole peninsula. In many cases the allotment of land, of olive trees and the like, has not been definitely made, and there are still disputes with the farmer owners, who, in this, part, are the monks of Mt. Athos. It is small wonder that the refugees in these places, accustomed to easier conditions of life, are tempted to despair, or to sit with folded hands and do nothing. An immense amount of work remains yet to be done both by the authorities and by the refugees themselves, before a complete adjustment of the new population to their changed conditions takes place.

Vandalism in Greece.

Consternation has been caused in the archæological world by the announcement that, in order to rectify the awkward angle at the junction of Boulevard Amelia and Boulevard Syngrós, a road will be cut to the east of the Arch of Hadrian, and that part of the west end of the peribolos of the Temple of Olympian Zeus will be destroyed in the process. Dr. Dörpfeld, the celebrated German archæologist and doyen of the foreign archæologists in Athens, has been deputed to try to dissuade the Prime Minister from perpetrating this act of vandalism. At the time of writing the result of his efforts has not been made known. The recent destruction of the minarets in Salonika shows that the Greeks are not yet fully alive to the duty of preserving historical remains. An advertisement for somebody's hats in huge white letters still disfigures the walls of the beautiful mediaeval castle of Lamia; and the destruction of part of the Venetian fortifications at Nauplia, which in their way are as remarkable as the prehistoric walls of Tiryns and Mycenæ, is contemplated. As a set-off to this unintelligible and unintelligent attitude of mind, it is good to hear that the restoration of St. Demetrius in Salonika, one of the most famous churches in Christendom, which was destroyed by the fire of 1917, is about to be begun.

ROUMANIA.

Bucharest, February 8.

The Election Fever.

The four-year term of the Liberal Government comes to an end at the close of this month, and the election fever has already begun to take hold of the country. A very important development, at all events from the Liberal point of view, was the formal pact made some ten days ago between the United Nationalist Party of M. Maniu and M. Iorga and the Tsaranist or Peasants' Party of M. Mihalache and Dr. Lupu, to work together and sink their differences in order to present a formidable and united Opposition to the Liberal party. The latter now stands completely isolated—unless indeed the party of General Averescu should decide to uphold it, and that is extremely unlikely, as it has itself high hopes of being asked to take over the Government. This party is well organised all over the country and has many adherents, but it can hardly hope to compete with the three other opposition parties united, and it is at least very doubtful whether the Liberals themselves will stand much chance against so strong a combination.

The Communes.

One of the last of the Liberals' measures, which they hope to be able to pass before going out of office, is a Bill, now before the Chamber, for the re-organisation of the Communes with a view to the decentralisation of the administration. The object is to give the communes a large measure of independence both as regards their finances and their administration, and to render them as far as possible self-supporting.

It is expected that the elections for the communal administrative bodies will take place before the general Parliamentary elections, that is to say under the auspices of the Liberal Government in the hope that a majority of Liberal members will be chosen.

This policy is commented upon in the Press as likely to give rise to trouble in the future, should a non-Liberal Government be brought into power, for it will be exceedingly hard for any party to govern effectively when the administration in a large majority of the communes is in the hands of its opponents.

Roumanian and Polish Alliance.

On March 3, 1921, Roumania entered into an alliance with Poland, the main object of which was the defence of the eastern frontiers of both countries. At that time

Poland had just been severely threatened by the Bolshevist armies, and there were constant incidents on the Roumano-Russian frontier. Since that time the attitude of Russia towards Poland has entirely changed and relations which might almost be called friendly have been established. Between Roumania and Russia the situation is much the same, but the relations between Roumania and Poland have become very cordial indeed and, besides the political alliance for defence, agreements have been come to in regard to railway transport and trade. There seems little doubt, therefore, that on the expiry on March 3, 1926 of the first five years of the political alliance steps will be taken to renew it without delay.

PERSIA.

Teheran, January 26.

The Railway Bill.

Last Thursday the Shah summoned and received a deputation of the representatives of the different parties in the Parliament, headed by Tadayyon, President of the Mejliss. His Majesty, after expressing his devoted attachment to the Constitution and laws of the country, declared that Persia is in urgent need of reforms, which can only be introduced and realised through the Mejliss, and he therefore impressed on them the necessity for the speedy opening of the sixth term of the Parliament and the immediate holding of the elections, but he hoped that the bills which had been submitted, being of vital importance for the economic development of the country, especially that for the construction of railways, should be discussed and ratified as soon as possible by the present Assembly, before its dissolution. He concluded by saying that the Deputies should redouble their efforts towards moral reform among the people, and make them understand that any recourse to foreign aid as far as internal questions are concerned is contrary to the patriotism of the Persians of to-day.

Tadayyon, in reply, after emphasising the Shah's known devotion to the constitutional laws and his keen interest in the legislature of the country, mentioned that the Mejliss is exerting its utmost efforts towards the examination and speedy passing of these bills, of the extreme utility of which no Deputy lost sight, and concluded by expressing his indignation at any recourse to foreign intervention, which he was sure every patriotic Persian strongly resented.

The Railway Bill, on which the Shah laid stress, was laid before the Mejliss last week, after its approval by the Cabinet. In doing so, the Minister of Public Works pointed out the urgent necessity of the immediate putting into execution of the necessary preliminaries (made possible by the steady income from the Government monopoly of tea and sugar), as these naturally entailed much technical preparation and drawing up of plans, and surveying. He asked the Mejliss to authorise the Government to proceed with these preliminaries as regards the construction of lines between the Capital and the following places:—Mohammerah, Bender Guez, Duzdab-Seistan, Khanikin, Lingah, Saoudjbulak, Ghatour, and Astara.

The Bill asks that the Government, after the necessary preliminary surveys, shall be authorised to invite tenders from competent foreign engineering firms, the most advantageous to be accepted, and shall authorise the engagement of four American specialists and a certain number of Persian engineers to proceed with the work of survey, for which a credit of Tomans 250,000 (some £60,000) should be voted from the tea and sugar taxes (which, incidentally, have brought in a revenue of some £600,000 since their coming into force seven months ago).

The present Mejliss has only three weeks more to run, and it remains to be seen whether the necessary authority will be voted to the Government before it is dissolved.

Air Services.

It is interesting to note that, while the question of railway construction (on which the present Shah has always set so much store) is at last being seriously discussed, rival French and German companies are busy laying proposals before the Government for air services, for postal and passenger traffic, in the interior of the country and to Europe and elsewhere. The German Junkers Company, which has now been established in Teheran for two or three years, undertakes, should its proposals be approved by the Mejliss, to link up Persia with Europe by the two following routes:—Tabriz-Turkey; Pehlevi (Enzeli) Baku-Moscow; and also that the proposed route from Europe to China shall pass through Persia, by way of Tabriz, Teheran and Meshed. It also undertakes the formation of a Persian Aviation Company, and to open an aviation school in Teheran to train Persian pilots and mechanics.

In view of the fact that the construction of railways in this country, where distances are so great between all the important centres and towns, communications so bad, and transport so slow and costly, will take a number of years, it seems only natural to suppose that air services will have been in existence long before the first trains are running in Persia.

The Crown Prince.

The interested Government departments are busy making preparations for the public proclamation of the new Shah's son, Shahpoor Mohamed Reza, as Valiahd (Crown Prince) next Thursday (a holiday, being the birthday of the Imam Ali, Amir el Momenin). A banquet will be held in the Museum Room in the Royal Palace, where the world-famous Peacock Throne is, and a dinner will be given at the same time in the Ministry for Foreign Affairs to the "Corps Diplomatique" and Consular representatives.

General News.

The Persian Government intend to engage a Belgian official as Director General of Posts, and it is to be hoped that this Administration, which was always under a Belgian Director General until two years ago when his services (as well as those of a good many other Europeans in the Government service) were dispensed with, will improve, as at present the postal service leaves much to be desired.

The Minister of the Court has begun making active preparations and drawing up the programme for the Coronation festivities, in conjunction with the Committee

appointed for that purpose, though the date has again been postponed, to April 21.

The bill drawn up by the Ministry of Justice, asking for a credit of Tomans 10,000 to meet the costs of drawing up the Civil Code Bill, which is to be presented to the next Assembly of the Mejliss, has been submitted for the approval of the Administrator General of the Finances. This is considered to be the first step towards the abolition of Capitulations.

The Persian Government is said by the papers to be negotiating with the India Government for the purchase of the railway from Mirjawa across Persian Baluchistan to Duzdab, built by British troops during the War.

CYPRUS.

Nicosia, February 9.

The Ottoman Debt and Cyprus.

That Cyprus should still be called upon to pay what used to be called the Turkish Tribute, but is now her "share of the Ottoman Debt," as guaranteed by France and Britain, has never ceased to be one of the principal island grievances. The total contribution of over £92,000 is reduced by the annual British grant of £50,000; but there is much to be said for the Cypriot contention that the island should now be relieved of the burden altogether. It is recognised that the moment is not opportune for placing a fresh burden on British taxpayers, while economy is so necessary. But now that Cyprus is severed from Turkey, strength is given to the claim that the island revenue should be spent in the colony, as in the case of all other British possessions. Hitherto the Turkish community (of over 60,000) has not sided in this matter with the Greeks, but the latter now urge that they should unite with them in seeking deliverance.

The Mail Service.

Loud complaints continue to be made regarding the defective communications with the outer world, especially by the commercial classes, and the demand for a weekly mail has been all along very reasonable. According to the new arrangement the steamer from Egypt, after touching at Larnaca only, proceeds to the Syrian coast, whence, after a week, it returns to Larnaca, and thence calls at Limassol. But at the open roadsteads of Larnaca and Limassol rough weather may at any time render communication impossible at one or both places; in which case goods shipped in Egypt will be carried back to that country, and thence again in due course to Larnaca and Syria. This is particularly hard on Limassol. In the past there have been instances when this "port" has remained for six weeks without mails or merchandise. But with a weekly service conditions are far more favourable than at present: and the chances of bad luck diminished.

Fire at Kyrenia.

A serious calamity has befallen this northern district capital. On February 4 a fire broke out, about 9 p.m., in the Government offices, which were destroyed. Very little was saved except Government safes and some books and documents, chiefly of the Forest Department. Besides the Commissioner's offices, those of the Land Registry and several others were practically reduced to ashes. The Commissioner telegraphed to Nicosia, about sixteen miles distant, for fire engines, and two were dispatched; but one met with an accident on the road, and the other arrived too late to be of much use. The loss is very serious. The origin of the fire has not yet been made clear.

Death of Lady Sendall.

News of the death of the widow of Sir Walter Sendall, a former High Commissioner, was received with deep regret. Sir Walter was much liked and respected during his term of office, especially by the Greek community, and Lady Sendall was universally beloved. Telegrams of condolence were sent to London, and have been gratefully acknowedged by Captain Feilden, who was A.D.C. to Sir Walter for many years, and has long been a valued friend of the family.

General News.

The Legislative Council will probably meet again towards the end of February.

Rumour states that the Governor, Sir Malcolm Stevenson, will shortly take up a high appointment in another Colony.

THE FUTURE OF IRAQ.

(Continued from page 223.)

Great Britain to create an independent Kurdistan within Iraq is absolutely certain and cannot be too often re-stated; but that individual Kurds in the Iraq State have considerable patriotic openings, say in the Army or the Civil Service, is already a fact. Amalgamation without absorption is as feasible in the East as it is anywhere else, provided it is decently supervised. Then there is the extremely difficult matter of the Assyrians. Admirers of the aged race and of what it has done for Great Britain appear to be divided upon whether it is better for the Assyrians to re-settle in Iraq upon any high lands that the Baghdad Parliament is able to give them, or for a wholesale scheme of emigration, perhaps to South America, in which there are many individual Assyrians already residing, to be evolved on their behalf jointly by the British and Iraq Governments. That is a problem which only the experts can decide, and we here can but wish that room may be found within Iraq for these hardy mountaineers who have served so well in the Levies and elsewhere, and for these patient, humble folk whose ecclesiastical future in the Middle East is so anxious a concern of the Church of England. Of the Jews in Iraq, to whose consistent loyalty to the British it is pleasing to pay tribute, we would only express the hope that in the practical work of the building up of Iraq—for example, in its defence—they may so engage themselves as to escape a share of the unpopularity which is said now to be a danger to them among the Arabs. And of the Arabs themselves, it is possible now to assert a genuine belief, alike in their future as administrators and as agriculturists, and in their ability to lead whatever Arab renaissance there may be in store, not only for a regenerated Middle East, but for the benefit of Great Britain in the East and for the world in general. There may be snags in the future course of Iraq's history; some scurry on the waters may be visible, if for instance, the proposal that the Royal Air Force should largely abandon Iraq in two years' time be realised; but whether the stream be placid or disturbed, it is Britain's task to see that Iraq sails down unharmed to the larger ocean of civilisation.

Mrs. Annie Besant, while visiting Karachi, stated that she intended leaving India on May 1 for England, accompanied by Mr. Krishnamurti, the coming world teacher.

THE MUSIC OF THE ORIENT:—III.

Performance and Hearing.

By K. W.

It has been made clear, I think, that the purpose of M. Gudenian in composing and in playing his Oriental music is not so much creation as revelation. By this I do not, of course, mean that he is not a creative artist, for in a sense even the archæologist must be creative, but that he is attempting to uncover the beautiful old things of the East, to sweep from them the dust that time or ignorance or wilful misrepresentation has laid upon them. It was in this sense that he spoke to me of the apparent impotence of the present Orient to realise its former greatness.

"If one cannot," he said," call the modern Orient degenerate, one can justifiably call it senile. Yet how unjust it is to insult a man in his old age for not being able to accomplish what he could do in his youth! It was two thousand years ago that an old Asiatic philosopher said to a Greek: 'My country is a disgrace to me, but you are a disgrace to your country.' Therefore I say to Occidentals: 'Why, instead of ridiculing Oriental music of the past, not try to rebuild it, just as is done for other antiquities, which are preserved in museums for the instruction of the world?' Yet, far from adopting an honourable attitude, as in archæology, certain Western composers have rifled Oriental fields to concoct their strange *cuisine*, not having even the decency to state the sources of their inspiration. They thereby can deceive Westerners, but how can they prevent an Oriental from recognising what is his own?"

To M. Gudenian the call of antiquity is very real. He lovingly quoted Goethe again:—

> What I possess as from afar I see;
> Those I have lost become realities to me.

"I wonder," he said, "if these lines had been written by an Oriental how many people in the West one could find who would not sneer at them? Those who are able to hear the call of antiquity are pursued in such a way that one could almost swear that the souls of all those of past ages had a message to deliver to one without which they could not find peace. This is probably what some people mean in saying that Oriental music is 'uncanny,' or 'hauntingly beautiful': it is an element in Oriental music which cannot be found in any other, and it seems to tell us: 'Strike, brother; strike, but listen.'"

Our conversation drifted to the nature of Western audiences, particularly to their superficiality. M. Gudenian told me he had heard people complain of the monotony of Oriental music. "Well," he said, "with the hope of destroying this impression, I gave to some such people the opportunity of hearing at least twelve pieces, in different modes, different rhythms, different atmospheres, and different forms, some of them with fantastic parts changing at every measure, and even arranged for different instruments. Yet every time I heard the same refrain: 'Monotonous.' Finally I played an old Occidental classical piece, presenting it as Oriental: and I received the same comment: 'Oriental music is monotonous!'"

We turned to the comprehension of Oriental music once more. "Truthfully speaking," said M. Gudenian, "there is no mystery in Oriental music. 'Passing Caravans' (one of his compositions, dedicated to the memory of Sir Richard Burton) means nothing else than caravans passing. Yet not very much intelligence is needed to compare the human family and successive generations with passing caravans. There is manifestly no strangeness in the symbolism of Oriental music."

Having been conducted, so to speak, through the background and foreground of Oriental music, I asked M. Gudenian to express himself more particularly upon the music itself; and, as a beginning, I inquired about Oriental rhythm.

"The most difficult rhythm—and it is really stupendously difficult—in Oriental music is the one occurring in the so-called *ad libitum* parts. It has such a dignity as to remind one of the movement of the stars rather than of the motion of a trotting horse. This rhythm is physically imperceptible because it is not meant to appeal in any way to the body. A character of infiniteness is thereby imparted to the music: as if there were no sentiment of past, present, or future, only a certain *Is!*

"This part of Oriental music is absolutely unteachable.

"In some of the slow movements of his unaccompanied violin sonatas Bach has given to the West an idea of what this means.

"As everything in the Universe has rhythm, the more *ad libitum* the music the harder it becomes rhythmically to do it justice. It is a thousand times more difficult to walk with harmonious rhythm in the vast desert than to march rhythmically in a street parade."

I then mentioned the difference in scale of Oriental music, the twenty-two notes, for example, of the Indian scale, and the researches of the moderns, notably Busoni, into the possibilities of a longer scale than the diatonic. Upon this M. Gudenian threw what to me was a quite new light.

"Whether quarter-tones are desirable intervals or not," he said, "has nothing to do with the fact that, as the Orientals use them, quarter-tones are the cause of the disgust that not only Westerners, but even many Orientals, feel for the music. Beyond doubt, the quarter-tone, as used by the Oriental, gives to the music a sensuous and almost immoral atmosphere, which makes it unacceptable to decent people.

"That the diamond is mingled with mud and dirt is not, however, a sufficient reason for trampling it underfoot, and Oriental music, cleansed of this filthy element, can reach to ethical purity.

"Even the augmented second, which is a highly poetical interval, the Orientals, with their abominable slurs, have distorted. And melodies in simultaneous fourths, so affecting in their delicacy, have been misused like fifths that in grave, deep registers produce a dignified simplicity.

"Classical harmonisation has naturally forbidden all these intervals, and we owe it to modern musicians that the beauty of these intervals, when properly employed, is now understood..

"Schoenberg, in his 'Treatise of Harmony,' when explaining harmonies in fourths, gives us a glimpse of what the future is reserving in this field to the musical world.

"Certainly there is no cacophony in the world except through misuse."

We turned then to the subject of which M. Gudenian is a particular master—violin-playing.

"Some masters in bygone days," he said, "forbade their pupils to vibrate in any passages of classical music in which peace, calm, or contemplation is conveyed. One cannot very well stutter while one preaches peace. Yet, as Goethe stated, after a little while when the ship has passed the ocean assumes its normal aspect, and to-day violinists vibrate continuously, as if they were hysterical beings unable to hold their tongues.

"To be self-controlled in suppressing all outward show, overcoming difficulties as if nothing had been done, seems to be a very aristocratic, luxurious privilege, granted to but a few who love Art for Art's sake.

"The Oriental tuning of the violin has, *à propos* of the noise that many modern fiddlers vainly make, something in it, bashful and timid, which lies softly on the ear. It

is as if loud words might hurt the sensitive ear and talkativeness prove a burden to the soul."

Then to the pianoforte, M. Gudenian's use of which has caused endless discussion among the critics. So far from admitting the charge that an Occidental instrument is unfitted for the representation of Oriental music, he stoutly defended his use of it.

"Of all instruments," he maintained, "including those of the Orient, the pianoforte is the most ideal medium in which to express Oriental music. In the expression of certain feelings, indeed, it is the only instrument, and no other, or combination of others, can take its place. The fact that it is purely a Western instrument should not prevent an Oriental from taking advantage of it, just as he benefits from the sciences of harmonisation, counterpoint, or the rest of it that others have put at his disposal.

"The German language is an Occidental language; yet is it not conceivable that an Oriental who has a real love for it could write beautiful Oriental poems by means of it, even surpassing those written in Eastern tongues? Think of Burton's genuinely Oriental poem, 'The Kasidah': is it not written in a language which, judged superficially, is fit only for practical and business purposes?

"If the objection that the Westernising association of the pianoforte is too strong be accepted, all effort would be paralysed. We should have to have the 'Pastoral Symphony' played with bagpipes and country instruments only in the fields, and the 'Coriolanus Overture' played with the instruments used by the Romans many centuries ago. After all, the instrument matters little: it is what it expresses that counts."

Earlier in our conversation M. Gudenian had told me the difficulty he had had in getting drums for the performance of his compositions. Some particular drums he could get nowhere in Europe, and had finally to send to Constantinople for them. It is hardly necessary for me to indicate to readers of THE NEAR EAST AND INDIA the importance of the drum as an Oriental instrument, for in the East it is called, I believe, "the Nightingale of the Desert." On this subject M. Gudenian said:—

"There exist a great variety of drums, capable of depicting different emotions. The drums used by the gipsies, for example, seem to be jovial, lively, and happy, while those of the Dervishes have earnestness and depth. But the most dignified of all is that known in the West as the 'Big Drum.'

"The kettle drum is the only one that has been used frequently in the West. There are conductors of symphonies who consider the kettle drum player as one of the most important members of the orchestra. Yet the kettle drum, with its definite pitch, can never convey the impression of certain Oriental drums, which are not only without definite pitch but produce on different parts of the same side of the drum different mixed tones. These naturally give the drum a more mysterious and complex character.

"From all drums, especially from the big drums, the right one is found with great difficulty: hundreds of them are suitable only for senseless music.

"Drums are very sensitive instruments, perhaps even more so than the violin. Unless the player feels the instrument as if it were part of his own body, it does not respond with anything more than hollow sound. The Western way of holding the sticks lightly in the fingers, and playing with the wrists, may give precise rhythm and quantity of tone, but that certain quality which is attractive in the drum can be obtained only by leaving the sticks completely loose in the hand, so as to make them strike and rebound almost by their own weight. This last way of drumming, incidentally, gives a tremendous precision of rhythm that reminds one of the exuberant liveliness of the Arabian horse. The circular manner of drumming (hearers of M. Gudenian will remember the unusual effect of his masterful playing in this manner) naturally accentuates this even more, because in this way the same stick never strikes the drum twice in succession."

Our interview was drawing to a close, but before parting M. Gudenian ended as he had begun, with a philosophical comment upon how one should listen to Oriental music.

"As in listening to good Occidental music, forget yourself, the player and the composer. All these three are 'dust unto dust,' and unless you forget them you will get dust into your own eyes, confirming the saying: 'having eyes they do not see.'

"Shadows obliterate our view, and, just in the same way that it was said, 'to know you must know how to unknow,' so in unseeing, you are enabled to see."

FORTUNE'S FAVOURS IN EASTERN WATERS.

By Lt.-Colonel F. Cunliffe-Owen.

III.—Torpedoed.

After some considerable time spent upon another front of the Great War, I was on my way to old Mespot, where, or in the vicinity of which, I was, as it turned out, eventually to remain for nearly five solid years.

We had embarked at a Mediterranean port and were all "wise" on the various funk holes into which to slip during the transit across to Egypt at that "unhealthy" period for sea voyaging. It was a ship worthy of the close attention of the Bosche, inasmuch as there must have been over a thousand troops on board with other pickings, but the time was before the regular convoy system adopted later. We carried no gun for the submarine attack, but, on the other hand, and best of all, two Japanese destroyers had been told off for escort duty.

I do not quite recollect whether, on this occasion, before leaving in the evening, there had been regular boat stations allotted, but I rather think not. I am sure, however, that we knew all about the three blasts on the syren.

It was a very dark night, but I hardly thought that we should be touched up in any case just yet. Afterwards I made various other voyages in submarine waters, and then learned that the first night might be as bad as any other, not that, when it came to the point, one really felt any decided apprehension about submarine attack. For myself, I had just a horror of being caught when I was having a bath or undressing or in similar awkward situations. At times, therefore, I made most elaborate preparations not to be at a disadvantage in the way of lifebelt, clothes, and so on.

And on this night of which I am writing I had as a matter of fact made such preparations. It was hot and most of us made our beds on the boat deck, a double advantage. When I turned in, all my paraphernalia were in the most apple-pie order. Apart from such necessaries as lifebelt, I had laid my clothes most neatly down in the precise order wanted, shoes carefully arranged in the easiest way for slipping on, and most of all, my eye-glass so that it could by no possible means (as I thought) get entangled in anything.

About midnight it came. Bump, crash, and then those infernal three blasts; darkness on the ship but search lights everywhere playing on the water. "There," I thought, "here it is," and I felt sad, and wondered whether my third real sea adventure was going to turn out badly.

However; now for my preparations; but I'm blest if

anything came off. I could *not* find my left shoe, and as for the eye-glass, hunt as I would, the damned thing appeared to be nowhere. All fear of eventualities disappeared, and my whole mind was set to getting that shoe and that glass. Meanwhile what *was* happening? As I say, I did not give a thought to that until it suddenly broke upon me that, while there was a good deal of noise going on with the destroyers darting here and there, everybody seemed to be standing quiet and in order, and the ship was there right enough and looked as if it were going to remain so.

And so it was. It transpired that we had in fact obtained a huge success, for, while the torpedo had merely struck a glancing blow on the ship's bow, the Japs had actually got the submarine, and shortly after we pursued our course to the Navarino funk-hole, then to fetch up duly at Port Said, and after that, the quiet and placid sailing beyond the Canal where escorts and all accessories of torpedo attack could be gently laid aside.

IV.—The Shimal.

The *Shimal* is the north wind of the Gulf (I say *the* Gulf because as all should know *the* Gulf is the Persian Gulf *par excellence)*, in contradistinction to the *Kos* or south wind, and on the occasion now about to be described, the *Shimal* was my deadliest enemy.

After accompanying Philby* to Ibn Saoud's capital of Riyadh and remaining as the Sultan's guest for a considerable while in those lonely regions, I had at last to get down again to the coast. This time I decided to make the journey via El Katif. "After adventures" which I do not propose to narrate here, my caravan duly pulled into Katif and I lay awhile to rest in the hospitable quarters of the well-known Sheikh of that locality. It was then a question of getting back to Koweit either by sailing dhow the whole way, slipping across by aforesaid dhow to Bahrein, and thence possibly a proper steamer for continuing.

I decided to go the whole hog and dhow it all the way, trusting to the *Kos* prevailing—which would mean perhaps 48 hours or so. I waited around until the signs of the *Kos* might be announced, all ready to up and go, but the annoying thing would not develop. So I made some excursions to visit and drink coffee with neighbouring notabilities, sallying forth on donkey back as per custom, and feasting meanwhile upon the abundant fish, prawns, and vegetables which were to be had in Katif—a truly grand change of fare after the meagreness of Nejd.

Thus one pleasant day about the middle of February, 1918, I was some miles from Katif enjoying a good repast of the nature specified and a chat with one of the petty notabilities. About 3 o'clock in the afternoon, lo—a breathless runner with news of the long-wished-for *Kos*. The donkeys were summoned and a hasty amble back to Katif. After collecting such shreds of baggage as remained to me after my sojourn in Nejd, the same donkeys had to serve to get my party on the waiting dhow, which, on account of the shallowness of the water at Katif, had to lie some two miles out to sea. Arrived at the dhow, it was just a case of transferring from the donkey's back to the deck, and there we were, ready to push off for the headland and anchor there for the night, the first night of what I fondly hoped would be only a matter of some 48 hours in all.

I have still with me a few notes taken on that subsequent nightmare of a voyage, and in these notes I read that we left the headland early the following morning with our friend the *Kos* in kindliest mood.

I should mention that, towing behind my dhow, was what was named in local parlance the *jahlboot* (corruption of jolly boat), with sole occupants my pure-bred Arab given to me as a present from Nejd, and its one attendant. My *rais* (captain) was a splendid fellow and his crew good sailormen, as the Gulf Arabs from these parts usually are, but the navigation facilities appeared to my eyes limited. Thus, a compass just marking the four main points, and well—that was about all. My conductors no doubt knew the coast marks to a "T" and did not bother about charts. There were two good casks of fresh water on board and, as a concession mainly to me, a live sheep and a pile of chupatties. Otherwise, dates and rice, and, of course, coffee. I had two retainers of sorts with me, one a little negro slave boy, and the other an old handy man relict of Turkish times. I often chatted with him to while away the hours, but as time wore on it was the weather which engaged our sole attention, and I heard from him the word *rusgyar* (wind) as often mentioned as on another occasion Salonika way I heard the same hateful expression, this time *anemos*, from a Greek retainer.

The first day we made sufficient progress, and the sun shone, so that after dark I spread my blankets on the half deck with some satisfaction, just noting that it appeared then to be perhaps cloudier and chillier with a certain swell on the water.

Now for my diary entries. February 22.—Woken up by torrents of rain, everything soaked. Our friend the *Shimal* and pretty high seas. Ran before the wind to Ras Tanajib. Next day continuance of *Shimal*. Had to anchor all day under the Ras (headland) and sickening roll the whole time. (N.B.—Head felt like coming off with each roll, but stomach bore up nobly.) Little *jahlboot* lurched up and down behind, but pony had his forelegs firmly planted and munched his grass.

The next day the *Shimal* moderated somewhat, and we were able to dry our things in the sun. We made slow progress, but passed another dhow runing towards Bahrein and simply cutting through the water with their favourable wind.

The following day we got a few hours' sail in the morning, but had to heave to eventually and stop under shelter of another Ras (Ma'asib). This was a bad night as the rolling was terrific, but nothing like what was to come, and my 48 hours receding in the dim distance.

The next morning we got some sailing in, with a S.E. wind; but later it veered again to the north and the sea got up really badly. We had to anchor under a small Ras, but things got worse as the evening wore on. The captain was afraid of our anchor's dragging, and I remember the strain shaking the vessel from top to bottom. I lay there on the half deck, drenched, and wondering whether all my life's adventures were going to be over in this way, and what it would feel like to find oneself flung on to those waters. At last the captain had to up-anchor and we ran before the wind into the black night—anywhere—neither he nor anyone else knew where. We must have got miles out into the middle of the Gulf, because when the morning broke, the captain had not the vaguest idea of our whereabouts, depending, as before explained, entirely upon his knowledge of the coast-line and marks.

However, the wind changed to the west and we were able to beat up for some hours, getting near to Ras-es-Zor, when in the evening we were, of all things, becalmed. Such are the sudden changes in these waters. A terrific swell continued, and it was now February 27. The sheep had, of course, been eaten, the chupatties soaked and gone, there had been no possibility of making coffee; so that we were getting no fatter.

But as Ras-es-Zor is not far from Koweit, February 28 began fairly happily. We made good progress until nearly opposite Shaiba, about 20 miles from our destination; and then the fun began afresh. This was a night

almost as bad as on the 26th, and we were again buffeted away from the coast. A storm arose about 11 p.m. and all night the horror continued.

As dawn broke, and the wind having changed a point or two, we beat up at some considerable risk westwards and with some heavy seas washing inboard over the frail matting sides. But we were determined to have a shot at Shaiba, and, arriving later on, in sight of the coast, we managed to anchor. I then said "enough," and I was going ashore somehow. We were about a mile out, but I said I would risk the small dinghy. Fortunately at that moment we were seen by some of the inhabitants, and after frantic waving, I was overjoyed to observe a larger craft pushing out. Into this I bundled with my retainers, arranging with the captain, after replenishing stores, that he should remain until he saw a fair chance of getting through the rest of the way to Koweit.

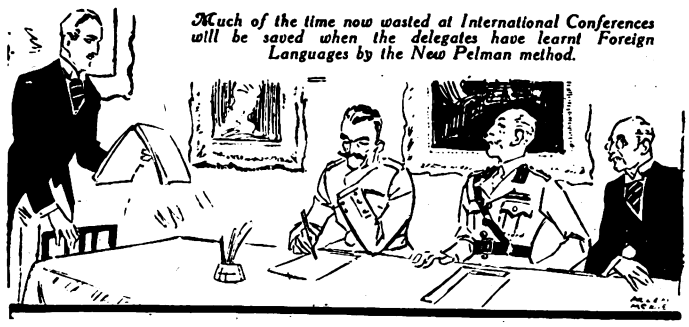
Arrived on the mainland at last, I flung myself into a warm but smoky hut and drank steaming coffee. I then inquired about transport, which materialised in the form of a baggage camel and donkey. Meanwhile, however, the rain had come on in torrents. Rummaging about in the miserable village, I found about two-thirds of what had once been an umbrella.

Then the small caravan started. Myself on the camel to commence with, holding over head the umbrella ribs as best I could, and changing to the donkey at intervals. This latter, however, always was on the point of sitting down on the wet sand, so it came to a permanent seat on the camel in the end, and thus we triumphantly entered Koweit on the night of March 1.

There was the comfortable residency of the Political Agent (the present Lord Belhaven and Stenton), and I shudder to think of how I repaid his kind hospitality. His bacon and eggs, his butter, his cigars! After my months in the desert, in the back of beyond where actually in some spots no Europeans ever penetrated, I can only say I must have simply gorged myself and cleaned Hamilton (as he then was) completely out of his good things in record time.

And I can say that for at least a couple of days I felt the ground rocking under me, even as the slanting deck of that dhow above the turbulent waters.

(Concluded.)



THE WEEK AT HOME.

London, Tuesday Morning.

The Liberals' Troubles.

Of the Liberals' troubles there is apparently, like unto learning, no end. Quarrel succeeds quarrel, secession follows secession. It is possible, of course, to argue that this in itself implies an unusual amount of vitality in the Party, but for bewildered members themselves it must be very difficult to derive much consolation from this eternal internal warfare. During the last week the Conference over the Land Question was the scene of important developments, of which the most picturesque was the striking by a Liberal Member of Parliament, Major Hore-Belisha, of one who would be such, the noted Mr. Pringle. That, however, was a purely personal matter, for the connexions of Major Hore-Belisha with the Beaverbrook Press are scarcely a national concern. But the chief event was the secession of a group of very able Liberals from the Land Policy. This group is led by Commander Hilton-Young, but takes its name of "Bedouin" from Sir Beddoes Rees, one of its leading members.

This secession is really significant, for if, as is suggested, this right wing of the Liberal Party definitely breaks away from the leadership of Mr. Lloyd George, and organises a party, so to speak, of its own, having its own whips, the main Liberal Party will cease to have any meaning. That this particular secession will be of any practical advantage to the Conservative Party seems,

Much of the time now wasted at International Conferences will be saved when the delegates have learnt Foreign Languages by the New Pelman method.

"BEST WAY" OF LEARNING LANGUAGES

Distinguished Generals Praise the New Pelman Method of Learning French, German, Italian, and Spanish.

"I find that the Pelman Method is the best way of learning French without a teacher."

So says General Sir Aylmer Haldane, G.C.M.G., K.C.B., D.S.O. (Commander-in-Chief in Mesopotamia, 1920-1), writing of the New Pelman "direct" method of learning Foreign Languages without using English.

Another distinguished military officer who recommends this method is Major-Gen. Sir Arthur Dorward, K.C.B., D.S.O., who commanded the British, American and Austrian troops at the capture of Tientsin in 1900. He writes:—

"Since I began the Pelman Course I have learnt more French than in eight years spent at school and college. The Course is without doubt the best method of learning a Foreign Language. The study has been a pleasure."

"The study has been a pleasure." This is an important point. Many people start to learn languages. They attend a class or they purchase a grammar and a dictionary. But after a time they get tired. They cease to attend the class. They leave the grammar and dictionary on their bookshelves. Why is this? In nine cases out of ten it is, because they have found the study dull. It is the grammar which has bored them—the pages of rules and exceptions which they are told they must master before the doors and delights of French, Italian, German or Spanish literature can be thrown open to them. And so they give up.

Dreary Grammar Avoided.

By the New Pelman method these grammatical difficulties and complexities are swept away. When you take up a Pelman Course in French or in any other language, you are introduced to the language itself from the very beginning and you start learning to speak, write, read and understand it from the first day. Formal grammar is avoided. You pick up the grammar almost unconsciously as you go along. If, after you have learnt to use the language, you would like to study the grammar you can do so. But the *Grammar* comes *last*, the living *Language* comes first.

That is why the new method is so interesting and successful.

Another striking feature of this method is that it enables you to learn French in French, German in German, Spanish in Spanish, and Italian in Italian.

Even if you do not possess the smallest acquaintance with any one of these languages you can now learn them without using a word of English. There are no vocabularies to be learnt by heart. You learn the words you need by using them, and in such a way that you never forget them. There is no translation (either mental or on paper) from one language to another. Hence you avoid the "hesitation" (due to translating mentally words of one language into words of another language) which is almost unavoidable when a Foreign Language is learnt by the old obsolete method. By the new plan you learn to speak the language like a native.

The New Pelman method of learning languages is explained in four little books, entitled respectively, "How to learn French," "How to learn Italian," "How to learn Spanish," and "How to learn German."

You can have a free copy of any one of these books by writing for it to-day to the Pelman Institute (Languages Dept.), 89, Pelman House, Bloomsbury Street, London, W.C.1. State which book you want, and a copy will be sent you by return gratis and post free.

Digitized by Google

however, doubtful, for the fiscal beliefs of Commander Hilton-Young's following are said to stand in the way of his adoption of Sir Alfred Mond's choice.

Nor is this the only disaster which must be recorded of the Liberal Party. Certain Liberal leaders of the Liverpool City Council, including Sir Max Muspratt, have just signified their intention of joining the Conservative Party. This move admittedly represents only a section of local Liverpool business opinion, but it is being taken to indicate the views of an increasing number of business men, including, probably, the Federation of British Industries (of which Sir Max is Vice-President).

Of the capital object of the Land Convention it is difficult to write with much certainty. It was said there that the Land campaign in the counties was meeting with great success and that it had aroused very considerable enthusiasm. Whether that is really so, I have no means of judging, but in my own neighbourhood I have seen nothing of it. The most probable eventuality of this terrific Land push, which is being indulged at the expense of such secessions from the Party, would appear to be that, where the Liberals have sown well, other political parties will reap, and where they have sown badly, it will redound still further to their downfall: in short, from their own particular point of view, a most unhappy business. Nobody seems to love Liberals, and certainly they have forgotten how to love one another.

The Darlington By-Election.

It is amusing to find the Conservatives, after the experience of defeat at Stockport and now again at Darlington, suggesting that improvements should be made in our electoral system to obviate the return of members who do not receive a majority of the total votes cast. At Darlington they had the mortification of seeing the election of a Socialist candidate who was enabled to beat the Conservative candidate only because the Liberals put up a hopeless but not an empty fight. Sections of the Conservative Press are now clamouring for some form of second preference or second ballot—a curious commentary on the silence which had hitherto greeted the Liberals' own recommendations of Proportional Representation.

By the incorrigible optimists this result has been hailed as one more proof of the fact that the Liberals still hold the balance between Conservative and Labour. But if all the Liberals wanted was to secure the election of a particular candidate, either Tory or Labour, why go to the trouble of preferring a candidate of their own?

Calcutta, Delhi, Simla, Lahore, Rawal Pindi and Murree.

The Food Council's Recommendations.

It is excellent news that the recommendations of the Food Council are soon to be acted upon. Their suggestions on the making a statutory offence of the giving of short weight and of short measure are to be embodied into a Bill which will be introduced into Parliament after the Easter recess.

That the whole country will look upon this Bill with the utmost approval is hardly to be doubted: which means in effect that Mr. Baldwin, to whom it is so largely due, will earn a lasting gratitude.

Another Black Country?

The Government's courageous decision to subsidise the development of the Kentish coalfields to the extent of £2,000,000 has been greeted with a good deal of satisfaction, not only from the business community, but also from those lovers of England who, aware of the fact that England must develop industrially, are yet eager that her fair face should not be transformed into ugliness in the doing of it. The presence within fifty miles of London of a huge colliery district fills many people with apprehension, but careful plans have been prepared to preserve as far as it is possible the historic beauty of Kent. When it is realised that the present population of 300,000 will probably be more than doubled in the next generation, the magnitude can be guessed of the task of those whose duty it is to avoid the beastliness of the Industrial Revolution. If another Black Country should be perpetrated by a twentieth century population, our time will assuredly never be forgiven by those who witness the full exploitation of the coalfields that are so soon to be developed.

The Civil Service Sports Grant.

The decision of the Government to grant to the fund of the Civil Service Sports Club the sum of £200,000 seems to have considerably annoyed people. Even staunch Conservatives, who see that opposition to the Government on this head cannot lead to anything very serious, are lamenting the inopportunenesss of the particular form of spending. Apparently, however, the Government is going to stand firm. It bases its argument on the necessity of the State's being as good an employer as are private institutions, such as Banks and Insurance Companies—and anyone who has played on the grounds of these institutions knows to what pleasing uses excess profits have been employed in the past.

Against this is put the fact that private firms do not spend money on their employees in unprofitable years, and that from the State point of view the present year is a bad one. Moreover, it is argued that the money could have been infinitely better spent, and to more national uses.

Knowing nothing of the origin of this generous impulse on the part of the Government, I can say little on the subject, except to remark the patent fact that the real reason of the Exchequer in offering so large a sum to a minority of citizens has not yet been made public. For the generosity of Governments is one of the completest oxymorons conceivable.

ALTER EGO.

The Aga Khan left Bombay on February 17 for Mombasa on an extensive tour in Kenya and Uganda. Later he will visit the Sudan and Egypt, and hopes to reach England in time for the Derby.

The members of the Permanent Mandates Commission of the League of Nations who are assembled in Rome to consider the French report on Syria were received by the King of Italy at the Quirinal last Thursday. The inquiry by the Commission is expected to finish this week.

Forty prisoners were released on February 17 in Bulgaria in virtue of the Amnesty. Among them were M. Bateff, a former Cabinet Minister, and M. Kabaktchieff, a member of the Communist Executive, who was arrested before the insurrection of September, 1923.

PERSONAL AND GENERAL.

TO-DAY

February 25, 1926 (New Style).
February 12, 1926 (Old Style)..
Shaaban 12, 1344 A.H., of the Moslem Calendar.
Adar 11, 5686, of the Jewish Calendar.

Sir Philip and Lady Hartog have returned from India.

The Countess of Lonsdale left London last Friday for Egypt.

Mrs. L. Knowles Rayson has returned to the Langham Hotel from Egypt.

The address of the Afghan Legation will in future be 31, Princes Gate, S.W.

Sir Herbert and Lady Vernon will return at the end of March to 109, Lancaster Gate from Egypt.

Sir Edwin and Lady Emily Lutyens will return on Saturday to 13, Mansfield Street, from India.

Viscount and Viscountess Inchcape will return early in March to 4, Seamore Place, W., from India.

Mr. and Mrs. Cecil Harmsworth and Miss Daphne Harmsworth have left London for a tour in Egypt and Palestine.

Sir Evan and Lady Cotton have arrived in London from Delhi and are staying at 14, Craven Hill Gardens, Bayswater.

The vacant portfolio of Public Instruction in the Persian Cabinet has been given to Tadayon, who was chairman of the last Mejliss.

Lady Chamberlain, after staying for a few days in Cairo with Lord and Lady Lloyd, left for Port Said on February 21 to resume her Mediterranean cruise.

The appointment of Mr. Harold Baxter Kittermaster to be Governor and Commander-in-Chief of the Somaliland Protectorate is gazetted under date February 9.

Captain Robert Neville, R.M., sailed last Friday in the Narkunda for Colombo to take up his duties as Private Secretary to Sir Hugh Clifford, Governor of Ceylon.

Sir Bertram Hornsby, Governor of the National Bank of Egypt, has had the Grand Cordon of the Order of the Nile conferred upon him.

General Sir Claud Jacob, General Officer Commanding the Northern Command, India, and Lady Jacob are returning to England in the P. and O. s.s. Ranpura, which left Bombay on February 13.

The will of Colonel Thomas Arnoll Davies, J.P. (late R.A.), of Weston Park House, Bath, who saw service on the North-West Frontier of India (net personalty £23,982) has been proved at £24,131.

The King has approved of the appointment of Colonel A. N. Fleming, D.S.O., M.B., F.R.C.S., Indian Medical Service, as Honorary Surgeon to the King, with effect from June 9, 1925, in succession to Colonel P. Dee, M.B., Indian Medical Service, who has retired.

Lady Constance Milnes-Gaskell and Miss Milnes-Gaskell left London last Thursday by the P. and O. special train to join the s.s. Narkunda at Marseilles for Port Said. They do not expect to return before the end of April. Lord and Lady Plunket also embarked in this vessel at Marseilles for Port Said.

Viscount and Viscountess Devonport left Bombay on February 23 in the Ranpura for England.

Brigadier-General the Hon. C. G. Bruce, who is now in India, is expected in Darjeeling next month.

Mr. Francis FitzGerald, C.B.E., Chairmn of the Anglo-Belgian Company of Egypt, Ltd., and of the Fayoum Light Railways Company, has left London for Cairo.

Sir Jervoise Athelstane Baines, C.S.I., of Kidlington, Oxon, who died on November 26, aged 78, left unsettled property of the gross value of £6,903, with net personalty £1,721.

Lord Irwin, Viceroy-designate of India, will be entertained at luncheon by the Royal Colonial Institute on Thursday, March 4, at the Edward VII. Rooms, Hotel Victoria. Lord Stanley of Alderley, Chairman of the Council, will preside.

Arrangements have been made to complete the work of the Nile Waters Commission which was appointed by the British and Egyptian Governments last year. Mr. R. M. Macgregor, the British delegate, and Abdel Hamid Soleman Pasha, the Egyptian delegate, will accordingly resume their examination and present their report.

The Royal Aero Club has awarded the Britannia Trophy for the year 1925 to Mr. Alan Cobham, whose flight with Air Vice-Marshal Sir Sefton Brancker from London to India and back was considered the most meritorious performance in the air by a British aviator during that year. Mr. Cobham left London on November 29, 1924, and arrived back on March 17, 1925. The machine was a D.H.50, 250 h.p. Siddeley Puma engine.

THE EVIDENCE BEFORE THE CURRENCY COMMISSION.

A Direct Conflict.

An analysis of the evidence, given in India before the Currency Commission, shows that practically all the Indian witnesses are believers in a gold standard; while European opinion preponderatingly, though not exclusively, favours the continuance of the existing gold exchange standard and the stabilising of the rupee at 1s. 6d. The Indian Merchants' Chamber of Bombay, in their written replies to the questionnaire issued by the Commission, said, "As to the stabilising of the rupee, our answer is that there is no question of stabilising the rupee with foreign currencies: what we want is an effective gold standard. Under this, the token rupee should pass current as one-fifteenth of a sovereign." There were other important questions before the Commission, such as the future functions of the Imperial Bank of India; but these are so largely technical that no one but an expert is competent to examine them properly. The two outstanding questions that present themselves to the inexpert observer are those of the standard to be adopted, and of the value to be fixed for the rupee after its adoption. With few exceptions, all the witnesses were emphatically of opinion that a reform of the Indian currency is immediately necessary; though some of them, and these not the least important, held that it would be better, for the present, to let things continue as they are, particularly in view of the fact that a succession of good monsoons has placed India in a strong position which might be radically altered by one failure, and would certainly be so by two successive failures, of the monsoon: a contingency which it is necessary to envisage.

The Battle of the Standards.

As to the question of the standard to be adopted, the inexpert observer has first to get thoroughly into his mind exactly what is the question at issue: and he cannot perhaps do better than accept the definition given by *Commerce* (Calcutta): "A gold standard means the introduction of gold money, not only for the discharge of foreign debts but also for internal circulation. Under a gold standard, gold coins are not only legal tender but are available in unlimited quantity on the presentation of bullion, and their value is solely dependent on the value of their intrinsic contents. A gold exchange standard makes gold the standard of value, but does not make gold coins available for internal circulation. Under this arrangement the Government undertakes to discharge the debts of India in the gold standard countries on the presentation of rupees in India." One of the witnesses heard at Calcutta, Professor Hamilton of the Patna University, lamented the fact that, in India, economics are so largely bound up with politics: and said that anyone, asked for advice upon a practical economic problem, had to choose between an answer that he believed to be economically sound and one that would be acceptable to Indian sentiment: which, as is of course theoretically desirable, wishes to determine its own economic policy. This desire is, however, coloured by the persistent belief of Indian economists that the exchange value of the rupee has been, is being and will continue to be "manipulated" in the interests of Great Britain and without regard to those of India. This point of view was dispassionately put by the Indian Chamber of Commerce, Calcutta, who said that a defect in the gold exchange standard was that stability depended on the judicious operations of the controlling authorities, whereas, in a gold standard, it was automatic. The same opinion was expressed, by a number of other Indian witnesses, by no means so dispassionately.

Hoarding.

India has been described as "a veritable sink of gold": and the figures, of her net importations of gold of recent years, are certainly surprising. Between 1923 and 1925 India imported gold to the value of 150 crores of rupees, against a pre-War yearly average of 29 crores and a War-time average of 8. Her total import, in the financial year 1924-25, came to £50 millions—66½ crores of rupees: of which she obtained 23 crores from London, 23½ from South Africa and 20 from the United States. In his evidence before the Commission, Professor Mitra of Calcutta gave it as his opinion that, by absorbing so large a percentage of the world's total production of gold—which he put at £80 millions per annum—India had "saved the whole world from a further rise in prices." It is, of course, admitted that this importation of gold is, at present, unproductive, as it is merely hoarded instead of being used as the basis of monetary operations: and the opponents of a gold standard think that its introduction would be likely to intensify the practice of hoarding, for which it would necessarily offer increased facilities. To this, the other side reply that people hoard gold because it is scarce: it is because gold has been withdrawn from circulation that hoarding has reached its present dimensions: and the tendency to hoard gold has been intensified by the fluctuations in the exchange value of the rupee, which (to quote the evidence of one of the Bombay witnesses) have "bred distrust of it as a store of value." This particular witness held that, once the rupee became effectively stabilised by the introduction of a gold standard, it would regain its popularity as "a store of value," and that this would not only put a stop to the hoarding of gold, but would release the gold already hoarded, thereby adding substantially to the gold reserve of the Government and rendering it easy for them to maintain the convertibility of the rupee. In a country so vast as India, the enormous majority of whose people deal in transactions of the smallest, the silver rupee must remain "the *de facto* standard of value": and the very assurance of convertibility into gold would enhance confidence in the rupee and lessen the desire to change it for gold.

Gold Reserve.

It is pointed out that, if this view is well founded, a few years' continuance of the present rate of imports of gold into India, which has proceeded, so far, without disturb-

Digitized by Google

ing the countries from which she has obtained it, would meet India's requirements in the matter of the reserve necessary for the introduction of a gold standard. Calcutta opinion put this as high as £500 millions, but Bombay thought this an over-estimate, and believed that £300 millions would be enough—a sum that "could be secured without difficulty." One of the Bombay witnesses said that the total gold available from the securities of the Gold Standard Reserve and the Paper Currency Reserve is 124 crores—approximately £93 millions. The United States might be glad to relieve herself of part of her present glut of gold by parting with what India wants—perhaps to the extent of doubling her present proportion of sales to India: which, if the South African sales remained at their present figure, would relieve London of the present drain on her gold reserves, which it is admittedly not easy for her to bear.

Effect on Silver.

But this suggestion brings with it a further difficulty, which the supporters of the gold standard for India do not appear to have considered. Their proposal is, that the coinage of rupees shall cease and that only gold—and subsidiary coinage in nickel and copper—shall be coined in future. It has been stated that, during the fifty years 1873 to 1923, India has absorbed 35 per cent. of the entire world production of silver: and an authoritative estimate of the present stock of silver in India (that of Mr. Findlay Shirras) puts it at 745 crores or rupees in value, about 557 crores of which are represented by coined rupees, less an unknown quantity melted down. It is pointed out that, if India starts minting gold instead of silver, she will become a seller instead of a buyer of silver: and that, apart from the lessening of the world demand by about 30 million ounces per annum, which is India's present demand, the cessation of the coinage of rupees, and the contraction of the silver currency which will follow on the introduction of gold coins, will probably result in the entry of India into the selling market with something like 2,000 million ounces of silver for sale. It is certainly reasonable to doubt whether the United States would be likely to oblige India in the matter of gold, when the result of her doing so would be to run the risk of a heavy fall in the value of silver, of which she herself is one of the world's most important producers.

Free Coinage of Gold.

There does not seem to be any estimate available of the stock of gold existing in India, nor is it possible to make any guess at the quantity that would be tendered if the Indian mints were, as it is suggested that they should be, thrown open to the free coinage of gold; but the former is certainly very large, and Indian experts are convinced that the latter would be large at the outset and would reach great proportions as time went on. They argue that, once Government commits itself to a gold standard, the required backing will quickly become available: and say that, in any case, Government need not itself put gold coins into circulation, so long as it undertakes that gold shall be freely obtainable whenever necessary. Further that, in practice, hoarding is largely a consequence of deficient facilities for banking and investment. A lecture delivered at Delhi by Sir Basil Blackett, the Indian Finance Member, referred particularly to this point. He said that the main difficulty is not to find useful avenues for the employment of capital, but the limitations on the supply of internal capital. "It is no good framing large schemes for lending and spending money unless the money is there to be lent. The money is, I believe, in one sense there, but it is not available, as things are, in adequate volume because the habit of banking and the habit of investment are not sufficiently widespread in India." He looked forward to the time when "private initiative, stimulated, encouraged and assisted wherever possible by Government, would make at least a proportion of the capital, now unproductively used, available for productive enterprise." It is argued that such a tendency is likely to receive an immense stimulus immediately it is realised that gold can be obtained at will for token coinage.

Standard Coin.

As regards the future currency of India, under a gold standard, there was a considerable divergence of opinion among the witnesses before the Commission. All were agreed that it should be minted in India, and most of them wanted the British sovereign, or an Indian "mohur" of the same weight and fineness: for choice, the former, since otherwise there would always be likely to be an exchange difference, however slight, between the two. Some, however, recommended the minting of a special coin whose gold contents should represent a more easily divisible number of token rupees than would be likely to be represented by a sovereign, in which case the Indian mohur would be a gold coin of its own, linked with the sovereign only by being of identical fineness. The printing of rupee notes should be discontinued, and new notes should represent named fractions, or multiples, of the mohur.

Legal Tender.

During the transition period, rupee notes and coined rupees should remain legal tender: in the opinion of some witnesses, full legal tender. Others thought that, though there should be an initial limitation, this should be as high as possible to begin with. The result, they consider, should be the payment of large sums in gold, or gold notes, and the consequent popularising of the use of gold coins, when further limitation of legal tender of the old currency would be easy: the ultimate limit to be aimed at, in the case of silver coins, being 150 or 100 rupees. At first, encashment of notes should be either in gold or silver, at the option of Government, so as, on the one hand, to avoid "any undue raid by the public": and, on the other, to permit of gold being gradually passed into circulation.

Exchange Values.

On the question of the exchange value of the rupee, opinion was divided in practically the same way as in "the battle of the standards." The importing interests favour stabilisation at 1s. 6d., while Indian industrialists, particularly the Bombay cotton manufacturers, desire a reversion to the 1s. 4d. rate, though without indicating the process by which this is to be effected. The Government of India is generally supposed to favour the higher rate, since reversion to the lower would mean an addition of three crores of rupees to the Home charges. As has been already noted, practically all the Indian witnesses considered the value of the rupee from the point of view of how many token rupees should be reckoned to the Indian standard gold coin: practically all the European witnesses considered it from the point of view of its own exchange value. Almost all witnesses were agreed that the stabilisation of the rupee, and the permanent elimination of fluctuations, were necessary. The most prominent dissentient was Mr. Moon, late manager of the Calcutta Branch of the Hongkong and Shanghai Bank, who said that "exchange is the great shock absorber protecting the community from the hardships caused by wide and sudden fluctuations in prices and wages." To the argument of the Bombay mill owners, that a reduction to 1s. 4d. would stimulate export trade, Mr. Moon replied that this would only be so until the reduction of 12 per cent. in the purchasing power of the rupee was met by a corresponding rise in the pay of the mill hands—an interval that was likely to be filled by strikes and lock-outs. A more forcible argument by the supporters of the 1s. 4d. rate was, perhaps, that the lowering of the value of the rupee would be of permanent benefit to the Indian cultivator: whose interests, in view of his small wants, are insignificant as a buyer compared with those as a seller. Another, that also appears forcible, was that the reduction would release an immense amount of gold that had been bought at 1s. 6d., which would thus become available for purposes of trade.

Digitized by Google

Stabilisation.

As one of the European witnesses pointed out, the exchange value of the rupee is the result of the excess of India's productivity and resources over her consumption and external obligations. The visible balance of trade in India's favour during the three years 1923-25 has been 245 crores of rupees, compared with a pre-War average of 42 crores: and, but for the recent action of Government, there can be no doubt that the rupee would have risen, during the last few months, considerably higher than its present level. By this action, Government has demonstrated its ability to prevent a rise, but it also demonstrated its complete inability to prevent a fall when it attempted, by the sale of "Reverse Councils," to keep the rupee at, or near, the rate of 2s. fixed by the Babington-Smith Committee of 1920. In the words of one of the Indian witnesses, this attempt not only failed, but involved India in the loss of many millions of pounds, besides causing heavy losses to the trade and industry of the country: and, when it was finally abandoned, the rupee exchange fell below 1s. 3d.

Content Value.

It is perfectly true that the fixation of the rupee at 2s. was forced on the Government at the time, because of the high price of silver, which made the content value of the rupee more than its previous exchange value. The only possible courses open to Government were, to raise the exchange value of the rupee or to issue rupees of a less silver content: and, in view of the enormous number of rupees in circulation, to attempt the latter expedient would not only have been misunderstood by an ignorant populace, but would have defeated its own object by encouraging melting and hoarding of silver. European opinion generally favoured a rate of 1s. 6d. in preference to 1s. 4d. for two reasons: first, the dislocation of prices that would ensue from any attempt to force a sudden reduction and the fact that, for the vast majority of the population of India, who are only indirectly affected by foreign exchange rates, stability in internal prices is far more important than stability in external prices: and secondly because the exchange value of the rupee ought always to be higher than its bullion value, and a rate of 1s. 4d. does not provide a sufficient margin of safety. Mr. Moon used this latter argument in developing his case for allowing things to continue as they are for the present. He said that world prices had not yet reached stability, instancing the great and sudden rises in the price of rubber, tea and jute, and the heavy falls in raw cotton and sugar, all of which had been entirely unforeseen only a short time ago: and that it was equally impossible to foresee, with any certainty, the future of the silver market. On the other hand, the Marwari Trades Association of Calcutta, in giving evidence in favour of a gold standard, said that the difference lay in that between a coin that is a token of value and one that is a standard of value: and that people were bound to regard with increasing suspicion a policy that compels them to accept a rupee at an exchange value of approximately fifty per cent. above its content value.

Inflation and Taxation.

One of the European witnesses made the point that any attempt to drop to the 1s. 4d. rate would not only raise internal prices to the masses, but would appear to wage earners and those on small fixed incomes, who had cheerfully borne the results of unavoidable inflation, to constitute a rise in the cost of living deliberately engineered against them. And an Indian witness at Bombay drew attention to the fact that a high rate of exchange, by reducing the cost of imported articles and the amount necessary for the repayment of foreign debts, makes for more favourable Government budgets and opens the way for tax reductions: while a low rate has the opposite effect, even if it appears to stimulate exports. Such stimulation, he said, was temporary and artificial, since internal prices rapidly adjust themselves to the new exchange ratio: while it should be remembered that India is primarily an agricultural country, and that the Government of India is now committed to a policy of discriminating protection. In face of what practically amounts to a racial division of opinion, a really impartial view is rather to seek; but, on the whole, if it were in evidence, it would probably support that put forward by the Calcutta Chamber of Commerce: who doubted whether the time was ripe for a further attempt to stabilise the rupee, but were prepared to support Government, should they decide otherwise.

CURRENT TOPICS.

The Indian Civil Service.

The rather pessimistic article by our Bombay Correspondent, in the last issue of THE NEAR EAST AND INDIA, presents a state of affairs that undoubtedly exists and needs serious attention, and a view that was more in evidence a year or two ago than it is at the moment. One's own strong belief is that the picture, though quite accurate as far as it goes, does not go far enough. It cannot be denied that the material attractions of the Indian Civil Service are no longer what they were; they are still attractive enough for those who are able to avoid matrimony, but not for those who cannot. But the material side is not everything: to Englishmen in particular, it never has been, and it may be hoped that it never will be. Perhaps more than ever before, in the long history of our connexion with India, it is now imperative that England should send her of her very best: and one believes that, among our best, are still to be found young Englishmen of the true spirit—which it would not perhaps be amiss to call the missionary spirit. In the generally accepted sense of the word, it has always been possible to find young men ready to undertake a great mission without counting the cost: and in India under the Reforms, the call to those who will, in the same spirit, undertake what is, at the present moment, perhaps the highest Imperial duty, will never fall on deaf ears. It may be admitted that the creature comforts, the social amenities, the great material prizes, of an Indian career, though still by no means to be despised, are no longer what they once were: and that the Service now demands recruits with a somewhat different outlook from that held —with many conspicuous exceptions—by the rank and file of their predecessors. But the spirit of service, that moves men to high adventure in one of the greatest causes, is not dead: and it is to those inspired by that spirit that England and India look to-day, and surely will not look in vain.

The "Bad Livelihood" Bill.

The action of the President of the Legislative Assembly, in summarily adjourning the House in the middle of the discussion of the "Bad Livelihood" Bill, of which various more or less subtle explanations were put forward, turns out to have been due to a much more prosaic cause—a simple mistake. During the division on the second reading of the Bill, the Leader of the House told the President that there was no further business with which the Government wished to proceed, on that day: meaning, of course, after this particular Bill had been finally disposed of. But the President took the intimation literally, and adjourned the House immediately after the division. The actual result must, however, have come as a blow to the Swarajists; for, when the third reading was taken on February 15, though still strenuously opposed by them, it was passed by a majority of fourteen—twice as large as that for the second reading. The independents, as well as the Swarajists, voted with the minority: and the substantial Government majority appears to have been due to considerable support from the Mohammedan members—whose sentiments, according to the cabled report, are "specially hostile to vagrancy."

It is not easy to understand exactly what this means. India is full of wandering mendicants who are looked upon, by their co-religionists, as persons of special sanctity: and, thought the majority of them are, no doubt, Hindus,

Digitized by Google

there is among them a large number of Mohammedan "faqirs." To this particular form of vagrancy Moslem sentiment is certainly not opposed: it is all to the good if its opposition, as expressed by the Moslem vote in the Assembly, is directed against the low class of criminals who spend their time, when out of prison, in despoiling their neighbours and have, up till now, been able to spend it in prison plotting, at their ease, for further villainies. They will now find their time otherwise occupied: and this should lead to a diminution in crime, as well as to a marked reluctance to qualify for detention on a charge of "bad livelihood."

The Swarajists accuse the usually placid Leader of the House with habitually losing his temper over this particular Bill. If so, the final result shows that he did it to some purpose; though, as a matter of fact, any plain speaking by a Government supporter always earns such reprobation; while the most violent language, used on the other side, is but the eloquence of patriotism labouring under honest indignation.

Political Evolution in India.

An article under the above title appears in the January number of *Foreign Affairs*, from the pen of Sir Frederick Whyte, the late President of the Legislative Assembly, who writes "as one having authority." He gives a general survey of recent political developments without and within the Legislatures, and a more detailed account of what, for want of a better name, may be called "party" activities in the Assembly: and his conclusion is that the advance made under the Montagu-Chelmsford Reforms, in the direction of self-government, is a real one—much more so than Indian "Nationalist" policitians will admit. As for the future, and the direction of the next move that is now so near as to be almost imminent, Sir Frederick Whyte gives an indication of his own ideas in the final passage of his article, which will probably strike those who know him as characteristic. "That the Government of India itself is now aware that the successive changes wrought in the Indian Constitution during the past two generations have brought India to the threshold of constitutional problems of vast import is shown by the fact that the Viceroy only last autumn ordered the preparation of a monograph on the relations of central and local governments in the principal federal units of the world, as an introduction to the study of Indian constitutional reform which will be taken seriously in hand by the Royal Commission of 1929." There is something deliciously attractive in two words especially of this passage: the word "itself" near the beginning, and the word "seriously" near the end: which is heightened when one remembers who it was that "prepared the monograph."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 4.

Political Unity.

It would be early to suggest that wiser counsels are actually prevailing in extremist circles on this side of India, but at last it has been possible for an open meeting to be held without interruption, at which it was suggested that a policy of blind obstruction might not be the most profitable road of political progress. The meeting was a representative one in the sense that it was addressed not only by politicians of varying views but also by leading Indians who are not generally associated with politics. The Moderate Press, while noting the fact, takes the line that there is no sign of any improvement in the attitude of Indians generally towards their alien rulers, and that the present unity may be that of men who meet in desperation at their failure to achieve anything real by any method. There may be some truth in this point of view: but, if such desperation leads to a descent to earth and an appreciation of realities, it will be welcome after the storms of hot air through which we have passed in the last five years.

Johnston and Jute.

Our anticipations as to the nature of the half-truths that would be put out by Messrs Johnston and Sime, the latest wise men from the East, have been fully borne out in the event; but it would be a mistake to allow the statement they have issued to remain unchallenged. The *Statesman* has drawn attention to the danger of such a policy, and it suggests that a considered reply should be issued by the Jute Associations. There is no question that the industry did make enormous profits during the War, and it is still a very rich monopoly; the jute operatives also make the highest wages it is possible to pay them without stopping them from working altogether. This is a characteristic of Indian labour which has recently been accented by a Bombay mill owner, who points out that high wages immediately have the effect of increasing absences, both temporary and permanent. It may be regrettable from the point of view of the Home Trade Unionist, but it is the fact that almost every Indian labourer is a blackleg; he is an agriculturist first and last, and he only comes to the towns in order to earn more money, while his women stay behind and work his land: if he makes money more quickly, back he goes to his land again. Under English "Union" conditions, he would be rigorously barred by the bricklayers or the engineers from interfering with their monopoly. Messrs. Johnston and Sime hardly troubled to conceal the contempt they felt for the Indian politician; it is to be regretted that a combination of thick skin and dull vision seems to have protected them from an appreciation of the cold scorn with which their performances are regarded in return.

Pathetic Contentment.

Whatever may be the position in regard to the middle classes, there is no doubt that Western civilisation has brought a considerable increase in prosperity to the workers. The vast majority of the population is agricultural and, India being the land of the *bania* or moneylender, the agriculturist has from time immemorial been debt-ridden from birth to death. The increase of industrialism and the growth of towns have opened avenues of employment of which the agriculturist has not been slow to take advantage: and for large portions of the year many of them flock to these alternative occupations, sometimes staying away for periods of two or three years; but sooner or later the worker returns to his village and his land. If the industrialist requires labour he has to attract it, which is yearly becoming more difficult and expensive; the standards of life, however, are low and, even with the increased cost of living, the amount that is required by an ordinary labourer to maintain himself and his family, and to provide against such things as marriage feasts and ornaments, seems ridiculously small when translated into pounds, shillings and pence. The whole philosophy of life is different where, instead of wishing to get on, the average man's ambition is limited to a desire to sit and think, or, as the song said, just to sit. Increase his wages, and he works shorter hours till he has obtained the amount he requires; lower them, and he returns to his country till they rise again. Shorten his hours, and he has nothing to do in his leisure time, for he is only a lodger living in a mess, and he is surrounded by temptations. The problem for the employer is a thorny one, and it is becoming yearly more difficult to obtain sufficient labour to carry on any kind of industrial enterprise, especially when this has to be done in an area where the labourer cannot be given land to cultivate; as part of his remuneration.

A Bad Advertisement.

The Johnstonian misrepresentations have given the Extremist Press an opportunity which is too good to miss. The report is quoted as conclusive evidence that the "workers" of India are being grossly exploited by Western industrial interests, who take particular care that no portion of the profit goes to its legitimate owners, the "people who produce the wealth." This type of argument

Digitized by Google

is familiar enough in the West, but the suggestion is now made that such exploitation is a novelty introduced by Europeans. Forgotten altogether are the days of slavery and forced labour; equally forgotten are the conditions under which the agriculturists worked and suffered and, from time to time when plague and famine swept the land, died in droves. Bad memories may be forgiven; but facts that are apparent on every hand and are notorious cannot be overlooked. Where workers are huddled together in filthy surroundings with insufficient light and air, where they are housed under the worst conditions, where they are grossly underpaid, where woman and child labour is exploited to the utmost, there is found an indigenous employer, carrying on his normal practices, and ever completely blind to the fact that he is exploiting human flesh and blood. Clean surroundings, light and air, protection of the weak, improvement in wages and housing conditions, and factory legislation, all these have been initiated and owe their existence to the West. It was open to Messrs. Johnston and Sime to see these things for themselves, but they have preferred to let the white man down; the fact that, in doing so, they have let themselves down, matters little; but surely the Labour Party should attend to its advertising department.

Unemployment—An Indian Solution.

Babu Bepin Chandra Pal's article this week is devoted to the question of unemployment, and he bases his remarks upon the debate which recently took place in the Assembly. This produced the well-known comment, in more than one quarter, that the sentiments of the speakers were guided rather by heart than head. Bepin Babu is an old and tried Indian politician, and he may be fairly called a moderate leader; his contribution to this difficult problem, however, betrays a remarkable innocence of outlook. He compares what he calls the English and the German system of education and industrialism, and he says of the latter that Government not only provided technical training but owned the industries which provided employment for the educated classes. No authority is given for this statement, but Bepin Babu makes it the basis of his remedy for the growing mass of unemployment in India: his panacea is that Government should extend generous aid to industries by giving protection and credit freely to deserving ones. The same writer is continually referring to the people of this country as groaning under a load of crushing taxation; it is now expected that he will shortly propose to finance his assistance to industries by the printing of more paper money.

Legislation.

The Assembly has been busy at Delhi and, on the whole, the extremists have been less in evidence than they promised. The Trades Union Bill has been passed: and, in spite of the fact that clauses have been introduced requiring one-half of the executive of Unions to be actually engaged in the industries concerned, there is an uneasy feeling that the Bill will merely open an avenue of lucrative employment to mischief-makers. The Assembly has refused to pass the proposed increase in the salaries of the Indian members of the Privy Council. An Income Tax Bill has been introduced for tightening up the machinery, and a Bill affording minor degrees of protection to various industries is also down for consideration. Although the South African question has not been debated at Delhi, a significant meeting took place in Calcutta last evening; it was really a representative one and the Bishop of Calcutta presided. It is to be hoped that some acceptable solution may be found to this very difficult problem. The Skeen Committee on Army Indianisation is still sitting, but the official accounts now omit all reference to the evidence of politicians, and there are signs of a careful editing of the statements of officers who are still being examined.

Men and Things.

Lord Inchcape has arrived in Calcutta, and he was immediately given a reception at Galstaun Park of record proportions. Colonel Gidney has returned with his Anglo-Indian deputation from England, which apparently has been very successful; the *Amrita Bazar Patrika*, however, wants him to stick to his suggestion that Anglo-Indians must look to the country of their residence, rather than to the West, for help. A new Indian Chamber of Commerce has been started; it appears to consist mainly of members of communities who have invaded Bengal in the interests of their trade; to judge from letters in the Press, the Bengali resents this fact being pointed out. A torch-light tattoo, advertised as an echo of Wembley, was to begin to-night; but a tropical storm will probably cause a postponement. The Corporation is still discussing its coal contracts on the too-familiar lines.

The Trivial Round.

For the last two weeks the city has been full of Bishops who have made a wonderful show in the Cathedral in their robes; they are here in connexion with various Church Congresses, and it is understood that the main lines of the proposed new constitution of the Church in India have been substantially settled. The annual dance in aid of the Kalimpong Homes was the usual success, and once again some Rs. 15,000 were cleared; the "Heavy Weight Stakes," in which a tote was run on lines usually associated with cattle shows at Home, produced much amusement and was won at evens by a popular solicitor. The Tennis Fnal brought out some of the best play ever seen in Calcutta, a youngster of ninteen, Mehta, taking Okamoto to five sets in the singles. In the Ladies Final, Mrs. Graham, after being 0—5 to Mrs. McKenna in the third set, made a wonderful effort and won the championship at 8—6. "No No Nanette" has arrived at the Empire and has caught on unmistakably; Salisbury and his Quaints are doing well. The wind is gradually veering to the south and the voice of the brain-fever bird is heard in the land; the cold weather is departing.

Markets.

Following upon the declining interest during the previous week in the jute market, the mills are now showing even less disposition to operate and prices have reacted further; gunnies have suffered in sympathy. The piece-goods market has failed to maintain the rather better feeling that prevailed of late, and prices are lower all round.

The tea market made a satisfactory showing here at the sale this week; enquiry was good and general, and prices tended upwards. London, on the other hand, was easier on Monday, but rallied at the later sale. The last of the crop will be offered here during the next week or so: after which there is an interval, until the new season's crop arrives at the end of May or beginning of June.

In the share market, jutes have been the outstanding feature; in this section almost all stocks have registered a sharp decline and, even at the lower prices, buyers have been difficult to tempt. It has been surprising that, with the obvious difficulties the trade has to face, the share market has maintained previous levels for so long a time; but it would appear that operators have just appreciated the fact, with a result that the market has suddenly become inundated with sellers. Although this heavy drop may be followed by a slight reaction, such an event is unlikely to be anything but temporary; it looks as if leaner dividends are bound to be the order for some time to come.

The recent renewal of interest in coal shares has followed the path of the cotton section, and inquiry has now dwindled almost to nothing, with a general marking down in prices. Tea shares have not shown up as they should, considering the satisfactory prices obtained at the sales here: and, though there is no selling pressure, there is no keenness to snap up the scrip on offer. Rubbers have been more or less neglected; the more speculative shares have given way considerably, on the further decline in the price of the commodity, but the better class dollar shares have withstood the situation very satisfactorily. The demand for Government securities and investment stocks con-

Digitized by Google

tinues, and prices have tended to rise, a remark which applies particularly to the longer-dated issues; in contrast, jute preferences have developed a weaker tendency the last few days, in sympathy with the general tone of the jute share market.

Money has been in less demand, but rates remain unaltered. Sterling is unchanged.

THE INDIAN MAIL.

Leopards.

Leopards have bulked quite large in recent mail papers from India: in particular, a man-eater in the Garhwal district of the United Provinces, which is credited with the death of no fewer than 114 human beings. The local Government have made special endeavours for its destruction: a large reward has been offered, sixteen paid Indian *shikaris* have been employed, poison has been freely used, and an experienced European sportsman, who desired to remain anonymous, has given his services. But, so far, all in vain. The anonymous sportsman's adventures have appeared in the Press, and show that he was, several times, almost within touch of a leopard that he believed, on each occasion, to be the man-eater, but never except in pitch darkness: also that a leopard—again, supposed to be the man-eater—had eaten four doses of poison, but appeared to be none the worse. He was obliged to give up his attempt at the end of December: and considerable adverse comment has resulted from his published suggestion that, as he has now learned the ground, and the habits of the animal, he is confident that he will be able to return in March or April and kill it without difficulty, "provided that the man-eater is not disturbed during the next three months." He also strongly recommends the withdrawal of rewards, on two rather remarkable grounds. First, that a reward is useless, because "the person who is willing to take the risk of killing the leopard wants no reward, and the person who wants the reward is not willing to take the risk of killing the leopard": secondly, that the existence of a large reward "makes co-operation between the villagers and the person who is sent out to kill the leopard impossible." The report does not say for how long the leopard's depredations have lasted already: but it is pointed out that, if it is to be "left undisturbed" for three or four months, the tale of deaths is likely to be considerably lengthened, and the villagers are likely to have their own ideas about the policy advocated.

Leopards take to man-eating less frequently than tigers; but, when they do do so, they are more dangerous and more destructive, being not only extraordinarily cunning but remarkably bold: they think nothing of coming into a village and entering a house from which to drag out a victim. Readers of Sterndale's books on sport in India will probably remember the famous man-eating leopard of Seoni, whose victims ran into hundreds, and which was at first supposed to be a tiger. It was beaten out in front of Sterndale, who, believing he was after a tiger, did not fire at it; after which, it never offered another chance until it was shot, in mistake for a pig, by a villager sitting up over his crops at night. It may be hoped that some such fate as this will overtake the Garhwal man-eater before the anonymous sportsman is able to find time to come back and finish it off.

Secondly, on the night of January 5, a leopard cub, that had been brought to Calcutta for presentation to the local Zoo, escaped and took refuge at the top of a narrow stair in a house in Chowringhee, the main thoroughfare of Calcutta. The police were called in, and were soon reinforced by a crowd of helpers armed with sticks; but the leopard was in a *cul de sac* where it could only be approached by a single man. Eventually a plucky Sergeant of Police climbed the stairs with a gun, trusting to luck to get his blow in first; and fortune favoured the brave.

Lastly, on December 31, a man-eating leopard, that had killed several people and mauled a number of others in a village in the Jessore district of Bengal, was accounted for by four Bengali sportsmen, three of whom were armed with guns and the fourth with a rifle. The published account of the proceedings reads rather quaintly. The leopard was traced to a dense bush, to which fire was applied, whereupon the animal came out with cautious and surreptitious steps, and one of the Babus shot at it, with the result that it attacked one of the others ferociously. The latter promptly fired two shots, and the leopard, rushing in another direction, mortally wounded a woman bystander. The leopard then attacked the third Babu, who fired a shot but unfortunately slipped and the man-eater in the twinkling of an eye was upon him. The Babu, a well-built man, forced his elbow into the mouth of the leopard with all his strength, pressing his foot upon that of the animal just to protect his head from its jaws. This desperate struggle between a ferocious leopard and a strong man went on for two minutes, when a sightseer, who was not prepared for the situation, went up to the scene with a spear. But the spear wound had no effect upon the animal, so the sightseer, seizing the fallen Babu's gun, struck the leopard with the butt-end of it. The gun unfortunately broke, so he took hold of the steel barrel of the broken gun and with it struck the animal on the nose, which bled profusely. The man-eater loosed its hold and tried to rush away, but was simultaneously shot by the first and second Babus, and dropped dead.

This rather naïve account conceals a great deal of real outstanding pluck shown by three at least of the four Babus—the fourth, the one with the rifle, does not figure in the story beyond the statement that he was there at the beginning: and pre-eminently so in the case of the "sightseer," who was certainly the hero of the tale. One is glad that the wounded Babu is progressing favourably in hospital: and the final sentence of the report has doubtless, before this, fired the sporting instincts of other local sportsmen—"More leopards are still at large in the vicinity."

Bombay Reclamation.

The mail brings the detailed report of the Committee appointed to examine the Bombay reclamation scheme. From this it appears that the majority did not, as appeared to be the case from the cabled reports, recommend the completion of the "Back Bay" part of the scheme and the abandonment of the part undertaken in Bombay harbour. According to the Report, the latter has already been closed down: and their recommendation is that, of eight blocks into which the former has been divided, three only should be completed, after which the matter should be further considered. It appears, from a plan which accompanies the Report, that the sea wall has been built for more than nine-tenths of its length; the gap remaining coincides almost exactly with one of the two middle blocks (No. 4, counting from the north) though it has not quite reached the boundary of either of the blocks on both sides of it (Nos. 3 and 5). It would certainly seem, to the layman, a great pity to leave the wall incomplete: which is, apparently, what it is proposed to do. One would suppose that the passage left, for the inrush of the tide, in the middle of the wall, would not only result in making the ultimate completion of the scheme, should that be eventually decided on, very much more difficult and costly, but would prejudice the work on the three end blocks (Nos. 1, 2, and 8) of which the report recommends the completion.

Apart from the great underestimate of the cost of the scheme, its financial results seem to have been much overestimated. The full scheme of the Back Bay reclamation provided for an addition of approximately $5\frac{1}{2}$ million square yards to the area of the Island, of which about $2\frac{1}{4}$ millions would be available for disposal to the public. On the revised estimate of 70 million rupees as the total cost of the project, it was calculated that, to recoup the expenditure with interest, it would be necessary to obtain an average price of Rs. 55 per square yard in sales spread over 11 years. The estimated total cost has now risen

Digitized by Google

to 110 million rupees: and the Committee consider that the maximum average price obtainable could not be expected to exceed Rs. 50 per square yard, and that the sales would have to be spread over 22 years at least. They are therefore of the opinion that a loss is inevitable, and their Report concentrates on the means of reducing this loss to a minimum. They put the present debt (on October 1, 1925) at 533 lakhs of rupees: and consider that, if their recommendations are accepted, the loss on the project will ultimately work out to something less than 350 lakhs; but that is the best that they find themselves able to make of it.

Three members signed the Majority Report. The fourth submitted a "Minority Report" of his own, which is said to run to about 400 pages of print. It is much less a report than a political essay, dealing with all sorts of matters only remotely connected with the question at issue, with voluminous appendices, and recommending the immediate abandonment of the scheme. It is, in effect, an indictment of the Government of Bombay in general, of their engineer, Sir George Buchanan, in particular; and, even more particularly, of the late Governor, Lord Lloyd. It is not surprising to learn that the extremist Press has taken up the matter with enthusiasm. It at first suggested an action for damages against Sir George Buchanan; but some bright spirit has thought of an even better move than that, and what is now solemnly proposed is the "impeachment" of Lord Lloyd.

INDIAN COMMERCIAL NOTES.

The Indian trade statistics for January 1926 have just been received, and show a recovery in imports from 1611 lakhs of rupees in December 1925, to 2250 lakhs in January. Exports have also advanced from 3153 to 3526 lakhs, a movement which is seasonal and to be expected at this time of the year. The net imports of gold were normal in January at 239 lakhs and of silver at 160 lakhs.

The balance of trade in merchandise and treasure stood at 893 lakhs of rupees in favour of India. Against this, however, must be set homeward remittances to the India Office, representing payments in India on trade account of rupees to the value of 796 lakhs. It will, therefore, be seen how closely the visible balance of trade in merchandise and treasure balances the homeward remittance of funds. There is only a difference of one crore of rupees.

On the whole, during the calendar year 1925, the balance of trade in India's favour amounted to 101 crores of rupees, as against the homeward remittance of Government funds, 57 crores only. It must not be forgotten, however, that during the first six months of 1925 exports of Indian produce were abnormally high and the balance of trade for those six months was actually 60 crores in India's favour, as against homeward remittances of only 17 crores. Subsequently, with the advent of the slack season, July to October, exports fell off and the set of trade in India's favour was less pronounced.

Every merchant is asking himself the question, how India's trade will go during 1926. There are already indications of an increased demand for cotton piece-goods and other manufactured goods which India normally takes. On the export side, it is early yet to say how the 1926 crops will turn out. The area under wheat is 2½ million acres short of what it was at the same time last year. On the other hand, last year's crop suffered from adverse weather conditions, and was distinctly on the short side. The yield of rice this year is likely to be normal and to allow of an export of over two million tons. The yield of cotton is half a million bales short of what it was last year, and the jute crop is also short; but sugar-cane promises well, and so do ground-nuts. The acreage under other oil-seeds is slightly below what it was last year, but no estimate of their yield has yet been published.

On the whole, it seems likely that exports in 1926 will be fairly well maintained, although they will probably not reach the record totals registered in January, February and March of 1925.

INDIAN EXCHANGE.

London, February 22.

During the past week unmistakable signs of weakness have appeared in the Indian markets, which is being ascribed to stagnation in exports, coupled with a lively demand for bullion in Bombay. It appears that rumours have been circulated in India that in the forthcoming Budget the Government intends to impose a tax upon silver imports, and the up-country dealers have been buying the metal very freely. Rates have, therefore, fallen away, and the T.T. rate in Calcutta and Bombay is now quoted at 1s. 6⅛d., but business is reported to a small extent at 1s. 6 5-32d. for immediate delivery, and there are many buyers at this rate for delivery in a fortnight.

Importers, as usual on any signs of weakness, have contributed to the fall by rushing in to settle exchange ready and forward, and a fair amount has been done for delivery in the monsoon months by piece-goods importers.

The anxiety on the part of some of the Banks to secure cover is reflected in the rate for three months' commercial bills, which is down a point to 1s. 6 13-32d. but shippers are not at all keen to accept this rate for more than their pressing requirements.

The India Government has, naturally, been out of the market, and unless it is prepared to buy under 1s. 6 3-16d. its services are not likely to be availed of.

Forward T.T. rates are no better than 1s. 6⅛d. this and next month, 1s. 5 3-32d. April and 1s. 6 1-16d. for the monsoon months with a small business passing.

The London Market has naturally followed the lead given by India, and in the middle of the week business was done at 1s. 6 11-64d., while latterly 1s. 6 5-32d. T.T. has been offering off and on. The outlook at the moment is uncertain, with a hesitating tendency, but a spurt in Indian exports would probably induce a steadier feeling.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

British Motor Firms and Greece.

One or two interesting criticisms have reached me with reference to the article which appeared in these columns recently on motor transport in Greece. It is said for one thing that it has been found impossible by some of our motor firms to obtain agents in Greece, and so it is out of the question for them to take advantage of the market that is being opened up by the development of the use of motor transport. I have referred the point to the writer of the article, and he assures me that agents can be obtained for British cars. It is also maintained that if agents are available business cannot be done because of the terms of payment. To that I can only answer that other countries manage to sell their motor cars in Greece, and it is reasonable to assume that the methods of settlement satisfy them otherwise they would leave the market alone.

Wireless in the Balkans.

On another pace will be found an American report dealing with the market for wireless apparatus in Roumania. There is so far no broadcasting station in that country, though there will probably be one shortly, so that for the time being there is no scope for the sale of wireless apparatus except for high-power sets, and this must obviously be restricted by the question of cost. In Greece, there is no progress to report in the development of wireless as an instrument of entertainment for the home, and restrictions on imports would at present, in any case, put that country out of court as a market for wireless apparatus. No doubt in time, however, Greece as well as Roumania and other Balkan countries, will have a broadcasting station, and it behoves our wireless equipment firms to keep an eye on that part of the world which should provide an excellent market in due course.

Sudan Trade Figures.

The figures are now available of the trade of the Sudan for the first eleven months of 1925. The total trade amounted in value to £E8,587,960, there being thus an increase of £E405,512 on the figures for the corresponding period of 1924. The value of the imports was £E4,565,161, a decrease of £E132,728, exports totalled £E3,580,994, an increase of £E313,239, while re-exports and transit at £E246,399 and £E195,406 showed respective increases of £E91,566 and £E133,435. The volume of trade is somewhat disappointing, and it is now clear that there is little possibility of the value of the trade last year going into eight figures. In the present year, however, we can reasonably anticipate a rapid expansion of trade both as regards exports and imports. The export figures will be influenced by the increasing output of cotton, while the improvement in purchasing power resulting from the larger area under cotton will be reflected by a widening demand for imports.

Openings in Palestine.

Sir Robert Waley Cohen, K.B.E., Chairman of the Palestine Corporation, Ltd., has a very interesting article in the *Palestine Annual* on Palestine as a field for the investor. He points out that the development that is taking place in Palestine has been due principally to the influx since the war of Jewish immigrants from Western Europe. These people, numbering slightly under 50,000, have come, he says, "with the determination to make good, and everything points to their doing so far sooner than could have been expected." The principal share in the development of Palestine is to be attributed, he emphasises, to this new population, but he points out that capital is necessary to enable development to keep pace with immigration, but so far external capital, with some notable exceptions, has not been too easy to obtain. His view is that Palestine is a favourable field for investment. "Industries already established, and showing good returns require working capital and money for extension," he says. "There is a large business to be done in building loans and loans on existing houses, at favourable rates and with an ample margin of security. Considerable sums will be needed for public utility undertakings—water supply, drainage, etc., in the three principal towns, if the needs of the new population and of the increasing number of tourists are to be met."

Rubber Variations.

For three weeks out of the last four the London rubber stocks have shown a decline, and they are now down to just over 9,000 tons. If anything could encourage the market this fact should, but so far, although there were signs of growing firmness yesterday, the market has remained very weak. The position in America, of course, remains the crux of the situation. In this connexion I would refer to a very interesting letter in a contemporary dealing with the question of America's supplies. The writer makes the point that if America has obtained most of her requirements for the first half of this year this is certainly not borne out by the forward sales of the companies, so, as he very justly observes, someone will be short. A report is also forthcoming from America to the effect that very shortly the growing development of transport will have its effect on the output of tyres with a corresponding increase in the demand for rubber, and that the situation will take on a different aspect before the summer. All that can be said is that we must wait and see. What is certain is that in the near future we are likely to witness very considerable fluctuations in the commodity market.

THE BRITISH INDUSTRIES FAIR.

(From Our Own Correspondent.)

Those who have visited the British Industries Fair with recollections of the British Empire Exhibition before them cannot fail to have been impressed by the sharp difference between the two events. The Exhibition had everything that makes for popular appeal; the Fair is undertaken purely for business. But that is not to say that is unattractive to the sightseer. Those who are not to be interested in the latest developments of manufactures can yet find entertainment all over the White City, and that that is being generally realised is evident from the way in which the general public have been taking advantage of the opening to them of the Fair for a few hours daily at a small fee.

It scarcely needs to be recalled that the Fair dates from early in the War, when it was inaugurated as a successor to Leipsic, and it has been held annually with the exception of last year, when the London section was temporarily suspended owing to the rival attractions of the Exhibition. In its brief career the Fair has had a number of habitations as far as London is concerned, and there were grounds for hoping some time ago that a permanent centre would be found at Wembley, but events have unfortunately rendered that impossible. But the White City has certainly served admirably as a centre for the Fair, and it has the merit of relative accessibility which Wembley most decidedly lacked.

Great expectations were entertained of the Fair as an instrument of trade endeavour at its initiation, and the condition of our commerce to-day suggests that they have still largely to be filled. But that is not the fault of the Fair. The adverse exchanges and the decreased purchasing power in Europe are two of the principal reasons why the Fair, though the business on each occasion that it has been held has been good, has not produced anything like the volume of orders that might have been expected. Another reason is to be found in the fact that until the present year the publicity given to it abroad has been altogether inadequate. The Government grant has permitted advertising on a much wider scale this time, though even now it cannot be said that enough has been done in this direction. Still it has been sufficient to bring buyers from all over the world, and as the world conditions generally have for some time been improving, and trade seems at long last to be on the upgrade, I anticipate that the results of the present Fair will prove quite satisfactory. Certainly the accounts last week were distinctly cheerful, and passing by the stands, along the gangways which at times seemed quite inconveniently packed with buyers, one could not help noticing the hopeful atmosphere that prevailed and was reflected by the demeanour of those presiding at the stands.

A review of the exhibits of a great Fair like that at the White City is always difficult when it is a question of compressing what one has to say into rather small compass, for one can at best only mention a few outstanding exhibits and must ignore countless others equally well worthy of notice. And in each of the many sections there are so many stands that call for comment. Particularly is this the case in regard to the Chemical and Allied Products section, which makes a very fine showing, and is deserving of the more attention, because of the advance made by this country in these branches of industry during the last ten years. *En passant* I noted with regret that one or two well-known firms who have exhibited in this section in past years were not represented this time. Features which particularly interested me from the point of view of the export trade to the Near East and India were the exhibits of fertilisers and insecticides. A notable exhibit in this section is that of the Gas Light and Coke Company, Ltd., who show dyes and heavy chemicals as well as products already mentioned.

From chemicals one passes easily to a lighter phase of human endeavour—musical instruments. This section, always prominent at the Fair, is very much in evidence this time, and has actually overflowed the hall devoted to it. Specially interesting exhibits are those of Dale Forty and Co., Ltd., the Imperial Organ and Piano Co., Ltd., and the Harper Piano Co., Ltd. The Scientific and Optical Instruments section has this time a new and important addition—a wireless section—in which there are no less than 32 exhibits, a fact which affords abundant evidence of the growth of this new industry and is at the same time a promise of the part that it will play in the export trade. Before very long the Near East will have its broadcasting stations, thus opening out a large market for receiving sets, while even now there is an outlet for high power sets.

The Sports Goods and Clothing section is most impressive, and the fact that the leading firms are now exhibiting at the Fair may, I hope, be taken as an indication that a strenuous effort will now be made to obtain this country's proper share of the foreign trade in these commodities. After all we have taught the world to play games, and as our manufacturers produce the best sports equipment that can be obtained it is little less than absurd that other countries should be getting so large a share of the trade abroad. Among the exhibitors may be mentioned F. H. Ayres, Ltd., John Jaques and Son, Ltd., and William Sykes, Ltd., The China, Earthenware, and Glass section has always hitherto been one of the most important features of the Fair, and this time is no exception, for the section is fully representative of this leading industry. The display of art pottery, chinaware, and glassware provides, as usual, a perfect feast for the eye. Among the exhibitors may be mentioned W. Moorcroft, Ltd., whose stand shows a wonderful array of their famous products, Nat. Heard, A.R.C.A., who shows Indian artwares, and Palestine Arts and Crafts, who have a pleasing display of Jerusalem pottery and Hebron glass.

As usual, the Stationery and Printing section is most comprehensive. Specially interesting exhibits are those of Raphael Tuck and Sons, Ltd., who show a choice selection of their well-known products, and Pilley and Co., Ltd., who show among other things hand-painted ware and papier mâché ware in attractive colours.

THE ENGLISH ORDER OF ST. JOHN.

On the petition of the Duke of Connaught as Grand Prior of the Order of the Hospital of St. John of Jerusalem in England, the King has been pleased to approve of the grant of a new coat of arms for that Order to take the place of the shield which has been in use since 1888. In this shield the "King's Beasts"—the Lion and the Unicorn—appear between the arms of the Cross of St. John. In the new coat of arms the King's Crest for England appears in the first quarters of the shield and the Beasts are banished. The King's Crest for England is familiar, says *The Times*, as it can be seen on the reverse of all shillings struck for this country since 1902 and all sixpences struck since 1911. Although the King's Beasts lose their position on the shield of the Order, they retain it in the case of the Badge and Star of the Order, where they still appear between the arms of the white eight-pointed Cross—often called the Maltese Cross. The new arms have been emblazoned on the Ensign of the Order, which will shortly appear at sea, as it will be worn by the steamer in which the Sub-Prior, Lord Scarborough, with a number of members of the English Order, will make the pilgrimage to Jerusalem, Cyprus, Rhodes, and Malta next month.

The Czecho-Slovak-Roumanian Delimitation Commission, which has been meeting at Satu Mare, has now arrived at a settlement of the Czecho-Slovak-Roumanian frontier on the river Tisa. The agreement reached by the Commission will make it possible in the future for both States to use the waterway on the Tisa under all tidal conditions. The settlement of this question, which has formed a subject of discussion for the past three years, removes the chief obstacle to the work of delimitation on this frontier.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 23.

Only very slight improvement can be recorded in the general Stock Exchange position, which for the past week or two has been so heavily depressed by forced liquidation by weak holders of speculative securities. But there has recently been a slight improvement of tone in the oil share section, which has been the most perturbed, and in that section the worst of the liquidation would seem to be over. Rubber shares, too, rallied to some purpose towards the end of last week, which saw them slipping back for several days. One may hope that, as domestic market troubles are cleared up, a better tone will develop. But with the near approach of the crucial time in the coal dispute it can hardly be expected that the public will, yet awhile, throw off their apathy and bring to the markets the breath of confidence and enterprise which have been so lacking of late. But it will be at least something if, as some brokers believe, markets are really through now with the troubles specifically caused by overbuying towards the close of 1925 by weak speculators.

The gilt-edged markets have maintained a firmness, which is based on monetary prospects rather than on the volume of business. The prices to which this class of security have been raised probably discount at least part of the advance that a fall in the Bank Rate might be expected to produce. The money market as well as the stock markets, are seriously discussing the prospects of a 4½ per cent. Bank Rate in the near future, but the majority view at the moment appears to be that such a step should not be expected until the beginning of April.

London's Traffic.

Although the receipts of three or four great British railway companies in 1925 showed a decline in comparison with 1924, this was entirely due to smaller receipts from freight traffic, and the Southern Railway, which relies mainly upon passengers for its revenue, was able to show a slight increase in its traffic receipts. The London Underground group, whose revenue is entirely derived from the carriage of passengers, had a similar experience to the Southern Railway, the number of passengers carried increasing by nearly 100 millions to the enormous total of 1,555 millions. Of this increase 78 millions was carried by the London General Omnibus Company, which carried 1,236 million passengers on it fleet of 4,136 omnibuses, the four Underground Railways being responsible for an increase of over 20 millions. The gross receipts of the groups increased by £473,500 and expenditure by £258,600, net income, including miscellaneous receipts being £239,000 higher at £2,989,500. The London General Omnibus Company maintains its dividend at 6 per cent., free of tax, and the Central London and Metropolitan District again pay 4 and 3½ per cent. respectively on their Ordinary Stock, but the London Electric dividend is reduced from 4 to 3½ per cent., and City and South London from 4 to 3 per cent. The total amount paid in dividends on the ordinary stocks of the group represents an average rate of 4.09 per cent. as compared with 4.43 per cent. in 1924. The Underground Electric Railways Company of London, which is purely a holding concern, deriving its income from holdings in the Underground group and other similar companies, again pays the full 6 per cent. on its income bonds. There are quoted at about par. The advantage to be obtained from the option attaching to these bonds, whereby Coupons can be encashed either in New York or Amsterdam as well as London, and a profit on the exchange thereby obtained, has, of course, now disappeared owing to the recovery of sterling to par.

Tobacco Prosperity.

It is now possible to see exactly how the leading tobacco companies fared last year. A study of the balance sheets of a group of a dozen of the principal undertakings is rendered particularly interesting as it affords evidence of the measures of success which has attended the operations of the independent enterprises in competition with the powerful tobacco combine. On the whole it is proved that the non-combine firms did very well, for out of a list of eight of them, lower profits were shown by only two. These were Albert Baker, whose net profits eased slightly from £34,390 to £34,106, and R. and J. Hill where the decline was from £29,859 to £24,939. But in both cases dividends were maintained at the previous level, Baker paying 12½ and Hill 10 per cent. As a matter of fact in no instances were dividends reduced by any of the twelve undertakings while some companies paid more, including the British American (nearly 28 per cent. against 26½), Cope Brothers (17½ against 15 per cent.), Finlay and Co., (8 against 7½ per cent.), and the Imperial (24 against 22½ per cent.) Although Carreras—of Black Cat fame—made no change in their dividend rate of 50 per cent., the return really represents 100 per cent on the capital, as it stood in 1923-24, for during the year the ordinary capital was doubled. This concern had a particularly good year, net profits jumping from £479,846 to £773,153. Godfrey Phillips shareholders once more had to go dividendless, but if the present rate of recovery is maintained (net profits rose last year from £55,385 to £74,684) it should not be long before the proprietors can look forward to a small return on their money. The Imperial of Canada earned slightly less than in the previous period, but both the United (South) and the Imperial companies had increases to record.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Paper.—The Egyptian Government Press invites tenders for the supply of paper for covers and drawing books. March 1. (D.O.T.)

Various Goods.—The Frontier Districts Administration invites tenders for a large variety of goods, mostly in small quantities. The principal requirements consist of oils, paints, leathers, soap, canvas, sacks, and miscellaneous items of general hardware. March 23. (D.O.T.)

TURKEY.

Stationary Stone Crushers and Portable Steam Engines.—Tenders are invited by the Anatolian Railway Administration for the supply of five stationary stone crushers, five portable steam engines. March 24. (D.O.T.)

The report of the Southern Punjab Railway Company for the year to September 30, 1925, shows that the net revenue, after deducting £186,346 payable to the Secretary of State for India as share of surplus net receipts and allowing for administration expenses, interest and other charges, was £258,167, plus £51,621 brought in, making £309,788. The directors recommend a final dividend on the ordinary stock of £7 per cent., together with a bonus of £2 per cent., leaving £77,788 to be carried forward.

JOHNSTON LINE

ROUMANIAN MARKET FOR WIRELESS EQUIPMENT.

Private individuals may now own and operate radio receiving sets in Roumania, and evidences of increasing interest are constantly being manifest (says an American Consular report). Attractive window displays of radio apparatus are also beginning to make their appearance. Under the present regulations, it is comparatively easy for individuals to procure the necessary licences.

The advisability of establishing a broacasting station in Roumania is under discussion, and it is quite likely that one will be operating within a year. In the absence of a local broadcasting station, there is no market for crystal or low-power sets, four or six valve sets capable of receiving all European stations being the only ones that are now saleable.

Practically all the important American and European manufacturers of wireless apparatus are now represented in Bucharest, or are making arrangements for representation. German consignments are probably now in the lead. American products are more expensive than German and other makes, but their superior quality is generally recognised.

Within modest limits, Roumania should become a promising field for wireless equipment because the people do not, as a rule, care for outdoor amusements, but are fond of congregating indoors and they are always ready for innovations.

FURS IN GOOD DEMAND.

The report of the London Fur Trade Association (Inc.) on the recent London raw fur skin sales, states that they were very well attended by buyers representing the home trade and the Continent, although few representatives of the American trade were present. Generally speaking, European business since the autumn sales has been only moderately active, except in France and in Italy, where trade has been good. In Germany, the deliberate restriction of credit facilities, which appears to be the policy of the financial authorities, is severely retarding business, but at the same time has eliminated reckless speculation. Once more it has to be reported that values of the cheaper furs continue to be deflated, whilst for the medium and better sorts, prices show little alteration. The total collections were not excessive, and for the most part competition was remarkably good in view of present circumstances.

Lord Winterton, Under-Secretary for India, is to open the British Empire Shopping Week at Horsham on Friday, March 5.

The traffic receipts of the South Indian Railway Company for the week ended January 23 amounted to Rs.6,12,417, making the total from April 1 Rs.4,24,26,897.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

48, FENCHURCH STREET, LONDON, E.C.3.

PERSIAN COMPOUNDED ROAD TAX.

The Board of Trade are informed that the Persian Bill for the abolition of the various taxes now levied on merchandise carried over Persian roads and their replacement by a compounded road tax in the form of an additional customs duties on imports and exports has been passed by the Mejliss with unimportant modifications. The Bill provided that the compounded tax shall be levied on all imports and exports on the following scale:—basic rate, 10 shahis per batman; opium, 5 krans per batman; manufactures of cotton, linen, silk, and wool, 1 kran per batman; petrol and sugar, 5 shahis per batman; dried fruits, cereals in bulk, raw wool, and cotton, machinery, and spare parts, 3 shahis per batman; lumber, ores, minerals, and bar, sheet and unworked metals, 1 shahi per batman; camels, horses, mules, bulls, cows, calves, and donkeys, 3 krans each; sheep, goats, and lambs, 1 kran each; motor cars, fourgons, carts, carriages, and other vehicles, 5 per cent. *ad valorem*. The collection of the following taxes is made illegal:—(a) nawaqel; (b) tolls; (c) brokerage (dallai); (d) pasturage; (e) weighage; (f) space tax; (g) educational or charitable or any other taxes or contributions levied by municipalities or their inhabitants on merchandise or means of transport passing through their town; (h) taxes and contributions levied under any pretext whatsoever on merchandise entering, leaving, or passing through towns. The Bill was to come into force on February 19.

THE CENTRAL ASIAN SOCIETY.

The next two meetings of the Central Asian Society concern Persia and Afghanistan. At the first, which is to take place on March 4, at 5.30 p.m., at the Royal Society of Arts, John Street, Adelphi, Sir Arnold Wilson will lecture upon "The Bakhtiari Tribes and their Country," with Sir Hugh Barnes in the Chair; and at the second, which is to take place on March 11, at 5 p.m., at 74, Grosvenor Street, a paper will be read on "The Problem of Afghanistan."

NEAR AND MIDDLE EAST ASSOCIATION.

The Near and Middle East Association have arranged a meeting for March 3, at 8.30 p.m., when "The Outlook in Bulgaria" will be discussed, Sir Edward Boyle, Bt., and Lady Muir (*née* Nadejda Stancioff) being the chief speakers. Major-Gen. Lord Edward Gleichen will preside, and the meeting will take place, by kind permission of Mr. L. Cobham, at 14, Hans Crescent, S.W.1.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Britannia for Bombay (Liverpool, March 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (London, March 6).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, March 10).

British India Line.—S.s. Dumana for Bombay and Karachi (London, March 12); s.s. Morvada for Colombo, Madras, and Calcutta (London, March 13).

Ellerman "City" Line.—S.s. City of Calcutta for Calcutta (Birkenhead, March 3).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 27); s.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 6.)

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, March 5); s.s. Nellore for Cololmbo, Madras, and Calcutta (Liverpool, March 20).

Motors and Motoring.

By G. B. B.

In certain recent severe road trials in this country the use of chains on the driving wheels, usually fitted in such events where greasy surfaces are likely to be encountered was forbidden, and as a result it was found that balloon tyres held up against skids quite as well as high pressure tyres with non-skid chains. Apparently no competition driver had noticed the fact, which private owner-drivers have known for some time, that balloon tyres prevented skidding on all but the very worst surfaces. Further, hill climbing is easier when balloon tyres are fitted. The larger section in contact with the ground gives a specially good grip and provided the engine power is there and the gear is sufficiently low, there should not be a hill that could not be climbed by cars shod with balloon tyres. I have used that type of cover practically since its introduction, and have nothing but good to say about it.

Body Design.

My Indian readers will be interested to hear that British body builders are now providing, as a usual practice, two doors and four doors for two and for four or five seaters respectively, a provision which, in Asia, has always been desired, but seldom been obtained, by the average purchaser. This improvement is certain before long to be reflected in increased sales, as the native buyer who will not have what he does not want, at any price, is never backward in seizing an opportunity of getting what he really does need. One of the things he likes is comfort, and he objects and always has objected to a door and seating arrangement which has meant that he must be disturbed and must get out of his seat whenever anyone else wishes to enter or leave the car. Also he has no use for narrow doors any more than he has for insufficient leg room. He likes wide doors to his car which will, when opened, give access to plenty of floor space; he wants, in short, that degree of comfort he feels he is entitled to expect and he will not buy a car unless he feels that the body builders have met his wishes in every possible way.

Rear Lighting.

My remarks, a few days ago, as to the number of motorists who break the law by failing to keep their back number plates clean and adequately illuminated at night, have been followed by an apparently inspired statement to the effect that whilst no special steps will be taken during the balance of the present lighting season, next winter other means than those at present in vogue for lighting number plates will be necessary. The lamp by the side of the plate will probably be prohibited and a top light, giving equal illumination on every letter and figure, may be compulsory.

An Agreeable Surprise.

I am agreeably surprised by the number of fellow motorists who agree with me that it will be a great mistake to make the carrying of red rear lights or reflectors by cyclists compulsory. Our view is that so long as their use is voluntary, and is actuated by a desire to show courtesy to other road users, it is all to the good. A better spirit on the road would soon become manifest; a better spirit which, I may add is greatly needed. But the moment the use of either red lights or rear warning devices is made compulsory the position changes and becomes one of great danger to all on the road; motorists, cyclists and pedestrians. It would be amusing almost, were it not so pathetic, to hear the non-thinking side of the motoring world arguing that cyclists "should carry red lamps for their own protection." Leaving out of question altogether the fact that it is the duty of the driver of an overtaking vehicle to see any obstruction or road user, we must admit that the cyclist is protected at present by the very fact that he is not rear-lighted. The motorist has to look out for him or commit manslaughter. We must admit also that the reason motorists are urging that cyclists should carry rear warnings is so that they will be able to see the cyclists without trouble, and that means, also as a matter of fact, that when cyclists do carry rear lamps we shall be able to glide along at any pace with light, secure in the knowledge that all we have to do is to look out for and keep clear of red rear lights. So before long we shall find ourselves carrying on at a good old pace with one eye keenly alert for little red sparkles.

All of which simply means that if a cyclist's red light is extinguished or the red glass of his reflector drops out or—to refer to a new fangled idea—white paint on his mudguard is obscured with mud, then, to use the vernacular, the poor fellow's number is up. His death warrant is sealed, and he will have no chance whatever of escaping with his life unless he stops for some reason and finds out what is the matter. And what about night motoring? The making of red lighting compulsory for cyclists will inevitably set all decent motorists' nerves on edge during night driving. They will literally be afraid to drive lest they run into some unfortunate lightless cyclist or pedestrian. Of course every motorist knows that there are a few motorists on the road who never will be gentlemen, who never will show any consideration for others and who drive on, non-stop, after running down a road user or any little trifle of that kind. They are the type who would welcome compulsory red lamps for others, simply because they feel that then they would be able to drive as they pleased simply because if there were any accident as a result of their careless or inconsiderate driving they could always swear that the other fellow's red lamp was out. As a motorist of many years standing and as a journalist who has written more than a little on motoring subjects, I am dead against any law making it compulsory for cyclists to carry any kind of a rear warning, whether red lights, red reflectors or white discs I am utterly opposed to it in the interests of motorists, cyclists and pedestrians alike.

Brake Power.

Much has been written lately about brake power, and one correspondent instances an American car which, he say, can be pulled up to a dead stop in 35 yards when going at 60 m.p.h. My own view is that I should not care about being in the car when the experiment was tried! I hear, however, of a British car which, at 25 m.p.h. can be pulled up by a foot brake alone, in 14 feet, or two feet less than its own length. At 35 m.p.h., the same car could be brought to a standstill in 36 feet, which is also a remarkable performance. Evidently British brakes are now superior to those on cars of trans-Atlantic origin.

The Copenhagen Show.

One of the chief exhibits at the Copenhagen Motor Show, which opened last Saturday, is a 40-50 h.p. long type Rolls-Royce "New Phantom" chassis, fitted with a six-seater Barker Pullman limousine body. The interest taken in this car has been extraordinary. As soon as it arrived in Copenhagen, orders were received that it was to be driven at once to the Kristiansborg Palace, for inspection by the King of Denmark, and His Majesty and his suite spent over an hour in closely examining every detail.

BRITISH CHAMBER OF COMMERCE OF TURKEY.

Annual General Meeting.

The annual general meeting of the British Chamber of Commerce of Turkey was held at Constantinople on February 2. H.M. Ambassador, Sir Ronald Lindsay, occupied the Chair.

Mr. W. G. M. Edwards, the Chairman of the Council of the Chamber, in the course of his address, said:—"May I take up your time for a few minutes and say a few words on the trade conditions of the past year? It is an extremely difficult matter to review a country's trade in the absence of statistics covering the whole year. At the same time it is gratifying to note that the Customs Department is publishing its monthly returns with greater promptitude and is steadily picking up arrears. The returns for the first five months of the year are now available, whereas at the corresponding period last year only those for the first three months had been published.

"The year 1924 closed with some improvement on the earlier month of that year and prospects of still brigther conditions for the new year. If these prospects have not fully materialised, both the import as well as the export trade was greater last year than during 1924. The monetary stringency, which has been a feature of the whole year, is not peculiar to Turkey alone. The fluctuations in the rate of sterling exchange have not been as marked during 1925 as in earlier years. The sterling rate, which was around 880 at the beginning of the year, closed at 908 in December. Compared with 1924, depreciation has been on a much smaller scale.

"The Government has energetically pursued its national railway programme and intensified production. The policy, in the words of the President of the Council of Ministers, is that of a 'Turkey interwoven with railways with a view to developing the means of communication and transport.' There are at present under construction in Turkey some 1,200 kilometres of railroads, provided for in the Budget of the current year. Projected lines may be placed at another 1,500, on which work is to be started in the near future. The estimated cost of the lines now being constructed is about £3,000,000 and that of the projected lines another £4,000,000.

"The policy of the Government, referred to in my remarks to you last year, of developing the agricultural riches of this country is bearing fruit. Every trader must look upon this effort with satisfaction, and it gives me great pleasure to be able to say that the encouragement the Government was giving to agriculture in 1924 was fully maintained in 1925. It is, after all, the greatest industry of Turkey, an industry which the people have been busily engaged in for generation and in which they have great experience. It is only natural, therefore, that the Government should give its further development first attention. It is to be hoped that it will not be led away from its policy in this regard by the idea that industrial wealth consists in fostering manufacturing of all kinds. Progress in this direction is very slow; it requires much capital and many hands with trained knowledge to manage complicated machinery. There is undoubtedly a shortage of labour in the industry for which the people of this country are most eminently fitted by long experience; if, therefore, any of this labour is induced to leave the land for work in towns, development in the direction so wisely adopted will first be arrested and then rapidly decline.

"In the matter of imports I have nothing very special to tell you. The first nine months of the year showed an increase of about 10 per cent. on 1924 in imports from Great Britain, and there is every reason to believe that this increase has been fully maintained for the last quarter of the year.

"Many months ago the Council pointed out to the Custom House authorities that there were indications of a coming congestion owing to shortage of warehousing space following on the closing of the private transit warehouses. Promises were given that steps would be taken to prevent any accumulation of goods. I have to say, however, that the condition of affairs at the Custom House is almost as bad as it was in 1920 and 1921. Goods lie three and four weeks in lighters, or piled up on the quays suffering damage. Traders who want to get their goods promptly cannot find them. Complaints are heard from every branch of trade. All these delays make goods more costly and increase the burden of the consumer. His buying capacity becomes less. The whole machinery of commerce becomes clogged and suffers losses accordingly.

"While no new industries have been started on a large scale as a result of the protective tariff, nevertheless, a number of articles are now being manufactured or made up locally to avoid the heavy duties; amongst these may be mentioned boots and shoes, cloth and ready-made clothing, shirts and collars, ties, knitted goods of different kinds, waterproofs and raincoats, jute sacks, soap and perfumery. The tendency to import partly manufactured material and to make up the finished article here is increasing.

"Business in neighbouring countries has been varied. Bulgaria has had a very bad year. The bad harvest of 1924, the political unrest, the uncertainty with respect to the future caused a stagnation during the first half of the year which was unprecedented. Peasants would not bring their prices down to the level of the world's markets, with the result that their crops of cereals and tobacco are still largely unsold. The outlook for the present year is none too cheerful but the general feeling is that 1926 cannot be worse than 1925. The recent change in the Government seems also to have created an atmosphere of confidence which augurs well. From Greece, in spite of many political changes, all we learn is that the whole country is humming with activity. The influx of the refugees from Turkey, which was lamented so much at first, is turning out to be an advantage. The wealth of a people is built up by the work of its hands, and if the hands do not exist there can be no wealth. The ports of Piræus and Salonika are full of shipping: much of the trade enjoyed by Constantinople has unfortunately been transferred to Piræus, where facilities are many, enterprise encouraged, and the trader left free from interference in carrying on his business. Conditions in Roumania continue to be adverse both for import and export trade. A series of poor harvests prevents the Roumanian Government from obtaining sufficient funds to develop adequately the resources of the country."

Sir Ronald Lindsay then addressed the meeting, and

Company Meetings.

MANCHESTER SHIP CANAL COMPANY.

Seaborne Traffic A Record.

Mr. Bacon's Speech.

The annual general meeting of the Manchester Ship Canal Company was held at the Houldsworth Hall, Manchester, on February 22.

Mr. W. C. Bacon, the Chairman, in moving the adoption of the report and accounts, said:—You will have noticed that both in the Press and in the speeches of public men reviewing the trade of the year 1925 they are in general accord in stating that the year opened favourably and seemed to be full of promise, but that the hopes of a real improvement in trade did not mature and, in fact, there was a distinct falling off in the last half of the year. Broadly speaking, that was the experience in regard to this company's affairs although, remembering the state of trade, I think you will agree that we have maintained our position very well. The receipts for the first half of the year showed a nice increase of £62,000 but, unfortunately, the last few months of the year were disappointing and reduced this increase to £29,888 for the year. Taking the accounts, however, as a whole, the result is very much the same as that for the year 1924, and the directors are able to recommend you to sanction dividends of 5 per cent. on both the preference and ordinary shares of the company.

There are one or two points in the accounts to which I should like to refer. First of all there is the gratifying fact that the seaborne traffic using the Ship Canal for the past year, namely, 5,622,405 tons, is the largest of any year since the Ship Canal has been open for traffic. The largest previous year was the pre-War year 1913, when the total was 5,457,218 tons. Whereas, however, the receipts from Ship Canal tolls, ship dues, and miscellaneous receipts for the year 1913 amounted to £654,917, in the year just past they amounted to £1,493,544. This increase in revenue is partly due to the company being able to obtain better remuneration for the use of the port owing to the all round advance in values as compared with 1913, and also to the advent of new traffic, some of which, being of a better class, yields higher rates of toll to the company. This increase in the better class traffic is a very satisfactory feature of the comparison.

The final result for the year was a total net income of £889,273 as compared with £857,739 in the previous year—an increase of £31,534. To this has been added the balance brought forward from last year's account—£32,929—and an item of £35,974, being the amount paid to December 31, 1924, towards the extinguishment of £723,600 first and second mortgage debentures charged in previous years against the net income and now written back. This gives a total net income of £958,176, and after deducting interest, rentals and other fixed charges amounting to £449,487, there is a total as shown in the balance-sheet available for dividends and reserve amounting to £508,689. The appropriation to reserve which includes £35,974 I have already mentioned, amounts to £50,973, leaving a balance of £457,715, out of which it is recommended that dividends be declared of 3½ per cent. on the Corporation preference stock, 5 per cent. on the preference shares, and 5 per cent. on the ordinary shares, which amount in total to £424,698, and leave a balance of £33,017 to carry forward to next year's account.

As you will see from the report, the capital expenditure during the last year amounted to £320,251, but against this there were receipts on capital account amounting to £73,267. The receipts consisted of the amount of compensation payable to the company by the Rochdale Canal Company under the Oldham and Rochdale Corporations Water Act, 1923. The nature of this receipt has been fully explained at previous meetings and it is not necessary for me to trouble you with it again.

Dealing with the question of capital expenditure, as you are aware, an extraordinary meeting is to be held at the conclusion of this meeting to sanction the borrowing from time to time, as required for capital purposes, of any sum or sums not exceeding in total the £1,000,000 authorised by the Manchester Ship Canal Act, 1913. Let me state briefly the policy of your directors in regard to this question of capital expenditure. We have, as you are aware, a very valuable undertaking in the Manchester Ship Canal which extends from Eastham to Manchester—a distance of 35 miles. The canal is capable of being utilised for traffic many times greater than that which has actually used it up to the present time. Such increased uses would not require any appreciable increase in the cost of maintaining the undertaking. The cost of dredging and working of the locks, swing bridges, as well as other standing charges would be practically the same as to-day if, for instance, the amount of traffic were doubled. To accommodate such traffic, however, it would be necessary to have additional transit sheds, railways, and other facilities for dealing with it at the docks, and in order to get increases of traffic it is necessary to provide increased accommodation of this kind in advance of actually obtaining the traffic. This necessitates some expenditure in interest before the works actually become remunerative, but later on it pays handsomely because the revenue received from the new traffic is very much in excess of the interest cost and other charges incidental to the new accommodation, because the rates charged are not only for the use of such new works but are also for tolls and dues for the use of the Ship Canal.

No better illustration of the soundness of this policy could be instanced than the construction of the new oil dock at Stanlow, near Ellesmere Port. We have there represented the principal motor spirit and oil importing and distributing companies in this country, the Anglo-American Oil Company, the British Petroleum Company, the Shell Mex Company, the British-Mexican Petroleum Company and others all doing a large and increasing trade. It is not necessary for me to mention what an important part motor spirit and fuel oil play under present-day conditions of transport. One of the works which we at present have in hand, and for which money is required, is the deepening of the Ship Canal from 28 to 30 feet between Eastham and Stanlow. As I have previously explained, this will enable deeper draughted ships to come to the Stanlow Oil Dock and will also enable vessels loading at Manchester to finish loading at Ellesmere Port down to a deeper draught. Another work in accordance with the policy I have outlined is the construction of the two new reinforced concrete sheds north of No. 9 Dock to enable us to

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

Digitized by Google

deal with additional traffic. No new transit sheds have been constructed since the completion of the sheds at the north of No. 8 Dock, which were finished in the year 1914. Other works we have in hand are the construction of railways and ancillary works for the development of the company's new dock estate at Barton on the land purchased some time ago from the de Trafford Trustees. Large extensions are also being undertaken at the Ellesmere Port Docks with a view to the development of traffic at that end of the Ship Canal.

Other items are the erection of new offices in Manchester and at the docks which, as I have explained at previous meetings, have become urgently necessary.

I should say, that the directors have been stimulated to spend capital in advance of strict requirements by the financial assistance received from the Government Unemployment Grants Committee, who have agreed to pay half the interest charge on some of these new works for periods varying from 7, 10 or more years. Without this assistance the directors would not have felt justified in putting in hand all the works involving such a large expenditure of money at the present time. I am sure you will agree that it is a matter of satisfaction that the company in this way, in addition to providing for future traffic, have been able to do something towards the mitigation of the unemployment problem. I think you will agree that the policy we have adopted is on right lines.

Whilst I am on this subject I may say it is the intention to raise, at any rate, the first portion of the money required by the issue of Manchester Ship Canal Bonds. These bonds are very well secured. Taking last year for instance, there was a surplus revenue of over half a million pounds which would have been available for payment of interest on these bonds had any of them then been issued. If any of you wish to invest in them you should write to the secretary of the company, and he will furnish you with full particulars. Perhaps some of you would like to invest your dividends in this security.

Those of you who follow the reports of the Shipowners' and other Associations will gather that freights were generally upon a lower level in 1925 than in any years since 1913-14, and it was impossible for vessels in the general trades to make a profit; indeed, one prominent shipowner stated that he was certain very few could even cover depreciation. Shipowners are always optimistic, indeed if they were not so they would not be in the business, for they often send the ships off with a cargo to a far distant port without knowing how the markets will be when they arrive, and often even in the height of the season at those ports they may have difficulty in finding profitable employment, and they may have to shift in ballast to a distant port rather than take the low freights then ruling. This is no doubt the origin of the term adventure in respect to shipping, for shipowners and shipmasters in the olden days were called adventurers and the voyage described on the insurance policy as touching this adventure.

All the speeches of the Chairmen of the large banking interests have been optimistic, much more so than in previous years and I trust we shall take courage therefrom. I was sufficiently optimistic to think we should have overcome the difficulties caused by the War in not more than ten years, but I fear now it may be longer, although I earnestly hope we are now approaching the dawn of a new era.

Alderman Sir William Kay (Deputy Chairman) seconded the resolution, which was carried unanimously; and at an extraordinary general meeting which followed the proposed borrowing powers were sanctioned.

The Indian Industrial and Commercial Congress has been revived after an interval of six years, chiefly through the efforts of the Indian Merchants' Chamber of Bombay. It held its opening session last Friday.

in the course of his remarks said:—"It is indeed a matter of great satisfaction to us all to know how very near agriculture is to the heart of the Turkish Republic. I myself in the spring of last year took an opportunity to make a little tour through the more accessible parts of Western Anatolia, and though I am the last person to imagine that one can get to know a country from what one sees from a railway carriage, yet I was greatly struck by one thing—the conviction that by agriculture unaided Turkey would be able to reconstruct the strength of the State and repair the damages of the terrible series of wars she has been through. Parallel with this effort to develop agriculture is another and no less important effort to develop the railway system. Railways in themselves produce nothing—they are merely the handmaids to other industries, and, of course, in Turkey mainly to the industry of agriculture. By facilitating exchanges they encourage production. No better means could be devised by the Turkish Government for this latter and all-important object, and, looking at the matter absolutely and from one point of view only, we may admire the immense effort that is being put out to extend the railway network of the country, especially when we remember that it is all being done out of revenue. The result is, as Mr. Edwards has pointed out, that the balance of trade is moving steadily in favour of Turkey, and though I have not followed closely his statistics I have no doubt this improvement is due to the increase of production and exports and not to any falling off of imports."

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended February 11, state:—

Since our last report, the futures market has shown a little more activity, especially in Sakel; the week's summary of price movements is as follows:—Sakellaridis: March, 0.57 dollars up; May, 0.43 dollars up; July, 0.50 dollars up; November, 0.33 dollars up. Ashmouni: February, 0.19 dollars down; April, 0.03 dollars down; June, 0.02 dollars down; August, 0.05 dollars down; October, 0.10 dollars up.

The Government purchases up to the present have consisted entirely of tenderable cotton and, as a result, the supply of these grades in the market is getting restricted. With the somewhat restricted available supply of tenderable cotton, it should not be difficult to push up the price of the March contract, but we consider that the taking up of dockets may be decidedly risky; any rise with no other basis than a decision to receive dockets, would certainly induce heavy tenders and, with the present lack of commercial demand which in all probability would be accentuated by a rise in prices, it is difficult to see how the taking up of the cotton could be made profitable. The distant months are all quoted at big discounts and accordingly of little use for hedging the cotton to be taken up against March contracts.

There is very little fresh to report on Ashmouni. In spite of its present very reasonable price compared with competing American long staple growths, spinners continue to show very little interest. From time to time, exporters receive inquiries for this growth, but more often than not no business results.

As a result of a recent tour in Upper Egypt, we estimate that the stock at present held in the villages and in the factories amounts to about ¾ million kantars. The greater part of this stock consists of qualities Good Fair and Fully Good Fair to Good and Fully Good: there is a distinct scarcity of the lower grades. The Government has bought, during the week, about 2,750 bales of Sakel from Fully Good Fair to Good, for which 35 to 36 dollars have been paid. The total Government purchases to date amount to about 23,000 bales.

The Liverpool Egyptian market continues to be heavy, and the recent decision of the Sudan Plantations Syndicate to ship to Liverpool practically the whole of their Gezira crop, in all about 325,000 kantars, cannot but increase the heaviness of that market.

Our opinion of the market is unchanged; while Sakel prices remain at present levels, the demand for this variety will be on a very limited scale; on the other hand, as long as the Government continues to buy, a decline of any magnitude cannot be expected. As regards Ashmouni, we consider present prices very reasonable and a slight rise not improbable. The week's receipts amount to 218,353 krs. against exports 249,678 krs.; the stock stands at 2,228,135 krs.

Spot: The demand from abroad has fallen off considerably and we have had a dull week at Minet-el-Bassal. Sales amount to about 15,400 bales, of which we estimate 8,250 bales Sakellaridis, 6,300 bales Uppers, 500 bales Zagora, 150 bales Pilion, and 200 bales White. The Government has bought during the week about 2,750 bales of Sakellaridis.

Sakellaridis: Has met with only a moderate demand though there has been business in all qualities. There has been a certain amount of demand for Extra qualities for which very high premiums have been paid. Spot differences are steady without much change from last week.

Ashmouni and Zagora: Demand has been on a smaller scale than last week. All styles have been dealt in. With the exception of Fully Good, which is a little dearer, spot differences are unchanged.

Brown and Pilion: Brown is neglected with no business to report. Spot differences are quotably a little dearer. Pilion has met with only a small demand and spot parities are unchanged except for Fully Good, which has hardened a little.

White: Has been in fair request at about last week's rates.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended February 20 states:—

Under the influence of increased demand from India a more cheerful feeling has been in evidence in most sections of the cotton trade during the past week. Whilst by no means satisfied with the general volume of business any moderate improvement helps to strengthen confidence and induces a feeling of hopefulness.

Yarn.—An exception to the better feeling is noted by the complaints from spinners of American cotton which continue to increase rather than the reverse. In spite of the shorter working hours it is doubtful whether the whole of the reduced production is being consumed. Egyptian spinnings, on the other hand, are encouraged by the steady demand which prevails and are maintaining a firm attitude as regards prices.

Cloth.—Manufacturers producing the particular varieties of goods required for India report a bigger demand than for a long time past. Orders seem to range fairly evenly over all plain and fancy goods used in that market. Since the beginning of the New Year the demand for China has been slow, and the broadening of business hoped for from the resumption of the Shanghai auctions has not yet materialised. Egypt and the Levant generally have been quiet, and nothing of particular interest can be reported as regards the smaller foreign outlets. Colonial and Continental inquiry have been a little more active, but the Home trade is decidedly on the quiet side.

Raw Cotton.—Movements in quotations during the past week have been unimportant and on balance there is very little change. It is reported that the exports of American cotton to all countries this season up to the present amount to 5,790,000 bales as compared with 5,954,000 bales during the corresponding period of last year. Egyptian cotton keeps steady, the receipts so far being 6,235,795 kantars against 6,488,722 kantars at this time last season. Closing quotations yesterday were as follows:—American Middling, 10.57; Egyptian Fully Good Fair, 18.10.

The Orient Steam Navigation Co. have placed an order with Messrs. Vickers, Ltd., for a passenger steamer generally similar in dimensions to the Orama and Otranto recently built by the same firm.

A technical conference has been held in Bucharest for arranging the linking up of the Bulgarian and Roumanian railway systems between Vidin and Calafat, in order to provide for direct through traffic from Poland.

M. Stovadinovitch, Yugoslav Minister of Finance, who has been for some weeks in the United States in connexion with the settlement of the Yugoslav Debt to America, left New York last Friday on his return to Belgrade. He is expected to stay a few days in London.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

France in Syria.

Even if France's own inclinations did not lead her to revise the methods of her administration in Syria, it is likely that she will have no other alternative after the Permanent Mandates Commission of the League of Nations has made its report on the Syrian Mandate. There can, however, be no doubt as to the sincerity of M. de Jouvenel's desire to adjust the system of government to Syrian mentality and local requirements, instead of attempting to fit the inhabitants to a procrustean scheme which may have succeeded in French colonies, but has proved intolerable to a people more advanced than any whom the French have hitherto ruled. The Angora Agreement, which the French High Commissioner has just concluded, is shown to have a local significance, as between Turkey and Syria, rather than to be an attempt to regulate Franco-Turkish relations as a whole. It will be followed by an adjustment of questions that have been engaging the joint attention of the Syrian and Palestinian Governments. In this way M. de Jouvenel hopes to settle all Syria's external problems as a useful preliminary to the reorganisation of the system of government. which is awaiting the restoration of peace.

Britain and Turkey.

It would be churlish not to welcome a prodigal's return, especially when he has words of wisdom for those with whom he has lately been indulging himself in unseemly fashion. Nor does it do to inquire too closely into the cause of the return; husks can never be good for the circulation, and we may leave it at that. "There is no ground, so far as we are aware," soberly says in plain Roman type the *Daily Mail*, so recently thrown into italics and convulsions over the certainty of immediate war in the Middle East, "for supposing that the Turks are assuming an intractable attitude. But it is sometimes suggested that they may be encouraged to show a stiffer front by the belief that they can expect strong support in this country in their dealings with the British Government. We advise them seriously not to make any such mistake as to adopt a provocative policy. They would err greatly, if they supposed that in the event of serious differences with Great Britain they could rely upon anyone of importance [*still no italics*] in this country to take their side against our own British Government. Any person who attempted to make the Turks believe that they could look for any effective support in such conditions would be gravely misleading them." It is to be hoped that the Turks will not be unkind enough to suggest that it is late in the day to shut the stable door when you have put your money on the wrong horse. Rather should they welcome a gem which might be adapted for the Hodja's store of wisdom. The fact is that the Turks have been able to take stock of the situation more quickly than their mentor has, with the result that the exchange of views between the British and Turkish Governments is pursuing a course which in the circumstances may be regarded as normal. As the fly could not divert the wheel to a war chariot, it must be allowed to take credit for making it revolve in the cause of peace.

Pending Elections in Egypt.

The Egyptian Government has announced that the approaching elections will be held on the basis of the Electoral Law of 1924, and the Zaghloulist Opposition has decided to take part in the elections. As the goal to be aimed at in Egypt is the return to constitutionalism, so far so good. The result of the elections must now be awaited. At the recent conference held by the Opposition in Cairo the strange sight was presented of Zagh-

Digitized by Google

loul Pasha, Adly Pasha and Sarwat Pasha seated together. Some voices were raised in favour of non-participation in the elections; but for once in a way Zaghloul Pasha stood to his ground and insisted on the constitutional attitude. Time, it may be, has brought wiser counsels, and if the Zaghloulists return to office, they may yet prove themselves capable of carrying on the administration with some regard for the realities of the situation. Great Britain asks for nothing else. There is a tendency to suppose that the British Government has committed itself to taking sides in Egyptian party politics. It is not the case; but as Great Britain has some responsibility in regard to the orderly government of Egypt and the safety of its inhabitants, British representatives must necessarily prefer to see in office a man who is prepared to maintain law and order in the country to one who shelters himself behind mob-rule. The stand made at the Opposition Conference by Zaghloul Pasha in favour of participation in the elections is the first indication of the possibility that, if returned to power again, he may yet stand up to those who have shaped his policies in the past with such disastrous results.

The Political Tug-of-War in Roumania.

The communal elections in Roumania have produced no "landslide" in either direction. In the country districts the Government may be able to claim a two-thirds majority; in the towns the Opposition appear to have obtained at least half of the seats. This result is regarded by the Government as not imposing upon it any need to resign at once, although there can be no question of committing the country to any further legislation of a special National Liberal character. Accordingly the three or four weeks that remain of the session will be devoted to passing the Electoral Reform Bill, and the present Parliament will be dissolved on or before April 3. In the past it has been the custom for the chief parties to take turn and turn about in forming a Government. In the present instance the end of the National Liberals' four years' tenure of office finds a number of Opposition parties in existence, none of which is strong enough to be marked down as the inevitable successor of M. Bratianu's compact following. At the eleventh hour a hurried effort has been made to create a single Opposition group by a series of pacts and undertakings; but the degree of cohesion attained in a short time does not seem to be of a high order. In view, however, of the fact that the Liberal Prime Minister is feeling the strain of office, it is generally taken for granted that he will not be averse from seeing his political opponents in power for a spell, in the conviction that divergences of opinion among them will shortly pave the way for the return of his own party.

The Defence of Palestine.

Whatever may have been the original reasons for the creation of the Arab Emirate of Transjordan, the fact has become increasingly apparent that in that Arab State is constituted the main defence of Palestine. What dangers there exists to the Holy Land comes, of course, as it has immemorially come, from the desert, and the desert in this case means those restless tribes south and south-east of the Dead Sea who now owe a nominal allegiance to the Sultan of Nejd, Ibn Saoud. It is in recognition of this state of affairs that strategic changes, involving both alterations and reductions, are being contemplated by Lord Plumer. In the first case, we understand, Ramleh is to supply more aeroplanes to Amman, the Air Force at which place will, in this connexion, have, if necessary, to make increasing use of the landing ground at Maan, in defence of the recently acquired Maan vilayet. Next, the last British unit of the garrison in Palestine (other than the R.A.F.), the Ninth Lancers, withdraws to Egypt. This is in itself a gratifying indication of the respect for order which Lord Plumer's Administration has been able to foster in the land Finally, the British gendarmerie is to be disbanded, although it is stated that about two hundred of the personnel will be incorporated in the Police. Instead, there is to be a Palestine and Transjordan Frontier Force, composed chiefly of Arabs and Circassians. This last move is not only an excellent symptom of the peaceful progress of the country, but also a welcome, if small, event for the Whitehall Exchequer. But the occasion should not be noted without a tribute to the splendid work of the British gendarmerie, which through four difficult years has preserved in a divided land the good name of British impartiality and justice.

The British School at Athens.

On another page we publish a brief history of the British School of Archæology in Athens. It is difficult to understand why this paladin in the Near East of British scholarship and archæological interest has failed hitherto to find a Maecenas. After forty years of sound and useful work the school is hard pressed for money; its ordinary revenue has been unequal to the strain of a heavy bill for repairs to the Director's house, and unless more funds are forthcoming to meet the cost of the excavations at Sparta very little work can be done on that important site this year. Archæological research may not appeal to the multitude; but we find it hard to believe that interest in the classical past is nowhere combined in England with a sufficiency of this present world's goods to allow for a generous endowment of the British School in Athens. Towards the sum of one thousand pounds required for the Sparta excavations this year only three hundred pounds have been given or promised. The School ought not to be reduced to meretricious methods of raising funds; but if other means fail, there would appear to be scope for the pushful and picturesque campaigns that undergraduates have been know to adopt with success for other purposes. In the multiplicity of demands these days on private generosity the still small voice of the retiring scholar is apt to go unheard or unheeded, and the School must adapt its ways of making its needs known to the spirit or the necessities of the time.

"BIS DAT QUI CITO DAT."

The association of Prince Henry with the Royal National Orthopaedic Hospital, of which His Royal Highness is President, and his special identification with the campaign for raising a special fund for this institution have been the means of extending the list of subscribers to cover the most distant parts of the world. It may be of interest, therefore, to overseas readers to record that towards the fund of £87,500, which is required for further extension of the country branches of the Hospital at Bickley and Stanmore, over £40,000 had already been secured before the Festival Dinner held on February 24. At that dinner a further sum of over £8,000 was given. Consequently a start can now be made in increasing the number of beds in the Hospital. There is still, however, a considerable sum to be collected, and the appeal goes out to Britons overseas who may sometimes be at a loss for a Home charity to which to give their support. The Orthopaedic Hospital began its work in 1838, and since that date has turned hundreds of thousands of actual or potential cripples into healthy and useful members of the community, including many soldiers classed A1. in the late War. In 1907 there were 45 beds, to-day there are 300, but 200 more are urgently needed; the outpatient attendances have increased in eighteen years from less than ten thousand annually to over 71,000. Support for the Hospital has recently come from as far afield as the Shanghai Race Club, and we are confident that there are many people and associations in the Near and Middle East and in India who will be glad to contribute their quota.

The Index to Volume XVIII of the "THE NEAR EAST AND INDIA (July 2—Dec. 24, 1925) is now ready and copies will be sent to subscribers on application to the Manager, "THE NEAR EAST AND INDIA," 170 Strand, London, W.C.2.

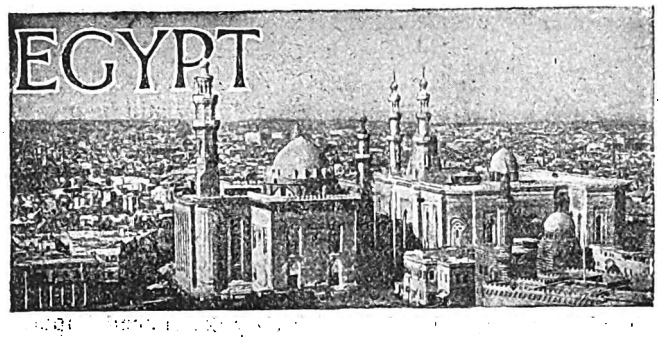
THE ROME MEETING.

A variety of causes combine to make the visit to Rome of M. Nintchitch, Yugoslav Minister for Foreign Affairs, an inevitable proceeding at the present moment. In the first place, there is a "treaty of friendship and cordial co-operation" between Italy and Yugoslavia, which has now run for two out of the five years for which it is valid. The basis of this Treaty is that the two countries undertake to afford one another their mutual support and cordial co-operation for the maintenance of the order established by the Treaties of Peace concluded at Trianon (with Hungary), at Saint Germain (with Austria) and at Neuilly (with Bulgaria), as well as for the respecting and execution of the obligations stipulated in these Treaties. At the same time in the event of international complications, and if the two contracting parties agree that their common interests are, or are likely to be, menaced, they undertake to discuss the measures to be taken in common to safeguard those interests. Thus, at a time when various countries affect to be exercised over the new set of conditions which it is supposed will be created by the admission of Germany to the League of Nations, it is reasonable that the Italian and Yugoslav Governments should try to discover how far their views on this matter coincide. Apart from the question of Germany's admission to the League and the proposal that Poland should simultaneously be given a permanent seat in the Council, the German Government has aroused misgivings by the interest it has recently shown in the fate of German minorities in foreign countries and by a disposition to favour union with Austria. On the subject of German minorities in Italy Signor Mussolini has shown that he is fully prepared to grapple with the problem single-handed; but he is, doubtless, aware that friendliness between the peoples of Italy and Yugoslavia has not advanced as far as the formal commitments of the two Governments, and recognises that, in view of Italy's interests in Albania, it is politic to lose no opportunity of emphasising the official friendliness between the two countries. For Yugoslavia, on the other hand, the prospect of the union of Austria and Germany has been allowed to conjure up genuine fears, and may well prompt her to bespeak Italian support.



The trouble that has arisen in Europe over Germany's admission to the League illustrates the difference in outlook between Great Britain and the majority of European countries. There is something repellant to the British mind in offering Germany the hand of friendship at Locarno and in showing immediately afterwards that there is no sincerity in the proffered friendship. The Locarno Pact purported to be a sincere undertaking on the part of the Allied Powers to accept Germany's offer to turn over a new leaf and to break with the Imperialism of the past. To attempt to stultify the meaning of her admission to the League by introducing at the same time a make-weight against her is one of those things which, in the British point of view, are not done. Even if the time for Poland's admission to the Council of the League were overdue, the canons of private and diplomatic conduct require that the subject should not be raised until Germany has formally taken her place in the League. The future attitude of the German people in European affairs may still be problematical, but the surest way of guiding it on right lines is to give the Germans full credit for good intentions, until there is sufficient ground for concluding that they mean to betray Europe's confidence. It is unlikely that Germany will be encouraged to abandon the questionable methods of pre-War Europe when she sees all round her countries acting in the very spirit for which they denounced Imperial Germany. Belief in the League of Nations and a genuine desire to make a success of it would prompt Continental Europe to leave the future, as far as Germany is concerned, to take care of itself. Any real attempt on the supremacy of the League would bring about such a rally of forces to its support that it would be made almost proof against any further challenge. If the Great Powers could adopt this attitude towards the League, the peace of Europe would become a reality. How far some of them are from this frame of mind was shown by the Italian Prime Minister in his recent fulmination against Germany on the subject of the Tirol, and in France's action in the question of Poland's place on the Council.

The shortcomings of one or other of the Great Powers do not excuse minor Powers for acting contrary to their own interests in this matter. A Great Power can make shift without the League; for the smaller States it is a sheet anchor of security, and they should be careful to do nothing to impair its authority. To attempt to pack the League or its Council after the manner of election-making in the East must inevitably undermine the prestige of the League and reduce it to impotence, if it does not destroy it altogether. Only by regarding it as above challenge or reproach can Europe hope to see the League invested with the authority necessary for the maintenance of the peace of the World. The Rome Treaty of January 1924 between Italy and Yugoslavia had for its main purpose the establishment of relations between the two countries which would lessen the risk of trouble as a result of the clash of interests along their common frontier. It would be most unfortunate for Yugoslavia, if she were to use this agreement to revive the pernicious system of pre-War days by which Balkan States attached themselves to a Great Power and were used as pawns in European intrigue. Even the union of Austria with Germany could not constitute a danger to any State in the Balkans without being at the same time a danger to Europe as a whole, and consequently the concern of the Great Powers. In these circumstances there cannot be the least doubt that the Balkan States should resolutely confine their attention to Balkan affairs, and refuse to be dragged into the vortex of Central or Western European politics. If there had been a Balkan Federation instead of a Little Entente, which tends to drag Yugoslavia and Roumania into the maelstrom of Central Europe, neither of these countries would have felt called upon to intervene in matters in which they are primarily concerned merely in so far as they wish to provide an echo for France, Italy or Czecho-Slovakia. The approaching session of the League of Nations at Geneva will turn on the question whether Europe is to have a genuine will for peace, or whether she is to base all her actions on a confirmed belief in unrest and ultimate war. It is a matter or regret that the Balkan States should hesitate for a moment to side with those who believe in, and are working for, peace and fairplay as the only possible antidote to the world's present ills.

The Near and Middle East*

From Our Own Correspondents.

Cairo, February 20.

The High Commissioner's Illness.

As the cables will have advised you, Lord Lloyd has had a return of the throat trouble which he contracted during his Sudan trip. My last letter mentioned that he was not yet entirely recovered when he arrived back in Cairo, and there is no doubt that this relapse is due to the strain to which the past ten days have put him. Now that the immediately critical phase in the political situation is over there will be a lull for about two months until the electoral campaign starts, and it is to be hoped that the High Commissioner will be able to take the rest which he deserves and without which he cannot possibly expect, without damage to his health, to be able to cope with the period of stress that will inevitably intervene as soon as the elections have taken place.

The Electoral Law.

The much talked of Congress has come and gone without noteworthy incident. Very wisely the Government decided not to do anything to interfere with the meeting, and still more wisely Ziwar Pasha, after ascertaining from the Senators that they wanted the Electoral Law passed by Parliament under the Wafd régime in 1924, abandoned his intention to adhere to the new Law which he promulgated last December and announced that the elections would be held under the "Zaghloul" Law.

It is now no secret that the new Law was promulgated against the advice of the High Commissioner, who, however, ceded to the insistence of the Ziwar Cabinet, which pressed for it on the ground, since proved erroneous, that it would materially alleviate the political situation.

EGYPTIAN STATE RAILWAYS

EXPRESS CORRIDOR TRAINS.
Dining and Sleeping Cars.

PORT SAID to CAIRO
in 4 hours.
1st Class fare Lst. 1-7-3½
(L.E.1 .330 m/ms)

Enquiry Office : CAIRO STATION. Tel. No. 6777.

The acceptance by the Cabinet of the point of view put forward by the Senators was wise, since it effectively prevents any criticism on the score of elections being held on an unconstitutional basis. It was also very astute, because it disarmed the Congress. Zaghloul Pasha in his speech openly admitted that this eleventh-hour action on the part of the Government had materially affected the programme they had drawn up, and there is no doubt that but for this action the proceedings would by no means have had the atmosphere of moderation that characterised them.

The Agricultural and Industrial Exhibition.

Barely had my last week's letter been posted than news was received of the fire in the Agricultural and Industrial Exhibtion which was to have been inaugurated to-day by King Fuad. The whole of the section devoted to Industrial Education was destroyed, together with some of the exhibits. It must have been a severe blow to the Executive Committee that had worked so hard to get the Exhibition completed in time, but to its credit it should be said that it at once set to work to deal with the situation. Within twenty-four hours steps had been taken for the reconstruction of the buildings and the manufacture of duplicate exhibits, and arrangements were made for the work to be carried out night and day. Already the framework of the new buildings has been erected, and there is every prospect that they will be completed by the new date, March 1, now fixed for the opening. The whole of the loss falls on the organisers and the Government, for the buildings were not insured. As a matter of fact, the contract for insurance was to have been completed on the morning after the fire broke out. So the underwriters have had a lucky escape, for they would have been confronted with a total loss.

The Rockefeller Offer.

Much comment has not unnaturally been aroused by the publication of the offer of ten million dollars made by Mr. John D. Rockefeller for the construction of a Museum in Cairo and the foundation of an Archæological Institute. Particularly did criticism become lively when it was known that the offer had as condition the formation of a local committee of management consisting of two Englishmen, two Americans, two Frenchmen, and two Egyptians who would control the work of the Antiquities Service for thirty-three years.

It is stated that the original conditions proposed were much more drastic in their relation to the Antiquities Service and entailed a very material alteration in the terms of the excavation concessions. But, even as they stand, they can scarcely be considered as of a nature that could commend the scheme to Egyptians. The latter fully appreciate the generosity of the offer. But they can scarcely be blamed if they look askance at a proposal the effect of which would be to place the control of the Service of Antiquities which, although directed by a Frenchman, is effectivly an Egyptian Administration, in the hands of a board on which Egyptians would be in a minority of two to six.

The present time, when the national *amour-propre* of Egypt is in such a sensitive state, would appear to be a singularly ill-advised moment for making such a proposal, and it is somewhat surprising that those who put it forward on behalf of Mr. Rockefeller should not have realised how impossible it would be for any Egyptian Cabinet to accept such conditions.
